OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-019-574-01

ISSUE

- Whether Respondents met their burden of proof in establishing a willful safety rule violation.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was employed by 5280 Towing, Inc., as a truck driver when he suffered an admitted work injury that left him partially paralyzed. On July 5, 2016, Claimant was hauling a forklift from Denver to Delta, CO. He drove a 2013 Silverado 18-foot pick-up truck attached to a flatbed 25-foot gooseneck trailer. The forklift was on the trailer.

2. En route, Claimant stopped at least twice to assess the vehicles. His last stop was just prior to getting on Highway 50. He remembers heading East on Highway 50. His next memory is waking up in the hospital.

3. One hundred sixty seven feet east of milepost 57 on Highway 50, Claimant's truck went off the road at between sixty five and seventy five miles per hour. The truck traveled approximately four hundred thirty feet, knocking out highway posts, and skidding sideways. The truck finally stopped after rolling over. The truck was crushed, and every side of the vehicle retained significant damage, including the roof.

4. When first responders arrived at the scene, Claimant remained upright in the driver's seat. Claimant's spine was crushed, resulting in paraplegia. The Colorado State Patrol accident report indicates that the truck was equipped with a shoulder and lap belt. The state patrol officer wrote "Unknown" where the report addressed whether safety equipment was in use. The report also indicates that the truck was not equipped with air bags.

5. Respondents admitted liability and began paying Claimant full benefits.

6. Eight months later, Respondents asserted that Claimant violated Employer's safety rule by failing to wear a seatbelt at the time of the accident.

7. Levi Medeiros is the Owner / Manager of Employer. Employer only hires "qualified professionals" to drive their vehicles. Claimant, who had a commercial driver's license (CDL) in order to drive large trucks and dump trucks, was hired by 5280 Towing on June 27, 2016. Mr. Medeiros stated that he did not believe that Claimant had any safety violations prior to coming to work for Employer. He based this on the

knowledge that Claimant was added to Employer's insurance without any rate hikes or additional premiums.

8. As part of the hiring process, Claimant passed a drug screen and signed a variety of employment related documents. Those documents included that:

- Claimant was issued a hard hat;
- Claimant was responsible for property damage
- There was a 90 day probationary period for all new employees
- Claimant may be responsible for additional insurance premiums
- Claimant could log himself as "off-duty" during certain situations
- Claimant agreed to "familiarize" himself with Federal Motor Carrier Safety Regulations Pocketbook, and received a copy of the book from Employer.

None of these documents explained that Employer had a policy requiring employees, such as Claimant, to wear a seatbelt.

9. Although Mr. Medeiros testified that Employer provided Claimant with an employee handbook, he conceded that Claimant did not sign a receipt for the employee handbook as he did for numerous other employment documents. The employee handbook was the only written evidence provided at the hearing that stated that employees must wear seatbelts. Claimant testified that he had never seen the employee handbook before, and that he had signed all of the documents Employer put in front of him during the hiring process. Additionally, Claimant testified that he never reviewed any documentation from Employer stating that drivers had to wear their seatbelts.

10. Claimant testified that no employee of Employer ever specifically told him that Employer had a policy that he had to wear a seatbelt while driving for Employer.

11. Even so, Claimant testified that he always wore his seatbelt. When questioned why he would wear his seatbelt if Employer did not require him to do so, Claimant stated "It's just what you do."

12. Claimant received his CDL in 2009. Since then, Claimant has worked for four or five companies as a truck driver. Claimant testified that he has never been written up by any of his employers for a safety violation, let alone failure to wear a seatbelt. Employer did not provide persuasive evidence to the contrary. Employer did not issue Claimant a safety violation during the period of time he worked for Employer. Claimant has never received a traffic citation for failure to wear a seatbelt, including in this accident.

13. When Claimant first had a driver's license at the age of sixteen, he did not always wear his seat belt because not all cars had seatbelts and "you didn't have to." However, since he received his CDL, he has worn a seatbelt "every day" because it is "required by law." He testified that he wears his seatbelt while he is driving a truck for work and when he is driving in a regular car because it is "required by law."

14. Claimant testified that the truck he was driving on the date of his accident had a safety belt alert system that would tell him if he was not wearing his seat belt, presumably because every car has one. Respondents provided no specific evidence that the safety belt alert system was working on the day of the crash or that it would have properly alerted Claimant if he was not wearing a seatbelt.

15. Claimant does not specifically remember if he was wearing his seatbelt at the moment of the accident. However, he believes he was wearing his seatbelt at the time of the accident because he always wears his seatbelt. Even when he was questioned about his multiple breaks during the drive, Claimant responded that it was "not possible" that he got back in the truck without fastening his seatbelt.

16. Mr. Voitel, an engineer Respondents hired, performed an accident investigation. He determined that for unknown reasons, the truck veered off the road and rolled over, eventually landing in an upright position. He also examined the data recorded by the truck's airbag module and determined that the driver's seatbelt was not engaged at the time of the accident. He examined the seatbelt which he determined revealed no signs of being worn. However, the black box can only record if the seatbelt was engaged. It is possible that Claimant believed the seatbelt was buckled, without it being properly latched. Mr. Voitel provided no scientific theories or methodologies for examining/observing a seatbelt after an accident.

17. Shortly after the accident, emergency responders extricated Claimant from the truck and flew him to St. Mary's Hospital. Per the flight nurse, Claimant was not ejected from his vehicle, rather, he was found inside of it. It was unclear to the flight nurse whether he was wearing his seatbelt. The following morning, James Hanosh, MD, reported that Claimant was "apparently a restrained passenger of a semi involved in a rollover with prolonged extrication." Amy Lynn Clark, PA-C, also noted that Claimant was a restrained passenger.

18. Claimant underwent surgery at St. Mary's Hospital and then was transferred to Craig Hospital in Denver. The admission documents describe Claimant's injury as, "Vehicle-Auto W/Seat Belt." Claimant continued to report to all of his providers that he believed that he did have his seatbelt on. These conversations all occurred long before Respondents alleged a safety rule violation.

19. Respondents' medical examiner, Sharon Walker, M.D., determined that because the air bag module stated that Claimant was not wearing his safety belt, then he met the criteria of a safety rule violation regarding "the willful failure of the employee to use safety devices provided by the Employer." First, Dr. Walker did not take into consideration or comment on Claimant being found in the driver's seat – he had not

moved during the major rollover truck accident, making it possible that the black box was wrong. Second, Dr. Walker did not speak to Claimant to determine his state of mind at the time of the accident, but rather performed only a record review. Even assuming Claimant was not wearing his seatbelt at the time of the crash, Dr. Walker has no expert skills or authority to determine whether Claimant "willfully" violated a safety rule, or whether he accidentally or mistakenly did not wear his seatbelt. For these reasons, the ALJ finds Dr. Walker's opinion of Claimant's state of mind to be speculative and unfounded, and therefore not credible or persuasive.

20. Dr. Walker determined that Claimant's failure to wear a seatbelt caused his spinal injury and right clavicle injury. Her opinion about the spinal cord injury was based on just one study of rollover single car accidents with an extremely small sample size of twenty people. Importantly, the study Dr. Walker cited does not concern the type of injury that Claimant sustained – a T4 spinal injury. Rather the study only discussed seatbelt v. non-seatbelt injuries to the thoracolumbar junction (T11 – L2). This study is inapposite to the type of spinal injury Claimant sustained to his upper thoracic spinal, multiple levels above the thoracolumbar junction. Dr. Walker did not discuss how the study of a different part of the spine related to Mr. Nunn's injury. The ALJ finds that Dr. Walker's opinions in this matter are not supported by a relevant scientific study, nor does she have any particular expertise in determining seatbelt v. non-seatbelt injuries. The ALJ finds that Dr. Walker did not provide credible or persuasive scientific or medical sources for her determination that Claimant's clavicle fracture was caused by his alleged lack of seatbelt. The ALJ does not find Dr. Walker's opinions to be credible or persuasive on the issue of causation.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado is to insure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S.

It is the ALJ's sole prerogative to assess the credibility of witnesses and the probative value of the evidence to determine whether a party has met its burden of proof.

A workers' compensation case is decided on its merits. § 8-43-201, C.R.S. The requirements of proof for civil non-jury cases in the district courts apply in workers' compensation hearings. § 8-43-210, C.R.S. The ALJ's factual findings concern only evidence that is dispositive of this issues involved; the ALJ has not addressed every piece of evidence that may lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App 2000).

Under § 8-42-112(1)(a)&(b), it is the respondents' burden to prove every element justifying a reduction in compensation for willful failure to obey a reasonable safety rule or willful failure to use a safety device provided by the employer. *Triplett v. Evergreen Builders Inc.*, W. C. No. 4-576-463 (May 11, 2004). The question whether the respondents met their burden to prove a willful safety rule violation is one of fact for determination by the ALJ. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995).

Section 8-42-112(1)(a)&(b), C.R.S., provide for a fifty percent reduction of compensation benefits where the industrial injury, "results from the employee's willful failure to obey any reasonable rule adopted by the employer for the safety of the employee." Therefore, in order to prove a safety rule violation, Respondents must prove that 1) there was a known safety rule, 2) Claimant "willfully" violated the enforced safety rule, and 3) Claimant's injury was proximately caused by a willful violation of a safety rule. *See, Bennett Properties Co. v. Indus. Comm'n*, 165 Colo. 135, 143 (1969), *Johnson v. Denver Tramway Corp.,* 115 Colo. 214 (1946); *Grose v. Riviera Electric*, W.C. No. 4-418-465 (ICAO, Aug. 25, 2000). If Respondents are unable to meet even one of the elements, Respondents have not met their burden.

Employer Did Not Communicate a Safety Rule Communicated to Claimant Regarding Wearing a Seatbelt

In order for Respondents to establish a safety rule, they must either show that there was a written or oral rule that is given by someone generally in authority and heard and understood by the employee. *Bennett*, 165 Colo. at 143; *Jentzen v. Northwest Transport*, W.C. # 4-009-435 *1 (ICAO, Apr. 24, 1992) (employee must know of the device or the rule).

As more fully set out in the findings of fact, here, Respondents produced no written evidence that Employer had a rule requiring employees to wear a seatbelt while driving. Although Employer provided a copy of the Federal Motor Carrier Safety Regulations Pocketbook to its employees, Employer asked Claimant only "to familiarize" himself with the book. No written documentation stated Employer required every rule in the handbook to be followed or that the Employer adopted all of the rules and required all of them to be followed. Additionally, Respondents did not provide persuasive evidence from any other employee drivers that they understood there was a safety rule requiring them to wear a seatbelt. Further, Claimant testified that he was never told by management or otherwise to wear a seatbelt while working for Employer. Finally, no persuasive evidence supports the conclusion that the employee handbook, which mentioned that employees must wear seatbelts, was provided to Claimant. The ALJ finds and concludes that Employer did not have a safety rule which it conveyed to Claimant regarding seatbelts. Therefore, there could not have been a violation of a known safety rule.

Assuming that Mr. Nunn Was Not Wearing His Seatbelt at the Time of the Accident, It Was Not an Intentional Act, But Rather Mere Oversight or Negligence.

A "willful" violation is one which results from deliberate intent, and not mere careless, negligence, inadvertence, forgetfulness, remissness, or oversight. *Johnson v. Denver Tramway Corp.,* 115 Colo. 214, 171 P.2d 410 (Colo. 1946); *City of Las Animas v. Maupin*, 804 P.2d 285, 286 (Colo. App. 1990). The employer bears the burden to show that a claimant's conduct was willful. *Lori's Family Dining, Inc. v. Indus. Claim Appeals Office*, 907 P.2d 715, 719 (Colo. App. 1995). An employer only satisfies the burden of proof by showing that the employee intentionally performed a forbidden act despite knowing of the rule. *See Bennett Props. Co. v. Indus. Comm'n*, 165 Colo. 135, 144, 437 P.2d 548, 552 (1968). Willfulness may be inferred from evidence of repeated warnings, knowledge of the risks arising from violations of the safety rule at issue, and the degree of carelessness or indifference to obvious risks. *See Indus. Comm'n v. Golden Cycle Corp.*, 126 Colo. 68, 74-75, 246 P.2d 902, 906 (1952); *Juarez v. Pillow Kingdom,* Inc., W.C. No. 4-364-252 *2 (ICAO Jan 22, 1999) (the ALJ could infer that the claimant acted with deliberate intent when the claimant was "repeatedly warned of the safety rule that he violated).

Evidence of willful misconduct may also be established by showing a conscious indifference to the perpetration of a wrong, or a reckless disregard of the employee's duty to his employer, such as engaging "in a pattern of behavior that would show a disregard or disrespect for the respondents' regulations." *Miller v. City and County of Denver*, W.C. No. 4-658-496 at *3 (ICAO Aug. 31, 2006).

As more fully set forth in the findings of fact, Respondents failed to provide credible or persuasive evidence that Claimant willfully violated a safety rule of the employer regarding the use of a seatbelt. First, Claimant believes that he was wearing his seatbelt at the time of the accident because he "always" wears his seatbelt. Second, Claimant never received any prior warnings with respect to any safety rule violations at any of his employers since he began working as a CDL truck driver in 2009, let alone for not wearing a seatbelt, that would show a pattern of behavior. Third, during his treatment Claimant told his doctors that he was wearing his seatbelt. The ALJ finds and concludes that Claimant more likely than not was wearing his seatbelt at the time of the accident.

The only doctor who opined on Claimant's mental state concerning seatbelt use was Dr. Walker, who did not even speak with Claimant to determine his mental state at the time of the crash. The ALJ found above and concludes now that Claimant did not willfully disobey a safety rule or use of a safety device. Rather, assuming that Claimant's seatbelt was not buckled, it is more likely than not that Claimant accidentally, negligently, inadvertently, or mistakenly was not wearing his seatbelt. That conclusion alone requires the ALJ to deny Employer's claim of a safety rule violation.

Assuming That Mr. Nunn Was Not Wearing a Seatbelt at the Time of the Accident, Respondents Have Not Proven That Not Wearing a Seatbelt Proximately Caused Claimant's Injuries

In order to determine that there was a safety violation, the claimant's injury must have been proximately caused by a willful violation of a safety rule. *See Grose v. Riviera Electric*, W.C. No. 4-418-465 (ICAO, Aug. 25, 2000). The question of whether Respondents proved Claimant's violation of the safety rule was a proximate cause of the injury is one of fact for determination by the ALJ. *Tatum-Reese Development Corp. v. Industrial Commission*, 30 Colo. App. 149, 490 P.2d 94 (1971). The mere concurrence of an injury and an alleged cause does not require the ALJ to draw the inference of causation. *See J.C. Carlile Corp. v. Anataki,* 162 Colo. 376, 426 P.2d 549 (1967) (under prior statute, blood alcohol level of .173 did not require inference that decedent's automobile accident was caused by intoxication).

As more fully set forth in the findings of fact, Respondents failed to produce credible or persuasive evidence that Claimant's alleged failure to wear his seatbelt proximately caused his injuries. Dr. Walker, was the only doctor to opine on whether a lack of seatbelt caused Claimant's injuries, and she is not an expert in spine injuries and seatbelts. Dr. Walker did not discuss that Claimant was found sitting upright in the driver's seat and was extricated from the driver's side of the cab. These factors make it more likely than not that Claimant was wearing a seatbelt. Dr. Walker did not personally examine Claimant nor did she consult with any of Claimant's treating doctors at Craig Hospital, who are experts in the field. Additionally, the medical study she relied upon to determine that Claimant's spine injury was caused by the lack of a seatbelt is not valid for the type of spinal injury that Claimant sustained, and she had no medical sources to determine that Claimant's clavicle break was the result of not wearing a seatbelt. It is more likely that the proximate cause of Claimant's injuries was the truck rolling over and crushing him, especially considering he remained in the driver's seat the whole time. The ALJ specifically finds and concludes that Respondents have not met their burden of proving that the proximate cause of Claimant's injuries was his willful failure to wear a seatbelt.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents are not entitled to reduce Claimant's temporary or permanent compensation or benefits by 50% for any alleged safety rule violation. Respondents' claims for a reduction are denied and dismissed.

2. Issues not expressly decided herein are reserved to the parties for future determination.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 2, 2018

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant has established, by a preponderance of the evidence, that the arthroscopic surgery recommended by Dr. Bowman is maintenance medical treatment.

II. Whether Claimant has established, by a preponderance of the evidence, that the arthroscopic surgery recommended by Dr. Bowman is reasonable, necessary, and related.

STIPULATIONS – PROCEDURAL MATTERS

The parties agreed that the case was closed pursuant to a Final Admission of Liability, but that Respondents admitted liability for maintenance medical treatment. Claimant did not endorse the issue of reopening. Therefore, the issue of reopening was not heard by this court.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On November 17, 2015, Claimant suffered a compensable injury to his left shoulder when a ceiling tile fell and hit his left shoulder. According to the medical records, the injury occurred when Claimant reached up to pull some paper towel off a shelf. The paper towel was holding up a ceiling tile. After Claimant pulled the paper towel off the shelf, the ceiling tile fell and hit Claimant on the backside of his left shoulder and neck.

2. On the day of the accident, Claimant went to Concentra Medical Center and was evaluated by Hanna Bodkin, PA-C. Claimant complained of left sided shoulder pain and inner upper arm pain which he rated at a 5-8/10. On physical examination, Claimant's left shoulder had decreased range of motion. Claimant was diagnosed as suffering from an injury to the left shoulder, shoulder contusion, and a superficial injury to the back wall of the left thorax. Claimant was prescribed a sling, ibuprofen, and physical therapy.

3. On November 24, 2015, Claimant returned to Concentra and was again evaluated by PA Bodkin. Claimant stated his pain was about the same, or

maybe worse. Claimant complained of pain in the top of his shoulder that radiated into his elbow.

4. On November 24, 2015, Claimant underwent physical therapy. According to the physical therapy notes, Claimant was doing better and had better range of motion.

5. On December 3, 2015, Claimant underwent additional physical therapy and told the physical therapist he was getting a little better, but still had soreness in the shoulder which progressed through the day.

6. On December 8, 2015, Claimant returned to PA Bodkin. Claimant complained of being in pain every morning and that he was feeling worse. Claimant also underwent physical therapy on this day as well. He advised the physical therapist that he was hurting really bad and that he stopped taking his pain medication because he felt the medication was masking his pain and causing him to overdo it.

7. On December 22, 2015, Claimant returned to PA Bodkin. Claimant stated he had been pain free for a week, although sore, and that he was 75% better.

8. On December 22, 2015, Claimant was evaluated by Dr. Cary Motz, an orthopedic surgeon. Dr. Motz noted in his report that a ceiling tile fell and hit Claimant in the supraclavicular area. Dr. Motz performed a physical examination and noted that Claimant was non-tender over the AC joint. He also noted very mild limitation of range of motion with internal rotation and slight crepitus which he thought was coming from Claimant's subscapular area. He also noted Claimant's rotator cuff strength was 5/5 in external rotation and 4+/5 with abduction. His impression was left shoulder contusion and possible chronic rotator cuff tear. Dr. Motz went on to state that Claimant's exam was fairly benign regarding the contusion to the shoulder. He also stated that although Claimant has some weakness with abduction, the mechanism of injury would not cause a rotator cuff tear and therefore it would not be work related if he had one. Dr. Motz said he would re-evaluate Claimant in a month and that he would expect that Claimant could be released.

9. On January 12, 2016, Claimant returned to PA Bodkin. Claimant noted a significant increase in pain and stiffness since he had not gone to physical therapy for 10 days. Claimant was, however, feeling about 80% better.

10. On January 12, 2016, Claimant returned to Dr. Motz. Claimant stated that he had improved with physical therapy and massage therapy. Dr. Motz performed a physical examination and noted excellent shoulder range of motion. He also noted some crepitus at the superomedial border of the scapula with some tenderness over the trapezius and that Claimant was not tender over the deltoid. Claimant's rotator cuff strength was 4+/5 with external rotation and abduction. Dr. Motz' impression was resolving left shoulder contusion and possible left

shoulder chronic rotator cuff tear. Dr. Motz concluded that Claimant did not require any more treatment due to the shoulder contusion. He also concluded that any additional symptoms which might be consistent with a rotator cuff tear were not related to the work accident.

11. On January 18, 2016, Claimant underwent an MRI of his left shoulder. The MRI demonstrated a mild subacromial subdeltoid bursitis, mild osteoarthritis of the chronic fibular joint, a small amount of bursal surface fraying, and mild tendinopathy of the supraspinatus tendon. There was no full thickness rotator cuff tear, tendon retraction, or focal rotator cuff muscle atrophy.

12. On January 26, 2016, Claimant was evaluated by Dr. Mark Montano. Dr. Montano evaluated Claimant's left shoulder and noted Claimant had pain with overhead reaching, but normal range of motion which was similar to his right sided range of motion. He also noted Claimant had good shoulder strength with external and internal rotation. Dr. Montano's assessment was shoulder contusion, superficial injury to the left back wall of the thorax, and supraspinatus tendinitis.

13. On February 4, 2016, Claimant returned to Dr. Montano and complained of numbness in his left hand which he said started the day before. Claimant thought the left handed numbness was due to a hard day at work, which included shoveling snow. Claimant stated that he also had pain in the left side of his neck and that his shoulder was very sore.

14. On February 17, 2016, Claimant returned to PA Bodkin and complained of worsening shoulder pain. Claimant's treatment remained the same, which consisted of physical therapy, acupuncture, and massage therapy.

15. On February 24, 2016, Claimant saw Dr. Sacha and he prescribed Lyrica and recommended a shoulder injection. After seeing Dr. Sacha, Claimant saw PA Bodkin and complained of increasing shoulder pain.

16. On March 2, 2016, Dr. Sacha administered a steroid injection into Claimant's left shoulder.

17. On March 9, 2016, Claimant returned to physical therapy. The therapy notes indicate the injection increased Claimant's range of motion but did not help his pain.

18. On March 18, 2016, Claimant advised his physical therapist that his shoulder locked up and that he had significant pain lifting his arm out away from his body. Claimant also stated that his pain gets so bad that he gets sick to his stomach. On March 23, 2016, Claimant told his physical therapist that his shoulder pain was very bad and that he vomited due to the pain. Claimant rated his pain at a 5-6/10.

19. On March 29, 2016, Dr. Sacha administered an injection into Claimant's left subacromial bursa – shoulder.

20. On April 7, 2016, Claimant advised his physical therapist that he has been pain free for the last 4 days. He stated that he had a steroid shot in his shoulder 10 days ago and that he has been on vacation and has not worked.

21. On April 12, 2016, Claimant reported to his physical therapist that he was doing much better and had no pain at all. Claimant also stated that he was able to work his normal shift the day before without increased pain. Claimant returned to physical therapy on April 14, 2016, and stated that he was doing much better and was able to return to all normal activities without limitation. Claimant returned on April 26, 2016, and stated that he had no shoulder pain and was able to perform all normal activities without limitations.

22. On April 26, 2016, Claimant was evaluated by Dr. Montano. Claimant was doing much better. Dr. Montano noted that Claimant had been pain free for weeks after he received the shoulder injection from Dr. Sacha. It was also noted that Claimant had been working full duty and performing all activities of life without pain, although he might have been sore due to physical therapy. Dr. Montano's assessment at that time was contusion of left shoulder, injury of left shoulder, superficial injury of back wall of thorax, and supraspinatus tendinitis. He anticipated Claimant would be at MMI within 2 weeks.

23. On May 6, 2016, Claimant advised his physical therapist that he had been overworked at work since his boss quit and he was having pain around the long head of his bicep. On May 10, 2016, Claimant reported to his physical therapist that he had more pain over the top and along the posterior of his left shoulder.

24. On May 27, 2016, Claimant was evaluated by Dr. Montano. Claimant indicated that although his shoulder was sore, he had improved significantly. Claimant also complained of some clicking in his shoulder. Dr. Montano placed Claimant at MMI and determined Claimant did not have any impairment due to his work injury. He did, however, recommend maintenance care in the form of a gym pass for one year and two visits with Dr. Sacha over the next 12 months.

25. Claimant testified that during April he was pain free. Claimant also testified that he felt like the effects of the shoulder injection were starting to wear off in May of 2016. Claimant's testimony is consistent with the medical records and is found to be credible regarding his lack of shoulder pain during the majority of April and that he had some pain in May of 2016.

26. As agreed to by the parties, Respondents filed a Final Admission of Liability based on Claimant being placed at MMI by Dr. Montano on May 27, 2016 and admitted liability for maintenance medical treatment. Claimant did not object to the FAL and his case closed.

27. In August of 2016, Claimant quit working for Employer.

28. On August 16, 2016, approximately 2 ½ months after being placed at MMI, Claimant returned to Concentra and was seen by Dr. Scott Richardson. Claimant's only complaint was increased clicking in his left shoulder. Claimant denied having any shoulder pain. Dr. Richardson physically evaluated Claimant's left shoulder and noted there was no tenderness. He also noted that Claimant's shoulder had full range of motion. He further noted that rotator cuff tests were negative and that labrum and stability tests were also negative. Dr. Richardson referred Claimant to an orthopedic specialist due to the clicking in his shoulder.

29. Approximately five days after his appointment with Dr. Richardson, Claimant moved to Astoria, Oregon.

30. Since moving to Oregon, Claimant has worked as a server and has also opened up his own food cart business.

31. On September 22, 2016, Claimant was evaluated by Dr. Ronald Bowman, an orthopedic surgeon in Oregon. By the time Claimant moved to Oregon and was evaluated by Dr. Bowman, Claimant had additional complaints. In addition to the clicking Claimant described to Dr. Richardson, Claimant complained of pain and instability in his left shoulder. Dr. Bowman examined Claimant and noted Claimant was tender at the AC joint and acromion and over the greater tuberosity. He also noted Claimant was tender at the anterior and posterior glenohumeral joint and that he had a very positive O'Brien test and a slightly positive open can test. He also found Claimant had a minimally positive Neer, Hawkins impingement, and anterior glide. Based on his examination, Dr. Bowman thought Claimant might have a labrum injury. Therefore, he recommended Claimant undergo another MRI with an arthrogram.

32. On November 10, 2016, Claimant returned to Dr. Bowman. Claimant advised Dr. Bowman that he could not undergo another MRI because he has a cochlear implant. Dr. Bowman noted Claimant did undergo a CT arthrogram which showed an interstitial longitudinal tear of the subscapularis tendon without retraction. He noted that the labrum appeared well attached and determined it was unlikely Claimant had a labral tear. Therefore, he recommended a subacromial injection and a glenohumeral injection, if the subacromial injection did not help.

33. On November 16, 2016, Claimant underwent a cortisone injection into his subacromial space. The medical note from that date indicates Claimant had a 50% reduction in pain at rest.

34. On December 8, 2016, Claimant returned to Dr. Bowman and indicated the injection helped for about 2 days. Dr. Bowman determined that the subacromial injection did not help isolate Claimant's pain. Therefore, he recommended Claimant undergo a glenohumeral joint injection.

35. On December 16, 2016, Claimant underwent a glenohumeral joint injection. It was noted that Claimant had sharp shooting pain in his subacromial bursa with reaching.

36. On February 2, 2017, Claimant returned to Dr. Bowman. Claimant reported that he was getting a little worse. Because Claimant could not undergo an MRI due to his cochlear implant, Dr. Bowman recommended a diagnostic arthroscopy and a possible rotator cuff repair and/or labral repair. Although Dr. Bowman indicated on November 10, 2016, that it was unlikely Claimant had a labral tear, he indicated on February 2, 2017, that Claimant might require a labral repair. However, before proceeding with surgery, Dr. Bowman referred Claimant to a physiatrist to see if there might be any other non-surgical treatments that might benefit Claimant.

37. On February 16, 2017, Claimant was evaluated by Dr. Bradford Lorber, a physiatrist. At this appointment, Claimant complained of pain in the anterolateral shoulder which felt like a needle was stuck in his shoulder. Claimant noted any movement caused increased needle like pain. Claimant indicated that nothing helps reduce his symptoms. Claimant also complained of occasional shooting pulses up to his neck and occasional radiation of symptoms into his arm and finger numbness that involves digits two, three, and four. Dr. Lorber stated that he could not rule out cervical radiculopathy as the cause of Claimant's shoulder pain. Despite not being able to rule out cervical radiculopathy as the cause of Claimant's shoulder pain, Dr. Lorber stated that proceeding with shoulder surgery would be the most advisable step.

38. On March 19, 2017, Dr. Failinger performed a records review. He determined that Claimant was not a surgical candidate as it relates to the industrial injury. Dr. Failinger also testified, via his deposition. Dr. Failinger's testimony was consistent with his report.

39. On March 23, 2017, Claimant returned to Dr. Bowman. Dr. Bowman noted that in order to rule out a labral injury, he recommended a diagnostic arthroscopy. He noted that it was possible that Claimant could be found to have normal tissue. He also noted that although Claimant did not have bicep tendon findings initially, it is common for these problems to develop over time with instability or damage to the labrum/glenoid interface. Dr. Bowman went on to state that:

> [T]he decision for medical treatment irrespective of causation issues for biceps pathology is a clinical decision more so than one may have had surgery and needs to be decided beforehand. I have done that appropriately and I continue to request that.

Although the above statement made by Dr. Bowman is not clear, this ALJ finds that based on his March 23, 2017, report, Dr. Bowman has indicated that Claimant has developed a problem with his biceps tendon and that the surgery

he has recommended will also be directed towards the biceps tendon, regardless of whether the biceps tendon condition was caused by the work accident.

40. Dr. Bowman also stated in his March 23, 2017, report that Claimant has ongoing symptoms from his industrial injury and the only way to determine the cause of the symptoms is to perform a diagnostic arthroscopy.

41. On April 13, 2017, Claimant returned to Dr. Bowman. Claimant complained of severe pain at times in his left shoulder. Claimant also noted that he continued to work in his new restaurant in Astoria and that his shoulder was painful after mopping the floor.

42. On May 25, 2017, Claimant returned to Dr. Bowman. Claimant indicated his symptoms were worse. He also complained of having estheisa in his thumb and index finger of his left hand. Dr. Bowman indicated that he thought Claimant was having more symptoms from rotator cuff pathology.

43. On July 6, 2017, Claimant returned to Dr. Bowman. Dr. Bowman noted that Claimant underwent EMG nerve conduction studies with Dr. Lorber and that the testing was normal. Dr. Bowman evaluated Claimant and thought that some of Claimant's pathology is the biceps tendon. Dr. Bowman stated that Claimant still required a diagnostic arthroscopy and that Claimant will likely "need a biceps tendinosis as well."

44. Dr. Bowman testified, via his November 15, 2017, deposition. Dr. Bowman testified that the arthroscopy he wants to perform is a two-step process. Dr. Bowman testified that the first step of the procedure is to view the structures of the shoulder and identify pathology which might be causing Claimant's shoulder pain. Then, the second step of the procedure is to fix the pathology which might be causing Claimant's shoulder pain. Dr. Bowman testified that he believes Claimant has something wrong with his shoulder and that that there is a real good chance the surgery will help. Dr. Bowman also testified that based on Claimant's response to the subacromial injection, Claimant would likely benefit from a decompression or acromioplasty, in which bone would be burrowed back to make the space larger. Dr. Bowman also stated in his July 6, 2017, report that Claimant will likely "need a biceps tendinosis as well." Therefore, the intent and purpose of the arthroscopic surgery is not purely diagnostic. The intent and purpose of the arthroscopic surgery proposed by Dr. Bowman is to cure or improve Claimant's underlying shoulder condition in order to reduce Claimant's pain complaints and increase Claimant's function.

45. Dr. Bowman also testified that even if Claimant could undergo an MRI – arthrogram, and it was normal, he would still recommend the arthroscopic surgery. Therefore, Dr. Bowman is not recommending the surgery because Claimant cannot undergo the MRI – arthrogram, he is recommending the surgery because he believes the surgery will cure or improve Claimant's underlying condition.

46. Claimant testified that at the time he was placed at MMI, he felt the latest cortisone injection was starting to wear off. He testified that his pain would wax and wane at that time depending on his workload. Claimant also stated that in order to minimize his work load at that time, he had to bring in extra labor.

47. Claimant also testified that since being placed at MMI, his condition has gotten worse. At the time Claimant was placed at MMI on May 27, 2016, he advised Dr. Montano that although his shoulder was sore, he was significantly better. At hearing, Claimant testified that his current shoulder condition sometimes prevents him from being able to lift his shoulder or put on his socks.

48. The purpose of the surgery recommended by Dr. Bowman is to cure or improve Claimant's shoulder condition.

49. The surgery has been recommended due to the alleged worsening of Claimant's condition since being placed at MMI and is an attempt to improve his condition. The proposed surgery is not designed to relieve Claimant from the effects of the work injury and prevent deterioration.

50. Because the purpose of the arthroscopic surgery is to cure or improve Claimant's condition, the medical treatment at issue is not *Grover*-type maintenance medical treatment.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

GENERAL PROVISIONS

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to

a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

I. Whether Claimant has established, by a preponderance of the evidence, that the arthroscopic surgery recommended by Dr. Bowman is maintenance medical treatment.

In cases where Respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003). When Respondents challenge Claimant's request for specific medical treatment, Claimant bears the burden of proof to establish entitlement to the benefits. *Ford v. Regional Transportation District*, W.C. No. 4-309-217 (ICAO February 12, 2009).

Pursuant to § 8-42-107(8)(b)(I), C.R.S., an authorized treating physician shall make the initial determination concerning the date of MMI. Once an authorized treating physician makes a determination of MMI, the termination of medical care is triggered and the ALJ lacks jurisdiction to conduct a hearing concerning the accuracy of the authorized treating physician's determination until a DIME is conducted. §8-42-107(8)(b)(III), C.R.S.; *Story v. Industrial Claim Appeals Office*, 910 P.2d 80 (Colo. App. 1995). The Colorado Supreme Court has noted that the DIME procedure is "the only way for an injured worker to challenge the treating physician's findings -- including MMI, the availability of post-MMI treatment, degree of non-scheduled impairments, and whether the impairment was caused by an on-the-job injury...." *Whiteside v. Smith*, 67 P.3d 1240, 1246 (Colo. 2003).

The ICAO has held that "once an authorized treating physician places the claimant at MMI, an ALJ lacks jurisdiction to award additional medical benefits for the purposes of curing the industrial injury and assisting the claimant to reach MMI unless the claimant undergoes a DIME." *Eby v. Wal-Mart Stores, Inc.*, W.C. No. 4-350-176 (February 14, 2001). See also *Anderson-Capranelli v. Republic Industries, Inc.*, W.C. No. 4-416-649 (November 25, 2002) (following MMI, "In the absence of a DIME the ALJ lacks jurisdiction to adjudicate a request for additional medical benefits to cure the effects of the injury."); *Toledo-Zavala v. Excel Corp*., W.C. Nos. 4-534-398, 4-534-399 (November 14, 2003) (same); *Cass v. Mesa County Valley School District*, W.C. No. 4-629-629 (August 26, 2005) ("[I]f an ATP places the claimant at MMI, an ALJ lacks

jurisdiction to award additional medical benefits to improve the claimant's condition unless a DIME has been conducted on the issue of MMI.").

However, in *Grover v. Industrial Commission*, 759 P.2d 705, 710 (Colo. 1988), the Supreme Court construed § 8-42-101 (1)(a) as requiring Respondents in workers' compensation claims to provide medical care to injured workers without regard to any time limitation as long as further medical treatment is reasonably necessary "to relieve the worker from the effects of the industrial injury …." The Court found justification for the ruling by observing "[i]t is an obvious fact of industrial life, however, that an injured worker can reach maximum medical improvement from an injury and yet require periodic medical care to prevent further deterioration in his or her physical condition." Id.

In 1991 the definition of MMI in § 8-40-201 (11.5) was added to the statute. In that amendment, MMI referenced a point when any physical impairment is stable and "no further treatment is reasonably expected to improve the condition." That definition excluded from 'further treatment' any "future medical maintenance." In *Milco Construction v. Cowan*, 860 P.2d 539 (Colo.App. 1992) the court noted this amendment. Consequently, when applying the obligation in § 8-42-101(1)(a) to the Respondents to provide medical care "to cure and relieve" the effects of the injury, the term "cure" was to necessarily be limited to care prior to MMI, while the phrase "relieve" could include post MMI treatment.

Therefore, the obligation to provide treatment to "cure" or improve Claimant's condition terminates when the Claimant reaches MMI. This is true because MMI is defined as the point in time when the Claimant's condition is "stable and no further treatment is reasonably expected to improve the condition." § 8-40-201 (11.5). *See Chism v. Walmart*, W.C. No. 4-809-103-03 (January 9, 2017).

However, surgery is not as a matter of law "curative" treatment. *Hayward v. Unisys Corp*. W.C. No. 4-230-686 (July 2, 2002), *affd, Hayward v. Industrial Claim Appeals Office*, (Colo. App. No. 02CA1446, January 9, 2003) (knee surgery may be curative or may be a form of *Grover*-style maintenance treatment designed to alleviate deterioration of the Claimant's condition). Medical treatment which does not tend to cure or improve Claimant's condition may nevertheless be ordered under *Grover* upon the presentation of substantial evidence that such treatment "will be reasonably necessary to relieve a claimant from the effects of the injury or to prevent further deterioration of his or her condition" after MMI. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609, 611 (Colo. App. 1995). Further, the question of whether medical treatment is administered for the purpose of "curing" or merely "relieving" Claimant's condition does not depend on the type of treatment, but rather the reason for the treatment. The following statement from *Milco Construction v. Cowan*, 860 P.2d 539, 542 (Colo. App. 1992), is pertinent:

> We hold, therefore, that, if the evidence in a particular case establishes that, but for a particular course of medical treatment, a claimant's condition can reasonably be

> expected to deteriorate, so that he will suffer a greater disability than he has sustained thus far, such medical treatment, irrespective of its nature, must be looked upon as treatment designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition.

Therefore, the issues before this ALJ are limited to whether the surgery recommended by Dr. Bowman is *Grover*-type maintenance medical treatment, and if so, whether the treatment is reasonable, necessary, and related to Claimant's industrial accident.

Consequently, the threshold issue for this ALJ to determine is whether the surgery recommended by Dr. Bowman is *Grover*-type maintenance treatment.

In this case, Claimant suffered an industrial injury to his left shoulder on November 17, 2015. Respondents admitted liability for the claim and provided medical treatment. Claimant was placed at MMI on May 27, 2016. At the time Claimant was placed at MMI he still had some pain in his shoulder and some clicking. Moreover, Claimant testified that at the time he was placed at MMI, his shoulder pain would wax and wane depending on his workload. Respondents filed a final admission of liability and admitted for *Grover*-type maintenance medical treatment. The parties agreed that the case was closed, except for the issue of *Gover*-type maintenance medical treatment.

As found, after being placed at MMI on May 27, 2016, Claimant was provided maintenance medical treatment. On August 16, 2016, approximately 2 ½ months after being placed at MMI, Claimant returned to Concentra and was seen by Dr. Scott Richardson. Claimant's only complaint was increased clicking in his left shoulder. Claimant denied having any shoulder pain. Dr. Richardson physically evaluated Claimant's left shoulder and noted there was no tenderness. He also noted that Claimant's shoulder had full range of motion. He further noted that rotator cuff tests were negative and that labrum and stability tests were also negative. Dr. Richardson referred Claimant to an orthopedic specialist due to the clicking in Claimant's shoulder.

Approximately 5 days after his appointment with Dr. Richardson, Claimant moved to Oregon. Since moving to Oregon, Claimant has worked as a server and has also opened up his own food cart business.

By the time Claimant moved to Oregon and was evaluated by Dr. Bowman, an orthopedic specialist, on September 22, 2016, Claimant was complaining of more than just clicking in his shoulder. Claimant was complaining of pain and instability. Based on his initial examination, Dr. Bowman opined that Claimant might be suffering from a labrum injury. As time went on, Claimant's pain complaints increased and the nature of his symptoms changed. Dr. Bowman ultimately recommended an arthroscopic surgery. Although Dr. Bowman has at times described the arthroscopic surgery as being purely

diagnostic in his medical records, this ALJ found that based on his deposition testimony and medical records, the purpose of the surgery is to cure and improve Claimant's shoulder condition. As testified to by Dr. Bowman, and found by this ALJ, Dr. Bowman expects to find pathology and perform certain procedures during the arthroscopy, including, but not limited to, a decompression or acromioplasty and a "biceps tendinosis." (Although Dr. Bowman's reports indicate the possible performance of a "biceps tendinosis," he might be referring to the condition he will surgically correct, and not the actual procedure. Regardless, such matter does not alter this ALJ's findings and conclusions.) In addition, as found by this ALJ, Dr. Bowman expects the surgery to improve Claimant's underlying condition by reducing his pain complaints and increasing his level of functioning.

As found by this ALJ, the reason for performing the arthroscopic surgery recommended by Dr. Bowman is to cure or improve Claimant's shoulder condition. Therefore, this ALJ concludes that Claimant has failed to establish by a preponderance of the evidence that the surgery recommended by Dr. Bowman is *Grover*-type maintenance medical treatment.

II. Whether Claimant has established, by a preponderance of the evidence, that the arthroscopic surgery recommended by Dr. Bowman, is reasonable, necessary, and related.

Because the surgery recommended by Dr. Bowman has been found to be curative, and not *Grover*-type maintenance treatment, the issue of whether the arthroscopic surgery is reasonable, necessary, and related is moot and will not be addressed.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for *Grover*-type maintenance medical treatment in the form of the arthroscopy recommended by Dr. Bowman is denied and dismissed.

2. Claimant did not endorse the issue of reopening and that issue has not been addressed by this ALJ. Therefore, whether Claimant's work related condition has worsened and whether his case should be reopened has not been addressed.

3. The sole issue decided by this ALJ was the threshold question as to whether the surgery recommended by Dr. Bowman qualified as *Grover*-type maintenance treatment.

4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 3, 2018

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-053-110-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

SELF-INSURED
Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on December 19, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 12/19/17, Courtroom 1, beginning at 8:30 AM, and ending at 10:30 AM).

Claimant's Exhibits 1 through 7 were admitted into evidence, without objection. Respondent's Exhibits A through L were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on December 28, 2017. No timely objections were filed. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern whether the Claimant sustained an occupational disease, to wit, the gradual onset of a right shoulder strain

with a date of last injurious exposure of July 7, 2017, and, if so, the Claimant's entitlement to medical benefits.

The Claimant bears the burden of proof on all issues, by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant (d.o.b. January 23, 1955) began work for the Employer in approximately April of 2017.

2. The Claimant's daily work duties were performed in the floral department of the Employer.

3. The Claimant's specific work duties, on a daily basis, consisted of moving and lifting plants with or without pots or containers, generally lifting/moving/arranging flowers and plants, and watering all flowers and plants, among other duties within the floral department, inside and outside.

4. The watering the flowers and plants located outside the Employer's store building consisted of repetitive overhead reaching in order to pull down watering hoses which were stored overhead on reels.

5. Ordinarily, the daily duties of employees in the floral department of the Employer's store were performed by at least two employees, but not on July 6 and July 7, 2017.

Findings

6. On Thursday, July 6, 2017, the Claimant performed her work duties for a full shift in the Employer's floral department by herself, without another employee also assigned to the floral department that day.

7. The next day, on July 7, 2017, the Claimant again performed the entire necessary duties of the floral department by herself. These duties consisted of continual lifting and moving sometimes heavy object, and repetitive overhead reaching involved in plant/flower watering activities, mainly performed outside.

8. According to the Claimant, she suffered from numerous physical complaints following these two days of working alone in the floral department. Her complaints consisted of, but were not limited to: sunburn, pain and discomfort in her right arm/shoulder, upper back and neck.

9. The Claimant timely reported the physical problems she related to her two days of solo work in the floral department to an authorized supervisor of the Employer. She was then directed by the Employer to an initial medical provider, Colorado Occupational Medical Partners, Inc. (Hereinafter "COMPI) where she ultimately came under the care and treatment of Matthew Lugliani, M.D., her authorized treating physician (ATP).

Employer Witnesses

10. Natasha Hatch, the Operations Assistant Manager of the Employer's store where the Claimant worked, testified that the Claimant first reported a sunburn that was making her right shoulder hurt, caused by watering plants at work on July 10, 2017 (*See* Respondent's Exhibit J). The ALJ infers and finds that Hatch confused the reporting date, stated by the Claimant, with the date of last injurious exposure.

11. The Claimant's ATP supports "repetitive lifting" as the cause of the Claimant's right shoulder problems, which is consistent with the Claimant's medical histories given to medical providers. The ALJ further finds that Hatch's testimony, essentially, does not contradict the Claimant's version of events, which is corroborated by the aggregate medical evidence, with the exception of the opinions of John Burris, M.D., Respondent's Independent Medical Examiner (IME).

11. Audrey Alire testified by telephone and corroborated Hatch's testimony--that the Claimant said she got a sunburn at work, causing her right shoulder to hurt. The ALJ infers and finds that although the Claimant may have thought, at first that the sunburn caused her right shoulder pain, on further reflection she realized that watering plants and repetitive lifting caused her right shoulder problems. In this respect, the ALJ finds the Claimant credible. Although Alire did not remember the Claimant's mentioning right shoulder pain, Alire selectively remember the "sunburn." The ALJ further finds that Alire's telephone testimony, essentially, does not contradict the Claimant's version of events, which is corroborated by the aggregate medical evidence, with the exception of the opinions of Dr Burris, Respondent's IME.

12. Kendra L. Slaughter testified that she worked with the Claimant in the floral department and the Claimant did not look like she was hurt on the day in question, July 8, 2017. The ALJ finds that Slaughter's telephone testimony does not effectively detract from the Claimant's version of events or from the aggregate, credible medical evidence.

Medical

13. On July 11, 2017, the Claimant was seen by Tom Chau, PA-C (Physician's Assistant-Certified) at COMPI, who examined her, and stated a diagnosis of: "R shoulder str."

14. PA-C Chau stated specifically that: "Right shoulder pain status post repetitive lifting with vague symptoms of headaches, fever, and sunburn."

15. In the form designated as "Physician's Report of Workers' Compensation Injury" (Claimant's Exhibit 5), dated August 4, 2017, Dr. Lugliani indicated that his objective findings were consistent with a work-related mechanism of injury. Dr. Lugliani released the Claimant to return to modified work from August 5 to August 15, 2017, with a 10 lbs lifting restriction. In a narrative report of the same date, Dr. Lugliani's assessment was "status post overuse injury, sustaining: (1) right shoulder pain; (2) cervicalgia; (3) symptoms of myogenic thoracic outlet syndrome;; (4) possible 1st rib subluxation; and, (5) right upper extremity neuropathic complaints. The ALJ finds that Dr. Lugliani has rendered an opinion, to a reasonable degree of medical probability, that the Claimant sustained an "occupational disease" to her right shoulder, arising out of the course and scope of her employment with the Employer.

16. On October 9, 2017, the Claimant presented to Morgan Campbell, D.O., of the Partners in Health Family Medicine, who diagnosed "rotator cuff syndrome of the right shoulder, active." Dr. Campbell indicated that the Claimant's "symptoms were not greatly (*sic*) [improved] with physical therapy. An MRI (magnetic resonance imaging) has been ordered today for further evaluation…."

Independent Medical Examination (IME) by John Burris, M.D.

17. On October 17, 2017, at the Respondent's request, an IME was performed on Claimant by Dr. Burris. Among other things, Dr. Burris concluded in his report of that same date that the Claimant did not suffer a workplace injury with the Employer, primarily because "there is no evidence of a specific mechanism which would constitute a workplace injury." Dr. Burris failed to adequately explain what "mechanism of injury…would constitute a **workplace** (emphasis supplied) injury." The ALJ declines to take his statement on faith. Further, ATP Dr. Lugliani contradicts Dr. Burris' opinion. The ALJ infers and finds that the scope of Dr. Burris' IME concerned the existence of a traumatic event (there was none per se), to the exclusion of a consideration of an occupational disease with gradual onset.

Ultimate Findings

18. The ALJ finds that Claimant's testimony to be credible. Further, the ALJ finds the testimonies of the lay witnesses called by the Respondent, although not lacking in credibility, do not detract from the credibility of the Claimant's testimony. Additionally, the ALJ finds the opinions of all the treatment providers at COMPI, including ATP Dr. Lugliani, as well as Dr. Campbell at Partners in Health Family Medicine, to be significantly more credible than the opinions of Respondent's IME, Dr. Burris.

19. Between conflicting testimonies and opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's version of events and the opinions of her authorized treatment providers, including ATP Dr. Lugliani and Dr. Campbell, and to reject all testimonies and opinions to the contrary.

20. The Claimant has proven, by a preponderance of the evidence that she suffered an occupational disease of her right shoulder, resulting directly from the repetitive lifting conditions under which her work was performed, which followed as a natural incident of her work and can be fairly traced to her employment as a proximate cause; and, does not come from a hazard to which she would have been equally exposed outside of her employment for the Employer.

21. The Claimant has proven, by preponderant evidence that all of her medical care and treatment for her work-related right shoulder condition at COMPI was authorized; referrals from COMPI were within the chain of authorized referrals; the treatment for the right shoulder condition was and is causally related to the Claimant's work-related occupation disease and reasonably necessary to cure and relieve the effects thereof.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558

(Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony was credible and the testimonies of the witnesses called by the Respondent, although not lacking in credibility, did not detract from the credibility of the Claimant's testimony. As further found, the opinions of all the treatment providers at COMPI, including ATP Dr. Lugliani, as well as Dr. Campbell at Partners in Family Medicine, to be more credible than the opinions of Respondent's IME, Dr. Burris.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting testimonies and opinions, the ALJ made a rational choice, based on substantial evidence, to accept the Claimant's version of events and the opinions of her authorized

treatment providers, including ATP Dr. Lugliani and Dr. Campbell, and to reject all testimonies and opinions to the contrary.

Occupational Disease

c. An "occupational disease" means a disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment. § 8-40-201 (14), C.R.S. *See City of Colorado Springs v. Indus. Claim Appeals Office,* 89 P. 3d 504 (Colo. App. 2004). An occupational disease might be said to "occur" when the disease becomes **disabling.** *See Union Carbide Corporation v. Indus. Claim Appeals Office,* 128 P.3d 319 (Colo. App. 2005). As found, Claimant has proven an occupational disease to her right shoulder with a date of last injurious exposure of May 7, 2017.

Burden of Proof

d. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden with respect to the compensability of the occupational disease to her right shoulder; and, with respect to authorized medical benefits.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondent shall pay the costs of all authorized, causally-related and reasonably necessary medical care and treatment for the Claimant's compensable

occupational disease of her right shoulder, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Any and all issues not decided herein are reserved for future decision.

DATED this_____day of January 2018.

ISSUES

I. Did Claimant overcome the Division Independent Medical Examination (DIME) on the issues of maximum medical improvement (MMI) and permanent partial disability (PPD)?

II. Maintenance medical treatment after MMI was admitted on the Final Admission of Liability.

III. The parties previously stipulated to reserve the issue of permanent total disability (PTD).

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant sustained an admitted industrial injury on July 11, 2016.

2. John Burris, M.D., an authorized treating physician, placed Claimant at MMI with no impairment and no work restrictions on December 7, 2016.

3. At the request of Claimant, a DIME was done by Dr. Orgel on June 7, 2017. Dr. Orgel determined Claimant reached MMI on December 6, 2016. He provided an impairment rating of 7% whole person for the lumbar spine. Lumbar flexion was invalid on the initial testing and again on June 8, 2017.

4. Dr. Orgel considered whether complaints of neck and thoracic back pain were causally related to the work injury. Dr. Orgel declined to provide an impairment rating for the neck or thoracic back.

5. Respondents filed a Final Admission of Liability on June 23, 2017 accepting the DIME opinions on MMI and impairment.

6. Claimant obtained an independent medical examination (IME) with Carolyn Gellrick, M.D. In her report of September 19, 2017, Dr. Gellrick agreed with the date of MMI as assigned by the DIME physician, Dr. Orgel. She noted there was no evidence of thoracic spine dysfunction or cervical spine dysfunction. She provided an impairment rating for the lumbar spine only. She and Dr. Orgel both used a Table 53 rating of 5% whole person. Dr. Gellrick noted that during her evaluation of Claimant, the range of motion testing was valid. She assigned 5% whole person based on range of motion for a total rating of 10% whole person for the lumbar spine.

7. Dr. Gellrick noted there was a difference of opinion between her impairment rating and the one assigned by the DIME. The difference was based upon whether range of motion measurements were valid. Dr. Gellrick did not identify any error made by the DIME physician in determining Claimant's impairment rating.

8. Dr. Orgel noted there were nonphysiological elements to Claimant's presentation including pain with light touch and voluntary motion observed much greater than voluntary movement on request.

9. Jonathan Bloch, M.D., another of the authorized treating physicians, stated in a report dated November 11, 2016 that Claimant had new overriding neck and right shoulder pain however the claim was for the low back only. In his opinion, "it most likely represents symptom magnification for purposes of obtaining WC benefits or prolonging this claim."

10. Claimant testified that she hurt her back and neck when she fell on July 11, 2016. She testified Dr. Zimmerman recommended medial branch blocks and Dr. Bloch recommended an EMG but she did not have either. She does not feel the doctors paid attention to her neck. Claimant testified she disagrees that she is at MMI and she feels she needs treatment for her back and neck.

11. On November 11, 2016, Dr. Bloch indicated the medical treatment guidelines would not indicate a rhizotomy without a diagnostic response to injection. He indicated he would order an EMG to further evaluate radiculopathy; however, he transferred care to the delayed recovery specialist.

12. Dr. Burris did not recommend a rhizotomy, medial branch block or an EMG. When he placed Claimant at MMI, his only recommendation for maintenance treatment was to complete two sessions of massage therapy.

13. The DIME physician, Dr. Orgel, stated there was no specific maintenance treatment needed. He encouraged activity and use of over-the-counter analgesics.

14. Claimant's IME physician, Dr. Gellrick, indicated Claimant needed to continue an exercise program and should continue NSAIDs. There were no other recommendations for maintenance treatment.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

1. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

2. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

5. MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

6. As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury, including whether the various components of the Claimant's medical condition are causally related to the industrial injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Martinez v. Industrial Claim Appeals Office, 176 P.3d 826*. Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

7. A DIME physician must apply the AMA Guides when determining Claimant's medical impairment rating. C.R.S. §8-42-101(3.7); C.R.S. §8-42-107(8)(c). The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

8. Dr. Burris, Dr. Orgel and Dr. Gellrick all agree Claimant reached maximum medical improvement by December 6, 2016. Claimant's testimony to the contrary does not meet the burden of clear and convincing evidence. Claimant has failed to overcome the Division IME on the issue of maximum medical improvement.

9. The DIME physician, Dr. Orgel, invalidated flexion range of motion measurements based on measurements taken on two different dates. While Claimant's expert, Dr. Gellrick, found the flexion range of motion measurements to be valid on the date of her examination, she made no representation that the rating done by Dr. Orgel was incorrect. A mere difference of opinion between physicians does not necessarily

rise to the level of clear and convincing evidence. Claimant has failed to overcome the Division IME on the issue of permanent impairment.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to overcome the Division IME on the issues of maximum medical improvement and permanent impairment.

2. Per prior Order, the issue of permanent total disability is reserved for future determination.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 3, 2018

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he is entitled to temporary total disability benefits.

STIPULATIONS

The parties stipulated that Claimant's average weekly wage is $1,163.00.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant commenced employment for the employer on June 6, 2017. The employer is a drilling company. Claimant worked at Rig 461 located in the area of Ft. Lupton, Colorado. Claimant was hired as a floorhand, which is an entry-level position. Claimant's job duties include throwing tongs, pulling slips, and general rig cleanup. The slips can weigh in excess of 300 pounds. Claimant's regular work shift was from 5:45 pm to 6:00 am, 14 days on, then 14 days off.

2. Claimant sustained a compensable left upper extremity injury on June 7, 2017 while pulling slips with a co-worker. Claimant estimated the weight of the slip he was pulling at the time of the accident was approximately 250 pounds. Claimant initially received medical care onsite with Axiom, an online nursing service.

3. On June 8, 2017, Claimant was seen at Banner Health by Dr. James Hebard, the authorized treating physician (ATP). Dr. Hebard reported that Claimant was able to return to modified duties beginning on June 8, 2017. He was generally to refrain from use of his left hand and arm. Dr. Hebard completed a Physician's Report of Workers' Compensation Injury on June 8, 2017, outlining Claimant's restrictions. Dr. Hebard also indicated that Claimant was to remain on modified duty until at least his next appointment, which was scheduled for June 22, 2017. (Respondents' Submission, p. 57) The ALJ credits Dr. Hebard's June 8, 2017, report as it relates to Claimant's restrictions and inability to perform his regular job duties.

4. Following his medical appointment with Dr. Hebard, Claimant returned to the jobsite where he went to sleep in the company-provided crew quarters. After Claimant awoke at approximately midnight, Claimant was directed to find Joey Strath, the rig supervisor, to discuss modified job duties that the employer had available for Claimant.

5. Joey Strath was a rig supervisor on location at Rig 461. During the period of time that Claimant slept on June 8, 2017, he received a modified job offer from corporate headquarters based on the restrictions assigned by Dr. Hebard, to present to Claimant.

6. This modified job offer (RS 58-59) was addressed to Claimant. It included a transitional work plan (TWP) within the restrictions assigned by Dr. Hebard. The TWP position was as a Modified Floorhand at full wages and full-time hours. The modified position called for Claimant to perform general administrative and other duties assigned within the restrictions assigned by Dr. Hebard in his Work Status Report. (RS 57) The TWP provided that the modified job being offered would not exceed the physical limitations outlined by Dr. Hebard. The modified job offer provided that Claimant would only be assigned tasks consistent with Claimant's physical abilities, knowledge and skills, and if necessary, training would be provided.

7. The modified job was for a limited period of time. The modified job was from June 8, 2017 through June 22, 2017. The modified job offer also indicated that "after each appointment with an Examining Physician or Treating Physician, a new Bona Fide Offer of Employment will be generated by Human Resources for your signature." (RS 58-59)

8. Claimant and Joey Strath met sometime around midnight on either June 8, 2017, or in the early morning hours of June 9, 2017, which was during Claimant's regular work shift. Mr. Strath handed the TWP to Claimant who held onto and looked at the document. Mr. Strath assumed Claimant was reading the TWP. Claimant returned the document to Mr. Strath, who put it down on his desk where Strath and Claimant were sitting. Mr. Strath went through the TWP with Claimant point-by-point, including the fact that Claimant would receive a full rate of pay, full-time hours, and that the company was offering him a modified position within the work restrictions assigned by Dr. Hebard. Mr. Strath advised Claimant that he would be reviewing company documents such as prior safety alerts, training manuals, the new employee orientation handbook, and other documents located in the safety room.

9. Mr. Strath handed the document back to Claimant. Claimant verbally declined the modified job offer for the period of June 8, 2017, through June 22, 2017, and told Strath that he did not want to read books for 12 hours a day for two weeks. After Claimant verbally declined the modified job offer, Mr. Strath handed the TWP to Claimant and asked him to sign the document confirming that he was declining the modified job offer.

10. Claimant initialed a line on the TWP which stated, "I have read and declined this Bona Fide Offer." Claimant signed the document, printed his name, and dated the document June 8, 2017. At Claimant's request, he was then given a ride home.

11. Claimant does not contend that the modified job duties offered were outside of the physical restrictions assigned by Dr. Hebard. Rather, he contends that he did not understand what he was signing. He agrees that he completed the form with his initials, signature, handwritten name and date. Claimant contends that when the job offer was made, Joey Strath treated him like a child. The ALJ does not find Claimant's contentions that he did not understand what he was signing, or that Mr. Strath was treating him like a child, to be credible or persuasive.

12. Mr. Strath met with Claimant to offer the transitional work assignment. He did so in a straightforward manner. He was calm, not nasty or aggressive. Mr. Strath denies that he spoke to Claimant in a demeaning manner and further stated that it was absolutely not true that he treated Claimant like a child. In Mr. Strath's observations, Claimant fully understood the document and at no time during their meeting did Claimant ask questions indicating that he did not understand what he was signing. Claimant was aware of his surroundings and what was being discussed.

13. The ALJ finds Mr. Strath's testimony to be credible.

14. Although Dr. Hebard's June 8, 2017, report indicates Claimant was to return for a follow up evaluation on June 22, 2017, and that work restrictions would be addressed, no records were submitted which indicate Claimant returned to Dr. Hebard on June 22, 2017.

15. On July 17, 2017, Claimant returned to Banner Occupational Health Clinic and was evaluated by Dr. Kevin Vlahovich. Dr. Vlahovich evaluated Claimant and modified his restrictions to no lifting of more than 5 pounds with his left upper extremity and restricted Claimant from doing any overhead work with his left arm. Dr. Vlahovich continued to restrict Claimant to modified duty. This ALJ credits Dr. Vlahovich's report as it relates to Claimant's restrictions and inability to perform his regular job from June 8, 2017, through at least July 17, 2017.

16. Claimant's June 7, 2017, industrial injury was disabling and prevented Claimant from performing his regular job duties as a floorhand.

17. Claimant's disability and inability to perform his regular job duties as a floorhand lasted more than three work shifts.

18. Claimant has not worked a shift for Employer since he was injured on June 7, 2017.

19. Claimant's injury and disability is the cause of his actual wage loss.

20. The earliest date on which Claimant could have become entitled to temporary disability benefits was June 11, 2017.

21. Even though Claimant refused an offer of modified employment for a limited period of time, his refusal occurred on June 8, 2017, or June 9, 2017, which is before Claimant missed three work shifts and became entitled to temporary disability benefits.

22. On July 19, 2017, Respondents filed a General Admission of Liability for medical benefits only. Respondents did not admit liability for temporary disability benefits and have not paid any temporary disability benefits.

23. Based on the stipulation of the parties, Claimant's average weekly wage is $1,163.00. This results in a weekly temporary total disability ("TTD") rate of $775.33.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

I. Whether Claimant has proven by a preponderance of the evidence that he is entitled to temporary total disability benefits.

To prove entitlement to TTD benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair Claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

The existence of disability presents a question of fact for the ALJ. There is no requirement that Claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

As found, Claimant's June 7, 2017, industrial injury was disabling and prevented Claimant from performing his regular job duties as a floorhand. This finding was based on the work restrictions issued by Dr. Hebard on June 8, 2017, which basically precluded Claimant from using his left upper extremity, and restricted Claimant to modified duty. This finding was also supported by the fact that Employer offered Claimant modified employment as a Modified Floorhand around midnight on June 8, 2017, or the early morning of June 9, 2017, consistent with the work restrictions set forth by Dr. Hebard on June 8, 2017.

As found, Claimant's industrial injury caused Claimant to miss more than three work shifts and is the cause of his wage loss. This finding is based on the fact that Claimant was precluded from performing his regular job as of June 8, 2017, and Claimant has not returned to work for Employer in any capacity since his injury. The fact that Claimant refused an offer of modified employment, which was made before he became entitled to temporary disability benefits, does not negate this finding.

Respondents argued that Claimant's refusal to accept the offer of modified employment is the cause of Claimant's wage loss and not the industrial injury and that Claimant is not entitled to TTD in the first instance. This ALJ does not find such argument to be persuasive. As found, Claimant's injury and restrictions preclude him from performing his regular job duties and is the cause of his wage loss. Claimant's

wage loss is not due to his refusal to accept a modified job for a limited period of time which was made before Claimant became entitled to temporary disability benefits.

Refusal of an offer of modified employment can be the basis for the termination of temporary total disability benefits pursuant to §8-42-105(3)(d)(1), C.R.S. However, Respondents are not seeking to terminate Claimant's temporary total disability benefits pursuant to §8-42-105(3)(d)(1), C.R.S., based on the refusal of an offer of modified employment since at the time Claimant refused the offer of modified employment, he was neither entitled to, nor receiving, temporary total disability benefits. (*See Archuletta v. Industrial Claim Appeals Office*, 381 P.3d 374 (Colo. App. 2016)(Temporary total disability benefits cannot be terminated pursuant to §8-42-105(3), C.R.S., when temporary total disability benefits have yet to commence.)

Therefore, this ALJ concludes that Claimant has established by a preponderance of the evidence that he is entitled to temporary total disability benefits from June 8, 2017 and continuing, until terminated by law. Claimant is entitled to temporary total disability benefits at a weekly rate of $775.33, which is based on an average weekly wage of $1,163.00, subject to any offsets.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall pay Claimant temporary total disability benefits at a weekly rate of $775.33, subject to any offsets, from June 8, 2017 and continuing, until terminated by law.

2. Claimant shall be paid interest at the rate of 8% per annum on compensation benefits not paid when due.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 8, 2018

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-043-568-02

ISSUE

- Whether claimant has proven by a preponderance of the evidence that her average weekly wage should be increased?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant has worked as a temporary seasonal employee for Employer for several years. Claimant also does some occasional work for other employers.

2. Claimant's earnings from 2012 through 2016 have been $10,631, $11,031, $11,287, $7,408, and $10,053, respectively.

3. Claimant suffered a work-related injury on March 24, 2017. Respondents filed a General Admission of Liability on May 2, 2017.

4. Claimant testified that she typically worked for Employer from January 1st or 2nd through the end of the tax season. Her 2017 earnings from Employer through the date of her injury were $5,215.18.

5. After the tax season ends, she does not work another regular seasonal position during the year. She additionally works for Boulder County during elections, and has some childcare jobs.

6. Claimant was able to work for Boulder County in October 2017 during the elections and earned $1,360.44.

7. Claimant testified that at the time she was injured, she was also working for Boulder Valley Christian Church in childcare. Claimant testified that she earned she earned $45 for January, $45 for February, and $90 for March 2017. Claimant's employment extended through May, 2017 at $90 per month for Boulder Valley Christian Church, but she was unable to work April and May 2017 due to her work injury.

8. Respondents admitted to an average weekly wage of $114.58 with a compensation rate of $76.39. Respondents arrived at this amount purportedly by adding Claimant's earnings from March 25, 2016 through March 10, 2017 arriving at $5,843.66. And then dividing that amount by fifty-one weeks. This calculation is in error. First, when the ALJ sums Claimant's earnings from Employer for the same period, the amount is$5,188.90. Second, the period of time calculated equals fifty weeks, not fifty-one.

9. The calculation sheet attached to Respondents' General Admission shows that Claimant earned $6,417.24 during the fifty-one week period from March 25, 2016 through March 17, 2017.[1] Claimant's average weekly wage from Employer is $125.82, with a corresponding TTD rate of $83.04.

10. Claimant's wages for her concurrent employment with Boulder Valley Christian Church for January through March, 2017 equal $180. But for Claimant's injury, she would have earned an additional $180 for April and May, at which time the church eliminated the position. By dividing the total amount Claimant would have earned, $360, by the five months she worked, results in a monthly average of $72. To arrive at Claimant's average weekly wage for her concurrent employment, we multiply $72 by 12, and then divide that amount by 52 weeks. Claimant's average weekly wage for her concurrent employment equals $16.61, with a corresponding TTD rate of $10.96.

11. Combining Claimant's earnings from Employer and her concurrent employer yields an AWW of $142.43. Her corresponding TTD rate is $94.00.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. C.R.S § 8-40-102(1). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. C.R.S § 8-43-201. A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claims Appeals Office,* 5 P.3d 385, 389 (Colo. App. 2000).

The average weekly wage of an injured employee is the basis upon which to compute compensation payments. C.R.S. section 8-42-102(2) provides that a claimant's average weekly wage is determined based on her earnings at the time of injury. A judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of the injury. *Pizza Hut . ICAO*, 18 P.3d 867, 869 (Colo. App. 2001). However, C.R.S. § 8-42-102(3) authorizes a judge to exercise discretionary authority to calculate an average weekly wage in another manner if the prescribed methods will not fairly calculate the average weekly wage based on the particular circumstances of the case. *Campbell v. IBM Corp.*, 867 P.2d 77, 88 (Colo. App. 1993).

[1] Although it appears that Employer calculated Claimant's earning on March 30, 2017; the amount did not include Claimant's earnings for the last week of her pre-injury employment.

The objective in calculating an average weekly wage is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Therefore, C.R.S. § 8-42-102(3) grants a judge substantial discretion to modify the average weekly wage if the statutorily prescribed method will not fairly compute a claimant's wages based on the circumstances. *In re Broomfield*, W.C. No. 4-651-471 (ICAO, March 5, 2007).

Where an injury impairs a claimant's ability ability to earn from concurrent employment, a "fair" computation of the average weekly wage may warrant inclusion of all such wages. *Jefferson County Pub. Sch. V. Dragoo*, 765 P.2d 636 (Colo. App. 1988).

Claimant has worked for Employer for several years as a temporary seasonal employee during the tax season. On March 24, 2017, Claimant sustained an on-the-job injury. Respondents filed a General Admission of Liability, admitting to the claim and admitting to temporary total disability benefits. However, Respondents miscalculated Claimant's average weekly wage by using an incorrect wage amount, an incorrect time period, and by failing to include her concurrent employment.

Claimant seeks to increase her average weekly wage by using the amount of her seasonal earnings and extending them throughout the year. The ALJ finds that doing so would not fairly approximate Claimant's wage loss during 2017.

Claimant's average weekly wage is $142.43. Her corresponding TTD rate is $94.00.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's average weekly wage is $142.43. Her corresponding TTD rate is $94.00.

2. Insurer shall pay Claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 8, 2018

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant proved by a preponderance of the evidence that the right shoulder surgery Claimant underwent on March 2, 2017, and subsequent treatment, is reasonable, necessary and related to Claimant's July 26, 2016, work injury; and

2. Whether Claimant proved by a preponderance of the evidence that she was disabled from her usual employment and is therefore entitled to Temporary Total Disability (TTD) benefits from March 2, 2017, until June 6, 2017, when she was released to full duty.

STIPULATIONS OF FACT

1. The parties stipulate and agree that Claimant, on July 26, 2016, sustained a compensable right shoulder injury that arises out of and in the course of her employment with Employer;
2. The parties stipulate and agree that Claimant's average weekly wage (AWW) is $354.31; and
3. The parties stipulate and agree that Respondents will pay Claimant $2,600.00 as compensation for lost wages resulting from her work injury from July 26, 2016, to March 1, 2017.

FINDINGS OF FACT

1. Claimant, who was 44 years old at the date of hearing, worked in Gunnison, CO for Employer as a housekeeper. Her job duties consisted of cleaning and organizing hotel rooms, including bed-making. On July 26, 2016, Claimant sustained an injury to her right shoulder that arises out of and in the course of her employment with Employer. The injury occurred while she was putting new linens on a mattress. As she flared the flat sheet out, up and away from her body to spread the linen over the mattress her right shoulder popped and she felt immediate pain.

2. Claimant did not complete her shift on July 26, 2016, and she reported a right shoulder injury to Employer. An Employer's First Report of Injury was filed. She was sent for treatment at Gunnison Valley Health Emergency Services (GVH).

3. Claimant was examined by Michael Meeuwsen, MD, on July 26, 2016, at GVH. Claimant reported she was injured earlier that day while making beds at work. She was diagnosed with a right shoulder rotator cuff strain, prescribed Ibuprofen 600mg, and referred for physical therapy (PT). Claimant was released to modified duty with the following restriction: "Patient is to avoid making beds or performing other weighted lifting activities while reaching away from [the] body for 2 weeks."

4. Claimant began treatment for her work injury at Gunnison Valley Health Family Medicine Clinic (FMC) on August 10, 2016. She reported a right shoulder injury that occurred at work while making beds and the inability to lift her right arm above 90 degrees. She reported she was working modified duty and was limited to dusting, vacuuming and bed-making with help. She was diagnosed with suspected right rotator cuff injury, and referred for an orthopedic evaluation and PT.

5. The following day, August 11, 2016, Claimant was examined by Dr. David Elfenbein, MD, for orthopedic evaluation. Dr. Elfenbein is an orthopedic surgeon. She reported a right shoulder injury that occurred at work while making beds, and the inability to lift her arm without pain. Dr. Elfenbein noted diffuse tenderness throughout the right shoulder, which was worse in the bicipital groove and radiated down her arm and upwards into her neck. Dr. Elfenbein diagnosed right bicipital and rotator cuff tendinitis. He assigned work restrictions of no lifting over 10 lbs. and no reaching overhead.

6. Claimant began a course of PT on August 25, 2016. She regularly reported her right shoulder symptoms were exacerbated by her work activities.

7. On September 8, 2016, Claimant returned to Dr. Elfenbein. She reported significant pain in the right bicipital groove and mild pain in the subacromial space. Dr. Elfenbein recommended an injection of Betamethasone and Lidocaine into the bicipital groove and biceps tendon sheath. Claimant received the injection that day. Dr. Elfenbein noted Claimant was being required to perform work duties beyond what her work restrictions permitted. He maintained Claimant's light duty status and added a "no bed making" restriction. Claimant was released to work light duty.

8. Claimant returned to Dr. Elfenbein on September 22, 2016. She reported significant pain in the right bicipital groove, but reduced pain in the subacromial space. Dr. Elfenbein noted Claimant was still being required to perform work beyond the limitations set forth by her work restrictions, including routinely doing 45 rooms per day and making beds despite her restrictions. Dr. Elfenbein discontinued PT and ordered an MRI. He maintained Claimant's work restrictions and light duty status.

9. Claimant underwent an MRI on September 30, 2016. It indicated inflammation of the shoulder joint and strain of the biceps tendon.

10. On October 6, 2016, Claimant returned to Dr. Elfenbein. She reported reduced pain in the bicipital groove and subacromial space since the injection on September 8, 2016, but increased pain in the acromioclavicular (AC) joint. Dr. Elfenbein reviewed the MRI.

He diagnosed Claimant with AC joint arthritis, subacromial spur, and bicipital and AC joint tendinitis. He recommended an injection of Betamethasone and Lidocaine into the AC joint tendinitis. Claimant received the injection that day. Dr. Elfenbein noted Claimant was still being required to do more at work than her restrictions permitted. He maintained Claimant's work restrictions and light duty status.

11. Claimant returned to Dr. Elfenbein on October 20, 2016. She reported increased pain in the bicipital groove and subacromial space, but reduced pain in the AC joint arthritis since the injection on October 6, 2016. Dr. Elfenbein recommended restarting PT. He maintained her work restrictions and light duty status, but noted she was being required to perform work prohibited by her restrictions.

12. On November 10, 2016, Respondents filed a Notice of Contest (NOC). On November 17, 2016 Claimant returned to Dr. Elfenbein. She reported she was doing better because she was not working, but still had pain in the bicipital groove, AC joint, and subacromial space. Dr. Elfenbein recommended right shoulder surgery, inclusive of subacromial decompression (SAD), distal clavicle resection (DCR), and biceps tenodesis. He maintained Claimant's restrictions and light duty status.

13. Respondents denied the request for surgery but permitted Claimant to continue conservative treatment. Claimant returned to Dr. Elfenbein on February 8, 2017. She reported severe right shoulder pain that was waking her at night. Dr. Elfenbein noted Claimant was being required to work full duty despite her continued work restrictions. He took her off work completely because Claimant's restrictions were not honored.

14. On February 16, 2017, Claimant returned to Dr. Elfenbein. She reported pain in the right bicipital groove, AC joint and subacromial space. Dr. Elfenbein continued Claimant's no work status. Claimant returned to Dr. Elfenbein on February 23, 2017. She reported worsening right shoulder pain that was making her miserable and preventing her from sleeping. She decided to proceed with surgery because she could no longer bear the pain. Dr. Elfenbein continued Claimant's no work status and scheduled her for surgery.

15. On March 2, 2017, Claimant underwent right shoulder surgery, inclusive of SAD, DCR and biceps tenodesis. It was performed by Dr. Elfenbein. The operative report indicates there was fraying and tearing of the superior labrum at the level of the biceps insertion, large subacromial spur and AC joint arthritis. Dr. Elfenbein opined the surgery Claimant underwent on March 2, 2017, was reasonable, necessary and related treatment because her work injury caused biceps fraying and tearing near the labrum (*i.e.* tendinitis), rotator cuff tendinitis and aggravated Claimant's preexisting AC joint arthritis.

16. Dr. Elfenbein credibly opined the biceps tenodesis was reasonable and necessary to treat the fraying and tearing of the superior labrum at the level of the biceps insertion because it was caused by Claimant's work injury. He opined the SAD and DCR procedures were reasonable, necessary and related to her work injury because the

injury aggravated her preexisting AC joint arthritis. He further credibly opined that all these procedures were done at the same time to avoid prolonged recovery and revision surgery, and thus were reasonable, necessary and related treatment.

17. Dr. John Schwappach, an orthopedic surgeon, testified Employer's failure to adhere to Claimant's work restrictions was a potential contributor to the lack of improvement she experienced through conservative treatment. Dr. Elfenbein opined this was a new injury. Dr. Schwappach testified this was a preexisting injury. The preponderance of the evidence establishes the fraying and tearing is a preexisting condition as Dr. Schwappach opined. The substantial evidence establishes Claimant's work injury aggravated, accelerated, or combined with the preexisting fraying and tearing to cause the need for surgery. Of note is the evidence that Claimant's right shoulder was asymptomatic prior to suffering her work injury.

18. The evidence established that Claimant underwent conservative treatment to no avail. She received selective injections that provided temporary relief, but no long tern benefits. This treatment is indicated by the Guidelines but failed to help Claimant recover from her industrial injury because the benefits of treatment were not supported by adherence to Claimant's work restrictions. Thus, her treating physician determined she was a surgical candidate and recommended surgery. Claimant credibly testified the surgery reduced her shoulder pain and improved her range of motion. Dr. Elfenbein, her treating orthopedist, opined the surgeries were reasonable, necessary, and related to her work injury because conservative measures and injections did not improve her condition.

19. Claimant was released to full duty on June 6, 2016. Claimant has not been placed at MMI.

CONCLUSIONS OF LAW

General legal principles

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. Section 8-41-301(1)(b), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991).

5. For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. Section 8-41-301(1)(c) C.R.S.; *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the judge. *Faulkner,* 12 P.3d at 846.

6. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the judge to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

Reasonable, necessary and related medical treatment

7. Here, Claimant suffered a work injury to her right shoulder on July 26, 2016, that caused biceps tendinitis, rotator cuff tendinitis, and aggravated her preexisting AC joint arthritis. Claimant had no issues with her right shoulder prior to

suffering this injury. Her preexisting subacromial spur and AC joint arthritis were asymptomatic and did not cause her pain or mobility issues prior to July 26, 2016. As indicated in the operative report, prior to undergoing surgery, there is objective evidence of labral fraying and tearing where the biceps tendon connects to the labrum. This area of the shoulder is located in the bicipital groove; where Claimant's pain was most centralized throughout her course of treatment.

8. Dr. Elfenbein opined this was a new injury. Dr. Schwappach testified this was a preexisting injury. The preponderance of the evidence establishes the fraying and tearing is a preexisting condition as Dr. Schwappach opined. The substantial evidence establishes Claimant's work injury aggravated, accelerated, or combined with the preexisting fraying and tearing to cause the need for surgery. Of note is the evidence that Claimant's right shoulder was asymptomatic prior to suffering the July 26, 2016, work injury and her course of treatment was not supported by the Employer's continued assignment of duties beyond her work restrictions.

9. The *AMA Guides* acknowledge that "reasonable medical care may include deviations from the Guidelines in individual cases." See WCRP Rule 17-4(A). When requested treatment deviates from the *AMA Guides* the provider is directed to Rule 16-10 (B) to make the request to the insurance carrier, and then to Rule 16-11(C)(3) to have any unresolved dispute determined by an judge. Because a judge is designated as an arbiter for disputes pertinent to treatment requested outside of the *AMA Guides*, Section 8-43-201(3) provides that an judge is "not required" to use the *AMA Guides* as the sole basis for a determination that a medical treatment is reasonable or necessary. *Cordova v. Walmart Stores, Inc.*, W.C. No. 4-926- 520-05 (ICAO Mar. 14, 2017).

10. Throughout her course of treatment, Claimant regularly reported Employer was not respecting her work restrictions and requiring her to perform duties she was supposed to avoid. At hearing, Claimant testified Employer did not respect her work restrictions and regularly required her perform tasks she was supposed to refrain from doing, including making up to 45 rooms per work shift. Dr. Schwappach testified that work restrictions and treatment are important and failure to adhere to a worker's restrictions can have an impact on the recovery process.

11. The evidence established that Claimant underwent conservative treatment to no avail. She received selective injections that provided temporary relief, but no long tern benefits. This treatment is indicated by the Guidelines but failed to help Claimant recover from her industrial injury. Thus, her treating physicians determined she was a surgical candidate and recommended surgery. Claimant credibly testified the surgery reduced her shoulder pain and improved her range of motion. Dr. Elfenbein, her treating orthopedist, opined the surgeries were reasonable, necessary, and related to her work injury because conservative measures and injections did not improve her condition.

12. Thus, the preponderance of the evidence establishes the surgery Claimant underwent on March 2, 2017, is reasonable, necessary, and related treatment to cure and relieve the effects of her July 26, 2016, work injury. The substantial

evidence also supports that Claimant's post-surgery physician follow-ups and PT sessions are reasonable, necessary, and related to her July 26, 2016, work injury.

TTD benefits

13. An employee is eligible for TTD benefits if: (1) the injury causes disability; (2) the injured employee leaves work as a result of the injury; and (3) the temporary disability is total and lasts more than three regular working days. Sections 8–42–103(1)(a) and (b), 8–42–105(1), C.R.S.; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542, 546 (Colo. 1995). To obtain TTD benefits Claimant must establish a causal connection between his work-related injury and a subsequent wage loss. Section 8-42- 103(1)(a), C.R.S.; *PDM Molding, supra.*

14. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric,* 971 P.2d 641 (Colo. 1999). TTD benefits ordinarily continue until one of the occurrences listed in Section 8-42- 105(3), C.R.S.; *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997).

15. The parties stipulated to lost wages from the date of injury, July 26, 2017, until the day before surgery, March 1, 2017. The preponderance of the evidence establishes Claimant is entitled to TTD benefits from her date of surgery, March 2, 2017, until she was released to full duty on June 6, 2017.

16. The surgery Claimant underwent on March 2, 2017, caused Claimant to miss work and suffer lost wages. The surgery, as noted above, is reasonable, necessary, and related treatment. Thus, Claimant's work injury (1) caused disability; (2) that resulted in her leaving work; (3) and the disability is total and lasted more than three regular working day. Therefore, the substantial evidence establishes that Respondents are liable to Claimant for lost wage benefits until she was released to full duty on June 6, 2017.

ORDER

1. Respondents shall be liable for Claimant's March 2, 2017, surgical procedure as it was shown to be reasonable, necessary and related to her July 26, 2016, work injury.

2. Respondents shall also be liable for the physician follow-ups and physical therapy post-surgery as these medical benefits are reasonable, necessary and related to her July 26, 2016, work injury.

3. Respondents shall be liable to Claimant for TTD benefits from March 2, 2017, to June 6, 2017.

4. The Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 8, 2018

Denver, CO 80203

ISSUES

- Whether Claimant proved by a preponderance of the evidence that labral surgery on her hip is reasonable, necessary, and related to the industrial injury.

FINDINGS OF FACT

1. Claimant began working for Employer in approximately 2008. She worked as a paraprofessional in the classroom, assisting autistic children.

2. Claimant's medical history was significant, as she was diagnosed with fibromyalgia prior to 2016. Records from John McLaughlin, M.D. were admitted at hearing. Claimant was evaluated by Dr. McLaughlin on August 29, 2014. At that time, Claimant reported numbness in her hands and feet, ongoing pain in the muscles all over her body, as well as anxiety. Dr. McLaughlin's assessment was anxiety. In a follow-up appointment on September 30, 2004, Dr. McLaughlin diagnosed anxiety, as well as myalgia, raising the possibility of fibromyalgia.

3. On October 28, 2014, Claimant was evaluated by Michael Charney, M.D. at Denver Arthritis Clinic. Claimant described pain in all four extremities, including a burning sensation in both upper and lower extremities. Dr. Charney noted mild myofascial tenderness, but no inflamed joints at the time of the examination. His impression included dysesthesias/paresthesias in a non-anatomic distribution, which raised concern about either a primary neuropathic process or a less likely underlying systemic autoimmune disease. Dr. Charney recommended a follow-up with the neurologist and serology testing. The ALJ noted Dr. Charney did not document any hip pain at this evaluation.

4. There was no evidence in the record Claimant required right hip treatment prior to October 4, 2016, secondary to the fibromyalgia diagnosis.

5. Claimant sustained an admitted industrial injury on October 4, 2016 while working for Employer. Claimant was injured while helping an autistic student on a balance beam. She bent down to pick up a visual cue card and was pulled by the student to the right. Claimant testified she felt pain on the right side of her pelvis and right hip. Claimant said she had not experienced pain like that before.

6. On October 4, 2016, Claimant was evaluated by Matthew Lugliani, M.D. at Health One. On examination, Claimant ambulated with an antalgic gait and mild paralumbar tenderness was noted on examination. Dr. Lugliani's assessment was right hip and low back pain after attempting to assist a special needs student. Claimant was given a prescription for Norco, ibuprofen and Flexeril. In the M-164, Dr. Lugliani noted

her injuries were consistent with her history and/or work-related mechanism of injury. In the follow-up appointment on October 18, 2016, Claimant reported massage therapy caused increased pain.

7. Claimant's treatment was transferred to Paul Ogden, M.D. at Workwell. Dr. Ogden evaluated Claimant on October 20, 2016. Dr. Ogden noted limited range of motion ("ROM") on extension, flexion, as well as tenderness over the right SI area. Tenderness and limited ROM was found at the greater trochanter, as was a positive FABER test. Dr. Ogden's diagnosis was: strain of muscle, fascia and tendon of lower back-initial encounter; radiculopathy, lumbosacral region; strain of muscle, fascia and tendon of right hip-initial encounter; fibromyalgia. Dr. Ogden issued work restrictions, ordered massage therapy and physical therapy ("PT").

8. Dr. Ogden oversaw Claimant's treatment, evaluating her at regular intervals. Claimant received conserved treatment, including PT, chiropractic and massage treatments, as well as medications. Dr. Ogden's diagnoses remained the same over these evaluations. Claimant testified she had ongoing right hip pain.

9. In December 2, 2016, Claimant underwent an MRI of her lumbar spine and right hip. The latter films were read by Charles Wennogle, M.D., whose impression was chondrolabral separation of the superior labrum, without chondral attenuation. In the MRI of the lumbar spine (from T12-L1 to L5-S1), no disc disease was present, no facet arthropathy was seen and there was no stenosis. Dr. Wennogle characterized this as a normal lumbar spine MRI.

10. Claimant underwent a right hip aspiration, arthrogram and local anesthetic injection/block on January 24, 2017. This was performed by David Solsberg, M.D. Dr. Solsberg found the hip joint to be normal and there were no complications with the procedure. Claimant's pain level prior to the procedure was 7/10, as was her pain level following the procedure.

11. On February 14, 2017, Claimant was evaluated by Scott Resig, M.D. He found tenderness over the great trochanter, as well as limited ROM of the right hip. Dr. Resig's assessment was: bursitis of the hip; labral tear; neurogenic pain. Dr. Resig administered a hip injection. Claimant's response to the injection was not documented. Claimant returned to Dr. Resig on February 14, 2017, at which time he administered another hip injection. No immediate pain relief was noted. Dr. Resig thought the pain could be coming from the back and recommended consideration of a physiatrist. Dr. Resig did not believe a hip scope would help her, but noted Claimant might need to see a hip arthroscopy specialist.

12. Claimant was evaluated by Samuel Chan, M.D. (Physiatrist) on March 27, 2017. Claimant described chronic pain in the lumbar spine area, which radiated to the right anterior hip. Prolonged standing and sitting exacerbated her pain complaints. She also experienced numbness and tingling in the posterior thigh to the knee, as well as the right foot. On examination, tenderness to palpation was noted over the lumbosacral paraspinal musculature on the right side, with no tenderness over bilateral sacral

sulcus. Claimant's bilateral hip ROM was full. Dr. Chan's diagnosis was: right hip-MRI showed chondrolabral separation of the superior labrum; rule out lumbosacral radiculopathy on the right side. Dr. Chan noted despite negative diagnostic injections to the trochanteric bursa or the right hip intra-articularly, Claimant had positive MRI findings. Dr. Chan recommended consideration of a lumbar spine MRI and EMG testing.

13. Claimant underwent an MRI of the lumbar spine on April 1, 2017. The films were read by Matthew Chanin, M.D., who noted mild degenerative disc disease without impingement; transitional anatomy at L5-S1; no asymmetric right-sided findings to explain patient's rightward pain and radiculopathy; no STIR signal abnormality to suggest an acute bone or soft tissue injury.

14. On April 11, 2017, Claimant was evaluated by Nathan Faulkner, M.D. He noted her pain was localized over the groin, but radiated into the lateral hip and buttock. She reported pain was worse with twisting movements, squatting and walking. Dr. Faulkner's diagnoses (confirmed by the radiographs) included tear acetabular labrum; hip dysplasia; as well as a cam deformity consistent with femoral acetabular impingement. The MRI confirmed the labral tear. Dr. Faulkner opined that Claimant's work related injury was more likely than not the cause of her labral tear, as she had no antecedent hip symptoms prior to the injury even though there was some radiographic evidence of preexisting hip dysplasia and bony abnormality. Dr. Faulkner stated Claimant would likely require surgery to fix the labral tear. Dr. Faulkner recommended another opinion by Brian White, M.D.

15. The electrodiagnostic study of the right lower extremity, which was performed on April 11, 2017 by Yusuke Wakeshima, M.D., was normal. Dr. Wakeshima opined there was no electrophysiologic evidence of lumbar radiculopathy on the right and no electrophysiologic evidence of sural, superficial peroneal, peroneal or tibial neuropathy on the right.

16. Claimant returned to Dr. Ogden on April 17, 2017. Claimant reported continued right hip pain and Dr. Ogden documented a limp. Claimant was unable to reach FABER position with the right hip. Dr. Ogden's diagnosis was: strain of muscle, fascia and tendon of lower back-initial encounter; radiculopathy, lumbosacral region; other sprain of right hip-initial encounter; fibromyalgia; unilateral osteoarthritis resulting from hip dysplasia, right hip.

17. Claimant was evaluated by Brian White, M.D. on May 10, 2017. She reported none of the treatments received thus far provided long-term relief. However, Claimant indicated the injection into the joint gave her 50 percent relief of her symptoms for a few hours. On examination, significant discomfort was noted with the anterior impingement maneuver on the right side. Dr. White stated the MRI confirmed a labral tear with well-preserved joint space overall. Dr. White's assessment was right hip dysplasia (significant) with labral tear. He felt Claimant was a reasonable candidate for hip arthroscopy, with femoral osteoplasty with an acetabular rim trimming and likely

labral reconstruction, and Ganz osteotomy. Dr. White noted the procedures would be staged by a week or two.

18. On June 8, 2017, Dr. White requested authorization for a proposed right hip femoroplasty, acetabuloplasty, unlisted procedure arthroscopy, osteotomy periacetabular with internal fixation.

19. Respondent denied authorization for the proposed surgery.

20. On August 14, 2017, Gary Zuehlsdorff, M.D. performed an Independent Medical Examination ("IME") at the request of Claimant. Claimant reported right groin pain, worsening at the end of the day. Tenderness was found on internal and external rotation. Dr. Zuehlsdorff's assessment was: pulling twisting injury with acute subjective complaints of right hip/groin /low back complaints; right hip x-rays/MRIs consistent with superior labral pathology, wither significant acute on chronic or totally acute in origin; pre-existing right hip dysplasia-moderate-with CAM type femoral acetabular impingement syndrome; mild secondary lumbar pain complex with essentially negative MRIs X 2; secondary trochanteric bursitis post injection-basically resolved. Dr. Zuehlsdorff opined that, given the congenital abnormalities, simply repairing the labrum was not the standard of care within the community and recommend the two-stage procedure recommended by Dr. White.

21. A letter from Dr. White, dated August 23, 2017 was admitted into evidence.[1] In this correspondence, Dr. White provided additional information concerning Claimant's condition and the proposed surgery. He noted Claimant's need for surgery was because of the injury on October 4, 2016. While Claimant may have had some predisposing labral pathology, she had no pain before her injury and this became a symptomatic hip or a symptomatic labral tear. Dr. White also noted that the congenital condition played a role in the hip. Claimant had a dyplastic cup which caused the labrum to be overloaded. Dr. White opined there was probably some dysfunction to the labrum, but it was subclinical prior to the injury. Dr. White concluded that the October 4, 2016 incident caused the baseline dysfunction to become symptomatic. The ALJ credited this analysis by Dr. White.

22. Dr. White also provided additional information regarding correction of Claimant's congenital condition. He said surgery was required to correct the labral tear with a labral reconstruction, as well as treating the underlying biomechanics. The procedure included re-shaping the ball and redirecting the cup to a more appropriate position. This would allow for the labral reconstruction to incorporate or heal. Dr. White opined that if the dysplasia and underline congenital issues were not addressed, she would not have a good result from the surgery.

23. An independent medical examination was performed by Carlos Cebrian, M.D. on behalf of Respondent on September 5, 2017. Dr. Cebrian noted Claimant denied prior history of right hip problems at the beginning the report. When discussing

[1] Exhibit JJ.

fibromyalgia, Dr. Cebrian documented Claimant reported bilateral hip pain, more on the right than left. On examination, diffuse tenderness to palpation was noted over the paralumbar muscles. The work-related diagnoses were: lumbar strain and right hip contusion/greater trochanteric bursitis. The non work-related diagnoses were: fibromyalgia; chronic pain disorder; anxiety; GERD; bilateral hip pain, greater right than left; right hip dysplasia, with femoroacetabular impingement ("FAI") and labral tear.

24. Dr. Cebrian opined that Claimant's right congenital hip dysplasia, with labral tearing and femoroacetabular impingement, her current symptoms and her need for surgery were independent, unrelated and incidental to the work injury that occurred on October 4, 2016. Dr. Cebrian's IME report contained a detailed description of hip anatomy, as well as hip dysplasia and FAI. He postulated that Claimant's pre-existing hip complaints were likely due to hip dysplasia, FAI and labral pathology.

25. A General Admission of Liability ("GAL") was filed on behalf of Respondent on September 26, 2017. The GAL admitted for temporary disability and medical benefits.

26. Claimant testified she wishes to undergo the hip surgery recommended by Dr. White.

27. Dr. Cebrian testified as an expert in the field of Occupational Medicine. He is Level II accredited pursuant to the WCRP. Dr. Cebrian opined that Claimant's congenital dysplasia, femoral acetabular impingement and labral pathology were not caused by, nor were they aggravated by the work incident.[2] Dr. Cebrian testified the Colorado Division of Workers' Compensation Lower Extremity Injury Medical Treatment Guidelines ("Medical Treatment Guidelines" or "MTG") applied to the diagnosis and treatment of labral pathology. To confirm the diagnosis of a labral tear, the patient should demonstrate changes on a pain scale accompanied by recorded functional improvement post-injection. There was no such confirmation in this case. He reasoned, after reviewing all the records, the pain generator had not been clearly identified and it was unknown whether she was having pain from the labrum or her hip joint itself.

28. Dr. Cebrian testified confirmation of pathology on an MRI and Claimant's subjective complaint were not bases to perform surgery. As referenced in the MTG, surgery sometime will be performed for conditions that don't require it. Dr. Cebrian reviewed the recording of the IME and said Claimant told him she had bilateral hip pain even before he had questioned her.[3] Dr. Cebrian acknowledged the medical records did not show Claimant complained of bilateral hip pain. Dr. Cebrian believed the congenital conditions were the reason for the complaints of hip pain, but it was attributed to fibromyalgia. Dr. Cebrian opined that given her dysplastic hip and the FAI, the separation of Claimant's labrum was most probably pre-existing, as opposed to

[2] Cebrian Deposition ("Cebrian depo."), p. 8:8-14.

[3] Cebrian depo, p. 16:7-10, 16-21.

anything caused by the minor injury mechanism. Dr. Cebrian did not believe the injury was a high energy trauma.[4] Dr. Cebrian stated the proposed surgery was not reasonable or necessary because it was not confirmed that the labral pathology was the cause of Claimant's pain. He agreed that correction of the congenital hip conditions, along with the labral tear was required.

29. Dr. Zuehlsdorff testified at hearing as an expert in the field of Internal Medicine the specialty in which he is board–certified. He is Level II accredited pursuant to the WCRP. Dr. Zuehlsdorff testified Claimant was in a vulnerable position anatomically when the injury occurred and high to moderate forces were operating on her hip. Dr. Zuehlsdorff noted Claimant had previously been diagnosed with fibromyalgia, which was diffuse pain, but had not treated for hip symptoms. The MRI showed no arthritic changes, but revealed a chondrolabral separation of the superior labrum. Claimant also had hip dysplasia and femoral acetabular impingement, which were pre-existing. Dr. Zuehlsdorff believed the injury caused further damage to the labrum, along with symptoms in the groin.

30. Dr. Zuehlsdorff opined the proposed surgery was reasonable and necessary. He disagreed with Dr. Cebrian's conclusion that Claimant was not a surgical candidate because the pain generator had not been identified. Dr. Chan had ruled out the low back as the source of Claimant's pain complaints. He also noted the MTG were not absolute on the question of a patient's response to injections. Dr. Zuehlsdorff testified that in general patients with arthritis would generally have a more positive response to injection. He believed Claimant's pain was coming from the hip joint. He distinguished between Claimant's fibromyalgia pain and the pain in the hip after her injury. The ALJ was persuaded by Dr. Zuehlsdorff's testimony.

31. The ALJ finds that the medical analyses and opinions of Claimant's expert, Dr. Zuehlsdorff are credible and more persuasive than the opinions of Respondent's expert, Dr. Cebrian.

32. The ALJ found Claimant proved by a preponderance of the evidence that the surgery recommended by Dr. White is reasonable, necessary, and related to the compensable injury of October 4, 2016.

33. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of

[4] Cebrian depo, p. 19:22-20:4.

litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1),C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). The credibility of the parties' respective experts were at issue in this case.

Medical Benefits-Proposed Right Hip Surgery

Respondent is liable for medical treatment reasonably necessary to cure or relieve the effects of the injury. § 8-42-101, C.R.S. Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability, which may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. The ALJ considered the MTG when deciding whether Claimant's need for hip surgery was proximately caused by the industrial injury.

When determining the issue of whether proposed medical treatment is reasonable and necessary, the ALJ may consider the provisions and treatment protocols of the MTG because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the MTG is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the MTG such weight as he or she determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009). MTG Rule 17, Exhibit 5, Section E(3)(h)[pp.127-128] has application to the case at bench:

h. Impingement/Labral Tears:

i. Description/Definition: Two types of impingement are described. Pincertype impingement results from over-coverage of the acetabulum. Camtype impingement, results from the head of the femur being misshapen at the junction of the head and neck of the femur. Labral tears can also be isolated; however, they are frequently accompanied by bony abnormalities. Patients usually complain of catching or painful clicking which should be distinguished from a snapping iliopsoas tibial tendon. A pinch while sitting may be reported and hip or groin pain. Patients frequently complain of difficulty squatting or using stairs.

ii. Occupational Relationship: Impingement abnormalities are usually congenital; however, they may be aggravated by repetitive rotational force or trauma. Labral tears may accompany impingement or result from high energy trauma.

iii. Specific Physical Exam Findings: Positive labral tests. May have some range of motion deficits with impingement. No physical exam tests can reliably identify impingement or labral pathology in isolation.

…

MRI may reveal abnormality; however, false positives and false negatives are also possible. MRI arthrogram with gadolinium should be performed to diagnose labral tears, not a pelvic MRI. Intra-articular injection should help rule out extra-articular pain generators.

To confirm the diagnosis of labral tear, the patient should demonstrate changes on a pain scale accompanied by recorded functional improvement post-injection. This is important, as labral tears do not always cause pain and over-diagnosis is possible using imaging alone.

…

ix. Surgical Indications/Considerations:

A) Surgery is indicated when 1) functional limitations persist after 8 weeks of active patient participation in treatment, 2) there are clinical signs and symptoms suggestive of the diagnosis and 3) other diagnoses, such as trochanteric bursitis or iliotibial band snapping have been ruled out. Iliotibial band pathology usually responds to physiotherapy. Bursitis is treated with lifestyle changes and steroid injections. Surgery is rarely required for these diagnoses.

In the case at bench, there was a conflict in the evidence as to whether the proposed surgery was reasonable and necessary, as well as related to the industrial injury. The ALJ concluded Claimant satisfied her burden of proof with regard to the

need for surgery on the right hip. As a starting point, the medical records admitted at hearing revealed Claimant had congenital hip dysplasia and femoral acetabular impingement, as well as evidence of labral tear. The physicians did not disagree the two former conditions were congenital and pre-existing. As found, there was no record of Claimant having hip symptoms before October 2016. (Finding of Fact 4). There was no record of any treatment for such hip symptoms before the industrial injury.

The ALJ concluded the proposed surgery was reasonable and necessary, as well as related to the industrial injury. First, the findings of Claimant's ATPs, including Dr. White supported the need for surgery. As found, Dr. White opined that Claimant's underlying hip dysplasia condition, although pre-existing, was sub-clinical before the injury. Accordingly, based upon the opinions of these physicians, Claimant's need for surgery was the result of the work injury. As part of this analysis, the ALJ concluded the proposed surgical procedure recommended by Dr. White was reasonable and necessary. In addition, the proposal that the procedure be performed in two parts, including the repair of the hip dysplasia was also found to be reasonable and necessary. (Finding of Fact 17).

In making this determination, the ALJ also considered Respondent's contention that the proposed surgery did not meet the Medical Treatment Guidelines because Claimant did not have a diagnostic response/pain relief when she received hip injections. The MTG go on to document there is a potential problem of over diagnosis of labral tears. The ALJ found that a labral tear was diagnosed by Claimant's ATPs. (Findings of Fact 11 [Dr. Resig], 12 [Dr. Chan] and 17 [Dr. White]). In this regard, the ALJ credited the expert opinions of Dr. White, as well as the testimony of Dr. Zuehlsdorff that the labral tear was either caused or worsened by the industrial injury. Therefore, under these facts, the Medical Treatment Guidelines support the request for surgery in this case. (MTG, Rule 17, Exhibit 5, Section E(3)(h) subsection ix. Surgical Indications/Considerations).

The ALJ also considered Respondent's argument that Claimant's underlying conditions, including the hip dysplasia and cam deformity were congenital, as well as pre-existing. This was supported by the testimony of Dr. Cebrian, who also opined that Claimant's previous pain complaint attributed to fibromyalgia were related to her underlying hip conditions.

As found *supra*, the weight of the evidence established the injury caused Claimant's right hip to require treatment. As determined in Findings of Fact 21-22, the ALJ determined that a necessary component of treating the symptomatic labral tear which resulted from the industrial injury was to correct these congenital conditions, crediting the findings of Dr. White. This is analogous to the situation in *Public Service Company v. Industrial Claim Appeals Office*, 979 P.2d 584, 585 (Col. App. 1999) in which the Court of Appeals affirmed the ICAO decision requiring Respondent-Employer to pay medical benefits for treatment of a bipolar disorder to stabilize that condition before surgery was performed on Claimant's injured neck. As the Court noted:

"[W]e conclude that ancillary treatment is a pertinent rationale for reasonably necessary care of a non-industrial disorder when such must be given 'in order to achieve the optimum treatment of the compensable injury' [5 Larson's Workers' Compensation Law]". *Id.*

In the case at bench, Dr. White concluded a repair of not only the labral tear, but also the hip joint and the socket was required. Dr. Zuelsdorff agreed with these opinions and the ALJ was persuaded that the proposed surgery which entails correction of the congenital conditions is required to treat the industrial injury.

ORDER

It is therefore ordered:

1. Respondents shall pay for the right hip surgery recommended by Dr. White as it is reasonable, necessary, and related to Claimant's October 4, 2016 industrial injury.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. Claimant has two pending claims against Employer. W.C. No. 5-019-321 is an upper extremity cumulative trauma claim with an April 20, 2016 date of injury. W.C. No. 5-019-320 involves accidental injuries occurring on May 9, 2016. The claims were consolidated for purposes of hearing and this order will address both claims.

ISSUES

- Did Claimant suffer a compensable occupational disease injury involving his upper extremities (W.C. No. 5-019-321)?

- Did Claimant suffer a compensable injury arising out of and in the course of his employment as a result of a motorcycle accident on May 9, 2016 (W.C. No. 5-019-320)?

FINDINGS OF FACT

1. At the time of his alleged injuries, Claimant worked for Employer as an in-school suspension officer and attendance liaison. He started that position in January 2016. Before that, he worked for Employer as a truancy officer. He worked on an annual contract basis. Claimant's employment ended at the end of the school year in May 2016 and his contract was not renewed.

Findings specific to April 20, 2016 claim (W.C. No. 5-019-321)

2. Claimant's primary duties involved monitoring students serving in-school suspensions. He used a laptop computer with an external mouse intermittently to complete reports and make notes regarding individual students. The length of the reports varied "from one paragraph to pages." Claimant testified he used the computer 4-6 hours per day "mostly typing."

3. Claimant began experiencing pain and numbness in his upper extremities in approximately April 2016.

4. He reported the symptoms to Employer as a potential cumulative trauma injury caused by "writing and typing." Rhonda Hribar, Employer's Risk Management Coordinator, completed an Employer's First Report on April 27, 2016, using April 20 as the date of injury. The injury description states "No accident. His arms have been hurting so he saw his family and VA doctor. Both stated he has tennis elbow and has to wear braces. Doctors told him it [was] from writing and typing motions from his job."

5. Employer referred Claimant to Dr. Douglas McFarland in Trinidad for authorized treatment. At his initial visit on May 3, 2016, Claimant described 1-2 months of bilateral elbow pain (worse on the right) and numbness in the fourth and fifth fingers of both hands. He told Dr. McFarland he spent approximately 4-6 hours per day typing, but

"is not using a mouse much." Physical examination showed lateral epicondyle tenderness bilaterally and positive Tinel's at both elbows. Dr. McFarland diagnosed bilateral lateral epicondylitis and cubital tunnel syndrome. Based on the initial information, he opined that the diagnoses were work-related. He released Claimant to work with instructions to avoid repetitive lifting and minimize repetitive motion with his upper extremities.

6. Respondents obtained a Job Demands Analysis of Claimant's position in January 2017. Since Claimant was no longer working for Employer, the JDA evaluated a different employee performing the job. But Employer's witnesses persuasively testified the JDA accurately depicted Claimant's job as he performed it. The JDA showed substantially less keyboard and mouse use then estimated by Claimant, with typing less than two hours and mousing less than one hour per day. Elbow flexion > 90 degrees occurred at most 2.2 hours per day. The evaluator determined that the risk factors identified in the Medical Treatment Guidelines (MTGs), including force and repetition, awkward postures, extensive elbow flexion, supination/pronation, and four hours of mouse use, were "not present."

7. Claimant attended an Independent Medical Examination (IME) with Dr. Jonathan Sollender at Respondents' request on January 24, 2017. Dr. Sollender agreed with the diagnoses of bilateral epicondylitis and cubital tunnel syndrome, but opined these conditions were not causally related to Claimant's employment. Dr. Sollender noted a significant discrepancy between Claimant's estimation of his work activities and the objective findings of the JDA. He concluded Claimant's job entailed "no exposure to any of the required occupational risk factors necessary to establish any causal link between his former work with [Employer] and his current symptoms." At hearing, Dr. Sollender emphasized that Claimant's job had no primary or secondary risk factors for development of cumulative trauma disorders as outlined in the MTGs. He opined Claimant's work-related exposures were "not even close" to levels considered causative of lateral epicondylitis or cubital tunnel disorder. Dr. Sollender noted the CTD MTGs were updated in 2017 and testified "he comes nowhere close to any of those thresholds that are contained in the 2010 version or the 2017 version of Rule 17, Exhibit 5."

8. On March 7, 2017, Dr. McFarland reviewed the JDA and Dr. Sollender's report and opined:

> I agree with Dr. Sollender's opinion that [Claimant's] upper extremity problems are probably not related to the reported job at which he was employed on 4/20/2016. . . . A detailed analysis of his job duties also indicated that he did not have the occupational risk factors necessary to establish a causal link between his work at [Employer] and his current upper extremity symptoms.

9. Dr. Sollender's opinions regarding causation of Claimant's upper extremity complaints are credible and persuasive.

10. Claimant failed to prove by a preponderance of the evidence he suffered a compensable occupational disease involving his upper extremities as a result of his work.

Findings specific to May 9, 2016 claim (W.C. No. 5-019-320)

11. On May 9, 2016, Claimant was involved in a motorcycle accident which forms the basis for W.C. No. 5-019-320. At approximately 4:30 PM on that date, he left the John Mall High School where he works to go to the school district administration building. His primary purpose was to pick up some COBRA documents in anticipation of the upcoming summer layoff. He also planned to retrieve any mail for the school that might be waiting at the administration building. Claimant testified he normally worked 7:30 AM to 5:30 PM four days per week, and he planned to return to the school after visiting the administration building.

12. The most direct route from the school to the administration building is to go south on Main Street, turn left on 5th Street and go one block east to the administration building, located on the southeast corner of 5th and Russell Street.

13. Main Street crosses a pair of railroad tracks at the intersection of 4th Street (one block north of 5th Street). As Claimant rode over the railroad tracks, he heard a noise "like something had banged up against the bottom of my bike or something had fallen off the bike." Claimant could not pull over immediately due to heavy traffic, so "I figured I'll just go around the block and park on the side and check to see what it was." Claimant turned left onto 5th Street, headed east one block and turned left onto Russell Street, passing by the administration building. As he was headed north on Russell Street (away from the administration building), a vehicle pulled out in front of him from an alleyway. Claimant "laid down" the motorcycle and slid approximately 40 feet. He suffered significant injuries as a result of the accident, including a head injury.

14. Although Claimant's trip to the administration building had its origin in his job duties and was sufficiently related to those duties to be reasonably considered an incident of his employment, he was engaged in a personal deviation at the time of his accident. As a result, his injuries did not arise out of and in the course of his employment.

CONCLUSIONS OF LAW

A. General compensability standards

To receive compensation or medical benefits, a claimant must prove he suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally, for either claimant or respondents. Section 8-43-201.

B. Compensability of the April 20, 2016 claim (W.C. No. 5-019-321)

The Act imposes additional requirements for liability of an occupational disease beyond the "arising out of" and "course and scope" requirements. A compensable occupational disease must meet each element of the four-part test mandated by § 8-40-201(14), which defines an occupational disease as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

The equally exposing stimulus requirement effectuates the "peculiar risk" test and requires that the hazards associated with the employment be more prevalent in the workplace than in everyday life or other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). In other words, the claimant "must be exposed by his or her employment to the risk causing the disease in a measurably greater degree and in a substantially different manner than are persons in employment generally." *Id.* at 824. The hazard of employment need not be the sole cause of the disease, but must cause, intensify, or aggravate the condition "to some reasonable degree." *Id*.

The mere fact that an employee experiences symptoms at work duties does not compel an inference that the condition was caused by the work. *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (October 27, 2008). There is no presumption that a condition which manifests at work arose out of the employment. Rather, the claimant must prove there is a direct causal relationship between the employment and the injury. Section 8-43-201; *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989).

The Director has adopted Medical Treatment Guidelines (MTGs) to advance the statutory mandate to assure quick and efficient delivery of medical benefits to injured workers at a reasonable cost to employers. WCRP Rule 17, Exhibit 5 addresses cumulative trauma conditions including, but not limited to, lateral epicondylitis and cubital tunnel syndrome. The ALJ may consider the MTGs as an evidentiary tool, but the ALJ is not bound by the MTGs when determining whether requested medical treatment is reasonable, necessary, or injury-related. Section 8-43-201(3); *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (January 25, 2011).

As found, Claimant failed to prove by a preponderance of the evidence he suffered a compensable work-related occupational disease. After reviewing all the evidence, the ALJ is not persuaded that any of Claimant's work duties, either singly or in combination, caused his condition. The JDA report, Dr. Sollender's opinions, and Dr. McFarland's March 7, 2017 report persuasively show Claimant was not consistently exposed to upper

extremity risk factors identified in the MTGs.[1] As Dr. Sollender noted, the levels of exposure were "not even close" to the causal thresholds described in the MTGs. Dr. Sollender persuasively opined that Claimant's lateral epicondylitis and cubital tunnel syndrome were not likely caused by his work, and Claimant presented no persuasive evidence to refute his expert opinion. Although Dr. McFarland initially opined the condition was work-related, he changed his opinion after reviewing the JDA and Dr. Sollender's report. While Claimant may have first noticed symptoms at work, that does not convince the ALJ to depart from the evidence-based principles in the MTG causation matrix. Claimant failed to prove by a preponderance of the evidence he suffered a compensable occupational disease.

C. Compensability of the May 9, 2016 claim (W.C. No. 5-019-320)

Claimant clearly suffered significant injuries in the motorcycle accident on May 9, 2016. But the critical question is whether those injuries occurred while performing service arising out of and in the course of his employment. Section 8-41-301(1)(b). The terms "arising out of" and "in the course of" are not synonymous. The "course of employment" requirement is satisfied if the injury occurred within the time and place limits of the employment relationship and during an activity that had some connection with the employee's job-related functions." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). The term "arising out of" is narrower, and requires that an injury "has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered a part of the employee's employment contract." *Horodysyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001).

The claimant need not actually be performing work duties at the time of the injury, nor must the activity be a strict employment requirement or confer an express benefit on the employer. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). "Many job functions involve discretionary or optional activities on the part of the employee, devoid of any duty component and unrelated to any specific benefit to the employer, but nonetheless sufficiently incidental to the work itself as to be properly considered as arising out of and in the course of employment." *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The ultimate question is whether the activity is sufficiently "interrelated to the conditions and circumstances under which the employee generally performs the job functions that the activity may reasonably be characterized as an incident of employment." *Price, supra* at 210. Whether an injury arises out of and in the course of employment are questions of fact for the ALJ. *Dover Elevator Co. v. Industrial Claim Appeals Office*, 961 P.2d 1141, 1143 (Colo. App. 1998).

Respondents argue that, even if Claimant was travelling for a work-related purpose, his injuries are not compensable because they occurred during a "personal deviation." The ALJ agrees with Respondents' argument. If an employee's work takes him away from the employer's premises, he is generally considered under continuous

[1] The most current version of the CTD MTGs became effective March 2, 2017, after the Claimant's alleged date of injury. The ALJ notes many of the durational thresholds have been lowered in the 2017 version of the MTGs, particularly with respect to secondary risk factors. The ALJ has considered both versions of the MTGs, and concludes Claimant does not satisfy the criteria of either.

coverage except when he makes a distinct departure on a personal errand. *Phillips Contracting, Inc. v. Hirst*, 905 P.2d 9 (Colo. App. 1995). When a personal deviation is asserted, the question is "whether the claimant's conduct constituted such a deviation from the circumstances and conditions of the employment that the claimant stepped aside from his job and was performing the activity for his sole benefit." *Panera Bread, LLC v. Industrial Claim Appeals Office*, 141 P.3d 970, 972 (Colo. App. 2006). A deviation must be "substantial" to remove the claimant from the course and scope of employment. *Kelly v. Industrial Claim Appeals Office*, 214 P.3d 516 (Colo. App. 2009).

As found, Claimant's accident occurred during a substantial personal deviation. At the time of the accident, Claimant was not performing any action in furtherance of, or incidental to, his employment. Rather, he was engaged in a purely personal deviation from the otherwise work-related travel to the administration building. The deviation becomes strikingly apparent upon viewing the map of Claimant's route attached to the police report. The work-related aspect of his travel was complete when he reached the administration building on the corner of 5th and Russell. Although Claimant had arrived at his destination, he chose to turn left and head away from the administration building for his sole benefit. These factors persuade the ALJ that Claimant was engaged in a personal deviation at the time of his accident. Accordingly, his injuries did not arise out of and occur within the course of his employment.

ORDER

It is therefore ordered that:

1. Claimant's claims for workers' compensation benefits in W.C. No. 5-019-320 and W.C. No. 5-019-321 are denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 10, 2018

Office of Administrative Courts

ISSUES

I. Does the ALJ even have jurisdiction to hear this DIME case at all, based upon *Harman-Bertstedt v. Loofbourrow*?

II. Assuming jurisdiction is so found, has Respondent, by clear and convincing evidence, overcome the DIME of Dr. Sharma on the issue of MMI and/or Impairment?

III. Assuming the Respondent has overcome the DIME, is Claimant entitled to any impairment rating?

JURISDICTION

As a condition precedent to this ALJ hearing Respondent's DIME challenge at all, Respondent's allege that under *Harman-Berstedt v. Loofbourrow, 320 P. 2d 327 (Colo. 2014),* the DIME process that was followed herein is in effect a nullity, thus depriving the ALJ of the ability to uphold or otherwise rule on the validity of this DIME examination. In this case, the ALJ has read the positions of the parties as thoroughly outlined in Respondent's Assumed Motion to Strike DIME, which was DENIED by Prehearing Administrative Law Judge Steninger on July 12, 2017. Such Motion and Order will be made part of the record herein.

Respondent's position herein is identical to that outlined in that Motion. The ALJ adopts in its entirely this ruling from PALJ Steninger. While that Order does not elaborate on the rationale for the denial, this ALJ finds compelling the argument of Claimant, to wit: This case is distinguishable from *Loofbourrow,* in that a Final Admission of Liability was filed by Respondents, thus properly triggering the DIME process. To conclude otherwise would effectively preclude a Claimant, such as here, from availing himself of the DIME process in order to challenge a finding of "No Impairment" by an ATP simply because no work is missed. The ALJ is not willing to deprive Claimant of such opportunity. Due process demands it.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. Claimant worked as a glazier for Respondent since 2011, and prior to that since 1998. His job duties include installing and maintaining windows for Colorado Springs School District 11.

2. Claimant sustained work related injuries on September 23, 2016, while standing on a ladder installing a large piece of glass, when a gust of wind blew the

glass, causing Claimant to twist his back to his left, in order to hold onto the glass, before ultimately dropping it.

3. Claimant promptly reported this injury to his employer. Respondent provided medical treatment. Claimant did not miss any time from work, but was placed on work restrictions by his ATP.

4. On September 26, 2016, Claimant presented to ATP Dr. Autumn Dean M.D., with low back pain. Dr. Dean diagnosed a lumbar strain/spasm and referred Claimant to physical therapy. She stated Claimant could continue working full duty. (Ex. F, p. 20). Claimant made regular follow-ups with Dr. Dean until she placed him at MMI, on 3-16-17.

5. On December 13, 2016, Claimant underwent an MRI requested by Dr. Dean, which revealed the following impressions:

> 1. 6 nonrib-bearing lumbar-type vertebral bodies, with segmental nomenclature as described: Please correlate carefully with radiographs prior to any planned intervention.
> 2. Moderate lumbar scoliosis. Lumbar spondylosis, with borderline central spinal canal stenosis at L3-L4. The *left* lateral canal is asymmetrically severely narrowed at this level secondary to a leftward lateralizing disc protrusion, which dorsally displaces the descending nerve and could account for radicular symptoms if present.
> 3. Multilevel foraminal stenoses bilaterally as described, most pronounced on the *left* at L5-L6.
> 4. T2-hypertense lesions within the visualized posterior right hepatic lobe, incompletely evaluated…..(Ex. A, p. 3)(emphasis added).

6. Claimant treated with Dr. Sparr, who diagnosed lumbar facet joint arthropathy and myalgia. On February 9, 2017, Dr. Sparr wrote a letter to Dr. Dean, stating Claimant's left-sided back pain is under control. Claimant responded extremely well to trigger point injections and aggressive manual physical therapy providing Claimant with a substantial decrease in myofascial tightness and his facet loading is now negative bilaterally. Dr. Sparr discharged Claimant and anticipated Claimant was near MMI. (Ex. B, pp. 2-3).

7. Claimant also treated at Action Potential Physical Therapy. On February 11, 2017, Andrew Fox, PT supplied a Discharge Summary for Claimant. (Ex. C, pp. 4-5). He noted that four listed goal achievements were made on Feb. 9, 2017, to include:

> Palpation: Lumbosacral Region: Musculature, Posterior, Hypertonic
> Palpable Improvements: *Spasm Decreasing to: Complete Elimination.*

8. Claimant filed a Worker's Claim for Compensation on March 2, 2017, claiming to have a permanent impairment.

9. On March 7, 2017, the Division of Workers Compensation ('Division') sent a letter to Claimant's attorney acknowledging receipt of the Workers' Claim for Compensation and advising him the insurance carrier had 20 days to decide whether benefits would be paid. By copy of the letter, the Division notified Respondent that a position must be stated on the claim within 20 days of the date of the letter.

10. In response to the Division's letter, Respondent filed a General Admission of Liability ('GAL') for medical benefits only, on March 10, 2017. Based on the facts of this case, and as required by W.C.R.P. 5-5(B), the GAL stated there had been no lost time.

11. On March 16, 2017, the ATP, Dr. Dean placed Claimant at MMI with no permanent impairment, and no further medical maintenance. Dr. Dean stated Claimant has normal range of motion in his low back, normal strength, no tenderness and no spasm. Dr. Dean opined Claimant's disc protrusion is not causing his symptoms, as this disc bulge is not likely from his work injury. Further, the lumbar scoliosis and stenosis are chronic/congenital issues and not work related. (Ex. D, p. 13.)

12. During Claimant's regular visits with Dr. Dean, she noted that his Lumbar back showed *spasm* on the following dates: 9-26-16, (Ex. 11, p. 191), 10-24-16 (Ex. 11, p. 154), 11-14-16 (Ex. 11, p. 139), 12-5-16 (Ex. 11, p. 133), 12-15-16 (Ex. 11, p. 114), 1-12-17 (Ex. 11, p. 100). During Claimant's continued regular visits with Dr. Dean, she noted the *absence of spasms* of his Lumbar back on the following dates: 2-2-17 (Ex. 11, p. 76) 2-23-17 (Ex. 11, p. 67), and 3-16-17 (Ex. 11, p. 50).

13. Dr. Dean's office further noted Claimant's vital signs on the 2-23-17 visit as follows: BP: 140/82, Pulse: 87, Temp: 36.6, Resp: 18, Wt: 61.1 kg, SpO2: 97%, BMI: 18.26 kg/m2 (Ex. 11, p.58). His vital signs on the 3-16-1 visit were listed as follows: BP: 132/84, Pulse: 78, Temp: 36.8, Resp: 14, Wt: 62.6 kg, SpO2: 97%, BMI: 18:72 kg/m2 (Ex. 11, p. 47). Dr. Dean further noted *tenderness* of his right side paraspinals on the 2-23-16 visit (Ex. 11, p. 59), but *no tenderness* is noted on the 3-16-17 visit (Ex. 11, p. 47). On 2-23-17, Claimant circles his pain chart at "1 to 3" (Ex. 11, p. 72). On 3-16-17, Claimant circles his pain chart on both "0" *and* "1 to 3" (Ex. 11, p. 56). On both dates, Dr. Dean notes that surgery would not be appropriate, because the disc protrusion issue is not causing his symptoms, and is not likely work related. *Id.*

14. Dr. Dean also makes the following notation in Claimant's file from the 2-23-17 visit, after recommending continued physical therapy:

> ….He [Claimant] also mentioned that he has retained legal counsel and his lawyer and his friends (bosses wife) have been telling him to try and prolong his restrictions so they can "get things together", and even encouraged him to see a spine surgeon..(Ex. 11, p. 57).

15. On March 17, 2017, as required by W.C.R.P. 5-5(E)(1)(a), Respondent filed a Final Admission of Liability ('FAL') for medical benefits paid. The FAL specifically noted that no TTD, TPD, or PPD was admitted or paid, nor continuing medical treatment.

16. On March 21, 2017, Claimant timely filed an Objection to Final Admission of Liability and a Notice and Proposal to Select an Independent Medical Examiner. Respondent filed a Notice of Failed IME Negotiation on March 22, 2017.

17. On April 6, 2017, Claimant timely filed an Application for a Division Independent Medical Examination ('DIME'). Anjmun Sharma, M.D., was eventually confirmed as the DIME physician.

18. Dr. Sharma performed the DIME on June 7, 2017. His report dated June 11, 2017, stated he agreed with the ATP's date of MMI. However, in his DIME report, Dr. Sharma states that "I concurred with the **MMI date of *12/05/2016***", and attributes this finding of MMI on this date to Dr. Dean. (Ex. F, pp. 12-13). Dr. Dean said no such thing on December 5, 2016. Instead, Dr. Dean continued to treat Claimant until she found him to be at MMI on 3-16-17.

19. Dr. Sharma also determined Claimant had a 10% whole person impairment as a result of his injury. Dr. Sharma calculated a 3% range of motion impairment and simply stated Claimant met the criteria for Table 53 diagnosis referencing section **II-C,** assigning a 7% impairment. (Exhibit F, p. 13.) Dr. Sharma testified at hearing as an expert in family medicine, and stated his report was based on the 'small amount' of medical records he received.

20. Respondent timely filed an Application for Hearing and a Motion to Strike the DIME.

21. The Motion was denied by a Prehearing ALJ, and parties went to hearing on October 25, 2017.

22. Dr. Ridings was offered as an expert in physical medicine and rehabilitation by Respondent and accepted as such by Claimant. Dr. Ridings testified he conducted an IME for Claimant on August 9, 2017, finding a zero percent impairment rating. Dr. Ridings testified Dr. Sharma erred in determining a 10% impairment rating because Dr. Sharma inappropriately applied Table 53. Dr. Ridings testified under the AMA Guides to the Evaluation of Permanent Impairment, Section 3.3, at 78-81 and 96-101 (3d. ed. 1991), Table 53 II-B is only applicable when a claimant presents abnormal muscle tone in the lumbosacral spine equating to "rigidity". Further, Table 53, II-C, requires "moderate to severe degenerative changes on structural tests; includes un-operated herniated nucleus pulposus with or without radiculopathy." (Ex. G.) Dr. Ridings testified while Claimant's lumbar MRI showed a degenerative disc protrusion at

L3-L4, Dr. Sharma only diagnosed Claimant with a **lumbar strain,** which cannot cause "moderate to severe" changes on structural tests as required for Table 53, II-C.

23. Dr. Sharma testified he did not have complete medical records from Dr. Dean or Dr. Sparr, nor was he aware that Claimant was placed at MMI on March 16, 2017. Dr. Sharma testified that *he did not see or review the MRI that was taken of Claimant, nor the radiologist's narrative.* In fact, he only had a total of three of Dr. Dean's reports, dated 9-26-16, 10-3-16, and 12-5-16. He never inquired of anyone if there were more to come from any providers. Dr. Sharma testified his basis for using Table 53 was "the posture of the patient, how he presented, the fact that he had pain, the fact that he was having difficulty walking, the fact that he had an antalgic gait, the fact the he exhibited quite a bit of rigidity and spasm". Dr. Sharma testified that he was not sure if he had failed to dictate the results of his DIME physical examination, or if he had done so, whether a member of his staff may have failed to transcribe it. He further faulted the Division of Workers Compensation for not informing him of the incompleteness of his DIME report.

24. Dr. Ridings testified that under the Table 53 guidelines, those subjective symptoms are not enough to meet the *moderate to severe degenerative changes on structural tests* standard required to provide a Table 53 II-C impairment rating. Dr. Ridings testified under the AMA Guides 3rd Edition, in order to use Table 53-or any table at all- the physician must be able to correlate a claimant's symptoms with the injury. Dr. Ridings testified impairment ratings must be based on objective pathology, and cannot simply be performed based solely on subjective complaints. Nor can a physician determine a rating where abnormalities were *not caused or made worse by the injury*.

25. Dr. Sharma, Dr. Dean, and Dr. Ridings all agree Claimant's injury was a lumbar strain and on the date of MMI there was no lumbar rigidity. Table 53 requires 6 months of pain *and* rigidity in order for a diagnosis to exist. In this case, Dr. Ridings opined that the history contained in the medical records does not support the condition precedent. Thus, there is no Table 53 diagnosis, and Dr. Sharma erred in calculating a 7% impairment rating under Table 53 II-C.

26. Dr. Ridings testified he agreed with Dr. Dean's opinion stating the left disc protrusion revealed in Claimant's MRI is not related to the work injury. Further, the disc protrusion was on the left, whereas all of Claimant's complaints were on the right low back. This is consistent with the mechanism of the injury, given Claimant twisted left, straining the right low back muscles. Dr. Ridings testified a disc injury would have caused pain in the midline, paraspinals, and radiating into the buttock. However, there is no reporting of pain that is discogenic in nature. Accordingly, Claimant was diagnosed with a lumbar strain, which was successfully treated with trigger point injections and two courses of physical therapy. (Ex. G.) Dr. Ridings testified Claimant was at MMI on March 16, 2017, with no impairment, because he had full range of motion, and no rigidity or symptoms invoking the use of Table 53.

27. A transcript of Dr. Ridings' IME was offered by both parties. (Claimant's Ex. 17 {entire transcript}, Respondent's Ex. G {excerpts only}. During the IME, Claimant insisted to Dr. Ridings several things:

1). Claimant was told by Dr. Sparr, and also by Dr. Dean, that if he had surgery, he would probably wind up in a wheelchair.

2). That he listed his pain in his 3-16-17 visit to Dr. Dean as "seven, eight, nines".

3). The shots he received from Dr. Sparr did not have any significant beneficial effect until April of 2017.

4). At the DIME exam, Dr. Sharma never took range of motion measurements with inclinometers. Rather, Dr. Sharma merely placed his thumb on his back, and told him to bend. Not three times, just once. Claimant 'swore to God' to Dr. Ridings of this.

5). Also at the DIME exam, Dr. Sharma never performed a physical examination of Claimant. Claimant remained fully clothed, never even removing his jacket.

The ALJ notes further that throughout the IME, Dr. Ridings appears to be unfailingly polite, straightforward, and professional with Claimant. Claimant was encouraged to explain his position thoroughly. In return, Claimant appears to cooperate in the IME without voicing any complaint.

28. Claimant also testified at hearing. In summary, Claimant testified that he has never been treated for back problems prior to this incident. (The ALJ finds this particular assertion to be credible). He further testified that his pain has not abated, with some days better than others. He stated he has missed work because of his injuries. He further testified that, in summary:

1). The shots from Dr. Sparr (which had ended in February of 2017) would wear off in about two days, then he was back to experiencing pain each time.

2). On the date he was placed at MMI, Dr. Dean performed no physical examination- no range of motion, never placed her hands on him at all. "She did nothing. All she did was she looked at me, she goes 'Well, we're done,'".

3). He was dissatisfied with the manner with which Dr. Ridings performed his IME.

4). He was also dissatisfied with Dr. Sharma, and Dr. Dean, and that a malpractice claim against Dr. Dean was forthcoming.

5). He could no longer remember if Dr. Sharma used inclinometers on him or not at the DIME exam, since "that was a long time ago".

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

C. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

Overcoming a DIME, Generally

D. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office*, 134 P.3d 475, 482 (Colo. App. 2005); *Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 400 (Colo. App. 2009). As a matter of diagnosis, the assessment of impairment requires a rating physician to identify and evaluate all losses and restrictions which result from the industrial injury. *Egan v. Indus. Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *Colorado AFL-CIO v. Donlon*, 914 P.2d 396 (Colo. App. 1995).

E. A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. C.R.S. §8-42-101(3.7); C.R.S. §8-42-107(8)(c). The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000). Not every deviation from the rating protocols of the AMA Guides requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office*, 81 P.3d 1117 (Colo. App. 2003); *Adams v. Manpower*, W.C. No. 4-389-466 (I.C.A.O. August 2, 2005). Moreover, a mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

Overcoming the DIME-Table 53, II-C

F. At the outset, the ALJ finds that Dr. Sharma's DIME examination includes not only his written DIME report, but his supplemental testimony at trial as well. Assuming, arguendo, that Dr. Sharma's medical *observations* are accurate, his *conclusions* are not. His impairment rating under Table 53 II-C is not based, in any fashion, on *moderate to severe degenerative changes on* ***structural tests.*** Dr. Sharma never had the MRI results to review; it appears he never knew they even existed. Nor did he inquire, instead deflecting that oversight to the Division. He certainly did not address the conclusions of Dr. Dean and Dr. Ridings that any structural abnormalities noted therein were not the cause of his pain, nor were they work related.

G. By his own admission, he based his Table 53 II-C results purely on his *observations* of Claimant-observations which were never *documented* in any fashion until he testified from memory, months after the DIME exam. Further, his final diagnosis

was simply *lumbar strain.* As Dr. Ridings correctly points out, this does not constitute sufficient objective evidence of any *work related structural pathology.* The ALJ concludes that it has been shown, by clear and convincing evidence, that the 7% whole person rating assigned to Claimant under Table 53, II-C is wrong. The DIME, therefore, has been overcome.

Impairment Rating under Table 53, II-B

H. Has, however, Claimant shown, now by a preponderance of the evidence, an impairment rating under Table 53, II-B? Table 53, II-B requires none-to-minimal degenerative changes on structural tests. The record is devoid of any work-related structural changes; however, none are required under Table 53, II-B. Claimant has certainly shown that he has a medically documented injury. What must be shown, in addition, is a minimum of *six months of medically documented pain* ***and*** *rigidity, with or without muscle spasm.* As such, the accuracy of the medical records, as well as the witnesses' testimony, is in play.

Claimant's Reliability as a Witness and Medical Historian

I. Claimant would now have the ALJ selectively believe some things Claimant has had to say-such as that Dr. Dean never examined him- but certainly not others-including that Dr. Sharma never examined him. Respondent would now have the ALJ selectively believe some things Claimant has had to say-such as that Dr. Sharma never examined him- while disbelieving others- such as that Dr. Dean never examined him. The ALJ can do neither. Claimant has stated things-with great certainty-that are either at odds with other of his own statements, at odds with reliable evidence, or at odds with ordinary medical practice. Either Dr. Dean examined Claimant on all dates documented, or Dr. Dean is a willful falsifier of her own medical records. Once Claimant has sorted out friend from foe (legally speaking), his assessments of Dr. Ridings and Dr. Sharma have shifted. Claimant appears to have been candid and cooperative with his medical providers, up until he was placed at MMI. Since that time, his anger has rendered him an unreliable source of information.

Reliability of Records of Claimant's ATPs

J. In summary, there is no reason to question the accuracy of the records of Dr. Dean, Dr. Sparr, or Claimant's physical therapy providers. While it appears Dr. Dean (correctly, the ALJ finds) stated that surgery was not appropriate (neither pain nor work related), nothing would suggest that she or Dr. Sparr would state that surgery would risk "putting Claimant in a wheelchair". Dr. Dean accurately tracked Claimant's symptoms at each visit, including vital signs, which vary-within predictable parameters-with each visit. She last noted that *spasm* (which would, if present, constitute *rigidity)* was present on 1-12-17. She noted that *tenderness* (which does not constitute rigidity) was last present on 2-23-16. If Dr. Dean could somehow be said to have an ulterior motive, it would be to keep treating the Claimant and billing the file. Instead, she just did her job. The ALJ finds that Dr. Dean's records are accurate and reliable, as are the other ATPs.

Reliability of Dr. Ridings' Examination and Testimony

K. In summary, the ALJ finds that Dr. Ridings' examination of Claimant was done professionally and accurately. He found no rigidity or spasm when he examined Claimant at his IME on August 17, 2017. Further, after a review of the available records, he noted that evidence of rigidity was last noted on February 9, 2017 by Dr. Sparr. That is 4 ½ months post injury, before it ends. Dr. Dean had noted the absence of spasm even sooner. Dr. Ridings also provided an accurate analysis of the application of Table 53 II-B, and Table 53 II-C to Claimant's situation. If no evidence of rigidity for a minimum of six months, no Table 53 rating.

Reliability of Dr. Sharma's Report and Testimony

L. If evidence of rigidity was last documented on 2-9-17, how can it now be a minimum of six months, to qualify for Table 53, II-B? First, Dr. Sharma never *documented* any rigidity from his DIME exam. He prepared a narrative his physical examination, but only referenced his range of motion numbers. No palpation is *documented* in writing or dictation to have occurred at all. If Claimant is to be believed, Dr. Sharma never touched him except with a thumb. Dr. Sharma testified that he did note "quite a bit of rigidity and spasm." However, Dr. Sharma failed to request any more medical records, despite the facial deficiency of what he was tendered. His narrative describes Claimant "standing in waters", and handling a large piece of glass "7 *inches* X 31 inches." He erroneously adopted an MMI date of 12-5-16, simply on the basis, it appears, that this was the latest record from Dr. Dean that he was presented. Even if he did observe rigidity, he erroneously applied his findings to Table 53II-C instead of 53II-B. He testified further that he does not always proofread his DIME reports "because of other competing tasks at hand." The ALJ finds that such other competing tasks of a busy practice prevented a reliable DIME physical exam. As such, the ALJ is unable to conclude, by a preponderance of the evidence, that Dr. Sharma medically documented "quite a bit" of rigidity and spasm-or any at all- such that at least 6 months have now been documented. Thus, a Table 53, II-B rating is not established.

Range of Motion

M. Because the Claimant has not shown that a Table 53, II-B ***or*** II-C applies, the ALJ declines to find further whether Dr. Sharma's or Dr. Ridings or Dr. Dean's range of motion figures are most accurate. The point is moot.

Maximum Medical Improvement

N. During the hearing, Respondent argued that MMI was not before the ALJ at this hearing. Claimant argued that it was. However, Claimant's Position Statement concedes that MMI was correctly found, and asks the ALJ not to overcome that aspect of the DIME. Therefore, Claimant asks the ALJ to find that MMI was reached on 12-5-16. The DIME has now been overcome. While it is likely now a moot point, the ALJ finds that the MMI date of 12-5-16 in the DIME report is plainly erroneous, and not

based upon the medical records. Instead, the ALJ finds, by clear and convincing evidence, that MMI was reached on 3-16-17, as found by Dr. Dean.

ORDER

It is therefore ordered that:

1. Claimant's claim for Workers Compensation benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

W.C. No. 5-044-940-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on December 19, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 12/19/17, Courtroom 1, beginning at 1:30 PM, and ending at 3:30 PM).

Claimant's Exhibits 1 through 4 were admitted into evidence, without objection. Respondents' Exhibits A through I were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ordered post-hearing briefs. Claimant's opening brief (labeled as "Proposed Specific Findings of fact, Conclusions of Law, and Order") was filed on December 27, 2017. On December 28, 2017, the ALJ issued a Procedural Order, indicating that Respondents' answer brief was still due within 5 working days of December 27, 2017. Respondents' answer brief was filed on January 4, 2018. Claimant's reply brief was filed on January 10, 2018. Consequently, the matter was deemed submitted for decision on that date.

ISSUES

The issues to be determined by this decision concern whether the Claimant suffered a compensable aggravation/acceleration of pre-existing right hip and shoulder conditions, or traumatic injuries to his right hip and shoulder in an auto accident on his way to pick up a prospective employee to help him in his work for the Employer. Also, did the Claimant's injuries, if compensable, arise out of the course and scope of his employment, specifically, whether the general "going to and coming from" rule applies; or, does an exception, involving the "dual purpose" doctrine apply. If the Claimant sustained a compensable injury, is he entitled to medical benefits that are causally-related to the auto accident of November 11, 2015? Also, if the claim is compensable, is the Claimant entitled to temporary partial disability (TPD) benefits.

The Claimant bears the burden of proof on all issues, by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. In November of 2015, the Claimant received a call from Wojciech Zdanowicz, the head of the Employer's business. At the time, the Claimant was living in Arizona and Zdanowicz lived and ran his business out of Colorado. Zdanowicz and the Claimant knew each other because the Claimant had worked for Zdanowicz in Colorado before moving to Arizona.

2. The Claimant resigned his position with the Employer for the first time shortly after being hired by the Employer in August of 2015. The Claimant had decided to move from Colorado to Arizona. When the Claimant resigned, he had a conversation Wojciech Zdanowicz, who owns and operates the Employer, regarding whether the Claimant would be willing to perform work for the Employer in the future. The Claimant stated that he planned to be back in Colorado to attend to personal domestic matters later in 2015. The Employer was agreeable to hiring the Claimant to perform work when the Claimant was in Colorado for his own personal affairs.

3. During their conversation, Zdanowicz asked the Claimant if he could come to Colorado to do a few days of fabrication work for twenty dollars an hour. The Claimant agreed and returned to Colorado on November 10, 2015.

4. When Claimant arrived in Colorado, according to the Claimant, Zdanowicz asked the Claimant how he would get from the airport at the airport to town. The Claimant told Zdanowicz that he rented a car and could drive himself.

5. According to Zdanowicz, he did not request that the Claimant return to Colorado on November 10, 2015. Rather, as Zdanowicz testified, he allowed the Claimant to work for him when he was in Colorado for personal reasons. As far Zdanowicz was aware, the Claimant had returned to Colorado in November of 2015 for his own personal reasons, and not for the express purpose of performing work for the Employer. The Employer did not request that the Claimant travel to Colorado for the express purpose of performing work. The ALJ finds a significant conflict between Zdanowicz's testimony regarding the reason the Claimant came to Colorado and the Claimant's testimony in this regard. The ALJ, however, resolves this conflict by finding that Zdanowicz and the Claimant had agreed on the Claimant doing work for Zdanowicz before the Claimant embarked on his trip to Colorado. Consequently, the ALJ finds that the Claimant came to Colorado for the dual purpose of doing work for the Employer and attending to personal business.

6. Zdanowicz had sheet metal fabrication work for the Claimant to perform in November of 2015. When the Claimant returned to Colorado in November of 2015, he told Zdanowicz that he wanted to use his own selected helper to assist him in the performance of the fabrication work. The Claimant selected Samuel Graham to be his helper. The Employer was agreeable to the Claimant's request. Indeed, Zdanowicz acquiesced in Graham becoming his employee at this time and when the Claimant left to return to Arizona in November 2015, Zdanowicz continued to pay Graham. Zdanowicz would have the ALJ believe that he had no role in Graham's employment and that the Claimant went to pick Graham up on his own initiative. The ALJ does not find this credible. Importantly, Zdanowicz did not **conditionally** accept Graham subject to Zdanowicz approval when Graham got to the shop. Mr. Graham's employment was to be finalized upon his arrival at the Employer's place of business on November 11, 2015.

7. On the evening of November 10, 2015, the Claimant slept in his car in a Walmart parking lot.

Findings: Preceding the Accident

8. According to the Claimant, on November 11, 2011, he went to the job site in Centennial. When he arrived, he was surprised by how much work there was for the job. The Claimant then told Zdanowicz that he needed an assistant to get the job done on time. According to the Claimant, Zdanowicz told him that it was fine if he needed an assistant and to take care of it himself. Respondents' answer brief posits the argument

that the Claimant went directly from sleeping in his car to pick up Graham. The Claimant's version makes more sense because there was no persuasive evidence that Zdanowicz agree, in advance to hire two people. He agreed to hire the Claimant only. It was only after the Claimant saw how much work there was, did he ask Zdanowicz if he could get a helper. This was after the Claimant arrived at the shop. The totality of the evidence concerning Graham establishes that the Claimant became Zdanowicz agent in hiring a helper and bringing him to the shop. Therefore, the ALJ finds the Claimant more credible than the statement attributed to Zdanowicz in the Respondents' answer brief.

9. With authority from Zdanowicz, the Claimant asked his friend and former coworker, Sam Graham, to be his assistant. Graham agreed but told the Claimant that he would need a ride from his home in Arvada to the job site in Centennial. Respondents argue that Zdanowicz never instructed the Claimant to pick up Graham; the Claimant's work did not require travel and Zdanowicz did not compensate the Claimant for travel. On the other hand, the ALJ infers and finds that without Graham, the Claimant would not have done the job alone; and, without the Claimant going to pick up Graham from his home in Arvada, neither the Claimant nor Graham would be doing the work for Zdanowicz.

Findings: Concerning the Accident

10. The Claimant then went to pick Graham up in Arvada. On his way to pick up Graham, the Claimant's rental car slid on some black ice, totaling the car and injuring the Claimant's neck, shoulders, knees, and left hand.

11. Aurora Police Department Officer Javen T. Harper responded to the scene of the car accident (Respondents' Exhibit B). Officer Harper noted at least three times in his accident report that there were no injuries in the collision (*Id.* at p. 4, 12).

12. Zdanowicz came to the scene of the collision after receiving a telephone call from Graham. Zdanowicz asked the Claimant whether he was injured in the collision or in need of medical care. The Claimant warranted that he was not injured and was not in need of medical attention.

13. Thereafter, Zdanowicz went to get Graham himself and brought him to the job site. Graham testified that someone from the Employer came to get him after the Claimant had the auto accident. The ALJ infers and finds that there was no one else other than Zdanowicz who knew about picking up Graham. Zdanowicz did not have a clear recollection of picking Graham up. The ALJ infers and finds that Zdanowicz picked up Graham after the Claimant had the auto accident.

14. Despite the accident, the Claimant and Graham worked the rest of the day. Graham was paid for his work by Zdanowicz. That night, the Claimant slept in Zdanowicz' s shop and Zdanowicz drove Graham back to Arvada.

15. After the collision, the Claimant and Graham worked for the Employer performing sheet metal fabrication work on the date of November 11, 2015. The Claimant and Graham also performed sheet metal fabrication work on the date of November 12, 2015. Both Zdanowicz and the Claimant testified that the Claimant performed a significant amount of work. The Claimant had no difficulty performing the work, and made no complaint of injury or pain to Zdanowicz.

16. On November 12, 2015, Zdanowicz picked Graham up again-- from Arvada. The Claimant and Graham worked throughout the day. That night, Zdanowicz paid for the Claimant and Graham to sleep at a hotel in Centennial. Zdanowicz does **not** deny that he paid for the hotel for Graham and the Claimant.

17. Because the Claimant's rental car was not drivable, and because Graham did not have any means of transportation to or from work, Zdanowicz paid for a hotel room for Graham and the Claimant, and picked them up from the hotel and dropped them off at the hotel after work. Zdanowicz testified that he provided the hotel for. Graham and the Claimant as a friendly gesture due to the collision, not as a condition or benefit of the Claimant's employment. The ALJ, however, infers and finds that Zdanowicz received a significant work-related benefit by paying for the hotel, *i.e.,* he had the certainty of having the Claimant and Graham available to do the work, as opposed to the inefficiency and uncertainty of having the Claimant fend for himself and having to pick Graham up in Arvada before work and drive him home afterwards.

18. The Claimant missed his flight back to Arizona. The Claimant paid for his own flight back to Arizona, but Zdanowicz paid for the Claimant's flight change fee. Again, according to Zdanowicz, he did so as a gesture to the Claimant, not as a condition or benefit of the Claimant's employment. The ALJ, however, infers and finds that this gesture helped assure Zdanowicz that the Claimant would work for him again. Graham eventually finished the job by himself and Zdanowicz paid Graham twenty dollars an hour for his work.

19. The Claimant again returned to work for the Employer in December of 2015. Again, the Claimant worked for the Employer when he was in Colorado. The Claimant was again able to perform sheet metal fabrication work without problems. He did not complain of any injury or desire for medical care during his December of 2015 sojourn in Colorado while working for the Employer.

Compensability

20. Prior to his employment with the Employer, the Claimant had pre-existing conditions relating to his neck, low-back, shoulders and hands. The Claimant had a prior work-related injury to his cervical spine which required a three level cervical fusion surgery in 2003. This injury resulted in a 25% impairment rating for the Claimant's cervical spine.

21. The Claimant was then involved in a non-work related automobile collision which occurred in 2009. He treated for injuries sustained in that collision at Spine One and The Surgery Center at Lone Tree. The Claimant's diagnoses to his neck included cervical spondylosis, cervical disc displacement, cervical disc degeneration, cervical radiculopathy, cervical post-laminectomy syndrome, and right foraminal disc herniation at C4-C5 with foraminal stenosis (Respondents' Exhibit G, p. 22, 130). The Claimant's diagnoses for his low-back included lumbar disc displacement, lumbar degenerative disc disease, lumbar radiculopathy and lumbar spondylosis (*Id.* at p. 43, 66). He had bulging discs in his lumbar spine at L3-L4 and L4-L5. (*Id.* at p. 110). The Claimant also complained of "upper limb pain and parathesias, left greater than right…." (*Id.* at p. 130). The Claimant underwent treatment including but not limited to several transforaminal epidural steroid injections into the lumbar spine and cervical spine (*Id.* at p. 22, 43, 66, 90, 110, 130). The Claimant also underwent physical therapy (PT) at Active Motion Physical Therapy (Respondents' Exhibit H). At times, the Claimant would fill out pain diagrams when he would present for treatment. He noted on several occasions that he had arthritis in his shoulders and hands (*See, e.g., Id.* at p. 77, 100, and 120). The Claimant testified at hearing that he has had arthritis in his shoulders for years prior to the alleged injury which is the subject of the present hearing.

22. The Claimant treated through 2011 for his injuries sustained in the 2009 automobile collision. The Claimant testified that he sustained a 15% impairment rating as a result of the 2009 collision.

23. The Claimant sought no medical care after the November 11, 2015 auto accident, until he presented for treatment with Lori Burke, N.P. at Partners in Primary Care (part of the Hatfield Medical Group) in Chandler, Arizona on September 9, 2016, approximately 10 months after the auto accident in question (Respondents' Exhibit I, p. 169). The Claimant went there to establish care, and to treat for a testicular lump and Hepatitis C, which had nothing to do with the auto accident. Except for the symptoms mentioned by the Claimant in the "History of Present Illness", Burke noted that all other symptoms were negative. The Claimant underwent a physical examination. Under the heading titled, "Musculoskeletal," Burke noted "Spine: no pain." (*Id.* at p. 170). There were no noted complaints of any pain in the Claimant's neck, low-back, shoulders, knees, hip or hands. The Claimant made no mention of the automobile collision of November 11, 2015. He was not placed on work restrictions. In his telephone testimony, the Claimant offered no plausible explanation for **not** mentioning the auto accident at this medical appointment.

24. The Claimant filled out a pain diagram on September 9, 2016. (*Id.* at p. 172). Under the heading titled "Present Health Concern" the Claimant wrote: "Lump in Testicle, Hep-C." Under the heading titled "Personal Medical History" the Claimant was asked to indicate whether he had any of a list of medical problems. The section titled "Other Problems" was left blank by the Claimant. Again, the Claimant offered no plausible explanation for leaving this blank.

25. The Claimant returned to visit NP Burke on October 4, 2016. (*Id.* at p. 178). Burke noted that the Claimant was there for a review of laboratory work, and had "no complaints." There were no symptoms noted. Another physical examination was performed, and again it was noted that the Claimant had no spine pain. There were no noted complaints of any pain in the Claimant's neck, low-back, shoulders, knees, hip or hands. Again, the Claimant made no mention of the automobile collision of November 11, 2015. He was not placed on work restrictions. Again, the Claimant offered no plausible explanation for not mentioning the auto accident.

26. The Claimant did not submit a Workers' Claim for Compensation until February 22, 2017, more than 15 months after the accident (Respondents' Exhibit E). In the form, he complained of pain in his back, neck, shoulder, hip and knee pain.

27. Following his appointment with NP Burke in October of 2016, the Claimant waited until November 1, 2017 to seek further medical treatment. On November 1, 2017, the Claimant returned to the Hatfield Medical Group and treated with Tyler Dennison, PA (Respondents' Exhibit I, p. 181). He told PA Dennison that he had chronic right shoulder pains and right hip pains. The Claimant told Dennison that he is a steelworker, and that he used to see an "Ortho" for cortisone injections that "bought him time." He stated that he "was told there's rotator cuff damage that would eventually require surgery. Patient states also [sic] degenerative changes." The Claimant denied any further musculoskeletal symptoms (*Id.* at p. 182). Physical examination of the Claimant's neck and lower-extremities were normal. There were no noted complaints of any pain in the Claimant's neck, low-back, knees, or hands. The Claimant made no mention of the automobile collision of November 11, 2015. He was not placed on work restrictions. The Claimant was referred for an MRI (magnetic resonance imaging) of the right-shoulder.

28. An MRI of the right-shoulder was performed on November 12, 2017 (*Id.* at p. 184). The MRI showed an "age indeterminant full-thickness tear" of the supraspinatus and partial tears of the subscapularis. The Claimant had degenerative changes in the acromion and humeral head.

29. According to the Claimant, long after he returned to Arizona (beginning in late 2016 or early 2017), he began to experience increasing pain and stiffness in his neck. His shoulders also began to make a crunching sound when he rotated them. He also had pain and numbness from his knee to upper thigh and in his left hand. His Workers' Claim for Compensation, dated February 2, 2017 (Respondents' Exhibit C), he indicates that he had no initial treatment. The ALJ infers and finds that this long delay in reporting any alleged injury consequences of the auto accident of November 11, 2015, significantly undermines the credibility of the Claimant's injury claim.

30. According to the Claimant, he can no longer work at fabrication work. Instead, he works as a guitar teacher for which he receives $10 an hour and works about 10 hours per week, thus, earning about $100.00 per week. His testimony in this regard is undisputed.

DISCUSSION

Picking Up Graham

The Claimant requested that Zdanowicz allow him to bring on an assistant to help him complete the job AND Zdanowicz acquiesced. The Claimant made this request on November 11, 2015, after reporting to the job site and seeing the amount of work required. After Zdanowicz agreed to the Claimant bringing on an assistant, the Claimant drove to get. Graham in Arvada. Zdanowicz had no clear recollection of agreeing to the Claimant bringing on an assistant. On the way to pick up Graham, the Claimant was involved in the auto accident in question before he could get to Graham. Nonetheless, Zdanowicz went to pick up Graham himself and brought him to the job site. Graham then worked for Zdanowicz, and was paid by Zdanowicz, until the job was complete. Because Graham worked for Zdanowicz, once he arrived in Centennial, the act of picking him up conferred a benefit on Zdanowicz. This is further established by the fact that Zdanowicz picked Graham up himself after the auto accident, when the Claimant was unable to do so. Furthermore, Zdanowicz continued to act as transporter for Graham on the night of November 11 and on the morning of November 12. Consequently, Graham was necessary to complete the job and the Claimant would have benefited Zdanowicz when he drove to Arvada to bring Graham to the job site in Centennial.

As found, Zdanowicz had knowledge that the Claimant, who had effectively commenced work for the Employer, left the Employer's premises to go pick up Graham to assist the Claimant in his work for Zdanowicz. If Graham had started out for the job site in his own vehicle and had the accident where he (Graham) was injured, Graham would be within the purview of the "coming to" rule and he would not be within the course and scope of his job. This did not happen.

Despite the fact that the Claimant's auto accident was within the course and scope of his employment for the Employer, as found, herein below, the Claimant has failed to prove that he sustained an aggravation/acceleration of a pre-existing condition or new compensable injuries arising out of the auto accident.

Claimant's Argument Concerning "Travel Status"

As a catch-all argument, the Claimant argues that because he was required to travel from Arizona to Colorado to work for Zdanowicz, he qualifies as a traveling employee. The ALJ determines that the Claimant misapplies the "travel status" doctrine because the Claimant, while in Colorado, became a "Colorado employee." Had Zdanowicz's business been in Arizona and had he the Claimant temporarily deploy to Colorado where the Claimant was injured in a compensable injury, then, the "travel

status" doctrine would apply. The Claimant cites several "travel status" cases herein below, but they are not germane to the facts of this case.

The traveling employee doctrine applies when an employee "is required to travel away from his home city or town, where he works, on his employer's business." *Tatum-Reese Development Corp. v. Industrial Commission*, 490 P.2d 94, (Colo. Ct. App. 1971). When an employee is on travel status, he is protected by the Workers' Compensation Act until he either (1) returns home; (2) makes a special deviation unrelated to his employment. *Id*. In determining if a claimant is on travel status, the court looks to whether the employer paid for transportation, lodging, and meals; however, "the absence of one or more of these factors does not, in and of itself, disqualify a claimant from receiving benefits." *Phillips Contracting, Inc. v. Hirst*, 905 P.2d 9, (Colo. Ct. App. 1995). The ALJ concludes that an employee must be on "travel status" from his place of employment which, in this case, would be Arizona. The fact is that he came from Arizona to take a job in Colorado, regardless of how short the duration of the job makes him a Colorado employee.

The fact that the Claimant left his home in Arizona to perform work for Zdanowicz in Colorado in November of 2015; when Claimant arrived, Zdanowicz offered to pick him up at the airport, but the Claimant rented and paid for a rental car (he was not reimbursed by Zdanowicz nor was there an agreement for reimbursement) illustrate that the Claimant became a Colorado employee as defined by the Workers' Compensation Act. The Claimant then stayed in Zdanowicz's shop during his second night in Colorado. On the third night, Zdanowicz paid for the Claimant and Graham to stay in a hotel close to the Employer's job site. Thereafter, as found, the Claimant missed his flight back to Arizona and Zdanowicz paid for Claimant's change fee for the flight back to Arizona. The Claimant had paid for the airline ticket himself and was not reimbursed for it. Although Zdanowicz did not cover all of Claimant's expenses, he provided lodging and transportation for both the Claimant and Graham. Indeed, the Claimant argues for a reverse application of the "travel status" doctrine, which argument the ALJ rejects.

Special Errand

Respondents argue that the Claimant's injury does not meet the **"**special errand**"** exception to the **"**going **to** and coming **from"** rule. Respondents weighed the following factors from *Madden*: (1) whether the travel occurred during work hours; (2) whether the travel occurred on or off the employer's premises; (3) whether the travel was contemplated by the employment contract; and (4) whether the obligations or conditions of employment created a "zone of special danger." In weighing these factors, Respondents concluded that none of the factors apply to the Claimant's injury. *Madden v. Mountain West Fabricators*, 977 P.2d 861, 863 (Colo. 1999).

Respondents err in weighing the third factor to the facts in the present case. To determine whether an employee's travel is contemplated by the employment contract, a court must conduct a fact intensive analysis to see if there is evidence of "a causal

connection between the employment and the injury such that the travel to and from work arose out of and in the course of employment." *Staff Administrators, Inc. v. Reynolds*, 977 P.2d 866, 868 (Colo. 1999).

To arise out of employment, the injury must have its "origin in" an employee's work-related functions." To determine if the injury has its origin in the employee's work-related functions, a court applies "but-for" test in which it ask: "if it [the injury] would not have occurred but for the fact that the conditions and obligations of the employment placed the claimant in the position where he or she was injured." *City of Brighton v. Rodriguez,* 318 P.3d 496, 511, 2014 CO 7.

By applying the "but-for" test, courts have reached the following outcomes:

The Supreme Court held in favor of a claimant who was killed by lighting while returning from a neighbor's farm after the employer sent him to work there. *Aetna Life Ins. Co. v. Indus. Comm'n of Colo*., 254 P. 995, 996 (Colo. 1927).

In another opinion, the Court of Appeals held that a claimant suffered a compensable injury when he was shot by a co-worker while both were waiting in a parking lot for their employer to arrive. *Kitchens v. Dep't of Labor and Empt', Div. of Labor*, 486 P.2d 474, 477 (Colo. App.1971).

In *Reynolds*, *supra,* the court determined that, although the claimant was using his own car, he suffered a compensable injury when he drove to a construction site after missing a rendezvous with his co-workers to carpool to the site.

In the present case, Respondents implicitly admit that the Claimant was involved in an auto accident when he went to pick up Graham. Respondents further admit that the purpose of the Claimant driving to pick up Graham was for him to assist the Claimant in the fabrication work for the Employer. As found, the Claimant and Zdanowicz spoke about getting an assistant for the fabrication work and that. Zdanowicz agreed to the request.

Additionally, as found, Zdanowicz went to pick up Graham after the Claimant was unable to do so because of the auto accident. Zdanowicz also drove Graham back home after the first day of work and picked him up and drove him to the work site the following morning. Zdanowicz's actions clearly demonstrate that.Graham was necessary in completing the fabrication work because once the Claimant was unable to pick him up, Zdanowicz himself drove to get him and bring him back to the work site.

Furthermore, in applying the "but-for" test to these facts, it is clear. Had it not been for the Claimant's employment with Zdanowicz, the Claimant would have never driven to pick up Graham. Likewise, had it not been for his employment with Zdanowicz, the Claimant would not have been involved in the auto accident on November 11, 2015.

Ultimate Findings

31 The Claimant's telephone testimony was consistent concerning the circumstances of his embarkation to pick Graham up and bring him to Zdanowicz's shop to begin work, the Claimant already having reported to the shop. The circumstances of the auto accident and the Claimant's injuries are, essentially, undisputed. To fully accept Zdanowicz's version of events, the ALJ would be required to reject the Claimant's testimony that when he saw the amount of work at the shop, he determined that he needed help, which led him to pick up Graham, with Zdanowicz's approval.. To accept Zdanowicz version of this event, the ALJ would be required to infer that the Claimant, entirely on his own, "out-of-the-clear-blue-sky" went to pick up Graham before even reporting to Zdanowicz's shop. Under the totality of the evidence, this makes no sense. Indeed, Zdanowicz's testimony regarding the Claimant going to pick up Graham is fuzzy, whereas the Claimant's testimony in this regard is quite clear. Therefore, the ALJ finds the Claimant more credible on the issue of the Claimant embarking to pick up Graham than Zdanowicz's testimony in this regard.

32. The Claimant continued working without difficulty after the auto accident; he did not seek any specific medical attention for anything for approximately 10 months; when he presented for medical attention in Arizona, he did not mention the auto accident or injuries claimed as a result thereof (he gave a history of testicular problems); he had similar problems to the injuries claimed herein on the Worker's Claim for Compensation as a result of disabling injuries sustained in 2009; and, the first mention of injuries allegedly related to the auto accident of November 11, 2015, was in the Claimant's Worker's Claim for Compensation, dated February 22, 2017. All of these facts significantly impact the credibility of the claimed occurrence of compensable

injuries on November 11, 2015. Although the auto accident was within the course and scope of his employment, the ALJ does not find the Claimant's claim of disabling injuries resulting from the November 11, 2015 auto accident **credible.**

33. Between conflicting versions of events regarding the Claimant's going to pick up Graham to assist him in his work for the Employer, the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's version of events and to reject evidence to the contrary,

34. The Claimant meets the requirements for the "special errand" exception to the "going to and coming from" rule because he reported to the job site before receiving approval from Zdanowicz to have Graham work as his assistant and to go pick up Graham and bring him to the jobsite. On his way to pick Graham up, the Claimant was involved in the auto accident in question.

35. The ALJ further finds that the Claimant was **not** on "travel status" within the meaning of the Workers' Compensation Act and the case law arising thereunder, at the time of the auto accident.

36. Although the auto accident of November 11, 2015 happened within the course and scope of the Claimant's employment with the Employer, the Claimant failed to prove by preponderant evidence that he suffered compensable injuries, or an aggravation/acceleration of pre-existing conditions, as a result of the November 11, 2015 auto accident. For this reason, any determinations concerning medical benefits, average weekly wage and temporary disability are moot.

37. There is no persuasive medical evidence connecting the Claimant's alleged injuries to the November 11, 2015 auto accident, other than the Claimant's lay testimony which, under the totality of the evidence, is insufficient to overcome the lack of medical opinions causally connecting the auto accident to the alleged injuries.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo.

App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, The Claimant's telephone testimony was consistent concerning the circumstances of his embarkation to pick up Graham and bring him to Zdanowicz's shop to begin work, the Claimant already having reported to the shop. The circumstances of the auto accident and the Claimant's injuries are, essentially, undisputed. Consequently, as found, the Claimant was more credible on the issue of his embarkation to pick up Graham than Zdanowicz's testimony in this regard.

b. As further found, the Claimant continued working without difficulty after the auto accident; he did not seek any specific medical attention for anything for approximately 10 months; when he presented for medical attention in Arizona, he did not mention the auto accident or injuries claimed as a result thereof (he gave a history of testicular problems); he had similar problems to the injuries claimed herein on the Worker's Claim for Compensation as a result of disabling injuries sustained in 2009; and, the first mention of injuries allegedly related to the auto accident of November 11, 2015, was in the Claimant's Worker's Claim for Compensation, dated February 22, 2017. All of these facts significantly impacted the credibility of the claimed occurrence of compensable injuries on November 11, 2015. Although the auto accident was within the course and scope of his employment, as found, the Claimant's claim of disabling injuries resulting from the November 11, 2015 auto accident is not **credible.**

c. As found, there is no persuasive or credible medical opinion connecting the Claimant's claimed injuries to the auto accident of November 11, 2015. It is primarily the Claimant's lay testimony that does so and, as found, it is insufficient to overcome

the lack of persuasive medical evidence, or to invoke the application of the holding in *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

Substantial Evidence

d. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting versions of events regarding the Claimant's going to pick up Graham to assist him in his work for the Employer, the ALJ made a rational choice, based on substantial evidence, to accept the Claimant's version of events and to reject evidence to the contrary,

Course and Scope of Employment/Special Errand

e. As found, the Claimant met the requirements for the "special errand" exception to the "going to and coming from" rule because he reported to the job site before receiving approval from Zdanowicz to have Graham work as his assistant and to go pick up Graham and bring him to the jobsite. On his way to pick Graham up, the Claimant was involved in the auto accident in question. *See Staff Administrators, Inc. v. Reynolds*, 977 P.2d 866, 868 (Colo. 1999**);** *City of Brighton v. Rodriguez,* 318 P.3d 496, 511**, 2014 CO 7**; *Aetna Life Ins. Co. v. Indus. Comm'n of Colo*., 254 P. 995, 996 (Colo. 1927); *Kitchens v. Dep't of Labor and Empt', Div. of Labor*, 486 P.2d 474, 477 (Colo. App.1971) [each opinion applies the "but for" the employment, brings a situation within the course and scope of employment].

Compensability

f. Essentially, *City of Brighton v. Rodriguez, supra,* creates a presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment. Thereupon, it is incumbent to show that non-work related

factors caused the injury. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant failed to show that his alleged injuries arose out of the auto accident of November 11, 2015. Therefore, he did **not** sustain an aggravation/acceleration of his previous conditions of 2009, nor did he sustain new compensable injuries as claimed. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997)*.* An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, none of the above circumstances were proven.

Burden of Proof

g. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to sustain his burden of proving compensable injuries arising out of the auto accident of November 11, 2015.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for Workers' Compensation benefits are hereby denied and dismissed.

DATED this_____day of January 2018.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For**

ISSUES

a. Whether Respondent overcame the opinion of Dr. Timothy Hall, Division independent medical examiner (DIME), by clear and convincing evidence regarding whether Claimant's left hip injury and resulting impairment is causally related to the admitted January 28, 2016, injury;

b. Whether Respondent has produced clear and convincing evidence to overcome Dr. Hall's DIME opinion that Claimant's left knee chondromalacia and resulting impairment is causally related to the January 28, 2016, slip and fall;

c. If the left hip injury is determined to be causally related, whether Claimant has established by a preponderance of the evidence that the 3% scheduled impairment rating should be converted to a 1% whole person rating; and

d. Whether Claimant has proven by a preponderance of the evidence that he is entitled to ongoing maintenance medical care for the left knee and/or left hip.

FINDINGS OF FACT

1. Claimant is a 55 year old man who worked for Employer on January 28, 2016, as an electrical inspector. On this date, he was walking away from a construction site and slipped on ice, landing on his left side. Claimant sought treatment from Dr. Bryan Counts at Concentra Medical Centers the same day. He reported to Dr. Counts that he landed on the left side of his body. Claimant initially felt that he was okay after the fall, but his knee began aching while driving shortly thereafter along with tightness in his thigh. Claimant told Dr. Counts on January 28, 2016, that he was experiencing pain in his left hip, thigh and knee, noting that the knee was the most bothersome at the time.

2. Dr. Counts performed a physical examination. The examination of the left hip documented tenderness to the anterior hip joint and greater trochanter bursa with complaints of stiffness. Examination of the left knee documented effusion, tenderness to the lateral knee and painful restricted range of motion. Dr. Counts diagnosed Claimant with a sprain of the left knee and a contusion of the left hip and thigh from the slip and fall. Dr. Counts prescribed Norco and Naproxen, along with physical therapy, x-rays of the left hip, a hinged brace for the left knee and x-rays of the left knee.

3. Claimant began physical therapy the same day as the injury and his appointment with Dr. Counts. The mechanism of injury was documented as, "Patient states he injured his left hip and knee when he slipped and fell on the ice." Claimant was experiencing constant pain around his patella with popping and clicking of the knee, and pain in his left quad running to his left hip. Claimant reported that he had no functional restrictions prior to the slip and fall.

4. Claimant followed up at Concentra on February 2, 2016, with Dr. Amanda Cava. Claimant's knee was the primary complaint, for which an MRI was ordered due to a suspected meniscal tear. Two days later, Claimant reported "increasing hip and quad pain" to his physical therapist. The therapist noted that Claimant had a positive squish test of the SI joint for posterior rotation on the left. Claimant was noted to walk with an antalgic gait.

5. Claimant underwent the left knee MRI on February 10, 2016. The MRI showed a small joint effusion, a multiplanar tear of the body and anterior horn of the lateral meniscus, a .6 mm displaced meniscal fragment versus loose body near the root attachment of the anterior horn of the lateral meniscus, a large 1.9 by 0.8 cm full-thickness cartilage defect central weightbearing surface medial femoral condyle and a partial thickness cartilage fissure patellar apex.

6. Claimant presented to Colorado Orthopedic Consultants on March 14, 2016, for an initial evaluation regarding his left knee injury. Dr. Michael Hewitt reviewed the MRI, examined Claimant and obtained a medical history. It was his opinion that surgery was indicated because Claimant had not progressed after six weeks of physical therapy.

7. Claimant followed up at Concentra with Dr. Counts on April 1, 2016, prior to his surgery. Claimant continued complaining of left knee and left hip pain. Claimant was seen at Concentra again by Darla Draper on April 18, 2016, during which Claimant reported left hip pain.

8. Dr. Michael Hewitt performed surgery on Claimant's left knee on April 19, 2016. The preoperative diagnoses included, "left knee displaced lateral meniscal tear" and "left knee chondromalacia." The post-operative diagnosis was a grade four chondral lesion of the medial femoral condyle, a grade three chondral lesion of the lateral femoral condyle, and a grade four chondral lesion of the central trochlea. Surgery included a left knee partial lateral meniscectomy, and a medial and lateral femoral condyle and trochlear chondroplasty. Claimant underwent post-surgery therapy.

9. As of August 3, 2016, Claimant reported that he had been improving; however, he still had pain in his lateral knee with painful popping, and still reported cramping of the left hip with hip flexion. Dr. Counts recommended more therapy for Claimant's left hip pain. On August 23, 2016, the physical therapist document Claimant's report of ongoing intermittent left hip pain, especially when walking, that

would range from a level two out of ten to a level seven out of ten. By September 12, 2016, Claimant was still reporting left mid-thigh and left hip pain.

10. Dr. Counts placed Claimant at maximum medical improvement (MMI) on October 4, 2016. Claimant reported that he was still having very frequent crepitus just superior to the patella in his left knee, but that he was ready for case closure. Physical examination documented crepitus on palpation. Despite Claimant reporting ongoing hip pain, Dr. Counts did not report examination of the left hip. Dr. Counts assigned a 9% scheduled rating for Claimant's left knee. Claimant was given 4% for range of motion loss per table 39 of the *AMA Guides*, and 5% per table 40 for a partial meniscectomy and due to persistent crepitation. Dr. Counts did not provide a rating for Claimant's left hip, nor did he discuss why no rating for the hip was given, despite complaints of hip pain for the past 10 months and considerable therapy provided for the hip injury. Dr. Counts recommended ongoing maintenance care in the form of a six month gym membership and to see either himself or Dr. Hewitt as needed for twelve months.

11. Claimant subsequently underwent a Division independent medical examination (DIME) with Dr. Timothy Hall on February 15, 2017. Claimant reported ongoing left knee pain along with hip pain, some back pain and some groin pain on the left side. It was reported that the knee hurts "pretty much all of the time." Claimant's left hip pain was documented to be at the iliac crest along into the quadratus and his back, laterally down the hip and into the groin. The pain was described as being "deep" in the hip and groin area and that the pain was significantly increased when sitting for a long period of time and then standing. Physical examination of the left hip revealed tenderness through the left quadratus lumborum, exquisite tenderness through the left psoas, and a lack of hip extension on the left side. Physical examination of the left knee documented range of motion loss and "significant crepitus" on range of motion.

12. In the DIME report, Dr. Hall found that Claimant was not at MMI for his left hip condition. Dr. Hall reviewed and took into account previous medical records documenting left hip pain. These records are reflected at Respondents' exhibits K and L. Claimant had slipped and twisted on September 10, 2012, resulting in bilateral hip pain. He was diagnosed with a bilateral hip strain with iliopsoas muscle spasm. Claimant underwent therapy for the hip and was placed at MMI for that injury on February 19, 2013. Claimant was provided a permanent impairment rating for his right hip by Dr. Robert Kawasaki. Claimant was given a 3% scheduled rating for the right hip for range of motion loss.

13. Dr. Kawasaki specifically noted in the MMI report on February 19, 2013 that Claimant initially was complaining of bilateral hip pain; however, the left hip symptoms resolved after treatment.

14. Dr. Hall recommended Claimant undergo a left hip MRI and diagnostic injections of the left hip. Dr. Hall acknowledged that Claimant has a history of osteoarthritis in his hips and felt the fall may have created further local pathology in the hip. Dr. Hall assigned provisional impairment ratings for both the left knee and left hip.

Dr. Hall assigned 10% for the left knee based on the partial menisectomy per table 40 of the *AMA Guides* and another 10% under the same table for "arthritis due to any cause including trauma; chondromalacia." Dr. Hall assigned a 3% impairment rating of the left hip for range of motion loss. Dr. Hall further opined that Claimant's hip/groin injury was affecting his lower back. Because Claimant does not have a specific impairment for his low back, he felt it was reasonable that the rating for the hip be converted to a whole person rating.

15. Claimant had a MRI of his left hip performed on April 7, 2017. The MRI showed moderate joint space narrowing of the left hip with moderately severe diffuse thinning and irregularity of the articular cartilage, a small joint effusion with synovial irregularity suggesting synovitis, a diffusely degenerated labrum, and tendinosis of the gluteal minimum and medius tendon.

16. Claimant was evaluated by Dr. John Schwappach, an orthopedist, on May 1, 2017, for his ongoing hip complaints. Dr. Schwappach reviewed the MRI, examined Claimant, and took a medical history. He diagnosed Claimant with an acute exacerbation of underlying osteoarthritis of the left hip. Dr. Schwappach felt an intraarticular cortisone injection would be appropriate to try. He also opined that Claimant could contemplate a total hip arthroplasty at an undetermined date in the future. Dr. Schwappach felt the total hip replacement would not be work related due to long standing underlying pathology, despite his acknowledgement that the slip and fall caused an exacerbation of Claimant's underlying osteoarthritis.

17. Claimant decided that he was not interested in pursuing a total hip replacement and this information was conveyed to Dr. Hall via letter on May 26, 2017, from Respondent's counsel. Dr. Hall responded on June 12, 2016, indicating that Claimant would therefore be at MMI effective the date of the evaluation with Dr. Schwappach, May 1, 2017, due to Claimant not wanting further potential curative treatment at that time.

18. Respondents retained Dr. Gwendolyn Henke to perform a records review and she authored a report dated June 30, 2017. It was Dr. Henke's opinion that Claimant's only work-related diagnoses included the displaced anterior horn tear of the left lateral meniscus and a contusion of the left lateral thigh. Dr. Henke opined that Dr. Hall incorrectly assigned a 10% rating for chondromalacia because it was her opinion that Claimant had pre-existing left knee arthritis that was not affected by the work injury. Dr. Henke further opined that Claimant should not receive a rating for his hip because he had pre-existing bilateral hip arthritis prior to the date of the injury. *Id.* Dr. Henke based her opinion solely on the fact that imaging documented arthritis existed prior to the injury. *Id.* She provided no discussion as to whether the fall aggravated or accelerated the underlying condition, or affected Claimant's functional abilities.

19. Dr. Henke testified at hearing on behalf of Respondents. It was her testimony that the meniscectomy performed by Dr. Hewitt was reasonably necessary and related to the work incident, but felt that the chondroplasty that was also performed

was not related to the claim because it was a degenerative finding. She opined that Dr. Hall should not have provided a 10% rating for the chondromalacia because it was a pre-existing condition, i.e., arthritis. She further testified that Claimant's current hip symptoms were unrelated to the January 28, 2016, fall and were solely the result of a pre-existing degenerative condition. It was her opinion that Claimant sustained nothing more than a temporary exacerbation of his hip and that there was "no evidence that he injured the hip in the fall." Based on this, she opined Claimant should not receive any rating for the hip.

20. Claimant testified at hearing regarding his previous hip injury of September 2012. He recalled that he slipped and tweaked his body. Claimant clarified that he slipped, but did not fall, and that the slip caused him to develop some anterior left hip pain. Claimant testified that he received no additional treatment for his hip after being released at MMI on February 19, 2013. Claimant indicated that he was "fine" leading up to the January 28, 2016, incident, and that he was able to perform his job without limitation or pain. His job required him to walk or otherwise be on his feet for approximately seven out of eight hours per day. It was not until after the fall in January of 2016 that he felt his knee and left hip begin tightening up and experiencing pain. His left hip continues to cause him pain to this day and he continues to take over the counter medication to help alleviate this pain. Claimant explained that he did not have left hip pain prior to the fall, and that the left hip pain has been continuous since the fall.

21. The ALJ finds that Dr. Hall appropriately rated Claimant's chondromalacia as being causally related to the January 28, 2016, incident. There is no dispute that Claimant likely had pre-existing arthritis in his left knee prior to the fall at work; however, there is no credible or persuasive evidence to suggest Claimant's pre-existing arthritis caused any significant pain or functional limitation prior to January 28, 2016. Table 40 of the *AMA Guides* addresses impairment ratings of the lower extremity for other disorders of the knee. Number five states a 0-20% rating can be provided for "Arthritis due to any cause including trauma; chondromalacia."

22. The ALJ finds that the traumatic event of January 28, 2016, more likely than not permanently aggravated an underlying condition in Claimant's left knee due to the fact that the left knee was reportedly asymptomatic prior to the fall. Because the *AMA Guides* allows for a rating for arthritis from "any cause" and also for chondromalacia, which was treated surgically under this claim by Dr. Hewitt, Dr. Hall did not err in finding the chondromalacia to be causally related and assigning the additional 10% rating accordingly.

23. Furthermore, the DIME report of Dr. Hall documents that Claimant was having back pain associated with his left hip injury at the time of his evaluation. Dr. Hall was able to determine the pain was going up Claimant's iliac crest into the quadratus lumborum muscle of the back. Physical examination confirmed Claimant's subjective complaints by documenting tenderness through the left quadratus lumborum. The ALJ therefore finds that Claimant has functional impairment not on the schedule of impairments and the 3% scheduled rating is converted to a 1% whole person rating.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. Section 8-41-301(1)(b), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its “origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee’s service to the employer.” *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991).

5. For an injury to be compensable under the Act, it must “arise out of” and “occur within the course and scope” of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any

compensation is awarded. Section 8-41-301(1)(c) C.R.S.; *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the judge. *Faulkner,* 12 P.3d at 846.

6. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the judge to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

7. The ALJ finds Claimant to be credible. Claimant's testimony regarding his left hip condition prior and subsequent to the January 28, 2016 incident is corroborated by the medical records. There are no records to suggest that Claimant had ongoing symptoms with his left hip after being placed at MMI in 2013 for his 2012 injury. In fact, it is documented that his left hip complaints had entirely resolved prior to MMI and that it was his right hip that was given a permanent impairment rating in 2013.

Overcoming the DIME regarding Causation of the Left Hip Injury and Resulting Permanent Impairment

8. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). To overcome a DIME physician's opinion regarding permanency or the cause of a particular component of a claimant's medical condition, the party challenging the DIME must demonstrate that the physician's determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.* A mere difference of medical opinions is insufficient. *Medina-Weber v. Denver Public Schools* W.C. No. 4-782-625 (ICAO, May 24, 2010).

9. The ALJ finds that Respondent failed to prove by clear and convincing evidence that Claimant's left hip injury and resulting impairment are not causally related to the January 28, 2016 fall. Claimant did sustain an injury to both of his hips in 2012 and was released at MMI for that claim on February 19, 2013, with no permanent impairment to his left hip. The MMI report specifically stated that Claimant's left hip symptoms had resolved. There are no medical records between February 19, 2013,

and January 28, 2016, to rebut Claimant's assertions at hearing that his left hip was asymptomatic prior to the January 2016 fall.

10. The ALJ finds the opinions of Dr. Henke to be unpersuasive. Dr. Henke opined that Claimant's ongoing symptoms are entirely a result of his underlying arthritis and that the fall on January 28, 2016, caused no more than a temporary exacerbation of his pain complaints. Her opinions are not supported by the record. Claimant reported to his physician on the day of the injury that he landed on his left side and was experiencing left hip pain. Claimant routinely reported ongoing left hip pain through the duration of his treatment to his multiple physicians and therapists as documented in the record. Claimant reported ongoing hip pain at the time of his MMI evaluation on October 4, 2016. He continued to report the same ongoing pain to Dr. Hall on February 15, 2017, and again at hearing on July 26, 2017. Claimant has reported left hip pain continuously for approximately 18 months from January 28, 2016, through July 26, 2017, that did not exist prior to January 28, 2016.

11. Therefore, the ALJ finds that Claimant sustained a permanent aggravation that warrants an impairment rating. Respondents have failed to show by clear and convincing evidence that Dr. Hall erred in finding Claimant's hip condition to be causally related to the admitted injury.

Overcoming the DIME regarding Causation of Claimant's Left Knee Chondromalacia

12. The ALJ finds that Dr. Hall appropriately rated Claimant's chondromalacia as being causally related to the January 28, 2016, incident. There is no dispute that Claimant likely had pre-existing arthritis in his left knee prior to the fall at work; however, there is no credible or persuasive evidence to suggest Claimant's pre-existing arthritis caused any significant pain or functional limitation prior to January 28, 2016. Table 40 of the *AMA Guides* addresses impairment ratings of the lower extremity for other disorders of the knee. Number five states a 0-20% rating can be provided for "Arthritis due to any cause including trauma; chondromalacia."

13. The ALJ finds that the traumatic event of January 28, 2016, more likely than not permanently aggravated an underlying condition in Claimant's left knee due to the fact that the left knee was reportedly asymptomatic prior to the fall. Because the *AMA Guides* allows for a rating for arthritis from "any cause" and also for chondromalacia, which was treated surgically under this claim by Dr. Hewitt, Dr. Hall did not err in finding the chondromalacia to be causally related and assigning the additional 10% rating accordingly.

Conversion of the 3% Scheduled Rating of the Left Hip

14. When a claimant's injury is listed on the schedule of disabilities, the award for that injury is limited to a scheduled disability award. Section 8-42-107(l)(a), C.R.S. The term "injury" contained in Section 8-42-107(l)(a), C.R.S. "refers to the situs of the

functional impairment, meaning the part of the body that sustained the ultimate loss, and not necessarily the situs of the injury itself." *Walker v. Jim Fuoco Motor Co.*, 942 P.2d 1390, 1391 (Colo. App. 1997); *see also Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo.App.1996). Depending upon the facts of a particular claim, therefore, damage to the lower extremity may or may not reflect functional impairment enumerated on the schedule of benefits. *See Strauch v. PSL Swedish Healthcare System, supra; see also Abeyta v. Wackenhut Services*, W.C. No. 4-519-399 (September 16, 2004).

15. The question of whether the claimant sustained a scheduled injury within the meaning of Section 8-42-107(2), C.R.S. or a whole person medical impairment compensable under Section 8-42-107(8), C.R.S., is one of fact for determination by the ALJ. *Walker v. Jim Fuoco Motor Co., supra*. The DIME report of Dr. Hall documents that Claimant was having back pain associated with his left hip injury at the time of his evaluation. Dr. Hall was able to determine the pain was going up Claimant's iliac crest into the quadratus lumborum muscle of the back. Physical examination confirmed Claimant's subjective complaints by documenting tenderness through the left quadratus lumborum. The ALJ therefore concludes that Claimant has functional impairment not on the schedule of impairments and the 3% scheduled rating is converted to a 1% whole person rating.

Medical Maintenance Care

16. The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). An award for Grover medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended, nor a finding that Claimant is actually receiving medical treatment. *Holly Nursing Care Center v ICAO*, 992 P.2d 701 (Colo. App. 1999). Claimant must prove entitlement to Grover medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc*., 865 P.2d 915 (Colo. App. 1993). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc*., 77 P.3d 863, 866 (Colo. App. 2003).

17. The ALJ finds that Claimant has proven by a preponderance of the evidence that he is entitled to a general award of future medical benefits for his left knee and left hip injuries stemming from the January 28, 2016, industrial injury. Claimant's ATP, Dr. Counts, indicated at the time of his MMI determination that Claimant should be afforded maintenance care to follow up with himself or Dr. Hewitt as needed for the next twelve months.

18. As of the July 26, 2017, hearing, both Claimant's left knee and hip remain symptomatic, and Claimant received a left hip injection as recently as June 28, 2017, for his ongoing claim related left hip pain. Claimant followed up with Dr. Counts as recently

as June 30, 2017, with complaints of ongoing left knee and left hip pain, for which medication was prescribed and a work excuse from June 28, 2017, through July 2, 2017 was given. Claimant is therefore entitled to all reasonable, necessary, and related medical care to prevent deterioration of his knee and left hip.

ORDER

1. Claimant's left hip injury is causally related to the January 28, 2016, incident.

2. Claimant's 3% scheduled rating for the left hip is converted to a 1% whole person rating.

3. Claimant's left knee chondromalacia and 10% rating for said chondromalacia are causally related to the January 28, 2016, incident and Respondents shall pay a PPD award in accordance with this rating, as well as the additional rating for the knee provided by Dr. Hall that was not challenged by Respondents, for a combined 19% impairment rating for the left knee.

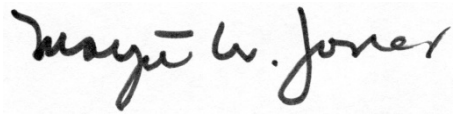
4. Respondents shall pay for all reasonable, necessary, and related treatment for Claimant's ongoing left knee and left hip symptoms that is intended to prevent further deterioration of his condition consistent with *Grover, supra*.

5. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 11, 2018



Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant established her bilateral knee injuries – including her torn meniscus - were caused by the June 4, 2015, work accident, and that she was not at MMI on November 3, 2015.

II. Whether Claimant is entitled to reasonable and necessary medical treatment for her knees due to her June 4, 2015, work accident.

III. Whether Claimant's November 25, 2015, knee surgery is related to the June 4, 2015, work accident.

IV. Whether Claimant's November 25, 2015, knee surgery was reasonable and necessary.

V. The issue of whether Claimant's November 25, 2015, knee surgery was authorized and provided by an authorized provider was reserved by the parties.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On June 4, 2015, Claimant was involved in an accident while taking a break at work.

2. Although Respondents have admitted liability for the accident, there is a dispute regarding the extent of Claimant's injuries which were caused by the accident.

3. There is surveillance video of the accident. The video, however, is very grainy and not real clear.

4. On June 4, 2015, Claimant took her service dog outside to go to the bathroom. Claimant took her dog to a bark covered island in the parking lot. While Claimant was standing just next to the island, with her service dog on the island, a car backed into Claimant. The car hit the Claimant's backside and caused her to fall forward onto the island. Claimant landed on her hands and knees and then immediately stood up.

5. At the time of impact, Claimant's backside was just about parallel with the back of the car.

6. An ambulance was called and when the ambulance arrived, Claimant was ambulatory. Claimant complained of generalized aching over her entire body.

Claimant denied any localized pain which was greater in any particular part of her body. She said she felt like she was hit by a football player. Although Claimant did complain about numbness and tingling in her lower extremities, she said it was normal due to her preexisting history of cerebral pseudotumor syndrome.

7. Prior to the accident, Claimant had been diagnosed with cerebral pseudotumor syndrome. The condition necessitated the need for her service dog. Claimant also suffered from a prior left foot fracture of the fifth metatarsal which was diagnosed around August 7, 2013.

8. The ambulance took Claimant to Denver Health. A Denver Health Report of Injury, dated June 4, 2015, contains triage notes. The notes indicate Claimant complained of back pain and also indicated that she will call back to give additional information. On June 5, 2015, Claimant called back and provided additional information about the accident and her complaints. Claimant complained of pain in her upper shoulders, neck, and mid-back down to her knees.

9. On June 4, 2015, Claimant's chief complaint in the emergency room was back pain. X-rays were taken of Claimant's back and an ultrasound was taken of her abdomen. The x-rays and ultrasound were normal. Claimant was diagnosed with a lumbar and cervical strain. Claimant was ultimately released the same day.

10. On June 5, 2015, Claimant went to Concentra Medical Center and was evaluated by Eliazbeth Palmer, PA-C. Claimant told PA Palmer that she was standing with her back to the parking lot when a car backed into her. Claimant stated that she twisted funny and injured her back. She also stated that she stumbled down but did not have a traumatic fall onto her back or head. She further stated that she was there for neck pain as well as left foot pain. Due to her left foot pain, Claimant was advised to wear her walking boot which she had due to her prior fracture of her left fifth metatarsal. Claimant did not complain of any knee pain or swelling.

11. On June 8, 2015, Claimant returned to Concentra and was seen by Dr. Carlos Guerrero. Claimant complained of worsening neck and back pain. Claimant also stated that her hands were numb and tingling at times. She also complained of worsening headaches, with visual disturbances, which included seeing flashed lines. Claimant did not complain of any knee pain or swelling.

12. On June 8, 2015, Claimant went to Advanced Orthopedics due to her left foot pain. Claimant was evaluated by Dr. Keith Jacobson. The medical report indicates Claimant presented with "pain and fracture on the left side." Claimant indicated that her left foot had been symptomatic since her June 4, 2015, auto accident. Dr. Jacobson evaluated Claimant and concluded that he did not think she had a fracture involving her left fifth metatarsal. He did, however, comment that Claimant had significant complaints of belly pain, back and cervical pain

along with pain radiating around her left leg. Claimant did not, however, complain of any knee pain or swelling.

13. On June 9, 2015, Claimant went to the emergency room due to worsening back pain, with radiation into her legs. Claimant did not complain of any knee pain or swelling.

14. On June 18, 2015, Claimant returned to Concentra and was seen by Dr. Danahey. Claimant complained of back pain with radiation into her left lower extremity. Dr. Danahey diagnosed Claimant as suffering from a lumbar strain. He continued Claimant's physical therapy and considered a re-evaluation with Dr. Bennett for Claimant's worsening headaches. He also referred Claimant to a physical medicine specialist. Claimant did not complain of any knee pain or swelling.

15. On June 30, 2015, Claimant was evaluated by Dr. Draper. Claimant complained of chronic headaches which she alleged became worse since her accident. Claimant also complained of back pain with symptoms radiating into her left lower extremity. Claimant stated that she was going outside of the workers' compensation system to see a spine physician for her back pain. Claimant also complained of neck pain. Claimant did not complain of knee pain or swelling.

16. On July 8, 2015, Claimant went to Advanced Orthopedics and was evaluated by Dr. Michael Shen. Claimant presented with acute low back pain with lower extremity radiculopathy for the past month. Claimant did not complain of any knee pain or swelling. Dr. Shen evaluated Claimant and reviewed the MRI of her lumbar spine. Since he was not an authorized provider, they discussed transferring Claimant's care to him. He also recommended steroid injections for her low back pain.

17. On July 9, 2015, Claimant returned to Dr. Danahey. Claimant complained of significant back and left leg pain. Claimant also started complaining of right foot pain, bilateral hand pain, and headaches. Claimant did not complain of any knee pain or swelling. Dr. Danahey diagnosed Claimant as suffering from a lumbar strain.

18. Between June 6, 2015, and July 23, 2015, Claimant did not have any knee pain or swelling.

19. On or about July 24, 2015, according to the Genex case manager notes dated August 3, 2015, Claimant advised her physical therapist that her right knee was bothering her due to her altered gait. Claimant did not indicate her knee had been hurting since the accident with the motor vehicle. The physical therapist taped Claimant's right foot in an attempt to correct her altered gait. Therefore, Claimant noted the onset of some mild right knee pain 50 days after the June 4, 2015, accident.

20. On July 29, 2015, Claimant was again evaluated by Dr. Danahey. Claimant reported "compensatory" right knee pain. Claimant indicated that she had an extensive surgical procedure to her right knee when she was 12. Again, Claimant did not indicate her right knee pain started at the time of the work accident.

21. On July 29, 2015, Claimant went to physical therapy. It was noted that she had a 50% reduction in knee pain with tape to supinate her right foot.

22. On July 30, 2015, Claimant was evaluated by Dr. Aschberger. Claimant reported right knee pain. Dr. Aschberger evaluated her knee and noted mild crepitus and that her knee looked a little bit swollen on the lateral side and patella. Dr. Aschberger did not note any other abnormalities regarding her knee.

23. On August 1, 2015, while walking down some stairs, Claimant developed the immediate onset of severe pain and felt a pop in her right knee. While walking down the stairs, Claimant tore her meniscus.

24. On August 3, 2015, Claimant called the medical case manager on her case. According to the case manager notes, Claimant indicated she hurt her knee on August 1, 2015, when she was going down some stairs and her right knee popped. Claimant also stated that her knee had been bothering her for about 10 days. Claimant stated that the physical therapist taped her foot last week as her gait was altered.

25. On August 3, 2015, Claimant went to Advanced Orthopedics and was evaluated by Dr. James Ferrari. Claimant told Dr. Ferrari that her right knee symptoms began on June 4, 2015, the date of the car accident. Claimant also stated that her symptoms occur constantly and they are moderate to severe. Dr. Ferrari ordered an MRI.

26. On August 6, 2015, Claimant was evaluated by Dr. Andy Motz at Advanced Orthopedics. Claimant stated that her symptoms were acute and traumatic and began on June 4, 2015, after being hit by a car. Dr. Motz reviewed the MRI and indicated that it demonstrated an acute tear of the medial meniscus. Dr. Motz also stated that he was able to review the surveillance video and that he thought it was a pretty high energy injury. He also stated that "I'm surprised she was able to walk away from it. There was a large valgus stress."

27. On August 7, 2015, Claimant returned to Dr. Danahey and he evaluated her right knee. The medical report from this visit is brief and does not discuss the cause of Claimant's right knee pain.

28. On August 18, 2015, Claimant was evaluated by Dr. Aschberger. Claimant told Dr. Aschberger that she tore her meniscus in her right knee while walking down some stairs. Dr. Aschberger noted that he reviewed her case regarding the right knee with Dr. Danahey. He also noted that physical therapy had apparently identified some pelvic asymmetries and some intervention was performed. Dr.

Aschberger stated that although it could be possible that she suffered some aggravation of the knee, it is not likely that any pelvic asymmetries were a direct source of her meniscal tear. He indicated that he would not expect an acute onset if pelvic asymmetries were involved.

29. On November 3, 2015, Claimant was evaluated by Dr. Danahey. Dr. Danahey was one of Claimant's authorized treating physicians. His final assessment regarding her work related injury was lumbar strain and muscle spasm. Dr. Danahey did not relate Claimant's right knee condition to her work accident. He placed Claimant at MMI as of November 3, 2015, without any impairment.

30. On November 25, 2015, Claimant underwent surgery on her right knee. Dr. Motz performed a right knee arthroscopy, medial meniscal repair, partial lateral meniscectomy, and resection of multiple bone spurs with chondroplasty.

31. On January 13, 2016, Claimant returned to Dr. Danahey. He noted that the right knee injury was not related to the June 4, 2015, accident.

32. On March 3, 2017, Claimant underwent an IME with Dr. Cebrian. The purpose of the IME was to determine the extent of her injuries from the June 4, 2015, accident and to determine whether she had any permanent impairment. While being evaluated by Dr. Cebrian, Claimant attributed her initial knee problems to her off balance gait. She indicated that she first noticed her knee pain during physical therapy. She then told Dr. Cebrian that she ultimately tore her meniscus while walking down some stairs. Dr. Cebrian concluded that it is not medically probable that Claimant's right knee complaints are causally related to the June 4, 2015, accident as she did not have right knee complaints for almost 2 months after the injury and when she did have significant right knee complaints, they were reported to have occurred while walking down stairs when she experienced a pop in her right knee. He indicated that there was a temporal delay of almost 2 months after the June 4, 2015, injury. Dr. Cebrian also indicated that Claimant attributed her right knee complaints due to gait abnormalities secondary to the June 4, 2015, claim and that Claimant's gait abnormalities would have been of limited duration as she was in a walking boot for only a few weeks. Dr. Cebrian went on to state that gait related abnormalities can lead to temporary muscular soreness from limping or inactivity, however, it is not medically probable that a gait related abnormality would cause, aggravate, or accelerate underlying meniscal pathology.

33. Dr. Cebrian also commented on the video of the accident. Dr. Cebrian stated that he reviewed two different videos of the incident. He indicated that although both videos are not real clear, Claimant can be seen being pushed forward by the car and her knees bend in flexion. He went on to indicate that there was not valgus stress on the knee joint as she was hit from behind and that in order for a valgus stress to occur, Claimant would have to have been standing sideways when hit by the car.

34. Dr. Cebrian also stated in his report that it was his medically probable opinion that Claimant's right knee complaints are related to the degenerative pathology in her right knee. Dr. Cebrian stated that research completed in the past several years has shown that it is more likely than not that Claimant's medical meniscal tear was not caused by trauma, but rather occurred as a consequence of her underlying degenerative pathology in her right knee. Dr. Cebrian stated that this was further substantiated by her history of no traumatic event with a temporal relationship to the development of symptoms. He also stated that it is clear that arthroscopic surgeries in this scenario have very little chance for long term success. He went on to state that there is often the assumption that the meniscal tear is a reflection of trauma sustained as opposed to being due to the underlying degenerative osteoarthritis. He also stated that it is more likely than not that the trauma reported did not cause the medial meniscus tear. He also said that the loss of joint cartilage is considered the structural hallmark of osteoarthritis. He also indicated in his report that the last decades of research have shown "osteoarthritis to be a whole joint disorder involving additional tissues such as subchondral bone, ligaments, synovial membrane, muscle, and the menisci." He went on to state that "Osteoarthritis can lead to spontaneous horizontal, flat, and/or complex tears; maceration; or destruction."

35. Dr. Cebrian also stated in his report that it is not medically probable that Claimant's left knee complaints are casually related to the June 4, 2015, incident due to the temporal delay in the development of those complaints which occurred even later than the right knee complaints.

36. Dr. Cebrian also testified at hearing. Dr. Cebrian testified consistent with his reports. Dr. Cebrian testified about Claimant's MRI findings. He testified that Claimant's MRI demonstrated that in the medial aspect of her knee, where Claimant had the tear in her medial meniscus, there was degeneration of the cartilage itself over the medial femoral condyle in which approximately 50% had worn away. He also testified that the radiologist noted extrusion or elevation of a portion of the medial meniscus around the posterior horn of the medial meniscus at the root attachment. He also testified that there were osteophytes in all three compartments of the knee, which also goes along with osteoarthritis and degeneration in the knee. He also indicated that there were cystic changes in the knee itself at the tibial attachment of the PCL which also goes along with the long-term degenerative condition. He also stated that the radiologist noted there was intrasubstance degeneration in the posterior horn of the meniscus. Lastly, he noted that the MRI was negative regarding any injury to the medial collateral ligament.

37. Dr. Cebrian concluded that Claimant did not injure her left or right knee on June 4, 2015.

38. Dr. Cebrian concluded that Claimant did not tear her meniscus or tear her medial collateral ligament in her right knee on June 4, 2015.

39. Dr. Cebrian also concluded that Claimant's June 4, 2015, accident - including any altered gait caused by the accident - did not aggravate or accelerate Claimant's underlying right or left knee conditions.

40. The ALJ finds Dr. Cebrian's opinions to be credible and persuasive.

41. The ALJ is persuaded by the lack of a temporal relationship between the accident and the development of ongoing pain and swelling in Claimant's right or left knee. Although Claimant did complain of generalized pain from her neck down to her knees the day after the accident, she did not have the onset of persistent pain and swelling in her right knee until approximately 50 days after the accident. The time between the work accident and symptoms in her left knee is even longer – approaching almost two years. The ALJ is also persuaded by the degenerative changes described by Dr. Cebrian which were evident on Claimant's MRI and included intrasubstance degeneration of the meniscus. Although the intrasubstance degeneration was noted in the posterior horn, and according to Dr. Motz the tear was located in another portion of the meniscus, the fact that the meniscus was showing signs of degeneration supports Dr. Cebrian's opinion that the torn meniscus was due to degeneration and not due to an acute injury.

42. Dr. Cebrian also indicated that because Claimant's right knee condition and torn meniscus was due to degeneration, the surgery performed by Dr. Motz in November of 2015 would not provide long term relief. As predicted by Dr. Cebrian, Claimant has ongoing pain in her right knee and Dr. Motz subsequently indicated in June of 2017 that further surgery may be necessary. This further supports Dr. Cebrian's opinion, which the ALJ credits, that Claimant's knee complaints relate to the preexisting osteoarthritis – degeneration – and not he work accident.

43. On March 23, 2017, Claimant was evaluated by Dr. Motz for complaints of right and left sided knee pain. Dr. Motz indicated in his report that:

> Ally was struck by a car. There was video footage of this available and I have reviewed this video. The video is quite striking showing a significant valgus stress to the right knee and then the patient landed on both knees. She immediately got up and ambulated which is quite amazing to me given the significance of the trauma.

44. Dr. Motz also stated in his March 23, 2017, report that Claimant has had ongoing pain in her left knee as well since the June 4, 2015, accident and that they were waiting to see if her left knee pain would improve with time. Such statement is inconsistent with Claimant's prior medical records. Claimant's prior medical records, including those of Dr. Motz, do not indicate Claimant has had left sided knee pain since June 4, 2015. In addition, the records do not indicate Dr. Motz has been waiting since June of 2015 to see if her left sided knee pain improved

before considering additional treatment. The ALJ does not find Dr. Motz' statements regarding the onset and duration of Claimant's left knee pain to be credible. Therefore, the ALJ does find Dr. Motz' opinions regarding causation to be persuasive.

45. On April 19, 2017, Claimant underwent a Division of Workers' Compensation Independent Medical Examination ("DIME"), which was performed by Dr. John Hughes. As set forth in his report, Dr. Hughes obtained her history, performed a physical examination, reviewed her medical records, and reviewed the video of the accident. At the time of the evaluation, Claimant complained of right-worse-than-left knee pain of an achy quality. Dr. Hughes reviewed and considered Dr. Aschberger's July 30, 2015, report in which he referenced Claimant's complaints. He also reviewed and considered Dr. Aschberger's August 18, 2015, report in which Claimant noted that she tore her meniscus while walking down some stairs and where Dr. Aschberger noted that he and Dr. Danahey discussed Claimant's claim and determined the knee was not related to the work accident.

46. Dr. Hughes disagreed with Dr. Danahey and Dr. Cebrian that there was no evidence of permanent impairment due to the work accident. Dr. Hughes determined Claimant suffered impairment to her lumbar spine and provided her a 10% whole person impairment rating.

47. Dr. Hughes was also asked to address Claimant's cervical spine. Dr. Hughes determined that although Claimant had early documentation of cervical spine pain, there was no evidence of persistent traumatic pathology in the region of her cervical spine. Therefore, he did not rate her cervical spine.

48. Dr. Hughes was also asked to address her right hand. Dr. Hughes stated that Claimant gave him a clear history of striking the motor vehicle with her right hand. Dr. Hughes noted that in the video he reviewed, he saw no evidence of such event. He also noted that it was not discussed early on in the medical records, but was discussed later on. Therefore, he determined that her right hand complaints were not related to the work accident.

49. Dr. Hughes was also asked to address Claimant's mid back – thoracic spine. Dr. Hughes did not find any separate and distinct traumatic pathology in her thoracic spine. He determined that any pain complaints in her thoracic spine were merely reactive to the low back. Therefore, he determined that she was not entitled to an impairment rating for her thoracic spine.

50. Dr. Hughes was also asked to address Claimant's bilateral knees. Dr. Hughes noted that there is evidence that Claimant was struck by the motor vehicle and that she fell forward. However, he also noted that there is no documentation of initial knee injuries, and emergence of right knee symptoms in the medical records came two months later, and that the history regarding the onset of her knee complaints is "rather clouded." Therefore, Dr. Hughes determined

Claimant's bilateral knee problems were not related to her work-related collision and fall on June 4, 2015.

51. Dr. Hughes concluded that Claimant reached MMI on November 3, 2015, and that she sustained a 10% impairment of the whole person pursuant to the AMA Guides.

52. The ALJ finds Dr. Hughes' opinions to be credible and persuasive.

53. On May 15, 2017, Respondents filed a Final Admission of Liability consistent with Dr. Hughes' DIME report, which determined Claimant reached MMI on November 3, 2015, and suffered a 10% whole person impairment to her lumbar spine. Respondents denied liability for maintenance medical treatment.

54. On June 19, 2017, Claimant was evaluated by Dr. Motz for bilateral knee pain. Due to her pain complaints, Dr. Motz ordered an MRI of each knee. Dr. Motz also wrote a report that day and again indicated Claimant suffered a medial meniscal injury due to the June 4, 2015 accident. He also indicated that Claimant suffered a medial collateral ligament injury at the same time. He further noted that Claimant had some patellofemoral stress syndrome that appeared chronic. He went on to state that the June 4, 2015, accident could have easily exacerbated her bilateral patellofemoral stress syndrome.

55. On June 22, 2017, Claimant returned to Dr. Motz to go over the results of her knee MRIs. Dr. Motz stated in his report that:

> Both knees show progression of patellofemoral arthritis which is not surprising given the injury where she had that huge stress when she was struck by the car and then fell on both knees. I think this progression of arthritis in the patellofemoral joint is secondary to this injury. It should be part of her claim. The medial meniscal repair appears intact on this follow-up MRI and the medial collateral ligament injury appears to have healed. I discussed further treatment options including steroid injections, Synvist injections, arthroscopic debridements, partial knee replacements and total knee arthroplasty. Given the extent of the arthritis she is probably going to need either partial or total knee arthroplasty. She will think over these options and let me know if she decides to proceed with any of them.

56. On September 8, 2017, Dr. Cebrian issued a supplemental report based on his receipt and review of additional medical records. The review of additional records did not alter the opinions previously rendered by Dr. Cebrian. He again concluded that Claimant's knee conditions were not caused or aggravated by the June 4, 2015, accident.

57. Dr. Motz testified, via deposition, on November 16, 2017. Dr. Motz testified consistent with his records and reports. Dr. Motz testified that Claimant suffered a radial tear of her meniscus due to the work accident. Dr. Motz also testified that based on his review of the video, he determined that the car hit Claimant on the side of her knee and it put "valgus stress" on her knee. He went on to testify that a radial tear of the meniscus is consistent with being hit on the side of the knee. He also testified that Claimant suffered an injury to her medial collateral ligament.

58. Dr. Motz testified that he disagreed with Dr. Cebrian's opinion that Claimant's torn meniscus was degenerative and due to her osteoarthritis. Dr. Motz testified that the type of tear he observed was inconsistent with degeneration. He also testified that Claimant could not have a degenerative tear of her meniscus because Claimant did not have degenerative arthritis in the compartment of the knee that suffered the meniscal tear.

59. This ALJ does not find Dr. Motz' opinions to be persuasive for a number of reasons. First, Dr. Motz' testimony and reports indicate that the accident and associated trauma to Claimant's right knee was significant. For example, in his August 6, 2015, report, he stated that:

> I was able to review surveillance video footage of the auto versus pedestrian accident that occurred on June 4, 2015. It was a fairly high energy injury. I'm surprised she was able to walk away from it. It was a large valgus stress.

Dr. Motz again stated in his June 19, 2017, report that:

> I'm surprised she was able to walk away as there was significant stress to the knee.

Then, after reviewing Claimant's 2017 MRIs which showed progression of Claimant's arthritis, Dr. Motz indicated in his June 22, 2017, report that Claimant's:

> [P]rogression of patellofemoral arthritis is not surprising given the injury where she had that huge stress when she was struck by the car and then fell to both knees.

The magnitude of the accident and resulting injury described by Dr. Motz in his medical reports and deposition testimony is in stark contrast to Claimant's medical records after the accident which fail to document a discrete injury to either knee and fail to document the onset and continuation of knee pain or swelling after the accident. According to Dr. Motz, the magnitude of the accident tore Claimant's medial collateral ligament and meniscus in her right knee. As indicated by Dr. Motz, an injury like this would be expected to prevent someone from walking after the accident. Despite Dr. Motz' opinions, Claimant got up right after the accident and was able to walk around. In addition, except for a

generalized comment of pain from her neck down to her knees on June 5, 2015, Claimant had no knee pain or swelling for almost two months. Moreover, when Claimant experienced some knee pain in July of 2015, she associated it with having an altered gait. Then, Claimant associated her increase in knee pain and torn meniscus to walking down stairs on August 1, 2015, when she felt a pop in her knee.

Second, Dr. Motz testified that the temporal proximity between the incident and onset of symptoms is important in analyzing causation. He testified that he was advised by Claimant that she has had knee pain since the incident. Dr. Motz also testified that although it is not always true that people have pain immediately after tearing their meniscus, they do develop pain as time goes on. And, when pressed and asked if most of his patients would develop pain in one to two weeks after an accident, he said yes. Although the ALJ does not find Dr. Motz' testimony persuasive that it could take some patients 1-2 weeks to develop pain after tearing their meniscus, Claimant did not develop specific knee pain within 1-2 weeks of the accident. As stated above, Claimant did not develop knee pain for almost two months.

Third, Dr. Motz testified that meniscal injuries usually do not swell up until the following day. Claimant's medical records fail to demonstrate that Claimant developed swelling in her right knee shortly after the accident. The first time there was any swelling noted was in Dr. Aschberger's July 30, 2015 medical report.

Fourth, Dr. Motz also indicated that the June 4, 2015, accident aggravated Claimant's bilateral patellofemoral stress syndrome. In essence, Dr. Motz indicated that Claimant's injury on June 4, 2015, was significant enough to aggravate her underlying patellofemoral stress syndrome in both knees, but yet was not significant enough to cause immediate and persistent pain in both knees.

Fifth, as found above, Dr. Motz stated in his March 23, 2017, report that Claimant has had ongoing pain in her left knee since the June 4, 2015, accident and that they were waiting to see if her left knee pain would improve with time. Such statement by Dr. Motz is inconsistent with Claimant's prior medical records. Claimant's prior medical records, including those of Dr. Motz, do not indicate Claimant has had left sided knee pain since June 4, 2015, and that Dr. Motz was waiting to see if her left sided knee pain would improve before considering additional treatment.

Therefore, this ALJ does not credit Dr. Motz' opinions regarding causation.

60. Claimant testified inconsistently regarding what information she reported to physicians and medical providers regarding pain and symptoms in her right knee. On direct examination, Claimant recalled reporting the condition in her knee to Drs. Danahey and Aschberger. However, on cross examination, Claimant showed a remarkable lack of memory in what she reported to multiple other

physicians. Therefore, the ALJ finds Claimant is not a reliable historian regarding the onset and duration of her knee pain.

61. Claimant did not injure her left or right knee on June 4, 2015.

62. Claimant did not injure her meniscus or medial collateral ligament in her right knee on June 4, 2015.

63. The June 4, 2015, accident - including any altered gait caused by the accident - did not cause, aggravate, or accelerate any condition in Claimant's right or left knee.

64. The June 4, 2015, accident did not cause the need for any medical treatment to either of Claimant's knees. Any need for treatment was due to Claimant's preexisting degenerative arthritis.

65. Claimant reached MMI on November 3, 2015.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

GENERAL PROVISIONS

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the

reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Where the medical evidence is subject to conflicting inferences, it is the ALJ's sole prerogative to resolve the conflict. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998).

Claimant is entitled to receive medical treatment for conditions that were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S.

A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms after a work related accident does not require the ALJ to conclude that the work accident caused the symptoms, or that the work accident aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms after a work related accident may represent the result of the natural progression of a pre-existing condition that is unrelated to the work accident. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005).

I. Whether Claimant established that her bilateral knee conditions – including her torn meniscus - were caused by the June 4, 2015, work accident, and that she was not at MMI on November 3, 2015.

At the outset of the hearing, the parties agreed that the issue to be decided was whether Claimant reached MMI on November 3, 2015, as determined by an authorized treating physician and the DIME. In this case, whether Claimant reached MMI on November 3, 2015, is dependent upon whether Claimant suffered an injury to either of her knees during the June 4, 2015, accident.

Claimant asserted that because the issue before the court involves the compensability or relatedness of an extremity-scheduled injury, or injuries, Claimant only had to establish by a preponderance of the evidence that her knee conditions were caused by the industrial accident. Respondent, on the other hand, asserted Claimant had to overcome the opinion of the DIME regarding MMI by clear and convincing evidence in order to establish that her knee conditions were caused by the industrial accident.

The requirements for overcoming a DIME regarding MMI by clear and convincing evidence under §8-42-107(8) apply to non-scheduled and scheduled injuries. *See Delaney v. Industrial Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2000); *Kamakele v. Boulder Toyota-Scion*, W.C. 4-732-992 (ICAO April 26, 2010).

Although Claimant contends *Egan v. Industrial Claim Appeals Office of State*, 971 P.2d 664, (Colo. App. 1998) provides that disputes regarding the cause of an extremity injury is not subject to the DIME procedures and the heightened burden of proof, the ALJ is not persuaded that *Egan* applies to the facts of this case. The language referred to by Claimant in *Egan* indicates that the preponderance standard applies to cases that involve only an extremity or scheduled condition. In this matter, Claimant's alleged injuries involve scheduled and non-scheduled conditions and Claimant is challenging a finding of MMI. Therefore, the ALJ does not find *Egan* controls in this matter.

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office*, 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of Claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that Claimant needs additional medical treatment (including surgery) to improve her injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining Claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Patterson v. Comfort Dental East Aurora*, WC 4-874-745-01 (ICAO February 14, 2014); *Hatch v. John H. Garland Co.*, W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra.* Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

In this Case, Dr. Hughes - the Division Examiner - determined Claimant reached MMI on November 3, 2015. He also determined that Claimant's bilateral knee conditions were not related to the June 4, 2015, work accident. As found, Dr. Hughes noted that there is evidence that Claimant was struck by the motor vehicle and that she fell forward. However, he also noted that there was no documentation of initial knee injuries, and emergence of right knee symptoms in the medical records came two months later, and that the history regarding the onset of her knee complaints is "rather clouded." Therefore, Dr. Hughes determined Claimant's bilateral knee problems and need for treatment was not caused by the work-related collision and fall on June 4, 2015. The ALJ found Dr. Hughes' opinion to be credible and persuasive.

In addition, Claimant was evaluated by Dr. Cebrian. The ALJ found that Dr. Cebrian credibly opined that Claimant's right and left knee problems were due to Claimant's preexisting arthritis and the work accident did not cause, aggravate, or accelerate Claimant's underlying arthritis and necessitate the need for medical treatment. As found, Dr. Cebrian credibly opined that Claimant's torn meniscus, for which she had surgery on November 25, 2015, was degenerative and was not caused or aggravated by the June 4, 2015, accident or any altered gait. As found, Dr. Cebrian also credibly opined that because the torn meniscus was degenerative in nature, surgery was unlikely to provide long term relief. Consistent with Dr. Cebrian's opinion, Dr. Motz has indicated that additional treatment is necessary and such treatment could include a partial or total knee replacement. In other words, the surgery performed by Dr. Motz did not provide long term relief because Claimant's knee condition is degenerative and was not caused by a specific traumatic event as alleged by Claimant. Moreover, like Dr. Hughes, Dr. Cebrian's opinion was also based on the fact that Claimant did not complain of specific and persistent knee pain and swelling until almost two months after the accident.

Claimant contends that the medical evidence and opinions provided by Dr. Motz establishes by clear and convincing evidence that she was not at MMI on November 3, 2015, because she suffered from a torn meniscus in her right knee which required surgery at the time she was placed at MMI, and that she had problems with her left knee as well. As found, Dr. Motz' opinions regarding causation are not found to be credible. As found, the magnitude of the accident and resulting injury described by Dr. Motz in his various medical reports and deposition testimony is in stark contrast to the Claimant's medical records after the accident. According to Dr. Motz, the magnitude of the accident tore Claimant's medial collateral ligament and meniscus in her right knee. As indicated by Dr. Motz, an injury like this would be expected to prevent someone from walking after the accident. Despite Dr. Motz' opinions, Claimant got up right after the accident and was able to walk around. In addition, except for a generalized comment of pain down to her knees on June 5, 2015, Claimant had no knee pain for almost two months. Moreover, when Claimant experienced some right sided knee pain in July of 2015, she associated it with having an altered gait. Then, Claimant associated her increase in knee pain and torn meniscus to walking down some stairs on August 1, 2015, when she felt a pop in her knee.

Claimant's development of left sided knee pain developed even later than her right sided knee pain. Dr. Motz has opined that Claimant's fall onto her knees on June 4, 2015, also aggravated her bilateral patellofemoral stress syndrome. Again, this ALJ did not find this testimony to be persuasive due to the late onset of Claimant's symptoms. Dr. Motz' opinion that Claimant's left sided knee pain was caused by the June 4, 2015, accident, the onset of which is even more remote than the right sided knee complaints, is even more tenuous, and makes his opinions less credible overall.

Therefore, the ALJ concludes that Claimant has failed to overcome the opinion of the DIME regarding MMI by clear and convincing evidence. Claimant has failed to establish that the June 4, 2015, work accident either caused her knee conditions or aggravated any preexisting knee conditions. Claimant's knee conditions are not related to her June 4, 2015, accident. Therefore, Claimant reached MMI on November 3, 2015.

As stated above, Claimant contends that because this claim involves an extremity - scheduled injury - she only needs to establish by a preponderance of the evidence that her knee conditions are causally related to the June 4, 2015, accident. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

The ALJ also concludes, for the same reasons stated above, Claimant has failed to establish by a preponderance of the evidence that her knee conditions were caused or aggravated by the June 4, 2015, accident. Therefore, regardless of the burden of proof, Claimant has failed to establish that her knee conditions were caused or aggravated by the industrial accident.

II. Whether Claimant is entitled to reasonable and necessary medical treatment for her knees due to her June 4, 2015, work accident.

Based on the above findings and conclusions, Claimant is not entitled to reasonable and necessary medical treatment for her knees.

III. Whether Claimant's November 25, 2015, knee surgery is related to the June 4, 2015, work accident.

Based on the above findings and conclusions of law, Claimant's November 25, 2015, knee surgery is not related to the June 4, 2015 work accident.

IV. Whether Claimant's November 25, 2015, knee surgery was reasonable and necessary.

Based on the above findings and conclusions of law, this issue is moot.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's knee conditions are not related to the industrial accident.

2. Claimant's claim for medical benefits to treat either knee is denied and dismissed.

3. Claimant reached MMI on November 3, 2015.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 11, 2018

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Respondents accurately calculated Claimant's average weekly wage as $184.12/week.

II. Whether Dr. Kenneth Danylchuk is an authorized treating provider.

III. If Dr. Danlychuk is an authorized treating provider, whether Respondents authorized the lumbar spine surgery he performed.

IV. Whether the surgery performed by Dr. Danylchuk was reasonable, necessary and related to Claimant's work injury.

V. Whether Respondents presented clear and convincing evidence establishing that the Division Independent Medical Evaluation (DIME) physician, Dr. Kenneth Finn, erred in performing a requested DIME since he had previously evaluated Claimant for injuries related to the same body parts involved in the current workers' compensation claim.

VI. Whether Respondents presented clear and convincing evidence establishing that Dr. Finn erred in opining that Claimant had not attained maximum medical improvement (MMI) at the time of the DIME.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Drs. Danlychuk and Cebrian, the ALJ enters the following findings of fact:

1. Claimant is a long-term taxicab driver for Employer having worked for Employer for the past 13 years.

2. Claimant was involved in an admitted work related motor vehicle accident (MVA) on October 2, 2015 while driving his taxicab. Claimant testified and the record evidence establishes that that he was proceeding through an intersection when a second vehicle struck Claimant's taxi at a high rate of speed causing severe damage to the front and right side of his vehicle.

3. As a taxi driver, Claimant testified that he was paid on a commission basis and earned 33% of the fares that he collected. Respondents calculated Claimant average weekly wage (AWW) to equal $184.12 per week.

4. Claimant testified that he worked anywhere from 40-60 hours per week;

however, he offered no testimony and presented no evidence regarding how many fares he picked up during these hours or how much he earned through commissions. He did not assert any particular dollar figure as his average weekly wage nor did he provide any documentation regarding his earnings or his AWW. Rather, Claimant testified that he earned approximately $14,000.00 in 2014 and $13,026.00 up to the date of his injury on October 2, 2015. The ALJ finds Claimant's testimony regarding his earnings speculative and unsubstantiated based upon the evidence presented.

5. Respondents submitted wage records, which establish Claimant's earnings for parts of 2014 and 2015. Specifically, Respondents tendered wage records covering the period from September 18 through December 31, 2014 and January 1 through August 13, 2015. These records establish that Claimant's earnings vary from week to week. They also establish that Claimant earned $3,811.39 for the 15 week time period submitted for 2014 and $9,408.72 between January 1 and August 13, 2015. The ALJ finds Claimant's 2014 wage records too far removed from the date of his injury to provide any meaningful information regarding his average weekly wage at the time of his MVA. Instead, the ALJ relies upon the wage records submitted from 2015 as they provide approximately eight and one half months of earnings from which an average wage closer in time to the MVA and Claimant's injuries can be calculated. Based upon the evidence presented, the ALJ calculates Claimant's AWW to equal $292.71 per week ($9,408.72 ÷ 225 days between 1/1/2015 and 8/13/2015 = $41.82/day × 7 days/week = $292.71).

6. Claimant testified as to the severity of the impact the cab absorbed on October 2, 2015. He reported that the air bags deployed and that he could actually feel the distortion of the frame of the vehicle through the floorboard at the point of impact. According to Claimant, the vehicle was a total loss. While Claimant did not hit his head or lose consciousness, he experienced immediate pain in both hands, both arms, both shoulders and his neck and back. Nonetheless, he was able to exit the cab for transport to the Emergency Room (ER) at St. Mary Corwin Hospital by ambulance.

7. Claimant testified that while he had back, neck and upper extremity pain, his primary concern following the accident was the integrity of a femoral artery graft that had been placed approximately six weeks previously.

8. Claimant testified while in the ER medical personnel confirmed that the condition of his femoral artery graft was stable and unchanged. Medical records indicate that Claimant reported "nonradiating neck and back pain without bowel or bladder incontinence or sensory or motor deficits." It was noted that Claimant had "chronic back pain status post remote discectomy" and while Claimant was observed to have first and second degree burns to the posterior aspect of the bilateral hands due to air bag deployment, no other deformities of the extremities were present upon inspection. Physical examination revealed "diffuse cervical and lumbosacral spinal and bilateral paraspinal muscular tenderness without traumatic lesions." CT scan of the cervical spine revealed reversal of the normal lordotic curve consistent with muscle spasm and/or positioning as well as "extensive chronic changes of the cervical spine.

No acute pathology of the lumbosacral spine was noted on x-ray per radiologist interpretation. Claimant was assessed with acute low back pain, airbag injury, and cervical strain. He was given Motrin and Norco for pain and instructed to follow-up with the workers' compensation clinic.

9. Claimant left the ER and presented to Employer's designated provider, Southern Colorado Clinic, the same day. Physician Assistant (PA), Terry Schwartz, evaluated him. Upon questioning, Claimant reported 7/10 "neck, lower back, bilateral wrist, left ribs (sic), right lower quadrant and bilateral ankles" (sic) pain. PA Schwartz reviewed Claimant's past medical history from August 15, 2013 and noted that no changes were necessary. He documented a past medical history to include "back problems" including a L4-L5 discectomy with fusion in 1978 as well as a prior history of MVA in 2001 resulting in a fusion with hardware placement. Physical examination revealed L3-L5 tenderness, a bow legged gait with external rotation of the right foot and reported discomfort with position changes. Claimant was assessed with acute neck and low back pain. Claimant was referred to physical therapy and returned to modified duty with physical restrictions of no lifting over 25 pounds, no repetitive lifting over 5 pounds, no pushing/pulling greater than 25 pounds were imposed

10. Claimant returned to the Southern Colorado Clinic for a follow-up appointment on October 15, 2015, where he was evaluated by Dr. Terrance Lakin. During this encounter, Claimant reported 5/10 persistent low back, neck, bilateral wrist, bilateral shoulder and bilateral knee pain. Claimant reported radiation of his back pain down the "posterior aspect of both legs" along with "numbness and tingling" in the bottom of his feet bilaterally. Given his radicular pain and pre-existing low back pathology, Dr. Lakin documented his intention to "initiate" a consultation with Dr. Michael Sparr for further evaluation and treatment. Concern for delayed recovery was expressed along with the need to identify Claimant's baseline level of pain given his pre-existing condition. It is difficult to ascertain what Dr. Lakin was trying to convey regarding Claimant's baseline level of pain from the content in his October 15, 2015 note. Based upon his report, the ALJ understands that Dr. Lakin documented Claimant's baseline level of pain prior to the October 2, 2015 MVA as 4-6/10 and following the MVA, his pain level increased to 7-8/10. Dr. Lain ordered an MRI of the lumbar spine.

11. The aforementioned MRI was completed on October 22, 2015.

12. Claimant presented to the Southern Colorado Clinic in follow-up on November 5, 2015, where he complained of continued back and neck pain. Dr. Lakin noted that Claimant had suffered a "significant exacerbation" of his pre-existing musculoskeletal degenerative changes and that while physical therapy had helped "a lot", Claimant remained concerned about back pain including a new onset of "radicular-type pain going down both legs to [the] bottoms of his feet." Dr. Lakin's November 5, 2015 report reflects that Claimant had central canal and foraminal lumbar spine stenosis. It was hoped that Dr. Sparr would be able to "calm" down the symptoms associated with the aggravation of these conditions without surgical intervention. Dr.

Lakin also noted that Claimant had additional spondylolisthesis in the lumbar spine; however, he questioned the relatedness of this to Claimant's MVA, noting that the spondylolisthesis was more likely related to the progression of Claimant's pre-existing degenerative joint disease (DJD).

13. Dr. Sparr evaluated Claimant on November 11, 2015. In a report following Claimant's appointment, Dr. Sparr outlines a prior medical history significant for polio as a child, necessitating a right ankle triple arthrodesis and heel cord lengthening. He also references Claimant's prior lumbar laminectomy/discectomy with L4-L5 fusion performed in 1978, which subsequently destabilized following a 2001 MVA prompting Claimant's second lumbar spine surgery. Questioning regarding Claimant's pain history revealed that he felt 20% improved overall but that his pain persisted in the neck, left shoulder, mid and low back as well as his wrists, legs, ankles and feet. According to Dr. Sparr's report, Claimant had 7/10 pain at the time of his evaluation. His typical pain was listed as 6-7/10 in intensity. His best pain level was reported as 4/10, and at its worst, Claimant's pain climbed to 7.5/10. Regarding his back pain and the condition of his lower extremities, Claimant reported the following: pain at and below the belt line with radiation into the buttocks and posterior thighs bilaterally; radiating pain into the calves and ankles with activity and numbness, tingling, and intermittent burning affecting his legs and feet. Finally, bending, twisting, rolling in bed and prolonged sitting, standing and driving caused increased back pain. Claimant also complained of neck pain extending from the base of the skull through the posterior lateral cervical region left greater than right sided. Claimant's neck pain increased with movement but did not radiate into the upper extremities. Claimant reported headaches approximately every week to week and a half, which represented an improvement over the constant headache Claimant, experienced immediately following his MVA. Dr. Sparr noted the need to review Claimant's recent lumbar spine MRI. He assessed Claimant with, among other things, occipital headache, cervical strain/sprain, cervical facet joint pain, lumbar radiculopathy and sacroilitis. He recommended that future consideration be given toward an "epidural steroid injection, possibly sacroiliac joint or gluteal trigger point injections, [and] possibly a trochanteric bursa injection."

14. Based upon the evidence presented, the ALJ finds that no injection therapy was administered on November 11, 2015.

15. Claimant subsequently presented to Dr. Sparr on December 2, 2015. He reported no change in his pain symptoms since his initial evaluation on November 11, 2015. Claimant's MRI had been received and was discussed with Claimant. According to Dr. Sparr, Claimant's MRI demonstrated status post bilateral L4 laminectomy with placement of left-sided pedicle screws and rod and an interbody spacer at L4/L5. He also noted that at the L4/L5 level there was grade 1 anterolisthesis at L4 upon L5 and grade 1 retrolisthesis of L5 upon S1, and grade 1 anterolisthesis of L3 upon L4, which was new when compared to radiographs taken in 2007. In addition to the movement noted above at L3/L4, L4/L5 and L5/S1, diffuse "age-related changes [were] noted with findings most severe at L3-L4 where there [was] severe central canal stenosis" and "moderate to severe right and moderate neural foraminal stenosis" noted. Dr. Sparr

documented that Claimant was scheduled to see Dr. Danylchuk for a surgical consultation on December 18, 2015 "using his primary insurance" because he wanted Dr. Danylchuk to review the MRI since he was the physician who provided the previous fusion. Because Claimant had continued tenderness over the upper cervical facet joints bilaterally in addition to reproducible headache symptoms with palpation of the occipital nerves, Dr. Sparr who administered occipital nerve blocks. The blocks consisted of 2 ccs of Marcaine, 2 ccs of Lidocaine and 1 cc of dexamethasone. The injections were completed without complication.

16. Claimant returned to Dr. Lakin later in the day on December 2, 2015. At this appointment, Claimant reported to Dr. Lakin that he was doing "pretty well" and was "making progress" He further reported that he had undergone injections with Dr. Sparr and that greatly "improved his cervical pain and range of motion." Regarding his low back, Dr. Lakin noted the Claimant was set to see Dr. Danylchuk who was "familiar with his back fusion." Dr. Lakin did not feel it was necessary for Claimant to see an orthopedic surgeon (Dr. Danylchuk) under workers' compensation because he had shown improvement with regard to his work related conditions. The report from this date of visit supports an inference that Dr. Lakin did not advocate that Claimant not see Dr. Danylchuk. Rather, the ALJ reads the report to indicate that because Claimant did have an appropriate concern regarding continued low back pain as well as pain and paresthesias in his lower extremities, a visit to Dr. Danlychuk to assess non-work related low back conditions was appropriate. In other words, Dr. Lakin's December 2, 2015 report persuades the ALJ that he did not feel it necessary that Claimant see Dr. Danlychuk under the comp case because the persistent back and leg symptoms were likely caused by a new spondylolisthesis at the L3-L4 level, which was related to a "transient progression" of Claimant's pre-existing degenerative joint disease" rather than the MVA. Thus, while he did not feel an orthopedic evaluation was necessary for conditions related to the MVA, Dr. Lakin felt it was appropriate for Claimant to see Dr. Danylchuk for continued back and leg pain caused by the natural progression of a pre-existing, non-industrial L3-L4 spondylolisthesis.

17. Claimant testified that he wanted to see Dr. Danylchuk because he had confidence in him given the successful result he enjoyed as a consequence of his second lumbar surgery, and also because he lost confidence in Dr. Lakin and Dr. Sparr. In support of his asserted lack of confidence in Drs. Lakin and Sparr, Claimant testified that they were only treating his symptoms and not the core of his problem. Consequently, he testified that he did not feel he was receiving proper care. However, on cross-examination, Claimant conceded that he is not a medical doctor and has no medical training, so could not say what would have constituted proper treatment

18. Claimant also testified that he told Dr. Sparr that he was allergic to certain medications before any injections were administered. As found, no injections were provided during Claimant's initial evaluation on November 11, 2015; however, the November 11, 2015 record indicates that Claimant was allergic to, among other things Lidocaine. Consequently, the ALJ finds that Claimant, more probably than not, told Dr. Sparr, before any injections were given, that he was allergic to Lidocaine.

19. According to Claimant, he suffered an allergic reaction to the injection administered by Dr. Sparr on December 2, 2015. Claimant testified that when he returned to Dr. Sparr's office for a follow-up appointment after this injection, Dr. Sparr was going to inject him for a second time with the same injection cocktail. Based on these events, Claimant testified that he did not believe that Dr. Sparr was listening to him prompting him to question Dr. Sparr's ability to properly treat the injuries associated with his MVA. According to Claimant, he lost all confidence in Dr. Sparr.

20. Similar to the November 11, 2015 report, the content of Dr. Sparr's December 2, 2015 medical record documents that Claimant was allergic to Novocain, Lidocaine and Morphine. Nonetheless, Dr. Sparr injected Claimant with both Marcaine and Lidocaine on December 2, 2015. While a December 9, 2015 report from Dr. Sparr is devoid of any report concerning difficulties or reactions to the December 2, 2015 injection, the report again reflects Claimant's allergies to Novocain, Lidocaine and Morphine. It also references that additional trigger point injections, as well as repeat occipital nerve blocks may be appropriate.

21. Claimant presented to Dr. Danylchuk on December 10, 2015. Dr. Danylchuk reviewed Claimant's October 22, 2015 MRI, concluding that it demonstrated severe spinal stenosis at the levels above the previous surgery, specifically L3-4 and L2-3. After performing an examination, Dr. Danylchuk indicated that while Claimant could benefit from lumbar epidural injections, however, his spinal stenosis was severe making him a candidate for future "extension of the decompression laminectomy and interbody fusion with posterior stabilization to incorporate at least the L3-4 level and perhaps the L2-3 level." Claimant agreed that surgery was necessary. Dr. Danylchuk indicated that he would allow Claimant and his "pain management injection doctor" to make the decision to proceed with additional injections and if injections were not undertaken, to return and Dr. Danylchuk would "proceed with surgery."

22. Claimant returned to Dr. Sparr on December 16, 2015 for the repeat trigger point injections that had been referenced as being appropriate following Claimant's December 9, 2015. Instead of proceeding with the anticipated injections, Claimant deferred citing diffuse "itchiness" which he reported developed after his occipital blocks. The record from this date of visit indicates that Claimant thought he was allergic to "caines." Despite Dr. Sparr's suggestion, that Claimant <u>thought</u> he was allergic to "caines", the ALJ finds that he was injected with a substance from the list of medications he was known to be allergic to, specifically Lidocaine (emphasis added). The report also documents Claimant's subsequent refusal to submit to injections of saline and dexamethasone or take additional/different medications recommended by Dr. Sparr. The ALJ finds the content of the December 16, 2015 report to support Claimant's assertion that he questioned Dr. Sparr's treatment plan as evidenced by his refusal to accept any of Dr. Sparr's treatment recommendations.

23. Regarding the condition of Claimant's low back, Dr. Sparr's December 16, 2015 report indicates that Dr. Danylchuk recommended injections or additional surgery

in the form of a repeat fusion. Dr. Sparr recommended a second opinion with Dr. Frey.

24. While the ALJ understands Claimant's reluctance to treat with Dr. Sparr, the suggestion that he sought treatment with Dr. Danylchuk only after he lost confidence in Dr. Sparr, because he was injected with Lidocaine, is unpersuasive. The evidence presented persuades the ALJ that Claimant had scheduled an appointment to see Dr. Danylchuk before his injection on December 2, 2015. Indeed, the December 2, 2015 record establishes that before his injection, Claimant reported that he was going to see Dr. Danylchuk for a surgical consultation on December 18, 2015 "using his primary insurance" because he wanted Dr. Danylchuk to review the MRI since he was the physician who provided the previous fusion. Moreover, the medical records persuade the ALJ that Claimant reported his purported allergic reaction after he discussed surgical options with Dr. Danlychuk on December 10, 2015. Based upon the evidence presented, the ALJ is persuaded that Claimant concluded that surgery was necessary and that further injections were not going to treat the "core" of his problem after meeting with Dr. Danylchuk on December 10, 2015. The evidence presented supports a reasonable inference that Claimant's insistence on proceeding to surgery and foregoing additional injections, rather than his alleged allergic reaction/lost confidence in Dr. Sparr formed the impetus for the decision to proceed with surgery with Dr. Danlychuk.

25. On January 5, 2016, Claimant called into the offices of Dr. Danylchuk to establish whether he would support Claimant's "decision to stop working until he [recovered] from surgery." Dr. Danylchuk supported Claimant's decision as evidenced by a January 7, 2016 work release form he completed removing Claimant from work from January 11, 2016 through June 21, 2016. While it is unclear from the evidence presented whether Claimant would have stopped working had Dr. Danylchuk not supported his decision, the content of the exchange with Dr. Danylchuk's office persuades the ALJ that Claimant had resolved to proceed with surgery regardless of the recommendation by Drs. Sparr and Lakin that he get a second opinion.

26. On February 4, 2016, Claimant returned to Dr. Lakin complaining of persistent 8/10 pain. He requested that he be returned to Dr. Sparr for additional injections in the neck without Lidocaine.

27. On February 22, 2016, Claimant presented to Dr. Danylchuk's office requesting that the staff there get the surgery recommended by Dr. Danylchuk authorized through workers' compensation. He gave the staff the information necessary to contact Pinnacol Assurance. A prior authorization requesting approval to proceed with a hardware removal at L4-5 along with a L2-4 laminectomy and posterior interbody fusion with cages and pedical screw fixation was forwarded to "Ryan" at Pinnacol Assurance on February 22, 2016. The written materials admitted into evidence submitted do not contain a response to the prior authorization request. Nonetheless, the testimony of Claimant and Dr. Danylchuk persuade the ALJ that the request was denied in accordance with workers' compensation rules of procedure.

28. Dr. Danylchuk performed a L3-4 bilateral discectomy with laminectomy

and posterior lumbar interbody fusion in association with a L4-5 hardware removal and L3, L4, and L5 hardware reinsertion procedure on April 6, 2016.

29. Claimant returned to Dr. Lakin on April 15, 2016 reporting that his pain had decreased from an 8/10 to a 3/10 following his surgery.

30. During examination, Claimant conceded that he had not been given a referral to Dr. Danylchuk and that Dr. Danylchuk was not an authorized treating provider under the workers' compensation claim. Claimant further testified that he was fully aware that Pinnacol Assurance did not authorize the surgery as part of this workers' compensation claim. Claimant testified that it did not matter to him who paid for the surgery. He testified further that he had resolved to proceed with surgery despite the denial by Pinnacol Assurance so that he would not become a paraplegic. Claimant presented no persuasive objective evidence establishing that the surgery performed by Dr. Danylchuk was emergent and designed to thwart neurologic damage and otherwise prevent him from becoming a paraplegic.

31. Based upon the evidence presented, the ALJ finds that Claimant sought treatment with Dr. Danylchuk under his personal insurance without first securing a referral from an authorized provider or a change of physician from Insurer. Consequently, the ALJ finds the treatment, including the April 6, 2016 surgery performed by Dr. Danylchuk unauthorized.

32. Respondents sought an opinion from Dr. Michael Janssen regarding the relatedness of Claimant's April 6, 2016 surgery to the October 2, 2015 MVA. Dr. Janssen completed a records review, MRI review and authored a June 23, 2016 narrative report following that review. Dr. Janssen opined that the imaging studies showed classic adjacent level disease with spinal stenosis, disc herniation, instability and degenerative spondylosis. He concluded that while the surgery performed by Dr. Danylchuk may have been reasonable and necessary to address the changes to the lumbar spine, the surgery was not in any capacity related to the October 2015 MVA. Instead, Dr. Janssen opined that the indication for surgery as performed arose strictly from Claimant's longstanding pre-existing deformity and the natural history of the his progressive pre-existing disease. According to Dr. Janssen, there was no new anatomical condition caused by the MVA that warranted surgery.

33. With regard to MMI, Dr. Janssen opined that Claimant would have reached MMI from the MVA within approximately 2-3 months for the causally related myofascial symptoms.

34. Dr. Janssen's report was forwarded to Dr. Lakin for review on June 28, 2016. Dr. Lakin concurred with Dr. Janssen's findings and conclusions prompting his decision to place Claimant at MMI effective February 14, 2016. In this regard, Dr. Lakin noted: "I believe an MMI date of 2/14/2016 would be appropriate. We had completed a good course of conservative care, EDx study was completed and did not confirm additional acute lumbar injury, he had noted good gains up until surgical intervention

was offered, he had benefit form cervical/occipital injections months prior, had requested additional injections for cervical on appointment 2/3/2016 but failed to take action to make appointments for several months, and his wrist complaints had been treated conservatively with return to baseline function."

35. Regarding the condition of Claimant's cervical spine, Dr. Lakin noted that Claimant had requested additional injections, yet failed to take the "initiative to call Dr. Sparr for an appointment." He went on to indicate that Claimant's past medical records established that he had reported neck pain and crepitus prior to the MVA and that up until May and June of 2016 Claimant maintained good range of motion. According to Dr. Lain, Claimant's recent range of motion loss was attributable to the progression of his pre-existing degenerative joint and degenerative disc disease (DJD/DDD). In this regard, Dr. Lakin opined that "no further work up is needed regarding his cervical spine as it relates to the October 2, 2015 MVA injury. [Claimant] has been treated appropriate (sic) for soft tissue injury and improved with soft tissue injections, he now progresses over time with known extensive severe DJD/DDD cervical spine by CT on 10/2/2015."

36. Dr. Lakin also concluded that Claimant had not sustained any permanent impairment and required no maintenance medical care.

37. The ALJ is not persuaded by Dr. Lakin's opinions concerning MMI. Claimant received one series of injections before refusing additional therapy secondary to an allergic reaction. The ALJ finds it understandable that Claimant would refuse, out of fear of another reaction, additional injections initially after he was given a medication he was allergic to. Based upon the evidence presented, the ALJ finds that a viable treatment option exists that may cure and relieve Claimant of ongoing symptoms the ALJ finds to be related to his October, 2, 2015 MVA, namely injections which do not contain "caine" medications. As Dr. Sparr has recommended such injections and Claimant has requested but not received the same, the ALJ finds Dr. Lakin's opinions concerning the need for further cervical spine treatment unpersuasive.

38. Respondents filed a final admission of liability on July 19, 2016. Claimant sought a Division Independent Medical Examination (DIME). In keeping with the accepted practice provided for by the Workers' Compensation Rules of Procedure, Dr. Kenneth Finn was selected to perform Claimant's requested DIME.

39. Dr. Finn completed the requested DIME on December 9, 2016. As part of the DIME, Dr. Finn took a history, reviewed "accompanying" medical records and completed a physical examination. Claimant was noted to be a "poor to fair" historian and the medical records received by Dr. Finn for review focused on his October 2, 2015 MVA. While Dr. Finn noted that Claimant had a "history of spinal stenosis", he did not have records pre-dating his October 2, 2015 injury, which outlined prior symptoms and/or treatment for his low back condition. He referenced only two records predating 2015, both from 2003. Given Claimant's pre-existing spinal stenosis and the lack of records outlining lumbar symptoms and/or treatment prior to the 2015 MVA, Dr. Finn opined that the treatment Claimant received for his low back was 100% related to his

MVA and he assigned 17% impairment for his lumbar spine condition. Dr. Finn concluded that Claimant had no further treatment needs concerning his low back since he underwent "definitive" treatment, i.e. surgery for the same. Concerning Claimant's cervical spine, Dr. Finn noted that he suffered a "classic whiplash" superimposed on "underlying spondylosis which became symptomatic at the time of his injury as I do not have any medical records showing any testing or treatment for neck issues predating his injury." As he felt that Claimant could benefit from "investigation of the cervical facet joint levels from C2-C4 which may involve cervical branch [blocks]" and further radiofrequency ablation, if Claimant responded to the blocks favorably, Dr. Finn opined that Claimant was not at MMI. Similar to the situation involving impairment for the lumbar spine, Dr. Finn assigned an advisory impairment rating of 13% for the cervical spine.

40. While no records outlining prior symptoms/treatment to the neck and back were included in DIME packet sent to Dr. Finn, the evidence presented supports a finding that Claimant undertook treatment primarily directed to the low back in 2007 after suffering two car accidents. While the 2007 and beyond records reference cervical spine stenosis, the ALJ finds that Claimant's treatment following the 2007 car accidents was predominately directed to Claimant's low back with minimal treatment for his pre-existing neck condition. The records also support that one of the aforementioned accidents was work related. Careful review of the records associated with this accident reveals that it aggravated the underlying condition of Claimant's low back causing bilateral leg pain prompting Dr. Daniel Olson to refer Claimant to Dr. Finn for an electrodiagnostic study (EMG).

41. Dr. Finn evaluated Claimant on April 15, 2008. Dr. Finn's physical examination was limited to the thoracolumbar spine and the lower extremities. He completed the EMG, which produced normal results. Although the report from this date of visit indicates that Claimant was to tentatively scheduled for a facet injection, the evidence presented does not indicate that this injection was completed or that Dr. Finn treated Claimant beyond completion of the EMG study.

42. Following Claimant's December 9, 2016 DIME, Respondents sought an IME of Claimant with Dr. Carlos Cebrian. In advance of the IME, Respondents forwarded 12 inches of records to Dr. Cebrian for review. The records included reports concerning Claimant's prior fusion surgery in 2002, records regarding Claimant's two 2007 MVA's, and Claimant's current medical treatment records and DIME report. Dr. Cebrian undertook careful review of the extensive medical records forwarded. He also took a personal history from Claimant and completed a physical examination, after which he issued a 70-page report on April 7, 2017.

43. In his IME report, Dr. Cebrian, agrees that Claimant suffered a both a cervical spine strain with temporary aggravation of an underlying cervical spine degenerative disc disease and a lumbar spine strain with temporary aggravation of an underlying lumbar degenerative disc disease and spinal stenosis. He opined further that Dr. Lakin properly placed Claimant at MMI on February 14, 2016. He did not

ascribe Claimant's need for surgery as performed by Dr. Danylchuk to the October 2, 20156 MVA. To the contrary, Dr. Cebrian, much as Dr. Janssen did, concluded that there was no objective evidence of change in Claimant's underlying chronic condition attributable to the MVA. He also opined that even if the surgery performed by Dr. Danylchuk was determined to be related to Claimant's October 2, 2015 MVA, the surgery was not reasonable or necessary.

44. Dr. Danylchuk testified by deposition of October 17, 2017. Dr. Danylchuk testified that he was familiar with Claimant's premorbid condition having performed surgery on Claimant previously. He also opined was that the need for the lumbar surgery was precipitated and causally related to the high velocity impact sustained in the motor vehicle accident. According to Dr. Danylchuk, the motor vehicle accident heralded the onset of increasing back and leg pain to the point where Claimant was having trouble dealing with it.

45. As noted, Dr. Danylchuk attributed Claimant's injury and low back treatment, including surgery to the October 2, 2015 MVA, stating: [I] this case, [Claimant] was doing extremely well, and then what started it was the accident, and that heralded the onset of complaints." Dr. Danylchuk was not swayed by the opinions of Dr. Janssen that Claimant's need for surgery was related to progressive nature of his pre-existing adjacent level disease citing the mechanism of injury, the onset of symtoms immediately after the MVA and Claimant's functional status prior to the accident.

46. Based upon the evidence presented, including the opinions of Dr. Danylchuk, the ALJ finds that Claimant's October 2, 2015 MVA, more probably than not, aggravated his underlying pre-existing degenerative disc disease as well as a pre-existing, yet asymptomatic L2-3 spondylolisthesis. While Claimant's adjacent level disease (L2-3 spondylolisthesis) likely preexisted Claimant's MVA, the immediate onset of symptoms combined with Claimant's rapid functional decline persuades the ALJ that the MVA, more probably than not, accelerated the deterioration associated with this condition giving rise to the need to stabilize lumbar spine. Accordingly, the ALJ finds the April 6, 2016 spinal surgery performed by Dr. Danylchuk related to the October 2, 2015 MVA. The evidence presented also convinces the ALJ that Dr. Danylchuk's April 6, 2016 surgery was reasonable and necessary.

47. While Claimant suffered a compensable aggravation/acceleration of a pre-existing condition resulting in Claimant's need for surgery, the evidence presented persuades the ALJ of the following: First, Dr. Danylchuk is not an authorized workers' compensation provider under the instant claim and second, Respondents did not authorize the April 6, 2016 spinal surgery. Consequently, Respondents are not liable for the costs associated with Dr. Danylchuk's April 6, 2016 surgery.

48. Concerning the DIME conducted by Dr. Finn, Dr. Cebrian opined that Dr. Finn erred in accepting the DIME assignment in the first instance. In this regard, Dr. Cebrian noted that Dr. Finn's prior "doctor-patient relationship" with Claimant, albeit under a different claim affected his "ability to be independent" with regard to the instant

claim. According to Dr. Cebrian, Dr. Finn likely knew or should have known that he had previously been a treater to Claimant and should have rejected the appointment.

49. As to the question of MMI, Dr. Cebrian opined that Dr. Finn erred in when he relied on the fact that he did not have pre-existing medical records to indicate prior pathology. According to Dr. Cebrian, this statement constituted error as there were "multiple medical records indicating pre-existing pathology in the cervical and lumbar spine. Per Dr. Cebrian, Dr. Finn erred when he did not request Claimant's pre-existing records. Dr. Cebrian testified that since Dr. Finn had knowledge, both as a prior treater and through the information provided by Claimant at the DIME, that Claimant had been involved in two prior MVAs, that Dr. Finn should have requested additional records before rending his DIME opinion. He opined that without those preexisting medical records, which were critical in terms of determining whether Claimant's current complaints were related, Dr. Finn was left to rely solely on Claimant's subjective complaints and inaccurate history.

50. Based upon the evidence presented, the ALJ finds the opinions expressed by Dr. Finn regarding the cause of Claimant's back and neck symptoms supported by the content of the medical records presented to him for review. Even Dr. Cebrian, Respondents' retained expert, agrees that Claimant suffered aggravations of his pre-existing back and neck conditions. As found, the evidence presented persuades the ALJ that the treatment to Claimant's back and neck are related to these aggravations. Dr. Finn believes that Claimant could benefit from further treatment directed to his cervical spine and is therefore not at MMI for the aggravation the caused by the MVA. While Dr. Cebrian disagrees, the ALJ finds his report and testimony unpersuasive.

51. The ALJ finds a paucity of evidence to suggest that Dr. Finn erred in the completion of his DIME, including his opinions concerning MMI and/or the methodology he employed to reach a total combined whole person impairment rating in this case. To the contrary, the evidence presented persuades the ALJ that there is a mere difference of opinion between the Dr. Finn as the division independent medical examiner and Respondents' retained medical expert, Dr. Cebrian concerning causation, MMI and impairment. Concerning, Respondents suggestion that the DIME should be set aside because the record demonstrates that Dr. Finn previously evaluated Claimant under the 2007 work related MVA, the ALJ is not convinced. In this case, Respondents failed to present persuasive evidence that Dr. Finn knew he had previously evaluated Claimant or that his opinions concerning MMI were somehow tainted by this prior encounter. To the contrary, the evidence presented persuades the ALJ that Dr. Finn did not have an extensive treatment history with Claimant or was one of his "treaters" as Respondents suggest. Rather, the record supports that Dr. Finn evaluated Claimant on one occasion for an EMG in excess of seven years before he completed the IME in this case. The record evidence persuades the ALJ that Dr. Finn had no recollection of this encounter or if he did, that he was biased in favor of Claimant. For these reasons, the ALJ finds that Respondents have failed to meet their required legal burden to set Dr. Finn's opinion regarding MMI aside. Because the ALJ finds Claimant not at MMI, the percentage of any permanent impairment associated with Claimant's back and neck

injuries is premature.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to Assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968). In this case, the ALJ concludes that Dr. Finn's opinion concerning MMI is supported by the content of the medical records he reviewed. As such, the ALJ finds his opinion credible. There is also a lack of persuasive evidence to support a conclusion that Dr. Finn deviated from the accepted methodology of the AMA Guidelines in reaching his opinion concerning MMI. While it is true that Dr. Finn saw Claimant in 2008 for an EMG, Respondents failed to present clear and convincing evidence that his opinions concerning MMI in the instant case are highly probably

incorrect based on that prior contact. Moreover, the ALJ is not persuaded that Dr. Finn's MMI opinion is in error based upon the fact that he relied on Claimant's verbal history and the records sent to him for review. The ALJ rejects Dr. Cebrian's contrary opinions as unpersuasive.

Claimant's Average Weekly Wage

D. The overall purpose of the average weekly wage (AWW) statute is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity resulting from the industrial injury. *See Campbell v. IBM Corp., 867 P.2d 77 (Colo. App. 1993); National Fruit Prod. v. Crespin, 952 P.2d 1207 (Colo. App. 1997).* The ALJ concludes that Claimant's wage records constitute the best evidence concerning his earnings around the time he was injured. The wage records support that Claimant's earnings varied during his employment. Respondents calculate Claimant's AWW to equal $184.12 based upon a 13.43-week work history. The ALJ agrees with Claimant that Respondents admitted AWW is not a fair representation of his average earnings because it accounts for a relatively short period of earnings. Given the nature of Claimant's work and his highly variable earnings, the ALJ concludes that Claimant's average weekly wage (AWW) is best calculated using the total earnings for 2015 as admitted into evidence. As found above, this methodology yields an AWW of $292.71 ($9,408.72 ÷ 225 days between 1/1/2015 and 8/13/2015 = $41.82/day × 7 days/week = $292.71).

Dr. Danylchuk's Status as an Authorized Treating Physician and Respondents' Denial of the April 6, 2016 Spinal Surgery

E. Authorization refers to a physician's legal status to treat the industrial injury at the respondents' expense. *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006); *Popke v. Industrial Claim Appeals Office*, 944 p.2d 677 (Colo. App. 1997). Under §8-43-404(5)(a)(I)(A), C.R.S. 2014 the employer has the right in the first instance to designate the authorized provider to treat the claimant's compensable condition. The rationale for this principle is that the respondents may ultimately be liable for the claimant's medical bills and, therefore, have an interest in knowing what treatment is being provided. *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005). Consequently, if the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. Section 8-43-404(7), C.R.S. 2005; *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); Pickett v. Colorado State Hospital, 32 Colo. App. 282, 513 P.2d 228 (1973).

F. Under § 8-43-404(5)(a), C.R.S., the employer or insurer is afforded the right in the first instance to select a physician to treat the injury. The statute requires the employer or insurer to "provide a list of at least two physicians, . . . in the first instance, from which list an injured employee may select the physician who attends said injured employee." Similarly, Workers' Compensation Rules of Procedure, Rule 8-2(A), 7 Code Colo. Reg. 1101-3, states that "[w]hen an employer has notice of an on the job injury, the employer or insurer shall provide the injured worker with a written

list . . .." In order to maintain the right to designate a provider in the first instance, the employer has an obligation to name the treating physician forthwith upon receiving notice of the compensable injury. *See Rogers v. Industrial Claim Appeals Office,* 746 P.2d 545 (Colo. App. 1987). The failure to tender the "services of a physician ... at the time of injury" gives the employee "the right to select a physician or chiropractor." The employer's duty to designate is triggered once the employer or insurer has some knowledge of facts that would lead a reasonably conscientious manager to believe the case may involve a claim for compensation. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *Jones v. Adolph Coors Co.,* 689 P.2d 681 (Colo. App. 1984); *Gutierrez v. Premium Pet Foods, LLC*, W.C. No. 4-834-947 (Industrial Claim Appeals Office, September 6, 2011). In this case, Claimant sought treatment, including surgery through Dr. Danylchuk on his own under his health insurance after Respondents had designated Dr. Lakin as his authorized treating physician (ATP). Moreover, he sought treatment with Dr. Danylchuk without first securing a referral from an authorized provider or a change of physician from Insurer. There is a lack of credible evidence to establish that the right to select a medical provider somehow passed to Claimant. Indeed, Claimant makes no such claim. Instead, Claimant asserts that his treatment with Dr. Danylchuk should be considered authorized because he lost confidence in Dr. Sparr's office as a result of "two bad experiences he had with bungled medication administration. According to Claimant, these events entitled him to "seek care elsewhere." As found above, the ALJ is not persuaded. Here, the evidence presented persuades the ALJ that Dr. Danylchuk is not an authorized provider. The evidence also convinces the ALJ that Respondents' denied his request for authorization to proceed with his recommended surgery. Accordingly, the ALJ concludes that Respondents are not liable for the costs of Claimant's treatment with Dr. Danylchuk.

The Relatedness of Claimant's Need for Low Back Treatment to his October 2, 2015 Motor Vehicle Accident

G. Claimant bears the burden of establishing entitlement to medical treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). Once a claimant has established a compensable work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S.*; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

H. Regardless, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949). A pre-existing condition "does not disqualify a claimant from receiving workers compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). To the contrary, a claimant may be compensated if his or her employment "aggravates, accelerates, or "combines with" a pre-existing infirmity or disease "to produce the disability and/or need for treatment for which workers' compensation is sought". *H & H Warehouse v. Vicory*,

805 P.2d 1167, 1169 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities and not the underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940). Here, the evidence presented supports a conclusion that Claimant likely had generalized pre-existing degenerative disc disease in his lumbar spine. He probably also had pre-existing disease in the spinal levels adjacent to his L4-5 fusion. Nonetheless, the record evidence fails to demonstrate that Claimant's low back was actively symptomatic or that he was in need of or recently received low back treatment prior to the October 2, 2015 MVA. Moreover, the evidence presented fails to demonstrate that Claimant's pre-existing condition was functionally limiting to him prior to the MVA. Indeed, on July 23, 2008, Dr. Olson released Claimant from his care without permanent impairment following his 2007 work related MVA. While Drs. Lakin, Janssen and Cebrian conclude that Claimant's current symptoms are related to the natural and probable progression of his pre-existing degenerative disc disease, the undersigned is not persuaded. Rather, the ALJ relies on the medical records predating the October 2, 2015 MVA, the accident report and the opinions of Dr. Danylchuk to conclude that Claimant's MVA probably aggravated his pre-existing degenerative lumbar spinal stenosis as well as his adjacent level disease to produce his symptoms and his need for spinal surgery. Consequently, the ALJ concludes that Claimant has established a causal connection between his admitted October 2, 2015 MVA and his need for additional low back surgery. Regardless, Dr. Danylchuk is not an authorized provider and Respondents did not otherwise authorize the surgery. Accordingly, Respondents are not liable for the costs associated with the surgery or treatment incidental thereto.

Overcoming the DIME

I. A DIME physician's findings concerning causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

J. In resolving the question of whether the DIME physician's opinions have

been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998).

K. MMI is defined, in part, as the "the point in time . . . when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S. Here, the weight of the persuasive evidence demonstrates that Claimant's need for additional cervical spine treatment is directly related to an aggravation of a pre-existing condition resulting from Claimant's MVA while he was in the course and scope of his duties as a taxi driver. Because this treatment has not been afforded and it presents a reasonable prospect for curing and relieving Claimant of the ongoing effects caused by the aggravation of his pre-existing degenerative disc disease, Claimant is not at MMI. See *Eby v. Wal-Mart Stores, Inc.*, W.C. No. 4-350-176 (February 14, 2001), *aff'd. Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, (Colo. App. No. 01CA0401, February 14, 2002)(*not selected for publication)* (citing *PDM Molding v. Stanberg,* 898 P.2d 542 (Colo. App. 1995*)* and *Colorado AFL-CIO v. Donlon*, 914 P.2d 396 (Colo. App. 1995)]; *Hatch v. John H. Harland Co.,* W.C. No. 4-368-712 (August 11, 2000).

L. After considering the totality of the evidence presented, including the DIME report of Dr. Finn and the conflicting reports of Drs. Lakin, Janssen and the stated opinions of Dr. Cebrian, the ALJ concludes that Respondent has failed to produce unmistakable evidence establishing that Dr. Finn's determination regarding MMI is highly probably incorrect. Rather, the ALJ concludes that the evidence presented fails to establish that Dr. Finn was biased in favor of Claimant because he had previously completed an EMG in 2008. Indeed, the record presented persuades the ALJ that Dr. Finn had no recollection of seeing Claimant in 2008. Because he had no recollection of seeing Claimant previously, the ALJ finds Dr. Cebrian's suggestion that DIME in this case is irreparably tainted unconvincing. Moreover, evidence presented persuades the ALJ that the remaining errors asserted by Dr. Cebrian constitute a mere difference of opinion regarding causation between Dr. Finn and himself. A professional difference of opinion does not rise to the level of clear and convincing evidence that is required to overcome Dr. Finn's opinion concerning MMI. *See generally, Gonzales v. Browning Farris Indust. of Colorado, W.C. No. 4-350-356 (ICAO March 22, 2000),* Consequently, Respondents have failed to meet their required legal burden to set his MMI determination aside.

ORDER

It is therefore ordered that:

1. Claimant's AWW is $292.71 per week ($9,408.72 ÷ 225 days between 1/1/2015 and 8/13/2015 = $41.82/day × 7 days/week = $292.71).

2. Dr. Kenneth Danylchuk was and is not an authorized provider in the chain of referral.

3. Respondents did not authorize Dr. Danylchuk's April 6, 2016 spinal surgery; therefore, Respondents bear no responsibility for payment or any other remuneration to Dr. Danylchuk or to Claimant related to this surgery.

4. Claimant has proven, by a preponderance of the evidence, that the April 6, 2016 lumbar fusion was reasonable, necessary and related to his October 2, 2015 MVA.

5. Respondents request to set aside the DIME opinion of Dr. Finn regarding causation and MMI is denied and dismissed. Because the ALJ determines that Respondents have failed to overcome the MMI determination of Dr. Finn, assignment of permanent impairment associated with Claimant's back and neck injuries is premature.

6. Respondents shall pay for all medical expenses, pursuant to the Workers' Compensation medical benefits fee schedule, to cure and relieve Claimant from the ongoing effects of his cervical and low back injuries, including but not limited to additional injections as recommended by Dr. Sparr.

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 12, 2018

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

I. Have Respondents shown, by a preponderance of the evidence, that they are entitled to penalties, due to *fraudulent* receipt by Claimant of Temporary Total Disability ("TTD") benefits while he was also receiving a full-time salary?

STIPULATION

The parties have stipulated that Claimant received an overpayment of TTD payments of $15,648.49, from the fall of 2016, until the spring of 2017. Respondents concede that this was a *mistake* on the part of Insurer. The issue before this ALJ is whether receipt by Claimant of such TTD payments was *fraudulent*, thus entitling Respondent to *penalties,* in addition to repayment.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant was employed as a Guest Services Manager, and suffered an admitted work injury on 8-27-16 when he was unloading luggage from Employer's customer shuttle. His hamstring was injured, and he promptly reported this injury to Employer, and was treated by an Authorized Treating Physician.

2. He was paid a full time salary, with an Average Weekly Wage which the parties agree was $923.08. This was paid by Employer, via direct deposit, on a bi-weekly basis. The TTD Workers Compensation benefit was therefore calculated at $615.39. Those TTD payments were paid on a biweekly basis by Insurer, in the form of checks made payable to Claimant, sent to his home address.

3. Claimant remained off work for seven weeks, after which he was cleared by his ATP to return to work for Employer on a part-time basis. Claimant promptly informed Employer of his medical clearance to return to work part-time. TTD payments were made during the period he was off work, such period ending ended on 10-21-16.

4. Employer then allowed Claimant to return to work on a part-time basis (Claimant believed it was 4 hours per day, Employer's HR director recalled it to be 6 hours per day. The ALJ finds this is a good faith difference in recall, and not material to the issue herein). In either event, Employer allowed Claimant to return to work part-time, but agreed to resume paying Claimant his full salary, effective 10-22-16. His full salary was paid until Claimant separated from employment in 2017 (the ALJ has heard no evidence to the contrary).

5. TTD payments had also been paid to Claimant, beginning on 9-3-16, but were only discontinued, effective in April, 2017, when Insurer filed a Petition to Modify his TTD payments, based upon an intervening medical condition involving Claimant's heart. While this issue was not discussed by either party at hearing, it appears that it was during this same period that Employer and Insurer began to compare notes, and realized there had been a TTD overpayment, since Claimant had resumed working part-time, but at full salary. By all accounts, and by stipulation of the parties, such overpayment of TTD benefits was calculated to be $15,648.49.

6. Claimant was called by Respondents to testify by telephone, and does not dispute the essential facts of this case as found above. He testified that he is not familiar with the Workers Compensation statutes. He believed he was being paid 60% (not 66.67%) of his salary as compensation for his medical inability to work full-time, despite being salaried full-time. He believed he was entitled to the TTD payments he received, until he was informed otherwise.

7. Claimant testified that at no point did he misrepresent to either Employer or Insurer that he was receiving TTD payments once he returned to work. At no point was he asked by Insurer if he was working again, or if he was still receiving TTD checks. At no point did Employer ask him if he was receiving TTD checks. Claimant further testified that once he returned to work, he emailed his adjuster, Beatrice Calvert, of this fact. To his knowledge, it went to her inbox. He never got a response from her. This email was sent from his work email address, and he is not able to retrieve his emails now, since he separated from work.

8. Claimant also testified that his HR supervisor, Debbie Betts, told him that she was having difficulty reaching Calvert as well. Further, Claimant's physical therapy had been discontinued in December, 2016, for reasons that were never communicated to him by Insurer. Claimant testified that he was surprised to find out in the spring of 2017 that he was not entitled to these TTD payments, and does not feel he did anything wrong. He does acknowledge the need for repayment.

9. Claimant's HR supervisor, Debbie Betts, also testified by telephone. In summary, Ms. Betts testified that she also notified Insurer's adjuster by email that Claimant had returned to work in the fall of 2016. She never received a response back from Beatrice Calvert either. At no point did she ask Claimant if he continued to receive TTD checks until the overpayment was discovered in the spring of 2017. At no point did Claimant misrepresent to her that he was not receiving said checks.

CONCLUSIONS OF LAW

Based upon the forgoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16.

Concealment of Material Facts by Claimant

C. In this case, the ALJ finds Claimant to be credible. Claimant is not legally sophisticated, and it is unreasonable to expect a claimant in a Workers Compensation case to understand the statutory scheme, or the policy reasons supporting it. Claimant testified, in effect, that he trusted the process to work as it should. The ALJ finds that his reliance was reasonable. If any interested party had simply asked him, he would have been forthcoming with his work status, and receipt of TTD payments. While erroneous, his belief that he was still entitled to the TTD payments upon returning to work is not so outrageous as to convince the ALJ that his intentions were fraudulent. While there might be circumstances creating an affirmative duty to point out errors in one's favor (such as a person who awakens to find a few extra digits added to his bank account, then spends the excess money in haste), such is not the case here. Claimant had a good faith belief in his entitlement to these TTD checks.

D. In this instance, the ALJ further finds that Claimant did inform his adjuster of his return to work by email. This is bolstered by Respondent's own witness, Debbie Betts, who had a similar experience with a non-communicative adjuster. Their testimony is plausible, and uncontradicted by Insurer. Claimant is now in the unenviable position of being unable to prove, except through his own testimony, that he sent this email. The ALJ finds his testimony sufficient. It was an open secret to the world-except the adjuster, it appears- that Claimant was working and being paid for it. Further, Claimant was regularly endorsing the TTD checks that Insurer was freely sending him, with no possible hope of *concealing* this fact. The ALJ cannot infer a fraudulent intent from these facts.

E. At no point did Claimant *conceal* a material fact which in equity and good conscience should have been disclosed to Insurer.

ORDER

It is therefore ordered that:

1. Claimant has received an overpayment of TTD benefits in the amount of $15, 648.49. Repayment will be made according to law, or as otherwise agreed by the parties.

2. Respondents' request for penalties is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 16, 2018

/s/ William G. Edie
William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that he sustained an injury arising out of and in the course and scope of his employment with respondent on June 8, 2017.

- If claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that medical treatment he received was reasonable and necessary to cure and relieve him from the effects of the injury.

- If claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that the medical treatment he received was authorized.

- If claimant proves a compensable injury, what is claimant's average weekly wage (AWW)?

- If claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits.

- If claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that he is entitled to temporary partial disability (TPD) benefits.

- If claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that his compensation should be increased by 50% pursuant to Section 8-43-408, C.R.S.**,** for employer's alleged failure to obtain and maintain worker's compensation insurance.

FINDINGS OF FACT

1. Claimant began employment with employer in May 2017. Claimant worked as a semi-truck driver hauling loads for employer. Claimant was paid 25% of the load. Claimant testified that he worked four days per week and averaged pay of $375.00 per day, for a total of $1,500.00 per week.

2. On June 8, 2017 claimant was hauling a load for employer from Beaver, Utah to Fallon, Nevada. While making a turn the trailer claimant was hauling shifted and the trailer turned over, resulting in an accident. Claimant was initially treated at the scene by emergency personnel.

3. Claimant immediately notified employer of the accident. Mr. Fisher, owner of employer, made arrangements to transport claimant back to Grand Junction, Colorado and instructed claimant to seek treatment at Community Hospital.

4. Upon returning to Grand Junction on June 9, 2017, claimant sought treatment at Community Hospital as directed. At that time, claimant reported pain in his neck, left shoulder, and left knee.

5. Claimant testified that it is his understanding that at the time of the June 8, 2017 accident, employer did not have workers compensation insurance. Claimant based this belief, in part, on the knowledge that Mr. Fisher scheduled an appointment for claimant to be seen at Grand Valley Family Practice. Claimant testified that Grand Valley Family Practice refused to see him because the appointment would not be covered by workers' compensation.

6. Other than the directive to seek initial treatment at Community Hospital and the attempted appointment with Grand Valley Family Practice, respondent did not provide claimant with the name of any other medical provider. Claimant testified that respondent did not provide him with a list of designated medical providers.

7. In addition to the initial treatment he received at Community Hospital, claimant also received treatment for his neck, left shoulder and left knee from St. Mary's Hospital, Dr. Robert Replogle, and Arianna Anderson, FNP.

8. On June 21, 2017, claimant was seen by Dr. Robert Replogle for a neurosurgery consultation. Dr. Replogle diagnosed a musculo-ligamentous strain, but determined that claimant could stop using the neck collar. Dr. Replogle opined that physical therapy might be appropriate for claimant if his neck pain continued.

9. On July 13, 2017 claimant returned to Community Hospital and was seen by Ariana Anderson, FNP. At that time, claimant reported that he was doing well with "occasional twinges in [his] knee and back" and his shoulder was "almost back to normal". Ms. Anderson observed that claimant had good range of motion in all joints and had no knee instability. Ms. Anderson determined that claimant could return to work.

10. Claimant testified that since the June 8, 2017 accident his left knee has felt "wobbly" and at times it has "collapsed". As a result, claimant is unable to be on ladders or scaffolding. Claimant testified that his current left shoulder symptoms include pain and a reduction in his range of motion. Claimant testified that his current neck symptoms include pain and stiffness, but these neck symptoms improve throughout the day.

11. Claimant testified that after the June 8, 2017 accident he did not return to employment with employer. Claimant was able to obtain to employment in late July 2017 with Energy Pro Insulation. Based upon claimant's testimony at hearing and payroll records entered into evidence, claimant's earnings with Energy Pro Insulation were less than the wages he earned with employer. For the ten week period

represented in the record, claimant averaged $563.10 per week while working for Energy Pro Insulation.[1] Claimant also testified that during the week of September 18, 2017 through September 24, 2017 he requested time off from his position at Energy Pro Insulation because of instability in his left knee.

12. Claimant testified that his employment with Energy Pro Insulation ended during the week of October 14, 2017. Claimant testified that he was discharged from Energy Pro Insulation because he was unable to keep up with production. Claimant also testified that his inability to keep up with production was caused by the injuries he sustained on June 8, 2017. Claimant further testified that he has not worked since October 14, 2017.

13. The ALJ credits claimant's testimony at hearing and finds that claimant has demonstrated that it is more likely than not that on June 8, 2017 he suffered an injury that arose out of an in the course and scope of his employment with respondent.

14. The ALJ credits claimant's testimony at hearing and finds that claimant has demonstrated that it is more likely than not that respondent failed to select a medical provider for claimant related to his work injury. Therefore, claimant has demonstrated that it is more likely than not that the choice of physician passed to claimant.

15. The ALJ credits claimant's testimony at hearing and the medical records entered into evidence and finds that claimant has demonstrated that it is more likely than not that the treatment he has received for his neck, left shoulder, and left knee constitutes reasonable medical treatment necessary to cure and relieve claimant from the effects of the June 8, 2017 work injury.

16. The ALJ credits claimant's testimony at hearing and finds that claimant has demonstrated that it is more likely than not that claimant was unable to work from June 9, 2017 through June 30, 2017; from September 18, 2017 through September 24, 2017; and from October 16, 2017 and ongoing. The ALJ further credits claimant's testimony at hearing and finds that claimant has demonstrated that it is more likely than not that he was unable to work during these periods because of the injuries he sustained June 8, 2017.

[1] The payroll records from Energy Pro Insulation show that claimant's earnings were as follows: For the pay period July 31, 2017 through August 6, 2017, gross earnings of $402.00. For the pay period August 7, 2017 through August 13, 2017, gross earnings of $456.00. For the pay period August 14, 2017 through August 20, 2017, gross earnings of $660.00. For the pay period August 21, 2017 through August 27, 2017, gross earnings of $705.00. For the pay period August 28, 2017 through September 3, 2017, gross earnings of $468.00. For the pay period September 4, 2017 through September 10, 2017, gross earnings of $348.00. For the pay period September 11, 2017 through September 17, 2017, gross earnings of $1,149.00. For the pay period September 25, 2017 through October 1, 2017, gross earnings of $552.00. For the pay period October 2, 2017 through October 8, 2017, gross earnings of $597.00. For the pay period October 9, 2017 through October 15, 2017, gross earnings of $294.00.

17. The ALJ credits claimant's testimony at hearing and the payroll records entered into evidence and finds that claimant has demonstrated that it is more likely than not that for the period of July 31, 2017 through September 17, 2017 and during the period of September 25, 2017 through October 14, 2017 that he worked for Energy Pro Insulation. The ALJ further credits claimant's testimony at hearing and the payroll records entered into evidence and finds that claimant has demonstrated that it is more likely than not that during those same time periods claimant earned less than his AWW because of June 8, 2017 work injury.

18. The ALJ credits claimant's testimony at hearing and finds that claimant has demonstrated that it is more likely than not that at the time of claimant's compensable work injury his AWW was $1,500.00.

19. The ALJ credits claimant's testimony at hearing and finds that claimant has demonstrated that it is more likely than not that respondent did not have workers' compensation insurance at the time of claimant's work injury on June 8, 2017.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also*

Subsequent Injury Fund v. Thompson, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

4. As found, claimant has demonstrated by a preponderance of the evidence that he sustained an injury arising out of and in the course and scope of his employment with respondent on June 8, 2017. As found, claimant's testimony on this issue is credible and persuasive.

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. As found, claimant has demonstrated by a preponderance of the evidence that the treatment he received for his neck, left shoulder, and left knee constitutes reasonable medical treatment necessary to cure and relieve claimant from the effects of the June 8, 2017 work injury. As found, claimant's testimony and the medical records are credible and persuasive on this issue.

7. "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008). Section 8-43-404(5)(a) specifically states: "In all cases of injury, the employer or insurer has the right in the first instance to select the physician who attends said injured employee. If the services of a physician are not tendered at the time of the injury, the employee shall have the right to select a physician or chiropractor." "[A]n employee may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion…." *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985), *citing*, 2 A. Larson, *Workers' Compensation Law* § 61.12(g)(1983).

8. As found, upon learning of claimant's work injury respondent failed to provide claimant with a list of designated medical providers. As found, claimant has demonstrated by a preponderance of the evidence that choice of medical provider passed to claimant. Therefore, medical treatment claimant received as a result of the June 8, 2017 work injury is authorized medical treatment. As found, claimant's testimony on this issue is credible and persuasive.

9. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

10. As found, claimant's AWW at the time of the work injury was $1,500.00. As found, claimant's testimony is credible and persuasive on this issue.

11. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician. Claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

12. As found, claimant has demonstrated by a preponderance of the evidence that because of the June 8, 2017 work injury he was unable to work from June 9, 2017 through June 30, 2017; from September 18, 2017 through September 24, 2017; and from October 16, 2017 and ongoing. Therefore, claimant is entitled to TTD benefits during these periods. As found, claimant's testimony on this issue is credible and persuasive.

13. To prove entitlement to temporary partial disability (TPD) benefits, claimant must prove that the industrial injury contributed to some degree to a temporary wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Temporary partial disability payments ordinarily continue until either claimant reaches maximum medical improvement or an attending physician gives claimant a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment. *See* 8-42-106, C.R.S.

14. As found, claimant has demonstrated by a preponderance of the evidence that as a result of the June 8, 2017 work injury claimant's wages were less than his AWW from July 31, 2017 through September 17, 2017; and from September 25, 2017 through October 14, 2017. Therefore, claimant is entitled to TPD benefits during these periods. As found, claimant's testimony on this issue and the payroll records are credible and persuasive.

15. Section 8-43-408(1) C.R.S., provides that in cases where the employer is subject to the provisions of the Colorado Workers' Compensation Act and has not complied with the insurance provisions required by the Act, the compensation or benefits provided in said articles shall be increased fifty percent.

16. As found, claimant has demonstrated by a preponderance of the evidence that respondent did not have workers' compensation insurance at the time of claimant's June 8, 2017 work injury. Therefore, claimant's compensation for this claimant shall be increased by 50%. As found, claimant's testimony on this issue is credible and persuasive.

ORDER

It is therefore ordered that:

1. Claimant suffered a compensable injury on June 8, 2017 that arose out of and in the course and scope of his employment with respondent.

2. Respondent is responsible for payment of reasonable medical treatment necessary to cure and relieve claimant from the effects of the June 8, 2017 work injury.

3. Claimant's average weekly wage (AWW) for this claim is $1,500.00.

4. Respondent shall pay claimant temporary total disability (TTD) benefits for the periods of June 9, 2017 through June 30, 2017; September 18, 2017 through September 24, 2017; and October 16, 2017 and ongoing.

5. Respondent shall pay claimant temporary partial disability (TPD) benefits for the periods of July 31, 2017 through September 17, 2017; and September 25, 2017 through October 14, 2017.

6. Claimant's benefits shall be increased by 50% because of respondent's failure to obtain and maintain workers' compensation insurance.

7. Respondent shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

8. In lieu of payment of the above compensation and benefits to the claimant, respondent shall:

a. Within ten (10) days of the date of service of this order, deposit the sum of $50,000.00 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation/Trustee. The check shall be mailed to the Division of Workers' Compensation, P.O. Box 300009, Denver, Colorado 80203-0009, Attention: Sue Sobolik/Trustee;

OR

b. Within ten (10) days of the date of service of this order, file a bond in the sum of $50,000.00 with the Division of Workers' Compensation within ten (10) days of the date of this order:

(1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or

(2) Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation and benefits awarded.

9. It is further ordered that respondent shall notify the Division of Workers' Compensation of payments made pursuant to this order.

10. It is further ordered that filing of any appeal, including a petition to review, shall not relieve respondent of the obligation to pay the designated sum to the trustee or to file the bond. §8-43-408(2), C.R.S.

11. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Grand Junction, Colorado 81501

ISSUES

- Did Claimant prove by a preponderance of the evidence she injured her right shoulder as a result of her admitted March 10, 2017 industrial accident?
- Did Claimant prove entitlement to TTD benefits commencing July 21, 2017?
- If Claimant is entitled to TTD benefits, is Respondent entitled to an offset for PERA retirement benefits?

FINDINGS OF FACT

1. Claimant worked as a probation officer and victim witness assistant for Employer. She was injured on March 10, 2017 while intervening in an altercation between a male probationer and his girlfriend in the hallway outside her office. Another probation officer attempted to restrain the male probationer while Claimant escorted the girlfriend down the hallway. The male broke free, ran down the hallway and physically assaulted Claimant and the girlfriend. He flung Claimant to the ground, severely fracturing her left femur.

2. Respondent admitted liability for the left leg/hip injury and covered all treatment relating to it. The present dispute involves whether Claimant also injured her right shoulder as a result of the accident.

3. A video surveillance camera was trained on the incident but there is a significant glare or other distortion on the lens that obscures the precise moment of injury. The ALJ viewed the video numerous times trying to get a clear view of the incident, without success. Although Claimant was thrown to the ground, it is impossible to draw definitive conclusions regarding the exact manner in which she fell or which part or parts of her body were injured.

4. Claimant was transported by ambulance to the Mount San Rafael emergency room in Trinidad. She was given fentanyl en route due to severe 10/10 pain in her left leg and hip. The paramedics' report does not mention any right upper extremity issues.

5. The ER physician, Dr. Jennifer Case, documented "the patient was at the courthouse and attempting to break up an altercation when she was shoved causing her to fall directly onto her left hip. . . . She reports immediate pain in the hip and is unable to move or bear weight on the hip since the injury. She denies head injuries or other injuries associated with the fall." X-rays showed a comminuted subtrochanteric fracture of the left femur, with 5 cm of superior displacement of the femoral shaft. The ER records contain no mention of any right arm or shoulder issues.

6. Claimant was transferred to Parkview Hospital in Pueblo for a "higher level of care." The admitting physician's report states "Patient is a probation officer with a probationer who 'went berserk,' picked her up and threw her down. Landed on left hip. . . . No other injuries or complaints." Claimant was "very uncomfortable [and] tearful." On examination, her left leg was externally rotated and shortened. The report also notes "normal" upper extremity examination, including normal range of motion." Claimant was admitted and scheduled for surgery the next morning.

7. Dr. Kenneth Danylchuk performed an open reduction with internal fixation on March 11, 2017.

8. Claimant was discharged from the main hospital and transferred to the acute rehabilitation unit on March 14. It appears Claimant was confined to bed for most of the time she was in the hospital as she was limited to "toe-touch weight-bearing" on the left leg.

9. The rehab unit records confirm Claimant reported issues with her right shoulder. For example, the she reported pain in the "R shoulder" during "Session 1" of occupational therapy starting on March 23, 2017. Also on March 23, a nurse documented "pt reports she has pain in her right shoulder after doing stairs in therapy yesterday, requested warm blanket." Later that day a nurse applied Voltaren Gel to the right shoulder. Similarly, OT records state "pt tried to lock R brake [on her wheelchair] but wasn't successful due to R shoulder pain." She had reduced shoulder range of motion which improved somewhat after massage and application of a cold pack. Records from March 24 indicate the right shoulder was feeling "much better."

10. Claimant was discharged from the rehab unit on March 25, 2017.

11. CCOM in Pueblo has been Claimant's primary ATP since her release from the rehab hospital. At her initial visit on March 27, 2017, Claimant was still maintaining "toe-touch weight-bearing using a walker and/or a wheelchair." She was having an "expected" level of postsurgical pain but felt she was improving. Claimant did not complain of shoulder pain and there is no indication her shoulder was examined.

12. Claimant returned to CCOM on April 11, 207. Her hip was slowly improving, although she was still toe-touch weight-bearing and ambulating with a walker. Claimant also reported "she did trip and fall when at home but did not injure her left hip, but her right shoulder [is] somewhat sore after this trip."

13. Claimant saw PA-C Pete Sloan at Dr. Danylchuk's office on May 25, 2017. She was still using a walker to ambulate, but her hip was doing better. PA-C Sloan also noted "she complains of left[1] shoulder pain and limitation of motion and weakness. She relates that she reviewed the security tape of her injuries and landed on that shoulder when she was knocked down. She complains of constant right shoulder pain with

[1] The ALJ finds the reference to the "left" shoulder is likely a dictation or transcription error, because Claimant has not otherwise reported any problems with her left shoulder and all of the significant clinical findings relate to the right shoulder.

increased pain with movement as well as inability to abduct and forward flex." The right shoulder was tender on examination with reduced flexion, extension, and external rotation. PA-C Sloan ordered a right shoulder MRI "to rule out rotator cuff tear."

14. The right shoulder MRI was done on June 12, 2017, which showed a full thickness tear of the supraspinatus tendon with "mild" retraction.

15. Claimant underwent right shoulder surgery with Dr. Danylchuk on July 21, 2017. Before surgery, Dr. Danylchuk noted "this is a relatively recent injury and I believe it most likely is repairable." He performed a rotator cuff repair, open acromioplasty and a distal clavicle excision.

16. Claimant saw Dr. Tashof Bernton for an IME at Respondent's request on October 23, 2017. Dr. Bernton opined the records he reviewed did not support a probable causal link between the March 10 accident and Claimant's right shoulder injury. He noted the April 11, 2017 CCOM report contained the first mention of right shoulder issues in the records he reviewed. He opined "she had a complete tear of the rotator cuff, and although that might have been missed acutely while she had a fracture and was being treated with high doses of narcotics, it would clearly have been noted in the rehabilitation process while training the patient on bed transfers, et cetera, as it would have interfered with some of these functions." Dr. Bernton concluded, "the medical record is consistent with a subsequent and nonwork-related fall onto the right shoulder in April 2017, which is the probable cause of her right shoulder rotator cuff tear."

17. Dr. Bernton's testimony at hearing was largely consistent with the opinions expressed in his IME report. He had viewed the surveillance video "many times" and felt it was not clear enough to determine the exact mechanism of injury. He opined Claimant fell directly on the left hip, which is not a plausible mechanism for injuring the right shoulder. He opined the rotator cuff tear was "acute" and would have been very painful immediately or shortly after it occurred. He maintained his opinion that the rotator cuff tear did not occur during the March 10 incident. Based on the records he reviewed, he thought the tear probably occurred during the incident at home described in the April 11 CCOM record. Dr. Bernton agreed the shoulder surgery was reasonably necessary, but not causally related to the March 10 industrial accident.

18. On cross-examination, he admitted he did not have access to the acute rehab facility records, which undercut his theory that there was no documentation of shoulder problems until April 11.

19. In her hearing testimony, Claimant credibly recounted two falls at home while recovering from her accident. Claimant did not provide a clear timeline, so the ALJ cannot determine precisely when each event occurred. In one incident, Claimant's leg gave way while lifting her walker over a doorway threshold. Claimant fell forward and arrested her fall by catching a doorknob with her right arm.

20. The other incident occurred while Claimant was taking her trash to the curb, which required her to walk down a small hill. She was using the handles of her wheeled

garbage can for support as she walked toward the curb. At the steepest part of the hill, her left leg buckled and gave way due to injury-related weakness. The garbage can kept rolling downhill and she fell to the ground.

21. Dr. Bernton did not have details regarding either incident. He assumed the fall at home was due to pre-existing lower extremity neuropathy.

22. Claimant credibly testified she has never fallen because of neuropathy.

23. Following the injury, CCOM released Claimant to modified work sitting 95% of the time. Claimant returned to modified duties on March 28, 2017 at her full wages. On May 22, 2017 Claimant submitted her notice of retirement, effective June 30, 2017. At the time of retirement, Claimant was working regular shifts and being paid her preinjury wage.

24. The shoulder surgery on July 21, 2017 caused a worsening of Claimant's condition and a corresponding increase in her injury-related limitations. Claimant's dominant right arm was in a sling for 6-8 weeks post-surgery and her pain levels were increased. Claimant credibly explained she could not have performed her regular job or even modified duty work after the surgery.

25. At the time of her injury and thereafter, Claimant has been eligible for and receiving PERA retirement benefits.

26. Claimant proved by a preponderance of the evidence the torn rotator cuff is causally related to the March 10 assault.

27. Claimant proved by a preponderance of the evidence her condition worsened as a result of shoulder surgery on July 21, 2017, causing increased disability and additional loss of earning capacity.

28. Respondent failed to prove it is entitled to offset TTD benefits by Claimant's PERA retirement benefits.

CONCLUSIONS OF LAW

A. Claimant's right shoulder injury is causally related to the admitted accident

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Even if the respondents admit liability, they retain the right to dispute the relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (ICAO, Jul. 2, 2010). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals*

Office, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must also prove that the requested treatment is reasonably necessary if disputed. Section 8-42-101(1)(a). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally, in favor of either claimant or respondents. Section 8-43-201.

A claimant does not have to identify the precise moment of injury, as long as she proves her work caused the injury. *Hubbard v. City Market*, W.C. No. 4-934-698-01 (November 21, 2014). A claimant can satisfy her burden to prove a causal relationship if the evidence as a whole justifies an inference the condition is work-related, even if the exact medical cause of the injury remains "shrouded in mystery." *Industrial Commission v. Riley*, 441 P.2d 3 (Colo. 1968).

As found, Claimant proved she injured her right shoulder as a result of the industrial accident. As Dr. Bernton explained, the rotator cuff tear was likely "acute," and given the lack of persuasive evidence suggesting Claimant had any pre-injury right shoulder problems, the ALJ is confident the tear occurred sometime on or after the date of injury. The evidence shows several potential work-related causes of Claimant's rotator cuff tear: she may have torn it during the original accident, or in therapy at the rehab hospital, or when she fell at home due to leg weakness. Another plausible explanation is that she strained or partially tore the rotator cuff in the original accident (which would account for the symptoms documented in the rehab records) and completely tore the cuff later when she fell at home. Each scenario is more probable than some undocumented accident outside of work or a spontaneous tear with no identifiable cause.

Claimant established at least four potential theories of causation linking her torn rotator cuff to the industrial accident. On the other hand, there is no persuasive evidence of any plausible nonwork-related cause to account for the pathology. Although the ALJ is not certain which theory of causation is correct, the ALJ is persuaded the cuff tear was more likely than not caused by one of these mechanisms of injury. Dr. Bernton believes Claimant injured the shoulder falling at home, but the persuasive evidence shows all post-injury falls were injury-related. Since all reasonably likely explanations are directly or indirectly related to the accident, it follows that Claimant's shoulder injury was more likely than not caused by the accident.

There is no significant dispute that the surgery was reasonably necessary. Therefore, Respondent is liable for treatment of the right shoulder, including but not limited to the July 21, 2017 surgery.

B. Claimant is entitled to TTD benefits commencing July 21, 2017

Sections 8-42-103(1)(g) and 8-42-105(4) preclude an award of TTD benefits if a claimant was "responsible for termination" of her employment. Claimant concedes she

was “responsible” for her termination by resigning on June 30, 2017, but requests TTD commencing with the shoulder surgery on July 21, 2017.

The termination statutes are not a permanent bar to receiving temporary disability benefits, and a claimant can reestablish eligibility for TTD by showing a worsened condition which causes a subsequent wage loss. *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004). A post-termination wage loss is “caused by a worsened condition” if the worsening results in limitations or restrictions which did not exist at the time of the termination, and which cause a limitation on the claimant’s temporary earning capacity that did not exist when she caused the termination. *Martinez v. Denver Health*, W.C. No. 4-527-415 (ICAO, August 8, 2005). The mere imposition of additional work restrictions does not automatically establish a worsened condition. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630 (Colo. App. 2014). The burden of proof to establish a subsequent worsening and consequent decrease of earning capacity is on the claimant. *Green v. Job Site, Inc.*, W.C. No. 4-587-025 (ICAO, July 19, 2005).

As found, Claimant proved that her injury-related medical condition deteriorated and caused greater limitations on her ability to work than were present at the time of her resignation. Claimant’s dominant arm was in a sling for 6-8 weeks while convalescing from shoulder surgery, and the ALJ is persuaded by Claimant’s testimony she could not have performed even modified sedentary duties in that condition.

Once commenced, TTD benefits continue until one of the terminating events enumerated in § 8-42-105(3), none of which have occurred yet. Accordingly, Claimant is entitled to TTD benefits commencing July 21, 2017 and continuing until terminated by law.

C. Respondent is not entitled to an offset for PERA retirement benefits

Section 8-42-103(1)(c)(II.5) provides:

> In cases where an employer does not participate in federal old-age, survivors, and disability insurance, and it is determined that employer-paid **retirement** benefits are payable to an individual and the individual’s dependents, the aggregate benefits payable for **permanent total disability** pursuant to this section shall be reduced, but not below zero by an amount determined as a percentage of the employer-paid retirement benefits . . . . (Emphasis added).

By contrast, temporary disability benefits are only subject to offset by PERA “disability” benefits. Section 8-42-103(1)(d)(I). Since Claimant is only receiving PERA retirement benefits, Respondent is not entitled to an offset.

ORDER

It is therefore ordered that:

1. Respondent shall pay for all reasonably necessary medical treatment to cure and relieve the effects of the compensable injury to Claimant's right shoulder, including, but not limited to, the July 21, 2017 surgery.

2. Respondent shall pay Claimant TTD benefits commencing July 21, 2017 and continuing until terminated according to law.

3. Respondent's request for an offset against TTD benefits because of Claimant's PERA retirement benefits is denied and dismissed.

4. Respondent shall pay interest to claimant at the rate of 8% per annum on all compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 17, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that her average weekly wage (AWW) should be increased.

- Whether claimant has demonstrated by a preponderance of the evidence that her scheduled impairment rating should be converted to a whole person impairment rating.

- Whether claimant sustained a serious permanent disfigurement to areas of her body normally exposed to public view, resulting in additional compensation.

FINDINGS OF FACT

1. Claimant began working for employer on January 26, 2015. Claimant's job duties included selling lightbulbs and light fixtures. On February 6, 2015, claimant suffered an admitted injury to her left ankle. Claimant testified that the injury occurred when she fell from a set of stairs in employer's showroom.

2. At the time of her injury claimant was paid $13.00 per hour. Claimant testified that at that time she was in a training period and her hours with employer were "limited". A paystub entered into evidence indicates that during the pay period of January 25, 2015 through January 31, 2015, claimant worked 27.5 hours. [1]

3. Claimant testified that when she was hired by employer she was told that at the conclusion of a two week training period she would work 40 hours per week and receive an increase in pay to $14.00 per hour. In addition, claimant would have the opportunity to earn a 2% commission on certain products.

4. Ms. Schwanke testified that claimant was hired to work part time, with the possibility of full time hours. Ms. Schwanke further testified that claimant was not going to complete a training period in two weeks. On the contrary, Ms. Schwanke explained that it can take up to a year to fully train an individual in the sales position held by claimant and at least six months of training to be able to begin earning commissions "consistently".

5. On February 6, 2015, Dr. Andreas Sauerbrey performed surgery on claimant's left ankle which included open reduction and internal fixation of a pilon fracture and an open reduction and internal fixation of a of a malleolus fracture.

[1] This is the week prior to claimant's date of injury.

Ultimately claimant was released to return to work on December 2, 2015. Claimant testified that she believed she would return to her position with employer once she was released to return to work by her doctor. However, claimant did not return to work with employer.

6. On December 7, 2015, claimant obtained employment with JMP Holdings. While working for JMP Holdings, claimant was paid a salary equal to $38,000.00 per year. In addition, JMP Holdings paid $1,800.00 per year for claimant's health insurance.

7. Claimant underwent a second surgery to her left ankle on February 11, 2016. That surgery was performed by Dr. Eric Verploeg and involved arthroscopy, debridement and hardware removal.

8. Following the February 11, 2016 surgery, claimant was eventually released to return to work in May 2016. Thereafter, claimant obtained employment with Affordable Flooring Warehouse. At that time, claimant was paid $15.00 per hour and worked 40 hours per week.

9. Claimant testified that currently she does not have full range of motion in her left ankle. As a result, claimant has difficulty walking up and down stairs, has pain in her low back, and feels that her body is "off kilter".

10. On October 27, 2016, Dr. John Tobey determined that claimant was at maximum medical improvement (MMI). At that time, Dr. Tobey assessed a permanent impairment rating of 17% for claimant's left lower extremity.

11. Claimant testified that when she was placed at MMI on October 27, 2017, she was earning $18.50 per hour with Affordable Flooring Warehouse. Claimant also testified that as of the date of the hearing she is still employed by Affordable Flooring Warehouse.

12. On November 30, 2016, respondents filed a Final Admission of Liability (FAL) admitting for the date of MMI and impairment rating as determined by Dr. Tobey and the AWW of $357.50.

13. On March 1, 2017, claimant returned to Dr. Verploeg. At that time, Dr. Verploeg assessed a permanent impairment rating of 35% for claimant's left lower extremity, based upon the existence of ankylosis.

14. Claimant timely contested the November 30, 2016 FAL and requested a Division-sponsored independent medical examination (DIME). On April 12, 2017, claimant was seen by Dr. Richard Stieg for that DIME. At that time, Dr. Stieg agreed that claimant reached MMI on October 27, 2017. However, Dr. Stieg assessed a permanent impairment rating of 36% for claimant's left lower extremity. Based upon Dr. Stieg's DIME report, respondents filed an amended FAL on June 9, 2017 admitting for the impairment rating of 36% for claimant's left lower extremity.

15. Claimant testified that while she was working for employer she also had employment with All Seasons Carpet and Upholstery. Claimant testified she worked variable hours for All Seasons Carpet and Upholstery. Claimant also testified that because of her February 6, 2015 work injury with employer she was unable to continue her employment with All Seasons Carpet and Upholstery.

16. Claimant provided W-2 forms from All Seasons Carpet and Upholstery for the years 2013 and 2014. These records indicate that in 2013 claimant had gross earnings of $5,526.31 with All Seasons Carpet and Upholstery. In 2014 claimant had gross earnings of $4,750.00. Based upon the W-2 forms entered into evidence, the ALJ calculates that claimant's average earnings with All Seasons Carpet and Upholstery equate to $98.81 per week.

17. Claimant asserts that her AWW should be increased to reflect her concurrent employment with All Seasons Carpet and Upholstery. Claimant also asserts that her AWW should be recalculated to take into account either: 1) the understanding that she would be paid $14.00 per hour after a training period with employer; or 2) her earnings following the first surgery with JMP Holdings; or 3) her earnings following the second surgery with Affordable Flooring Warehouse.

18. The ALJ credits claimant's testimony regarding her understanding of her wages with employer over the contrary testimony of Ms. Schwanke. Therefore, the ALJ finds that had claimant not been injured, she would have been paid $14.00 per hour and scheduled 40 hours per week at the conclusion of her two week training period. Thus, the ALJ finds that the appropriate calculation of claimant's AWW would be based upon the rate of $14.00 per hour at 40 hours per week, for weekly total of $560.00. The ALJ declines to include an additional amount for possible commissions as there is no clear evidence in the record of what such commissions might be.

19. The ALJ credits claimant's testimony and the payroll records entered into evidence and finds that claimant has demonstrated that it is more likely than not that at the time of her injury while working for employer she had concurrent employment with All Seasons Carpet and Upholstery. The ALJ calculates that claimant earned an average of $98.82 per week with that concurrent employer.

20. The ALJ finds that claimant has failed to demonstrate that it is more likely than not that she has suffered any functional impairment that is not contained on the schedule. Therefore, the ALJ declines to convert claimant's scheduled left lower extremity impairment rating to a full person impairment.

21. At the November 9, 2017 hearing, claimant demonstrated that as a result of the February 6, 2015 injury and related surgeries she has well healed surgical scars on her left ankle. Specifically, claimant has 1) a scar on the inside of her left ankle that measures 5 ½ inches long and approximately 1/8 of an inch wide; 2) a scar on the outside of her left ankle measuring 3 ½ inches long and 1/16 of an inch wide; and 3) two arthroscopic scars each measuring approximately ½ of an inch in diameter. In addition,

claimant has a slight antalgic gait and noticeable swelling in her left ankle when compared to her right ankle.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., (2015). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2012).

4. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

5. Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's AWW on her earnings at the time of the injury. Under some circumstances, the ALJ may determine the claimant's TTD rate based upon her AWW on a date other than the date of the injury. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007).

6. As found, claimant's AWW is properly calculated to be $658.82 ($560.00 plus $98.82 for concurrent employment. Although claimant was working "limited" hours and earning $13.00 per hour for employer as of February 6, 2015, the parties had agreed that at the conclusion of the two week training period claimant's wage was to be increased to $14.00 per hour and she would be scheduled 40 hours per week. The ALJ concludes that had claimant not been injured her earnings would have been $560.00 per week.

7. As found, claimant has demonstrated by a preponderance of the evidence that she had concurrent employment at the time of her work injury, resulting in wages averaging $98.82 per week.

8. The ALJ declines to incorporate claimant's wages with either JMP Holdings or Affordable Flooring Warehouse in calculating her AWW, as to do so would not accurately reflect claimant's average wages at the time of the injury.

9. Section 8-42-107(1) states in pertinent part:

> (a) When an injury results in permanent medical impairment and the employee has an injury or injuries enumerated in the schedule set forth in subsection (2) of this section, the employee shall be limited to medical impairment benefits as specified in subsection (2) of this section.
>
> (b) When an injury results in permanent medical impairment and the employee has an injury or injuries not on the schedule specified in subsection (2) of this section, the employee shall be limited to medical impairment benefits as specified in subsection (8) of this section.

10. The question of whether the claimant has sustained an "injury" which is on or off the schedule of impairment depends on whether the claimant has sustained a "functional impairment" to a part of the body that is not contained on the schedule. *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996). Functional impairment need not take any particular impairment. Discomfort which interferes with the claimant's ability to use a portion of his body may be considered "impairment." *Mader v. Popejoy Construction Company, Inc.*, W.C. No. 4-198-489, (ICAO August 9, 1996). Pain and discomfort which limits a claimant's ability to use a portion of his body may be considered a "functional impairment" for determining whether an injury is on or off the schedule. *See, e.g., Beck v. Mile Hi Express Inc.*, W.C. No. 4-238-483 (ICAO February 11, 1997).

11. It is the claimant's burden of proof by a preponderance of the evidence to establish both that he suffered a permanent impairment and that the permanent impairment is either contained on the schedule set forth at subsection (2) or not on the schedule specified in subsection (2). Further, it is the claimant's burden to prove by a preponderance of the evidence the extent of the permanent impairment.

12. As found, claimant has failed to demonstrate by a preponderance of the evidence that she has suffered any functional impairment that is not contained on the schedule. Therefore, claimant's request to convert her scheduled impairment rating to a whole person impairment is denied.

13. Section 8-42-108 (1), C.R.S. provides that at claimant may be entitled to additional compensation if, as a result of the work injury, she has sustained a serious permanent disfigurement to areas of the body normally exposed to public view.

14. As found, as a result of her February 6, 2015 work injury, claimant has a visible disfigurement to her body consisting of scarring and swelling on her left ankle and a slight antalgic gait. Therefore, claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view.

ORDER

It is therefore ordered that:

1. Claimant's average weekly wage (AWW) for this claim is $658.82.

2. Claimant's request to convert her scheduled impairment to a whole person impairment is denied and dismissed.

3. Respondents shall pay claimant $2,000.00 for her disfigurement. Respondents shall be given credit for any amount previously paid for disfigurement in connection with this claim.

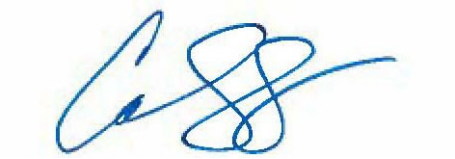
4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information

regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Dated: January 18, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, CO 81501

ISSUES

I. Whether Claimant has established, by a preponderance of the evidence, that the arthroscopic surgery recommended by Dr. Bowman is maintenance medical treatment.

II. Whether Claimant has established, by a preponderance of the evidence, that the arthroscopic surgery recommended by Dr. Bowman is reasonable, necessary, and related.

STIPULATIONS – PROCEDURAL MATTERS

The parties agreed that the case was closed pursuant to a Final Admission of Liability, but that Respondents admitted liability for maintenance medical treatment. Claimant did not endorse the issue of reopening. Therefore, the issue of reopening was not heard by this court.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On November 17, 2015, Claimant suffered a compensable injury to his left shoulder when a ceiling tile fell and hit his left shoulder. According to the medical records, the injury occurred when Claimant reached up to pull some paper towel off a shelf. The paper towel was holding up a ceiling tile. After Claimant pulled the paper towel off the shelf, the ceiling tile fell and hit Claimant on the backside of his left shoulder and neck.

2. On the day of the accident, Claimant went to Concentra Medical Center and was evaluated by Hanna Bodkin, PA-C. Claimant complained of left sided shoulder pain and inner upper arm pain which he rated at a 5-8/10. On physical examination, Claimant's left shoulder had decreased range of motion. Claimant was diagnosed as suffering from an injury to the left shoulder, shoulder contusion, and a superficial injury to the back wall of the left thorax. Claimant was prescribed a sling, ibuprofen, and physical therapy.

3. On November 24, 2015, Claimant returned to Concentra and was again evaluated by PA Bodkin. Claimant stated his pain was about the same, or

maybe worse. Claimant complained of pain in the top of his shoulder that radiated into his elbow.

4. On November 24, 2015, Claimant underwent physical therapy. According to the physical therapy notes, Claimant was doing better and had better range of motion.

5. On December 3, 2015, Claimant underwent additional physical therapy and told the physical therapist he was getting a little better, but still had soreness in the shoulder which progressed through the day.

6. On December 8, 2015, Claimant returned to PA Bodkin. Claimant complained of being in pain every morning and that he was feeling worse. Claimant also underwent physical therapy on this day as well. He advised the physical therapist that he was hurting really bad and that he stopped taking his pain medication because he felt the medication was masking his pain and causing him to overdo it.

7. On December 22, 2015, Claimant returned to PA Bodkin. Claimant stated he had been pain free for a week, although sore, and that he was 75% better.

8. On December 22, 2015, Claimant was evaluated by Dr. Cary Motz, an orthopedic surgeon. Dr. Motz noted in his report that a ceiling tile fell and hit Claimant in the supraclavicular area. Dr. Motz performed a physical examination and noted that Claimant was non-tender over the AC joint. He also noted very mild limitation of range of motion with internal rotation and slight crepitus which he thought was coming from Claimant's subscapular area. He also noted Claimant's rotator cuff strength was 5/5 in external rotation and 4+/5 with abduction. His impression was left shoulder contusion and possible chronic rotator cuff tear. Dr. Motz went on to state that Claimant's exam was fairly benign regarding the contusion to the shoulder. He also stated that although Claimant has some weakness with abduction, the mechanism of injury would not cause a rotator cuff tear and therefore it would not be work related if he had one. Dr. Motz said he would re-evaluate Claimant in a month and that he would expect that Claimant could be released.

9. On January 12, 2016, Claimant returned to PA Bodkin. Claimant noted a significant increase in pain and stiffness since he had not gone to physical therapy for 10 days. Claimant was, however, feeling about 80% better.

10. On January 12, 2016, Claimant returned to Dr. Motz. Claimant stated that he had improved with physical therapy and massage therapy. Dr. Motz performed a physical examination and noted excellent shoulder range of motion. He also noted some crepitus at the superomedial border of the scapula with some tenderness over the trapezius and that Claimant was not tender over the deltoid. Claimant's rotator cuff strength was 4+/5 with external rotation and abduction. Dr. Motz' impression was resolving left shoulder contusion and possible left

shoulder chronic rotator cuff tear. Dr. Motz concluded that Claimant did not require any more treatment due to the shoulder contusion. He also concluded that any additional symptoms which might be consistent with a rotator cuff tear were not related to the work accident.

11. On January 18, 2016, Claimant underwent an MRI of his left shoulder. The MRI demonstrated a mild subacromial subdeltoid bursitis, mild osteoarthritis of the chronic fibular joint, a small amount of bursal surface fraying, and mild tendinopathy of the supraspinatus tendon. There was no full thickness rotator cuff tear, tendon retraction, or focal rotator cuff muscle atrophy.

12. On January 26, 2016, Claimant was evaluated by Dr. Mark Montano. Dr. Montano evaluated Claimant's left shoulder and noted Claimant had pain with overhead reaching, but normal range of motion which was similar to his right sided range of motion. He also noted Claimant had good shoulder strength with external and internal rotation. Dr. Montano's assessment was shoulder contusion, superficial injury to the left back wall of the thorax, and supraspinatus tendinitis.

13. On February 4, 2016, Claimant returned to Dr. Montano and complained of numbness in his left hand which he said started the day before. Claimant thought the left handed numbness was due to a hard day at work, which included shoveling snow. Claimant stated that he also had pain in the left side of his neck and that his shoulder was very sore.

14. On February 17, 2016, Claimant returned to PA Bodkin and complained of worsening shoulder pain. Claimant's treatment remained the same, which consisted of physical therapy, acupuncture, and massage therapy.

15. On February 24, 2016, Claimant saw Dr. Sacha and he prescribed Lyrica and recommended a shoulder injection. After seeing Dr. Sacha, Claimant saw PA Bodkin and complained of increasing shoulder pain.

16. On March 2, 2016, Dr. Sacha administered a steroid injection into Claimant's left shoulder.

17. On March 9, 2016, Claimant returned to physical therapy. The therapy notes indicate the injection increased Claimant's range of motion but did not help his pain.

18. On March 18, 2016, Claimant advised his physical therapist that his shoulder locked up and that he had significant pain lifting his arm out away from his body. Claimant also stated that his pain gets so bad that he gets sick to his stomach. On March 23, 2016, Claimant told his physical therapist that his shoulder pain was very bad and that he vomited due to the pain. Claimant rated his pain at a 5-6/10.

19. On March 29, 2016, Dr. Sacha administered an injection into Claimant's left subacromial bursa – shoulder.

20. On April 7, 2016, Claimant advised his physical therapist that he has been pain free for the last 4 days. He stated that he had a steroid shot in his shoulder 10 days ago and that he has been on vacation and has not worked.

21. On April 12, 2016, Claimant reported to his physical therapist that he was doing much better and had no pain at all. Claimant also stated that he was able to work his normal shift the day before without increased pain. Claimant returned to physical therapy on April 14, 2016, and stated that he was doing much better and was able to return to all normal activities without limitation. Claimant returned on April 26, 2016, and stated that he had no shoulder pain and was able to perform all normal activities without limitations.

22. On April 26, 2016, Claimant was evaluated by Dr. Montano. Claimant was doing much better. Dr. Montano noted that Claimant had been pain free for weeks after he received the shoulder injection from Dr. Sacha. It was also noted that Claimant had been working full duty and performing all activities of life without pain, although he might have been sore due to physical therapy. Dr. Montano's assessment at that time was contusion of left shoulder, injury of left shoulder, superficial injury of back wall of thorax, and supraspinatus tendinitis. He anticipated Claimant would be at MMI within 2 weeks.

23. On May 6, 2016, Claimant advised his physical therapist that he had been overworked at work since his boss quit and he was having pain around the long head of his bicep. On May 10, 2016, Claimant reported to his physical therapist that he had more pain over the top and along the posterior of his left shoulder.

24. On May 27, 2016, Claimant was evaluated by Dr. Montano. Claimant indicated that although his shoulder was sore, he had improved significantly. Claimant also complained of some clicking in his shoulder. Dr. Montano placed Claimant at MMI and determined Claimant did not have any impairment due to his work injury. He did, however, recommend maintenance care in the form of a gym pass for one year and two visits with Dr. Sacha over the next 12 months.

25. Claimant testified that during April he was pain free. Claimant also testified that he felt like the effects of the shoulder injection were starting to wear off in May of 2016. Claimant's testimony is consistent with the medical records and is found to be credible regarding his lack of shoulder pain during the majority of April and that he had some pain in May of 2016.

26. As agreed to by the parties, Respondents filed a Final Admission of Liability based on Claimant being placed at MMI by Dr. Montano on May 27, 2016 and admitted liability for maintenance medical treatment. Claimant did not object to the FAL and his case closed.

27. In August of 2016, Claimant quit working for Employer.

28. On August 16, 2016, approximately 2 ½ months after being placed at MMI, Claimant returned to Concentra and was seen by Dr. Scott Richardson. Claimant's only complaint was increased clicking in his left shoulder. Claimant denied having any shoulder pain. Dr. Richardson physically evaluated Claimant's left shoulder and noted there was no tenderness. He also noted that Claimant's shoulder had full range of motion. He further noted that rotator cuff tests were negative and that labrum and stability tests were also negative. Dr. Richardson referred Claimant to an orthopedic specialist due to the clicking in his shoulder.

29. Approximately five days after his appointment with Dr. Richardson, Claimant moved to Astoria, Oregon.

30. Since moving to Oregon, Claimant has worked as a server and has also opened up his own food cart business.

31. On September 22, 2016, Claimant was evaluated by Dr. Ronald Bowman, an orthopedic surgeon in Oregon. By the time Claimant moved to Oregon and was evaluated by Dr. Bowman, Claimant had additional complaints. In addition to the clicking Claimant described to Dr. Richardson, Claimant complained of pain and instability in his left shoulder. Dr. Bowman examined Claimant and noted Claimant was tender at the AC joint and acromion and over the greater tuberosity. He also noted Claimant was tender at the anterior and posterior glenohumeral joint and that he had a very positive O'Brien test and a slightly positive open can test. He also found Claimant had a minimally positive Neer, Hawkins impingement, and anterior glide. Based on his examination, Dr. Bowman thought Claimant might have a labrum injury. Therefore, he recommended Claimant undergo another MRI with an arthrogram.

32. On November 10, 2016, Claimant returned to Dr. Bowman. Claimant advised Dr. Bowman that he could not undergo another MRI because he has a cochlear implant. Dr. Bowman noted Claimant did undergo a CT arthrogram which showed an interstitial longitudinal tear of the subscapularis tendon without retraction. He noted that the labrum appeared well attached and determined it was unlikely Claimant had a labral tear. Therefore, he recommended a subacromial injection and a glenohumeral injection, if the subacromial injection did not help.

33. On November 16, 2016, Claimant underwent a cortisone injection into his subacromial space. The medical note from that date indicates Claimant had a 50% reduction in pain at rest.

34. On December 8, 2016, Claimant returned to Dr. Bowman and indicated the injection helped for about 2 days. Dr. Bowman determined that the subacromial injection did not help isolate Claimant's pain. Therefore, he recommended Claimant undergo a glenohumeral joint injection.

35. On December 16, 2016, Claimant underwent a glenohumeral joint injection. It was noted that Claimant had sharp shooting pain in his subacromial bursa with reaching.

36. On February 2, 2017, Claimant returned to Dr. Bowman. Claimant reported that he was getting a little worse. Because Claimant could not undergo an MRI due to his cochlear implant, Dr. Bowman recommended a diagnostic arthroscopy and a possible rotator cuff repair and/or labral repair. Although Dr. Bowman indicated on November 10, 2016, that it was unlikely Claimant had a labral tear, he indicated on February 2, 2017, that Claimant might require a labral repair. However, before proceeding with surgery, Dr. Bowman referred Claimant to a physiatrist to see if there might be any other non-surgical treatments that might benefit Claimant.

37. On February 16, 2017, Claimant was evaluated by Dr. Bradford Lorber, a physiatrist. At this appointment, Claimant complained of pain in the anterolateral shoulder which felt like a needle was stuck in his shoulder. Claimant noted any movement caused increased needle like pain. Claimant indicated that nothing helps reduce his symptoms. Claimant also complained of occasional shooting pulses up to his neck and occasional radiation of symptoms into his arm and finger numbness that involves digits two, three, and four. Dr. Lorber stated that he could not rule out cervical radiculopathy as the cause of Claimant's shoulder pain. Despite not being able to rule out cervical radiculopathy as the cause of Claimant's shoulder pain, Dr. Lorber stated that proceeding with shoulder surgery would be the most advisable step.

38. On March 19, 2017, Dr. Failinger performed a records review. He determined that Claimant was not a surgical candidate as it relates to the industrial injury. Dr. Failinger also testified, via his deposition. Dr. Failinger's testimony was consistent with his report.

39. On March 23, 2017, Claimant returned to Dr. Bowman. Dr. Bowman noted that in order to rule out a labral injury, he recommended a diagnostic arthroscopy. He noted that it was possible that Claimant could be found to have normal tissue. He also noted that although Claimant did not have bicep tendon findings initially, it is common for these problems to develop over time with instability or damage to the labrum/glenoid interface. Dr. Bowman went on to state that:

> [T]he decision for medical treatment irrespective of causation issues for biceps pathology is a clinical decision more so than one may have had surgery and needs to be decided beforehand. I have done that appropriately and I continue to request that.

Although the above statement made by Dr. Bowman is not clear, this ALJ finds that based on his March 23, 2017, report, Dr. Bowman has indicated that Claimant has developed a problem with his biceps tendon and that the surgery

he has recommended will also be directed towards the biceps tendon, regardless of whether the biceps tendon condition was caused by the work accident.

40. Dr. Bowman also stated in his March 23, 2017, report that Claimant has ongoing symptoms from his industrial injury and the only way to determine the cause of the symptoms is to perform a diagnostic arthroscopy.

41. On April 13, 2017, Claimant returned to Dr. Bowman. Claimant complained of severe pain at times in his left shoulder. Claimant also noted that he continued to work in his new restaurant in Astoria and that his shoulder was painful after mopping the floor.

42. On May 25, 2017, Claimant returned to Dr. Bowman. Claimant indicated his symptoms were worse. He also complained of having estheisa in his thumb and index finger of his left hand. Dr. Bowman indicated that he thought Claimant was having more symptoms from rotator cuff pathology.

43. On July 6, 2017, Claimant returned to Dr. Bowman. Dr. Bowman noted that Claimant underwent EMG nerve conduction studies with Dr. Lorber and that the testing was normal. Dr. Bowman evaluated Claimant and thought that some of Claimant's pathology is the biceps tendon. Dr. Bowman stated that Claimant still required a diagnostic arthroscopy and that Claimant will likely "need a biceps tendinosis as well."

44. Dr. Bowman testified, via his November 15, 2017, deposition. Dr. Bowman testified that the arthroscopy he wants to perform is a two-step process. Dr. Bowman testified that the first step of the procedure is to view the structures of the shoulder and identify pathology which might be causing Claimant's shoulder pain. Then, the second step of the procedure is to fix the pathology which might be causing Claimant's shoulder pain. Dr. Bowman testified that he believes Claimant has something wrong with his shoulder and that that there is a real good chance the surgery will help. Dr. Bowman also testified that based on Claimant's response to the subacromial injection, Claimant would likely benefit from a decompression or acromioplasty, in which bone would be burrowed back to make the space larger. Dr. Bowman also stated in his July 6, 2017, report that Claimant will likely "need a biceps tendinosis as well." Therefore, the intent and purpose of the arthroscopic surgery is not purely diagnostic. The intent and purpose of the arthroscopic surgery proposed by Dr. Bowman is to cure or improve Claimant's underlying shoulder condition in order to reduce Claimant's pain complaints and increase Claimant's function.

45. Dr. Bowman also testified that even if Claimant could undergo an MRI – arthrogram, and it was normal, he would still recommend the arthroscopic surgery. Therefore, Dr. Bowman is not recommending the surgery because Claimant cannot undergo the MRI – arthrogram, he is recommending the surgery because he believes the surgery will cure or improve Claimant's underlying condition.

46. Claimant testified that at the time he was placed at MMI, he felt the latest cortisone injection was starting to wear off. He testified that his pain would wax and wane at that time depending on his workload. Claimant also stated that in order to minimize his work load at that time, he had to bring in extra labor.

47. Claimant also testified that since being placed at MMI, his condition has gotten worse. At the time Claimant was placed at MMI on May 27, 2016, he advised Dr. Montano that although his shoulder was sore, he was significantly better. At hearing, Claimant testified that his current shoulder condition sometimes prevents him from being able to lift his shoulder or put on his socks.

48. The purpose of the surgery recommended by Dr. Bowman is to cure or improve Claimant's shoulder condition.

49. The surgery has been recommended due to the alleged worsening of Claimant's condition since being placed at MMI and is an attempt to improve his condition. The proposed surgery is not designed to relieve Claimant from the effects of the work injury and prevent deterioration.

50. Because the purpose of the arthroscopic surgery is to cure or improve Claimant's condition, the medical treatment at issue is not *Grover*-type maintenance medical treatment.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

GENERAL PROVISIONS

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to

a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

I. Whether Claimant has established, by a preponderance of the evidence, that the arthroscopic surgery recommended by Dr. Bowman is maintenance medical treatment.

In cases where Respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003). When Respondents challenge Claimant's request for specific medical treatment, Claimant bears the burden of proof to establish entitlement to the benefits. *Ford v. Regional Transportation District*, W.C. No. 4-309-217 (ICAO February 12, 2009).

Pursuant to § 8-42-107(8)(b)(I), C.R.S., an authorized treating physician shall make the initial determination concerning the date of MMI. Once an authorized treating physician makes a determination of MMI, the termination of medical care is triggered and the ALJ lacks jurisdiction to conduct a hearing concerning the accuracy of the authorized treating physician's determination until a DIME is conducted. §8-42-107(8)(b)(III), C.R.S.; *Story v. Industrial Claim Appeals Office*, 910 P.2d 80 (Colo. App. 1995). The Colorado Supreme Court has noted that the DIME procedure is "the only way for an injured worker to challenge the treating physician's findings -- including MMI, the availability of post-MMI treatment, degree of non-scheduled impairments, and whether the impairment was caused by an on-the-job injury...." *Whiteside v. Smith*, 67 P.3d 1240, 1246 (Colo. 2003).

The ICAO has held that "once an authorized treating physician places the claimant at MMI, an ALJ lacks jurisdiction to award additional medical benefits for the purposes of curing the industrial injury and assisting the claimant to reach MMI unless the claimant undergoes a DIME." *Eby v. Wal-Mart Stores, Inc.*, W.C. No. 4-350-176 (February 14, 2001). See also *Anderson-Capranelli v. Republic Industries, Inc.*, W.C. No. 4-416-649 (November 25, 2002) (following MMI, "In the absence of a DIME the ALJ lacks jurisdiction to adjudicate a request for additional medical benefits to cure the effects of the injury."); *Toledo-Zavala v. Excel Corp*., W.C. Nos. 4-534-398, 4-534-399 (November 14, 2003) (same); *Cass v. Mesa County Valley School District*, W.C. No. 4-629-629 (August 26, 2005) ("[I]f an ATP places the claimant at MMI, an ALJ lacks

jurisdiction to award additional medical benefits to improve the claimant's condition unless a DIME has been conducted on the issue of MMI.").

However, in *Grover v. Industrial Commission*, 759 P.2d 705, 710 (Colo. 1988), the Supreme Court construed § 8-42-101 (1)(a) as requiring Respondents in workers' compensation claims to provide medical care to injured workers without regard to any time limitation as long as further medical treatment is reasonably necessary "to relieve the worker from the effects of the industrial injury …." The Court found justification for the ruling by observing "[i]t is an obvious fact of industrial life, however, that an injured worker can reach maximum medical improvement from an injury and yet require periodic medical care to prevent further deterioration in his or her physical condition." Id.

In 1991 the definition of MMI in § 8-40-201 (11.5) was added to the statute. In that amendment, MMI referenced a point when any physical impairment is stable and "no further treatment is reasonably expected to improve the condition." That definition excluded from 'further treatment' any "future medical maintenance." In *Milco Construction v. Cowan*, 860 P.2d 539 (Colo.App. 1992) the court noted this amendment. Consequently, when applying the obligation in § 8-42-101(1)(a) to the Respondents to provide medical care "to cure and relieve" the effects of the injury, the term "cure" was to necessarily be limited to care prior to MMI, while the phrase "relieve" could include post MMI treatment.

Therefore, the obligation to provide treatment to "cure" or improve Claimant's condition terminates when the Claimant reaches MMI. This is true because MMI is defined as the point in time when the Claimant's condition is "stable and no further treatment is reasonably expected to improve the condition." § 8-40-201 (11.5). *See Chism v. Walmart*, W.C. No. 4-809-103-03 (January 9, 2017).

However, surgery is not as a matter of law "curative" treatment. *Hayward v. Unisys Corp*. W.C. No. 4-230-686 (July 2, 2002), *affd, Hayward v. Industrial Claim Appeals Office*, (Colo. App. No. 02CA1446, January 9, 2003) (knee surgery may be curative or may be a form of *Grover*-style maintenance treatment designed to alleviate deterioration of the Claimant's condition). Medical treatment which does not tend to cure or improve Claimant's condition may nevertheless be ordered under *Grover* upon the presentation of substantial evidence that such treatment "will be reasonably necessary to relieve a claimant from the effects of the injury or to prevent further deterioration of his or her condition" after MMI. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609, 611 (Colo. App. 1995). Further, the question of whether medical treatment is administered for the purpose of "curing" or merely "relieving" Claimant's condition does not depend on the type of treatment, but rather the reason for the treatment. The following statement from *Milco Construction v. Cowan*, 860 P.2d 539, 542 (Colo. App. 1992), is pertinent:

> We hold, therefore, that, if the evidence in a particular case establishes that, but for a particular course of medical treatment, a claimant's condition can reasonably be

> expected to deteriorate, so that he will suffer a greater disability than he has sustained thus far, such medical treatment, irrespective of its nature, must be looked upon as treatment designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition.

Therefore, the issues before this ALJ are limited to whether the surgery recommended by Dr. Bowman is *Grover*-type maintenance medical treatment, and if so, whether the treatment is reasonable, necessary, and related to Claimant's industrial accident.

Consequently, the threshold issue for this ALJ to determine is whether the surgery recommended by Dr. Bowman is *Grover*-type maintenance treatment.

In this case, Claimant suffered an industrial injury to his left shoulder on November 17, 2015. Respondents admitted liability for the claim and provided medical treatment. Claimant was placed at MMI on May 27, 2016. At the time Claimant was placed at MMI he still had some pain in his shoulder and some clicking. Moreover, Claimant testified that at the time he was placed at MMI, his shoulder pain would wax and wane depending on his workload. Respondents filed a final admission of liability and admitted for *Grover*-type maintenance medical treatment. The parties agreed that the case was closed, except for the issue of *Gover*-type maintenance medical treatment.

As found, after being placed at MMI on May 27, 2016, Claimant was provided maintenance medical treatment. On August 16, 2016, approximately 2 ½ months after being placed at MMI, Claimant returned to Concentra and was seen by Dr. Scott Richardson. Claimant's only complaint was increased clicking in his left shoulder. Claimant denied having any shoulder pain. Dr. Richardson physically evaluated Claimant's left shoulder and noted there was no tenderness. He also noted that Claimant's shoulder had full range of motion. He further noted that rotator cuff tests were negative and that labrum and stability tests were also negative. Dr. Richardson referred Claimant to an orthopedic specialist due to the clicking in Claimant's shoulder.

Approximately 5 days after his appointment with Dr. Richardson, Claimant moved to Oregon. Since moving to Oregon, Claimant has worked as a server and has also opened up his own food cart business.

By the time Claimant moved to Oregon and was evaluated by Dr. Bowman, an orthopedic specialist, on September 22, 2016, Claimant was complaining of more than just clicking in his shoulder. Claimant was complaining of pain and instability. Based on his initial examination, Dr. Bowman opined that Claimant might be suffering from a labrum injury. As time went on, Claimant's pain complaints increased and the nature of his symptoms changed. Dr. Bowman ultimately recommended an arthroscopic surgery. Although Dr. Bowman has at times described the arthroscopic surgery as being purely

diagnostic in his medical records, this ALJ found that based on his deposition testimony and medical records, the purpose of the surgery is to cure and improve Claimant's shoulder condition. As testified to by Dr. Bowman, and found by this ALJ, Dr. Bowman expects to find pathology and perform certain procedures during the arthroscopy, including, but not limited to, a decompression or acromioplasty and a "biceps tendinosis." (Although Dr. Bowman's reports indicate the possible performance of a "biceps tendinosis," he might be referring to the condition he will surgically correct, and not the actual procedure. Regardless, such matter does not alter this ALJ's findings and conclusions.) In addition, as found by this ALJ, Dr. Bowman expects the surgery to improve Claimant's underlying condition by reducing his pain complaints and increasing his level of functioning.

As found by this ALJ, the reason for performing the arthroscopic surgery recommended by Dr. Bowman is to cure or improve Claimant's shoulder condition. Therefore, this ALJ concludes that Claimant has failed to establish by a preponderance of the evidence that the surgery recommended by Dr. Bowman is *Grover*-type maintenance medical treatment.

II. Whether Claimant has established, by a preponderance of the evidence, that the arthroscopic surgery recommended by Dr. Bowman, is reasonable, necessary, and related.

Because the surgery recommended by Dr. Bowman has been found to be curative, and not *Grover*-type maintenance treatment, the issue of whether the arthroscopic surgery is reasonable, necessary, and related is moot and will not be addressed.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for *Grover*-type maintenance medical treatment in the form of the arthroscopy recommended by Dr. Bowman is denied and dismissed.

2. Claimant did not endorse the issue of reopening and that issue has not been addressed by this ALJ. Therefore, whether Claimant's work related condition has worsened and whether his case should be reopened has not been addressed.

3. The sole issue decided by this ALJ was the threshold question as to whether the surgery recommended by Dr. Bowman qualified as *Grover*-type maintenance treatment.

4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 3, 2018

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable work related injury in May of 2017.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to reasonable and necessary medical benefits to treat his May, 2017 work injury.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from May 19, 2017 through August 25, 2017.

4. Determination of Claimant's average weekly wage (AWW).

FINDINGS OF FACT

1. Claimant was hired to work for Employer on approximately May 3, 2017. Employer is a fencing company with three main divisions including residential/home, new construction, and commercial.

2. At an interview for the position, Claimant advised Employer that he had installed commercial fencing at an airport in his home country and that he was knew how to perform all aspects of fence installation.

3. Employer was impressed with Claimant's reported experience and set up an immediate second interview. Claimant was thereafter hired to work in the higher end commercial division as a 2nd Man, with duties involving helping the foreman to build a fence from start to end. The job is physical and can involve at various stages: digging holes, mixing concrete, setting poles, using equipment, and performing all aspects of fencing installation.

4. On May 11, 2017 an incident report was created. The report noted that the day prior, Claimant refused to work with the crew and sat in the truck while other crew members worked. The report indicated that Claimant sat in the truck for 4 working hours because it was too cold. *See* Exhibit I.

5. On May 17, 2017 a human resources note indicated that after two weeks of work and after evaluation, it was apparent that Claimant was unable to perform duties

stated on his resume. There was a plan to meet with Claimant the next day. *See* Exhibit I.

6. On May 18, 2017 a meeting was held with Claimant. Claimant was unhappy with his rate of pay. Sometime that day, Claimant made a comment that day that he could quit and make more money working at McDonald's. Claimant was sent home and told to return the next day for another meeting. *See* Exhibit I.

7. At that time, Employer had decided to terminate Claimant's employment and prepared to get a final check ready to give to Claimant the next day.

8. On May 19, 2017 Claimant was terminated from employment with Employer. Employer advised Claimant he did not have the experience he had claimed in the interviews. Claimant responded that the work with Employer was different than in his home country.

9. Claimant did not report an injury to Employer on any of the above dates. Claimant's initial job training that he completed just two weeks prior covered how to report injuries and near misses.

10. Employer was not made aware of Claimant's alleged injury until late May, 2017 when they were contacted by their insurance company.

11. On May 24, 2017 Claimant sought medical treatment at Rocky Mountain Medical and was evaluated by Naser Yazd, DNP. Claimant reported right index and middle finger numbness. Claimant reported that his symptoms happened during work due to heavy repetitive motion and that he had the loss of sensation in his finger. On examination Claimant was found to have limited range of motion in his right wrist with pain and numbness in the thumb, index, and middle fingers. Claimant was assessed with right wrist carpal tunnel syndrome and was referred to an orthopedic surgeon to follow up with the carpal tunnel syndrome that he reported happened at work. Claimant was given a prescription for a wrist support. *See* Exhibit G.

12. On May 26, 2017 Claimant filed a Worker's Claim for Compensation. Claimant indicated he was injured on May 17, 2017 and that his hand, fingers, neck, and headaches were the body part affected. Claimant indicated that the injury occurred after digging two days in hard land in the Louisville area. *See* Exhibit A.

13. On June 6, 2017 Claimant was evaluated by NP Yazd. Claimant reported that his right wrist carpal tunnel syndrome had persisted since the last visit with numbness and needling sensations. Claimant again reported that it was due to work and asked for some kind of x-ray or MRI. On examination, NP Yazd found sensory deficits of the right index and middle fingers with normal range of motion. NP Yazd noted Claimant would be sent for an MRI of the right wrist and would be sent to an orthopedic surgeon. *See* Exhibit G.

14. On July 11, 2017 Claimant underwent physical therapy. The treatment diagnoses were listed as pain in right hand and muscle spasm. The injury/onset/change of status date was listed as May 23, 2017. Therapeutic exercises were performed and after treatment Claimant had improved muscle spasm and tenderness. Claimant was provided exercises to perform at home. *See* Exhibits H, 1.

15. On August 15, 2017 Claimant was evaluated by NP Yazd. Claimant reported that his right wrist carpal tunnel syndrome had been better after receiving physical therapy with the finger numbness 95% better and only 5% still numb. Claimant again reported that this happened a few months ago at work while digging with a heavy shovel and manual digging tools and again indicated it was work related. Claimant reported that at the time of his injury he reported it to his supervisor, but that they fired him right away. The examination was found to be unremarkable. NP Yazd indicated that all of the visit sheets would be copied for Claimant's lawyer and there were no recommendations/plans for the right carpal tunnel syndrome. *See* Exhibit G.

16. Claimant testified at hearing. Claimant testified that he was on a two day project in Louisville where he could not use mechanical tools and had to manually dig holes for the fence posts. Claimant indicates that his gloves were torn and that they were not replaced and he worked without gloves during this time. Claimant testified that on the second day of digging he felt pain from his middle and pointer finger to his elbow, along with numbness and that he told the guys on his crew that he could not work anymore because his hand was injured. Claimant testified that he told people in the office the next day that he couldn't use his hand well and that he was then sent to a concrete job. Claimant testified that he went to the doctor after one week and initially thought it would heal on its own. Claimant testified that he could not work for three months due to the injury.

17. Mr. Macias, a human resources and safety manager for Employer, also testified at hearing. He indicated that he trained Claimant and went over the requirements for reporting an injury or a near miss. Mr. Macias testified that he had no indication that Claimant had any injury when Claimant was terminated on May 19, 2017.

18. Mr. Cruz, a project manager for Employer's commercial division, also testified at hearing. Mr. Cruz supervised Claimant during his 16 days of employment. Mr. Cruz acknowledged that the job duties were physical and testified to the general duties involved in a commercial fence installation. Mr. Cruz indicated that employees work on a 3 man crew. He indicated that a typical project is three days with the first day involving 4-5 hours of digging with special digging equipment including bobcats, augers, 2 man augers, post hole diggers, and hand tools. He testified that the rest of the day involves getting materials ready, the truck ready, and pulling string to mark the ground. Mr. Cruz testified that on the second day, the crews are involved in fixing/setting poles. Finally, he indicated that the third day involves hanging fabric. Mr. Cruz testified that employees receive two 15 minute breaks and one 30 minute lunch. Mr. Cruz also testified that Claimant had not reported an injury to him and that he was not aware of any alleged injury until the end of May.

19. Claimant's testimony overall is not found credible or persuasive. His testimony that he had to manually dig holes for two days straight is not consistent with the testimony provided by Mr. Cruz about the use of various tools on projects and is not consistent with the testimony provided by Mr. Cruz about the time that is typically spent digging. Further, Claimant's testimony that he told people of his injury and reported it is not consistent with the testimony of Mr. Cruz or Mr. Macias.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. The mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

An occupational disease is a disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment. *See* § 8-40-201(14), C.R.S. A claimant seeking benefits for an occupational disease must establish the existence of the disease and that it was directly and proximately caused by the claimant's employment duties or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P. 2d 251 (Colo. App. 1999); *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). In deciding whether the Claimant has met his burden of proof, the ALJ is empowered to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002).

Claimant has failed to meet his burden to establish that he sustained a compensable occupational disease to his right wrist, carpal tunnel, as a direct and proximate cause of his employment duties. Although Claimant testified that he dug holes manually for two days and that he believed it to have caused his condition, the ALJ finds this not credible or persuasive. Rather, the testimony of Mr. Cruz surrounding the typical job duties, the tools used, and the variation in what activities are performed is credited. Employees do not dig holes for two days. The work is more varied and involves getting materials ready, getting the truck ready, pulling string to mark the ground, and also involves breaks. Further, Mr. Cruz is found credible that the digging is done with varied tools. Although not a requirement for a compensability determination, it is noted that there has been no medical doctor that has performed a causation analysis in this case. NP Yazd repeats in his medical records the information provided to him subjectively by Claimant. There is no indication that NP Yazd questioned Claimant as to the number of hours spent performing various tasks including digging or that he received information specific to the risk factors for developing carpal tunnel syndrome. Further, Claimant's testimony on the amount of time spent digging is not found credible or persuasive. Although a large part of his duties might involve digging holes to set the fencing poles, Claimant is not credible that he dug holes manually without the varied tools available to

the crews for two days. Further, as found above, Claimant reported to physical therapy that the onset of symptoms was May 23, 2017, one day prior to him seeking treatment, and after the date on which his employment ended. This is also inconsistent with his testimony.

Additionally, Claimant's testimony that he reported the work related injury is not credible or persuasive. Employer's witnesses are credible that they were not aware of any alleged injury until after Claimant was terminated. Claimant did not mention the alleged injury in his May 18 meeting or at the time of his May 19 termination. Overall, the evidence presented is insufficient for Claimant to establish, more likely than not, that he sustained a work related occupational disease during his 16 days of employment with Employer.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a work related occupational disease in May of 2017 during his course and scope of employment with Employer.

2. As Claimant failed to meet his burden to establish a compensable injury, the remaining issues are not addressed. The claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 24, 2018

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that the right total knee arthroplasty recommended by Dr. Kevin Borchard is reasonable medical treatment necessary to cure and relieve claimant from the effects of the September 18, 2015 work injury.

- Whether claimant has demonstrated by a preponderance of the evidence that the right knee surgery recommended by Dr. Kevin Borchard was automatically authorized due to respondent's alleged failure to comply with WCRP Rule 16-11.

- Whether claimant has demonstrated by a preponderance of the evidence that penalties should be imposed pursuant to Section 8-43-304, C.R.S. for respondent's alleged violation of Rule 16.

- Whether claimant has demonstrated by a preponderance of the evidence that penalties should be imposed pursuant to Section 8-43-304, C.R.S. for respondent's alleged dictation of claimant's care in violation of Section 8-43-503(3) C.R.S.

ISSUE ON REMAND

- The ICAO issued an Order of Remand on December 22, 2017 instructing the ALJ to make additional findings regarding whether the January 16, 2017 or January 20, 2017 requests for prior authorization were "completed requests" for purposes of Rule 16-10. [1]

FINDINGS OF FACT

1. Claimant suffered an admitted injury on September 18, 2015. Based upon the medical records entered into evidence, the injury occurred when claimant fell off a ladder and landed on his right leg. When claimant first began receiving treatment following the injury he complained of pain in his low back and right hip.

2. Prior to the September 18, 2015 injury claimant received medical treatment for his right knee. In October 2012, a magnetic resonance image (MRI) of claimant's right knee showed a complex medial meniscus tear, a lateral meniscus tear, chondromalacia, and scar tissue. Based upon these MRI results, on October 26, 2012, Dr. Robert LaPrade performed an arthroscopic partial medial meniscectomy and partial lateral meniscectomy, with synovectomy.

[1] The Order of Remand references Rule 16-10(F). However, based upon the specific language included in the Order of Remand regarding complete authorization requests, the ALJ understands the order to address the requirements of the most current version of Rule 16-10(E), which incorporated the language of prior promulgations of Rule 16-9(F).

3. On July 30, 2015, claimant sought treatment with Dr. Alexander Meininger and complained of aching pain in his right knee and cramps in his right calf. During the examination Dr. Meininger noted tenderness around the medial aspect of claimant's right knee and "trace" effusion. On that same date, x-rays of claimant's right knee showed a "normal well maintained knee joint". Dr. Meininger referred claimant to Dr. Timothy Wirt for a spinal consultation. On August 6, 2015, Dr. Wirt opined that he was not sure that claimant's right leg issues were related to his low back, but ordered an MRI of claimant's lumbar spine. Dr. Wirt did not specifically address claimant's right knee at that time. Thereafter, claimant was injured on September 18, 2015 as described above.

4. On September 19, 2015, claimant received treatment in the emergency department at The Memorial Hospital at Craig. Dr. Tinh Huyn diagnosed claimant with a gluteal strain and chronic back pain. Thereafter on September 21, 2015 claimant treated with Yampa Care Craig and reported back pain with difficulty walking and lifting.

5. Ultimately on November 4, 2015, claimant underwent repair of a tear in the right proximal hamstring. This surgery was performed by Dr. Kevin Borchard.

6. The medical records entered into evidence demonstrate that on December 23, 2015, claimant was seen at Dr. Borchard's office by Thomas Doty, PA-C. On that date, claimant reported that he was experiencing right knee pain that began a "couple years ago". On that date, Mr. Doty also recorded that claimant had "not addressed the problem because of right hip surgery in Nov[ember]" and that the right knee pain was "preventing [claimant] from full physical therapy benefit". Mr. Doty excused claimant from work from December 23, 2015 to January 2, 2016 due to a "right knee effusion", ordered x-rays of claimant's right knee, and administered a right knee injection.

7. On December 23, 2015, radiographs of claimant's right knee showed moderate knee joint effusion with moderately severe degenerative arthropathy involving the medial joint compartment.

8. Claimant continued to complain of right knee pain and on September 16, 2016, an MRI was taken of claimant's right knee. The MRI showed a high grade, near complete tearing of the anterior cruciate ligament (ACL), extensive degenerative tearing of the body and posterior horn of the medial meniscus, moderate degenerative arthrosis involving the medial femorotibal compartment, prominent bone edema throughout the medial tibial plateau, and mild degenerative arthrosis involving the patellofemoral and lateral femorotibial compartments.

9. On September 23, 2016, Sherri Boyle, adjustor with insurer, noted that claimant "did mention the knee throughout the claim so it needs to be included in the claim handling".

10. On October 13, 2016, Dr. Borchard completed a Physician's Report of Worker's Compensation Injury form (WC-164 form) and noted that claimant had a right ACL tear.

11. On November 17, 2016, claimant returned to Dr. Borchard and again reported pain in his right knee. Dr. Borchard recorded that claimant's "knee pain has been persistent throughout this time with more localized to the medial joint line" and that arthritis in claimant's right knee "has been much more symptomatic since his fall". At that time Dr. Borchard discussed treatment options including anti-inflammatory medications, injections, use of a knee brace, and possible surgery. On December 5, 2016, insurer authorized a brace for claimant's right knee.

12. On December 5, 2016, Ms. Boyle chose to obtain an independent medical examination (IME) of claimant "to see the relatedness of the knee". Ultimately, an appointment was scheduled with Dr. Brian Harrington.

13. Prior to claimant's evaluation by Dr. Harrington, Dr. Borchard recommended that claimant undergo a right total knee arthroplasty. A request for authorization for the recommended surgery was submitted to insurer on January 16, 2017 via facsimile (fax). Based upon the documents entered into evidence the January 16, 2017 request included a fax cover sheet and a "surgery authorization form".

14. A second request for this same right knee surgery was submitted to insurer on January 20, 2017. Based upon the documents entered into evidence the January 20, 2017 request included a fax cover sheet and a form titled "orthopedic surgery service pre-op orders" and the same "surgery authorization form" sent on January 16, 2017.

15. Initially the ALJ understood that the January 20, 2017 request also included the medical record from claimant's January 12, 2017 appointment with Dr. Borchard. On remand the ALJ has further reviewed the requests and finds that the faxes sent by Dr. Borchard's office do not indicate the number of pages included with the faxed requests. Therefore, the ALJ is unable to ascertain if additional documents were perhaps included. In addition, the copy of the January 12, 2017 medical record as included in claimant's exhibits does not appear to be attached to the January 20, 2017 request. As it appears in the record, the January 12, 2017 medical record is part of a 99 page document with a fax date of March 13, 2017. Based upon these records, the ALJ finds that the January 12, 2017 medical record was not included with the January 20, 2017 request for authorization. There is no other indication in the record that Dr. Borchard provided respondent with any documentation of his decision making process regarding the recommended knee surgery.

16. On January 16, 2017, Ms. Boyle sent a letter to Dr. Harrington asking him to opine whether claimant's right knee issues were related to the September 18, 2015 work injury and what treatment options were warranted.

17. On January 18, 2017, claimant was seen by Dr. Harrington who noted that insurer requested that he "render an opinion as a Level II provider on where to go with this patient's care plan or if he is at MMI". Dr. Harrington obtained a medical history from claimant, performed a physical exam, and reviewed claimant's medical records.

Dr. Harrington's review of claimant's medical records included information regarding claimant's prior treatment for his right knee.

18. Dr. Harrington opined that claimant's right ACL tear was related to the September 18, 2015 work injury. In support of this opinion, Dr. Harrington noted that he had "no evidence of an ACL tear prior to [claimant's] work related injury on September 18, 2015". Dr. Harrington opined that the mechanism of injury described by claimant "is certainly plausible for an ACL tear". Dr. Harrington also opined that although claimant had degenerative joint disease (DJD) related symptoms in his right knee prior to the September 18, 2015 work injury, the injury was an "incitement of post-traumatic arthritis". Dr. Harrington "deferred" to Dr. Borchard regarding whether it would appropriate to pursue surgery or more conservative treatment.

19. On January 27, 2017, Ms. Boyle sent a fax to Dr. Borchard's office that stated: [s]urgery is still pending as I am waiting on 2nd opinion from [doctor]".

20. On February 8, 2017, Ms. Boyle provided Dr. Borchard's office with verbal authorization for the recommended knee replacement surgery. Ms. Boyle testified at hearing and confirmed that between January 16, 2017 and her verbal authorization on February 8, 2017 she did not take any steps to contest the recommended surgery.

21. Based upon the verbal authorization from insurer, Dr. Borchard's office scheduled claimant's right total knee arthroplasty for March 27, 2017.

22. On March 24, 2017, counsel for respondent notified Dr. Borchard that respondent was revoking authorization for the surgery. The basis for respondent's revocation was that they were in receipt of new medical records that indicated claimant had a preexisting condition in his right knee.

23. On May 30, 2017, Dr. Timothy O'Brien performed a review of claimant's medical records and opined that claimant did not suffer a knee injury on September 18, 2015. Dr. O'Brien also opined that although knee replacement would be reasonable treatment for claimant's condition, that need is related only to claimant's long standing osteoarthritis and not any acute injury. Dr. O'Brien testified by deposition in this matter consistent with his written report.

24. The ALJ credits the opinions of Drs. Borchard and Harrington over the contrary opinion of Dr. O'Brien and finds that the ACL tear in claimant's right knee is related to the September 18, 2015 work injury, further resulting in the need for a total knee replacement.

25. The ALJ credits the opinions of Drs. Borchard and Harrington over the contrary opinion of Dr. O'Brien and finds that claimant's need for a total knee replacement is necessary to relieve claimant from the effects of the September 18, 2015 work injury.

26. The ALJ credits the testimony of Ms. Boyle and finds that respondent failed to take action to contest the requested surgery within seven days of the request. The ALJ also finds that respondent authorized the treatment when Ms. Boyle provided verbal authorization to the treating physician, Dr. Borchard, on February 8, 2017.

27. Respondent argues that the requests for surgery from Dr. Borchard did not comply with Rule 16-10, as neither request constituted a "completed request". Therefore, respondent argues that they are is not bound by the requirements of Rule 16-11. As found, the January 16, 2017 and January 20, 2017 did not include documentation related to Dr. Borchard's decision making process, nor his opinion regarding the reasonableness of the recommended surgery.

28. The ALJ finds respondent's action of authorizing the recommended surgery after obtaining the opinion of Dr. Harrington equates to acquiescence of the "completeness" of the authorization requests. However, based upon the definition of "complete" included in Rule 16-10 and the documents entered into evidence, Dr. Borchard's requests were insufficient to trigger the seven day timeline in Rule 16-11. Therefore, claimant has failed to show that it is more likely than not that respondent violated Rule 16-11.

29. Claimant argues that respondent directed claimant's care in violation of Section 8-43-503(3), C.R.S. when an attempt was made to revoke the prior authorization of surgery. The ALJ declines to apply this analysis in this case. Although respondent did contact the provider, Dr. Borchard, to state that authorization was revoked, this notice did not direct Dr. Borchard on whether or not to proceed with surgery. Therefore, claimant has failed to show that it is more likely than not that respondent violated Section 8-43-503(3), C.R.S.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider,

among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. As found, claimant has demonstrated by a preponderance of the evidence that the recommended right knee surgery is reasonable medical treatment necessary to cure and relieve claimant from the effects of the September 18, 2015 work injury. As found, the opinions of Drs. Borchard and Harrington are credible and persuasive.

5. Rule 16-11 WCRP allows respondents seven days to contest a recommended medical treatment. If respondents fail to comply with the requirements of Rule 16-11, the requested treatment is deemed authorized. Rule 16-11(B) provides, in part:

> [i]f the payer is contesting a request for prior authorization for medical reasons, the payer shall, within seven (7) business days of the completed request: (1) Have all submitted documentation . . . reviewed by a physician or other health care professional, as defined in section 16-5(A)(1)(a), . . .
>
> (3) Furnish the provider and the parties with a written contest that sets forth the following information: (a) An explanation of the specific medical reasons for the contest, including the name and professional credentials of the person performing the medical review and a copy of the medical reviewer's opinion; (b) The specific cite from the Medical Treatment Guidelines exhibits to Rule 17, when applicable; (c) Identification of the information deemed most likely to influence the reconsideration of the contest when applicable; and (d) A certificate of mailing to the provider and parties.

6. WCRP 16-10(E) provides that for an authorization request to be "complete" the medical provider "shall concurrently explain the reasonableness and the medical necessity of the services requested, and shall provide relevant supporting medical documentation." WCRP 16-10(E) further identifies supporting medical documentation as "documents used in the provider's decision-making process to substantiate the need for the requested service or procedure."

7. It is the claimant's burden to demonstrate that there was a "completed request" for purposes of assessing a penalty for violation of Rule 16. *See McDaniel v. Vail Associates. Inc.*, W.C. No. 3-111-363 (July 18, 2011). A respondent is not required to plead insufficiency of a request for authorization as an affirmative defense. *Id.*

8. Previously the panel has addressed the requirement that Rule 16 request for preauthorization include documents included in the provider's decision making process. *Lichtenberg v. J.C. Penney Corp.*, W.C. No. 4-814-897 (July 19, 2012); *See Aguirre v. Nortrak*, W.C. No. 4-742-953 (March 19, 2012); *McDaniel v. Vail Associates. Inc. supra; Skelly v. Wal-Mart*, W.C. No. 4- 632-887 July 31, 2008); *Cross v. Microglide*, W.C. No. 4-355-764 (September 2, 2003) aff'd, *Cross v. ICAO*, 03CA1807 (Colo. App. 2004) (not selected for publication); *Wilkens v. First Lutheran Church*, W.C. No. 4-369-843 May 17, 2001).

9. Finally, WCRP 16-11(E) provides, in pertinent part: "[f]ailure of the payer to timely comply in full with the requirements of section 16-11(A) or (B), shall be deemed authorization for payment of the requested treatment".

10. The purpose of Rule 16 is to protect the medical provider from providing treatment to a claimant which the insurer later challenges as unrelated, unnecessary or unreasonable. *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 20, 2007). Although the rule refers to "authorization," its purpose is to establish the reasonableness and necessity of treatment provided by an authorized provider. *Bray v. Hayden School District RE-1,* W.C. No. 4-418-310 (April 11, 2000).

11. As found, respondent received two authorization requests from Dr. Borchard for the recommended knee surgery. As found, Dr. Borchard's requests on January 16, 2017 and January 20, 2017 were insufficient to trigger the seven day timeline in Rule 16-11. Therefore, claimant has failed to show that by a preponderance of the evidence that respondent violated Rule 16-11.

12. Section 8-43-503(3), C.R.S., prohibits employers, insurers, and their representatives from dictating "to any physician the type or duration of treatment or degree of physical impairment".

13. As found, respondent made an attempt to revoke prior authorization of the recommended surgery. The ALJ concludes that this action did not constitute direction of claimant's care. On the contrary, respondent's attempted revocation did not dictate whether the surgery was to proceed or not. Therefore, penalties are not appropriate with regard to this issue.

14. Pursuant to Section 8-43-304(1), a claimant must first prove by a preponderance of the evidence that the disputed conduct constituted a violation of statute, rule, or order before a court can assess penalties against a respondent. *Allison v. Industrial Claim Appeals Office*, 916 P.2d 623 (Colo. App. 1995). If respondent committed a violation of the statute, rule or order, penalties can be imposed only if respondents' actions were not reasonable under an objective standard. *Pioneers*

Hospital of Rio Blanco County v. Industrial Claim Appeals Office, 114 P.3d 97 (Colo. App. 2005); *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). The standard is "an objective standard measured by reasonableness of the insurer's action and does not require knowledge that the conduct was unreasonable." *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo. App. 1995).

15. As found, claimant has failed to prove by a preponderance of the evidence that respondent violated Rule 16-11.

16. As found, claimant has failed to prove by a preponderance of the evidence that respondent violated of Section 8-43-503(3), C.R.S.

ORDER

It is therefore ordered that:

1. Respondent shall pay for the recommended right total knee arthroplasty, pursuant to the Colorado Medical Fee Schedule.

2. Claimant's request for penalties for an alleged violation of Rule 16-11 is denied and dismissed.

3. Claimant's request for penalties on the basis of direction of care is denied and dismissed.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after

mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that his average weekly wage (AWW) should be increased to include the value of lodging.

- Whether respondents have demonstrated by a preponderance of the evidence that claimant's monetary benefits should be reduced by 50% for an alleged safety violation pursuant to Section 8-42-112(1), C.R.S.

- At hearing the parties stipulated to a "base" AWW of $832.00 prior to the ALJ's determination of whether an increase is appropriate.

FINDINGS OF FACT

1. Claimant resides in Fruita, Colorado. Claimant was hired by employer to work at a surface mine location near Vernal, Utah. Employer was performing work at that location pursuant to a contract with their client, U.S. Oil Sands. Claimant sustained an admitted work injury on June 8, 2017. Claimant testified that he was injured when he fell more than 14 feet from a structure at the mine.

2. Claimant attended training with employer on May 31, 2017. Thereafter, claimant was scheduled to begin work in Vernal, Utah on June 6, 2017. Claimant's job duties while employed with employer included preparing equipment for the mining process. This included building chutes, conveyors, and the crusher system. The crusher is a five story structure that operates to crush rock into sand. Claimant testified that he was assigned to an eight man crew. On claimant's first day at the mine location his crew was trained on the operation of a "man basket". During that training the safety instructor informed claimant's crew that they had two fall protection harnesses available for the eight man crew.

3. Mr. Barron testified that he provided safety training to claimant on May 31, 2017. Mr. Barron also testified that he was not an employee of employer on May 31, 2017, but worked for "KTW", an insulation company. Mr. Barron became employer's employee two days after claimant's' work injury.

4. With regard to safety issues, Mr. Barron testified that employees are expected to comply with appropriate safety regulations at the job side. Mr. Barron also testified that OSHA requires fall protection over 4 feet, while OSHA "construction" rules require fall protection over 6 feet. Mr. Barron also testified that there are different safety

rules administered by the Mine Safety and Health Administration (MSHA). Mr. Barron testified that MSHA requires fall protection any time there is risk for a fall.

5. Documents entered into evidence indicate that the Occupational Health and Safety Administration (OHSA) requires fall protection when "an employee is working at 6 feet or more above a lower level". U.S. Oil Sands, Inc. Contractor HSE Handbook indicates that fall protection is required if an employee is "walking or working within 15 feet of an unprotected edge that has a drop of 4 feet or more".

6. Mr. Barron testified that the job site where claimant was injured had an OSHA section and an MSHA section. As a result, different safety regulations applied depending upon the specific section. Mr. Barron also testified that the different sections were clearly marked.

7. On June 7, 2017, claimant's foreman, Larry Stoller, did not arrive at the job site until mid-day. As a result, claimant's crew assisted another crew with assembling chutes. When the foreman arrived, claimant's crew was assigned to install a fly wheel on the crusher structure. Claimant testified that that the fly wheel was to be installed on the third level of the structure. This process was completed with the use of a crane. Claimant testified that although members of his crew were on the third level of the structure, they had only two fall protection harnesses. Claimant did not wear a fall protection harness on that day.

8. On June 8, 2017, it was determined that the fly wheel had been installed incorrectly. As a result, claimant's crew was involved in removing and reinstalling the fly wheel in the correct position. Claimant testified that he and Mr. Stoller started that shift by looking for a part that was necessary for the project. Claimant and Mr. Stoller went to the fifth level of the crusher during this process. Claimant testified that he and Mr. Stoller were joined by two other employees, Doug and Travis. Claimant and his three coworkers did not use fall protection harnesses at that time.

9. Claimant testified that the four of them (claimant, Mr. Stoller, Doug and Travis) moved from the fifth level down to the third level where two other employees were working on the fly wheel. Claimant testified that at first they watched the other two employees work for few minutes. Then Mr. Stoller instructed claimant to assist those coworkers. Claimant did as instructed and moved toward the individuals working on the fly wheel. It was at that time that claimant fell through a hole in the floor. There was an opening in the floor of the third level because a grate had been removed to accomplish the removal and reinstallation of the fly wheel. It is estimated that claimant fell 14 feet to the ground.

10. Mr. Barron testified that on the date of claimant's injury on June 8, 2017, employer had 39 employees on location at the mine. Documents entered into evidence show that there were a total of seven fall protection harnesses available for these 39 employees.

11. Claimant testified that when he was hired by employer he was told by Heath Jewell, Project Manager, that he would be paid $16.00 per hour. Claimant testified that Mr. Jewell also informed him that because claimant would be traveling from Fruita, Colorado to Vernal, Utah that claimant could stay at the Springhill Suites. Claimant was not responsible for the cost of the hotel.

12. Claimant understood that he would be staying at the hotel for four nights each week. When claimant arrived in Vernal, Utah on June 5, 2017 he checked in at the Springhill Suites and identified himself as an employee of employer. The ALJ is persuaded by claimant's testimony on this issue and finds that if claimant had not sustained the injury on June 8, 2017 he would have stayed four nights per week in Vernal, Utah while employed by employer.

13. Claimant testified that he researched the cost of the room at the Springhill Suites in Vernal, Utah. Based upon that research, claimant believes the cost of the room was $109.00 per night.

14. Mr. Barron testified that claimant's hotel was not paid for by employer, but was paid for by employer's client, U.S. Oil Sands. The ALJ finds that employer's agreement with U.S. Oil Sands included the understanding that U.S. Oil Sands would pay for lodging for employer's employees.

15. The ALJ credits claimant's testimony with regard to the cost of the hotel room in Vernal, Utah. The ALJ is not persuaded by respondents' argument that because the room was paid for by employer's client, U.S. Oil Sands, that the value should not be included in calculating claimant's AWW. On the contrary, the ALJ finds that the hotel was provided by employer via employer's contract with their client, U.S. Oil Sands. Therefore, the cost of claimant's lodging was a fringe benefit provided to claimant, the value of which should be included in calculating claimant's AWW.

16. The ALJ credits claimant's testimony and finds that claimant has demonstrated that it is more likely than not that the hotel room rate was $109.00 per night. Therefore, claimant's AWW should be increased to reflect the value of lodging of $436.00; (four nights per week at a room rate of $109.00 per night).

17. The ALJ credits claimant's testimony and finds that respondents have failed to demonstrate that it is more likely than not that claimant engaged in a willful failure to follow a safety rule and/or a willful failure to utilize safety equipment. Although there were expectations at the job site related to the use of fall protection, the ALJ credits claimant's testimony and materials entered into evidence and finds that there were only two harnesses available for use by claimant's eight man crew. The ALJ recognizes that there were a total of seven harnesses at the job site. However, it is clear from the testimony provided that only two of those harnesses were made available to claimant's crew. As a result, claimant was effectively prevented from properly complying with employer's fall protection requirements due to the inadequate number of

harnesses available. The ALJ also finds that claimant behaved reasonably in following the instruction of his direct supervisor, Mr. Stoller, when he moved to assist the other employees.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include the reasonable value of any advantage or fringe benefit provided to the claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

4. Section 8-42-102(3), C.R.S. provides that in cases where "the foregoing methods of computing the average weekly wage of the employee, by reason of the nature of the employment or the fact that the injured employee has not worked a sufficient length of time to enable earnings to be fairly computed thereunder or has been ill or has been self-employed or for any other reason, will not fairly compute the average weekly wage, the division, in each particular case, may compute the average weekly wage of said employee in such other manner and by such method as will, in the opinion of the director based upon the facts presented, fairly determine such employee's average weekly wage."

5. As found, claimant has demonstrated by a preponderance of the evidence that his AWW should be increased to reflect the value of lodging provided to him while employed with employer. As found, claimant's AWW shall be increased by $436.00, for a total AWW of $1,268.00. As found, claimant's testimony is credible and persuasive on this issue.

6. Respondents argue that claimant's injury resulted from a willful violation of a safety rule. Section 8-42-112(1)(b), C.R.S. permits imposition of a fifty percent reduction in compensation in cases of an injured worker's "willful failure to obey any reasonable rule" adopted by the employer for the employee's safety. The term "willful" connotes deliberate intent, and mere carelessness, negligence, forgetfulness, remissness or oversight does not satisfy the statutory standard. *Bennett Properties Co. v. Industrial Commission*, 165 Colo. 135, 437 P.2d 548 (1968).

7. The respondents bear the burden of proof to establish that the claimant's conduct was willful. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995). The question of whether the respondent carried the burden of proof was one of fact for determination by the ALJ. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990). The claimant's conduct is "willful" if he intentionally does the forbidden act, and it is not necessary for the respondent to prove that the claimant had the rule "in mind" and determined to break it. *Bennett Properties Co. v. Industrial Commission, supra; see also, Sayers v. American Janitorial Service, Inc.,* 162 Colo. 292, 425 P.2d 693 (1967) (willful misconduct may be established by showing a conscious indifference to the perpetration of a wrong, or a reckless disregard of the employee's duty to his employer). Moreover, there is no requirement that the respondent produce direct evidence of the claimant's state of mind. To the contrary, willful conduct may be inferred from circumstantial evidence including the frequency of warnings, the obviousness of the danger, and the extent to which it may be said that the claimant's actions were the result of deliberate conduct rather than carelessness or casual negligence. *Bennett Properties Co. v. Industrial Commission, supra; Industrial Commission v. Golden Cycle Corp.,* 126 Colo. 68, 246 P.2d 902 (1952).

8. As found, respondents have failed to demonstrate by a preponderance of the evidence that claimant engaged in a willful failure to follow a safety rule and/or a willful failure to utilize safety equipment. Therefore, claimant's benefits will not be reduced. As found, claimant's testimony is credible and persuasive on this issue.

ORDER

It is therefore ordered that:

1. The stipulated AWW of $832.00 shall be increased by $436.00 to reflect the value of lodging, for a total AWW of $1,268.00.

2. Respondent's request to reduce claimant's monetary benefits by 50% is denied and dismissed.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether Claimant has demonstrated by a preponderance of the evidence that he sustained a compensable occupational disease arising out of and in the course and scope of his employment with employer.

- If claimant proves a compensable occupational disease, whether claimant has demonstrated by a preponderance of the evidence that the medical treatment he has received is reasonable and necessary to cure and relive him from the effects of the occupational disease.

- If claimant proves a compensable occupational disease, whether claimant has demonstrated by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits.

- In their position statements both parties indicated a stipulation regarding claimant's average weekly wage. Specifically, the parties have agreed that if claimant's claim if found compensable, claimant is a maximum wage earner for purposes of calculating any TTD benefits.

FINDINGS OF FACT

1. Claimant testified that he worked as an underground coal miner for a total of 22 years. Claimant was employed as a coal miner with employer beginning in November 2007. Claimant's job duties included operating the long wall shear. This involves working at the point in the mine where the mining occurs. As a result, miners working on the long wall are exposed to coal dust and other air borne particles.

2. Claimant provided specific testimony regarding his exposure to coal dust, diesel fuel, diesel smoke, hydraulic fluid, emulsion fluid, gear oil, transmission fluid, lime kiln dust, Touch N Seal foam packs, acetylene, rock lock, and degreasers. Claimant testified that he regularly came into contact with these various materials through inhalation and/or skin exposure while working for employer. Claimant also testified that he was not regularly exposed to these materials outside of his employment with employer.

3. Records from the Mine Safety and Health Administration (MSHA) were admitted into evidence. These records include Material Safety Data Sheets for lime kiln dust, Touch N Seal Foam Kits (both A and B), and transmission fluid. These items contain various levels of isocyanates.

4. The medical records entered into evidence indicate that claimant was reporting gastrointestinal (GI) symptoms as early as May 14, 2012. On that date claimant sought emergency treatment at Delta Memorial Hospital for abdominal pain, severe nausea, and vomiting and was hospitalized. Claimant also reported that he had experienced abdominal problems two years prior, but that taking Nexium "helps". Claimant has sought treatment at the emergency department for similar symptoms since that time. Claimant testified that prior to his employment with employer he did not have GI related symptoms.

5. Dr. Masi Khaja performed an upper GI endoscopy on August 27, 2012. At that time, Dr. Khaja diagnosed a small hiatal hernia and mild duodenitis. Dr. Khaja informed claimant that he was possibly suffering from cyclic vomiting syndrome and encouraged claimant to avoid the use of cannabis.

6. Claimant testified that he is not a tobacco smoker. Claimant testified that he has used edible CBD[1] cannabis to treat his GI symptoms. Claimant testified that he stopped using edible CBD cannabis at the end of 2015. Although he no longer ingests edible cannabis, claimant continues to experience GI symptoms. Although various medical records indicate that claimant was smoking marijuana, claimant credibly testified that he did not smoke marijuana. Instead, claimant ingested edibles with occasional use of CBD vapor. Claimant further testified that it is his understanding that the cannabis he ingested did not contain THC[2].

7. Claimant's final day of employment with employer was July 29, 2015. On that date, claimant reported his symptoms to his supervisor and employer provided claimant with a list of designated medical providers. From that list claimant selected Dr. Timothy Meilner. Claimant testified that he selected Dr. Meilner because he had been treated by him periodically since 2012. Claimant first treated with Dr. Meilner related to this claim on August 13, 2015. At that time claimant reported abdominal pain with nausea and vomiting. Dr. Meilner referred claimant to Dr. Masi Khaja for a gastroenterology consultation.

8. Claimant returned to Dr. Meilner on December 15, 2016 continuing to complain of abdominal pain, nausea, and vomiting. At that time, Dr. Meilner also referred claimant to pulmonology and GI experts at National Jewish Health.

9. Claimant testified that on July 29, 2015 in addition to his GI symptoms he was struggling to breathe. Claimant testified that after that date he began to notice that he could hear his breathing and would struggle to breathe with any type of exertion. Claimant also testified that he has had a cough for years and at times during his 20 plus years as a miner he would "cough up black stuff". It is unclear from the medical records when claimant began to report specific respiratory symptoms to his medical providers.

[1] Cannabidiol
[2] Tetrahydrocannabinol

10. Claimant was seen at National Jewish Health on August 15, 2016. While there he underwent a number of tests including pulmonary function testing, an exercise stress test, a chest x-ray, a computerized tomography (CT) scan of his chest, and an esophagram. While at National Jewish Health claimant was seen by Dr. Brigitte Gottschall for a pulmonary consultation.

11. Dr. Gottschall issued a written report in which she opined that although claimant met the diagnostic criteria for chronic bronchitis, she did not find manifestations of medical or legal pneumoconiosis. Dr. Gottschall recommended that claimant undergo a sleep study to determine whether he had sleep apnea. In her report, Dr. Gottschall stated that it was her understanding that GI issues are not caused by occupational exposures for coal miners.

12. Subsequently, Dr. Meilner referred claimant for testing and diagnosis at the Occupational Lung Disease Clinic at the Miners Colfax Medical Center. Claimant was seen by Dr. Akshay Sood on February 21, 2017 at that facility and reported "10 years of respiratory symptoms on and off". At that time Dr. Sood diagnosed claimant with chronic bronchitis and exertional dyspnea. Dr. Sood also diagnosed claimant with simple medical or clinical coal workers pneumoconiosis and the chronic phenotype of chronic obstructive pulmonary disease (COPD). Dr. Sood specifically referenced claimant's exposures to isocyanates, but determined that claimant did not have isocyanate asthma. Dr. Sood also opined that claimant did not meet the criteria for disability under the Black Lung Benefits Act. In that same report, Dr. Sood stated that claimant's "gastrointestinal symptoms remain unexplained".

13. Claimant was seen again by Dr. Sood on July 13, 2017 at the Occupational Lung Disease Clinic at the University of New Mexico. At that time, Dr. Sood diagnosed claimant with simple medical or clinical coal workers pneumoconiosis, chronic bronchitis phenotype of COPD consistent with legal pneumoconiosis, as before. However, Dr. Sood also diagnosed claimant with isocyanate asthma.

14. In his testimony, Dr. Sood explained that he changed his diagnosis in July 2017 to include isocyanate asthma because at that time claimant provided a more detailed work history and information regarding the various materials he was exposed to at work. Dr. Sood testified that claimant met the diagnostic criteria for isocyanate asthma given the duration, intensity, and latency of claimant's exposure to isocyanates. Dr. Sood also testified that claimant had experienced a significant decline in his lung capacity, which indicates a progressive lung disease.

15. Dr. Carrie Relich, Director of the Yale University Occupational and Environmental Medicine Program, testified at hearing. Dr. Relich is considered the U.S. expert on work related asthmas, including isocyanate asthma. Dr. Relich explained in her testimony that isocyanate asthma is caused in workers that are exposed to products containing isocyanates. Isocyanates are a range of chemicals that are widely used in polyurethanes, particularly as ingredients in various foams and coatings. Dr. Relich testified that even in small amounts, exposure to isocyanates can cause isocyanate asthma.

16. Dr. Relich testified that she agrees with Dr. Sood's diagnosis of isocyanate asthma. In support of this opinion Dr. Relich testified that claimant meets the diagnostic criteria for occupational/work related asthma including breathing tests, temporal association of the symptoms, and his work exposure to substances that cause asthma.

17. Claimant attended an independent medical examination (IME) with Dr. Michael Volz on September 7, 2016. Dr. Volz reviewed claimant's medical records, obtained a medical history from claimant, and completed a physical examination as part of the IME. Following the IME Dr. Volz opined that although claimant's respiratory issues might be due to pneumoconiosis, there was no objective confirmation. Dr. Volz also opined that there was no evidence based information to support a finding that claimant's GI symptoms were caused by his work exposures. Dr. Volz testified by deposition in this matter. Dr. Volz's testimony was consistent with his written report.

18. Claimant testified that his current symptoms include shortness of breath. Claimant also testified that his respiratory symptoms prevent him from working. Claimant testified that in 2015 he began using oxygen. Since that time claimant feels that his symptoms have improved. Claimant testified that although his abdominal and GI symptoms can return, he has better management of those symptoms.

19. The ALJ credits the opinions of Drs. Sood and Relich and finds that claimant has demonstrated that it is more likely than not that as a result of his work exposures while working for employer claimant developed isocyanate asthma, chronic bronchitis, simple medical or clinical coal workers pneumoconiosis and the chronic phenotype of COPD.

20. The ALJ recognizes that Dr. Sood amended his diagnosis based upon claimant's self-reporting of his exposure to isocyanates. The ALJ finds claimant's testimony regarding those exposures, and the related evidence regarding the specific exposure to isocyanates, to be credible and persuasive. The ALJ is not persuaded that claimant's use of cannabis has contributed to his respiratory symptoms.

21. The ALJ has considered all of the evidence and testimony presented at hearing and finds that claimant has failed to demonstrate that it is more likely than not that his GI symptoms are the result of his work exposures. It continues to be unclear what caused the onset of claimant's GI symptoms.

22. The ALJ credits claimant's testimony and finds that he has demonstrated that it is more likely than not that because of his respiratory symptoms he has been unable to work since July 29, 2015.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S.

A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. As found, claimant has demonstrated by a preponderance of the evidence that he has an occupational disease arising out of and in the course and scope of his employment with employer. As found, claimant's diagnoses of isocyanate asthma, chronic bronchitis, simple medical or clinical coal workers pneumoconiosis, and the chronic phenotype of COPD are the result of claimant's work as a coal miner for

employer. As found, the opinions of Drs. Sood and Relich are credible and persuasive on this issue.

6. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

7. As found, claimant has demonstrated by a preponderance of the evidence that medical treatment of his occupational respiratory disease (isocyanate asthma, chronic bronchitis, simple medical or clinical coal workers pneumoconiosis, and the chronic phenotype of COPD) is reasonable and necessary to cure and relieve him from the effects of the occupational disease. As found, the opinions of Drs. Sood and Relich are credible and persuasive on this issue.

8. As found, claimant has failed to demonstrate by a preponderance of the evidence that his GI related treatment is reasonable, necessary, or related to his respiratory occupational disease.

9. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

10. As found, claimant has demonstrated by a preponderance of the evidence that he because of his respiratory occupational disease he has been unable to work since July 29, 2015. Therefore, claimant is entitled to TTD benefits from July 29, 2015 and ongoing until terminated by law. As found, claimant’s testimony is credible and persuasive on this issue.

ORDER

It is therefore ordered that:

1. Claimant has a compensable occupational disease (specifically isocyanate asthma, chronic bronchitis, simple medical or clinical coal workers pneumoconiosis, and the chronic phenotype of COPD).

2. Respondents are responsible for payment of medical treatment claimant has received as a result of his occupational disease.

3. Claimant's GI symptoms and treatment are not related to his occupational disease. Claimant's request for medical treatment related to his GI symptoms is denied and dismissed.

4. Claimant is entitled to temporary total disability (TTD) benefits beginning July 29, 2015 and ongoing until terminated by law.

5. The ALJ recognizes and adopts the stipulation of the parties that claimant is a maximum wage earner for purposes of determining the amount of any TTD benefits.

6. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

7. All matters not determined herein are reserved for future determination.

Dated: January 29, 2018

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that the medical treatment of Dr. Eric Westerman, including prescriptions, is reasonable, necessary and related to Claimant's April 26, 1990 industrial injury.

II. Whether Claimant has been properly paid permanent total disability ("PTD") benefits.

III. Whether Respondents are subject to a penalty under Section 8-43-304 for an alleged failure to properly pay PTD benefits.

PROCEDURAL HISTORY

At hearing, counsel requested the ALJ take administrative notice of Claimant's DOWC file. The ALJ attempted to obtain the DOWC file and was informed the file is several hundred pages. The ALJ did not review Claimant's DOWC file as the parties had the opportunity to present documentary evidence from the file, and both parties agree there is no probative information in the file other than what was already admitted into evidence.

FINDINGS OF FACT

PTD/Penalties

1. Claimant's date of birth is October 28, 1947.

2. Claimant sustained a compensable industrial injury while working for Employer on April 26, 1990. Claimant was 42 years old at the time of injury.

3. Respondents filed a General Admission of Liability ("GAL") on June 18, 1990 admitting for an average weekly wage ("AWW") of $318.00, medical benefits, and temporary total disability ("TTD") benefits at a rate of $212.01.

4. Respondents filed a subsequent GAL dated April 3, 1991, admitting to TTD and temporary partial disability ("TPD") benefits. The GAL notes, "Respondents are claiming overpayments in the amount of $1,620.32 for disability paid since 2/03/90, this overpayment will be credited to PPD if any."

5. Respondents filed a Final Admission of Liability ("FAL") on May 8, 1991, admitting to a maximum medical improvement ("MMI") date of April 5, 1991, per the report of Dr. Angelika Voelkel. The FAL reflects an AWW of $318.00, with TTD paid at

$212.01 per week, TPD at a varied rate, and permanent partial disability ("PPD") benefits paid at a rate of $120.00 from April 5, 1991 to December 9, 1991.

6. Respondents filed a second FAL on September 25, 1991 admitting for a higher AWW of $390.61, TTD at a rate of $260.38, TPD at a varied rate, and PPD at a rate of $120.00. An overpayment of $959.17 would be credited to PPD.

7. An April 15, 1994 GAL reflects an admitted AWW of $390.61, TTD at $260.38, TPD at $58.52, and 313 weeks of PPD (9/17/94 through 3/17/2000) at a rate of $120.00, for a PPD total of $37,560.00. The GAL states, "Respondent is admitting to maximum permanent partial impairment – we have previously admitted and paid 2% in the amount of $4280.64."

8. Claimant requested a lump sum payment of PPD in the amount of $37,560.00. On June 2, 1994, the Division issued a Lump Sum Order ordering Respondents to pay Claimant a lump sum of $29,342.91, after a credit of $5,120.62 of previously paid PPD, and a lump sum discount of $3,096.47.

9. Claimant sought PTD benefits at a hearing before ALJ Martin Stuber on December 13, 1994. On January 17, 1995, ALJ Stuber issued Specific Finds of Fact, Conclusions of Law and Order in which he determined Claimant reached MMI as of November 10, 1993 and was permanently and totally disabled. ALJ Stuber ordered the following, *inter alia*: "Respondent-Insurer shall pay to Claimant permanent total disability benefits at the rate of $260.38 per week, commencing on November 10, 1993 and continuing thereafter for the duration of Claimant's life. Respondents may claim a credit for all permanent disability payments made subsequent to the date of maximum medical improvement."

10. ALJ Stuber issued a Corrected Order on February 15, 1995, based on a joint motion of the parties noting that Claimant worked for Employer until June 22, 1994. ALJ Stuber ordered that his January 17, 1995 order remained in full force and effect with the following correction:

> The Respondent-insurer shall pay to claimant permanent total disability benefits at the rate of $260.38 per week, commencing on June 23, 1994 and continuing thereafter for the duration of claimant's life. Respondents may claim a credit for all permanent disability payments made subsequent to the date of maximum medical improvement.

No evidence was presented indicating ALJ Stuber's order was appealed by either party.

11. Respondents subsequently filed a FAL on April 14, 1995, admitting for an AWW of $390.61, TTD at a rate of $260.38, TPD at a rate of $58.52, and PTD beginning June 23, 1994 for 313 weeks at $140.38. The FAL states, "Respondent has a credit on PT benefits for a max perm partial. Respondents reserves the right for SSDI offsett (*sic*)."

12. The April 14, 1995 FAL reflects that Respondents began taking credit for PPD previously paid by subtracting $120.00 per week from the ordered amount of $260.38

and paying PTD at the rate of $140.38 per week. By offsetting the PTD payments by $120.00 per week for 313 weeks beginning June 23, 1994, the ALJ finds the maximum PPD amount of $37,560.00 would have been fully recovered on June 22, 2000.

13. Claimant's attorney at the time, Steven H. Gurwin, issued a letter to the Division dated May 31, 1995 stating that Claimant accepted the April 14, 1995 FAL as it related to PTD, but objected to the FAL in all other aspects.

14. Records of the Social Security Administration indicate Claimant has been receiving social security disability insurance ("SSDI") benefits since December 1, 1994. The initial monthly award was $498.20, which would yield a reduction of any paid SSDI benefits by an amount of $57.48 per week. Claimant became entitled to social security retirement benefits as of October 2013 and began receiving social security retirement benefits in the amount of $667.00 per month beginning on or around November 1, 2013.

15. A June 20, 1996 check to Claimant reflects a payment of $280.76, which equates to a weekly PTD rate of $140.38, consistent with the admitted rate in the April 14, 1995 FAL.

16. A check dated July 18, 1996 reflects a payment of $326.58, which equates to a weekly PTD rate of $163.29.

17. A July 23, 1996 check was issued to Claimant in the amount of $3,795.86 for underpayment of PPD.

18. Claimant testified that she is currently receiving PTD at a rate of $163.29 and has been receiving PTD at such rate since at least 1996.

19. The DOWC periodically requested that Insurer's third party administrator provide the status of Claimant's claim. Correspondence from the applicable third party administrator to the DOWC dated May 20, 1997, September 27, 2000, July 6, 2005, April 27, 2007, June 9, 2009, June 13, 2011, April 30, 2013 and June 16, 2015 all note Claimant's weekly benefit rate as $163.29.

20. There is no documentation in Claimant's DOWC file explaining the change in rate. There is no evidence of a FAL reflecting the change in PTD rate.

21. A hearing was held before ALJ Margot Jones in 2002 on the issue of medical benefits. No dispute was heard regarding the rate of PTD or alleged penalties. Mr. Gurwin represented Claimant at the 2002 hearing.

22. An Application for Hearing on the issue of medical benefits was filed by Respondents on August 27, 2015.

23. Mr. Gurwin withdrew as Claimant's counsel effective September 17, 2015.

24. Claimant requested a copy of her DOWC file on December 8, 2015.

25. On March 16, 2016, Claimant filed a Request to the Director for Penalties against Respondents. Claimant requested penalties "under C.R.S. 8-43-304 for Respondents clear violation of C.R.S. 8-42-103(2)(c)(IV) beginning October 28, 2012 to present and continuing for every two week pay period in which respondents failed to amend their general admission and discontinue the offset is a separate penalty under CRS 8-43-305." Claimant alleged Respondents knew, or should have known, that Claimant was under age 45 at the time they began taking an SSDI offset and that they could not maintain the offset beyond age 65. Respondents filed a Response to Claimant's Request for Penalties, requesting a hearing.

26. The Director of the DOWC issued an order dated April 11, 2016 denying Claimant's motion for penalties, without prejudice. It was noted, in part, Claimant failed to state the date the SSDI offset began and failed to identify the amount of the offset.

27. Claimant filed an Application for Hearing on May 25, 2017 endorsing the issues of medical benefits, PTD and penalties. Regarding the request for penalties, Claimant stated,

> Claimants request for penalties under C.R.S. 8-43-304 for Respondents violation of C.R.S. 8-42-103(2)(c)(IV) for every two week pay period in which respondents failed to discontinue offsets taken for permanent total disability and Permanent partial disability. C.R.S. 8-43-305. Failure to pay medical bills of the authorized treating physician, Dr. Westerman and Pharmacy bills from IWP for prescriptions from the authorized treating physician to cure and relieve the effects of the admitted injury.

28. Claimant testified that she has suffered financial hardship as a result of not receiving PTD at a rate of $260.38 for the past several years.

Medical Benefits

29. Respondents contest the treatment of authorized treating physicians Dr. Eric Westerman and Dr. Robert Carson. Claimant testified that she had been regularly seeing Dr. Westerman since at least the year 2000. Respondents also contest Claimant's prescription medications. Claimant testified that at the time she was using Duragesic patches and Oxycontin.

30. On September 23, 2014, Dr. Lawrence Lesnak performed an Independent Medical Examination ("IME") at the request of Respondents. Dr. Lesnak physically examined Claimant and reviewed medical records dating back to January 2011. Dr. Lesnak noted Claimant has multiple non-work-related medical issues including, *inter alia*, chronic obstructive pulmonary disease, type 2 diabetes, and sleep apnea. Dr. Lesnak concluded Claimant may have sustained a lumbosacral strain/sprain on August 26, 1990, but that her other diagnoses, including ankylosing spondylitis and fibromyalgia, were not in any way related to the work injury. Dr. Lesnak diagnosed Claimant with chronic pain syndrome unrelated to her work injury. He opined that Claimant's opioid pain medications, antidepressant medications, and muscle relaxants

were not related to the work injury, and recommended Claimant wean from the patches and Oxycodone. Dr. Lesnak further opined that Claimant did not require any additional medical treatment as related to the April 26, 1990 industrial injury.

31. In early December 2014, Drs. Siva Ayyar and David Trotter performed peer reviews regarding the medical necessity of Claimant's Duragesic medication. Both doctors opined that the continued use of Duragesic DIS was not medically necessary, contending that there was no documentation of maintained increase in function or decrease in pain. Both doctors recommended Claimant taper her use of the Duragesic medication.

32. On December 15, 2014, Dr. Westerman issued a letter in which he opined that Claimant continued to require medication. Dr. Westerman stated,

> I have been following [Claimant] for many years as it relates to her chronic refractor pain, for which she has been on fentanyl 100 mcq q.3 days. This patient has made every attempt to be compliant with her healthcare over the years and we have found that the fentanyl at this does keeps her pain at least partially under control. I resent the fact that you had a physician contact me trying to talk to me into reducing her dose as this is, in my mind, extremely unethical based on just monetary concerns. This patient should <u>not</u> drop her dose as otherwise her pain with (*sic*) increase, which is multifactorial in nature.

33. On March 3, 2015, Dr. Westerman issued a second letter, noting he received Dr. Lesnak's IME report. Dr. Westerman declined to comment on Claimant's situation any further, stating,

> I find it interesting that Dr. Lesnik (*sic*) can relate that her pain is not related to her Worker's Compensation injury from 1990 when he has not been able to review any records prior to 2011. This, in my mind, has already been settled via the courts so I am perplexed as to why you are asking me these questions some 25 years after the Worker's Compensation injury. As such, I do not feel compelled to address your specific questions and will leave this to you and the patient, and presumably her attorney.

34. On November 24, 2015, Dr. Carson issued a Consultation Report, nothing that he has treated Claimant for over a decade. Dr. Carson stated that he and Dr. Westerman have managed Claimant's chronic pain with a variety of pain medications, including Duragesic, Oxycodone and Cymbalta, and that Claimant has been complaint with all chronic pain medication requirements.

35. Claimant testified that Respondents ceased paying for the treatment of Dr. Westerman subsequent to the issuance of Dr. Lesnak's IME report. A billing statement dated February 20, 2017 reflects a past due balance of $1,073.00. Claimant testified

that she cannot return to seeing Dr. Westerman until the past due balance has been paid. Claimant wants to continue treating with Dr. Westerman.

36. Claimant testified that she has been treating with Dr. Joseph Fillmore for her chronic pain. She stated that he has been able to reduce her Duragesic dose from 100mg to 75mg, and is working with her find alternatives to the opioids.

37. Claimant testified that the Duragesic patches and Oxycodone help reduce her chronic pain. Claimant said that she was able to continue to get the medication from the Injured Workers Pharmacy ("IWP"). An IWP statement dated July 11, 2016 reflects an outstanding balance of $9,374.12. Claimant testified that she is uncertain if that is the current balance.

38. Claimant's daughter, Rachel B., testified at hearing on behalf of Claimant. She has been living with her mother since the time of the injury with the exception of a three-year span. She testified that Claimant's prescribed pain medications reduced Claimant's pain, increased her function, and aided in the performance of activities of daily living.

39. Claimant's testimony is found credible and persuasive.

40. The ALJ credits the opinion of Dr. Westerman over the conflicting opinion of Dr. Lesnak and finds that Claimant has proven by a preponderance of the evidence that the medical treatment of Dr. Westerman, including the prescribed pain medications, reasonably necessary and related to the April 26, 1990 industrial injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Medical Benefits

The respondents are liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. Colorado courts have ruled that the need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995).

In cases where the respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO February 12, 2009). The question of whether the claimant proved that specific treatment is reasonable and necessary to maintain his condition after MMI or relieve

ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

As found, Claimant has established that it is more likely than not Dr. Westerman's treatment, including prescriptions, is reasonably necessary and related to Claimant's April 26, 1990 injury. The ALJ credits the opinion of Dr. Westerman, who has treated Claimant for several years and is familiar with Claimant's condition and need for treatment. Dr. Lesnak's opinion is based, in part, on a limited medical record review. Additionally, Claimant credibly testified that the medications assist in reducing her pain and increasing her functioning.

PTD Rate

Claimant contends she has been underpaid $97.09 per week since June 23, 2000 due to Respondents' failure to cease the PPD offset once fully recovered. Respondents contend that $163.29 is the accurate PTD rate based on the available information, the actions of the parties and the actions of the DOWC. Respondents also argue that $163.29 is arguably inclusive of reductions for SSDI and lump sum payments. Respondents further contend that, if $163.29 is found to be an inaccurate rate, Respondents would be entitled to an overpayment during certain periods for SSDI and PPD offsets.

It is undisputed that, since at least 1996, Claimant has not been paid PTD at the $260.38 rate ordered by ALJ Stuber. The evidence does not conclusively establish or allow even a reasonable inference as to why Respondents began paying PTD at a rate of $163.29.

Per the April 14, 1995 FAL, Respondents were taking a credit for the maximum PPD amount and reserved the right for a SSDI offset. Based on a $120.00 offset for 313 weeks beginning June 23, 1994, the full $37,650.00 PPD payment would have been fully recovered as of June 22, 2000. If solely considering ALJ's Stuber's ordered amount of $260.38 and the PPD offset, Claimant would have been underpaid $97.09 per week since June 23, 2000.

Nonetheless, determination of whether Claimant has been properly paid PTD benefits requires a consideration of other applicable offsets. Section 8-42-103(1)(c)(I), C.R.S. provides, in relevant part, that PTD benefits "shall be reduced, but not below zero, by an amount practically equal to one half" of SSDI benefits. Section 8-42-103(1)(c)(II), C.R.S. also provides for a 50% reduction of social security insurance retirement benefits. However, no offset of social security retirement benefits is applicable if the injury on which the PTD award is based occurred after the claimant reached forty-five years of age. §8-42-103(1)(c)(IV), C.R.S.

Claimant began receiving SSDI in December 1994. Respondents are entitled to an offset of SSDI benefits until Claimant reached age 65, as Claimant's injury occurred prior to her reaching 45 years of age. An offset for both SSDI and PPD would result in a

weekly PTD rate of $82.90 ($260.38 minus the $120.00 PPD offset and $57.48 SSDI offset).

From June 23, 1994 through June 22, 2000, Respondents are entitled to offset Claimant's PTD benefits based on overpayment of PPD by $120.00 per week. Respondents are also entitled to an SSDI offset of Claimant's PTD benefits in the amount of $57.48 per week from December 1, 1994 through October 31, 2013. Accordingly, Respondents shall pay Claimant PTD at a rate of $140.38 from June 23, 1994 through November 30, 1994, $82.90 from December 1, 1994 through June 22, 2000, $202.90 from June 23, 2000 through October 31, 2013, and $260.38 from November 1, 2013 and continuing thereafter for the duration of Claimant's life.

Penalties

Claimant seeks penalties for Respondents' alleged unreasonable failure to pay the PTD amount ordered by ALJ Stuber. Claimant's position statement states that Claimant originally believed Respondents failed to stop taking an offset for SSI but, upon further review, believes Respondents were in violation for continuing to take the PPD offset.

Respondents contend Claimant is not entitled to a penalty, as the penalty was not pled with specificity, the statute of limitations has tolled, and there is a rational basis for Respondents' payment of $163.29.

Pled with Specificity

Section 8-43-304(4) provides that in "any application for hearing for a penalty pursuant to subsection (1) of this section, the applicant shall state with specificity the grounds on which the penalty is being asserted." The statute then goes on to provide a procedure for curing violations of alleged penalties, and altering the burden of proof if the violation is cured. The Industrial Claim Appeals Office has held that the purposes of the specificity requirement are to provide notice of the allegedly improper conduct so as to afford the alleged violator an opportunity to cure the violation, and to provide notice of the legal and factual bases of the claim for penalties so that the alleged violator can prepare its defense. *Davis v. K Mart,* W.C. No. 4-493-641 (I.C.A.O. April 28, 2004); *Gonzales v. Denver Public School District Number 1,* W.C. No. 4-437-328 (I.C.A.O. December 27, 2001).

The OAC Application form contains the direction to the parties that if penalties are sought from an ALJ the party must check the box opposite "Penalties" and then must "Describe with specificity the grounds on which a penalty is asserted, including the order, rule or section of the statute allegedly violated, and the dates on which you claim the violation began and ended."

Claimant's Application for Hearing requests penalties under Section 8-43-304 for violation of Section 8-42-103(2)(c)(IV) for every two week pay period Respondents failed to continue offsets for PTD and PPD. The application also cites Section 8-43-305

for failure to pay medical bills of the authorized treating physician. At hearing and in her position statement, Claimant requests penalties for Respondents' failure to comply with ALJ Stuber's order.

Section 8-42-103(2)(c)(IV) is a non-existent provision. Assuming Claimant was actually referring to Section 8-42-103(1)(c)(IV), such provision provides that the offset of SSI retirement benefits provided for in subparagraphs (II) and (III) of Section 8-42-103(1)(c) "only apply if the injury on which the award for permanent total disability was based occurred after the claimant reached forty-five years of age."

Based on the Application for Hearing and Claimant's Request to the Director, the basis upon which Claimant is requesting penalties is unclear. Furthermore, the Application for Hearing lists no beginning date of the alleged violation or beginning date for the penalty. Additionally, at hearing and in her position statement, Claimant requested penalties due to Respondents' failure to pay PTD at a rate ordered by ALJ Stuber. ALJ Stuber's order is not referenced in the Application for Hearing. Accordingly, the ALJ concludes Claimant failed to state with specificity the grounds on which the penalty is being asserted.

Statute of Limitations

Even assuming, *arguendo*, Claimant's request for penalties was pled with specificity as required, Claimant's request is barred by the statute of limitations.

Section 8-43-304(5), C.R.S. provides that a "request for penalties shall be filed with the director or administrative law judge within one year after the date that the requesting party first knew or reasonably should have known the facts giving rise to a possible penalty." Section 8-43-305, C.R.S. provides that each day an insurer "fails to comply with any lawful order" of the director constitutes a "separate and distinct violation thereof." Section 8-43-305 further provides that in an action to enforce a penalty "such violation shall be considered cumulative and may be joined in such action."

Section 8-43-304(5) was enacted in 1994 as a part of SB-94-193, and the act contains no legislative direction concerning the effective date of the bill and its provisions. 1994 Colo. Sess. Laws, ch. 309 at 1879. . Per Colo. Const. art. V §19, if no effective date is stated in an act, the act takes effect on its passage. Accordingly, the one-year statute of limitations for penalty claims became effective June 1, 1994.

Statutes of limitation are procedural and changes in such statutes may be applied to subsisting claims for relief without offending the constitutional prohibition against retrospective legislation. *See Vetten v. Industrial Claim Appeals Office,* 986 P.2d 983, 986 (Colo. App. 1999); *see also, Woodmoor Improvement Association v. Property Tax Administrator,* 895 P.2d 1087 (Colo. App. 1994). Section 8-43-304(5) is a procedural statute of limitations. *See* Margaret Jesse v. Loaf-N-Jug, WC 4-138-958 (ICAO March 1, 2010). See Arczynski v. Club Mediterranee, W. C. No. 4-156-147 (May 20, 2003); aff'd, Arczynski v.lndustrial Claim Appeals Office, No. 03CA1096 (Colo. App.

July 1, 2004) (not selected for publication), *Kessler v. Mountain Meadows Nursing Center,* W.C. No. 3-616-169 (September 27, 2001).

Thus, although Claimant's injury occurred prior to 1994, the statute of limitation set forth in Section 8-43-304(5) applies. Claimant has been receiving PTD at a rate of $163.29 for over 20 years. Mr. Gurwin's May 31, 1995 letter accepting the April 15, 1995 FAL as it related to PTD establishes Claimant was aware of the ordered PTD rate, the rate at which Respondents would be recovering the PPD overpayment, and that Respondents reserved the right for a SSDI offset. Mr. Gurwin continued to represent Claimant until September 2015, including at hearing before ALJ Jones in 2002 on a medical benefits issue. No evidence was presented establishing that Claimant's PTD rate or penalties were endorsed or addressed, when such issues would have been ripe.

As of July 1996 or, at the latest, the hearing before ALJ Jones in 2002, Claimant reasonably should have known that she was not receiving the amount ordered by ALJ Stuber or based upon any reasonable calculation of applicable credits and offsets. That Claimant's current counsel did not discover the discrepancies in PTD rates until Claimant ordered her file in December 2015 does not negate the fact that Claimant was aware of the amount ordered by ALJ Stuber and was aware of the amount she was receiving. Claimant was represented by counsel throughout the majority of the claim, spanning several years, during which time Claimant reasonably should have known Respondents were not paying the rate ordered by ALJ Stuber even considering applicable credits and offsets. Claimant failed to file within the one-year time frame required under Section 8-43-304(5), C.R.S., and thus the request for penalties is barred by the statute of limitations.

ORDER

It is therefore ordered that:

I. The medical treatment of Dr. Eric Westerman, including prescriptions, is reasonable, necessary and related to Claimant's April 26, 1990 industrial injury. Respondents shall pay the costs for Dr. Westerman's medical treatment and Claimant's prescriptions, including outstanding balances and reimbursement for expenses incurred for obtaining medication through the IWP. These payments shall be made pursuant to the Colorado Workers' Compensation Fee Schedule.

II. Respondents shall pay Claimant PTD at a rate of $140.38 from June 23, 1994 through November 30, 1994, $82.90 from December 1, 1994 through June 22, 2000, $202.90 from June 23, 2000 through October 31, 2013, and $260.38 from November 1, 2013 and continuing thereafter for the duration of Claimant's life.

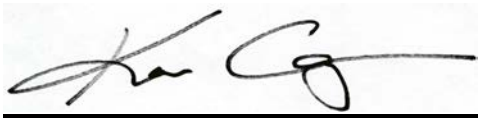
III. Claimant's request for penalties is denied and dismissed.

IV. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

V. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 31, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Has Claimant shown, by clear and convincing evidence, that the DIME opinion of Dr. Tyler has been overcome, on the issue of MMI, and therefore, causation?

II. If the DIME has not been overcome, has Claimant's condition worsened after MMI, such that his claim should be reopened?

III. Has Claimant shown, by a preponderance of the evidence, that he is entitled to medical benefits, in the form of cervical spine surgery?

IV. Has Claimant shown, by a preponderance of the evidence, that he is entitled to TTD benefits, effective December 8, 2017, as a result of his worsening condition?

STIPULATIONS

I. The parties agreed that the issues of Permanent Partial Disability and Permanent Total Disability were bifurcated from this hearing, and held in abeyance, pursuant to a Prehearing Conference Order dated October 24, 2017. Further, Claimant has admitted to the Average Weekly Wage as admitted by Respondents, and wishes to hold the issue of disfigurement in abeyance. These agreements were all adopted by the ALJ.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant worked for Employer as a Maintenance Technician at Tierra Vista Communities. On November 22, 2013 Claimant was repairing a section of the sliding garage door when he fell approximately 3 feet from a platform ladder, striking primarily his left side of his body.

2. Claimant was initially treated by the Peterson Air Force base fire department and by personnel from American Medical Response. Claimant's entire spine was immobilized as he was placed on the back board with straps. He was also placed in a cervical collar as "Fire stated that pt was having c-spine neck pain, left shoulder pain, right knee pain, and head pain." (Ex. 1, pp. 2-3).

3. Claimant underwent initial diagnostic testing including a CT scan of the cervical spine which showed an absence of any acute fracture or subluxation. It was noted by his emergency providers that he had a mild T9 compression fracture of indeterminate age. (Ex. 2, p. 31). Claimant's initial diagnosis was a left shoulder strain and a right pinky finger abrasion. After physical therapy Dr. Randall Jones (with Concentra) placed Claimant at MMI with no impairment effective December 13, 2013. (Ex. K, p. 88-89).

Dr. Jones noted in his report that "patient is "100%" back to normal. Patient has been working their (sic) full duty. Patient has not been taking their meds because his condition improved. Patient has had physical therapy and feels better…' (Ex. 3, p. 71). (It is duly noted that Claimant testified that he never told Dr. Jones these things).

4. Claimant went without treatment for almost one year, but followed-up with Dr. Jones on November 10, 2014. According to Claimant, during this timeframe he went to his personal physician, Dr. Robert Swanson, who advised him to follow with Dr. Jones. During this visit, Claimant complained of shoulder pain, but *denied* neck problems, except some left neck pain with shoulder motion. (Ex. 3, p. 69). This produced a recommendation for an MRI scan of the left shoulder by Dr. Wiley Jinkins. Claimant was then diagnosed with subacromial impingement syndrome with a partial thickness rotator cuff tear. (Ex. K, pp. 89-90).

5. An MRI of the cervical spine was performed on December 18, 2014. The pertinent findings for that exam were:

1. Mid and lower cervical *degenerative* change, greatest at C6-C7……

4. *Possible mild subacute* soft disc at C6-C7, *more likely chronic.* (Ex. F, p. 4)(emphasis added).

6. Upon questioning, Dr. Jones responded by stating that it was a greater than 50% likelihood claimant's left shoulder pain was related to the work injury, but nothing in his record review would indicate claimant's back, head or neck related to the work injury. (Ex. K, p. 90).

7. Dr. Wiley Jinkins, MD, initially treated Claimant's left shoulder with injections, but Claimant also underwent a second MRI indicating the shoulder pathology had progressed. Dr. Jinkins performed the arthroscopic repair of claimant's left shoulder on October 23, 2015. If Claimant had made cervical spine pain complaints while treating with Dr. Jinkins, Dr. Jinkins testified that would have referenced this in his reports. No such references exist in his reports.

8. Claimant was placed at MMI by Dr. Jones, effective May 20, 2016 and provided with a 20% scheduled impairment. Respondents filed an Amended Final Admission of Liability dated June 12, 2016 in accordance with the MMI opinion and impairment rating. (Ex. A).

9. Claimant initiated the DIME process which was conducted by Dr. John Tyler, MD. Dr. Tyler found the claimant was at MMI, effective July 14, 2016. Dr. Tyler provided Claimant with an 18% left upper extremity impairment. Respondents filed a Final Admission of Liability on February 1, 2017 accordance with Dr. Tyler's opinions. (Ex. D).

10. In assessing whether Claimant received any impairment to the cervical spine due to the injury Dr. Tyler found that:

> I do not find clear and convincing evidence that the patient had an *injury* to the cervical spine. I base this not only on the medical record review of the physician's notes but also on the forms completed by the patient and each of these forms show that his pain symptomatology is well-localized to the left shoulder and the patient himself does not even mark the cervical spine is an area of pain complaint or concern. (emphasis added).

During the examination of Claimant's cervical spine, Dr. Tyler found normal alignment with no segmental dysfunctions, no evidence of localized spasm or trigger points, with only a few localized trigger points within the left infraspinatus, rhomboid minor and superior trapezius. (Ex. 8, p. 193).

11. Claimant underwent an independent medical examination on June 30, 2016 with Dr. Lawrence Lesnak. In Dr. Lesnak's report Claimant denies posterior neck symptoms. On physical examination, Claimant had full range of motion in the cervical spine in all planes, without reproduction of any symptoms. Provocative testing of Claimant's cervical spine was negative, and palliative testing of claimant cervical spine produced no symptoms. (Ex. H, p.59, 69). Dr. Lesnak performed a Distress and Risk Assessment Method (DRAM) evaluation of Claimant. This showed that Claimant had a significant degree of psychological factors influencing his symptoms. In Dr. Lesnak's estimation, Claimant has a very disabled viewpoint. Id at 57.

12. Claimant returned to Dr. Jinkins on January 18, 2017. The hand-written notes accompanying Dr. Jinkins' narrative report indicate; "(L) shoulder, headache & neck pain. Increased neck pain." (Ex.4, p. 96). Dr. Jinkins injected the shoulder and recommended a repeat MRI.

13. An MRI of the cervical spine was performed on March 23, 2017. Dr. Jinkins reviewed the results on April 4, 2017; "…There was a large disc herniation at C6-C7, which is causing moderate to severe bilateral foraminal stenosis, being more symptomatic on the left than the right, with the disc herniation effacing the thecal sac in close proximity to the cervical spinal cord. He indicated that overall, there has not been a great deal of change as far as symptoms are concerned. He rates his pain level in the neck and trapezius area as a '6' on a scale of 1-10 and his shoulder as well. The pain radiates all the way down his left arm into the hand." (Ex. 4, p. 89).

14. Dr. Jinkins continued; "Physical examination revealed provocative testing for impingement still to be positive, however, more significantly, there does appear to be some slight triceps weakness on the left as compared to the right, which would be a corresponding spinal nerve being impinged. Rotation of the cervical spine elicited discomfort as well." Id.

15. Dr. Jinkins recommended a neurosurgical consultation, "…insomuch that he does have a significant disc herniation, as noted above. He indicated that prior to his fall at work, he had no problems with his cervical spine. Since that time, his symptoms have not abated, but in actuality have progressed…" (Id at p. 90).

16. Claimant saw neurosurgeon Dr. Manon on July 24, 2017. He reported; "…The patient presents for a clinic visit today regarding the cervical spine. He had surgery performed of the left shoulder by Dr. Jenkins [sic] in 2015 for 'bone spurs.' Despite successful surgery he continued to have radiating pain originating in the shoulder and radiating to the neck. Additionally, he reported radiculopathy extending from the base of the neck [on] the left down the shoulder, biceps, forearm, and third, fourth and fifth digits…He reports some limited range of motion of the neck with precipitating neck pain upon flexion and rotation towards [the] left. Also, rotation towards [the] left precipitates his left arm pain…" (Ex. 5, p. 142).

17. On physical examination of the cervical spine, Dr. Manon found "diffuse pain elicited along the cervical paraspinal musculature bilaterally, trapezius, and shoulder. ROM [range of motion] limited with flexion and extension, rotation…" (Id.) Dr. Manon reviewed the MRI findings and concluded, "…This is a 60 year old gentleman with a chronic history of left upper extremity radiculopathy secondary to a prominent C6-C7 disc bulge or herniation with associated significant neural foraminal stenosis. There is advanced cervical spondylosis associated with this. The patient will be best treated with surgical discectomy and artificial disc replacement versus a cervical fusion…" (Ex. 5 at 144).

18. Dr. Jinkins again saw Claimant on July 26, 2017. He reported, "…He did see Dr. Manon, who felt that he is a candidate for decompression at level C6-C7. He is actually scheduled for the surgery on his cervical spine on Tuesday, 08/01/17. He indicated that overall, *there has not been any notable change as far as his neck* and left arm are concerned…Physical examination revealed there to be tenderness in the paraspinous musculature, left and right...I would recommend proceeding with this surgical procedure, as recommended by Dr. Manon…" (Ex. 4, p. 87)(emphasis added).

19. Dr. Manon submitted a request for authorization of cervical spine surgery to Insurer on July 27, 2017. (Ex. 5, p.141). Insurer denied the request on August 2, 2017. (Id. at 140).

20. Dr. Jinkins testified by deposition as an expert in orthopedic surgery on December 4, 2017. Dr. Jinkins explained that Concentra referred Claimant to him only for evaluation and treatment of the shoulder injury, and that the shoulder was the only injury he was authorized to treat. Dr. Jinkins explained that the lack of reference to cervical spine complaints in some of his reports was due to Concentra's policy of allowing him to treat only the shoulder. (Dr. Jinkins depo pp. 17-18)

21. Dr. Jinkins explained that when he placed Claimant at MMI, it was for the shoulder injury, not the neck injury:

> *Q* The maximum medical improvement status for Mr. Romero, if the – is this just maximum medical improvement in your opinion relative to the

left shoulder that you were treating or is this maximum medical improvement for the injury?

A No, this is just the shoulder.

Q Is that ordinarily how you would evaluate a worker for a work injury, is to offer maximum medical improvement for just the component of injury that you're evaluating?

A Yes, that's – that's the way it was recommended that it be done from Concentra.

Q From Concentra?

A Yes.

Q Okay.

A Once again, I was not treating him for the cervical problem at that time. (Dr. Jinkins depo p. 36).

22. Dr. Jinkins testified that the work injury served to aggravate Claimant's cervical spine degenerative condition:

Q The diagnostic testing for Mr. Romero, at least as far as the Penrad Imaging study shows, has degenerative changes identified in the MRI. Would you agree with that?

A It did, yes.

Q Including bony formations that are working in concert with a potential disc to create impingement, correct?

A Correct.

Q If this is identified in the report as chronic in nature, which we've read, do you disagree with that radiologist's interpretation of this condition as chronic?

A No, I do not. In other words, the injury which he – which was incurred did not cause the degenerative condition. It was – it was there previously. It preexisted, but it did serve to aggravate it.

Q Okay. So, in your opinion, the degenerative condition predates injury, but injury happens and creates symptomatology in the neck, working together with that degenerative condition?

A Yes, sir. The neck is inherently close to the shoulder or the muscles that operate the shoulder do originate in the cervical region, the scapular region. And so they can be interrelated. (Dr. Jinkins depo. pp. 57-58)

Q You talked about the degenerative condition not being caused by Mr. Romero's work injury, but it being aggravated. Could you tell us how that happened?

A Yes. This is not uncommon, that we see people -- older people in the older people workforce where -- who will have pre-existing degenerative arthritis, most commonly seen probably in the knees, who are completely asymptomatic barring an injury. The injury can aggravate this underlying, silent arthritis and cause it to become symptomatic. Also an injury can accelerate the progression of the arthritic condition if it's a significant trauma.

Q And do you feel that's what happened in Mr. Romero's case?

A He's significantly symptomatic now with regard to the cervical region, probably more so than he was early on, so it is *probably a progression.* (emphasis added). (Dr. Jinkins depo p. 67).

23. Dr. Jinkins testified that Claimant's cervical spine condition has worsened:

Q Since the report in which it appears you first documented cervical spine problems, that being December 23, 2014, from then until the time you most recently saw Mr. Romero, has his cervical spine condition worsened?

A It seems to be a preponderance of his symptoms at the present time. It does appear that it has progressed, because this is his main complaint at the present. (Dr. Jinkins depo p. 71).

24. Dr. Tyler was deposed on December 8, 2017. Dr. Tyler further explained at his deposition what he meant by a cervical *injury* during his deposition the following:

Q. And basically you found - - or it's your opinion that there was no cervical spine injury or perhaps just ratable impairment, or is that a distinction without a difference?

A. You are hundred percent correct. There was nothing that was ratable. Did he suffer an *injury* to the cervical spine? Yes. That was reported in the very beginning of his notes when he fell off the ladder and his consciousness, but, I mean, it was reported by think even the paramedics. But there wasn't anything *ratable* based on my examination. (Dr. Tyler depo, pp.31- 32,).

A. ….based on what we have just reviewed, i.e., the CT scans, the X-rays, and putting on the [cervical] collar, *it doesn't state that there's an injury.*

Now, there's mention made by the ambulance service, the paramedics, that the patient was tender. That's the symptom; that's not a diagnosis. So it's – do you have any question that he was most likely suffering an *injury* to the cervical spine? The question is, no, I don't question that he suffered an *injury* to the cervical spine. You don't fall off a 3-foot ladder striking your shoulder, your hips, and not *strain the muscles* of your neck. Why? Because your head weighs between 10 and 16 pounds, depending on the size.

….you're most likely going to *strain the muscles* and surrounding tissues that are helping to hold or support the head, and that would be the cervical spine.

Q: But just to clarify, is it your testimony that *he did sustain in injury to his cervical spine, but* ***he simply does not have ratable impairment?***

A: That would be correct. (Dr. Tyler depo, pp. 53-55)(emphasis added).

25. Dr. Tyler testified regarding the way he conducts DIMEs. While dictating the review of the medical records component of his DIME report the patient is present, so as to allow for any input. In this instance, Claimant participated in generating part of Dr. Tyler's report through parenthetical offerings, as allowed by Dr. Tyler. (Dr. Tyler depo, pp. 7, 8, 10-12). When showed Dr. Lesnak's report describing no cervical symptoms upon provocative testing, Dr. Tyler agreed that this was consistent with his examination of Claimant's cervical spine. (Dr. Tyler depo, p. 44).

26. Dr. Tyler also addressed the issue of worsening of Claimant's condition, since the DIME report was issued:

Q: …..Based on all of that, do you have an opinion as to whether or not Mr. Romero is still at MMI?

A: I don't think I can answer that question.

Q: Why not?

A: Because the disc pathology as seen now wasn't present during the time of care for which I was treating him in regards to his work injury of 2013, I believe it was; so *that is a new pathology.* So I'm not sure how you can state that [it] is directly related to his work injury when it wasn't present based upon the records that I had for review and based upon the

> symptomology that I saw at the point where I placed him at maximum medical improvement.
>
> So if that indeed is new symptomology and new pathology, then I'm not sure how it would have a direct relationship to his work injury. (Dr. Tyler depo, pp. 65-66).

27. Claimant testified he experiences continuous pain in his left neck and the upper part of his shoulder. Claimant testified that since being placed at MMI, his neck condition has worsened. Specifically, Claimant experiences neck pain and headaches when he turns his head up or down and from side to side, and he has had to decrease or terminate physical activities such as golf and fishing due to his increased neck pain. Claimant has been unable to work since December, 2014 due to the effects of his industrial injuries. Claimant was awarded Social Security disability benefits.

28. Claimant further testified that he did not tell a medical care provider at Concentra in November 2014 that he was: "100% back to normal with no pain." Claimant also testified that he told Dr. Lesnak about pain in his neck and that Dr. Lesnak did not palpate his neck. Claimant contends that the discrepancy between his testimony and what is contained in the medical records over these matters is due to an error on the part of the medical providers or examiners in generating the records.

CONCLUSIONS OF LAW

Based upon the foregoing Finding of Fact, the ALJ makes the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the

testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this instance, the ALJ finds Claimant to be sincere in his description of his symptoms to his medical providers at all times pertinent-including reporting, for example, to his Concentra provider in 2014 that he was "100% back to normal with no pain." His current recall of such events, including palpation of his neck by Dr. Lesnak, is simply not reliable-nor could one reasonably expect total reliability from a layperson who is now in pain. Claimant can only describe what he is feeling; someone in his position cannot render a medically reliable or convincing opinion on *causation.*

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME Opinion, Generally

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI, permanency or the cause of a particular component of a claimant's medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

E. "Maximum medical improvement" is defined in Section 8-40-201(11.5), C.R.S. as:

> A point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. The

> requirement for future medical maintenance which will not significantly improve the condition or the possibility of improvement or deterioration resulting from the passage of time shall not affect a finding of maximum medical improvement. The possibility of improvement or deterioration resulting from the passage of time alone shall not affect a finding of maximum medical improvement.

F. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998).

DIME opinion of Dr. Tyler re: MMI (and by implication, Causation)

G. Dr. Jinkins credibly indicated that his focus was Claimant's shoulder, not his neck, according to his understanding of his assigned role by Concentra. Dr. Tyler, by contrast, made clear in his DIME report that he was addressing Claimant's neck issues as well as his shoulder. This is addressed in his 'Impression #5', as well as in his narrative. If any lingering doubt remained about the scope of his DIME exam, it was made clear in his deposition. As the DIME physician, Dr. Tyler opined that Claimant was at MMI as of July 14, 2016, *for all his injuries caused by this industrial accident.* While Dr. Tyler agrees that Claimant now suffers from serious issues with his cervical spine, he has made a persuasive case that Claimant's current cervical complaints were *not* ***caused by*** *this industrial accident.*

Ambiguity in the DIME's Conclusions

H. While Dr. Tyler appeared to equivocate (as Claimant now urges) at one point in his deposition on the MMI issue, this was based upon speculation under cross-examination of what Dr. Jinkins (who by all accounts was to treat the shoulder-not the neck) might or might not have said at his own deposition. Dr. Tyler again reaffirmed (after this alleged equivocation) that he did not believe the work injury *caused* Claimant's current complaints. To the extent his momentary 'equivocation' is construed as an ambiguity, the ALJ finds that, taken as whole, Dr. Tyler's body of work in the DIME report clearly shows a lack of causation for Claimant's current complaints due to the work injury.

Aggravation of Underlying Condition/Now Symptomatic

I. The ALJ further finds that Claimant's latent degenerative cervical conditions were not made symptomatic by his fall. At most, Claimant suffered a muscle strain,

from which he has long since recovered. The only evidence to the contrary was offered by Dr. Jinkins, who at one point opined in his deposition that it's *probably* a progression of a now-symptomatic aggravation of an underlying chronic condition. Assuming, arguendo, that the ALJ accepts this as being correct (which the ALJ does not in this case), it is insufficient to overcome the DIME opinion by clear and convincing evidence. At most, it represents a difference in medical opinion. In this case, Dr. Jinkin's 'charter' was not to treat the neck at all, except insofar is it related to his shoulder. The DIME opinion, therefore, has not been overcome.

Reopening/Worsening of Condition

J. As found above, Claimant has not shown, by a preponderance of the evidence, that his current cervical complaints, worsening though they are, are due to his work injury. His condition is chronic, and was not made symptomatic by the fall from the ladder. His request to reopen his claim is denied.

Medical Benefits/TTD Benefits

K. No one contests that Claimant needs surgical correction of his worsening cervical condition. This unfortunate gentleman has suffered lumbar and thoracic conditions already; now he suffers from a progressive, chronic degenerative cervical condition. However, since his work accident did not *cause* his chronic condition to now become symptomatic, he is not entitled to medical benefits. Nor can he claim TTD benefits, for the same reason.

ORDER

It is therefore ordered that:

1. Claimant's request for cervical spine surgery and TTD benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 2, 2018

Colorado Springs, Colorado 80906

ISSUES

The issues to be determined by this decision are:

- What is Claimant's average weekly wage?
- Whether Claimant is owed any back TPD?

FINDINGS OF FACT

1. Claimant is a 32 year-old male who was involved in an admitted incident which occurred on August 22, 2015. Claimant was employed with the Respondent as an automotive technician at the time of this incident.

2. On September 30, 2015, Respondents admitted to an average weekly wage of $507.07, as reflected on the initial General Admission of Liability.

3. The admitted average weekly wage was computed by totaling all of Claimant's wages from August 24, 2014 through August 15, 2015. As the work injury occurred on August 22, 2015, the time period used was a total of 51 weeks. The total wages were $25,860.35, which was then divided by 51 weeks. This resulted in an average weekly wage calculation of $507.07.

4. Claimant returned to work with lifting restrictions on September 12, 2015 and continued working with restrictions through September 18, 2017 when his ATP took him completely off work.

5. From September 19, 2017 through the date of hearing, Respondent had paid Claimant $338.04 per week based on the admitted average weekly wage of $507.07 as reflected in the GAL Respondents filed on October 19, 2017.

6. Claimant continues to receive wage loss benefits calculated using an average weekly wage of $507.07.

7. Claimant was not under any hourly work restrictions from the time he returned to work until April of 2016, when his ATP, Dr. William Miller, imposed a six hour per day work restriction. He remained on the restriction until he was taken off work on September 26, 2017.

8. On January 18, 2017, Claimant underwent a DIME performed by Dr. Douglas Scott. Dr. Scott opined Claimant had a 40 pound weight restriction with no hourly restrictions.

9. Claimant admitted there were times he missed work for personal issues during the time period he is asking for temporary partial disability benefits.

10. From his date of hire through November 14, 2014, Claimant was paid $11 an hour on an *hourly basis*.

11. Effective November 15, 2014, Claimant began receiving $13.75 “per hour.” However, he was no longer paid on an hourly basis. Rather, he was paid on a *task basis*. As an example, if Claimant completed a task assigned a value of 1.5 hours, he would be paid $20.63. It would not matter whether he completed the task in five minutes or five hours – he was paid the value of the *task*.

12. The total amount of wages Claimant earned while paid on a *task basis* from November 15, 2014 through August 15, 2015, a period of 39 weeks, is $19,824.13. $19,824.13 divided by 39 weeks results in an AWW of $508.31.

13. Bill Holinger, Claimant’s supervisor and the store manager where Claimant is employed, testified via deposition on November 10, 2017. He testified Claimant earns his wages based on the tasks he performs. The m Claimant completes tasks, the more he earns during a set period of time. Mr. Holinger also testified that Claimant’s wages are negatively impacted by the following factors:

- Claimant shows no sense of urgency when performing tasks,
- Claimant’s performance was sub-par,
- Claimant does not show up for many reasons not related to his work injury, such as “his car won’t start, that he needed a new battery, or new starter, or that he calls in sick because he did not get a good night’s rest because his daughter was keeping him up.”
- Claimant is late to work continually, providing different non-injury related excuses. Mr. Holinger testified that he knows this because he manually enters Claimant’s start time. Claimant’s tardy arrival at work decreases the amount of time he has to complete tasks and thus decreases his ultimate earnings,
- Claimant falls asleep on the job while sitting at his desk,
- Claimant takes 20 minute bathroom breaks, and when Mr. Holinger looks for Claimant, he finds Claimant asleep in the bathroom.

14. Mr. Holinger also testified that Claimant’s performance directly correlates to how much Claimant earns. Mr. Holinger reiterated that Claimant works as a flat rate technician. He earns money based not on the number of hours he works, but based on the number of tasks he completes and the hour-value assigned to the task.

15. Mr. Holinger explained that Claimant's doctor faxed in medical records indicating his work-restrictions. Mr. Holinger further testified that tasks which fit within Claimant's restrictions are and were available every day, and every hour. Such tasks include oil changes, alignments, brake work and vehicle inspections, and are performed on almost every vehicle brought to the workplace.

16. The ALJ finds Mr. Holinger's testimony credible and persuasive.

17. Claimant testified at hearing. Although he could not correctly recall his rates of pay, Claimant acknowledged that he was paid on a task basis; and that he observed his six-hour restrictions because he wanted to get better.

AWW Calculation

18. Claimant argues that Respondent's average weekly wage calculation is not correct. The ALJ agrees.

19. The total amount of wages Claimant earned from the time of his raise November 15, 2014 through August 15, 2015, a period of 39 weeks, is $19,824.13. $19,824.13 divided by 39 weeks is $508.31 per week on average. The ALJ finds this to be the best and most fair approximation of Claimant's wage loss.

CONCLUSIONS OF LAW

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

It is within the ALJ's purview as the finder of fact to determine the credibility of witnesses and resolve conflicts in the evidence. *Metro Moving & Storage v. Gussert*, 914 P.2d 411 (Colo. App 1995).

Claimant argues that his AWW should be calculated as set forth in section 8-42-102(2)(d), C.R.S., which applies in situations where a claimant is paid an hourly wage. The ALJ concludes that after November 15, 2014, Claimant was no longer paid an hourly wage but rather a task based wage. This renders section 8-42-102(2)(d) inapplicable.

Claimant argues that the three weeks from April 26, 2015 through May 16, 2015, where Claimant earned little or nothing each week due to time off for a family emergency, should not be included in the averaging calculations as that period represents a one-of-a-kind loss of wages, which does not accurately reflect Claimant's earnings at the time of his injury. The ALJ is not persuaded. Claimant offers no authority to support this proposition and the ALJ likewise finds none. By Claimant's own admission, there were times he missed work for personal issues during the time period he is asking for temporary partial disability benefits.

Respondents argue that the six hour work restriction imposed by Claimant's ATP in April 2016 is inappropriate because the Division IME found no hourly restriction. Respondents offer no authority to support this proposition and the ALJ likewise finds none. That the DIME doctor did not suggest the six hour work restriction is of no consequence. No persuasive evidence supports a conclusion that the six hour restriction was ever lifted. Thus, the ALJ finds and concludes that Claimant was under an hourly restriction from April 2016 until he was taken off work.

The overall purpose of the statutory scheme is to calculate "a fair approximation of the claimant's wage loss and diminished earning capacity." *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). Additionally, the ALJ hearing a case is allowed to use a different method of calculation which "based on the facts presented, fairly determine such employee's average weekly wage." §§ 8-42-102(3) and 8-42-102(5)(b), C.R.S.

The ALJ finds the current average weekly wage is incorrect because it includes a time period when Claimant was not earning his time-of-injury rate of pay. A more fair and accurate representation of Claimant's earnings is based on the time period beginning when Claimant's hourly rate was increased to $13.75 through the date of his admitted injury. The AWW based on this calculation is $508.31. Not $507.07 as Respondents calculated.

ORDER

It is therefore ordered that:

1. Claimant's AWW is $508.31.

2. Claimant is entitled to benefits based on his AWW of $508.31 for the period of time he was entitled to temporary partial disability benefits.

3. Claimant is entitled to interest at the rate of 8% per annum on all amounts not paid when due.

4. All matters not determined herein are reserved for future determination.

NOTE: If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: 01/25/2018

/s/ Kimberly Turnbow
Kimberly Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman St 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, his injuries arose out of and in the course and scope of his employment.

II. Whether Claimant established, by a preponderance of the evidence, he is entitled to reasonable, necessary, and related medical treatment.

III. Whether Claimant established, by a preponderance of the evidence, the right to select a physician passed to Claimant and he is entitled to select a physician of his choice.

IV. Whether Claimant is entitled to temporary total disability benefits.

V. Claimant's average weekly wage.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Tice Electric – Employer - has been in business for 37 years. It is an LLC, and Chris Meister is the owner and manager of the company. He is responsible for hiring, scheduling, and payroll.

2. Nick Meister is the son of Chris Meister and also works for Employer.

3. As of May 25, 2017, Claimant had been employed by Employer for approximately one and a half years as an electrical apprentice and general handyman.

4. While working for the Employer, Claimant's work was not solely electrical in nature. Claimant would also participate in construction projects, go to car auctions, and work on a winery that was also on the Employer's premises. See Hearing Transcript pg. 10 lns. 2-18.

5. While working for Employer, Chris Meister, allowed Claimant to live at Employer's shop, which is located at 3535 A, South Irving Street, Englewood, CO 80110, for approximately 8 months. Employer/Chris Meister did not charge Claimant rent during this period. While working for Employer, Chris Meister also assisted Claimant in paying his first month's rent, and deposit, for a house. Employer/Chris Meister also assisted Claimant in paying some court fines and expenses in order for Claimant to get his driver's license back. The assistance provided to Claimant and the payments made on his behalf were favors.

Employer/Chris Meister never expected to be reimbursed. Hearing Transcript pgs. 59-62.

6. Prior to working for Employer, Claimant worked extensively in the concrete field for approximately 32 years. All of the employees with the Employer were aware of Claimant's extensive experience with and knowledge of concrete work. See Hearing Transcript pg. 10 lns. 23-25, pg. 11 lns. 1-14.

7. Chris Meister assigned duties and job tasks to employees when they arrived to work in the morning. See Hearing Transcript pg. 11 lns. 18-25, pg. 12 lns. 1-2.

8. On May 24, 2017, Claimant arrived to work at his normal time, approximately 7:00 a.m., and was told by Chris Meister they were going to do something different for work that day and they were going to go somewhere. See Hearing Transcript pg. 12 lns. 11-23.

9. Chris Meister informed Claimant that he would be working with Nick Meister for the day. Hearing Transcript pg. 13 lns. 8-12.

10. Nick Meister is Chris Meister's son and Claimant recognizes both men as his bosses or supervisors. Hearing Transcript pg. 13 lns. 16-25, pg. 14 lns. 1-2.

11. Nick Meister and Chris Meister are Claimant's bosses and supervisors.

12. On May 24, 2017, Nick Meister drove Claimant to Nick Meister's house to perform work. This is the first time Claimant had ever been to Nick Meister's house. Hearing Transcript pg. 14 lns. 6-13.

13. Claimant had no idea he would be working with concrete until he arrived at Nick Meister's house on May 24, 2017. See Hearing Transcript pg. 15 lns. 5-10.

14. Claimant had never known about a concrete patio project prior to May 24, 2017, when he arrived at Nick Meister's house and never conversed with Nick Meister about the patio previously—not even on the way to the house. See Hearing Transcript pg. 15 lns. 11-17.

15. Nick Meister, also a Tice Electric employee, was present and working on the patio project on May 24, 2017. See Hearing Transcript pg. 16 lns. 6-9.

16. After working for the day at Nick Meister's home, Nick Meister drove Claimant back to Tice Electric. See Hearing Transcript pg. 17 lns. 7-16.

17. Claimant began May 25, 2017, just the same by arriving at work in the morning at Tice Electric at his normal arrival time. See Hearing Transcript pg. 18 lns. 10-24.

18. Claimant and Nick Meister informed Chris Meister of the previous day's work and progress. Both Nick and Chris Meister informed Claimant that they were going to continue working on the concrete patio at Nick Meister's house. See Hearing Transcript pg. 19 lns. 1-19.

19. Again, Nick Meister drove Claimant to the work location, Nick Meister's house. See Hearing Transcript pg. 20 lns. 3-11.

20. When leaving the Tice Electric work yard, the vehicle was pulling a trailer owned by Tice Electric with wood pre-loaded in it. See Hearing Transcript pg. 20 lns. 17-25, pg. 21 ln. 1.

21. After arriving at Nick Meister's house on May 25, 2017, Claimant continued working on the concrete patio with Nick Meister. See Hearing Transcript pg. 21 lns. 7-25.

22. Chris Meister arrived late in the afternoon and ultimately ended up assisting in the work. See Hearing Transcript pg. 21 lns. 6-11.

23. The concrete was provided by a commercial truck rather than ready-mix bags at retail locations like Home Depot. See Hearing Transcript pg. 22 lns. 17-25, pg. 23 lns. 1-7.

24. Claimant was directing Nick and Chris Meister where to unload the wheelbarrows full of concrete each time they were refilled from the concrete truck. See Hearing Transcript pg. 23 lns. 8-25.

25. Chris Meister installed a sprinkler tube in the patio so low voltage lighting could be used. See Hearing Transcript pg. 26 lns. 20-25, pg. 27 lns. 1-4, pg. 76 lns. 10-17.

26. No one ever asked Claimant to perform a favor on May 24 or 25, 2017. No one ever informed Claimant that he would not be paid for his work on May 24 or 25, 2017. See Hearing Transcript pg. 32 lns. 1-9.

27. Claimant arrived at work at Tice Electric on May 25, 2017, as normal because that is the routine—he goes to work and is informed where he will be working and what he will be doing that day. See Hearing Transcript pg. 32 lns. 19-25, pg. 33 lns. 1-4

28. Neither Chris nor Nick Meister consulted Claimant about the patio or Claimant's opinions prior to being sent out to Nick Meister's house. See Hearing Transcript pg. 42 lns. 10-25.

29. Claimant does not always turn in time slips at the end of a work day. There were numerous times he did not submit a time slip after working. See Hearing Transcript pgs. 46-49, pg. 52 lns. 15-25, pg. 53.

30. Chris Meister never informed Claimant that his work on May 24 or May 25, 2017, was to pay back any debt for former assistance or that he was performing a favor. See Hearing Transcript pg. 52 lns. 5-10.

31. Claimant never told his employer that he quit Tice Electric. See Hearing Transcript pg. 54 lns. 10-13.

32. Claimant was only at Nick Meister's house on May 25, 2017, because he went to work in the morning, he was told go to Nick Meister's house that day by his boss, Chris Meister, and Nick Meister drove him to the location. See Hearing Transcript pg. 55 lns. 5-16.

33. Chris Meister bought supplies for the project—namely a tarp to cover the work area due to incoming rain. See Hearing Transcript pg. 68 lns. 24, pg. 69 lns. 2-7.

34. Chris Meister also assisted in the work and Chris and Nick Meister were taking direction from Claimant. See Hearing Transcript pg. 23 lns. 8-25.

35. Chris Meister remained at the job site until approximately 3:00 a.m. See Hearing Transcript pg. 75 lns. 3-7.

36. Claimant's legs were covered with wet concrete for an extended period of time and he ultimately felt a burning sensation in both legs. Claimant was forced to take a shower due to the burning and skin falling off from his legs. See Hearing Transcript pgs. 25-27. Claimant was informed by Nick Meister that an ambulance was called for Claimant and Claimant was transported to Swedish Medical Center's burn unit. See Hearing Transcript pg. 28 lns. 22-25, pg. 29 lns. 1-2.

37. Nick Meister knew of Claimant's chemical burns and need for treatment on May 25, 2017. Chris Meister learned of Claimant's chemical burns, second hand. See Hearing Transcript pg. 77 lns. 2-11. Although Chris Meister testified that he was not aware that an ambulance arrived and took Claimant to the hospital at the time it actually occurred, the ALJ finds that Chris Meister learned of the accident and Claimant's need for medical treatment that day through his son, Nick Meister. It does not seem plausible that Nick Meister would call an ambulance for Claimant and not tell his father, Chris Meister, that day since Chris Meister was at Nick's house until 3:00 a.m.

38. On May 25, 2017, Employer had notice of Claimant's work injury and need for medical treatment. Employer has never provided Claimant a list of designated physicians to treat his work injury.

39. On May 25, 2017, Claimant was treated at Swedish Medical Center's burn unit by Dr. Gregory Burcham. The medical report from that date indicates Claimant suffered his chemical burn "at work today." Claimant was treated and released the same day. Claimant was, however, directed to return to the outpatient Burn Clinic at Swedish for further treatment.

40. On May 31, 2017, Claimant returned to the outpatient Burn Clinic at Swedish Medical Center for additional treatment of his chemical burns. Claimant was initially evaluated Dr. Pulikkottil. Claimant was diagnosed as suffering from "7% total body surface area 2nd degree burns to his bilateral lower extremities due to chemicals from cement while at work." Claimant was admitted to the burn unit because it was a chemical burn that required operative management which included skin grafts.

41. On June 1, 2017, Claimant underwent surgery for his chemical burns. On June 2, 2017, Claimant was discharged. At the time of discharge, the degree of Claimant's burns was changed. Although Claimant was still diagnosed with burn injuries to 7% of his body, it was determined after surgery that 4% of his total body surface area suffered 3rd degree burns. Clmnt. Ex. 3.

42. After the first surgery was performed by Dr. Pulikkottil on June 1, 2017, Claimant returned to Dr. Pulikkottil for additional treatment. Clmnt. Ex. 3.

43. On June 21, 2017, Claimant underwent additional surgery, by Pulikkottil, for his chemical burns since some of the wounds were not healing. Clmnt. Ex. 3.

44. Claimant's chemical burns have required several skin grafts and laser treatments to treat his burns and extensive scarring. Claimant selected Dr. Pulikkottil to treat his burns and scarring. See Hearing Transcript pgs. 29-30; Clmnt. Ex. 3, Bates 10-149 and Ex. 6, Bates 161-69.

45. Claimant's chemical burns physically precluded him from performing his regular job duties for Employer as of May 26, 2017.

46. Claimant's injuries physically prevented him from returning to his usual job, and as a result, Claimant left his employment and has not returned to his employment.

47. As of December 20, 2017, the day of the hearing, Claimant has not returned to work, and has not be able to perform his regular job duties, due to his chemical burns and treatment.

48. Claimant experiences continuous itching and an absolute failure to perspire where he was burned, forcing Claimant to use lotions and other topical creams.

Claimant's injuries have also resulted in significant scarring. See Hearing Transcript pg. 30 lns. 2-10; Clmnt. Ex. 6, Bates 161-69.

49. Claimant has not been released back to work by his physicians to his knowledge and he has not performed any work since May 25, 2017, for income. See Hearing Transcript pg. 30 lns. 11-22.

50. Claimant has not been seeking work due to the need for ongoing treatment, including surgeries. See Hearing Transcript pg. 50 lns. 23-25, pg. 51 lns. 1-4.

51. Claimant never told Tice Electric he would not be returning to work. See Hearing Transcript pg. 50; lns. 7-16.

52. Since the accident, and Claimant was taken away by an ambulance, Employer and Claimant have not communicated with each other regarding the extent of Claimant's injuries, return to work matters, or other employment matters. The only matter Employer and Claimant communicated about after the accident was the return of a car Claimant was using which belonged to Employer.

53. Employer never terminated Claimant from his employment and Claimant never quit his employment with Employer.

54. Claimant never received a list of approved physicians from Employer following his injury on May 25, 2017. See Clmnt. and Rspndt. Exhibits generally.

55. Claimant was paid $20.00 per hour. The number of hours Claimant worked each week varied.

56. Claimant earned $13,515.96 from January 1, 2017, to May 24, 2017. Claimant's average daily wage was $94.52, translating to an average weekly wage of $661.64 after multiplying the average daily wage by 7. See Clmnt. Ex. 7, Bates 170-78.

57. Claimant's testimony is found to be credible.

58. Chris Meister testified that he would assign job tasks to the employees each morning. He also testified that if he did not have enough work for his employees, which might happen 2-3 days a month, he would either let them know a day ahead of time, or let them know when they got to work. He also testified that if there was not enough work for his employees, but they showed up, he would typically pay them for four hours.

59. Chris Meister testified that Claimant was not working for Employer on May 24th or May 25th, of 2017.

60. Chris Meister testified that on May 23, 2017, they finished up a job and there was no work for Claimant on May 24, 2017. Chris Meister testified that when Claimant came into work on May 24, 2017, he told Claimant that he did not have any work for Claimant, but that he was welcome to work around the shop if he wanted. Chris Meister also testified that on May 24, 2017, he told Claimant and his son Nick Meister, that he did not have any work for either of them, and then Nick Meister asked Claimant whether he wanted to go to his house and help him with a project. He also testified that he saw Nick and Claimant drawing little sketches regarding the project. Chris Meister also testified that on May 25, 2017, the day of the accident, he did not see Claimant at Tice Electric at the beginning of the day because he had a meeting that morning with the director from Arby's and he was running parts out to another job and picked up some checks.

61. The ALJ does not find Chris Meister's testimony regarding the events of May 24 and May 25, 2017, which resulted in Claimant working on a concrete project to be credible for a number of reasons. First, if Employer had work for Claimant around the shop on May 24th, 2017, for which he would get paid, it does not make sense that Claimant would forego payable work, when he was having financial problems, to do an unpaid favor for Nick Meister. Second, Chis Meister contends he did not see Claimant the morning of May 25, 2017, the day of the accident. If Chris Meister did not see Claimant that morning, how did Claimant know what work he was supposed to do that day? As testified to by Claimant, and not refuted by Respondents, job assignments were handed out each morning by Chris Meister. It does not make sense that Claimant would volunteer to work with Nick Meister at his house on May 25, 2017, and leave the shop if Chris Meister had yet to show up at Tice Electric to provide work assignments for that day. Third, if Claimant was asked to volunteer and help Nick Meister with his patio, it seems like they would have arranged to do the work over a weekend and not during a normal work week.

62. Employer did not pay Claimant for the work he performed on May 24th or May 25, 2017.

63. Claimant testified that he considered Chris Meister and Nick Meister to be his supervisors. Respondents did not dispute such testimony. The ALJ finds that both Nick Meister and Chris Meister had supervisory authority over Claimant.

64. Claimant was directed by his Employer, Chris Meister, to work on Nick Meister's patio, by performing concrete work, on May 24 and May 25, 2017.

65. Claimant was injured within the course and scope of his employment with Employer.

66. Claimant required medical treatment on May 25, 2017, due to his work injury.

67. Claimant's injuries have precluded him from performing his regular job duties since May 26, 2017.

68. Employer had notice of Claimant's work related injury and need for medical treatment on May 25, 2017, and Employer has never provided Claimant a list of designated medical providers to treat his chemical burns.

69. Claimant selected Dr. Pulikkottil to treat his chemical burns.

70. Claimant's average weekly wage is $661.64.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

GENERAL PROVISIONS

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979); *People v. M.A*., 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2007).

I. Whether Claimant established, by a preponderance of the evidence, his injuries arose out of and in the course and scope of his employment.

Claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. Employer has the "power to enlarge the scope of employment." *See Dover Elevator Co. v. Industrial Claim Appeals Office*, 961 P.2d 1141, 1143 (Colo. App. 1998). The question of whether Claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The ALJ has credited Claimant's testimony. As found, Claimant showed up at work each day to get his daily work assignment and was directed by Employer to perform concrete work at the house of Nick Meister on May 24 and May 25, 2017, as part of his employment. While performing the concrete work, Claimant suffered severe chemical burns to his legs.

Respondents contend that Claimant was performing the concrete work as a favor. However, the ALJ rejects such contention. As found, Claimant went to work on May 24 and May 25, 2017 and was directed by Employer – Chris Meister – on each day to work with Nick Meister. Claimant was then driven by Nick Meister to Nick's residence to perform concrete work. Claimant was never asked to perform the concrete work as a favor and Claimant never said he would perform the work as a favor.

Respondents also contend that the fact Employer did not pay Claimant for working on May 24 and May 25, 2017, supports their contention that Claimant was performing the concrete work as a favor and not as an Employee. However, the ALJ does not find this fact to be dispositive. Claimant credibly testified that he went to work on May 24 and May 25, 2017, with the intention of working for Employer and getting paid for his work. Claimant also credibly testified that upon arriving at work on each day he was directed by Employer – Chris Meister - to work with Nick Meister on those days and he did. Employer's failure to pay Claimant for work performed at the direction of Employer cannot be used to divest Employer's liability for a work related injury.

Respondents also contend that the fact that Claimant did not turn in a time-slip on May 24 and May 25, 2017 establishes that he was doing the work as a favor. Again, the ALJ does not find this fact to be persuasive or dispositive. As found, Claimant did not always turn in his time sheets. As testified to by Claimant, which the ALJ credits, he did not always turn in a time sheet for each day he worked because Chris Meister knew where he was and what he was working on. And, Claimant could not turn in his timesheet on May 25, 2017, because he was taken by ambulance to the hospital for his severe chemical burns.

Respondents also contend that because Claimant was hired as an apprentice electrician and handyman, that his performance of concrete work was beyond the course and scope of his employment. The ALJ also rejects this contention. The Employer has the "power to enlarge the scope of employment." *See Dover Elevator Co. v. Industrial Claim Appeals Office*, 961 P.2d 1141, 1143 (Colo. App. 1998). In this case, Claimant was specifically directed by Employer to perform concrete work. In addition, Claimant's work was not limited to electrical work. During his Employment with Employer, Claimant did electrical work, general handyman work, and other tasks at the direction of Employer such as building out the bathroom at the shop and attending car auctions.

Therefore, the ALJ concludes that Claimant has established by a preponderance of the evidence that he suffered a compensable injury within the course and scope of his employment on May 25, 2017.

II. Whether Claimant established, by a preponderance of the evidence, he is entitled to reasonable, necessary, and related medical treatment.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

As found, Claimant suffered severe chemical burns within the course and scope of his employment. As found, the chemical burns required medical treatment.
Claimant was taken by ambulance to Swedish Hospital and was treated in their burn unit. Claimant was also treated at the outpatient burn unit at Swedish hospital.

Therefore, the ALJ concludes Claimant has established by a preponderance of the evidence that he is entitled to reasonable and necessary medical treatment to cure and relieve the effects of his industrial chemical burns.

III. Whether Claimant established, by a preponderance of the evidence, the right to select a physician passed to Claimant and he is entitled to select a physician of his choice.

Section 8-43-404(5)(a)(I)(A), provides that:

> "In all cases of injury, the employer or insurer shall provide a list of at least four physicians or four corporate medical providers or at least two physicians and two corporate medical providers, where available, in the first instance, from which list an injured employee may select the physician who attends said injured employee."

The statute further provides that if "the services of a physician are not tendered at the time of injury, the employee shall have the right to select a physician or chiropractor."

This statute affords Employer the right to designate at least four physicians and/or corporate providers that are deemed authorized to provide medical treatment. Employer's right to designate the authorized providers may be lost and the right of selection passed to Claimant if medical services are not tendered "at the time of injury." *See Rogers v. Industrial Claim Appeals Office,* 746 P.2d 565 (Colo. App. 1987).

WCRP 8-2(A), provides a framework for providing the required list of physicians within 7 business days from when the Employer has notice of the injury and similarly states that "[w]hen an employer has notice of an on the job injury, the employer or insurer shall provide the injured worker with a written list .... " WCRP 8-2(D) further provides that if the employer fails to comply with this Rule 8-2, the injured worker may select an authorized treating physician of the workers' choosing.

However, once the ATP is "selected" Claimant may not change physicians or employ additional providers without obtaining permission from the Insurer or exercising a right granted by statute. This is true because § 8-43-404(5)(a)(I)(A) still gives Employer the initial right to designate the authorized provider, and Respondents still remain interested in the selection of the ATP since they are liable to pay for the medical treatment. *See Yeck v. Industrial Claim Appeals Office,* 996 P.2d 228 (Colo. App. 1999); *Yale v. Engineered Plastic Designs*, WC 4-643-303 (ICAO April 3, 2006).

As found, Employer had notice of the injury and Claimant's need for medical treatment on May 25, 2017, when Claimant suffered his chemical burns and was taken away by an ambulance – which was called by Nick Meister – who was also found to be a supervisor of Claimant. As found, Chris Meister also learned about Claimant's injury and need for treatment the same day since he was at Chris Meister's house until 3:00 a.m. the following morning. Employer never designated a physician to treat Claimant's work injury pursuant to §8-43-404(5)(a)(I)(A) or WCRP 8-2. Therefore, the ALJ concludes the right of selection passed to Claimant.

On the date of the accident, Claimant was taken to Swedish Hospital by ambulance. Claimant was released the same day and told to return to the outpatient burn clinic. On May 31, 2017, Claimant returned to the outpatient burn clinic and started treating with Dr. Pulikkottil. Since returning to the outpatient burn clinic on May 31, 2017, Claimant has continued to treat with Dr. Pulikkottil for his chemical burns. For example, Dr. Pulikkottil performed surgery on Claimant on June 1, 2017, as well as subsequent procedures. Therefore, the ALJ concludes that the right of selection passed to Claimant and Claimant selected Dr. Pulikkottil to treat his work injury.

IV. Whether Claimant is entitled to temporary total disability benefits.

Initial Entitlement to TTD

To prove entitlement to TTD benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

The existence of disability presents a question of fact for the ALJ. There is no requirement that Claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

As found, Claimant's chemical burns and need for treatment precluded Claimant from performing his regular job duties as an apprentice electrician and handyman. Although specific work restrictions were not issued by a treating physician, the ALJ concludes that Claimant's testimony, combined with the medical records and the exhibits showing the extent of his medical treatment and severity of his burns, establishes by a preponderance of the evidence that his injuries prevented Claimant from performing his regular job duties for more than three work shifts, starting May 26, 2017. Therefore, the ALJ concludes that Claimant has established by a preponderance of the evidence that he is entitled to temporary total disability benefits.

Is Claimant responsible for his termination

Respondents contend Claimant is not entitled to temporary disability benefits because he allegedly abandoned his job after the accident.

Section 8-42-103(1)(g), C.R.S., and § 8-42-105(4)(a), C.R.S., provide that if a temporarily disabled employee "is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." Because these statutes provide a defense to an otherwise valid claim for TTD benefits, Respondents shoulder the burden of proof by a preponderance of the evidence to establish each

element of the defense. *Gilmore v. Industrial Claim Appeals Office,* 187 P.3d 1129 (Colo. App. 2008); *Brinsfield v. Excel Corp.,* W.C. No. 4-551-844 (ICAO July 18, 2003). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002), the court held the term "responsible" as used in the termination statutes reintroduces the concept of fault as it was understood prior to the Supreme Court's decision in *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Consequently, the concept of fault used in the unemployment insurance context is instructive. Fault requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.,* 902 P.2d 414 (Colo. App. 1994), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995); *Brinsfield v. Excel Corp., supra.*

Violation of an employer's policy does not necessarily establish Claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. 1987). However, Claimant may act volitionally if he is aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office, supra*. This is true even if Claimant is not specifically warned that failure to comply with Employer's expectations may result in termination. *See Pabst v. Industrial Claim Appeals Office,* 833 P.2d 64 (Colo. App. 1992). Ultimately, the question of whether Claimant was responsible for the termination is one of fact for determination by the ALJ. *Gilmore v. Industrial Claim Appeals Office, supra.*

If Claimant leaves work because of an inability to perform the duties of the job, Claimant is not responsible for the subsequent job separation. For example, in *Bonney v. Pueblo Youth Service Bureau*, W.C. No. 4-485-720 (ICAO April 24, 2002), an ALJ found an industrial injury physically prevented Claimant from returning to her usual job, and as a result Claimant left the employment. In that case, it was held that Claimant is not "responsible" for quitting employment which the injury prevents the claimant from performing. *See also Windom v. Lawrence Construction Co.*, W.C. No. 4-487-966 (ICAO November 1, 2002); *Holsonback v. Brand Scaffold Builders*, W.C. No. 4-724-509 (ICAO June 12, 2008). This is true because the very purpose of temporary disability benefits is to compensate for a temporary loss of wages which occurs when Claimant is physically unable to perform the pre-injury employment. *Schlage Lock v. Lahr*, 870 P.2d 615 (Colo. App. 1993).

In this case, Claimant left work after the May 25, 2017, accident because his chemical burns prevented him from performing his regular job duties. Since the accident, Claimant has not returned to work. There was no credible testimony presented by Employer that Claimant was terminated from employment. Therefore, there was no finding that Claimant was terminated from employment. There was testimony that neither Employer nor Claimant have spoken about work matters since the accident and Claimant has not returned to work. There was testimony that

communication between the parties since the accident involved Claimant returning a car that belonged to Employer. The fact that neither Employer nor Claimant have talked to each other since the accident regarding return to work issues and Claimant has not returned to work does not rise to the level of Claimant being responsible for the termination of his employment and a bar to disability benefits. Respondents did not put forth any credible testimony establishing Claimant violated a company rule or policy by not contacting Employer to discuss return to work matters, or other employment matters, and such conduct resulted in his termination from employment. As found, Claimant left work due to his injury and inability to perform his regular job duties. Therefore, the ALJ concludes that Respondents have failed to establish by a preponderance of the evidence that Claimant is responsible for the termination of his employment.

V. Claimant's average weekly wage.

Section 8-42-102(2), C.R.S., requires the ALJ to calculate Claimant's AWW based on the earnings at the time of injury as measured by Claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating the AWW. However, if for any reason the ALJ determines the default method will not fairly calculate the AWW § 8-42-102(3), C.R.S., affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. Section 8-42-102(3) establishes the so-called "discretionary exception." *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

Claimant was paid $20.00 per hour. However, the number of hours Claimant worked each week varied. Therefore, the ALJ concludes that in order to fairly determine Claimant's average weekly wage, Claimant's total earnings for 2017 will be divided by the number of weeks he worked that year.

Claimant earned $13,515.96 from January 1, 2017, to May 24, 2017. Claimant's average daily wage was $94.52, translating to an average weekly wage of $661.64 after multiplying the average daily wage by 7. See Clmnt. Ex. 7, Bates 170-78. Therefore, the ALJ concludes that Claimant's average weekly wage is $661.64.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable injury on May 25, 2017, while working for Employer.

2. Respondents shall provide Claimant reasonable, necessary, and related medical treatment to treat his work injury.

3. The right to select a treating physician passed to Claimant and Claimant selected Dr. Pulikkottil. Therefore, Dr. Pulikkottil is an authorized treating physician.

4. Claimant's average weekly wage is $661.64.

5. Respondents shall pay Claimant temporary total disability benefits starting May 26, 2017, until terminated by law. Claimants' temporary total disability benefits shall be paid based upon an average weekly wage of $661.64.

6. Respondents shall pay Claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

7. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 23, 2018

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Was Claimant an employee of either Respondent Carlos Hernandez or Respondent Matute on the date of injury; and

2. What is Claimant's average weekly wage (AWW).

FINDINGS OF FACT

1. Claimant is a 35 year old male who sustained admitted injuries on September 29, 2016, after falling from a ladder on the fourth day of a job scheduled for five days where he was sanding and painting a house in Golden, Colorado (the Golden residence).

2. Claimant has worked for different painting companies, including Davis Painting, which is owned by Freddie Hernandez who is Claimant's brother. Freddie Hernandez also works for Respondent Carlos Hernandez from time to time, and was doing so the week of September 26, 2016. Claimant also worked for Respondent Carlos Hernandez previously in 2013 and 2014. Respondent Carlos Hernandez is owned by another of Claimant's brothers, Carlos Hernandez. Carlos Hernandez has denied liability for this claim and contends that Claimant was not working for Respondent Carlos Hernandez on the date of the injury. It is undisputed that Respondent Carlos Hernandez was insured by Pinnacol Assurance on the date of Claimant's injury. The WC claim against Respondent Carlos Hernandez is designated as Pinnacol Assurance No. 3874469.

3. Wilder Hernandez is an employee of Respondent Carlos Hernandez and is the son of Carlos Hernandez, the owner of Respondent Carlos Hernandez. Wilder is Claimant's nephew. Wilder Hernandez was working as a painter at the Golden residence with Claimant on the date of the injury. Wilder does not own an interest in Respondent Carlos Hernandez. Wilder does not own a painting business or any business.

4. Jarvis Matute owns Respondent Matute and is also insured by Pinnacol Assurance. The WC claim against Respondent Matute is designated as Pinnacol No. 3864038. Respondent Matute is not now and has never been in the painting business. Respondent Matute has no employees and does not hire laborers.

5. The consolidated claims against Respondent Matute and Respondent Carlos Hernandez are designated as WC No. 5-027-793.

6. Jarvis Matute responded to a call from the pastor of a church (the Church) that he and the Hernandez family, including Carlos, Wilder and Eden Hernandez, also

attended. The Pastor called upon the congregation to help the Hernandez family by using Hernandez Painting for all of their painting needs.

7. On more than one occasion in 2016 at the Church, Jarvis Matute and Carlos Hernandez discussed the Golden residence sanding and painting job. Jarvis Matute also mentioned that he may have other work for Respondent Carlos Hernandez to paint some apartments. During a church picnic in June 2016, Jarvis Matute told the Pastor that he found work for the Hernandez family and Matute was focused mainly on Carlos Hernandez.

8. In May 2016, Carlos Hernandez, owner of Respondent Carlos Hernandez, entered into and signed a contract with Jarvis Matute, owner of Respondent Matute to perform sanding and painting services at the Golden residence. Carlos Hernandez also provided Jarvis Matute with a certificate of insurance listing Respondent Carlos Hernandez as the insured and Respondent Matute as the Certificate Holder and a W-9 taxpayer identification number for Respondent Carlos Hernandez. The ALJ accepts the testimony of Respondent Matute that he sub-contracted the work to Respondent Carlos Hernandez pursuant to a contract signed by Carlos Hernandez.

9. Wilder Hernandez and Claimant arrived at the Golden residence job site on September 26, 2016, in a Carlos Hernandez Painting company truck to begin the job. Wilder took Claimant to and from the Golden residence job site in the Carlos Hernandez Painting company truck on September 26, 27, and 28. Wilder also drove Claimant to the job site in the company truck on September 29th, the date of Claimant's injury.

10. Claimant and Wilder Hernandez used tools and equipment owned by Respondent Carlos Hernandez or Freddie Hernandez in the course and scope of their painting job at the Golden residence. Claimant and Wilder Hernandez used ladders, rollers, an extension cord and a machine that throws paper down used like a drop cloth, from Hernandez Painting, as well as a paint spray machine and a sanding machine owned by Freddie Hernandez who was working at the time with Carlos Hernandez on another paint job.

11. Based upon the totality of the evidence and the testimony of all witnesses, the Judge finds that Claimant was not an employee of Respondent Matute on the date of injury or any other time.

12. Based upon the totality of the evidence and the testimony of all witnesses, the Judge finds that Claimant was an employee of Respondent Carlos Hernandez on the date of injury.

13. On September 29, 2016, Claimant was injured in the course and scope of his employment for Respondent Carlos Hernandez.

14. Carlos Hernandez denies signing the May 31, 2016, contract between Respondent Carlos Hernandez and Respondent Matute. Charla Janney was accepted as a handwriting expert. Ms. Janney ruled out Jarvis Matute as forging Carlos

Hernandez' name on the contract but did not rule out Carlos Hernandez as the signer. Ms. Janney found it is probable that the signature on the contract is Carlos Hernandez'. The Judge accepts the opinion of Ms. Janney as credible and persuasive. The Judge rejects the testimony of Carlos Hernandez. No persuasive evidence was provided to support Carlos Hernandez' claim that the signature on the contract was not his.

15. On the date of injury and at all times that Claimant worked on the Golden residence job, the Judge finds that Claimant was an employee of Respondent Carlos Hernandez and Respondent Carlos Hernandez was Claimant's employer for all work on the Golden residence job the week of September 26, 2016, including the date of Claimant's injury. Respondent Carlos Hernandez was the insured subcontractor for all sanding and painting services for the Golden residence during the week of September 26, 2016, and including Claimant's date of injury. Wilder Hernandez and Claimant were the two employees of Respondent Carlos Hernandez that its owner, Carlos Hernandez, provided to perform the essential functions of the contract between Hernandez Painting and Jarvis Matute Construction signed by Carlos Hernandez and Jarvis Matute to perform services at the Golden residence.

16. The Judge rejects the testimony of Carlos Hernandez, Wilder Hernandez, and Edin Hernandez as not credible or persuasive.

17. The Judge accepts the testimony of Jarvis Matute, Pastor Bustamante, and Ms. Charla Janney as credible and persuasive.

18. The Judge finds and concludes that Claimant's AWW is based upon Claimant's 2016 earnings. Claimant's 2016 1099 federal tax form reflects earnings in 2016 of $41,400. Claimant worked through the end of September, approximately nine months in 2016; therefore the ALJ finds that Claimant's average weekly wage is $1,150.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Act, Sections 8-40-101, C.R.S., *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

2. A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ need not address every piece of evidence

or every inference that might lead to conflicting conclusions. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P. 3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of a witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he or she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. Section 8-41-301(1) (c), C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp*., 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for the determination of the Judge. *Faulkner*, 12 P.3d. at 846.

Who is Claimant's Employer

5. Contracts are formed once an offer is made, accepted, and a mutual exchange occurs or is promised. *Denver Truck Exchange v. Perryman*, 134 Colo. 586, 307 P.2d 805 (1957). Acceptance is a statement of agreement to the offer which may be exhibited by promising to perform the terms of the offer or actually beginning to perform the obligations of the offer. *Indus. Prod. Int'l, Inc. v. Emo Trans, Inc.*, 962 P.2d 983, 988 (Colo. App. 1997).

6. As found, Carlos Hernandez, owner of Respondent Carlos Hernandez entered into and signed a contract with Jarvis Matute, owner of Respondent Matute, to perform sanding/painting services at the Golden residence. As found, Respondent Matute sub-contracted all painting and sanding work for the Golden residence to Respondent Carlos Hernandez for the week of September 26, 2016, including Claimant's date of injury, September 29, 2016.

7. Section 8-40-202(1), C.R.S. of the Act defines an "employee" to include every person under any contract of hire, express or implied. Section 8-40-203(b) defines "employer" to include every person, association of persons, firm and private corporation, who has one or more persons engaged in the same business or employment. As found, Respondent Carlos Hernandez was subcontractor to perform all painting and sanding work at the Golden residence. As found, Claimant was an employee of Respondent Carlos Hernandez on September 29, 2016. As found, Claimant was in the course and scope of his employment for Respondent Carlos Hernandez when he was injured.

8. Because Respondent Carlos Hernandez was Claimant's employer, insured by Pinnacol Assurance on the date of Claimant's injury and Claimant was an employee of Respondent Carlos Hernandez on the date of injury, the concepts of statutory employer for an uninsured employers do not apply to this claim.

9. Pursuant to Section 8-42-102(2)(e), C.R.S. of the Act: "Where the employee is paid on a piecework, tonnage, commission, or basis other than a monthly, weekly, daily, or hourly wage AND where the employment is but casual and in the usual course of the trade, business, profession, or occupation of this employer, the total amount earned by the injured employee in the twelve months preceding the injury shall be computed and divided by the number of pay periods for which they were employed for the year preceding the injury. The Judge finds and concludes that Claimant's AWW is based upon Claimant's 2016 earnings. Claimant's 2016 1099 federal tax form reflects earnings in 2016 of $41,400. Claimant worked through the end of September. So $41,400 divided by nine months computes to an average weekly wage of $1,150.

ORDER

It is therefore ordered that:

1. The claim against Respondent Matute and Respondent Pinnacol Assurance is hereby DENIED AND DISMISSED.

2. Claimant was in the course and scope of his employment with Respondent Carlos Hernandez when he was injured.

3. Claimant's average weekly wage is $1,150.

4. Respondent Carlos Hernandez shall pay statutory interest at the rate of eight percent (8%) per annum on all amounts due and not paid when due.

5. Any and all issues not determined herein are reserved for future decision.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: 1-29-18

/s/ Margot W. Jones
Margot W. Jones, Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The following issues were raised for consideration at hearing:

a. Whether Claimant proved by a preponderance of the evidence that she sustained a work-related industrial injury and/or aggravation of a preexisting condition on February 25, 2017;

b. Whether Claimant's lower back and left hip injuries are compensable under this claim as a direct and natural consequence of the February 25, 2017, right knee injury;

c. Whether Claimant proved by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical benefits for her right knee, low back and left hip injuries;

d. Whether Claimant established by a preponderance of the evidence that she is entitled to receive Temporary Total Disability (TTD) benefits for the period of April 30, 2017, to October 16, 2017; and

e. What is Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

1. Claimant is 54 years old and has worked for Employer as a Customer Service Agent since December 1, 2014. Each day at work as a Customer Service Agent, Claimant is assigned a position at either the ticket counter, the gate or at the baggage service office, and she works that assignment for her entire shift.

2. As a part of her work-related duties at the ticket counter, Claimant normally weighs customers' bags, checks their identification and then lifts their bags onto a bag belt. Customer Service Agents for the Employer are taught proper bag lifting techniques, which requires squatting to complete each lifting motion. Each time Claimant moves a bag, she squats down, lifts the bag and then takes one to two steps before placing the bag on the bag belt. Claimant estimated that in a normal shift at the ticket counter she lifts at least 300 bags weighing 40 to 50 pounds each.

3. Claimant was assigned to work at the ticket counter from 7:00 a.m. to 3:30 p.m. on February 25, 2017. The morning of February 25, 2017, was not a typical morning at the ticket counter, because the bag belt malfunctioned and could not be used. The bag belt is a conveyor belt. Instead of simply lifting each bag once to put it onto the bag belt, she had to move each customer's bag twice, once to a staging area and then later onto the repaired bag belt.

4. At approximately 10:00 a.m. on the morning of February 25, 2017, Claimant's right knee became painful. Claimant was able to work through the pain, but by the end of her shift at 3:30 p.m., Claimant's knee was extremely painful and swollen. Claimant did not report her symptoms to a supervisor at that time. It is common for Claimant to have aches and pains after working a busy day at the ticket counter, so she went home with the hope that her knee pain and swelling would resolve on its own. Claimant spent the evening resting and icing her knee.

5. Claimant's knee did not improve with rest and ice. Therefore, when she reported to work for her next regularly scheduled shift on February 27, 2017, Claimant formally reported her injury to Customer Service Supervisor Brandy Barr. The Occupational Injury Report completed by Ms. Barr lists "carrying/lifting" as the cause of Claimant's injury, and goes on to state as follows:

> [Claimant] cannot remember a specific action that caused the injury however about half way into the shift she began to feel pain in her knee in which she states she felt like she must have twisted or strained it in some way. [Claimant] gave it the weekend to see if it was still feeling the same and as of now it is still painful and she is now reporting the injury …

6. Claimant injured her knee while squatting down to lift a heavy bag at work on February 25, 2017, but she cannot pinpoint an exact moment when the injury occurred. Claimant also reported the same mechanism of injury to each of the medical providers she has seen in this case. On February 25, 2017, Claimant had a busy day at the airport and that she had already serviced 60 to 70 customers by the time her knee became painful around 10:00 a.m.

7. Before February 25, 2017, Claimant had never experienced pain or swelling in her right knee, and she had never gone to a physician for treatment relating to her right knee. In fact, Claimant's insurance records reflect that December 1, 2014, to February 25, 2017, Claimant had only been to a physician on one occasion, and that was for a sinus infection.

8. After reporting her injury to Employer, Claimant established care with Martin Kalevik, D.O. of HealthONE Occupational Medicine and Rehabilitation. Dr. Kalevik sent Claimant for MRI imaging of the knee on March 10, 2017, and then ultimately referred Claimant to Rajesh Bazaz, M.D., an orthopedic surgeon with Western Orthopedics. Dr. Bazaz met with Claimant and evaluated Claimant's knee on six occasions, and also provided expert testimony in this case.

9. Dr. Bazaz diagnosed Claimant with arthritis of the right knee. Dr. Bazaz credibly opined that twisting the knee or squatting up and down to lift heavy items could suddenly aggravate previously asymptomatic arthritis.

10. Dr. Bazaz opined that it is impossible to tell what caused Claimant's arthritis or how long it has been present in Claimant's right knee. However, Dr. Bazaz further opined that Claimant sustained an aggravation of her preexisting arthritis on February 25, 2017, while squatting down and lifting baggage at work. Dr. Bazaz opined that the timing of the onset of Claimant's symptoms was relevant. Also relevant to Dr. Bazaz was the fact that prior to lifting bags all day at work on February 25, 2017, Claimant had never previously suffered from issues associated with her right knee.

11. Dr. Bazaz recommended non-operative treatment for Claimant's right knee condition, including a steroid injection, a lubricant injection, and physical therapy. Claimant underwent these treatments, and her knee is now approximately 50% improved. While she has not been able to return to doing all of her hobbies, Claimant reports that the treatment she has received for her knee has allowed her to return to work in a full-time capacity performing her normal job duties.

12. Claimant underwent a medical examination with Timothy O'Brien, M.D. on July 14, 2017, and Dr. O'Brien issued a report of the same date. Dr. O'Brien agreed with much of Dr. Bazaz's opinions. Dr. O'Brien opined that Claimant had arthritis in the knee that preexisted the February 25, 2017 incident and Dr. O'Brien agrees that arthritis in the knee can be completely asymptomatic and then suddenly become symptomatic due to an aggravation. Dr. O'Brien opined that spending an entire day lifting 30 to 40 pound pieces of luggage could aggravate preexisting arthritis. However, Dr. O'Brien would not agree that spending a day lifting luggage weighing 30 to 40 pounds did aggravate Claimant's preexisting arthritis in the right knee. However, Dr. O'Brien concluded that Claimant's sudden onset of symptoms in the right knee on February 25, 2017, was due to her "personal health."

13. In June of 2017, Claimant developed pain in the left hip and lower back and was referred to Samuel Chan, M.D. for evaluation. After completing an examination of Claimant, Dr. Chan opined that Claimant suffered from "compensatory symptoms" of the left lumbar spine and hip area. Dr. Chan recommended and performed an SI injection under fluoroscopic guidance for Claimant's lower back, and also recommended chiropractic treatment. With respect to the hip, Dr. Chan obtained MRI imaging and then determined that Claimant was suffering from an exacerbation/aggravation of preexisting arthritis.

14. Dr. O'Brien opined regarding Claimant's lower back and hip symptoms concluding Claimant's symptoms were a manifestation of Claimant's personal health and were not in any way related to Claimant's work on February 25, 2017 or right knee symptoms.

15. Claimant credibly testified at hearing that prior to June of 2017 she had never suffered from lower back or left hip symptoms. Claimant testified that since beginning treatment for her hip and lower back, those conditions have improved by approximately 60%.

16. Martin Kalevik, D.O. assigned work restrictions for Claimant beginning on March 2, 2017. Employer was not able to accommodate those restrictions between April 30, 2017, and October 16, 2017, and Claimant lost wages from Employer during that period.

17. Prior to her injury, Claimant worked for Employer approximately 40 hours per week and was paid at a rate of $14.58 per hour. Between February 16, 2016, and February 15, 2017, Claimant earned a total of $25,733.40. This equates to a daily rate of pay of $70.31 and an average weekly wage of $492.17 ($25,733.40/366 Days = $70.31; $70.31 x 7 = $492.17).

18. Claimant also works as a golf professional and owns her own company, Lana Ortega Golf, since 2006. Claimant has not sustained any wage loss with respect to Lana Ortega Golf. Claimant discussed her work for Lana Ortega Golf with her medical providers in this case, and they approved her continued work.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the "Workers' Compensation Act of Colorado" (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might

lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability – Claimant's Right Knee

4. A claimant bears the burden of proving by a preponderance of the evidence that an injury occurred within the course of, and arose out of, employment with the employer. Section 8-41- 301(1), C.R.S.; *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury or condition is in the course of employment if it occurred within the time and place limits of employment and during an activity that has some connection with the employee's job-related functions. *Wild West Radio, Inc. v. Industrial Claim Appeals Office*, 905 P.2d 6 (Colo. App. 1995). An injury or condition arises out of employment if "there is a causal connection between the duties of employment and the injuries suffered." *Deterts v.Times Pub. Co*., 38 Colo. App. 48, 552 P.2d 1033 (1976).

5. The mere existence of a pre-existing condition does not prevent an injury from "arising out of" an injured worker's employment. If an industrial injury aggravates, accelerates, or combines with a preexisting condition so as to produce disability and a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997.

6. In this case, the credible and persuasive evidence presented at hearing established that Claimant had arthritis of the right knee that preexisted her February 25, 2017, injury. Claimant's arthritis constituted a preexisting condition. Further, the evidence established that Claimant's work for Employer on February 25, 2017, aggravated her preexisting condition of arthritis and caused the sudden need for medical attention. Prior to February 25, 2017, Claimant had never had a problem with her right knee. Then, suddenly, after an especially strenuous morning at work filled with squatting and lifting 40 to 50-pound pieces of luggage, Claimant's knee became swollen and painful. Dr. Bazaz's medical records and testimony offers the most probable explanation for Claimant's sudden onset of symptoms on February 25, 2017. Claimant's onset of symptoms was caused by her work. Dr. O'Brien's disagreement with this conclusion was not deemed credible. Accordingly it is concluded that Claimant's injury was precipitated by her work for Employer on February 25, 2017, when she was squatting down and lifting 300 or more bags weighing 40 to 50-pounds in an eight-hour shift.

Causation – Claimant's Lower Back & Left Hip

7. In Colorado, an employer is liable for the natural consequences of a work injury or the treatment obtained because of the work injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970). In this case, substantial evidence established that Claimant's altered gait caused by her right knee injury led to pain in her lower back and left hip. Dr. Chan, M.D. credibly opined that Claimant's symptoms are a "compensatory" injury related to her right knee. Also, Claimant credibly testified that prior to the onset of her right knee symptoms she had never experienced any pain or symptoms in her lower back or left hip. For these reasons, Claimant's lower back and left hip symptoms are deemed to be causally related to the compensable February 25, 2017, right knee injury.

Medical Benefits

8. A claimant is entitled to authorized medical treatment that is related and reasonably necessary to cure and relieve the effects of the injury. Section 8-42-101(1)(a), C.R.S.; *Yeck v. Industrial Claims Appeals Office*, 996 P.2d 228 (Colo.App. 1999). A claimant bears the burden to prove by a preponderance of the evidence the causal relationship between the work-related injury and the condition for which treatment is sought. *Snyder v. Industrial Claims Appeals Office,* 942 P.2d 1337 (Colo.App. 1997).

9. An employer is responsible for medical treatment when, in the normal progression of treatment, an authorized treating physician refers the claimant to other providers for additional treatment. *Greager v. Industrial Commission*, 701 P.2d 168 (Colo.App. 1985). If a claimant seeks treatment outside the chain of authorized providers, respondents are not required to pay for it. Section 8-43-404(7), C.R.S.; *Yeck v. Industrial Claims Appeals Office, supra.*

10. As found, Claimant has proven by a preponderance of the evidence that she sustained a compensable right knee injury on February 25, 2017, that ultimately led to pain in her lower back and left hip. Claimant is therefore entitled to receive reasonable, necessary and casually related medical benefits for her right knee, lower back, and left hip injuries.

11. The medical treatment Claimant received through HealthONE Occupational Medicine and Rehabilitation, Health Images, Western Orthopedics, Colorado Occupational Medical Partners, Inc., Mile High Sports & Rehabilitation, and Injury Care Associates is found to be reasonable, necessary, and related to Claimant's compensable claim.

Temporary Disability Benefits

12. To prove entitlement to temporary total disability benefits, a claimant must prove the industrial injury caused a "disability." Section 8-42-103(1), C.R.S.; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability" connotes two

elements. The first is “medical incapacity,” which is evidenced by loss or impairment of bodily function. The second is temporary loss of earning capacity, which is evidenced by the claimant’s inability to perform his pre-injury full duty job. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Temporary disability benefits continue until the occurrence of one of the four terminating events specified in Section 8-42-105(3), C.R.S. *PDM Molding, Inc. v. Stanberg, supra*.

13. Claimant’s February 25, 2017 injury/aggravation caused functional limitation and restriction the prohibited her from completing her full, regular duty job for Employer. This is reflected by the restrictions assigned by Dr. Kalevik. Claimant’s functional limitations and restrictions interfered with her ability to work for Employer. As a result, Claimant testified that she lost wages between April 30, 2017, and October 16, 2017. Claimant has established by a preponderance of the evidence that she is entitled to temporary total disability benefits for that period.

Average Weekly Wage

14. The average weekly wage of an injured employee shall be taken as the basis upon which to compute compensation payments. Section 8-42-102(2), C.R.S. normally requires a judge to determine a claimant’s average weekly wage based on her earnings at the time of injury. A judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of the injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, Section 8-42-102(3), C.R.S. authorizes a judge to exercise discretionary authority to calculate an average weekly wage in another manner if the prescribed methods will not fairly calculate the average weekly wage based on the particular circumstances of the case. *Campbell v. IBM Corp*., 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating an average weekly wage is to arrive at a fair approximation of a claimant’s wage loss and diminished earning capacity*. Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240- 475 (ICAO May 7, 1997).

15. As found, a calculation based on the relevant period of September 16, 2016, through February 15, 2017, results in an AWW of $492.17. This constitutes a fair approximation of Claimant’s wage loss and diminished earning capacity.

ORDER

1. Claimant suffered a compensable work-related injury to her right knee on February 25, 2017.

2. Claimant’s lower back and left hip injuries are a natural consequence of her February 25, 2017, injury, and are therefore causally related to this compensable claim.

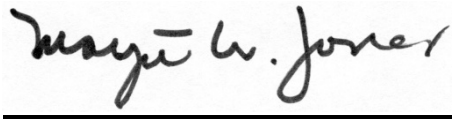
3. Respondents are financially responsible for all medical treatment that is reasonable, necessary and related to Claimant’s right knee, lower back, and left hip injuries. This includes treatment previously provided and treatment

recommended in the future to cure and relieve the effects of Claimant's compensable injuries.

4. Claimant shall receive TTD benefits for the period of April 30, 2017 to October 16, 2017.

5. Claimant's AWW is $492.17.

DATED: March 21, 2018



Margot W. Jones, Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Dr. Bennett Machanic is an authorized treating physician ("ATP").

II. Whether Dr. Machanic's referral to Dr. David Yamamoto exceeded the scope of referral by Dr. Lon Noel.

FINDINGS OF FACT

1. Claimant sustained an admitted industrial injury on February 6, 2017 while working for Employer as a physical therapist. The lid of Claimant's trunk unexpectedly came down while she was retrieving items from the trunk of her vehicle, striking Claimant's head and right shoulder.

2. Employer sent Claimant to Midtown Medical on February 7, 2017, where she presented to authorized treating physician ("ATP") Lon Noel, M.D. Dr. Noel diagnosed Claimant with a skull contusion/right shoulder contusion, cervical strain, and possible intermittent vertigo most likely secondary to vestibulitis. He recommended Claimant ice the area, take ibuprofen and/or Tylenol, and remain off of work until reevaluation.

3. Dr. Noel reevaluated Claimant on February 9, 2017 and diagnosed Claimant with a scalp contusion and acute neck injury superimposed on previously present neck pathology. Claimant was scheduled to undergo a cervical spine MRI.

4. On February 14, 2017, Claimant returned to Dr. Noel and complained of worsening symptoms. Dr. Noel noted Claimant brought in "some neurology notes from previous visits with Dr. Mechanic (*sic*)." Dr. Machanic had been treating Claimant since November 2016 for unrelated left arm and hand pain. Dr. Noel referred Claimant for a physiatry evaluation with Dr. Lesnak and a physical therapy assessment with South Valley Physical Therapy.

5. Dr. Noel reevaluated Claimant on February 20, 2017. Claimant reported tenderness and tightness in her right neck and on the right side of head. When working out feels pressure in her head. Dr. Noel noted, "She has been seen for her previous injuries by Physiotherapy Associates (Andy Free) and is also seeing Dr. Machanic (neurology) whose previous notes I have received and reviewed." In addition to the physiatry evaluation scheduled with Dr. Lesnak for February 27, 2017, Dr. Noel referred Claimant for a neurological evaluation with Dr. Machanic and "possible referral of therapy treatments to Physiotherapy Associates (Andy Free)."

6. Claimant presented to Dr. Machanic for evaluation on February 22, 2017. Among other things, Dr. Machanic recommended that Claimant undergo an ophthalmological consultation with her regular ophthalmologist, Dr. Stuart Lewis.

7. Claimant did not undergo the evaluation with Dr. Lesnak on February 27, 2017.

8. Dr. Noel reevaluated Claimant on February 27, 2017. Dr. Noel noted he reviewed in detail the notes from Dr. Machanic's neurological workup. He further noted Dr. Machanic sent Claimant for ophthalmological consultation with Dr. Lewis, and that Dr. Machanic would reevaluate Claimant in four weeks, on 4/12. Claimant was to continue physical therapy at Physiotherapy and vestibular stabilization treatments at South Valley Physical Therapy.

9. On March 6, 2017, Claimant followed up with Dr. Noel, reporting she had issues with her vision when looking at computer screens, sensitivity to light and noises, nausea, dizziness, off balance, shoulder pain and popping, and TMJ pain. Dr. Noel referred Claimant to her personal dentist, Dr. Pfeiffer.

10. Dr. Noel reevaluated Claimant on April 6, 2017. Dr. Noel stated additional x-rays taken were within normal limits. He noted that the x-rays were taken in odontoid view, which was suggested by Mr. Machanic. He again noted Claimant was scheduled for a follow-up evaluation with Dr. Machanic on April 12, 2017 and that a referral to Dr. Politzer was pending.

11. Claimant returned to Dr. Machanic for a follow-up evaluation on April 12, 2017. Dr. Machanic recommended Claimant continue physical therapy. In addition, he referred Claimant to Dr. Mary Ann Keatley for a cognitive evaluation, Dr. Politzer for vision issues, and Dr. Gentile for osteopathic treatment.

12. Dr. Noel reevaluated Claimant on April 18, 2017. Dr. Noel reported he reviewed the notes from Dr. Machanic's April 12, 2017 follow-up in detail. Dr. Noel outlined Dr. Machanic's findings, recommendations and referrals in detail, and noted Claimant was scheduled to see Dr. Machanic on June 6, 2017, but would possibly see him earlier pending a brain MRI recommended by Dr. Machanic.

13. Claimant returned to Dr. Noel for a follow-up evaluation on May 2, 2017. Dr. Noel noted Claimant had seen Dr. Keatley, Dr. Pfeiffer, Dr. Machanic, and South Valley physical therapy, and that she was scheduled to see Dr. Politzer on May 18, 2017. Dr. Noel further Claimant was scheduled for an evaluation with Dr. Politzer on May 18, 2017, and an evaluation with Dr. Machanic on June 8, 2017. He remarked that he had reviewed Claimant's case in detail with a Josie Niclinson and refused Dr. Machanic's referral to Dr. Gentile.

14. On May 23, 2017, Claimant followed up with Dr. Noel, reporting new right shoulder instability, new pressure in her head, sleep loss, new spinning sensations, and continued dizziness and light sensitivity. Dr. Noel reiterated his referral to Dr. Lesnak and noted Claimant again refused to see Dr. Lesnak. Dr. Noel indicated he was transferring Claimant's care, stating,

> She became quite upset when I suggested to her that her case needs to be consolidated and I think it is apparent that most of her consultants do

> not quite know what to do with her and keep referring her to other specialists. She has not subjectively improved and, in fact, overall seems to be worsen (*sic*) now than at the time of her 02/06/2017 injury…I voiced the fact that I was quite reluctant to continue treating this patient as she attempts to direct care and has been uncooperative in my attempts to treat her.

15. Dr. Noel recommended that Claimant finish therapy with South Valley Physical Therapy and Physiotherapy, and listed the following under Specialist Followups: "Followups with Dr. Mary Ann Keatley/Dr. Politzer/Mr. Machanic."

16. Dr. Noel signed referrals to Dr. Machanic on February 20, 2017, February 27, 2017, March 24, 2017, April 18, 2017, May 2, 2017 and May 23, 2017.

17. Claimant continued to treat with Dr. Machanic. Dr. Machanic referred Claimant to an endocrinologist, audiologist, and occupational physician Dr. David Yamamoto. The referral to Dr. Yamamoto was denied by Respondents.

18. Claimant ultimately underwent an evaluation with Dr. Lesnak on June 21, 2017. Dr. Lesnak evaluated Claimant and performed an extensive medical records review. He opined that Claimant was at maximum medical improvement ("MMI") with no impairment, and no need for maintenance medical benefits. Dr. Lesnak noted Claimant had no objective findings to support her multiples subjective complaints and opined, "Claimant has significant secondary gain issues and psychological factors influencing her symptoms and recovery."

19. On September 15, 2017, Claimant underwent an Independent Medical Examination with Dr. Carlos Cebrian. Dr. Cebrian opined that there is no objective evidence that provides support for persistence and expansion of subjective symptoms, and that Claimant is at MMI for her work related injury. He further opined, "the worsening of cognitive, emotional, and subjective symptoms are consistent with psychological issues rather than the work injury."

20. On November 28, 2017 Respondents filed a Final Admission of Liability consistent with the finding of Dr. Lesnak that claimant is at MMI with no impairment. The FAL denied maintenance medical benefits.

21. Dr. Noel testified by deposition as an expert in occupational medicine. He is board certified in internal medicine and Level II accredited by the Colorado Division of Workers' Compensation.

22. Dr. Noel testified he referred Claimant to Dr. Lesnak because of "red flags," stating Claimant "had a lot of subjective complaints that I could not find any objective evidence to confirm." Regarding his referral to Dr. Machanic, he testified, "I knew that Dr. Machanic had seen her previously, and I thought that she might be more comfortable seeing someone that she did know. Dr. Lesnak, as well as Dr. Machanic, has a neurological background, so Dr. Lesnak was my first choice." He testified that he

referred Claimant to Dr. Machanic for a neurological workup. Dr. Noel stated he does not know Dr. Machanic or work with him closely, and has not rendered referrals to Dr. Machanic as a routine part of his practice. He further stated he would not have referred Claimant to Dr. Machanic had Claimant not requested the referral.

23. When asked why he continued to render referrals to Dr. Machanic despite the "red flags" he observed as early as February 14, 2017, Dr. Noel testified,

> Well, I wanted to, as I mentioned, try to clarify some things, see if I could find objective evidence that she truly had a problem there. I generally will work with these difficult or red-flag cases, as it were, with Dr. Lesnak…And I wanted to work with him, but was unable to at that point in time. And so I kind of dragged it out a little bit, but I was trying to get more information.

24. He ended the doctor/patient relationship because Claimant was uncooperative in refusing to see Dr. Lesnak and he believed Claimant was attempting to direct her medical care.

25. Dr. Noel testified that at the time of the referral to Dr. Machanic, he had not yet reviewed Claimant's medical history. Dr. Noel testified that he subsequently has reviewed Claimant's medical records in their entirety and believes Claimant has hypochondriasis and Munchausen syndrome. Dr. Noel stated that, knowing what he knows now, he would not have rendered a referral to Dr. Machanic in February 2017.

26. Dr. Noel testified he did not intend for Dr. Machanic to render a "large number" of referrals, and he was dissatisfied with Dr. Machanic's failure to "get in touch with him" as the gatekeeper. However, in reference to Dr. Machanic's referrals, Dr. Noel further testified,

> Now, in retrospect, I did decide to go ahead and do a couple of them after she had already seen somebody, or on the recommendation of some of the other people, because I wanted to get some clarity on the case. And instead of clarifying things, it just made it worse.

27. Dr. Noel opined that Dr. Machanic's treatment was not reasonable, necessary or related for treatment of the February 6, 2017 industrial injuries.

28. Dr. Noel testified that he has 24 years of experience in the workers' compensation system and was aware that he controlled Claimant's case as the gatekeeper. He further testified that, if he deemed certain treatment inappropriate, he was aware he could address such issues in his reports.

29. Claimant testified that she did not initially see Dr. Lesnak because she did not believe it would be of any benefit. She testified she told Dr. Noel she wanted to see a neurologist because she believed she had post-concussive disorder, and informed Dr. Noel that she had seen Dr. Machanic in the past. She stated she did not tell Dr. Noel to

continue sending her to Dr. Machanic. Claimant testified that she was not attempting to direct her care.

30. Claimant's testimony is found credible and persuasive.

31. Dr. Noel's referral to Dr. Machanic was based on Dr. Noel's independent medical judgment and was within the normal progression of authorized treatment.

32. Dr. Machanic's referral to Dr. Yamamoto was in the chain of referrals and within the scope of Dr. Noel's referral.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination

regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Authorized Treating Physician

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777(Colo. App. 1990).

Authorization to provide medical treatment refers to a medical provider's legal authority to provide medical treatment to the claimant with the expectation that the insurer will compensate the provider for the services rendered. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). The questions of whether a referral was made as part of the normal progression of authorized treatment, and the scope of the referral, are questions of fact for determination by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App.2001).

A referral can be limited in scope. *See Gail v. U.S. West Service Link, Inc*., W.C. No. 3-957-994 (June 18, 1991), aff'd., *Gail v. U.S. West Service Link, Inc*., (Colo. App. No. 92CA1107, June 3, 1993) (not selected for publication). The scope of the referral is a question of fact for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). A limited referral for specified treatment does not render a physician an authorized treating physician for the purposes of making general referrals. *See Clark v. Hudick Excavating, Inc.*, W.C. No. 4-524-162 (November 5, 2004); *Gamboa v. ARA Group, Inc.*, W.C. No. 4-106-924 (November 20, 1996).

Here, Respondents contend Dr. Machanic is not an authorized physician because Dr. Noel's referral was not based on independent medical judgment and did not occur as part of the normal progression of authorized treatment. Respondents further contend Dr. Machanic exceeded the scope of his referral by referring Claimant to Dr. Yamamoto and other physicians.

The ALJ disagrees. Although Dr. Noel testified that he did not know Dr. Machanic, that he made the referral at the request of Claimant, and that he would not have made the referral without Claimant's request, the totality of the evidence establishes Dr. Noel's referral to Dr. Machanic was based on his independent medical judgment. Dr. Noel wanted Claimant to obtain a neurological workup and to obtain further clarification regarding Claimant's condition. While Dr. Lesnak was Dr. Noel's "first choice," Dr. Noel acknowledged that he thought Claimant may be more comfortable with Dr. Machanic. Thus, Dr. Noel had a medical reason to refer Claimant for further evaluation and doing so was within the normal progression of treatment. The fact that Claimant requested the referral to Dr. Machanic does not negate the validity of the referral. A claimant's request to be referred to a particular provider did not defeat the validity of such a referral in *Sackett*; *City of Durango v. Dunagan*, 939 P.2d 496, 500 (Colo. App. 1997); or *Greager v. Indus. Comm'n*, 701 P.2d 168, 170 (Colo. App. 1985).

Beyond making the initial request to see Dr. Machanic, Claimant credibly testified that she did not tell Dr. Noel to continue sending her to Dr. Machanic. Dr. Noel continued to refer Claimant to Dr. Machanic, signing multiple referrals. While Dr. Noel testified Dr. Machanic was exceeding the scope of his referral and making referrals without his approval, the evidence clearly establishes Dr. Noel reviewed Dr. Machanic's evaluation notes in detail and was apprised of Dr. Machanic's findings, recommendations and referrals. No evidence was presented indicating Dr. Noel refused any of Dr. Machanic's referrals, with the exception of Dr. Gentile. Even when Dr. Noel elected to terminate the doctor/patient relationship with Claimant, he referred Claimant to Dr. Machanic for follow up. While Dr. Noel, in hindsight, would not refer Claimant to Dr. Machanic, his initial referral and continuing referrals were based his independent medical judgment at the time. Further, based on the totality of the evidence, Dr. Machanic's referral to Dr. Yamamoto and other physicians did not exceed the scope of Dr. Noel's referral.

ORDER

It is therefore ordered that:

I. Dr. Machanic is an authorized treating physician.

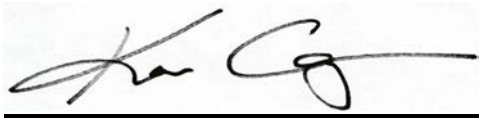
II. Dr. Machanic's referral to Dr. Yamamato was in the chain of referral and did not exceed the scope of referral.

III. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 31, 2018



Kara R. Cayce
Administrative Law Judge

1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-995-488-04

ISSUE

The following issue was raised for consideration: Whether Claimant proved by a preponderance of the evidence that he is entitled to an Order awarding home assistance and yard services as a reasonable and necessary medical benefit.

FINDINGS OF FACT

1. Claimant sustained an admitted low back injury in a motor vehicle accident while in the course and scope of her employment on September 3, 2015. Claimant was authorized to treat with Dr. Alicia Feldman at the Colorado Clinic in Loveland, Colorado.

2. Claimant was paid temporary total disability benefits (TTD) benefits of $570.86 biweekly beginning September 29, 2015.

3. Dr. Feldman placed the Claimant at maximum medical improvement (MMI) on January 31, 2017. The Respondents filed a Notice and Proposal to Select an IME.

4. On June 13, 2017, Marc Steinmetz, M.D. authored a Division independent medical examination (DIME) report, stating Claimant reached maximum medical improvement (MMI) without impairment on October 3, 2016. On July 18, 2017, the DOWC provided notice of receipt of the Division IME report DIME process concluded. On July 26, 2017, Insurer filed a Final Admission of Liability consistent with Dr. Steinmetz' opinions Claimant reached MMI on October 3, 2016, without impairment. TTD benefits were paid to Claimant by Respondents, and never terminated by any other admission or order, until that Final Admission of Liability was filed.

5. Insurer contends that Claimant was overpaid TTD benefits from October 3, 2016, through July 14, 2017, in the amount of $11,621.08. Respondents seek repayment of the alleged overpaid amount.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo.

306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overpayment

4. Section 8-40-201(15.5), C.R.S., defines two categories of overpayment; when a claimant receives money that exceeds the amount that should have been paid or money received that a claimant was not entitled to receive.

5. Here, Claimant did not receive an overpayment within the meaning of Section 8-40-201(15.5), *supra*. The evidence established that Claimant received TTD benefits to which she was entitled during the period, October 16, 2016 through July 14, 2017. So, although Claimant received benefits exceeding the amount to which she became entitled after the DIME opinion and the Final Admission of Liability, at the time she received the TTD she was entitled to the TTD benefits.

6. Sections 8-42-103(3) and 8-42-105, C.R.S. provides that temporary total disability benefits shall continue until an employee reaches MMI, returns to regular or modified employment, the attending physician gives the employee a written release to return to regular employment or the attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing and the employee fails to begin such employment.

7. At the time Claimant received TTD benefits, she was entitled to receive those benefits. Claimant did not meet any standard for termination of TTD as defined by Sections 8-42-103 and 105, *supra*. Claimant was placed at MMI by Dr. Feldman, the authorized treating physician, on January 31, 2017. On April 12, 2017, Respondents applied for a DIME challenging the impairment rating and MMI determination. TTD continue to be paid to Claimant during the pendency of the DIME. The DIME report was dated June 13, 2017, and DOWC determined the DIME process was concluded on July 18, 2017. On July 26, 2017, Respondents filed the Final Admission of Liability accepting

liability for TTD benefits from September 29, 2015, through October 2, 2016, based on the DIME physician's MMI determination of October 3, 2016.

8. Since Claimant was not overpaid TTD within the meaning of Section 8-40-201(15.5), C.R.S., Respondents shall not recoup an overpayment. *United Airlines v. Industrial Claim Appeals Office of the State of Colorado,* 312 P.3d 235, 239(Colo.App. 2013); *Rocky Mountain Cardiology v. Industrial Claim Appeals Office,* 94 P3d 1182, 1186 (Colo.App. 2004).

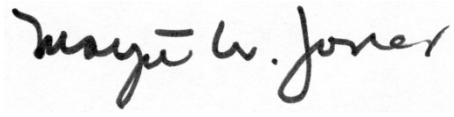
ORDER

1. Respondents claim to recoup an alleged overpayment of TTD is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 26, 2018



Office of Administrative Courts

Denver CO 80203p

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that medical benefits of massage and acupuncture requested by Eric Tentori, D.O. are reasonable, necessary, and causally related to her October 5, 2016 work injury.

FINDINGS OF FACT

1. Claimant worked for employer as an office manager. As part of Claimant's duties she often was offsite seeking out more fleet business. In this capacity, she was picking up a client's car on October 5, 2016 when she was involved in a motor vehicle accident.

2. Claimant was rear ended while her vehicle was at a complete stop. At the time she was struck, Claimant was bent over attempting to turn a knob on the vehicle from four wheel to two wheel drive. Claimant alleges that when she was struck her head flew forward, she felt heat at the back of her neck, and her right hand flew into the dash near the knob she was reaching for.

3. The vehicle Claimant was in had slight damage to the rear bumper area. The vehicle that struck Claimant left the scene of the accident. Claimant was able to drive back to Employer's shop.

4. Claimant alleges that when she returned to the shop she was not making sense and couldn't even carry her purse. A co-worker advised Claimant to go to the emergency department. Claimant went to the emergency department where a CT of the neck and head were completed and negative. Chest x-rays were also completed and were negative. Claimant was discharged with a prescription for Norco.

5. On October 6, 2016 Claimant was evaluated at Concentra by Linda Thomas, M.D. Claimant reported that she was the restrained driver of a moderate velocity rear end collision the day prior. Claimant reported no loss of consciousness. Claimant reported right neck and upper back pain, feeling "flighty," pressure going up the right side of her neck and right side of her face, and episodes of light headedness increased by fast turning of the head. Dr. Thomas noted that the pain was located in the right lateral neck and right trapezius with associated symptoms of headache, neck muscle spasm, and neck tenderness. Dr. Thomas noted no upper extremity paresthesias, no upper extremity weakness, and no shoulder pain. Dr. Thomas found on the right hand/fingers a small ecchymosis at the right thenar eminence without tenderness, swelling, or erythema and with full range of motion and no discomfort. Dr. Thomas also found motor strength of the hand/fingers to be normal. Dr. Thomas found cervical muscle spasms and muscle tenderness and muscle tenderness and spasms in the thoracic spine. Dr. Thomas

assessed cervical strain, thoracic sprain, and concussion without loss of consciousness and recommended ibuprofen and physical therapy. *See* Exhibit D.

6. On October 18, 2016 Claimant was evaluated by Samuel Chan, M.D. Claimant reported that she was leaning forward in order to change the four-wheel drive back to two-wheel drive when she was rear ended. Claimant reported pain in the right side cervical spine especially at the base of the skull, radiating to the retro orbital region. Claimant also reported slurred speech, tearfulness on the right side, and a frequent choking sensation. Claimant also reported numbness and tingling going diffusely down the right upper extremity. Claimant was assessed as having sustained a whiplash type injury. *See* Exhibit G.

7. On October 21, 2016 Claimant was evaluated by Casey McKinney, PA-C. Claimant reported overall feeling much improved and that physical therapy was benefiting her neck symptoms. Claimant had some persistent neck pain, mild headache, and persistent dizziness with head movements. Claimant was assessed with cervical strain and headache and was refereed to physical therapy noting that Claimant would continue physical therapy for the cervical symptoms until resolved. *See* Exhibit 4.

8. On October 25, 2016 Claimant was evaluated by Theodore Villavicencio, M.D. Claimant reported overall being much improved with decreased dizziness. The next day, October 26, 2016 Claimant was evaluated and reported being worse, unable to complete a task properly, headache, and worse dizziness. On October 31, 2016 Dr. Villavicencio evaluated Claimant. Claimant reported being somewhat improved from the flare of cervical pressure and headache last week but that she was having sensation of abnormal swallowing, bubbling up her esophagus into her right ear, and persistent dizziness. *See* Exhibit 4.

9. On December 6, 2016 Claimant was evaluated by Dr. Villavicencio. Dr. Villavicencio noted that Claimant was overall improved with now infrequent headaches. He noted that her head CT from October 14, 2016 was normal and the MRI of her cervical spine showed some findings not causal of her pain. He noted that Claimant's neck pain was improving. He assessed cervical strain, thoracic sprain, concussion without loss of consciousness, and headache. He anticipated maximum medical improvement at the next visit in four weeks. *See* Exhibit D.

10. On December 16, 2016 Claimant was evaluated by Casey McKinney, PA-C. Claimant was noted to be in for a recheck on head and right elbow injury. Claimant reported trouble extending her arm. Claimant again indicated that her headaches were overall improved and she reported continued soreness in the right upper lateral neck. Claimant reported that on her initial visit and with her visit with Dr. Chan, she discussed right elbow pain after the motor vehicle accident that was initially minimal. Claimant reported that she was now having flares of pain in her right medial elbow after a temp job with writing that has caused her not to be able to extend the right elbow and that was causing radiating pain into her right hand/arm. Claimant also reported concern about her memory which she felt was failing her. At the right elbow, PA McKinney noted the medial

epicondyle and abnormal range of motion with pain at 70 degrees. Tenderness in cervical muscles was also found. PA McKinney noted Claimant's report that the right elbow was injured in the motor vehicle accident and had now flared and recommended a referral to a hand specialist if deemed compensable to evaluate and treat the working diagnosis of right medial epicondylitis. PA McKinney also recommended a referral to neurology for memory issues after concussion. *See* Exhibit D.

11. On December 23, 2016 Claimant was evaluated by Tracy Wolff, M.D. Claimant reported little glitches in the elbow when doing physical therapy and that the main focus had been concentrating on the neck and concussion. Claimant reported that since December 6 she was unable to straighten her arm and that she was having pain from the elbow up to the shoulder. Claimant also reported numbness down into the fingers. Dr. Wolf assessed right arm pain with a component of medial and lateral epicondylitis and diffuse neuritis and recommended therapy for the arm. Dr. Wolf performed a corticosteroid injection along the cubital tunnel on the right. *See* Exhibit G.

12. On January 6, 2017 Claimant was evaluated by Dr. Wolf and reported good overall relief following the prior injections. On examination, there was improved tenderness over the medial epicondyle but continued tenderness over the lateral epicondyle. A corticosteroid injection with lidocaine was performed at the right lateral epicondyle. *See* Exhibits 5, G.

13. On January 30, 2017 Claimant was evaluated by Dr. Villavicencio. He noted that Claimant was back for a recheck of multiple injuries stemming from a motor vehicle accident. Claimant reported that the medial and lateral injections for epicondylitis had benefit that was waning and that she felt weakness in the right upper extremity with attempts at lifting and that she was unable to fully extend the elbow. Dr. Villavicencio assessed cervical strain, headache, and medial epicondylitis, right and recommended a recheck with Dr. Wolf regarding the right epicondylitis. *See* Exhibit 4.

14. On February 3, 2017 Claimant was evaluated by Dr. Wolf. Dr. Wolf assessed right lateral greater than medial epicondylitis, possible cubital tunnel and discussed not using the right arm and activity modification or being stuck in a circle with it never healing. Dr. Wolf opined that other options included platelet rich plasma injections, acupuncture, dry needling, therapy, or in the long run surgery. Dr. Wolf opined, however, that none of the options were going to work if Claimant continued to use her right elbow as it needed the chance to calm down and heal. Dr. Wolf again discussed casting to completely stop use of that area. *See* Exhibit 5.

15. On February 20, 2017 after Claimant had continued right elbow pain, Dr. Villavicencio ordered a right elbow MRI. *See* Exhibit 4.

16. On February 27, 2017 Claimant underwent an MRI of her right elbow. The impression provided was low grade tear proximal fibers extensor carpi radialis muscle at the lateral epicondyle, mild osteoathrosis, and small elbow joint effusion with no acute bony injury. *See* Exhibit E.

17. Claimant was referred to the delayed recovery unit and began treating with Eric Tentori, D.O. Dr. Tentori noted the recommendation for the right epicondylitis of casting the right upper extremity for three weeks and Dr. Wolf's indication that it might be worth it to get a second opinion so Claimant could hear options from somebody else. Dr. Tentori referred Claimant for a second upper extremity orthopedic consultation. *See* Exhibit 6.

18. On March 21, 2017 Claimant was evaluated by orthopedic hand specialist Craig Davis, M.D. for a second opinion. Claimant reported that she had sustained a concussion, significant whiplash injury, and an injury to her right elbow. Claimant reported continued diffuse soreness throughout her elbow which was both medial and lateral. Dr. Davis provided the impression of right elbow mild degenerative arthritis that seemed to have been aggravated by her injury as well as an element of medial and lateral epicondylitis. Dr. Davis opined that Claimant had an appropriate/reasonable course of treatment. Dr. Davis indicated that if he were treating Claimant he would probably try an injection into the elbow joint itself given that Claimant seemed to have symptoms referable to the degenerative changes noted on MRI. He did not foresee that surgical treatment would likely be of benefit. *See* Exhibit 8.

19. On April 18, 2017 Claimant was evaluated by Dr. Davis. He noted she decided to pursue treatment with him and reported a new symptom of stocking distribution numbness from her forearm to her fingertips involving all five fingers. Claimant reported that it had been present since the accident. Dr. Davis provided the impression of persistent elbow synovitis and discussed an injection, but Claimant decided to wait on the injection. Dr. Davis noted that Claimant's numbness was in a stocking distribution and did not correspond with any single nerve. *See* Exhibit 8.

20. On April 25, 2017 Claimant was evaluated by John Aschberger, M.D. Dr. Aschberger found Claimant to have right elbow irritation with various findings including lateral epicondylitis and noted that Dr. Davis had suspected an intrinsic elbow abnormality. Dr. Aschberger doubted cervical radiculopathy and considered carpal tunnel syndrome given the symptom distribution in the hand. Dr. Aschberger recommended electro diagnostic testing for the right upper extremity given the persistent symptoms. Dr. Aschberger also noted symptoms of a potential median nerve issue at the wrist. He opined that there were findings of myofascial irritation and that a trial of massage therapy would be reasonable to address associated trigger points. *See* Exhibit 7.

21. On May 16, 2017 Claimant was evaluated by Dr. Tentori. He referred her back to Dr. Aschberger for the purpose of a right upper extremity electrodiagnostic assessment and asked that Dr. Aschberger continue his involvement in Claimant's somewhat complicated claim. *See* Exhibit 6.

22. On June 14, 2017 Claimant was evaluated by Dr. Aschberger. He found on examination that Claimant was tender at the right elbow medial and lateral epicondyle.

He noted findings of lateral epicondylitis were replicated. He noted that a follow up injection at the lateral epicondyle would be considered. *See* Exhibit 7.

23. On June 1, 2017 Claimant underwent an independent medical evaluation performed by George Schakaraschwili, M.D. Claimant reported headache, neck pain, right arm pain, and cognitive symptoms. Claimant reported that the motor vehicle accident was "quite the impact" and that it caused her to jam her right hand into the console. Claimant reported that after the accident she felt pain instantly in the back of her neck and that it felt warm. Claimant reported that she had a bruise in the right thenar area that resolved after one or two weeks and that she began noticing pain in the right elbow with decreased range of motion on elbow extension. Dr. Schakaraschwili reviewed medical records and performed a physical examination. On examination Claimant reported decreased sensation in a patchy non dermatomal distribution in the right elbow both medially and laterally and in the thumb and index finger. Dr. Schakaraschwili found tenderness to palpation at the right lateral epicondyle and radial tunnel. *See* Exhibits 9, G.

24. Dr. Schakaraschwili opined that following Claimant's initial evaluation, Claimant had an expanding list of symptoms that were inconsistent with the mechanism of injury including: severe headaches, severe neck pain, ear pain, right sided head pain, and progressive neurocognitive symptoms inconsistent with Claimant's behavior on the day of the accident and inconsistent with the known natural history of traumatic brain injury with the absence of any findings on two head CT scan studies. Dr. Schakaraschwili opined that the pain complaints appeared grossly out of proportion to the mechanism of injury including late appearing complaints of right elbow pain and temporomandibular joint complaints that had no apparent connection to the accident. Dr. Schakaraschwili opined that there were objective findings of a partial tear to the extensor tendon in the elbow along with a small joint effusion which indicated that some type of injury occurred to the right arm at some time but which could not have occurred during the subject accident. Dr. Schakaraschwili opined that the treatment for right elbow symptoms was due to injuries or conditions unrelated to the work injury. He opined that Claimant was at MMI with no impairment as a result of the accident and required no further treatment related to the accident. *See* Exhibits 9, G.

25. On June 20, 2017 Claimant was evaluated by Dr. Davis. Dr. Davis noted extreme tenderness on physical examination at the medial epicondyle. Dr. Davis provided the impression of right medial epicondylitis and performed an injection to that area. *See* Exhibit 8.

26. On July 3, 2017 J. Trevor McNutt, M.D. performed a medical record review. Dr. McNutt opined that Claimant likely sustained a cervical strain, thoracic strain, possible right elbow strain, and possible mild traumatic brain injury without loss of consciousness. Dr. McNutt opined that Claimant did not still suffer from the injuries, that her prognosis was good, and that she did not need any additional treatment. He opined that the treatment was appropriate for a mild soft tissue injury. Dr. McNutt noted that Claimant's initial symptoms improved within a few weeks after the accident which was expected but

that the symptoms began to recur and/or expand later throughout treatment without any new injury in and around the time Claimant retained legal counsel. Dr. McNutt also noted that results of neuropsychological testing indicated nonorganic factors playing a significant role in Claimant's symptoms and opined that her subjective complaints did not correlate with the objective findings. Dr. McNutt opined that no further treatment or intervention was indicated to improve Claimant's condition. *See* Exhibit H.

27. On August 22, 2017 Claimant was evaluated by Dr. Tentori. Claimant reported resolution of the pain in her neck and upper back, improvement with her right sided TMJ dysfunction and associated right ear pressure sensation, but no significant improvement regarding her diffuse right upper extremity pain and functional limitations. Dr. Tentori noted that Claimant had been evaluated by two upper extremity orthopedists, Dr. Wolf and Dr. Davis. He noted that Dr. Davis opined that Claimant's imaging studies had not shown much pathology and that Claimant was likely to gradually improve with time. Dr. Tentori also noted that Claimant was evaluated by physiatrist Dr. Aschberger who found Claimant had maximized treatment regarding the right upper extremity/right elbow and that Dr. Aschberger noted that Claimant's claim would be appropriate for case closure once Claimant had maximized treatment for TMJ. Claimant reported to Dr. Tentori that she had continued to receive treatment with Dr. Raabe including acupuncture and massage directed at her right TMJ issues. Claimant reported that the involved practitioners in her case had suggested a course of acupuncture and massage therapy directed at her right upper extremity. On examination Dr. Tentori found the right upper extremity to have ongoing tenderness with palpation of a diffuse nature that appeared to be emanating from the right elbow with symptoms radiating both proximally and distally. Dr. Tentori believed the upper extremity diffuse tenderness appeared to be related to myofascial pain/irritation and noted a neurologic examination had no focal findings. Dr. Tentori noted that the right TMJ/ear pressure sensation was resolving and that the one primary/ongoing issue was Claimants' report of pain affecting her right upper extremity. He opined that prior to consideration of case closure/MMI declaration, he supported/recommended a course of acupuncture and massage therapy directed at Claimant's right upper extremity with 1-2 sessions of each for 6 weeks. He explained to Claimant that the recommended 6 weeks of massage and acupuncture would likely be the final treatment recommendations directed at the right upper extremity. *See* Exhibits 6, D.

28. On September 6, 2017 Dr. Schakaraschwili issued a Rule 16 record review report. He noted his prior independent medical evaluation of Claimant and that he had received additional medical records. Dr. Schakaraschwili noted that his review of medical records showed that the right upper extremity pain complaints first appeared in the record on December 16, 2016 more than two months after the subject accident. He opined that the minor rear end collision on October 5, 2016 would not have caused injury to Claimant's right arm. He opined that the MRI findings were not related to the original work injury and that all treatment directed at the right upper extremity was not claim related. *See* Exhibit G.

29. On September 28, 2017 Claimant was evaluated by Dr. Aschberger. Claimant reported concern with the right arm, limited motion, and significant pain. Dr. Aschberger expected upcoming MMI. He agreed with Dr. Tentori's recommendation and plan for deep tissue work into the upper extremity. However, he opined that rather than acupuncture he recommended physical therapy combined with massage to go over a progressive strengthening and range of motion program. *See* Exhibit 7.

30. Both Claimant and Dr. Schakaraschwili testified at hearing.

31. Claimant disagreed that the motor vehicle accident was slight. She testified as to the damage to the car she was driving and to the other car, indicating the other car had major front end damage. Claimant testified that at the time of impact she was bent over trying to change the car from four-wheel drive to two-wheel drive. Claimant testified that when she was hit, her head flew forward and she felt heat at the back of her neck. Claimant further testified that her right hand flew into the dash near the knob she was reaching for. Claimant testified that she had a bruise on her right palm at the base of her thumb and that as she worked more after the accident, her elbow got worse. Claimant testified that after the recommendation for casting to avoid movement, she sought a second opinion and wished to undergo massage and acupuncture.

32. Dr. Schakaraschwili opined that Claimant had not sustained a head injury or traumatic brain injury in the accident and that when a person is rear ended they move backwards and it would be impossible for Claimant's hand to have been jammed into the dash when she was rear ended. He opined that epicondylitis is generally an overuse injury and noted that Claimant made no mention of elbow pain until December 16 when a flare up of pain was mentioned. He opined that Claimant probably had medial and lateral tendonitis and that the MRI showed a tear but opined that the conditions were not caused by the motor vehicle accident and that there was no mechanism of injury that could have caused those conditions. Dr. Schakaraschwili opined that a high force would be required to cause those type of injuries. Dr. Schakaraschwili also opined that massage and acupuncture would play no real role in treating the conditions and although it might make Claimant feel better it would not cure or shorten recovery time for the conditions. He noted that Claimant's elbow symptoms showed up after she worked a lot of data entry, reaching, and putting on stickers for a temporary organization job. Dr. Schakaraschwili agreed with physical therapy and strengthening as reasonable treatment options, but again opined that the treatment would not be work related. He opined that the mechanism of injury was not sufficient enough to cause Claimant's problems and that there was no mention of right arm pain until December 16 as the main bases for his opinion.

33. Claimant is found credible and persuasive in explaining the accident and the force on her right hand as it was pushed into the console near the button she was reaching for when she was rear ended. Although Dr. Schakaraschwili noted that a person would move backward when rear-ended, Claimant was diagnosed as having a whiplash type injury which necessarily involves both backward and forward movements. Claimant also had a bruise on her right hand supporting her testimony that her right hand was jammed into the console when she was rear ended. Additionally, Claimant is credible

and persuasive that she reported the right hand/elbow problems, but that the initial treatment focus was centered on other things. As found above, on October 18 Claimant reported to Dr. Chan that she had numbness and tingling going diffusely down her right upper extremity. This was approximately 13 days following the motor vehicle accident.

34. Dr. Schakaraschwili is not found persuasive. His opinion is based, largely, on the mechanism of injury and the believed time discrepancy. He is incorrect that Claimant had no reported symptoms until mid-December. Rather, the records indicate that Claimant told Dr. Chan on October 18 that she had numbness and tingling going diffusely down the right upper extremity. Additionally, Dr. Schakaraschwili is not found persuasive that the mechanism of injury could not have caused Claimant's right upper extremity condition.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or

every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Right upper extremity- massage and acupuncture

Claimant is required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). If Claimant establishes a causal nexus, Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has met her burden to establish, more likely than not, that the recommended massage therapy and acupuncture is reasonable, necessary, and causally related to her October 5, 2016 work injury. Claimant is credible and persuasive that she had symptoms in her right upper extremity/elbow immediately but that the treatment was directed elsewhere. Claimant reported numbness and tingling diffusely down her right upper extremity to Dr. Chan on October 18, 2016, just 13 days after the motor vehicle accident. The treatment had been directed at the neck and the concerning concussion type symptoms. Claimant is credible that those areas were more of the focus and that although she had immediate right upper extremity and elbow symptoms, the pain and her elbow got worse as she worked more following the accident.

Dr. Schakaraschwili put great emphasis on expanding symptoms and believed that there were no upper extremity issues reported until December 16, 2016. In the December 16 visit with PA McKinney, Claimant told PA McKinney that she had reported to Dr. Chan her right elbow pain. Claimant testified consistently and on review, the record reviews of Dr. Chan's visit show that Claimant did report diffuse numbness and tingling in her right upper extremity and similar symptoms to what she continued to report during her later treatment. Dr. Schakaraschwili also put emphasis on the mechanism of injury where he believed Claimant could not have struck her right extremity with enough force to cause injury. Claimant, however, is credible and persuasive that her right hand was jammed into the console near the button she was reaching for. This is consistent with a rear end whiplash type accident, consistent with the bruising on her right hand shortly after the accident, and consistent with a rear end collision causing damage to both the vehicle she was driving and the vehicle that struck her. Claimant has established, more likely than not, that she struck her right upper extremity with enough force to cause injury on October 5, 2016.

The doctors who have reviewed this case have recommended different treatment modalities including acupuncture, massage, physical therapy, casting, strengthening, and

no treatment. The ALJ finds that massage and acupuncture are reasonable and necessary treatment methods to attempt to cure and relieve the effects of Claimant's motor vehicle accident. The recommendations by Dr. Tentori to are approved. Claimant has established, more likely than not, that her right upper extremity/elbow is related to the October 5, 2016 motor vehicle accident and that massage and acupuncture are reasonable and necessary treatment options.

ORDER

1. Claimant has established by a preponderance of the evidence that medical benefits of massage and acupuncture requested by Eric Tentori, D.O. are reasonable, necessary, and causally related to her October 5, 2016 work injury.

2. All matters not determined are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-956-554-04

ISSUES

- Whether Respondents are entitled to reduce periodic permanent total disability (PTD) benefits following a lump sum payment of permanent partial disability (PPD) benefits?

STIPULATION

The parties stipulated at the time of hearing that Claimant is permanently and totally disabled from earning wages as a proximate result of his admitted workers' compensation injuries effective as of the date Claimant reached maximum medical improvement (MMI), or May 31, 2017.

FINDINGS OF FACT

1. Claimant sustained an admitted injury on June 27, 2014. Claimant underwent treatment and on May 31, 2017, Dr. Caroline Gellrick placed at maximum medical improvement ("MMI"). Dr. Gellrick issued a 27% whole person impairment rating.

2. On June 7, 2017, Respondents filed a Final Admission of Liability ("FAL") admitting to the MMI date and impairment rating by Dr. Gellrick. The value of the 27% whole person impairment rating was $55,814.77. Respondents admitted to an average weekly wage ("AWW") of $760.00 with a correlating temporary total disability rate of $506.67.

3. On June 26, 2017, Claimant filed an objection to FAL and an application for hearing. Claimant's application for hearing endorsed the issues of average weekly wage, disfigurement, temporary total disability benefits, temporary partial disability benefits, medical bills, mileage, and permanent total disability benefits. Also on June 26, 2017, Claimant requested the PPD award in a lump sum.

4. On July 5, 2017, Respondents filed a lump sum calculation and proof of payment for permanent partial disability claims form. The form indicated that Respondents had previously paid $2,473.92 in permanent partial disability benefits prior to the request for a lump sum. The form also indicated that Respondents were taking a lump sum discount in the amount of $2,183.27. The form indicated that Respondents were paying Claimant $51,157.58 in a lump sum on July 6, 2017, after taking credit for the previously paid benefits and taking a discount on the lump sum.

5. Claimant was 59 years old when placed at MMI. Claimant's life expectancy pursuant to W.C.R.P. Rule 7-3 is 26.1 years.

6. While being treated for his work injury, Claimant was diagnosed with metastatic cancer. Claimant's treating doctors opined that Claimant would only survive for approximately 6 months to 2 years.

7. Since being diagnosed with cancer, Claimant has undergone surgical, chemotherapy, and radiation treatments. Claimant testified, consistently with his medical records, that some of the treatments have worked, while others have not.

8. By stipulating to PTD as of the date of MMI, the parties have *created* an "overpayment" because Respondents had already paid PPD for that time period.

9. The amount of overpayment is $39,299 based on the PPD lump sum paid being more than the amount of PTD that should have been paid from the date of MMI through the date of the hearing.

10. Respondents request a 75% reduction in Claimant's PTD benefits to recover the overpayment. Respondents seek to recover at such a high rate because they anticipate that Claimant will not survive long enough for them to recover the overpayment.

CONCLUSIONS OF LAW

Based upon the forgoing Findings of Fact, the ALJ makes the following Conclusions of Law:

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. (2017). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

It is within the ALJ's purview as the finder of fact to determine the credibility of witnesses and resolve conflicts in the evidence. *Metro Moving & Storage v. Gussert*, 914 P.2d 411 (Colo. App 1995).

Respondents assert that Claimant's PPD award was not final, and that Claimant thus was not vested in the lump sum payment. After Respondents filed the FAL, Claimant filed an objection and requested a hearing on the issue of PTD benefits. Respondents argue that because Claimant had objected to Respondents' admission (that Claimant was entitled to PPD benefits rather than PTD benefits); the PPD award was not final.

Respondents rely on C.R.S. sections 8-43-203(2)(b)(II)(A) and (d)[1]; and *Franco v. Denver Public Schools*, W.C. No. 4-818-579 (ICAO Nov. 13, 2014), for the proposition that once a hearing is requested within 30 days of the filing of a final admission of liability, awards that are in dispute *will not close* until the dispute is resolved. Respondents argue that because the award of PPD benefits was not "final," Claimant was not entitled to the PPD benefits he received and they were, therefore, not due at the time he received them. Accordingly, Respondents argue they are entitled to recoup the payments they made for PPD benefits by taking a credit against future PTD benefits payments. *See Simpson v. Indus. Claim Appeals Off.*, 219 P.3d 354 (Colo. App. 2009).

The ALJ disagrees. Respondents' argument erroneously ties the requirement of disability benefit payments to the closure of an issue by failing to object to an admission or to an award entered by an ALJ. However, section 8-43-203(2)(b)(I) provides that if the employer or employer's carrier admit liability, payment must be immediate.

> Such notice shall specify the amount of compensation to be paid, the period for which compensation will be paid, to whom compensation will be paid, the period for which compensation will be paid and the disability for which compensation will be paid, and *payment thereon shall be made immediately*.

(emphasis supplied). The statute requires immediate payment regardless of whether or not an objection is filed.

Respondents provide no authority for the proposition that the purpose of section 8-43-203(2)(b)(II)(A) is to suspend respondents' immediate payment obligation set forth in 8-43-203(2)(b)(I). The ALJ likewise finds none. Rather, the purpose of subsection (2)(b)(II) appears to be procedural in nature. See section 8-43-203(2)(b)(II)(B) which provides, "The amendments made to sub sub-paragraph (A) of this subparagraph (II) by Senate Bill 09-168, enacted in 2009, are declared to be procedural . . .."

The ALJ finds and concludes that Respondents' argument is inconsistent with generally accepted rules of statutory construction. First, Respondents' argument would require us to read subsection (b)(II)(A) as nullifying subsection (b)(I). The ALJ declines to do so. We must read and consider the statutory scheme as a whole to give consistent, harmonious, and sensible effect to **all** its parts. *Charnes v. Boom*, 766 P.2d 665 (Colo. 1988); *Martinez v. Cont'l Enters.*, 730 P.2d 308 (Colo. 1986).

Second, when construing a statute, we must give effect to the General Assembly's purpose and intent as reflected in the plain language of the statute. *People v. Luther*, 58 P.3d 1013 (Colo.2002). Section 8-43-203(2)(b)(II)(A) is part of a statutory scheme designed to promote, encourage, and ensure prompt payment of compensation to an injured worker without the necessity of a formal administrative determination in cases not presenting a legitimate controversy. *Peregoy v. Industrial Claim Appeals*

[1] The ALJ does not find subsection (2)(d) to be applicable.

Office of the State of Colo., 87 P.3d 261, (2004); *Dyrkopp v. Indus. Claim Appeals Office*, 30 P.3d 821, 822 (Colo.App.2001)).

The ALJ finds and concludes that Claimant became entitled to immediate payment of his PPD benefits upon Respondents' filing of their FAL, June 7, 2017.

Claimants have a statutory right to request a lump sum payments for PPD pursuant to C.R.S. section 8-43-406 after six months have elapsed from the date of their injuries. At Claimant's request, Respondents paid out the lump sum PPD award subject to the 4% statutory discount and disability benefits already paid. Claimant's request and Respondents' payment were appropriate and created no overpayment.

However, the parties created an overpayment by stipulating at hearing to PTD as of the date of MMI. The stipulation created an overpayment because Respondents had already paid PPD benefits for the same time period the parties now stipulate Claimant was permanently totally disabled. See *Waymire v. Indus. Claim Appeals Off.*, 924 P.2d 1168 (Colo. App. 1996)(claimant may not receive permanent partial and permanent total disability benefits for the same periods of time).

Pointing to the terminal nature of Claimant's cancer, Respondents argue for an aggressive reimbursement rate, essentially arguing that Claimant will not live long enough for Respondents to otherwise recover the overpayment. However, Respondents again offer no authority to support that proposition, and the ALJ likewise finds none.

Lump sum calculations for PPD inherently rely on a certain amount of speculation to determine the lifetime present value of a claim. No one can say with any certainty how long any claimant will live. As a result, there is always a risk that payment of a lump sum will result in overcompensating or undercompensating a claimant. To minimize speculation, WCRP Rule 7-3 provides a life expectancy table to be utilized for this express purpose. To open up the workers' compensation system to additional speculation with regard to any injured workers' life expectancy is without authority and would effectively result in Respondents presenting evidence of claimants' individual health woes completely unrelated to work injuries in an attempt to lower disability payments. This result in contrary to the Act's purpose.

Respondents are entitled to recover their overpayment. See section 8-42-113.5 generally. Thus, pursuant to section 8-42-113.5(c), Respondents seek to reduce Claimant's weekly PTD benefits by 75%, arguing that even at that rate, they are unlikely to recover the entire overpayment because they anticipate Claimant will not survive long enough for them to do so. The ALJ finds and concludes that Claimant has no other source of income and testified to his monthly expenditures. Allowing Respondents to reduce Claimant's benefits by such and amount would result in financial hardship to Claimant, leaving him unable to meet his financial needs and obligations that arise as a result of his industrial injury.

Additionally, allowing for such a drastic reduction requires the ALJ to accept Respondents' position that Claimant's allegedly "accurate" life expectancy controls, rather

than WCRP Rule 7-3 provides a life expectancy table. The ALJ has specifically rejected this argument.

Neither statute nor rule mandates a specific method to recover workers' compensation benefits that have been overpaid. Claimant suggests the correct mechanism for recovery pursuant to C.R.S. section 8-43-406 is to essentially convert the PPD overpayment to a lump sum payment for PTD benefits. The ALJ finds and concludes that mechanism to be appropriate for the following reasons:

- At the time the parties stipulated that Claimant has been at PTD since his MMI date, he became able to request his PTD award in a lump sum.
- Respondents would have then been required to pay Claimant his PTD benefits in a lump sum subject to the statutory cap.
- The amount Respondents paid in PPD benefits does not exceed the amount of a lump sum PTD payment to which Claimant is entitled.
- This method does not reward respondents for a claimant's health status not related to the work injury.

ORDER

It is therefore ordered that:

1. Claimant's lump sum PPD payment is hereby converted to a partial lump sum PTD payment.

2. All matters not determined herein are reserved for future determination.

3. This decision of the Administrative Law Judge is final, unless a Petition to Review this decision is filed within twenty (20) days from the date of this decision is mailed. Section 8-43-301(2), C.R.S. The Petition to Review must be filed with the Office of Administrative Courts, 1525 Sherman Street 4th Floor, Denver, Colorado 80203. Detailed information regarding the Petition to Review process is contained in the attached advertisement "Appeals of Division of Administrative Hearings Orders in Workers' Compensation cases."

DATED: 01/29/2018

/s/ Kimberly Turnbow
Kimberly Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman St 4th Floor
Denver, CO 80203

NOTE: If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that continued medical benefits are reasonable, necessary, and causally related to her January 3, 2016 work related injury.

FINDINGS OF FACT

1. Claimant sustained an admitted work related injury on January 3, 2016 when she was driving from her home to pick up work supplies.

2. While driving on January 3, 2016 at approximately 7:33 p.m., Claimant ran a stop sign and caused a motor vehicle accident. Her vehicle rolled over. The other vehicle involved in the accident had two unrestrained passengers who were both ejected. The accident resulted in the death of one of the unrestrained passengers, a 10 year old child.

3. When officers arrived on scene, Claimant's vehicle was on its roof and Claimant was outside the vehicle and was observed to be in a substantial amount of pain.

4. Paramedics on scene found Claimant laying outside her pickup truck. They noted no intrusion to the passenger compartment but that the vehicle was on its roof and sustained moderate to extensive front end damage. Claimant was alert, screaming, and in moderate distress. Clamant reported her vehicle had T-bone impacted the other vehicle in its passenger door/corner area and that she remembered everything but didn't know exactly what happened. Claimant reported she was dangling upside down by her seatbelt, self-extricated, and was assisted to lay on the ground by bystanders. Claimant denied any loss of consciousness, headache, dizziness, visual disturbance, midline spinal pain, abnormal extremity sensation, or nausea. Claimant was noted to be awake and oriented x4, following commands, answering questions appropriately, speaking clearly in full sentences. Claimant was transported by ambulance to North Colorado Medical Center (NCMC) on a non-emergent limited trauma activation transfer. *See* Exhibit G.

5. As a result of the motor vehicle accident, Claimant was criminally charged with careless involving death, careless driving involving injury, and a stop sign violation. The driver of the other vehicle was charged with two counts of seat belt violations.

6. At NCMC, Claimant was interviewed by police officers investigating the accident. Claimant reported that she hurt all down her left side including her ribs, hip, knee, shin, and center of her chest. Claimant moaned often and appeared to be in a bit of pain.

7. At NCMC Claimant was evaluated initially by Christopher Clark, D.O. Claimant reported severe pain and shortness of breath, left upper rig cage tenderness, left flank tenderness, and left leg tenderness. It was noted that she was driving a large pickup truck at 56 miles per hour when she was involved in a motor vehicle accident and her vehicle flipped. Claimant was noted to have a medical history involving diabetes type II. On physical examination, Claimant's head was found to be normocephalic and autraumatic and she was found to be alert and oriented to person, place, time, and situation with no focal neurological deficit observed. She was found to be cooperative with appropriate mood and affect. Dr. Clark listed the differential and possible diagnoses as: head injury, cervical spine injury, trunk injury, internal hemorrhage, solid organ injury, and hollow organ injury with the rationale that Claimant had abdominal tenderness, left chest wall tenderness, thoracic spine tenderness and further evaluation was ordered. Including a CT of the cervical spine, CT of the chest/abdomen/pelvis, and CT of the head/brain to determine what the problems actually were. *See* Exhibit C.

8. Claimant underwent diagnostic radiology at NCMC. The radiology showed no findings at the left femur and no acute fracture or dislocation of the left tibia or fibula. A well corticated calcification at the left medial knee joint was observed and opined that it may be soft tissue calcification and a well-corticated bone density was found at the tip of the fibula that could relate to an old fracture. Edema in the lower leg was also noted. The impression of the femur, tibia, and fibula was no acute osseous abnormality. (left leg) *See* Exhibit C.

9. A CT scan of the cervical spine was performed at NCMC. It was noted that images were obtained from the skull base through the upper thoracic spine. Degenerative disc disease was found at C6-C7 that was mild to moderate. The prevertebral soft tissues were found to be within normal limits. The impression provided was degenerative changes but no acute osseous abnormality of the cervical spine. *See* Exhibit C.

10. A CT scan of Claimant's chest, abdomen, and pelvis was also performed at NCMC. Mild narrowing and hardening of the aorta was found. Dependent atelectasis was found. The liver was diffusely decreased in attenuation, consistent with fatty liver disease (hepatic steatosis). A 1.6 cm parenchymal depth laceration of the left kidney upper pole cortex was found with perinephric hemorrhage, small in amount, adjacent to the laceration. Irregularity of the superior right pubic bone was appreciated and opined that it may reflect a nondisplaced fracture. Multilevel degenerative changes of the spine were found. Mild left osteoarthritis of the hip was found and moderate right osteoarthritis of the hip was found. Soft tissue calcification superior to the right femoral neck was found. *See* Exhibit C.

11. A CT scan of Claimant's lumbar spine was also performed. No acute osseous abnormality was found. Degenerative disc disease was found, most pronounced at L5-S1 where there was a vacuum cleft and endplate irregularity and anterior osteophytes. *See* Exhibit C.

12. A CT of Claimant's head/brain showed no acute intracranial abnormality. *See* Exhibit 3.

13. A CT scan of the thoracic spine was performed. No acute osseious abnormality was found. Mild multilevel degenerative changes of the thoracic spine were found. *See* Exhibit 3.

14. Michelle Anderson, M.D. reviewed the diagnostic testing and provided the impression of left kidney laceration and closed fracture of the right superior pubic ramus. Claimant was admitted. Claimant reported right hand pain and left foot pain and it was noted that an orthopedic consultation was pending and that x-rays would be ordered. *See* Exhibit C.

15. On January 5, 2016 Claimant was evaluated by Steven Sides, M.D. for an orthopedic consultation. He noted Claimant was involved in a motor vehicle collision with a questionable loss of consciousness and that Claimant complained of severe left flank chest wall pain as well as left leg pain. Dr. Sides noted that Claimant had undergone multiple CT scans and radiographs and was found to have a grade 3 left kidney laceration. Dr. Sides noted that there was a questionable superior pubic ramus fracture on CT scan. Dr. Sides noted that Claimant had multiple questions, multiple complaints, and wanted to make sure that he understood for some reason that she really needed to go to rehabilitation. He noted that he was not clear as to why Claimant and her sister were seemingly very interested and persistent about this. He noted that he later learned that there might be some legal issues involved with the crash. Dr. Sides noted that Claimant complained of multiple issues that seemed to be getting worse over the course of her hospitalization. He opined that Claimant's cervical, thoracic, and lumbar spine were cleared clinically and radiographically. When asked to localize pain, Claimant pointed to the midline anteriorly at the side of her symphysis pubis. Dr. Sides performed a physical examination. Dr. Sides assessed right superior pubic ramus fracture that was minimally displaced, left foot sprain, right hand contusion, and contusion with secondary ecchymosis to the left thigh and leg. Dr. Sides reassured Claimant that the left thigh and leg should resolve over time and with the hand and foot complaints, radiographs would be done and provided there were no fractures, claimant could mobilize with physical therapy. *See* Exhibit C.

16. Claimant was discharged from NCMC to an in-patient rehabilitation facility. On January 9, 2016 it was noted that Claimant was walking with a walker. By January 11, 2016 it was noted that Claimant had no complaints of pelvic pain and that the bruise on her left medial thigh was purple and resolving within normal limits. On January 13, 2016 it was noted that Claimant was independent with activities of daily living, denied pain, and was independent with ambulation in room and around the facility without the use of assistive devices. *See* Exhibit M.

17. On January 13, 2016 discharge planning was discussed with Claimant. Claimant reported increased anxiety and depression and feelings of weepiness with difficulty sleeping and repeated thoughts related to the motor vehicle accident. Claimant

reported that a friend showed her a picture of the crashed vehicle which resulted in an increased negative emotional response. Claimant agreed that seeing a therapist to address the emotional responses would be beneficial. The facility noted that discharge the next day would be good as Claimant had met all goals. The facility recommended no outpatient therapy but suggested mental health therapy. *See* Exhibit M.

18. An occupational therapy assessment showed that Claimant had benefitted from the inpatient therapy to increase safety and functional mobility to allow for safe discharge home at prior level of functioning. Claimant had a Barthel index score of 100/105 for all activities of daily living and functional mobility which was noted to be improved from her initial score of 57/105. The plan was to discharge Claimant home at her prior level of function with no further need for skilled occupational therapy. A physical therapy assessment showed that Claimant had demonstrated significant progress with strength, balance, and activity toleration and that she was now independent and safe with all bed mobility, transfers, gait, and stairs without use of assistive devices. Claimant was discharged from skilled physical therapy and noted to have met all goals. *See* Exhibit M.

19. After discharge from the inpatient rehabilitation program where she was doing well, Claimant was treated with multiple providers and had increasing and unexplained physical symptoms.

20. On January 21, 2016 Claimant was evaluated at Concentra by Robert Nystrom, D.O. Claimant reported that she had been involved in a motor vehicle accident and reported that she had been found at the emergency department to have a left lacerated kidney, fractured pelvis, and a concussion. Claimant reported that she may have had a loss of consciousness but was not sure as she had very large gaps in her memory of the event. Claimant reported headaches, poor memory, and pain in her left flank and left leg. Claimant reported difficulty performing mental calculations, impaired short term memory, long term memory, and recall. Claimant's mood and affect were noted to be bewildered, concerned, depressed, grieving, quiet, and tearful. Dr. Nystrom noted that she had slow speech and slow affect like she was stunned or in emotional shock. Claimant was assessed with pelvic fracture, kidney laceration (left), and concussion. This was the first time Claimant was assessed with concussion and was 18 days after the motor vehicle accident. Dr. Nystrom referred Claimant to neuro, psych, physiatry, and ortho. *See* Exhibit D.

21. On January 29, 2016 Claimant was evaluated by Robert Baer, M.D. Dr. Baer opined that Claimant had a very stable pelvic injury and he encouraged her to progress to her activities and felt that Claimant needed to get back to ambulating and strengthening to avoid deconditioning. *See* Exhibit I.

22. On January 29, 2016 Claimant was evaluated by Ophthalmologist Benjamin Markse. Claimant reported she broke her glasses in a car accident at work and that she had headaches since the accident, chronic pain, and eye pain when looking to the left. Dr. Markse also noted a diabetic check was due with 1 year since Claimant's last exam. He noted that Claimant did not check her blood sugars and has had diabetes for 14 years.

Dr. Markse reviewed her medications, and performed a complete examination. He assessed her with Diabetes Type II, unstable and discussed with her that her vision complaints were related to the lack of blood sugar control. Claimant also was assessed with: regular astigmatism, bilateral; hypermetropia, bilateral (farsightedness); presbyopia; and age related nuclear cataracts, bilateral. *See* Exhibit J.

23. On January 30, 2016 Claimant underwent a psychological consultation with Joel Cohen, Ph.D. Dr. Cohen noted that Claimant had been referred for concerns about neurocognitive disorder secondary to a blow to the head, likelihood that Claimant was either dazed and/or had loss of consciousness, and concerns about elements of PTSD. He noted that Claimant had a variety of symptoms suggestive of PTSD including recurrent intrusive thoughts about the motor vehicle accident, major substantially disrupted sleep, bad dreams, and significant depression. Claimant reported with the accident that she recalled headlights, flying in the air, landing upside down in the vehicle, and seeing her significant other undo the seatbelt and fall to the floor and crawl out the window. Claimant then recalled bracing herself, releasing her seatbelt, and coming down somewhat more gently than she had seen her significant other come down. Claimant recalls then significant pain, moaning, and yelling and that two gentleman came to the side of the vehicle and were able to pull her out. Claimant recalled being transported to the hospital by ambulance. Claimant expressed obvious anxiety about driving and a variety of symptoms clearly indicative of PTSD. Claimant had obvious emotional distress when describing that a 10 year old girl had died at the scene after being ejected from the other vehicle. Dr. Cohen opined that Claimant presented as significantly depressed. He opined that Claimant had an injury related diagnosis of acute onset of posttraumatic stress disorder and that she had indications of neurocognitive disorder but deferred that opinion to the neurologist and neuropsychologist. He recommended 10 sessions of psychotherapy to address emotional support to the incident. *See* Exhibit D.

24. On February 16, 2016 Claimant was evaluated by Shimon Blau, M.D. Claimant reported that she had been involved in a motor vehicle accident and that she suffered a left kidney laceration, multiple pelvic fractures, and a concussion. Claimant reported that she was admitted to the hospital for several days, and was then discharged to a rehabilitation facility where she spent about a week and that they had wanted her to stay longer but that she wanted to get home to her dog. Claimant reported ongoing severe pain, mostly in the right lateral thigh with numbness and a feeling of fire in the area and a similar feeling around the left knee joint and left lateral thigh. Claimant reported some left abdominal pain, left lower back pain, and left flank pain. Claimant reported pain in the region of bilateral throchanteric bursae. Claimant was noted to be 57 years old, a type 2 diabetic, and she reported smoking about 6 cigarettes per day and smoking medical marijuana at night to help her sleep. Dr. Blau reviewed the CT scans and x-rays that had been performed. He provided the impression of: kidney laceration, pain in bilateral lower extremities, concussion, opioid type dependence. He opined that Claimant's pain symptoms seemed to resemble myalgia paresthetica at least in the bilateral lower extremities and opined it may have been from her injuries and may take some time to improve. He recommended physical therapy. *See* Exhibit D.

25. On February 22, 2016 Claimant was evaluated by Dr. Nystrom. Claimant reported a lot of pain and numbness in the right leg with piercing pains and a feeling of lighting on fire. Claimant reported difficulty with balance and leg weakness and requested a script for a walker. Dr. Nystrom referred Claimant for an MRI of the lumbar spine to see if there was any nerve impingement that could be causing Claimant's leg symptoms. Dr. Nystrom also provided a prescription for a walk-n-chair to help Claimant ambulate. *See* Exhibit D.

26. On February 23, 2016 Claimant was evaluated by Eric Hammerberg, M.D. Claimant reported that she had been involved in a motor vehicle accident, was unconscious for an unknown period of time and awoke hanging upside down. Claimant reported she was diagnosed with concussion, posttraumatic amnesia, posttraumatic headaches, cervical strain, and post-concussion syndrome. Claimant reported right sided headaches with occasional nausea and vomiting which was becoming worse with a recent increase in her pain medication. Claimant reported her primary concern was severe burning pain over the anterior aspects of both thighs. Dr. Hammerberg noted medical problems of diabetes type 2 and high blood pressure and that Claimant had smoked cigarettes since 1972. Dr. Hammerberg noted on review of symptoms that Claimant had symptoms of malaise, fatigue, frequent urination, stuttering, occasional tremors, dizziness, weakness, impaired balance, impaired coordination, double and blurred vision, sleep problems, impaired concentration, impaired hearing in the left ear, appetite changes with nausea and vomiting, abdominal pain, dry skin, skin rashes, abnormal thirst, and cold intolerance. Dr. Hammerberg performed a neurological examination. Dr. Hammerberg provided the impression of: posttraumatic headache, cervical strain, post-concussion syndrome, and bilateral meralgia paresthetica (due to compression of both lateral femoral cutaneous nerves by the seat belt). He recommended increased gabapentin and a neuropsychological evaluation. *See* Exhibit H.

27. On February 26, 2016 Claimant was evaluated by Dr. Baer. He noted that Claimant was difficult to examine and could not tolerate even light touch to her right lateral thigh. Dr. Baer noted that when Claimant was distracted, he could rotate her hips reasonably well but if she realized he was moving the hips, her pain increased greatly. Dr. Baer noted an appearance of a sensory deficit in the right lateral femoral cutaneous nerve distribution. He noted that x-rays showed her fractures were healing and he opined that Claimant was going to have a very good outcome. Dr. Baer opined that Claimant again had pain that was way out of proportion to any obvious injury. *See* Exhibit I.

28. On March 10, 2016 Claimant was evaluated by psychologist Dr. Cohen. Dr. Cohen noted that Claimant's overall behavioral presentation was concerning. He noted that it was important to recall that when he saw Claimant originally, much closer to the actual date of injury, Claimant ambulated into his office and was more functional than she presented at this next appointment. Claimant indicated that she had been reporting escalating loss of sensation and weakness in her lower extremities bilaterally and that she was now in a combination of wheelchair/walker to prevent falling. Dr. Cohen noted that Claimant had elements of adjustment like reaction with depression and elements of

PTSD due to the loss of life and the fact that Claimant was also being held legally accountable and he noted a first court date in two weeks' time. Dr. Cohen opined that they could not minimize the potential for the level of emotional distress but also that it was adversely affecting the process of her physical recovery. *See* Exhibit D.

29. On March 21, 2016 Claimant was evaluated by Dr. Biggs. He noted that Clamant felt like she was progressively getting worse and that Claimant came into the evaluation in a wheelchair reporting that she was unable to ambulate because of the pain. Dr. Biggs noted that getting any sort of examination was difficult because Claimant was incredibly tender to just light touch. He opined that Claimant had no stenosis anywhere and could not explain her leg symptoms as coming from the spine. He opined that it sounded more like a meralgia paresthetica problem, but could not explain why Claimant could not walk. He opined there was nothing surgically to do and that injections into the spine would not help. *See* Exhibit I.

30. On April 5, 2016 Claimant underwent a cognitive assessment performed by Alissa Wicklund, Ph.D. Claimant reported the motor vehicle accident and that she had a brief loss of consciousness and brief posttraumatic amnesia. Claimant reported confusion and memory lapses during hospitalization and that she was experiencing headache, dizziness, and photophobia and phonophobia. Claimant reported constant headaches, dizziness with positional change and head movement, nausea, neck strain, photophobia and phonophobia, and mental fogginess. Claimant reported diminished concentration and memory. Claimant reported feelings of anxiety and depression as well as symptoms of PTSD. Claimant reported a medical history of febrile seizures, one seizure at age 16, diabetes, migraines, motion sickness, situational depression after her mother's death, and one previous concussion. Dr. Wicklund noted that Claimant's performance was invalid on measures of suboptimal effort and malingering with variable effort apparent across tests administered. Dr. Wicklund opined that due to Claimant's anxiety and Claimant's level of symptom exacerbation only a brief battery of neurocognitive tests were administered and that the tests were interpreted with caution as there was evidence of suboptimal engagement. Dr. Wicklund opined that the results from the evaluation were most notable for an individual in significant psychological distress. Dr. Wicklund noted that she discussed with Claimant the normal recovery curve form concussion. Dr. Wicklund opined that once Claimant had achieved more emotional stability, additional extended battery of neurocognitive testing could be administered. *See* Exhibit I.

31. On June 9, 2016 Claimant was evaluated by Alicia Feldman, M.D. Claimant reported pain in the right hip and right leg that was severe and burning in character with constant numbness, pins and needles, burning and tingling. Claimant underwent an EMG of her bilateral lower extremities. Dr. Feldman opined that the EMG results showed mild peripheral neuropathy likely from diabetes, and possible lateral femoral cutaneous neuropathy with absent bilateral lateral femoral cutaneous sensory nerve action potentials. Dr. Feldman could not exclude a right sided or bilateral meralgia paresthetica. Dr. Feldman found no evidence of any lumbar spine radiculopathy. Dr. Feldman opined

that they could consider lateral femoral cutaneous nerve injections once Claimant's blood sugars were under better control. *See* Exhibit E.

32. Claimant continued treatment through Concentra and their referrals. Her pain complaints continued, increased, and spread to other areas. Over the next several months she complained of neck pain, back pain, bilateral hip/thigh pain, bilateral knee pain, loss of hearing, loss of vision, bilateral leg pain, headaches, light sensitivity, depression, and trouble sleeping with flashbacks of the motor vehicle accident. Over the next several months and through September of 2016 the areas of concern Claimant reported subjectively and the assessments made by Dr. Nystrom continued to increase as her list of complaints grew.

33. On June 20, 2016 Claimant was evaluated at audiology for a hearing exam. Claimant reported that she had been in a motor vehicle accident on January 3 and had since experienced left ear hearing loss, left ear pain, and imbalance. Claimant underwent comprehensive audiometry threshold evaluation and speech recognition and was assessed with tinnitus bilateral, and mixed conductive and sensorineural hearing loss, unilateral, left ear, with unrestricted hearing on the right side. Claimant was found to have cerumen impactions, with earwax tightly packed blocking both of her ear canals, more on the left, that was removed. Claimant reported hearing better following the removal of these impactions.

34. On August 29, 2016 Claimant underwent an MRI of her cervical spine. The impression provided by Jay Kaiser, M.D. was C6-7 disc degeneration with disc osteophyte complex leading to mild thecal sac effacement. Dr. Kaiser also found uncovertebral spurring with moderate left and severe right foraminal stenosis at C6-7. *See* Exhibit L.

35. On September 21, 2016 Claimant underwent another cognitive assessment performed by Dr. Wicklund. Claimant reported an increase in overall symptoms compared to her first evaluation with Dr. Wicklund. Dr. Wicklund noted that neuropsychological testing was again attempted and that Claimant demonstrated a similar pattern and failed tests designed to examine suboptimal effort and malingering. Dr. Wicklund noted again that Claimant's results were notable for an individual with high levels of emotional distress. Dr. Wicklund noted that Claimant endorsed more current post concussion symptoms at this evaluation than at the April evaluation. Again, the neuropsychological tests were unable to be completed due to the suspected suboptimal effort on testing. Dr. Wicklund noted that she again discussed concussion mechanisms of injury, symptoms, and recovery trajectory with Claimant and that 9 months post injury the cellular dysregulation caused by concussion was likely resolved and opined that other factors were likely contributing to Claimant's perception of daily symptom experience. Dr. Wicklund recommended consultation with Claimant's current psychologist about inpatient psychiatric hospitalization as Claimant's' significant emotional distress and focus on physiologic symptoms was likely inhibiting progress in recovery. Dr. Wicklund noted again that Claimant could follow up with neuropsychology once she had achieved emotional stability. *See* Exhibit I.

36. On January 2, 2017 Claimant underwent an independent medical evaluation performed by psychiatrist Stephen Moe, M.D. Dr. Moe reviewed medical records, a clinical questionnaire filled out by Claimant, and performed a psychiatric interview of Claimant. Dr. Moe opined that Claimant's post injury physical and cognitive symptoms had been too numerous, too severe, too prolonged, and too unresponsive to treatment to reflect the effects of the acute injuries noted during her initial hospital stay after the motor vehicle accident. He opined that the physical and cognitive symptoms that Claimant attributed to the motor vehicle accident had been significantly influenced by non-injury factures captured by the psychiatric condition of somatic symptom disorder and/or intentional adoption of the illness role to gratify psychological needs and/or obtain external rewards. Dr. Moe opined that Claimant's post motor vehicle accident psychiatric complaints suggest she developed PTSD or major depressive disorder as a result of the accident, the findings related to her physical and cognitive symptoms made it probable that her psychiatric complaints were similarly influenced by non-injury factors. He opined that the available data in Claimant's case made the diagnosis of concussion highly uncertain and he noted evidence against a concussion from the medical records and Claimant's accounts. Dr. Moe opined, however, that if Claimant did incur a concussion, it would have been at the mild end of the spectrum of severity with a normative outcome of prompt recovery with cognitive deficits resolving in hours to days, to rarely weeks. Dr. Moe opined that when symptoms persist they winnow in number and severity reflecting a "worst-first" pattern. Dr. Moe noted Claimant's course of symptoms included escalation without identified cause and an absence of indications of symptoms of concussion initially followed by the later onset and escalation of symptoms suggesting enduring effects of a concussion. *See* Exhibit A.

37. Dr. Moe opined that both PTSD and major depressive disorder were plausible outcomes following a potentially life threatening accident that caused bodily injuries. He noted that objective findings and normative outcomes could assess the validity of a patient's physical complaints, no such tools were available for psychiatric symptoms. He also noted that the course f psychiatric symptoms was by and large unpredictable making it impossible to use the course of symptoms as a gauge for the legitimacy of complaints. Dr. Moe recommended that as a condition of further psychotherapy, Claimant display ever greater functioning. He recommended she take steps to return to work. *See* Exhibit A.

38. On January 24, 2017 Claimant underwent an independent medical evaluation performed by Allison Fall, M.D. Claimant reported the motor vehicle accident and that the other vehicle had hit the door on the driver's side of her car. Claimant reported thinking she had broken every bone on that side. Claimant reported that she woke up and was lying back with her hands on the wheel upside down. Claimant reported that her left flank and abdominal area was hurting and in extreme pain. Claimant reported undoing her seatbelt, falling, and landing on her arms. Claimant reported going to the hospital and to a rehabilitation center afterwards. Claimant reported when she got home, she just laid there, for the first part of the year of treatment no one could even touch her and she was in a walk and chair. Claimant reported current complaints of: nausea with

internal spinning; deep aches in her right greater than left hip, her neck, and her head; electrical bursts/shocks into both legs along the lateral thigh; stabbing pain in her back, neck, head, leg, and upper back; insomnia; and fear. Claimant reported not having as much pain in the rehabilitation center because everyone was focused on her kidney problem and that the other pain just started coming more and more. Claimant reported that she often fell over and did not know when she was going to fall or why she did not walk well. Dr. Fall reviewed medical records and performed a physical examination. *See* Exhibit B.

39. Dr. Fall provided the assessment of: status post work related motor vehicle accident; grade III kidney laceration, resolved without complication; superior pubic ramus fracture, healed without complication; and left thigh contusion, resolved. Dr. Fall opined that Claimant may also have suffered a mild self-limited concussion with no objection evidence of residuals that was resolved. Dr. Fall opined that the subjective complaints outweighed objective findings and that there was no indication for any additional treatment as a result of the motor vehicle accident. Dr. Fall opined that Claimant should be educated on discontinuing to the use of a cane and resuming normal activities and that Claimant should obtain a new primary care physician to take care of her underlying medical problems of diabetes and hypertension. Dr. Fall opined that fortunately, none of Claimant's injuries from the motor vehicle accident had led to any permanency. *See* Exhibit B.

40. On February 8, 2017 Claimant was evaluated by Dawn Jewell, Psy.D. Claimant expressed feeling discouraged by her persistent pain and the manner in which her limitations influenced her ability to sleep through the night or engage in typical daily activities. Claimant reported ongoing concerns about her cognitive abilities. Dr. Jewell noted that they had been working on what it means to accept what had happened and to realize that Claimant may not be able to achieve an adequate understanding of the accident and why it happened. Dr. Jewell noted that Claimant continued to perseverate on reviewing the accident with a focus on understanding why it happened. *See* Exhibit 2.

41. On February 21, 2017 Claimant underwent an MRI of her pelvis. The impression provided by Eric Smith, M.D. was normal pelvic bone barrow signal and morphology, with no stress reaction or fracture. Dr. Smith found mild degenerative changes bilaterally in the hips, a paralabral cyst along the lateral margin of the right illum, and mild proximal hamstring tendinosis. He found no tearing. *See* Exhibit L.

42. On February 21, 2017 Claimant also underwent an MRI of her lumbar spine. The impression provided by Jay Kaiser, M.D. at L5-S1 was: disc degeneration with a broad based central disc protrusion that did not cause neural compression, mild type 1 endplate change, and mild bilateral foraminal stenosis with facet joint tropism and moderate bilateral facet arthropathy. At L2-L3, the impression was: small caudal left foraminal protrusion extending to the exit zone of the foramen not causing neural compression. Dr. Kaiser also found mild degenerative changes at the other lumbar motion segments. *See* Exhibit L.

43. On February 27, 2017 Claimant was evaluated by Dr. Jewell. Claimant reported being sad lately and that she was always achy despite physical therapy exercises. Claimant remained frustrated about her reported inability to complete activities that were easy in the past and questioned if her distractibility was related to medications, sleep disturbance, stress, pain, or post-concussive symptoms. Claimant discussed an upcoming court date near the end of March and nervousness as well as an apology letter that she had to write about the accident. Dr. Jewell and Claimant talked about Claimant's post-accident identity and the manner in which the last year has changed her self-concept and confidence in her abilities. Dr. Jewell noted that the treatment continued to focus on managing pain, posttraumatic stress responses, and frustration related to functional limitation and changes post injury. *See* Exhibit 2.

44. On March 8, 2017 Claimant was evaluated by Dr. Jewell. Dr. Jewell noted that she was working on approaching maximum medical improvement and acceptance of current limitations. Claimant reported feeling super emotional lately and described increased back pain recently possibly from using walking sticks more. Dr. Jewell talked about what it meant to be approaching MMI and the need to develop a plan for post-MMI. Claimant reported wanting to focus on improving her organizational skills and getting a budget going to better manage personal finances. Dr. Jewell noted that they processed Claimant's reactions to accepting physical and cognitive limitations and that Claimant agreed to start reading and completing material out of a recommended work book for managing posttraumatic stress reactions. *See* Exhibit 2.

45. On April 3, 2017 Claimant was evaluated by Dr. Jewell. Claimant reported that she had court the week prior and that she felt somewhat relieved that have it behind her but was feeling scared about complying with the requirements. Dr. Jewell noted that Claimant was reading/working through a PTSD workbook but she reported poor recall of the content and could not tell Dr. Jewell what she had learned about the readings so far. Claimant reported persistent flashbacks and "hearing" the accident happen again but described having decreased intensity in her fear response and that she was impacted for a shorter amount of time. They discussed approaching MMI and Claimant returning to work but Claimant remained concerned about her ability to work in some capacity questioning her cognitive abilities, physical limitations, and impact of her mood/PTSD symptoms on work performance. Dr. Jewell noted that in light of recent events with Claimant's legal situation and Claimant's need to continue processing the impact on her personal and vocational future, continued psychological treatment may be beneficial. Dr. Jewell noted an understanding that Claimant may be approaching MMI from a physical standpoint but requested eight additional sessions of psychotherapy to be used before and/or after MMI, once per month, so that Claimant had support during the difficult transition. *See* Exhibit 2.

46. On April 12, 2017 Claimant was evaluated by Dr. Nystrom. Claimant reported that she was walking better but still had pain in the bilateral legs and right leg numbness. Dr. Nystrom opined that it was reasonable to do an MRI of the head to rule

out an intracranial pathology. Dr. Nystrom explained to Claimant that he thought she was approaching MMI. *See* Exhibit 3.

47. On April 24, 2017 Claimant was evaluated by Dr. Jewell. It was noted that Claimant appeared down affectively. Claimant stated that she had been sad and depressed in recent weeks with little interest in doing anything and described isolating herself in her room much of the time. Claimant expressed sadness about the way she had been treated since her court date and reported that she had been labeled as a murderer and killer and that she was none of those things. Claimant reported having increased sensation in her right leg and that she was trying to walk with one walking stick instead of two. Claimant remained discouraged about her ability to work. *See* Exhibit 2.

48. On May 10, 2017 Claimant was evaluated by Dr. Jewell. Claimant reported increased pain on her left side, that she had not been feeling well, and that she was easily exhausted. Dr. Jewell and Claimant continued talking about a letter that Claimant needed to write for court to the other driver involved in the motor vehicle accident. They also discussed what it would take to return to work and Claimant identified her perceived barriers as difficulty staying on task, getting easily confused, difficulty with multitasking, getting exhausted fast, lacking skills she had previously, making frequent mistakes, and experiencing headaches/increased pain when she pushed herself too hard. *See* Exhibit 2.

49. On May 10, 2017 Claimant was evaluated by Dr. Nystrom. Claimant reported she was in a lot of pain and had not been doing physical therapy as it ran out. Claimant reported feeling depressed and secluded. Claimant reported diffuse pain in her back and neck. *See* Exhibit 3.

50. On May 11, 2017 Claimant underwent an MRI of her head/brain. The impression provided by Jana Crain, M.D. was: no hemorrhage in the brain parenchyma and no extra axial fluid collection. Scattered few punctate foci of signal abnormality with the subcortical white matter nonspecific and bi-frontal. Differential included migraines, vaculitis, sequea of demylination, or chronic small vessel ischemic change. Dr. Crain found no acute intracranial abnormality. *See* Exhibit L.

51. On May 11, 2017 Claimant was evaluated by Dr. Feldman. Claimant reported pain in the right hip, right leg, left leg, back, groin, neck. Dr. Feldman noted that an MRI of the brain was pending and that the etiology for the gait disturbance remained unclear. Dr. Feldman noted that it appeared Claimant needed some cognitive rehab, but that she did not have Claimant's neuropsych testing. Dr. Feldman recommended that Claimant continue with Dr. Jewell for psychological treatment and discussed that Claimant may have some physical manifestations of the trauma. Dr. Feldman recommended Claimant continue with low dose medications for pain and function and explained the new marijuana policy and that Claimant needed to pick between opioids and marijuana. Dr. Feldman diagnosed Claimant with non-work related diabetes and obesity and with work related traumatic brain injury, numbness in right thigh, cervicalgia, lumbago, lumbar spondylosis, and non-displaced sacral fracture. *See* Exhibit 4.

52. On May 23, 2017 Claimant was evaluated by Dr. Feldman. Dr. Feldman noted that the goal was to work on gait, back pain, and neck pain. Dr. Feldman noted that Claimant's gait was improved and that the plan was to continue to provide reassurance. Dr. Feldman opined that Claimant may have some sort of conversion disorder as the imaging and workup was negative. Dr. Feldman recommended continued physical therapy and home exercise program. Dr. Feldman recommended at Claimant continue with Dr. Jewell for depression and delayed recovery. Dr. Feldman noted that Claimant reported that she needed cognitive rehab pursuant to neuropsych testing and Claimant complained of continued cognitive issues. Dr. Feldman noted that she did not have the neuropsych test report available. *See* Exhibit 4.

53. On June 6, 2017 Claimant was evaluated by Dr. Jewell. Claimant was not using her walking sticks and reported feeling optimistic about her progress. Claimant reported that she had discontinued pain medications and that she could handle the pain. Claimant reported that the PTSD workbook was helpful but that she continued to struggle with frequent and impactful PTSD symptoms on a regular basis, primarily flashbacks and re-experiencing symptoms. Claimant reported a new fear of being judged/labeled by strangers or having people call her a murderer. Claimant stated that she had been accused of not having enough empathy toward the other driver in the motor vehicle accident and the death. Claimant reported her belief that she thought people were looking at her and thinking she was a murderer. Dr. Jewell noted that Claimant continued to report cognitive deficits, slow processing speed, and poor retention despite the normal brain imaging and tests results so far. Dr. Jewell noted that Claimant had not yet undergone formal neuropsychological testing. *See* Exhibit 2.

54. On June 19, 2017 Claimant was evaluated by Dr. Jewell. Claimant reported that she had a telephone hearing where her driver's license was revoked for one year. Claimant reported that following her telephone hearing she had increased difficulty sleeping and felt a loss of freedom since she could no longer drive. Dr. Jewell noted that another provider had recently encouraged Claimant to participate in eye movement desensitization and reprocessing (EMDR) for her PTSD and noted that she did not provide that type of treatment. *See* Exhibit 2.

55. On June 21, 2017 Claimant was evaluated by Dr. Nystrom. Claimant reported she was doing better but that her head, neck, and knees were bothering her the most. Claimant reported having a lot of problems with depression and cognitive issues. Dr. Nystrom noted that Claimant was walking without assistive devices but with a noticeable limp. *See* Exhibit 3.

56. On June 30, 2017 Dr. Nystrom responded to a letter in which he deferred on answering questions about MMI until he had Dr. Feldman's input. Dr. Nystrom stated in response that Claimant was unfortunately suffering PTSD from her injury which was complicating her recovery. *See* Exhibit 3.

57. On July 12, 2017 Claimant was evaluated by Dr. Jewell. Claimant reported increased pain over the last three days. Claimant reported trouble processing with whether or not the incident was her fault and that if she knew definitely that she was the person solely at fault for the accident and death of the child, she could start to accept it and own it. Dr. Jewell noted that they discussed a lot the note Claimant was required to write for court as well as forgiveness and the process it takes to forgive someone. *See* Exhibit 2.

58. On July 20, 2017 Dr. Nystrom responded to questions sent to him by Claimant's attorney following the IME reports of Dr. Moe and Dr. Fall. Dr. Nystrom opined that there may be some secondary gain involved but that he felt Claimant's "real" PTSD and depression was much greater. Dr. Nystrom opined that Claimant was suffering from significant PTSD and depression. Dr. Nystrom opined that Claimant was possibly at MMI from a physical perspective, but noted he would defer to Dr. Feldman's opinion on physical MMI. Dr. Nystrom opined that if Claimant was at MMI she would need maintenance care of continued psychological counseling. He also opined that she would need further treatment recommended by Dr. Feldman. Dr. Nystrom opined that Claimant would have both physical and psychological permanent impairments. *See* Exhibit 3.

59. On July 28, 2017 Dr. Fall issued a supplemental report. She noted that she had received additional medical records following her independent medical evaluation of Claimant in January of 2017. Dr. Fall again opined that there was no indication for any additional treatment as a result of the motor vehicle collision. She noted that imaging studies still had not revealed any explanation for Claimant's various symptoms. *See* Exhibit B.

60. On July 28, 2017 Dr. Jewell wrote a letter after reviewing the IME documentation from Dr. Moe and Dr. Fall. Dr. Jewell expressed her surprise that Dr. Moe was asked to evaluate Claimant's psychiatric status and response to treatment when he did not have a complete treatment record. Dr. Jewell opined that she did not believe that Claimant's physical and cognitive symptoms were driven by secondary gain. Dr. Jewell noted that the motor vehicle accident had resulted in the death of a child and that Claimant was characterized by some as a murderer and had faced criminal charges. Dr. Jewell opined that any secondary gain Claimant may have received as a result of the accident seemed trivial compared to the profoundly negative social consequences from the accident. Dr. Jewell believed that the circumstances of the accident would be difficult for most individuals to cope with and that the profound consequences of the accident explained Claimant's depressive symptoms. Dr. Jewell noted that emotional distress can act to increase one's experience of pain and that Claimant's pain or physical symptoms may be related to stress reactions and that there was an objective basis for that. Dr. Jewell opined that Claimant clearly had PTSD and major depression from the motor vehicle accident. Dr. Jewell opined that a motor vehicle accident with a rollover and accidental death of a child is an extraordinary psychological stressor and clearly sufficient to precipitate a condition like PTSD. Given the severity of the psychological injury, Dr. Jewell indicated she would be more concerned if Claimant had not been emotionally impacted. Dr. Jewell indicated that a recognized diagnostic variation of PTSD is with

delayed expression and that it was plausible that Claimant's reactions were somewhat delayed. Dr. Jewell opined that Claimant had not yet reached MMI from a psychological perspective and that continued care was necessary. Dr. Jewell recommended continued psychological treatment focused on processing PTSD reactions and developing healthy coping skills/cognitive techniques with the goal of symptom reduction. She suggested at least eight additional sessions. *See* Exhibit 2.

61. On July 31, 2017 Dr. Moe performed a follow up independent medical examination of Claimant. He noted additional records he had received. Dr. Moe opined that Claimant's enduring physical, cognitive, and psychiatric symptoms were all rooted in unsuccessful coping with the effects of her work related motor vehicle accident, a maladaptive response which derived from a combination of pre-accident, accident-related, and post-accident factors. Dr. Moe opined that Claimant was at maximum medical improvement with respect to the psychiatric/psychological treatment for the work injury. Dr. Moe noted that at his evaluation, Claimant had a grossly abnormal gait pattern that appeared non-physiologic. Dr. Moe opined that the additional medical records he reviewed at this evaluation supported his conclusion that if Claimant suffered a concussion as a result of the motor vehicle accident (not diagnosed by hospital at discharge) then it would have been a mild concussion with prognosis of prompt and full recovery. Dr. Moe opined that Claimant's post injury physical and cognitive symptoms could not be explained with medical diagnoses. Dr. Moe noted that Claimant's breadth of physical symptoms characterized as severe and debilitating had changed greatly from his earlier interview and evaluation including: prior focus of pain in head, hips, right leg, and both knees and current focus of headaches and nausea with essentially no concern about hips or legs; increase in post-concussive syndrome noted by Dr. Wicklund on 9/21/16 that were greater than reported on 4/5/16. Dr. Moe noted that treatment over the past 1.5 years had resulted in minimal gains. *See* Exhibit A.

62. Dr. Moe opined that Claimant did not suffer from the effects of multiple slow to resolve physical traumas and that her emotional distress was not closely tied to the event of accident itself but was tied to the effects of the accident. Dr. Moe opined that Claimant's collective physical, cognitive, and psychiatric symptoms that persisted were primarily due to a failure to accept and cope with the various life-disrupting effects of the work injury that initially involved acute injuries and bewilderment as to how the accident happened and how she could have caused the accident by failing to notice the stop sign. Dr. Moe noted that Claimant then was confronted with dealing with the fact that her negligence caused the death of another person inflamed by the stress of criminal charges and a civil lawsuit. Dr. Moe noted that the degree of distress surrounding these issues that Claimant displayed in session with him and Claimant's associated adoption of the role of a victim spoke to the persistent impact that guild and shame continued to have on her. Dr. Moe opined that because Claimant had not achieved the necessary emotional growth that would be reflected in the successful process of accepting and coping with unwanted effects of the accident, Claimant's symptoms persisted in various forms (physical, cognitive, and psychiatric) which represented some combination of manifestations of distress and adoptions of the illness role as a maladaptive effort to cope with her situation. Dr. Moe noted that the treatment Claimant had received since

discharged from the hospital had not had a significant impact on her condition. The lack of recent improvement following the disposition of the criminal case, suggested that Claimant's illness role identification had become increasingly entrenched. Dr. Moe opined that Claimant stood to do no worse and to possibly enjoy significant improvement with the termination of psychotherapy and opined that Claimant was at MMI regarding treatment of post injury psychiatric symptoms. Dr. Moe opined that although Claimant had 17 sessions of psychotherapy which was far from excessive, by this time its effectiveness would be reflected in very apparent changes in Claimant's thinking and functioning which was unfortunately not the case. Dr. Moe opined that cognitive symptoms were not the product of concussion and that speech therapy was not reasonable, necessary, or related to the work injury. Dr. Moe recommended 10 sessions of maintenance psychotherapy with Dr. Jewell over the upcoming year to facilitate the positive termination of treatment. *See* Exhibit A.

63. Dr. Fall testified by deposition consistent with her reports. Dr. Fall opined that Claimant had some non-physiologic findings and movement patterns that were not normal or expected based on the injuries Claimant explained. Dr. Fall referenced early records where other doctors had found Claimant's behavior odd. She also referenced Claimant's worsening symptoms after getting out of the hospital and the neuropsychological testing which was invalid twice and noted that it was apparent that there were other issues all along through the medical records that were playing a role in Claimant's symptoms.

64. Dr. Fall opined that Claimant may or may not have meralgia paresthetica and noted that it was a hard diagnosis to objectively because it is mostly based on symptomatology. Dr. Fall opined that meralgia paresthetica could have been caused by the left thigh contusion and would have made sense on the left side, but that Claimant had it on both sides which didn't make sense and caused her hesitation to give meralgia paresthetica as a formal diagnosis. Dr. Fall opined that if Claimant did have meralgia paresthetica the expected symptoms were burning pain or pins/needles numbness and that it was a sensation type of injury. Dr. Fall opined that the treatment would include removing any source of compression and then time to heal and/or medications. Dr. Fall opined that there was not an exact time expectancy of when symptoms would go away. Dr. Fall opined that if Claimant really had meralgia paresthetica and if medications decreased the symptoms, then she would recommend medications. Dr. Fall opined that injections were an option, but rarely a treatment of meralgia paresthetica

65. Dr. Fall opined that Claimant had no lumbar spine injury, no lumbar radiculopathy, no cervical strain, no hearing loss, no speech abnormality, no traumatic brain injury or need for vision therapy as a result of the motor vehicle accident. Dr. Fall opined that Claimant's physical injuries of kidney laceration, superior pubic ramus fracture, and left thigh contusion all resolved without complication. Dr. Fall opined that if a mild concussion was sustained, it would be resolved by now. Dr. Fall opined that a mild concussion would include worst symptoms first with a gradual resolution to complete recovery. Dr. Fall agreed with Dr. Wicklund that any cellular dysregulation caused by concussion was likely resolved and opined that even if Claimant did have a concussion,

the possible severity of it was mild and would have resolved by the time of Dr. Wicklund's second evaluation. Dr. Fall also agreed that Claimant's physical and cognitive symptoms were being influenced by Claimant's psychiatric state. Dr. Fall opined that Claimant's current complaints were not typical complaints that would be heard 1.5 years after a mild concussion.

66. Dr. Fall opined that Claimant's physical symptoms at this point were a result of a somatic symptom disorder or other psychiatric diagnosis. Dr. Fall opined that Claimant did not require any further physical treatment and that treating physical abnormality doesn't make sense and that Claimant would not get any benefit from physical treatment because Claimant had no underlying tissue damage or pain generator from a physical perspective. Dr. Fall opined that with no physical pathology being treated, any further treatment would just perpetuate a disability mindset. Dr. Fall opined that 8 additional sessions of psychotherapy was reasonable.

67. Dr. Moe also testified by deposition in this matter. Dr. Moe testified that if a person remembered events following an accident, it argued against anything more than a relatively mild concussion at the worst based on what Claimant was able to recall about the accident, what paramedics reported, and the evaluation and diagnoses performed at the emergency department of the hospital on the day of accident. Dr. Moe opined that in Claimant's case there were excessive symptoms relative to the expected outcome both in terms of cognitive complaints and physical bodily complaints. Dr. Moe opined that Claimant may have an element of amplifying symptoms for expressions of care and concern as sort of an antidote to all the negativity she experienced as a result of the accident. He assessed somatic symptom disorder, and noted it would require treatment aimed at coping skills and that Claimant had partly received that with Dr. Jewell. Dr. Moe agreed that Claimant met the diagnostic criteria for PTSD but believed other issues were primarily driving Claimant's symptoms.

68. Dr. Moe opined that any continued treatment would be psychotherapy focused on coping for all of Claimant's issues, cognitive complaints or physical complaints. Dr. Moe noted that despite continued psychotherapy for some time, claimant reported no improvement and worsening. Dr. Moe noted that there had been no benefit from the psychotherapy and that there was no indications that the therapy was moving Claimant in the right direction. Dr. Moe recommended completing 8 more sessions of psychotherapy to complete it out under maintenance care and opined that Claimant was at maximum medical improvement. Dr. Moe believed Claimant was still struggling psychologically with multiple fueling factors

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See*

§ 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000).

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). Medical "treatment" encompasses both diagnostic and curative medical procedures. *Merriman v. Industrial Commission,* 210 P.2d 448 (Colo. 1949); *Public Service Co v. Industrial Claim Appeals Office,* 979 P.2d 584 (Colo. App. 1999) *Villela v. Excel Corp.,* W.C. No. 4-400-281 (ICAO February 1, 2001) (reasonable diagnostic procedures are a prerequisite to MMI if they have reasonable prospect for defining claimant's condition and suggesting further treatment). Conversely, MMI exists when any medically determinable physical or mental impairment caused by the injury has become stable and no further treatment is reasonably expected to improve the claimant's condition. Section 8-40-201(11.5), C.R.S.; *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002).

Claimant has established, by a preponderance of the evidence that continued medical treatment for both meralgia paresthetica and psychotherapy is reasonable, necessary, and causally related to her January 3, 2016 work related injury. As found above, several doctors diagnosed her as having likely meralgia paresthetica. On June 9, 2016 after performing EMG testing, Dr. Feldman opined that Claimant may have meralgia paresthetica and that injections could be considered for that nerve sensation deficit after Claimant had her blood sugars under control. Per the records submitted into evidence, this condition has not yet been adequately evaluated and/or treated. Although Dr. Fall opined that meralgia paresthetica could be consistent with the left thigh contusion from the motor vehicle accident, Dr. Fall found it inconsistent that Claimant would have symptoms of meralgia paresthetica on both the right and left side. This opinion is not as persuasive as the opinion of Dr. Hammerberg that the symptoms of bilateral meralgia paresthetica could be due to compression of both lateral femoral cutaneous nerves by the seatbelt. In addition to Dr. Hammerberg's opinion, in March of 2016 both Dr. Baer and Dr. Biggs endorsed Claimant's symptoms as being consistent with meralgia paresthetica. The June 9, 2016 EMG is also consistent with meralgia paresthetica. Dr. Fall explained potential treatment for this condition to involve medications and/or rarely injections and Dr. Feldman considered injections as a possibility in June of 2016 but not until Claimant had her blood sugar levels under control. From the records, Claimant has symptoms found by multiple providers to be consistent with meralgia paresthetica, yet has not had adequate curative or diagnostic treatment for this condition.

Claimant has also established, by a preponderance of the evidence that continued psychotherapy treatment is reasonable, necessary, and causally related to her January 3, 2016 work injury. As found above, Claimant experienced a significant psychological response to a devastating accident. Diagnoses of PTSD and depression and Claimant's obvious emotional distress describing the accident and that a 10 year old girl had died at the scene after being ejected from the other vehicle were noted in January of 2016 by Dr. Cohen. This obvious emotional distress has continued throughout the claim to the time of hearing. Claimant continues to experience trouble coping with the accident, has obvious psychological overlay affecting her reported physical symptoms, and still has indications of depression and PTSD as a result of the accident. The ALJ finds Dr. Jewell credible and persuasive that Claimant has not yet reached MMI from a psychological perspective and that continued care is necessary. Claimant has established that continued psychotherapy is reasonable, necessary, and related to the January 3, 2016 injury. The ALJ finds it credible that continued psychotherapy aimed at Claimant's underlying psychological conditions is reasonably be expected to improve her condition and is still necessary at this point given the extreme circumstances of the case and extreme emotional and psychological distress Claimant sustained.

Claimant has failed to establish that any further physical treatment (other than treatment aimed at meralgia paresthetica) is reasonable, necessary, or causally related to her January 3, 2016 work injury. As found above, Claimant's physical injuries resulting from the accident including her kidney laceration, pelvic fracture, and left thigh contusion have resolved without complication. Claimant has failed to establish that she sustained an injury to her cervical spine, thoracic spine, or lumbar spine necessitating treatment. As found above, the diagnostic testing of the spine showed no acute injury and/or nerve

impingement as a result of the motor vehicle accident. EMG testing showed no evidence of lumbar spine radiculopathy as a possible cause for Claimant's bilateral lower extremity symptoms.

Additionally, Claimant has failed to establish by a preponderance of the evidence that any treatment for concussion/mild traumatic brain injury is reasonable, necessary, or causally related to her January 3, 2016 work injury. Claimant has failed to establish that she sustained a concussion or mild traumatic brain injury as a result of the motor vehicle accident. From the paramedic records, hospital records, and Claimant's reported recollection of the injury, it appears she did not sustain a concussion or mild traumatic brain injury. As found above, at the scene of the accident, Claimant denied any loss of consciousness, headache, dizziness, visual disturbance, midline spinal pain, abnormal extremity sensation, or nausea. Claimant was noted to be awake and oriented x4, following commands, answering questions appropriately, speaking clearly in full sentences. After being transported by ambulance, and at the hospital Claimant's head was found to be normocephalic and autraumatic and she was found to be alert and oriented to person, place, time, and situation with no focal neurological deficit observed. She also was cooperative with appropriate mood and affect. Even assuming that Claimant did sustain a concussion and mild traumatic brain injury, Claimant has failed to establish that any further treatment aimed at concussion/MTBI symptoms is reasonable or necessary at this point, 1.5 years after the accident. Multiple providers opined that expected symptoms for this type of injury are "worst first" in nature. Here, Claimant's reported symptoms have not been worst first and have greatly expanded over the course of the claim. Further, as found above, several symptoms that Claimant subjectively believes are the result of a concussion/brain injury were opined to be caused by other problems. Claimant's vision problems were opined to be a result of her uncontrolled diabetes by her eye doctor. Her hearing problems greatly improved after removal of impacted ear wax. The symptoms that Claimant is reporting are medically inconsistent with concussion or mild traumatic brain injury. As such, Claimant has failed to establish that any further treatment aimed at concussion or mild traumatic brain injury is reasonable, necessary, or causally related to the January 3, 2016 work injury.

It is notable that Claimant was discharged from the rehabilitation center 11 days after the motor vehicle accident and was doing well at that time. She was found to have increased anxiety and depression with trouble sleeping and mental health therapy was suggested supporting her psychological trouble with the accident. However, physically she was doing fine and had met all goals. The rehabilitation center opined that she was at her pre-injury level of functioning at discharge. Claimant scored 100/105 for all activities of daily living and functional mobility improved from an initial score of 57/105. After discharge, Claimant's subjective complaints expanded greatly inconsistent with the natural course of concussion, mild traumatic brain injury, or physical injury where symptoms would be likely noted acutely and/or "worst first." The only remaining basis for treatment that Claimant has established as being reasonable, necessary, and causally related to the January 3, 2016 work injury is for the identified meralgia paresthetica and for continued psychotherapy. Claimant has failed to establish that any further treatment is reasonable, necessary or related.

ORDER

It is therefore ordered that:

1. Claimant has met her burden to establish that continued physical treatment aimed at meralgia paresthetica is reasonable, necessary, and causally related to her January 3, 2016 work injury.

2. Claimant has met her burden to establish that continued psychotherapy is reasonable, necessary, and causally related to her January 3, 2016 work injury.

3. Claimant has failed to establish that any further treatment (except as outlined in Order 1 and Order 2) is reasonable, necessary, or causally related to her January 3, 2016 work injury.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 19, 2018

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered an occupational disease to her right upper extremity during the course and scope of her employment with Employer.

2. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of her work-related injuries.

3. Whether Claimant has made a "proper showing" that she is entitled to a one-time change of her Authorized Treating Physician (ATP) pursuant to §8-43-404, C.R.S.

4. A determination of Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

1. Employer is a food service corporation with a location in a Comcast call center in Denver, Colorado. Employer provides food to employees of the call center as well as catering services. Claimant is a 36-year-old female who has worked for Employer since 2010. She was promoted to Cashier Supervisor in 2013.

2. Claimant engages in a variety of job duties throughout each day. Her responsibilities include loading ice into a soda machine and a salad bar, prepping and cutting vegetables and fruit, cashiering, cleaning, stocking product, managing employees and completing paperwork. Claimant testified that each time she supplies the soda machine or salad bar with ice, she first fills four large containers with ice using a scoop. She then lifts each of the containers and empties them into the soda machine or salad bar. Filling the soda machine requires Claimant to lift each of the four containers above her head and filling the salad bar requires her to lift the containers to shoulder height.

3. Claimant explained that she began experiencing pain in her right wrist and shoulder in April or May 2016. The pain in her shoulder was most pronounced when she was filling the soda machine and salad bar with ice. The pain in her wrist was most prevalent when chopping fruits and vegetables. Claimant remarked that her symptoms worsened between May and October 2016 because the Comcast call center lacked a manager and she was required to perform additional job duties.

4. Claimant commented that she reported her injuries to her supervisor Hugo Araujo shortly after he was hired in October 2016. She attributed her right upper extremity symptoms to her job duties. Although Mr. Araujo reduced Claimant's responsibilities by filling the soda machine and salad bar with ice, her symptoms persisted.

5. On March 15, 2017 Claimant visited primary care physician Devon Wall, FNP at the University of Colorado Health Center for an evaluation. FNP Wall diagnosed Claimant with radial styloid tenosynovitis of the right hand and right anterior shoulder pain. In response to Claimant's query about the cause of her symptoms FNP Wall attributed the condition to her repetitive job duties.

6. On March 16, 2017 Claimant again reported her injuries to Mr. Araujo and provided the medical records she had received from FNP Wall. Employer completed a First Report of Injury and provided a list of four medical providers. Claimant chose Concentra Medical Centers.

7. On March 22, 2017 Claimant visited Kara Marcinek, NP at Concentra. She reported that Claimant visited for a "possible repetitive motion injury" that had been causing her right upper extremity symptoms. NP Marcinek diagnosed Claimant with diffuse right arm pain. She assigned work restrictions prohibiting Claimant from lifting over two pounds with her right arm, scooping ice or chopping. NP Marcinek prescribed Claimant a wrist brace and pain medication. She also requested a work site evaluation.

8. On March 30, 2017 Sara Nowotny conducted a Physical Demands Analysis & Risk Factor Assessment (Job Demands Analysis) for the position of Kitchen Supervisor at Employer's Denver location. Because Claimant was under restrictions imposed by her medical providers at Concentra at the time of the assessment, Ms. Nowotny instructed Mr. Araujo to perform Claimant's job duties. Relying on the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*), Ms. Nowotny did not find evidence of any Primary or Secondary Risk Factors involved in Claimant's activities. Ms. Nowotny specifically noted that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*. In specifically addressing awkward posture and repetition/duration Ms. Nowotny noted that Claimant engaged in right wrist ulnar deviation/flexion for 12 minutes and 51 seconds each hour or one hour and 43 minutes per day. To constitute a primary risk factor for the development of a cumulative trauma disorder, an individual must exhibit greater than four hours of wrist flexion in excess of 45 degrees, extension in excess of 30 degrees and ulnar deviation in excess of 20 degrees. Ms. Nowotny specifically commented that scooping ice did not fit within the Primary or Secondary Risk Factors regarding pronation and grip strength.

9. Claimant explained that in April 2017 she requested a switch to another one of Employer's authorized medical providers. She commented that Respondents informed her that changing her treating physician was not an option because she had already chosen a provider.

10. Claimant's treatment through Concentra included a referral to Rocky Mountain Medical Group for physical therapy. Claimant testified that her work restrictions and conservative treatment alleviated her right wrist pain but failed to diminish her shoulder symptoms.

11. At the request of Claimant's primary care provider FNP Wall Claimant underwent a right shoulder MRI. After reviewing the MRI Claimant's medical providers at Concentra referred her to Michael Hewitt, M.D. for an examination.

12. On July 24, 2017 Claimant visited Dr. Hewitt for an evaluation. After reviewing the right shoulder MRI Dr. Hewitt diagnosed Claimant with right shoulder impingement and recommended a cortisone injection. Dr. Hewitt administered the injection and Claimant obtained approximately two months of right shoulder pain relief.

13. On October 25, 2017 Claimant underwent an independent medical examination of her right wrist with Jonathan Sollender, M.D. Dr. Sollender conducted a physical examination, reviewed Claimant's medical records and considered Ms. Nowotny's Job Demands Analysis. Dr. Sollender summarized that Claimant engaged in a variety of tasks while working for Employer including cashiering, scooping ice and cutting vegetables and fruit. Claimant denied any specific injury, but attributed her symptoms to her daily, repetitive job duties.

14. Dr. Sollender explained that in order to perform a medical causation analysis for a cumulative trauma condition pursuant to the *Guidelines*, the first step is to make a diagnosis, the next step is to clearly define the job duties and the final step is to compare the job duties with the delineated primary risk factors. Dr. Sollender determined that Claimant suffered from DeQuervain's tenosynovitis in her right wrist.

15. Dr. Sollender compared Claimant's job duties as reflected in the Job Demands Analysis with the delineated Primary Risk Factors in the *Guidelines*. He reviewed the Primary Risk Factor Definition Table for Force and Repetition/Duration. The Table requires 6 hours of greater than 50% of individual maximum force with task cycles 30 seconds or less, or sufficient force is used for at least 50% of a task cycle. Additional risk factors are 6 hours of lifting 10 pounds greater than 60 times per hour or 6 hours of use of hand held tools weighing two pounds or greater.

16. Dr. Sollender noted that an additional Primary Risk Factor category is Awkward Posture and Repetition/Duration. The factor requires 4 hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees, or ulnar deviation greater than 20 degrees. The category also includes 6 hours of elbow flexion greater than 90 degrees, or 6 hours of supination/pronation with task cycles 30 seconds or less or awkward posture is used for at least 50% of a task cycle. Dr. Sollender determined that Claimant's job duties did not meet any of the Primary or Secondary Risk Factors. enumerated in the *Guidelines.*

17. Dr. Sollender determined that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*. He remarked that Claimant's activity of loading ice into the salad bar and soda machines took only 15-20 minutes to complete. Dr. Sollender detailed that Claimant made approximately 64 scoops of ice to fill the four buckets required for the salad bar and soda machines. Each scoop of ice weighs about 7.5 pounds and Claimant fills the soda machine and salad bar with ice four times each day. Dr. Sollender explained that

repetitive lifting is significant pursuant to the *Guidelines* only if it involves 10 pounds or greater more than once every 30 seconds over the course of four hours. He concluded that Claimant's various job duties did not involve the requisite force, repetition or awkward posture to constitute a repetitive trauma condition pursuant to the *Guidelines*.

18. Claimant has failed to demonstrate that it is more probably true than not that she suffered an occupational disease to her right upper extremity during the course and scope of her employment with Employer. Although Claimant attributed her right upper extremity symptoms to her work activities, a review of her job duties reflects that they lacked the requisite force or repetition to cause a cumulative trauma disorder. Claimant engaged in a variety of numerous tasks throughout each shift in her position as a Cashier Supervisor. The record reflects that Claimant's job duties specifically involved loading ice into a soda machine and salad bar, prepping and cutting vegetables and fruit, cashiering, cleaning, stocking product, managing employees and completing paperwork.

19. Relying on Rule 17, Exhibit 5 of the *Guidelines*, Ms. Nowotny did not find evidence of any Primary or Secondary Risk Factors in Claimant's job duties. Ms. Nowotny specifically noted that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*. In specifically addressing awkward posture and repetition/duration Ms. Nowotny noted that Claimant engaged in right wrist ulnar deviation/flexion for 12 minutes and 51 seconds each hour or one hour and 43 minutes in a day. To constitute a primary risk factor for the development of a cumulative trauma disorder, an individual must exhibit greater than four hours of wrist flexion in excess of 45 degrees, extension in excess of 30 degrees and ulnar deviation in excess of 20 degrees. Ms. Nowotny specifically commented that scooping ice did not fit within the Primary or Secondary Risk Factors regarding pronation and grip strength.

20. Dr. Sollender diagnosed Claimant with DeQuervain's tenosynovitis in her right wrist. Dr. Sollender compared Claimant's job duties as reflected in the Job Demands Analysis with the delineated Primary Risk Factors in the *Guidelines*. He reviewed the Primary Risk Factor Definition Table for Force and Repetition/Duration. The Table requires 6 hours of greater than 50% of individual maximum force with task cycles 30 seconds or less, or sufficient force is used for at least 50% of a task cycle. Additional risk factors are 6 hours of lifting 10 pounds greater than 60 times per hour or 6 hours of use of hand held tools weighing two pounds or greater.

21. Dr. Sollender noted that an additional Primary Risk Factor category is Awkward Posture and Repetition/Duration. The factor requires 4 hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees, or ulnar deviation greater than 20 degrees. Dr. Sollender determined that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*. He remarked that Claimant's activity of loading ice into the salad bar and soda machines took only 15-20 minutes to complete. Dr. Sollender detailed that Claimant made approximately 64 scoops of ice to fill the four buckets required for the salad bar and soda machines. Each scoop of ice weighs about 7.5 pounds and Claimant fills the soda machine and salad bar with ice four times each day. Dr. Sollender explained that repetitive lifting is significant pursuant to the *Guidelines* only if it involves 10 pounds or

greater more than once every 30 seconds over the course of four hours. He concluded that Claimant's various job duties did not involve the requisite force, repetition or awkward posture to constitute a repetitive trauma condition pursuant to the *Guidelines*.

22. Although Dr. Sollender did not address Claimant's shoulder condition, the record reflects that Claimant's variety of job duties did not involve the requisite force, repetition or awkward posture to constitute a repetitive trauma condition to her right upper extremity pursuant to the *Guidelines*. The record fails to demonstrate that Claimant engaged in right shoulder movement at the rate of 15-36 repetitions per minute and shoulder movement with force greater than 10% of maximum with no two second pauses for 80% of the work cycle. Furthermore, after conducting a detailed Job Demands Analysis Ms. Nowotny specifically noted that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*. Based on the persuasive opinions of Dr. Sollender and Ms. Nowotny that Claimant did not suffer cumulative trauma disorders to her right upper extremity while working for Employer, Claimant's claim for Workers' Compensation benefits is denied. Although Claimant manifested right upper extremity symptoms at work she has failed to establish a causal relationship to job duties.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, §8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

6. The *Guidelines* provide, in relevant part:

> Indirect evidence from a number of studies supports the conclusion that task repetition up to 6 hours per day unaccompanied by other risk factors is not causally associated with cumulative trauma conditions. Risk factors that are likely to be associated with specific CTC diagnostic categories include extreme wrist or elbow postures, force including regular work with hand tools greater than 1 kg or tasks requiring greater than 50% of an individual's voluntary maximal strength, work with vibratory tools at least 2 hours per day; or cold environments.

W.C.R.P. Rule 17, Exhibit 5, p.16. The duration of force and repetition as a primary risk factor must be greater than six hours at 50% of individual maximum force with task cycles of 30 seconds or less.

7. The *Guidelines* include a Primary Risk Factor Definition Table for Force and Repetition/Duration. The Table requires 6 hours of greater than 50% of individual maximum force with task cycles 30 seconds or less, or sufficient force is used for at least 50% of a task cycle. An additional Primary Risk Factor category is Awkward Posture and Repetition/Duration. The factor requires four hours of wrist flexion greater than 45

degrees, extension greater than 30 degrees or ulnar deviation greater than 20 degrees. The category also includes 6 hours of elbow flexion greater than 90 degrees, or six hours of supination/pronation with task cycles 30 seconds or less or awkward posture is used for at least 50% of a task cycle. Other Primary Risk Factors include computer work for more than seven hours per day or at a non-ergonomically correct work station, continuous mouse use of greater than four hours or use of a handheld vibratory power tool for six hours or more. Additional risk factors are six hours of lifting 10 pounds greater than 60 times per hour or six hours using hand held tools weighing two pounds or greater.

8. The *Guidelines* specifically include factors for the development of shoulder pathology. They include the following: (1) overhead work of 30 minutes per day for a minimum of five years; (2) shoulder movement at the rate of 15-36 repetitions per minute and no two second pauses for 80% of the work cycle; and (3) shoulder movement with force greater than 10% of maximum with no two second pauses for 80% of the work cycle. Moreover, jobs requiring heavy lifting in excess of 10 times per day over the years may contribute to shoulder disorders. Vibration can also be considered an additional risk factor pursuant to Rule 17, Exhibit 4 of the *Guidelines*. Notably, the *Guidelines* provide that, because of the lack of multiple, high quality studies, each case must be evaluated individually when addressing the likelihood of cumulative trauma contributing to shoulder pathology.

9. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered an occupational disease to her right upper extremity during the course and scope of her employment with Employer. Although Claimant attributed her right upper extremity symptoms to her work activities, a review of her job duties reflects that they lacked the requisite force or repetition to cause a cumulative trauma disorder. Claimant engaged in a variety of numerous tasks throughout each shift in her position as a Cashier Supervisor. The record reflects that Claimant's job duties specifically involved loading ice into a soda machine and salad bar, prepping and cutting vegetables and fruit, cashiering, cleaning, stocking product, managing employees and completing paperwork.

10. As found, relying on Rule 17, Exhibit 5 of the *Guidelines*, Ms. Nowotny did not find evidence of any Primary or Secondary Risk Factors in Claimant's job duties. Ms. Nowotny specifically noted that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*. In specifically addressing awkward posture and repetition/duration Ms. Nowotny noted that Claimant engaged in right wrist ulnar deviation/flexion for 12 minutes and 51 seconds each hour or one hour and 43 minutes in a day. To constitute a primary risk factor for the development of a cumulative trauma disorder, an individual must exhibit greater than four hours of wrist flexion in excess of 45 degrees, extension in excess of 30 degrees and ulnar deviation in excess of 20 degrees. Ms. Nowotny specifically commented that scooping ice did not fit within the Primary or Secondary Risk Factors regarding pronation and grip strength.

11. As found, Dr. Sollender diagnosed Claimant with DeQuervain's tenosynovitis in her right wrist. Dr. Sollender compared Claimant's job duties as reflected in the Job Demands Analysis with the delineated Primary Risk Factors in the *Guidelines*.

He reviewed the Primary Risk Factor Definition Table for Force and Repetition/Duration. The Table requires 6 hours of greater than 50% of individual maximum force with task cycles 30 seconds or less, or sufficient force is used for at least 50% of a task cycle. Additional risk factors are 6 hours of lifting 10 pounds greater than 60 times per hour or 6 hours of use of hand held tools weighing two pounds or greater.

12. As found, Dr. Sollender noted that an additional Primary Risk Factor category is Awkward Posture and Repetition/Duration. The factor requires 4 hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees, or ulnar deviation greater than 20 degrees. Dr. Sollender determined that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*. He remarked that Claimant's activity of loading ice into the salad bar and soda machines took only 15-20 minutes to complete. Dr. Sollender detailed that Claimant made approximately 64 scoops of ice to fill the four buckets required for the salad bar and soda machines. Each scoop of ice weighs about 7.5 pounds and Claimant fills the soda machine and salad bar with ice four times each day. Dr. Sollender explained that repetitive lifting is significant pursuant to the *Guidelines* only if it involves 10 pounds or greater more than once every 30 seconds over the course of four hours. He concluded that Claimant's various job duties did not involve the requisite force, repetition or awkward posture to constitute a repetitive trauma condition pursuant to the *Guidelines*.

13. As found, although Dr. Sollender did not address Claimant's shoulder condition, the record reflects that Claimant's variety of job duties did not involve the requisite force, repetition or awkward posture to constitute a repetitive trauma condition to her right upper extremity pursuant to the *Guidelines*. The record fails to demonstrate that Claimant engaged in right shoulder movement at the rate of 15-36 repetitions per minute and shoulder movement with force greater than 10% of maximum with no two second pauses for 80% of the work cycle. Furthermore, after conducting a detailed Job Demands Analysis Ms. Nowotny specifically noted that Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*. Based on the persuasive opinions of Dr. Sollender and Ms. Nowotny that Claimant did not suffer cumulative trauma disorders to her right upper extremity while working for Employer, Claimant's claim for Workers' Compensation benefits is denied. Although Claimant manifested right upper extremity symptoms at work she has failed to establish a causal relationship to job duties.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20)

days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: February 1, 2018.

Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Did Respondents prove a basis to withdraw their admission for *Grover* medical benefits by a preponderance of the evidence?

- Did Claimant prove by a preponderance that that narcotic pain medications prescribed by Dr. Kedlaya are reasonable, necessary and related to his admitted industrial injury?

FINDINGS OF FACT

1. This claim involves an admitted industrial injury to Claimant's neck in July 2001.

2. Claimant had a significant preinjury history of neck pain and headaches. In September 1998, he started receiving chiropractic treatment from Dr. William Thomas for "pain in the neck and the back of the skull bilaterally." Objective findings included muscle spasms in the cervical spine and occiput. Dr. Thomas diagnosed "cervical sprain/strain/whiplash injury." Later records consistently documented cervical and occipital pain, muscle spasms, and reduced cervical range of motion. In August 2000, he reported muscle spasms in the cervical spine, dizziness, and headaches. The chiropractic records document ongoing neck pain through July 2001. On July 9, 2001 (one week before the injury), Claimant reported exacerbating his neck and upper back pain putting up drywall at his home.

3. Claimant worked for Employer as a "gas fitter/serviceman." He was injured on July 16, 2001 when an excavation trench partially collapsed on him. A third-party company was performing a horizontal boring operation beneath a roadway, and Claimant was hunched over working in a trench on the opposite side of the street. The bore broke through the embankment above Claimant, causing several hundred pounds of dirt and rock to fall on his head, neck, and back. Claimant extricated himself from the trench with the assistance of coworkers.

4. Employer referred Claimant to Dr. Kevin Boehle at Southern Colorado Clinic for authorized treatment.[1] At the initial visit, he reported neck and upper back pain and was diagnosed with a "cervicothoracic strain." X-rays showed moderate straightening of the cervical lordosis. He was prescribed medication, referred for physical therapy, and put on work restrictions. Claimant did not tell Dr. Boehle about his prior neck problems or treatment.

[1] The parties submitted no records from the first 11+ years of Claimant's injury-related treatment, so the history has been gleaned primarily from Respondents' IME reports, the FALs, and testimony.

5. A cervical MRI on September 17, 2001 showed disc bulging at C4-5, a small left-sided protrusion at C5-6 with lateral recess stenosis and possible encroachment of the left C6 nerve root, and a central disc bulge at C6-7.

6. Claimant had a surgical consultation with Dr. Illig in November 2001 but was not considered a surgical candidate. Regarding the potential nerve root encroachment noted by the radiologist, Dr. Illig opined "clinically there is no evidence of this and the degree of impingement as mentioned is quite mild."

7. Dr. Boehle put Claimant at MMI in July 19, 2002. At the time of MMI, Claimant reported "achiness" in his neck. He had pain 10% of the time, typically 1/10, and 2/10 at its "worst." Physical examination revealed "some chronic mild muscle tightness" in the cervical region. Dr. Boehle assigned a 9% whole person cervical impairment rating based on 4% for Specific Disorder and 5% for ROM loss. Regarding Claimant's functional capacity and maintenance care, Dr. Boehle opined:

> [T]he patient is capable of resuming regular work activities without restrictions particularly and will continue the home stretching and strengthening program to maintain spinal mobility and decreased pain. He will utilize over-the-counter anti-inflammatories as needed. At this point, I will not schedule him back for maintenance care, although if he has any changes, then follow-up one to two times in the next 6 to 12 months may be indicated. We will also approve of an independent exercise and strengthening program for the next 3 to 6 months . . . . Beyond that, I do not feel that any other intervention is indicated or necessary . . . . He will resume activities of daily living, social activities and occupational activities without limitation.

8. Respondents filed a Final Admission of Liability (FAL) on August 26, 2002 admitting for the rating and "6 months independent exercise and strengthening program" per Dr. Boehle's report.

9. Claimant returned to full-duty work in approximately July 2002. He testified that he "worked there for a couple of years, and I started having problems again. So I actually worked there for four years with the problem, and then finally, just could not do it anymore."

10. In June 2004, Claimant reported worsening symptoms. By that time, Dr. Daniel Olson at CCOM had taken over as Claimant's primary ATP. The record contains no discussion or analysis by any physician of a causal connection between the worsened condition and the original injury.

11. Claimant had another cervical MRI on September 22, 2004 which showed a small left paracentral disc complex and moderate bilateral foraminal stenosis at C5-6, a small annular tear at C6-7, and a moderate-sized disc protrusion at C7-T1.

12. Claimant returned to Dr. Illig for a second surgical consultation in October 2004, who concluded "the patient has no clinical evidence of any significant cervical

radiculopathy. He has no evidence of a cervical myelopathy." Dr. Illig saw no indication for surgical intervention.

13. In a report dated December 8, 2004, Dr. Olson indicated Claimant was at MMI with no additional impairment. Dr. Olson also assigned permanent work restrictions.

14. Respondents filed a stipulated FAL on March 30, 2006 admitting for a closed period of TTD from September 30, 2004 through December 14, 2004. The FAL also admitted to "reasonable, necessary, and solely related medical treatment after MMI to maintain MMI status."

15. Claimant's maintenance care subsequently expanded far beyond that contemplated in the original 2002 MMI report. He has had numerous modalities, including numerous medications, cervical facet injections and ESIs, and at least one rhizotomy. Claimant testified "none of that really seemed to help." Eventually, he was put on escalating doses of narcotics such as Opana and OxyContin.

16. Claimant started treating with Dr. Divakara Kedlaya, a pain management specialist, in December 2009. At the time, he was taking 40 mg of Opana ER twice a day, 5 mg of Opana IR four times per day, gabapentin, Celebrex, Flexeril, and Ambien.

17. Dr. Raschbacher performed two IMEs and two record reviews for Respondents between July 2012 and June 2017. At his initial IME on July 25, 2012, Dr. Raschbacher was impressed by Claimant's preinjury history of neck problems, for which he was actively receiving treatment one week before the industrial accident. Dr. Raschbacher noted there was no evidence the accident caused any structural damage or other objectively verifiable injury to Claimant's cervical spine. He also opined Claimant's failure to disclose the preinjury history to Dr. Boehle was "a major omission" that prevented Dr. Boehle from properly assessing causation and determining when Claimant had returned to baseline. Dr. Raschbacher ultimately concluded Claimant's ongoing neck symptoms were not work-related:

> [Claimant] was clearly under treatment for chronic neck and other pain prior to his injury claim date. In fact, the week before he reported his injury claim, he was already reporting spontaneous worsening of cervical symptomatology. It appears that after the injury . . . all treatment was then done on a work-related basis, for the neck. This appears to be an error, in my medical opinion.
>
> [M]ore likely than not [Claimant] would have returned to his prior baseline . . . as there were pre-existing structural or degenerative changes not caused by the accident. . . . [Claimant] has been treated well beyond any reasonable period of maintenance for his pre-existing cervical pain complaints. Clearly, progressive degeneration over time on a nonwork-related basis is more likely than not going to occur with the passage of time. The imaging tests done after the injury claim date did not delineate any finding that was clearly and solely a result of the injury claim of 07/16/01.

> My medical opinion is that any need for a temporary aggravation of his cervical pain complaints from his work-related injury claim would have ceased long ago. . . . He had chronic pain before the injury and certainly would be expected to have it after the injury, and would be expected to have it absent any injury. Given these facts, my recommendation is to not offer any more care or treatment for the cervical spine on a work-related basis.

18. In his January 2014 report, Dr. Raschbacher opined "it is not clear why all treatment for this preexisting symptomatic condition was assumed to be work-related after his injury claim date." He maintained that any further treatment should be provided outside of the workers' compensation system.

19. In his June 10, 2016 IME report, Dr. Raschbacher reiterated "there is no clear medical basis for continuing to treat his chronic cervical pain on the basis of his injury claim. This condition was under treatment before his injury and there did not appear to be any clear anatomic changes or objective findings that were not likely pre-existing and that were attributable to an injury of 07/16/01."

20. In May 2017, Respondents denied any further refills of Opana. As a result, Dr. Kedlaya changed Claimant's prescription to MS Contin 30mg three times per day and oxycodone 10 mg 4 times per day. He also continued Celebrex, Lidoderm patches, Voltaren gel, tizanidine, Ambien, and Movantic for opioid-induced constipation.

21. In his most recent report, dated June 27, 2017, Dr. Raschbacher opined "it is neither reasonable nor necessary to continue with any narcotic prescription on a chronic basis . . . either Opana or morphine sulfate or similar or related medicines."

22. Dr. Kedlaya testified in a post-hearing evidentiary deposition on December 2, 2017. He discussed the medical justification for Claimant's medication regimen at length, but provided minimal information as to any causal connection between Claimant's accident and his current treatment. Dr. Kedlaya opined in conclusory fashion that Claimant's ongoing neck pain is related to the 2001 injury, but did not explain the basis for that opinion. He admitted he was unaware of Claimant's preinjury neck and back problems, and had not reviewed any of the preinjury records.

23. Dr. Raschbacher's opinions regarding causation are credible and persuasive.

24. Respondents proved by a preponderance of the evidence that the admitted industrial accident did not proximately cause Claimant's current need for medical treatment.

CONCLUSIONS OF LAW

Respondents are liable for medical treatment from authorized providers that is reasonably necessary to cure or relieve the employee from the effects of the industrial injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond maximum medical

improvement (MMI) if the claimant requires periodic maintenance care to prevent further deterioration of their physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). An injury need not be the sole cause of a claimant's need for treatment, as long as there is a "direct causal relationship" to the industrial accident. *Seifreid v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1996); *Munoz v. JBS Swift & Co. USA, LLC*, W.C. No. 4-780-871-03 (October 7, 2014).

Even where the respondents admit liability for medical benefits after MMI, they retain the right to challenge the compensability and reasonable necessity of specific treatment. *Hanna v. Print Expediters Inc.*, 77 P.3d 863 (Colo. App. 2003). Ordinarily, the claimant must prove by a preponderance of the evidence that an injury directly and proximately caused the condition for which he seeks benefits, and that the requested treatment is reasonably necessary. *Walmart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). But § 8-43-201(1) was amended in 2009 to place the burden of proof on the party seeking to modify an issue determined by an admission or order. If the effect of the respondents' challenge to medical treatment is to terminate all previously admitted maintenance benefits, the respondents must prove no further treatment is reasonable, necessary or related to the injury. *Salisbury v. Prowers County School District RE2*, W.C. No. 7-702-144 (ICAO June 5, 2013); *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838 (ICAO October 1, 2013).

At hearing, Respondents' counsel acknowledged Respondents are seeking to terminate Claimants' ongoing maintenance benefits on the theory that no further treatment is causally related to the industrial injury. Respondents also argue ongoing treatment with narcotics is not reasonable or necessary, regardless of causation. Respondents have the burden of proof on withdrawing the admission for *Grover* medical benefits and terminating all of Claimant's ongoing treatment. If Respondents fail to carry that burden, Claimant must prove opioids are reasonably necessary treatment for the industrial injury.

As found, Respondents proved by a preponderance of the evidence that the July 2001 accident did not proximately cause Claimant's current need for medical treatment. Dr. Raschbacher laid out a cogent and convincing argument to support his opinion regarding causation, and the countervailing evidence is minimal. Although Dr. Kedlaya opined Claimant's current neck pain is injury-related, his opinion was conclusory with no accompanying persuasive rationale. He admitted he was not aware of Claimant's preinjury history of chronic neck pain and did not even begin treating Claimant until many years after the accident. Claimant's condition worsened significantly after being placed at MMI in 2002, and there is no persuasive evidence to establish the requisite causal connection to the original injury. It is most probable that Claimant's current symptoms reflect the natural progression of his pre-existing degenerative changes combined with natural aging, which would have happened regardless of the industrial accident. While the treatment Dr. Kedlaya provides may be reasonably necessary to manage Claimant's chronic pain, it is not reasonably attributed to the accident which occurred nearly 17 years ago.

ORDER

It is therefore ordered that:

1. Respondents' request to withdraw their admission for ongoing *Grover* medical benefits is granted.

2. Claimant's request for additional medical treatment in relation to his July 16, 2001 industrial injury is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 2, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered a compensable lower back injury during the course and scope of her employment with Employer on December 11, 2016.

2. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical treatment for her December 11, 2016 industrial accident.

3. Whether Claimant has established by a preponderance of the evidence that she is entitled to receive Temporary Total Disability (TTD) benefits for the period March 7, 2017 until May 16, 2017.

4. A determination of Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

1. Claimant worked for Employer as a City Delivery Dispatcher at its area distribution center. Her job duties involved retrieving orders from shelves and preparing items for delivery to Employer's retail locations.

2. On August 29, 2015 Claimant obtained treatment for lower back pain at a chiropractic facility known as "The Joint." Todd Taylor, D.C. reported that Claimant presented with lower back pain that had started approximately one week earlier when she moved from a seated position to standing. He noted that Claimant suffered sharp, constant pain in her entire lower back area. Claimant had difficulty walking. She used Ibuprofen and pain-relief gel to alleviate her symptoms.

3. On December 11, 2016 Claimant moved 18 car batteries from a core cart to a pallet while working for Employer. The batteries each weighed approximately 40 pounds. Claimant specifically bent forward, lifted each battery out of the core cart, carried the battery and bent down to place it on the pallet. She commented that she experienced soreness in her lower back but the pain became more intense when she entered her delivery truck.

4. On December 12, 2016 Claimant discussed her lower back pain with Store Manager Stanley Brutis. Claimant specifically advised Mr. Brutis that she was feeling more sore than usual and would be leaving work early to obtain chiropractic treatment. Although Mr. Brutis inquired whether Claimant's lower back pain was related to her work activities, she specifically denied that her symptoms were work-related.

5. Later on December 12, 2016 Claimant visited The Joint for chiropractic treatment. Zachary Roberts, D.C. did not record any history of a work-related injury. Instead, the record reveals that Claimant simply presented for lower back stiffness without radiation.

6. On December 12, 2016 Claimant purchased a membership to The Joint. The membership permitted her to visit three to four times over the course of one month.

7. Claimant did not work on December 13, 2016 because of lower back pain but did not report any work injury to Employer. On December 14, 2016 Claimant resumed her regular job duties.

8. On December 16, 2016 Claimant returned to The Joint for treatment. Nicholas Jason, D.C. noted that Claimant presented with sciatic pain. However, Claimant did not mention a work injury. Dr. Jason referred Claimant to Mountain View Pain Center for an examination.

9. Later on December 16, 2016 Claimant visited Anthony Trotter, D.C. at Mountain View Pain Center for an evaluation. Dr. Trotter recorded that Claimant suffered lower back pain that originally began as tightness. The symptoms progressively worsened to include shooting pains down the right leg into the calf. Dr. Trotter diagnosed a disc herniation that required additional treatment.

10. On December 17, 2016 Claimant reported her December 11, 2016 injury to Mr. Brutis. Employer filed a Workers' Compensation claim on Monday, December 19, 2016.

11. On December 20, 2016 Claimant visited Authorized Treating Physician (ATP) Tomm VanderHorst, M.D. for an initial evaluation. Dr. VanderHorst recorded that Claimant had developed symptoms on the evening of December 11, 2016. Claimant did not recall a specific trauma or onset of symptoms. She noted that she had loaded approximately 20 car batteries onto a pallet earlier in the day. Claimant remarked that she had "some slight low back soreness across to her outlining level." She commented that it was not unusual for her to experience some muscle soreness after work. Claimant left work early the following day because of increased back pain and visited her chiropractor. As the week progressed Claimant's pain radiated into her right buttock, upper thigh and right calf. After conducting a physical examination Dr. VanderHorst diagnosed Claimant with acute right-sided lower back pain with sciatica. He determined that Claimant's lower back condition was likely caused by her work activities for Employer.

12. On March 8, 2017 Claimant underwent a lower back MRI. The MRI revealed a large right paramedian disc extrusion at L4-L5 that resulted in obliteration of the right lateral recess and mass effect on the right L5 and S1 nerve roots in the thecal sac. After reviewing the MRI results, Dr. VanderHorst referred Claimant to Robert Kawasaki, M.D. for specialist treatment on March 10, 2017.

13. Claimant began treatment with Dr. Kawasaki on April 7, 2017. Claimant reported she began experiencing lower back pain while moving car batteries on

December 11, 2016 at work and developed radiating pain into her legs within the next few days. She informed Dr. Kawasaki that she first sought chiropractic treatment on her own and her chiropractor encouraged her to file a claim for Workers' Compensation. Dr. Kawasaki diagnosed Claimant with a L4-5 right sided disc-herniation resulting in the obliteration of the lateral recess causing L5 and S1 radicular symptoms. He determined that it was within reasonable medical probability that Claimant's work activities on December 11, 2016 caused her disc herniation and radicular symptoms. Dr. Kawasaki recommended injections.

14. On April 12, 2017 Claimant underwent a psychological evaluation with Ron Carbaugh, Psy.D. Claimant reported that she was injured at work on December 11, 2016 while moving car batteries. She mentioned that she sought chiropractic treatment on her own and then obtained medical treatment through the Workers' Compensation system with Dr. VanderHorst. Dr. Carbaugh diagnosed Claimant with adjustment disorder and depressed mood. He noted that she possessed psychological factors that affected her medical condition. Claimant subsequently began psychological treatment with Dr. Carbaugh.

15. On August 3, 2017 Claimant underwent an independent medical examination with Kathleen D'Angelo, M.D. Claimant reported that her lower back began aching on December 11, 2016 after loading car batteries from a cart onto a pallet. Over the ensuing days the pain radiated down into her right leg. Dr. D'Angelo reviewed Claimant's medical records and conducted a physical examination. She expressed concerns about the delayed reporting of Claimant's lower back injury, the atypical presentation of symptoms that worsened over time instead of occurring acutely and the absence of notes about a precipitating injury in the December 2016 records from The Joint and Mountain View Pain Center. Dr. D'Angelo ultimately did not render a causation opinion in the absence of electrodiagnostic testing.

16. On August 7, 2017 Claimant underwent an independent medical examination with John S. Hughes, M.D. Dr. Hughes concluded that Claimant suffered a lower back injury while moving car batteries for Employer on December 11, 2016. However, he cautioned that the medical documentation was "not clear" because "initial notes authored by Dr. Taylor and Dr. Roberts on December 12, 2016 did not mention work-related lifting." He recommended a right lower extremity EMG.

17. On September 27, 2017 Claimant underwent an EMG of her right leg. The EMG revealed an acute S1 right-sided radiculopathy.

18. After reviewing additional medical records Dr. D'Angelo issued a Supplemental Report on October 19, 2017. Dr. D'Angelo continued to express concerns about the causal relationship between Claimant's December 11, 2016 work activities and lower back symptoms. She emphasized that an acute disc herniation is usually accompanied by immediate symptoms. Claimant's development of worsening symptoms in the days following the December 11, 2016 incident was unusual.

19. On December 6, 2017 the parties conducted the post-hearing evidentiary deposition of Dr. D'Angelo. Dr. D'Angelo explained that Claimant did not likely suffer a compensable lower back injury while working for Employer on December 11, 2016. She reiterated that Claimant had a disc extrusion at L4-L5 that resulted in nerve compression at the L5-S1 level. Dr. D'Angelo explained that most extruded discs are degenerative in nature. Furthermore, 40%-60% of patients with disc findings have no pain or radiculopathy. She noted that Claimant's intermittent lower back pain followed by remission of pain is "very typical of degenerative spine disease." In contrast, Dr. D'Angelo explained that when patients present with lower back symptoms after an acute injury they can usually state exactly what they were doing at the time. She characterized an acute disc extrusion as "acutely symptomatic."

20. Dr. D'Angelo remarked that Claimant initially described her lower back pain as "soreness" or "an ache" after December 11, 2016. She reasoned that, if Claimant suffered a disc extrusion at work on December 11, 2016, she likely would not have completed her shift. Claimant would have immediately experienced nerve compression at L5-S1. Furthermore, Claimant did not note an acute trauma to The Joint, Mr. Brutis, Dr. Trotter or Dr. Vander horst in the days following December 11, 2016. Dr. D'Angelo reasoned that Claimant's failure to mention a traumatic incident was inconsistent with an acute disc extrusion. Finally, Dr. D'Angelo noted that Claimant experienced lower back pain while simply standing up in 2015 and subsequently suffered intermittent back pain. She concluded that Claimant's pattern of symptoms was not consistent with an acute spinal injury on December 11, 2016.

21. Claimant has failed to demonstrate that it is more probably true than not that she suffered a compensable lower back injury during the course and scope of her employment with Employer on December 11, 2016. The medical records reflect that Claimant did not suffer an acute injury but likely experienced a recurrence of lower back stiffness and soreness. On December 11, 2016 Claimant moved approximately 20 car batteries from a core cart to a pallet while working for Employer. On the following day she advised Store Manager Mr. Brutis that she was feeling more sore than usual and would be leaving work early to obtain chiropractic treatment. Although Mr. Brutis inquired whether Claimant's lower back pain was related to her work activities, she specifically denied that her symptoms were work-related. Subsequent chiropractic records from The Joint and Dr. Trotter reveal that Claimant experienced tightness and stiffness in her lower back. However, she did not mention any work accident. In a visit with Dr. VanderHorst Claimant also did not report an acute work incident but instead mentioned that it was not unusual for her to experience some muscle soreness after work.

22. After undergoing a lower back MRI Claimant was diagnosed with a L4-5 right-sided disc herniation that resulted in nerve compression at L5-S1. Drs. VanderHorst and Kawasaki determined that Claimant's work activities on December 11, 2016 caused her disc herniation and radicular symptoms. However, they failed to adequately consider Claimant's chiropractic records that revealed prior lower back symptoms and treatment. Instead, Dr. D'Angelo persuasively explained that, if Claimant suffered a disc extrusion at work on December 11, 2016, she likely would have immediately experienced nerve compression at L5-S1. She also emphasized that Claimant did not note an acute trauma

to The Joint, Mr. Brutis, Dr. Trotter or Dr. VanderHorst in the days following December 11, 2016. Dr. D'Angelo reasoned that Claimant's failure to mention a traumatic incident was inconsistent with an acute disc extrusion.

23. Although Dr. Hughes concluded that Claimant suffered a lower back injury while moving car batteries for Employer on December 11, 2016 he cautioned that the medical documentation was "not clear" because "initial notes authored by Dr. Taylor and Dr. Roberts on December 12, 2016 did not mention work-related lifting." Dr. D'Angelo also noted that Claimant experienced lower back pain while simply standing in 2015 and subsequently suffered intermittent back pain. She concluded that Claimant's pattern of symptoms was not consistent with an acute spinal injury on December 11, 2016. Based on Claimant's initial reports excluding an acute injury as well as the persuasive opinion of Dr. D'Angelo, Claimant has failed to demonstrate that her work activities on December 11, 2016 aggravated, accelerated or combined with her pre-existing condition to produce a need for medical treatment. Claimant may have experienced soreness and stiffness after moving car batteries at work on December 11, 2016. However, in the absence of an acute event, her symptoms more likely constituted the logical and recurrent consequence of her pre-existing condition.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. § 8-41-301(1)(c) C.R.S.; *Faulkner v. Industrial Claim Appeals Office,*12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered a compensable lower back injury during the course and scope of her employment with Employer on December 11, 2016. The medical records reflect that Claimant did not suffer an acute injury but likely experienced a recurrence of lower back stiffness and soreness. On December 11, 2016 Claimant moved approximately 20 car batteries from a core cart to a pallet while working for Employer. On the following day she advised Store Manager Mr. Brutis that she was feeling more sore than usual and would be leaving work early to obtain chiropractic treatment. Although Mr. Brutis inquired whether Claimant's lower back pain was related to her work activities, she specifically denied that her symptoms were work-related. Subsequent chiropractic records from The Joint and Dr. Trotter reveal that Claimant experienced tightness and stiffness in her lower back. However, she did not mention any work accident. In a visit with Dr. VanderHorst Claimant also did not report an acute work incident but instead mentioned that it was not unusual for her to experience some muscle soreness after work.

8. As found, after undergoing a lower back MRI Claimant was diagnosed with a L4-5 right-sided disc herniation that resulted in nerve compression at L5-S1. Drs.

VanderHorst and Kawasaki determined that Claimant's work activities on December 11, 2016 caused her disc herniation and radicular symptoms. However, they failed to adequately consider Claimant's chiropractic records that revealed prior lower back symptoms and treatment. Instead, Dr. D'Angelo persuasively explained that, if Claimant suffered a disc extrusion at work on December 11, 2016, she likely would have immediately experienced nerve compression at L5-S1. She also emphasized that Claimant did not note an acute trauma to The Joint, Mr. Brutis, Dr. Trotter or Dr. Vanderhorst in the days following December 11, 2016. Dr. D'Angelo reasoned that Claimant's failure to mention a traumatic incident was inconsistent with an acute disc extrusion.

9. As found, although Dr. Hughes concluded that Claimant suffered a lower back injury while moving car batteries for Employer on December 11, 2016 he cautioned that the medical documentation was "not clear" because "initial notes authored by Dr. Taylor and Dr. Roberts on December 12, 2016 did not mention work-related lifting." Dr. D'Angelo also noted that Claimant experienced lower back pain while simply standing in 2015 and subsequently suffered intermittent back pain. She concluded that Claimant's pattern of symptoms was not consistent with an acute spinal injury on December 11, 2016. Based on Claimant's initial reports excluding an acute injury as well as the persuasive opinion of Dr. D'Angelo, Claimant has failed to demonstrate that her work activities on December 11, 2016 aggravated, accelerated or combined with her pre-existing condition to produce a need for medical treatment. Claimant may have experienced soreness and stiffness after moving car batteries at work on December 11, 2016. However, in the absence of an acute event, her symptoms more likely constituted the logical and recurrent consequence of her pre-existing condition.

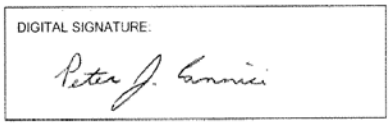
ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: January 30, 2018.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that she suffered an injury to her back arising out of and in the course and scope of her employment with employer on July 13, 2017.

- If claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that medical treatment she received, including treatment at Glenwood Medical Associates, constitutes reasonable medical treatment necessary to cure and relive claimant from the effects of the work injury.

- At hearing, the parties agreed that if the claim is found compensable they will reach a stipulation on the issues of average weekly wage (AWW); temporary total disability (TTD) benefits; and temporary partial disability (TPD) benefits.

FINDINGS OF FACT

1. Claimant began working for employer on July 12, 2016 as a customer service clerk. Claimant testified that on July 13, 2017 she was working at the service counter with her coworker, RH. Claimant testified that she was injured on that date when she was "slugged" in the back by her coworker, RH. Claimant testified that the contact made by RH was forceful enough to cause claimant to strike her abdomen on the service counter. Claimant also testified that immediately following that contact she could not move for a period of time.

2. RH testified at hearing regarding the July 13, 2017 incident. RH agrees that she and claimant were working at the service counter. They had been discussing another employee. RH noticed that same employee was close to where she and claimant were speaking. As a result, RH wanted to get claimant's attention. RH admits that she touched claimant on the back. However, RH describes the contact as a "very very light touch" in the area of claimant's shoulder. RH testified that claimant seemed startled when she was touched. Prior to this incident RH was not aware that claimant had any back issues. Claimant notified RH that she had "a bad back".

3. Another coworker, NK also testified at hearing. NK was present when RH touched claimant at the service counter. NK testified that he believed that RH was attempting to get the attention of claimant. NK described the touch as "miniscule"; a "light little tap". NK testified that claimant appeared to be startled when RH touched her back and stated that she had a "bad" back.

4. At hearing video surveillance of the July 13, 2017 incident was offered as evidence. The ALJ has reviewed the video and finds that it corroborates the version of events described by RH and NK.

5. Claimant testified that she has arthritis in her back and "has to be careful with it". Claimant testified that immediately following the incident she took some Aleve to treat her back pain. Claimant continued to have back pain and after reporting the incident to a store manager claimant left her shift for the day.

6. Claimant testified that her back pain worsened overnight. On July 14, 2016, claimant notified employer that she intended to seek medical treatment. Employer provided claimant with a list of designated providers and claimant chose to seek treatment with Glenwood Medical Associates as her authorized treating provider (ATP). Claimant was seen on that date by Dr. Paul Salmen who diagnosed a mid-back contusion and "some muscle spasm with parathoracic movement". Dr. Salmen prescribed Meloxicam and cyclobenzaprine and instructed claimant to treat with ice and heat. Claimant was taken off of work until July 18, 2017. Dr. Salmen provided work restrictions including no lifting over 20 pounds, no overhead lifting, and no kneeling or crawling.

7. On July 18, 2017, claimant was seen by Dr. Jamie Faught (also with the ATP, Glenwood Medical Associates). Dr. Faught diagnosed mid thoracic back pain and recommended claimant take Celebrex and to begin taking the cyclobenzaprine previously prescribed by Dr. Salmen. At that time, Dr. Faught placed claimant on complete work restrictions for one week.

8. On August 28, 2017, Dr. Faught placed claimant at maximum medical improvement (MMI) with no permanent impairment. Claimant testified that she has no back symptoms from the July 13, 2017 incident.

9. The ALJ credits the testimony of RH and NK over the conflicting testimony of claimant and finds that the contact made by RH on July 13, 2017 was a light tap on claimant's shoulder. Therefore, the ALJ finds that claimant has failed to demonstrate that it is more likely than not that she suffered an injury to her back on July 13, 2017.

10. The ALJ also concludes that claimant has failed to demonstrate that it is more likely than not that the incident on July 13, 2017 aggravated, accelerated, or combined with any preexisting condition to necessitate medical treatment or disability.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the

employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

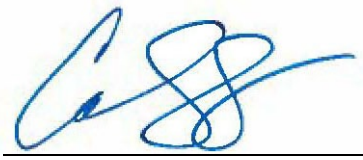
4. As found, claimant has failed to demonstrate by a preponderance of the evidence that she suffered an injury to her back on July 13, 2017. As found, the testimony of RH and NK is credible and persuasive.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

Dated: February 6, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant has proven by a preponderance of evidence that Dr. Eric Spier issued an order for ongoing 24-hour supervision.

II. If Dr. Spier ordered 24-hour supervision, whether the care/24-hour supervision provided by Vicky Ferry is reasonable, necessary and related to Claimant's admitted industrial injury.

III. To the extent actually raised by Claimant at hearing, whether Dr. Spier's request for 24-hour care/supervision should be "deemed authorized" for Respondents' failure to contest what Claimant contends was a request for prior authorization in compliance with WCRP 16-9, 16-10 and 16-11.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant worked for Employer as a CDL truck driver delivering oversized loads of material to building construction sites. On April 15, 2017, Claimant went to a job site for a client. While on site, Claimant fell approximately 10 feet through an unmarked/unprotected basement opening to the concrete floor below.[1]

2. Claimant suffered serious life threatening injuries, including a severe closed head injury, multiple fractures, including closed fractures of ribs 2-8. He also sustained a right shoulder rotator cuff tear with AC separation and biceps tendinopathy, a cervical spine strain and a lumbar sprain with involvement of the right SI joint.

3. Claimant was air lifted by flight for life to Penrose Hospital where he underwent an emergent left-sided decompressive craniectomy, with bone flap for evacuation of a subdural hematoma. Post surgically, Claimant developed a hemopneumothorax and an entrapped right lung requiring limited thoracotomy with placement of chest tubes on April 25, 2017. Claimant subsequently developed acute respiratory failure requiring tracheostomy and mechanical ventilator support.

4. Claimant's acute condition stabilized and he was transferred to Kindred Hospital (herein after "Kindred") on May 5, 2017 for continued respiratory stabilization. While at Kindred, Claimant was "liberated" off the ventilator although his tracheostomy

[1] The medical records that contain reference to the fact that Claimant fell from a roof are in error.

remained cannulated at the time of his discharge and transfer to Craig Hospital (herein after "Craig") for additional rehabilitation on May 22, 2017.

5. Claimant was admitted to Craig on May 22, 2017 to participate in interdisciplinary brain injury recovery to include, brain injury physician management, pharmacology management, specialized rehabilitation nursing, speech therapy, physical therapy, occupational therapy, recreational therapy and neuropsychology evaluation and management.

6. Upon admission to Craig, Claimant underwent an optometry consultation during which it was discovered that Claimant suffered a "complete traumatic neuropathy of his right eye" probably caused by his facial fractures. Claimant had no light perception vision and it was felt that he would have no "useful visual recovery in the right eye." Claimant is essentially blind in the right eye.

7. Claimant was also found to have mixed hearing loss in the right ear after otology evaluation.

8. On May 25, 2017, Dr. Eric Spier, Claimant's attending physician at Craig, authored correspondence strongly recommending the appointment of a guardian and conservator given Claimant's inability to make personal, legal, medical or financial decisions secondary to severe cognitive impairment.

9. Claimant's wife is handicapped. She has cerebral palsy, is deaf, unable to speak and does not read. She communicates via special sign language with her left hand/arm since right-sided weakness prevents her from using her right arm/hand to sign. Claimant provided substantial assistance to his wife before his injury. Claimant's wife moved into her sister's (Vicky Ferry's) home following Claimant's injury. Ms. Ferry is currently delivering the assistance to Claimant's wife that he was providing before his fall. Given the depth of Claimant's cognitive impairment coupled with his wife's limitations, Dr. Spier appointed Ms. Ferry as Claimant's Medical Proxy Decision Maker on May 24, 2017. The Medical Proxy Order was to remain in effect for 6 months. The Order states that due to the Claimant's cognitive impairment, he "lacks decisional capacity to:

(a) comprehend information,
(b) deliberate regarding available choices, and/or
(c) communicate verbally or nonverbally his/her decisions regarding his/her health care."

10. During a medical team conference meeting on June 5, 2017, it was noted that Claimant required moderate assistance with time management and minimal assistance with activities of daily living (ADL). He was noted to have a severe word finding difficulties, moderately impaired verbal comprehension, and severely impaired reading, writing and signing skills.

11. On June 20, 2017, Claimant suffered a generalized tonic-clonic post-traumatic seizure requiring emergency room attention. Claimant was placed on Keppra in an effort to prevent further seizure activity.

12. A follow-up team conference meeting was held July 11, 2017. Present at the meeting were several medical team members, Claimant's wife, unidentified family members and Kathy Douglas, a nurse case manager (NCM) assigned to the case by Insurer. A report from this conference reveals that while Claimant's recovery was progressing, he required a shower chair and supervision with other ADL's. It was also noted that Claimant's severe conduction aphasia persisted, as did a severe naming impairment, a fluent output repetition impairment and an oral reading comprehension impairment. Claimant was noted to have other mild executive function deficits for which monitoring of his neurocognitive status was recommended. Family education and discharge to Ms. Ferry's home was discussed and a list of "Do's and Don'ts" was provided to Claimant and his family in preparation for his discharge. Upon discharge, Claimant was to be followed by home health care with eventual progress to outpatient therapy, including the Craig Hospital Aphasia Treatment (CHAT) Program later.

13. Careful review of the aforementioned "Do's and Don'ts" lists the first "Do" as Claimant needing to have 24 hour supervision, meaning that "someone [needed] to be home with [Claimant] at all times." The Do's and Don'ts list encourages Claimant to assist with the completion of certain daily activities, i.e. laundry, cleaning the dishes, cleaning his room and cooking with supervision (emphasis added). The list also instructs Claimant not to drive a vehicle, use power or hand tools capable of causing injury, engage in unsupervised cooking, build or tend to fires, use weapons, or walk outside unsupervised. Moreover, the list provides that Claimant was not to pay his bills without supervision nor was he to shower without letting a family member know he was doing so. As a "general rule of thumb", Claimant was to refrain from any activity that could cause harm to him or anyone else if it was not done perfectly.

14. Ms. Ferry was present during the discharge-planning meeting. She testified that she took the Do's and Don'ts list to mean that Claimant would need constant supervision upon his discharge. Leanne Endriss, Claimant's other sister-in-law, was also present at the discharge planning meeting. Ms. Endriss testified that she understood from the discharge instructions that "David would need 24-hour care for his safety, that he that he wasn't able to make decisions safely, and that instead of going to a home -- because they had talked about putting him in a home healthcare -- not in-home healthcare, but in a facility -- . . . Vicky said he can come to my house, I will take care of him. And so they knew that and they thought that was a good fit."

15. Ms. Ferry's interpretation of the "Do's and Don'ts" list as it relates to Claimant's need for 24 hour supervision is supported by the various discharge summaries from the interdisciplinary rehabilitation team members and the testimony of Ms. Endriss. Based upon the evidence presented the ALJ credits Ms. Ferry's interpretation of the Do's and Don'ts list to find that upon his discharge, Claimant required substantial structure and 24 hour supervision to abstain from certain inherently dangerous activities- for his safety and the safety of others given his cognitive deficits.

16. Claimant was discharged from Craig on July 12, 2017. Per the discharge plan, Claimant returned to Colorado Springs to live with his wife and Ms. Ferry in Ms. Ferry's home as he required more care and supervision than his wife could provide. Claimant has lived with Ms. Ferry continuously since his discharge from Craig. Since his discharge, Ms. Ferry has transported him to his various medical appointments, has assisted him in preforming activities of daily living, has managed his prescriptions, assisted with cognitive retaining through various activities/games, has assisted with Claimant's social reintegration and has taken over his finances. The evidence presented persuades the ALJ that per the discharge plan Ms. Ferry has assumed Claimant's care and has provided 24-hour supervision.

17. At the time of Claimant's discharge, Dr. Spier indicated that Claimant should continue with physical therapy, occupational therapy, speech and language therapy, and neuropsychology care; however, he did not write a script for home care services. Rather, Dr. Spier indicated that Claimant should follow up with his primary care physician and return to Craig to participate in the CHAT Program, and for follow up as needed.

18. As noted, Ms. Douglas, NCM was present as the discharge-planning meeting held July 11, 2017. Upon Claimant's discharge, NCM Douglas helped arrange and schedule the follow-up therapy appointments recommended by Dr. Spier. She did not, however, arrange for Claimant to be seen by an authorized treating provider as part of the workers' compensation claim. Ms. Ferry testified that after returning home from Craig, Claimant was running out of his medications, including Keppra. As NCM Douglas had yet to schedule an appointment for Claimant to see a physician under the workers' compensation claim, Ms. Ferry took him to his primary care physician, Dr. Strode to get his prescription(s) refilled.

19. Because Dr. Spier did not write a prescription for home supervision and no follow-up appointment had been made for Claimant to be evaluated by a physician under the workers' compensation claim, no specific recommendations, outside of the "Do's and Don'ts" list regarding the scope of continued home supervision existed after Claimant's discharge from Craig. According to NCM Douglas, Dr. Spier had little interest in getting involved in home care issues, noting further that he did not want to write any additional prescriptions for home care and that Claimant should follow-up with whomever he saw in Colorado Springs after his discharge for home care/supervision concerns.

20. Because no follow-up appointment had been scheduled for Claimant to see a physician under the workers' compensation claim following his discharge from Craig and because Ms. Ferry was scheduled to be on vacation from August 2 through August 8, 2017, arrangements were made though NCM Douglas to secure an alternate care giver to cover Ms. Ferry's supervision of Claimant while she was out of town. As part of this process, Dr. Spier issued a prescription for home care services providing for both certified nursing assistant care and home supervision on July 26, 2017. The prescription provides as follows: "CNA Care 2-4 hours per day 5-days per week (reevaluate in 4 weeks) 24 hr. supervision (8-2-17 to 8-8-17)."

21. As noted above, Leanne Endriss is Claimant's sister-in-law. She is also a professional caregiver. Ms. Endriss was chosen to fill in for Ms. Ferry while she was on vacation. Relying on the prescription written by Dr. Spier, Ms. Endriss provided supervision to Claimant. Insurer has paid Ms. Endriss for the services she rendered and payment for this period of supervision is no longer in controversy. Concerning the CNA care ordered by Dr. Spier, the evidence presented persuades the ALJ that this care was provided by an outside agency and Insurer has paid the costs for the same.

22. Claimant was evaluated by Dr. Miguel Castrejon on August 17, 2017 as part of the worker's compensation claim. While Dr. Castrejon made multiple recommendations, referrals and provided Claimant with prescriptions for language re-education, a right shoulder and lumbar MRI, he did not write a prescription for continued 24-hour supervision.

23. On August 31, 2017, Claimant met with his Occupational Therapist, Sarah Wrench for his 16th visit of occupational therapy. Ms. Wrench indicated that the Claimant had made good overall progress and opined the Claimant was ready to transfer to outpatient services. Ms. Wrench had previously indicated the Claimant was able to feed himself independently, as he was able to utilize all utensils, adaptive devices, pour liquids and open containers without risk.

24. Ms. Wrench indicated that Claimant could independently and safely perform daily living tasks such as washing his face, shaving (including blade insertion), bathing combing hair and brushing teeth independently, and without supervision. Ms. Wrench indicated that the Claimant was able to answer phones, dial numbers, transfer in and out of bed, administer the changing and dressing of his own clothing, and that he could walk independently (without need of human assistance, including on uneven surfaces). As for toileting, it was indicated that the Claimant was able to manage all aspects of toileting safely and without assistance.

25. Ms. Wrench specifically indicated that the Claimant was able to ambulate and walk independently of 165 feet or more, on all surfaces. It was also indicated that Claimant was able to ascend and descend a full flight of stairs without the need of any supervision. Claimant was noted to be able to open tight jars, perform chores such as washing walls, carry groceries or briefcase, climb stairs, and transfer from chair to chair without difficulty.

26. Claimant was evaluated by Dr. Timothy Sandell on November 15, 2017 in the presence of his wife and NCM Douglas. It is noted in the report generated from this date of visit that Dr. Castrejon had recently evaluated Claimant and that Claimant was referred to Dr. Sandell to become his "primary care provider." Similar to Dr. Castrejon, Dr. Sandell made recommendations for re-evaluation, primarily with regard to his shoulder, ENT services, and neuroopthalmology. However, the record presented from this date of service is devoid of any indication that Claimant required any period of home supervision nor does the record evidence presented support a finding that Dr. Sandell ordered such services.

27. On November 17, 2017, Ms. Ferry submitted an invoice to Insurer seeking reimbursement for the care/supervision services she has rendered to Claimant. The invoice specifically requests that she be compensated for providing 24-hour supervision of Claimant from July 12, 2017 to August 1, 2017 for a total of 496 hours at $16.00/hour. In her invoice, Ms. Ferry also requested to be compensated for eight hours a day at $12.00/hour for home health care services/supervision from August 8, 2017 through November 17, 2017, for an additional 452 hours.

28. The ALJ finds $16.00 a reasonable rate of compensation for the home health care/supervision services provided to Claimant by Ms. Ferry.

29. NCM Douglas testified that she is currently the nurse case manager assigned to the Claimant's case. Ms. Douglas testified that she was assigned to the case shortly after Claimant was admitted to the hospital in April of 2017. Ms. Douglas also testified that she had attended Claimant's discharge meeting at Craig Hospital on July 12, 2017. Ms. Douglas indicated that at the discharge meeting, it was agreed that Claimant would continue with physical therapy, occupational therapy, and speech and language therapy. Ms. Douglas indicated that she arranged for these treatments as she had received the prescriptive orders for the therapy services from Craig Hospital.

30. Despite her attendance at the discharge-planning meeting, NCM Douglas testified that Dr. Spier did not recommend 24-hour care, "except for the time frame that the family was not going to be in attendance." NCM Douglas also testified that she was did not see the list of Do's and Don'ts that was prepared for Claimant in advance of his discharge. Not only did NCM Douglas testify that she did not see the list, she maintained that it was not "necessarily conveyed in the conference." NCM Douglas' testimony is inconsistent with the more persuasive medical records and the testimony of Ms. Ferry and Ms. Endriss tending to establish that she knew or should have known that Claimant was to be supervised 24 hours per day upon discharge and that Dr. Spier, as the rehabilitation team leader assisted in developing this requirement and supported it. (See records of Discharge Report, Claimant's Exhibit 12, page 88 (cc'd Kathy Douglas); see also, Team Conference report, id., "the discharge plan was discussed. A list of do's and don'ts was provided to the patient. He is initially being followed by home health care and will progress to outpatient therapy…" , cc'd to Kathy Douglas. id., page 88).

31. Ms. Douglas also testified that Dr. Spier's prescription written on July 26, 2017, was the only prescription for home supervision that has been issued in this case. Careful review of the evidence presented, supports this testimony.

32. To the extent that Claimant actually raised the issue at hearing, the ALJ finds that he failed to prove that Dr. Spier requested prior authorization of 24-hour care/supervision. To complete a prior authorization request under WCRP 16-10, the provider shall concurrently explain the reasonableness and the medical necessity of the services requested, and shall provide relevant supporting medical documentation. Supporting medical documentation is defined as documents used in the provider's decision-making process to substantiate the need for the requested service or procedure. In this case, there is a dearth of evidence to support a finding that Dr. Spier

sent any documentation to the adjuster containing the necessary information required by Rule 16-10(F(1)(b), W.C.R.P. to make it a completed request for prior authorization for 24-hour care/supervision.

33. Based upon the evidence presented, the ALJ is persuaded that the Do's and Don'ts list, along with the specific recommendations of Claimant's physical therapist, occupational therapist and psychologist, establish that Claimant did not have the capacity to manage his activities of daily living as a direct consequence of his industrial injury. Accordingly, the ALJ finds that the 24-hour supervision needed to assure Claimant's safety and wellbeing upon discharge through the last date of Ms. Ferry's vacation reasonable, necessary and related to his admitted work injury.

34. Moreover, the evidence presented persuades the ALJ that while Dr. Spier did not write a prescription for such supervision, he clearly intended for Claimant to be supervised as part of his discharge to Ms. Ferry's home. Because Dr. Spier did not alter the "Do's and Don'ts" list prior to August 2, 2017, and because he wrote a prescription for 24 hour supervision while Ms. Ferry was on vacation, it is reasonable to infer that Claimant required 24 hour care/supervision prior to Ms. Ferry's vacation, i.e. following his discharge on July 12, 2017, to the date of her vacation on August 2, 2017. In this case, the ALJ is persuaded that the "Do's and Don'ts" list is tantamount to an order/prescription for 24-hour care/supervision upon Claimant's discharge to Ms. Ferry's home. Accordingly, the ALJ is persuaded that Ms. Ferry is entitled to reimbursement for the care/supervision she provided from July 13, 2017 through August 2, 2017.

35. While Ms. Ferry may have provided some amount of care/supervision on July 12, 2017, the evidence presented fails to establish that the care/supervision she rendered was likely 24 hours in length. To the contrary, the evidence presented establishes that Claimant was discharged from Craig on this date, so he clearly spent some part his day in the hospital under the care and supervision of the hospital staff. Consequently, the ALJ finds the claim for 24-hour reimbursement for July 12, 2017 unpersuasive. The evidence presented also persuades the ALJ that Ms. Ferry likely cared for and supervised Claimant for some period of time on August 2, 2017 prior to departing for vacation. The ALJ finds Ms. Ferry's indication that she provided 7 hours of care/supervision to Claimant on August 2, 2017 credible and persuasive.

36. While the ALJ is convinced that Dr. Spier ordered Claimant to be supervised 24 hours a day upon his discharge through August 8, 2017, the ALJ agrees with Respondents that the issue of ongoing care/supervision beyond August 8, 2017, was not specifically endorsed for hearing. Consequently, the ALJ declines to address and reserves for future determination, Claimant's homecare/supervision needs after August 8, 2017.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo.App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

C. In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. *2008).* In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). Concerning the credibility of witnesses, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). As found, the ALJ credits the testimony of Ms. Ferry and Ms. Endriss over the contrary testimony of NCM Douglas regarding Claimant's need for 24-hour supervision. While there is inconsistency regarding the specific period of time Ms. Ferry provided Claimant care/supervision on July 12 and August 2, 2017, the balance of the evidence establishes that Dr. Spier supported Claimant's discharge from Craig if Claimant could be provided with 24-hour supervision. Thus, while the invoice submitted by Ms. Ferry does not support that she provided 24-hour supervision of Claimant on July 12, 2017, the ALJ concludes that her testimony regarding Claimant's need for supervision is in keeping with Dr. Spier's intent and with the content of the discharge summaries of the interdisciplinary rehabilitation team at Craig. Ms. Douglas' contrary testimony is unpersuasive.

Medical Benefits- Essential Services/Supervision

D. Section 8-42-101(1)(a), C.R.S. provides that the respondent is liable for medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *See Colorado Compensation Insurance Authority v. Nofio, supra.* Home health care services fall within this provision. *See Suetrack USA v. Industrial Claim Appeals Office, supra.* Whether treatment or services provided under § 8-42-101, C.R.S. are reasonable and necessary is one of fact for resolution by the ALJ. *See City of Durango v. Dunagan,* 939 P.2d 496 (Colo.App. 1997). In this case, Respondents contend that the need for 24-hour supervision as contained in the "Do's and Don'ts" list is not reimbursable because Claimant's occupational therapist, Ms. Wrench reported on August 31, 2017, that Claimant does not need any assistance with personal hygiene, bathing, eating, or dressing. Consequently, Respondents assert that the essential services provided by Ms. Ferry are limited to purely supervising Claimant while he performs his daily activities and household chores. In short, Respondents argue that the essential services/supervision provided by Ms. Ferry are not incidental to the provision of medical treatment and thus, not compensable under the Act.

E. To be a compensable medical benefit, the service must be medical in nature or incidental to obtaining such medical or nursing treatment. *Country Squire Kennels v. Tarshis,* 899 P.2d 362 (Colo.App. 1995). A service is medical in nature if it is reasonably needed to cure and relieve the effects of the injury and related to the claimant's physical needs. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo.App. 1997). Services which have been found to be "medical in nature" include home health care services in the nature of "attendant care" if reasonably needed to cure or relieve the effects of the industrial injury. *Atencio v. Quality Care, Inc.*, 791 P.2d 7 (Colo.App. 1990). Such services may encompass assisting the claimant with activities of daily living, including matters of personal hygiene. *Suetrack v. Industrial Claim Appeals Office*, 902 P.2d 854 (Colo.App. 1995). Further, it is well established that a claimant's spouse may be compensated for nursing type services. *Edward Kraemer and Sons, Inc. v. Downey*, 852 P.2d 1286 (Colo.App. 1992). Here, the evidence presented persuades the ALJ that the services/supervision rendered during the period July 13, 2017 to August 2, 2017 were central to Claimant's personal care, health and wellbeing. Specifically, Claimant required transportation to/from all of his follow-up visits as he was precluded from driving. Moreover, Claimant required supervision and assistance to take a shower, cook, clean, do laundry and manage his prescriptions and finances. Finally, Claimant required assistance in brain stimulation and social reintegration to improve his condition. Based upon the evidence presented, the ALJ concludes that the services rendered to Claimant by Ms. Ferry were both medical in nature and incidental to obtaining medical care. Moreover, as found, the ALJ is convinced that such services were reasonable and necessary to assist in Claimant's medical recovery, i.e. to prevent deterioration of his condition and otherwise cure and relieve him of ongoing cognitive dysfunction by precluding his engagement in hazardous activities and otherwise expose him to additional brain and social stimulation. Hence, the ALJ concludes that the

services and supervision provided by Ms. Ferry from July 13, 2017 through August 2, 2017 were medical in nature and thus, compensable.

F. In addition to contending that the services/supervision provided by Ms. Ferry are not medical in nature, Respondents argue that they are not reimbursable because outside of Dr. Spier's, July 26, 2017 script, none of the treating providers in the case have issued a prescription for such services/supervision. As noted above, the ALJ finds that Claimant did not specifically endorse the issue of Claimant's entitlement to ongoing home care/supervision after August 8, 2017. Consequently, this order does not address that issue. Nonetheless, Respondents also contend that Ms. Ferry is not entitled to reimbursement for the care/supervision she rendered to Claimant from July 13, 2017 through August 2, 2017, because of the absence of a written a prescription. The ALJ is not persuaded. In rejecting Respondents' contention, the undersigned finds the claim of *Brenda Kern v. St. Mary's Hospital*, W.C. 4-391-482 (ICAO, January 17, 2001) instructive. In *Kern*, the Claimant suffered severe head and brain injuries, including a right temporal lobe hemorrhage, a subdural hematoma and a fractured skull. Ms. Kern's husband was spending a substantial amount of time with her performing essential services including "food planning and preparation, cognitive training, encouraging the claimant to eat (because the industrial injury resulted in the claimant's loss of smell and taste), developing daily schedules, assisting the claimant with daily work assignments from Dr. Bowen, preparing daily medications, dispensing daily medications, assisting the claimant with her hearing aide, transporting the claimant to the grocery store where she shops as part of her cognitive training, performing massages, calling in and picking up prescriptions, assisting the claimant in a prescribed exercise program, and other duties related to the claimant's personal hygiene and incontinence."

G. Citing *Atencio v. Quality Care, Inc*., 791 P.2d 7 (Colo.App. 1990), the *Kern* respondents challenged the provision of essential services on the grounds that such services were "not compensable in the absence of a medical prescription from the attending physician." Because, no treating physician had prescribed attendant services prior to June 3, 1999, the *Kern* respondents reasoned that the record was "legally insufficient to support an award of attendant services prior to that date." In the instant claim, Respondents likewise assert that because no prescription for essential services/supervision was written covering times before August 2, 2017, the services/supervision provided by Ms. Ferry up to her vacation were not reasonable or necessary.

H. Setting aside the fact that the undersigned is persuaded that the "Do's and Don'ts" list is the equivalent of a prescription for 24-hour care/supervision, the ALJ finds Respondents' argument concerning the need to have a prescription to award the provision and reimbursement of essential services contrary to the Panel's decision in *Kern*. Indeed, the Panel in *Kern* rejected this argument noting as follows:

> Contrary to the respondents' contention the courts have not interpreted § 8-42-101(1)(a) to limit compensable home health care to

> services which are medically prescribed. *Atencio v. Quality Care, Inc., supra*. In *Atencio*, the claimant suffered compensable injuries to her upper extremities. As a result of [her] injuries, the claimant was severely limited in the use of her hands. The treating physician prescribed housekeeping and attendant services which were awarded by an ALJ. However, the Industrial Claim Appeals Panel concluded such services were not compensable under the predecessor statute to § 8-42-101(1)(a) and, therefore, set aside the award. The Supreme Court disagreed and concluded that such services are compensable if medically necessary or incidental to obtaining such treatment. Further, the court held that the question of whether the services "qualify under this test" was one of fact for the ALJ. In concluding that the record contained "substantial and sufficient" evidence "both in quality and quantity to support" the ALJ's award, the court relied on the testimony of the claimant and the claimant's attendant that the claimant is unable to bathe, dress, perform home health care or sanitary functions or household chores without assistance. *Id*. at 8. The court also relied on "undisputed" evidence that the treating physician prescribed housekeeping and attendant services and that such services were necessary. *Id* at 9. However, nothing in *Atencio* suggests that the medical prescription for attendant care was a prerequisite to the award of attendant services. To the contrary, the court held that the facts "considered together, were sufficient to support" the finding the requested attendant care met the test of being "medical in nature." *Id* at 9. Therefore, we reject the respondents' contention that *Atencio* supports their assertion that as a matter of law, attendant services which are not prescribed by the treating physician are not compensable.
>
> Furthermore, a medical prescription for attendant care services is not determinative of whether such services are reasonably necessary. Rather, a medical prescription or a physician's supporting testimony is merely some evidence the ALJ may consider in determining whether the requested services are "medical in nature." *See Bellone v. Industrial Claim Appeals Office, supra.* Consequently, the ALJ was not precluded from awarding attendant services greater than the services subsequently prescribed by the treating physicians.

I. While the facts are not exactly aligned with the case at bar, the decision reached in *Kern* persuades the ALJ that an award of essential services is not predicated on the existence of a prescription. Moreover, as announced in *Kern,* the ALJ is not precluded from widening the scope of services awarded beyond that prescribed by the treating physician provided that the care/services are medical in nature or incidental to obtaining medical treatment and otherwise reasonable and necessary. What occurred in the matter at hand mirrors what occurred in *Kern*, namely that Claimant was receiving essential services without a formal prescription written by a treating physician. Because the ALJ concludes that a prescription is not necessary and because the

care/supervision Ms. Ferry provided between July 13, 2017 and August 2, 2017 was medical in nature, Claimant has proven by a preponderance of the evidence that he is entitled to reimbursement to Ms. Ferry, at a rate of $16.00 per hour for a total of 487 hours. (20 days (7/13/2017-8/1/2017) × 24 hours/day + 7 hours on 8/2/2017 = 487 hours).

ORDER

It is therefore ordered that:

1. Claimant has proven that Dr. Spier ordered home care/24-hour supervision upon Claimant's discharge from Craig Hospital on July 12, 2017. Even if Dr. Spier had not ordered such home care, the ALJ concludes that a prescription for such services is not necessary to order reimbursement to Ms. Ferry for services she rendered between July 13, 2017 and August 2, 2017.

2. Claimant has proven by a preponderance of the evidence that the care/24-hour supervision rendered by Ms. Ferry between July 13, 2017 and August 2, 2017 was reasonable, necessary and related to his admitted industrial injury.

3. Claimant's request for a determination of whether he is entitled to ongoing home care/24-hour supervision after August 8, 2017, along with all matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, CO 80906

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he was injured in the course and scope of his employment, when he was injured in an automobile accident on his way home from work?

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. The Claimant works as a maintenance technician for Sylvester's Maintenance. The company is headquartered in Englewood, Colorado, a suburb of Denver. The company performs building maintenance jobs, such as welding, plumbing, general building maintenance, and repairs for commercial businesses such as grocery stores and auto dealerships. The Claimant testified that it is a "fairly small" business with about 10-11 other maintenance techs that cover jobs, mainly in the Denver area. The Claimant worked there for about a year before his accident.

2. On June 23, 2017, a Friday, the Claimant finished his last job for the day. This was a Friday. After finishing this job, the Claimant went by the office and removed some trash from his truck at the company headquarters. He noted his hours on his handwritten timesheet when he finished the job at 4:30 pm. The Claimant then proceeded to drive to his home in Black Forest.

3. As Claimant neared his home, he was involved in a two-vehicle accident. The Claimant was approaching an intersection where he had the right of way, and the other driver failed to stop at a stop sign. The Claimant testified that he stepped hard on the brakes but could not avoid 't-boning' the other vehicle. After the impact, his truck veered off the left side of the road and ran up an embankment and into a brick wall.

4. Cell phone records indicate the last time Claimant used the phone for work purposes was at 2:55 p.m. The next entry was a call at 5:23 p.m., sometime after the accident occurred.

5. Claimant's truck was equipped with a safety system that automatically called 911 and reported the accident to authorities. The Claimant testified, and the phone records confirm, that after the accident he called his work supervisor, Robert Lashway. Soon he also received a call from the company owner James Sylvester. After the emergency response team arrived, both he and the other driver were medically examined at the scene.

6. The Claimant testified that the emergency responders recommended that he seek emergency treatment. The Claimant did not immediately seek medical care. He

stayed at the scene to gather contents of the truck which were loose and scattered at the scene. At the time of the accident the truck was loaded with tools and parts. There was also a welder mounted in the truck bed. Many of the hand tools on the truck were the property of Claimant.

7. The Claimant submitted as evidence photographs he took at the scene, showing very significant damage to the truck he was driving, a 2016 Ford F-350. The airbags had deployed. The truck was towed back to the company headquarters in Englewood and the Claimant went home with his wife, who had come to the accident scene. At home he showered, and then by about 9:00 pm he felt bad and decided to go to the ER. His wife drove him to the ER, where he was checked out and put under observation. He testified that the ER doctor recommended he take a couple weeks off.

8. The Claimant suffered injuries to his right knee, which rammed the dash, and his left shoulder, from the shoulder belt, and was later diagnosed with a mild traumatic brain injury.

9. The Claimant was not directed by his employer to seek treatment with a work comp provider. The Claimant had been referred to Dr. Bradley Vilims by his personal injury attorney. Dr. Vilims saw the Claimant on July 18 for treatment. Dr. Vilims diagnosed mild traumatic brain injury, neck pain and headaches, mid to upper lumbar pain, and left knee injury. He recommended continued chiropractic treatment and made a referral for treatment of anxiety and fear avoidance behavior. He took the Claimant off work for 3 weeks.

10. The Claimant lives in Black Forest, a suburb of Colorado Springs. He and one other maintenance tech live outside of Denver, but the other techs all live in the Denver area. Mr. Sebastian testified that, if he was driving to a job in Denver, he would typically clock in for the day about when he hit highway 470, or about 15 minutes away from the home office in Englewood. In this way, he could either report to the home office, or be diverted to an assigned job. If he was working on a job in Colorado Springs, he testified that "…as soon as I walk out the front door I'm on the clock." Maintenance techs such as Claimant are not required to first go to the home office in Englewood office prior to clocking in.

11. The exception to this is required safety briefings, which are held on Monday mornings at the home office in Englewood. Maintenance techs are not paid for their time for this weekly commute to Englewood, including Claimant, who lives about an hour away.

12. The maintenance techs are each provided with a company truck and a company owned cellphone. They are also provided with a company owned credit card to pay for gas. The techs are allowed to drive the company trucks home and keep them at their homes. The cell phones are provided for the techs by the company, who has the contract and pays the cell phone bills. The Claimant testified that this was his only cell phone, and he made personal calls on the cell phone as well as work calls. The cell phone had a calendar function, which Employer would populate with the job

assignments, so the maintenance techs could arrange their workday. Additionally, Claimant wore a company issued shirt and hat to work each day.

13. The Claimant testified that the new truck and cell phone were offered to him as part of the negotiations when he was hired. The Ford F-350 he drove was a new truck the Employer purchased specifically for him when he was hired. Claimant considered this truck and cell phone to be a personal benefit for him. The Claimant testified that he considered the free cell phone and use of the truck as "enticing factors" in the job offer. The photographs of the truck show that the vehicle bears signage on both sides advertising for the Employer Sylvester's Maintenance.

14. The Claimant testified that, at the time of his accident, the truck had about 60,000 miles on it and it was 8 months old. He estimated that he drove about 300 to 400 miles per day in the truck. The rear of the truck had compartments for tool storage. There is a rack on the back of the truck that held a ladder. After the accident there were tools and parts scattered around the scene. The record is unclear which of these particular items were Claimant's, and which belonged to Sylvester's Maintenance. Such distinction, however, is not important to make in this case.

15. Mr. Sylvester, the owner of Sylvester's Maintenance, testified for the Respondents. He confirmed that his maintenance techs all drove company trucks which he allows them to keep at their homes. He testified that, "…my agreement with the employees is you have the company vehicle at your disposal 24 hours a day 7 days a week, if you need it for personal, you are allowed to use it, my only rule is you put personal fuel into it. That's my only requirement."

16. When he was questioned, "So, the employee has use of the vehicle, but it's the fuel that's the issue?" Sylvester answered, "Sure". Mr. Sylvester was asked if there were company materials on the truck and stated, "We were never able to do an inventory because Mr. Sebastian is the one who drives that truck every day, so I don't know 100% what is on that truck, so the answer is no."

17. Mr. Sylvester confirmed that the maintenance techs are "on the clock" for the entire business day except for lunch, and they are normally paid to travel between jobs. The techs are not required to stop in the office on their way to or from work, with the exception of Monday mornings, when they attend a safety meeting at the office.

18. He further testified, however, that Maintenance Techs are not paid to commute, unless they are picking up parts from the home shop in order to perform a particular job. He confirmed that the issuance of company trucks and call phones are a fringe benefit for his workers. He confirmed that he considers Claimant to be an employee of Sylvester's Maintenance.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. It is the Claimant's burden of proof to establish compensability of her injury by a preponderance of the evidence. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina*, 860 P. 2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark*, 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A*., 104 P. 3d 273 (Colo. App. 2004); *Hosier v. Weld County Bi-Products,Inc.*, W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi*, 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984).

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this case, there are few material conflicts in the testimony to resolve. The ALJ finds Claimant to be credible, despite evidence of some post-concussion symptoms. The ALJ finds James Sylvester to be credible as well.

D. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability-"Going to Work"

E. In general, a Claimant who is injured while going to or coming from work does not qualify for workers' compensation benefits because such travel is not considered to be performance of services arising out of and in the course of employment. *Madden v. Mountain W. Fabricators*, 977 P.2d 861, 863 (Colo. 1999). This principle is known as the "going to and from work" rule. However, many exceptions to the general rule against compensability for travel to and from work have been recognized "to account for varying and unusual circumstances that create a causal connection between the employment and an injury that occurred while the employee was going to and from work." *Id.* at 863-64. The fact that an employer provides transportation for an employee does not, by itself, make an injury compensable under the Colorado Workers' Compensation Act. The Madden Court cited four possible variables in assessing if an exception to the general rule exists: "These variables include but are not limited to:

> (1) whether the travel occurred during working hours,
> (2) whether the travel occurred on or off the employer's premises,
> (3) whether the travel was contemplated by the employment contract, and
> (4) whether the obligations or condition of employment created a 'zone of special danger' out of which the injury arose."

F. The Colorado Court of Appeals applied the "going to and from work" rule in *Varsity Contractors & Home Ins. Co. v. Baca,* 709 P.2d 55 (Colo. App. 1985), to an "on-call" employee involved in a motor vehicle accident while he was heading home to shower and change clothes in preparation for another shift that night. The workers' compensation benefits were denied. The hearing officer (prior to designation of ALJ) found that the accident was not compensable because it occurred while the claimant was traveling between work and home, as he was doing nothing in furtherance of the employer's business. The Court of Appeals found that even if the Claimant was going home to shower and change clothes in preparation for working another shift that night, that was insufficient to constitute the requisite special circumstances needed to create a causal connection between the employment and the injury.

G. In *Baca,* the Claimant argued that other factors also established that he was working within the course of his employment, such as the fact that he sometimes did office work at home, the car and fuel were provided by his employer for his personal use, and he carried a beeper and therefore, was "on-call" while driving home. The Court found each of these factors to be insufficient under the totality of the circumstances. The *Baca* Court observed that there was no evidence that the Claimant intended to perform office work at home on the evening of the accident. Nor had he performed work at home with sufficient regularity that it could "genuinely and not fictitiously be that the home had become part of the employment premises." The *Baca* Court further noted that the car in which the Claimant was injured was provided for both personal and business use, and was neither operated by nor under the direct control of the employer at the time of the accident. Thus, an injury resulting from the Claimant's operation of the vehicle did not arise from the course and scope of employment.

Madden Variables (1) "Working Hours", and (4) "Zone of Danger"

H. Claimant concedes that he had had "clocked out" at 4:30 p.m., and was on his way home when the accident occurred at least 30 minutes later. He concurs that *Madden* Variable (1) does not apply here.

I. Claimant further concedes that *Madden* Variable (4) does not apply, as there was no "zone of danger" that gave rise to this injury. The accident occurred on public roads, miles from where Employer maintains a business.

Madden Variable (2) "Premises of Employer"

J. Claimant argues that since Employer owns the truck, the truck attains the status of 'mobile office'- thus making said truck the ***'premises'*** of Employer. Claimant reasons that this truck contains what is needed to complete the day's work (cell-phone, tools, and parts), and he spends his work day in this 'mobile office'. The ALJ does not concur. What is contemplated by the employment relationship herein is that Claimant will spend no more time than is necessary to get from one job to the next in his truck, after which he will spend the *majority* of his work day performing repairs on the **'premises'** *of Employer's client businesses.* Only in this way does Employer bill the client.

K. An argument might be advanced that it is too rigid to confine the term 'premises' to an Employers' *real property* instead of an appropriately equipped motor vehicle- a mobile food truck or bookmobile, for example. In such case, the employment relationship might indeed contemplate such equipped truck as being 'premises', since such a worker would spend the entire work day inside, mostly while stationary, and perhaps situated on land leased for this limited purpose. Such is not the case here. The ALJ finds that Employer's truck has not obtained the status of 'premises'.

Madden Variable (3) "Contemplated by Employment Contract"

L. Claimant contends that this accident occurred while he was engaged in 'activities benefitting the employer.' As examples, he cites that tools and parts were retrieved from the ground immediately afterwards, and that the truck had signage identifying the owner of the business. Regarding the latter, this truck's insignia falls short of being a 'moving billboard' for Employer. While arguably some benefit might derive, the ALJ finds such benefit to be *de minimis,* especially since Sylvester's Maintenance is not a retail business or product appealing to consumers *("Coca Cola", "ABC Plumbing", "Two Men and a Truck",* and the like). Instead, the only persons who would ever be influenced by the logo would be prospective owners or managers of commercial businesses, such as Employer's clients. The primary purpose of this signage is more likely simply to identify the truck to the clients while parked on their premises.

M. Nor would picking up the *post-accident* flotsam somehow mean that Claimant was *'rendering services as contemplated by the Employment Contract' during the accident.* A travelling salesman injured in a company car on his way to church on

Sunday morning does not 'render such services to his employer' merely by vacuuming the glass from the floorboard afterwards, or retrieving his sales brochures from the pavement, even though this constitutes mitigation of his employer's damages. Nor would calling a supervisor for guidance on arranging for a tow ***after the fact*** retroactively mean that the accident itself resulted from 'rendering services to the employer.'

N. Nor was Claimant on "travel status." Employer did not require Claimant to be at this intersection when the accident occurred. Claimant was not required to be on the way home at all. He could just as easily be on the way to his favorite restaurant, or his son's little league game across town. "Just gas up the truck. Enjoy your weekend." No further jobs for that workday were contemplated, once he removed the trash from the truck and 'clocked out' after his last assignment of the day. In this case, Employer paid the note and insurance on the truck for use by Claimant 24/7. In theory, at least, Claimant paid for his personal gasoline. There is no evidence in the record that Employer paid for meals or lodging under any circumstances. This accident did not occur 'reasonably incidental to the express or implied terms of his employment.' Once Claimant clocked out, he could do as he pleased, up until the Monday morning safety meeting.

O. There being no other "*Madden* variable" applicable to this case, the ALJ concludes that Claimant was simply driving home from work when this unfortunate accident occurred.

ORDER

It is therefore ordered that:

1. Claimant's claim for Workers Compensation benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that penalties should be assessed against respondent pursuant to Sections 8-43-304 and 8-43-305, C.R.S. for respondent's alleged violation of a court order dated June 28, 2016.

- Whether claimant has demonstrated by a preponderance of the evidence that penalties should be assessed against respondent pursuant to Sections 8-43-304 and 8-43-305, C.R.S. for respondent's alleged violation of a settlement order dated May 26, 2017.

FINDINGS OF FACT

1. The parties previously went to hearing on June 9, 2016 before ALJ Mottram on the issues of compensability, reasonable and necessary medical treatment, temporary total disability (TTD) benefits, and employer's failure to maintain workers' compensation insurance. Respondent participated in the June 9, 2016 hearing *pro se*.

2. On June 28, 2016, ALJ Mottram issued Findings of Fact, Conclusion of Law, and Order. In that order ALJ Mottram determined that claimant suffered a compensable injury while employed with respondent. Respondent was ordered to pay for medical treatment related to the work injury. Respondent was also ordered to pay TTD benefits, which ALJ Mottram increased by 50% due to respondent's failure to carry workers' compensation insurance. The June 28, 2016 order also instructed respondent to post a bond with the Division of Workers' Compensation (DOWC) in the amount of $3,400.00.

3. Following the June 28, 2016 order by ALJ Mottram, respondent obtained legal representation from Melissa Loman Evans, Esq. While represented by counsel, respondent entered into a settlement agreement with claimant. The parties agreed to a full and final settlement in which respondent would pay claimant $15,000.00. On May 26, 2017, the settlement agreement was approved by the DOWC Director.

4. Mr. Warnock testified at the hearing in this matter and stated that he has not paid any money to claimant pursuant to the June 9, 2016. Mr. Warnock also testified that he did not post a bond in the amount of $3,400.00 as ordered on June 9, 2016. Mr. Warnock testified that he has made no payments toward the settlement amount that was approved by the DOWC on May 26, 2017.

5. At hearing, respondent attempted to argue that claimant was not an employee of respondent at the time of the injury. Respondent further argued that because it is respondent's position that claimant was not their "employee" that the June 28, 2016 order directing "the employer" to act does not apply to them.

6. At hearing, the ALJ explained to respondent that the issue of whether claimant was an employee was not an issue properly before the ALJ. Likewise the issue of whether the claimant suffered a compensable injury, was previously adjudicated at the June 9, 2016 hearing.

7. The ALJ credits the testimony of Mr. Warnock and finds that claimant has demonstrated that it is more likely than not that respondent has taken no steps to comply with the June 28, 2016 order issue by ALJ Mottram.

8. The ALJ credits the testimony of Mr. Warnock and finds that claimant has demonstrated that it is more likely than not respondent has taken no steps to comply with the settlement order issued by the DOWC on May 26, 2017.

9. Respondent testified at hearing that because of fines assessed by the DOWC, the company is likely facing bankruptcy. While the ALJ can appreciate respondent's situation, the issue of fines assessed by the DOWC is not properly before the ALJ at this time.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. Section 8-43-304, C.R.S., governs when penalties may be imposed in a workers' compensation matter and provides, in relevant part, that any employer or insurer:

> "who violates any provision of [the Workers' Compensation Act], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or panel…, or fails, neglects, or refuses to obey any lawful order…, shall be subject to … a fine of not more than one thousand dollars per day for each such offense."

This provision has been construed as applying to violation of an order issued by an ALJ. *Giddings v. Industrial Claim Appeals Office,* 39 P.3d 1211 (Colo. App. 2001).

4. Pursuant to Section 8-43-304(1), a claimant must first prove by a preponderance of the evidence that the disputed conduct constituted a violation of statute, rule, or order before a court can assess penalties against a respondent. *Allison v. Industrial Claim Appeals Office*, 916 P.2d 623 (Colo. App. 1995). If respondent committed a violation of the statute, rule or order, penalties can be imposed only if respondents' actions were not reasonable under an objective standard. *Pioneers Hospital of Rio Blanco County v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). The standard is "an objective standard measured by reasonableness of the insurer's action and does not require knowledge that the conduct was unreasonable." *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo. App. 1995).

5. An order is defined as including "any decision, finding and award, direction, rule, regulation, or other determination arrived at by the director or an administrative law judge." *See* Section 8-40-201(15), C.R.S. The fine shall be apportioned in whole or part at the discretion of the director or administrative law judge between the aggrieved party and the workers' compensation cash fund created in Section 8-44-112, C.R.S. with the amount apportioned to the aggrieved party being a minimum of fifty percent of any penalty assessed. *See* Section 8-43-304, C.R.S. In addition, Section 8-43-305 C.R.S. provides that each day a party engages in the violation is construed as a separate offense.

6. Here respondent has failed to comply with two separate orders. The first order was issued on June 28, 2016 by ALJ Mottram. The second is the settlement order issued on May 26, 2017 by the DOWC.

7. In each instance respondent does not dispute that he has failed to comply with these orders. Respondent's only argument on the issue of penalties is Mr. Warnock's belief that claimant was not an employee of respondent. Again, the question of whether claimant was or was not respondent's employee was at issue at the initial proceeding in June 2016 and is not properly before the ALJ at this time.

8. The ALJ finds that respondent did not act reasonably in violating both the June 28, 2016 order and the May 26, 2017 settlement order.

9. The ALJ concludes that penalties shall be assessed in this matter for respondent's failure to comply with the June 28, 2016 order. However, once the settlement was reached by the parties, respondent was responsible for complying with the settlement order beginning on May 26, 2017.

10. Therefore the ALJ calculates that 332 days elapsed between the June 28, 2016 order and the May 26, 2017 settlement. This represents the dates in which respondent violated the initial June 28, 2016 order. The ALJ also calculates that 230 days elapsed between the May 26, 2017 settlement order and the January 11, 2018 hearing in this matter. This results in a total of 562 days in which of respondent violated an order.

11. As each day is a separate offense under the statute, respondent shall pay a penalty of $10.00 per day, totaling $5,620.00 in penalties. No amount of this total will be apportioned to the fund.

ORDER

It is therefore ordered that:

1. Respondent shall pay claimant $5,620.00 in penalties, no amount is apportioned to the fund.

2. Respondent shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

4. In lieu of payment of the above compensation and benefits to the claimant, respondent shall:

a. Within ten (10) days of the date of service of this order, deposit the sum of $5,620.00 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation/Trustee. The check shall be mailed to the Division of Workers' Compensation, P.O. Box 300009, Denver, Colorado 80203-0009, Attention: Sue Sobolik/Trustee;

OR

b. Within ten (10) days of the date of service of this order, file a bond in the sum of $5,620.00 with the Division of Workers' Compensation:

(1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation;

OR

(2) Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation and benefits awarded.

5. It is further ordered that respondent shall notify the Division of Workers' Compensation of payments made pursuant to this order.

6. It is further ordered that the filing of any appeal, including a petition to review, shall not relieve respondent of the obligation to pay the designated sum to the trustee or to file the bond. Section 8-43-408(2), C.R.S.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-051-811-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on January 16, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 1/16/18, Courtroom 1, beginning at 8:30 AM, and ending at 11:00 AM). Jorge Espinosa was the official Spanish/English Interpreter.

Claimant's Exhibits 1, 2 and 4 were admitted into evidence, without objection. Claimant's exhibit 3 was withdrawn. Respondents' Exhibits A through F were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on January 19, 2018. Respondents were given 2 working days within which to file objections. None were timely filed. After consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUE

The issue to be determined by this decision concerns whether or not the Claimant sustained a compensable right shoulder injury on June 22, 2017.

The Claimant bears the burden of proof by a preponderance of the evidence.

Because the ALJ hereby determines that the Claimant sustained a compensable injury and no benefits are awarded, as outlined herein below, any appeal of this decision would be interlocutory.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Procedural Posture

1. The Respondents filed a Notice of Contest on July 19, 2017, denying coverage based upon the need for "Further Investigation for medical evidence."

2. The Claimant filed an Application for Expedited Hearing on August 8, 2017.

3. An expedited hearing took place on January 16, 2018, where testimony was presented before the undersigned ALJ.

The Injury

4. The Claimant was a potato unloader for the Employer.

5. On June 22, 2017, while in the course and scope of his employment, the Claimant stepped onto a potato, slipped, and struck his right shoulder against the side of a tractor, at approximately 10:00 AM.

6. The Claimant timely reported the injury to his immediate supervisor, Roy Kobza. Roy Kobza directed the Claimant to speak with the Employer's Human

Resources (HR) Representative, Juanita Adame, to whom the Claimant reported his injury. Adame speaks Spanish.

After the Injury

7. The Claimant completed his shift, which ended at 3:30 PM. He returned to work the following day, Friday, June 23, 2017, and performed his regular duties.

8. The Claimant volunteered to work an overtime-shift on Saturday, June 24, 2017. He proceeded to work a four-hour-shift spraying chemicals around the exterior property. According to the Claimant, this was a light task.

9. Kevin Kobza, the Employer's Maintenance Manager, testified that he observed the Claimant spraying the weeds and did not see the Claimant showing signs of pain. The ALJ finds that this testimony does not disprove the Claimant's injury of June 22, 2017.

10. Roy Korbza, the Claimant's supervisor on June 22, testified that Claimant told him that he had slipped on a potato chip, fell into a wall, and injured his right shoulder. Roy Korbza told the Claimant to report the incident to Juanita, which the Claimant did.

11. The Claimant did not work on Sunday, June 25, 2017.

12. The Claimant returned to work on Monday, June 26, 2017. He complained of pain, and an inability to use his right shoulder, to his supervisor, Roy Kobza. The Claimant had no such complaints or limitations before the incident of June 22, 2017. Roy Kobza corroborated what the Claimant told him about his right shoulder. Consequently, Roy Kobza assigned the Claimant to light duty.

11. The Claimant completed an Incident Report Form with the Employer's HR Representative, Juanita Adame. This report lists the date and time of incident as "6/22/2017 at 10:00 A.M." (Claimant's Exhibit 4).

12. The Claimant was referred to, and received treatment at Aviation & Occupational Medicine by Amelia Carmosino, Certified Physician's Assistant (P.A-C) and Gary Childers, M.D. In their assessment, they determined that there was a greater than 51% probability that this was a work-related injury. (Respondents' Exhibit C, p. 2).

13. The Claimant returned to work, and was placed in modified duty.

Ultimate Findings

14. The Claimant credibly testified that he injured his right shoulder, while in the course of his employment, and that this injury required medical treatment. The Claimant's testimony is corroborated by the medical records, which demonstrate a consistent pattern of complaint. The ALJ finds that the Claimant presented in a straight-forward and credible manner. The medical records of a right shoulder injury are undisputed. Although Kevin Kobza did not observe the Claimant manifesting pain, the ALJ finds that his testimony does not detract from the Claimant's credibility.

15. Further, the Claimant's testimony regarding the mechanism of injury is credible. The Claimant timely notified a supervisory individual with the Employer of his injury on June 22, 2017, and again, on June 26th, 2017 (Claimant's Exhibit 4). The medical records following the Claimant's date of injury corroborate the Claimant's testimony concerning the mechanism of injury. The Claimant's testimony was persuasive and credible.

16. Based on the totality of the evidence, the ALJ infers and finds that the event of June 22, 2017 constituted an aggravation and acceleration of a dormant preexisting fragility of the Claimant's right shoulder and the incident, which arose out of the course and scope of the Claimant's employment, required medical treatment and was disabling.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254

(1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant credibly testified that he injured his right shoulder, while in the course of his employment, and that this injury required medical treatment. The Claimant's testimony was corroborated by the medical records, which demonstrated a consistent pattern of complaint. The medical records of a right shoulder injury are undisputed. Although Kevin Kobza did not observe the Claimant manifesting pain in his opinion, the ALJ finds that his testimony does not detract from the Claimant's credibility.

Compensability

b. A compensable injury is one that arises out of and in the course of employment. Section 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, based on the totality of the

evidence, the event of June 22, 2017 constituted an aggravation and acceleration of a dormant preexisting fragility of the Claimant's right shoulder and the incident, which arose out of the course and scope of the Claimant's employment, required medical treatment and was disabling.

Burden of Proof

c. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden on compensability.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant sustained a compensable injury to his right shoulder on June 22, 2017.

B. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of February 2018.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

This decision of the administrative law judge does not grant or deny a benefit or a penalty and may not be subject to a Petition to Review. Parties should refer to § 8-43-301(2), C.R.S., and other applicable law regarding Petitions to Review. If a Petition to Review is filed, *see* Rule 26, OACRP, for further information regarding the procedure to be followed.

ISSUES

At the time of the hearing the issues before the ALJ were:

- Whether claimant has demonstrated by a preponderance of the evidence that he sustained an injury to his low back arising out of and in the course of his employment with employer on December 5, 2016.

- If claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that medical treatment he has received was reasonable and necessary to cure and relieve claimant from the December 5, 2016 injury.

- If claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that medical treatment he has received was authorized.

On January 12, 2018, the ALJ granted a stipulation that provides that issues related to claimant's medical treatment are held in abeyance while claimant attends aggressive physical therapy. In addition, the parties stipulated that respondent will pay for out of pocket medical expenses that were included in claimant's hearing exhibit 12.

Thereafter, on February 6, 2018, the parties participated in a status conference regarding what issues, if any, remained to be determined. At that status conference it was clarified that the issue of compensability is still pending. Therefore, the ALJ issues this order regarding the issue of compensability.

FINDINGS OF FACT

1. Claimant was been employed with employer for approximately four years as a utility worker. Claimant's job duties include installing and maintain water and sewer lines. On December 5, 2016 claimant and a coworker were notified that an E-1 pump was not working. Claimant and his coworker determined that the pump would need to be removed and a new pump installed.

2. An E-1 pump is located approximately six feet underground. Claimant testified that normally these pumps are installed with two ropes that are then available to pull the pump out of the hole. However, on December 5, 2016, the E-1 pump claimant was to remove had a wire installed rather than a rope. When claimant and his coworker attempted to use this wire to pull the pump, claimant lost his grip and he felt a

sharp pain and stiffness in his low back. Claimant did not immediately report this incident to employer. Claimant finished his shift and self-treated with ice, heat, and ibuprofen.

3. Claimant reported the December 5, 2016 incident to employer on December 6, 2016. Employer provided claimant with a list of designated medical providers. From that list of providers claimant selected Dr. Patrick O'Meara as his authorized treating physician (ATP).

4. Claimant first treated with Dr. O'Meara on December 7, 2016 and reported stiffness and pain in his low back with electrical shocks into his left leg. Dr. O'Meara diagnosed claimant with lumbar, sacral, and thoracic strains. Claimant's treatment has included physical therapy, home exercise, and injections.

5. Dr. O'Meara ordered a magnetic resonance image (MRI) scan of claimant's lumbrosacral spine. That MRI was done on January 27, 2017 and showed degenerative changes at multiple levels, with a modest concentric bulge disc at the L2-L3 level, prominent edema seen near the mid-portion of the L2-L3 level interspace, and a significant finding of stenosis at the right L4 neural foramen.

6. On February 8, 2017, claimant received a left transforaminal lumbar epidural steroid injection (ESI) at the L2-L3 level. On February 15, 2017, claimant returned to Dr. O'Meara and reported that his pain had worsened since the injection.

7. Claimant underwent another transforaminal lumbar ESI at the L2-L3 level on March 10, 2017. On March 14, 2017, claimant was again seen by Dr. O'Meara. At that time claimant reported that the most recent injection did not improve the pain in this lower back.

8. On March 27, 2017, claimant underwent a bone scan that showed degenerative change in the paracentral lumbar spine at the L2-L3 level, but no evidence of metastatic disease.

9. On April 10, 2017, claimant underwent a left sacrolliac (SI) joint injection. On April 13, 2017, Dr. O'Meara noted that claimant had "significant improvement" following that injection.

10. Claimant testified that Dr. O'Meara referred him to Dr. Joseph Adragna for treatment because Dr. O'Meara was closing his practice and moving out of the country. The medical records entered into evidence indicate that on May 23, 2017 Dr. O'Meara instructed claimant to follow up with Dr. Adragna in two to three weeks.

11. Dr. O'Meara referred claimant to Dr. Robert Replogle for a neurosurgery consultation. Claimant was seen by Dr. Replogle on May 30, 2017. Dr. Roplogle noted that claimant had symptoms of pain referable to his L2-L3 level. Dr. Roplogle and recommended claimant undergo an anterior lumbar interbody fusion (ALIF).

12. Claimant was first seen by Dr. Adragna on June 12, 2017. Dr. Adragna diagnosed a flare of claimant's underlying degenerative condition and a thoracolumbar strain. Dr. Adragna referred claimant to Dr. William Faragher with Rocky Mountain Restorative Medicine. Claimant was see by Dr. Faragher on September 26, 2017. Dr. Faragher diagnosed claimant with left low back pain "possibly" secondary to left L4-S1 facet syndrome; possible left SI joint pain and dysfunction; left L5-S1 foraminal stenosis; and right L2L3 and right L4-L5 foraminal stenosis.

13. Dr. Faragher recommended a number of treatment modalities, including a home exercise program, use of a TENS unit, and lumbar traction. Dr. Faragher noted that more invasive treatment options could include L4-S1 medial branch blocks and possible consideration of radiofrequency ablation.

14. On September 6, 2016, respondents sent claimant to Dr. Brian Reiss for an independent medical examination (IME). Dr. Reiss reviewed claimant' medical records, obtained a history from claimant and conducted a physical exam. In his IME report Dr. Reiss opined that fusion surgery, as recommended by Dr. Replogle, would not be indicated for claimant. Instead, Dr. Reiss recommended that claimant undergo an intensive physical therapy program that would include core strengthening, aerobic conditioning, and a stretching program.

15. Dr. Reiss testified by deposition in this matter and confirmed his opinion that the recommended fusion surgery is not reasonable medical treatment at this time. Dr. Reiss also testified regarding his specific recommendation that claimant undergo intensive physical therapy.

16. Claimant testified that his current back symptoms include pain and stiffness and sharp "shock like" jolts of pain from the lower left side of his back down his left leg to his knee. Claimant's symptoms are worsened when he walks on uneven terrain, twists his torso, or bends side to side. Claimant's current work restrictions include no lifting over 50 pounds; no repetitive lifting over 40 pounds; with limits on walking, crawling, kneeling and climbing.

17. Claimant testified that he previously suffered an injury to his mid back, but has had no prior low back issues. In addition, claimant had no leg symptoms prior to the December 5, 2016 incident.

18. The ALJ credits claimant's testimony and the opinion of Dr. Adragna and finds that claimant has shown that it is more likely than not that on December 5, 2016 the lifting incident aggravated, accelerated, or combined with claimant's underlying degenerative condition to necessitate medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. As found, the lifting incident on December 5, 2016 aggravated, accelerated, or combined with claimant's underlying degenerative condition. As found, claimant has demonstrated by a preponderance of the evidence that he suffered a work injury to his low back on December 5, 2016. As found, claimant's testimony and the opinion of Dr. Adragna are credible and persuasive.

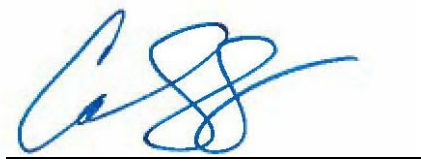
ORDER

It is therefore ordered that:

1. Claimant suffered a compensable injury to his low back on December 5, 2016.

2. All matters not determined herein are reserved for future determination.

Dated: February 8, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable injury on October 17, 2016.

2. Whether Claimant has established by a preponderance of the evidence that she is entitled to a general award of reasonable and necessary medical benefits to treat her October 17, 2016 injury.

STIPULATIONS

1. Claimant's average weekly wage is $520.00.

FINDINGS OF FACT

1. Claimant was employed by Employer as a housekeeper. Her duties included entering rooms after patients left, cleaning the rooms, changing the sheets, and preparing the rooms for new patients. Employer's job description notes a heavy physical workload with physical requirements including: pushing, pulling, and lifting up to 50 pounds; and standing, walking, bending, pushing, kneeling, and stooping. *See* Exhibit 15.

2. Claimant alleges that on October 17, 2016 she arrived to work and checked the board to know which patients would be checking out and which rooms would need to be cleaned that shift.

3. Claimant testified that she went to the closet and realized that she would need more sheets. Claimant testified that she went to the clean linen closet and took out a package of heavy sheets, put the package on her right shoulder, and went through the hallways to get to a cart where she typically put clean linens. Claimant testified that the cart was higher than her and that she needed to push her right shoulder upward to get the sheets onto the cart. Claimant alleges she felt a pulling in her shoulder and neck at that time with no pain and that she kept working.

4. Claimant testified that she first felt pain 2-3 days later and that the pain increased daily. Claimant reported that she sent a text message to her supervisor on October 23, 2016 reporting the incident since she could no longer bear the pain and that on October 24, 2016 while at work she made a report of the injury and was referred for treatment.

5. Approximately 10 months prior to this incident and approximately 2 weeks prior to this incident, Claimant had been evaluated by her primary care physician (evaluations on December 2, 2015 and October 5, 2016).

6. At the December 2, 2015 evaluation with primary care provider Luz Marcela Serrano, M.D. Claimant reported that she worked in housekeeping for Employer and that she had developed pain on her upper extremities that started on her shoulders and radiated to both arms. Claimant reported moderate pain and that it was waking her from sleep. Claimant reported no heavy lifting or trauma. Claimant reported pain on the biceps region bilaterally, that she was unable to sleep on her sides, and a noticed decreased in strength. Dr. Serrano noted review of systems positive for myalgias, back pain, and joint pain and that Claimant had pain on examination in the cervical spine, paraspinal muscles, and medial and lateral epicondylitis bilaterally. Dr. Serrano ordered x-rays of Claimant's cervical spine that were noted to be negative with no significant arthritis but mild degenerative joint disease. Dr. Serrano assessed: acquired hypothyroidism; myalgia and myositis; radicular pain; paresthesias; prediabetes; and morbid obesity. *See* Exhibit D.

7. At the October 5, 2016 evaluation with Dr. Serrano, Claimant reported bilateral upper extremity pain with an onset of three weeks prior in the biceps region radiating down to wrists with constant pain. Claimant reported working in housekeeping with heavy lifting. Claimant also complained of blurry vision. Dr. Serrano assessed: myalgia; pain in both upper extremities; visual disturbance; pre-diabetes; acquired hypothyroidism; bmi 39.0-39.9 adult; and generalized abdominal pain. Dr. Serrano opined that Claimant had an unclear etiology for her myalgias but suspected it was due to the line of work and heavy lifting. Dr. Serrano completed lab work. *See* Exhibit D.

8. On October 6, 2016 Dr. Serrano called Claimant to notify Claimant that the lab work showed normal kidney and liver functions, worsening pre-diabetes, and hypothyroidism. Dr. Serrano noted that there was no need to adjust Claimant's medications. Dr. Serrano noted that overall the labs were normal and that Dr. Serrano could not explain Claimant's body aches but that she suspected it may be associated with the type of work Claimant does. *See* Exhibit D.

9. Approximately two weeks after this visit with Dr. Serrano, Claimant alleges that an acute work related injury occurred. On October 24, 2016 Claimant reported that she had sustained a work injury on October 17, 2014 and she was referred for treatment.

10. Claimant was evaluated on October 24, 2016 at Rocky Mountain Urgent Care by Michelle Baker, PA-C. Claimant reported pain in her right arm and back from carrying a packet of 100 sheets on October 17, 2016. Claimant reported that two days after lifting the heavy package of sheets she developed pain. PA Baker recommended a sling, rest, voltaren, and diclofenac. PA Baker referred Claimant to see a workers' compensation physician for follow-up. Claimant did not report her prior right upper extremity pain or treatment with Dr. Serrano. *See* Exhibits C, 9.

11. On November 3, 2016 Claimant was evaluated by Devin Jacobs, PA-C. Claimant reported that on October 17, 2016 she was carrying a package of sheets that weighed approximately 30 pounds on top of her right shoulder. Claimant reported that she threw the sheets off her right shoulder with a mild twinge of discomfort which gradually got worse. PA Jacobs noted tenderness to palpation to the right rhomboids, and muscle tension with mild spasm. He found pain in abduction range of motion and in internal rotation right midline spine. Claimant's cervical spine was noted to have no tenderness and full range of motion. PA Jacobs assessed strain of right shoulder, provided work restrictions, and referred Claimant for physical therapy. *See* Exhibits B, 10.

12. On November 7, 2016 Claimant underwent physical therapy with Patrick Morrissey, PT. PT Morrissey noted that Claimant's right shoulder strain correlated with her impairments including active range of motion, pain, and muscle performance. *See* Exhibit 11.

13. On November 9, 2016 Claimant was evaluated by PA Jacobs. Claimant reported continued pain in the lateral and posterior shoulder with occasional radiation to the right mid upper arm. Claimant reported overall feeling better but that the pain that morning had been worse than yesterday. Claimant reported spasms at night and that her pain level was 6/10. PA Jacobs noted under review of systems: muscle pain; joint swelling, and joint stiffness. He continued to assess strain of right shoulder and continued work restrictions. *See* Exhibits B, 10.

14. On December 7, 2016 Claimant was evaluated by Dr. Serrano. Claimant reported being injured on October 17, 2016 at work after grabbing sheets from a supply office and lifting onto her right shoulder and that she developed pain four days after the heavy lifting in the mid back. Claimant reported pain in the mid back, limited range of motion with trouble twisting, and pain on the right trapezius and radiating to the forearm. Claimant reported no longer being covered by workman's comp for unclear reasons and that she wanted to have a personal evaluation because she still had pain. Dr. Serrano found Claimant positive for myalgias, back pain, joint pain, and neck pain. On examination Dr. Serrano found that the right shoulder exhibited decreased range of motion, tenderness, pain, spasm, and decreased strength. Dr. Serrano assessed right shoulder injury/muscle strain and recommended work restrictions and physical therapy. *See* Exhibits D, 12.

15. On January 16, 2017 Claimant was evaluated by Dr. Serrano. Claimant reported that her symptoms improved as long as she was doing physical therapy. Claimant reported that at work her restrictions were not being followed. Claimant reported that her work, pain, and shoulder symptoms were having an effect on her mood. Dr. Serrano continued to assess right shoulder injury/muscle strain, continued work restrictions, and noted her anticipation that Claimant would be able to return to work without restrictions once Claimant finished physical therapy in six more weeks. Dr. Serrano noted Claimant's low score on the depression assessment and strongly advised Claimant to start depression medications. Claimant indicated that she wanted to do natural methods first. *See* Exhibits D, 12.

16. On January 31, 2017 Claimant was evaluated by Timothy Lewan, M.D. Claimant reported being there for depression symptoms that had been constant and ongoing for several weeks. Claimant reported being angry at times and that her blood pressure was mildly elevated and significantly elevated at work that she attributed to being so mad. Dr. Lewan assessed: moderate episode of recurrent major depressive disorder, anxiety, and elevated blood pressure. Claimant reported wanting to restart Zoloft and that she had success with Zoloft in the past. Dr. Lewan noted that counseling could be helpful and that Claimant was to follow up with Dr. Serrano. *See* Exhibit 12.

17. On March 13, 2017 Claimant was evaluated by Dr. Serrano. Dr. Serrano noted that Claimant was present for headaches and blood pressure concerns and that Claimant was seen a few weeks ago after developing headaches and high blood pressure while at work and was found to have major depressive disorder and was prescribed Zoloft. Claimant reported that she did not take the Zoloft because she was concerned about side effects. Claimant reported being stressed about a workman's comp case and potential outcomes and lawyer fees. Dr. Serrano assessed headache, sleep disturbance, moderate episode of recurrent major depressive disorder, elevated blood pressure, pre-diabetes, and acquired hypothyroidism. *See* Exhibit 12.

18. On April 10, 2017 Claimant was evaluated by Dr. Serrano. Claimant reported that her headaches were better, that she had been laid off work, and that she felt that her health was better. Dr. Serrano recommended follow up for depression and headaches in about six weeks, that Claimant continue medications, and that it may be okay to discharge Claimant and suspected stress may have been cause of headaches. *See* Exhibit 12.

19. On June 13, 2017 Claimant underwent an independent medical evaluation performed by Lawrence Lesnak, M.D. Claimant reported that on October 17, 2016 while working she had obtained a package of clean sheets, lifted them and placed them onto the top of her right shoulder and walked through several hallways. Claimant reported that she was in the process of leaning forward to let the package of clean sheets slide off her shoulder onto a nearby cart when she felt a sudden pop in her right suprascapular region but that other than the pop she had no initial symptoms. Claimant reported that approximately three days later she began to notice some right sided lower thoracic/infrascapular pains, right suprascapular pains, and some diffuse right arm pains. Claimant indicated that she was referred to physical therapy which helped a little bit but that she soon found out her claim had been denied. *See* Exhibits A, 13.

20. Claimant reported that she went to her primary care provider in December because of her ongoing symptoms and that her primary provider recommended physical therapy and medications and again Claimant reported that the physical therapy seemed to help. Claimant also reported that during this time she noticed her depression becoming much worse. Claimant reported frequent muscle cramping in her right suprascapular region and right inferior scapular region typically occurring late in the afternoon or evening hours with intermittent popping sensations involving her right shoulder whenever she

moves in certain directions. Claimant reported frequent cramping sensations and some pain involving her right posterior upper arm that seemed to be associated with any type of overhead activities. Claimant reported no history of prior right upper back, capular/suprascapular, shoulder, or right upper extremity symptoms or injuries. *See* Exhibits A, 13.

21. Dr. Lesnak reviewed medical records and performed a physical examination. Dr. Lesnak opined that there did not appear to be any medical evidence to suggest that Claimant sustained any type of injurious event during work hours on October 17, 2016. Dr. Lesnak opined that ***the reported mechanism of injury would place no anatomic stresses on the Claimant's right shoulder and an injury could not have occurred based on the specific incident Claimant alleges occurred***. Dr. Lesnak also opined that ***if Claimant had sustained an acute soft tissue or bony injury, she would have had symptoms immediately and not three days later and that a three day period was not consistent with any type of injurious event***. Dr. Lesnak also noted that ***Claimant clearly had similar symptomatology documented by her primary care provider just 12 days prior to the alleged incident as well as similar symptoms documented in December of 2015 and that they were noted without trauma***. *See* Exhibits A, 13.

22. As part of the independent medical evaluation, Claimant also underwent a computerized outcome assessment. Dr. Lesnak noted that Claimant scored a 39 on the modified zung depression index and an 18 on the modified somatic pain questionnaire. Dr. Lesnak opined that scores placed Claimant in the distressed depressive category for psychosocial functioning. Dr. Lesnak also noted scores from the Dallas Pain Questionnaire. Dr. Lesnak opined that the test results suggested that there were significant psychosocial factors that were influencing Claimant's symptoms, recovery, and perceived function. Dr. Lesnak opined that the extremely high level of somatic pain complaints reported may suggest an underlying somatization/somataform disorder. Dr. Lesnak opined that patients with extremely high levels of somatic pain complaints are often times very unreliable and that the reproducible objective findings must be relied upon rather than the subjective complaints in these types of patients. Dr. Lesnak opined that Claimant also had a long history of chronic depression and had discontinued high dose antidepressant medications on her own in early 2016. Dr. Lesnak suspected that Claimant had progressive depressive symptoms resulting in worsening somatic pain complaints that were completely unrelated to any job activities. *See* Exhibits A, 13.

23. Dr. Lesnak testified at hearing consistent with his written report. Dr. Lesnak reported that Claimant demonstrated the actual mechanism of injury at the evaluation and that ***her testimony at hearing was completely different than what she had reported to him at the evaluation.*** Dr. Lesnak also noted that ***Claimant had denied to him that she had any prior symptoms involving her right shoulder or right upper extremity, despite diffuse neck, bilateral shoulder, and bilateral upper extremity symptoms noted in the medical records in December of 2015 and again 12 days prior to the alleged injury. Dr. Lesnak noted that Claimant had also denied prior problems at Rocky Mountain Urgent Care and at Concentra.***

24. Dr. Lesnak's opinions are found credible and persuasive.

25. Jonathan Guenther, Employer's director of plant operations testified at hearing. After the alleged injury was reported, Mr. Guenther attempted to find footage of the injury on the facility's video system. Mr. Guenther checked the location, date, and time reported by Claimant but did not find footage to match Claimant's report. Mr. Guenther also checked footage throughout the entire shift from different areas of the facility and also on days before and after the 17th. Mr. Guenther was able to view Claimant in the videos, but did not see any footage of Claimant carrying a package on her right shoulder in his review. After reviewing footage, Mr. Guenther went back to Claimant to verify he was looking at the right time and place.

26. The video in question was not produced to Claimant. A copy of the video showing the date and time frame in question was sent to Insurer and was lost. The original video was recorded over by Employer after a copy was sent to Insurer.

27. At hearing Claimant was asked whether she had given a recorded statement to Insurer. Claimant was confused by what Respondents meant,

A "about the first call when I made my report?"

Q "this would have been the second call. Well, let's talk about this. How many –how many times have you been asked about the claim?"

A "several times"

28. Claimant never confirmed or denied that she had given a recorded statement to Insurer. Respondents did not offer a recorded statement into evidence. Other than the questions to Claimant about a recorded statement, and Claimant's confused responses, there is no testimony confirming a recorded statement exists. The ALJ concludes that there is insufficient evidence of the existence of a recorded statement in this case and thus makes no findings as to a recorded statement.

29. An Employee Accident Report, offered as Exhibit E, and any questions surrounding the report are stricken from the record and not considered.

30. Claimant, overall, is not found credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence,

to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection

is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to meet her burden of proof to establish that she sustained a work related injury on October 17, 2016. Claimant is not found credible or persuasive by the ALJ for the following reasons:

1. Claimant's testimony about the mechanism of injury at hearing is inconsistent from her reports to medical providers about the mechanism of injury.
2. Claimant failed to report to Dr. Lesnak and to several treating providers that she had pre-existing bilateral upper extremity symptoms for which she had received treatment and treatment recommendations just 12 days prior to this new alleged injury. These pre-existing problems included her complaints of diffuse pain preventing her from sleeping and requiring diagnostic imaging. This type of pre-existing pain/treatment would be hard to forget, especially considering it was last evaluated 12 days before this alleged work injury.
3. The injury could not have occurred as described by Claimant due to the lack of anatomic stresses on the right shoulder as credibly opined by Dr. Lesnak.
4. If an acute injury had occurred, Claimant would have had immediate symptoms rather than a 2-3 day delay in onset of symptoms as credibly opined by Dr. Lesnak.
5. Claimant's psychosocial issues make her subjective complaints unreliable.

Recorded Statement

As pertinent to the remand order, Claimant was asked at hearing whether she had given a recorded statement to Insurer. The ALJ allowed the question about whether or not a statement had been given over Claimant's objection, objecting to any mention of the recorded statement or any use of it for impeachment due to late disclosure. Prior to this question about whether or not a recorded statement had been given, Claimant was asked about the weight of the sheets. Claimant indicated she didn't know how much they weighed. After the question about whether or not she had given a statement was allowed, Claimant's testimony was confused about what call or what statement Respondent counsel was talking about. Claimant never confirmed or denied having given a recorded statement to Insurer. Respondent never offered a recorded statement into evidence nor did they attempt to use any recorded statement to impeach Claimant's testimony. After the confusion about which statement they were referring to, Respondent went on to continue to question Claimant about the weight of the sheets.

Q "you do remember giving a statement, right?"
A "about the first call when I made my report?"
Q "this would have been the second call. Well, let's talk about this. How many –how many times have you been asked about the claim?"
A "several times"

Q Okay. And during the several times, you estimated that this weighed at least 50 pounds, this item you're lifting; isn't that true, ma'am?"

A "I don't remember."

At this point, after asking generally about what Claimant reported during the several times she had been asked about the claim (and not about what she reported during any recorded statement since she could not answer/remember), Respondents asked the next question about the recorded statement.

Q "Okay. I've got a transcript and I've got the recorded statement itself. Do you want me to play it where you said 50 pounds or do you want to admit that you said it weighed about 50 pounds?"

A "Yes that's okay"

Q "Okay. So you're admitting it weighed 50 pounds or you're not sure"

A "I'm not – I'm not sure"

Q "Okay. Did you tell anybody else that it was very heavy?"

A "Yes."

Again, other than Respondents' argumentative question, there was no testimony or evidence about the recorded statement. Claimant again did not confirm whether or not a recorded statement existed or what she may have said. The questioning again went on to what she told "anybody else" about the weight of the sheets and went on to reports she made outside any recorded statement. Claimant continued to answer that she didn't know how much the sheets weighed, felt that they were very heavy, and answered that very heavy to her meant 50-60 pounds. Claimant, when asked if she took sheets weighing at least 50 pounds, again answered she wasn't sure, didn't remember it, and indicated that when she placed the sheets on her shoulder, she was not thinking about exactly how much they weighed.

In the July 31, 2017 Findings of Fact, Conclusions of Law, and Order, the ALJ made no findings about the recorded statement. On appeal to ICAO, Claimant contended that the recorded statement was not in her possession, that she was surprised by it, and that the ALJ abused discretion in permitting the Respondents to cross-examine Claimant about it. Essentially, Claimant argued on appeal a discovery violation. Although a discovery violation may have existed as Respondents admittedly did not disclose to Claimant or provide Claimant with a copy of the recorded statement until the night prior to hearing, the question allowed asked Claimant whether or not she had given a recorded statement to Insurer. Claimant never provided a direct answer either confirming/denying that she had given a recorded statement. Claimant was confused by recorded statement versus report of injury and the examination moved on to additional questions about the weight of the sheets, what she had reported (generally) about the weight of the sheets, and what heavy meant to Claimant. Had Respondents referred directly to the recorded statement, offered it into evidence, or attempted to use it for impeachment, the ALJ would have addressed the alleged discovery violation and sanctions. Here, Claimant could not confirm or deny that she provided a recorded statement. Contents of a recorded statement were not considered in the July 31, 2017 findings of fact since there was no

evidence or testimony to support that a recorded statement with Insurer took place or what was said during the recorded statement. Further, even if a sanction was appropriate, the sanction would have included striking the recorded statement/evidence (it was never even offered into evidence), and would have included disallowing questions about the recorded statement (here, although a brief question was allowed, Claimant could not recall the recorded statement and did not confirm that there was a recorded statement).

Accident Report

Also as pertinent to the remand order, Claimant was asked questions at hearing about an Employee Accident Report that was later admitted into evidence as Exhibit E. Claimant objected to using Exhibit E as evidence due to surprise and argued that it was provided the night prior to hearing despite repeated requests for discovery. Claimant testified that it was her handwriting was on the report. The report itself indicated in response to the request to describe fully the events that resulted in injury: "I was carried one packet of blankets almost 50 fits." Claimant testified that she didn't write down a description about flipping the sheets with her shoulder and feeling a pop but that she filled out the form herself indicating she had guessed how many feet she had walked. After review of the transcript on remand, the ALJ finds that the Employee Accident Report should not have come into evidence and that questions about its contents should be stricken. Exhibit E is removed from evidence and questions surrounding the Employee Accident Report are stricken from the record.

The ALJ agrees that a discovery violation existed. Respondents failed to provide Claimant with a copy of the Employee Accident Report until the day prior to hearing. Respondents were required to exchange all relevant employer records at least 20 days prior to the hearing date. The evidence was in Respondents' possession and easily could have been transmitted to Claimant. Although the statement in question contained a fragmented sentence and had almost no potential to be outcome determinative, there was insufficient good cause to allow for its late submission. The evidence itself was insignificant, but could easily have been exchanged by the exercise of due diligence on the part of the Respondents. As the ALJ found the evidence insignificant, it was not referenced at in the Findings of Fact, Conclusions of Law, and Order issued July 31, 2017. However, on remand the ALJ agrees that the correct sanction is to exclude Exhibit E and any testimony surrounding it. The exclusion does not impact the ultimate determination in this case.

Video and Spoliation

The ALJ has broad discretion to impose sanctions when there is spoliation of evidence to remediate the harm to the injured party from the absence of that evidence. Claimant argued that the video in this case should have been preserved and wasn't and that Claimant had no way to verify what was or was not shown on the video. Claimant requested that Mr. Guenther's testimony about what was observed on the video be stricken due to spoliation.

The ALJ finds that taping over the video was neither intentional spoliation nor reckless or grossly negligent spoliation of the video. Rather, Employer had sent a copy to Insurer and had no reason to believe that the original should be preserved. Additionally, the ALJ finds that Insurer did not intentionally or recklessly lose the recorded video such to require the requested sanction of disallowing Mr. Guenther's testimony. Bad faith has not been shown sufficient to disallow testimony about what was viewed on the video.

Additionally, even if the ALJ imposed the sanction of disallowing Mr. Guenther's testimony and took an adverse inference that the video showed Claimant walking down the hallway of Employer with a package of sheets on her right shoulder, the adverse inference and sanction would not change the outcome of the proceeding. A video showing Claimant walking down the hallway with sheets on her shoulder and placing them onto a cart would not be sufficient to establish a work related injury. Although it may support Claimant's testimony that she carries packages of sheets on her shoulders, it would not support an acute injury occurring on the date in question. As found above, Claimant had symptoms and received treatment prior to this date. Claimant testified and reported that she had no pain for several days after this incident, so the video would not be able to show any immediate/acute actions consistent with acute pain. Further, even if showed Claimant carrying sheets and pushing them onto a cart, Dr. Lesnak is credible that the claimed mechanism would not have caused injury. Thus, even if the video contained what Claimant alleges it still would not be outcome determinative.

Here, as there was no intentional, reckless, or grossly negligent conduct destroying the video Claimant's request to strike Mr. Guenther's testimony due to spoliation is denied. Further, even if the testimony was stricken and an adverse inference were drawn, it would not be outcome determinative given Claimant's pre-existing symptoms/treatment, the lack of anatomic stress on the shoulder with the movement described, and the lack of immediate pain inconsistent with an acute injury.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that she sustained a compensable injury on October 17, 2016.

2. Claimant therefore is not entitled to an award of medical benefits and her claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the

Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. ISSUES

I. Determination of Claimant's average weekly wage ("AWW").

II. Whether Claimant has established by a preponderance of the evidence entitlement to temporary total disability benefits ("TTD") from July 11, 2017 through July 31, 2017.

FINDINGS OF FACT

1. Claimant's date of birth is May 1, 1951. Claimant was 66 years old at the time of hearing.

2. Claimant has been a member of the International Theatrical Stagehand and Employees Union (IATSE) since 2005. Claimant obtains work from different employers through the IATSE. Claimant testified the length of jobs varied from one day up to five weeks. The rate of pay for each job also varied.

3. Claimant testified that in the year prior to his injury he earned an average of $1,186.18 per week from multiple employers, including Employer.

4. On June 27, 2017, Claimant suffered an admitted industrial injury in the course and scope of his employment as an audio/visual technician for Employer. Claimant sustained an injury to his right middle and ring fingers.

5. On the date of injury, Claimant was working a two-day job for Employer at $32.28 per hour. Per Employer's pay records and Claimant's testimony, Claimant worked a total of 16 regular hours and 5 overtime hours on two-day job, earning gross wages of $758.58.

6. Claimant did not have concurrent employment on June 27, 2017.

7. Prior to June 27, 2017, Claimant's gross wages earned from Employer totaled $3,383.62 for pay dates February 24, 2017 through June 2, 2017. Review of the pay records demonstrates Claimant actually worked seven (7) weeks for Employer between February 24 and June 2, 2017.

8. In a July 14, 2017 report, Claimant's authorized treating physician ("ATP"), Dr. Villavicencio, placed Claimant at maximum medical improvement ("MMI") on July 11, 2017 with no permanent physical impairment. Claimant testified he asked Dr. Villavicencio to place him at MMI because he wished to return to work.

9. On July 31, 2017, Respondents filed a Final Admission of Liability ("FAL") consistent with Dr. Villavicencio's report, admitting for an AWW of $491.02 and TTD benefits from July 1, 2017 through July 10, 2017.

10. Claimant testified that after asking to be placed at MMI, his hand did not continue to heal as he expected. Claimant believed he was unable to perform his job duties to his hand injury and subsequently scheduled a return visit to Dr. Villavicencio.

11. Dr. Villavicencio reevaluated Claimant on August 1, 2017, at which time he placed Claimant back on temporary work restrictions. Claimant was restricted to lifting up to 20 pounds for up to 3 hours per day and pushing/pulling up to 20 pounds for up to 3 hours per day.

12. Respondents reopened Claimant's claim by filing a new General Admission of Liability ("GAL") on August 15, 2017, admitting for an AWW of $491.02 and TTD benefits from June 28, 2017 through July 10, 2017 and August 1, 2017 ongoing. It was noted that Respondents re-opened TTD benefits on August 1, 2017 because Claimant returned to treatment and was placed back on restrictions which could not be accommodated.

13. On October 13, 2017, Dr. Villavicencio placed Claimant at MMI with a 10% hand impairment.

14. On November 2, 2017 Respondents filed a second FAL admitting for an AWW $491.02, TTD from June 28, 2017 through July 10, 2017 and August 1, 2017 through September 28, 2017, and permanent partial disability ("PPD") from October 13, 2017 through December 24, 2017.

15. Respondents have paid Claimant TTD in accordance with the November 2, 2017 FAL. Claimant returned to work after September 28, 2017.

16. Claimant requests TTD from July 11, 2017 through July 31, 2017.

17. Claimant testified he was unable to bid for jobs through the IATSE during the periods of previously paid TTD and for the time period of July 11, 2017 through July 31, 2017 because the IATSE does not permit members to bid for jobs while under temporary work restrictions. Claimant testified he did not work between July 11 and July 31, 2017.

18. Claimant's testimony regarding his average earnings is found credible and persuasive. The ALJ finds Claimant's AWW is $1,186.18, based on Claimant's average earnings per week during the year prior to the industrial injury.

19. Claimant failed to establish entitlement to TTD benefits from July 11, 2017 through July 31, 2017 by a preponderance of the evidence. Claimant's testimony, alone, does not persuade the ALJ Claimant is entitled to TTD benefits when Claimant's ATP, Dr. Villavicencio, placed Claimant at MMI as of July 11, 2017.

20. Evidence and inferences contrary to these findings were not credible and persuasive.

21. CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial

evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Average Weekly Wage

Section 8-42-102(2), C.R.S., requires the ALJ to calculate the claimant's AWW based on the earnings at the time of injury as measured by the claimant's monthly, weekly, daily, hourly or other earnings. However, Section 8-42-102(3) provides,

> Where the foregoing methods of computing the average weekly wage of the employee, by reason of the nature of the employment or the fact that the injured employee has not worked a sufficient length of time to enable earnings to be computed thereunder or has been ill or has been self-employed or for any other reason, will not fairly compute the average weekly wage, the division, in each particular case, may compute the average weekly wage of said employee in such other manner and by such other methods as will, in the opinion of the director based on the facts presented, fairly determine such employee's average weekly wage.

The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993).

Claimant was paid an hourly rate for the two-day job on which he was injured and had no concurrent employment at the time. Nonetheless, Claimant worked for multiple employers for varied lengths of time and various rates of pay leading up to, and after, his date of injury. Due to the nature of Claimant's employment, solely considering Claimant's work for Employer at the time of injury, or his sporadic work for Employer during the weeks prior to the injury, does not provide a fair approximation of Claimant's wage loss and diminished earning capacity. Accordingly, the ALJ concludes Claimant's average weekly wage should be based on his average earnings over the course of the year prior. Claimant credibly testified that in the year prior to his injury he earned an average of $1,186.18 per week through multiple employers. An AWW of $1,186.18 accurately reflects Claimant's varied jobs and pay rates, and is the fairest approximation of the claimant's wage loss and diminished earning capacity.

TTD

To prove entitlement to TTD benefits, the claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage

loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Claimant notes his request for TTD for the period of time from July 11, 2017 through July 31, 2017 is based solely upon his testimony that he “improvidently” talked his physician into placing him at MMI and was unable to work due to the hand injury. There is insufficient persuasive evidence Dr. Villavicencio did not use his own independent medical judgment when placing Claimant at MMI on July 11, 2017. Based on the totality of the evidence, TTD benefits were properly terminated on July 10, 2017 as Claimant was placed at MMI, and Claimant is not entitled to TTD benefits for the period of July 11, 2017 through July 31, 2017.

ORDER

It is therefore ordered that:

I. Claimant’s AWW is $1,186.00.

II. Claimant has not established entitlement to TTD benefits from July 11, 2017 through July 31, 2017. Claimant’s claim for TTD benefits for such time period is denied and dismissed.

III. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

IV. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or

service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

- Did Claimant prove by a preponderance of the evidence that a C3-C7 cervical fusion performed by Dr. James Bee on September 26, 2017 was causally related to his admitted July 21, 2016 industrial accident?

- If Claimant proved the requisite causal nexus, was the surgery reasonably necessary?

FINDINGS OF FACT

1. Claimant worked for Employer as a tractor-trailer driver. On July 21, 2016, he suffered admitted injuries in a motor vehicle accident on I-25 north of Monument. He Claimant was traveling northbound and traffic had come to a complete stop due to an obstruction up the road. A drunk driver traveling at a high rate of speed failed to stop and crashed into a minivan behind Claimant's vehicle. The force of the impact pushed the minivan into and under Claimant's semitrailer.

2. Although the trailer absorbed the brunt of the impact, enough energy was transmitted to the tractor to jostle Claimant around in the cab. As pertinent to the current disputed issues, Claimant likely experienced a "whiplash" motion of his head and neck.

3. Claimant required no medical attention at the scene and assisted the passengers in the minivan, including two young children. He remained at the crash site for several hours interacting with first responders. The semitrailer was inoperable but the tractor was undamaged, so Claimant drove it back to the truck depot.

4. During the return drive, Claimant began experiencing neck pain and stiffness, which he rated approximately 4-5/10. When he arrived at the office, he completed accident paperwork and discussed the accident with his managers. Claimant said his neck was hurting and he was anxious and upset about witnessing the trauma to the family in the minivan. Claimant's manager asked if he needed to go to the hospital, and Claimant replied "I don't know. Maybe I'm stressed-out over these kids." The manager replied "why don't you just go home," and Claimant did so.

5. Claimant stayed off work the next three days, returning to work on Monday, July 25. On Wednesday of that week, he awoke with severe pain in his low back. He worked Wednesday and Thursday and then told his direct supervisor about his back pain. Claimant was concerned about a health insurance co-payment if he went to the emergency room, so he elected to see a chiropractor instead.

6. Claimant saw David Lauritzen, D.C. on August 3, 2016, complaining primarily of low back pain. He had difficulty rising from a seated position, standing, and walking. Physical examination showed moderate to severe muscle spasms throughout

his neck and back, but there were no radicular signs or other objective neurological abnormalities. Deep tendon reflexes (DTRs) in the upper and lower extremities tested normal. Claimant subsequently received several additional chiropractic treatments, but at no time did Dr. Lauritzen document any objective neurological abnormalities.

7. Employer eventually referred Claimant to CCOM for authorized treatment. His initial visit was on August 22, 2016 with Dr. Kathryn Murray. His primary complaints related to his low back but he also reported some neck pain. Claimant denied any numbness, tingling or weakness in his arms. The most significant exam findings were trigger points and muscle spasms in the neck and lower back. All objective neurological tests were normal, including DTRs, strength, and sensation in the upper and lower extremities. Cervical x-rays showed multilevel degenerative changes, including ventral vertebral osteophytes at C3 through C6, but no acute pathology. Dr. Murray diagnosed cervical and lumbar strains, referred Claimant for physical therapy, and released him to full duty.

8. At his next visit on September 8, 2016, Claimant told Dr. Murray his neck pain had "resolved." He was still having low back pain but was improving with therapy. His most bothersome symptom was occasional numbness in the right foot. Dr. Murray did not examine Claimant's neck because "patient states all [neck] pain is gone." Physical examination relating to his low back showed normal lower extremity reflexes, strength, and sensation, with no gait abnormalities.

9. Claimant's leg symptoms progressively worsened over the next several weeks, so Dr. Murray requested a lumbar MRI. The MRI was performed on November 11, 2016, and showed multilevel pathology including two herniated lumbar disks abutting nerve roots, facet hypertrophy and foraminal stenosis.

10. After reviewing the MRI, Dr. Murray referred Claimant to Dr. William Lippert for an epidural steroid injection (ESI).

11. Claimant had his initial visit to Dr. Lippert's office on December 1, 2016. PA-C Mark Stafford examined his neck, low back, upper extremities, and lower extremities but the only significant findings related to potential lumbar radiculopathy.[1]There were no signs suggestive of cervical myelopathy. Claimant's reflexes and strength were normal in the upper and lower extremities, Babinski response was normal, and he demonstrated an "excellent heel and toe walk." PA-C Stafford diagnosed lumbar radiculopathy and scheduled a lumbar ESI.

12. Claimant returned to Dr. Murray on December 6, 2016 and reported Employer had taken him off work after learning of the herniated discs in his low back. Dr. Murray noted "patient states he has to be honest with me today and says his pain has truly been 4-5/10 scale for many months but he just did not want to be taken off work so he has been downplaying his pain the entire time. He has constant tingling in the right leg specifically the calf and foot. He will get an occasional left foot tingling but it is very

[1] Claimant had tenderness to palpation of the lumbar spine, some decreased sensation in the right leg and left foot, and positive straight leg raise testing.

minimal. He does complain of having back spasms." Claimant did not mention issues with his neck or upper extremities, nor did he describe any symptoms suggestive of cervical myelopathy. Examination of the lower extremities showed decreased sensation on the right calf and left foot but normal strength and reflexes. His gait was normal.

13. At his next appointment on January 3, 2017, Claimant's lower extremity strength was 5/5 and equal bilaterally including resisted dorsiflexion and plantar flexion, knee extension and flexion and hip flexion. Deep tendon reflexes were normal at the knees and left ankle, but ***reduced*** (1/4) in the right ankle. This was the first documented neurologic abnormality other than decreased lower extremity sensation, but interestingly, Claimant was actually hyporeflexive.[2]

14. Dr. Lippert performed a lumbar ESI on January 25, 2017, which provided approximately 75% pain relief, particularly with the leg pain. Based on Claimant's response to the injection, Dr. Lippert opined the residual back pain was likely related to facet arthropathy.

15. The improvement from the ESI was only temporary, and Claimant's severe symptoms returned after a few weeks. Because of his recurrent symptoms, Dr. Murray referred Claimant to Dr. James Bee for a surgical evaluation.

16. Dr. Kathleen D'Angelo performed an IME for Respondent on April 9, 2017. Her physical exam revealed no neurological abnormalities suggestive of myelopathy.

17. Dr. Bee evaluated Claimant on April 17, 2017. He did not think Claimant was a surgical candidate for his lumbar spine and instead recommended rhizotomy. Dr. Bee was more concerned with examination findings suggesting cervical myelopathy. Specifically, Dr. Bee appreciated subtle long tract signs including brisk upper and lower extremity reflexes, positive Hoffmann's sign bilaterally, bilateral clonus, and ataxia. Dr. Bee requested a cervical MRI to investigate possible cord compression.

18. Claimant saw Dr. Rook for an IME at his counsel's request on June 9, 2017. Dr. Rook focused primarily on Claimant's low back, but also addressed the neck briefly. On exam, Dr. Rook noted lower extremity hyperreflexia,[3] but normal upper extremity reflexes. Dr. Rook appreciated "trace" clonus at the right ankle, but none on the left. Babinski response was normal. Dr. Rook noted "there has been a concern that the patient might have a cervical or thoracic injury contributing to the hyperreflexia and clonus identified by Dr. Bee . . . . [Claimant] did have hyperreflexia but the remainder of his physical examination was soft for upper motor neuron lesion. Nevertheless, I've encouraged him to proceed with the diagnostic imaging."

19. Claimant saw Dr. Bee again on June 12, 2017, but the MRI had not been completed because Respondent denied it. Dr. Bee again noted long tract signs including

[2] As Dr. Rook and Dr. Bee explained, **hypo**reflexia is typically associated with nerve root compression (i.e., radiculopathy), whereas **hyper**reflexia is a common sign of cervical myelopathy.
[3] Reflexes were 4+ bilaterally at the knees and 3+ bilaterally at the ankles.

unsteady heel-to-toe walking, brisk reflexes (3+/4) in the lower and upper extremities, positive Hoffmann's, and clonus.[4]

20. Claimant had the cervical MRI on July 10, 2017. It showed stenosis with cord flattening from C3 through C7 due to bulging or herniated discs and vertebral spurring.

21. Claimant met with Dr. Bee to review the MRI on July 17, 2017. Dr. Bee noted "cord compression measuring less than 10 mm at C3-4, C4-5, C5-6 and C6-7, but no definitive cord signal change." Dr. Bee stated, "with [the] statistically increased risk of cord compression with space revealed for the cord less than 10 mm as well as his findings of long tract signs, I have talked to him about surgical intervention on his cervical spine. He is not interested at this time."

22. Claimant returned to Dr. Bee on July 31, 2017 and had changed his mind regarding surgery. He told Dr. Bee "he has discussed this with his family as well as Dr. Murray. Due to his four-level cord compression, his ongoing symptoms, and his worsening ataxia, he would like to proceed with surgical intervention."

23. Dr. Rook reevaluated Claimant on August 24, 2017. He reviewed the MRI report and spoke with Claimant, although it does not appear he performed any physical examination. Dr. Rook opined

> [H]is MRI now demonstrates three disc herniations with flattening of the spinal cord. These findings were likely not present prior to his motor vehicle accident/OTJI as the patient had no musculoskeletal ailments or neurological symptoms prior to the accident. The accident involved significant forces, and given the findings on the recent imaging studies, it is more than likely that his current cervical symptomatology is related to herniated discs that developed as a result of his motor vehicle accident. It is my recommendation that he proceed with surgery as soon as possible, utilizing his private insurance if necessary.

24. On September 26, 2017, Dr. Bee performed a C3-C7 anterior discectomy and fusion. Respondent had denied authorization for surgery, so Claimant elected to have surgery under his health insurance.

25. Dr. Bee testified via deposition on November 1, 2017. He offered a cogent justification for the surgery but provided no definitive conclusions regarding causation. For instance, when asked whether he agreed with Dr. Rook that the MVA likely caused the cervical disc herniations he replied, "I think it's incredibly difficult to try to predict what was occurring before. Unless you have an MRI before, it's just speculation." He also testified "it's difficult, if not impossible, to say what event caused this pathology." He testified "if you have cord compression from disk bulging, that tends to be more of a

[4] In his deposition, Dr. Bee discussed a number of inaccuracies in his medical records due to the EMR software used by his office. The ALJ relied on Dr. Bee's testimony in conjunction with his records to glean which portions likely reflect actual exam findings and which portions are likely cloned or "auto-populated."

degenerative case" but added, "sometimes degenerative changes can be accelerated with trauma." Finally, he testified:

> Q. [I]n terms of more likely than not . . . is it your opinion that his degenerative conditions simply worsened over time naturally to culminate in the surgery, or that his condition was accelerated or aggravated by the motor vehicle accident?
>
> A: I think it's impossible to say.
>
> Q. So you can't say whether it's more likely than not?
>
> A. No.

26. Dr. Brian Reiss performed an IME for Respondent in November 2017, and concluded the cervical stenosis and cord compression were not causally related to the July 2016 accident.

27. Dr. Resiss subsequently testified via deposition to elaborate on the opinions and conclusions expressed in his IME report. He emphasized there were no documented neurological abnormalities suggestive of myelopathy before Dr. Bee's initial evaluation in April 2017. He disagreed with Dr. Rook's opinion that the MVA caused the herniated cervical discs:

> [The MRI] revealed severe degenerative changes at multiple levels . . . . [H]e had spurs at the location of where he had apparent bulging, which when you put those together, really indicates a chronic condition because spurs take years to develop . . . . [I]t clearly is the picture of a degenerative process occurring over years. I didn't detect anything that would suggest to me that he had an acute herniated disc at all.

28. Dr. Reiss testified Claimant specifically denied any significant symptoms such a clumsiness or dropping things before seeing Dr. Bee.

29. Dr. Reiss also opined Claimant's pattern of symptom progression was inconsistent with a sudden increase in cord compression after the accident:

> [I]f you very, very, very slowly over years decrease the space available for the cord, the cord adapts, it does not react to that until it becomes critical. So a slow narrowing of the spinal canal is something that is quite well tolerated by the cord until it is overwhelming. And it occurs in a lot of people slowly over time without any signs or symptoms.
>
> If you have an acute herniated disc that all of a sudden takes the space available for the cord, usually the cord reacts very poorly that, and you get signs and symptoms very soon after. . . .
>
> So everything points away from any acute narrowing of the spinal canal, which would indicate to me, it is highly unlikely that he herniated a

> disc after the motor vehicle accident. He probably just had a cervical strain and myofascial pain. So the findings of his stenosis are almost certain to be chronic, pre-existing, and degenerative.

30. Based on his review of the MRI images, Dr. Reiss concluded Claimant had bulging discs but no "true" herniations. He thought the cord compression was primarily a function of "the spur formation taking up room and coming up against the spinal cord.

31. Dr. Reiss opined there was no urgent need for surgery and the multilevel fusion was essentially "prophylactic." Given Claimant's relatively subtle neurological findings, with mild cord compression but no evidence of any cord damage, Dr. Reiss would have instead recommended careful observation and monitoring for signs of progressive myelopathy. But he also acknowledged that reasonable surgeons disagree about whether surgery is the best approach in a situation such as this:

> [I]f you have cervical stenosis without symptoms of myelopathy, proceeding [with surgery] is a prophylactic procedure. And . . . there is some validity to that. I would be on the other side of that saying we should observe carefully. There are plenty of people on this side that say, no, we should go ahead with surgery.
>
> And this is what is available in the literature. This is what is discussed, and there are reasonably good surgeons on both sides, very intelligent people that do research that follow these things, and there are people on both sides, and they disagree.

32. Ultimately, Dr. Reiss concluded the surgery was reasonable but "not at all related to the effects of the motor vehicle accident."

33. Dr. Reiss' opinions regarding causation are more credible and persuasive than those of Dr. Bee or Dr. Rook.

34. Claimant failed to prove that the September 26, 2017 cervical fusion performed by Dr. Bee was causally related to the July 21, 2016 accident.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). Even if the respondents admit liability, they retain the right to dispute the relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (July 2, 2010). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals*

Office, 989 P.2d 251 (Colo. App. 1999). The claimant must also prove that the requested treatment is reasonably necessary, if disputed. Section 8-42-101(1)(a).

The existence of a preexisting condition does not disqualify a claim for compensation if an industrial accident aggravates, accelerates, or combines with the preexisting condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

The claimant must prove entitlement to medical benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

As found, Claimant failed to prove the multilevel cervical fusion performed by Dr. Bee was causally related to the July 21, 2016 accident. The ALJ credits Dr. Reiss' opinion that the underlying pathology in Claimant's neck was preexisting and degenerative rather than the result of acute trauma. The nine-month delay between the accident and the first documented manifestation of any signs of myelopathy undercuts Dr. Rook's opinion that the accident acutely caused bulging or herniated discs. As Dr. Reiss explained, the spinal cord will generally adapt to and tolerate progressive canal narrowing over a prolonged period. Eventually, it reaches a tipping point, leading to the insidious onset of signs and symptoms of myelopathy. By contrast, the cord typically "reacts very poorly" to an acute disk herniation and "you get signs and symptoms soon after that." Had claimant suffered structural damage in the accident, he most likely would have developed clinically observable signs of myelopathy sooner. Although Claimant argues no one was "looking for" issues related to his neck, multiple providers documented normal neurological findings throughout his course of treatment before he started treating with Dr. Bee. PA-C Stafford specifically documented normal reflexes in the upper and lower extremities and negative Babinski response in December 2016. Similarly, no providers documented any symptoms consistent with myelopathy such as clumsiness, balance problems, ataxia, dropping items, or difficulty with fine manipulation before April 2017.

The ALJ is also persuaded by Dr. Reiss' opinion that the accident did not aggravate, accelerate, or combine with Claimant's pre-existing condition to produce the need for surgery. Again, the substantial delay between the accident and the onset of any observable clinical signs of myelopathy is a critical factor. Dr. Reiss explained "there are no clinical signs or symptoms that were recorded after the motor vehicle accident that would indicate that there was any effect . . . on [Claimant's] spinal cord. Zero symptoms, zero signs recorded of any effect on his spinal cord." Although Dr. Bee opined trauma "can" aggravate degenerative changes "sometimes," he did not say it more likely than not did so in this case. Ultimately, Dr. Bee found it "impossible to say" whether the accident aggravated or accelerated Claimant's preexisting condition. Dr. Rook initially opined the accident caused the cord compression, but hedged at the hearing and offered an aggravation theory as a fallback position. He offered no persuasive explanation for the nine-month delay in developing clinically appreciable signs of myelopathy. Additionally, the fact that Dr. Rook did not personally review the MRI images reduces the probative

value of his opinions as compared to those of Dr. Reiss. While Dr. Rook's theory may be correct, the ALJ does not find it to be more likely than not.

After reviewing all the evidence presented, the ALJ concludes the surgery was most likely a culmination of the natural progression of Claimant's preexisting condition, without contribution from the industrial accident.

Having determined that Claimant did not prove the requisite causal nexus, the question of reasonable necessity is moot.

ORDER

It is therefore ordered that:

1. Claimant's claim for medical benefits for cervical myelopathy, including the fusion surgery performed by Dr. Bee, is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 9, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-043-248-02

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on January 18, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 1/18/18. Courtroom 1, beginning at 8:30 AM, and ending at 10:15 AM).

Claimant's Exhibits 1 through 10 were admitted into evidence, without objection. Respondents' Exhibits A through H were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on January 25, 2018. On January 29, 2018, counsel for Respondents indicated no objection to the proposed decision. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern: (1) average weekly wage (AWW); AND, (2) whether Claimant is entitled to temporary total disability (TTD) benefits from March 3, 2017, through September 5, 2017. If the Claimant meets his

burden on TTD, the next issue is whether the Claimant was responsible for his termination from employment and the resulting wage loss and, thus, not entitled to TTD benefits from March 3, 2017, through September 5, 2017.

The Claimant bears the burden of proof, by a preponderance of the evidence on the issues of AWW and TTD. Respondents bear the burden on the affirmative defense of "responsibility for termination, by preponderant evidence."

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the commencement of the hearing, the parties stipulated and the ALJ finds that Claimant's AWW is $1,008.42, which yields a TTD rate of $672.31. The parties stipulate that the time period at issue for the TTD benefits is from March 3, 2017, through September 5, 2017, both dates inclusive, a total of 187 days. As of September 6, 2017, Respondents admitted for TTD benefits.

2. On the February 16, 2017, Claimant injured his back while working for the Employer. The Claimant was assigned to work near Loveland, Colorado, on Highway 34. His job duties involved rock mitigation and this required him to walk down or repel down mountains and knock loose rock off the mountain. His job duties also involved drilling holes and installing rebar on mountainsides.

3. The Respondents filed a General Admission of Liability (GAL) dated November 20, 2017, admitting for medical benefits, a TTD weekly benefit rate of $672.31, and TTD benefits from September 6, 2017 "ongoing." The GAL remains in full force and effect. The controversy herein concerns TTD benefits from March 3, 2017 through September 5, 2017m, both dates inclusive, a total of v187 days.

The Injury

4. On February 16, 2017, the Claimant was repelling down a mountain and trying to set a 25-foot rebar, which was tied to rope and being lowered down the mountain by two other employees who were stationed above the Claimant. The two employees lost control of the rope, and the Claimant grabbed the 25-foot rebar to prevent it from falling down on his co-workers below him. While holding onto the rebar, Claimant's body twisted, and he injured his back.

5. Immediately following his injury, the Claimant experienced back pain and left-sided foot drop. According to the Claimant, his left leg felt like dead weight. One day soon after the injury, the Claimant was walking and his injured leg got caught on a rock, he fell and injured his shoulder. Despite his condition, the Claimant did not seek medical attention right away and he tried to continue working his regular duty job. He was struggling to do his job, so the Employer let him take a few days off to let him heal. The Claimant he did not get better. When he returned to work, the Employer provided some light duty tasks for him and also let him take a few more days off work to rest.

6. The Claimant has been restricted to light duty ever since his work-related injuries.

Alleged "Responsibility for Termination"

7. On Sunday, February 19, 2017, a few days after the injury, the Claimant and another employee, Corey Ballantine, were drinking whiskey and started wrestling at the hotel, which is paid for by the Employer. According to the Claimant, it was a fun wrestling match and that they were just joking around. The Claimant and Ballantine shook hands afterwards and then continued to hang out together and with the other employees. Although the Employer paid for the lodging, the Claimant and Ballantine were off duty at the time and no one was injured. The ALJ takes administrative notice of the fact that it is not illegal for an adult to drink whiskey when the adult is off duty (the Claimant was born on November 27, 1982 and was 34 years old at the time of the wrestling match). It is also not illegal to engage in a wrestling match, off duty, nor was any company policy prohibiting wresting presented in evidence.

8. At the end of February 2017, the Employer took the Claimant off the mountain and had him drive to Grand Junction to deliver a part. The Employer also had the Claimant fly from Denver to Seattle, Washington to deliver a hydraulic press to the owner of the company. When he returned to Colorado, the Employer told him that they no longer had any light duty for him and that he could return to work when he was ready to work full duty. Claimant continued to be restricted from full duty as of this time and he continues to be so restricted. The Employer never told the Claimant that he was terminated or that he was fired for any reason. The Employer did not give the Claimant a warning for the wrestling match and nobody ever told him he was fired for wrestling with Ballantine.

9. At the hearing, David Williams, a foreman or supervisor for the Employer, testified that he was the Claimant's temporary foreman at the time of the Claimant's injury and in the few weeks after Claimant's injury. Williams was aware of the incident in which Claimant and Ballantine wrestled at the hotel. Williams talked to the Claimant about the incident but he did not give the Claimant a warning, written or verbal, about the incident. Williams does not terminate employees.

10. Williams worked on the job site with the Claimant until early March 2017, when he was sent to a different job site. When Williams left the job site, the Claimant was still there. Williams did not know if Claimant was terminated or why Claimant stopped working for the Employer.

11. Although the Respondents raised the affirmative defense of "responsibility for termination," they did not inform the Claimant of the specific policy reasons, if any, for the Claimant's separation from employment, other than telling him there was no more light duty work for him. The ALJ infers that the Employer considered the horseplay wresting with Ballantine, on Sunday when the Claimant was off duty, as a violation of company policy (no policy was presented) under an inferred rationale that the Employer was paying for the accommodations, somehow the Claimant was on duty 24/7, and the wresting match was a safety danger. The ALJ finds that this rationale goes far beyond pushing the ends of the envelope. It amounts to a desperate grab at straws to avoid paying benefits to the insured's work-related temporarily disabled employee. The ALJ rejects this rationale.

Ultimate Findings

12. Despite his propensity to drink whiskey, off duty, the ALJ finds the Claimant's testimony credible, straight-forward, persuasive an un-rebutted. The facts are not in dispute. What is in dispute is some unknown reason underlying the Claimant's separation from employment. David Williams, who testified for the Respondents did not contradict the Claimant's testimony in any appreciable way.

13. The ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's testimony and to reject any evidence to the contrary.

14. The Claimant has proven, by a preponderance of the evidence that he was temporarily and totally disabled from March 3, 2017, through September 5, 2017, both dates inclusive, a total of 187 days (Respondents admitted for TTD benefits from September 6, 2017 and continuing). During this period of time, the Claimant was sustaining a 100% temporary wage loss.

15. The Respondents have failed to prove, by preponderant evidence that the Claimant was responsible for his termination by virtue of a volitional act that he reasonably knew, or should have known, would result in his termination from employment.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, THE Claimant's version of the events of his injury and temporary disability are undisputed. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As further found, the Claimant's testimony was credible, straight-forward, persuasive and un-rebutted. The facts were not in dispute. What was in dispute was some unknown reason underlying the Claimant's separation from employment. David Williams, the only witness who testified for the Respondents did not contradict the Claimant's testimony.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice, based on substantial evidence, to accept the Claimant's testimony and to reject any evidence to the contrary.

Temporary Total Disability

c. The Claimant has the burden of proving entitlement to TTD benefits. § 8-42-103(1)(a), C.R.S. This provision requires a claimant to establish a causal connection between the work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo.1995). The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by a claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). As found, The Claimant was restricted from full duty from March 3 2017 through September 5, 2017; and, the Employer chose to no longer make modified duty available to the Claimant during this period of time. There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish physical disability. See *Lymburn v. Symbois Logic*, 952 P.2d 831 (Colo. App. 1997). Rather, a claimant's testimony alone is sufficient to establish a temporary "disability." *Id*. As found, the Claimant was temporarily and totally disabled from March 3, 2017, through September 5, 2017, both dates inclusive, a total of 187 days (Respondents admitted for TTD benefits from September 6, 2017 and continuing).

d. Once the prerequisites for TTD are met [*e.g.,* no release to return to full duty, MMI has not been reached (the GAL admitting for continuing TTD benefits establishes that MMI has not yet been reached), a temporary wage loss is occurring because modified employment is no longer made available, and there is no actual

return to work]. TTD benefits are designed to compensate for a 100% temporary wage loss. *See Eastman Kodak Co. v. Indus. Comm'n,* 725 P. 2d 107 (Colo. App. 1986); *City of Aurora v. Dortch,* 799 P. 2d 461 (Colo. App. 1990). As found, during the period from March 3, 2017 through September 5, 2017,, the Claimant was sustaining a 100% temporary wage loss.

e. The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions that impair Claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). The existence of disability presents a question of fact for the ALJ. There is no requirement that the Claimant produce evidence of medical restrictions imposed by an authorized treating physician, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic, supra.* As found, Claimant established a disability directly related to his work-related injury.

"Responsibility for Termination"

f. Respondents contend that the Claimant is not entitled to TTD benefits from March 3, 2017, through September 5, 2017, because he is at fault for his separation of employment and resulting wage loss. Respondents argue that Claimant's employment was terminated in March 2017 because he was in a fight with another employee on Sunday, February 19, 2017 (an off day), at an employer-provided hotel in Loveland, Colorado. This defense is governed by the termination statues, as well as *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004). "In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury". §§ 8-42-203(1)(g) and 8-42-105(4)(a), C.R.S. Thus, where the employee is responsible for the termination, TTD benefits may be denied. *Id.; See also Apex Trans., Inc. v. Indus. Claim Apps. Office*, 321 P.3d 630, 631 (Colo. App. 2014). Respondents did not present any persuasive evidence that the Employer actually terminated the Claimant's employment. Accordingly, Respondents failed to meet their burden to prove Claimant was at fault for his separation of employment and resulting wage loss.

g. Section 8-42-105 (4), C.R.S., provides that an employee responsible for his own termination is not entitled to temporary disability benefits. This statutory provision has been interpreted to mean that "responsibility for termination" must be through a volitional act on the part of the terminated employee. *Colorado Springs Disposal v. Indus. Claim Appeals Office,* 58 P. 3d 1061 (Colo. App. 2002). A finding of fault requires a volitional act or the exercise of a degree of control by a claimant over the circumstances leading to termination. *Gilmore v. Indus. Claim Appeals Office,* 187 P.3d 1129, 1132 (Colo. App. 2008); *Apex Transport, Inc. v. Indus. Claim Appeals Office,* **2014 COA 25.** In determining whether the claimant is responsible for termination, the ALJ may be required to evaluate competing factual theories concerning the actual

reason or reasons for the termination. *See Rodriguez v. BMC West*, W.C. No. 4-538-788 [Indus. Claim Appeals Office (ICAO), June 25, 2003]. As found herein above, the Respondents failed to prove that the Claimant's separation from employment was because of a volitional act on his part that he knew, or reasonably should have known would lead to his termination from employment. Indeed, the Respondents failed to show that the Employer terminated the Claimant in the first place. As found, on March 3, 2017, the Employer stopped making modified work available to the Claimant.

Burden of Proof

h. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden with respect to TTD benefits from March 3, 2017, through September 5, 2017, both dates inclusive, a total of 187 days. As further found, Respondents failed to sustain their burden on the affirmative defense of "responsibility for termination."

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. In addition to all admitted benefits, Respondents shall pay the Claimant temporary total disability benefits of $672.31 per week, or $96.04 per day, from March 3, 2017 through September 5, 2017, both dates inclusive, a total of 187 days, in the aggregate amount of $17, 960.28, which is payable retroactively and forthwith.

B. The General Admission of Liability, dated November 20, 2017, shall remain in full force and effect.

C. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts due and not paid when due.

D. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of February 2018.

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that she sustained a compensable injury to her low back, pelvis and wrists as a consequence of a fall occurring March 12, 2017.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Employer provides commercial food service to a flight school operated by Doss Aviation. As part of their business, Employer maintains a large production bakery on site. Claimant worked as a baker making breads, rolls, cakes and various other desserts for service to the flight students.

2. On March 12, 2017, Claimant was engaged in her typical clean up duties at the end of her work shift. Claimant testified that she was pulling a large rubber mat across the floor in order to sweep and mop underneath of it when her heel caught on a mat behind her. According to Claimant, she lost her balance, and fell backward on to her buttocks and outstretched hands. Claimant testified that she remained on the ground for a couple of minutes until Michael Rivera; one of Employer's cooks assisted her to her feet.

3. Mr. Rivera testified that he had finished cleaning up the area around his workstation. He had moved his mat away from his workspace, placing it in a folded position on the floor close to the area where Claimant was working. According to Mr. Rivera, as Claimant was dragging her mat backward, she made contact with the folded edge of his mat. Mr. Rivera testified that Claimant stumbled and fell backward, landing on her buttocks and right hand on top of his folded mat. Per Mr. Rivera, Claimant never lost grip of the mat with her left hand during her fall. Mr. Rivera testified that Claimant appeared embarrassed and laughed before he assisted her to her feet. According to Mr. Rivera, Claimant complained of right wrist pain but returned to her duties. She did not appear hurt to him.

4. Claimant testified that she reported the incident to Robert Cruz, Employer's shift lead, as no manager was working that day. According to Claimant, Mr. Cruz told her she could seek emergent care if she wanted to and that someone would take her to Centura Center for Occupational Medicine (CCOM) the next day as there was no manager on duty to take her claim.

5. Mr. Cruz, testified that he did not see the incident but Claimant later reported it to him, indicating that she had fallen during cleanup and her right wrist was bothering her. According to Mr. Cruz, Claimant did not mention any other pains or complaints nor did she request medical treatment. Rather, Claimant indicated that she would go home, take some Ibuprofen, go to bed and see how she felt the next day.

6. Claimant completed her shift, returned home and went to bed. She testified that she woke up at 6:00 PM with intense pain focused in her low back. Claimant testified that she reported for her 3:30 AM shift on March 13, 2017, at which time she requested medical treatment. According to Claimant, after reporting her need to obtain treatment, she was instructed to commence with her regular duties. Claimant testified that she worked for approximately six hours before she was taken to CCOM around 9:30 AM.

7. Owen Brooks, Employer's Assistant Manager, testified that Mr. Cruz advised him of Claimant's alleged injury around 7:30-8:00 AM. Mr. Brooks then spoke with Claimant. Mr. Brooks testified that during his conversation with Claimant she advised him that she had fallen and injured her wrists. He testified further that Claimant never mentioned low back pain. According to Mr. Brooks he did not learn of Claimant's back pain until after her initial visit to CCOM.

8. Bill Hayes, Employer's site manager also testified that he spoke with Claimant prior to her leaving for CCOM on March 13, 2017. He testified that Claimant did not mention what body parts were hurting her prior to her departure to CCOM.

9. Mr. Brooks transported Claimant to CCOM where Nurse Practitioner (NP) Teresa Kuhn evaluated her for a chief complaint of back/low back and bilateral wrist pain. Claimant reported that she fell backwards onto her low back with both of her arms stretched behind her to brace her fall. She reported soreness in both wrists and her low back. She denied incontinence, numbness, or tingling. She described her pain as aching with occasional stabbing sensations. "She denie[d] previous problems with her low back or wrists." She reported that Advil helped alleviate symptoms. A pain diagram completed on this visit depicts numbness and aching in the wrists bilaterally. The pain diagram also depicts aching pain in the anterior pelvis and the midline of spine, extending from the top of the thoracic spine downward to the lumbar spine and laterally to the sacroiliac joints (SI) bilaterally.

10. While Claimant denied a prior history of hand/wrist symptoms, review of the medical records reveals that on December 11, 2015, she reported bilateral hand/finger numbness and tingling to Wendy Archuleta the nurse practitioner in her primary care physician's office. Claimant's hand symptoms were severe enough to warrant a referral to a hand surgeon for a surgical consultation. Claimant's medical records also indicate that she continued to have tingling in her hands and feet, as of April 2016, but that she had not followed through with the referral to the hand surgeon.

11. Claimant testified that prior to the date of injury she never mentioned any problems with her low back to coworkers, but may have mentioned problems with her hands to a coworker. This purportedly occurred when she borrowed some pain cream from a coworker (identified as Tracy) about a month or two prior to the date of injury.

12. Tonya Martinez, a co-employee of Claimant's testified that she regularly interacted with Claimant during the workweek and had done so the last five years. She testified that Claimant periodically complained of back, hip, and wrist problems prior to the March 12, 2017 injury. Additionally, Ms. Martinez testified that she had at least one conversation with Claimant concerning Claimant's interest in having carpal tunnel surgery. Ms. Martinez added that for a period of time Claimant had had both wrists wrapped at work, which had become somewhat of a joke around the workplace.

13. Claimant denied ever mentioning problems with her low back or wrists to Ms. Martinez. She also testified that she denied previous problems with her low back and wrists at her initial evaluation following her March 12th slip and fall because she had not had any prior low back problems and because her prior symptoms involved her hands and not her wrists, which she did not think, were significant enough to report. Nonetheless, after reviewing the December 11, 2015 report of NP Archuleta, Claimant acknowledged that her symptoms predated the injury.

14. Claimant's March 13, 2017 physical examination revealed normal sitting and standing posture. Claimant also demonstrated the capacity to transition from one position to another with ease. She could get on and off the exam table without difficulty. She demonstrated full lumbar flexion and extension range of motion with discomfort. Straight leg raising was negative bilaterally. Gait was normal. Palpatory examination revealed lumbar paraspinal tenderness with spasm. Range of motion in the bilateral wrists were normal with generalized pain. Grip strength was equal bilaterally.

15. X-rays of the lumbar spine were taken and revealed mild degenerative changes throughout without fracture or subluxation. There was no significant bony neural foraminal narrowing. X-rays of the wrists were compared to those obtained February 21, 2008 and demonstrated no bony abnormalities and no interval change.

16. Claimant was assessed with contusions of the low back, pelvis, and right and left wrists. She was released with work restrictions of no bending, kneeling, squatting, stooping, or twisting; push pull no more than 5 pounds; and lift no more than 1 pound.

17. Claimant testified that she returned to work on March 14, 2017, at which time she asked Mr. Hays if he had received a list of her work restrictions. Mr. Hays told her he had the restrictions. According to Claimant, she asked Mr. Hays if he had filing she could do. Claimant testified that he told her no. She alleged that she also asked if she could use her sick time, to which she testified Mr. Hays informed her that she had no sick time. Claimant also testified that she asked if she could take her pre-planned vacation early, which purportedly was rejected because there was only one other baker

who was already on vacation. Given the above, Claimant testified that she was essentially forced to work full unrestricted duty for the next three shifts which purportedly caused worsening symptoms, including weakness in her legs.

18. Mr. Rivera testified that he was aware that Claimant had lifting restrictions. He also testified that during the three shifts, which Claimant asserts she worked full duty, he did not observe her lifting anything heavy nor did he ever see Claimant move about kitchen with support from the counters as she would later claim was necessary. According to Mr. Rivera, Claimant was not asked to perform duties outside of her restrictions.

19. Mr. Cruz testified that he was aware of Claimant's restrictions and that she was limited in the amount of lifting she could perform. He testified that Claimant was never asked to work beyond her restrictions and he never saw Claimant use the counters in the kitchen for support while carrying out her duties. According to Mr. Cruz, co-workers performed the heaving lifting associated with Claimant's position and she was assigned light duty tasks, including cutting and plating desserts.

20. Mr. Brooks testified that Bill Hayes made everyone aware of Claimant's work restrictions following her March 13, 2017 CCOM appointment. He testified that because the other baker was on vacation at the time, he took over the majority of Claimant's job duties, so she could work within her restrictions. Claimant's primary job during the three shifts she claimed to have worked full duty was to cut, decorate and plate desserts. He testified that Claimant was never forced or even asked to work outside of her work restrictions. He too, testified that he never noticed Claimant holding onto countertops or crying in pain.

21. Bill Hayes, testified that he informed the staff of Claimant's work restrictions and that they needed to help her out while she worked modified duty. He indicated that there was modified duty available within Claimant's work restrictions but she wanted to be off work. He testified that he told her he was down to one baker and that her co-employees would help her with the duties of her job that she was restricted from performing.

22. Claimant returned to NP Kuhn on March 16, 2017. Claimant reported that her condition had worsened because she had not been allowed to work within her restrictions. She described her lumbar pain as achy, "crampy" muscle type pain. Physical examination revealed findings similar to those documented after her March 13, 2017 examination. Claimant was referred to physical therapy and returned to modified duty work. Her pushing, pulling and lifting restrictions were liberalized to 10 pounds pushing/pulling and 5 pounds lifting.

23. Claimant never returned to work following her vacation.

24. Claimant saw Physician Assistant (PA) Steven Byrne at CCOM on March 21, 2017. As part of this visit, Claimant completed a pain diagram that depicts achy

8/10 pain in her back and pelvis. She also reported continued numbness and pins and needles sensations in her hands and wrists. Physical examination of the wrists revealed mild swelling over the radial styloid bilaterally. Claimant again reported that Employer did not comply with her work limitations and made her work full duty with which PA Byrne documented her frustration. Based upon the evidence presented, this documentation is the last treatment note authored by a provider at CCOM.

25. On March 24, 2017, Claimant presented to Dr. Terrance Lakin at the Southern Colorado Clinic. Claimant reported that she tripped over a floor mat that was left in the walkway, and while she was moving it, she fell back on her tailbone and hands. She continued to have more pain and aching in the low back/pelvis, loss of sensation/tingling in thighs/pelvis and buttocks, and incontinence of urine. Physical examination revealed moderate to severe distress, slow transitioning, guarding, and assistance required to get on and off the exam table. She had poor lumbar range of motion. She reported paresthesia in nearly all digits, but intermittent and difficult to pin down. She maintained full bilateral wrist range of motion, although mild swelling of the wrists persisted. Straight leg raises were positive bilaterally at 70° with radiating symptoms. She was at that time referred to the emergency room (ER) for evaluation of possible cauda equina syndrome.

26. On March 29, 2017, Physician Assistant (PA), Terry Schwartz at Southern Colorado Clinic, evaluated Claimant in follow-up. Claimant appeared extremely upset and anxious. She expressed "strong emotions about her supervisor 'making her work' to the end of her shift despite her pain complaints. While there is no reference to the condition of Claimant's wrists, Claimant's low back, pelvic and lower extremity examination was essentially unchanged. PA Schwartz explained to Claimant that her "symptoms, exam, and testing [did] not correlate with identifying a specific cause." Nonetheless, Claimant removed from work because PA Schwartz did not think she could function.

27. As evidenced by the content of the medical records and pain diagrams completed thereafter, the ALJ finds the March 24, 2017 appointment to mark an inexplicable expansion of purported symptoms Claimant associates with her March 12, 2017 slip and fall. While Claimant has undergone substantial physical evaluation and extensive diagnostic testing, an objective explanation for her evolving symptoms has not been discovered leading some providers to recommended psychological evaluation/intervention and Respondents' retained expert, Dr. Henry Roth to suggest that she is suffering from somatic symptom disorder.

28. While questions regarding the reasonableness and necessity of Claimant's treatment along with concerns regarding the relatedness, i.e. the cause of Claimant's escalating symptoms and inability to function at work persist, these issues are not before the ALJ. Rather, the parties only requested a determination of whether Claimant suffered a compensable injury in the first instance.

29. While Dr. Lakin indicated that there is a lack objective evidence to support a conclusion that Claimant sustained an injury, the ALJ finds that he, NP Kuhn and PA Schwartz all documented, what the undersigned ALJ finds to be independent signs consistent with injury, namely back spasm and wrist swelling. Moreover, the April 7, 2017 MRI performed at St. Mary Corwin Hospital demonstrated "mild soft tissue edema overlying the sacrum/coccyx posteriorly." While Dr. Roth largely concurs with the opinions of Dr. Lakin, he admitted that the described mechanism of injury could result in a sacral contusion or lumbar strain.

30. The evidence presented persuades the ALJ that the documented back spasm and wrist swelling Claimant experienced following her slip and fall was, more probably than not caused by the March 12, 2017 incident. While Dr. Roth contends that the myriad of symptoms that developed over the ensuing months is unrelated to Claimant's slip and fall, the ALJ is not persuaded this negates a finding that she suffered a compensable injury. As noted, questions regarding the relatedness of Claimant's escalating symptoms and inability to function at work following her slip and fall are not before the ALJ. As presented, Claimant has proven, by a preponderance of the evidence, that she sustained compensable injuries to her back, pelvis and wrists.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

I. General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. The Claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-43-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo.App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo.App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or

unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

C. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. *2008).* In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo.App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). In this case, Claimant's testimony regarding the events leading up to her slip and fall are corroborated by the testimony of Mr. Rivera. Moreover, the medical documentation supports a conclusion that Claimant fell backward onto her outstretched hands and buttocks resulting in low back and wrist pain requiring medical attention. Claimant's subjective pain complaints are supported by objective findings including low back spasm, soft tissue edema over the sacrum/coccyx by MRI imaging and radial styloid swelling. Accordingly, the undersigned finds Claimant's testimony regarding the mechanism of injury, her initial pain and her decision to seek treatment credible and persuasive.

II. Compensability

D. A "compensable injury" is one, which requires medical treatment or causes disability. *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, *supra*; § 8-41-301, C.R.S. To sustain her burden of proof concerning compensability, Claimant must establish that the condition for which she seeks benefits was proximately caused by an "injury" arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

E. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to

the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Here, there is little question that Claimant's alleged injury occurred within the time and place limits of her employment relationship with Employer and during an activity, specifically moving a large rubber mat in preparation to clean under it as part of her duties as a baker for Employer. Moreover, the evidence presented leaves little doubt that Claimant's injuries "arose out of" her employment.

F. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). The fact that Claimant may have experienced an onset of pain while performing job duties does not mean that Claimant sustained a work-related injury. An incident which merely elicits pain symptoms without a causal connection to the industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988)*; Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989). Here, the ALJ concludes that the testimony of Mr. Rivera corroborates that Claimant slipped and fell while moving her work mat in order to clean under it at the end of her shift. Moreover, the physical examinations of Claimant shortly after this slip and fall contain objective findings consistent with an injury to the low back, pelvis and wrists. Accordingly, the ALJ is convinced that Claimant's injury has its origins in her work related functions and is sufficiently related thereto so as to be considered part of her service to Employer. Based upon a totality of the evidence presented, Claimant's low back, pelvis and wrist injuries are compensable. Questions regarding the extent of Claimant's injuries and the relatedness of her evolving symptoms to her injuries along with her inability to work are reserved for future determination.

ORDER

It is therefore ordered that:

1. Claimant has proven by a preponderance of the evidence that she sustained compensable injuries to her low back, pelvis and wrists.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or

service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

SUPPLEMENTAL ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

No further hearings have been held in the above-captioned matter. On December 27, 2017, counsel for the Respondents filed a Petition to Review the Full Findings of Fact, Conclusions of Law and Order of Administrative Law Judge (ALJ) Edwin L. Felter, Jr., mailed December 15, 2017, an interlocutory decision which granted the Claimant the right to proceed to a Division Independent Medical Examination (DIME) at her own expense, reserving all other issues. No hearing transcript was requested. On December 27, 2017, Respondents filed an "opposed Motion to Stay DIME," which the ALJ denied on January 8, 2018. On January 30, 2018, Respondents filed their Brief in Support of petition to Review, conceding: "It is well-established that a party dissatisfied with an order that requires it **to pay** (emphasis supplied) a penalty or benefit, or denies a **claimant** (emphasis supplied) a benefit or penalty, is reviewable." Respondents argue that they are required to pay costs, attendant to the Claimant's paid-for DIME by providing the DIME physician and all other parties, a complete copy of all medical records in their possession pertaining to the "subject injury," pursuant to § 8-42-107.2(3)(b), C.R.S. and W.C.R.P., Rule 11-3(J) and § 25-1-801, C.R.S. To further pursue to postal/cost argument, the ALJ is impressed that this argument stretches the outer ends of the envelope beyond reason and common sense. To save costs on documents that the Respondents are otherwise legally obliged to provide, Respondents' argument would deprive the Claimant of the statutory right to have and pay for a DIME. The Claimant is **not** seeking an Indigent Determination (which the Respondents could contest and appeal an adverse ruling).

On February 9, 2018, the Claimant filed a "Response to Respondents' Brief in Support of Petition to Review," essentially, arguing that Respondents' argument that the admissions of liability they filed were a nullity because the Respondents properly treated the Claimant's claim as a "no lost time" injury, whereby they could pay medical benefits without admitting or denying liability. This argument is bold-facedly made against a backdrop of an independent medical examination by Henry J. Roth, M.D., wherein he rated the Claimant's permanent disability at zero, and the Respondents filed a Final Admission of Liability (FAL), dated June 15, 2017, admitting for Dr. Roth's zero permanent impairment rating. The Respondents argument thereupon would have a "slam dunk" effect, thus ending the Claimant's case at zero permanent impairment without her having the due process right to challenge the FAL with a statutory DIME. Respondents' convoluted and circular argument is very interesting. It may even border on the frivolous. It is not well-taken by the ALJ.

The full background of the interlocutory decision is repeated herein below.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on December 5, 2017, in Denver, Colorado. The hearing was digitally recorded (reference: 12/5/17, Courtroom 1, beginning at 8:30 AM, and ending at 9:30 AM). No testimony was taken. Oral arguments were made.

Claimant's Exhibits 1 through 7 were admitted into evidence, without objection. Respondents' Exhibits A through C were admitted into evidence, without objection.

ISSUE

The sole issue to be determined at hearing and by the Full Findings, Conclusions of Law and Order, mailed December 15, 2017, was whether the Claimant is entitled to a Division Independent Medical Examination (DIME), after the Respondents filed an FAL for zero permanent impairment, based on Dr. Roth's IME rating of zero permanent impairment. Because the Claimant's counsel made a judicial admission that the Claimant was not indigent and the Claimant would be paying for the DIME, any determination of the issue would be interlocutory.

The Claimant bears the burden of proof by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. The Claimant sustained an admitted compensable injury (within the definition of "sufficiency to be compensable") arising out of the course and scope of her employment on February 16, 2017.

2. The Claimant underwent significant medical treatment at the hands of Henry J. Roth, M.D. (Claimant's Exhibit 7), who was the Claimant's authorized treating physician (ATP). Dr. Roth diagnosed "a whiplash like response involving cervical, thoracic, and lumbar regions, primarily right-sided" (Claimant's Exhibit 7), occurring on February 16, 2017. He released the Claimant to full time work, effective February 21, 2017, with restrictions of "no patient turning, transfers, transport, or boosting." These restrictions continued until May 3, 2017. On May 24, 2017, Dr. Roth gave the Claimant a full release to work, and declared her to be at maximum medical improvement (MMI) with no residual impairment. Dr. Roth was of the opinion that the Claimant's condition was work-related.

3. First, the Respondents filed a General Admission of Liability (GAL) on May 1, 2017. Under the section "Liability is admitted for the following benefits, the box was checked, marking "medical benefits." No other box in that section was checked. In the "remarks" section, Respondents wrote "medical only claim with no lost time….Not at MMI/no PPD owed" (Claimant's Exhibit 1). The ALJ infers and finds that statement "Not at MMI/no PPD owed" a "rush to judgment before a Final Admission of Liability (FAL) was ripe.

4. Next, based on Dr. Roth's opinions, the Respondents ultimately filed an FAL, dated June 15, 2017 (Claimant's Exhibit 2), admitting for an MMI dated of May 24, 2017 and zero permanent partial disability (PPD). There have been no admissions for temporary disability benefits.

5. The Claimant filed a timely objection to the FAL and a Notice and Proposal to Select a DIME.

6. On July 12, 2017, Respondents requested a pre-hearing conference where both attorneys appeared by telephone.

7. A pre-hearing conference was held on July 31, 2017, before Pre-Hearing ALJ (PALJ) Thomas J. DeMarino. Based on the Industrial Claim Appeals Office Order in *Trujillo v. Elwood Staffing,* W.C. No. 4-957-118-02 [Indus. Claim Appeals Office(ICAO), June 22, 2017], PALJ DeMarino granted Respondents' motion to strike

the Claimant's Notice and Proposal, articulating the fact that ATP Henry J. Roth, M.D., found zero PPD. This determination will be further discussed in detail herein below under "Conclusions of Law."

8. Thereafter, the Claimant applied for a hearing before the Office of Administrative Courts (OAC) on the issue of whether the Claimant is entitled to a DIME, under the holding in *Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003).. The hearing was held on December 5, 2017, with no testimony taken –only oral arguments of counsel. Also, Respondents filed a written "Trial Brief Regarding Claimant's Lack of Entitlement to a DIME," which was considered herein.

RESPONDENTS' ARGUMENTS

In a nutshell, Respondents orally argued that its admissions of liability were, essentially, nullities because the case does not involve a compensable "indemnity" claim. This Respondents incorrectly analogize the circumstances in this case to the established law that an employer may pay an injured worker's medical benefits without admitting or denying liability. *See* § 8-43-101, C.R.S. Reading the statutory section *in pari materia,* it is clear that an employer/insurance carrier may pay for an injured worker's medical benefits without taking a position admitting or denying compensability. The underlying purpose of this provision is to encourage the payment of medical bills by an employer without the employer committing to a position on liability. The ALJ concludes that this analogy is misplaced because the Respondents filed **admissions** concerning medical benefits and an FAL for zero PPD. *Black's Law Dictionary,* 10th Ed., defines "admission" as "an acknowledgement that facts are true." In this case, an admission of **liability** is an admission that the fact of liability is true, *i.e.* that the Respondents accept liability for a compensable injury resulting in the need for authorized medical treatment. An **admission of liability** in workers' compensation law is legally binding unless set aside in an adjudicatory proceeding. The ALJ soundly rejects the Respondents analogy to paying medical benefits without admitting or denying liability.

Respondents mechanistically rely of Workers' Compensation Rules of Procedure (WCRP), Rule 5-5 (E) (1) (a) [Trial Brief, p. 2, par. 5], which states"…within 30 days after the date of mailing or delivery of a determination by an authorized treating physician providing primary care that there is **no** (emphasis supplied) impairment, the insurer shall either: (a) file an admission of liability consistent with the physician's opinion, or ()b) Request a Division Independent Medical Examination (IME) in accordance with…." The ALJ infers and concludes that Respondents must have been laboring under a scotoma (blind spot) with respect to the full import of this rule, which mandates a DIME request if no final admission is filed. Indeed, to accept the respondents' argument in this regard would be to interpret that only respondents, **and not claimants,** could obtain a DIME when there is zero PPD. Such an interpretation would do violence to the plain meaning of the rule.

Respondents, as did PALJ DeMarino in striking the Claimant's request for a DIME, rely heavily on ICAO's Order in *Trujillo v. Elwood Staffing,* W.C. 4-957-118-02 (ICAO, June 22, 2017). *Trujillo* is part of the progeny of *Harman-Bergstedt, Inc. v.* Lo*ofbourrow*, 320 P.3d 327 (Colo. 2014), which applied very narrow, fact specific principles, without establishing a sweeping precedent. *Trujillo* determined that MMI is a term of art, and has no legal significance in a case with no indemnity benefits payable. This makes implicit sense because MMI is the demarcation line between temporary and permanent disability indemnity benefits. Indeed, it is the demarcation line between temporary disability benefits and **zero** permanent disability. In *Loofbourrow* by extension, an FAL is not effective to close a case as to further medical benefits. The Court stated that a claimant could still seek further medical benefits, with the burden of proof as to reasonableness and causal relatedness on the claimant. The holding of the case is that a petition to reopen need not be filed under §8-43-303, if the claimant should seek further medical benefits. The case sets no precedent as to any broader meaning than in the context of reopening for medical benefits, and it does not specify what type of medical benefits it is meant to address (*i.e*. *Grover* or pre-MMI substantive treatment). To accept the Respondents argument that the FAL, admitting for zero PPD is a nullity, would overturn the reasonable expectations of the community of injured workers who received a perfunctory zero impairment rating. It would undermine the DIME process whereby the ATP's opinion of zero PPD would be the end of the line and not subject to challenge. This could be the situation in a parallel universe (where technical form triumphs over due process), but not in Colorado.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

COMPENSABILITY

a. An "injury" referred to in § 8-41-301, C.R.S., contemplates a **disabling** injury to a claimant's person, not merely a coincidental and non-disabling insult to the body. *See Henderson v. RSI, Inc.,* 824 P.2d 91 (Colo. App. 1991). *Also see Gaudett v. Stationers Distributing Comp*any, W.C. No. 4-135-027 [Indus. Claim Appeals Office (ICAO), April 5, 1993]. A priori, **the consequences of a work-related incident must require medical treatment or be disabling** in order to be sufficient to constitute a compensable event. If an incident is not a significant event resulting in an injury, claimant is not entitled to benefits. *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (ICAO, March 7, 2002). As found, by admissions of the Respondents and the medical evidence, the Claimant sustained compensable injuries on February 16, 2017, arising out of the course and scope of her employment.

CLAIMANT'S ENTITLEMENT TO A DIME

Rule 5-5 (E) (1) (a) of the WCRP

b. Rule 5-5 (E) (1) (a), WCRP, allows for a DIME when an ATP rates PPD at zero.

Trujillo v. Elwood Staffing, W.C. 4-957-118-02 (ICAO, June 22, 2017)

c. This case, which was relied upon by PALJ DeMarino in striking the Claimant's request for a DIME at the pre-hearing conference, is part of the progeny of *Loofbourrow*, *supra*. The Supreme Court held in *Loofbourrow* that MMI is a term of art, and has no legal significance a case with no indemnity payable. By extension, a FAL is not effective to close a case as to further medical benefits. This makes implicit sense because MMI is the demarcation line between temporary and permanent disability indemnity benefits. The Court stated that the claimant could still seek further medical benefits, with the burden of proof as to reasonableness and causal relatedness on the claimant. The holding in the case is that a petition to reopen need not be filed under §8-43-303, C.R.S., if the claimant should seek further medical benefits. The case sets no precedent as to any broader meaning than in the context of reopening for medical benefits, and it doesn't specify what type of medical benefits it is meant to address (i.e. Grover or pre-MMI substantive treatment).

d. Additionally, *Trujillo* continues down the path of *Kazazian v. Vail Resorts*, W.C. No. 4-915-969-03 (ICAO, April 24, 2017), in that there is no statutory consequence of MMI unless there is an injury for which disability is payable. ICAO reasoned, "In Loofbourrow, the Court held that a determination of MMI has no statutory significance with injuries that do not result in the loss of no more than three days or shifts of work time or permanent disability, as is the case in this action…." See, *Trujillo v. Elwood Staffing*, *supra.* As stated, extending the *Loofbourrow* case this far was not the Supreme Court's intent. The "unique" circumstances of *Loofbourrow* are distinguishable from both this *Trujillo* case, as well as the present case decided herein. Moreover, this *Trujillo* case involves the limited issues of medical **benefits after a DIME had already occurred.** It is clearly distinguishable on these grounds as well. The case does not stand for the fact that the DIME should never have occurred, or that §8-42-107.2(a)(1)(A) does not apply in these instances. Stretching the rationales of these cases to the present case is an interesting gymnastic devoid of merit as applied herein.

[T]he General Assembly created the DIME System within the Statutory Scheme because of the Potential for Treating Physicians to be Biased

e. The logical result of the Respondents' argument is that if an ATP is allowed to determine whether or not a DIME should occur (if a zero PPD is assessed, there is no right to a DIME), is that it runs afoul of the decision in *Whiteside v. Smith,* 67

P.3d 1240 (Colo. 2003). *Whiteside* stands for the notion that the worker is giving up a lot of common law rights within the Colorado workers' compensation system, and therefore access to the system—including the DIME process—is a substantive due process right. The *Whiteside* Court stated unequivocally that the "substantive right to workers' compensation is a constitutionally protected property interest." Generally, this is true concerning the right to challenge an ATP's zero PPD rating. If not challenged through the DIME process, the ATP's zero PPD rating is final and "supreme." To argue the a request for a DIME is not yet ripe creates a logical fallacy, whereby any challenge or rating other than the ATP's zero PPD rating will, most likely never be ripe unless there's a worsening of condition. There is a missing link in such a notion, *i.e.,* the present right to challenge an ATP's zero PPD rating.

Harman-Bergstedt, Inc. v. Loofbourrow, 320 P.3d 327 (Colo. 2014)

f. The *Loofbourrow* case is distinguishable from the present case. In *Loofbourrow* there *was no* FAL filed. It is clear error to extend this holding to the conclusion that there can be no DIME without a TTD payment. It is a stretched connection, beyond the bounds of reason, with such overwhelming, key distinguishing facts.

g. The Respondents argue that a DIME should not be granted in the absence of PPD or TTD award. The argument relies squarely on the holding in the *Loofbourrow* case and its ICAO progeny. The *Loofbourrow* case did not involve a FAL. The filing of an FAL triggers a claimant's duty to request a DIME. *See*, § 8-42-107.2(a)(1)(A), C.R.S. The only legal remedy for a claimant (or respondent) who disagrees with an ATP's MMI determination is to request a DIME. Thus, the *Loofbourrow* decision does not apply in this instance given the clear factual incongruence. There is also the issue of **due process**, which will be discussed *infra*. In fact, many cases would not be factually similar to *Loofbourrow*, as that case involved "unique circumstances." See, *Harman-Bergstedt, Inc. v. Loofbourrow*, *supra*. For the Respondents' arguments to prevail, *Loofbourrow* must be read in such a way that it tortures the facts and looks nothing like the decision itself. The *Loofborrouw* holding is very narrow and limited. Its progeny have gone far out of bounds. The *Loofbourrow* decision itself concedes how unique the factual situation was. It does not apply to a situation in which an FAL is part of the procedural history (there was no FAL in *Loofbourrow*, *supra*).

h. The *Loofbourrow* Court refers to the "unique circumstances of that case. *See, Harman-Bergstedt, Inc. v. Loofbourrow*, *supra*. Further, the Supreme Court stated: "The **sole** (emphasis supplied) issue before this court is whether Loofbourrow could be entitled to an award of temporary disability benefits without having challenged, by means of a division-sponsored independent medical examination, the initial treating physician's assessment that she had reached maximum medical improvement. The intermediate appellate court found that**, under the unique circumstances of this case,** including particularly her claim of a worsening condition and the **absence of a final admission of liability…**" [emphasis supplied], *Id*. If the Respondents use

Loofbourrow to skirt the due process import of *Whiteside v. Smith, supra,* they do so in a "circular" way. Specifically, they implicitly argue that the Claimant never had a right to the DIME in the first place. The ALJ concludes that this circuitous argument is a stretch beyond the bounds of reason and without merit.

Setting Aside Pre-Hearing Order Striking DIME

i. The orders of a PALJ are not final for purposes of an appeal. *See Indus. Claim Appeals Office v. Orth,* 965 P.2d 1246 (Colo. 1998). As found and concluded, PALJ DeMarino's pre-hearing conference order misplaced a reliance on ICAO's Order in *Trujillo, supra.* For the reasons articulated herein above, the pre-hearing conference order was in error and should be set aside.

Burden of Proof

j. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992), and it is by a "preponderance of the evidence." A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden that she is entitled to a DIME to challenge ATP Dr. Roth's zero PPD rating.

SUPPLEMENTAL ORDER

IT IS, THEREFORE, ORDERED AND RE-ITERATED, THAT:

A. The Claimant is entitled to a Division Independent Medical Examination (DIME) at her own expense.

B. The DIME process shall proceed forthwith. PALJ DeMarino's Pre-Hearing Conference Order is hereby set aside.

C. This order is procedural and interlocutory because it does not award any benefits. Therefore, any and all issues not determined herein are reserved for future decision.

D. Further relief on interlocutory matters, if the ALJ has exceeded his jurisdiction, may be sought through a Rule 106 (a)(4), C.R.C.P. avenue.

DATED this_____day of February 2018.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

This decision of the administrative law judge does not grant or deny a benefit or a penalty and may not be subject to a Petition to Review. Parties should refer to § 8-43-301(2), C.R.S., and other applicable law regarding Petitions to Review. If a Petition to Review is filed, *see* Rule 26, OACRP, for further information regarding the procedure to be followed.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. Nos. 5-029-658-01, 5-029-659-01 and 5-029-6660-01

CORRECTED FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER DENYING SUMMARY JUDGMENT

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

On February 13, 2018, the parties filed a "Joint Motion for Corrected order," alleging *inter alia,* that the Findings of Fact, made to illustrate contested issues of fact and set forth some background, "may be misread, misunderstood, misinterpreted, and misapplied." The Joint Motion is well taken, and the Order denying Summary Judgement in all three of the above-referenced cases is hereby corrected accordingly.

A hearing on the merits in the above-referenced matter has been re-scheduled. On December 27, 2017, Respondents filed three separate Opposed Motions for Summary Judgment, in the above-captioned, cases on the issue of statute of limitations allegedly barring the Claimant's claims. On January 11, 2018, the Claimant filed three separate Responses to Respondents' Motions for Summary Judgment. The matter was referred to Edwin L. Felter, Jr., Administrative Law Judge (ALJ) for a ruling on January 15, 2018.

The ALJ hereby consolidates all of the three above-captioned cases for purposes of ruling in the Motions for Summary Judgment.

W.C. No. 5-029-658-01 concerns an alleged right shoulder injury of June 15, 2005 [attached to Respondents' Motion are Exhibits A through Y]. W.C. No. 5-029-659-01 concerns an alleged right elbow injury of July 15, 2006 [attached to the Respondents' Motion are Exhibits A through Y]. W.C. No. 5-029-660-01 concerns an

alleged left hip injury of October 17, 2013 [attached to Respondents' Motion are Exhibits A through F][1] The Claimant filed three separate "Responses to Respondents' Motions for Summary Judgment on January 11, 2018 [separate sets of Exhibits A through U were attached to the Claimant's Responses].

ISSUES FOR SUMMARY JUDGMENT

The issues to be determined by this controversy on all three claims concern the applicability of the affirmative defense of "statute of limitations." to all three claims. The Employer takes the position that the claims only needed to be filed with the insurance carrier and not with the Division of Workers' Compensation (DOWC) because they concerned alleged "no lost time" injuries and the Respondents were not required to file Employer First Reports of Injury, and they could pay medical bills without contesting or denying liability. The Claimant's position is that the Employer knew, in each case, that the Claimant was taken out of his regular duties of playing baseball for more than three days, yet the Employer did not file an Employer's First Report of Injury in any of the claims, thus, the statute of limitations was tolled.

The Respondents bear the burden of proof, by preponderant evidence on the "statute of limitations" affirmative defense as it pertains to each claim. The crux of the Respondents' position is that its wage continuation program, pursuant to § 8-42-105 (2)(a), C.R.S.,, essentially, renders the notion of the Employer's knowledge of "more than three days lost time" irrelevant, thus, allowing the Employer to treat the Claimant's cases as paying medical bills without have to file Employer's First Reports of Injury, or without being required to admit or deny liability.

FINDINGS OF FACT

Based on the undisputed evidence contained in the file, pleadings and exhibits, the ALJ makes the following Findings of Fact:

General/All Three Cases

1. The ALJ finds that there are disputed issues of material fact concerning whether the statute of limitations was tolled, and these issues can only be resolved in an evidentiary hearing.

[1] The sets of lettered Exhibits attached to the three motions are different lettered sets.

W.C. No. 5-029-659-01 (July 15, 2006)

2. The ALJ finds that there are disputed issues of material fact concerning the 2006 right elbow injury, among other issues, whether the statute of limitations was tolled.

W.C. No. 5-029-660-01

3. The ALJ finds that there are disputed issues of material fact concerning whether the statute of limitations was tolled after the 2013 injury.

DISCUSSION OF STATUTE OF LIMITATIONS

Section 8-43-103(2), C.R.S., provides that the right to workers' compensation benefits is barred unless a formal claim is filed within two years of the injury. The statute of limitations does not begin to run until a claimant, as a reasonable person, knows, or should have known, the "nature, seriousness and probable compensable character of his injury." *City of Boulder v. Payne,* 426 P.2d 194 (Colo. 1967) at 197. In order to recognize the probable compensable character of the injury, "the injury must be of sufficient magnitude that it causes a disability which would lead a reasonable person to recognize that he may be entitled to compensation benefits." *Choi v. Colo. Architectural Mills Works Supply*, W.C. No. 4-794-282 [Indus. Claim Appeals Office (ICAO), October 14, 2010].

There are exceptions to the two-year statute of limitations under § 8-43-103(2), but they do not apply in this case. For instance, § 8-43-103(2), C.R.S. provides: "In all cases in which the employer has been given notice of an injury and fails, neglects, or refuses to report said injury to the division (DOWC) as required by the provisions of [the Workers' Compensation Act], this statute of limitations shall not begin to run against the claim of the injured employee … until the required report has been filed with the division. *Likens v. Dep't of Corrs*, W.C. No. 4-560-107 (ICAO Feb. 10, 2004). This applies to alleged "lost time" or "permanently disabling injuries of which an employer has notice.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Statute of Limitations

a. The Statute of Limitations is an affirmative defense and unless raised, it is waived. *See Kersting v. Indus. Comm'n,* 30 Colo. App. 297, 567 P.2d 394 (1977). To

paraphrase the late U.S. Supreme Court Justice Oliver Wendell Holmes, Jr: "It has nothing to do with justice. It is a housekeeping device of the law to clean out old cases." When the time specified in a statute of limitations has passed, it could be conceptualized that there is a conclusive presumption that there will be prejudice to the side on the receiving end of the lawsuit. As found, herein above, the Respondents raised this affirmative defense herein.

b. Although if the Claimant establishes that he sustained three compensable injuries in 2005, 2006 and 2013, respectively, his claims would be barred by the statute of limitations, applicable to each claim unless the statutes were tolled. § 8-43-103(2), C.R.S., provides that the right to workers' compensation benefits is barred unless a formal claim is filed within two years of the injury. The statute of limitations does not begin to run until the claimant, as a reasonable person, knew or should have known the "nature, seriousness and probable compensable character of his injury." *City of Boulder v Payne,* 162 Colo. 345, 426 P.2d 194 (1967) at 197. The holding in *Payne* is not germane herein if the statute of limitations was tolled by virtue of the Employer failing to file Employer's First Reports of Injury when they were legally obligated to do so.

Tolling of the Statute of Limitations

c. There are exceptions to the two-year statute of limitations under § 8-43-103(2), and one of them applies in this case. For instance, § 8-43-103(2), C.R.S. provides that: "In all cases in which the employer has been given notice of an injury and fails, neglects, or refuses to report said injury to the division (DOWC) as required by the provisions of [the Workers' Compensation Act], this statute of limitations shall not begin to run against the claim of the injured employee … until the required report has been filed with the division." *Likens v. Dep't of Corrs.,* W.C. No. 4-560-107 (ICAO Feb. 10, 2004).

Burden of Proof

d. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). In the present case, it is the Respondents' burden to prove that the statutes of limitations apply to the Claimant's three claims; and, it is the Claimant's burden to prove that the statutes of limitations were tolled in the three claims. A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, in the first instance, the

Respondents have established prima facie cases concerning the applicability of the statutes of limitations to all three claims; however, the .Claimant has proven that there are disputed issues of material fact surrounding the tolling of the statutes of limitations.

Summary Judgment

e. Pursuant to Office of Administrative Courts Rules of Procedure (OACP) Rule 17, 1 CCR 1101-3, "any party may file a motion for summary judgment seeking resolution of any endorsed issue for hearing." Summary judgment may be sought in a workers' compensation proceeding. *See Fera v. Indus. Claim Appeals Office,* 169 P.3d 231, 232 (Colo. App. 2007). The OAC Rule allows a party to support its Motion with affidavits, transcripts of testimony, medical reports, or employer records. A motion for summary judgment may be supported by pleadings, depositions, answers to interrogatories, and admissions on file. C.R.C.P. 56; *See also Nova v. Indus. Claim Appeals Office*, 754 P.2d 800 (Colo. App. 1988) [C.R.C.P. and C.R.E. apply insofar as they are not inconsistent with the procedural or statutory provisions of the Act]. The Respondents' Motions for Summary Judgment in each of the three cases are supported by documents. The Claimant's Responses to the Respondents' three motions are also supported by documents.

f. Summary judgment is appropriate when the pleadings show that there is no genuine issue as to any material fact and that the moving party is entitled to judgment as a matter of law. C.R.C.P. 56(c); *Churchey v. Adolph Coors Co.*, 759 P.2d 1336 (Colo. 1988). This rule allows the parties to pierce the formal allegation of the pleadings and save the time and expense connected with trial when, as a matter of law, based on undisputed facts, one party could not prevail. See *Drake v. Tyner*, 914 P.2d 519 (Colo. Ct. App. 1996). As found, the aggregate documentary evidence establishes that there are disputed issues of material fact in each of the three claims.

g. Once the moving party shows specific facts probative of a right to judgment, it becomes necessary for the non-moving party to set forth facts showing that there are genuine issues of disputed, material facts for hearing. *See Miller v. Van Newkirk*, 628 P.2d 143 (Colo. App. 1980). As found, the Respondents' three Motions for Summary Judgment, and the Claimant's Responses thereto fail to show specific facts probative of the respondents' right to summary judgment.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondents' Motions for Summary Judgment in W.C. Nos. 5-029-658-01, 5-029-659-01 and 5-029-660 are hereby denied and dismissed.

B. A hearing on the merits, shall proceed as scheduled.

C. Any and all issues, including the tolling of the statutes of limitations in all three claims, are hereby reserved for future decision.

DATED this_____day of February 2018.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

This decision of the administrative law judge does not grant or deny a benefit or a penalty and may not be subject to a Petition to Review. Parties should refer to § 8-43-301(2), C.R.S., and other applicable law regarding Petitions to Review. If a Petition to Review is filed, *see* Rule 26, OACRP, for further information regarding the procedure to be followed.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-055-295-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on January 10, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 1/10/18, Courtroom 1, beginning at 8:30 AM, and ending at 11:30 AM).

Claimant's Exhibits 1 through 21 were admitted into evidence, without objection, with the exception of Claimant's Exhibit 21, pp. 227, 228 only, which two pages were rejected. Respondents' Exhibits A through G were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule: Claimant's opening brief was filed on January 17, 2018. Respondents' answer brief (erroneously labeled as "Proposed Full Findings of Fact, Conclusions of Law and Order) was filed on January 26, 2018 [PLEASE NOTE: the ALJ finds it inappropriate for a party to file a proposed decision before the ALJ has decided the case]. On January 30, 2018, Claimant advised that she would not be filing a reply brief. Consequently, the matter was deemed submitted for decision on January 31, 2018.

ISSUES

The issues designated for hearing concerned: (1) compensability of a pulmonary embolism and a right knee bruising; (2) medical benefits from August 11, 2017, attributable to a pulmonary embolism and a minor right knee bruising; (3) average weekly wage (AWW); and temporary total disability (TTD) benefits from August 12, 2017, through September 11, 2017, attributable to a pulmonary embolism or a right knee bruising.

The Claimant bears the burden of proof on all issues, by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant works for the Employer as a supervisor at Denver International Airport. She coordinates the pick-up of arriving passengers at the airport by taxi cabs and limousines for transport to their ultimate destinations

2. On June 15, 2017, the Claimant underwent non-work related right total knee replacement surgery (arthroplasty), performed by Jared Michalson, M.D. She was not given anti-coagulation prophylactics (Respondents'. Exhibit C, pp. 39-41).

The Work-Related Incident, Allegedly Causing a Compensable Aggravation/Acceleration of the Claimant's Underlying Right Knee Condition

3. On August 11, 2017, at approximately 6:00 PM, the Claimant was walking with another employee to the Employer's office in order to clock-out for the day. She walked too close to the edge of the sidewalk, lost her balance, and fell to the ground. She struck her right knee on the ground (concrete) and could not get up.

4. An ambulance came and took the Claimant to University Hospital. She was admitted to the emergency room (ER) at 6:47 PM (Claimant's Exhibit 1, p. 5). An x-ray was taken of her right knee at University Hospital and it revealed no significant findings (Claimant's Exhibit 1, p.9). According to the Claimant, her right knee "looked good" following the fall.

After the Incident

5. On August 29, 2017, the Claimant presented to orthopedic surgeon, Dr. Michalson for evaluation and another x-ray to the right knee. Dr. Michalson noted the x-ray showed a well-appearing right total knee arthroplasty without complication. Dr. Michalson did not provide nor refer the Claimant for any treatment to her right knee (Respondents' Exhibit. B, p.33).

6. On August 30, 2017, the Claimant was evaluated by Lynne M. Yancey, M.D., at Concentra Medical Center. Based on her examination of the Claimant and the history provided, Dr. Yancey's assessment was "traumatic hematoma to the right knee." (Respondents' Exhibit D, p. 43). No medication or treatment was provided and the Claimant was released from care (Respondents' Exhibit D., pp. 43-44).

7. The Claimant admitted at hearing that as a result of the August 11, 2017 incident her right knee was bruised but had returned to its baseline condition.

Pulmonary Embolism

8. The Claimant had her knee fully checked out at the ER and was ready to leave the hospital several hours later when she first noticed shortness of breath. She ultimately was diagnosed with a pulmonary embolism (PE) and related medical conditions involving her heart and she had to be hospitalized.

9. The Claimant alleges that her pulmonary embolism and resulting medical conditions are work-related based on the fact that the medical conditions first presented several hours after the fall on August 11, 2017. She contends that the temporal relationship between the fall and the medical conditions confirms that the pulmonary embolism is work-related.

Medical:

10. On August 12, 2017, William Cameron McGuire, M.D., a resident physician in the cardiology department at UC Health, evaluated Claimant and concluded that she sustained an acute and chronic pulmonary embolism which was likely provoked with recent TKA [total knee arthroplasty (replacement)] and no prophylaxis (Claimant's Exhibit 1, p. 22). With respect to the NSTEMI (heart) issue, questions arose as to whether this was "type I" or "type II". Dr. McGuire noted on August 12, 2017; "Type I vs. Type II. Concerning features are type of pain/pressure, onset at rest, pain that was experienced despite IV morphine, progressive nature over 30m, and relief with sublingual nitro. Tnl initially 0.4 but uptrended overnight to 1.8 c/w NSTEMI. Also possible that this is Type II from an acute PE in the setting of a mechanical fall on a recently operated knee without thromboembolism prophylaxis. The characteristic of the

chest pain and the lack of tachycardia argue against that, but she does have increased risk in the post-operative LE phase w/CP occurring shortly after a mechanical fall" (Claimant's Exhibit 1, p. 22).

11. A second physician at University of Colorado Health Sciences Center (UCHSC), Peterson Sparks, M.D., provided the following option about the cause of the Claimant's condition on August 15, 2017: "Pulmonary emboli: acute and chronic. Likely provoked with recent TKA and no prophylaxis" (Respondents' Exhibit F, p. 89).

12. On September 29, 2017, a third physician, Stuart Lind, M.D., a hematologist at UCHSC evaluated the Claimant and provided the following causation assessment:

> Although the patient's acute PE was discovered within a month of knee replacement, which might lead to her PE as being classified as "provoked", the radiologist's findings of evidence of chronic PE suggests that she may be closer physiologically to someone with 'unprovoked' venous thromboembolism" (Respondents' Exhibit F, p. 135).

Dr. Lind concluded that the Claimant's PE was likely unprovoked and caused by her genetic abnormality that makes her blood more susceptible to clotting.

13. Jessica D. Badlam, M.D., a pulmonologist at UCHSC and instructor of pulmonary vascular disease, initially considered the possibility that the Claimant's PE may have been related to the fall on August 11, 2017 (Claimant's Exhibit 3, p. 90). After reviewing additional information, however, Dr. Badlam clarified her opinion on October 11, 2017 and concluded that the Claimant's PE was either provoked by the TKA and lack of prophylaxis or unprovoked by Claimant's genetic clotting disorder.

14. A review of the entire medical record in evidence discloses not a single medical opinion that the Claimant's fall of August 11, 2017, provoked her pulmonary embolism. On the contrary, the weight of medical opinion establishes that the Claimant's TKE of June 15, 2017, which preceded the fall of August 11, 2017, provoked the pulmonary embolism.

15. There is no dispute in the evidence concerning the fact that the Claimant's fall of August 11, 2017 was of sufficient seriousness that she could not get up, was taken to the ER and otherwise required medical care and attention of an immediate and emergent nature for her right knee. As found herein above, an X-Ray of the Claimant's right knee in the ER revealed no significant findings (Claimant's Exhibit 1, p. 9). As further found herein above, Surgeon Dr. Michalson, on August 29, 2017, noted that the X-Ray showed a well-appearing TKA without complication. The Claimant admitted at

hearing that as a result of the August 11, 2017, fall, her right knee was bruised but had returned to its baseline condition.

16. The Employer directed the Claimant to Concentra, where she was seen by Lynne Yancey, M.D., on August 30, 2017. Dr. Yancey reported that the Claimant's PE and heart condition were not work related (Respondents' Exhibit D, p. 44).

17. On August 30, 2017, Dr. Yancey placed the Claimant at maximum medical improvement (MMI) and released her to return to work full duty without restrictions (Respondents' Exhibit D. p. 45).

Independent Medical Examination (IME) by Jeffrey Schwartz, M.D.

18. Dr. Schwartz, a board certified pulmonologist, performed an IME of the Claimant on November 15, 2017; and, he reviewed all medical records which were admitted into evidence (Respondents' Exhibit A, pp. 1-5). Dr. Schwartz stated that there is no scientific evidence or medical literature to support the proposition that a fall or traumatic impact to the lower extremity could cause a blood clot in the leg to become a PE.

19. Dr. Schwartz is of the opinion that the Claimant had two major risk factors for developing a PE prior to and unrelated to the incident of August 11, 2017: (1) a familial blood clotting disorder; and, (2) a recent total right knee replacement surgery on June 15, 2017, which was completed without anticoagulation prophylaxis.

20. Dr. Schwartz is of the opinion, within a reasonable degree of medical probability, that the Claimant's PE was provoked by the total right knee replacement surgery which occurred before the August 11, 2017 incident and the lack of anticoagulation prophylaxis. Furthermore, Dr. Schwartz stated the opinion that the Claimant's fall on August 11, 2017 did not aggravate or accelerate in any way the provocation of the PE that was caused by the recent knee surgery.

Ultimate Findings

21. The Claimant's credibility is not in issue, however, her lay opinion on the cause of her PE is **not** sufficient, without medical support, to establish the cause of her PE. In contra-distinction, the weight of medical opinion establishes to a reasonable degree of medical probability that the TKA most likely provoked the PE. There is no persuasive evidence that the fall of August 11, 2017, contributed to the occurrence of the PE. The medical experts' opinions in evidence are persuasive, credible and undisputed. The medical opinion of IME Dr. Schwartz is highly persuasive and credible. In fact, it is corroborated by other physicians, as found herein above.

22. The Claimant has failed to prove, by a preponderance of the evidence that her PE is causally related to a compensable event. The totality of the evidence establishes, however, that the fall of August 11, 2017 was sufficient to cause a minor, compensable right knee injury, which required medical attention, but caused **no** temporary disability. Her disability from August 12, 2017 through September 121, 2017 is attributable to the non-work related PE.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's credibility is **not** in issue, however, her implied lay opinion that the fall of August 11, 2017, caused the pulmonary embolism would amount to an expert medical opinion and it is not sufficient to establish a causal link between the fall and the

pulmonary embolism. The weight of medical opinion in evidence makes it reasonably probable that the TKA provoked the pulmonary embolism and this is undisputed. There is no medical opinion in evidence linking the fall to the pulmonary embolism. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony .as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. The ALJ is not free to disregard the undisputed medical evidence and lack thereof. Further, as found, the medical opinions of IME Dr. Schwartz were highly persuasive and credible. In fact, they are corroborated by other medical opinions in evidence, as herein above found.

Compensability of the Pulmonary Embolism

b. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant failed to prove, at the threshold, that the PE was caused by the fall of August 11, 2017. Therefore the PE is not a compensable phenomenon.

The Right Knee Bruising

c. An "injury" referred to in § 8-41-301, C.R.S., contemplates a **disabling** injury to a claimant's person, not merely a coincidental and non-disabling insult to the body. *See Henderson v. RSI, Inc.,* 824 P.2d 91 (Colo. App. 1991). *Also see Gaudett v. Stationers Distributing Comp*any, W.C. No. 4-135-027 [Indus. Claim Appeals Office (ICAO), April 5, 1993]. A priori, the consequences of a work-related incident must require medical treatment or be disabling in order to be sufficient to constitute a compensable event. If an incident is not a significant event resulting in an injury, claimant is not entitled to benefits. *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (ICAO, March 7, 2002). As found, the fall of August 11, 2017 resulted in the Claimant being taken to the ER for treatment of her right knee, with minor bruising of the right knee, and she returned to baseline on the right knee, without any disability attributed to the right knee. Therefore, the Claimant has proven, by preponderant evidence that she sustained a minor compensable injury to the right knee, which required a medical examination and ER costs, but did not result in disability.

Temporary Disability

d. To establish entitlement to temporary disability benefits, a claimant must prove that the industrial injury has caused a "disability," and that she has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1),

C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). As found, the Claimant has failed to prove that her right knee injury resulted in temporary disability.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to prove the compensability of the pulmonary embolism, however, she has proven the compensability of the right knee injury, whereby ER costs were incurred, but no temporary disability.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay the ambulance and emergency room costs of treatment of the Claimant's right knee bruising, subject to the Division of Workers' Compensation Medical fee Schedule.

B. Any and all claims related to the pulmonary embolism are hereby denied and dismissed.

C. Any and all claims for temporary disability benefits from August 12, 2017, through September 11, 2017, are hereby denied and dismissed,

DATED this_____day of February 2018.

ISSUES

- Whether Claimant overcame by clear and convincing evidence the opinion of the Division Independent Medical Examination (DIME) physician as to maximum medical improvement.

- Whether Respondents overcame by clear and convincing evidence the opinion of the Division Independent Medical Examination (DIME) physician as to Claimant's permanent impairment rating.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ finds as fact:

1. On January 20, 2015, Claimant injured his back when he and four coworkers tried to move a heavy magnet belt.

2. A few weeks prior to the work injury, Claimant treated for low back problems with a chiropractor, Dr. Clark, and with Physician Assistants Tyler Norton and Amy King at Dr. Lisa Zwerdlinger's office. On January 4, 2015, Tyler Norton, PAC, noted that Claimant injured his back three weeks prior when he picked something heavy off of the ground. Claimant treated several times with Dr. Clark. Claimant reported pain severity of 5/10, increasing to 8/10 with walking. Claimant's pain was constant and radiated down the back of his buttocks and right leg. On January 8, 2015, Amy King PA reported Claimant still had a lot of back pain despite medication and Ms. King prescribed Vicodin.

3. After the January 20, 2015, work injury, Claimant primarily treated with Dr. Lisa Zwerdlinger, Dr. Donald Corenman, and Dr. Thos Evans. Treatment included extensive chiropractic care, physical therapy, epidural steroid injections, and radiofrequency ablation.

4. On March 16, 2015, Dr. Robert Leibold performed a lumbar spine MRI which was read as finding central L3-4 disc herniation and L4-5 disc bulge with mild to moderate stenosis. A later MRI, performed on May 6, 2015, found a broad-based disc protrusion at L4-5 with moderate stenosis and displacement of the left L5 Nerve root; and spondylosis and facet joint osteoarthritis from L2-3 through L5-S1.

5. On December 21, 2015, Dr. Thomas Puschak, Panorama Orthopedics & Spine Center, performed a second opinion and noted that Claimant's EMG in May was unequivocal and that an MRI showed "very mild degenerative changes, mild congenital and acquired stenosis at L3-L4 and L4-L5. He has had some epidural injections, radiofrequency ablations without significant benefit . . . The amount of stenosis he has is so exquisitely mild that I would not recommend anything surgical to decompress this . . . He has failed meds, PT, injections, rhizotomies at this point. I doubt that there is going to [be] much for me to offer from surgical standpoint."

6. On January 15, 2016, Dr. Marc Treihaft, neurologist, performed a neuromuscular evaluation following referral from Dr. Corenman. Dr. Treihaft noted that the abnormalities identified on MRI studies did not present a clear-cut surgical lesion. Dr. Treihaft noted that Claimant's

intermittent symptoms may reflect compression of the sciatic nerves but did not explain saddle and truncal distribution numbness. Dr. Treihaft considered the sensorimotor polyneuropathy most likely related to diabetes. Dr. Treihaft recommended a thoracic MRI. On February 3, 2016, the thoracic MRI reflected only degenerative changes.

7. On February 3, 2016, Dr. Corenman noted that MRIs of the thoracic and lumbar spine reflected some degenerative changes but no evidence of root compression. Claimant's work-related back pain was not surgical and Claimant was close to maximum medical improvement. Claimant's bilateral lower extremity symptoms were probably diabetic related and not Workers' Compensation related.

8. On March 17, 2106, Dr. Evans intended to convey his injection treatment plan to Dr. Corenman who was scheduled to see Claimant later that day.

9. On March 17, 2016, Dr. Corenman reported that Claimant reached maximum medical improvement and he rated Claimant with a 17% whole person impairment (11% range of motion and 7% Table 53). Dr. Corenman did not consider Claimant a surgical candidate. Leg symptoms did not appear to be radiculopathic but probably were neuropathic. The first EMG indicated there was some evidence of radiculopathy at L5-S1 but there was no real evidence of that on exam or in Claimant's history. Dr. Treihaft performed another EMG that found peripheral neuropathy. He concluded Claimant's leg symptoms were generally unrelated to his current back symptoms. Dr. Corenman recommended medical maintenance of one year of pain medications for acute flares of Claimant's chronic pain.

10. On March 18, 2016, Dr. Kevin King, chiropractor, indicated Claimant rated his lower back pain as a 5 on a scale of 0 to 10.

11. On April 16, 2016, Dr. Reiss performed a Respondents sponsored independent medical evaluation. Dr. Reiss concluded that Claimant suffered a work related temporary exacerbation of a preexisting condition that resolved without impairment. Dr. Reiss opined that Claimant had reached MMI on May 6, 2015.

12. On April 8, 2016, Dr. Lisa Zwerdlinger noted Claimant reached maximum medical improvement March 17, 2016. "Patient's pain is in the low back with no improvement." She recommended continued medication and chiropractor as needed.

13. On August 25, 2016, Dr. Brian Shea performed the Division independent medical examination (DIME). Dr. Shea reviewed medical records and examined Claimant. Dr. Shea agreed with treating physician, Dr. Corenman, that Claimant reached maximum medical improvement on March 17, 2016. Dr. Shea rated Claimant with an 18% whole person impairment (12% range of motion impairment and 7% Table 53(2)(C)). Dr. Shea understood Dr. Reiss's reluctance to give Claimant an impairment rating based on evidence of a preexisting condition, however Dr. Shea decided to give an impairment rating based on Claimant's primary physician's opinion that Claimant suffered a work-related injury and Dr. Corenman's treatment. Dr. Shea recommended medical maintenance care over the next 12 months including prescription medication, injections by Dr. Evans, and consideration of electrical stimulation implant.

14. On September 28, 2016, Respondents filed a Final Admission based on Dr. Shea's report.

15. Claimant has undergone the following medical maintenance treatments:

- Injections:
    - On September 6, 2016 and November 16, 2016, Dr. Evans performed right L4-5 and right L5-S1 transforaminal epidural steroid injections with little to no lasting improvement.
    - On March 14, 2017, Dr. Evans performed a right L3-4 and right L4-5 transforaminal epidural steroid injection.
    - On December 19 and 27, 2016, Dr. Evans performed medial branch radiofrequency ablation. Initially, Claimant initially reported relief, however, subsequently, Claimant reported new symptoms that included foot drop, pain in the right foot, and spasms in the lower right leg.
- Chiropractic: Claimant regularly treated at King Chiropractic. Claimant generally rated his low back pain with 4, 5, or 6 on a scale of 1 - 10. On October 10, 2017, Kevin G. King reported Claimant "is showing no change in functional complaints and is showing no change in level of discomfort.
- Physical Therapy: Claimant treated at Parker Physical Therapy from March 26, 2015, prior to MMI, through April 24, 2017, after MMI. During that time, Claimant participated in 119 visits and missed 16 appointments. Claimant reported very little overall change from appointment to appointment.
- MRI: On April 26, 2017, an MRI of the lumbar spine reflected a "new" central to left posterolateral disc extrusion with mild caudal migration at L4-L5. The extrusion could be a source of left L5 radiculopathy.

16. On December 1, 2016, Dr. Barry Ogin performed an independent medical examination and report at Respondent's request. On May 31, 2017, Dr. Ogin performed a follow-up independent medical evaluation and report. Also, Dr. Ogin testified at the hearing as an expert in Physical Medicine and Rehabilitation, and in Pain Management.

- Dr. Ogin reported that Claimant appeared comfortable and not in any significant distress on casual observation, however, once formal testing started, Claimant demonstrated extensive grimacing and multiple pain behaviors.
- Formal range of motion testing appeared limited by poor effort and was non-physiologic and inconsistent with casual observation.
- Lumbar range of motion was invalid based on internal consistency measurements.

- Dr. Ogin concluded that Claimant's symptoms far outweighed any objective pathology. Dr. Ogin agreed with Dr. Corenman that Claimant's MRIs revealed mild degenerative changes without obvious stenosis; that Claimant may have some underlying congenital narrowing and disk degeneration, but there was no evidence of a specific injury that could be attributed to the work incident.

- Claimant's symptoms progressed dramatically over time which is inconsistent with a static low back injury without worsening pathology.

- Claimant presented with multiple non-physiologic pain behaviors and non-physiologic distribution of numbness and weakness in his legs.

- He had a negative response to all treatments rendered including multiple medications, extensive physical therapy, chiropractic care and multiple spinal injections. Multiple epidural steroid injections failed to alleviate his low back pain and leg pain for more than a few days at most. Typically, radiofrequency neurotomy should provide benefit for up to one year and, at a minimum, six months. Claimant had no objective improvements and at most had less than one month of subjective improvement according to the physical therapy records, Dr. Zwerdlinger's records, and Claimant's own history.

- Contrary to Dr. Zwerdlinger's assertions, there was no clear evidence of radiculopathy. Dr. Treihaft's electrodiagnostic testing in January 2016, revealed no evidence of radiculopathy.

- Dr. Corenman, Dr. Puschak, and Dr. Reis agreed Claimant did not present with compressive lesions and was not a surgical candidate.

- Dr. Ogin concluded Claimant has a nonorganic basis for his pain and presentation either due to conscious or unconscious variables. The medical records reflected preexisting anxiety and other stressors. There may be a psychological basis for Claimant's condition that would not be related to his work injury.

- Dr. Ogin agreed with Dr. Reiss that Claimant reached maximum medical improvement by May 2015, and that additional treatment was not warranted.

- Dr. Ogin pointed out that Claimant's number of physical therapy visits exceeded recommendations in the Medical Treatment Guidelines, and there was no functional progress documented in the physical therapy records.

- Dr. Ogin agreed with Dr. Reiss that no permanent impairment existed due to the work injury. Claimant's underlying degenerative disk disease was not caused, aggravated, or accelerated by the work injury. Claimant's failure to improve was not physiologically attributed to the back strain.

17. Dr. Ogin opined that much of Claimant's treated was not supported by the Medical

Treatment Guidelines (MTGs).

- The MTGs do not support radiofrequency denervation without a prior positive diagnostic response to controlled medial branch blocks. No documentation in Claimant's medical records supports that a functional assessment occurred or that Claimant experienced functional improvement. Results indicated some transient relief or no relief. The Medical Treatment Guidelines require six to 18 months of relief or longer. Therefore, repeat radiofrequency neurotomy procedure was not indicated or appropriate.

- The MTGs did not support Claimant's repeated epidural steroid injections because evidence of functional gain was not present and pain returned, or worsened, or there was no diagnostic response.

- The Medical Treatment Guidelines did not support ongoing physical therapy visits because 121 visits far exceed the amount and duration recommended and Claimant did not show functional gain.

- Dr. Ogin concluded that Claimant's current problems are not work related. In Dr. Ogin's opinion, the new L4-5 disk extrusion was due to progressive disk degeneration. Dr. Ogin noted that disk protrusions, spondylosis, and facet degeneration are all typical age-related findings in the lumbar spine and that the new disk herniation at L4-5 in April 2017, over two years after Claimant's occupational exposure, was not related, caused, or aggravated by the work injury.

- Dr. Ogin did not recommend further treatment under the workers' compensation claim because Claimant had not responded to extensive treatment including physical therapy, chiropractic care, massage therapy, modalities, epidural steroid injections, and facet blocks, and because Claimant's ongoing symptoms were not work related. Dr. Ogin recommended treatment outside the workers' compensation system that may include repeat epidural steroid injections, electrodiagnostic testing, therapies, and possible surgical intervention.

18. Dr. Ogin testified that Claimant's reported "pop" in his back was not an indication of a disc rupture based on Claimant's clinical course and nonspecific findings. He opined Dr. Shea erred when he concluded Claimant presented with radiculopathy. Claimant's clinical examination did not support radiculopathy. The first EMG study described some weak radiculopathy but that was not borne out in clinical examination or subsequent EMG results. Dr. Ogin agreed with medical specialists, Dr. Corenman, Dr. Reiss, Dr. Puschak, and Dr. Treihaft, that Claimant's leg symptoms were not related to the work injury but rather were more likely attributable to Claimant's diabetes and peripheral neuropathy. Dr. Ogin testified that the new disc fragment, identified over two years after Claimant's date of injury and over one year after maximum medical improvement, was not work related but rather more likely was due to the natural progression of his underlying degenerative disc disease.

19. On January 10, 2017, Dr. John Hughes prepared an independent medical

examination report at Claimant's request. Also, Dr. Hughes testified at the hearing as an expert in in occupational medicine. He is not a spine surgeon or a neurologist. Until shortly before the hearing, Dr. Hughes was not aware of pertinent medical records including records of Claimant's low back injury and treatment that predated Claimant's work injury, and Dr. Triehaft's recommendation for a thoracic spine MRI.

20. Dr. Hughes testified that when he examined Claimant on January 10, 2017, Claimant reported that he then was experiencing back pain of a 2 on a scale of 1 – 10; that Claimant reported diffuse weakness in both legs; and that pain radiated down Claimant's legs.

21. Dr. Hughes did not disagree with Dr. Shea's determination of MMI on March 17, 2016. Rather, Dr. Hughes concluded that Claimant's condition worsened post MMI and that Claimant is no longer at MMI as evidenced by the April 2017 new disc extrusion. Dr. Hughes testified that Claimant's work injury predisposed him to additional injury, however, Dr. Hughes also testified that degenerative changes occur naturally in the lumbar spine.

22. Claimant testified at the hearing that a few weeks prior to the work injury, he hurt his low back, primarily his hip, at work. Claimant admitted he did not report a work injury. Contrary to the medical records that Claimant treated with his chiropractor for a few weeks and then saw his doctor, Claimant testified that he saw his doctor first and that his doctor referred Claimant to treat with his chiropractor. Also, contrary to the medical records that reflected Claimant reported ongoing back pain on January 8, 2015, and that the PA prescribed Vicodin on that date, Claimant testified that his symptoms essentially resolved prior to the January 20, 2015, work injury. Claimant is a poor historian and his testimony was not persuasive.

23. Claimant admitted to a medical history that included diabetes. Claimant testified that his condition worsened in April of 2017 when he got out of bed in the morning, was brushing his teeth, and he experienced excruciating pain. Claimant treated with his chiropractor and the next day an MRI was performed. Claimant reported that current symptoms include pain on the right side of his low back and his legs go numb based on his position.

24. The ALJ finds, based on the totality of the evidence that Claimant has not overcome by clear and convincing evidence the opinion of the DIME physician as to MMI.

25. The ALJ finds, based on the totality of the evidence that Respondents have overcome by clear and convincing evidence the opinion of the DIME physician as to Claimant's permanent impairment rating.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), sections 8-40-101, et seq., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to

injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming DIME

A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004).

Overcoming DIME on Maximum Medical Improvement

Section 8-40-201 (11.5) C.R.S. defines "maximum medical improvement" as a point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition.

The requirement for future medical maintenance which will not significantly improve the condition or the possibility of improvement or deterioration resulting from the passage of time shall not affect a finding of maximum medical improvement. The possibility of improvement or deterioration resulting from the passage of time alone shall not affect a finding of maximum medical improvement.

Claimant failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Shea that Claimant reached MMI on March 17, 2016. The medical evidence supports that Claimant was medically stable and had not improved despite extensive treatment before and after the date of MMI.

The persuasive medical records support Dr. Shea's conclusion of MMI. Multiple physicians, including Dr. Corenman, Dr. Reiss, Dr. Ogin, and Dr. Hughes, support Dr. Shea's conclusion of MMI. Dr. Reiss and Dr. Ogin supported an earlier MMI date. Dr. Hughes agreed that Claimant reached MMI on March 17, 2016, but questioned whether Claimant's condition had worsened and whether Claimant remained at MMI. Dr. Zwerdlinger's conclusion that Claimant was not at MMI was not persuasive.

The question of reopening, or questions of whether Claimant's condition changed for the worse, if the worsening is work-related, and if Claimant remains at maximum medical improvement, are not ripe for consideration by this ALJ at this hearing.

Claimant has not produced persuasive medical evidence contradicting Dr. Shea's opinion of maximum medical improvement. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Shea's Maximum medical improvement determination was incorrect.

Overcoming DIME on PPD Impairment Rating

A DIME physician's findings of causation or relatedness and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000). The question of whether the DIME physician rating was overcome by clear and convincing evidence presents questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The determination of whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury is one of fact that the ALJ must determine based on a totality of the circumstances. *Moorhead Machinery & Boiler Co. v. DelValle,* 934 P.2d 861 (Colo. App. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970). However, no compensability exists when a later accident or injury occurs as the direct result of an independent intervening cause. An unrelated medical problem may be considered an independent intervening cause even where an industrial injury impacts the treatment choices for the underlying medical condition. *Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187 (Colo. App. 2002).

Respondents have met their burden and have established by clear and convincing evidence that it was "highly probable" that Dr. Shea, the DIME physician, incorrectly related Claimant's ongoing back problems to the work injury and, as a result, Dr. Shea incorrectly assigned an 18% whole person permanent impairment rating. The opinions and testimony of Dr. Ogin are found credible and persuasive. The opinion of Dr. Reiss is found credible and persuasive. Their overall opinions were detailed and supported by the medical records.

Dr. Shea erred when he concluded Claimant presented with radiculopathy. Dr. Treihaft's EMG results confirmed sensorimotor polyneuropathy related to diabetes. On February 3, 2016, Dr. Corenman noted that MRIs of the thoracic and lumbar spine reflected some degenerative changes but no evidence of root compression and that Claimant's bilateral lower extremity symptoms were probably related to his diabetes and not his work injury. On March 17, 2016, Dr. Corenman reported that the first EMG study described some weak radiculopathy but that was not borne out in clinical examination or subsequent EMG results. Dr. Ogin agreed with medical specialists, Dr. Corenman, Dr. Reiss, Dr. Puschak, and Dr. Treihaft, that Claimant's leg symptoms were not related to the work injury but rather were more likely related to Claimant's diabetes and peripheral neuropathy.

Dr. Shea erred because objective tests, clinical evaluations, and medical treatment did not objectively or persuasively support a ratable work injury/condition. The March 16, 2015, and May 6, 2015 lumbar spine MRIs reflected minimal degenerative changes common in an individual Claimant's age. On December 21, 2015, orthopedic specialist Dr. Puschak noted that an MRI showed "very mild degenerative changes, mild congenital and acquired stenosis at L4-L4 and L4-L5. He has had some epidural injections, radiofrequency ablations without significant benefit… The amount of stenosis he has is so exquisitely mild that I would not recommend anything surgical to decompress this... He has failed meds, PT, injections, rhizotomies at this point. I doubt that there is going to [be] much for me to offer from surgical standpoint." On January 15, 2016, Dr. Treihaft, neurologist, performed a neuromuscular evaluation and noted that the abnormalities identified on MRI studies did not present a clear-cut surgical lesion. Dr. Treihaft noted that intermittent symptoms may reflect compression of the sciatic nerves but did not explain saddle and truncal distribution numbness. Dr. Treihaft considered the sensorimotor polyneuropathy most likely related to diabetes. Dr. Ogin agreed with Dr. Corenman that MRIs revealed mild degenerative changes without obvious stenosis, and that Claimant may have some underlying congenital narrowing and disk degeneration, but there was no evidence of a specific injury that could be attributed to the work incident.

Dr. Shea's reliance on Dr. Zwerdlinger's opinion to support a rating constituted error because Dr. Zwerdlinger's conclusions were not supported by the persuasive medical records.

Specifically, Dr. Shea acknowledged Dr. Reiss's reluctance to give the patient an impairment rating based on evidence of a preexisting condition, however Dr. Shea decided to give an impairment rating based on Claimant's primary physician's opinion, Dr. Zwerdlinger's opinion, that Claimant suffered a work-related injury. Dr. Zwerdlinger failed to acknowledge Claimant's preexisting back problems even though Claimant treated with physician assistants in Dr. Zwerdlinger's office the weeks leading up to the work injury. On January 4, 2015, Tyler Norton, PAC, reported that Claimant injured his back three weeks prior when he picked something heavy off of the ground. Claimant treated several times with his chiropractor, Dr. Clark. Claimant reported the severity of pain was 5/10, increasing to 8/10 with walking. Pain radiated down the back of his buttocks and right leg. Pain was constant. On January 8, 2015, Amy King PA reported Claimant still had a lot of back pain despite medication and Ms. King prescribed Vicodin. Also, as noted above, contrary to Dr. Zwerdlinger's assertions, there was no clear evidence of radiculopathy. Dr. Zwerdlinger's conclusions were not supported by any neurologist or orthopedic specialist.

Dr. Shea's reliance on Dr. Corenman's treatment to support a rating constituted error because treatment, in and of itself, does not support a rating. Also, Dr. Corenman did not appear to be aware of Claimant's preexisting condition. In fact, the records indicate that Claimant failed to report, or downplayed, his preexisting back problems to all of the physicians including his own independent medical examiner, Dr. Hughes.

Dr. Ogin persuasively concluded that Claimant presented with multiple non-physiologic pain behaviors and non-physiologic distribution of numbness and weakness in his legs which was not ratable. Claimant's subjective symptoms far outweighed any objective pathology. He had a negative response to all treatments rendered including multiple medications, extensive physical therapy, chiropractic care, and multiple spinal injections. Multiple epidural steroid injections failed to alleviate his low back pain and leg pain long term. Claimant had no objective improvements according to the physical therapy records, Dr. Zwerdlinger's records, and the patient's own history. Dr. Ogin concluded Claimant has a nonorganic basis for his pain and presentation either due to conscious or unconscious variables. The medical records reflected preexisting anxiety and other stressors and support a finding that Claimant's condition has a psychological basis not related to his work injury.

The medical records support that Claimant suffered a temporary aggravation that did not result in a permanent change in his condition that predated the work injury. Two weeks prior to the work injury, Claimant reported the severity of his low back pain was 5/10, increasing to 8/10 with walking. He had constant pain which radiated down the back of his buttocks and right leg. On March 18, 2016, one day after Dr. Corenman and Dr. Shea placed Claimant at maximum medical improvement of his work-related injuries, Claimant's complaints essentially mirrored pre-work injury levels. On March 18, 2016, Dr. Kevin King, chiropractor, reported that Claimant rated his lower back pain at a 5 on a scale of 0 - 10. Shortly thereafter, on April 16, 2016, orthopedic specialist, Dr. Reiss, concluded that Claimant suffered a work related temporary exacerbation of a preexisting condition that resolved without impairment. Dr. Ogin agreed with Dr. Reiss that no permanent impairment existed due to the work injury. Dr. Ogin concluded that Claimant's current problems are not work related. Claimant's underlying degenerative disk disease was not caused, aggravated, or accelerated by the work injury.

Claimant's problems/symptoms at the time of the hearing appear to be due to non-work-related progressive disk degeneration and a new L4-5 disk extrusion. Dr. Ogin credibly testified that disk protrusions, such as the one reflected on Claimant's recent MRI, spondylosis, and facet degeneration, are all typical age-related findings in the lumbar spine and that Claimant's new disk herniation at L4-5, first identified over two years after Claimant's work injury and after multiple prior MRIs, was not related, caused, or aggravated by the work injury. Claimant supported that opinion when he testified that his condition worsened sometime in April 2017 when he got out of bed, was brushing his teeth, and experienced excruciating pain. Claimant treated with his chiropractor who referred Claimant for an MRI. The medical records reflect that the MRI to which Claimant referred occurred on April 26, 2017, over two years after the original work injury, and the MRI reflected a "new" central to left posterolateral disc extrusion.

In summary, Respondents met their burden of proof that it was highly probable that Dr. Shea, the DIME physician, incorrectly related Claimant's ongoing back problems to the work injury and incorrectly assigned Claimant an 18% whole person permanent impairment rating. The opinions of Dr. Reiss and Dr. Ogin are more credible that Claimant suffered a temporary aggravation of his preexisting conditions that resolved and that Claimant did not suffer any permanent impairment as a result of his work-related injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant failed to overcome Dr. Shea's determination of maximum medical improvement by clear and convincing evidence.

2. Respondents have overcome Dr. Shea's opinion of permanent impairment by clear and convincing evidence, thus Claimant is not entitled to a permanent impairment rating.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 14, 2018

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, Suite 400
Denver, CO 80203

ISSUES

- Whether Claimant overcame the opinion of the DOWC independent Medical Examiner (Dwight R. Leggett, II, M.D.) by clear and convincing evidence on the issues of maximum medical improvement, causation and permanent disability

- Was the left total knee replacement reasonable, necessary and related to the work injury of June 2, 2015?

- Whether Respondents are liable for ongoing medical care as a result of the June 2, 2105 injury.

- Is Claimant entitled to disfigurement benefits as a result of the June 2, 2016 work injury?

FINDINGS OF FACT

1. Claimant has worked for Employer for seventeen years. At the time of her injury, Claimant was a Customer Service Representative at the CSR Center. She assisted passengers who had problems with tickets, needed their flights re-scheduled and the like.

2. Claimant's medical history was significant in that she was previously diagnosed with osteoarthritis in both knees and received treatment for that condition. Medical records admitted at hearing documented treatment she received for both knees. In particular, Dr. Leggett's DIME report referenced the fact Claimant underwent a left knee arthroscopy in 2007 and was treated by Timothy Collander, M.D in 2009.[1]

3. On December 21, 2009, Claimant sustained an industrial injury to her right knee, which resulted in surgery. A report from J. Raschbacher, M.D., dated September 27, 2010 related to this injury was admitted into evidence. A history of left knee injury was noted and Claimant was continuing to experience pain in the right knee. Dr. Raschbacher determined Claimant reached MMI for this injury and concluded Claimant sustained a 26% lower extremity medical impairment, which converted to a 10% whole person impairment.

4. Claimant was evaluated on September 21, 2012 by Stephanie Evans, P.A. (supervised by Dr. Collander), whose diagnosis was osteoarthritis of the knee (bilateral). The symptoms were noted to have begun more than five years ago and the record documented a recommendation that both knees be replaced. At the evaluation, pain

[1] Exhibit 9, p. 341; Exhibit B, p. 36.

was noted on palpation of the medial and lateral joint line of both knees, as well as the medial and lateral patella. The assessment was acquired hypothyroidism; insomnia; and osteoarthritis of the knee. Celebrex was prescribed and given instructions for RICE therapy.

5. Claimant returned for a follow-up evaluation with PA Evans on December 13, 2013, with essentially the same symptoms. The assessment was osteoarthritis of the knees and it was noted she would need a knee replacement. In a follow-up examination on December 19, 2014, PA Evans reported Claimant had bilateral knee pain. The treatment note indicated Claimant needed bilateral knee replacement surgery, but did not have enough time off and would have to wait another year. [2] The ALJ inferred Claimant's osteoarthritis had reached the point that surgery was recommended.

6. On May 15, 2015, at the time of a comprehensive examination, Claimant's knee symptoms were described as stable, but progressive and worsening.

7. Claimant testified she did not have trouble with her knees after 2007. She had occasional tightness. Claimant testified she was able to work full-time and her activities were not restricted. Her job required her to stand.

8. On June 2, 2015, Claimant sustained an admitted industrial injury when she fell forward and landed on both knees. Claimant testified she landed on the marble floor and she was sent to Concentra.

9. Claimant was evaluated by Stephanie Missey, PA-C at Concentra, who noted tenderness in both knees. PA-C Missey's assessment was: fall and knee contusion. Tylenol was prescribed and x-rays were ordered. The x-rays taken on June 2, 2015 showed degenerative changes of the femorotibial joint space, with diffuse joint space narrowing and osteophyte formation in the right knee. No joint effusion was seen. On the left knee, no fracture or malalignment was seen. Degenerative changes of the femorotibial joint space and diffuse osteophyte formation, along with joint space narrowing were found. Radiologist Maximina Boutselis, M.D. read the films. The M-164 was signed by Candice Sobanski, M.D.

10. Claimant returned for a follow-up evaluation on June 8, 2015. She was evaluated by Rosalie Einspahr, NP, who noted her condition had not changed from last week. She had complaints of knee pain and lower leg pain. The assessment was identical to the June 2, 2015 appointment and physical therapy ("PT") was begun.

11. Claimant continued to treat at Concentra, including follow-up appointments with NP Einspahr while she received PT. Claimant continued to report pain in both knees, with the left more painful than the right. On June 22, 2015, Scott Richardson recommended continued PT and returned Claimant to regular work duties.

[2] Exhibit G, p. 56.

12. On August 3, 2015, Claimant was evaluated by Jeffrey Arthur, M.D., at which time she had ongoing bilateral knee pain. Dr. Arthur noted no erythema, no ecchymosis, but found tenderness to palpation over the patellofemoral joints bilaterally, positive medial joint line tenderness in both knees, crepitus in the left knee, as well as reduced range of motion. Dr. Arthur noted Claimant had been very active before her injury and was able to work without limitations. The ALJ noted Dr. Arthur did not include a causation analysis in this record. Dr. Arthur administered bilateral steroid injections and referred Claimant for bilateral knee MRIs. Dr. Arthur completed an M-164 detailing his findings and recommendations.

13. On August 22, 2015, Claimant underwent an MRI of the left knee. Films were read by Bao Nguyen, M.D. whose impression was large degenerative tear of the lateral meniscus associated with advance lateral femorotibial arthrosis; lateral patellofemoral and early medial compartment degenerative changes; additional thin oblique horizontal tear of the horn medial meniscus; mild chronic sprains of the cruciate and collateral ligaments; and no bone trauma, bone tumor or AVN.

14. In the MRI done on the right knee that same day, Dr. Nguyen's impression was: no bone trauma or bone tumor, but degenerative changes across the medial compartment of patellofemoral joint associated with tiny intra-articular loose bodies; complex degenerative, but mostly horizontal tear of the body of the medial meniscus; mild MCL sprain and accompanying mild posteromedial corner sprain/strains; complex tear of the lateral meniscus; intact cruciate and collateral ligaments; mild prepatellar subcutaneous edema, but no extensor mechanism tear or evidence of transient patellar dislocation.

15. Claimant returned to Dr. Arthur on October 8, 2015. At the time of the evaluation, Dr. Arthur noted Claimant was a candidate for a knee arthroscopy based upon the MRI findings. The arthroscopy was recommended for therapeutic purposes. Dr. Arthur noted both knees were candidates for surgical intervention, since Claimant had failed to an extensive course of conservative treatment, including anti-inflammatory medicine, injections, therapy, and activity modification.

16. On November 11, 2015, Claimant was evaluated by John Burris, M.D. He noted that the Claimant had attended 38 sessions of physical therapy. Dr. Burris stated the x-rays taken subsequent to falling on June 2, 2015 were negative with no acute abnormalities. The MRIs of both knees on showed significant degenerative changes with no obvious acute abnormalities. Dr. Burris diagnosed bilateral knee contusion and noted that a discussion of total joint replacement occurred three weeks before the injury, when Claimant reached end stage degenerative joint disease. Dr. Burris concluded that the Claimant was already at end stage degenerative joint disease when she was injured June 2, 2015. He found reasonable and appropriate conservative care was provided, as determined by the Division of Workers' Compensation Treatment Guidelines.

17. Dr. Burris placed the Claimant at MMI and concluded she sustained a 0% medical impairment as a result of the work injury. He issued no work restrictions and recommended no maintenance or follow-up treatment.

18. Claimant testified she continued to experience pain after MMI.

19. On May 10, 2016, Dr. Leggett performed a DOWC Independent Medical Examination ("DIME"). Claimant reported she had 0% improvement since the fall, with severe pain in the left greater than right knee. She reported swelling in the left knee greater than the right knee. On examination, considerable edema was noted in the left knee, primarily over the lateral aspect. 2+ pitting edema which was found from the mid tibia downward. Exquisite tenderness was found along the lateral joint line, as well as over the lateral greater than medial infrapatellar bursa. Crepitus was noted with active and passive range of motion.

20. Examination of the right knee revealed lateral greater than medial edema, but not as severe as the left. High levels of tenderness were also found over the lateral greater then medial joint line and collateral ligaments. This involved the infrapatellar bursa as well. Mild to moderate medial patellar drift was identified with observation of active flexion and extension of the knee. Crepitus and occasional popping was noted with active and passive range of motion.

21. Dr. Leggett noted that Claimant's medical records documented clear pre-existing pathology as well as symptoms immediately before the fall. The ALJ noted this was part of Dr. Leggett's causation analysis. Dr. Leggett cited the DOWC Medical Treatment Guidelines-Lower Extremity ("MTG-Lower Extremity") concerning the occupational relationship with aggravated osteoarthritis:

> "2. KNEE
>
> a. Aggravated Osteoarthritis (OA):
> …
>
> ii. Occupational Relationship: The provider must establish the occupational relationship by establishing a change in the patient's baseline condition and a relationship to work activities including but not limited to physical activities such as repetitive kneeling or crawling, squatting and climbing, or heavy lifting. There is also good evidence that intensive physical work more than doubles the risk of symptomatic knee OA with knee replacement, and that there is a dose-response relationship between work load and the development of knee OA with knee replacement. Intensive physical labor is defined as job categories such as forestry employee, dockworker, farm worker, or ditch digger.
> …
>
> iii. Non-occupational Risk Factors: Body mass index (BMI) of 25 or greater is a significant risk factor for eventual knee replacement. There is good evidence that

obesity increases the risk of symptomatic knee OA resulting in knee replacement six fold in men and eleven fold in women. There is strong evidence of increased BMI as a significant risk factor for the occurrence of onset of knee OA. Numerous studies document an increased odds ratio for developing knee osteoarthritis for BMIs greater than 30. Progression of symptomatic knee osteoarthritis is variable. In one study over a two year span, 70% of patients showed no significant joint space narrowing, 20% showed slow progression and only 9% had more significant changes. There is strong evidence for hand OA as a significant marker of risk for knee OA. Other causative factors to consider - Previous meniscus or ACL damage may predispose a joint to degenerative changes. There is strong evidence that an ACL injury increased the ten-year risk of developing Kellgren-Lawrence defined osteoarthritic changes compared to the uninjured knee. This risk is approximately fourfold both for minimal OA and for moderate to severe OA. There is good evidence that meniscal damage, even in the absence of knee surgery, is associated with a significantly increased risk of development of radiographic tibiofemoral OA within 30 months of its detection on MRI. There is strong evidence for previous knee injury as a significant risk factor for OA. A number of studies indicate that patients with ACL injuries and meniscus pathology are likely to develop degenerative osteoarthritis. Percentages range from approximately 25% to 50%. It is unclear whether the repair of ACLs significantly decreases the degenerative pathology. One study found more severe arthritis present in those with an ACL repair. In order to entertain previous trauma as a cause, the patient should have medical documentation of the following: menisectomy; hemarthrosis at the time of the original injury; or evidence of MRI or arthroscopic meniscus or ACL damage. The prior injury should have been at least 2 years from the presentation for the new complaints. In addition, there should be a significant increase of pathology on the affected side in comparison to the original imaging or operative reports and/or the opposite un-injured side or extremity." MTG Lower Extremity, pp. 67-68.

22. Dr. Leggett opined Claimant's ongoing pain and functional limitation was due to pre-existing bilateral knee osteoarthritis and degeneration. This conclusion was persuasive to the ALJ. Dr. Leggett stated no impairment or maintenance was indicated due to the June 2, 2015 fall. He assigned a 0% medical impairment rating. Dr. Leggett stated that additional conservative treatment would not give much benefit and concurred with Dr. Arthur and Dr. Colander that surgery was necessary.

23. On June 10, 2016, a Final Admission of Liability ("FAL") was filed on behalf of Respondents based upon Dr. Leggett's DIME. Respondents admitted for 0% impairment and no post-MMI medical benefits.

24. Claimant returned to Dr. Arthur on June 16, 2016. Dr. Arthur noted Claimant had meniscus tears and arthritis in both knees. Her knees were becoming more symptomatic and she wished to have the problems addressed and not worry about who would be covering it. On examination, increased valgus deformity, right greater than left was noted. Crepitus was found at the patellofemoral joint bilaterally,

with medial and lateral joint line tenderness was noted. Dr. Arthur performed a repeat cortisone injection in both knees. Claimant was to return once surgery was authorized.

25. On July 26, 2016, Claimant underwent a left total knee arthroplasty, which was performed by Dr. Arthur. The pre-and post-operative diagnosis was the same: severe left degenerative joint disease. Claimant was noted to have failed conservative treatment, including weight loss, physical therapy, anti-inflammatories, aquatic medicine, activity modification, cane, injections etc. There were no complications noted from the surgery.

26. On August 4, 2016, Claimant was seen post-surgery by Dr. Arthur. Dr. Arthur noted it could take from 4-6 weeks for the surgical pain to resolve.

27. On October 6, 2016, Claimant was evaluated by Jon Erickson, M.D., at the request of Respondents. Dr. Erickson opined Claimant's current significant bilaterally symptoms were due directly and solely to her pre-existing advanced osteoarthritis. This opinion was within a reasonable degree of medical probability. After reviewing the MRIs, Dr. Erickson noted there was no evidence of a significant worsening or aggravation of the osteoarthritis. The only site of acute trauma was bilateral subcutaneous edema in the area of both patellae, which one would expect from a blow to the front of the knees.

28. Dr. Erickson concluded subcutaneous edemas were not a basis for surgery. Dr. Erickson noted there was a reference to bilateral knee osteoarthritis, severe enough to justify a knee replacement made on May 17, 2015, which was evidence that Claimant was symptomatic immediately prior to the subject injury. Dr. Erickson concurred with the MMI determinations of Dr. Burris and Dr. Leggett.

29. Dr. Erickson testified at hearing as an expert in Orthopedic Surgery, the specialty in which he was board-certified. He is Level II accredited pursuant to the WCRP. Dr. Erickson review Claimant's treatment records from the June 2, 2015 injury, as well as the records which predated it. Dr. Erickson testified he disagreed with the request for an arthroscopy made during the claim, as he believed Claimant had a preexisting condition and not related to the work injury.[3] He diagnosed prepatellar subcutaneous edema in both knees.[4] Dr. Erickson opined Claimant had a temporary exacerbation of her pre-existing knee issues, but not a permanent aggravation. This was supported by the MRIs, which showed degenerative, not acute findings.[5] Dr. Erickson testified that he believed Dr. Burris and Dr. Leggett were correct in placing Claimant at MMI with no maintenance treatment recommended for the work injury.[6] Dr.

[3] Hearing Transcript ("Hrg. Tr.") p. 43: 1-18.

[4] Hrg. Tr. p. 51: 8-13.

[5] Hrg. Tr. p. 53: 4-14; 54:5-6.

[6] Hrg. Tr. 57:1-12.

Erickson testified a significant injury to a joint can cause an acceleration of a patient's preexisting arthritis. In this case Claimant's arthritis had progressed to the point that a joint replacement was required.[7] Dr. Erickson's testimony was persuasive to the ALJ.

30. Claimant testified that she now has difficulty with stairs and walking for long periods of time. She has trouble sleeping due to pain.

31. Before the June 2, 2015 injury, Claimant suffered from osteoarthritis in both her left and right knee. Total knee arthroplasties were recommended before the subject injury.

32. Claimant's need for the left total knee arthroplasty was a result of the osteoarthritis and not the June 2, 2015 industrial injury.

33. Claimant did not offer medical evidence which contradicted Dr. Leggett's conclusions, nor did it lead the ALJ to conclude these were erroneous.

34. Claimant failed to overcome Dr. Leggett's opinions concerning MMI and impairment by clear and convincing evidence.

35. Claimant failed to satisfy her burden of proof to show an entitlement to post-MMI medical benefits.

36. Claimant had a scar on her left knee that was open to public view.

37. Claimant's scar resulted from the total knee arthroplasty, which was not causally related to the industrial injury. Claimant was not entitled to disfigurement benefits.

38. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of

[7] Hrg. Tr. p. 59:10-14.

the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In the case at bench, the ALJ focused on the respective medical opinions on the issue of whether Dr. Leggett's opinions were overcome by clear and convincing evidence.

Legal Standard for Overcoming the DIME

In resolving the issues, the ALJ notes the question of whether Respondents overcame Dr. Leggett's opinion is governed by §§ 8-42-107(8)(b)(III) and (c), C.R.S. (2016); *Peregoy v. Indus. Claim Apps. Office*, 87 P.3d 261, 263 (Colo. App. 2004). These sections provide that the finding of a DIME physician selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence". § 8-42-107(8)(b)(III), C.R.S.; *Leprino Foods Co. v. Indus. Claim Appeals Office*, 134 P.3d 475, 482-83 (Colo. App. 2005); *accord Martinez v. Indus. Claim Appeals Office*, 176 P.3d 826, 827 (Colo. App. 2007). Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995). The mere difference of medical opinions does not constitute clear and convincing evidence to overcome the opinion of the DIME physician*. Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO Nov. 17, 2000).

The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Indus. Claim Apps. Office*, 961 P.2d 590 (Colo. App. 1998). Since the DIME physician is required to identify and evaluate all losses and restrictions that result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Id*. The elevated burden is evidence of the Colorado Legislature's intent to limit overcoming the DIME physician's opinion to those cases where it is more probable than not that the opinion was incorrect

As a starting point, Claimant suffered from pre-existing osteoarthritis in both knees. (Findings of Fact 2-6). This degenerative condition had advanced to the point

that total knee arthroplasties were recommended for both knees. (Findings of Fact 4-5). This occurred before the work injury on June 2, 2015.

Once Claimant suffered her industrial injury, she required treatment for symptoms in both knees. However, Claimant was placed at MMI by first, her ATP and then by the DIME physician, Dr. Leggett. In this regard, Dr. Leggett concluded Claimant's osteoarthritis was the cause for her symptoms, as well as her need for surgery. He determined this was not related to June, 2015 fall. As the Court of Appeal noted in *Leprino Foods Co. v. Indus. Claim Appeals Office*, *supra,* 134 P.3d at 482, absent evidence that the conclusion regarding causation was erroneous, Dr. Leggett's conclusions were binding.

Based upon the totality of the evidence, the ALJ concluded that Dr. Leggett's opinions were not overcome with regard to MMI and Claimant's impairment rating. The ALJ's rationale was two-fold; first, Dr. Leggett articulated the basis for his conclusion that Claimant reached MMI on November 11, 2015, along with the determination that pre-existing bilateral osteoarthritis was the cause of Claimant's pain and functional limitations. As determined in Findings of Fact 22-23, Dr. Leggett concluded Claimant sustained no medical impairment as a result of the June 2, 2015 injury based upon his review of Claimant's history, including treatment before the subject injury. The ALJ found Dr. Leggett applied the MTG-Lower extremity when analyzing Claimant's osteoarthritis condition. (Finding of Fact 22).

Dr. Leggett's conclusions were buttressed by the opinions offered by Dr. Burris, who was an ATP, who agreed that Claimant's preexisting condition was the cause of her ongoing complaints. (Finding of Fact 15). Dr. Erickson's opinions were also in accord. (Findings of Fact 25-27). The ALJ credited the opinions of Dr. Leggett, Dr. Burris and Dr. Erickson.

Second, Claimant did not introduce sufficient evidence to overcome Dr. Leggett's opinion regarding causation. Dr. Leggett analyzed the basis for Claimant's bilateral knee symptoms and concluded the symptoms were related to the underlying osteoarthritis condition. (Finding of Fact 22). Claimant did not adduce evidence which rebutted Dr. Leggett's conclusions.

The ALJ considered Claimant's argument that her symptoms were significantly aggravated by the work injury. Claimant also averred the records of Dr. Arthur supported the conclusion that the left knee arthroplasty was required by the June 2, 2015 injury. As determined in Findings of Fact 33-34, Claimant did not adduce sufficient evidence to meet the clear and convincing evidence standard.

Medical Benefits-Reasonable, Necessary and Related

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. (2016) The question of whether Claimant proved treatment is reasonable and

necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Claimant put forward the argument that the surgery performed on the left knee was reasonable and necessary, relying upon the opinions of Dr. Arthur. Claimant also argued the fact that before her fall she was able to work with no restrictions supported this conclusion.

The ALJ determined that the question of relatedness was required to be answered first and the conclusions of the DIME physician were dispositive on this issue. As found, Dr. Leggett concluded the proposed surgery was not related to the industrial injury, but rather required because of Claimant's osteoarthritis. (Finding of Fact 21). This determination on relatedness controls the ALJ's decision on whether Respondents are liable to provide medical benefits, in this case, the left total knee arthroplasty.

Grover Medical Benefits

As found, Claimant did not overcome Dr. Leggett's conclusion that she was at MMI. However, the ALJ considered whether she was entitled to post-MMI medical benefits. The claim for medical treatment beyond the point of maximum medical improvement is governed by *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). In *Grover v. Industrial Commission*, the Colorado Supreme Court authorized maintenance care to maintain MMI or to prevent further deterioration of a Claimant's condition. *Milco Construction v. Cowan,* 860 P.2d 539, 541 (Colo. App. 1992). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended, nor a finding that Claimant is actually receiving medical treatment*. Holly Nursing Care Center v ICAO*, 992 P.2d 701 (Colo. App. 1999). Claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915 (Colo. App. 1993).

Claimant failed to show she was entitled to post-MMI medical benefits for condition related to the subject injury. There was no evidence in the record that any of the Claimant's ATPs recommended maintenance treatment. (Finding of Fact 16). This determination was also supported by the conclusions of Dr. Erickson. (Finding of Fact 27-29) .

Further, Dr. Leggett concluded Claimant's need for further treatment was not related to her injury. The opinions regarding further treatment offered by Dr. Leggett (as the DIME physician) were not entitled to any special deference. However, his conclusion was consistent with those offered by Dr. Burris. In light of these conclusions that Claimant's need for treatment was not related to the industrial injury, the ALJ determined Claimant did not prove her need for medical treatment. (Finding of Fact 35). Accordingly, The ALJ determined Claimant failed to meet her burden of proof on this issue and was not entitled to *Grover* medical benefits.

Disfigurement

Claimant's request for disfigurement benefits is governed by 8-42-108, C.R.S. (2016), which provides in pertinent part:

> "If an employee is seriously, permanently disfigured about the head, face, or parts of the body normally exposed public view, in addition to all other compensation benefits provided in this article and except as provided in subsection (2) of this section, the director may allow compensation not to exceed four thousand dollars to the employee who suffers such disfigurement".

Claimant's entitlement to disfigurement benefits must be related to a compensable component of the industrial injury. The ALJ found that Claimant's bilateral knee condition was preexisting and the left knee arthroplasty was necessitated by the preexisting condition. Thus, the scar resulting from the surgery was not related to the work injury and Claimant is not entitled to recover disfigurement benefits.

ORDER

It is therefore ordered:

1. Claimant failed to overcome the opinions of Dr. Leggett by clear and convincing evidence. Claimant remains at maximum medical improvement, without impairment, as of November 11, 2015.

2. Respondents are not liable for the left total knee replacement, as the need for the treatment was unrelated to and pre-existed the June 2, 2015 injury.

3. Claimant's request for post-MMI medical benefits is denied and dismissed.

4. Claimant's request for disfigurement benefits is denied and dismissed.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

I. Whether Claimant established by a preponderance of the evidence she suffered a compensable industrial injury on February 13, 2017.

II. Whether Claimant established by a preponderance of the evidence she is entitled to reasonable and necessary medical treatment related to the February 13, 2017 injury, including medical care received thus far at HealthONE and Blue Sky Neurology.

III. Determination of Claimant's average weekly wage ("AWW").

FINDINGS OF FACT

In lieu of live testimony, the parties stipulated to the following findings of fact:

1. Claimant is employed with Employer as a teacher. On February 13, 2017, Claimant sustained a work injury while working with a student. The student struck Claimant on the head with a laptop computer.

2. Claimant required medical treatment. Since the date of injury, Respondent has paid for all related medical treatment. Respondent has not denied any medical treatment.

3. While Claimant lost time from work due to the work injury, she has not missed more than three days or shifts as a result of the injury.

4. On July 3, 2017, Claimant filed a Workers' Claim for Compensation.

5. On July 27, 2017, Respondent filed a Notice of Contest denying liability because Claimant had not missed over three work days.

6. Claimant requests an order establishing she sustained a compensable injury and that Respondent is liable for reasonable and necessary medical treatment.

The ALJ makes the additional findings of fact, based on exhibits admitted at hearing:

7. Claimant treated with Matthew Lugliani, M.D. at HealthOne. Dr. Lugliani diagnosed Claimant with mild postconcussive syndrome, cephalgia and cervicalgia. Dr. Lugliani recommended Claimant attend a neurology consultation, which occurred on on April 13, 2017 with Lisa Roeske-Anderson, M.D. at Blue Sky Neurology.

8. Dr. Lugliani noted Claimant's objective findings were consistent with a work-related mechanism of injury. Claimant continued to treat with Dr. Lugliani, who continued to opine Claimant's condition was work-related.

9. Payroll records reveal Claimant worked an average of five days per week between January 20, 2017 and March 1, 2017. Claimant was paid at two different hourly rates, $25.49 and $11.25. For each day worked from February 1, 2017 and February 28, 2017, Claimant was paid a total of $146.96 per day (4 hours at $25.49 plus 4 hours at $11.25). Multiplying the daily amount ($146.96) by the average number of days worked per week (5) results in an average weekly wage of $734.80. The ALJ finds that $734.80 represents a fair and accurate approximation of Claimant's average weekly earnings at the time of injury.

10. Claimant has established by a preponderance of the evidence that she sustained a compensable industrial injury arising out of and in the course of her employment with Employer on February 13, 2017.

11. Claimant has established by a preponderance of the evidence she is entitled to reasonable and necessary medical treatment related to the February 13, 2017 injury.

12. Claimant has established by a preponderance of the evidence the medical treatment provided by HealthONE and Blue Sky Neurology as a result of the February 13, 2017 injury was reasonable and necessary to cure and relieve the effects of the injury.

13. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary

to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Compensability

Claimant is required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of employment, and that the alleged injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Respondent argues Claimant's injury is not "compensable" because Claimant was not disabled for more than three working shifts or did not sustain any permanent impairment. Respondent relies, in part, on *Harman-Bergstedt, Inc. v. Loofbourrow,* 320

P.3d 327 (Colo. 2014). In *Loofbourrow*, the Court held that a determination of maximum medical improvement has no statutory significance with regard to injuries that do not result in the loss of no more than three days or shifts of work time or permanent disability. *Loofbourrow* addresses a narrow issue, specifically, whether the claimant could be entitled to temporary total disability benefits without having challenged the authorized treating physician's MMI determination through a Division Independent Medical Examination.

Section 8-41-301(1), C.R.S. states, in relevant part, that the right to the compensation "shall obtain in all cases" where the following conditions occur:

> (b) Where, at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment;
> (c) Where the injury or death is proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment and is not intentionally self-inflicted.

The Industrial Claim Appeals Office ("ICAO") has acknowledged that defining a compensable injury solely as one where there has been sufficient lost time or permanent impairment mischaracterizes the intentions of the Act. In *Fincham v. Home Depot*, W.C. No. 5-020-103-01 (November 9, 2017), the ALJ determined the respondents were liable for the claimant's right shoulder injury. On appeal, the respondents argued the ALJ erred in "implicitly" concluding the claimant proved a compensable injury, contending the claimant's injury did not result in a sufficient disability. In a footnote, ICAO stated,

> The Respondents attribute consequences to the word 'compensable' which are not intended by the Workers' Compensation Act (Act) or by various judicial uses of the term. As the Loofbourrow opinion explains, the Court in that decision is using the word to refer a claim for which indemnity benefits are payable. However, in different contexts the Act applies the word 'compensable' to simply mean an injury that arises out of the and in the course of the employment, even if the injury requires no more than the payment of medical benefits. See § 8-42-101(6)(a) and (b) or § 8-43-404(9), C.R.S.

Here, while it is undisputed Claimant has not missed more than three days of work or suffered permanent impairment, "compensability" denotes whether the injury arose out of and in the course of employment. The industrial injury occurred at work while Claimant was performing work-related functions. Dr. Lugliani opined Claimant's condition is work-related. Based on the totality of the evidence, Claimant has established that it is more likely than not the February 13, 2017 injury arose out of and in the course of employment, and was proximately caused by the performance of services for Employer. Accordingly, Claimant has proven by a preponderance of the evidence she sustained a compensable injury on February 13, 2017.

Medical Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

As Claimant has established she sustained a compensable industrial injury, Claimant is entitled to reasonable and necessary medical treatment related to the February 13, 2017 injury. The medical treatment Claimant has received at HealthOne and Blue Sky Neurology for the work injury has been reasonable and necessary to cure and relieve Claimant of the effects of the injury.

Average Weekly Wage

Section 8-42-102(2), C.R.S., requires the ALJ to calculate the claimant's AWW based on the earnings at the time of injury as measured by the claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating the AWW. However, if for any reason the ALJ determines the default method will not fairly calculate the AWW § 8-42-102(3), C.R.S., affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. Section 8-42-102(3) establishes the so-called "discretionary exception." *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

As found, Claimant's average weekly wage based on the earnings at the time of injury is $734.80.

ORDER

It is therefore ordered that:

I. Claimant has established by a preponderance of the evidence that she suffered a compensable injury arising out of and in the course of her employment on February 13, 2017.

II. Respondents shall pay for reasonable and necessary medical treatment related to the February 13, 2017 industrial injury, including the medical treatment provided by HealthOne and Blue Sky Neurology.

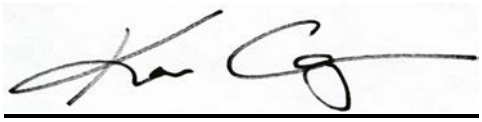
III. Claimant's average weekly wage is $734.80.

IV. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

V. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 15, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable right shoulder injury on June 23, 2017.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to reasonable and necessary medical benefits, including reimbursement for the cost of surgical treatment to her right shoulder.

STIPULATIONS

1. The parties stipulated that Claimant's average weekly wage is $892.97.

FINDINGS OF FACT

1. Claimant was employed by Employer as a bus driver.

2. On March 3, 2017 Claimant slipped and fell on ice in her own driveway at home and sustained a non-work related injury to her right shoulder.

3. Due to the March 3, 2017 injury, Claimant underwent surgery on April 4, 2017 to repair a full thickness tear of the supraspinatus tendon in her right shoulder that was performed by Thomas Hackett, M.D. The surgery included arthroscopic limited debridement, arthroscopic rotator cuff repair of the supraspinatus tendon, acromial decompression with partial chondroplasty, and sub pectoral open biceps tenodesis of the long head of the biceps tendon. *See* Exhibits 8, I.

4. The following physical therapy notes document Claimant's progress after surgery. On April 27, 2017 Claimant was working on rotation more aggressively and was weaning from her sling while at home. On April 28, 2017 Claimant was doing well and pushing rotation motion better. On May 3, 2017 the plan was to add foam roll in gentle pectoral stretch position and the physical therapist encouraged more overpressure into flexion and abduction as they were limited greater than external rotation over the past 2-3 visits. On May 5, 2017 Claimant had increased pain at end ranges but was pushing the stretching. On May 8, 2017 Claimant had a long weekend with family to clear out her home and do yard work to help prep for the sale of her home. Claimant's tolerance assessment showed increased passive range of motion to 130 flexion, 95 abduction, and 45 external rotation but showed continued stiffness throughout all directions of shoulder motion. Claimant was to begin more aggressive overpressure stretching. On May 12, 2017 it was noted that Claimant had moderate restrictions into range of motion of flexion, external rotation, abduction, and internal rotation. *See* Exhibit J.

5. On May 19, 2017 Claimant underwent physical therapy. Claimant reported having a lot of fluid in her arm after the last session that subsided with massage. The physical therapist noted moderate shoulder hiking that was visible with slow improvement in passive range of motion and moderate levels of pain at end ranges. The plan was for Claimant to continue to focus on regaining full passive range of motion. On May 22, 2017 the physical therapist noted that Claimant remained fairly stiff in the shoulder. On May 24, 2017 the assessment was that Claimant continued to demonstrate decreased mobility at GH and ST joints. *See* Exhibits 9, J.

6. On May 24, 2017 Claimant was evaluated by Dr. Hackett. Claimant reported that she was doing well, continuing to progress with regard to her symptoms, but that she did not feel she had adequate strength yet to return to work. Dr. Hackett agreed Claimant was not ready to return to work without restrictions. *See* Exhibits 8, I.

7. On May 26, 2017 Claimant reported at physical therapy that she had difficulty getting her arm down with foam roller stretching and that her tightness was worse. On May 30, 2017 Claimant reported she was still having difficulty with external and internal rotation and Claimant had continued demonstrated limitations in range of motion. Claimant reported on June 2, 2017 that she had more difficulty in her posterior shoulder and shoulder blade region due to muscle spasms and that she had been using the arm a lot. The therapist noted that Claimant remained limited in her full passive range of motion and had increased tone throughout the parascapular region probably due to increased work load performed last week in cleaning house activities. *See* Exhibits 9, J.

8. Claimant continued to treat at physical therapy throughout June of 2017. On June 5, 2017 Claimant reported that she had increased lifting with her right arm and that she tolerated lawn work and sweeping/raking but had increased soreness. On June 7, 2017 Claimant reported increased soreness in her biceps region following a lifting motion with her right upper extremity and that she had wrapped and iced her right arm “a bunch” following. Her passive mobility was noted to be improved with moderate overpressure achieving 155 flexion, 160 abduction. It was noted at this visit that Claimant had continued difficulty with shoulder hiking during active range of motion due to scapular emchancis and weakness in the rotator cuff that remained. On June 12, 2017 it was noted that Claimant had continued tightness and stiffness throughout the shoulder joint limiting return to full and normal ranges. On June 15, 2017 Claimant reported that she was very stiff and the therapist found she continued to demonstrate compensation at scapulothoracic joint during active motion. On June 20, 2017 Claimant reported frustration with the continued stiffness/soreness due to lack of motion and that she wanted to return to work. *See* Exhibits 9, J.

9. On June 21, 2017 Claimant was evaluated by Dr. Hackett. He noted she was ten weeks post-op for her right shoulder surgery. Claimant reported she was continuing to work with her physical therapist on range of motion, felt like she was still a little tight, but overall felt well with minimal pain. Claimant wanted to discuss returning to work. Dr. Hackett noted that as a bus driver, Claimant needed significant use of both

arms. On examination, Dr. Hackett found that Claimant had approximately 160 degrees of forward flexion, internal rotation to the level of L5, and external rotation to about 30 degrees. Dr. Hackett found 4/5 supraspinatus testing. Dr. Hackett wanted Claimant to continue working on range of motion and strengthening in physical therapy. Dr. Hackett provided work restrictions of allowing Claimant to work part-time and 5 hours every other day for two weeks. He then indicated Claimant could go up to 10 hours every other day for an additional two weeks and opined that by the end of July Claimant should be able to return back to work full time. *See* Exhibits 8, I.

10. Prior to being able to return to work, Employer required Claimant to undergo an evaluation pursuant to the requirements of the Federal Transit Administration to determine whether or not Claimant met all of the Department of Transportation (DOT) physical requirements and to determine whether Claimant had "fitness for duty" following her injury. The fit for duty evaluation was scheduled for June 23, 2017.

11. Claimant underwent both physical therapy and her fitness for duty evaluation on the same date. In the morning of June 23, 2017 she went to physical therapy. At physical therapy she reported continued mobility issues and that she was unable to raise her arm fully overhead. *See* Exhibits 9, J.

12. On June 23, 2017 in the afternoon, Claimant underwent a fit for duty evaluation performed by Deborah Zimmerman, PA-C at CCOM. Claimant reported that she had been doing physical therapy but had not yet started much strengthening overhead. Claimant reported that Dr. Hackett had released her to full duty. On examination, PA Zimmerman found abduction to about 140 degrees, flexion to about 150 degrees, and very limited strength to resistance to both abduction and flexion. PA Zimmerman found that Claimant was able to reach across to her other shoulder but could not reach much past her lumbar spine behind her. PA Zimmerman found that Claimant was capable of lifting floor to waist but not capable of driving a commercial vehicle per federal guidelines and that Claimant would need to continue her strengthening prior to a return to driving commercial vehicles. PA Zimmerman opined that Claimant had very little stamina in the right shoulder and had a five pound restriction above the waist. PA Zimmerman recommended that Claimant return in one month after some increased strengthening and range of motion. *See* Exhibit C.

13. Claimant emailed Employer on June 25, 2017 noting that PA Zimmerman had made the decision not to clear Claimant without having Dr. Hackett's records. Claimant also noted that she had researched her job description and essential functions, DOT and motor carrier Safety regulations and couldn't find any requirement for overhead lifting of any weight. Claimant indicated that she would bug staff to forward Dr. Hackett's records but wasn't sure if it would change Zimmerman's mind. Claimant did not report any injury or new pain in her shoulder due to the June 23 examination in this email. *See* Exhibit D.

14. Claimant underwent physical therapy on June 28, 2017 and reported seeing a CCOM doctor. The physical therapist noted increased bruising throughout the anterior

arm and concern with a possible tear due to the bruising. However, the therapist noted Claimant's verbal reports of discomfort were less and that Claimant's passive range of motion was slightly improved. The therapist instructed Claimant to return to her doctor. *See* Exhibits 9, J.

15. After PA Zimmerman opined that Claimant could not drive a commercial vehicle, Employer scheduled an interactive discussion with Claimant about possible work accommodations.

16. Claimant met with Employer for this discussion on June 30, 2017. Claimant testified that during this meeting she reported to Employer that she had been injured at the June 23, 2017 evaluation with PA Zimmerman.

17. Employer's senior human resources specialist, Monica Zorens and Employer's director of human resources, Dana Lavardiere were present at the June 30, 2017 meeting. Both testified at hearing that Claimant did not report any injury from the June 23, 2017 evaluation during this meeting and that Claimant appeared excited and upbeat at the meeting regarding her progress.

18. On July 5, 2017 Claimant was evaluated by Dr. Hackett. Claimant reported that after her last visit where she was cleared to return to work on a 4 week progression, CCOM denied her request to return to work and did not clear her. Claimant reported that after the appointment at CCOM she noticed bruising and what she thought was some weakness and that her physical therapist recommended she follow up with Dr. Hackett. Claimant did not report that PA Zimmerman had caused an acute injury and did not report that PA Zimmerman had yanked down hard on her arm causing acute pain/weakness. On exam, Dr. Hackett found significant bruising along Claimant's right arm with no swelling or erythema. Dr. Hackett found 130 degrees of forward flexion, 4/5 supraspinatus testing, and 4+/5 external and internal rotation strength testing. Dr. Hackett was concerned with Claimant's increased weakness and planned to obtain imaging to see if there was a re-torn rotator cuff tendon. *See* Exhibit I.

19. On July 6, 2017 Claimant underwent an MRI of her right shoulder interpreted by Charles Ho, M.D. Dr. Ho provided the impression of: postoperative changes compatible with rotator cuff repair, sub acromial decompression, and long biceps tenodesis; moderate to severe supraspinatus tendinosis with high-grade partial thickness tearing and possible areas of full thickness tearing from the greater tuberosity and repair with medial retraction of torn portions of tendon with tear defect over about 1 cm wide area; prominent sub acromial sub deltoid scarring and debris and fluid signal distention which may be postoperative and/or bursitis; and small joint effusion with prominent capsular synovial irregular thickening and increased signal which may be postoperative change and sprain and scarring and synovitis and/or capsulitis. *See* Exhibit K.

20. On July 7, 2017 Dr. Hackett called Claimant to explain that the MRI showed a new tear of the supraspinatus tendon with medial retraction. Dr. Hackett recommended a revision rotator cuff repair surgery. *See* Exhibits 8, I.

21. On July 7, 2017 Claimant emailed Employer. She noted that Dr. Hackett had expressed some concerns about possible shoulder damage done by PA Zimmerman at her June 23, 2017 evaluation and that Dr. Hackett was extremely concerned about obvious acute damage. Claimant also reported that an MRI was completed and showed a fresh rotator cuff tear and that she was going to be scheduled for repair surgery and would keep them posted. *See* Exhibit D.

22. On July 12, 2017 Employer responded to Claimant's email and requested that Claimant completed an "employee's written notice of injury" and "designated medical provider" form. *See* Exhibit D.

23. On July 13, 2017 Claimant responded by email to Employer indicating she was very confused why workers comp paperwork was emailed. Claimant indicated she respectfully declined to sign the forms and noted that it remained to be determined precisely when or how her recent post-surgery rotator cuff tear happened and that the reason could remain idiopathic. *See* Exhibit D.

24. On July 18, 2017 Claimant underwent a right shoulder arthroscopy with extensive debridement and revision rotator cuff repair performed by Dr. Hackett. In the indication for procedure, Dr. Hackett noted that Claimant was doing well postoperatively when she sustained an incident resulting in popping with a pulling type sensation that was followed by weakness not present previously. *See* Exhibits 8, I.

25. On July 28, 2017 Claimant filled out "Employees Written Notice of Injury" indicating that she was injured when at the direction of PA Zimmerman, she raised her right arm both straight out in front of her and straight out to the right side. Claimant wrote that PA Zimmerman applied inappropriate sharp downward force on the right arm in both positions causing pain, tingling, and weakness form the shoulder all the way to the fingertips. *See* Exhibit E.

26. On November 17, 2017 Claimant underwent an independent medical evaluation performed by J. Raschbacher, M.D. Claimant reported that after her initial shoulder injury and surgery she was progressing well in physical therapy and was cleared 11 weeks post-surgery to return to work at 20 hours per week. Claimant reported that prior to her fitness for duty examination she had no symptoms except for some weakness. Claimant reported that on physical examination at her fitness for duty evaluation she was requested to hold her shoulder on the right at 90 degrees forward flexion with the elbow straight and that when she did so, the examiner yanked down on her arm and pushed it down 5 or 6 inches. Claimant reported that the examiner then requested Claimant do 90 degrees of abduction and did not put pressure on the arm, and that Claimant could only do about 45 to 50 degrees. Claimant reported to Dr. Raschbacher that she felt a pop in the shoulder and felt a definite drop of one-quarter to one-half inch and had pain shooting down the right arm to the elbow and pain to the neck as well as an electrical sensation to the outer two fingers. Claimant reported that at her next physical therapy date, she had a red/purple bruise at the right arm to the elbow and that after her fitness for duty

evaluation, she had pain almost back to her pre-surgery levels and could hardly lift her arm again. *See* Exhibit G.

27. Dr. Raschbacher reviewed medical records and performed a physical examination. Dr. Raschbacher opined that it was unlikely that Claimant suffered the injury claimed on June 23, 2017. Dr. Raschbacher opined that Claimant's description was not likely accurate of what occurred during physical examination with PA Zimmerman. Dr. Raschbacher noted that the general practice of examiners would not include yanking on or applying sharp downward force to a post-operative extremity. Additionally, Dr. Raschbacher opined that failure of a rotator cuff repair is not particularly unusual and that failure is an accepted risk of the procedure with no specific trauma or injury necessary to cause a failure of a repair or a re-tear of a partially healed tendon. Dr. Raschbacher also noted the discrepancy where Claimant reported to Dr. Hackett that the new incident resulted in popping and weakness but no significant discomfort and reported to Dr. Raschbacher that she had immediate symptomatology that included pain. Dr. Raschbacher opined that it was medically medically unlikely that resistance testing described by PA Zimmerman would result in a re-tear of the supraspinatus tendon. *See* Exhibit G.

28. On November 27, 2017 Jon Erickson, M.D. performed a medical records review. Dr. Erickson noted the wide variance between PA Zimmerman's account of the June 23 evaluation and Claimant's account of the same evaluation. Dr. Erickson noted that he had done innumerable shoulder girdle strength assessments and that the technique he uses is similar to that described by PA Zimmerman and that the technique described by Claimant would not allow an accurate strength assessment. Dr. Erickson opined that bruising or ecchymosis following a tear or re-tear of the rotator cuff would be decidedly unusual and opined that the bruising suggested that Claimant had sustained a separate injury unrelated to the June 23, 2017 alleged incident. Dr. Erickson noted that orthopedic literature documented many times that failure of rotator cuffs in individuals over the age of 50 was not unusual and was commonly associated with prolonged limitation in range of motion and decreased strength in the rotator cuff which was a theme running consistently throughout the physical therapy notes that followed Claimant's April 4, 2017 surgical repair. Dr. Erickson also noted the surgical record from the re-tear surgery where Dr. Hackett found the cuff tendon to be very degenerative and friable causing substantial difficulties in the re-repair which Dr. Erickson opined was not consistent with an acute re-injury but suggested the tear had been present for a significant period of time. Dr. Erickson opined that Claimant's initial rotator cuff repair unfortunately failed which caused Claimant difficulties in physical therapy including limitations in range of motion and weakness. *See* Exhibit H.

29. PA Zimmerman testified by deposition. PA Zimmerman testified that at the June 23, 2017 evaluation she had Claimant go through range of motion and that she also performed resistance testing. PA Zimmerman testified that the resistance testing involved abduction at 90 degrees and flexion at 90 degrees. PA Zimmerman indicated that she usually uses her index and long finger (two fingers) to apply pressure during resistance testing and that she applies her fingers to the arm and asks patients to resist her in upward

pressure. PA Zimmerman testified that if there is no force whatsoever upward, she might apply a little bit of downward pressure. PA Zimmerman recalled that the examination was uncomfortable for Claimant but did not recall Claimant being in pain. PA Zimmerman testified that Claimant had no strength in her arm and brought it down right away on resistance testing when she was asked to push up. PA Zimmerman testified that she did not grab Claimant's arm, did not apply a huge amount of pressure, and did not apply sharp downward pressure while performing testing. PA Zimmerman did not recall hearing a pop, seeing any shift or drop of Claimant's shoulder, or hearing Claimant report pain shooting up her neck and down into her arms and testified that she would have documented that if it had occurred.

30. PA Zimmerman's testimony is found credible, persuasive, and logically consistent with the normal course of examinations for return to duty evaluations.

31. Claimant testified at hearing. Claimant reported that by June 22, 2017 her shoulder was fine and that she had been released to work. This is inconsistent with the physical therapy records and reports showing Claimant's frustration and continued limitations with her right shoulder in June of 2017.

32. Claimant testified that at the June 23, 2017 evaluation with PA Zimmerman, sharp downward pressure was put on her right arm during strength testing and that she heard a popping noise, felt like her arm dropped, and felt pain shooting up the side of her neck and down her arm. This is inconsistent with her later reports.

33. Claimant testified that immediately following her evaluation with PA Zimmerman, she drove to Breckenridge and to Employer's office and spoke to supervisor Williamson about what had happened. She testified that she told Williamson around 5:10 p.m. that the PA had yanked on her arm and that "you should have seen it." Mr. Williamson testified that he did not see or talk to Claimant on June 23, 2017 after Claimant's evaluation and that he regularly leaves the office by 4:00 or 4:30 p.m. Mr. Williamson testified that he was first aware of an alleged injury from the June 23, 2017 evaluation on July 7, 2017.

34. Claimant also testified that at the meeting with Employer on June 30, 2017 she told them what had happened with PA Zimmerman at the June 23, 2017 evaluation and that she showed them her bruising.

35. Employer's senior human resources specialist, Monica Zorens testified about the June 30, 2017 meeting with Claimant. Ms. Zorens testified that Claimant did not report any incident with PA Zimmerman or the June 23, 2017 CCOM evaluation and that Claimant was excited at the meeting and upbeat. Ms. Zorens testified that Claimant reported that her range of motion had improved and held out her arms to show them the improvement/increase in range of motion. Ms. Zorens noticed a bruise on Claimant's arm and testified that Claimant indicated that the physical therapist had recommended an appointment with the doctor due to concern for internal bleeding. Ms. Zorens testified that the first time she was aware Claimant was reporting that an injury had happened

during the June 23, 2017 evaluation with PA Zimmerman at CCOM was when she received an email from Claimant on July 7, 2017.

36. Employer's director of human resources, Dana Lavardiere, also testified at hearing about the June 30, 2017 meeting with Claimant. Ms. Lavardiere also testified that Claimant was very positive at the meeting about her progress and that Claimant never alleged that the CCOM evaluation had led to any pain or discomfort. Ms. Lavardiere also testified that Claimant held out her arms to demonstrate her range of motion and progress and that Claimant appeared excited.

37. Ms. Zorens, Ms. Lavardiere, and Mr. Williamson are found more credible and persuasive than Claimant. Claimant did not report any alleged injury from her June 23, 2017 evaluation to them either on June 23, 2017 or during the meeting on June 30, 2017.

38. Dr. Raschbacher testified at hearing. He opined that the method of strength testing PA Zimmerman indicated was performed was the typical method for strength testing. Dr. Raschbacher testified that in 30-35 years of performing return to work physicals following rotator cuff surgeries, he has never seen a rotator cuff re-torn from strength testing. Dr. Raschbacher noted that although Claimant reported to him that after her June 23, 2017 evaluation with PA Zimmerman at CCOM her pain was back to higher levels and she couldn't lift her arm, the records showed that her range of motion after the June 23, 2017 evaluation improved actively. Dr. Raschbacher opined that if the June 23, 2017 CCOM evaluation caused a new tear, it was not at all likely that Claimant would have had improved range of motion on June 28, 2017. Dr. Raschbacher agreed with Dr. Erikson's opinion that the re-tear of Claimant's rotator cuff was not acute because of the appearance in the subsequent surgery and opined it was unlikely that a re-tear occurred on June 23, 2017.

39. The opinions of Dr. Raschbacher and Dr. Erikson are found credible and persuasive and consistent with the credible testimony of PA Zimmerman. Although Claimant either re-tore her rotator cuff or had a failed initial surgery, Claimant has failed to establish that an injury occurred on June 23, 2017 during her evaluation with PA Zimmerman.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find

that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of employment. *See* § 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection

is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to establish by a preponderance of the evidence that she sustained a compensable work related injury on June 23, 2017 during her evaluation at CCOM with PA Zimmerman. PA Zimmerman's testimony surrounding the strength testing is found more credible and persuasive than Claimant's testimony. PA Zimmerman's testimony is consistent with the testimony from other providers as to the usual course of strength testing. PA Zimmerman is further found credible that Claimant performed strength testing in both flexion and abduction despite Claimant's reports that she could not even raise her arm to perform abduction testing.

Claimant's testimony that she was doing fine prior to the CCOM evaluation is also discredited by the physical therapy records. As found above, five days after this alleged injury during her evaluation, Claimant had better range of motion. In addition to PA Zimmerman, Claimant's testimony was contradicted by three Employer witnesses. Overall, Claimant is not credible or persuasive as to what occurred during the CCOM evaluation. Claimant did not report that any acute, new, or alleged injury occurred during that testing until much later. Claimant admits that in a July 13, 2017 email she wrote that it remained to be determined precisely when or how her recent post-surgery rotator cuff tear had happened. If Claimant, as she alleges at hearing, knew that sharp downward pressure applied by PA Zimmerman at the evaluation had caused immediate pain and symptoms, it is logically incredible that she would have indicated in the July 13 email that it remained to be determined when or how the re-tear had occurred. Rather, she would have indicated the acute incident that she now alleges. Claimant also was contradicted in cross examination as to the amount of housework and movement she performed with her right arm during her recovery from the initial surgery. Clearly, as shown by MRI, Claimant had a re-tear. However, Claimant has failed to establish more likely than not that this re-tear has any causal connection to the June 23, 2017 evaluation with PA Zimmerman.

Claimant's argument that she sustained a permanent substantial aggravation of her condition during the evaluation is not credible or persuasive. Claimant was not, as she argues, doing very well until the evaluation and had not been cleared for normal full time work. Rather, she had been cleared to work 5 hours per day, every other day and had ongoing limitations and frustrations documented throughout physical therapy. Claimant has failed to establish that the evaluation on June 23, 2017 caused an acute re-tear of her rotator cuff or that she sustained a work related injury. Rather, it is just as likely that she had failed surgery and/or a separate incident causing her re-tear. Claimant is not credible as her testimony has been contradicted by multiple sources and witnesses and thus her testimony cannot be relied upon to any degree of certainty. The weight of the evidence does not support that a work related injury occurred on June 23, 2017.

Medical Benefits

As Claimant has failed to establish that she sustained a compensable work related injury, her request for medical benefits is denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that she sustained a compensable work related injury on June 23, 2017 during her evaluation at CCOM performed by PA Zimmerman.

2. Claimant's request for medical benefits and her claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Respondents are entitled to recover the costs of medical and indemnity benefits paid under the claim following a determination that Claimant induced the award of said benefits through fraud.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. While employed as a hair stylist for Employer, Claimant alleged that she suffered an injury to her neck on February 28, 2015, despite the fact she had significant preexisting problems with her neck. (Resp. Ex. B - Findings of Fact 1).

2. A hearing regarding the compensable nature of this injury took place on September 29, 2015 before ALJ Lamphere. The ALJ issued a Summary Order on November 4, 2015 finding that Claimant had proven that she suffered a compensable aggravation of a pre-existing, yet asymptomatic condition. The November 4, 2015 Summary Order held Respondents liable for all related medical treatment reasonably necessary to cure and relieve Claimant from the effects of this compensable aggravation. A critical determination concerning this finding and Order was that Claimant testified she had been pain free and not sought medical treatment for an extended period of time prior to the work injury. (Resp. Ex. B - Findings of Fact 2).

3. Following Claimant's September 29, 2015 hearing, Respondents located additional records and history referencing the condition of Claimant's cervical spine. Respondents then sought to set aside the November 4, 2015 Summary Order and reopen the claim based on fraud due to Claimant intentionally misleading the Court regarding the condition of her cervical spine at the time of her alleged February 28, 2015 injury. (Resp. Ex. B - Findings of Fact 4).

4. Hearing concerning reopening of the claim was held on January 18, 2017. The evidence presented at hearing persuaded ALJ Lamphere that Claimant suffers from chronic neck pain precipitated by preexisting injuries suffered as a consequence of falls and motor vehicle accidents. Despite Claimant's assertion to the contrary, the persuasive evidence demonstrated that she sought treatment regarding her neck multiple times from 2007 to 2015, including treatment for neck pain in 2013 after a fall and again in February 2015 just two day prior to the alleged work injury. (Resp. Ex. B - Findings of Fact 11).

5. Following that hearing, the ALJ entered an Order on March 3, 2017 finding that Claimant "consciously concealed the true nature of her cervical spine condition at the time of her September 29, 2015 hearing in an effort to mislead the ALJ into finding her asserted neck injury compensable." (Resp. Ex. B - Findings of Fact 19).

6. The ALJ then ordered that Respondents had established by a preponderance of evidence that the prior November 4, 2015 Order should be reopened due to fraud and/or mistake and Respondents had demonstrated by a preponderance of the evidence that Claimant did not sustain a compensable injury on February 28, 2015 as she claimed. (Resp. Ex. B – Order).

7. While the March 3, 2017 Order found that Claimant committed fraud, it did not address repayment of medical or indemnity benefits previously paid by Respondents as a consequence of the November 4, 2015 Summary Order. (Resp. Ex. B).

8. Respondents appealed the March 3, 2017 Order to the Industrial Claim Appeals Office (the "Panel"). The Panel issued an Order of Remand on August 18, 2017. The Panel affirmed the ALJ's determination that claimant engaged in fraud and that Claimant did not suffer a work injury in 2015. Nonetheless, as the order did not address repayment of both medical and indemnity benefits paid, the Panel remanded the case back to the ALJ to hold a hearing to address the issue of repayment of medical and temporary disability benefits and enter the necessary factual findings and order on this issue. (Resp. Ex. C).

9. Gwen Brightwell, claim's adjuster at Sedgwick, testified that Respondents' Exhibit A contained the medical and indemnity payments for Claimant's claim. Ms. Brightwell testified that pages 1 and 2 were the medical benefits paid on the claim after Claimant reported the alleged work injury. Ms. Brightwell testified that this was a true and correct copy of the medical payments made on this claim. (Tr. 11:2 – 13:11).

10. Ms. Brightwell testified that $13,158.37 was paid out in medical expenses under the claim. This included reimbursements paid directly to Claimant for mileage traveled to and from doctor's appointments for treatment. (Tr. 13:25 – 14:9 and Resp. Ex. A p. 1-2). According to Ms. Brightwell, the $13,158.37 included charges for a Respondent sponsored Independent Medical Exam ("RIME") and for a Division Independent Medical Examination ("DIME"). Page 2 of Respondents Exhibit A lists two bills labeled as "Medical Exam – Defense (Medical)" in the amounts of $575.00 and $5,050.00 respectively. Ms. Brightwell testified that this was for a Respondent requested independent medical examination (IME), and that the physician who completed this examination provided no treatment to Claimant. The same page of Exhibit A documents two bills labeled "Medical Exam – Independent/Agree" in the amounts of $675.00 and $117.72 respectively. Ms. Brightwell testified that these bills were for the Division Independent Medical Examination (DIME) sought and paid for by Respondents.

11. Ms. Brightwell testified that page 3 of Exhibit A was a payment log for the indemnity benefits paid to Claimant as part of the claim. According to MS. Brightwell and the documentation contained on page 3 of Exhibit A, Respondents paid Claimant a total of $1,995.33 in temporary disability benefits.

12. Based upon the evidence presented, Insurer has paid a total of $15,153.70 in connection with this claim. (Tr. 15:13 – 21 and Resp. Ex. A). Respondents seek reimbursement for the total amount paid, i.e. $15,153.70 at a minimum rate of $500.00.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to Assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The undersigned finds Ms. Brightwell's testimony regarding the amounts paid under this clam credible and supported by the

payment logs entered into evidence. Nonetheless, the ALJ agrees with Claimant that not all moneys paid in connection with the claim are recoverable as "benefits" induced by Claimant's fraudulent actions.

Respondent's Entitlement to Repayment of Disability and Medical Benefits

D. Pursuant to § 8–43–303(1) C.R.S., upon a prima facie showing that the claimant received an overpayment in benefits, the award shall be reopened solely as to overpayments and repayment shall be ordered. No such reopening shall affect the earlier award as to moneys already paid except in cases of fraud or overpayment. *Id.* In 1997, The General Assembly amended subsections (1) and (2)(a) of § 8-43-303 to permit reopening of an award on grounds of fraud and overpayment, in addition to the already statutory reopening methods of error, mistake, or change in condition. *Haney v. Shaw, Stone, & Webster*, W.C. No. 4-796-763 (ICAO July 28, 2011) at *1; citing *Simpson v. Industrial Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009), *rev'd on other grounds Benchmark/Elite, Inc., v. Simpson*, 232 P.3d 777 (Colo. 2010).

E. The 1997 amendments also provide that no such reopening shall effect the earlier award as to moneys already paid except in cases of fraud or *overpayment*. *Haney*, at *1. The 1997 amendments added § 8-40-201(15.5) defining "overpayment" to mean:

> [M]oney received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles. For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received disability or death benefits under said articles.

F. The case of *Vargo v. Industrial Commission*, 626 P.2d 1164 (Colo. App. 1981) has been interpreted to hold that the remedy for respondents that retroactively withdraw an admission of liability based on fraud is entitlement to repayment from a claimant for "all fraudulently obtained benefits, including medical benefits paid to third parties." *Stroman v. Southway Services, Inc.,* W.C. No. 4-366-989 (ICAO August 31, 1999) at *3.

G. The term "medical benefit" is not found in the definitions contained in the Act at § 8-40-201, C.R.S.; however, the definition of "medical benefit" has been discussed by the courts. It has previously been held that a DIME examination is directed towards resolving disputes and is "not directed towards curing and relieving the effects of the claimant's injury." *Jones v. Circle Two Ranch,* W.C. No. 4-488-429 (ICAO September 11, 2008) at *2; *See Colorado AFL-CIO v. Donlon*, 914 P.2d 396 (Colo. App. 1995)(the DIME process is to reduce litigation on the issues of MMI and medical impairment by deferring the determinations of MMI and medical impairment to a neutral, medical expert). The *Jones* court further explained that the DIME physician generally cannot treat the claimant or make referrals for treatment; therefore, it was clear that the DIME was not designed to provide a "medical benefit" to the claim. *Id.* at *2.

H. As explained in the *Jones* claim cited *supra*, it has previously been held that a DIME is not considered a medical benefit because there was no treatment provided or referred, and the sole purpose of a DIME is to reduce litigation. The ALJ therefore concludes that the two payments made by Respondents for the DIME in the amounts of $675.00 and $117.20 do not constitute a "medical benefit" Claimant obtained fraudulently. Consequently, Respondents are not entitled repayment of the costs associated with for it. The same rationale applies to the expenses incurred by Respondents in requesting that a physician of their choice perform an independent medical examination of Claimant. It logically follows that if a DIME does not constitute a "medical benefit" because no treatment is being provided, then a RIME, which does not provide any service to cure and relieve the claimant of the effects of his/her alleged injury also does not constitute a medical benefit. Indeed, the principal purpose of requesting a RIME is investigative in nature and intended to secure an opinion from a retained expert in an effort to reduce the potential for further litigation rather than the delivery of any treatment. The ALJ therefore concludes that Respondents are not entitled to repayment of the two charges associated with their request for an independent medical examination in the amount of $575.00 and $5,050.00 respectively.

I. Respondents paid a total of $6,417.72 between their IME and the DIME that the undersigned concludes they are not entitled to recoup. Subtracting $6,417.72 from the total medical payments made by Respondents of $13,158.37, leaves $6,740.65 that Respondents are entitled to recover from Claimant, as payments associated with this treatment constitute moneys paid for benefits obtained through Claimant's fraud. Respondents also paid $1,995.33 in indemnity payments that they are entitled to recoup. Combining the total amount of "benefits" Respondents are entitled to recoup yields a total of $8,735.98.

J. The parties have been unable to agree on a schedule for repayment of the above referenced $8,735.98. When the parties are unable to agree upon such a schedule, the ALJ is empowered, pursuant to § 8-43-207(q), C.R.S., to conduct hearings to "[r]equire repayment of overpayments." In *Simpson v. Industrial Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009), rev'd on other grounds, *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010), the Colorado Court of Appeals held that with regard to overpayments, the ALJ has discretion to fashion a remedy. Further, the ALJ has the authority to determine the terms of repayment and the ALJ's schedule for recoupment will not be disturbed absent an abuse of discretion. See *Louisiana Pacific Corp. v. Smith*, 881P.2d 456 (Colo. App. 1994).

K. As found, Respondents' request that the overpayment be repaid at a rate of $500.00 per month. Claimant presented no evidence regarding her ability to repay the benefits fraudulently obtained, other than to request that repayment be "affordable." As pointed out by Respondents, benefits in this case were pay out over a period of 28 months. Based upon the evidence presented, the ALJ concludes that a repayment schedule of $312.00/month will extinguish the overpayment in approximately the same time frame that the fraudulently obtained benefits were paid out. The ALJ concludes that the aforementioned repayment schedule balances the rights of Respondents to

timely recovery of the overpayment while lessening the potential of creating an undue hardship on Claimant.

ORDER

It is therefore ordered that:

1. Claimant shall repay Respondents a total of $8,735.98 at a rate $312.00/month. Claimant's first payment to Respondents is due the 1st of the month after this order becomes final and subsequent payments of $312.00 are due the first of every month thereafter until the overpayment is extinguished. Claimant's counsel shall contact Respondents' counsel to obtain the necessary details regarding where payments are to be sent.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 16, 2018

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

I. Was Employer insured by Pinnacol Assurance for Workers Compensation Insurance on the date of injury?

STIPULATIONS

As noted previously, both parties present stipulated that the date of injury was 9/6/2016, despite a date of injury of 9/21/2016 being referenced in earlier pleadings. Counsel for Claimant and Respondent/Insurer agreed that Employer was not insured by Pinnacol on said date of injury.

Both parties further agreed that the burden of proof in this instance is upon Insurer to show lack of coverage, by a preponderance of the evidence.

RECITATIONS

At the outset of this Hearing, the ALJ informed the parties that Diva Lauren had called the Colorado Springs Office of Administrative Courts shortly before the 9:00 a.m. start time for this hearing, and informed Court personnel that she could not attend today's hearing, but could be reached by telephone at a phone number she left with Court personnel. Neither party present expressed a desire for her participation in this hearing, by phone or otherwise.

Counsel for Respondent/Insurer made an extensive offer of proof of Insurer's repeated efforts to secure the participation and cooperation of Ms. Lauren in the discovery and hearing process, to no avail. Further, Insurer's counsel informed the ALJ that Ms. Lauren has verbally acknowledged to him her receipt of his efforts at communication. Claimant's counsel concurred that his own numerous efforts at communication with Ms. Lauren to investigate this case went unanswered.

The ALJ finds both counsel credible.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. On July 20, 2016, Pinnacol Assurance notified Employer by letter that Employer's Workers Compensation Insurance policy would be cancelled for non-payment of premiums, effective August 10, 2016, unless said premiums were either paid, or alternative arrangements agreed to. (Exhibit A, p. 1)

2. On August 10, 2016, Pinnacol notified Employer by letter that Employer's Workers Compensation Insurance policy had been cancelled, effective 12:01 a.m. on August 10, 2016. In this letter, Pinnacol advised Employer of the possibility of reinstating said policy, but contact must be made immediately by Employer with Pinnacol to discuss terms of reinstatement. (Exhibit A, p. 2).

3. There is no evidence in the record that such policy of Workers Compensation Insurance was ever reinstated by Employer.

4. There is no evidence in the record that Employer, at any point, secured Workers Compensation Insurance under a different carrier.

5. Claimant suffered a work injury on September 6, 2016, while working for Patsy's Candies, Inc.

6. At the time of this work injury, the ALJ finds, by a preponderance of the evidence, that Employer was not insured by Pinnacol Assurance for Workers Compensation coverage.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this case, there are no credibility

determinations of witnesses to be made; however, the ALJ does find both counsel present to have been candid and credible in reciting to the ALJ their efforts to investigate, process, and litigate this case appropriately-specifically to secure the participation of Diva Lauren in the process.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Workers Compensation Insurance on Date of Injury

D. The ALJ concludes, by a preponderance of the evidence, that Employer was not covered by Pinnacol for a Workers Compensation Insurance policy on the date Claimant was injured.

ORDER

It is therefore Ordered that:

1. Employer was not insured by Pinnacol Assurance for Workers Compensation Insurance on the date of injury.

2. Respondent Pinnacol Assurance is dismissed as a party to this action, and has no further obligations to Employer or Claimant in connection therewith.

3. In the event a new Application for Hearing is filed in connection with this matter, Claimant’s Attorney is directed to request that Court personnel administratively assign such future case to ALJ Edie.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 21, 2018

/s/ William G. Edie

Colorado Springs, Colorado 80906

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that the thoracic outlet syndrome release surgery recommended by Dr. Stephen Annest is reasonable medical treatment necessary to cure and relieve claimant from the effects of the admitted May 23, 2014 work injury.

FINDINGS OF FACT

1. Claimant sustained an injury to her right shoulder on May 23, 2014. The injury occurred when claimant was lifting a bag of resident laundry and felt and heard a pop in her right shoulder. Respondents admitted liability for claimant's injury. Claimant subsequently underwent two right shoulder surgeries.

2. Subsequently, Dr. David Lorah placed claimant at maximum medical improvement (MMI) on May 8, 2015 with an impairment rating of 6% to her right upper extremity. On July 21, 2015, respondents filed a final admission of liability (FAL) based upon Dr. Lorah's determined date of MMI, impairment rating, and admitted for ongoing maintenance medical benefits. Claimant objected to the FAL and requested a Division-sponsored independent medical examination (DIME).

3. On November 17, 2015, Dr. William Timothy performed an electromyogram (EMG) test and a nerve conduction (NCS) study of claimant's upper extremities. Dr. Timothy found claimant's EMG results to be normal and showed no evidence of neurogenic injury. Dr. Timothy diagnosed cervical strain with axial back pain, upper extremity paresthesias, and right shoulder pain. In his report, Dr. Timothy questioned nonspecific thoracic outlet symptomology.

4. Dr. Ellen Price performed a DIME of claimant on November 18, 2015. Dr. Price determined that claimant reached MMI on June 9, 2015 and assessed an impairment rating of 24% to claimant's right upper extremity.

5. On November 30, 2015, claimant was seen by Dr. David Lorah. On that date, Dr. Lorah referred claimant to physical therapy for thoracic outlet syndrome (TOS). In his report, Dr. Lorah indicated that he would consider referral for a TOS consultation.

6. Based upon Dr. Price's DIME report respondents filed a FAL On December 4, 2015, admitting to the MMI date of June 9, 2015, and impairment rating of 24% for claimant's right upper extremity. Respondents also admitted for ongoing maintenance medical treatment. Claimant timely objected to the December 4, 2016 FAL and applied for hearing on the issues of conversion and disfigurement.

7. On January 4, 2016, Dr. Richard Sanders examined claimant and diagnosed right neurogenic TOS and right neurogenic pectoralis minor syndrome. In his report, Dr. Sanders recommended claimant complete physical therapy. Dr. Sanders opined that if claimant's symptoms did not improve she could be a candidate for surgery for thoracic outlet syndrome.

8. On January 20, 2016, Dr. Lorah concurred with Dr. Sanders' recommendation for physical therapy and opined that by pursuing physical therapy claimant could possibly avoid surgery for thoracic outlet syndrome.

9. On May 3, 2016, the parties proceeded to hearing before ALJ Mottram on the issues of whether claimant suffered a functional impairment to part of the body that was not contained on the impairment schedule and whether she was entitled to a disfigurement award. On June 7, 2016, Judge Mottram issued Findings of Fact, Conclusions of Law and Order and found that claimant had sustained a functional impairment and was entitled to a whole person impairment rating of 14%.

10. On January 4, 2016, claimant was seen by Dr. Richard Sanders for evaluation of possible TOS. On that date, Dr. Sanders administered a right pectoralis minor block. Dr. Sanders found claimant's response to that block as "fair". Dr. Sanders also administered a right scalene block, which led to a 60% decrease in pain and paresthesia, which Dr. Sanders deemed to be a "good" response to the block. Based upon claimant's responses to these blocks Dr. Sanders diagnosed claimant with right neurogenic TOS and right neurogenic pectoralis minor syndrome.

11. On February 19, 2016, claimant returned to Dr. Lorah. On that date, Dr. Lorah noted that Dr. Sanders no longer performed surgery and referred claimant to Dr. Stephen Annest for consultation.

12. On October 12, 2016, the parties proceeded to hearing before ALJ Sidanycz regarding whether the referral to Dr. Annest was reasonable, necessary and related to claimant's work injury. The ALJ issued Findings of Fact, Conclusions of Law and Order in which the surgical consultation was found to be reasonable, necessary and related to claimant's work injury.

13. Claimant returned to Dr. Lorah on December 9, 2016. Dr. Lorah noted claimant had been evaluated in the emergency room due to a severe flare of pain involving her right shoulder, upper arm, and forearm. Dr. Lorah noted that he believed claimant needed a surgical decompression and that delay of the surgery could lead to permanent damage to neurovascular structures.

14. At the request of respondents, on April 27, 2017, Dr. Kathy McCranie reviewed claimant's medical records. Dr. McCranie opined that claimant continued to remain at MMI and that a diagnosis of TOS would not be work related, given claimant's mechanism of injury. McCranie also noted in her report that the EMG study of claimant's right upper extremity was negative, thus ruling out a diagnosis of neurogenic TOS.

15. On May 11, 2017, the parties proceeded to hearing before ALJ Mottram regarding whether claimant's claim should be reopened due to a worsening condition. On June 8, 2017, ALJ Mottram issued Findings of Fact, Conclusions of Law, and Order in which he found that claimant's condition had worsened and her claim was reopened.

16. Claimant was seen by Dr. Annest on August 4, 2017 and August 24, 2017. Dr. Annest opined that claimant has right side brachial entrapment. He recommended claimant undergo right TOS decompression surgery. Specifically, Dr. Annest recommended pec minor tenotomy, transaxillary resection, dissection of artery, supraclavicular neurolysis peripheral nerve, brachial plexus neurolysis, and amniotic wrap.

17. On August 31, 2017, claimant was seen by Dr. Alexander Feldman for an EMG. Based upon the results of the EMG, Dr. Feldman opined that claimant has right TOS.

18. On November 28, 2017, claimant was sent for an independent medical examination (IME) with Dr. Henry Roth. In connection with the IME, Dr. Roth reviewed claimant's medical records, obtained a medical history from claimant, and performed a physical examination. In his IME report, Dr. Roth opined that the recommended thoracic outlet surgery is not reasonable or necessary medical treatment; is not related to claimant's work injury; and would not likely provide much benefit to claimant. In support of his opinion, Dr. Roth noted that the Colorado Medical Treatment Guidelines (the Guidelines) state that myofascial dysfunction with TOS symptoms does not qualify as an operative condition.

19. On January 2, 2018, Dr. Roth issued an addendum to his IME report in which he reviewed the EMG report prepared by Dr. Feldman. In the addendum, Dr. Roth opined that claimant does not have TOS and questioned whether the EMG result was correct. Dr. Roth recommended that claimant undergo another EMG with a board certified electromyographer with expertise in peripheral neuropathy and TOS electric diagnostics.

20. Dr. Roth testified at hearing and confirmed the opinions in his written reports. In his testimony, Dr. Roth was critical of the results of the EMG performed by Dr. Feldman because the test was only performed on claimant's right side and no left sided comparison was done.

21. On January 3, 2018, Dr. McCranie performed a supplemental medical records review. In her supplemental report Dr. McCranie again opined that claimant's mechanism of injury would not cause the development of TOS and that the very diagnosis of TOS would not be work related. In that same report, Dr. McCranie agreed with Dr. Roth's recommendation that claimant undergo another EMG with a board certified electromyographer.

22. Claimant testified that her current symptoms include headaches, pain her right shoulder, right arm, neck, chest wall, and shoulder blade, as well as swelling in her right arm and hand. Claimant testified that she drops objects and has difficulty writing. Claimant also testified that she wants to undergo the recommended surgery and that she understands the risks involved.

23. The ALJ credits the medical records, claimant's testimony, and the opinions of Drs. Annest, Sanders, Feldman, and Lorah over the contrary opinions of Drs. Roth and McCranie and finds that claimant has shown that it is more likely than not that the TOS surgery recommended by Dr. Annest is reasonable medical treatment necessary to cure and relieve claimant from the effects of the May 23, 2014 work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2013).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. As found, claimant has demonstrated by a preponderance of the evidence that the TOS surgery recommended by Dr. Annest is reasonable medical treatment necessary to cure and relieve claimant from the effects of the May 23, 2014 work injury. As found, the medical records, claimant's testimony, and the opinions of Drs. Annest, Sanders, Feldman, and Lorah are credible and persuasive.

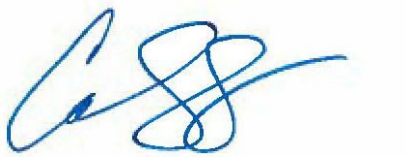
ORDER

It is therefore ordered that:

1. Respondents shall pay for the thoracic outlet syndrome release surgery recommended by Dr. Annest, pursuant to the Colorado Medical Fee Schedule.

2. All matters not determined herein are reserved for future determination.

Dated: February 22, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-022-847-03; WC 4-977-514-01

ISSUES

- Whether Claimant has proved by a preponderance of the evidence that the L4-5 lumbar decompression recommended by Andrew Castro, M.D., Allison Fall, M.D. and John Burris, M.D. is reasonable and necessary to cure and relieve the effects of Claimant's industrial injuries.

- Whether the L4-5 lumbar decompression surgery is reasonable necessary and related to the October 13, 2014, or March 23, 2016, worker's compensation claims.

- Whether Claimant proved by a preponderance of the evidence that W.C. No. 4-977-514 should be reopened for a worsened condition.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant has worked as a bus driver for Employer since 2008.

2. On October 13, 2014, Claimant sustained work-related injuries to his low back when he slipped and fell on the wet bathroom floor while working for Employer. Thereafter, Claimant experienced low back and left leg pain.

3. On October 16, 2014, Claimant was evaluated by Michelle Honsinger, PA-C at Concentra. Claimant advised Ms. Honsinger that he slipped and fell on the wet bathroom floor at work on October 13, 2014, and that he landed on his back. Claimant reported that he sought treatment because his pain was not improving and even worsening. Claimant reported low back pain that radiated into his left buttock and left thigh with a pain level of 7/10.

4. On October 23, 2014, Claimant returned to Concentra and reported that he continued to suffer from back pain that shot down his left leg.

5. On November 6, 2014, Claimant was evaluated by Glenn Petersen, PA-C, at Concentra. Claimant advised Mr. Petersen that he continued to experience low back pain that radiated into his left leg and that there was no change in symptoms despite therapy. Accordingly, Mr. Peterson recommended that Claimant undergo an MRI of his lumbar spine.

6. On November 12, 2014, Claimant underwent his first lumbar spine MRI which demonstrated:

   1) *Small broad-based disc protrusion at L4-5, resulting in mild central canal stenosis and moderate bilateral foraminal compromise but as yet,* ***no exiting nerve root deformity****.*
   2) ***Other disc levels remain normal from T11-12 to L5-S1****.*

3) *No osseous trauma or spondylolisthesis. No evidence of a spinal infection or bone tumor.*
4) *No abnormal distal thoracic cord signal or syrinx.*

7. Claimant returned to Concentra on November 13, 2014, at which time it was noted that Claimant did not suffer from muscle pain, neck pain, joint swelling, joint stiffness, muscle weakness or night pain.

8. On November 18, 2014, Claimant was examined by Lacie Esser, PA-C, at Concentra who noted Claimant's MRI findings which demonstrated a small broad-based disc protrusion at L4-L5 with moderate bilateral foraminal encroachment. Ms. Esser noted Claimant's complaints of back pain that radiated down to his left leg. Ms. Esser stated that she would like to send Claimant for a spine consultation to see if he would be a candidate for an epidural steroid injection ("ESI").

9. On December 4, 2014, Gary Ghiselli, M.D. at Denver Spine Surgeons evaluated Claimant and reported that he had been working non-operatively without pain relief with back pain that radiated into his left leg. Dr. Ghiselli found that Claimant had minimal leg symptoms and no weakness on exam. After his physical exam and review of the MRI, Dr. Ghiselli opined that, "**We do not feel that surgery is necessary at this time**. We have recommended that he see a Physiatrist to maximize all non-operative treatment including possible injections to help therapeutically and diagnostically. He can return to see us if surgical evaluation needs to be done again. However, currently we do not feel that surgery would benefit him."

10. On December 4, 2014, Claimant also saw Glenn Petersen, PA-C, at Concentra after his consultation with Dr. Ghiselli. Mr. Petersen noted that Claimant continued to experience back pain that radiated down his left leg and that Dr. Ghiselli only advised him to consult with a physiatrist for possible injections.

11. Claimant was evaluated by physiatrist, Rick Zimmerman, D.O. on January 7, 2015. Claimant reported ongoing low back. **Dr. Zimmerman's straight leg raise and neural tension were negative bilaterally**. Dr. Zimmerman also noted no specific tenderness in the SI joints, sciatic notches or greater trochanters bilaterally. After review and examination, Dr. Zimmerman performed Claimant's first bilateral L4-5 transforaminal ESI. After performing the ESI, Dr. Zimmerman noted that in the recovery room, Claimant stood, flexed and extended his lumbar spine and reported no low back pain. Claimant demonstrated improved range of motion reaching down to his lower shins and eventually touching his ankles, which was a functional improvement compared to his pre-injection ability to reach to his upper shins with his fingertips. **Dr. Zimmerman officially considered it a diagnostic response to the ESI**.

12. On February 9, 2015, thirty-four days after undergoing his first ESI, Claimant was evaluated by Allison Fall, M.D. at Concentra. Claimant reported that he was doing well, able to do his independent home exercise program and that he had no pain. Claimant also advised Dr. Fall that he was still under restrictions but stated that he did not really need them. Dr. Fall's examination revealed that forward flexion, extension

and right and left lateral bending were full and pain-free and that there were **no radicular signs**. Dr. Fall's final impression was that Claimant suffered from an **asymptomatic L4-5 disc protrusion** and she discharged him from care and released him to full duty. Dr. Fall opined that there was **no impairment or indication for work restrictions**.

13. On February 26, 2015, Claimant was involved in a non work-related motor vehicle collision.

14. On February 27, 2015, Claimant presented to Denver Health Medical Center Emergency Room and was evaluated by Cecilia Sorensen, M.D. Dr. Sorensen reported that Claimant was status post a motor vehicle collision from the day before as a restrained driver with no airbag deployment and that Claimant's car was drivable after the collision. Dr. Sorensen stated that after Ibuprofen and Tramadol was administered, his only complaints were of neck pain and headaches. Specifically, that Claimant was complaining of left lateral neck pain. Dr. Sorensen determined that Claimant did not warrant any imaging studies. Most notably, Dr. Sorensen noted that Claimant reported whiplash and **denied incontinence, weakness, tingling or any other pain**. Dr. Sorensen's official diagnosis was that Claimant suffered from upper back pain and discharged him after Motrin was administered. The Nursing Notes also state that Claimant was medicated with Motrin and observed to be ambulatory with a steady gait from the Emergency Department.

15. On March 4, 2015, six days after the motor vehicle collision, Claimant consulted with J. Stephen Gray, M.D. at Lakewood Injury Treatment Center. Claimant's chief complaints were headaches, neck pain and left low back pain with lower extremity symptoms. Dr. Gray noted Claimant's statement that upon impact, he was slammed, thrown forward and caught by the seatbelt which slammed him backwards and to the left where he hit the left side of his head on the post of the jeep. Claimant advised Dr. Gray that he did not lose consciousness but that he did experience immediate left-sided head pain. Dr. Gray noted that Claimant had some improvement in neck pain and minimal improvement in his low back pain. Most notably, Claimant graded his neck pain and 3-4/10 and his back pain at 7/10. Claimant informed Dr. Gray that he had been treated in the past several months for a prior work-related low back injury and that he had an MRI showing a disc protrusion. Claimant reported some aching pain down into his left posterolateral thigh area but specified that, "This does not go down to his knee and has not since the accident." Dr. Gray noted that in Claimant's prior work-related care, he had the same left-sided posterolateral leg pain, and for that reason, underwent one ESI. Dr. Gray reviewed Claimant's MRI and agreed that prior to the motor vehicle collision, his MRI demonstrated a, "small broad-based disc protrusion at L4-5." Dr. Gray's primary assessment was that Claimant suffered from a scalp contusion, mild concussion, cervical strain and exacerbation of pre-existing low back pain with recurrence of left lower extremity symptoms, probably referred. Dr. Gray ordered X-rays of Claimant's cervical and lumbar spine and a repeat MRI of his low back to rule out a worsening of his preexisting broad-based disc protrusion at L4-5.

16. Claimant returned Concentra on March 11, 2015, where he was evaluated by Rosalie Einspahr, N.P. Claimant informed Ms. Einspahr that he suffered from neck, low back and left leg pain. Due to the exacerbation of Claimant's preexisting low back and left leg pain, Claimant was referred back to Dr. Fall.

17. On March 13, 2015, Claimant underwent a second lumbar spine MRI which now demonstrated:

> *L1-L2: No disc herniation, foraminal narrowing, or spinal stenosis.*
>
> *L2-L3: No disc herniation, foraminal narrowing, or spinal stenosis.*
>
> *L3-4: There is mild bilateral facet hypertrophy. There is no focal disc herniation or central canal stenosis. A component of relatively mild bilateral neural foraminal narrowing is noted but there is no significant nerve impingement.*
>
> *L4-5: There is relatively mild bilateral facet hypertrophy. There is mild disc desiccation. There is a shallow broad-based posterior disc protrusion and annular fissure, slightly asymmetric to the left. This contacts and abuts the descending bilateral L5 nerve roots, slightly greater on the left than right. There is no significant central canal stenosis. There is mild to moderate left and relatively mild right sided foraminal narrowing.*
>
> *L5-S1: There is relatively mild bilateral facet hypertrophy. There is no significant disc herniation. No central canal stenosis. No significant foraminal narrowing.*
>
> *IMPRESSION:*
>
> *Mild degenerative disc disease and facet hypertrophy of the lumbar spine, greatest at L4-L5. A shallow broad-based posterior disc protrusion and annular fissure at L4-L5 abuts the descending L5 nerve root, slightly greater on the left than right. There is relatively mild left greater than right L4-5 neural foraminal narrowing.*

This imaging report was subsequently amended with ADDENDUM #1 which stated:

> *Request for addendum has been made to compare with a previous spine MRI from 11/12/2014, which is now available for comparison. The broad-based posterior* ***disc protrusion at L4-L5 is slightly improved and decreased in size in the interval****. No other significant interval changes have occurred.*

18. Claimant returned to Dr. Gray at Lakewood Injury Treatment Center on March 25, 2015, and advised Dr. Gray that he continued to have moderately severe neck pain and moderate low back pain that ran down to the posterolateral aspect of his left leg to his knee. Upon review of Claimant's most recent MRI, Dr. Gray stated, "It

should be noted that in comparing this with the previous MRI there did not appear to be any significant changes. We will ask Dr. Fall to look at these two MRIs and help us differentiate whether there are any new findings. Again, **to this examiner's eye, there is no significant difference in these films**." On examination of Claimant's lumbar spine, Dr. Gray stated that there was no evidence of spasm, erythema, edema or step-off. Dr. Gray also found that Claimant's legs were neurovascularly intact. Dr. Gray referred Claimant for chiropractic care and advised him to follow-up with Dr. Fall to discuss the possibility of a repeat epidural steroid injection.

19. On April 22, 2015, Claimant was re-evaluated by Dr. Gray who reported that Claimant continued to complain of low back pain with left lower extremity symptoms that remained unchanged since their last visit. Claimant reported that his neck pain was improving and denied any new symptomatology. Claimant did not report new symptomatology in his legs and denied any bowel or bladder incontinence, dysfunction, or urinary retention. Dr. Gray's examination of Claimant's lumbar spine revealed no evidence of spasm, erythema, edema, step-off or significant abnormal curvature. Dr. Gray also noted that there was no localized tenderness to palpation of Claimant's lumbar spine. Dr. Gray recommended that Claimant continue with chiropractic care, physical therapy and massage twice a week.

20. Claimant returned to Dr. Gray on May 13, 2015, where he continued to complain of left-sided low back pain and left leg pain. Claimant advised Dr. Gray that his pain improved somewhat since their last visit. Dr. Gray noted that Claimant would not be allowed to see Dr. Fall under his prior work-related claim and other than relatively mild neck discomfort, Claimant denied any new symptomatology. Dr. Gray continued to recommend that Claimant see a physiatrist to determine whether an epidural steroid injection or some sort of injection therapy would be appropriate and that he was to follow-up with his work comp doctor regarding his injuries as well.

21. Claimant was evaluated by Kirk Holmboe, D.O. at Concentra on May 13, 2015. On this date, Dr. Holmboe released Claimant from care and found that he reached maximum medical improvement for his 2014 work-related injuries. Dr. Holmboe stated, "At this point I will release him from care for his work related injury as he was doing quite well when last seen by Dr. Fall and she imposed no restrictions and did not assign any impairment. Further care will have to come through his or other drivers auto insurance."

22. On May 19, 2015, Claimant was evaluated Yusuke Wakeshima, M.D. Claimant advised Dr. Wakeshima that his current symptoms were posterior neck pain and upper back region pain, which Dr. Wakeshima determined to be 100% related to the 2015 MVA. Claimant also reported low back pain with left posterior thigh and leg pain with no lower extremity weakness, bowel or bladder dysfunction. Dr. Wakeshima acknowledged Claimant's history of a preexisting low back injury with corresponding left leg symptoms and stated that he would request notes from Dr. Fall as well as Dr. Holmboe to review and determine what percentage of his symptoms were related to the 2015 MVA and what percentage were related to the 2014 work injury. Dr. Wakeshima

planned to see Claimant back to discuss apportionment of his lumbar spine region and future treatment plans based on his review of the MRI studies.

23. Claimant returned to Dr. Wakeshima on June 2, 2015, and reported pain in his low back, left leg, neck and upper back. Dr. Wakeshima reviewed Claimant's prior lumbar MRI studies and noted that his review of the MRI on November 12, 2014, before the MVA and after his first work-related injury reported only a small broad-based disc protrusion with mild central canal stenosis and moderate bilateral foraminal compromise with no exiting nerve root deformity. Dr. Wakeshima opined that on his over-read of the 2014 MRI, there was facet arthrosis appreciated at multiple levels as well as an annular tear. Accordingly, Dr. Wakeshima opined that Claimant's MRI findings before and after the non work-related MVA **probably did not significantly change despite contrasting reports**. Dr. Wakeshima planned to have Claimant take his 2015 MRI films back to Advanced Medical Imaging so they could compare it to their 2014 MRI to determine if there were any real significant interval changes from his lumbar spine MRI before and after the 2015 MVA. However, it was Dr. Wakeshima's opinion that he did not observe a significant interval changes between Claimant's 2014 and 2015 MRIs. Most notably, Dr. Wakeshima stated, **"Upon my over-read of the MRI films from November 12, 2014, I am not really seeing that much difference that the MRI of March 13, 2015 and I would like to confirm whether there has been no significant interval change."**

24. Dr. Wakeshima re-evaluated Claimant on June 16, 2015, and stated that since his last evaluation, Claimant did not report any change in his neck and low back pain symptoms, specifically that his neck was now as equally as painful as his low back. On this date, Dr. Wakeshima was still without Claimant's 2014 work injury records. In the absence of medical records and based purely on Claimant's subjective responses and answers, Dr. Wakeshima opined that 60% of his ongoing low back pain was related to the MVA of February 26, 2015, and that 40% was preexisting and related to the work injury on October 13, 2014. Dr. Wakeshima recognized that he would need to re-address this apportionment after Claimant's 2014 and 2015 MRIs were properly compared and contrasted by Advanced Medical Imaging. Dr. Wakeshima stated, "**I would like to see him one more time to obtain the radiologist's inputs regarding comparison MRI studies as well as review Dr. Fall's notes, and determine what was accomplished in the past and how severe his pain was prior to his motor vehicle accident.**"

25. On June 30, 2015, Claimant returned to Dr. Wakeshima and reported no significant change in his pain symptoms. Specifically that he still experienced pain in his lower neck, low back and left leg. Dr. Wakeshima noted that Claimant was able to have his lumbar MRI imaging studies over-read to compare and contrast any significant interval changes between the 2014 and 2015 MRIs. Dr. Wakeshima stated, "**They did compare the MRI from March 13, 2015 with an MRI on November 12, 2014 and it did report that there was a broad-based posterior disc protrusion at L4-5 that has slightly improved and decreased in size in the interval. No significant interval change has occurred.**" Dr. Wakeshima also had notes from Dr. Holmboe available to him for review. Dr. Wakeshima noted that Dr. Holmboe's last note indicated he was at

MMI. Dr. Wakeshima opined that Claimant would benefit from undergoing electrodiagnostic studies to make sure there was no radiculopathy. In terms of Claimant's neck and low back pain, Dr. Wakeshima wanted him to undergo a course of chiropractic treatment with acupuncture times six sessions each to see if it improved his pain symptoms. With regard to treatment of Claimant's low back, Dr. Wakeshima stated, "**His MRI studies of the lumbar spine and cervical spine did not demonstrate any major pathology that would lead one to suspect that spine surgical intervention currently is indicated.**"

26. On July 14, 2015, Claimant presented to Wayne Hoffman, D.C. per Dr. Wakeshima's referral. Dr. Hoffman reported Claimant's chief complaints of neck pain, mid back pain, low back pain and that his progress had stagnated. On physical exam, Dr. Hoffman performed orthopedic testing which most notably included a Lasègue's test which was negative bilaterally. Dr. Hoffman also performed a **straight leg test to diagnose lumbosacral radiculopathy which was also negative bilaterally,** demonstrating that Claimant did not reproduce a pain pattern in his bilateral lower extremities when tested for lumbar radiculopathy.

27. On July 21, 2015, Claimant returned to Dr. Hoffman and advised him that he was still experiencing cervical pain at a 3/10 level, no mid back pain at all and improved low back pain at 3/10. Dr. Hoffman assessed that Claimant's cervical spine improved, that his thoracic pain resolved and that his lumbar spine was improved as well.

28. On July 21, 2015, Claimant was also evaluated by Bethany Wallace, M.D. at Lakewood Injury Treatment Center. Claimant advised Dr. Wallace that he was getting better, that his left leg pain was receding and not as intense or consistent and that he still had stiffness in his neck and low back. Claimant reported that if he sat for a long time, it aggravated his left leg. Most notably, Dr. Wallace noted that Claimant was getting much better after the slip and fall at the time Dr. Fall evaluated him on February 9, 2015, just prior to his 2015 MVA. Dr. Wallace also noted Claimant's reports that he no longer needed assistance to stand up and that **he was not interested in injections or surgery**. Claimant reported that, "He is pleased that the chiropractic and the acupuncture, have helped a lot." **Dr. Wallace also performed another straight leg test which was negative** for a reproduced pain pattern in his lower extremities. Dr. Wallace merely recommended that Claimant continue physical therapy, massage therapy, chiropractic and acupuncture and that he could consider spinal surgery for the lumbar disc problem and sciatica. Dr. Wallace did not request authorization for a second epidural steroid injection nor did she request authorization for spinal surgery. Claimant's low back and left leg symptoms had much improved and he was not interested in pursuing further treatment on his low back. Dr. Wallace's one-time evaluation was done under the auspices of a consultation, not a surgical recommendation.

29. On December 8, 2015, Claimant underwent a Division Independent Medical Examination with Jade Dillon, M.D. for evaluation of his October 13, 2014, work injury. Dr. Dillon noted that Claimant's MRI on November 12, 2014, only demonstrated a small broad-based disc protrusion at L4/5 with mild central canal stenosis and moderate

bilateral foraminal compromise with no focal nerve root deformity. She also noted Claimant's neurosurgical evaluation by Dr. Ghiselli on December 14, 2014, wherein Dr. Ghiselli found that Claimant was not a surgical candidate as it related to his 2014 work injuries. Dr. Dillon relied on Dr. Fall's report dated February 9, 2015, which reflected a good response to the first epidural steroid injection on January 7, 2015. Dr. Dillon also agreed with Dr. Holmboe's assertion that Claimant reached MMI for the 2014 work injuries to his low back and left leg. Absent the second subsequent intervening event on March 23, 2016, Dr. Dillon could only conclude that Claimant's increased low back pain and left leg symptoms were due to the non work-related MVA on February 26, 2015. Thus, Dr. Dillon concurred with Dr. Holmboe that Claimant reached MMI on May 13, 2015, for his 2014 work injuries and that his low back pain and left leg symptoms were not ratable conditions; therefore assigning a 0% impairment rating.

30. Aside from DIME Dr. Dillon's finding that Claimant reached MMI on his 2014 low back and left leg conditions, and that Claimant's low back and left leg symptoms were not ratable conditions, Dr. Dillon recorded that as of December 8, 2015, Claimant's symptoms remained isolated to his low back and left leg. Additionally, Dr. Dillon recorded that Claimant moved well with normal gait, stance and balance and, most notably, that her straight leg raising test was negative bilaterally. Dr. Dillon concluded that Claimant merely suffered from a lumbar strain as a result of the occupational injury on October 13, 2014, which she found to go on to good recovery with conservative treatment.

31. On March 23, 2016, Claimant was involved in a second motor vehicle accident while driving a bus for Employer.

32. As the DIME provided no medical treatment, Claimant received no medical treatment for his low back from July 21, 2015, until after his March 23, 2016 accident. This is a period of over 9 months of no treatment.

33. On March 31, 2016, Claimant returned to Concentra and was evaluated by Catherine Hunt, P.A. Ms. Hunt noted Claimant's description of the work-related motor vehicle accident on March 23, 2016, stating that, "Patient reports he was driving a bus and another car was hit, which then lost control and hit the front of the bus with the front of their car. Patient states he was driving about 20 mph at time of impact and was restrained." Ms. Hunt recorded Claimant's chief complaint to be low back pain. Claimant's pain diagram dated March 31, 2016, reveals that, in contrast to all of his prior complaints of low back and left leg pain, Claimant now documented increased low back pain with stabbing pain that radiated into *both* legs.

34. On April 20, 2016, Claimant returned to Concentra and was evaluated by Valerie Skvarca, PA-C. Ms. Skvarca noted that Claimant was still complaining of left-sided low back pain at 6/10. Claimant was forthright in advising Ms. Skvarca that he had a previous history of back injuries and therefore asked for a repeat lumbar spine MRI.

35. On April 29, 2016, Claimant underwent a third lumbar spine MRI read by Bao Nguyen, M.D. which revealed:

1. *Moderate bilateral L4-5 neuroforaminal stenosis and mid central spinal canal stenosis at this level owing to a broad-based protrusion.*
2. *Minor central disc bulge at L5-S1.*

36. Dr. Nguyen filed an addendum to the April 29, 2016, MRI report which stated:

COMPARISON: MRI 11/12/2014

No interval change is appreciated in comparison to the prior MRI exam of 2014.

37. Claimant returned to Concentra on May 5, 2016, and was evaluated by Nickolas Curcija, PA-C. Claimant advised Mr. Curcija that his pain was unimproved despite therapy or medications and that he had been experiencing cramps in *both* legs at night. Mr. Curcija performed a positive straight leg test. Claimant's corresponding pain diagram also documents his ongoing reports of low back pain and bilateral leg pain.

38. On May 19, 2016, Claimant returned to Concentra and was re-examined by Mr. Curcija who specifically noted that, "The patient presents today with recheck back pain radiating down to legs." Another positive straight leg test was performed and again, Claimant's pain diagram continued to document low back pain and bilateral leg pain.

39. Claimant returned to Dr. Fall on May 20, 2016. Although Dr. Fall acknowledged that Dr. Nguyen noted no interval change between the 2014 MRI and 2016 MRI, Dr. Fall found that, in contrast to the 2014 MRI, the 2016 MRI demonstrated moderate bilateral L4-5 neuroforaminal stenosis and mid central spinal canal stenosis due to a broad-based disc protrusion. Dr. Fall stated that Claimant continued to report low back and bilateral leg symptoms and that he was now experiencing parasthesias down *both* legs. Another positive straight leg test was performed and Dr. Fall opined that Claimant had radicular findings consistent with his 2016 MRI. Dr. Fall therefore recommended that Claimant undergo *bilateral* L4-5 transforaminal steroid injections.

40. On June 9, 2016, Claimant returned to Concentra and was re-examined by Mr. Curcija who noted that Claimant was still waiting for his bilateral L4-5 transforaminal steroid injections and that therapy was increasing his pain symptoms. Mr. Curcija reported that Claimant's pain level was 6/10 and that it was located in the low back bilaterally with pain radiating to his bilateral calves. Mr. Curcija also noted that Claimant was experiencing weakness in his both legs.

41. Claimant returned to Dr. Fall on June 10, 2016, and reported that he had a return of symptoms with pain radiating down both legs. Dr. Fall noted that Claimant's bilateral L4-5 transforaminal steroid injections were still pending and, in contrast to her diagnosis of an asymptomatic L4-5 disc protrusion for the 2014 injury, Dr. Fall now found that Claimant suffered from left greater than right L4 radiculitis. Dr. Fall stated that she would await the results of the bilateral L4-5 transforaminal steroid injections.

42. On June 17, 2016, Claimant was evaluated by Robert Kawasaki, M.D. Dr. Kawasaki stated that Claimant was still experiencing low back pain, bilateral thigh region pain, calf cramps and numbness and tingling in his left leg. Dr. Kawasaki then performed right L4-5 transforaminal steroid injections with L4 spinal nerve root block and left L4-5 transforaminal steroid injections with L4 spinal nerve root block.

43. On June 23, 2016, Claimant returned to Concentra and was re-evaluated by Mr. Curcija. Six days had passed since Claimant underwent bilateral L4-5 transforaminal steroid injections and L4 spinal nerve root blocks; however, Claimant continued to report back pain that radiated into *both* legs and that he did not feel any symptom relief following the injections as he continued to have pain at 6/10 in his low back that radiated down to both legs and into his calves. Mr. Curcija performed another positive straight leg test which caused a pulling sensation in Claimant's lower extremity. Again, Claimant's corresponding pain diagram indicates that he continued to report low back pain and bilateral leg pain.

44. Claimant returned to Dr. Fall on June 24, 2016, one week after his bilateral L4-5 transforaminal steroid injections and L4 spinal nerve root blocks, and continued to report no change in symptoms. Dr. Fall noted that the injection he received as a result of his 2014 worker's compensation claim was the only thing that helped that the second set of injections did not change anything. Claimant continued to report pain down both legs and that he was even experiencing numbness in his posterior calf. Accordingly, Dr. Fall recommended an electrodiagnostic evaluation of Claimant's left leg to rule out radiculopathy.

45. On August 25, 2016, Insurer admitted liability for medical benefits on the 2016 work-related injuries.

46. Dr. Fall performed Claimant's electrodiagnostic evaluation on August 26, 2016. Dr. Fall noted that electrodiagnostic evaluation of Claimant's left leg revealed increased insertional activity in the lower lumbar paraspinals and in the left gastrocnemius. Dr. Fall also stated that she saw a visible involuntary contraction of the left gastrocnemius when Claimant was lying flat. Dr. Fall assessed that Claimant suffered from left L5 radiculitis without significant denervation. After reviewing his treatment, Dr. Fall recommended that Claimant undergo a left L5-S1 transforaminal injection which would address the left L5 nerve root. Due to his ongoing low back and bilateral leg symptoms, Claimant asked Dr. Fall if he could discuss his symptoms with a spine surgeon. Dr. Fall felt this request was appropriate and wrote a referral for a surgical evaluation to be done after the L5-S1 transforaminal injection its response could be discussed. Again, Claimant's corresponding pain diagram indicates that he continued to report low back pain and bilateral leg pain.

47. On September 2, 2016, Claimant returned to Concentra where he was evaluated by Dr. Cava. Claimant continued to report low back pain that radiated into both legs and also, that he was having difficulty with sexual function and erections due to his severe back pain and severe cramping in his buttocks and legs. Dr. Cava's straight leg test was positive bilaterally but worse on the left.

48. On September 7, 2016, Claimant was evaluated by spine surgeon, Bryan Castro, M.D. Dr. Castro's report states, "The patient has lower back pain with pains going down his legs, left side greater than right. Sometimes he gets cramping in the legs as well. He has some numbness in the medial calf with some pain and cramping in the posterior aspect of the leg, left greater than right. His low back pains are greater than the leg pains. He has pain with any activities." Most notably, Dr. Castro's report states, "The patient states that now since his automobile accident in March [2016], the pains have been significantly increased." Dr. Castro reviewed Claimant's treatment history and acknowledged that the L5-S1 transforaminal injection as recommended by Dr. Fall was still pending. Dr. Castro's review of systems were, "Positive difficulty and pain with walking, some difficulty with sexual relations secondary to pain." Dr. Castro reviewed Claimant's lumbar spine MRI of April 29, 2016, and compared it to the lumbar MRI of November 12, 2014, which he found to highlight some disc desiccation at L4-L5 with mild disc protrusion and annular tear. Ultimately, Dr. Castro's report states that he was in agreement with proceeding with bilateral L5-S1 transforaminal epidural steroid injections and found them to be reasonable. Once again, Claimant's corresponding pain diagram indicates that he continued to report low back pain and bilateral leg pain.

49. Dr. Zimmerman performed Claimant's left L5-S1 transforaminal epidural steroid injection on September 14, 2016. Dr. Zimmerman reported that Claimant's pre-procedure pain score at rest was 6/10 and his straight leg raise and neural tension were positive. After the injection, Claimant's pain score at rest was 0/10. Dr. Zimmerman stated, "Lumbar range of motion improved with forward bending and reaching down to his mid shins with his fingertips, and extension improved to approximately 10" or 15". He had no significant pain with these maneuvers, and straight leg raise pain was reduced from 8/10 before the procedure to 2/10 after the procedure, being a diagnostic response. The patient stood and ambulated without difficulty. Motor and sensation were intact in both lower limbs."

50. Claimant returned to Dr. Fall on September 23, 2016, nine days after his left L5-S1 transforaminal epidural steroid injection, and reported that he was worse. Claimant explained that initially, he was numb so he did not experience pain in Dr. Zimmerman's clinic; however, once he left, the numbing medicine wore off and his pain returned and increased to the point where he was even having difficulty doing things around the house. Dr. Fall's straight leg test was again positive and she referred Claimant for pool therapy two times a week for three weeks for core stabilization and low back pain. Again, Claimant's corresponding pain diagram indicates that he continued to report low back pain and bilateral leg pain.

51. Claimant was re-evaluated by Dr. Cava at Concentra on September 29, 2016. Dr. Cava stated that if Claimant experienced worsening radicular symptoms, that a follow-up with Dr. Castro should be considered to re-evaluate Claimant's need for surgery. Dr. Cava also noted that the most recent injection did not help and that Claimant continued to experience difficulty with sexual function and erections due to severe back pain and severe cramping in his buttocks and legs. Dr. Cava reported that Claimant's pain radiated into his buttocks, thighs, bilateral calves and was worse on the left with associated symptoms of lower extremity numbness, lower extremity tingling and

lower extremity weakness. Dr. Cava's repeat straight leg test was once again positive and Claimant's corresponding pain diagram indicates that he continued to report low back pain and bilateral leg pain.

52. Claimant was re-examined by Dr. Fall on October 7, 2016. Claimant reported a pain level of 6/10 and Dr. Fall's physical exam revealed decreased flexion with pain radiating down both legs and a positive straight leg raise bilaterally in the seated position. Dr. Fall's impression was that Claimant suffered a lumbosacral strain with a small broad-based disc protrusion at L4-5 with surgery not yet recommended by Dr. Castro. Again, Claimant's corresponding pain diagram indicates that he continued to report low back pain and bilateral leg pain.

53. Between October 13, 2016, and October 27, 2016, Claimant was seen at Concentra at least three more times, and continued to complain of low back pain that radiated into both legs at each appointment.

54. Claimant returned to Dr. Fall on November 14, 2016, where she recorded that Claimant did not benefit from pool therapy. Specifically that, "He states he is 0% better. He still has pain going down the leg and the back. He states they are both together, so one is not worse than the other." Dr. Fall did not have further treatment recommendations, only that she would recommend a follow-up with Dr. Castro prior to MMI to re-address the reasonable necessity of surgery.

55. Claimant was re-evaluated by Dr. Castro on November 15, 2016. Dr. Castro noted Claimant's report of worsened symptoms and stated, "Just prior to closing the case, I will get him a new MRI to make sure there is [sic] no new findings and indeed if this still remains with no significant herniation, then surgical intervention would not be offered. At that point, he will be placed at MMI from a surgical standpoint. We will see him back after the MRI." Again, Claimant's corresponding pain diagram indicates that he continued to report low back pain and bilateral leg pain.

56. On November 23, 2016, Claimant underwent his fourth lumbar spine MRI, which demonstrated:

IMPRESSION

1. *Canal stenosis L4-L5 level with protrusion and annular tearing. Mild inferior foraminal narrowing is noted.*
2. *L5-S1 with canal narrowing. Foraminal narrowing right greater than left.*

57. Claimant followed up with Dr. Fall on December 5, 2016, who reviewed the results of his fourth lumbar MRI scan. After reviewing the MRI, Dr. Fall assessed that Claimant suffered from **L4-5 and L5-S1 disc protrusions with bilateral lower extremity radiculitis with possible progression on a more recent study**. Dr. Fall stated that she would await the recommendations of Dr. Castro in light of these new MRI findings. Again, Claimant's corresponding pain diagram indicates that he continued to report low back pain and bilateral leg pain.

58. Claimant returned to Dr. Castro on December 7, 2016, to re-address the reasonable necessity of surgery. Dr. Castro stated that Claimant's MRI scans appeared to be significantly changed when compared to the last MRI. Dr. Castro stated that there were no new herniations or instability patterns; however, Claimant demonstrated moderate stenosis of the lateral recesses bilaterally at L4-5. Dr. Castro informed Claimant that low back pain was not an indication for surgical intervention in his case where there was no instability or worsening findings in his low back but that *his buttock and leg pain could be treated with a lumbar decompression*. In lieu of recommending ineffective conservative management, Dr. Castro recommended a one-level microdiscectomy decompression for decompression of lateral recesses to hopefully improve Claimant's claudicatory-type symptoms, which in a setting of moderate stenosis and failure to respond to conservative management, was a reasonable consideration. Dr. Castro stated that there was no indication for a fusion or any other structural type of surgery but that due to Claimant's ongoing pain and worsening of symptoms, he would begin surgical planning for a one-level decompression. Again, Claimant's corresponding pain diagram indicates that he continued to report low back pain and bilateral leg pain.

59. On December 12, 2016, Claimant returned to Dr. Fall who agreed with Dr. Castro's surgical recommendation of a one-level decompression. Claimant's corresponding pain diagram continued to indicate low back pain and bilateral leg pain.

60. On December 14, 2016, Dr. Castro's office requested authorization of an L4-5 lumbar decompression, which was scheduled to take place on December 29, 2016, at Lutheran Medical Center.

61. On January 9, 2017, Claimant returned to Dr. Fall and advised her that the L4-5 lumbar decompression was denied. Claimant stated that he was quite miserable, in a lot of pain and actually felt sick that the surgery had been denied. Dr. Fall noted that Claimant was still working and having pain in his low back and both legs. Dr. Fall assessed that Claimant suffered from L4-5 and L5-S1 disc protrusions with bilateral lower extremity radiculitis. Dr. Fall stated, "I agree with the surgical recommendation by Dr. Castro, the orthopedic spine specialist." Dr. Fall wanted Claimant to follow up with her in one month so if he was to pursue surgery, he would not be at MMI. If however Dr. Fall saw that Claimant would not pursue surgery, she planned to proceed with an impairment rating. Claimant's corresponding pain diagram continued to indicate low back pain and bilateral leg pain.

62. Claimant returned to Dr. Fall on February 6, 2017, and reported ongoing symptoms in both legs and that his pain was quite bad. Claimant advised Dr. Fall that a hearing was set regarding denial of the L4-5 lumbar decompression and that he was to attend two Respondent-sponsored IMEs with Brian Reiss, M.D. and John Burris, M.D. Dr. Fall prescribed additional medication for his radicular symptomatology and advised Claimant that it was only a temporary solution. Claimant's corresponding pain diagram continued to indicate low back pain and bilateral leg pain.

63. On February 27, 2017, Dr. Burris performed a Respondent-sponsored IME. Dr. Burris was to respond to a letter from Respondents dated February 2, 2017. In that letter, Respondents asked Dr. Burris to address the following question:

> *If Mr. Camara has not reached MMI from any work-related injuries, please describe what further treatment is reasonable and necessary to bring him to MMI. Please specifically address whether Dr. Castro's request for authorization to perform an L4-5 lumbar decompression is reasonable, necessary and related to Mr. Camara's injury of March 23, 2016.*

After Dr. Burris conducted his physical exam and reviewed the records, Dr. Burris concurred with Drs. Fall and Castro that Claimant suffered from low back pain with bilateral lower extremity radiculitis. In response to Respondents' inquiry on whether Dr. Castro's request for authorization to perform an L4-5 lumbar decompression was reasonable, necessary and related to the March 23, 2016, injury, Dr. Burris stated:

> *Although he has a history of prior back injuries**, the records support the 3/23/2016 event as the proximate cause of his current symptoms**. Because he has continued symptoms and his treating specialists recommend additional treatment, **I do not believe he has reached maximum medical improvement**. **I believe the L4-5 lumbar decompression recommended by Dr. Castro is reasonable, necessary and related to the 3/23/2016 event**.*

64. On March 1, 2017, Claimant underwent a second Respondent-sponsored IME with Dr. Reiss. By contrast, Dr. Reiss opined that the 2016 work MVA did not change Claimant's preexisting condition. It is Dr. Reiss' opinion that treatment should be considered related to Claimant's only preexisting incident not related to his work injuries. In contrast to the overwhelming evidence, Dr. Reiss' report states that he does not believe the 2015 MVA produced even a temporary aggravation of Claimant's preexisting condition. Dr. Reiss testified consistent with his report that he did not contest the L4-5 lumbar decompression itself, only that it could only be related to the 2015 MVA. On cross-examination, Dr. Reiss admitted that he did not have or review any medical records showing that Claimant suffered from any back pain prior to February 26, 2015. Dr. Reiss also admitted that he did not recall any medical records documenting that Claimant's pain complaints after the 2014 work claim were isolated to his left leg and low back, which would allow him to properly compare and contrast Claimant's complaints of low back and left leg pain prior to March 23, 2016, to Claimant's complaints of low back pain and bilateral leg symptoms after March 23, 2016.

65. Dr. Reiss testified at hearing that the surgery could only be related to the 2016 work MVA if his worsening of condition was simply a lumbar strain superimposed upon Claimant's preexisting condition, which included spinal stenosis and lower extremity symptomatology. Dr. Reiss testified that if Claimant received any injury in the 2016 work MVA, it was possible he had a lumbar strain and that treatment of a lumbar strain was not surgical intervention but physical therapy and time. Dr. Reiss' testimony is inconsistent with every other provider's opinion, the overwhelming medical records

and the objective findings on Claimant's four separate MRI scans documenting that Claimant's initial lumbar strain was objectively worsened after the March 23, 2016, work MVA.

66. Claimant returned to Dr. Fall on March 13, 2017, and advised her that he still had ongoing low back and bilateral leg pain. Dr. Fall addressed Dr. Burris' IME opinion and acknowledged that he found the surgery to be medically reasonable, necessary and related to the March 23, 2016, work injuries. Dr. Fall stated, "Hopefully, this means that the insurance will now approve the surgery and he can proceed." Dr. Fall also wrote Claimant a prescription for a three-month gym membership while he awaited surgery in order to keep him active, mobile and to help him with symptom relief.

67. On April 13, 2017, Claimant returned to Concentra and was re-evaluated by Nickolas Curcija, PA-C. Mr. Curcija noted that Claimant's symptoms remained the same, if not worse, with pain radiating down to the backs of both legs to his calves. Claimant also reported occasional numbness in his left shin and intense pain in the back of his legs which limited his ability to be intimate with his wife. Claimant's corresponding pain diagram continued to indicate low back pain and bilateral leg pain.

68. On May 1, 2017, Claimant followed up with Dr. Fall who acknowledged receipt of Dr. Reiss' IME opinion stating that the L4-5 lumbar decompression was not related to the work injury of March 23, 2016, but rather to Claimant's preexisting condition he solely attributed to the MVA on February 26, 2015. Claimant advised Dr. Fall that although he received treatment from Dr. Wakeshima, he did not pursue surgery after the February 26, 2015, motor vehicle accident and that he was in fact doing well after the 2015 MVA, up until the work-related MVA on March 23, 2016.

69. On May 2, 2017, and May 11, 2017, Claimant was seen at Concentra and continued to complain of ongoing low back pain that radiated into both legs. Claimant's corresponding pain diagrams on these two dates also continued to indicate low back pain and bilateral leg pain.

70. Claimant was evaluated by Albert Hattem, M.D. on May 22, 2017, and reported persistent low back pain with bilateral leg numbness. Claimant rated his pain at 6/10 and advised Dr. Hattem that this injury has really impacted his life and that he continued to have problems with his wife. Claimant stated that prior to March 2016, he was not having these problems. On physical exam, Dr. Hattem's straight leg test was positive in the seated position bilaterally.

71. Dr. Fall re-examined Claimant on June 12, 2017, and noted that Claimant's pain was worsening and that he was experiencing a lot of leg pain and cramping. Claimant rated his pain at 7/10. Since the hearing was scheduled so far out, and there was no treatment to undergo apart from the denied L4-5 lumbar decompression, Dr. Fall recommended proceeding forward with an impairment assessment at their next scheduled visit.

72. Claimant underwent a third IME with John Hughes, M.D. on June 26, 2017. Similar to Drs. Castro, Fall and Burris, Dr. Hughes agreed that the surgical treatment as proposed by Dr. Castro was reasonable and necessary; however, in contrast to every other treating provider, Dr. Hughes found that original 2014 work injury was the proximate cause of his current symptoms. Dr. Hughes stated that:

> *I do believe that surgical treatment as proposed by Dr. Castro is reasonable, necessary, and related to a natural progression of Mr. Camara's initial work-related lumbar spine injuries of October 13, 2014. In my opinion, Mr. Camara is not at MMI pending this surgical treatment.*
>
> *RECOMMENDATION*
>
> *It is my opinion that Mr. Camara sustained work-related lumbar spine injuries on October 13, 2014, that did not resolve, as noted by Dr. Dillon in her report of December 8, 2015. He has now developed left L5 radiculopathy, and I believe that the surgical treatment recommended by Dr. Castro is reasonable, necessary, and related to Mr. Camara's initial work-related lumbar spine injury of October 13, 2014.*

73. Claimant was finally re-evaluated by Dr. Hattem on July 6, 2017, and reported no change in his symptoms within the last 1 ½ months. Claimant continued to report persistent low back pain at 7/10 with ongoing bilateral leg pain. Claimant reported that his low back pain equaled his leg pain and that his right leg was now worse than the left.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder

should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

In the present case, Claimant began suffering from low back pain and left leg symptoms on October 13, 2014. On February 9, 2015, Dr. Fall evaluated Claimant and found that he merely suffered from an asymptomatic L4-5 disc protrusion as a result of his 2014 work claim. On February 26, 2015, Claimant was involved in a non work-related motor vehicle accident which temporarily aggravated his underlying low back pain and left leg symptoms. On June 30, 2015, Dr. Wakeshima, became the first provider to expressly opine that Claimant's MRI studies on March 13, 2015, did not demonstrate any major pathology that would lead one to suspect that spine surgical intervention was indicated at that time. In this case, the undersigned ALJ agrees with Claimant that the IME report of Dr. Reiss reflects enhanced effects of the claim he was hired to review (the February 26, 2015, MVA claim) to provide an opinion that would mitigate Respondents' obligation to deliver medical benefits per sections 8-40-101, *et seq.*, C.R.S. The medical records substantiate that prior to March 23, 2016, Claimant's medical treatment was isolated to his low back and left leg.

Reasonable and Necessary Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. See § 8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714 (Colo. 1994). The claimant has the burden of proof to establish the right to specific medical benefits by a preponderance of the evidence. § 8-43-201, C.R.S.; *Valley Tree Service v. Jimenez*, 787 P.2d 658 (Colo. App. 1990). The question of whether a claimant has proved that specific medical treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). It is the Judge's sole prerogative to assess the sufficiency and probative value of the evidence to determine whether the claimant has met his burden of proof. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

Once the claimant establishes the probability of need for future treatment, as is found in this case, the claimant is entitled to a general award of future medical benefits, subject to the respondents' right to contest the compensability of any particular treatment on grounds that the treatment is not authorized or not reasonably necessary. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Here, Claimant has proven by a preponderance of the evidence Claimant was finished treating for his 2015 MVA by the time he was involved in the motor vehicle accident on March 23, 2016, while in the course and scope of his employment with Employer. Claimant received no medical treatment whatsoever in the more than nine months preceding his March 23, 2016 work related accident. The medical records persuasively document that Claimant's treatment after the 2016 MVA included injections, medications and therapy for his low back and bilateral lower extremities. Moreover, the medical records persuasively and overwhelmingly document that Claimant's complaints of bilateral leg symptomatology did not begin until after the motor vehicle accident on March 23, 2016.

Similarly, the ALJ is not persuaded by Respondents' assertion that Claimant is attempting to get the L4-5 lumbar decompression "bootstrapped" onto the 2016 work claim. On July 21, 2015, Dr. Wallace recorded Claimant's express statement that he was not interested in any injections or surgery at that time. In fact, Dr. Wallace specifically stated that, "He is pleased that chiropractic and acupuncture, have helped a lot." The ALJ finds that Claimant credibly and persuasively testified that he was not sent for any surgery as a result of his evaluation with Dr. Wallace in relation to his 2015 MVA claim. Additionally, the ALJ finds that Dr. Wallace's report is indicative of a mere consultation, not an actual request to conduct surgery, as Respondents contended multiple times at hearing. As is found, Claimant was not a surgical candidate as a result of the 2015 MVA.

Dr. Burris, a Level II accredited physician appointed by Respondents to conduct an IME, provided a causation opinion which the ALJ finds credible and persuasive. Dr. Burris concurred with Dr. Castro and Dr. Fall in opining that although Claimant had a history of back injuries, the records support the 3/23/2016 event as the proximate cause of Claimant's current symptoms. Dr. Burris does not believe Claimant has reached MMI. More importantly, Dr. Burris credibly opined that the L4-5 lumbar decompression recommended by Dr. Castro is reasonable, necessary and related to the 3/23/2016 event. As is found, the L4-5 lumbar decompression is reasonable, necessary and related to the March 23, 2016, work-related MVA claim.

Based on the totality of the evidence presented, the ALJ is not persuaded by Respondents' argument that Claimant's low back and bilateral leg symptoms are primarily attributable to the February 26, 2015, non work-related motor vehicle accident. Although Claimant sustained an aggravation of his preexisting low back pain and left leg symptoms on February 26, 2015, he did not seek any injections or surgery as a result of that MVA and he was finished treatment by the time he was involved in the MVA on March 23, 2016. Respondents did not introduce any persuasive evidence to refute the records of Drs. Castro, Fall or Burris confirming that Claimant sustained additional

injuries to his low back with new symptomatology in both legs as a result of the work-related motor vehicle accident on March 23, 2016.

By contrast, Claimant has been continuously and increasingly limited since the March 23, 2016, industrial injury. Moreover, Claimant provided ample evidence to document additional symptoms in his both legs after the March 23, 2016, motor vehicle accident. Also persuasive was Claimant's testimony and medical records demonstrating that the March 23, 2016, work MVA was the only precipitating event that compelled Claimant to report that he was having difficulty with sexual function and erections due to his severe back pain and severe cramping in his buttocks and legs.

The ALJ concludes that Dr. Burris' opinion that Claimant's low back and bilateral leg symptoms are related to the March 23, 2016, work MVA is credible, persuasive and more persuasive than the contrary causational opinion of Dr. Reiss. The medical records substantiate, and Dr. Burris credibly explained that Claimant's increased low back symptoms with new bilateral leg symptoms are related to the March 23, 2016, work MVA. After the March 23, 2016, work MVA, new findings were observed on Claimant's MRI at the L5-S1 level with new symptoms manifesting in both legs. Moreover, when Claimant's 2014 and 2015 MRIs were compared, every treating provider opined that the 2015 MRI did not demonstrate significant interval changes. By contrast, upon official comparison of Claimant's 2014 and 2015 MRIs, it was found that the broad-based posterior disc protrusion present as a result of the 2014 work claim had actually slightly improved and decreased in size in the interval by March 13, 2015.

Accordingly, Dr. Reiss was not persuasive as to his opinion that the 2015 could be the only cause for Claimant's current symptoms. Dr. Reiss' opinions are not consistent with Claimant's medical records nor do they negate any physician's opinion that an L4-5 lumbar decompression is actually necessary. Dr. Reiss' opinion that the 2015 MVA did not even aggravate Claimant's 2014 low back symptoms is biased, unpersuasive and inconsistent with the overwhelming medical records. That Dr. Reiss issued an opinion in favor or Respondents should not come as a surprise. At hearing, Dr. Reiss admitted that he "testif[ies] for the respondents. That's who hires [him]. That's who pays [him]. And that's who [he] testif[ies] for." Incredibly, and despite all evidence to the contrary, Dr. Reiss issued the opinion that Claimant suffered no injury *at all* as a result of his March 23, 2016 car crash. After weighing the medical opinions and potential biases as a whole, the ALJ finds Drs. Castro, Fall and Burris more persuasive.

Claimant has proved by a preponderance of the evidence that the exacerbation of his low back pain accompanied by new symptomatology in both legs was caused by his involvement in the motor vehicle collision that occurred at work on March 23, 2016. Therefore, Claimant is entitled to such medical benefits under the 2016 worker's compensation claim. The one-level, one-sided decompression surgery is therefore authorized, reasonable, necessary and related to the March 23, 2016, worker's compensation claim. The ALJ is persuaded that the March 23, 2016, incident is the most likely cause of Claimant's current low back and bilateral leg symptomatology, which ultimately requires an L4-5 lumbar decompression as recommended by Drs. Castro, Fall and Burris.

Reopening W.C. No. 4-977-514-2014 CLAIM

To warrant reopening, it is not necessary that a worker's industrial disability, i.e. the degree of permanent partial disability, has increased. Rather, reopening is also appropriate where additional medical and temporary disability benefits are warranted. *See Osborne v. Industrial Commission*, 725 P.2d 63 (Colo .App. 1986); *Chavez v. Industrial Commission*, 714 P.2d 1328 (Colo. App. 1985). Claimant has failed to prove by a preponderance of the evidence that W.C. No. 4-977-514 should be reopened for a worsened condition.

Dr. Burris, a Level II accredited physician appointed by Respondents to conduct an IME, provided a causation opinion the ALJ finds credible and persuasive. Dr. Burris concurred with Dr. Castro and Dr. Fall in opining that although Claimant had a history of back injuries, the records support the 3/23/2016 event as the proximate cause of Claimant's current symptoms. Dr. Burris credibly opined that the L4-5 lumbar decompression recommended by Dr. Castro is reasonable, necessary and related to the 3/23/2016 event. As is found, the L4-5 lumbar decompression is reasonable, necessary and related to the March 23, 2016, work-related MVA claim.

The ALJ has found the March 23, 2016 work injury to be the proximate cause of Claimant's need for surgery. Therefore, there is no basis for reopening W.C. No. 4-977-514-2014.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. The L4-5 lumbar decompression as recommended by Drs. Castro, Fall and Burris is reasonable, necessary and related to Claimant's March 23, 2016, work-related MVA.

2. Claimant requires the medical treatment recommended by Drs. Castro, Fall, and Burris to cure and relieve him of the effects of his March 23, 2016, industrial injuries and their sequelae and is entitled to a general award of medical benefits. Respondents shall pay for the Claimant's L4-5 lumbar decompression, and all other medical care deemed reasonable and necessary.

3. Claimant failed to prove by a preponderance of the evidence that W.C. No. 4-977-514 should be reopened for a worsened condition. Therefore that claim shall not be reopened.

4. Issues not expressly decided herein are reserved to the parties for future determination.

5. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 20, 2018

Denver, CO 80203

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive additional medical treatment, including medications and physical therapy, that is causally related, reasonable and necessary to his November 18, 2015 admitted industrial injury.

FINDINGS OF FACT

1. Claimant is a 43-year-old male who worked for Employer as a Concrete Finisher and Laborer. On November 18, 2015 Claimant slipped on ice while working for Employer. He injured his lower back and neck. Claimant continued his regular work schedule for Employer and did not miss any shifts as a result of the incident.

2. On November 25, 2015 Claimant visited Brian Beatty, D.O. at Rocky Mountain Medical Group for an examination. Claimant reported lower back pain but denied any leg symptoms.

3. During the winter of 2015-16 Claimant reported a gradual improvement in his symptoms. By February 5, 2016 he noted that he only had back pain when he bent at the waist for extended periods of time. Claimant continued to deny any leg pain, numbness, weakness or tingling.

4. On April 4, 2016 Claimant underwent a lumbar spine MRI. The MRI reflected only mild degenerative disc changes at L5-S1 and mild, bilateral, proximal S1 root sleeve deformity.

5. On April 22, 2016 Claimant visited Barry Ogin, M.D. for an evaluation of his lower back discomfort. After performing a physical examination Dr. Ogin determined that Claimant's lumbar spine was "fairly unremarkable." He noted that Claimant's mild L5-S1 disc protrusion was likely incidental. Dr. Ogin also concluded that Claimant was not a good candidate for interventional treatments because he suffered diffuse axial back pain that was aggravated by minimal palpation and movement. He suspected that there were psychological barriers potentially impacting Claimant's recovery.

6. Claimant also visited Dr. Beatty for an examination on April 22, 2016. Dr. Beatty commented that there were no major structural changes to Claimant's lower back and with physical therapy and core stabilization Claimant would return to full activities. Claimant continued to deny any leg pain, numbness, weakness or tingling.

7. On June 22, 2016 Claimant returned to Dr. Beatty for an evaluation. Claimant reported that he had been released by Dr. Ogin and completed physical therapy. He noted that he was doing well with only minimal, intermittent pain. Claimant explained

that he was ready to work his regular job. Dr. Beatty noted that Claimant suffered only occasional back pain and was not experiencing any leg pain, numbness, weakness or tingling. Dr. Beatty confirmed that Claimant had not suffered any radicular symptoms. He concluded that Claimant had reached Maximum Medical Improvement (MMI) with no permanent impairment.

8. On July 5, 2016 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Beatty's MMI and impairment determinations. Claimant challenged the FAL and sought a Division Independent Medical Examination (DIME) to address his neck, back and right arm symptoms.

9. On June 30, 2016 Claimant was incarcerated at the Sterling Correctional Facility. Claimant testified that his condition began to deteriorate and he suffered more sciatic pain that traveled down his left leg.

10. On August 2, 2016 Claimant visited the infirmary at the Sterling Correctional Facility. He reported lower back symptoms and pain that radiated down his left leg. He received pain medication, muscle relaxers and a lidocaine injection. Physicians also provided Claimant with a cane so he would not suffer any additional lower back injuries.

11. After Claimant was released from prison he visited the Salud Family Health Center on May 4, 2017. He reported significant lower back pain while sitting and standing. Claimant also noted left posterior thigh numbness and two instances of urinary incontinence. Claimant attributed his symptoms to his slip and fall at work on November 18, 2015.

12. On May 11, 2017 Claimant underwent an MRI of his lumbar spine. The MRI revealed a diffuse disc bulge at L3-L4 that had increased since the prior MRI.

13. On May 19, 2017 Claimant visited R. Shay Bess, M.D. for an examination. Dr. Bess recorded that Claimant had suffered a work injury when he fell on ice and injured his back. He noted lower back swelling and sciatica. Claimant reported pain in his buttocks, thigh and calf. His symptoms consisted of 75% back pain and 25% leg pain. Dr. Bess diagnosed Claimant with a lumbar disc herniation, lumbar stenosis and lumbar spondylosis. He did not have Claimant's lumbar MRI scan, Workers' Compensation medical records and Department of Corrections medical records to determine whether Claimant's symptoms were related to his November 18, 2015 work incident.

14. On May 30, 2017 Claimant underwent a DIME with Lloyd Thurston, D.O. Claimant reported that he slipped and fell at a job site on November 18, 2015. Dr. Thurston noted that Claimant was initially diagnosed with cervical, lumbar and thoracic strains. He reviewed Claimant's medical records, considered diagnostic studies and conducted a physical examination. Dr. Thurston explained that Claimant's original lumbar MRI on April 4, 2016 showed mild degenerative disc changes at L5-S1 "with some mild, bilateral, proximal S1 root sleeve deformity." He agreed with Dr. Beatty that Claimant reached MMI on June 22, 2016 with no permanent impairment or restrictions.

15. Dr. Thurston commented that Claimant's symptoms initially improved but then worsened "without explanation when he was incarcerated." He concluded that the lumbar MRI changes from April 4, 2016 to May 11, 2017 were unrelated to the November 19, 2015 slip and fall. Although Claimant reported that his back pain was greater than his left leg pain, there were no objective findings consistent with a radiculopathy. Dr. Thurston determined that Claimant's current symptoms should be addressed through his primary care physician. He concluded that Claimant's cervical, thoracic and lumbar strains had resolved. Dr. Thurston emphasized that Claimant's disc bulge at L3-L4 and spinal canal stenosis occurred after he reached MMI on June 22, 2016 and was thus not work-related.

16. On July 13, 2017 Respondents filed a FAL consistent with Dr. Thurston's MMI and impairment determinations. The FAL specified that Claimant reached MMI on June 22, 2016 with no permanent impairment.

17. Claimant testified at the hearing in this matter. He explained that Dr. Beatty placed him at MMI on June 22, 2016 because he was likely to be incarcerated. Nevertheless, Claimant acknowledged that he was suffering minimal symptoms while treating with Dr. Beatty and his condition worsened without an intervening event while incarcerated. Claimant specifically began to suffer tingling down his left leg and urinary incontinence.

18. Claimant has failed to demonstrate that it is more probably true than not that he is entitled to receive additional medical treatment, including medications and physical therapy, that is reasonable, necessary and causally related to his November 18, 2015 admitted industrial injury. Initially, Claimant suffered admitted industrial injuries to his lower back and neck area on November 18, 2015 and did not miss any of his scheduled work shifts. Claimant subsequently received conservative treatment including physical therapy and core stabilization exercises. A lumbar spine MRI reflected only mild degenerative disc changes at L5-S1 and mild, bilateral, proximal S1 root sleeve deformity. By June 22, 2016 Dr. Beatty noted that Claimant suffered only occasional back pain and was not experiencing any leg pain, numbness, weakness or tingling. He concluded that Claimant had reached MMI with no permanent impairment.

19. On June 30, 2016 Claimant was incarcerated. He subsequently developed increasing lower back symptoms and pain that radiated down his left leg. A May 11, 2017 lumbar MRI revealed a diffuse disc bulge at L3-L4 that had increased since the prior MRI. DIME Dr. Thurston commented that Claimant's symptoms initially improved but then worsened "without explanation when he was incarcerated." He concluded that the lumbar MRI changes from April 4, 2016 to May 11, 2017 were unrelated to the November 19, 2015 slip and fall. Although Claimant reported that his back pain was greater than his left leg pain, there were no objective findings consistent with a radiculopathy. He summarized that Claimant reached MMI on June 22, 2016 with no impairment or restrictions and his current symptoms should be addressed through his primary care physician. Dr. Thurston concluded that Claimant's cervical, thoracic and lumbar strains had resolved.

20. In contrast, Claimant explained that Dr. Beatty placed him at MMI on June 22, 2016 because he was likely to be incarcerated. Nevertheless, Claimant acknowledged that he was suffering minimal symptoms while treating with Dr. Beatty and his condition worsened without an intervening event while incarcerated. Based on Claimant's November 18, 2015 work injury Dr. Bess diagnosed him with a lumbar disc herniation, lumbar stenosis and lumbar spondylosis. However, Dr. Bess did not have Claimant's lumbar MRI scan, Workers' Compensation medical records and Department of Corrections medical records to determine whether Claimant's symptoms were related to his November 18, 2015 work incident. Based on the persuasive medical records and opinions of Drs. Beatty and Thurston, Claimant's symptoms from his work injury resolved by June 22, 2016. Although Claimant suffered additional back pain and radicular symptoms when he was incarcerated, it is speculative to attribute his condition to the November 18, 2015 slip and fall at work. As Dr. Thurston specifically noted, the lumbar MRI changes from April 4, 2016 to May 11, 2017 were unrelated to the November 19, 2015 slip and fall. Accordingly, Claimant's request for causally related, reasonable and necessary medical benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004).

"Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

5. However, a determination of MMI has no statutory significance when injuries do not cause a claimant to lose more than three work shifts or suffer a permanent disability. *Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P. 3d 327, 331 (Colo. 2014). Specifically, MMI is a statutory term of art that has no applicability in claims that do not entail payment of disability benefits. *Id.* Because MMI has no applicability in medical only claims, it cannot serve as a basis for filing or contesting a FAL. *Trujillo v. Elwood Staffing*, W.C. No. 4-957-118 (ICAP, June 22, 2017). Accordingly, MMI is a term that only applies to injuries in which disability indemnity benefits are payable. *Id.*

6. Claimant's claim in the present matter is thus not closed. Respondents' FAL based on Dr. Thurston's DIME determination is premature and does not preclude Claimant from pursuing additional medical benefits. Claimant does not need to prove that his condition has changed or that there was a mistake pursuant to §8-43-303, C.R.S. *See Trujillo v. Elwood Staffing*, W.C. No. 4-957-118 (ICAP, June 22, 2017).

7. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

8. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he is entitled to receive additional medical treatment, including medications and physical therapy, that is reasonable, necessary and causally related to his November 18, 2015 admitted industrial injury. Initially, Claimant suffered admitted industrial injuries to his lower back and neck area on November 18, 2015 and did not miss any of his scheduled work shifts. Claimant subsequently received conservative treatment including physical therapy and core stabilization exercises. A lumbar spine MRI reflected only mild

degenerative disc changes at L5-S1 and mild, bilateral, proximal S1 root sleeve deformity. By June 22, 2016 Dr. Beatty noted that Claimant suffered only occasional back pain and was not experiencing any leg pain, numbness, weakness or tingling. He concluded that Claimant had reached MMI with no permanent impairment.

9. As found, on June 30, 2016 Claimant was incarcerated. He subsequently developed increasing lower back symptoms and pain that radiated down his left leg. A May 11, 2017 lumbar MRI revealed a diffuse disc bulge at L3-L4 that had increased since the prior MRI. DIME Dr. Thurston commented that Claimant's symptoms initially improved but then worsened "without explanation when he was incarcerated." He concluded that the lumbar MRI changes from April 4, 2016 to May 11, 2017 were unrelated to the November 19, 2015 slip and fall. Although Claimant reported that his back pain was greater than his left leg pain, there were no objective findings consistent with a radiculopathy. He summarized that Claimant reached MMI on June 22, 2016 with no impairment or restrictions and his current symptoms should be addressed through his primary care physician. Dr. Thurston concluded that Claimant's cervical, thoracic and lumbar strains had resolved.

10. As found, in contrast, Claimant explained that Dr. Beatty placed him at MMI on June 22, 2016 because he was likely to be incarcerated. Nevertheless, Claimant acknowledged that he was suffering minimal symptoms while treating with Dr. Beatty and his condition worsened without an intervening event while incarcerated. Based on Claimant's November 18, 2015 work injury Dr. Bess diagnosed him with a lumbar disc herniation, lumbar stenosis and lumbar spondylosis. However, Dr. Bess did not have Claimant's lumbar MRI scan, Workers' Compensation medical records and Department of Corrections medical records to determine whether Claimant's symptoms were related to his November 18, 2015 work incident. Based on the persuasive medical records and opinions of Drs. Beatty and Thurston, Claimant's symptoms from his work injury resolved by June 22, 2016. Although Claimant suffered additional back pain and radicular symptoms when he was incarcerated, it is speculative to attribute his condition to the November 18, 2015 slip and fall at work. As Dr. Thurston specifically noted, the lumbar MRI changes from April 4, 2016 to May 11, 2017 were unrelated to the November 19, 2015 slip and fall. Accordingly, Claimant's request for causally related, reasonable and necessary medical benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

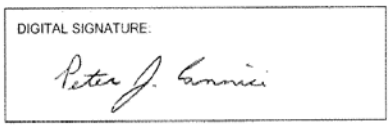
1. Claimant's request for additional medical benefits is denied and dismissed.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20)

days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: February 20, 2018.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-997-496-02

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on January 23, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 1/23/18, Courtroom 1, beginning at 1:30 PM, and ending at 4:30 PM).

Claimant's Exhibits 1 through 16, with the exception of Exhibi6 which was withdrawn, were admitted into evidence, without objection. Respondents' Exhibits A through U were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a briefing schedule and a deadline to file a written transcript of the post-hearing evidentiary deposition of Bennett I. Machanic, M.D. the Claimant's authorized treating physician (ATP). The Claimant's opening brief was filed, electronically, on January 30, 2018. Respondents' answer brief was filed, electronically, on February 6, 2018. Claimant's reply brief was filed on February 8, 2018. A written transcript of Dr. Machanic's evidentiary deposition was due on March 19, 2018, however, Claimant's counsel advised on February 16, 2018 that Claimant would **not** be taking Dr. Machanic's deposition and the parties were ready for a decision. Therefore, the ALJ deems the matter submitted for decision as of February 16, 2018.

ISSUES

The issue to be determined by this decision concerns whether the Claimant is permanently and totally (PTD) disabled because of a compensable back injury of October 23, 2015. During the hearing, the parties stipulated that the Claimant was entitled to post maximum medical improvement (MMI) medical benefits that are reasonably necessary and causally related to the compensable back injury.

The Claimant bears the burden of proof, by a preponderance of the evidence on the issue of PTD.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant, age 39, suffered an on-the-job back injury which was found compensable by ALJ Margo W. Jones in a decision issued on September 21, 2016. In that decision ALJ Jones found that the Claimant suffered a compensable back injury while installing solar panels (Claimant's. Exhibit 16).

2. The claim was initially denied by Respondents and proceeded to hearing on April 21, 2016 and June 17, 2016 before ALJ Margot Jones on the issue of compensability.

3. After ALJ Jones issued her decision, the Respondents filed a General Admission of Liability (GAL) on March 1, 2017, which admitted to medical benefits and ongoing temporary total disability (TTD) benefits since the date of injury at a rate of $610.71 per week (Respondents' Exhibit B).

4. Andrew Castro, M.D., a surgeon, diagnosed the Claimant as having an extremely large disc herniation at L5-S1 centrally and right sided causing several lateral recess encroachment, severe spinal canal compression, and encroachment of the transversing S1 nerve root bilaterally (Claimant's. Exhibit. 11).

5. Until the injury event of October 23, 2015, the Claimant was able to work full time installing solar panels, a heavy duty job.

6. Ultimately, Respondents filed a Final Admission of Liability (FAL), admitting for the 25% whole person medical impairment rating, assigned by ATP Dr.

Machanic, with an MMI date of July 25, 2017, which is not disputed. Respondents originally denied liability for post-MMI maintenance medical benefits, but stipulated to the same during the hearing.

Medical

7. Prior to the first hearing before ALJ Jones, the Claimant had treated with a few medical providers. On February 15, 2017, he first met with his chosen ATP, Dr. Machanic. He informed Dr. Machanic that he had a prior injury to his low back injury which occurred twenty years ago. Then, he had a ruptured disc and underwent a lumbar laminectomy with a possible fusion (Respondents' Exhibit Q). Dr. Machanic reviewed the Claimant's prior imaging and ordered an EMG (Exhibit Q).

8. The Claimant underwent an EMG with Dr. Machanic on March 29, 2017 (Exhibit Q, bates stamp, 339)

9. In May 2017, the Claimant treated at Colorado Brain and Spine Institute. (Respondents' Exhibit O). J. Paul Elliott, M.D., performed an initial exam on May 7, 2017. Dr. Elliott noted, "his diffuse bilateral extremity pain and weakness is not explained by these examinations and we are recommending a thoracic MRI (magnetic resonance imaging) without contrast and a lumbar MRI for further evaluation." (Respondents' Exhibit O, bates stamp 323). On May 9, 2017, Margarety Gasienica, PA-C (Certified Physician's Assistant) reviewed the Claimant's lumbar MRI and believed it was "largely normal except for left S1 nerve root abutted by scar tissue. Nothing to explain his exam" (Exhibit O, bates stamp 326). On May 22, 2017, PA-C Gasienica reviewed the Claimant's MRI findings with Dr. Elliott and stated, "reviewed the imaging which reveals only left lateral recess/subarticular recess scar tissue [at the] L5-S1. These findings do not explain his symptoms. Will refer back to Dr. Machanic for further evaluation of a neurological issue" (Exhibit. O, bates stamp 570). The ALJ finds that ATP Dr. Machanic's assessments are entitled to greater weight than Dr. Elliott's assessments.

10. On July 11, 2017, the Claimant returned to Dr. Machanic who noted the Claimant had gone to see Dr. Elliott. Dr. Machanic was of the opinion that the Claimant was at MMI as of July 25, 2017 (Respondents' Exhibit Q, bates stamp 343) Dr. Machanic assigned the Claimant a 25% whole person impairment rating. Respondents filed an FAL, based on ATP Dr. Machanic's opinions. This fact adds greater weight to Dr. Machanic's opinions.

11. In his November 17, 2017 report, Dr. Machanic stated that based on testing, the Claimant has nerve abnormalities at L5 and S1 and scarring. Dr. Machanic stated that the nerves were not dead but they were not vigorous. The Claimant's nerve problems trigger spasms which result in pain that radiates into his legs and groin. Dr. Machanic was of the opinion that there are no treatment options to restore the nerves to

their normal function and that Claimant's problems are likely permanent. Dr. Machanic also stated that if surgery had been performed earlier, the Claimant would have gotten better, and that the Claimant is unable to work now and will endure ongoing and permanent chronic pain. Because of this, the Claimant will need help with the activities of daily living (ADLs) for the remainder of his life (Claimant's. Ex. 2). The ALJ finds ATP Dr. Machanic highly persuasive and credible in this regard. Indeed, during the course of the hearing, the ALJ observed the Claimant exhibiting severe physical limitations, requiring the use a wheelchair, on and off, and these manifestations appeared to be genuine.

12. Jeffery Kleiner, M.D., performed an independent medical examination (IME) and issued a report dated October 25, 2017. Dr. Kleiner concurred with the opinion of Dr. Machanic that the delay in surgery on the massive L5-S1 disc herniation led to irreparable nerve injury, pain and dysfunction. While Dr. Kleiner is not a vocational expert, he agreed with Dr. Machanic that the Claimant is permanently and totally disabled-- from a medical standpoint (Claimant's. Exhibit 4).

Functional Capacities Evaluation (FCE)

13. Terry Young, an occupational therapist (OTR) at Starting Point performed a FCE on the Claimant. In her report of October 3, 2017, she documented that the Claimant suffered from pain and muscle spasms in his legs during the testing which were palpable and so severe that Young had to massage his legs and at one time, Young had to use both knees on the Claimant's hamstrings to get the spasms to stop (Claimant's Exhibit 1).

14. According to Young, despite multiple attempts on the part of the Claimant to perform any type of productive task during the FCE, he was simply unable. According to Young, the Claimant has no ability to engage in home making chores, family activities, and social functions in any consistent or reliable way. She said that reaching, leaning forward, standing or any type of activity, no matter how sedentary, would prompt spasms within minutes. Even simple reaching caused the Claimant to go into painful muscle spasms. In this regard, the ALJ has the unmitigated temerity to conclude that OTR Young's observations of the Claimant and more reliable and credible than Dr. Lesnak's so called observations, which border on moral, not medical bases, *i.e.,* "exaggerating."

15. Young's expert OTR opinion was that the Claimant was putting forth full and consistent effort during the evaluation. She based this opinion upon widely accepted protocols within the field of functional capacity evaluations, with 16 out of 16 markers used to determine level of effort showing that high effort was put forth. Young stated that observations and other evidence support the fact that the Claimant's report of abilities and limitations can be considered valid and authentic. She concluded that the Claimant was unable to demonstrate any productive abilities that would equate to competitive employment in any position at any time during the FCE.

16. Regarding physical limitations, Young stated in her report that the Claimant can sit for 5 to 45 minutes, but at times he can't sit at all due to unrelenting muscle spasms, and that his sitting tolerance is not predictable in any way. He can stand for to 5 minutes but this quickly brings on high levels of pain and that standing is very difficult and painful. He was barely able to tolerate walking for even short distances and was in a wheelchair most of the time during the evaluation. He cannot bend, crouch, squat, kneel, crawl, or climb stairs. He cannot reach above shoulder level and cannot drive. Any reaching forward to perform functional tasks for more than a few seconds to a few minutes is extremely limited due to the onset of muscle spasms.

17. Young stated that the Claimant applied a massage tool to his legs during the FCE to try to control the muscle spasms. The ALJ also observed the Claimant's significant other doing this during the course of the hearing. Dr. Lesnak's observations of this bordered on ridicule.

Dr. Machanic's Review of FCE

18. Dr. Machanic reviewed the FCE report and stated that it mirrors what he saw, clinically. Dr. Machanic said that the FCE study was a very well done study and the results of the testing are reliable. Dr. Lesnak attempted, unsuccessfully, to diminish the FCE. Dr. Machanic also concluded, from a medical standpoint, that the Claimant is completely and totally disabled from employment.

Respondents' Independent Medical Examination by Lawrence Lesnak, D.O.

19. The ALJ finds that Dr. Lesnak's demeanor and manner of testifying was less than straight-forward in answering questions, especially on cross-examination. He insisted on attempting to seize control of the questioning, especially during cross examination, by delivering a mini lecture without giving answers which were directly responsive to the questions being asked. The ALJ infers and finds that Dr. Lesnak's approach resulted more in obfuscating the true facts rather than aiding the tribunal in a search for the truth. Although hired by the Respondents as their IME, his role is not to assist in the advocacy of Respondents' position. His proper role is to assist the tribunal in a search for the truth, according to his best lights. Dr. Lesnak did **not** fulfill the later role. This is only one factor diminishing his overall credibility.

20. Dr. Lesnak stated the opinion that the Claimant was exaggerating his symptoms and was **probably** capable of working. This opinion lacks any means of visible support in Dr. Lesnak's underlying analysis. Dr Lesnak had previously testified at the compensability hearing in 2016. At that hearing, as cited in Finding of Fact No. 22 of ALJ Jones' decision (Claimant's Exhibit 16), Dr. Lesnak stated that the Claimant was unable to work due to his injury, although he also opined that the Claimant's disc injury was not caused by his employment. Obviously, ALJ Jones did not believe him on work-

relatedness. During a voir dire exam at the present hearing, Dr. Lesnak admitted that the Claimant's condition had worsened since the prior hearing. Based on the totality of the evidence, Dr. Lesnak's opinion that the Claimant's condition had worsened since 2016 is credible because it is corroborated by other medical, OTR and vocational opinions. The ALJ infers and finds that the inconsistency between Dr. Lesnak's 2016 opinion that the Claimant could **not** work, and his 2018 opinion that the Claimant's condition had worsened yet the Claimant could **not** work seriously undermines the overall credibility of Dr. Lesnak's opinions. How can Dr. Lesnak explain that the Claimant can now work .when his condition has worsened, but could **not** work before his condition worsened? He gives no answer to this question. The ALJ infers that the answer, if any, would appear to be in the realm of the paranormal, further undermining the overall credibility of Dr. Lesnak's opinions.

21. Dr. Lesnak admitted on cross examination that he had only examined the Claimant once and that was on March 5, 2016. He was contacted about two weeks before the present hearing to give an opinion on the Claimant's capacity to work. Dr. Lesnak also disagreed with the FCE findings of Terry Young, and with every treating doctor, none of whom found the Claimant to be exaggerating or magnifying his symptoms. Indeed, the foundation of Dr. Lesnak's ultimate opinion that the Claimant can now work is made of nebulous matter, thus, his ultimate opinions fall in the face of well-founded medical opinions to the contrary. Ultimately, the ALJ finds Dr. Lesnak's opinions in this matter lacking in credibility.

Opinion of Vocational Expert Katie Montoya

22. Katie Montoya, a vocational rehabilitation expert, was retained by Claimant's counsel to render an opinion on the employability of the Claimant. She based her opinions on the FCE findings and the adoption of those findings by the Claimant's treating physician, Dr. Machanic. The ALJ infers and finds that Montoya's opinions are based on a solid set of assumptions as herein above found.

23. Montoya is of the opinion that the Claimant is unemployable due to his restrictions; also, because of his frequent, severe and debilitating muscle spasms which occur with almost any activity including simple reaching. She is of the opinion that the Claimant cannot be productive in his present condition and that no employer would be interested in hiring the Claimant, nor would an employer be able to accommodate the Claimant's restrictions and limitations. The ALJ infers and finds that the totality of Montoya's opinions add up to a firm factual conclusion that the Claimant cannot earn a wage in the open, competitive job market and is, thus, permanently and totally disabled.

Vocational Opinion of Sara Nowotny

24. Sara Nowotny testified as a vocational expert for the Respondents. She had looked into several jobs that she believed the Claimant could do at car dealerships

in the Denver area. Several of the employers she contacted said that they hire people who are confined to wheelchairs. This does not take into account Claimant's other physical limitations and spasms. Most of the examples she gave were for receptionist jobs. On cross examination, Nowotny conceded that the Claimant's employability issues were not limited to the Claimant having to frequently use a wheelchair. She admitted that the restrictions from the FCE, as verified by Dr. Machanic, would make the Claimant permanently and totally disabled, but if she relied only upon the opinion of Dr. Lesnak, the Claimant could be employable. Indeed, .the ALJ infers and finds that Nowotny's tentative, alternative opinions would support either employability (if her assumptions are based on Dr. Lesnak's opinions) or un-employability (if her assumptions are based on the FCE and ATP Dr. Machanic's opinions). Indeed, the ALJ infers and finds that one of Nowotny's alternative opinions supports Montoya's opinions. Based on the proposition that Dr. Lesnak's opinions have been discredited as herein above found, the ALJ finds Nowotny's alternative opinion, based on the assumptions that the FCE is valid, as well as the opinions of ATP Dr. Machanic, more credible than the other alternative opinion, founded on IME Dr. Lesnak's discredited opinions.

Factual Analysis of the Evidence

25. The totality of the evidence supports the inescapable factual conclusion that the Claimant's is incapable of earning any wages with the Employer herein, or with any other employer. The FCE findings show that the Claimant is unable to perform the simplest tasks, like reaching or even sitting, without suffering from debilitating spasms and pain. This was borne out by the occupational therapist, Terry Young, who was able to palpate the spasms during the FCE. She had to massage the affected area so the spasm would release and she could continue with the FCE. These spasms occurred after a few minutes of reaching or sitting. It is implausible that any employer would be willing to accommodate these symptoms in an employee. It is also implausible that the Claimant could be even marginally productive in an employment setting. The fact that the Claimant cannot even take care of his personal needs without assistance speaks to the probability that he cannot be productive in any type of employment.

26. Respondents argue that there is **insufficient** objective evidence of permanent total disability. This argument is misplaced because, during the FCE, the Claimant suffered from pain and muscle spasms to the extent that OTR Terry Young eventually had to place both her knees on the Claimant's hamstrings to stop the spasms. Quite incredibly, Dr. Lesnak opined that the spasms were voluntarily induced (a euphemism for "faking it"). He offered no underlying explanation for this seemingly clairvoyant conclusion. Indeed, the ALJ rejects this conclusion in the face of an objective FCE and the weight of other medical opinions. The ALJ finds the Respondents argument in this regard to be without merit.

27. The testimony of Dr. Lesnak that the Claimant is exaggerating or otherwise magnifying his symptoms is not shared by any of the Claimant's treating physicians. As found herein above, Dr. Lesnak is not credible.

28. Katie Montoya's opinion that the Claimant is permanently totally disabled is persuasive and credible, considering the extreme difficulty the Claimant had in even completing the FCE. Sara Nowotny admitted that if the opinions of OTR Terry Young and Dr. Machanic are relied upon, the Claimant is incapable of employment. While the Claimant has some college education and because there are employers who hire individuals in wheelchairs, this does not make the Claimant employable. The Claimant's almost constant state of severe pain and spasm is one of the most critical factors (in the opinions of Terry Young, Katie Montoya and Dr. Machanic) that make the Claimant unemployable.

29. The Claimant's treating physicians are unanimous in their opinions that the Claimant is severely injured. No doctor other than the Respondents' IME physician, Dr. Lesnak, has stated any doubts about the Claimant's veracity. In fact, the FCE showed that the Claimant tried his best to complete the assigned tasks but was simply unable because of his injuries.

Ultimate Findings

30. To a considerable degree, resolution of the PTD issue rests heavily on credibility determinations. As found herein above, the opinions of ATP Dr. Machanic, Vocational Expert Katie Montoya, and OTR Terry Young are highly persuasive, credible and dispositive of the issue of PTD. Indeed, the alternative opinion of Respondents' vocational expert, Sara Nowotny, wherein she postulates that Claimant would be PTD if Nowotny accepted the FCE findings and ATP Dr. Machanic's opinions, further supports the fact that Claimant is permanently and totally disabled.

31. The ALJ makes a rational choice, based on substantial evidence, to accept the opinions of ATP Dr. Machanic, Vocational Expert Katie Montoya, and OTR Terry Young, and to reject all opinions to the contrary, especially the opinions of Dr. Lesnak.

32. The Claimant's established 25% whole person permanent medical impairment is one significant factor, coupled with the fact that he is unemployable because of his spasms and physical limitations, are significant human factors contra-indicating the Claimant's ability to work. The Claimant has proven, by a preponderance of the evidence that he is incapable of earning a wage in the competitive labor market. He has proven that the injury of October 23, 2015 is a significant causative factor of his inability to earn a wage in the competitive job market. Therefore, the Claimant has proven that he is permanently and totally disabled.

33. The Claimant's back injury of 20 years ago is a non-factor. 20 years later, he was able to work full time at heavy work until the injury of October 23, 2015. If anything, the injury of October 23, 2015, aggravated and accelerated a dormant back condition.

34. During the hearing, the parties stipulated that Respondents would pay the costs of all authorized, causally related and reasonably necessary post-MMI medical maintenance benefits, which would be incurred after the MMI date of July 25, 2017.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be ad evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of ATP Dr. Machanic, Vocational Expert Katie Montoya, and OTR Terry Young are highly persuasive, credible, consistent with the totality of the evidence and dispositive of the issue of PTD. Indeed, the alternative opinion of Respondents' vocational expert, Sara Nowotny, wherein she postulates that Claimant would be PTD if Nowotny accepted the FCE findings and ATP Dr. Machanic's opinions, further supports the fact that Claimant is permanently and totally disabled. As further found, the opinions of Dr. Lesnak are **not** credible (with the exception of his opinion that the Claimant's condition had worsened since 2016) because, among other

findings herein above, the critical inconsistency between his 2016 opinion that the Claimant could **not** work, and his 2018 opinion that the Claimant's condition has worsened, but the Claimant can now work negates his ultimate opinions on employability.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of ATP Dr. Machanic, Vocational Expert Katie Montoya, and OTR Terry Young, and to reject all opinions to the contrary, especially the opinions of Dr. Lesnak.

Permanent Total Disability

c. An employee is permanently and totally disabled if he is unable to earn any wages in the same or other employment. § 8-40-201(16.5) (a) C.R.S. The "full responsibility rule," applicable to claims for permanent total disability benefits, provides that the industrial injury need not be the sole cause of a claimant's permanent total disability. Under the rule, when an "employer hires an employee who, by reason of a pre-existing condition or by reason of a prior injury, is to some extent disabled, he takes the man (person) with such handicap," and the employer is liable for a "full award of benefits" if a subsequent industrial injury combines with the pre-existing disability to produce permanent total disability. See *United Airlines, Inc. v. Indus. Claim Appeals Office,* 993 P.2d 1152, 1154-1155 (Colo. 2000). The only exception to the established rule is where the industrial injury is not a significant causative factor in the claimant's disability. See *Seifried v. Indus. Comm'n,* 736 P.2d 1262 (Colo. App. 1986) [the claimant suffered from several pre-existing ailments, and the treating physician opined

that the claimant had reached maximum medical improvement, and concluded that the claimant remained disabled because of non-occupational factors].; *Lindner Chevrolet v. Indus. Claim Appeals Office,* 914 P.2d 496 (Colo. App. 1995). *See also Holly Nursing Care Center v. Indus. Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999).As found, the Claimant meets the statutory and case law criteria for PTD. He has established that his admitted, compensable injury of October 23, 2015, is a significant causative factor of his PTD

d. In determining whether a claimant is permanently and totally disabled, an ALJ may consider the claimant's "human factors," including the claimant's age, work history, general physical condition, education, mental ability, prior training and experience, and the availability of work that the claimant could perform. *Weld County School District RE-12 v. Bymer,* 955 P.2d 550 (Colo. 1998*); Joslin's Dry Goods Co. v. Indus. Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001). The term "any wages" means more than zero wages. *See Lobb v. Indus. Claim Appeals Office,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. Indus. Claim Appeals Office,* 894 P.2d 42 (Colo. App. 1995). The critical test is whether employment exists that is reasonably available to a claimant under his or her particular circumstances. *Weld County School Dist. Re-12 v. Bymer*, *supra*. This means whether employment is available in the competitive job market, which a claimant can perform on a reasonably sustainable basis. *See Joslins Dry Goods Company v. Indus. Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001). As found, the Claimant has proven that he is incapable of earning wages in the competitive labor market, on a reasonably sustainable basis, and there is no work reasonably available to him. Permanent total disability does not need to be proven by medical evidence. *See Baldwin Construction, Inc. v. Indus. Claim Appeals Office,* 937 P.2d 895 (Colo. App. 1997). *Calvert v. Roadway Express, Inc.,* W.C. No. 4-355-715 [Indus. Claim Appeals Office (ICAO), November 27, 2002]; *In re Claim of Randy Blocker v. Express Personnel,* W.C. No. 4-622-069-04 (ICAO, July 1, 2013). As further found, the admitted injury of October 23, 2015 is a significant causative factor of the Claimant's PTD.

Post-MMI Medical Maintenance Benefits

e. An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Grover v. Indus. Comm'n, supra*. Such evidence may take the form of a prescription or recommendation for a course of medical treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer v. Indus. Claim Appeals Office, supra*. An injured

worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity. *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). Treatment to **improve** a claimant's condition does **not** fall under the purview of *Grover* benefits. *Shalinbarger v. Colorado Kenworth, Inc.,* W.C. No. 4-364-466 [Indus. Claim Appeals Office (ICAO), March 12, 2001]. As found, during the hearing, the parties stipulated that the Respondents will pay the costs of all authorized, causally related and reasonably necessary post-MMI medical maintenance benefits.

Burden of Proof

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden on the issue of.permanent total disability.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay the costs of all authorized, causally related and reasonably necessary post-maximum medical improvement medical maintenance care and treatment, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Respondents shall pay the Claimant permanent total disability benefits at the rate of $610.71 per week from July 25, 2017 and continuing for the rest of the Claimant's natural life.

C. Respondents are entitled to a credit for all permanent partial disability benefits paid pursuant to the Final Admission of Liability, dated August 24, 2017.

D. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts due and not paid when due.

DATED this_____day of February 2018.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

CERTIFICATE OF SERVICE

I hereby certify that I have sent true and correct copies of the foregoing **Full Findings of Fact, Conclusions of Law and Order** on this_____day of February 2018, electronically in PDF format, addressed to:

Division of Workers' Compensation
cdle_wcoac_orders@state.co.us

_____
Court Clerk

Wc.ord

ISSUES

- Did Claimant prove by a preponderance of the evidence she sustained a compensable injury on January 9, 2017?

- If the claim is compensable, is Claimant entitled to reasonably necessary and related medical benefits, including three office visits to Southern Colorado Clinic in January 2017 and associated mileage reimbursement?

STIPULATIONS

If the claim is compensable, Southern Colorado Clinic is an authorized provider.

The parties reserved the issues of temporary disability benefits, whether the right of selection passed to Claimant, and whether other providers are authorized.

Claimant's average weekly wage is $457.72.

FINDINGS OF FACT

1. Claimant worked for Employer for several years as an overnight merchandise stocker. Her duties include pulling boxes and items from shelving units in the back of the store and stocking items for retail sale. The job requires a significant amount of lifting, bending, climbing ladders, standing, and walking.

2. At approximately 9:30 PM on January 9, 2017, Claimant was in the back of the store pulling boxes of inventory. She was standing beside a steel shelving unit and bent over to retrieve a box from the bottom shelf. A coworker was on the other side of the shelving unit moving boxes on the top shelf. The top shelf is 7 feet 4 inches from the floor, and several boxes on the top shelf were stacked on top of other boxes. The coworker inadvertently knocked a box off the top shelf, which fell and struck Claimant in the low back.

3. There is conflicting evidence regarding the size and weight of the box. Claimant estimated the box was 24 inches by 24 inches and weighed approximately ten pounds. Ms. Gonzales, the assistant manager, estimated by box was 12 inches by 12 inches and weighed "between four and five pounds." Ms. Madrill testified the box weighed 4.5 pounds. The ALJ does not consider the exact dimensions of the box to be dispositive and finds it likely weighed approximately 5 pounds.

4. Immediately after being struck by the falling box, Claimant felt a sharp pain in her low back. After she stood up, she had difficulty standing and walking. Claimant reported the incident to her manager and completed an incident report. Claimant told her manager she wanted to go to the emergency room, but he could not take her because he

could not get another manager to cover the store for several hours.[1] So Claimant clocked out and went home.

5. Claimant's pain was "a little bit better" the next day, so she returned to the store for her regular shift. She was allowed to "do something light" at her request. Claimant's back pain increased during the shift, making it increasingly difficult to perform her duties. She finished her shift at 6:00 AM but asked her manager to make arrangements for her to see a doctor.

6. Before going to urgent care later that morning, Claimant was summoned to a meeting with several managers. One of the managers indicated Employer would likely deny the claim because Claimant had several prior work-related injuries. The managers questioned Claimant about what she could have done differently to avoid the accident. Claimant was upset by this encounter because she had done nothing to trigger the incident.

7. Employer referred Claimant to Southern Colorado Clinic, where she saw PA-C Terry Schwartz. At her initial visit on January 11, 2017, she described the incident as "box fell off shelf above her and struck her in the lower back sacrum as she was bent over trying to pick up a box, knocked her to her knees, after sitting a little while was able to get back up. . . . Progressively more lower back pain when she tried to return to work." Claimant maintained a "guarded" posture, and was also visibly upset by her perception that Employer blamed her for the accident. Physical examination revealed marked tenderness over the sacrum on the left side and the paraspinal muscles at approximately L4-5. There was no obvious ecchymosis or abrasion. PA-C Schwartz remarked "it appears the blow to the lower back now has set off lower lumbar spasms, probably trying to splint low back from the initial injury. Though I cannot identify a contusion, [the] area is quite tender in addition now into [the] surrounding region." He diagnosed "acute low back pain – struck in lower sacrum by falling box." PA-C Schwartz prescribed 800 mg of ibuprofen three times per day for pain and cyclobenzaprine to relieve muscle spasms. He also imposed work restrictions of no lifting from the floor, 3 pounds from waist to shoulders, and recommended she be allowed to change positions frequently for pain relief. Finally, he referred Claimant to a psychologist, Dr. Herman Staudenmayer, to address anxiety and other emotional issues that he believed "sets her up for delayed recovery."

8. Employer provided modified duties consistent with the restrictions and Claimant has remained at work in a modified capacity since the accident.

9. Claimant had a psychological evaluation with Dr. Staudenmayer on January 17, 2017. His impressions included "emotional dysfunction from the injury, including depression, anxiety, and anger." Psychological testing suggested a tendency to somaticize and overreport symptoms. Dr. Staudenmayer diagnosed "adjustment disorder

[1] Per Employer's policy, a manager generally accompanies the injured worker to their first injury-related medical appointment.

with mixed anxiety and depressed mood" and "somatic symptom disorder." He recommended cognitive behavioral therapy and biofeedback.

10. Claimant returned to PA-C Schwartz on January 18, 2017. She had left work early the night before because of increased pain. She also noticed "pins and needles on her thigh and R knee." She was having difficulty standing to fold clothes at work and had to sit down frequently. On exam, she was tender throughout the L4-5, S1 and SI joint regions. She was scheduled to start physical therapy on January 20. PA-C Schwartz ordered lumbar x-rays, which showed no abnormalities. He indicated "I am having difficulty connecting the MOI with her progression of symptoms/complaints. I discussed restrictions and explained that with this injury cannot justify putting her completely off work. She indicated she would like to be, but the notes she 'can't afford' to be off. Finally negotiated a reduced 4 hr shift for a while." He prescribed Lidoderm patches, continued the ibuprofen and cyclobenzaprine, and recommended Claimant continue home exercises.

11. Claimant started physical therapy on January 20 as expected. The therapist noted, "symptoms are consistent with the diagnosis and stated history of lumbar contusion and strain injury."

12. Claimant followed up with PA-C Schwartz again on January 25, 2017. She was still having back pain, but it had improved to 4/10. She described several injury-related and personal factors causing stress and anxiety. She had seen Dr. Staudenmayer twice and had another appointment with him in two weeks. PA-C Schwartz noted they "spent a few minutes talking about emotions/psychological issues affecting physical conditions. She notes 'a lot of nausea, anxiety, worry' and notes direct relationship to her levels of back pain and inability to function. I believe biofeedback could really help her; she is to begin tomorrow." PA-C Schwartz concluded, "the patient has so much psychological issues, that it will be difficult to get her physically back to baseline." He recommended reducing physical therapy and adding massage once per week. Her next appointment was scheduled for February 15, 2017.

13. Respondents filed a Notice of Contest on January 27, 2017.

14. After Respondents formally denied the claim, all further treatment was denied and Claimant's scheduled appointments were cancelled.

15. Claimant had a history of intermittent low back problems predating the January 9, 2017 work accident. In October 2012 she told her primary care providers she had been experiencing back pain for approximately two years. She also reported that her left leg would give out occasionally due to low back pain. She was having left-sided low back pain with radiating pain down the left leg to the toes. Lumbar x-rays were unremarkable. Claimant received some chiropractic treatment but discontinued care because it was "not helping."

16. She pursued treatment again in April 2014 for low back pain and left leg radicular-type symptoms. She reported "intermittent" back pain since her last evaluation

for back pain in 2012, but her symptoms had worsened over the past several weeks. She had a lumbar MRI on April 30, 2014 which showed an L5-S1 lateral disc protrusion abutting and possibly compressing the left L5 nerve. Claimant attended physical therapy for approximately three weeks, with the last documented session on June 13, 2014. The PT records reflect a general pattern of improvement although the ALJ could not find a formal discharge summary in the record.

17. Claimant received no further treatment for her low back from June 2014 until the work accident in January 2017. The only documentation of any potentially related issues during that interval is a July 14, 2015 physical therapy note (for an unrelated condition) which notes: "she has felt shooting pain down her legs at times, but not often."

18. Claimant resigned her position with Employer on May 26, 2014, citing ongoing low back pain. She was re-hired at full duties in September 2014 and continued working until the present.

19. Claimant underwent two IMEs in connection with the January 2017 injury claim. Dr. Eric Ridings performed an IME for Respondents, and Dr. Miguel Castrejon performed an IME for Claimant.

20. Claimant saw Dr. Ridings on March 20, 2017. She estimated top shelf was 7 feet off the floor[2] and was confident the box that struck her was stacked on at least one, and possibly two, other boxes. She demonstrated her bent-over position at the time of the accident, and Dr. Ridings measured her back was 3.5 feet from the floor. He determined the box must have fallen at least 4.5 feet before it struck Claimant's back. Based on this information, Dr. Ridings opined:

> [Claimant] sustained a contusion to the lumbosacral region. This mechanism [as described by Claimant] could cause a lumbosacral strain, or less likely a low lumbar disc injury. The likelihood of either injury being severe enough to require medical treatment is directly related to the kinetic energy imparted to the patient's back by the falling box, and therefore to the weight of the box and the distance that it fell. If the box was more or less as described by [Claimant] today, it may have caused a lumbar strain, and therefore evaluation and treatment as was initiated under this claim prior to its denial would be reasonable, necessary, and accident related.

21. Dr. Ridings also noted he had received conflicting information from Respondents' counsel before the IME. According to Respondents' counsel, Employer stated the box weighed only 4.5 pounds, and fell only 1.7 feet before impacting Claimant. Dr. Ridings stated, "if this information from the employer is accurate, then in my opinion such an incident could not cause any injury to the patient's back that would require any medical evaluation or treatment."

[2] Employer's personnel manager, Yvonne Madrill, credibly testified she measured the shelving unit with a tape measure, and the top shelf is 7' 4" from the floor.

22. Dr. Castrejon evaluated Claimant on September 20, 2017. Dr. Castrejon noted Claimant's description of the incident to PA-C Schwartz, Dr. Ridings, and himself were "nearly identical." He thought it inappropriate to rely on unsubstantiated information from Employer transmitted through counsel regarding the mechanism of injury. Dr. Castrejon noted Claimant presented as a "straightforward" and sincere individual, who "has experienced a distinct injury that has been complicated by the development of chronic pain syndrome." Dr. Castrejon opined Claimant suffered "a straining injury to the lumbar spine," and "an aggravation of the underlying degenerative condition that is resulting in radiculitis involving the left lower limb." He recommended additional treatment including a lower extremity EMG, a surgical consultation, and psychological treatment aimed at addressing Claimant's chronic pain syndrome.

23. Dr. Ridings testified at hearing for Respondents. Based on the testimony at hearing, Dr. Ridings realized the true mechanism of injury was an "intermediate" scenario between those discussed in his report, *i.e*., the box fell at least 4.5 feet but weighed only 4.5 pounds. He opined "I would expect that you would have a visible bruise the day afterward if the force was enough to have actually caused an injury."

24. Dr. Castrejon testified in a post-hearing deposition dated January 10, 2018 to elaborate on the opinions expressed in his IME report. Although Dr. Castrejon had known of Claimant's preinjury back problems at the time of his IME, he did not have medical records documenting the prior history and treatment. He reviewed those records before the deposition and opined they did not change his opinions.

25. Dr. Castrejon's opinions regarding causation are credible and persuasive.

26. Claimant proved by a preponderance of the evidence she suffered a compensable industrial injury on January 9, 2017.

27. Claimant proved by a preponderance of the evidence that the treatment she received from Southern Colorado Clinic's between January 11, 2017 and January 25, 2017, the treatment with Dr. Staudenmayer, and ancillary mileage reimbursement, was reasonably necessary and related to the January 9, 2017 injury.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must prove she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S.; *see, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to

find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S.

If an industrial injury aggravates, accelerates, or combines with a preexisting condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-91-616-03 (ICAO, September 9, 2016

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1), C.R.S. In other words, an "accident" is the cause, and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work and caused symptoms does not necessarily establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (ICAO Aug. 17, 2016). Compensable medical treatment includes evaluations or diagnostic procedures to investigate the nature or extent of the industrial injury. *Garcia v. Express Personnel*, W.C. No. 4-587-458 (ICAO, August 24, 2000).

Even a minor "strain" or a "temporary exacerbation" of a pre-existing condition can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused her to seek medical treatment. The ICAO's decision in *Garcia v. Express Personnel*, W.C. No. 4-587-458 (ICAO, August 24, 2004) is instructive regarding the minimal extent of an injury that can satisfy the basic threshold requirement of compensability. In *Garcia*, the claimant felt pain in her abdomen and hip while lifting a piece of glass at work. The employer referred the claimant to Dr. Caughfield, who diagnosed a lumbar strain, but opined she had already reached MMI. The ALJ found that the claimant suffered a "minor back sprain," but also found the sprain had "resolved" within five days of the incident. The ALJ denied the claim on the theory that the claimant suffered no "injury." The ICAO reversed and held that the claimant had established a compensable injury as a matter of law:

> Where pain triggers the claimant's need for medical treatment, the claimant has established a compensable injury if the industrial injury is the cause of the pain. The term medical treatment includes diagnostic procedures required to ascertain the extent of the industrial injury.
>
> Here, the ALJ found there was an industrial accident which caused a minor lumbar strain. Further, the ALJ determined that when the injury was reported to the employer, the employer offered the claimant medical services from Dr. Caughfield, which the claimant accepted. Although Dr.

> Caughfield placed the claimant at MMI based upon his [ ] examination, the ALJ found with record support that Dr. Caughfield diagnosed a lumbar strain. Thus, the ALJ's findings compel the conclusion the claimant established a compensable injury which entitled her to an award of medical benefits. (Citations omitted).

Similarly, *Conry v. City of Aurora*, W.C. No. 4-195-130 (ICAO, April 17, 1996) involved a minor episode that was found to establish a compensable claim as a matter of law. In *Conry*, the claimant suffered from pre-existing asthma. One day she walked into work and encountered a "strong smell of ammonia." As a result, she "began wheezing and became short of breath." The claimant's supervisor advised that she go to the doctor. There is no indication in the decision that the claimant required any treatment other than that single physician visit. The ALJ denied the claim because the ammonia exposure merely caused a "temporary exacerbation" of the claimant's pre-existing asthma. She had no ongoing sequela nor required any additional treatment. Therefore, the ALJ determined the claimant failed to prove that she suffered a compensable "injury."

The ICAO reversed and found the claimant had proven compensability as a matter of law. The Panel stated "the claimant's industrial exposure to ammonia caused her to experience respiratory symptoms for which she needed and received medical treatment. . . . [T]hese findings compel a conclusion that the claimant suffered a compensable aggravation of her pre-existing condition [asthma]. Therefore, we reverse the ALJ's determination that the claimant did not suffer a compensable injury."

As found, Claimant proved she suffered a compensable injury on January 9, 2017. The persuasive evidence demonstrates a box of product fell from a shelf directly onto Claimant's back while she was stooped over. The shelf was 7' 4" high, and the box that fell was most likely stacked on top of at least one other box. Even if the forces involved were relatively minor, they were sufficient to evoke symptoms in Claimant's low back. When the pain persisted, Claimant reasonably requested medical treatment and Employer obliged. Her clinical presentation at the initial visit was consistent with an acute episode of low back pain. Although PA-C Schwartz saw no obvious contusion, he noted she was "quite tender" where the box struck her and concluded the incident likely "set off" back spasms. PA-C Schwartz diagnosed "acute" low back pain and reasonably prescribed conservative measures including diagnostic imaging, medications and physical therapy.

Although Claimant had a history of low back problems with episodes of similar symptoms in 2012 and 2014, there is no persuasive evidence that she was pursuing or needed any treatment for those issues immediately before the incident in January 2017. The last documented treatment for the preexisting condition was in June 2014, nearly two and one-half years before the work accident. The ALJ finds it unlikely that Claimant was having significant symptoms during that interval, particularly since she has not otherwise been reticent to pursue treatment when she feels it warranted. Furthermore, Claimant would not likely have been able to maintain her relatively physically demanding job had her back been symptomatic. The most likely scenario is Claimant suffered a recurrence of back pain as a direct and proximate result of the incident on January 9, 2017. Moreover,

mere fact that emotional issues may have played a role in amplifying and perpetuating Claimant's perception of her pain does not negate the fact that the incident at work was the catalyst for her symptoms and the proximate cause of her need for treatment in January 2017.

Respondents have raised legitimate questions regarding the full extent of Claimant's injury and whether her ongoing need for treatment is related to the compensable injury. This order does not address those issues, for two reasons. First, the parties only asked the ALJ to address whether Claimant suffered a compensable injury in the first instance, and if so, whether Respondents are liable for the treatment she received from Southern Colorado Clinic. Second, Respondents' argument essentially invites a determination that Claimant is at MMI, which exceeds the ALJ's jurisdiction. *See McCormick v. Exempla Healthcare*, W.C. No. 4-594-683 (January 27, 2006) (once there has been an initial determination of a compensable injury, an ALJ's finding that the claimant requires no further treatment constitutes an impermissible constructive determination of MMI).

B. Medical benefits

Respondents are liable for medical treatment from authorized providers that is reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). As found, Claimant proved by a preponderance of the evidence that the treatment she received through Southern Colorado Clinic in January 2017 is reasonable, necessary and related to her January 9, 2017 injury.

ORDER

It is therefore ordered that:

1. Claimant's claim for a January 9, 2017 industrial injury is compensable.

2. Respondents shall pay for reasonably necessary medical treatment to cure and relieve the effects of the January 9, 2017 injury, including, but not limited to, the January 2017 charges from Southern Colorado Clinic, the treatment with Dr. Staudenmayer, and ancillary mileage expense.

3. Claimant's AWW is $457.72.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that treatment of his cervical symptoms (including epidural steroid injections recommended by Dr. John Prall) constitutes reasonable medical treatment necessary to cure and relieve claimant from the effects of the August 2, 2016 work injury.

- Whether claimant has proven by a preponderance of the evidence that the umbilical hernia repair recommended by Dr. Andrew Morse constitutes reasonable medical treatment necessary to cure and relieve claimant from the effects of the August 2, 2016 work injury.

FINDINGS OF FACT

1. Claimant began working for employer in June 2016 as a mechanic. On August 2, 2016, claimant was driving his vehicle on I-70 to pick up parts for employer. Another vehicle struck claimant's vehicle causing claimant to lose control, resulting in the vehicle rolling four or five times. This is an admitted claim. Claimant testified that at the time of the injury he knew that he had injured his back and ribs. In addition, claimant felt pain in his neck and left knee.

2. Immediately following the August 2, 2016 motor vehicle accident (MVA), claimant was transported by ambulance to St. Mary's Hospital for treatment. Claimant testified that he was informed that his left lung was punctured and that he had broken ribs. Claimant was initially hospitalized for five days.

3. On August 2, 2016, claimant underwent various computed tomography (CT) scans, including a CT scan of his cervical spine. That CT scan showed no acute injury. The findings did show spondylosis with osteophyte formation at the C5-C6 and C6-C7 levels with facet arthritis throughout the mid and lower cervical spine.

4. On August 4, 2016, a magnetic resonance image (MRI) of claimant's cervical spine showed moderate acquired central canal stenosis at the C4-C5 level. That same MRI showed a broad based annual bulging and bilateral uncovertebral joint osteophyic spurring causing ventral cord flattening and mild acquired central canal stenosis at the C6-C7 level.

5. The medical records entered into evidence indicate that claimant reported parasthesia in his bilateral lower extremities and his right upper extremity. These same records identify claimant's injuries as left rib fractures on ribs 5-10; a left pulmonary contusion; left L2-L4 transverse process fractures; and abrasions. Claimant's abdomen was examined and identified as "soft without significant tenderness, masses,

organomegaly or guarding". Elsewhere in the initial medical records, Dr. David Pettit identified "a tiny pneumothorax which does not need a chest tube at this time". Claimant was discharged from St. Mary's Hospital on August 7, 2016.

6. Thereafter, claimant began treating with his authorized treating physician (ATP), Dr. Michael Hughes. Claimant was first seen by James Haraway, NP with Dr. Hughes' practice on August 15, 2016. Mr. Haraway recorded that claimant was experiencing chest pain, shortness of breath, abdominal pain, low back pain with tingling and numbness in his lower extremities, neck pain, and bilateral shoulder pain.

7. Claimant testified that after being seen by Mr. Haraway he continued to have difficulty breathing. When his breathing issues did not improve, claimant sought treatment at Community Hospital on August 25, 2016. On that date, a CT scan of claimant's chest was taken and showed a large pleural effusion in claimant's left lung. As a result, claimant was hospitalized at Community Hospital from August 25, 2016 to August 27, 2016.

8. A second MRI of claimant's cervical spine was taken on August 25, 2016 that showed degenerative disc disease with minor disc bulging at the C6-C7 level.

9. Respondents admitted for the August 2, 2016 injury and filed a General Admission of Liability (GAL) on November 21, 2016.

10. Claimant was successful in requesting a change of physician and on November 22, 2016, claimant was first seen by his new ATP, Dr. Craig Stagg. At that time claimant reported pain in his neck, mid back, and low back. In addition, claimant reported numbness into his chest area and down into his arms. On that same date, Dr. Stagg examined claimant's abdomen and recorded that it was soft, non-tender with no guarding or rebound and no tenderness to palpation.

11. Dr. Stagg referred claimant to Dr. Ellen Price for chronic pain management. Claimant was first seen by Dr. Price on January 5, 2017. Dr. Price noted that claimant was experiencing pain in his back, left leg, and left knee. Dr. Price recommended and administered acupuncture and recommended that claimant continue with physical therapy.

12. On May 10, 2017, claimant underwent surgery on his lumbar spine. Dr. John Prall performed partial laminectomy, medial facetectomy and foraminotomy at L3 and L4; a revision partial laminectomy, medial facetectomy and foraminotomy at L4-L5, removal of hardware; and posterior lateral fusion at L4-L5. Claimant testified that following the May 10 2017 surgery he felt an 80% improvement in his back pain. However, claimant noted an increase in his left knee pain.

13. Following the May 10, 2017 surgery claimant was instructed to wear a back brace. On May 12, 2017, an x-ray was taken of claimant's abdomen. That x-ray did not show any indication of a hernia.

14. On May 26, 2017, respondents sent claimant for an independent medical examination (IME) with Dr. Carlos Cebrian. In connection with the IME, Dr. Cebrian reviewed claimant's medical records, obtained a medical history, and performed a physical examination of claimant. Following the IME, Dr. Cebrian issued a report in which he opined that claimant's cervical spine symptoms are not related to the August 2, 2016 work injury.

15. On June 8, 2017, claimant returned to Dr. Stagg complaining of sharp pain and tenderness on his left side and pain in his mid-back when taking deep breaths. After consultation with Dr. Prall, Dr. Stagg instructed claimant to seek treatment at the emergency department at Community Hospital to rule out a pulmonary embolus. On that same date a CT scan of claimant's abdomen showed no abnormalities. The report makes no mention of a hernia.

16. Due to claimant's continued complaints of right rib pain and low back pain, Dr. Stagg referred claimant to Dr. Andrew Morse for consultation. Claimant was seen by Dr. Morse on June 19, 2017. Dr. Morse examined claimant and noted a small umbilical hernia.

17. Claimant testified that he has had no symptoms related to the hernia, but he believes he did not have a hernia prior to the work injury. Claimant further testified that he believes that the hernia was caused by the August 2, 2016 work injury

18. On July 11, 2017, claimant returned to Dr. Prall and indicated that he "would like to revisit the issue of his neck". On that date, claimant reported to Dr. Prall that he had issues with imbalance, discoordination with his hands including changes to his handwriting, dropping things, with intermittent numbness and tingling in his upper extremities. Dr. Prall opined that claimant's symptoms were indicative of myelopathy and ordered an MRI of claimant's cervical spine.

19. On July 18, 2017, the cervical spine MRI showed mild canal narrowing at the C4-C5, C5-C6, and C6-C7 levels secondary to posterior disc complexes; multilevel neural foraminal narrowing most noticeable at the C5-C6 level; and multilevel degenerative disc disease with unconvertebral and facet arthropathy. It was noted in the MRI report that these findings were not significantly changed from the prior cervical MRI.

20. On July 20, 2017, claimant returned to Dr. Stagg. In the medical record of that date, Dr. Stagg noted that Dr. Prall had ordered a cervical MRI to rule out compression and myelopathy. Dr. Stagg opined that those diagnoses, if found, would be related to claimant's work injury.

21. Based upon the MRI results, Dr. Prall recommended claimant undergo bilateral transforaminal ESIs at the C5-C6 and C6-C7 levels.

22. On August 17, 2017, Dr. Brian Mathwich reviewed the request for C5-C6 and C6-C7 ESIs. Dr. Mathwich deferred to the opinions of Dr. Cebrian as indicated in the IME report and agreed that claimant's cervical spine symptoms are not related to

the work injury. Based upon Dr. Mathwich's report respondents denied the requested ESIs.

23. On August 22, 2017, Dr. Stagg opined that given the findings on the cervical CT scans and MRIs that the proposed cervical ESIs are appropriate treatment for claimant. Dr. Stagg specifically opined that claimant's cervical injury is work related.

24. On September 19, 2017, claimant returned to Dr. Stagg. On that date, Dr. Stagg referred claimant to Dr. Joel Dean for electrodiagnotic studies of claimant's upper extremities related to claimant's possible cervical spine myelopathy.

25. On September 27, 2017, claimant returned to Dr. Morse. On that date, Dr. Morse identified a palpable periumbilical hernia. Dr. Morse recommended claimant undergo repair of the hernia.

26. On September 29, 2017, Dr. Jeffrey Raschbacher reviewed the request for hernia repair. Dr. Raschbacher noted that there were no prior reports of a hernia in claimant's medical records. Dr. Raschbacher noted that there is "no latency of many, many months for developing an umbilical hernia". Therefore, Dr. Raschbacher opined that the hernia was not caused by or related to the work injury. Based upon Dr. Raschbacher's report respondents denied the recommended hernia repair.

27. Dr. Cebrian prepared a supplemental IME report on November 15, 2017 in which he opined that claimant's cervical spine complaints are not causally related to the August 2, 2016 work injury. In support of this opinion Dr. Cebrian noted that initial findings related to claimant's cervical spine were muscular in nature and claimant did not complain of cervical spine pain for several months. Dr. Cebrian also opined that claimant likely sustained a cervical strain/contusion at the time of the work injury, but claimant does not need treatment for that condition at this time.

28. In that same supplemental report, Dr. Cebrian opined that claimant's umbilical hernia is not causally related to the August 2, 2016 work injury. In support of this opinion Dr. Cebrian noted that there is no report of a hernia until June 19, 2017 and in Dr. Cebrian's opinion it is unlikely for there to be a 10 month delay in the development of a hernia. Dr. Cebrian opined that it is more likely that claimant's umbilical hernia is related to claimant's weight.

29. Dr. Cebrian's testimony by deposition was consistent with his written reports. Dr. Cebrian testified that the two most likely causes of an umbilical hernia are: 1) increased intra-abdominal pressure secondary to obesity and 2) a traumatic evident. Dr. Cebrian explained that hernias caused by increased intra-abdominal pressure occur over a long period of time, while those caused by trauma are symptomatic within days of the trauma. Dr. Cebrian further testified that he believes that claimant's umbilical hernia was caused by increased intra-abdominal pressure secondary to obesity because it took approximately 10 months for the hernia to appear. Dr. Cebrian also testified that claimant's hernia is not causally related to the August 2, 2016 MVA.

30. With regard to claimant's cervical symptoms, the ALJ credits the opinions of Drs. Prall and Stagg over the contrary opinion of Dr. Cebrian and finds that claimant has demonstrated that it is more likely than not that his cervical symptoms are related to the August 2, 2016 MVA. Therefore, the ALJ also finds that claimant has demonstrated that it is more likely than not that treatment of his cervical symptoms (including the recommended ESIs at the C5-C6 and C6-C7 levels) is reasonable medical treatment necessary to cure and relieve him from the effects of the work injury.

31. With regard to the umbilical hernia, the ALJ credits the medical records and the opinions of Drs. Raschbacher and Cebrian and finds that claimant has failed to demonstrate that his hernia was caused by the August 2, 2016 MVA. The ALJ credits Dr. Cebrian's opinion and finds that the more likely cause of claimant's umbilical hernia is increased intra-abdominal pressure secondary to obesity.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting

disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, claimant has demonstrated by a preponderance of the evidence that treatment of his cervical spine symptoms (including the recommended ESIs) constitutes reasonable medical treatment necessary to cure and relieve claimant from the effects of the August 2, 2016 injury. As found, the opinions of Drs. Prall and Stagg are credible and persuasive on this issue

6. As found, claimant has failed to demonstrate by a preponderance of the evidence that the recommended umbilical hernia repair is reasonable medical treatment necessary to cure claimant from the effects of the August 2, 2016 injury. As found, the medical records and the opinions of Drs. Raschbacher and Cebrian are credible and persuasive on this issue.

ORDER

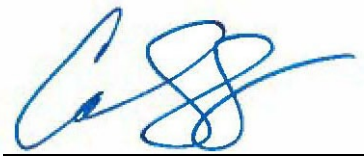
It is therefore ordered that:

1. Respondents shall pay for treatment of claimant's cervical spine symptoms, including the recommended ESIs at the C5-C6 and C6-C7 levels, pursuant to the Colorado Medical Fee Schedule.

2. Claimant's request for umbilical hernia repair is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

Dated: February 23, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after

mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

The issue presented involves Claimant's entitlement to additional medical benefits. The specific question is:

I. Whether Claimant established, by a preponderance of the evidence, that a trial of spinal cord stimulation is reasonable, necessary and casually related to his March 4, 2015 work injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant sustained an admitted injury to his low back on March 4, 2015, while employed as an Engineer with the City of Colorado Springs Fire Department. He slipped on ice and fell to the ground while chasing after a parked firetruck that was also sliding on the ice.

2. Claimant began treating with Dr. Miguel Castrejon on March 13, 2015. Dr. Castrejon described Claimant's low back complaints as a "constant dull to sharp and stabbing pain that extends into the left leg with a tingling sensation…" Electrodiagnostic (EMG) testing revealed "abnormal" results, which were interpreted by Dr. Castrejon as supportive of the "presence of a chronic left L5 radiculopathy…" Dr. Castrejon referred Claimant to Dr. Michael Rauzzino for a neurosurgical opinion.

3. Dr. Rauzzino saw Claimant on March 24, 2015. At the time of this evaluation, Claimant reported low back greater than left leg pain. He also complained of left greater than right leg weakness. Finally, he reported left leg numbness and tingling. Dr. Rauzzino discussed treatment options including physical therapy, injections, and surgery.

4. Conservative care failed prompting Dr. Rauzzino to perform a lumbar decompression and fusion surgery at L5-S1 on May 13, 2015.

5. On June 23, 2015, Claimant returned to Dr. Rauzzino with complaints of "worsening" in his low back with radiation "down his legs." Dr. Rauzzino recommended a longer course of steroids.

6. Claimant saw Dr. Rauzzino on July 14, 2015, during which appointment, Claimant reported persistent "numbness and tingling in his feet and up into the calves and ankles…" Dr. Rauzzino recommended gabapentin for the ongoing numbness and

tingling, as well as physical therapy. Dr. Rauzzino expressed no concerns about plantar fasciitis.

7. Claimant followed-up with Dr. Castrejon on July 23, 2015. During this encounter Claimant reported that the "bottom of [his] right foot [was] painful midfoot to heel and is causing him to limp and not walk as much as he would like" Claimant was encouraged to "roll [his] right foot over a frozen water bottle to see if that will help. He may have a mild plantar fasciitis…" Dr. Castrejon did not refer Claimant to a podiatrist in order to confirm or rule out plantar fasciitis.

8. A lumbar spine x-ray was taken on September 11, 2015 and compared to Claimant's prior study. The interpreting radiologist noted the following: "Compared to the prior study, there is now separation of the plate from the anterior margin of the fusion cage on the extension and neutral views compared to the flexion view. This would be consistent with residual motion at the L5-S1 level and therefore pseudoarthrosis."

9. On September 15, 2015, Dr. Rauzzino reported, "…[Claimant] has some low back aching that is fairly well controlled. His main complaint continues to be numbness and tingling in his legs and feet. He had some of this pain prior to surgery, but this is a bit different and has increased some after surgery…" Dr. Rauzzino recommended an epidural steroid injection "to try to calm down the nerves at L5-S1 given that this is where his pain symptoms are." Dr. Rauzzino added that, "…given the significant amount of collapse and slip he has after correction, this could be something of a stretch injury on the nerves, though this should settle down in a few months…"

10. Dr. Castrejon reviewed new imaging on October 2, 2015 and reported, "…The lumbar MRI did not reveal a significant change. The x-rays, though, document plate separation with motion on flexion and extension that support a nonunion. This is likely the source of his pain. As he is having an increase in left leg pain and paresthesias with some involvement on the right, and in light of the nonunion, I am requesting authorization for proceed with repeat EMG/NCV to evaluate for worsening radiculopathy. I am requesting authorization for lumbar ESI with Dr. Bert Willman…"

11. Claimant returned to Dr. Rauzzino on October 5, 2015 reporting an "increase in low back pain as well as leg radiculopathy, mostly with burning and sharp pain in his feet" six weeks previously. Dr. Rauzzino indicated, "…It is likely that his symptoms are due to an increase in activity, especially the abrupt increase in physical therapy around that time certainly can cause an increase inflammatory response and could lead to some of his symptoms, on top of him abruptly coming off the narcotics was likely not helpful for the patient as well either…He is also set up for an EMG today, which could certainly give us some more information regarding his foot pain…"

12. Dr. Castrejon performed the aforementioned repeat EMG/NCV testing on October 5, 2015. Again, the results were interpreted as abnormal and consistent with the "presence of a chronic bilateral L5 radiculopathy with small fibrillation potentials that

may support post surgical acute irritation." According to Dr. Castrejon the EMG study, "although not definite, suggest[ed] acute to subacute changes at L5 and minimal at S1…" Dr. Castrejon noted Claimant requested a second opinion, and he referred him to Dr. Paul Stanton.

13. Dr. Bert Willman saw Claimant on October 7, 2015 in conjunction with the referral from Dr. Castrejon. Dr. Willman noted that after his surgery in May 2015, Claimant enjoyed some improvement; however, he subsequently experienced a "flare up" described as "increased low back pain with increased burning pain in bilateral lower extremities in a symmetric manner…" Dr. Willman expressed no concern about plantar fasciitis. He administered a L4-L5 epidural steroid injection.

14. Claimant completed a pain questionnaire for Dr. Willman on October 12, 2015. He indicated his current symptoms were "nerve pain in both feet, worse on the left. Dull pain in lower back." Claimant also completed a pain diagram, confirming "numbness" and "burning" in both feet."

15. Dr. Stanton evaluated Claimant on November 5, 2015 as part of his request for a second opinion. Dr. Stanton reported that since the surgery in May, 2015, "…[Claimant] has had ongoing back pain, which he had prior to surgery and new onset of bilateral lower extremity symptoms, left more significant than right with numbness and tingling bilateral feet and toes and burning pain into the calf, which he did not have prior to surgery…" Dr. Stanton's opined that Claimant likely experienced a "nerve root stretch with neuropractic [sic] symptomatology." He elaborated; "…At this point, Michael likely has nerve root stretch from his interbody cage size…" Dr. Stanton noted that revision surgery with bone grafting could be contemplated, but, he concluded that he "would certainly not recommend this until he has had adequate time for his nerve roots to recover…" Dr. Stanton expressed no concern about plantar fasciitis.

16. Claimant saw Dr. Rauzzino on November 10, 2015, after which he noted, "…Michael is requesting referral to a neurologist to see if there is anything else that can be done to help manage his nerve pain and I think it is not unreasonable to have a neurologist assess the paresthesias in his feet; we will defer to Dr. Castrejon to arrange this if he feels this is indicated…" Dr. Rauzzino expressed no concern about plantar fasciitis.

17. Neurologist, Dr. Gregory Ales met with Claimant on December 2, 2015. Upon review of Claimant's medical history, he reported, "…[Claimant] was noted to have atrophy of his left calf and surgery was recommended. He had a fusion in May of this year of the L5-S1 level. He had significantly worsened pain after surgery. The pain was now radiating into his legs whereas it was only localized back pain previously…He did get a second opinion from another orthopedic surgeon [Dr. Stanton] who concluded that there was some stretch injury to the nerve because of the hardware…He describes pain bilaterally in his feet. It often radiates from his back. He has continued low back pain. The pain in his feet is burning. It is generally worse on the left in the lateral portion of the foot and on the right on the medial portion of the foot…"

18. On physical examination, Dr. Ales noted Claimant's left calf measured 1 centimeter smaller than his right calf. Claimant was assessed with "pain and paresthesias in primarily an L5 and S1 distribution bilaterally along with sensory deficits and continued atrophy of his left calf which was identified prior to his surgery…" Dr. Ales reviewed treatment options, noting as follows: "…We briefly discussed a spinal stimulator which would only be considered if his symptoms persisted beyond a year postop…" Dr. Ales did not suspect plantar fasciitis, but rather concluded Claimant was experiencing "…Lower extremity paresthesias likely related to lumbar spondylosis and lumbar fusion. I do not see evidence of polyneuropathy by his examination of another compressive neuropathy."

19. The L4, L5, and S1 dermatomes emanate from the low back and descend down the leg to the feet. (Claimant's Exb. 19).

20. Dr. Castrejon placed Claimant at MMI on January 7, 2016. At the time, he made no mention of plantar fasciitis. He did however; provide impairment ratings for lumbar spine impairment including ratings for sensory loss and motor weakness at the L5 level.

21. Claimant began treating with Dr. Stephen Scheper on February 24, 2016. Dr. Scheper noted Claimant complained of aching midline lumbosacral pain "…with numbness, tingling, burning, and sharp pain in the bilateral feet and ankles in stocking glove distribution." On neurologic exam, Dr. Scheper found diminished sensation to "light touch in the bilateral L4-S1 dermatomes and to pinprick in the bilateral S1, greater than L5 dermatomes – although not following clear dermatomal distribution, his pattern of sensory disturbance is not fully 'stocking glove' in nature…"

22. Dr. Scheper assessed: "Persistent chronic L4-S1 neuropathic pain and L5-S1 weakness status post L5-S1 fusion." He also opined that Claimant's "questionable hardware loosening at the anterior vertebral body of L5 is unrelated to his current symptoms, considering there is no instability of the L5 on S1 vertebral bodies." He agreed with Dr. Stanton that Claimant "likely suffered a nerve traction injury which should be treated conservatively…" Regarding continued treatment, Dr. Scheper recommended repeat epidural steroid injections, and use of prescription medications.

23. Dr. Scheper performed repeat EMG testing on April 7, 2016 and interpreted the results as follows: "Abnormal EMG consistent with bilateral L5-S1 denervation mild on the left and mild bordering on moderate on the right of subacute and chronic nature…Bilateral sural sensory nerves reveal evidence of axonal loss. This is unrelated to pre-DRG radicular pathology and more likely a sensory axonal peripheral neuropathy in nature."

24. On April 27, 2016, Dr. Scheper saw Claimant in follow-up for "…chronic low back pain and bilateral foot pain and sensory disturbance persistent after L5-S1 fusion on May 2015." During this examination, Claimant reported increased numbness in his right heel but denied symptoms through the calf or distally through the foot. Dr.

Scheper assessed Claimant with "[c]hronic lumbosacral neuritis after L5-S1 fusion, versus peripheral neuropathy nerve pain in the bilateral plantar feet. He noted the EMG as being consistent with "mild, latent, subacute-chronic radiculopathy with evidence of reinnervation AND rather severe sensory axonal peripheral neuropathy." Finally, he noted Claimant's "[l]ow back pain is better" and the [i]ntensity of leg symptoms is mildly improved with high-dose Lyrica and Cymbalta." Dr. Scheper expressed no concern about plantar fasciitis.

25. Respondents retained physician, Dr. Nicolas Olsen to perform an independent medical examination (IME). Dr. Olson evaluated Claimant on May 5, 2016. Dr. Olson completed a records review, performed an examination and issued a report concerning his findings. In his report, Dr. Olson documents what he believed to be findings consistent with a diagnosis of plantar fasciitis namely the presence of "point tenderness . . . centered around the anterior aspect of both calcaneus, right greater than left" along with numbness "overlying the calcaneus in the right foot." According to Dr. Olson, Claimant's physical examination was "strongly suggestive of bilateral plantar fasciitis accounting for his burning foot pain." Dr. Olson opined that Claimant was not a candidate for "any kind of stimulator" as he had "no clear signs of radiculopathy and his foot pain was not associated with his lumbar complaints so as to warrant such a device.

26. On June 6, 2016 Dr. Scheper reported; "…It is reasonable for [Claimant] to undergo another surgical opinion now one year after his surgery. More importantly, I think evaluation for spinal cord stimulator trial is appropriate."

27. Dr. Jeffrey Jenks performed a Division Independent Medical Examination (DIME) on June 14, 2016. In his DIME report, Dr. Jenks notes: "…Presently, [Claimant] describes bilateral lumbosacral pain with radiation into the postural lateral aspects of both legs to his feet. He describes weakness in both legs." (Id. at 88). Dr. Jenks diagnosed Claimant with "[s]tatus post L5-S1 fusion with ongoing severe low back and bilateral leg pain." He agreed with Dr. Castrejon's date of MMI; however, added, "I would recommend that he be evaluated for placement of a spinal cord stimulator. If this would occur that [sic] his claim should be reopened." Dr. Jenks expressed no concern about plantar fasciitis.

28. Dr. Kevin Schmidt examined Claimant on July 20, 2016 and noted, "…Michael currently reports 'aching' low back pain and 'burning, pins and needles' foot pain beginning at mid foot through all toes…" Dr. Schmidt reported, "…Michael and I discussed the possibility of spinal cord stimulation. I feel he is a reasonable candidate for a trial of this and feel it would likely improve his foot symptoms and also has a chance to improve his low back symptoms…" Dr. Schmidt expressed no concern about plantar fasciitis.

29. Dr. George Frey examined Claimant on August 25, 2016. In his report from this encounter, Dr. Frey noted: "…He had surgery with Dr. Rauzzino. Sx were all LBP pre op. 'From day one I had severe leg pains in BLE equally.' He was placed on steroids. The sx have now settled into the sole of the feet, and medially and heel.

Severe LBP. There is swelling in the feet and stiffness in the thighs and knees…" Dr. Frey concluded; "…In summary, Michael has an unclear pain generator at this point. He (sic) sx may represent a CRPS or perhaps a persistent L5 radiculopathy. EMG offers some support for this. A Dx SNRB [diagnostic selective nerve root block] would be helpful to better define this. If this is more the latter, we could consider (remotely) the option of a revision decompression. If this is CRPS then an SCS [spinal cord stimulation] may be of benefit. Dr. Frey expressed no concern about plantar fasciitis.

30. Dr. Schmidt performed a diagnostic bilateral L5-S1 transforaminal epidural steroid injection on September 27, 2016. (In his testimony, Claimant erroneously recalled this injection as having happened in "maybe June" of 2016).

31. Dr. Frey met with Claimant on October 13, 2016 and reported a favorable outcome from the recent injection as follows: "…He saw excellent diagnostic relief of the LE pains in the calf and the feet. The R=L in relief, the LLE in general has more pain than the right…" Dr. Frey described problems with Claimant's surgical hardware, and his treatment plan noting: "…In summary, Mike has persistent L5 nerve compression and L5 radiculopathy due to foraminal compression. There is bony material built up in the L5 foramen – pushed back from the TIBFD [threaded lumbar interbody spinal fusion device]. Note that the S1 screw tip on the left side penetrates the anterior cortex of the sacral ala exactly adjacent to the L5 root on the left side; this may also explain a significant amount of the L5 radiculopathy. Given the well correlated Dx result of the injection, I recommend we proceed to surgery for L5 root decompression and posterior pedicle screw instrumentation removal…"

32. Dr. Frey performed surgery on November 15, 2016. Surgery included removal of the previously placed surgical hardware. Claimant saw Dr. Frey's physician assistant (PA) in follow-up on November 29, 2016. At this appointment, Claimant reported persistent foot pain described as pins and needles, constantly. Claimant's foot pain was reportedly "worse with walking, placing feet in cold water and he states his feet feel 'cold to the touch' and "when sheets are over his feet and when he wears socks and shoes…"

33. Dr. Scheper saw Claimant on December 12, 2016. Dr. Scheper noted that after his recent surgery Claimant was reporting 6/10 "soreness and dull pressure in the low back" and no improvement with his "bilateral foot burning pain and paresthesias…"

34. On January 12, 2017, Dr. Scheper noted continued burning and tingling in Claimant's feet opining that he was suffering from "chronic bilateral lower extremity neuropathic pain secondary to lumbosacral neuritis…"

35. On February 21, 2017, Dr. Frey reported Claimant was three months' post surgery and "…His LBP and his true radicular sx are resolved since surgery. He still has the neuropathy pains and remains on Lyrica and Nucynta. His neuropathic pains continue to SLOWLY improve." (Id. at 13; emphasis in original). Dr. Frey concluded that Claimant was "[d]oing well with partial resolution of pre op sx. Neuropathic pains

unchanged; he may need an SCS if time, rehab, and med management are not adequate…"

36. On May 19, 2017, Dr. Scheper reported: "…The patient presents to followup on persistent bilateral foot burning pain and sensory disturbance which he rates at 7/10. Those are still most prominent in the afternoon-evening, and he is overall unchanged since his last encounter in January. He continues taking Nucynta…Cymbalta…and Lyrica…" Dr. Scheper's impression was:

> -Chronic bilateral foot neuropathic pain secondary to lumbosacral neuritis status post L5-S1 fusion 2015, with revision November 2016. On an appropriate medication regimen but unfortunately with inadequate relief…
>
> -Mild idiopathic sensory axonal peripheral neuropathy on EMG, less likely causing his foot symptoms as I would expect a mild peripheral neuropathy to respond better to his high dose anti-neuritic medications.

Dr. Scheper concluded: "…He has been recommended to undergo a stimulator trial but was reluctant in the past. He is now considering this more readily because of his severe daily symptoms which have been unresponsive to extensive conservative efforts. I feel this is reasonable to restore his capacity for any gainful employment…" Dr. Scheper recommended a psychologic profile evaluation, "…prior to pursuing the trial with Dr. Schmidt back in the office of Dr. Frey…"

37. Neuropsychologist Lisa Townsend, Psy.D. evaluated Claimant on July 6 and 13, 2017 to determine whether he was an appropriate candidate for a spinal stimulator trial. She concluded, "…There are no other clinically significant psychological indicators that would preclude this patient from undergoing the stimulator trial."

38. On August 25, 2017, Dr. Scheper again diagnosed "Chronic bilateral lower extremity neuropathic pain secondary to lumbosacral neuritis status post L5-S1 fusion. Symptoms remain moderate-severe and cause severe functional impairment as described above, despite extensive conservative treatment…Mild idiopathic sensory axonal peripheral neuropathy on EMG, unlikely the cause of his moderate-severe neuropathic pain…As I have previously recommended, I still feel he is not at MMI and should be referred back to Dr. Schmidt for a neurostimulator trial."

39. A request for authorization of a trial spinal cord stimulator with Dr. Schmidt was submitted on September 13, 2017. Respondent denied the request.

40. Claimant testified that the surgery on May 13, 2015, helped relieve his low back pain, but that very shortly after the surgery he began experiencing burning pain in both legs, ankles, and feet. This is corroborated by Dr. Rauzzino's reports. Claimant explained that his low back pain now accounts for 20% of his total pain, while his bilateral feet and ankles account for 80% of his pain.

41. Claimant had plantar fasciitis in his left heel approximately 10 years ago. According to Claimant, the pain was localized to the area of a bone spur on the heel. Claimant's primary care physician gave him arches and the condition resolved after about 1 year. Claimant testified he had no other problems with his feet or ankles until after the surgery on May 13, 2015.

42. Dr. Olson testified at hearing. He testified that plantar fasciitis is a condition when the plantar fascia (the ligament that connects the heel bone to the toe) becomes inflamed causing pain in the soles of the feet, especially when standing and/or walking. He reiterated his opinion that Claimant's medical record complaints and his physical examination support a conclusion that he is suffering from either non-work related plantar fasciitis, or a potential idiopathic peripheral axonal sensory neuropathy. He testified the former is more likely than the latter.

43. Dr. Olsen testified that the goal of a spinal cord stimulator to treat lumbar radiculopathy would be to disrupt the signals in the lumbar nerve roots that are causing the symptoms. Dr. Olsen further testified that in using neural stimulation to address radicular pain, it is essential that there is a clearly defined pain generator. Specifically, in order for neural stimulation to be able to appropriately treat symptoms resulting from a lumbar radiculopathy, there needs to be clear evidence that the patient does have a true lumbar radiculopathy caused by a compression of a nerve root. In this case, Dr. Olson testified that Claimant had close to a 0% chance of the symptoms he has at the bottom of his feet being relieved as a result of neural stimulation because he does not demonstrate any clear evidence of a lumbar radiculopathy. In other words, because none of the lumbar nerve roots are the pain generator for Claimant's symptoms, neural stimulation of the lumbar nerve roots will not address Claimant's plantar symptoms. Accordingly, Dr. Olson opined that the recommended spinal cord stimulator trial is not reasonable, necessary or related to Claimant's admitted work injury.

44. The Medical Treatment Guidelines (MTG) for Chronic Pain Disorders specifically reference the appropriateness of spinal cord stimulation in certain cases. Specifically, the MTG for Chronic Pain Disorders state the following:

> Traditional or other SCS may be indicated in a subset of patients who have clear neuropathic radicular pain (radiculitis).

While Respondents acknowledge that Dr. Scheper, has diagnosed Claimant with chronic bilateral lower extremity neuropathic pain secondary to lumbosacral neuritis, they cite to the potential complications associated with spinal stimulation and Dr. Olson's concerns that Dr. Scheper did not always complete a detailed examination of Claimant as proof that a trial of SCS in not reasonable or necessary. The ALJ is not persuaded.

45. The ALJ notes that with the exception of the one-time reference that Claimant "may" have mild plantar fasciitis in the right foot by Dr. Castrejon on July 23,

2015, none of Claimant's treating or examining physicians and surgeons have entertained plantar fasciitis as a possible cause of Claimant's foot and ankle pain. To the contrary, careful inspection of the medical record reveals the following opinions concerning the likely cause of Claimant's foot and ankle pain include the following:

- Dr. Rauzzino on September 15, 2015; "…this could be something of a stretch injury on the nerves, though this should settle down in a few months…"

- Dr. Stanton on November 5, 2015; "…likely nerve root stretch with neuropractic [sic] symptomatology…At this point, Michael likely has nerve root stretch from his interbody cage size…"

- Dr. Ales on December 2, 2015; "…Lower extremity paresthesias likely related to lumbar spondylosis and lumbar fusion.."

- Dr. Scheper on February 24, 2016; "…I do agree with Dr. Stanton he likely suffered a nerve traction injury which should be treated conservatively…"

- Dr. Frey on October 13, 2016; "…In summary, Mike has persistent L5 nerve compression and L5 radiculopathy due to foraminal compression…"

- Dr. Scheper on January 12, 2017; "Chronic bilateral lower extremity neuropathic pain secondary to lumbosacral neuritis…"

- Dr. Frey on February 21, 2017; "…His LBP and his true radicular sx are resolved since surgery. He still has the neuropathy pains and remains on Lyrica and Nucynta…Neuropathic pains unchanged; he may need an SCS if time, rehab, and med management are not adequate…"

- Dr. Scheper on May 19, 2017; "…Chronic bilateral foot neuropathic pain secondary to lumbosacral neuritis status post L5-S1 fusion 2015, with revision November 2016. On an appropriate medication regimen but unfortunately with inadequate relief…"

- Dr. Scheper on August 25, 2017, "Chronic bilateral lower extremity neuropathic pain secondary to lumbosacral neuritis status post L5-S1 fusion…"

46. The ALJ credits the opinions of Claimant's treating physicians to find that Claimant likely suffers from neuropathic pain in his bilateral feet and ankles caused by lumbosacral neuritis resulting from a combination of his fusion surgery performed May 13, 2015 and the subsequent stretching of the nerves secondary to movement of the

interbody cage prior to achieving fusion. Dr. Olson's contrary opinions are unconvincing.

47. Based upon the evidence presented, the ALJ is persuaded that Claimant is an appropriate candidate for a trial of spinal cord stimulation and that the need for this trial is related to his admitted work related injury and is otherwise reasonable and necessary to cure and relieve him of his ongoing symptoms.

48. The ALJ further finds Claimant's condition satisfies the requirements of the Medical Treatment Guidelines ("MTG's") necessary to warrant a trial of neurostimulation. W.C.R.P. 17, Exb. 7, Section H (1)(c) discusses surgical indications for neurostimulation, and subsections (i) and (ii) set forth criteria that "patients must meet" in order to be considered for neurostimulation. The criteria include: clear neuropathic radicular pain; not a candidate for further surgical intervention of the spine; have burning pain in a distribution amendable to stimulation coverage and have pain at night not relieved by position; and the extremity pain should account for at least 50% or greater of the overall leg and back pain. Additionally, prior to the trial of neurostimulation, a comprehensive psychiatric or psychologic evaluation must take place as has been performed here. As noted, the ALJ finds that Claimant's current condition satisfies the requirements of the MTG's regarding a trial spinal cord stimulator. However, the ALJ is not compelled to award or deny medical benefits based on the MTG's alone. See *Thomas v. Four Corners Health Care,* W.C. No. 4-484-220 (April 27, 2009); *Jones v. T.T.C. Illinois, Inc*., W.C. No. 4-503-150 (May 5, 2006), *aff'd Jones v. Industrial Claim Appeals Office,* No. 06CA1053 (Colo. App. March 1, 2007)(not selected for publication)(it is appropriate for the ALJ to consider the guidelines on questions such as diagnosis, but the guidelines are not definitive).

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* Claimant must prove that he is a covered employee who suffered an injury arising out of and in the course of employment. *Section 8-41-301(1), C.R.S.; See, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought, including medical treatment *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact,

after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). In this case, the evidence presented, including the results of Claimant's EMG testing persuade the ALJ that Claimant's persistent plantar symptoms are likely the result of lumbosacral neuritis caused by a combination of his May 13, 2015 fusion surgery and the subsequent stretching of the nerves secondary to movement of the interbody cage prior to achieving boney consolidation (union). As found, Dr. Olson's contrary opinion that the symptoms in Claimant's feet are causally related to non-work related plantar fasciitis is unconvincing.

C. In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000)

Medical Benefits

D. A claimant is entitled to medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury. *See* § 8-42-101(1), C.R.S. 2003; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office, supra*. Similarly, the question of whether medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003).

F. The MTG's are regarded as the accepted professional standards for care under the Workers' Compensation Act. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); see also *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The Medical Treatment Guidelines, Rule 17-2(A), W.C.R.P. provide: All health care providers shall use the Guidelines adopted by the Division. In spite of this direction, it is generally acknowledged that the Guidelines are not sacrosanct and may be deviated from under appropriate circumstances. *See*, Section 8-43-201(3) (C.R.S. 2014). Nonetheless, they carry substantial weight. The ALJ may also appropriately consider the Medical Treatment Guidelines as an

evidentiary tool. *Logiudice v. Siemans Westinghouse,* W.C. 4-665-873 (ICAO January 25, 2011).

G. As provided for under § 8-43-201(3), the ALJ has "[considered] the medical treatment guidelines adopted under § 8-42-101(3) in determining whether certain medical treatment is reasonable, necessary, and related to an industrial injury or occupational disease." In keeping with the MTGs and as found above, the ALJ concludes that Claimant's current condition satisfies the requirements set forth in the Medical Treatment Guidelines ("MTG's") necessary to warrant a trial of neurostimulation. See, W.C.R.P. 17, Exb. 7, Section H (1)(c) subsections (i) and (ii). Here, Claimant most probably has neuropathic pain (radiculitis), is not currently a candidate for additional surgical intervention on the spine, and has burning pain in a L5-S1 distribution greater than his degree of axial back pain. Moreover, Claimant has undergone a psychological evaluation, which has determined that no clinically significant psychological indicators exist that would preclude Claimant from undergoing a trial of neurostimulation. Claimant has established by a preponderance of the evidence that he is entitled to a trial of spinal cord stimulation as a reasonable, necessary and related treatment modality to cure and relieve him of the effects of his admitted work related injury.

ORDER

It is therefore ordered that:

1. Respondent shall authorize and pay for the spinal cord stimulator trial.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 26, 2018

/s/ Richard M. Lamphere

Colorado Springs, CO 80906

ISSUES

- Whether claimant has proven by a preponderance of the evidence that the right wrist surgery recommended by Dr. Randall Viola is reasonable medical treatment necessary to cure and relieve claimant from the effects of the March 19, 2015 work injury.

- Whether claimant has proven by a preponderance of the evidence that she is entitled to temporary total disability (TTD) benefits for the dates September 10, 2016 through September 12, 2016; September 26, 2016; October 4, 2016; December 13, 2016; February 21, 2017; and April 3, 2017.

- Whether claimant has proven by a preponderance of the evidence that her average weekly wage (AWW) should be increased.

- Whether claimant has demonstrated by a preponderance of the evidence that the surgery recommended by Dr. Viola was automatically authorized due to respondent's alleged failure to comply with WCRP 16.

- Whether claimant has demonstrated by a preponderance of the evidence that penalties should be imposed pursuant to Section 8-43-304, C.R.S. for respondent's alleged violation of WRCP 16.

FINDINGS OF FACT

1. Claimant was employed with employer as a paraprofessional working with severe needs students at employer's preschool. On March 19, 2015, claimant suffered an injury to her right wrist. Claimant testified that the injury occurred when she was attempting to interact with a severe needs student. During that interaction the student grabbed the ring and small fingers on claimant's right hand and hyperextended them. Respondents have admitted for the March 19, 2015 injury.

2. Claimant testified that initially her medical treatment included physical therapy, light therapy, and home exercises.

3. In the summer of 2015, claimant moved to Steamboat Springs, Colorado because her spouse obtained employment in that area. Claimant testified that upon moving to Steamboat Springs she obtained employment with the Hayden School District.

4. After claimant's move to Steamboat Springs, her medical treatment related to this claim was transferred to Dr. Laura Morti. Claimant was first seen by Dr. Morti on July 21, 2015. Dr. Morti diagnosed claimant with sprains to her right hand and wrist.

5. Dr. Morti referred claimant to Dr. Alexander Meininger with Steamboat Orthopaedic Associates. Thereafter, Dr. Morti also referred claimant to hand specialist, Dr. Randall Viola. Claimant was first seen by Dr. Viola on April 19, 2016. At that time, Dr. Viola diagnosed scarring secondary to a volar plate injury in the right ring finger and small finger. Dr. Viola ordered a magnetic resonance image (MRI) of claimant's right wrist.

6. On May 24, 2016, an MRI of claimant's right wrist showed a full thickness tear through the central disc of the triangular fibrocartilage complex (TFCC), and a small longitudinal split tear of the extensor carpi ulnaris tendon.

7. Based upon the results of the MRI, Dr. Viola recommended surgery including debridement of the TFCC, a possible ganglion cyst excision, repair of the extensor carpi ulnaris tendon tear, and trigger finger release for both the ring and small fingers.

8. The recommended surgery was reviewed by Dr. Jonathan Sollender on July 6, 2016. Dr. Sollender opined that the recommended surgery was reasonable, necessary, and related to claimant's work injury. Respondents authorized that recommended surgery which was performed by Dr. Viola on July 14, 2016.

9. Following the July 14, 2016 surgery, claimant was prescribed the antibiotic clindamycin. This antibiotic resulted in claimant contracting clostridium difficile colitis (c. diff). Claimant was diagnosed with c. diff in early August 2016. Claimant testified that she treated with Dr. Lambert Orton for her c. diff symptoms. Initially, the c. diff seemed to resolve with treatment and on September 1, 2016, Dr. Mordi cleared claimant to return to full duty.

10. Claimant testified that her c. diff symptoms returned and she again tested positive for c. diff on September 13, 2016. Claimant testified that for the dates of September 10, 2016 through September 12, 2016 she was unable to work because of the return of her c. diff symptoms.

11. Subsequently, claimant was seen by Dr. Orton on September 26, 2017. At that time Dr. Orton determined that the c. diff was resolved. Dr. Orton cleared claimant to return to work with no restrictions on September 27, 2016. Claimant was also seen by Dr. Morti on September 26, 2016. Dr. Morti released claimant to return to work with no restrictions on September 26, 2016. Claimant testified that because she was seen by both physicians on September 26, 2016, she missed the entire day of work.

12. Claimant testified that following the surgery and prior to the c.diff diagnosis she was attending physical therapy and doing well. C. diff is highly contagious and claimant was unable to be around people. As a result, claimant was unable to attend physical therapy following the c. diff diagnosis.

13. On September 21, 2016, respondents filed a General Admission of Liability (GAL) admitting for an average weekly wage (AWW) on this claim of $860.59.

14. On October 18, 2016 claimant returned to Dr. Mordi and reported that she had some pain from injections administered by Dr. Viola, but her range of motion had improved. Dr. Mordi did not assign any work restrictions at that time.

15. On October 24, 2016, claimant began physical therapy with Winters Handworks. On October 26, 2016, claimant reported to the physical therapist that she was "getting more rotation at [her] forearm". At a subsequent physical therapy appointment on November 4, 2016, claimant reported that her wrist was "finally feeling a little better" and that she could rotate her arm without pain and had better range of motion.

16. Claimant returned to Dr. Mordi on November 29, 2016. On that date claimant reported that she was improving and Dr. Mordi noted that claimant's right wrist extension was almost the same as her left wrist. Again, Dr. Mordi did not assign work restrictions.

17. On December 13, 2016, claimant returned to Dr. Viola and reported that she was "doing very well following this surgery until several nights ago when at a work party someone shook her hand extremely sternly and caused immediate pain". In the medical record of that date, Dr. Viola noted that "[t]echnically we would likely consider this a new injury as the patient was doing well following her procedure". Dr. Viola recommended claimant utilize a wrist splint. For ease of reference, this December 2016 incident will be referred to as "the handshake incident".[1]

18. On January 10, 2017, claimant was seen by Dr. Mordi. Claimant reported "a worsening of symptoms after an aggressive handshake at a holiday party". Dr. Mordi noted that the use of a splint, as directed by Dr. Viola, "resolved the symptoms of that aggravation". Claimant had no work restrictions following the January 10, 2017 appointment with Dr. Mordi.

19. On February 21, 2017, claimant returned to Dr. Viola. On that date, Dr. Viola determined that claimant's lack of wrist motion was due to excessive adhesions. Dr. Viola recommended claimant undergo a second surgery to remove adhesions and scar tissue through tenolysis.

[1] It is undisputed that the handshake incident occurred at a work event related to claimant's employment with Hayden School District and not the employer at issue in this claim.

20. Claimant was seen by Dr. Mordi for a follow up on February 28, 2017. On that date, Dr. Mordi noted decreased range of motion and referenced Dr. Viola's recommendation for surgery.

21. In late February 2017, insurer determined almost two years had elapsed since the date of claimant's admitted injury. As a result, insurer commenced the process for scheduling a 24 month Division-sponsored independent medical examination (DIME) and took steps to schedule an independent medical examination (IME) for claimant with Dr. Sollender. On February 23, 2017, claimant was provided with notification that the IME with Dr. Sollender was scheduled for April 3, 2017.

22. On March 13, 2017, Dr. Viola's staff sent insurer a request for authorization of the recommended right wrist tenolysis surgery.

23. Pursuant to a request from respondents, on March 14, 2017, Dr. Jason Rovak reviewed the reasonableness of the recommended surgery. Dr. Rovak opined that the recommended surgery was unrelated to claimant's injury in March 2015. Dr. Rovak specifically questioned the mechanism of injury and reasonableness of the first surgery. Dr. Rovak specifically noted that central TFCC tears are idiopathic "in the patient population surrounding the 50-year range".

24. Dr. Rovak also noted his disagreement with authorization of the first surgery, but acquiesced that it had in fact been authorized. Dr. Rovak recommend denial of the surgery until claimant was seen by the IME. Based upon Dr. Rovak's opinion, respondents denied the recommended surgery.

25. On April 3, 2017, claimant attended the scheduled IME with Dr. Sollender. Dr. Sollender reviewed claimant's medical records, obtained a medical history from claimant, and performed a physical examination in connection with the IME. In his IME report, Dr. Sollender opined that claimant reached maximum medical improvement (MMI) on October 18, 2016. Dr. Sollender also opined that the surgery recommended by Dr. Viola was not reasonable or necessary. In support of this opinion Dr. Sollender noted that further surgery on claimant's right TFCC would not be useful. Dr. Sollender also opined that the December 2016 handshake incident constituted a new injury to claimant's right wrist. Therefore, in Dr. Sollender's opinion any further treatment of claimant's right wrist would be related to the handshake incident.

26. On October 19, 2017, Dr. Viola responded in writing to a number of questions posed to him by claimant's counsel. In that letter, Dr. Viola was asked if the recommended surgery was authorized by the Colorado Medical Treatment Guidelines. Dr. Viola indicated that he was unable to answer that question.

27. Claimant testified that at the time of the March 19, 2015 work injury she had concurrent employment with Yampa Valley Medical Center in a preschool named "Grandkids". As indicated by W-2s entered into evidence, claimant's earnings from Yampa Valley Medical Center totaled $14,050.43 in 2014; and $12,083.97 in 2015.

28. Claimant testified that she has also worked as an independent consultant for Thirty One since March 2014 and was doing so the time of her March 19, 2015 work injury. Records entered into evidence indicate that claimant's earnings with Thirty One were $959.00 in 2015; $1,111.00 in 2016; and $651.00 in 2017. Claimant asserts that her AWW should be increased to reflect her concurrent employment with Yampa Valley Medical Center and Thirty One.

29. Claimant testified that on September 26, 2016; October 4, 2016; December 13, 2016; and February 21, 2017; she attended medical appointments related to this claim. On each date, claimant took a "sick day" and was initially paid for that time by her employer, the Hayden School District. However in May 2017, the Hayden School District recouped those wages from claimant's pay. Claimant asserts that because she was attending authorized medical appointments and missed entire days of work, respondents are responsible for payment of TTD benefits for these dates.

30. Claimant also testified that she took a sick day to attend the IME with Dr. Sollender on April 3, 2017. As with the dates listed above, claimant was initially paid wages for that sick day by her current employer, the Hayden School District, but the wages were also later recouped.

31. With regard to the recommended surgery, the ALJ notes that claimant's medical providers agree that the diagnosis of c. diff is causally related to claimant's original injury as it arose directly from medications she was prescribed following the July 14, 2016 surgery.

32. The ALJ credits the opinion of Dr. Viola over the contrary opinion of Dr. Sollender and finds that claimant's current need for wrist surgery is related to the development of adhesions and scar tissue. The ALJ further finds that the adhesions and scar tissue in claimant's right wrist are causally related to claimant's inability to attend physical therapy for a period for time while she underwent treatment for c. diff. The ALJ is not persuaded that the December 2016 handshake incident caused the adhesions and scar tissue. Therefore, the ALJ finds that claimant had demonstrated that it is more likely than not that the need for right wrist surgery is reasonable medical treatment necessary to cure and relieve her from the effects of the admitted work injury.

33. Claimant argues that because she missed work to attend various authorized medical appointments and her current employer failed to pay her for those dates that she is entitled to temporary total disability (TTD) benefits for those dates. The ALJ is not persuaded by this assertion. In each instance the claimant was working without restrictions when she attended medical appointments with her providers. Therefore, "loss of wages" asserted by claimant on those dates was not caused by a disability. The ALJ finds that claimant has failed to demonstrate that it is more likely than not that she is entitled to TTD benefits on the dates of September 10, 2016 through September 12, 2016; September 26, 2016; October 4, 2016; December 13, 2016; February 21, 2017; and April 3, 2017.

34. The ALJ credits the documents entered into evidence and claimant's testimony regarding her employment with Yampa Valley Medical Center and Thirty One. The ALJ finds that claimant has demonstrated that it is more likely than not that at the time of her work injury she had concurrent employment with Yampa Valley Medical Center and Thirty One.

35. The ALJ calculates that at the time of the injury claimant's AWW with Yampa Valley Medical Center was $251.29. This calculation is based upon an average of claimant's 2014 and 2015 wages.[2] The ALJ calculates that claimant's AWW with Thirty One[3] at the time of the injury was $18.44. Therefore, claimant has demonstrated that it is more likely than not that her AWW should be increased by $269.73.

36. Claimant argues that respondents failed to comply with Rule 16 when Dr. Rovak deferred to the IME physician regarding the recommended surgery. The ALJ is not persuaded by this assertion. It is clear from Dr. Rovak's report that he considered the relatedness and necessity of the recommended surgery. Dr. Rovak specifically opined that claimant should not have undergone the first surgery as he questioned the mechanism of injury. The ALJ finds that this constitutes an opinion regarding whether the recommended surgery was reasonable, necessary, and related. Thus the ALJ finds that respondents complied with Rule 16 in issuing a denial within the prescribed timeline and the surgery was not automatically authorized.

37. Claimant also asserts that penalties should be assessed for respondents' alleged "unreasonable delay and denial" of the requested surgery. The ALJ credits the medical records entered into evidence and finds that claimant has failed to demonstrate that it is more likely than not that there was unreasonable delay or denial of the requested surgery.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

[2] Wages of $14,050.43 and $12,083.97 divided by 104 weeks = $251.29.
[3] 2015 wages of $959.00 divided by 52 weeks = $18.44.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. As found, claimant has demonstrated by a preponderance of the evidence that the right wrist surgery recommended by Dr. Viola is reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury. As found, the opinion of Dr. Viola is credible and persuasive.

5. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician. Claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

6. As found, claimant has failed to demonstrate by a preponderance of the evidence that on the dates of September 10, 2016 through September 12, 2016; September 26, 2016; October 4, 2016; December 13, 2016; February 21, 2017; and April 3, 2017; that she suffered a wage loss due to a medical incapacity or disability. On the contrary, on each of the dates listed claimant was released to full duty work without restrictions.

7. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

8. As found, claimant has demonstrated by a preponderance of the evidence that at the time of her work injury she had concurrent employment with Yampa Valley Medical Center and Thirty One. As found, the ALJ calculates that claimant's AWW should be increased by $269.73 to reflect concurrent employment.

9. Rule 16-11 WCRP allows respondents seven days to contest a recommended medical treatment. If respondents fail to comply with the requirements of Rule 16-11, the requested treatment is deemed authorized. Rule 16-11(B) provides, in part:

> [i]f the payer is contesting a request for prior authorization for medical reasons, the payer shall, within seven (7) business days of the completed request: (1) Have all submitted documentation . . . reviewed by a physician or other health care professional, as defined in section 16-5(A)(1)(a), . . .
>
> (3) Furnish the provider and the parties with a written contest that sets forth the following information: (a) An explanation of the specific medical reasons for the contest, including the name and professional credentials of the person performing the medical review and a copy of the medical reviewer's opinion; (b) The specific cite from the Medical Treatment Guidelines exhibits to Rule 17, when applicable; (c) Identification of the information deemed most likely to influence the reconsideration of the contest when applicable; and (d) A certificate of mailing to the provider and parties.

10. WCRP 16-11(E) provides, in pertinent part: "[f]ailure of the payer to timely comply in full with the requirements of section 16-11(A) or (B), shall be deemed authorization for payment of the requested treatment".

11. The purpose of Rule 16 is to protect the medical provider from providing treatment to a claimant which the insurer later challenges as unrelated, unnecessary or unreasonable. *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 20, 2007). Although the rule refers to "authorization," its purpose is to establish the reasonableness and necessity of treatment provided by an authorized provider. *Bray v. Hayden School District RE-1,* W.C. No. 4-418-310 (April 11, 2000).

12. Pursuant to Section 8-43-304(1), a claimant must first prove by a preponderance of the evidence that the disputed conduct constituted a violation of statute, rule, or order before a court can assess penalties against a respondent. *Allison v. Industrial Claim Appeals Office*, 916 P.2d 623 (Colo. App. 1995). If respondent

committed a violation of the statute, rule or order, penalties can be imposed only if respondents' actions were not reasonable under an objective standard. *Pioneers Hospital of Rio Blanco County v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). The standard is "an objective standard measured by reasonableness of the insurer's action and does not require knowledge that the conduct was unreasonable." *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo. App. 1995).

13. Rule 16-9 applies only to requests for authorization of medical treatment that is consistent with the Medical Treatment Guidelines and has an established value under the Medical Fee Schedule. When asked by claimant's counsel to identify whether the proposed surgery was within the Medical Treatment Guidelines, Dr. Viola was unable to do so. The ALJ concludes that there was no violation of Rule 16-9 in the current case as it does not apply to Dr. Viola's request for authorization.

14. The ALJ also concludes that respondents complied with Rule 16-11(B) when they asked Dr. Rovak to review the request for the procedure. The ALJ notes that Dr. Rovak's report is dated one day after Dr. Viola's office submitted the request for authorization to respondents. In that report, Dr. Rovak made specific medical findings regarding why he recommended that respondents deny the surgery. Dr. Rovak specifically indicated in his report that he did not think that claimant's condition was related to the March 19, 2015 work injury. The ALJ concludes that respondents acted in an objectively reasonable manner in relying upon Dr. Rovak's report. Similarly, the ALJ finds that respondents did not unreasonably delay claimant's surgery. The denial was issued the day after respondents received the request for authorization.

15. As found, claimant has failed to demonstrate that by a preponderance of the evidence that respondents violated Rule 16. Therefore, the surgery recommended by Dr. Viola did not become authorized by operation of the rule.

16. As found, claimant has failed to demonstrate by a preponderance of the evidence that respondent violated a rule. Therefore, claimant has failed to demonstrate by a preponderance of the evidence that penalties are appropriate in this matter.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the right wrist surgery recommended by Dr. Viola.

2. Claimant's request for TTD benefits for the dates of September 10, 2016 through September 12, 2016; September 26, 2016; October 4, 2016; December 13, 2016; February 21, 2017; and April 3, 2017, is denied and dismissed.

3. Claimant's average weekly wage (AWW) for this claim shall be increased by $269.76 to reflect concurrent employment.

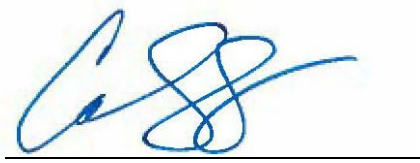
4. Claimant's request for automatic authorization of the surgery for an alleged violation of Rule 16 is denied and dismissed.

5. Claimant's request for penalties for an alleged violation of Rule 16 is denied and dismissed.

6. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

7. All matters not determined herein are reserved for future determination.

Dated: February 7, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that the right wrist surgery recommended by Dr. Randall Viola is reasonable medical treatment necessary to cure and relieve claimant from the effects of the March 19, 2015 work injury.

- Whether claimant has proven by a preponderance of the evidence that she is entitled to temporary total disability (TTD) benefits for the dates September 10, 2016 through September 12, 2016; September 26, 2016; October 4, 2016; December 13, 2016; February 21, 2017; and April 3, 2017.

- Whether claimant has proven by a preponderance of the evidence that her average weekly wage (AWW) should be increased.

- Whether claimant has demonstrated by a preponderance of the evidence that the surgery recommended by Dr. Viola was automatically authorized due to respondent's alleged failure to comply with WCRP 16.

- Whether claimant has demonstrated by a preponderance of the evidence that penalties should be imposed pursuant to Section 8-43-304, C.R.S. for respondent's alleged violation of WRCP 16.

FINDINGS OF FACT

1. Claimant was employed with employer as a paraprofessional working with severe needs students at employer's preschool. On March 19, 2015, claimant suffered an injury to her right wrist. Claimant testified that the injury occurred when she was attempting to interact with a severe needs student. During that interaction the student grabbed the ring and small fingers on claimant's right hand and hyperextended them. Respondents have admitted for the March 19, 2015 injury.

2. Claimant testified that initially her medical treatment included physical therapy, light therapy, and home exercises.

3. In the summer of 2015, claimant moved to Steamboat Springs, Colorado because her spouse obtained employment in that area. Claimant testified that upon moving to Steamboat Springs she obtained employment with the Hayden School District.

4. After claimant's move to Steamboat Springs, her medical treatment related to this claim was transferred to Dr. Laura Morti. Claimant was first seen by Dr. Morti on July 21, 2015. Dr. Morti diagnosed claimant with sprains to her right hand and wrist.

5. Dr. Morti referred claimant to Dr. Alexander Meininger with Steamboat Orthopaedic Associates. Thereafter, Dr. Morti also referred claimant to hand specialist, Dr. Randall Viola. Claimant was first seen by Dr. Viola on April 19, 2016. At that time, Dr. Viola diagnosed scarring secondary to a volar plate injury in the right ring finger and small finger. Dr. Viola ordered a magnetic resonance image (MRI) of claimant's right wrist.

6. On May 24, 2016, an MRI of claimant's right wrist showed a full thickness tear through the central disc of the triangular fibrocartilage complex (TFCC), and a small longitudinal split tear of the extensor carpi ulnaris tendon.

7. Based upon the results of the MRI, Dr. Viola recommended surgery including debridement of the TFCC, a possible ganglion cyst excision, repair of the extensor carpi ulnaris tendon tear, and trigger finger release for both the ring and small fingers.

8. The recommended surgery was reviewed by Dr. Jonathan Sollender on July 6, 2016. Dr. Sollender opined that the recommended surgery was reasonable, necessary, and related to claimant's work injury. Respondents authorized that recommended surgery which was performed by Dr. Viola on July 14, 2016.

9. Following the July 14, 2016 surgery, claimant was prescribed the antibiotic clindamycin. This antibiotic resulted in claimant contracting clostridium difficile colitis (c. diff). Claimant was diagnosed with c. diff in early August 2016. Claimant testified that she treated with Dr. Lambert Orton for her c. diff symptoms. Initially, the c. diff seemed to resolve with treatment and on September 1, 2016, Dr. Mordi cleared claimant to return to full duty.

10. Claimant testified that her c. diff symptoms returned and she again tested positive for c. diff on September 13, 2016. Claimant testified that for the dates of September 10, 2016 through September 12, 2016 she was unable to work because of the return of her c. diff symptoms.

11. Subsequently, claimant was seen by Dr. Orton on September 26, 2017. At that time Dr. Orton determined that the c. diff was resolved. Dr. Orton cleared claimant to return to work with no restrictions on September 27, 2016. Claimant was also seen by Dr. Morti on September 26, 2016. Dr. Morti released claimant to return to work with no restrictions on September 26, 2016. Claimant testified that because she was seen by both physicians on September 26, 2016, she missed the entire day of work.

12. Claimant testified that following the surgery and prior to the c.diff diagnosis she was attending physical therapy and doing well. C. diff is highly contagious and claimant was unable to be around people. As a result, claimant was unable to attend physical therapy following the c. diff diagnosis.

13. On September 21, 2016, respondents filed a General Admission of Liability (GAL) admitting for an average weekly wage (AWW) on this claim of $860.59.

14. On October 18, 2016 claimant returned to Dr. Mordi and reported that she had some pain from injections administered by Dr. Viola, but her range of motion had improved. Dr. Mordi did not assign any work restrictions at that time.

15. On October 24, 2016, claimant began physical therapy with Winters Handworks. On October 26, 2016, claimant reported to the physical therapist that she was "getting more rotation at [her] forearm". At a subsequent physical therapy appointment on November 4, 2016, claimant reported that her wrist was "finally feeling a little better" and that she could rotate her arm without pain and had better range of motion.

16. Claimant returned to Dr. Mordi on November 29, 2016. On that date claimant reported that she was improving and Dr. Mordi noted that claimant's right wrist extension was almost the same as her left wrist. Again, Dr. Mordi did not assign work restrictions.

17. On December 13, 2016, claimant returned to Dr. Viola and reported that she was "doing very well following this surgery until several nights ago when at a work party someone shook her hand extremely sternly and caused immediate pain". In the medical record of that date, Dr. Viola noted that "[t]echnically we would likely consider this a new injury as the patient was doing well following her procedure". Dr. Viola recommended claimant utilize a wrist splint. For ease of reference, this December 2016 incident will be referred to as "the handshake incident".[1]

18. On January 10, 2017, claimant was seen by Dr. Mordi. Claimant reported "a worsening of symptoms after an aggressive handshake at a holiday party". Dr. Mordi noted that the use of a splint, as directed by Dr. Viola, "resolved the symptoms of that aggravation". Claimant had no work restrictions following the January 10, 2017 appointment with Dr. Mordi.

19. On February 21, 2017, claimant returned to Dr. Viola. On that date, Dr. Viola determined that claimant's lack of wrist motion was due to excessive adhesions. Dr. Viola recommended claimant undergo a second surgery to remove adhesions and scar tissue through tenolysis.

[1] It is undisputed that the handshake incident occurred at a work event related to claimant's employment with Hayden School District and not the employer at issue in this claim.

20. Claimant was seen by Dr. Mordi for a follow up on February 28, 2017. On that date, Dr. Mordi noted decreased range of motion and referenced Dr. Viola's recommendation for surgery.

21. In late February 2017, insurer determined almost two years had elapsed since the date of claimant's admitted injury. As a result, insurer commenced the process for scheduling a 24 month Division-sponsored independent medical examination (DIME) and took steps to schedule an independent medical examination (IME) for claimant with Dr. Sollender. On February 23, 2017, claimant was provided with notification that the IME with Dr. Sollender was scheduled for April 3, 2017.

22. On March 13, 2017, Dr. Viola's staff sent insurer a request for authorization of the recommended right wrist tenolysis surgery.

23. Pursuant to a request from respondents, on March 14, 2017, Dr. Jason Rovak reviewed the reasonableness of the recommended surgery. Dr. Rovak opined that the recommended surgery was unrelated to claimant's injury in March 2015. Dr. Rovak specifically questioned the mechanism of injury and reasonableness of the first surgery. Dr. Rovak specifically noted that central TFCC tears are idiopathic "in the patient population surrounding the 50-year range".

24. Dr. Rovak also noted his disagreement with authorization of the first surgery, but acquiesced that it had in fact been authorized. Dr. Rovak recommend denial of the surgery until claimant was seen by the IME. Based upon Dr. Rovak's opinion, respondents denied the recommended surgery.

25. On April 3, 2017, claimant attended the scheduled IME with Dr. Sollender. Dr. Sollender reviewed claimant's medical records, obtained a medical history from claimant, and performed a physical examination in connection with the IME. In his IME report, Dr. Sollender opined that claimant reached maximum medical improvement (MMI) on October 18, 2016. Dr. Sollender also opined that the surgery recommended by Dr. Viola was not reasonable or necessary. In support of this opinion Dr. Sollender noted that further surgery on claimant's right TFCC would not be useful. Dr. Sollender also opined that the December 2016 handshake incident constituted a new injury to claimant's right wrist. Therefore, in Dr. Sollender's opinion any further treatment of claimant's right wrist would be related to the handshake incident.

26. On October 19, 2017, Dr. Viola responded in writing to a number of questions posed to him by claimant's counsel. In that letter, Dr. Viola was asked if the recommended surgery was authorized by the Colorado Medical Treatment Guidelines. Dr. Viola indicated that he was unable to answer that question.

27. Claimant testified that at the time of the March 19, 2015 work injury she had concurrent employment with Yampa Valley Medical Center in a preschool named "Grandkids". As indicated by W-2s entered into evidence, claimant's earnings from Yampa Valley Medical Center totaled $14,050.43 in 2014; and $12,083.97 in 2015.

28. Claimant testified that she has also worked as an independent consultant for Thirty One since March 2014 and was doing so the time of her March 19, 2015 work injury. Records entered into evidence indicate that claimant's earnings with Thirty One were $959.00 in 2015; $1,111.00 in 2016; and $651.00 in 2017. Claimant asserts that her AWW should be increased to reflect her concurrent employment with Yampa Valley Medical Center and Thirty One.

29. Claimant testified that on September 26, 2016; October 4, 2016; December 13, 2016; and February 21, 2017; she attended medical appointments related to this claim. On each date, claimant took a "sick day" and was initially paid for that time by her employer, the Hayden School District. However in May 2017, the Hayden School District recouped those wages from claimant's pay. Claimant asserts that because she was attending authorized medical appointments and missed entire days of work, respondents are responsible for payment of TTD benefits for these dates.

30. Claimant also testified that she took a sick day to attend the IME with Dr. Sollender on April 3, 2017. As with the dates listed above, claimant was initially paid wages for that sick day by her current employer, the Hayden School District, but the wages were also later recouped.

31. With regard to the recommended surgery, the ALJ notes that claimant's medical providers agree that the diagnosis of c. diff is causally related to claimant's original injury as it arose directly from medications she was prescribed following the July 14, 2016 surgery.

32. The ALJ credits the opinion of Dr. Viola over the contrary opinion of Dr. Sollender and finds that claimant's current need for wrist surgery is related to the development of adhesions and scar tissue. The ALJ further finds that the adhesions and scar tissue in claimant's right wrist are causally related to claimant's inability to attend physical therapy for a period for time while she underwent treatment for c. diff. The ALJ is not persuaded that the December 2016 handshake incident caused the adhesions and scar tissue. Therefore, the ALJ finds that claimant had demonstrated that it is more likely than not that the need for right wrist surgery is reasonable medical treatment necessary to cure and relieve her from the effects of the admitted work injury.

33. Claimant argues that because she missed work to attend various authorized medical appointments and her current employer failed to pay her for those dates that she is entitled to temporary total disability (TTD) benefits for those dates. The ALJ is not persuaded by this assertion. In each instance the claimant was working without restrictions when she attended medical appointments with her providers. Therefore, "loss of wages" asserted by claimant on those dates was not caused by a disability. The ALJ finds that claimant has failed to demonstrate that it is more likely than not that she is entitled to TTD benefits on the dates of September 10, 2016 through September 12, 2016; September 26, 2016; October 4, 2016; December 13, 2016; February 21, 2017; and April 3, 2017.

34. The ALJ credits the documents entered into evidence and claimant's testimony regarding her employment with Yampa Valley Medical Center and Thirty One. The ALJ finds that claimant has demonstrated that it is more likely than not that at the time of her work injury she had concurrent employment with Yampa Valley Medical Center and Thirty One.

35. The ALJ calculates that at the time of the injury claimant's AWW with Yampa Valley Medical Center was $251.29. This calculation is based upon an average of claimant's 2014 and 2015 wages.[2] The ALJ calculates that claimant's AWW with Thirty One[3] at the time of the injury was $18.44. **Therefore, claimant has demonstrated that it is more likely than not that her AWW with her concurrent employers is $269.73.**

36. Claimant argues that respondents failed to comply with Rule 16 when Dr. Rovak deferred to the IME physician regarding the recommended surgery. The ALJ is not persuaded by this assertion. It is clear from Dr. Rovak's report that he considered the relatedness and necessity of the recommended surgery. Dr. Rovak specifically opined that claimant should not have undergone the first surgery as he questioned the mechanism of injury. The ALJ finds that this constitutes an opinion regarding whether the recommended surgery was reasonable, necessary, and related. Thus the ALJ finds that respondents complied with Rule 16 in issuing a denial within the prescribed timeline and the surgery was not automatically authorized.

37. Claimant also asserts that penalties should be assessed for respondents' alleged "unreasonable delay and denial" of the requested surgery. The ALJ credits the medical records entered into evidence and finds that claimant has failed to demonstrate that it is more likely than not that there was unreasonable delay or denial of the requested surgery.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

[2] Wages of $14,050.43 and $12,083.97 divided by 104 weeks = $251.29.
[3] 2015 wages of $959.00 divided by 52 weeks = $18.44.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. As found, claimant has demonstrated by a preponderance of the evidence that the right wrist surgery recommended by Dr. Viola is reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury. As found, the opinion of Dr. Viola is credible and persuasive.

5. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician. Claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

6. As found, claimant has failed to demonstrate by a preponderance of the evidence that on the dates of September 10, 2016 through September 12, 2016; September 26, 2016; October 4, 2016; December 13, 2016; February 21, 2017; and April 3, 2017; that she suffered a wage loss due to a medical incapacity or disability. On the contrary, on each of the dates listed claimant was released to full duty work without restrictions.

7. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

8. As found, claimant has demonstrated by a preponderance of the evidence that at the time of her work injury she had concurrent employment with Yampa Valley Medical Center and Thirty One. **As found, the ALJ calculates that claimant's AWW for her concurrent employers is $269.73.**

9. Rule 16-11 WCRP allows respondents seven days to contest a recommended medical treatment. If respondents fail to comply with the requirements of Rule 16-11, the requested treatment is deemed authorized. Rule 16-11(B) provides, in part:

> [i]f the payer is contesting a request for prior authorization for medical reasons, the payer shall, within seven (7) business days of the completed request: (1) Have all submitted documentation . . . reviewed by a physician or other health care professional, as defined in section 16-5(A)(1)(a), . . .
>
> (3) Furnish the provider and the parties with a written contest that sets forth the following information: (a) An explanation of the specific medical reasons for the contest, including the name and professional credentials of the person performing the medical review and a copy of the medical reviewer's opinion; (b) The specific cite from the Medical Treatment Guidelines exhibits to Rule 17, when applicable; (c) Identification of the information deemed most likely to influence the reconsideration of the contest when applicable; and (d) A certificate of mailing to the provider and parties.

10. WCRP 16-11(E) provides, in pertinent part: "[f]ailure of the payer to timely comply in full with the requirements of section 16-11(A) or (B), shall be deemed authorization for payment of the requested treatment".

11. The purpose of Rule 16 is to protect the medical provider from providing treatment to a claimant which the insurer later challenges as unrelated, unnecessary or unreasonable. *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 20, 2007). Although the rule refers to "authorization," its purpose is to establish the reasonableness and necessity of treatment provided by an authorized provider. *Bray v. Hayden School District RE-1,* W.C. No. 4-418-310 (April 11, 2000).

12. Pursuant to Section 8-43-304(1), a claimant must first prove by a preponderance of the evidence that the disputed conduct constituted a violation of statute, rule, or order before a court can assess penalties against a respondent. *Allison v. Industrial Claim Appeals Office*, 916 P.2d 623 (Colo. App. 1995). If respondent

committed a violation of the statute, rule or order, penalties can be imposed only if respondents' actions were not reasonable under an objective standard. *Pioneers Hospital of Rio Blanco County v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). The standard is "an objective standard measured by reasonableness of the insurer's action and does not require knowledge that the conduct was unreasonable." *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo. App. 1995).

13. Rule 16-9 applies only to requests for authorization of medical treatment that is consistent with the Medical Treatment Guidelines and has an established value under the Medical Fee Schedule. When asked by claimant's counsel to identify whether the proposed surgery was within the Medical Treatment Guidelines, Dr. Viola was unable to do so. The ALJ concludes that there was no violation of Rule 16-9 in the current case as it does not apply to Dr. Viola's request for authorization.

14. The ALJ also concludes that respondents complied with Rule 16-11(B) when they asked Dr. Rovak to review the request for the procedure. The ALJ notes that Dr. Rovak's report is dated one day after Dr. Viola's office submitted the request for authorization to respondents. In that report, Dr. Rovak made specific medical findings regarding why he recommended that respondents deny the surgery. Dr. Rovak specifically indicated in his report that he did not think that claimant's condition was related to the March 19, 2015 work injury. The ALJ concludes that respondents acted in an objectively reasonable manner in relying upon Dr. Rovak's report. Similarly, the ALJ finds that respondents did not unreasonably delay claimant's surgery. The denial was issued the day after respondents received the request for authorization.

15. As found, claimant has failed to demonstrate that by a preponderance of the evidence that respondents violated Rule 16. Therefore, the surgery recommended by Dr. Viola did not become authorized by operation of the rule.

16. As found, claimant has failed to demonstrate by a preponderance of the evidence that respondent violated a rule. Therefore, claimant has failed to demonstrate by a preponderance of the evidence that penalties are appropriate in this matter.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the right wrist surgery recommended by Dr. Viola.

2. Claimant's request for TTD benefits for the dates of September 10, 2016 through September 12, 2016; September 26, 2016; October 4, 2016; December 13, 2016; February 21, 2017; and April 3, 2017, is denied and dismissed.

3. Claimant's average weekly wage (AWW) for concurrent employment with Yampa Valley Medical Center and Thirty One is $269.73.

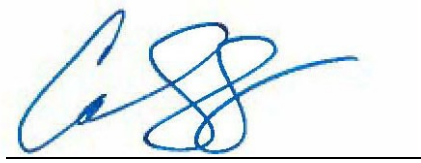
4. Claimant's request for automatic authorization of the surgery for an alleged violation of Rule 16 is denied and dismissed.

5. Claimant's request for penalties for an alleged violation of Rule 16 is denied and dismissed.

6. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

7. All matters not determined herein are reserved for future determination.

Dated: February 27, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that continuing medical treatment for her left upper extremity ulnar neuropathy, lumbar spine and cervical spine is reasonable, necessary and causally related to her March 10, 2017 admitted industrial injuries.

2. Whether Claimant has demonstrated by a preponderance of the evidence that she is entitled to receive Temporary Total Disability (TTD) benefits for the period May 5, 2017 through May 19, 2017.

3. Whether Respondents have proven by a preponderance of the evidence that Claimant was responsible for her termination from employment under §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving TTD benefits.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $635.00.

FINDINGS OF FACT

1. Claimant worked for Employer as the Manager of a convenience store. On March 10, 2017 Claimant suffered admitted industrial injuries during the course and scope of her employment. While assisting customers Claimant tripped on a shock absorbent mat and fell backwards against a cigarette case. She struck her left shoulder and head and twisted her left ankle. Claimant did not fall to the ground during the incident.

2. Claimant initially sought medical treatment at the Lutheran Medical Center on March 10, 2017. She exhibited guarding of her neck, diffuse tenderness at the midline of her cervical spine and bilateral paraspinal muscle tenderness. Claimant's medical records documented bursitis and chronic lower back pain. CT scans of Claimant's lumbar and cervical spines revealed multiple degenerative findings.

3. Employer directed Claimant to Concentra Medical Centers for treatment. On March 13, 2017 Claimant visited Concentra for an evaluation. Claimant reported back, neck, left shoulder and hip pain. Kristin Haber, M.D. diagnosed Claimant with an acute sprain of the ligaments of the neck, a lumbar sprain, a closed head injury and tingling of the left upper extremity. Dr. Haber assigned the following work restrictions: change positions periodically to relieve discomfort; work no more than 40 hours per week; sit 80% of the time; no squatting/kneeling; no walking on uneven terrain; no climbing ladders and; limit work shifts to eight hours.

4. On April 3, 2017 Claimant returned to Dr. Haber and stated that her back was "back to baseline." Dr. Haber noted that Claimant exhibited a normal lordosis to the lumbosacral spine, no tenderness, full range of motion and a negative straight leg raise.

5. Employer's District Manager and Claimant's supervisor Larry Altipeter explained that he accommodated Claimant's work restrictions. He specifically provided Claimant with a high stool on which to sit behind the counter.

6. Employer also adhered to Claimant's assigned work restrictions by limiting her to working no more than 40 hours per week. Claimant's co-worker Jennifer Beckett testified that she and Amanda Kama Lile worked overtime to cover for Claimant's limited hours. In fact, time cards reflect that Ms. Beckett worked 56-70 hours per week while Claimant was on restricted duty.

7. Claimant testified that in early May 2017 she requested permission from Concentra to return to full duty employment without the 40 hours per week limitation. However, she explained that the additional work hours caused an increase in her pain symptoms. Claimant was thus taken off work until May 5, 2017.

8. On May 8, 2017 Claimant was released to work 40 hours per week. Claimant also submitted a conditional resignation letter to Employer. The letter specified that "my last day will be May 19 of 2017." The letter provided that the stress of work was weighing on her injury and health.

9. Claimant testified that she tendered her resignation because of Mr. Altipeter's expectations when she returned to work. She specifically commented that Mr. Altipeter required her to have Employer's convenience store staffed and restocked by May 9, 2017. In contrast, Mr. Altipeter remarked that he only wanted to begin the process of restocking and staffing on May 9, 2017.

10. On May 9, 2017 Claimant reported for work at Employer's convenience store. She provided her resignation and two weeks' notice to Mr. Altipeter. He accepted Claimant's resignation letter and terminated her effective immediately. Mr. Altipeter noted that Industry standards dictate an Employer can either accept a conditional resignation and permit the employee to work an additional two weeks or accept the resignation effective immediately. Claimant's last day of work was May 5, 2017.

11. Claimant subsequently continued to receive medical treatment through Concentra providers. She has not yet reached Maximum Medical Improvement (MMI).

12. On July 14, 2017 Respondents filed a General Admission of Liability (GAL). The GAL specified that Respondents acknowledged liability for medical benefits only. The GAL noted that there was "no lost time exceeding 3 days. MMI and impairment yet to be determined."

13. On August 25, 2017 Claimant visited Kathy McCranie, M.D. at Concentra. Dr. McCranie referred Claimant for an EMG/NCV of the left upper extremity. She noted that the test "would help determine whether [Claimant] has a cervical radiculopathy versus an ulnar neuropathy. While the cervical radiculopathy would be considered work related, the ulnar neuropathy would not as there is no correlated injury to the left upper extremity."

14. Claimant subsequently underwent a left upper extremity EMG/NCV. The test revealed a distal ulnar neuropathy with sparing of the nerve across the elbow and no evidence of a cervical radiculopathy.

15. On October 3, 2017 Claimant underwent a psychological evaluation with Joel Cohen, Ph.D. Dr. Cohen noted that "[t]here is certainly going to be a somatoform element to [Claimant's] presentation apart from whatever true pain generator she may have from a pathophysiological perspective." He summarized that "we are dealing with a diagnosis of adjustment reaction with mixed emotional features, but the rule out diagnosis would be somatic symptom disorder."

16. On December 14, 2017 Claimant underwent an independent medical examination with Wallace K. Larson, M.D. Claimant reported that she was bagging a purchase for a customer while at work on March 10, 2017. As she stepped backwards she tripped over a shock absorbing pad on the floor. Claimant struck her head, neck and left shoulder area on a cigarette case but did not fall to the floor. After conducting a thorough review of Claimant's medical records, Dr. Larson determined that Claimant sustained a very minor contusion of the posterior aspect of her left shoulder and trapezius. He noted that the injury should have resolved within two weeks even without any medical treatment. Dr. Larson explained that, although Claimant exhibited a great deal of pain behavior, her symptoms were not related to the March 10, 2017 accident. He commented that Claimant has a history of lower back pain and degenerative disc disease of the lumbar spine. Noting that Claimant's treatment has been excessive and nonproductive, Dr. Larson concluded that her care was not related to the March 10, 2017 event. Moreover, Claimant "does not require any ongoing medical treatment, evaluation, maintenance care or restrictions."

17. Dr. Larson testified at the hearing in this matter. He explained that Claimant's neck symptoms, ulnar neuropathy and lower back pain were not related to her March 10, 2017 work accident. In addressing Claimant's neck pain, he mentioned that the cervical MRI on the date of injury revealed pre-existing degenerative findings. He attributed Claimant's neck symptoms to her somatoform disorder and specified that her pain did not have an anatomical basis. Finally, Claimant's mechanism of injury only caused a minor contusion to the back of her left shoulder and did not involve her neck.

18. In addressing Claimant's ulnar neuropathy, Dr. Larson noted that Dr. McCranie had referred Claimant for an EMG/NCV of the left upper extremity. Dr. McCranie determined that the EMG/NCV revealed a non-work related distal ulnar neuropathy and sparing of the nerve across the elbow with no evidence of a cervical neuropathy. Dr. Larson emphasized that he agreed with Dr. McCranie that Claimant's left upper extremity symptoms were not related to her March 10, 2017 accident.

19. Dr. Larson also testified that Claimant's lower back problems were not related to her March 10, 2017 accident at work. Initially, by April 3, 2017 Claimant reported to Dr. Haber that her back had "returned to baseline." Dr. Larson also mentioned that Claimant's lumbar MRI revealed pre-existing, degenerative findings. He summarized that Claimant experienced a minor mechanism of injury and suffers from a somatoform disorder.

20. Claimant has established that it is more probably true than not that continuing medical treatment for her left upper extremity ulnar neuropathy, lumbar spine and cervical spine is reasonable, necessary and causally related to her March 10, 2017 admitted industrial injuries. On July 14, 2017 Respondents filed a GAL acknowledging liability for Claimant's industrial injuries. The GAL noted that there was "no lost time exceeding 3 days. MMI and impairment yet to be determined." Respondents have not sought to withdraw the GAL.

21. The record reflects that Claimant is seeking medical benefits for her left upper extremity ulnar neuropathy, lumbar spine and cervical spine. Respondents assert that Claimant's current condition is not related to the admitted injuries and seek a denial of additional medical treatment. Relying on the opinion of Dr. Larson and the medical records, Respondents specifically contend that Claimant suffers degenerative conditions and a somatoform disorder. However, Respondents argument requires a *de facto* finding of MMI regarding the March 10, 2017 injuries. Because Claimant is entitled to medical benefits until reaching MMI, a denial of all further medical treatment necessarily reflects an implicit determination that Claimant reached MMI for the effects of her industrial injuries. However, there has been no medical determination of MMI by an ATP or Division Independent Medical Examination (DIME) physician. Accordingly, the issue of MMI is not properly before the ALJ. Therefore, Claimant is entitled to receive continued medical treatment for her March 10, 2017 industrial injuries.

22. Claimant has proven that it is more probably true than not that she is entitled to receive TTD benefits for the period May 5, 2017 through May 19, 2017. Claimant was unable to earn wages during the period because she was experiencing the effects of her March 10, 2017 industrial injuries. In early May 2017 Claimant requested permission from Concentra to return to full duty employment without a 40 hours per week limitation. However, she explained that the additional work hours caused an increase in her pain symptoms. Claimant was taken off work until May 5, 2017. On May 9, 2017 Claimant reported for work at Employer's convenience store. She provided her resignation and two weeks' notice to Mr. Altipeter. Mr. Altipeter accepted Claimant's resignation letter and terminated her effective immediately. Claimant's last day of work was thus May 5, 2017. The record reflects that Claimant's industrial injuries caused a disability lasting more than three work shifts, she left work as a result of the disability and the disability resulted in an actual wage loss. Notably, Claimant has not reached MMI for her March 10, 2017 industrial injuries.

23. Respondents have failed to prove that it is more probably true than not that Claimant was responsible for her termination from employment and is thus precluded from receiving indemnity benefits. Mr. Altipeter accepted Claimant's resignation letter on

May 9, 2017 and explained that industry standards dictate that an Employer can either accept a conditional resignation and permit the employee to work an additional two weeks or accept the resignation effective immediately. However, when Claimant tendered her resignation letter on May 9, 2017 she anticipated that she would cease employment with Employer on May 19, 2017. In fact, the letter specified that "my last day will be May 19 of 2017." Although Claimant voluntarily resigned her position, the resignation was not effective until May 19, 2017. The resignation was conditioned upon the completion of two more weeks of work. Instead, Mr. Altipeter chose to terminate Claimant on May 9, 2017 despite her intention. The record thus reveals that Claimant did not precipitate her employment termination by a volitional act that she would have reasonably expected to cause the loss of employment. Accordingly, under the totality of the circumstances Claimant did not commit a volitional act or exercise some control over her termination from employment. She is thus not precluded from receiving TTD benefits. Claimant shall receive TTD benefits for the period May 5, 2017 through May 19, 2017.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical Benefits

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A

preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. Section 8-42-101(1), C.R.S. requires the employer to provide medical benefits to cure or relieve the effects of the industrial injury, subject to the right to contest the reasonableness or necessity of any specific treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The employer's obligation continues until the claimant reaches MMI. MMI is defined as the point in time when the claimant's condition is "stable and no further treatment is reasonably expected to improve the condition." §8-40-201(11.5), C.R.S. However, the claimant may receive medical benefits after MMI to maintain his status or prevent a deterioration of his condition. *See Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988). Furthermore, §8-42-107(8)(b)(I) & (II), C.R.S. provide that the initial determination of MMI is to be made by an ATP. If either party disputes the ATP's MMI determination, the claimant must undergo a DIME. The statute also provides that the ALJ lacks authority to determine MMI until there has been a medical determination of MMI by an ATP or a DIME. *See Story v. Industrial Claim Appeals Office,* 910 P.2d 80 (Colo. App. 1995); *In Re Bruno*, W.C. Nos. 4-947-316-01, 4-935-813-03 (ICAP, July 31, 2015).

6. As found, Claimant has established by a preponderance of the evidence that continuing medical treatment for her left upper extremity ulnar neuropathy, lumbar spine and cervical spine is reasonable, necessary and causally related to her March 10, 2017 admitted industrial injuries. On July 14, 2017 Respondents filed a GAL acknowledging liability for Claimant's industrial injuries. The GAL noted that there was "no lost time exceeding 3 days. MMI and impairment yet to be determined." Respondents have not sought to withdraw the GAL.

7. As found, the record reflects that Claimant is seeking medical benefits for her left upper extremity ulnar neuropathy, lumbar spine and cervical spine. Respondents assert that Claimant's current condition is not related to the admitted injuries and seek a denial of additional medical treatment. Relying on the opinion of Dr. Larson and the medical records, Respondents specifically contend that Claimant suffers degenerative conditions and a somatoform disorder. However, Respondents argument requires a *de facto* finding of MMI regarding the March 10, 2017 injuries. Because Claimant is entitled to medical benefits until reaching MMI, a denial of all further medical treatment necessarily reflects an implicit determination that Claimant reached MMI for the effects of her industrial injuries. However, there has been no medical determination of MMI by an ATP or Division Independent Medical Examination (DIME) physician. Accordingly, the issue of MMI is not properly before the ALJ. Therefore, Claimant is entitled to receive continued

medical treatment for her March 10, 2017 industrial injuries. *See Story v. Industrial Claim Appeals Office,* 910 P.2d 80 (Colo. App. 1995); *In Re Bruno*, W.C. Nos. 4-947-316-01, 4-935-813-03 (ICAP, July 31, 2015) (where the claimant had not reached MMI, ALJ's finding terminating all future medical treatment reflected an implicit determination that the claimant had reached MMI and was thus erroneous); *Davis v. Little Pub,* W.C. No. 4-947-977 (June 17, 2015).

TTD Benefits

9. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

10. As found, Claimant has proven by a preponderance of the evidence that she is entitled to receive TTD benefits for the period May 5, 2017 through May 19, 2017. Claimant was unable to earn wages during the period because she was experiencing the effects of her March 10, 2017 industrial injuries. In early May 2017 Claimant requested permission from Concentra to return to full duty employment without a 40 hours per week limitation. However, she explained that the additional work hours caused an increase in her pain symptoms. Claimant was taken off work until May 5, 2017. On May 9, 2017 Claimant reported for work at Employer's convenience store. She provided her resignation and two weeks' notice to Mr. Altipeter. Mr. Altipeter accepted Claimant's resignation letter and terminated her effective immediately. Claimant's last day of work was thus May 5, 2017. The record reflects that Claimant's industrial injuries caused a disability lasting more than three work shifts, she left work as a result of the disability and the disability resulted in an actual wage loss. Notably, Claimant has not reached MMI for her March 10, 2017 industrial injuries.

Termination For Cause

11. Respondents assert that Claimant is precluded from receiving temporary disability benefits because he was responsible for his termination from employment pursuant to §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. Under the termination statutes a claimant who is responsible for his termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that

reestablishes the causal connection between the industrial injury and wage loss. *In re of George,* W.C. No. 4-690-400 (ICAP July 20, 2006). The termination statutes provide that, in cases where an employee is responsible for his termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAP Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to his termination if the effects of the injury prevent him from performing her assigned duties and cause the termination. *In re of Eskridge,* W.C. No. 4-651-260 (ICAP Apr. 21, 2006). Therefore, to establish that Claimant was responsible for his termination, Respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over his termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if he precipitated the employment termination by a volitional act that he would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

12. As found, Respondents have failed to prove by a preponderance of the evidence that Claimant was responsible for her termination from employment and is thus precluded from receiving indemnity benefits. Mr. Altipeter accepted Claimant's resignation letter on May 9, 2017 and explained that industry standards dictate that an Employer can either accept a conditional resignation and permit the employee to work an additional two weeks or accept the resignation effective immediately. However, when Claimant tendered her resignation letter on May 9, 2017 she anticipated that she would cease employment with Employer on May 19, 2017. In fact, the letter specified that "my last day will be May 19 of 2017." Although Claimant voluntarily resigned her position, the resignation was not effective until May 19, 2017. The resignation was conditioned upon the completion of two more weeks of work. Instead, Mr. Altipeter chose to terminate Claimant on May 9, 2017 despite her intention. The record thus reveals that Claimant did not precipitate her employment termination by a volitional act that she would have reasonably expected to cause the loss of employment. Accordingly, under the totality of the circumstances Claimant did not commit a volitional act or exercise some control over her termination from employment. She is thus not precluded from receiving TTD benefits. Claimant shall receive TTD benefits for the period May 5, 2017 through May 19, 2017.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant is entitled to receive continued medical treatment for her March 10, 2017 industrial injuries.

2. Claimant shall receive TTD benefits for the period May 5, 2017 through May 19, 2017.

3. Claimant earned an AWW of $635.00.

4. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: February 28, 2018.

Denver, CO 80203

ISSUES

I Whether Respondents presented clear and convincing evidence establishing that Dr. Henke erred in opining that Claimant had not attained maximum medical improvement (MMI) at the time of a follow-up Division Independent Medical Examination (DIME) on October 5, 2016.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

Claimant's Injury and Prior Hearing Regarding MMI

1. Claimant sustained an admitted work-related injury on September 10, 2013, while stepping from a mowing machine. According to Claimant, he slipped on wet grass and fell striking his right lower back on the mower deck resulting in immediate pain. He reported his injury and began treating through workers' compensation with Dr. Craig Anderson.

2. Claimant treated through workers' compensation and was placed at maximum medical improvement with 0% disability and no restrictions by Dr. Anderson on March 7, 2014.

3. Claimant returned to work after being placed at MMI. He testified that upon his return to work, he was assigned to operate a skid loader to clean up debris after a flood in the Boulder area. According to Claimant, he ran the skid loader for approximately two weeks during which time he experienced a return of his back pain with associated leg symptoms pain due to being bounced about inside the cab.

4. Claimant sought care through the emergency room and his primary care physician Dr. Robert Springs.

5. On July 9, 2014, Claimant was seen by Dr. Clarence Henke for a Division Independent Medical Exam (DIME). Dr. Henke obtained a history from Claimant, reviewed medical records and performed a physical examination. After completing his evaluation, Dr. Henke concluded that Claimant was not at maximum medical improvement (MMI). Before endorsing MMI, Dr. Henke requested the completion of a lower extremity EMG and a neurosurgical evaluation. He also recommended that Claimant continue with his established medications and return to restricted work.

6. Respondents requested an independent medical examination (RIME) with Dr. Franklin Shih. Dr. Shih completed the requested RIME on August 27, 2014. In his RIME report, Dr. Shih disagreed with Dr. Henke's opinion that Claimant had not reached MMI. Dr. Shih opined that Dr. Henke erred in concluding that Claimant had not reached MMI based upon perceived inconsistencies between what Claimant reported to him during the RIME and what was contained in the medical records of Dr. Anderson. Moreover, Dr. Shih noted that Dr. Henke did not perform three sets of range of motion measurements nor did he assign a preliminary impairment rating in accordance with the *AMA Guides* and the DOWC rating tips.

7. Respondents filed an Application for Hearing to challenge the "not at MMI" determination of Dr. Henke. Respondents requested hearing was held on December 3, 2014. ALJ Margot Jones presided. ALJ Jones determined that Respondents had failed produce clear and convincing evidence to overcome Dr. Henke's opinion that Claimant had not reached MMI.

8. In her February 19, 2015 Findings of Fact, Conclusions of Law and Order, ALJ Jones concluded that Dr. Anderson's reports concerning Claimant's symptoms were internally inconsistent and inconsistent with his subsequent deposition testimony. Consequently, she found Claimant's testimony more persuasive than Dr. Anderson's. She also concluded that while Dr. Henke may have technically deviated from the AMA Guidelines, such deviations do not automatically mandate a conclusion that his DIME opinions are erroneous. Rather, the party challenging the DIME must still demonstrate that the deviation casts a substantial doubt on the validity of the DIME. Finally, in upholding Dr. Henke's "not at MMI" determination, ALJ Jones concluded that a mere difference of opinion between physicians does not amount to clear and convincing evidence to support a finding that the DIME had been overcome. For these reasons, ALJ Jones determined that Respondents failed to overcome Dr. Henke's opinion concerning MMI.

Post Hearing Events, Claimant's Follow-Up DIME and Claimant's Subsequent Treatment

9. After that ALJ Jones determined that Respondents had failed to overcome Dr. Henke's MMI determination, Respondents filed a General Admission of Liability (GAL) on March 3, 2015. Respondents contend that despite the filing of a GAL, Claimant failed to follow-up with treatment. Claimant contends that Respondents failed to schedule the necessary appointments recommended by Dr. Henke to bring him to MMI. Instead of scheduling the EMG and neurosurgical evaluation, Claimant contends that Respondents scheduled additional IME's.

10. Claimant was evaluated by Dr. Sharon Walker at the request of Respondents on September 3, 2015. As part of her RIME, Dr. Walker completed a records review, obtained a history and completed a physical examination. Dr. Walker's RIME report reflects that details of the case were "difficult" to discern because of discrepancies in the records. Ultimately, Dr. Walker concurred with Dr. Shih's opinions,

noting that the "medical record documentation is probably a more accurate depiction of what took place between September 30, 2013 and March 7, 2014." She raised concern for symptom magnification and concluded that Claimant indeed had reached MMI by March 7, 2014 as opined by Dr. Anderson. She also specifically noted that Claimant did not require additional treatment and/or surgical intervention.

11. Following Dr. Walker's RIME, Claimant sought to return to Dr. Henke for a follow-up DIME. Claimant completed his request for a follow-up DIME on October 7, 2015 and Dr. Henke performed the follow-up DIME on November 11, 2015.

12. On December 11, 2015, Dr. Henke issued his follow-up DIME report. In his report, Dr. Henke noted that as part of the original DIME completed on July 9, 2014, he recommended "bilateral lower extremity electromyogram examination" and "neurosurgical consultation." Dr. Henke reviewed the RIME report of Dr. Walker. He concluded that her opinions regarding MMI, permanent impairment and the need for additional treatment were "directly contrary to her [documented] review of the medical records and her physical examination." After completing a physical examination and reviewing Claimant's MRI, Dr. Henke reiterated his original opinion that Claimant was not at MMI. He also renewed his original recommendations for bilateral lower extremity electromyogram examination and a neurosurgical evaluation. After the second time Mr. Potter visited with Dr. Clarence Henke, he finally was able to start seeing a physician through workers' compensation.

13. Respondents filed a GAL on January 4, 2016 and Claimant was referred to Dr. Levi Miller for additional treatment.

14. Dr. Miller examined Claimant on February 4, 2016. During this initial examination, Dr. Miller documented findings consistent with the content of previous medical records specifically that Claimant was suffering from chronic low back and right leg pain most consistent with an L4-5 radiculopathy. However, it was unclear to Dr. Miller whether Claimant's "neurologic deficit [was] due to nondermatonal abnormalities and pain." Dr. Miller noted that it did not appear that Claimant had undergone an electrodiagnostic study or a "consultation" with a surgeon. Despite the recommendation of Dr. Henke for completion of an EMG study, Dr. Miller simply noted he would "[c]onsider nerve conduction study/electromyography to evaluate for acute/or chronic denervation related to right lower extremity lumbosacral radiculopathy symptoms. Rather than completing the recommended EMG or referring Claimant to another doctor for the same, Dr. Miller instructed Claimant to "[r]eturn to the clinic in one month for medication management and to discuss further diagnostic and therapeutic measures."

15. On April 14, 2016, Dr. Miller saw Mr. Potter again. Instead of referring Mr. Potter for an EMG and neurosurgical consultation, Dr. Miller changed medications due to an allergic reaction he had to Percocet.

16. Claimant returned to Dr. Miler on June 23, 2016. In his report from this date of visit, Dr. Miller documents that Claimant asked to be placed at MMI because he

"[believed] there [was] nothing that we can do to improve his condition." Claimant disputes that he made this statement. Nonetheless, Dr. Miller noted that Claimant would return to Dr. Henke for an impairment rating. Based upon the evidence presented, the ALJ finds that the EMG and neurosurgical evaluation recommended by Dr. Henke were not completed during Claimant's care with Dr. Miller.

Claimant's Third DIME with Dr. Henke

17. Claimant returned to Dr. Henke for a third DIME. Dr. Henke reviewed Dr. Miller's treatment records and after review reiterated that Claimant had not had the benefit of the EMG and neurosurgical evaluation he recommended twice previously. Claimant's physical examination was felt to be consistent with right leg radiculopathy with compression of the L4 and L5 spinal roots. Dr. Henke recommended a bilateral lower extremity electromyogram and a neurosurgical consultation as soon as possible given Claimant's MRI findings and his worsening radiculopathy symptoms. Accordingly, Dr. Henke repeated his conclusion that Claimant was not at MMI.

18. Respondents applied for Hearing to overcome the DIME.

Claimant's Hearing Testimony

19. Claimant testified that Dr. Miller never referred him to get the nerve study recommended by Dr. Henke, even though he asked for it. Claimant also testified that Dr. Miller asked specifically if he desired to have surgery to which Claimant responded, "Yes," yet he was not referred to one.

20. Claimant testified that he has shooting pain in his back. Movement makes his pain worse as does sitting. Claimant reported high anxiety as a result of his continued pain. He testified that he "just wants to be fixed." Consequently, he testified that he wants to get an opinion from a neurosurgeon to determine if surgery would be successful or if it would make his condition worse.

Dr. Henke's Deposition Testimony

21. In support of his DIME opinions concerning MMI, Dr. Henke testified via deposition. Dr. Henke testified that when he met with Claimant at the second and third DIME's, Claimant endorsed symptoms in both legs in a pain diagram and described them as pins and needles, stabbing pain in the lower lumbar area midline, and on both sides. Dr. Henke opined that these were consistent with subjective complaints of radiculopathy. He also testified that the MRI and physical examination supported clinical findings of radiculopathy. Consequently, he testified that completion of a nerve study was important because it could assist in determining whether Claimant's leg pain was "occurring from a disc compression on the nerve or a narrowing of the foramen, which level, one or more, that was causing this."

22. Dr. Henke reviewed the report from Dr. Sharon Walker. He testified that her conclusion that Claimant was at MMI contradicted her own physical findings on examination. Specifically, Dr. Henke pointed to the fact that Dr. Walker noted that Claimant could hardly walk due to increased pain and weakness in the right leg, which caused listing to the right side. He also noted that she was unable to elicit deep tendon reflexes at the bilateral knee or ankle, that Claimant was unable to toe walk on the right secondary to his leg giving out and that he had a positive straight leg raise test all of which were inconsistent with Claimant being at MMI.

23. Dr. Henke also reviewed the medical records from Dr. Miller. Dr. Henke testified that had Dr. Miller referred Mr. Potter to get the EMG as he'd requested, it would have identified the accuracy of the kinds of symptoms he was complaining of as to which nerves could be causing his symptoms, which would assist a provider in determining whether a surgical remedy was available to Claimant.

Dr. Walker's Testimony

24. Dr. Walker testified that she disagreed with Dr. Henke's conclusion that Claimant was not at MMI. In support of her disagreement with Dr. Henke's MMI determination, Dr. Walker testified: "Dr. Hinkey (sic) continues to basically take the patient's word over the documented medical records, even though there was discrepancies between Mr. Potter – what Mr. Potter says and the documented medical records." Despite this testimony, Dr. Walker concurred with Claimant's counsel that the need for additional diagnostic testing could preclude a finding of MMI. Outside of her criticism of Dr. Henke's faith in the credibility of Claimant's subjective reports, Dr. Walker failed to point out any errors in the procedures or methodology utilized by Dr. Henke in the completion of his DIME.

25. The ALJ finds a paucity of evidence to suggest that Dr. Henke erred in the completion of his DIME, or that his opinion concerning MMI is highly probably incorrect. To the contrary, the evidence presented persuades the undersigned ALJ, as much as it did ALJ Jones, that there is a mere difference of opinion between the Dr. Henke as the division independent medical examiner and Respondents' retained medical expert, Dr. Walker concerning causation and MMI. Concerning, Respondents suggestion that the DIME should be set aside because the record demonstrates that Dr. Shih credibly opined that there were multiple errors in the report, specifically that Dr. Henke did not assign a preliminary impairment rating as required, that he did not perform three sets of range of motion and lastly that Dr. Henke did not rely upon the evidence contained in the record, the ALJ is, as was ALJ Jones, not persuaded that these technical deviations cast substantial doubt on the validity of Dr. Henke's MMI determination.

26. Based upon the evidence presented, the ALJ finds the opinions expressed by Dr. Henke regarding MMI supported by the content of the medical records presented to him for review. Even Dr. Walker, Respondents' retained expert, agrees that a finding of MMI may be precluded based upon the need for additional diagnostic testing. Dr. Henke believes that Claimant could benefit from further diagnostics and consultation to

determine the cause of his ongoing pain in an effort to cure and relief it. While Dr. Walker disagrees, the ALJ finds her report and testimony unpersuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to Assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968). In this case, the ALJ concludes that Dr. Henke's opinion concerning MMI is supported by the content of the medical records he reviewed. The ALJ is not persuaded that Dr. Henke's MMI opinion is in error based upon the fact that he relied on Claimant's verbal history and the records sent to him for review. While Dr. Walker disagrees, the ALJ rejects the suggestion that her contrary opinions constitute clear and convincing evidence that Dr. Henke's MMI determination is highly probably

incorrect. Furthermore, there is a lack of persuasive evidence to support a conclusion that Dr. Henke's technical deviations regarding the assignment of a preliminary impairment rating, completion of range of motion testing and attaching range of motion worksheets to the report casts a substantial doubt regarding the validity of his MMI determination. Accordingly, the ALJ finds Dr. Henke's MMI opinions credible and persuasive.

Overcoming Dr. Henke's MMI Determination

D. A DIME physician's findings concerning causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

E. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998).

F. MMI is defined, in part, as the "the point in time . . . when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S. Here, the weight of the persuasive evidence demonstrates that Claimant's need for additional diagnostic testing/evaluation is directly related to his admitted industrial injury. Because this treatment has not been afforded and it presents a reasonable prospect for curing and relieving Claimant of the ongoing effects caused by his work related low back injury, Claimant is not at MMI. See *Eby v. Wal-Mart Stores, Inc.*, W.C. No. 4-350-176 (February 14, 2001), *aff'd. Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, (Colo. App. No. 01CA0401, February 14, 2002)(*not selected for publication)* (citing *PDM Molding v. Stanberg,* 898 P.2d 542 (Colo. App. 1995*)* and *Colorado AFL-CIO v. Donlon*, 914 P.2d 396 (Colo. App. 1995)]; *Hatch v. John H. Harland Co.,* W.C. No. 4-368-712 (August 11, 2000).

G. After considering the totality of the evidence presented, including the DIME report of Dr. Henke and the conflicting reports of Drs. Anderson, and Shih, as well as the report and stated opinions of Dr. Walker, the undersigned concludes, as did ALJ Jones that Respondents have failed to produce clear and convincing evidence to establish that Dr. Henke's determination regarding MMI is highly probably incorrect. Rather, the ALJ concludes that the evidence presented persuades the ALJ that the errors asserted by Dr. Shih as having occurred in this case constitute deviations from the *AMA Guides*, which do not call into question the legitimacy of Dr. Henke's MMI determination. Moreover, to the extent that Dr. Henke's opinions concerning MMI diverge from those expressed by Dr. Shih, Dr. Anderson and Dr. Walker, the ALJ concludes that those divergences constitute a professional difference of opinion. A mere difference of opinion between physicians fails to constitute error. *See Gonzales v. Browning Farris Indust. of Colorado*, W.C. No. 4-350-356 (ICAO March 22, 2000). Consequently, Respondent has failed to prove that Dr. Henke's opinion regarding MMI is highly probably incorrect.

ORDER

It is therefore ordered that:

1. Respondents request to set aside the DIME opinion of Dr. Henke regarding MMI is denied and dismissed. Because the ALJ determines that Respondents have failed to overcome the MMI determination of Dr. Henke, assignment of permanent impairment associated with Claimant's back injury is premature.

2. Respondents shall authorize and pay for all expenses associated with the completion of the EMG and neurosurgical consultation as recommended by Dr. Henke. Payment shall be in accordance with the Colorado workers' compensation medical benefits fee schedule.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 28, 2018

/s/ Richard M. Lamphere

Colorado Springs, CO 80906

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable work injury on or about August 18, 2017?

II. Has Claimant shown, by a preponderance of the evidence that the right of selection of his Authorized Treatment Provider ("ATP") passed to him, due to Employer's failure to timely provide a list of ATP's as required by law?

III. If the right to select his ATP passed to Claimant, did he properly exercise that right in selecting Dr. Malinky as his ATP?

IV. If the right of selection of ATP was not properly exercised by Claimant, was he nonetheless entitled to a change of ATP to Dr. Malinky?

V. Has Employer shown, by a preponderance of the evidence, that Claimant was responsible for his own termination, thus relieving Employer of providing Temporary Total Disability payments?

STIPULATIONS

The parties stipulated that Claimant's Average Weekly Wage is $1,558.00. This stipulation was accepted by the ALJ.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant was employed as a service technician whose job was to service and repair heating and air conditioning equipment. This type of work can be physically demanding. Claimant has approximately 30 years of experience in the field, and began work with Employer in July, 2016.

2. On Friday, August 18, 2017 Claimant was working on job at a restaurant/brewery that involved relocating an ice machine from a small upstairs closet to a room downstairs. Claimant had been involved in planning how the work would be performed. Claimant testified that he had expressed to Employer that this was a "major job" and that three men were needed in order to complete the work.

3. The men and materials were gathered and work began at 8:00 a.m. After the work began, one of the technicians ("Ben") was called away. He left with a work truck that contained materials Claimant felt were necessary for the job. The major part of the job involved running copper lines down into and through the building. The

workers needed to push and pull the copper lines from a condenser on the roof of the building into a crawlspace, across a ceiling, through an office, then into another room.

4. At some point, Ben returned and everyone worked on the task. The copper lines were placed and some of the connections were made. Running the lines involved physical overhead work, pushing and pulling the copper lines through holes which the workers had drilled into floors, walls and ceilings.

5. Claimant testified that by approximately 7:00 p.m., his arms felt numb. His shoulders and back hurt from twisting and torqueing his arms and upper body while running the copper lines all day. Claimant testified that he told his co-workers (Ben, and Mike Buffington) that his arms were numb and that he had hurt himself.

6. Claimant did not report the injury to his supervisor, Vernon Zimmerman, on August 18, 2017. Claimant testified that in this industry, aches and pains are common. Claimant testified that he is not in the habit of reporting an injury or seeking medical attention every time he experiences pain at work.

7. Claimant testified that his symptoms increased over the weekend. On the morning of Monday, August 21, 2017, Claimant testified that his right arm and shoulder were very painful. He went to work, and arrived to find 4-5 co-workers outside. He told "Mike" and several other co-workers that he had hurt himself. Claimant went inside and asked Mr. Zimmerman to come outside when he finished a phone call. Claimant went back outside. Mr. Zimmerman came outside and asked Claimant how the job had gone. Claimant told Mr. Zimmerman he was injured while performing the job. Claimant became upset, raised his voice, and asked Mr. Zimmerman "what is wrong with you and why are you doing this to me?" He further told Mr. Zimmerman that "You hurt me!" Claimant further characterized his own demeanor as "I lost it."

8. Claimant testified that believed Mr. Zimmerman had not been providing sufficient men and materials that would allow Claimant to perform his jobs effectively. He believed the job on August 18 was one such job. In fact, Claimant testified that he sincerely believed that Mr. Zimmerman was "after me" and *intentionally* trying to hurt him in this fashion. Mr. Zimmerman invited Claimant to "go home and cool off."

9. Claimant and Mr. Zimmerman talked on the phone later that morning. Mr. Zimmerman asked Claimant to return to the office so they could meet and decide what to do next. Claimant returned and met with Mr. Zimmerman and office manager Sean Gayle. Claimant reported being injured on the job the previous Friday. During this meeting, Mr. Gayle stated, "Geary, we cannot have you go forward like this, hollering at people after you get hurt." Claimant stated he understood.

10. Mr. Zimmerman proposed a possible new job position for Claimant; in either sales or supervision. Claimant told Mr. Zimmerman he was grateful for the opportunity. Claimant stated he was hurt, and he asked to take a week of vacation so he could "heal" and consider the new job offer. Mr. Zimmerman agreed. During this

conversation, Employer did not provide Claimant with a list of physicians from which to choose to treat his injuries.

11. Claimant testified that he then took a nap. Then, since he knew the location of an Emergicare facility, and knew it was a 'Workers Comp facility', he went there the afternoon of August 21. He was told he needed a "first report of injury" from his employer before he could be seen. Claimant called Shelby Baker at Employer's office; she told him he would have to come to the office the next morning to get it.

12. Claimant went to Employer's office the morning of Tuesday, August 22, 2017. He met with Shelby Baker and Sean Gayle. Ms. Baker gave Claimant the paperwork he needed, but told him the situation looked "suspicious." Ms. Baker completed an "Employer's First Report of Injury" on the same date. (Ex. 5). She described how the injury happened; "[employee] was pulling line set for installation in the basement thru ceiling; noticed shoulder pain. Continued to work thru the shoulder pain." *Id.*

13. Claimant was then seen at Emergicare on August 22, 2017. Dr. Autumn Dean reported, "Pt was reaching overhead for 6-8 hours at work and started having burning pain in his R shoulder." She diagnosed "R shoulder strain" and noted that her objective findings were consistent with a work-related mechanism of injury. Dr. Dean imposed work restrictions that included no lifting or carrying more than 5 pounds, and no reaching. Her notes further indicate "May use R arm up to waist level only and next to body-no reaching. No driving if taking sedating medications." A return visit was scheduled for 8/29/2017 at 10:20 a.m. (Ex. 1, p. 4).

14. Claimant (while still officially on paid vacation) went to Employer's office the morning of Friday, August 25, 2017. He thanked Employer for considering him for one of the two positions they discussed previously, on August 21. Mr. Zimmerman then told Claimant it had been decided not to offer him a position. Employer gave Claimant a document entitled "Wright Total Indoor Comfort Disciplinary Procedure" dated August 21, 2017. (Ex. E).

15. That form indicates Claimant received a warning about his behavior on August 21, 2017. Specifically, that Claimant had "walked off scheduled job" and "continuing instances of loseing [sic] composure with fellow employees & supervisors." The form does not indicate Claimant's employment was being terminated, rather, the section entitled "Action Plan Taken by Supervisor to Help Employee" contains the following entry; "Termination at current position. Offered new position to accomidate [sic]." The form is dated August 21, 2017 and lists a "Follow Up Date" of August 25, 2017.

16. Mr. Zimmerman testified that no new job was formally offered to Claimant at the meeting on August 21. He explained his intent was to consider offering Claimant a job as a sales representative when he met with Claimant on August 25. However, at a separate meeting prior to Claimant's arrival, Employer had decided to terminate

Claimant's employment after all. Mr. Zimmerman terminated Claimant's employment when Claimant came to the office on August 25.

17. Claimant acknowledged at hearing that in April, 2017, and again in May of 2017, he had raised his voice working at two different jobs at 7-11 stores. Mr. Zimmerman had discussed these incidents with Claimant, but Claimant had not been subject to any sort of formal discipline.

18. Dr. Dean's *Physician's Report of Workers Compensation Injury* indicates that Claimant was examined again on 8/29/2017. The restrictions originally imposed on 8/22/2017 remained in effect, with a recommendation for physical therapy to occur twice a week for 4 to 6 weeks. MMI was estimated to be in 4-6 weeks. A follow-up exam was then set for 9/19/2017 at 9:00 a.m. (Ex 1, p. 3).

19. Dr. Dean's next *Physician's Report of Workers Compensation Injury* shows that Claimant did appear on 9/19/2017 for his follow-up appointment. The same work restrictions were still recommended, but no referral for physical therapy was made at this visit. MMI was still estimated at "4-6 weeks", despite this visit being three weeks after MMI had already been estimated at "4-6 weeks". Claimant was still diagnosed with a right shoulder strain, and the next appointment was set for 10/10/2017 at 9:00. (Ex 1, p. 2). The record is silent whether Claimant attended this follow-up visit, or any thereafter.

20. Claimant testified that on September 1, 2017, he delivered a letter to Employer in which he requested authorization to be seen by "Interventional Pain Management" for his work related injury. (Ex. 8). Claimant testified that Dr. Malinky is with that clinic, that Dr. Malinky had treated Claimant for prior medical issues, and Claimant wanted a change of physician from Dr. Dean to Dr. Malinky. Employer did not respond to the letter. The ALJ notes that the document itself merely mentions that Claimant would like "another opinion of injuries", does not request a change of physicians, and is not on a Change of Treating Physician form as prescribed by the Director of the Division of Workers Compensation.

21. Claimant supplied medical records which appear to indicate that he consulted on at least one occasion with the Mountain View Medical Group through private insurance, in the fall of 2017. Nothing in the record indicates that at any point Claimant attempted to designate this group as his ATP, nor does Claimant argue that now.

22. Claimant testified that he has applied for work but has been unable to locate work which is within Dr. Dean's work restrictions. At hearing, however, Claimant testified that his injuries from this event are now "completely better". Claimant has, however, been receiving unemployment benefits.

23. Vernon Zimmerman testified that he was unaware of Claimant's pain complaints until they were raised at the meeting on August 21. He testified that

Claimant was ultimately terminated from his position due to his unprofessional behavior, and due to some prior absenteeism due to aches and pains. He had verbally warned Claimant previously about his unprofessional behavior, but not in writing.

24. Shelby Baker, Office Manager for Employer, testified by telephone. She testified that Claimant's termination was not related to any Workers Compensation claim he might have filed; rather, it was due to his behavioral issues. Instead, she had opined that it seemed suspicious that Claimant would file a Workers Compensation claim so close on the heels of this meeting where his behavior had become an issue. She further testified that she verbally gave Claimant a list of ATPs while filling out the First Report of Injury with Claimant, since she did not have a written ATP list at this time. There is no further evidence suggesting that anyone on Employer's behalf subsequently tendered Claimant a written list of providers within seven days-or any time thereafter.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the Claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it

is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Compensability

D. For an injury to be compensable under the Act, it must arise out of and occur within the course and scope of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. In this regard, there is no presumption that an injury which occurs in the course of a worker's employment arises out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968); see also, *Industrial Commission v. London & Lancashire Indemnity Co*., 135 Colo. 372, 311 P.2d 705 (1957) (mere fact that the decedent fell to his death on the employer's premises did not give rise to presumption that the fall arose out of and in course of employment). Rather, it is the Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. §8-43-201, C.R.S. 2006; *Ramsdell v, Horn*, 781 P.2d 150 (Colo. App. 1989).

E. The determination of whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals*, 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle*, 934 P.2d 861 (Colo. App. 1996).

Retaliatory Claim for Workers Compensation Benefits

F. Respondents argue that Claimant's claim for Workers Compensation was filed in retaliation for his meeting with his supervisor on August 21, 2017, wherein he had been warned about his behavioral issues. The timeline of events suggests otherwise. Claimant left this meeting chastened, but hopeful of receiving a new position within the company. The two positions mentioned as possibilities were both less physically demanding. It was not until that Friday, August 25, that Claimant was informed that his services would no longer be needed. In the interim, Claimant had already reported his injuries; first during the meeting of August 21, then formally with the office manager on August 22 while seeking medical treatment. The ALJ is unpersuaded that Claimant filed his Workers Compensation claim for a termination which did not even occur for several more days.

G. Instead the evidence shows that Claimant was performing assigned job duties for Employer when he injured his right shoulder. The injury happened on Friday, August 18, 2017. Claimant did not report the injury that day. Claimant reasonably thought he might feel better over the weekend, but unfortunately did not. He then reported the injury to his Employer the morning of Monday, August 21, 2017. Claimant presented to Emergicare on August 22, 2017 where Dr. Dean indicated "[Patient] was reaching overhead for 6-8 hours at work and started having burning pain in his R shoulder." This description of the mechanism of injury is entirely consistent with Claimant's testimony. Dr. Dean diagnosed "[Right] shoulder strain," recommended medication, and imposed work restrictions. Dr. Dean saw Claimant again on August 29 and September 19. On the August 29, 2017 visit, she recommended Claimant begin physical therapy. Claimant has established by a preponderance of the evidence that he sustained a compensable injury to his right shoulder on August 18, 2017.

Medical Benefits

H. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a), C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). However, the respondents are only liable for authorized treatment or emergency medical treatment, which may be obtained without prior authorization. See § 8-42-101(1), C.R.S.; *Pickett v. Colorado State Hospital*, 32 Colo. App. 282, 513 P.2d 228 (1973); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). In this case, while Claimant could rightfully have obtained emergency medical treatment over the weekend due to the pain he was experiencing, he did not. Claimant reasonably believed that this was one of those aches and pains that resolve on their own. Instead, he waited to express his dissatisfaction and report his injury until business hours resumed that following Monday.

Initial Right of Selection of Physician

I. Authorization refers to a physician's legal status to treat the industrial injury at the Respondents' expense. *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006); *Popke v. Industrial Claim Appeals Office*, 944 p.2d 677 (Colo. App. 1997). Once an ATP has been designated, the claimant may not ordinarily change physicians or employ additional physicians without obtaining permission from the insurer or an ALJ. However, if an employer fails to designate an ATP the right of selection of the ATP passes to the claimant. Section 8-43-404(5)(a)(I)(A), C.R.S. ("…If the services of a physician are not tendered at the time of injury, the employee shall have the right to select a physician or chiropractor.") *See also* W.C.R.P. 8-2(E)(" If the employer fails to supply the required designated provider list in accordance with this rule, the injured worker may select an authorized treating physician or chiropractor of their choosing.") While the evidence does not show any bad faith by Employer in providing a written list of ATPs, such failure to provide a written list of authorized treating physicians within seven days passed the right of selection to Claimant, and the ALJ so finds.

J. The inquiry does not end there, however. In this case, Claimant initially chose Emergicare, and was treated by Dr. Dean, beginning August 22, 2017. Although the record is not clear what other ATP options were conveyed to him verbally by Shelby Baker, Claimant chose Emergicare. Claimant then continued to treat with Dr. Dean, with at least two more visits, on August 29, and again on September 19. (The records provided by Claimant indicated he then treated with Mountain View Medical Group on 10-2-17, through private insurance, but no effort was made to change his ATP, and no follow-up is noted). When Claimant tendered his letter, dated 9/1/2017, he did not manifest an intent to choose Dr. Malinky as his ATP. He never mentions Dr. Malinky by name. The letter merely asks that he "be seen by" Interventional Pain Management for "another opinion of injuries." There is no evidence that he ever actually was seen or at this facility. Where a Claimant has signified "by words or conduct that he has chosen a physician to treat the industrial injury", he has made 'a selection'. *Pavelko v. Southwest Heating and Cooling,* W.C. 4-897-489 (Sept. 4, 2015). Also see, *Williams v. Halliburton Energy Services,* W.C. 4-005-888-01 (Oct. 28, 2016). The ALJ finds, that notwithstanding his letter of 9/1/17, that Claimant actually *selected* Dr. Dean of Emergicare as his Authorized Treating Physician. As such, he then became subject to C.R.S. 8-43-304(5)(a)(III), for any *changes* he might wish to make to his ATP.

Change of Authorized Treating Physician and Claimant's Letter dated 9/1/2017

K. The ALJ finds that such letter, assuming it were timely delivered and received by Employer, does not comply with the requirements of C.R.S 8-43-304(5)(a)(III). The request is not on a written and submitted on a *form designated by the director* (of the Division of Workers Compensation), as required by C.R.S. 8-43-304(5)(a)(III)(B). The letter was not sent to Employers Insurance Carrier, nor to the initially authorized treating physician. C.R.S. 8-43-304(5)(a)(III)(C). There is no evidence that Interventional Pain Management was on the Employer's designated list, or provides medical services for a designated corporate medical provider on such list, as required by C.R.S. 8-43-304(5)(a)(III)(D). As already found, this letter does not manifest an intention to designate Interventional Pain Management as Claimant's ATP. The ALJ further finds that, statutory noncompliance notwithstanding, the letter does not even request a *change of physician;* merely "another opinion of injuries'. For the foregoing reasons, Claimant has failed to show he is entitled to this change of physician. His ATP remains Dr. Dean with Emergicare.

TTD Benefits and Responsibility for Termination of Employment

L. To prove entitlement to temporary total disability (TTD) benefits, Claimant must establish that the industrial injury caused a disability lasting more than three work shifts; that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The impairment of the earning

capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the Claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). In this case, the preponderance of the evidence establishes that beginning August 21, 2017 Claimant was otherwise unable to perform his usual job, due to the effects of the industrial injury. The evidence further shows that Claimant was on paid vacation, at his own request, from August 21, 2017, until his termination became formalized on August 25, 2017.

M. The employer bears the burden of establishing by a preponderance of the evidence that a Claimant was terminated for cause or was responsible for the separation from employment. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008); Section 8-42-105(4). Claimant must perform some volitional act or exercise a degree of control over the circumstances resulting in his termination. See *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995).

N. The ALJ concludes that the Claimant had at least four documented instances of angry outbursts in front of customers and co-workers prior to his termination. Vernon Zimmerman credibly identified two instances in April and May of 2017, at two different 7-Eleven convenience store sites, where the Claimant and Mr. Zimmerman had discussions about the Claimant's loud outbursts that were unacceptable in front of customers and co-employees. Claimant himself largely corroborated this. According to Mr. Zimmerman, the Claimant apologized for his inappropriate behavior that day. Another July 2017 verbal warning regarding inappropriate behavior was documented in Exhibit E, the termination letter. The final reprimand and ultimatum took place on August 21, 2017, in a meeting with Mr. Zimmerman and other management personnel, when the Claimant was told his unprofessional angry outbursts could not be tolerated by the company.

O. The record is unclear if profanity was actually used in this meeting. Nonetheless, the ALJ finds that Claimant's belief, however sincerely held, that Employer was *intentionally trying to hurt him,* is simply not rational. It is not uncommon for employees to feel that insufficient resources are provided to them to complete their jobs. While most employers might welcome some employee input to promote efficiency, they need not tolerate repeat verbal outbursts from their subordinates, in the form of "losing it". Claimant was already on notice that such conduct was unacceptable. Between August 21, 2017 and August 25, 2017, when the Claimant came to pick up his paycheck, the Respondent/Employer decided that it was not going to accommodate the Claimant with another position in the company and communicated the final decision to terminate the Claimant. The ALJ finds and concludes that Employer was within its discretion to terminate Claimant forthwith, notwithstanding "optional" steps mentioned in its Disciplinary Procedure. Employer was free to proceed straight to termination at its discretion.

P. The ALJ further finds, by a preponderance of the evidence, that Employer did not terminate Claimant as retaliation for his earlier filing of a Workers Compensation

Claim. The Claimant was responsible for his own termination, which precludes Claimant from receiving temporary total or temporary partial disability for his compensable injury. Claimant was on voluntary, paid vacation when he was terminated; therefore he is not entitled to TTD payments for any missed work at any point.

ORDER

It is therefore ordered that:

1. Claimant suffered a compensable work injury on August 18, 2017; thus he is entitled to all medical benefits to relieve him of such injury.

2. Claimant's ATP at all times pertinent is Dr. Dean with Emergicare.

3. Claimant's claim for Temporary Total Disability benefits is denied and dismissed.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove that her condition has worsened and a left ulnar nerve transposition is reasonably necessary to cure and relieve the effects of her industrial injury?

- Did Claimant prove entitlement to TTD benefits commencing August 17, 2017?

- Did Respondents prove that Claimant's admitted left ulnar nerve pathology was not caused by the November 7, 2011 accident?

FINDINGS OF FACT

1. Claimant suffered admitted injuries on November 7, 2011 due to a trip and fall accident. Claimant's foot got caught while she was stepping up onto a curb, causing her to fall forward onto her hands and knees.

2. Employer did not refer Claimant to an authorized provider, so she treated with her personal providers through the military healthcare system. She initially went to the Evans Army Hospital emergency room on November 7, 2011. The records are largely illegible, but the problematic areas appear confined to the bilateral wrists and left knee. There were no documented elbow complaints.

3. Claimant underwent upper extremity electrodiagnostic testing on November 30, 2011 with Dr. William Seybold. The impetus for the testing was "recurrent, primarily nocturnal bilateral hand pain and numbness . . . over the past few months." There was no mention of the November 7 fall at work. Dr. Seybold found bilateral carpal tunnel syndrome. He did not test the left ulnar nerve and there was no indication of any ulnar nerve symptoms or problems.

4. Claimant saw Dr. Daniel White, an orthopedic surgeon, on January 30, 2012. Her chief complaint was bilateral hand pain and numbness of "insidious onset" starting "6-7 months ago." She reported "pins and needles" in all fingers but "most specifically in the right ring finger." Elbow flexion ulnar compression test was "equivocal," and Tinel's was negative at the cubital tunnels. Dr. White diagnosed "bilateral wrist pain" and referred Claimant for occupational therapy. He did not mention any left ulnar nerve pathology.

5. Claimant's initial occupational therapy evaluation took place on April 16, 2012. The therapist examined both arms, but provocative tests for ulnar nerve issues were "negative."

6. Claimant underwent a second EMG/NCV test on December 11, 2012 with Dr. Mark Blackley. This time the testing included the left ulnar nerve at the elbow. The

testing showed mild to moderate bilateral carpal tunnel syndrome but "no evidence of an ulnar neuropathy."

7. Claimant had a surgical evaluation with Dr. Chance Henderson on January 22, 2013. There were significant clinical findings consistent with bilateral carpal tunnel syndrome, including thenar atrophy and positive Tinel's and Phalen's tests bilaterally at the wrists. Cubital tunnel testing was "negative x3 bilateral elbow." Dr. Chance diagnosed bilateral carpal tunnel syndrome, administered bilateral wrist injections and scheduled Claimant for surgery.

8. Dr. Henderson performed bilateral carpal tunnel surgery on February 8, 2013. Claimant initially did well, but her symptoms gradually returned. She followed up with Dr. Henderson on April 9, 2013 and reported "numbness in the bilateral ring and small fingers that seems to be bothering her more than anything." On examination, Tinel's and elbow ulnar nerve compression tests were negative, and there were no subjective changes in sensation in the ulnar nerve distribution. Dr. Henderson remarked Claimant was "doing well since surgery but today [presents] with new complaints of hand pain mostly in the distribution of the ulnar nerve . . . ."

9. Although Employer had filed a First Report of Injury shortly after the accident, Insurer did not contact Claimant for more than a year. A second "First Report of Injury" was filed on January 14, 2013, which prompted Insurer's claims adjuster, Beatriz Diaz, to contact Claimant in late January or early February 2013. As a result of those communications, Ms. Diaz filed a General Admission of Liability and referred Claimant to Dr. Gregg Martyak for ongoing care.

10. Claimant's initial visit with Dr. Martyak took place on July 11, 2013. He noted positive Tinel's over the bilateral cubital tunnels and made the first documented diagnosis of cubital tunnel syndrome.

11. On November 19, 2013, Claimant had a third EMG/NCV test, performed by Dr. Katherine Leppard. By that time, her clinical presentation was more clearly consistent with bilateral cubital tunnel syndrome. She had tenderness over both ulnar nerves at the elbow with positive Tinel's bilaterally. Pinprick sensation was decreased in the median and ulnar distributions. The electrodiagnostic testing showed continued bilateral carpal tunnel syndrome and, for the first time, evidence of bilateral ulnar neuropathy at the elbow. Dr. Leppard graded the left ulnar neuropathy as "moderate" and the right as "mild." She also commented that "both were reportedly normal on the prior EMG of 12/11/12."

12. On January 27, 2014, Dr. Martyak performed a left carpal tunnel revision and a left ulnar neuroplasty at the elbow. Intraoperatively, he found a "large amount of scar tissue on the median nerve at the wrist." He also noted a "large amount of tissue placing pressure on the [ulnar] nerve in the cubital tunnel," but did not specify whether it was scar tissue.

13. At her April 22, 2014 follow-up appointment, Claimant told Dr. Martyak her left elbow and wrist were "doing well," with no residual numbness in the ulnar nerve

distribution. But by August 7, 2014, numbness and tingling were "returning" in the ulnar distribution of the left hand.

14. Dr. Martyak released Claimant at MMI on October 8, 2014. He opined, "I am not sure any additional surgery would be of benefit to her. The only procedure left would be to revise her ulnar nerve neuroplasties to transpositions."

15. Claimant saw Dr. Shimon Blau on March 23, 2015 for an impairment rating. Dr. Blau assigned a 15% left upper extremity rating, including 3% for the residual left ulnar nerve impairment. Dr. Blau's report contains no causation analysis regarding the left cubital tunnel syndrome.

16. Claimant attended a DIME with Dr. Frank Polanco on August 24, 2014. Dr. Polanco calculated a 26% scheduled rating for the left upper extremity, including 3% for residual left ulnar nerve impairment. Dr. Polanco's report contains no discussion or analysis of causation regarding the left cubital tunnel syndrome.

17. Respondents filed a Final Admission of Liability based on Dr. Polanco's DIME report on October 14, 2015. Claimant timely objected to the FAL and requested a hearing, but subsequently withdrew her objection in a stipulation dated March 7, 2016, and allowed the claim to close.

18. Claimant's residual left cubital tunnel symptoms progressively intensified after MMI. On February 14, 2017, she returned to Dr. Martyak and reported the numbness in the fourth and fifth fingers had "returned to the level of pre surgery on the left." Dr. Martyak recalled that "at our last visit in 2014 we declared her at MMI with the caveat that if numbness returned we may need to consider a revision ulnar nerve neuroplasty with transposition as a final definitive procedure." He sent Claimant back to Dr. Leppard for repeat EMG/NCV testing.

19. Dr. Leppard performed the testing on July 20, 2017, which showed bilateral ulnar mononeuropathy at the elbow. She opined "the left ulnar mononeuropathy at the elbow is severe . . . . [and] has worsened since the prior EMG of 11/19/13."

20. After reviewing the electrodiagnostic test results, Dr. Martyak recommended a revision ulnar neuroplasty with an intramuscular transposition.

21. Respondents asked Dr. Eric Ridings to perform a Rule 16 peer review of the request for surgery. Dr. Ridings opined "there is no occupational relationship between her current left cubital tunnel syndrome and her injury falling down in 2011. Based on the record, an ulnar nerve transposition is reasonable but is not related to the 2011 claim or to her work in any other way."

22. Dr. Ridings performed a detailed record review for Respondents in November 2017 regarding the left cubital tunnel. He opined that the original mechanism of injury would not have caused cubital tunnel syndrome. He thought Dr. Leppard had over-interpreted the November 2013 electrodiagnostic testing, and stated, "at most I

would call this borderline cubital tunnel syndrome." He agreed that the July 2017 testing showed definitive ulnar neuropathy, but opined:

> [T]he patient's current left cubital tunnel syndrome can in no way be related to falling onto her outstretched hands in 2011. As noted, the EMG of December 2012 showed no abnormalities across the left elbow, and subsequent development of borderline findings in 2013 cannot be attributed to the 2011 work injury. Even less can one attribute findings in 2017 to the 2011 claim. Hence, any treatment for that condition is not work-related under this claim.

23. Claimant saw Dr. Timothy Hall for an IME at her counsel's request on November 15, 2017. Dr. Hall disagreed with Dr. Ridings and opined,

> [T]his is the direct consequence of her original injury to the left elbow. . . . This is a very specific event at the left elbow. The only thing that has happened at that left elbow is the fall, which resulted in this entrapment. I do not see any reasonable argument that has been put forward that would explain these symptoms other than the worsening over time of this diagnosis related to the fall. It is probably the consequence of local scarring following surgery, which is not an uncommon even under these circumstances.

24. Dr. Hall testified at hearing to elaborate on the opinions expressed in his report. When asked how Claimant's condition could naturally worsen after the 2014 surgery with no intervening cause, Dr. Hall explained:

> Continued scarring. You know, that's what the neurolysis went in to get rid of. And unfortunately, often the consequence of removing scar tissue is the production of further scar tissue. We don't have a way of retarding that consequence. Some people lay down different amounts of scar tissue in different places. And it appears she has laid down significant scar tissue postoperatively.

25. Regarding the significant delay between the accident and the first documented complaints of cubital tunnel syndrome, Dr. Hall opined he "wouldn't expect" acute symptoms because "there was not that much trauma." Rather, he opined that the entrapment "evolved slowly over time."

26. Dr. Ridings testified for Respondents in a posthearing deposition dated February 12, 2018. He expressed his "strong opinion that [Claimant's] left ulnar nerve issues are not, in any way, related to the 2011 claim." Dr. Ridings cited several factors which led him to that conclusion: there was no documented injury to Claimant's left elbow in 2011; the records document no complaints or findings consistent with ulnar compression until April 2013; EMG/NCV studies in November 2011 and December 2012 showed no evidence of cubital tunnel syndrome; and the EMG/NCV testing in November 2013 was at most "borderline" positive for cubital tunnel syndrome.

27. Dr. Hall's opinion that Claimant's current need for a left ulnar nerve transposition is the direct and natural consequence of the January 27, 2014 surgery is credible and persuasive. Claimant proved by a preponderance of the evidence that her condition has worsened since MMI and the proposed left ulnar nerve transposition is reasonably necessary.

28. Dr. Ridings' opinion that Claimant's initial diagnosis of cubital tunnel syndrome was not related to the November 2011 accident is credible and persuasive. Respondents proved that the initial diagnosis of left cubital tunnel syndrome was not caused by the November 2011 accident. The January 27, 2014 left cubital tunnel surgery was reasonably necessary, but not causally related to the November 2011 accident.

29. After reviewing the evidence presented, the ALJ is persuaded that Claimant's left cubital tunnel syndrome has worsened since MMI, and the left ulnar nerve transposition proposed by Dr. Martyak is reasonably necessary. The ALJ further credits Dr. Hall's opinion that the proposed transposition is the direct and natural consequence of the January 27, 2014 surgery. But the ALJ is also persuaded by Dr. Ridings' opinion that the initial diagnosis of left cubital tunnel syndrome, which led to the January 2014 surgery, was not caused by the November 2011 accident. Although Respondents admitted liability for the diagnosis, covered the 2014 surgery, and paid medical impairment benefits related to ulnar neuropathy, they are legally entitled to revisit the initial causation determination in the context of Claimant's petition to reopen. Since the January 2014 surgery was performed for a condition that, in retrospect, was not caused by the industrial accident, Respondents are not liable for the current consequences of that surgery. Therefore, Claimant's petition to reopen must be denied.

CONCLUSIONS OF LAW

A. Claimant proved her condition worsened after MMI. The proposed ulnar nerve transposition is reasonably necessary and causally related to the January 27, 2014 surgery

Section 8-43-303(1) allows a party to request that a claim be reopened on the grounds of "an error, a mistake, or a change in condition." A change in condition refers either to a change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985).

Claimant's left ulnar neuropathy has clearly worsened since MMI and all experts agree the surgery proposed by Dr. Martyak is reasonably necessary. The also ALJ credits Dr. Hall's opinion that the ulnar nerve transposition surgery is the direct and natural consequence of the January 27, 2014 surgery. Specifically, Dr. Hall explained that the current left ulnar nerve entrapment "is probably the consequence of local scarring following surgery, which is not an uncommon event under these circumstances." This opinion is supported by the "large amount of scar tissue" Dr. Martyak found around the

median nerve during Claimant's left carpal tunnel revision surgery, which indicates she has a predisposition to developing excessive scar tissue after surgery.

B. Respondents must prove that the initial diagnosis of cubital tunnel syndrome, which led to the January 27, 2014 left ulnar neuroplasty, was not related to the November 2011 accident.

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. § 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). As a general rule, where a claimant's entitlement to medical benefits is disputed, the claimant must prove that an injury directly and proximately caused the condition for which she seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Even after an admission of liability is filed, the respondents retain the right to dispute the relatedness of any particular treatment, because the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (ICAO, Jul. 2, 2010).

But application of those general principles in this case is complicated by § 8-43-201(1), which provides that "a party seeking to modify an issue determined by a general or final admission . . . shall bear the burden of proof for any such modification." Respondents are not merely disputing whether the proposed surgery is related to the original accident, but are asserting that left cubital tunnel syndrome should not have been considered a compensable component of the injury in the first place. That position directly conflicts with their previous admissions of liability for left cubital tunnel syndrome, pursuant to which they paid medical and indemnity benefits. By defending the petition to reopen on the basis that that the left cubital tunnel syndrome was not causally related to the accident in the first instance, Respondents are seeking to modify an "issue" that was previously determined by an admission of liability. As a result, Respondents must prove that Claimant's initial diagnosis of left cubital tunnel syndrome was not causally related to the November 2011 accident.

C. Is the standard of proof a preponderance or clear and convincing?

Although § 8-43-201(1) assigns the burden of proof it does not specify the applicable standard of proof. Most issues in this system are decided using the preponderance of the evidence standard, which requires a showing that a disputed proposition is more likely true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). But Claimant previously underwent a DIME with Dr. Polanco, who assigned an impairment rating for left ulnar neuropathy. Although determining causation is an "inherent" part of the DIME process, Dr. Polanco's determinations are not entitled to any special weight because Claimant had purely scheduled impairments. The presumptive weight attributed to the DIME's determinations of MMI and whole person impairment is not applicable to scheduled ratings. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691 (Colo. App.

2000). Thus, Respondents must carry their burden on initial causation by a preponderance of the evidence.

D. Respondents carried their burden

As found, Respondents proved that Claimant's original diagnosis of left cubital tunnel syndrome was not caused by the industrial accident. The ALJ credits Dr. Ridings' opinions as the most reasonable interpretation of the post-accident medical evidence. The ALJ sees no persuasive explanation for the seventeen-month delay before the first definitive manifestations of ulnar entrapment. Although Claimant's early complaints of numbness and tingling in "all" of her fingers (which includes the fourth and fifth fingers) *could* have been consistent with cubital tunnel syndrome, no examining provider even suggested that diagnosis until Dr. Henderson in April 2013. Dr. Ridings further noted that those early reported symptoms were "diagnostically [ ] meaningless," and Dr. Hall agreed that Claimant's symptoms have been "very diffuse" and "non-specific," and her clinical presentation has been "inconsistent . . . from provider to provider." More importantly, specific provocative tests such as Tinel's and cubital tunnel compression test were repeatedly negative during that seventeen-month interval, and EMG/NCV testing of the left ulnar nerve in December 2012 (13 months post-injury) was objectively normal. Had Claimant been experiencing chronic inflammation and progressive scarring around the left ulnar nerve since the accident as opined by Dr. Hall, the ALJ would have expected ulnar nerve entrapment to have become apparent much sooner than it did.

The ALJ acknowledges that Dr. Blau and Dr. Polanco implicitly found a causal connection between left cubital tunnel syndrome and the accident, as evidenced by their impairment ratings. But their reports contain no specific discussion or analysis of causation and they appear to have simply presumed causation, most likely because Respondents had paid for the surgeries and were not disputing causation. The ALJ has given minimal weight to Dr. Blau's and Dr. Polanco's reports.

E. The proposed ulnar nerve transposition is not a compensable consequence of the original injury as a matter of law.

The finding that the accident did not cause the initial ulnar nerve entrapment does not end the analysis, because the ALJ has also determined that the proposed surgery is a direct and natural consequence of the surgery performed in January 2014. Therefore, the next question is: are Respondents liable for medical treatment to remedy a problem caused by a surgery they authorized under an admission of liability, even though, in retrospect, the original surgery was not causally related to Claimant's industrial accident?

The ICAO addressed this issue in *Gordon v. Ross Stores, Inc*., W.C. No. 4-878-759-05 (February 5, 2015). In *Gordon*, the respondents had admitted liability for carpal tunnel syndrome (CTS) and authorized a carpal tunnel decompression surgery. Because of the surgery, Claimant developed CRPS. A DIME determined that the CRPS was "iatrogenically caused" by the carpal tunnel surgery and provided a whole person CRPS rating. An ALJ subsequently found that the respondents proved the claimant did not develop CTS as a result of her employment and allowed them to withdraw the GAL. But

the ALJ also awarded the DIME's CRPS rating because the CRPS was caused by surgery that was authorized and admitted at the time. Specifically,

> The ALJ rejected the respondents' argument that since the claimant's underlying CTS was not caused by her work activities, then her subsequent surgery for CTS and her resulting CRPS also cannot be work-related. The ALJ based his determination on the quasi-course of employment doctrine. The ALJ explained that the claimant developed CRPS while undergoing authorized medical treatment for an industrial injury, that surgical treatment was provided to relieve the effects of the admitted industrial injury, and that it became an implied part of her employment contract.

The ICAO reversed and held the claimant's CRPS was not a compensable component of her injury as a matter of law. Citing *Travelers Insurance Company v. Savio*, 706 P.2d 1258 (Colo. 1985), the ICAO held the quasi-course doctrine only applies if the subsequent injury "is the direct and natural consequence of an original injury which itself was compensable." Since the claimant's CTS was not a compensable injury in the first instance, a secondary condition that developed due to treatment for CTS was also not compensable.

Based on the analysis in *Gordon*, even though Claimant's current need for surgery is a direct and natural consequence of the January 2014 surgery, Respondents are not liable for futher treatment because the original ulnar neuropathy was not caused by the November 2011 accident.

ORDER

It is therefore ordered that:

1. Claimant's request to reopen her claim for a left ulnar nerve transposition and additional TTD benefits is denied and dismissed.

2. Any matters not determined herein, or otherwise closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 16, 2018

s/Patrick C.H. Spencer II

Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-048-446-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on February 28, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 2/28/18, Courtroom1m beginning at 1:30 PM, and ending at 4:00 PM).

Claimant's Exhibits 1 through 15 were admitted into evidence, without objection, After a foundation was laid, Claimant's Exhibit 16 was admitted into evidence Respondents' Exhibits A through J were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on March 7, 2018. Respondent had been given 2 working days within which to file objections. No timely objections were filed. A written transcript of the February 28, 2018 hearing, was filed on March 21, 2018. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern whether the Claimant sustained a compensable low back injury arising out of and in the course and scope of her employment with the Employer on May 7, 2017. Additionally, the ALJ determined whether Jed A. Bell, D.O., Buckeye Spine and Rehab, is an authorized treating physician and whether the October 18, 2017, and November 15, 2017, low back injections that the Claimant underwent with Dr. Bell were reasonably necessary, and causally related to the May 7, 2017 work-related injury. The paramount issue of **compensability** turns on an assessment of the Claimant's credibility.

The Claimant bears the burden of proof by a preponderance of the evidence on all issues that are the subject of this decision.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the commencement of the hearing, the parties stipulated, and the ALJ finds, that if the claim is compensable: (a) Claimant's average weekly wage (AWW) is $656, with a corresponding temporary total disability (TTD) benefit rate of $437.33; (b) the time period for TTD benefits is June 5, 2017, through July 21, 2017, both dates inclusive, a period of 47 days; and, (c) Robert Herbert, D.O., is the Claimant's authorized treating physician (ATP).

2. On May 7, 2017, Claimant, a flight attendant for the Employer, sustained a lower back injury arising out of and in the course and scope of her employment with the Employer. Claimant testified that while on a flight from San Jose, California to Las Vegas, Nevada, she injured her back during unexpected turbulence. Claimant testified she was trying to return to her jump seat when the turbulence hit and she twisted, feeling a sudden pinch in her lower back. Claimant testified she flew the rest of her trip from Las Vegas, Nevada, to Buffalo, New York, and then home to Cleveland, Ohio. Claimant testified that on May 9, 2017, she went to her primary care physician (PCP), Mount Carmel Medical Group, but could not be seen due to the fact her injury was work related (Claimant's Exhibit 8, p. 52).

3. On May 12, 2017, the Claimant went to the adult triage (ED) at Mount Carmel St. Ann's in Westerville, Ohio. The ED report reflects Claimant "is a flight attendant and has had right leg pain …x1 week. No known moi (mechanism of injury)" (Claimant's Exhibit 6, p, 13). The report also states Claimant said, "she developed mild right leg pain four weeks ago after flying back from Ireland. She works as a flight attendant. She did not think much of it but pain has gradually worsened especially over the last 2 days. She does not have a PCP…" The ED physician was concerned with a DVT (deep vein thrombosis) [Claimant's Exhibit 6, p. 15]. On physical examination, the ED physician noted that Claimant had back pain with palpation. The ED physician noted Claimant was concerned with a herniated disc and wanted a lumbar MRI (magnetic resonance imaging) [Claimant's Exhibit 6, p. 17]. At Hearing, the Claimant testified that she never told the ED providers that she injured her back on the way home from Ireland. She testified that she was in Ireland at the end of March 2017 and did not injure her back on her trip home from Ireland. She further testified that she was at the Mount Carmel ED for approximately 35 minutes, that it was chaotic, and that nobody was really helping her. She stated that she reported that she injured her low back during turbulence.

4. There is a discrepancy between the history of mechanism of injury (MOI) that Claimant gave to the ED treaters in Ohio and the history of the MOI which the Claimant subsequently gave to her treating physicians and to which she testified at hearing. The Respondents substantially rely on this discrepancy in their challenge to **compensability.** As found herein below, the Claimant presented straight-forwardly and credibly at hearing. The ALJ infers and finds that the ED treaters, in conversation with the Claimant, heard mention of "flying back from Ireland" and placed importance on this detail to the exclusion of the Claimant giving a history of the injury occurring after experiencing turbulence. In making a credibility determination, the ALJ finds the Claimant's version of the MOI, as related to her subsequent authorized treating physicians (ATPs) and testified to at hearing, under oath, more credible than the Ohio ED notes on MOI. Even the Respondents' retained Independent Medical Examiner (IME), Allison Fall, M.D., is of the opinion that if turbulence was the MOI, then, the Claimant's back injury is **work-related.** In the final analysis, the mention of 'flying back from Ireland," although it may have been the beginning of the Claimant's low back problems, has turned out to be somewhat of a "red herring."

5. On May 14, 2017, the Claimant treated at Riverside Methodist Hospital ED. She reported that she hurt her lower back approximately one week prior. The report reflects that Claimant stated she had been physically active and developed pain in her right hip and down her right lower extremity (Claimant's Exhibit 7, pp. 31-32). The report also reflects that Claimant reported that she works as a flight attendant and is "often having to bend low and lift objects." The report reflects that the Claimant reported she has thrown her back out in the past but this incident was worst (Claimant's Exhibit 7, p. 34). On physical examination, the ED physician noted a positive straight leg raise on the right side. Claimant underwent a lumbar CT, which revealed "slight effacement of the

ventral thecal sac and bilateral neural foraminal stenosis at L4-5 and L5-S1 due to disc space narrowing and mild discogenic disease" and disc protrusions (Claimant's Exhibit 7, p. 37). The ED physician prescribed medications and referred the Claimant to a neurosurgeon. *Id*. Claimant testified, under oath, that despite what the report states, she did report how she injured her back during turbulence. Claimant testified this ED report does not accurately reflect what she told the ED providers on May 14, 2017.

6. The Claimant stated that as a result of her injury she took time off work. She stated that she was off work following her injury until May 16, 2017. She testified that she was on the board on May 16-18. According to the Claimant, she did not work on May 16, 2017. She stated that she flew one or two roundtrip flights on May 17 and 18. Then, on May 19, 2017, she went back to work for one day of training. She was off work from May 20 through May 29. She took this time off work in hopes her back would start feeling better. On May 29, 2017, she reported her injury to her supervisor, who advised her to complete an irregularity report, which she did that day. In the irregularity report, the Claimant described how her injury occurred (Claimant's Exhibit 16, p. 180).

7. At the hearing, Claimant was adamant that on May 12 and May 14, 2017, she reported her mechanism of injury to both ED providers. She testified the May 12 and May 14, 2017 ED reports do not accurately reflect what she reported to these providers regarding how her injury occurred. The ALJ finds the Claimant's testimony regarding how her injury occurred credible and persuasive. The ALJ finds that the Claimant has proven that on May 7, 2017, she sustained a low back injury arising out of and in the course and scope of her employment with the Employer. Additionally, the ALJ finds that the Claimant has proven that the October 18, 2017, and November 15, 2017, lumbar spine injections she underwent with Jed Bell, D.O., Buckeye Spine and Rehab, were reasonably necessary, and causally related to her May 7, 2017 work-related injury.

Work Health Grove City—Robert Herbert, D.O.

8. On June 6, 2017, the Claimant treated at Work Health Grove City with Robert Herbert, D.O., the authorized treating physician (ATP). The Claimant reported that she injured her lower back during turbulence on a May 7, 2017 flight. Dr. Herbert provided the Claimant with work restrictions and referred her for physical therapy (PT). (Claimant's Exhibit 10, pp. 107-115). From June 13, 2017, through July 10, 2017, The Claimant underwent ten PT sessions at Eastside Health Center *Claimant's* (Exhibit 9, pp. 53-106).

9. On June 20, 2017, the Claimant treated with Dr. Herbert, who noted that Claimant had started PT and was off work. The Claimant reported ongoing lower back pain with radiating pain down her right leg. Dr. Herbert prescribed medications, maintained the Claimant's treatment plan and work restrictions, and referred her to a pain management specialist (Claimant's Exhibit 10, pp. 116-124). On July 5, 2017, the Claimant treated with Dr. Herbert and continued to report ongoing low back pain with

radiating pain down her right leg (Claimant's Exhibit 10, pp. 125-131). On July 21, 2017, Claimant again treated with Dr. Herbert and reported ongoing lower back pain with radiating pain down her leg. Dr. Herbert released her to full duty on July 21, 2017 (Claimant's Exhibit 10, pp. 138-145). On August 10, 2017, the Claimant again treated with Dr. Herbert, who the maintained Claimant's treatment plan (Claimant's Exhibit 10, pp. 146-151).

Physical Medicine Associates –Robert Perkins, M.D.

10. On August 4, 2017, the Claimant treated at Physical Medicine Associates with Robert Perkins, M.D., and reported how her injury occurred and her symptoms since the injury. Dr. Perkins noted that on August 3, 2017, the Claimant underwent a lumbar MRI, which revealed a right paracentral disc protrusion at L5-S1 that is compressing the right S1 nerve root. Dr. Perkins rendered an opinion, to a reasonable degree of medical probability, that the disc protrusion is related to her work injury. Dr. Perkins recommended two rounds of epidural steroid injections (Claimant's Exhibit 11, pp. 152-153). At hearing, the Claimant stated that the Respondents denied these injections.

Buckeye Spine and Rehabilitation –Jed Bell, D.O.

11. At hearing, the Claimant testified that after Respondents denied the injections recommended by Dr. Perkins, she went to Buckeye Spine and Rehab, where she treated with Dr. Bell. On October 4, 2017, the Claimant treated with Dr. Bell, who recommended that the Claimant undergo the lumbar injections (Claimant's Exhibit 15, pp. 172-173). On October 18, 2017, the Claimant underwent her first right S1 TFESI (Claimant's Exhibit 15, p. 174). On November 2, 1017, the Claimant again treated with Dr. Bell, who noted that Claimant had a 60% decrease in pain following the first injection (Claimant's Exhibit 15, pp. 176-177). On November 15, 2017, the Claimant underwent her second right S1 TFESI (Claimant's Exhibit 15, p. 178).

Allison Fall, M.D. Respondents' Independent Medical Examiner (IME)

12. On January 18, 2018, the Claimant underwent an IME with Dr. Fall, Respondents' retained expert witness. Dr. Fall examined the Claimant and reviewed Claimant's medical records, including the May 12 and May 14, 2017 ED records (Claimant's Exhibit 5, pp. 9-12). Claimant described her mechanism of injury to Dr. Fall. Dr. Fall stated the following opinion:

> Assuming [Claimant's] history is accurate, then she did note the onset of the low back pain during turbulence, then she does have a work-related lumbar spine injury, which is a disc protrusion with right lower extremity radiculopathy, which fortunately has responded quite well to epidural injections. She is not yet at MMI.

Claimant's Exhibit 5, p.12). Dr. Fall recommend a course of PT and consideration of one final epidural steroid injection.

13. On February 20, 2018, Dr. Fall testified by deposition. She testified consistently with her report. Dr. Fall stated that if Claimant's reported mechanism of injury is correct, then she did sustain a work-related injury. Dr. Fall testified that if Claimant's reported mechanism of injury is not accurate*, i.e.,* if there was no turbulence, then she did not sustain a work-related injury.

Ultimate Findings

14. The ALJ finds the Claimant's testimony and Dr. Fall's opinion credible and persuasive. Specifically, the ALJ finds that Claimant's testimony that she injured her back during turbulence on the May 7, 2017 flight and that she reported this mechanism of injury at her May 12, and May 14, 2017 ED appointments. The Claimant's testimony was straight-forward, credible and persuasive. As found herein above, the reference to "flying back from Ireland" is a "red herring."

15. Between conflicting medical reports, the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's testimony and Dr. Fall's opinion, and to reject any evidence to the contrary.

16. The ALJ finds that the Claimant has proven by a preponderance of the evidence that she sustained a compensable lower back injury on May 7, 2017, during the turbulence incident, arising out of and in the course and scope of her employment with the Employer.

17. The ALJ finds that all of the Claimant's medical care and treatment for her May 7, 2017, work-related lower back injury, including the injections by Dr. Bell, are causally related and reasonably necessary to cure and relieve the effects thereof. Additionally, the ALJ finds Dr. Bell is an authorized treating physician. Claimant testified Respondents denied the injections recommended by Dr. Perkins for non-medical reasons. Claimant then went and had the injections with Dr. Bell.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony and Dr. Fall's opinion on work-relatedness were credible and persuasive. Specifically, the ALJ found that Claimant's testimony that she injured her back during turbulence on the May 7, 2017 flight and that she reported this mechanism of injury at her May 12, and May 14, 2017 ED appointments credible. . The Claimant's testimony was straight-forward, credible and persuasive. As found herein above, the reference to "flying back from Ireland" is a "red herring."

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical reports, the ALJ made a rational choice, based on substantial evidence, to accept the Claimant's testimony and Dr. Fall's opinion on work-relatedness, and to reject any evidence to the contrary.

Compensability

c. A compensable injury is one that arises out of and in the course of employment. § 8-41-301(1) (b), C.R.S. The "arising out of test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought. §** 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health* 21 *Laboratories v. Indus. Claim Appeals* Office, 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals* Office, 942 P.2d 1337 (Colo. App. 1997). *Also see §* 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225334 (ICAO, April 7, 1998). As found, on May 7, 2017, the Claimant sustained a low back injury arising out of and in the course and scope of her employment with the Employer. Therefore, she sustained a compensable injury on May 7, 2017.

Medical Benefits/Refusal to Treat for Non-Medical Reasons

d. Because this matter is compensable, Respondents are liable for medical treatment that is reasonably necessary to cure or relieve the effects of an industrial injury. § 8-42-101(a), C.R.S.; *Snyder v. Indus. Claim. Apps. Office*, 942 P.2d 1337 (Colo. App. 1997). To be a compensable benefit, medical care and treatment must be causally related to an industrial injury. *Dependable Cleaners v. Vasquez*, 883 P.2d 583 (Colo. App. 1994). Pursuant to § 8-43-404(5)(a), C.R.S., an employer or insurer is afforded the right in the first instance to designate the authorized treating physician. If the physician selected by the respondents refuses to treat for non-medical reasons, and the respondents fails to appoint a new physician, the right of selection passes to the claimant, and the physician selected by the claimant is authorized. *See Ruybal v. Univ. Health Sciences Center*, 768 P.2d 1259 (Colo. App. 1988). Whether the ATP refused to treat the claimant for non-medical reasons is a question of fact for the ALJ. *See Lutz v. Indus. Claim Apps. Office*, 24 P.3d 29 (Colo. App. 2000). In this case, Dr. Herbert referred the Claimant to Dr. Perkins, who recommend that the Claimant undergo lumbar injections. At hearing, Claimant credibly testified that the Respondents denied the injections recommended by Dr. Perkins, so she went to Buckeye Spine and Rehab to undergo the injections. As found, Dr. Bell at Buckeye Spine and Rehab, is an authorized treating physician.

e. As found, Claimant's need for the lower back treatment, including the October 18, 2017, and November 15, 2017, lumbar spine injections performed by Dr. Bell, are causally related to the Claimant's May 7, 2017 work-related injury. Additionally, medical treatment must be reasonably necessary to cure and relieve the effects of an industrial injury. § 8-42-101(1)(a), C.R.S.; *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P.2d 864 (1935); *Sims v. Indus. Claim Apps. Office*, 797 P.2d 777 (Colo. App. 1990). As found, the Claimant sustained her burden concerning the authorization, reasonable necessity, and causal relatedness of the October 18, 2017, and November 15, 2017, low back injections that the Claimant underwent with Dr. Bell at Buckeye Spine and Rehabilitation.

f. As stipulated and found, Robert Hebert, D.O., is the Claimant's ATP. Therefore, as found, any referrals for treatment of the Claimant's work-related back injury were and are within the chain of authorized referrals.

Average Weekly Wage (AWW)

f. As stipulated and found, the Claimant's AWW is $656, which yields a TTD rate of $437.33 per week, or $62.48 per day

Temporary Total Disability (TTD)

g. As stipulated and found, the Claimant was temporarily and totally disabled from June 5, 2017 through July 21, 2017, a total of 47 days, which entitles the Claimant to aggregate TTD benefits of $2,936.56.

Burden of Proof

h. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden on compensability, all medical benefits, AWW and TTD.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay all of the causally related, reasonably necessary costs of medical care, including the costs of referrals from Robert Herbert, D.O., subject to the Division of Workers Compensation Medical Fee Schedule.

B. Respondents shall pay the Claimant temporary total disability benefits at the rate of $437.33 per week, or $62.48 per day, from June 5, 2017, through July 21, 2017, both dates inclusive, a total of 47 days, in the aggregate amount of $2,936.56, which is payable retroactively and forthwith.

C. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

D. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of March 2018.

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that she suffered a compensable injury on August 2, 2017.

II. Whether Claimant established, by a preponderance of the evidence, that she is entitled to reasonable and necessary medical treatment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was born on April 23, 1964 and was 53 years of age at the time of the hearing.

2. Claimant worked for Pro Drivers, a "subsidiary" of Employbridge Holding Company.

3. Claimant was employed as a driver. Claimant's job duties included delivering equipment to clients. Equipment included delivering Comcast boxes, medical supplies and metal on flatbed trucks.

4. In May of 2017, Claimant allegedly injured her low back while transporting milk to "Scoop" ice cream. Claimant was allegedly moving a dolly containing five crates of milk, when the dolly tipped and claimant jerked to grab the milk, allegedly pulling her back. This alleged injury was not part of this hearing. (*Hearing* p. 10, ll:3-8)

5. Claimant reported this injury but refused workers' compensation.

6. Claimant was seen by a chiropractor Justin Dukes, D.O. as a result of this alleged injury. (*Hearing*, p. 10, l:21)

7. Claimant was originally examined by Dr. Dukes on May 5, 2017. Claimant was complaining of acute low back dysfunction. Claimant rated her pain as a 6 out of 10 which was deep and burning. (*Respondents' Exhibit* A, p. 1)

8. Claimant continued to suffer from low back dysfunction and treated with Dr. Dukes in May, June and July. Claimant last treated with Dr. Dukes on July 29,

2017. Claimant continued to complain of acute low back dysfunction with her pain at a 6 out of 10. (*Respondents' Exhibit* A)

9. Claimant also testified that her symptoms were consistent during her treatment with Dr. Dukes and that her pain level was roughly a 9 out of 10. (*Hearing*, p. 11, ll: 1-8.) Claimant also testified that despite having 9/10 pain, she was able to work. (*Hearing*, p. 11, ll: 9-10.)

10. Claimant testified as a result of this injury her symptoms continued after July 29, 2017.

11. Claimant testified she was injured on August 2, 2017, working at CTDI pulling a lift gate up when she felt pain in her low back. Claimant originally testified on direct the incident occurred at 10:00 a.m. with her shift starting at 4:00 a.m. On cross-examination, Claimant testified the incident occurred at 3:00 p.m. (*Hearing*, p. 12, ll:1-6)

12. Jennifer Warren, the area operations manager for Respondent-Employer, testified. Ms. Warren testified her job duties include meeting and getting to know the drivers, the clients, job assignments as well as what happens on the job. Ms. Warren testified if there is an on the job injury it comes to her attention. Ms. Warren testified employees are taught to notify both the client and the employer of an injury right away. Ms. Warren testified the reason for this is to investigate the claim. Ms. Warren's testimony is found to be credible. (*Hearing*, p. 20, ll:21-25, p. 21, ll:1-5)

13. Ms. Warren testified she knew the Claimant as a driver for Pro Drivers.

14. Ms. Warren testified review of the CTDI computer records documents the job Claimant was doing at CTDI ended on August 1, 2017. Ms. Warren testified when discussing the alleged incident with Andrea at CTDI they were unaware of any injury. (*Hearing*, p. 21, ll:19-24)

15. Ms. Warren also testified that Claimant first reported that the accident occurred at the dock at CTDI. CTDI pulled all of the camera footage from their dock and they could not find footage of the alleged accident. After footage of the alleged accident could not be found, Claimant indicated the accident occurred at a client's delivery site. (*Hearing*, p. 23, ll:19-23.)

16. Claimant was seen by Dr. Childers on the day of the alleged accident. On Dr. Childers' physical examination he found no gross abnormalities, strength and sensation were normal, Claimant's gait was normal, her straight leg raised test was normal and her reflexes were normal. Other than tenderness of the lumbar spine there was nothing abnormal about Claimant's presentation on August 2, 2017. (*Respondents' Exhibit* C, p. 19)

17. Claimant testified that just prior to the alleged incident of August 2, 2017, her pain level was 7/10 and that after the incident it was 10/10. (Hearing, p. 13, ll: 12-17) Despite indicating her pain level was 10/10 after the alleged incident, Claimant was evaluated by Dr. Childer's the same day, August 2, 2017, and he indicated in his report that Claimant was in "no apparent distress." (*Respondents' Exhibit* C, p. 19)

18. Dr. Childers referred Claimant to Dr. Parker. Dr. Parker first saw Claimant on August 10, 2017. Claimant told Dr. Parker, and she conceded on cross-examination, that her discomfort would fluctuate depending upon the activity. The Claimant admitted this fluctuation occurred prior to August 2, 2017. (*Respondents' Exhibit* D, p. 21)

19. Claimant also told Dr. Parker on August 10, 2017, that although additional treatment was recommended due to her alleged injury that occurred in May of 2017, such treatment was not approved. (*Respondents' Exhibit* D, p. 21)

20. In addition to seeing Dr. Parker, Claimant also had physical therapy. In the August 29, 2017 chart note, the physical therapist educated Claimant on her "normal" age related changes found on her MRI. (*Respondents' Exhibit* E)

21. The evidentiary deposition of Gary B. Childers, M.D. was taken on January 19, 2018 and submitted as evidence. Dr. Childers is a physician who has been licensed to practice for approximately 30 years in family medicine. He is neither board certified nor board eligible. (*Depo. Tr*. p.4 ll:11-23) When Dr. Childers examined Claimant on August 2, he found no muscle spasm. (*Id*. p. 8 ll:13-16) Other than Claimant's complaint of tenderness there were no other findings on physical examination. (*Id*. ll:17-25)

22. Dr. Childers admitted his opinion on causation was predicated upon Claimant's self-reported history to him. (*Id*. p.10 ll:15-17)

23. Dr. Childers conceded the problem as a provider is they don't know whether the patient is being honest with them with regard to where their symptoms are or what caused the symptoms. (*Id*. p.20 ll:13-17)

24. Review of the MRI, according to Dr. Childers, although abnormal were not unusual for someone of Claimant's age in fact found in 60% of individuals over the age of 40 were arthritis and were not necessarily causing symptoms. (*Id*. p.27 ll:1-25 and p.28 ll:1-2)(*See also* p.30 ll:1-8)

25. Claimant was evaluated in an Independent Medical Examination by Kathleen D'Angelo, M.D. on December 24, 2017. Dr. D'Angelo's evidentiary deposition was taken on January 26, 2018. Dr. D'Angelo is a Board Certified Internal Medicine Specialist who moved to Colorado in 2001, Level II Accredited since that time with education training experience to examine, diagnose and treat

patients with low back complaints. (*Depo* 2, p.4 ll:7-19) Dr. D'Angelo was offered as a medical expert in occupational medicine with no objection from Claimant. (*Id*. p.5 ll:1-2)

26. At the time of Dr. D'Angelo's Independent Medical Examination, she did not have access to Dr. Dukes' records. These were provided to her on January 25, 2018, and reviewed prior to her deposition. Claimant reported to Dr. D'Angelo her symptoms existed prior to the alleged August 2, 2017 incident. (*Id*. p. 9 ll:1-4) Dr. D'Angelo asked merely because on August 2, 2017 between 11:37 a.m. and 1:41 p.m., Claimant complained to Dr. Childers of some tenderness, which did not mean it was due to what allegedly occurred at 9:15 a.m. that morning. "No. no. I mean, certainly not when you look at her MRI. She certainly had a lot of degenerative changes." (*Id*. ll:17-25; p.10 ll:1-7)

27. Dr. D'Angelo testified merely because Claimant had palpable tenderness at the lumbar spine on August 2, did not mean Claimant actually injured her lumbar spine. (*Id*. ll:9-12)

28. With regard to the MRI findings, Dr. D'Angelo testified they were not due to the alleged injury. (*Id*. ll:8-16)

29. Dr. D'Angelo volunteered, "clearly, August 2nd, the same day as her "injury" she had a normal exam. Certainly nothing that would lead me to believe that there was anything significant brewing. "I - - I can't explain excruciating back pain based upon what she looked like immediately after her injury, unless there was an intervening event." (*Id*. p.23 ll:12-18)

30. Dr. D'Angelo further offered, "she stated that from the very beginning of her May injury until the time I saw her, she had lower back pain with radiation into her right leg up to the level of the knee. (Id. p.24 ll:3-5) Claimant did not claim to Dr. D'Angelo the alleged August 2, 2017 incident aggravated, accelerated or exacerbated the pain in her right leg, rather, she related it to the May injury. "She stated that from the time of the May injury until she saw me, her symptoms had really not changed at all." (*Id*. ll:8-14)

31. Dr. D'Angelo further testified, "there is no way to state within a reasonable degree of medical probability the care claimant received beginning August 2 was reasonably needed because of what occurred on August 2." Dr. D'Angelo explained, "no. And that is very significant, not only did she complain about 6 out of 10 pain on that particular date 5 days prior to her August injury, but that level of pain seemed to be fairly consistent from beginning to end of the chiropractic notes, which suggests to me that pain wasn't going anywhere anytime soon." (*Id*. p.30 ll:10-21)

32. With regard to restrictions subsequent from August 2, Dr. D'Angelo testified based upon a complete review of the medical evidence, meeting Claimant and

evaluating Claimant. Dr. D'Angelo testified the restrictions Dr. Childers gave were not reasonably needed because of what she alleged occurred on August 2:

> No. I mean, clearly on that particular date what she had was subjective complaints of pain that did not appear to correspond to objective abnormalities on physical exam. They also did not seem to be all that different from her complaints of pain five days earlier when she was seen by the chiropractor at which time she was performing regular duty. So I don't really see any physiological reason for restrictions. There was no tissue at risk of worsening damage with her regular duties.

(*Id*. p. 31 ll:7-15)

33. It is specifically found Claimant failed to meet her burden of proof. It is specifically found the testimony of Jennifer Warren to be credible and persuasive. It is specifically found the testimony of Kathleen D'Angelo, M.D. to be credible and persuasive. It is specifically found that the testimony of Claimant is not credible. It is specifically found Claimant did not injure her back on August 2, 2017 in the course and scope of her employment that required healthcare and/or disabled the Claimant from performing her regular job duties.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See Section 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier of fact, after considering all of the evidence, to find that a fact is more probably true than not. See *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. See §8-43-201(1), C.R.S.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has

rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 134 P.254 (Colo. 1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insuranace Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2007). A worker's compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established, by a preponderance of the evidence, that she suffered a compensable injury on August 2, 2017.

For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). An injury occurs "in the course of" employment where Claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" requirement is narrower and requires Claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work related functions and is sufficiently related to those functions to be considered part of the employment contract. *Id*. An activity arises out of and in the course of employment when the activity is sufficiently related to the conditions and circumstances under which the employee generally performs her job functions such that the activity may reasonably be characterized as an incident of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207 (Colo. 1996). Compensable injuries involve an "injury" which requires medical treatment or causes disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

The right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000).

Claimant was required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp*., 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center*, WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.*, WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

It is specifically concluded that Claimant's testimony is not credible for a number of reasons. First, Claimant alleges she injured herself on August 2, 2017, while driving for CTDI. According to Ms. Warren, the driving assignment for CTDI ended on August 1, 2017. Second, Claimant initially indicated the accident occurred at CTDI. Once CTDI reviewed their surveillance footage and could not find any evidence of the alleged accident, the location of the alleged accident was changed to a client of CTDI's. Third, Claimant obtained medical treatment the same day of the alleged accident. Although Claimant testified the accident caused back pain of 10/10, Dr. Childer's evaluated Claimant the day of the alleged accident and noted Claimant was in no apparent distress. Fourth, Claimant alleges she initially injured her back in May of 2017 while delivering milk to Scoop Ice Cream. Claimant's medical records after May of 2017, but before August 2, 2017, indicate Claimant had persistent back pain of 6/10. Then, at hearing, Claimant testified that she had persistent back pain of 9/10 between the same period of time and that she was able to work during this period of time. Claimant's pain complaints are inconsistent and it does not make sense to the ALJ that Claimant could have pain of 9/10 but continue to work – even modified duty. Therefore, this ALJ does not find Claimant's pain complaints, which are the underpinnings of her claim, to be credible.

It is specifically concluded Claimant failed to meet her burden of proof. It is specifically concluded the testimony of Jennifer Warren to be credible and persuasive. It is specifically concluded the testimony of Kathleen D'Angelo, M.D. to be credible and persuasive. It is specifically concluded Claimant failed to establish by a preponderance of the evidence that she injured her back on August 2, 2017 in the course and scope of her employment and that such injury required healthcare and/or disabled Claimant from performing her regular job duties.

II. **Whether Claimant established, by a preponderance of the evidence, that she is entitled to reasonable and necessary medical treatment.**

Because the ALJ concluded Claimant failed to establish by a preponderance of the evidence that she suffered a compensable injury on August 2, 2017, this issue is moot.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 21, 2018

Denver, CO 80203

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he suffered a compensable injury arising out of and in the course of his employment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant began working for United Subcontractors, Inc. in February of 2017. His job was to spray polyurethane foam insulation inside of buildings. Claimant was trained to wear protective clothing while spraying, including a respiratory mask with cartridges to protect him from chemical vapors. [Resp. Exhibit G, p. 63]

2. Claimant consistently wore his protective clothing while spraying, including a respiratory mask with cartridges to protect him from chemical vapors. [Hearing Transcript, p. 47.]

3. On the alleged date of injury, Claimant entered the room where his partner, Bryan Stoddard, was working. Claimant was not wearing his protective clothing since Mr. Stoddard was not actively spraying. Claimant told Mr. Stoddard that he missed a spot. Claimant was approximately 15 feet away when Mr. Stoddard resumed spraying. [Hearing Transcript p. 18] The overspray hit the back of Claimant's head and neck.

4. Claimant testified that Mr. Stoddard did not tell him to put his protective gear on prior to spraying. [Hearing Transcript, p. 33-34] Mr. Stoddard testified that he told Claimant to put his protective gear back on. Mr. Stoddard testified that he was not aware if Claimant was in the room when he resumed spraying. [Hearing Transcript, p. 55]

5. Per the history provided to Claimant's medical providers, the alleged exposure occurred on March 3, 2017 (Friday) and Claimant developed a mild cough on March 4, 2017 (Saturday). By March 7, 2017 (Tuesday), Claimant alleged a shortness of breath even at rest. He assumed that he had a respiratory infection and self-treated with Mucinex, Dayquil, and Nyquil. Claimant alleges that his symptoms worsened over the next few days until he went to an urgent care clinic on March 10, 2017 (Friday). At the urgent care clinic, it was discovered that Claimant had low blood oxygen and he was transferred to the emergency department for further treatment and evaluation. According to Claimant, he was

diagnosed with chemical induced pneumonia and asthma and remained hospitalized for three days. [Resp. Ex. G, p. 62]

6. Claimant testified the alleged exposure occurred on Saturday, March 4, 2017. This testimony is contrary to the Workers' Claim for Compensation which Claimant completed and signed on March 20, 2017, that identified the date of injury as March 3, 2017. [Resp. Ex. A] Mr. Stoddard testified that he believed that the alleged exposure occurred on Friday, March 3, 2017.

7. During Claimant's testimony, he admitted he was coughing prior to work on the alleged date of injury. Claimant testified that he did not believe he had a cold and that the cough was due to smoking. [Hearing Transcript, p. 16 at 8-13] Claimant admitted he smoked a half pack to a full pack for 10 years prior to the alleged incident. [Hearing Transcript p. 30-31] Claimant admitted that he had "new onset" of a cough in the mornings prior to March 3, 2017. He described this as being over the prior "day or two." [Hearing Transcript p. 30]

8. Mr. Stoddard testified that he picked Claimant up for work on the morning of the alleged exposure. He testified that the morning of the alleged incident Claimant had a cough and "wasn't…his healthy self." [Hearing Transcript p. 64] Mr. Stoddard testified that Claimant had been sick for approximately one week. He suggested that Claimant see a doctor prior to the alleged exposure due to his coughing. [Hearing Transcript, p. 63-64] Mr. Stoddard testified that he noticed an increasing cough due to Claimant's physical exertion throughout the day, again, prior to the alleged overspray incident. [Hearing Transcript p. 64-64, Claimant's Exhibit 9]. The ALJ credits this portion of Mr. Stoddard's testimony and finds it highly persuasive.

9. Claimant testified that on the day of the alleged incident, but prior to the alleged overspray incident, he tried to smoke a cigarette, but could not because he was coughing so much. [Hearing Transcript, p. 32] The ALJ credits this portion of Claimant's testimony and finds it highly persuasive.

10. Claimant testified that he was not feeling well immediately following the alleged exposure and that he spoke with Mr. Stoddard about his condition. Mr. Stoddard testified that he was not aware of the alleged incident until the two returned to the truck at the end of the job. At that time, Claimant purportedly told Mr. Stoddard that he had been sprayed. [Hearing Transcript, p. 56 at 2-10]

11. Claimant testified that Mr. Stoddard offered Claimant his inhaler following the alleged exposure. [Hearing Transcript, p. 42] Claimant testified he did not recall whether he told his physicians about his prior cough or his use of an inhaler on the day of the incident.

12. On March 16, 2017, Mr. Stoddard authored a witness statement. [Claimant's Exhibit 9] In this statement, he stated Claimant was having light to moderate

coughing spells and that he noticed the cough to be “worsening” throughout the workday prior to the alleged spraying incident. Mr. Stoddard’s statement says that he “did not notice a severe shortness of breath.” There is no mention of the use of any inhaler in Mr. Stoddard’s written statement.

13. Notably, Claimant’s cough prior to the alleged exposure and alleged use of Mr. Stoddard’s inhaler on the date of the incident are not documented in his medical records. The first mention of the alleged use of the inhaler came during Claimant and Mr. Stoddard’s hearing testimony.

14. Mr. Stoddard testified that he and Claimant are friends and see each other socially. [Hearing Transcript – p. 72 at 2-18]

15. Claimant testified that he told his physicians that his coworker had inadvertently sprayed the back of his suit and his hair with insulation. [Hearing Transcript, p. 45 at 19-23] Notably, Claimant told Dr. Neagle that “he did not feel like any got onto his skin and he did not have irritation on the back of his neck.” [Resp. Ex. C, p. 30]

16. Claimant testified that he did not report any injury when he returned to the shop on his alleged date of exposure. [Hearing Transcript p. 42]

17. When Claimant presented to the hospital with respiratory symptoms on March 10, 2017, he provided very specific details concerning the alleged incident. Specifically, Claimant reported that he was “not experiencing significant symptoms” on March 3, 2017. He stated that he “seemed to do okay through the weekend; however by Monday morning, he noticed onset of cough, wheezing, and shortness of breath.” He stated that “over the last 5 days this has gotten progressively worse.” [Resp. Ex. C, p. 38] There is no mention of having used a co-worker’s inhaler contained in the hospital records nor is there any mention of a cough prior to the incident that was so bad he could not smoke a cigarette. This record, dated March 10, 2017 is the most contemporaneous account of the alleged incident.

18. This provided history, which Claimant repeated to other medical providers that evaluated him, starkly contradicts Claimant’s testimony concerning onset of his symptoms provided at hearing. [See e.g., Resp. Ex. D, G]

19. Claimant testified he does not have health insurance as of March 2017, that significant medical bills were incurred as a result of his hospitalization, and if workers’ compensation does not cover it, he is “pretty much” stuck with the bill. [Hearing Transcript p. 50-51]

20. Claimant treated with Dr. Neagle on March 10, 2017. Per Dr. Neagle’s assessment, the two possible causes of Caimant’s respiratory illness were either isocyanate-induced asthma or a respiratory infection. On March 11, 2017, Dr.

Neagle opined that Claimant's exposure to isocyanates on March 3, 2017 was the most likely cause of Claimant's respiratory illness. [Resp. Ex. C, p. 43]

21. Dr. Neagle testified that claimant's CT scan revealed "some subtle patchy, hazy opacities in the upper lung field, which can represent infection, but it can be due to a virus, bacteria, So you can't say for certain what it is without knowing." [Deposition of Dr. Neagle, p. 28-29] There is no indication in Dr. Neagle's reports or testimony that he was aware of Claimant's pre-existing cough.

22. Respondents obtained an IME with Dr. Schwartz. Dr. Schwartz disagreed with Dr. Neagle's assessment of the cause of Claimant's symptoms. "Mr. Malan's clinical trial was, in fact, inconsistent with all known respiratory conditions associated with isocyanate exposure, but very consistent with community acquired pneumonia (CAP)." [Exhibit G, p. 66]

23. Dr. Schwartz testified that community acquired pneumonia is an infection of the lungs acquired in a nonhospital setting. [Deposition of Dr. Schwartz, p. 10 at 11-19] He testified this is a relatively common condition as opposed to isocynate induced injury which is rare.

24. Dr. Schwartz noted that isocyanate-induced asthma typically occurs in individuals who are chronically exposed to isocyanates over many months or many years. Claimant gave no history of repeated exposure to isocyanate as he indicated that he was careful to wear the prescribed respiratory mask designed to prevent inhalation of vapors and fumes. Dr. Schwartz further opined, "had Mr. Malan somehow become sensitized to isocyanates prior to the described exposure on Friday, 03/03/17, his exposure would have caused…*acute* asthma, that is, a severe attack within minutes of exposure. Had the claimant developed acute asthma secondary to his isocyanate exposure, these symptoms would have gradually improved when he was away from work on the weekend of 03/04/17-03/05/17. The careful history obtained by Dr. Neagle regarding Claimant's exposure and his onset of symptoms in the AM of 03/06 is not consistent with any known reaction to the exposure to isocyanate Mr. Malan reports, asthma or otherwise." [Resp Ex. G, p. 66-67]

25. Per Dr. Schwartz, "Dr. Neagle opined that claimant likely had isocyanate-induced asthma on 03/11/17 but he did so without accounting for Mr. Malan's focal right upper lobe pulmonary infiltrate and right hilar lymphadenopathy evident on his chest CT scan on 03/10/17. Asthma is an airway disease and would not cause a focal pulmonary infiltrate to occur, regardless of the etiology of the asthma, hence Mr. Malan's right upper lobe infiltrate cannot be explained by a diagnosis of isocyanate-induced asthma."

26. Dr. Schwartz further opined, "it was additionally preposterous for Mr. Malan's physicians to diagnose the claimant with chemical pneumonitis, as the inhalation of an irritant fume would not cause injury to just the right upper lobe, as the upper

lobes of the lungs get significantly less ventilation and, therefore, less exposure to an inhaled toxin than the lower portions of the lung. An inhaled irritant that moved down the airways of the lungs and reached the alveoli would cause a more diffuse lung injury and not result in an injury to only one small area of the right lymphadenopathy, a finding that does *not* occur in asthma attacks from chemical exposure but is a *typical* inflammatory reaction in patients with pneumonia." [Resp. Ex. G, p. 67]

27. Dr. Schwartz concluded that "CAP, rather than chemical pneumonitis or isocyanate-induced asthma, is a much more likely diagnosis to account for Mr. Malan's acute respiratory illness in March. CAP is a very common illness as it occurs in 4-5 million Americans each year. While no risk factor is required to have CAP, cigarette smoking is a well-known risk factor for CAP and the claimant has been a smoker prior to his acute respiratory illness in March 2017." [Resp. Ex. G, p. 67]

28. Dr. Schwartz noted that "in deciding that claimant did not suffer from CAP, Dr. Neagle attributed diagnostic importance that no causative organism was found to be responsible for Mr. Malan's pneumonia. However, there is no diagnostic importance of this finding. It has long been known that the majority of hospitalized patients with CAP who undergo an exhaustive evaluation to identify the organism causing their pneumonia do not have an organism identified. A recent study of the etiologies of CAP in adults in the U.S. demonstrated that we can only identify the cause of CAP in approximately 38% of cases that are severe enough to require hospitalization. The most common etiologies of CAP were shown not to be bacteria, but respiratory viruses, organisms which are known to be difficult to identify and have long been known to cause airway inflammation and bronchial hyperreactivity as seen in Mr. Malan when he was acutely ill." [Resp. Ex. G, p. 68]

29. Dr. Neagle admitted that there is no way to quantify isocyanate exposure. There are no diagnostic tests which would show isocyanate levels in Claimant's blood or lungs. There are no objective tests of any kind which could show that an individual was or was not exposed to an isocyanate. [Deposition of Dr. Neagle, p. 17-18]

30. Dr. Schwartz acknowledge Claimant probably had some inhalation of isocyanate, but he testified that this inhalation did not cause, aggravate, or accelerate any condition for Claimant. [Deposition of Dr. Schwartz, p. 16-17]

31. Dr. Schwartz testified that Claimant underwent spirometry testing on multiple occasions. Per Dr. Schwartz, spirometry testing is a common way to look at lung capacity and airflow. Dr. Schwartz noted Claimant's spirometry testing was normal. [Hearing Transcript, p. 79] Dr. Schwartz testified Claimant has no evidence of asthma. He testified Claimant has had no testing done to determine airflow obstruction which would be necessary for an affirmative diagnosis.

[Hearing Transcript, p. 81] Of the testing that was completed, Dr. Schwartz testified it was not consistent with a diagnosis of asthma.

32. Dr. Schwartz testified Claimant did not tell him that he was coughing prior to the alleged exposure. Dr. Schwartz noted that this supported his conclusion Claimant had a respiratory infection. Dr. Schwartz testified, "I believe he had a respiratory infection, likely viral related, that caused an asthmatic reaction and he had clear evidence on his CT scan of focal area of infiltrate, an enlarged lymph gland on that side, quite consistent with infection. So, he had pneumonia, so we call it community-acquired pneumonia to distinguish it from something that was developed in the healthcare environment." [Hearing Transcript, p. 85-86]

33. Dr. Neagle testified that in his opinion Claimant's CT scan was not consistent with community-acquired pneumonia, but that he could not rule out an infection. [Deposition of Dr. Neagle, p. 30 at 6-12]

34. Dr. Schwartz testified that Dr. Neagle did not think Claimant had community-acquired pneumonia because his area of infiltrate was small and his oxygen requirement was large. Dr. Schwartz disagreed and testified that the infection caused bronchospasms which would account for low oxygen levels. [Hearing Transcript, p. 87 at 6-18]

35. Per Dr. Schwartz, "the evidence on the CT is quite clear-cut…he had a focal which means a localized infiltrate in the upper portion of his right lung near towards his spine, so he's got a small area of infiltrate congestion that's evident on the CAT scan and the other finding that the radiologist described which I reviewed and confirmed was that a lymph node on the right side was enlarged and lymph nodes become enlarged typically from infection." [Hearing Transcript, p. 86-87] Dr. Schwartz explained in his report that lymph nodes do not enlarge due to isocyanate exposure. [Resp Ex. G]

36. Dr. Schwartz testified that Dr. Neagle was "quite wrong about a very basic point of physiology and that is as we inhale, most of our air goes to the lower part of our lung…so when somebody has an inhalation exposure, the substance will go everywhere in the lungs…so if somebody was going to have some damage as a result of an inhaled chemical, they will demonstrate congestion in the mid or lower portion of the lung, not the upper portion and Dr. Neagle was confused and wrong about that point of physiology." [Hearing Transcript, p. 87-88]

37. Per Dr. Schwartz' testimony, "single exposures from isocyanates causing lung issues just sort of doesn't occur." Dr. Schwartz testified there is no evidence Claimant had become sensitized to isocynates in his prior work in the spray foam industry. Even if he were sensitized, only a small percentage may develop an asthmatic reaction. Dr. Schwartz noted, "you don't have to have any predisposing conditions in order to get pneumonia but Mr. Malan's smoking was a well-known risk factor to develop pneumonia." [Hearing Transcript, p. 88-89]

38. Dr. Schwartz opined to a reasonable degree of medical probability no injury-producing incident occurred on March 3, 2017 and Claimant's lung issues were not caused, aggravated, or accelerated by any overspray which claimant may have encountered on that date.

39. The ALJ credits Dr. Schwartz' opinions, as set forth in his testimony and report, that Claimant most likely suffered from community acquired pneumonia (CAP) and finds it highly persuasive for a number of reasons. First, Claimant had a significant cough before the alleged exposure. Claimant, and Mr. Stoddard, both testified that Claimant had a cough before the alleged exposure. The cough, as described by Mr. Stoddard, had been present for about a week before the alleged incident. The severity and persistence of the cough, and the fact that Claimant did not appear to be "his healthy self" caused Mr. Stoddard to tell Claimant to go see a doctor. Moreover, the severity of the cough prevented Claimant from being able to smoke a cigarette on the day of, but before, the alleged incident. Second, Claimant underwent a CT scan when he was hospitalized on March 10, 2017. The radiologist opined that the CT scan showed "patchy infiltrates in the medial aspect of the right upper lobe suspicious for an infectious process." The opinion of the radiologist is consistent with Dr. Schwartz' opinion that the presence of patchy infiltrates is inconsistent with exposure to isocyanates and consistent with an infection. The CT scan also showed an enlarged lymph node, which Dr. Schwartz also indicated is indicative of an infection and inconsistent with exposure to isocyanates. Moreover, the CT findings were isolated to the right upper quadrant of Claimant's lungs. As explained by Dr. Schwartz, which the ALJ found credible, if Claimant's lung condition was caused by the inhalation of isocyanates, you would expect to see findings bilaterally, and lower in the lungs. Third, as testified to by Dr. Schwartz, Claimant's asthma diagnosis – which was provided by Dr. Neagle - has not been confirmed through appropriate testing, such as a methacholine challenge test.

40. The ALJ is mindful that there is evidence contained in the record which could lead one to find that Claimant did not have an infection or CAP. However, the ALJ finds that Dr. Schwartz credibly and persuasively addressed those matters in his testimony and report.

41. The ALJ does not credit the opinions of Dr. Neagle for a number of reasons. First and foremost, Dr. Neagle has not credibly explained the timing of Claimant's symptoms compared to the alleged exposure. Dr. Neagle was not aware of Claimant's persistent and worsening cough that predated Claimant's alleged exposure by almost a week. As found, and previously stated above, the cough prevented Claimant, who was smoking a pack of cigarettes a day, from being able to smoke a cigarette on the day of, but before, the alleged exposure. Second, based upon Dr. Neagle's testimony, it appears that at the time of his original diagnosis, he was not familiar with the latency period between the exposure to isocyanates and the development of symptoms. [Deposition

Transcript, p.22-24.] Dr. Neagle testified that since he has been involved in Claimant's care, he has read additional literature regarding the matter. He indicated that based on his understanding of the literature, and his understanding that Claimant's symptoms allegedly arose approximately 48 hours after the alleged exposure, the onset of Claimant's symptoms is consistent with the literature. [Deposition Transcript, p.22-24.] Such testimony appears to be directed at the opinion set forth in Dr. Schwartz' report which indicates one would expect a much faster onset of symptoms if Claimant had been exposed and was sensitized to isocyanates. [Resp. Exhibits, p. 66-67]. However, regardless of the latency period between the exposure and the onset of symptoms, Dr. Neagle did not provide a credible or persuasive opinion to explain the onset of Claimant's symptoms approximately one week before the alleged exposure. Second, Dr. Neagle did not have a credible and persuasive explanation for Claimant's right swollen lymph node and patchy infiltrates in the medial aspect of the right upper lobe of Claimant's lungs. Third, Claimant was evaluated by Dr. Neagle on April 11, 2017 and advised by Claimant that his claim was being contested. [Claimant's Hearing Exhibits, p. 3-4.] Upon being advised that his claim was being denied, Dr. Neagle indicated in his April 11, 2017, report that Claimant suffered "a significant exposure to spray foam insulation, which contains isocyanates." However, during his deposition, Dr. Neagle agreed that there was no way to quantify the amount of isocyanate to which Claimant was exposed. [Deposition Transcript, p. 17-20] Dr. Neagle also indicated in his report that prior to the exposure, Claimant did not have any prior lung asthma or disease. However, as previously found, Claimant had a cough that was getting progressively worse during the week leading up to the alleged exposure.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

1. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. Sections 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. Section 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. Section 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. Section 8-43-201.

2. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of

evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. Section 8-43-201.

4. With regard to compensability, C.R.S. Section 8-43-201 states, "A claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence." The claimant always carries the initial burden of proof in a workers' compensation case." *DiCamillo v. Gosney & Sons, Inc.* W.C. No. 4-328-945 (May 21, 1998).

5. The preponderance standard is met when "the existence of a contested fact is more probable than its nonexistence." *Industrial Com. of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *People v. Taylor*, 618 P.2d 1127 (Colo. 1980). The question of whether Claimant met his burden of proof to establish a compensable injury is one of fact for determination by the judge. *See Faulkner v. I.C.A.O.*, 12 P. 3d 844 (Colo. App. 2000).

6. A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with employer. C.R.S. Section 8-41-301(1)(b)*; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). If a party has the burden of proof by a preponderance of the evidence, and the evidence presented weighs evenly on both sides, the finder of fact must resolve the question against the party having the burden of proof. *Town of Castle Rock v*. *I.C.A.O.*, 2013 COA 109 (Colo. App. 2013); *Schocke v. State*, 719 P.2d 361 (Colo. App. 1986).

7. Claimant has stipulated that this is not an occupational disease claim. The sole issue before the court is whether a chemical exposure on March 3, 2017 caused, aggravated, or accelerated any condition in claimant's lungs. Claimant has failed to meet his burden of proving that it is more probably true than not that he suffered an

injury to his lungs in the course and scope of his employment on or around March 3, 2017. The persuasive and credible evidence shows that claimant's symptoms are related to community acquired pneumonia.

8. The ALJ notes significant inconsistencies between Claimant's testimony and Claimant's medical history which is well-documented in his medical reports. The ALJ further notes inconsistencies between Claimant's testimony and the testimony of Mr. Stoddard.

9. The ALJ finds the testimony of Dr. Schwartz as to the issue of causation credible and persuasive. The ALJ accepts the opinions of Dr. Schwartz as more credible and persuasive than those of Dr. Neagle. The ALJ accepts Dr. Schwartz' opinion that claimant's work activities on March 3, 2017 did not cause, aggravate, or accelerate Claimant's condition and that Claimant did not develop an occupationally induced respiratory condition. [Exhibit G, p. 68]

10. The ALJ concludes that that Claimant has failed to sustain his burden of proof to establish a compensable injury to his lungs on March 3, 2017.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for workers' compensation benefits arising out of the alleged March 3, 2017 incident is hereby denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 2, 2018

Glen B. Goldman

_____

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that she suffered a compensable injury on August 2, 2017.

II. Whether Claimant established, by a preponderance of the evidence, that she is entitled to reasonable and necessary medical treatment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was born on April 23, 1964 and was 53 years of age at the time of the hearing.

2. Claimant worked for Pro Drivers, a "subsidiary" of Employbridge Holding Company.

3. Claimant was employed as a driver. Claimant's job duties included delivering equipment to clients. Equipment included delivering Comcast boxes, medical supplies and metal on flatbed trucks.

4. In May of 2017, Claimant allegedly injured her low back while transporting milk to "Scoop" ice cream. Claimant was allegedly moving a dolly containing five crates of milk, when the dolly tipped and claimant jerked to grab the milk, allegedly pulling her back. This alleged injury was not part of this hearing. (*Hearing* p. 10, ll:3-8)

5. Claimant reported this injury but refused workers' compensation.

6. Claimant was seen by a chiropractor Justin Dukes, D.O. as a result of this alleged injury. (*Hearing*, p. 10, l:21)

7. Claimant was originally examined by Dr. Dukes on May 5, 2017. Claimant was complaining of acute low back dysfunction. Claimant rated her pain as a 6 out of 10 which was deep and burning. (*Respondents' Exhibit* A, p. 1)

8. Claimant continued to suffer from low back dysfunction and treated with Dr. Dukes in May, June and July. Claimant last treated with Dr. Dukes on July 29,

2017. Claimant continued to complain of acute low back dysfunction with her pain at a 6 out of 10. (*Respondents' Exhibit* A)

9. Claimant also testified that her symptoms were consistent during her treatment with Dr. Dukes and that her pain level was roughly a 9 out of 10. (*Hearing*, p. 11, ll: 1-8.) Claimant also testified that despite having 9/10 pain, she was able to work. (*Hearing*, p. 11, ll: 9-10.)

10. Claimant testified as a result of this injury her symptoms continued after July 29, 2017.

11. Claimant testified she was injured on August 2, 2017, working at CTDI pulling a lift gate up when she felt pain in her low back. Claimant originally testified on direct the incident occurred at 10:00 a.m. with her shift starting at 4:00 a.m. On cross-examination, Claimant testified the incident occurred at 3:00 p.m. (*Hearing*, p. 12, ll:1-6)

12. Jennifer Warren, the area operations manager for Respondent-Employer, testified. Ms. Warren testified her job duties include meeting and getting to know the drivers, the clients, job assignments as well as what happens on the job. Ms. Warren testified if there is an on the job injury it comes to her attention. Ms. Warren testified employees are taught to notify both the client and the employer of an injury right away. Ms. Warren testified the reason for this is to investigate the claim. Ms. Warren's testimony is found to be credible. (*Hearing*, p. 20, ll:21-25, p. 21, ll:1-5)

13. Ms. Warren testified she knew the Claimant as a driver for Pro Drivers.

14. Ms. Warren testified review of the CTDI computer records documents the job Claimant was doing at CTDI ended on August 1, 2017. Ms. Warren testified when discussing the alleged incident with Andrea at CTDI they were unaware of any injury. (*Hearing*, p. 21, ll:19-24)

15. Ms. Warren also testified that Claimant first reported that the accident occurred at the dock at CTDI. CTDI pulled all of the camera footage from their dock and they could not find footage of the alleged accident. After footage of the alleged accident could not be found, Claimant indicated the accident occurred at a client's delivery site. (*Hearing*, p. 23, ll:19-23.)

16. Claimant was seen by Dr. Childers on the day of the alleged accident. On Dr. Childers' physical examination he found no gross abnormalities, strength and sensation were normal, Claimant's gait was normal, her straight leg raised test was normal and her reflexes were normal. Other than tenderness of the lumbar spine there was nothing abnormal about Claimant's presentation on August 2, 2017. (*Respondents' Exhibit* C, p. 19)

17. Claimant testified that just prior to the alleged incident of August 2, 2017, her pain level was 7/10 and that after the incident it was 10/10. (Hearing, p. 13, ll: 12-17) Despite indicating her pain level was 10/10 after the alleged incident, Claimant was evaluated by Dr. Childer's the same day, August 2, 2017, and he indicated in his report that Claimant was in "no apparent distress." (*Respondents' Exhibit* C, p. 19)

18. Dr. Childers referred Claimant to Dr. Parker. Dr. Parker first saw Claimant on August 10, 2017. Claimant told Dr. Parker, and she conceded on cross-examination, that her discomfort would fluctuate depending upon the activity. The Claimant admitted this fluctuation occurred prior to August 2, 2017. (*Respondents' Exhibit* D, p. 21)

19. Claimant also told Dr. Parker on August 10, 2017, that although additional treatment was recommended due to her alleged injury that occurred in May of 2017, such treatment was not approved. (*Respondents' Exhibit* D, p. 21)

20. In addition to seeing Dr. Parker, Claimant also had physical therapy. In the August 29, 2017 chart note, the physical therapist educated Claimant on her "normal" age related changes found on her MRI. (*Respondents' Exhibit* E)

21. The evidentiary deposition of Gary B. Childers, M.D. was taken on January 19, 2018 and submitted as evidence. Dr. Childers is a physician who has been licensed to practice for approximately 30 years in family medicine. He is neither board certified nor board eligible. (*Depo. Tr*. p.4 ll:11-23) When Dr. Childers examined Claimant on August 2, he found no muscle spasm. (*Id*. p. 8 ll:13-16) Other than Claimant's complaint of tenderness there were no other findings on physical examination. (*Id*. ll:17-25)

22. Dr. Childers admitted his opinion on causation was predicated upon Claimant's self-reported history to him. (*Id*. p.10 ll:15-17)

23. Dr. Childers conceded the problem as a provider is they don't know whether the patient is being honest with them with regard to where their symptoms are or what caused the symptoms. (*Id*. p.20 ll:13-17)

24. Review of the MRI, according to Dr. Childers, although abnormal were not unusual for someone of Claimant's age in fact found in 60% of individuals over the age of 40 were arthritis and were not necessarily causing symptoms. (*Id*. p.27 ll:1-25 and p.28 ll:1-2)(*See also* p.30 ll:1-8)

25. Claimant was evaluated in an Independent Medical Examination by Kathleen D'Angelo, M.D. on December 24, 2017. Dr. D'Angelo's evidentiary deposition was taken on January 26, 2018. Dr. D'Angelo is a Board Certified Internal Medicine Specialist who moved to Colorado in 2001, Level II Accredited since that time with education training experience to examine, diagnose and treat

patients with low back complaints. (*Depo* 2, p.4 ll:7-19) Dr. D'Angelo was offered as a medical expert in occupational medicine with no objection from Claimant. (*Id*. p.5 ll:1-2)

26. At the time of Dr. D'Angelo's Independent Medical Examination, she did not have access to Dr. Dukes' records. These were provided to her on January 25, 2018, and reviewed prior to her deposition. Claimant reported to Dr. D'Angelo her symptoms existed prior to the alleged August 2, 2017 incident. (*Id*. p. 9 ll:1-4) Dr. D'Angelo asked merely because on August 2, 2017 between 11:37 a.m. and 1:41 p.m., Claimant complained to Dr. Childers of some tenderness, which did not mean it was due to what allegedly occurred at 9:15 a.m. that morning. "No. no. I mean, certainly not when you look at her MRI. She certainly had a lot of degenerative changes." (*Id*. ll:17-25; p.10 ll:1-7)

27. Dr. D'Angelo testified merely because Claimant had palpable tenderness at the lumbar spine on August 2, did not mean Claimant actually injured her lumbar spine. (*Id*. ll:9-12)

28. With regard to the MRI findings, Dr. D'Angelo testified they were not due to the alleged injury. (*Id*. ll:8-16)

29. Dr. D'Angelo volunteered, "clearly, August 2nd, the same day as her "injury" she had a normal exam. Certainly nothing that would lead me to believe that there was anything significant brewing. "I - - I can't explain excruciating back pain based upon what she looked like immediately after her injury, unless there was an intervening event." (*Id*. p.23 ll:12-18)

30. Dr. D'Angelo further offered, "she stated that from the very beginning of her May injury until the time I saw her, she had lower back pain with radiation into her right leg up to the level of the knee. (Id. p.24 ll:3-5) Claimant did not claim to Dr. D'Angelo the alleged August 2, 2017 incident aggravated, accelerated or exacerbated the pain in her right leg, rather, she related it to the May injury. "She stated that from the time of the May injury until she saw me, her symptoms had really not changed at all." (*Id*. ll:8-14)

31. Dr. D'Angelo further testified, "there is no way to state within a reasonable degree of medical probability the care claimant received beginning August 2 was reasonably needed because of what occurred on August 2." Dr. D'Angelo explained, "no. And that is very significant, not only did she complain about 6 out of 10 pain on that particular date 5 days prior to her August injury, but that level of pain seemed to be fairly consistent from beginning to end of the chiropractic notes, which suggests to me that pain wasn't going anywhere anytime soon." (*Id*. p.30 ll:10-21)

32. With regard to restrictions subsequent from August 2, Dr. D'Angelo testified based upon a complete review of the medical evidence, meeting Claimant and

evaluating Claimant. Dr. D'Angelo testified the restrictions Dr. Childers gave were not reasonably needed because of what she alleged occurred on August 2:

> No. I mean, clearly on that particular date what she had was subjective complaints of pain that did not appear to correspond to objective abnormalities on physical exam. They also did not seem to be all that different from her complaints of pain five days earlier when she was seen by the chiropractor at which time she was performing regular duty. So I don't really see any physiological reason for restrictions. There was no tissue at risk of worsening damage with her regular duties.

(*Id*. p. 31 ll:7-15)

33. It is specifically found Claimant failed to meet her burden of proof. It is specifically found the testimony of Jennifer Warren to be credible and persuasive. It is specifically found the testimony of Kathleen D'Angelo, M.D. to be credible and persuasive. It is specifically found that the testimony of Claimant is not credible. It is specifically found Claimant did not injure her back on August 2, 2017 in the course and scope of her employment that required healthcare and/or disabled the Claimant from performing her regular job duties.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See Section 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier of fact, after considering all of the evidence, to find that a fact is more probably true than not. See *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. See §8-43-201(1), C.R.S.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has

rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 134 P.254 (Colo. 1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insuranace Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2007). A worker's compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established, by a preponderance of the evidence, that she suffered a compensable injury on August 2, 2017.

For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). An injury occurs "in the course of" employment where Claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" requirement is narrower and requires Claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work related functions and is sufficiently related to those functions to be considered part of the employment contract. *Id*. An activity arises out of and in the course of employment when the activity is sufficiently related to the conditions and circumstances under which the employee generally performs her job functions such that the activity may reasonably be characterized as an incident of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207 (Colo. 1996). Compensable injuries involve an "injury" which requires medical treatment or causes disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

The right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000).

Claimant was required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp*., 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center*, WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.*, WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

It is specifically concluded that Claimant's testimony is not credible for a number of reasons. First, Claimant alleges she injured herself on August 2, 2017, while driving for CTDI. According to Ms. Warren, the driving assignment for CTDI ended on August 1, 2017. Second, Claimant initially indicated the accident occurred at CTDI. Once CTDI reviewed their surveillance footage and could not find any evidence of the alleged accident, the location of the alleged accident was changed to a client of CTDI's. Third, Claimant obtained medical treatment the same day of the alleged accident. Although Claimant testified the accident caused back pain of 10/10, Dr. Childer's evaluated Claimant the day of the alleged accident and noted Claimant was in no apparent distress. Fourth, Claimant alleges she initially injured her back in May of 2017 while delivering milk to Scoop Ice Cream. Claimant's medical records after May of 2017, but before August 2, 2017, indicate Claimant had persistent back pain of 6/10. Then, at hearing, Claimant testified that she had persistent back pain of 9/10 between the same period of time and that she was able to work during this period of time. Claimant's pain complaints are inconsistent and it does not make sense to the ALJ that Claimant could have pain of 9/10 but continue to work – even modified duty. Therefore, this ALJ does not find Claimant's pain complaints, which are the underpinnings of her claim, to be credible.

It is specifically concluded Claimant failed to meet her burden of proof. It is specifically concluded the testimony of Jennifer Warren to be credible and persuasive. It is specifically concluded the testimony of Kathleen D'Angelo, M.D. to be credible and persuasive. It is specifically concluded Claimant failed to establish by a preponderance of the evidence that she injured her back on August 2, 2017 in the course and scope of her employment and that such injury required healthcare and/or disabled Claimant from performing her regular job duties.

II. **Whether Claimant established, by a preponderance of the evidence, that she is entitled to reasonable and necessary medical treatment.**

Because the ALJ concluded Claimant failed to establish by a preponderance of the evidence that she suffered a compensable injury on August 2, 2017, this issue is moot.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 21, 2018

Glen Goldman

_____

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Respondents have produced clear and convincing evidence to overcome the opinion of DIME physician's opinion that Claimant is not at MMI.

II. If Respondents have overcome the DIME physician's opinion on MMI, whether Respondents have overcome the DIME physician's provisional impairment rating.

III. Whether the medical benefits recommended by the DIME physician are reasonable and necessary.

FINDINGS OF FACT

1. On April 10, 2015, Claimant was involved in a non-work-related rear-end motor vehicle accident ("MVA"). Claimant was the restrained driver of a stationary small vehicle that was rear-ended by a mid-size automobile traveling less than 20 miles per hour. Claimant went to the emergency department that day, and then subsequently sought medical treatment at OnPoint Urgent Care on April 21, 2017 for neck and back pain. On physical examination, Claimant had normal neck range of motion, lumbar paraspinous tenderness, and right side cervical paraspinal muscular spasm. Claimant was diagnosed with a cervical strain/sprain and lumbar strain/sprain. Claimant underwent chiropractic treatment and physical therapy after the April 10, 2015 accident.

2. On October 11, 2016, Claimant was involved in a second MVA in the course and scope of her employment with Respondents. Claimant's vehicle was side-swiped by another car attempting to avoid a rear-end collision.

3. Claimant selected Concentra Medical Center as her designated provider and presented to Carrie J. Burns, M.D. on October 11, 2016 with complaints of neck, mid back and low back pain. Claimant reported being involved in a MVA in April 2015. On physical examination, Dr. Burns noted tenderness in the C1-3 right paraspinal and right trapezius muscle, T8-12 right paraspinal and right rhomboid muscle, and L2-T12 tenderness right paraspinal. Dr. Burns further noted cervical, thoracic and lumbosacral muscle spasms on the right side, and full range of motion in the cervical, thoracic and lumbar spine. She diagnosed Claimant with a cervical and lumbar strain and released Claimant to work without restrictions. Claimant was not prescribed medication.

4. Claimant returned to Dr. Burns for a follow-up evaluation on October 17, 2016 with complaints of a burning sensation, bilateral lumbar pain and stiffness, and right neck and upper back pain. Claimant rated the pain 8/10, reporting that the right side was worse than the left. Dr. Burns provided an assessment of a cervical and lumbar

strain and thoracic myofascial strain. She referred Claimant to massage therapy and physical therapy.

5. On October 24, 2016, Claimant presented to Sharon O'Connor, M.D. at Concentra with continued complaints of back and neck pain. Claimant reported 25% improvement in her back pain.

6. During a follow-up evaluation with Dr. Burns on November 8, 2016, Claimant reported improvement in her neck symptoms, but a persistent ache in her lower back. Claimant reported that the pain was worse on the right side.

7. On November 29, 2016, Gary Scofield, PA-C evaluated Claimant at Concentra. Claimant reported improvement but still experienced mild to moderate right neck and right lower back pain, which she rated a 2/10.

8. Massage Therapist, Cynthia Guy, treated Claimant on November 30, 2016. Claimant stated her cervical and thoracic pain was improved, but her lumbar pain had increased. Claimant reported most of her pain and tension being in the right lower quadrant.

9. Cynthia Guy again treated Claimant on December 13, 2016. Claimant reported overall improvement in her cervical and thoracic spine, and some pain in the lumbar spine, with general all-around improvement in that area as well.

10. Claimant subsequently transferred care to Caroline Gellrick, M.D. Dr. Gellrick performed a medical record review on December 15, 2016 in which she documented Claimant's April 2015 MVA..

11. Dr. Gellrick first evaluated Claimant on December 22, 2016. Claimant reported she had approximately one month of treatment for the 2015 MVA and "everything resolved" with no lingering residual symptoms. In connection with the October 2016 MVA, Claimant reported 7/10 pain in her cervical, lumbar and lower thoracic spine, with random shooting pains in the low back into the right leg. Claimant reported the right side of the cervical trapezius area felt worse than the left. On physical examination, Dr. Gellrick noted paraspinous muscle spasms in right side of neck worse than left, cervical range of motion 85% normal with positive Spurling's test, and "huge" trigger points in the right trapezius and left trapezius, with the right side being particularly bothersome. Dr. Gellrick diagnosed Claimant with a cervical strain with right greater than left trapezius spasm, myofascial thoracic strain resolving, myofascial lumbar spine strain resolving, with no focal neurological deficits, and reactive adjustment disorder. She administered one trigger point injection to the left trapezius and two injections to the right trapezius and recommended Claimant undergo an x-ray of the cervical spine.

12. Claimant returned to Dr. Gellrick for a follow-up evaluation on December 30, 2016. Cervical x-rays demonstrated cervical kyphosis but were otherwise remarkable. Dr. Gellrick noted Claimant's symptoms were worse in the cervical spine than the low

back and thoracic spine. On physical exam, Dr. Gellrick noted very tight trigger points in the trapezius region, worse on the right than the left. She administered repeat trigger injections and recommended physical therapy, massage therapy, chiropractic treatment, Lidopro cream, and a psychological evaluation with Dr. Torres.

13. Dr. Gellrick reevaluated Claimant on January 12, 2017. Claimant reported continued pain, which she rated a 7.5/10. Dr. Gellrick noted very tight trigger points on the right and left sides and administered repeat trigger point injections.

14. Claimant was involved in a third MVA on January 17, 2017. Claimant was the restrained driver and was struck by another vehicle. Claimant presented to OnPoint Urgent Care with neck pain, back pain and a headache. Claimant was diagnosed with a neck strain and prescribed Norco and Medrol, Soma. Cervical x-rays revealed curvature reversal but were otherwise normal.

15. Claimant began receiving treatment from Donald D. Aspegren, D.C. on January 19, 2017. She reported being involved in the January 17, 2017 MVA. Claimant rated her pain 7-10/10. In subsequent visits on January 23, January 25 and January 30, 2017, Claimant rated her 7-10/10, 6.5/10, and 7/10, respectively.

16. Physiotherapy Associates physical therapy notes dated January 19, January 23 and March 24, 2017, document Claimant's cervical pain as 9/10, thoracic 8/10, and lumbar 6/10.

17. Claimant saw Dr. Gellrick on January 26, 2017 and informed her of the January 17, 2017 MVA. Claimant reported being rear-ended by a car driving 10-15 miles per hour. She reported being in a turned position looking over her left shoulder at the time of impact. Claimant was wearing her seatbelt and did not strike her head. Claimant reported feeling an onset of increased pain in the entire spine with spasm. She rated the pain 7/10. Dr. Gellrick noted the following on physical examination: tight trigger points in both the left and right trapezius, 85% normal cervical range of motion, pain with cervical extension, and tenderness of the paraspinous muscles the cervical spine. Claimant indicated she was experiencing pain in her left low back.

18. Dr. Gellrick noted Claimant experienced a "[w]orsening of condition with new MVA January 17, 2017 with left-sided symptoms present now responding to chiropractic treatment." She placed Claimant at MMI as of January 17, 2017, stating,

> We have a new injury which by history is not work comp compensable. If this changes this examiner would certainly be happy to see the patient back under work comp since she was driving the company vehicle but otherwise must go to MMI today with notification with this examiner of a new injury dated January 17, 2017 aggravating the entire spine in the latest car accident and the patient was turned to the left with jolted the neck even more.

Dr. Gellrick suggested Claimant's treatment should proceed under a new claim for the January 17, 2017 MVA.

19. On June 15, 2017, Claimant underwent a DIME with Kristin D. Mason, M.D. Dr. Mason physically examined Claimant and reviewed medical records from October 11, 2016 through February 22, 2017, including the Physiotherapy Associates record from January 19, 2017, and Dr. Aspegren's January 19 and January 25, 2017 records.

20. Claimant reported to Dr. Mason receiving physical therapy through her private health insurance since being placed and MMI and her condition had improved. Claimant reported neck pain predominantly on the right side radiating into the scapular area and low back pain. Claimant felt the neck generally bothered her more, rating the pain at a 4-5/10.

21. Dr. Mason noted Claimant was involved in an April 2015 MVA and her symptoms had resolved. Regarding the January 17, 2017 MVA, Dr. Mason noted, "She feels immediately following the second motor vehicle accident she was about 30% worse, mainly marked by more prominent headaches and increased bad days. She definitely feels the first motor vehicle accident was the worse one and caused her the most symptoms."

22. On physical examination, Dr. Mason noted trigger points in the right trapezius and levator scapula. She further noted the following dual inclinometer range of motion measurements: forward flexion 45 degrees, extension 50 degrees, right side bending 45 degrees, left side bending 30 degrees, right rotation 82 degrees and left rotation 82 degrees. Dr. Mason diagnosed Claimant with a cervical sprain/strain with myofascial findings, and possible underlying facet disorder status post MVA times two.

23. Dr. Mason opined Claimant was not at MMI, stating,

> She did have a subsequent injury but it does not appear that her pain levels increased substantially or that she had any brand new complaints so as I sit here today, based on the information I have, it looks like at most she had a temporary exacerbation from the other accident in January and the ongoing difficulties she is having likely dates back to the October accident.

24. Dr. Mason recommended Claimant complete physical therapy and undergo a reevaluation with Dr. Torres. She suggested Claimant might also benefit from manipulation and acupuncture. Dr. Mason assessed a provisional 9% total whole person impairment, consisting of a 4% impairment under Table II(B) of the AMA Guides, and 5% for range of motion deficits.

25. On October 11, 2017, Brian Reiss, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. Dr. Reiss reviewed Claimant's medical records and physically examined Claimant. Dr. Reiss noted that he did not have

any of Claimant's medical records prior to the 2016 MVA and, as such, he could not confirm whether or not Claimant truly had symptoms prior to the October 2016 MVA. Dr. Reiss remarked that it would be unusual for an individual to only have continued symptoms from a side-wipe accident and not from two separate rear-end accidents. Regarding the October 2016 MVA, he found Claimant's reports of 2/10 pain in physical therapy notes to contradict the 7/10 pain reported to Dr. Gellrick in December 2016. He noted it was unclear if Dr. Gellrick believed Claimant's symptoms from the October 2016 MVA had resolved and Claimant's current symptoms were new and related to the January 2017 MVA. Dr. Reiss opined Claimant had reached MMI without restrictions and without any need for further care.

26. Dr. Reiss testified at hearing on behalf of Respondents as an expert in orthopedic surgery with a subspecialty in spine disorders. Dr. Reiss is board certified and Level II accredited by Division of Workers' Compensation. Dr. Reiss opined Claimant reached MMI as of November 29, 2016, based on her low pain levels at the time. He stated it is unclear why Claimant's pain level subsequently changed so dramatically. Dr. Reiss opined that it is more probable a rear-end collision, rather than the side-swipe accident, caused Claimant's issues.

27. Dr. Reiss disagreed with Dr. Mason that the January 2017 MVA was a temporary exacerbation, stating such determination was medically improbable and could not be based solely on Claimant's pain level. He testified the January 2017 MVA was at least equally responsible for Claimant's symptoms. Dr. Reiss opined Dr. Mason's determination that Claimant did not report a substantial increase in pain or any "brand new" complaints following the January 17, 2017 MVA is incorrect. Dr. Reiss referred to Claimant's pain levels increasing from 7/10 to 9/10 after the January 2017 MVA, opining that such increase in pain complaints is substantial. He also referred to Claimant's report of a 30 percent worsening of her symptom with increasing bad days, newly reported headaches, and "new" left-sided complaints.

28. Dr. Reiss opined additional physical therapy, chiropractic treatment, and acupuncture are not reasonable or necessary. He testified Claimant has exceeded physical therapy maximums as recommended by the Guidelines, and he sees no compelling reason to deviate from the Guidelines. Dr. Reiss further testified that any additional physical therapy deemed reasonable and necessary could be performed as maintenance care.

29. Claimant testified at hearing that the symptoms from the April 2015 MVA resolved after a few sessions of physical therapy. She stated she had no back or neck complaints in the weeks prior to the October 2016 MVA. Claimant testified the 2016 MVA resulted in neck and back pain, right worse than left. In the days leading up to the January 2017 MVA Claimant continued to experience pain in the cervical spine and mild pain in her mid and low back. Claimant testified subsequent to the January 2017 MVA her neck and back pain worsened, but she returned to her pre-January 2017 MVA baseline in April 2017. Claimant testified that she continued to experience neck and back pain after April 2017 but continued to receive physical therapy and massage until

November 2017 through her private insurance. Claimant testified that her neck pain at the time of hearing had been reduced to a 3/10 and her low back pain had essentially resolved. Claimant testified that she had not been symptom free from her work-related injuries since the October 2016 MVA. Claimant stated she desires additional physical therapy, chiropractic treatment and acupuncture.

30. Claimant's testimony is found credible and persuasive.

31. The ALJ credits the opinion of DIME physician Dr. Mason over the conflicting opinions of Drs. Reiss and Gellrick.

32. Respondents failed to overcome the DIME physician's opinion on MMI by clear and convincing evidence.

33. Claimant has proven by a preponderance of the evidence the medical treatment recommended by Dr. Mason is reasonable, necessary and related to the October 2016 work injury.

34. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals*

Office, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME Physician's Opinion

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO May 20, 2004); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI.

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather it is the

province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* WC 4-712-812 (ICAO November 21, 2008). The ultimate question of whether the party challenging the DIME physician's finding of MMI has overcome it by clear and convincing evidence is one of fact for the ALJ. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Respondents contend Dr. Mason was clearly wrong in determining the January 2017 was a temporary exacerbation, as Claimant's pain substantially increased after the January 2017 MVA and Claimant developed worsening and new symptoms. The ALJ disagrees. As of January 12, 2017, Claimant's pain was 7.5/10. Subsequent to the January 2017 MVA, the medical records document 6.5-9/10 pain. Dr. Mason clearly took this into consideration and determined the change was not substantial, as she reviewed the January 19, 2017 Physiotherapy Associates note and Dr. Aspegren's January 19 and January 26, 2017 medical notes which reflect Claimant's 6.5-9/10 pain. Moreover, although Claimant reported to Dr. Mason she felt 30 percent worse after the January 17, 2017, Dr. Mason specifically notes this was "immediately following" the January 2017 MVA.

Regarding new and worsening symptoms, Claimant's left-sided symptoms were present to some extent prior to the January 2017 MVA. The medical records prior to the January 2017 MVA document bilateral and left-sided complaints and objective findings. The ALJ acknowledges there is no mention of headaches in the pre-2017 MVA medical records; however, such fact alone does not persuade the ALJ Dr. Mason clearly erred in concluding the January 2017 MVA was a temporary exacerbation and Claimant is not at MMI. Claimant credibly testified her symptoms worsened after the January 2017 MVA and returned to baseline by April 2017. Dr. Mason's opinion that Claimant is not at MMI is supported by the medical records and Claimant's credible testimony. The evidence presented presents a mere difference of opinion in that of Dr. Mason, Dr. Reiss and Dr. Gellrick. Based on the totality of the evidence, there is insufficient credible and persuasive evidence establishing Dr. Mason's opinion on MMI was highly probably incorrect.

Medical Treatment

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work-related injury or disease and the condition for which benefits or compensation is sought. *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo.App. 1997). Whether the claimant sustained his burden of proof is a factual question for resolution by the ALJ. *City of Durango v. Dunagan,* 939 P.2d 496 (Colo.App. 1997).

As found, Claimant has proved it is more likely than not that the medical treatment recommended by Dr. Mason is reasonable, necessary and related to the

October 2016 work injury. The ALJ credited Dr. Mason's opinion over that of Dr. Reiss with respect to the reasonableness and necessity of the recommended medical treatment.

ORDER

It is therefore ordered that:

I. Respondents failed to overcome the DIME physician's opinion on MMI and provisional impairment by clear and convincing evidence. Claimant is not at MMI.

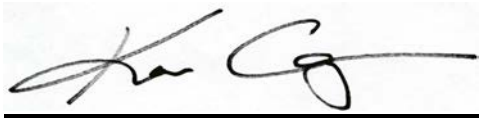
II. Claimant established by a preponderance of the evidence entitlement to the medical treatment recommended by the DIME physician.

III. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

IV. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 21, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Did Claimant sustain her burden of proof to establish that she suffered a compensable injury within the course and scope of her employment at Respondent?

2. Did Claimant sustained her burden of proof to establish that she is entitled to medical benefits as a result of the alleged work incident?

FINDINGS OF FACT

1. Claimant is a 54-year-old woman who worked for Safeway since 1999 as a truck driver. Claimant's job duties as a truck driver included checking the truck, checking the equipment, hooking up the trailer, making deliveries, driving to various stores, delivering product to various stores, lifting some product that could have fallen off the pallet and driving back to the distribution center.

2. On October 10, 2014, Claimant was driving back to Respondent's Distribution Center when she had to take her mandatory Department of Transportation break. Claimant pulled off on I-25 at Buckeye Road because there was a pull off for trucks. Claimant took a walk on the frontage road next to I-25. While taking her walk, she was struck by a vehicle.

3. The October 11, 2014, medical record from the emergency department of the University of Colorado noted that Claimant did not complain of head and neck pain. Claimant's only complaint of pain was buttock pain and coccyx/pelvis pain. Claimant did not have an altered mental status. On the review of symptoms, Claimant was negative for back pain, joint swelling, neck pain, and neck stiffness. On lumbar examination, there was no swelling, edema, deformity, or laceration. On psych examination, Claimant had a normal mood and affect with normal behavior. Claimant underwent a CT scan of her abdomen and pelvis, which was unremarkable. This was the first examination after the incident with the vehicle. This examination was benign, and there were no complaints of neck and head pain. There were minimal complaints of low back pain.

4. On October 14, 2014, Claimant was evaluated at Midtown Occupational Medicine (Midtown Occupational). Claimant stated that her pain was primarily in her coccyx region and in her left buttocks. Claimant denied any other symptoms, and she was ready to return to work. On her review of symptoms, Claimant was negative for weakness and paralysis of the lower extremities. On examination, Claimant had full range of motion of her back, both anterior and posterolaterally and rotation. Claimant also had full range of motion of her hips, knees, and ankles, bilaterally. Claimant also had no pain to palpation of her spine. Claimant's diagnosis was a low back strain secondary to trauma. Claimant was given a full duty release, placed at maximum medical improvement (MMI) and given a 0% impairment rating. No further examinations were scheduled. This examination occurred four days after the incident. This examination was benign and fairly normal.

5. During her testimony, Claimant indicated that she had lied to the providers at Midtown Occupational. Claimant unpersuasively and incredibly testified that she was in so much pain at that time of her examination at Midtown Occupational that she could barely stand there, and that her ankle was so swollen that it barely fit in her shoe. It is inconsistent for Claimant to say that she was in so much pain that she could barely stand, but the examination showed that Claimant had 5/5 strength in all four extremities, a normal gait and that her sensation was intact in all four extremities. The medical record also indicates that Claimant had a pleasant mood and affect. Claimant's testimony is not credible.

6. Claimant further testified that she had at least two prior workers' compensation claims, and that she knew how to file a claim with Respondent. Claimant testified that she did not want to file a worker's compensation claim for the October 10, 2014, date of injury because she did not want to sit in Respondent's Wellness Room. Claimant unpersuasively and incredibly testified that the Wellness Room was torture because she had to sit there for 8 hours not doing anything.

7. Claimant testified, that instead of wanting to sit in the Wellness Room, she preferred to work her regular, full time job as a truck driver performing her regular duties. Claimant performed her regular, full time job for almost two years until she was taken off work for a subsequent work-related left knee injury. At the April 28, 2016 evaluation for her left knee pain, Claimant indicated that she was working her full duty work without too much difficulty. Claimant's testimony is illogical and incredible to believe that she could not sit in the Wellness Room because of unbearable pain, but that she could perform her regular, full time duties as a truck driver.

8. Claimant further testified that she went to Israel and went on camping trips. Claimant testified that the Israel trip was miserable because she had to sit on an airplane for 15 hours and sit on tour buses. Nonetheless, Claimant was working full duty, driving a truck, and sitting during her shifts without any pain. None of Claimant's work duties increased her pain. Claimant's testimony is inconsistent with a person who sustained a compensable injury on October 10, 2014.

9. Claimant filed a Workers' Claim for Compensation in September of 2016 for the October 10, 2014, accident because she was running out of money for her treatment. Claimant testified that she wanted to remain outside of the workers' compensation system as long as possible. Claimant admitted during her testimony that one of the reasons that she wanted to file a worker's compensation claim was that she was running out of money. Claimant's actions are inconsistent with her claim of work injury.

10. On October 23, 2014, Jack England, D.O. evaluated Claimant. Claimant complained of left ankle pain going up the leg; swollen and bruised. On examination, Claimant had a normal gait, and her neck examination was within normal limits. There was no complaint of neck pain. Dr. England's assessment was acute left ankle sprain, abrasions to the left ankle, and back pain. This examination occurred approximately 10 days after the incident, and there was swelling of the ankle. However, at the initial

examination at the emergency department and at Midtown Occupational, Claimant presented without any indication of left ankle abrasions or left leg swelling. Claimant also had a normal gait during those examinations. Claimant's left ankle was swollen because of her underlying degenerative condition as determined by the x-ray.

11. Dr. England reexamined Claimant on January 28, 2015. Claimant complained of pain in the left ankle and multiple areas. Dr. England noted that he was double board certified in emergency medicine and familiar with automobile accidents. Dr. England asked Claimant why she was not complaining of pain in these other areas during her initial presentation to the emergency department. Dr. England noted that this was a late injury, but he was going to reevaluate Claimant. Dr. England also opined that it was not uncommon to have injuries that bothered injured persons a few days or a week or so later after the injury. Dr. England ordered diagnostic studies, which were also performed on January 28, 2015.

12. Claimant had multiple pain complaints three months after the incident. The only pain complaint reported to the emergency room was for buttock and pelvis pain. Claimant had reported some mild low back pain to Midtown Occupational. The impressions of the x-rays were mainly negative, except for the coccyx, and even that did not show any defined acute fracture. Even three months after the incident, Claimant's pain complaints did not match any objective findings on diagnostic testing.

13. Claimant underwent a MRI of the left ankle on February 5, 2015. The MRI's results were consistent with a degenerative change of the ankle but not acute traumatic injury. Claimant's alleged pain complaints to her ankle were the result of her underlying arthritis and degenerative changes, which were not caused by the October 10, 2014, incident.

14. On April 30, 2015, Claimant was evaluated by Bharat Desai, M.D. at Panorama Orthopedics Spine Center. Claimant complained of pain on the midsection of her body, especially the tailbone on the left buttock cheek. On examination, Claimant was alert and oriented times 3, and she had appropriate mood and affect. Claimant was tender over her left buttock cheek and over her sacrococcygeal junction. Claimant underwent straight leg raising tests, which were not suggestive of a lumbar issue or low back issue. Dr. Desai noted that the x-rays showed a slightly distracted sacrococcygeal junction but otherwise stable. The lateral issues on her sacrum and pelvis were stable. Dr. Desai recommended a coccyx MRI. At this examination, Claimant did not report any low back pain.

15. Claimant underwent an MRI of the pelvis on May 14, 2015. The MRI showed degenerative tears, which were tendinosis, and not uncommon with age. Most patients with such findings have no history of acute trauma before developing pain symptoms to the area.

16. Claimant was reevaluated by Dr. England on May 14, 2015. Claimant's neck examination was within normal limits. Claimant had a normal gait, and her sensation was within normal limits. Claimant had a normal mood and affect. Dr.

England drafted an addendum to his chart on May 15, 2015. Dr. England noted that the biggest complaint was persistent pain in the coccyx. Dr. England also noted that Claimant complained of cervical spine pain, lumbosacral spine pain, and right knee pain. Claimant's left ankle seemed improved. Dr. England opined that Claimant's conditions were chronic with acute exacerbations at times. This was the first mention of any neck pain in the medical records. This is seven months removed from the October 10, 2014 incident. Claimant did not sustain a neck injury in the alleged trauma. Claimant's alleged neck pain seven months after the incident is due to her underlying degenerative condition.

17. On May 28, 2015, Claimant underwent a lumbar MRI. The MRI's impression was: overall mild lower lumbar spine degenerative change and no acute disc herniation. The radiographic evidence does not show an acute injury. The lumbar MRI shows degenerative changes, which were not caused by the incident. Claimant's degenerative changes are caused by the aging process and living.

18. Michael Horner, D.O., evaluated Claimant on July 16, 2015. Claimant complained of lower back pain that radiated into the buttock and posterior thigh on the right side. Claimant also complained of pain to the thoracic spine. Claimant introduced a new complaint of pain to the mid back. This is the first mention of mid back pain, and this occurred nine months after the October 10, 201, incident.

19. On October 28, 2015, Claimant was evaluated by Patrick Sawyer, PA-C of South Denver Spine. Claimant complained of tailbone pain, low back pain, and pain at the T10 region of the low back. Claimant related all of her pain complaints to the October 10, 2014, incident. Claimant also complained of right lateral thigh pain, and she denied symptoms in her left leg. Claimant brought a new complaint of right lateral thigh pain, which is a year removed from the October 10, 2014, incident. Claimant also noted that she did not have any left leg symptoms, which is different than her previous examinations. Claimant's pain complaints outweighed her objective findings.

20. On December 30, 2015, Claimant was evaluated by Louis Kasunic, D.O. In the review of symptoms, Claimant reported "that the job is the enemy. I work too much to have a life. It is [Respondent's] fault, but I am not willing to give up the pay and benefits I would have to lose if I left the job." Additionally, under review of symptoms, Claimant denied muscle pain and weakness of muscles or joints. Dr. Kasunic opined that Claimant has serious victim issues and that none of her health issues are of her own doing and everything is the fault of her job, but she is unwilling to leave that job.

21. Subsequently, Claimant underwent an MRI of the cervical, thoracic, and lumbar spine on January 7, 2016. The impressions were: ** C5-C6 moderate spinal stenosis, moderate right foraminal narrowing, and abutment and possible compression of the right C6 nerve; ** C6-C7 mild to moderate spinal stenosis, moderate right foraminal narrowing, and abutment and possible compression of the right C7 nerve; ** C3-C4 mild spinal stenosis and moderate left foraminal narrowing; ** T10-T11 moderate spinal stenosis secondary to a right paracentral disc extrusion; ** T11-T12 mild spinal

stenosis; ** Mild congenital cervical spinal stenosis; and ** Chronic left uretero pelvic junction obstruction versus peripelvic cyst.

22. The findings on the January 7, 2016, cervical, thoracic, and lumbar spine MRI were degenerative changes. Claimant had arthritis of the joints and the spaces on the lateral portion of the spine, which was not caused by the work incident.

23. On March 4, 2016, Claimant was evaluated by Zaki Ibrahim, M.D. Claimant complained of back pain that radiated into her legs with right leg pain worse than left. Claimant also complained of numbness and tingling. Claimant noted that her back symptoms have been severe since the October 10, 2014, incident. Dr. Ibrahim stated that Claimant's symptoms have been unabated despite extensive physical therapy and chiropractic treatment. Claimant stated that she underwent a lumbar injection, which only helped her low back symptoms for a short period of time. Dr. Ibrahim reviewed the January 7, 2016, MRI of the cervical, lumbar, and thoracic spine. Dr. Ibrahim opined that each of her MRI studies revealed mild to moderate degenerative changes with no evidence of instability or significant canal occulusion. Dr. Ibrahim opined that he was unable to identify a concrete lesion, which could be responsible for Claimant's symptom constellation. Dr. Ibrahim opined that he "strongly recommended that this patient continue conservative care. I do not believe she would benefit from any type of surgical intervention given her history of not having any persistent improvement with conservative care up to this point and the appearance that her symptom distribution is somewhat nonphysiologic... Indeed, I must question the possibility of symptom magnification or malingering which may be related to her current lawsuit…." The changes seen on MRI were chronic and degenerative. They were not acute. Dr. Ibrahim could not find a pain generator for Claimant's symptoms. Claimant's pain symptoms did not match any objective findings.

24. Jeremy Smith, PA, from the Steadman Clinic evaluated the Claimant on April 11, 2016. Claimant complained of right hip and left hip pain due to the October 10, 201, incident. Mr. Smith noted that the MRI of the lumbar spine showed multiple distances without significant nerve compression, and that the bilateral hip MRI showed mild chondral degeneration along with mild CAM bump. Mr. Smith reported that the hip MRI findings were consistent with a glut medius and minimus tendinitis involving the right hip. On examination, Claimant had pain with palpation over the lumbar spine diffusely along with pain on back extension and rotation. On ambulation, Claimant had a mild antalgic gait. Mr. Smith opined that Claimant's MRIs showed degenerative and not acute changes. There was a new finding of a mild antalgic gait, instead of a normal gait. This new finding occurred approximately one and half years after the October 10, 2014 incident. Based on Claimant's presentation, her pain complaints were not caused by acute trauma, but they are instead due the degenerative condition or a somatic symptom disorder.

25. Patricia Little, M.D. evaluated Claimant on April 25, 2016. Claimant noted that she only received short term benefit from her L4-S1 facet injection. Dr. Little also noted that Claimant's coccyx MRI does not reveal any abnormality. On examination,

Claimant's gait was wide-based. Dr. Little's impressions were lumbar spondylosis, lumbosacral radiculopathy and sacroiliac joint, inflamed.

26. On May 17, 2016, Claimant was evaluated by Eric Jamrich, M.D. Claimant complained of low back pain that radiated down the back of her legs. Claimant stated her pain started from the October 10, 2014, incident. Dr. Jamrich noted that Claimant had conservative care, which did not relieve her symptoms. Dr. Jamrich recommended a discogram. Claimant underwent the discogram on June 20, 2016, which found 7/10 concordant low back pain reproduced at L4-L5 and L5-S1.

27. Claimant was referred for a bilateral lower extremity EMG due to complaints of numbness. This EMG occurred on June 28, 2016. The EMG's assessment was normal study without evidence for any significant neuropathy or lumbar radiculopathy. Claimant's complaints of radiating pain down both of her legs do not match any objective clinical test.

28. Dr. Little continued to examine Claimant. Dr. Little recommended another lumbar spine MRI, which occurred on March 16, 2017. The March 16, 2017, MRI reflected: ** Mild central canal stenosis at T11-T12 due to a shallow right central disc protrusion. This is unchanged from the prior study. ** Mild to moderate left and mild right neural foraminal narrowing and slight narrowing of the left lateral recess at L3-L4, unchanged. ** Minimal right neural foraminal narrowing at L4-L5. There is a tiny shallow central disc protrusion and annular fissure at this level, unchanged. ** Mild disc bulge and shallow central disc protrusion at L5-S1 in addition to the 2.5 mm retrolisthesis of L5-S1. There is no central or neural foraminal narrowing at this level. Three is no change from the prior study. ** Mild edema within the soft tissues adjacent to the right L3 facet. This is of uncertain etiology, but could represent a mild muscle strain or ligamentous sprain. ** Left renal peripelvic cyst, unchanged.

29. The March 16, 2017, MRI was compared to the previous January 7, 2016, MRI. There were no changes, except that there was some mild edema on the soft tissues adjacent to the right L3 facet. These degenerative changes and Claimant's pain complaints did not correlate with the objective findings.

30. Kathy D'Angelo, M.D. performed an IME and issued a report on March 30, 2017. Dr. D'Angelo opined that Claimant's only medical diagnoses related to the October 10, 2014, incident were contusions of the coccyx and myofascial pain to the lumbar and sacral region. Dr. D'Angelo noted those conditions were at MMI and no impairment rating should be given. Dr. D'Angelo performed an examination of Claimant's cervical spine, thoracic spine, lumbar spine, right hip, and left hip. The examinations were normal. Dr. D'Angelo opined that Claimant had a delayed onset of symptoms, which is difficult to explain from a physiological and neurological perspective. Dr. D'Angelo noted that she could not explain Claimant's waxing and waning pain complaints from a medical standpoint. Dr. D'Angelo noted that if Claimant would have developed lumbar disc herniation due to the alleged incident, Claimant's symptoms would have been evident immediately, but it was not within medical

probability to have intermittent pain symptoms from an acute spinal trauma. Dr. D'Angelo opined that it was not medically probable to have the development of symptoms, which were not problematic consistently following an original spine trauma several days, weeks, months, or years following an acute traumatic injury. Dr. D'Angelo testified that some pain symptoms can manifest at a later date. Dr. D'Angelo testified that there are no late onset of symptoms with acute spinal trauma or acute joint trauma.

31. Dr. D'Angelo further opined that Claimant's expanding and changing complaints were subjective and inconsistent with objective physical or radiological findings. Dr. D'Angelo noted that Claimant's diffuse pain complaints have migrated and worsened, and that new symptoms have developed following a significant lapse of time after her injury. Dr. D'Angelo opined that Claimant's complaints are not causally related to the October 10, 2014, incident. Dr. D'Angelo also opined that Claimant's abnormal and non-physiological symptom presentation is related to degenerative changes, anger, and financial incentive.

32. Claimant underwent a three-level fusion at L3-S1 on May 15, 2017.

33. At the August 21, 2017, hearing, Dr. Little testified on behalf of Claimant. Dr. Little noted that she was not level II accredited, and that she is not familiar with the causation analysis under the Division of Workers' Compensation Medical Treatment Guidelines. Dr. Little testified that Claimant's neck complaints did not arise initially. Dr. Little also testified that Claimant's three level lumbar spine surgery was not unreasonable, but it may have not been necessary. Dr. Little testified that she would not have chosen surgery without weakness or intractable pain.

34. Dr. D'Angelo credibly testified via post-hearing deposition on August 31, 2017. Dr. D'Angelo credibly testified that there is no late onset of symptoms with acute spinal trauma or acute joint trauma. Dr. D'Angelo also credibly testified that Claimant did not suffer an acute injury to her lumbar spine because Claimant's physical examinations showed a normal motor examination and normal sensory examination. Dr. D'Angelo testified that an acute trauma does not accelerate that the underlying degenerative disease process. Dr. D'Angelo further credibly testified that Claimant's subjective complaints do not match the objective findings because Claimant had normal examinations and normal straight leg raising tests. Dr. D'Angelo testified that straight leg raising tests are indicative of disc herniations, and if the leg is elevated, it increases pressure on the nerve and causes radiculopathy pain, which Claimant did not have. Dr. D'Angelo testified that she could not link Claimant's complaint of neck pain to the October 10, 2014, incident because the incident happened seven months prior to the first complaint of neck pain and Claimant initially denied head and neck pain. Dr. D'Angelo testified that there are very specific indications for a fusion surgery, one of which is instability of the spine. Dr. D'Angelo testified that there was nothing on the MRIs that indicated that Claimant needed a fusion. Dr. D'Angelo credibly testified that the surgery was not reasonable, necessary, and not related to the October 10, 2014, incident.

35. Dr. D'Angelo testified that Claimant behaved like a person with somatic symptom disorder because Claimant was attached to her symptoms and was looking for validation of her symptoms. Dr. D'Angelo testified that Claimant said she was in pain, but Claimant did not demonstrate any pain behaviors. Dr. D'Angelo credibly testified that Claimant's alleged cause of lumbar spine pain, cervical spine pain, and bilateral hip pain were due to underlying degenerative changes and not causally related to her work injury.

36. The ALJ finds and determines that the medical evidence and the testimony by Dr. D'Angelo indicate that Claimant did not sustain a compensable injury on October 10, 2014.

37. The ALJ finds that Dr. D'Angelo's testimony is more credible than Claimant and Dr. Little. The ALJ finds that testimony by Claimant is not credible and not persuasive. The ALJ finds that from review of the medical records, Claimant's pain complaints did not match any objective findings or her subjective pain complaints outweighed any objective findings. This is especially true on the EMG, which was normal, even though Claimant complained of radicular symptoms into her legs.

38. The ALJ finds the medical records of Midtown Occupational, Dr. England, Dr. Ibrahim, and Dr. Kasunic more persuasive than the testimony of Dr. Little or the Claimant.

39. The ALJ finds that Claimant's conduct and actions contradicts her hearing testimony. Despite being in so much pain, following the October 10, 2014, incident, she worked her regular duties, full time as a truck driver, but she could not sit in the Respondent's Wellness Center. Despite Claimant's testimony about the October 14, 2014, medical appointment when she was in so much pain, the medical record contradicts Claimant's pain complaints reflecting that Claimant had a pleasant mood and affect. This ALJ concludes that it is not credible that someone in such severe pain would state that she was ready to return to work full duty.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado (Act), Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201. Medical evidence is not required to establish causation and

lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

2. A claimant is required to prove that an injury arose out of and in the course of the Claimant's employment. *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). Moreover, to recover workers' compensation benefits, there must be a causal relationship between the industrial accident and the injury for which benefits are sought. *Snyder v. Indus. Claims Appeal Office*, 942 P.2d 1337 (Colo. App. 1997).

3. In the context of a workers' compensation claim, the terms "accident" and "injury" are not synonymous. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). An industrial accident is an unforeseen event. Section 8-40- 201(1), C.R.S. An injury is a result of the industrial accident. However, not every industrial accident results in a compensable injury. *See Hershberger v. Baldwin Constr*., W.C. No. 4-331- 727 (February 19, 1998). A compensable industrial injury is an accident which results in an injury requiring medical treatment or causing a disability. *Wherry v. City and County of Denver,* W.C. 4-475- 818 (March 7, 2002).

4. The mere occurrence of a compensable injury does not require the Administrative Law Judge to find that all subsequent medical treatment and physical disability was caused by the industrial injury. *Boone v. Winslow Constr*., W.C. No. 4-321- 251 (August 21, 1998).

5. In determining whether the claimant suffered a compensable injury in this case, the credibility of the witnesses and the probative value of the evidence must be assessed in order to determine whether the claimant has met her burden of proof. *Dover Elevator Co. v. Indus. Claim Appeals Office,* 961 P.2d 1141 (Colo. App. 1998).

6. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See Magnetic Engineering, Inc. v. ICAO, 5 P.3d 385 (Colo. App. 2000).

7. The credible and persuasive evidence presented at hearing established that Claimant did not sustain a compensable work injury on October 10, 2014. Claimant being struck by a vehicle did not cause her disability. Claimant was given a full duty release, placed at MMI, and given a 0% impairment rating on October 14, 2014, by the treating physician at Midtown Occupational. Claimant's examination was benign and normal. During Claimant's multiple examinations with multiple providers her subjective complaints did not match any objective findings. Claimant's lumbar, thoracic, and neck MRI show degenerative changes, which are not related to the October 10, 2014 incident. Dr. Ibrahim credibly

opined that he was unable to identify a concrete lesion, which could be responsible for Claimant's symptom constellation. Dr. Ibrahim persuasively opined that Claimant would not benefit from surgical intervention given her nonphysiologic symptom distribution.

8. Dr. D'Angelo's IME and testimony were credible and persuasive. Dr. D'Angelo noted that Claimant's expanding and changing nature of her complaints were subjective and inconsistent with objective physical or radiological findings. Dr. D'Angelo noted that Claimant's diffuse pain complaints have migrated and worsened, and that new symptoms have developed following a significant lapse of time after her incident. Dr. D'Angelo credibly opined and testified that Claimant's complaints are not causally related to the October 10, 2014 incident. Dr. D'Angelo also opined that Claimant's abnormal and non-physiological symptom presentations are related to degenerative changes, anger, and financial incentive.

9. Given the forgoing, the ALJ finds and concludes Claimant's October 10, 2014, incident did not require medical treatment or caused a disability. Accordingly, the ALJ determines and concludes that the Claimant did not meet her burden of proof in establishing that she suffered a compensable injury on October 10, 2014. The ALJ also concludes that Claimant's extensive medical treatment is not reasonable, necessary, or causally related to the October 10, 2014, incident. Lastly, the three-level fusion performed on May 15, 2017, was not reasonable, necessary, or related to the October 10, 2014, incident

ORDER

1. The Claimant's request for workers' compensation benefits is denied and dismissed with prejudice.

If you are dissatisfied with the Judge's order, you may file a Petition to review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43- 301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether the Claimant sustained a compensable injury as an employee of Employer?

2. Whether the medical benefits from Yampa Medical Center, Classic Air Care, Inc. and Denver Health were reasonable, necessary and related to Claimant's industrial injury?

3. Whether Claimant is entitled to temporary total disability (TTD) benefits?

4. Whether Employer is liable for penalties for failure to maintain workers' compensation insurance pursuant to Section 8-43- 408, C.R.S.?

FINDINGS OF FACT

1. Claimant credibly testified that in January 2017 he began working for Employer. Prior to this time, Claimant had worked as a painter. Claimant's friend, Daniel Benegas, asked Claimant if he wanted to work for Employer. Claimant identified Matthew Gantick as Employer. Claimant was not working at the time and agreed. Claimant began performing snow removal services for Employer on January 5, 2017. Claimant was paid $20 per hour by Employer. Claimant denied having prior experience performing snow removal services. Claimant denied operating any company of any kind in January 2017.

2. Claimant credibly testified at hearing. Claimant testified that Mr. Gantick told him what jobs to perform. Mr. Gantick would call or text Claimant, through Mr. Benegas, as to when there was work and the time and place to show up. Typically, they would meet at Mr. Gantick's business in Clark, Colorado and then drive to the work location. Sometimes, Mr. Gantick would drive Claimant to the work location. Claimant denied working for any other company or at any other job in January 2017. Claimant denied any prior training or experience before working for Employer. Mr. Gantick instructed Claimant on snow removal skills on the first day of work.

3. Employer provided Claimant with tools to perform the snow removal services including shovels, picks and ladders. Claimant did not provide any tools for the snow removal service.

4. On February 6, 2017, Claimant met Employer in Clark, Colorado. Claimant was a passenger in a vehicle driven by Daniel Benegas. They followed Employer to a house where they were to remove snow from the roof. Employer left and said he would return later. Claimant was required to work on the house that day. Claimant testified that some jobs would take more than one day to complete. However, Claimant felt he was required to work the job

within the time frame given by Employer, who would pressure Claimant to finish.

5. Claimant and Mr. Benegas began removing snow from the roof. While on the roof, Claimant slipped and fell off the roof. The ice from the roof fell on top of Claimant. Claimant testified that he sustained injuries to his ribs, chest and nose as a result of the fall. Claimant testified that he did not have a good memory of the accident or his injuries immediately thereafter as he lost consciousness. Mr. Benegas took Claimant into the residence and called Employer.

6. Mr. Gantick arrived at the job site after Claimant was injured. Claimant was taken to Yampa Valley Medical Center. He awoke and saw his wife and brother.

7. Claimant was taken to Denver Health by helicopter. Claimant underwent surgery to his stomach at Denver Health. Claimant displayed a surgical scar in the middle of his torso approximately five inches in length. Claimant also displayed a protruding rib higher on his chest, to the left side. Claimant remained hospitalized at Denver Health approximately one week. Claimant received follow up medical treatment at Yampa Valley Medical Center approximately one month after his injury where x-rays were taken. Claimant followed up at Denver Health on March 15, 2017.
.
8. Claimant received medical bills from Yampa Valley Medical Center for treatment on February 6, 2017, and a follow up visit. These medical bills were the result of treatment Claimant received for injuries caused by the fall from the roof on February 6, 2017.

9. Claimant received medical bills from Classic Air Care, Inc. for helicopter transportation on February 6, 2017. The medical bill for the helicopter flight were the result of treatment he received for injuries caused by the fall from the roof on February 6, 2017.

10. Claimant received medical bills from Denver Health for treatment on February 6, 2017, including, but not limited to, surgery and a follow up visit.

11. These medical bills were the result of treatment he received for injuries caused by the fall from the roof on February 6, 2017.

12. Claimant was paid in cash from Employer for his snow removal services. Claimant was paid $20 per hour for the hours he worked. Claimant would submit his hours to Employer and would receive payment. Claimant was not paid on a fixed schedule. Claimant filled out a card upon which Claimant would submit his daily hours. Claimant contemporaneously kept track of his hours on his cell phone. Claimant worked 108 hours for Employer from

January 5, 2017 to February 6, 2017. It is found that Claimant's AWW is $458.18.

13. Employer never consulted with Claimant for purposes of deciding how to bid or determine an estimate for a snow removal job.

14. Claimant did not return to work for Employer after his injury. Claimant was unable to perform his regular job duties for Employer after he was discharged. Claimant tried to return to work painting in mid-April, 2017 and worked for approximately 3-4 weeks. Claimant earned $16 per hour and worked 10 hours per day, 6 days per week during this period. Claimant was unable to continue painting due to his work injuries. Claimant returned to work washing dishes and preparing food for an event company on June 11, 2017, earning $14 per hour working 40 hours per week. Claimant could not return to his work at Employer at this time.

15. Mr. Gantick is the sole owner of Employer. The business purpose of Employer is concrete construction. Mr. Gantick testified that he did not have any employees in February 2017. Mr. Gantick testified he last had employees two and one-half years prior when he issued payroll for concrete construction services. Mr. Gantick testified he sub-contracted out his work for the past two and one-half years. Mr. Gantick's testimony is found to be less credible and persuasive than Claimant's testimony.

16. Mr. Gantick identified Claimant as "Tommy". Mr. Gantick became familiar with Claimant through Mr. Benegas, identified by Mr. Gantick as an independent subcontractor who contracted with Employer. Mr. Gantick testified Mr. Benegas approached Employer indicating Claimant was an experienced shoveler and brought him to work on a particular day. Mr. Gantick testified that Claimant rode in his truck one time. Mr. Gantick testified that Claimant's services worked out to $20 per hour. Mr. Gantick testified he would receive a phone call from a home owner for snow removal service and Mr. Gantick would contact a list of independent subcontractors. Mr. Gantick testified that whoever could do the job would perform snow removal services. The Employer would get paid and Employer would pay the independent subcontractors. Mr. Gantick testified that he did pay Claimant money by handing him cash directly. Mr. Gantick testified that to keep the independent contractors organized by providing index cards for them to write their time down for snow removal services which he would then record. To the extent that Mr. Gantick's testimony contradicts Claimant's testimony, Claimant's testimony is found to be more credible and persuasive than Mr. Gantick's testimony.

17. Mr. Gantick testified that he requested Claimant's Social Security number to issue a 1099 tax form but was unable as Claimant never provided the requested information. Mr. Gantick testified he paid Claimant a total of

$1620.00 for 81 hours of snow removal services from January 5, 2017, to February 6, 2017. The hours recorded by Employer were read into the record. Mr. Gantick denied requiring Claimant to work exclusively for him and denied providing Claimant any training. Mr. Gantick testified he had tools, identified as ladder and scoops, but so did Claimant, as he witnessed them being removed from the vehicles. Mr. Gantick testified he had been providing snow removal for several years.

18. Mr. Gantick testified on February 6, 2017, Mr. Benegas and Claimant followed him to the job site. Mr. Gantick testified that he would take the labor that he contacted to a job site and expect that they Mr. Benegas called Mr. Gantick approximately 1 hour later. Mr. Gantick arrived back at the job site and found Claimant in Mr. Benegas's car. Mr. Gantick observed a cut on Claimant's nose and placed some snow on the wound. Claimant was complaining of pain in his side and Mr. Gantick instructed that they needed to get Claimant to Yampa Valley Medical Center. Mr. Gantick testified he went with Claimant to Yampa Valley Medical Center and witnessed him being airlifted.

19. Mr. Gantick testified he did not have workers' compensation insurance on February 6, 2017. Mr. Gantick testified he would decide, together with his independent contractors, how many hours a snow removal job would take and charge the customer $30 per hour per individual on the job to make up the estimate or bid. Mr. Gantick testified Claimant did not provide snow removal services for Employer after February 6, 2017.

20. Claimant submitted documentation from Yampa Valley Medical Center that on February 6, 2017, medical services identified as Pharmacy IV Solutions, General Supplies, Laboratory, Laboratory Chemistry, Laboratory Immunology, Laboratory Hematology, Chest XRay, CAT Scan Head, CAT Scan Body Portion, Ultrasound, Emergency Room Services, Echocardiology, Drug with detailed coding, Trauma Activ Respon IV, Preventative Care Vaccine, Physician Fees Radiology, Physician Fees Emergency were performed and charged to Claimant.

21. Claimant submitted documentation from Classic Air Care, Inc. indicating the Claimant was transported on February 6, 2017, from Yampa Valley Medical Center to Denver Health Medical Center.

22. Claimant submitted documentation from Denver Health that Claimant received hospital services from February 6, 2017, to February 12, 2017, identified as Room and Board, Intensive Care, Pharmacy, Medical/Surgical Supplies and Devices, Laboratory, Radiology, Operating Room Services, Anesthesia, Respiratory Services, Emergency Room, Pulmonary Function, Pharmacy-Extension of 025X-Single, Source Drug Not Used, Recovery Room, Radiology Diagnostic, Physician services by Dr. Michael Breyer

(Critical Care E/M 30-74 Minutes), Physician services by Dr. Donald Townsend (Insert Cath,art, Percut, Shorterm, Emergency Anesthesia, Anesth, Open Heart; W/O Pump Oxygenator), Physician Services by Dr. David Symonds (Chest X-Ray), Physician Services by Dr. Linda Fielding (Chest X-Ray), Physician Services by Dr. Michael Mestek (Chest X-Rays) and Physician Services by Dr. Ronald Townsend (Chest X-Ray).

23. The medical report from Denver Health dated March 15, 2017, indicated Claimant was seen for post-operative follow up after a pericardial window by Dr. Cohen on February 6, 2017. Claimant was seen this date by Nupur Sehdev PA-C. Claimant reported feeling great and denied chest pain. Claimant's wound looked good. Mr. Sehdev offered Claimant a letter returning him to work light duties but Claimant was seeking a letter returning him to stay at home until he obtain surgery for a his nasal fracture which Mr. Sehdev declined to provide.

24. It is found that Claimant proved by preponderance of the evidence that he was an employee of Respondent on the date of the work injury, February 6, 2017, and that he received the medical treatment, described above, that was reasonably necessary and related to cure and relieve Claimant of the effects of the work injury.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40- 102(1), C.R.S. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592, P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43- 201, C.R.S. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385,389 (Colo. App. 2000).

2. The ALJ is empowered to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence. *See Bodensieck v. ICAO*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. ICAO*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull*, 802 P.2d 1182, 1183 (Colo. App. 1990). When determining credibility, the fact finder should consider, among other things,

the consistency or inconsistency of the witnesses testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205(1936).

COMPENSABILITY (EMPLOYEE VS. INDEPENDENT CONTRACTOR)

3. Pursuant to Section 8-40-202(2)(a), C.R.S. "any individual who performs services for pay for another shall be deemed to be an employee" unless the person is "free from control and direction in the performance of the service, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent trade, occupation, profession, or business related to the service performed." The putative employer may establish that the claimant was free from direction and control and engaged in an independent business or trade by proving the presence of some or all of the nine criteria set forth in Section 8-40- 202(2)(b)(II), C.R.S.; *Baker v. BV Properties, LLC*, W.C. No. 4-618-214 (August 26, 2005) (*See also Nelson v. Industrial Claim Appeals Office,* 981 P.2d 210 (Colo. App. 1998)).

4. The factors set forth in Section 8-40- 202(2)(b)(II) indicating that an individual is not an independent contractor include the individual being paid a salary or hourly rate instead of a fixed contract rate, and being paid individually rather than under a trade or business name. Conversely, independence may be shown if the person for whom the services are performed provides no more than minimal training to the claimant, does not dictate the time of performance, does not establish a quality standard for the claimant's work, does not combine its business with the business of the claimant, does not require the claimant to work exclusively for a single person or company, and is not able to terminate the claimant's employment without liability. *Baker v. BV Properties, LLC, supra.* This statute creates a "balancing test" to overcome the presumption of employment contained in Section 8-40- 202(2)(a), C.R.S. and establish independent contractor status. *Nelson v. Industrial Claim Appeals Office, supra*. The question of whether the employer has presented sufficient proof to overcome the presumption is one of fact for the ALJ. *Baker v. BV Properties, LLC, supra*.

5. As found, there was no dispute that Claimant received compensation for snow removal services. Claimant was paid in cash, by Employer, based on an hourly rate of $20 per hour. It was undisputed that Claimant would submit his hours to Employer and was then compensated at his hourly rate. As a result, Claimant established a prima facie case that he was an employee of Employer.

6. As found, Employer has failed to establish by a preponderance of the evidence of Claimant's independence from Employer. In addition to the payment at an hourly rate, Claimant testified that he never performed snow removal services prior to working for Employer. As a result, Claimant was not customarily engaged in the snow removal business but worked only for Employer. Claimant credibly testified that Employer provided the tools for the snow removal services, including shovels, ladders and picks. Claimant credibly testified that Employer instructed him on snow removal on his first day of work. Claimant credibly testified that Employer took Claimant to the job sites on a daily basis and provided instruction on the job. Claimant credibly testified, as did Employer, that he was compelled to work on a given job by Employer and was not given freedom to complete the project based on Claimant's own schedule. Claimant credibly testified that Employer pressured him to complete projects.

7. It is concluded that Claimant was an employee of Respondent on February 6, 2017, and injured himself in the course and scope of his employment with Respondent.

AVERAGE WEEKLY WAGE

8. "Wages" is defined as the "money rate at which the services rendered are recompensed under the contract of hire in force at the time of the injury, either express or implied." Section 8-40- 201 (19(a)), C.R.S. The objective of wage calculation is to arrive at a fair approximation of the Claimant's wage loss determined from the employee's wage at the time of injury. Section 8-42- 102(3); *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo.App.1993); *See Williams Brother, Incorporated v. Grimm*, 88 Colo. 416, 197 P.1003 (1931); Vigil v. Industrial Claim Appeals Office, 841 P.2d 335 (Colo. App. 1992).

9. Claimant credibly testified that he worked 108 hours for the 33 day period from January 5, 2017, to February 6, 2017. As a result, Claimant's AWW is calculated at $458.18 (108 hours x $20.00 / 33 days x 7 = $458.18).

MEDICAL BENEFITS

10. Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of a work-related injury. Section 8-42- 101(1) (a), C.R.S. (2008). Where a claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work related

injury and the condition for which benefits are sought. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). Whether a claimant sustained her burden of proof is generally a factual question for resolution by the ALJ. *See City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997).

11. Claimant credibly testified that he was taken to Yampa Valley Medical Center then airlifted to Denver where he underwent surgery at Denver Health. The medical records, including bills, support and confirm that Claimant underwent emergency treatment at Yampa Valley Medical Center and Denver Health on February 6, 2017. The medical records, including bills, support that Claimant was airlifted from Yampa Valley Medical Center to Denver Health on February 6, 2017. The medical records, including bills, support and confirm that Claimant was seen in follow up at Yampa Valley Medical Center for x-rays and physician evaluation on February 22, 2017. The medical records, including medical bills, support and confirm that Claimant was admitted to Denver Health from February 6 to February 12, 2017, and seen in follow up at Denver Health on March 15, 2017. Claimant credibly testified that all the medical treatment was related to his industrial fall. The evidence provided by Claimant was not contested by Respondent. In fact, Employer confirmed that Claimant was treated at Yampa Valley Medical Center and airlifted to Denver.

12. As a result, because the evidence provided by Claimant was uncontested with regard to the medical treatment, Claimant has sustained his burden of proof establishing the medical treatment obtained from Yampa Valley Medical Center on February 6, 2017, and February 22, 2017, was reasonable, necessary and related to his work-related fall. As found, Claimant has sustained his burden of proof establishing the airlift on February 6, 2017, was reasonable and necessary medical treatment arising out of his work-related fall.

13. As found, Claimant has sustained his burden of proof establishing that the medical treatment received at Yampa Valley Medical Center and Denver Health from February 6, 2017, to February 12, 2017, and March 15, 2017, was reasonable, necessary and related to his industrial fall.

TEMPORARY DISABILITY BENEFITS

14. To establish entitlement to temporary disability benefits, an employee must prove that the industrial injury, or occupational disease, has caused a "disability," and that he/she suffered a wage loss that, "to some degree," is the result of the industrial disability. Section 8-42- 103(1), C.R.S.; *PDM Molding, Inc. v. Stanburg*, 898 P.2d 542, 546 (Colo. 1995). The term "disability," as used in workers' compensation cases, connotes two elements. The first is "medical incapacity" evidenced by loss or reduction of bodily function. "Disability" connotes both medical incapacity and restrictions to bodily function.

15. The second element of temporary disability is loss of wage earning capacity. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning

capacity element of "disability" may be evidenced by a complete or partial inability to work, or physical restrictions that preclude a claimant from securing employment. *See Culver v. Ace Electric, supra; Hendricks v. Keebler Company*, W.C. No. 4-373- 392 Industrial Claim Appeals Office (ICAO), June 11, 1999.

16. It is concluded that Claimant was disabled from his usual employment and is therefore entitled to an award of indemnity benefits. Claimant and Employer testified Claimant did not return to work after his injury. Claimant was physically unable to return to work until April 15, 2017. This testimony was uncontested. The only medical documentation with regard to work restrictions was from the Physician's Assistant Sehdev which suggests Claimant could return to light duty on March 15, 2017. As a result, Claimant has sustained his burden of proof establishing entitlement to TTD from February 7, 2017, to April 14, 2017, when Claimant started painting.

17. Based on Claimant's testimony, he did not sustain wage loss for approximately 4 weeks starting April 15, 2017. Claimant credible testified he was unable to continue painting due to his work injuries on or about May 12, 2017. Claimant is entitled to TTD from May 13, 2017 until June 10, 2017. Based on Claimant's testimony, he returned to work on June 11, 2017, and did not sustain work-related wage loss thereafter.

PENALTIES

18. Mr. Gantick testified he was uninsured on February 6, 2017. Pursuant to Section 8-43-408(1), C.R.S. Claimant's indemnity benefits in the present claim shall be increased by 50%.

19. Section 8-43-408(2), C.R.S., requires that an uninsured employer post a bond or certificate of deposit for the present value of all of the unpaid compensation and benefits. WCRP 9-5 provides that the trustee is to be the Subsequent Injury Fund in the Division of Workers' Compensation. Pursuant to WCRP 9-5, the ALJ has calculated a total of $5,958.03 for past-due TTD benefits through the date of hearing in addition to $112.234.43 for known authorized medical expenses. There is no present value discount for these past-due amounts. A bond or certificate of deposit in the amount of $118,192.46 is appropriate.

ORDER

IT IS, THEREFORE ORDERED THAT:

1. Claimant sustained a compensable injury as an employee of Respondent on February 6, 2017, when he fell off a roof.

2. Claimant's average weekly wage is $458.18 with a corresponding TTD rate of $305.54. With the additional 50% liability, Claimant is entitled to TTD benefits at the rate of $458.31 per week.

3. Respondent are liable and shall pay all medical benefits received by Claimant from Yampa Valley Medical Center for dates of service on February 6, 2017, and February 22, 2017.

4. Respondent are liable and shall pay for the airlift services provided to Claimant by Classic Air Care, Inc. on February 6, 2017.

5. Respondents are liable and shall pay all medical benefits received by Claimant from Denver Health from February 6, 2017 to February 12, 2017 and for March 15, 2017.

6. Respondent are liable and shall pay Claimant for TTD benefits from February 7, 2017 to April 14, 2017 and May 13, 2017 to June 10, 2017.

7. Respondent are liable and shall pay Claimant an additional 50% on all indemnity benefits pursuant to Section 8-43- 408 (1), C.R.S. for failure to maintain workers' compensation insurance.

8. Pursuant to WCRP 9-5, the ALJ has calculated a total of $5,958.03 for past-due TTD benefits through the date of hearing in addition to $112.234.43 for known authorized medical expenses. There is no present value discount for these past-due amounts. A bond or certificate of deposit in the amount of $118,192.46 is appropriate.

9. Within ten (10) days of the date of service of this order, deposit the sum of $118.192.46 with the trustee, Subsequent Injury Fund Unit of the Division of Workers' Compensation, P.O. Box 300009, Denver, Colorado 80203-0009, Attention: Sue Sobolik, to secure the payment of all unpaid compensation and benefits awarded, or in lieu thereof,

10. Within ten (10) days of the date of service of this order, Claimant shall file a bond in the sum of $118,192.46 with the Division of Workers' Compensation within ten (10) days of the date of this order:

    (1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation or

    (2) Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation and benefits awarded.

11. IT IS FURTHER ORDERED: Pursuant to Section 8-43-408(5) C.R.S., the uninsured employer shall pay an amount equal to 25% of the compensation to which Claimant is entitled to the Colorado uninsured employer fund created in Section 8-67-105 C.R.S.

12. IT IS FURTHER ORDERED: That the employer shall notify the Division of Workers' Compensation of payments made pursuant to this order.

13. IT IS FURTHER ORDERED: That the filing of any appeal, including a petition for review, shall not relieve the employer of the obligation to pay the designated sum to a trustee or to file the bond. Section 8-43-408(2) C.R.S.

If you are dissatisfied with the Judge's order, you may file a Petition to review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43- 301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 5, 2018

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable injury on September 13, 2016.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to reasonable and necessary medical treatment for a September 13, 2016 injury.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits and/or temporary partial disability (TPD) benefits.

STIPULATIONS

1. Claimant's average weekly wage (AWW) at the time of injury was $376.00.

FINDINGS OF FACT

1. Claimant is a 47 year old woman who was employed by Employer as a banquet worker. Claimant was so employed for approximately 1.5 years.

2. Claimant's duties included washing dishes, prep work, polishing spoons and glasses, setting up for events, and serving and clearing food. Employer sends their workers to different large hotels or places that need banquet workers for events. The Omni Hotel is a regular client of Employer.

3. On September 13, 2016 Claimant was assigned to work a banquet event at the Omni Hotel. This was Claimant's first time working at this particular hotel. Claimant arrived at the Omni and clocked in at 3:50 p.m. Claimant clocked out at 5:00 p.m.

4. What happened during the hour and ten minutes Claimant was at the Omni is in dispute and there are many inconsistencies of what occurred during this time.

5. Claimant alleges that she was wearing the proper all black uniform that day as required. Claimant alleges that she met the other employees who worked for Employer in the cafeteria of the Omni. Claimant alleges that she then walked to the event hall and past an ice machine on her way to go into the event hall when she slipped on water near the machine that she did not see. Claimant alleges that she fell with her knee twisted and landed sitting down. Claimant testified that when she landed one knee was bent and the other knee was forward.

6. Claimant alleges that after falling she couldn't walk and was told to stay there and sit for a little bit and after ten minutes, she continued working to set up the event because the event was about to start and they needed to have all the tables set and ready.

7. Claimant alleges that at around 4:40 or 5:00 she was told to go home and that when she left she called a supervisor, Augustin Ramirez, to report that she had fallen. Claimant alleges that she was not told why she was being sent home and that she reported to Mr. Ramirez that she thought she was being sent home because she had fallen. Claimant testified that she would have worked the whole event if she had not been sent home. Claimant denied that she was told she was being sent home because of a uniform problem.

8. Claimant alleges that after calling Mr. Ramirez, she went to Employer's office and was wearing the same clothes she had on while at work (her all black uniform) and that she arrived at Employer's office shortly before 6:00 p.m. Claimant alleges that at the meeting she met only with Mr. Ramirez. Claimant alleges that she filled out a report and met with the district manager Beatrice Rodriguez the next day.

9. Claimant alleges that at her first doctor's appointment she told the doctor she had fallen with her right knee bent backward and twisted and that she fell into a sitting position.

10. Mr. Ramirez, an area manager for Employer testified at hearing. He was Claimant's manager on the date in question. Mr. Ramirez testified that on September 13, 2016 he received a call from the Omni reporting that Claimant was not wearing the proper uniform and that the call was about 15-20 minutes after the scheduled shift start time of 4:00 p.m. Mr. Ramirez alleges that he called Claimant to tell her she needed to go home because she was not in the proper uniform and that Claimant was really upset. Mr. Ramirez alleges that he then told Claimant to wait a few minutes and they would see if they could use her in the back of the house or bring her a uniform.

11. Mr. Ramirez alleges that Claimant called him a few minutes later to report that she had fallen and that Claimant was advised to call Ms. Rodriguez, the district manager, to report the injury. Mr. Ramirez alleges that a couple hours later, around 7:00 p.m., Claimant came to the office to write down a statement and that he, Claimant, Ms. Rodriguez, and Claimant's daughter were in the room. Mr. Ramirez alleges that at the meeting, Claimant was not in the proper all black uniform and that Claimant said she had gone home to change before coming to the office.

12. Ms. Rodriguez, Employer's district manager, also testified at hearing. Ms. Rodriguez indicated that on the date in question, Mr. Ramirez told her Claimant had been sent home due to her uniform and that she then received a call from Claimant who said she needed to seek medical attention. Ms. Rodriguez alleges that Claimant could not explain clearly what had happened and that it didn't make sense so she asked Claimant

to come to the office to meet in person. At the office, Ms. Rodriguez alleges that Claimant had on regular clothing and was not in the proper all black uniform.

13. Ms. Rodriguez is familiar with the Omni since the Omni is a regular client and Ms. Rodriguez has worked at the Omni for events. Ms. Rodriguez testified that the usual practice is for all employees to meet in the cafeteria to get assignments and partner with the Omni staff. Ms. Rodriguez testified that if an employee is not in the correct uniform when meeting in the cafeteria, they are sent home and don't get to work or go into the ballroom.

14. Ms. Rodriguez testified that Claimant was at Employer's office at approximately 6:45 p.m. and that she filled out Exhibit 1 with information given to her from Claimant. Ms. Rodriguez testified that Claimant stated that she had stopped at home to change before coming to the office.

15. Exhibit 1 is a report of injury that indicates Claimant was walking into the ballroom to start her shift with all employees when she slipped on ice and water on the floor at approximately 4:15 p.m. It is listed a slip and fall accident with problems including Claimant's back and right knee. The date and time of notification of injury is listed as September 13, 2016 at 5:15 p.m. and the date and time of preparation of the report is listed as September 13, 2016 at 6:45 p.m. *See* Exhibit 1.

16. On September 14, 2016 Claimant was evaluated at Concentra by Ron Rasis, PA-C. Claimant reported that she slipped on water and ice when she was walking into a banquet hall with a group of co-workers. Claimant reported that her right leg slipped out into extension in front of her and that she fell back and landed on her buttock. Claimant reported mild soreness in her buttock at the impact sight and diffuse lower back pain as well as right knee soreness and stiffness. On examination there was no erythema, ecchymosis, effusion or swelling noted. The lumbar spine had tenderness and tenderness in the left and right paraspinals. X-rays showed no right knee fracture, dislocation, or osseous lesion and the adjacent soft tissues appeared unremarkable with no evidence of joint effusion. Claimant was assessed with contusion of the buttock, back pain, and right knee pain and sprain. A knee support was provided and physical therapy, ibuprofen, and hold/cold compress was planned. Claimant was allowed to return to modified work activity that day working her entire shift with a 15 pound lift/push/pull limit and an occasional squat/kneel restriction allowing 3 hours of those activities per day. *See* Exhibits 3, A, C.

17. On September 16, 2016 Claimant was evaluated by PA Rasis. Claimant reported that she was working light duty and felt overall slightly improved but with slight ongoing soreness over her patella. PA Rasis noted no joint swelling. *See* Exhibits 3, A.

18. On September 16, 2016 Claimant underwent physical therapy. Claimant reported that her right leg bent back and she landed in a sitting position after slipping on water and ice on the floor. Claimant reported no prior functional restrictions. Claimant reported pain of 5/10. *See* Exhibits 2, B.

19. Claimant continued to undergo physical therapy with 8 total visits between September 16 and November 22. Although Claimant reported that physical therapy slightly helped and that she was slightly better following, her pain levels remained fairly similar throughout therapy. *See* Exhibits 2, B.

20. On September 19, 2016 Employer sent a letter to Concentra noting that Claimant was currently unable to perform the physical tasks required of her regular job and listing temporary positions which required different abilities for specific tasks that were outlined in the letter. Concentra was asked to check all activities that Claimant would currently be able to perform. An M.D. from Concentra (signature illegible) checked off 55 boxes for different tasks, indicating that Claimant could currently perform all tasks identified by Employer. This letter was signed on September 29, 2016. *See* Exhibit J.

21. On September 28, 2016 Claimant was evaluated by PA Rasis. Claimant reported that she was not working due to her restrictions and again reported overall improvement. Claimant reported no pain when active and walking, but increased stiffness after sitting. PA Rasis discussed advancing restrictions and ongoing physical therapy. PA Rasis assessed back pain and right knee sprain. PA Rasis increased work restrictions to allow lifting, pushing, and pulling up to 20 pounds and he removed the restriction on squatting and kneeling. *See* Exhibits 3, A.

22. On October 7, 2016 Employer sent a letter to Claimant indicating they had identified a temporary position for her that her physician stated she could perform. The position was listed as dishwasher/prep cook and was set to begin at 7:00 a.m. on Thursday October 13, 2016. Claimant was asked to please report to work at that date and time and that she would be scheduled for 38 hours per week at the Convention Center and at the Hyatt Tech Center. *See* Exhibit J.

23. On October 31, 2016 Claimant was evaluated by PA Rasis. Claimant reported ongoing relief from her prior knee pain but ongoing diffuse aching lower back pain and soreness with bending, prolonged standing, and activity. Work restrictions were removed and Claimant was returned to regular duty on this date. *See* Exhibits 3, A.

24. On November 14, 2016 Claimant was evaluated by PA Rasis. Claimant reported that she was not working as Employer had not offered her work recently. Claimant reported ongoing aching pain and soreness in her lower back and that she had not received any additional physical therapy as she had not been contacted to schedule it. PA Rasis found tenderness in the left and right paraspinal in the lumbar spine but no muscle spasms or warmth. PA Rasis recommended physical therapy two times per week for two weeks. *See* Exhibits 3, A.

25. On December 20, 2016 Claimant was evaluated by PA Rasis. He noted that Claimant had no restrictions. Claimant reported overall that she was much improved with no ongoing midline lower back pain. Claimant reported a slight pulling sensation in her left buttock with bending over. On exam, Claimant had no tenderness in the lumbar

spine and no muscle spasm. PA Rasis noted that Claimant had been compliant with physical therapy and that she was comfortable with her home exercise program. Claimant agreed that she was able to perform all her regular work activity and activities of daily living without difficulty and that she had full function and required no additional medical intervention or ongoing monitoring. PA Rasis found that Claimant was at maximum medical improvement (MMI) and noted that Claimant agreed to MMI. PA Rasis found that Claimant had no permanent impairment. *See* Exhibits 3, A.

26. Wage records show that prior to the injury, Claimant worked varied hours per week for Employer. In the twelve weeks prior to her injury, the lowest week included 23.17 hours worked and the highest week included 61.82 hours worked. The week of the alleged injury and the week ending September 18, 2016, claimant worked 14.67 hours.

27. Wage records show Claimant was not paid and did not work at all in the three weeks following her alleged injury including the weeks ending September 25, 2016, October 2, 2016, and October 9, 2016. *See* Exhibits J, K.

28. By the week ending October 16, 2016 Claimant was working her normal varied hours per week for Employer. Claimant continued to work hours similar to those prior to her alleged injury from October 10, 2016 through November 6, 2016. Claimant's last paycheck covering the week ending November 6, 2016 was issued on November 14, 2016. *See* Exhibits J, K.

29. Claimant testified that she missed days and time from work due to her injury but that she was sent to work within her restrictions at the same pay. Claimant testified that she believes she was terminated from Employer because she sent messages to Mr. Ramirez about work and that he stopped responding to her. Claimant testified that she was never told she was no longer an employee. Mr. Ramirez testified that he tried to find duties within Claimant's restrictions after the injury and that Claimant was able to work within the restrictions. Mr. Ramirez testified that he was unsure why Claimant stopped coming to work and that Claimant did not reach out to him.

30. Victor Juarez, Employer's workers' compensation claims manager, testified at hearing. Mr. Juarez indicated that Claimant was able to work after her injury and that he received restrictions and updates on restrictions. He testified that after Claimant was released to full duty she continued to work but then later stopped working for unknown reasons. Mr. Juarez testified that after her full duty release, Claimant became a regular employee and indicated that employees typically call them for work or are called by Employer if needed for a job.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See*

§ 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment was proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10,

2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As noted above, there are numerous inconsistencies in what occurred at the Omni and afterward in the meeting at Employer's office to discuss the alleged injury. The Respondents essentially argue that Claimant is not credible, was sent home due to her uniform, and did not even work let alone fall or sustain an injury. Claimant essentially argues that she fell, had no uniform issues, and was sent home because she had fallen. The ALJ finds inconsistencies and flaws in both arguments.

If Claimant was sent home immediately due to her uniform problem she would not have been clocked in for 1 hour and 10 minutes. She would have been sent home fairly quickly. As Ms. Rodriguez noted, employees who don't have the correct uniform don't even get job assignments or leave the cafeteria meeting place. Credible and persuasive evidence was presented that at this time, both the Omni and Employer were trying to find a way to use Claimant despite her wrong uniform. Credible and persuasive evidence also shows that there was an event that needed to be set up quickly that evening. It is logically consistent with the credible and persuasive evidence that Claimant did in fact perform duties that evening during the time period in question and that they found work for her despite her uniform problem. This is consistent with Claimant's testimony that she worked for a while before being sent home. The credible and persuasive evidence is that Claimant was eventually sent home due to the uniform problem after 1 hour and 10 minutes and after performing the duties they found for her that didn't require a uniform.

The ALJ finds the logically persuasive and credible evidence establishes that Claimant arrived to work without the proper uniform, was given duties anyways that didn't require a uniform, and was sent home 1 hour and 10 minutes later due to the uniform issue and after Employer could no longer use her for duties not requiring a uniform. The question then becomes whether or not Claimant sustained a work related injury while she was working and performing duties during this 1 hour and 10 minute period of time.

The ALJ finds that Claimant has established by a preponderance of the evidence that she slipped and fell on water near the ice machine on September 13, 2016 while working. Although filling up glasses with ice is the last step of banquet setup, water from an ice machine can be present at other times and Claimant is credible that there was water on the floor on September 13, 2016 that caused her to slip and fall and sustain minor injuries to her lower back and knee. The ice machine would have been located in a hallway used to access the banquet room and Claimant is credible that she was in the hallway to work banquet set up and that there was water on the floor that caused her to slip and fall. Claimant's testimony that she rested a little while and then worked on banquet set up is credible and persuasive. Claimant reported the injury to Employer that day and Claimant has established, more likely than not, that she sustained a compensable work related injury on September 13, 2016 while in the course and scope of employment.

Reasonable and Necessary Medical Treatment

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

Claimant has established by a preponderance of the evidence that her medical treatment related to the September 13, 2016 injury through December 20, 2016 was reasonable, necessary, and related to her injury. As found above, on December 20, 2016 Claimant was placed at maximum medical improvement with no permanent impairment and Claimant reported that she was much improved, had full function, and agreed that she required no additional medical intervention or ongoing monitoring. Claimant has received reasonable and necessary medical treatment for her injury and has established that the treatment through December 20, 2016 was related to her injury.

Temporary Total Disability

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*. The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

As found above, Claimant worked varied hours per week. The wage records show that following her injury Claimant did not work until October 10, 2016. Based on the weight of the evidence and testimony, the ALJ finds that Claimant had met her burden to show that from September 13, 2016 through October 9, 2016, Claimant was temporarily and totally disabled due to her injury. As found above, the wage records also show that

beginning October 10, 2017, Claimant worked her normal varied hours similar to those she worked prior to her September 13, 2016 injury and that she continued working normal varied hours for approximately one month and through November 6, 2016.

Claimant has failed to show that she was temporarily partially or totally disabled at any point after October 9, 2016. Claimant did not sustain an impairment of wage earning capacity, Claimant was placed at full duty in October, and Claimant continued to work until November 6, 2016. The weight of the credible and persuasive evidence establishes that Claimant stopped calling in for jobs after November 6, 2016. It is not persuasive that Respondent started ignoring Claimant's calls or failed to provide her work. Claimant testified that around this time period she began caring for her grandchildren. Any wage loss subsequent to November 6, 2016 was not due to Claimant's injury or any impairment. Claimant was, in fact, working full duty with no restrictions on November 6, 2016. She had no medical incapacity or disability and any wage loss after November 6, 2016 was due to Claimant's choice not to call in or take jobs and due to her choice to stop coming in to work.

Temporary Partial Disability

An employee is entitled to receive sixty-six and two-thirds percent of the difference between the employee's average weekly wage at the time of the injury and the employee's average weekly wage during the continuance of the temporary partial disability. As found above, Claimant was out of work completely following her injury until October 10, 2016 and is entitled to temporary total disability for the time between her injury and through October 9, 2016. On October 10, 2016 she began earning her normal pre-injury wages and had no appreciable difference between her average wages prior to injury. Thus, Claimant has failed to establish any entitlement to temporary partial disability benefits.

ORDER

It is therefore ordered that:

1. Claimant has established, by a preponderance of the evidence, that she sustained a compensable injury on September 13, 2016.

2. Claimant has established, by a preponderance of the evidence, that the medical treatment from September 13, 2016 through December 20, 2016 was reasonable, necessary, and causally related to her September 13, 2016 work injury.

3. Claimant has established by a preponderance of the evidence an entitlement to temporary total disability benefits from September 13, 2016 through October 9, 2016.

4. Claimant has failed to establish, by a preponderance of the evidence, an entitlement to any temporary partial disability benefits.

5. All issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 28, 2018

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

1. Whether Respondents have successfully rebutted the presumption of compensability under §8-41-209 by showing, by a preponderance of the medical evidence, that Claimant's prostate cancer did not occur on the job.

2. Whether Respondents have made the necessary showing so as to be able to withdraw the medical only General Admission of Liability filed on April 24, 2013.

3. In the event this claim is deemed compensable, whether medical treatment provided by Anova Cancer Center is reasonably necessary and related to the work injury, such that Respondents should be held liable for payment of this treatment.

FINDINGS OF FACT

1. Claimant worked for Employer for a period of 36 years as a firefighter. Claimant was hired as a full time firefighter on February 1, 1979 and worked until he retired on February 20, 2015 for reasons unrelated to his prostate cancer. See Exhibit A.

2. Throughout his career, Claimant performed shift work. From 1979 through 2006 he worked 24 hours on, 24 hours off, 24 hours on, followed by 4 days off. In 2006 Claimant began working 48 hours on followed by 96 hours off.

3. During the course of his career, Claimant responded to the typical range of fires for career firefighters, including grass fires, dumpster fires, car fires, weed fires, wildland fires, some commercial fires, and house fires. Claimant testified that the fires to which he responded were fairly typical with the other firefighters in his department who were employed around the same time and for approximately the same duration. Other than the typical general hazards of the firefighting profession, Claimant reported to Dr. Allems that there were no unusual specific fires or particular exposures that stood out in his mind. Claimant sustained the known and typical exposures associated with the firefighting profession during his career.

4. As with most career firefighters, Claimant used protective equipment and bunker gear that was eventually improved and replaced over time. In his earlier career the issued self-contained breathing apparatus (SCBA) was used only during the suppression phase of fighting fires and not during the overhaul or cleanup phases. Additionally, in the early part of his career, the SCBA masks were shared and not fitted properly. In his early career, Claimant washed his bunker gear himself. Claimant also would take showers after a fire call and soot from the fire would roll off his body and down the drain.

5. Bunker gear, the SCBA masks, and the cleaning processes improved throughout the years of Claimant's employment. Extractors were eventually purchased by Employer to clean the bunker gear and an extra set of bunker gear was eventually purchased so Claimant did not have to use "dirty" gear.

6. With the improvement in bunker gear and processes, Claimant's exposures at the end of his career were less than in his early career. However, from 1979 through 2015 Claimant had many years of exposure to the known and typical exposures associated with the firefighting profession and many years where his gear did not adequately protect him from exposure.

7. Claimant began undergoing testing for prostate specific antigen (PSA) at age 50 through Employer and continued to undergo the PSA testing annually. *See* Exhibit 8.

8. On May 29, 2012, Claimant was evaluated at Urology Associates by Susan Eichorst, PA. Claimant reported dysuria, a history of prostatitis on two to three previous occasions, and a family history of prostate cancer. PA Eichorst performed a physical exam and noted an asymmetric prostate with bulbous right lobe and firmness of the left base. PA Eichorst noted a PSA was performed on May 24, 2012 with a result of 1.3. PA Eichorst assessed penile pain and abnormal prostate exam. PA Eichorst opined that Claimant had an asymmetric prostate and a PSA of 1.3, and that although it may be a normal variant, with Claimant's family history and symptoms, a prostate biopsy would be recommended. *See* Exhibit J.

9. On June 7, 2012, Claimant underwent a biopsy of his prostate at Urology Associates. Twelve cores were removed and tested. Eleven tested normal as benign prostatic tissue. However, the right lateral base core tested positive for adenocarcinoma with a Gleason score of: 3+3=6 involving 5% of the biopsy. The diagnostic summary was prostatic adenocarcinoma. *See* Exhibit J.

10. On June 19, 2012, Claimant was evaluated at Urology Associates by Barrett Cowan, M.D. Dr. Cowan assessed prostate cancer and discussed treatment options with Claimant including active surveillance, hormone deprivation therapy, davinci robotic prostatectomy, open radical prostatectomy, brachytherapy, IMRT, combination radiation therapy, cyberknife radiation therapy, proton therapy, and cryotherapy as well as the risks and benefits of all treatment options. Claimant was interested in learning more about cyberknife therapy and was referred to Gregg Dickerson, M.D. to learn more about the cyberknife option. *See* Exhibit J.

11. On July 3, 2012, Claimant was evaluated by Dr. Dickerson. Dr. Dickerson noted that Claimant had been referred to learn more about the option of cyberknife stereotactic body radiation therapy (SBRT) for prostate cancer. Claimant reported a family history of prostate cancer (father). On exam, Dr. Dickerson found Claimant's prostate asymmetrically enlarged with a bulbous and firm right superior lobe. Dr.

Dickerson discussed treatment options and he recommended SRBT to treat Claimant's prostate cancer. Dr. Dickerson noted that Claimant wanted to proceed with cyberknife SBRT treatment. *See* Exhibits 5, I.

12. On July 18, 2012, Claimant filed a Workers' Claim for Compensation with regard to his prostate cancer and listed it as an occupational disease under § 8-41-209, C.R.S. On August 8, 2012, Respondents filed a Notice of Contest. The matter was scheduled for hearing on May 28, 2013. After filing a claim and received the notice of contest, Claimant continued to seek treatment. *See* Exhibits B, C, E.

13. On August 14, 2012 Claimant was evaluated by Dr. Cowan. Dr. Cowan noted that Claimant came in to discuss treatment options. Dr. Cowan noted that they discussed Claimant's situation for over an hour and the advantages and disadvantages of each mode of therapy. Dr. Cowan advised Claimant that despite his age, he was a good candidate for observation. Dr. Cowan also advised Claimant that if he wanted to be treated, cyberknife had an equivalent cure rate to other treatments with fewer side effects. Claimant opted to proceed with observation and a follow up in one month for a repeat PSA was planned. *See* Exhibit J.

14. On October 10, 2012, Claimant underwent an independent medical evaluation performed by Annyce Mayer, M.D. Dr. Mayer noted a history of prostatitis x2 in the past as well as a family history with Claimant's father having had prostate cancer at age 70. Claimant reported that his father worked at Rocky Flats as a guard and a technical writer and that to his knowledge, his father did not work in any production areas and did not have any excess radiation exposure or exposure related illness. Dr. Mayer noted that Claimant began having PSA testing with Employer at work at age 50 and had been tested annually, with results always 1.0 or less until his recent diagnosis. Dr. Mayer opined that the prostate cancer had been detected at a very early stage and that it was not yet clear that treatment would be required. Dr. Mayer noted a plan of watch and wait with repeated PSA and biopsy in December. *See* Exhibit 8.

15. Dr. Mayer opined, to a reasonable degree of medical probability that the cause of Claimant's prostate cancer was unknown. She opined that Claimant was exposed to a number of carcinogens commonly found in fire soot and smoke over the course of his 34 years as a firefighter. Dr. Mayer opined that Claimant met the presumption under 8-41-209, C.R.S. that his prostate cancer was work related. She noted thus, that she had to consider whether or not the non-occupational risk factors constituted a preponderance of the medical evidence that the condition or impairment did not occur on the job and the question of without the work-related exposure, was it medically probable that Claimant would have the current diagnosis and treatment requirements in the absence of his firefighting exposure. *See* Exhibit 8.

16. Dr. Mayer referenced the International Agency for Research on Cancer (IARC), part of the World Health Organization, and noted that IARC has recognized a number of carcinogens that are commonly found in fire soot and smoke. Dr. Mayer listed some of the carcinogens in each of the IARC categories, including Group I agents (known

human carcinogens), Group 2A agents (probable human carcinogens), and Group 2B agents (possible human carcinogens). Dr. Mayer also discussed various risk factors for prostate cancer and noted the following: prostate cancer was the most common non-skin cancer in men, particularly in older men; there is a strong familial component to prostate cancer, with an estimated 10-15% of all prostate cancer attributable to inherited factors, and the remainder considered "sporadic cases"; for development of prostate cancer before age 55, up to 40-50% are considered due to inherited factors; and the greatest familial risk of prostate cancer is afforded by first degree relatives. Regarding Claimant's case, Dr. Mayer opined that Claimant had an increased relative risk of prostate cancer of 1.5-2.0 due to his family history. Dr. Mayer discussed the meta-analysis by LeMasters et al. which she noted reported a 28% increase in relative risk of prostate cancer in firefighters. Dr. Mayer also noted that most firefighters do not get prostate cancer. *See* Exhibit 8.

17. On December 6, 2012 Claimant underwent a repeat PSA test that showed a level of 1.5. On December 12, 2012 Claimant underwent a repeat biopsy of his prostate. Twelve cores were again removed and tested. Ten of then tested normal as benign prostatic tissue. This time, two cores tested positive for adenocarcinoma: the right lateral base core and right lateral mid core. *See* Exhibit J.

18. On January 4, 2013 Claimant again met with Dr. Cowan to discuss treatment options. Dr. Cowan opined that Claimant's long-term prognosis was excellent regardless of which mode of therapy Claimant chose.

19. In March and April of 2013, Claimant underwent cyberknife SBRT treatment for his prostate cancer with Dr. Dickerson. *See* Exhibit I.

20. On April 15, 2013 William Milliken, M.D. issued a case summary letter. Dr. Milliken opined that based on prior experience with prostate cancer claims in firefighters with significant risk factors for a non-occupational exposure etiology, it appeared the case would be accepted for a firefighter exposure etiology despite the predominance of scientific evidence that suggested otherwise. Dr. Milliken noted the constraints of the legislative issues. *See* Exhibit H.

21. On April 24, 2013 Respondents filed a medical only general admission of liability (GAL) noting that there had been no compensable wage loss. After this was filed, the May 28, 2013 hearing was cancelled noting that the issues had been resolved. At the time the GAL was filed Claimant had already completed his cyberknife SBRT treatment for prostate cancer. *See* Exhibits 1,D, E.

22. Claimant continued to follow up with Dr. Dickerson and with Dr. Cowan at Urology Associates. By January of 2015, his PSA level was at .5. By April of 2015, his PSA level was at .49 and he was noted to be doing well two years post cyberknife treatment. In April of 2015, Dr. Dickerson noted that Claimant was demonstrating an excellent clinical and biochemical response to treatment with no significant late side effects and relief of problems of erectile dysfunction with Cialis. By October of 2015,

Claimant's PSA level was at .4 and in April of 2016 it was noted to be at .2. On October 26, 2016 Urology Associates noted that Claimant was demonstrating excellent clinical and biochemical response to treatment. It was noted that Claimant had worsening of erectile dysfunction at about 50% of pre-treatment level, but that there were no other late side effects from Claimant's course of cyberknife SBRT for his prostate cancer. *See* Exhibits 6, 13, I, J.

23. On July 27, 2016 Claimant was evaluated by Sharon Walker, M.D. at On the Mend Occupational Medicine. Dr. Walker noted that Claimant was sent to their clinic for an evaluation of work-related prostate cancer and to determine if Claimant had reached MMI and whether he had sustained any permanent impairment as a result of his work injury. Dr. Walker noted that Claimant's dad had prostate cancer at the age of 70. Dr. Walker opined that Claimant's prostate cancer was a result of his work as a firefighter and she agreed with the treatment Claimant had undergone. Dr. Walker placed claimant at maximum medical improvement and opined that further treatment could be done as maintenance including lifetime erectile dysfunction medications and lifetime follow up evaluations for prostate cancer. DR. Walker opined that Claimant sustained a 5% whole person impairment rating. *See* Exhibits 2, G.

24. On December 27, 2016 Dr. Mayer issued an updated report. Dr. Mayer noted Claimant's prostate cancer diagnosis and treatment history. She listed his social history to include that he was a former smoker, smoking ¾ of a pack per day on average for 17 years overall. She noted his family history with Claimant's father diagnosed with prostate cancer at age 70. Dr. Mayer supplemented Claimant's occupational history to include additional information regarding Claimant's work shifts and the shift changes that had occurred over the years, noting that Claimant initially worked most of his career at 24 hours on, 24 hours on, 24 hours off, 24 hours off, 24 hours on, followed by 4 days off and that 8 years or so before he retired he changed to 48 hours on, followed by 96 hours off. Claimant reported feeling much more refreshed on the 48/96 schedule. Dr. Mayer also noted that Claimant had retired from employment on February 20, 2015. Dr. Mayer opined that Claimant was at MMI and that he had a 23% whole person impairment rating based on impairment of prostate and seminal vesicles (5%), impairment for sexual function (10%) and impairment of the urethra for mild urinary incontinence (10%). *See* Exhibit 7.

25. Dr. Mayer again opined that Claimant met the requirements under the firefighter cancer presumption statute listed at 8-41-209. She discussed his exposures typical to fighting fires as well as other exposures including diesel exhaust, solar radiation, and shift work. Dr. Mayer opined that rotating shift work has been identified as a risk factor for prostate cancer. She noted that Claimant did not sleep well on the job and that he had difficulty with sleep after leaving the job. Dr. Mayer opined that six epidemiological studies showed an increased risk of prostate cancer in firefighters including: LeMasters et al. (2006); Bates (2007); Daniels (2013); Pukkala (2014); Tsai (2015); and Glass (2016). Dr. Mayer noted that smoking cigarettes did not appear to increase the risk of prostate cancer in Caucasians (other than in heavy smokers). As before, Dr. Mayer opined that Claimant has an increased relative risk of 1.5-2.0 of developing prostate

cancer due to his family history. Dr. Mayer noted that the relative risk of prostate cancer in firefighters as a group was known, but that the relative risk of prostate cancer in firefighters with a familial history of prostate cancer versus those without a family history were not known because none of the studies had examined family history. As such, she opined that it was possible that the summary risk statistics consistently showing a statistically significant increased risk of prostate cancer of 4-28% in firefighters actually means that all firefighters have this same amount of increased risk. She opined that it was also possible that there was a subset of firefighters who were at substantially increased risk, with a synergistically increased risk strong enough to drive up the summary risk estimate for the whole population. She noted that some people possess a low risk for developing a disease through an environmental insult while others are much more vulnerable due to subtle differences in genetic factors. Dr. Mayer noted that as Claimant and his father shared some genetic factors, a gene by environment interaction was suggested with the early onset of prostate cancer. *See* Exhibit 7.

26. Dr. Mayer opined that there was no medical evidence that it is more probable that the cause of Claimant's prostate cancer was not related to his exposure to carcinogens during his work as a firefighter. Dr. Mayer opined that over the course of his 33 to 34 years of work as a firefighter, Claimant had repeated opportunity for typical firefighter exposures that have been linked to prostate cancer including PAHs and circadian rhythm disruption as well as cadmium, pesticides, arsenic, PCBs, and other endocrine disruptors. She noted he had inadequate respiratory and skin protection for much of his career and that his repeated exposure to carcinogens including PAHS were at virtually every fire scene and well absorbed through the skin---and were well established risk factors for prostate cancer. *See* Exhibit 7.

27. On February 6, 2017 Claimant underwent an independent medical evaluation performed by Sander Orent, M.D. Dr. Orent opined that from the perspective of risk factors, Claimant's many years of firefighting exposed him to multiple carcinogens and noted the problems with bunker gear in the early days as well as a lack of adequate respiratory protection during that time. Dr. Orent noted that Claimant smoked cigarettes at ¾ of a pack per day for a period of 17 years. Dr. Orent noted a family history of prostate cancer from Claimant's father. However, Dr. Orent opined that it was extremely important to know that Claimant's father was a guard at Rocky Flats and had two major exposures to plutonium fires in that job. Dr. Orent opined that it was quite clear in his view that Claimant's prostate cancer was a result of his multiple and prolonged exposures to carcinogens in the course and scope of his job as a firefighter. Dr. Orent opined that Claimant's family history does not explain his malignancy and noted the genetic predisposition as a potential enhancer to the carcinogen exposure. However, Dr. Orent noted that Claimant's father had substantial carcinogen exposures even probably exceeding that of Claimant in at least 2 episodes at Rocky Flats from a highly carcinogenic agent, plutonium. Dr. Orent opined that Claimant did not have a significant smoking history and had no other confounders. Therefore, Dr. Orent opined that Claimant's prostate cancer was a direct result of his many years of carcinogenic exposure as a firefighter. *See* Exhibit 9.

28. On January 23, 2017 Claimant was interviewed by phone for an internal medicine/occupational medicine and toxicology evaluation performed by Thomas Allems, M.D. Dr. Allems reviewed Claimant's medical and occupational history and issued a report on May 1, 2017. Dr. Allems opined that Claimant's diagnosis of adenocarcinoma of the prostate was unrelated to his occupation as a firefighter. Dr. Allems opined that it was not possible to state, with any degree of medical probability, that Mr. Minor's prostate cancer was caused or contributed to by any factors of his employment. Dr. Allems noted his understanding of Colorado's firefighter cancer presumption statute, and noted that the application of this statute and the determination of whether the scientific evidence rebuts it from a legal standpoint is deferred to the trier of fact. However, from a medical standpoint, Dr. Allems opined, "the presumption is reasonably rebutted on the strength of the medical evidence of a lack of association between firefighting and prostate cancer." *See* Exhibits 10, F.

29. Dr. Allems opined that prostate cancer is the most common cancer diagnosis in American males and that the incidence of prostate cancer skyrocketed in the 1990s contemporaneous with wide usage of PSA screening. "The advent of mass annual screening for prostate cancer (now abandoned) that resulted in a big uptick in disease incidence disproportionately affected precisely the cohort that firefighters fall into – healthy middle aged men." Like Dr. Mayer, Dr. Allems also noted that a family history of prostate cancer is a recognized risk factor for prostate cancer, while cigarette smoking is generally not considered a risk factor for prostate cancer. *See* Exhibits 10, F.

30. Dr. Allems opined that there are no established human carcinogens that are recognized to be a cause of prostate cancer. In addition to IARC, Dr. Allems cited the 2006 edition of Cancer Epidemiology and Prevention by Schottenfeld, which Dr. Allems described as an authoritative text on the epidemiology of cancers. Dr. Allems noted that this text, similar to the summary tabulations published by IARC, does not include prostate cancer in the list of known target organs for any carcinogens. Dr. Allems further noted that there had been specific interest in the occupational epidemiological studies in the role of cadmium because cadmium is concentrated in the prostate. Dr. Allems noted that this was a concern in cadmium workers who had actual known and significant exposure to cadmium, such as workers in the battery manufacturing industry, and that this group was not felt to include firefighters. In addition, even studies of such cadmium-exposed workers did not find a clear association between occupational cadmium exposure and prostate cancer. Dr. Allems went on to review of a number of epidemiological studies that looked at various occupational associations with prostate cancer. Dr. Allems noted that, while not focusing on firefighters, many of the studies included exposures of relevance to firefighters such as vehicular exhausts, solvents and polycyclic aromatic hydrocarbons (PAHs). As part of his review, Dr. Allems included a summary of his analysis regarding the interpretation of the results of the studies and their significance to the causation analysis. The results of these studies, Dr. Allems noted, often contained inconsistencies in the data and/or failed to show any meaningful association between any of these substances and prostate cancer. *See* Exhibits 10, F.

31. Dr. Allems acknowledged that firefighters, in the usual course of their firefighting duties, were inevitably exposed to numerous toxins and recognized human carcinogens, both through inhalational exposure as well as dermal exposures. Dr. Allems specifically identified several recognized and suspected human carcinogens that can be present in products of combustion, including asbestos, polyaromatic hydrocarbons (PAHs), benzo(a)pyrene, benzene, formaldehyde, dioxins, polychlorinated biphenyls and vinyl chloride. Dr. Allems further noted that the carcinogens that were most prevalent in fire smoke were asbestos, benzene, formaldehyde and PAHs. However, Dr. Allems noted that PAHs were not associated with prostate cancer. Dr. Allems further recognized that firefighters can also be exposed to vehicular exhausts as part of their work duties. However, Dr. Allems noted that IARC has published an extensive and authoritative monograph on the carcinogenic potential of vehicular exhaust, and that epidemiological studies regarding vehicular exhaust have focused on occupations that involve incontrovertible potential for overexposure on a chronic and daily basis (as opposed to firefighters). Dr. Allems noted that, while the human epidemiologic data have suggested an association between heavy exhaust exposure and cancer of the lung and bladder (thus resulting in diesel exhaust being ranked as a Group I carcinogen), no association was found with regard to prostate cancer. Gasoline engine exhaust, on the other hand, is ranked by IARC as a Group 2B carcinogen, indicating a substance that is possibly carcinogenic in humans based on "inadequate" evidence of cancer causation in humans. *See* Exhibits 10, F.

32. Dr. Allems explained that, although the general epidemiological data did not suggest that the types of exposures sustained by firefighters on the job posed a risk of prostate cancer, a numbers of epidemiological studies have been done specifically with regard to firefighters and cancer. Dr. Allems identified and reviewed numerous firefighter studies and noted the findings in his report. In addition to all 6 of the studies cited by Dr. Mayer, Dr. Allems' review included many other studies that looked specifically at firefighters and prostate cancer. According to Dr. Allems' review, several of the studies found no increased association or actually found negative associations between firefighters and prostate cancer as compared to the general population. While some of the studies found a marginally increased risk, the increase was noted in many cases to not be statistically significant. In many instances, studies that initially found an increased rate of prostate cancer were noted to have incongruous results when the data was analyzed for markers of increasing exposure and/or age (in other words, the data showed decreasing rates of prostate cancer with increasing amounts of firefighting exposures and/or age). A few studies found a marginally increased rate of prostate cancer but did not provide any data to allow for an analysis of dose response trend. In addition to the epidemiological studies, Dr. Allems noted that in 2009 the National League of Cities provided a report reviewing state firefighter presumption laws and the pertinent epidemiological literature. Dr. Allems wrote that the report noted zero studies that found strong or moderate associations between firefighting and prostate cancer, three studies that reported a weak association, and nine studies that found no association. Further, Dr. Allems noted that IARC monograph on cancer risk in firefighters placed the occupation of firefighting in the Group 2B category (possibly carcinogenic to humans). *See* Exhibits 10, F.

33. Dr. Allems opined that Claimant (and firefighters) are not exposed to any known prostate carcinogens and opined that the strength of the medical evidence made it more probable that Claimant's condition was not work related. Dr. Allems opined that Claimant's prostate cancer was due to the natural risk factors of Claimant being a middle age man, and/or Claimant's family history of prostate cancer.

34. Dr. Orent, Dr. Mayer, and Dr. Allems testified at hearing consistent with their reports and opinions.

35. At hearing, several pages of the International Agency for Research on Cancer (IARC) Monographs on the Evaluation of Carcinogenic Risk to Humans, Volume 98 were admitted into evidence. These included pages 401-403, 760-764, and 556-569. A summary of those pages is listed below.

Pages 401-403 --- shows table 1.1 and cancer sites in humans of chemicals measured at fires. Of the large list of chemicals measured at fires, none is listed as having human or animal evidence of prostate as a cancer site. *See* Exhibit M.

Pages 556-569 --- Lists exposure data and acknowledges the enormous number of toxic combustion products including known and possible carcinogens generated by all fires. It noted that a meta-analysis of multiple studies showed the incidence of prostate cancer for firefighters was approximately 30% in excess. IARC noted, however, that of the 20 studies of prostate cancer, only two reached statistical significance and only one study showed a trend with duration of employment. It noted of 20 total studies of prostate cancer, 17 reported elevated risk estimates ranging from 1.1 to 3.3. IARC noted that the human epidemiological studies, at best, used poor measurements of exposure. IARC noted increased risks for some cancers was found for firefighters in the meta-analysis but IARC noted the limitations in the studies. IARC concluded that there was limited evidence in humans for the carcinogenicity of occupational exposure as a firefighter and that occupational exposure as a firefighter was possibly carcinogenic to humans. *See* Exhibit 16

Pages 760-764 Discussion of relationship between cancer and shift work and circadian disruption. IARC notes that increased risk of cancer of the prostate had been reported and that the earliest studies of airplane pilots showed a markedly elevated incidence of prostate cancer compared with national reference levels, but IARC noted the limitations of the studies involved the potential for detection bias due to a higher prevalence of screening for

> prostate cancer in this occupational group. IARC concluded that there was limited evidence in humans for the carcinogenicity of shiftwork that involves night work and that shiftwork that involves circadian disruption is probably carcinogenic to humans. *See* Exhibit 21.

36. Dr. Mayer testified that the LeMasters study reviewed many smaller studies and summarized them in the meta-analysis. Dr. Mayer testified that after the LeMasters study, the Bates study showed a 1.22statistically significant increased risk of prostate cancer in firefighters; the Pukkala study showed an increased risk of 1.13, and the Glass study showed an increased risk of 1.23 for full time firefighters and 1.51 for part time firefighters. Dr. Mayer also testified that hormonal dysregulation is a risk factor for prostate cancer and that in animals there was good evidence that this type of disruption alters the hormonal cycle such that it leads to a conclusion that shift work that involves circadian rhythm disruption is probably carcinogenic to humans. DR. Mayer opined that the cause of Claimant's cancer was unknown and that she couldn't say it was specifically due to firefighting. Dr. Mayer also testified that family history can confer risk but that it was also known that there is a synergistic risk with a combination of genetic factors and carcinogen exposures that could cause cancer. Dr. Mayer opined that prostate cancer had been linked to firefighting by both the LeMasters meta-analysis that showed an increased risk of 1.28 and by IARC itself that showed an increased risk of 1.3.

37. Dr. Orent testified at hearing. Dr. Orent opined that there was no question that Claimant had exposures during his career to multiple carcinogenic agents. Dr. Orent reviewed Claimant's occupational history and known exposures with the lack of proper bunker gear cleaning, lack of good personal protective equipment, and lack of use of some during phases of the fire overhaul. Dr. Orent also opined that Claimant worked shift work and that shift work has an effect on hormonally sensitive target organs and that sleep disturbance is a profound part of being a firefighter. Dr. Orent also opined that plasticizers had endocrine components. Dr. Orent opined that prostate cancer was an endocrine sensitive malignancy. Dr. Orent opined that the concurrence of exposures that Claimant had over the course of many years is what led to his prostate cancer.

38. Dr. Allems testified that many studies have not shown an association between firefighting and prostate cancer and that some studies showed a negative association between firefighting and prostate cancer, meaning that firefighters had a lower risk than the general population. Dr. Allems also acknowledged that some studies showed an increased risk but opined that even though some studies might show a statistically significant increased risk, the existence of a negative dose-response pattern, meaning the risk is not increasing with increased exposure- length of employment, duration of employment, number of runs- outweighed the fact that there was a statistically significant increased risk listed at all. Dr. Allems also noted the concerns with the few studies that did show an association between firefighting and prostate cancer including a general lack of dose response relationship, lack of racial divisions, and lack of family history. Dr. Allems also noted concern with the PSA screening since firefighters were more likely than the general public to have annual and regular PSA tests. Dr. Allems

opined that the inconsistencies were still too great to make a connection between firefighting and prostate cancer. Dr. Allems opined that the statistically increased risk of prostate cancer for Claimant due to his family history was 1.5 to 2.0 and opined that it was probably higher than any of the other statistics that were cited by Dr. Mayer. Dr. Allems opined that the family history was higher than the risk associated at 1.28 for firefighters by the LeMasters study. Dr. Allems opined that family history is one of the strongest risk factors. Dr. Allems testified that despite the wealth of information and studies, firefighting does not reach the level of causation for prostate cancer. Dr. Allems explained that, if you have a study that purports to show an increased risk of prostate cancer, but then the data is segregated out along exposure lines and the rates do not increase with increasing markers of exposure, then the study falls flat for purposes of trying to make an occupational causation connection. Dr. Allems testified that the firefighter studies that have looked at markers of exposure have been pretty uniform in not showing an increased trend in prostate cancer.

39. The ALJ finds, based on the evidence as a whole, that Claimant's cancer was not caused or contributed to by his firefighting exposures. The epidemiological studies specifically regarding firefighters are particularly relevant to this case given that it is undisputed that Claimant sustained the gamut of known and typical firefighting exposures, and given the lack of evidence of any usual exposures outside of this range of known and typical firefighting exposures. Dr. Allems credibly testified that, although there are some studies that show a connection between firefighting and prostate cancer, the strength of the scientific and medical evidence as a whole strongly supports the conclusion that firefighting is not associated with an increased risk for prostate cancer. In contrast to Dr. Mayer, who did not reference or discuss any of the studies that did not show an association between firefighting and prostate cancer, Dr. Allems conducted an extensive, thorough and objective review of the pertinent literature, including the six studies upon which Dr. Mayer primarily relied. While Dr. Allems acknowledged those studies that found an association, he also credibly testified regarding the deficiencies in the data and the inconsistencies and conflicts that emerge when the data in these studies are reviewed and analyzed more closely. Dr. Mayer agreed that markers or surrogates of exposure and the concept of dose-response is "absolutely" relevant to the causation analysis in this case. Nevertheless, Dr. Mayer did not provide any explanation or response regarding the specific discrepancies and inconsistencies that Dr. Allems pointed out with regard to the data in the studies upon which she relied, including the absence of a correlation between markers of increased exposure and increased risk of prostate cancer. Dr. Mayer also did not offer any response to Dr. Allems' testimony regarding the phenomenon of increased PSA testing among firefighters beginning in the 1990s as compared to the non-firefighter population, and the skewing of the increased incidence rates and the epidemiological data overall that occurred as a result. Dr. Mayer also did not dispute Dr. Allems' testimony regarding the existence of a larger number of studies that did not show any association between firefighting and prostate cancer, nor did she specifically address IARC's listing of firefighting as only a Group 2B possible human carcinogen.

40. Regarding the basis for her opinion, Dr. Mayer referred to the "multiple studies out there" that have found a statistically significant increased risk. Dr. Mayer also testified regarding IARC's review of the LeMasters meta-analysis and a subsequent meta-analysis conducted by the IARC working group which she stated found a statistically significant 30% excess risk for cancer in firefighters. However, the IARC monograph reflects that the 30% increase is referring to the incidence rate, which is the precise measure that Dr. Allems testified was particularly sensitive to the phenomenon of increased PSA testing among firefighters. Moreover, in this same monograph, IARC concluded that there is "limited evidence" in humans for the carcinogenicity of occupational exposure as a firefighter, and that occupational exposure as a firefighter is "possibly carcinogenic" to humans (Group 2B). That IARC concluded that firefighting exposures were only possibly carcinogenic to humans, despite the finding of a 30% increase in prostate cancer incidence rates, reflects IARC's recognition of the need to look beyond a single data point and consider additional factors when interpreting the data, such as the impact of the frequency of PSA testing among firefighters as compared to the general population, any correlation in the data with markers of exposure, and the strength of the body of scientific evidence as a whole. This recognition is consistent with the opinions and testimony provided by Dr. Allems. Moreover, IARC's conclusion that firefighting is only "possibly" carcinogenic to humans supports the conclusion that it is probable (i.e. more likely than not) that Claimant's prostate cancer is not causally related to his firefighting exposures.

41. The ALJ finds Dr. Allems' opinions and testimony regarding the lack of a causal association between firefighting exposures and prostate cancer to be well thought out and supported by his thorough review and analysis of the pertinent epidemiological literature regarding occupations in general, firefighters specifically, and prostate cancer. The ALJ finds the opinions of Dr. Allems to be more credible and persuasive that those provided by Dr. Mayer and Dr. Orent in this regard.

42. The ALJ further finds, based on the credible evidence as a whole, that Claimant's strongest risk factor for his prostate cancer is his family history. Both Dr. Mayer and Dr. Allems testified that family history is a strong risk factor for prostate cancer. Dr. Mayer also opined that Claimant's increased risk for prostate cancer due to his family history is 1.5-2.0. Dr. Allems agreed that this assessment is reasonable. Dr. Allems also credibly testified that the increased risk due to family history, as assessed by Dr. Mayer, is actually greater than the 1.28 increased risk that was stated in the LeMasters study, as well as in most of the firefighter data that he reviewed. Dr. Mayer's own testimony and the studies submitted into the evidence by Claimant also establish that the 1.5-2.0 increase in risk due to family history is greater than the increased risk associated with firefighting found in the studies relied upon by Dr. Mayer in support of her opinion in this case. Specifically, Dr. Mayer testified that the Bates study found an increased risk of 1.22; that the Pukkala study found an increased risk of 1.3; that the Daniels (2013) study found an increased risk of 1.44 in the population aged 45 to 59; and that the Glass study found an increased risk of 23% (1.23) for full-time firefighters and 51% (1.51) for part-time firefighters. Thus, according to Dr. Mayer's own testimony, the increased risk of prostate cancer associated with firefighting as found in these studies is actually less than

Claimant's increased risk of prostate cancer due to his family history. Dr. Allems testified that Claimant's strongest risk factor was his family history. Dr. Mayer also agreed that Claimant's age at diagnosis was only one year off of the age range at which 40-50% of all cases are considered due to inherited factors.

43. Dr. Orent discounted the importance of Claimant's family history as a risk factor in this case because of the purportedly significant exposure to plutonium that Claimant's father sustained while working at Rocky Flats. However, there was no evidence or testimony as to what exposures Claimant's father specifically had and Dr. Orent testified at hearing that he had no details about Claimant's father's potential exposures. In light of the vague and scant amount of uncorroborated information upon which Dr. Orent based his opinion, that Claimant's father's prostate cancer was due to his plutonium exposures such that Claimant's family history is not a significant risk factor in this case, the ALJ finds this opinion to be incredible and unpersuasive.

44. Further, the ALJ finds that the preponderance of the medical evidence establishes the lack of a causal association between plutonium and prostate cancer. Even if Claimant's father had been exposed to plutonium while working at Rocky Flats, plutonium is listed by IARC as a carcinogenic agent for cancers of the lung, liver and bone and is not listed in association with the prostate as a target organ. Dr. Allems testified that to his knowledge, plutonium has not been identified as a prostate carcinogen and if it were, he would expect it to be listed on the IARC table for prostate cancer. No studies were presented to support the conclusion that plutonium is a carcinogen for prostate cancer or that any (speculative) plutonium exposure Claimant's father had was the cause of his prostate cancer.

45. Based on a review of the evidence as a whole, and particularly the epidemiological evidence, the ALJ finds that the preponderance of the medical and scientific evidence establishes that Claimant's known and typical firefighting exposures were not capable of causing his prostate cancer, such that the presumption of compensability is rebutted with regard to general causation.

46. In addition, based on a review of the evidence as a whole, the ALJ finds that the Respondents have established by a preponderance of the medical and scientific evidence that it is more probable that Claimant's prostate cancer was due to his family history, and not to his occupational exposures as a firefighter, such that the presumption of compensability is rebutted with regard to specific causation.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to

injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Firefighter Presumption Under §8-41-209, C.R.S.

For an injury to be compensable under the Act, it must “arise out of” and “occur within the course and scope” of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Ordinarily, the claimant has the burden of establishing his or her entitlement to benefits by a preponderance of the evidence. *City of Boulder v. Streeb*, 706 P.2d 786, 789 (Colo. 1985). The question of causation is generally one of fact for determination by the ALJ. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000).

Section 8-41-209, C.R.S., enacted by Colorado’s legislature in 2007, reverses the burden of proof for firefighters who have developed certain types of cancers and who have satisfied the threshold criteria set forth in the statute. The statute provides:

(1) Death, disability, or impairment of health of a firefighter of any political subdivision who has completed five or more years of employment as a

firefighter, caused by cancer of the brain, skin, digestive system hematological system or genitourinary system and resulting from his or her employment as a firefighter, shall be considered an occupational disease.

(2) Any condition or impairment of health described in subsection (1) of this section:

(a) Shall be presumed to result from a firefighter's employment if, at the time of becoming a firefighter or thereafter, the firefighter underwent a physical examination that failed to reveal substantial evidence of such condition or impairment of health that preexisted his or her employment as a firefighter; and

(b) Shall **not** be deemed to result from the firefighter's employment if the firefighter's employer or insurer shows **by a preponderance of the medical evidence** that **such condition or impairment did not occur on the job**.

. . .

§8-41-209, C.R.S. (emphasis added).

In *City of Littleton v. Industrial Claim Appeals Office*, 370 P.3d 157, 165 (Colo. 2016), the Colorado Supreme Court determined that the statutory presumption embodied in §8-41-209(2), C.R.S. "is substantive in that it remains in the case as a substitute for evidence." *Id.* at 165. However, the court emphasized that the statutory presumption "is not conclusive, or irrebuttable." *Id*. at 168. The employer can overcome the presumption by producing a preponderance of the medical evidence that the firefighter's cancer "did not occur on the job." *Id*. at 165, 169. While the court stated that the employer faces a "formidable" burden "because the employer is tasked with proving a negative," *Id*. at 172, the court also noted that the employer's burden does not require an especially high degree of proof. Rather, in order to meet its burden under §8-41-209(2)(b), the employer or insurer must show that it is "more probable than not" that the firefighter's condition or impairment "did not occur on job." *Id.* at 169. The *City of Littleton* court clarified the types of evidence that employers can use to rebut the statutory presumption and prove that a firefighter's cancer is not work-related. The employer may rebut the presumption with evidence establishing the absence of either general or specific causation. *Id.* at 172. Specifically an employer may prove by a preponderance of the medical evidence either: "(1) that a firefighter's known or typical occupational exposures are not capable of causing the type of cancer at issue; or (2) that the firefighter's employment did not cause the firefighter's particular cancer, where, for example, the claimant firefighter was not exposed to the cancer-causing agent, or where the medical evidence renders it more probable that the cause of the claimant's cancer was not job-related." *Id*. Notably, §8-41-209(2), C.R.S. does not require the employer "to disprove causation from every conceivable substance." *Id.* at 171. In fact, if a firefighter's exposure is "speculative, remote or illogical, then it is not typical of the occupation." *Id.*

With regard to general causation, the *City of Littleton* court noted that epidemiological evidence is "'highly probative because it considers human physiology and

the likelihood that a potential environmental factor is capable of entering the body, traveling to a particular organ, and interacting with that organ in a way that can cause a particular cancer.'" *Id.* at 170. The court cited a 10th Circuit opinion for the proposition that, "[w]hile the presence of epidemiology does not necessarily end the inquiry, where epidemiology is available, it cannot be ignored. As the best evidence of general causation, it must be addressed." *Id.* (citing *Norris v. Baxter Healthcare Corp.,* 397 F.3d 878, 882 (10th Cir. 2005)). The *City of Littleton* court expressly concluded that employers may rely on epidemiological evidence to show the lack of an association or general causal relationship between known or typical substances to which the firefighter is likely to be exposed on the job and the firefighter's particular condition or impairment. The ALJ may then determine whether that medical evidence shows, by a preponderance, that the claimant firefighter's cancer "did not occur on the job." *Id.* at 171.

In the companion case of *Industrial Claim Appeals Office v. Town of Castle Rock*, 370 P.3d 151, 157 (Colo. 2016), the Supreme Court further determined that to meet its burden of proof under §8-41-209(2)(a), the employer is not required to establish a specific alternate cause of the firefighter's cancer. The court addressed the employer's ability to rebut the presumption of compensability by showing a lack of specific causation and noted that the employer may meet its burden to show that the firefighter's condition did not occur on the job by presenting risk-factor evidence demonstrating that it is more probable than not that a particular firefighter's cancer was caused by something other than the firefighter's employment. *Id.* at 156-157.

Here, Respondents have established by a preponderance of the evidence that the known and typical occupational exposures sustained by Claimant as a result of his work as a firefighter are not capable of causing his prostate cancer. Although it is undisputed that Claimant was exposed to carcinogenic agents during his long 36 year career, the epidemiological evidence considered as a whole shows a lack of association or general causal relationship between the known and typical substances to which Claimant was likely exposed on the job and his prostate cancer. The carcinogenic agents he was exposed to have been shown to be linked to other types of cancers, but none are linked or show a relationship with prostate cancer or as targeting the prostate.

As found above, although some studies show a slightly increased risk of prostate cancer among firefighters, the studies have limitations and conflicts (dose trend, lack of sorting by racial makeup, lack of sorting by family history) as well as potential for higher prevalence based on higher levels of PSA testing in the firefighter population. Although it is possible that firefighting may cause prostate cancer, it is not probable and Respondents have met their burden to show, more probably than not, that based on current scientific and medical evidence, prostate cancer is not causally related to the exposures experienced in firefighting occupations. Therefore, Respondents have successfully rebutted the presumption of compensability pursuant to §8-41-209(2)(b) based on a lack of general causation.

In addition, even if general causation were accepted based on the LeMasters meta-analysis showing an increased risk of 1.28 and the IARC listing of 1.3 increased

risk, Respondents have still successfully rebutted the presumption of compensability pursuant to §8-41-209(2)(b) based on a lack of specific causation. As found above, Claimant's greatest risk factor for developing prostate cancer is his family history and the fact that his father had prostate cancer. This risk factor was opined by both Dr. Mayer and Dr. Allems to be 1.5-2.0, and is greater than the risk listed by the studies relied upon. Even assuming that general causation exists between firefighting and prostate cancer, here, Claimant's family risk is much higher than the risk associated with firefighting and Respondents have presented this risk factor evidence, demonstrating it is more probable that Claimant's prostate cancer was caused by his family risk than his firefighting risk. Although Dr. Orent disregarded the family risk due to his belief that Claimant's father was exposed to significant plutonium due to work at Rocky Flats, we have no information on what types (if any) of exposure Claimant's father had. Further, plutonium is not linked causally to prostate cancer.

Withdrawing an Admission of Liability

The Court of Appeals has previously concluded that the burden of proof to establish compensability remained on the claimant even when an employer was attempting to withdraw an admission of liability. However, the Colorado Workers' Compensation Act has since been amended to change the burden of proof when respondents are attempting to withdraw admissions of liability. Specifically, respondents must now prove by a preponderance of the evidence that the claimant did not suffer a compensable injury as defined under Colorado law. §8-43-201(1), C.R.S.

Because Respondents filed a medical only General Admission of Liability on April 24, 2013, they bear the burden of proof to establish by a preponderance of the evidence that Claimant did not sustain a compensable injury. As found, Respondents have successfully rebutted the presumption of compensability under §8-41-209(2)(b). Consequently, Respondents have satisfied their burden under §8-43-201(1) and are permitted to withdraw their admission of liability in this claim.

ORDER

IT IS HEREBY ORDERED that:

1. Respondents have successfully rebutted the presumption of compensability under §8-41-209 and have shown, by a preponderance of evidence, that Claimant's prostate cancer did not occur on the job.

2. Respondents have made the necessary showing to withdraw the medical only General Admission of Liability filed on April 24, 2013.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or

service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 22, 2018

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

1. Whether Claimant has produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Brian Beatty, D.O. that he reached Maximum Medical Improvement (MMI) on September 29, 2016 for his March 19, 2014 industrial injuries.

2. Whether Claimant has produced clear and convincing evidence to overcome the DIME opinion of Dr. Beatty that his Deep Vein Thrombosis (DVT) was not related to his March 19, 2014 industrial injuries.

3. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive reasonable, necessary and related medical maintenance benefits that are designed to relieve the effects of his March 19, 2014 industrial injuries or prevent further deterioration of his condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

4. Whether Claimant is entitled to a disfigurement award pursuant to §8-42-108, C.R.S.

FINDINGS OF FACT

1. Claimant worked for Employer as a Roofer. On March 19, 2014 Claimant was climbing a ladder while carrying a roll of black paper to a roof. As Claimant stepped onto the roof with his right leg, his left foot slipped and the ladder moved from its base. Claimant fell approximately 20 feet to the ground. He suffered pain to his right upper extremity, back and left lower extremity. Claimant was transported to the Denver Health Emergency Room and diagnosed with a fracture of the right wrist, a fracture of the coccyx and a lower back strain.

2. On March 31, 2014 Claimant began receiving medical treatment from Arbor Occupational Medicine. He was diagnosed with a right radius fracture, a cervical myofascial strain, a coccyx fracture, a contusion and hematoma to the right shin area, a contusion of the right ankle and a contusion of the left heel.

3. On April 4, 2014 Claimant visited Andrew Castro, M.D. for an evaluation. Dr. Castro agreed that Claimant had a fracture of the coccyx. He determined that the fracture was stable and Claimant was not a surgical candidate. Dr. Castro recommended an MRI of the lumbar spine if Claimant's symptoms persisted.

4. On April 16, 2014 Respondents acknowledged that Claimant had suffered industrial injuries on March 19, 2014 and filed a General Admission of Liability (GAL).

5. On August 14, 2014 Claimant underwent an MRI of his lumbar spine. Claimant subsequently visited PA-C Richard Shouse for an evaluation. PA-C Shouse noted that the MRI revealed soft tissue edema surrounding the S5 fracture that suggested a lack of healing.

6. Claimant subsequently received a lengthy course of medical treatment. Although he underwent right wrist surgery and his wrist healed, he continued to suffer lower back pain. Moreover, physicians noted urological symptoms and a possible pudental nerve injury.

7. On June 1, 2015 Claimant underwent a urological examination with Richard Heppe, M.D. Claimant reported urinary intermittency, decrease in force of his urine stream, significant urinary urgency, decreased libido and erectile dysfunction. Dr. Heppe commented that the urinary obstructive symptoms could be related to underlying urethral stricture disease secondary to Claimant's work injury, neurogenic bladder dysfunction secondary to his sacral injury or dysfunctional voiding related to inadequate relaxation of the pelvic floor secondary to his ongoing pain. Dr. Heppe determined that Claimant's erectile dysfunction was likely related to hypogonadism caused by long-term narcotic treatment.

8. Dr. Heppe recommended a number of tests to diagnose Claimant's condition. The tests included a blood draw, a cystoscopy to rule out urinary tract anatomic pathology and complex urodynamics to better evaluate bladder function and determine whether there was neurogenic dysfunction. Claimant did not undertake the proposed testing or attend any follow-up appointment with Dr. Heppe.

9. On August 13, 2015 Claimant returned to Authorized Treating Physician (ATP) Sander Orent, M.D. for an examination. Dr. Orent noted that an MRI reflected scarring around the pudental nerve that may have constituted the source of Claimant's urinary symptoms. He remarked that the diagnostic testing still needed to be completed but Claimant was unable to tolerate the evaluations. On September 2, 2015 Dr. Orent again remarked that Claimant's urodynamics had been delayed because of his increased back pain and leg symptoms after attempted injections. By October 15, 2015 Dr. Orent reiterated that Claimant required a urologic evaluation but the workup had not been completed because of severe back pain. He noted that he would not reschedule the diagnostic testing.

10. On March 17, 2016 Claimant visited Dr. Orent for an examination. Claimant reported "marked swelling in his left calf." Dr. Orent noted that Claimant had a history of "venous insufficiency in both lower extremities and therefore that puts him at risk for the possibility of a DVT." He remarked that the "proximate cause of any DVT would be a back injury and the inability to do anything other than primarily lie in bed on his back." An ultrasound at the Avista Adventist Hospital Emergency Room revealed a nonocclusive clot extending from the femoral deep vein distal to the popliteal. Claimant received Xarelto for his DVT.

11. On April 12, 2016 Claimant returned to Dr. Orent for an evaluation. Although Claimant had received 21 days of Xarelto for his DVT, Dr. Orent noted that the amount was insufficient and referred Claimant to a hematologist for further evaluation. In addressing Claimant's lower back condition Dr. Orent remarked that there was no other treatment available and Claimant would likely reach Maximum Medical Improvement (MMI) after evaluation for ongoing anticoagulation treatment.

12. On May 4, 2016 Claimant visited Praveena Solipuram, M.D. at the Rocky Mountain Cancer Centers regarding his DVT. Dr. Solipuram ordered a hypercoagulable panel and a repeat ultrasound. She stated that Claimant should continue the medications for at least four to six months pending the results of testing. In a follow-up visit with Dr. Solipuram she commented that Claimant might benefit from long-term anticoagulation medications. Claimant subsequently informed Dr. Solipuram that he had stopped taking Xarelto because he had awakened on multiple occasions with blood in his mouth.

13. On July 8, 2016 Claimant underwent an independent medical examination with Edwin M. Healey, M.D. Claimant continued to report severe chronic pain and significant depression. Dr. Healey diagnosed Claimant with post-traumatic mechanical low back pain, continued fracture of the fifth sacral segment of the coccyx with 6mm displacement associated with small bony fragments, adjustment disorder with depression and anxiety, chronic pain disorder, DVT and urinary frequency. He offered Claimant the opportunity to speak with a psychologist, but Claimant declined because the psychologist did not speak Spanish. Dr. Healey thus recommended that Claimant visit a Spanish speaking psychologist in conjunction with pain management treatment.

14. On August 16, 2016 Claimant underwent a final evaluation with Dr. Orent. Dr. Orent remarked that Claimant had undergone injections, physical therapy and chiropractic treatment without improvement. Claimant exhibited significant non-physiologic tenderness in his lumbar spine. Dr. Orent specifically commented that it had been very difficult to identify a pain generator. He diagnosed Claimant with "chronic intractable low back pain." Dr. Orent recommended a Functional Capacity Evaluation (FCE) to ascertain Claimant's true limitations.

15. On September 29, 2016 Claimant visited David Orgel, M.D. for an impairment evaluation. Dr. Orgel noted that Claimant had undergone three surgeries for his right wrist and suffered from lower back pain "of an unclear etiology." He assigned Claimant a 13% right upper extremity impairment for wrist range of motion deficits. Although Dr. Orgel attempted to measure Claimant's lumbar flexion range of motion, the measurements were invalid. He asked Claimant to return on the following day for repeat lumbar flexion range of motion measurements.

16. Claimant returned to Dr. Orgel on September 30, 2016. Dr. Orgel noted that Claimant had been unable to complete an FCE because of his pain behaviors. Although Claimant's lumbar flexion range of motion measurements were again invalid, Dr. Orgel assigned him an 11% range of motion impairment for his lower back. He also assigned Claimant a 7% impairment for a specific disorder of his coccyx and sacral fracture pursuant to Table 53 of the *AMA Guides for the Evaluation of Permanent*

Impairment Third Edition (Revised) (AMA Guides). Claimant thus suffered a total 18% whole person impairment rating for his back. Combining his right wrist and back ratings yielded a 25% whole person impairment as a result of his March 19, 2014 industrial injuries.

17. Dr. Orgel diagnosed Claimant with lower back pain and a DVT. He determined that Claimant should receive maintenance treatment through the Hematology Clinic and visit Dr. Sorenson for one year. Dr. Orgel did not assign Claimant work restrictions because "there was no valid way of determining his work abilities." He thus discharged Claimant at MMI.

18. Claimant challenged the MMI determination through a Division Independent Medical Examination (DIME). On January 19, 2017 Brian Beatty, D.O. performed the DIME. Claimant reported neck pain, lower back pain and right wrist pain. Dr. Beatty conducted a thorough review of Claimant's medical records and performed a physical examination. He diagnosed Claimant with a lumbar spine strain, a right wrist fracture, a sacral fracture and a coccyx fracture. Dr. Beatty agreed that Claimant had reached MMI on September 29, 2016. He assigned Claimant a 5% impairment for a specific disorder of the lumbar spine pursuant to Table 53 of the *AMA Guides* and a 7% rating for range of motion deficits. Dr. Beatty also assigned Claimant an 8% whole person impairment rating for range of motion loss of the right wrist. The impairments combined for a 19% whole person rating. He noted that Claimant's range of motion measurements for lumbar flexion were invalid. Dr. Beatty recommended lumbar spine maintenance treatment for six months. He did not suggest any additional treatment for Claimant's DVT because it was not causally related to the March 19, 2014 industrial injuries. Dr. Beatty specifically explained that he did not "believe that treatment for the deep venous thrombosis is appropriate [because] the patient is at high risk for DVT due to varicose veins and there was never any surgical procedure performed on his lower extremities that would account for a work-related DVT."

19. On June 19, 2017 Claimant underwent an independent medical examination with Miguel Castrejon, M.D. Claimant reported ongoing lower back pain as well as depression and anxiety. He mentioned continued urological symptoms of interrupted urine flow, erectile dysfunction and urination difficulties. After reviewing Claimant's medical records and conducting a physical examination, Dr. Castrejon diagnosed Claimant with post-fracture scarring involving the pudental nerve that possibly caused pudental nerve entrapment. The condition resulted in neurogenic bladder and erectile dysfunction, DVT, chronic pain, and reactive depression and anxiety.

20. Dr. Castrejon determined that Claimant had not reached MMI for his pudental pain syndrome or reactive depression and anxiety due to incomplete evaluations and lack of treatment. He agreed that Claimant had reached MMI for his other symptoms. Dr. Castrejon also commented that Claimant's DVT was related to his March 19, 2014 industrial injuries because the accident caused severe deconditioning.

21. Dr. Castrejon explained that imaging studies supported his conclusion that Claimant had pudental nerve scarring that caused pudental entrapment syndrome. He

remarked that many medical providers had mentioned possible pudental nerve entrapment but Claimant never completed urodynamic studies or received treatment. Dr. Castrejon commented that the symptoms of pudendal nerve entrapment syndrome arise from changes in nerve function and structural changes in the nerve from compression. The changes cause "neuropathic" pain in the perineum, genital and rectal areas.

22. Dr. Castrejon stated that Claimant required additional treatment to reach MMI. He recommended urodynamic studies to assess Claimant's possible pudental nerve entrapment. Dr. Castrejon also suggested psychological treatment involving biofeedback and psychotropic medications to address Claimant's anxiety. In terms of medical maintenance care Dr. Castrejon reasoned that Claimant should have access to additional spinal injections and participate in a supervised water therapy program to assist with conditioning and development of an independent core strengthening program. Claimant should also be permitted to return to a pain management specialist for medication management, possible nerve blocks, stimulators or surgical nerve decompression.

23. On August 3, 2017 Claimant underwent an independent medical examination with F. Mark Paz, M.D. Claimant recounted his March 19, 2014 fall at work and his course of medical treatment. Dr. Paz conducted a thorough physical examination and reviewed Claimant's medical records. He determined that Claimant's lower back, coccyx and right wrist conditions were work-related but his left lower extremity DVT and adjustment disorder were not caused by his work accident. Dr. Paz emphasized that Claimant's physical examination findings reflected symptom magnification. Claimant provided a poor effort and his pain behaviors were documented by his treating physicians. Dr. Paz also mentioned that Claimant's "overt pain behaviors and inconsistencies" were documented in the FCE reports. He concluded that Claimant did not require any medical maintenance treatment.

24. On October 18, 2017 Dr. Paz issued a Supplemental Report to address Dr. Castrejon's conclusions and consider surveillance video of Claimant. He noted that the surveillance video reinforced his opinion that Claimant "has been an unreliable historian for an indeterminate period." Dr. Paz specified that Claimant's lack of pain behaviors or posturing in the video "were inconsistent with an individual with a greater than two-year history of subjectively reported, debilitating low back pain." He concluded that Claimant reached MMI on September 29, 2016 for his March 19, 2014 industrial injuries. Dr. Paz detailed that Claimant's sacral and right wrist fractures were "clinically stable" and would not improve with additional treatment.

25. Dr. Paz also addressed Dr. Castrejon's comments regarding Claimant's pudental nerve involvement. Dr. Paz reasoned that, because Claimant already had a caudal epidural steroid injection on June 3, 2015 with a non-diagnostic/therapeutic response, there was no need for sacral nerve root blocks. He remarked that the caudal epidural steroid injections would have "flooded" the sacral nerve root area and the blocks would be redundant. Dr. Paz emphasized that Claimant presented with only subjective symptoms and had no "pain" pattern in the pudental nerve distribution. He summarized that "[t]here is no clinical basis for further evaluation of the pudental nerve in this claim."

26. Dr. Paz also noted the disparity between Claimant's pain complaints and functional abilities. He commented that Claimant's exaggerated pain behaviors upon physical examination and observed functional activities on the surveillance video could not be ignored. Dr. Paz explained that the disparity in Claimant's behaviors should be incorporated into the clinical assessment and decision-making. He concluded that the DIME opinion of Dr. Beatty was consistent with the Workers' Compensation Level II Physician Accreditation Curriculum for determining MMI.

27. On November 13, 2017 Claimant underwent a psychological evaluation with Stephen Moe, M.D. Dr. Moe concluded that Claimant suffers from adjustment disorder, anxiety and depression as a result of his March 19, 2014 accident. However, he concluded that additional treatment for Claimant's psychological conditions could be completed as maintenance care and was not required for Claimant to attain MMI. He reasoned that Claimant's psychological symptoms might resolve with resolution of his physical ailments. Dr. Moe commented that psychiatric treatment might not help Claimant until he accepts that his physical condition may never be "fixed." He recommended 8-10 sessions of psychotherapy and possibly medications for depression and anxiety.

28. Claimant testified at the hearing in this matter. He explained that he continues to suffer lower back pain and urological symptoms. Claimant remarked that he has difficulties urinating and problems with erectile dysfunction. He noted that he has experienced significant depression since his work injuries and would like to visit a Spanish-speaking psychologist.

29. Claimant also underwent a disfigurement evaluation at the hearing. As a result of his March 19, 2014 industrial injuries, he sustained permanent disfigurement to his right upper extremity area. The disfigurement consists of three scars on his right wrist. Two of the scars are about three inches long and one is two inches long. Claimant also cannot completely straighten his right hand. The disfigurement is serious, permanent and normally exposed to public view. Claimant is thus entitled to a disfigurement award in the amount of $1,900.00.

30. Dr. Castrejon testified at the hearing in this matter. He explained that, although Claimant's coccyx fracture has healed, the break scarred the pudendal nerve. Objective imaging could account for all of Claimant's urological symptoms. Dr. Castrejon remarked that entrapment of the pudendal nerve can occur anywhere along the nerve. He stated that Claimant's fall from 10-20 feet onto a concrete surface caused displacements and fractures resulting in bone fragments. Dr. Castrejon reasoned that blood from the fracture caused scarring of the area and entrapped the nerve. After reviewing the DIME report he commented that Dr. Beatty failed to address Claimant's pudendal nerve and thus erred. Moreover, because there is treatment likely to improve Claimant's condition, Dr. Beatty erred in finding Claimant had reached MMI. Dr. Castrejon remarked that Claimant must undergo the previously recommended urological workup prior to reaching MMI. He also disagreed with Dr. Paz that the caudal epidural steroid injection was sufficient to test the pudental nerve because it did not likely cause fluid to extend outside of the spinal structure.

31. Dr. Castrejon explained that Claimant suffers from depression and anxiety as a result of his March 19, 2014 industrial injuries. He remarked that Dr. Beatty failed to address Claimant's mental health condition. Dr. Castrejon agreed with Dr. Moe that Claimant's psychological treatment could occur after MMI as maintenance care.

32. Dr. Castrejon also maintained that Claimant's DVT was related to his March 19, 2014 work accident. Claimant's immobility for a significant period of time after his work accident rendered him susceptible to developing a DVT. He determined that Dr. Beatty simply failed to address the possibility that Claimant developed a DVT as a result of his immobility.

33. Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Beatty that he reached MMI on September 29, 2016 for his March 19, 2014 admitted industrial injuries. Claimant has also failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Beatty that his DVT was not related to his March 19, 2014 industrial injuries. Initially, Claimant suffered industrial injuries to his right wrist, coccyx and lower back when he fell from a ladder on March 19, 2014. Claimant subsequently received a lengthy course of medical treatment. Although his right wrist healed after surgeries, he continued to suffer lower back pain. Moreover, physicians noted urological symptoms and a possible pudental nerve injury. By October 15, 2015 ATP Dr. Orent reiterated that Claimant required a urologic evaluation but the workup had not been completed because of severe back pain. Claimant also received treatment for a left calf DVT as well as anxiety and depression.

34. On August 16, 2016 Claimant underwent a final evaluation with Dr. Orent. Dr. Orent remarked that Claimant had undergone injections, physical therapy and chiropractic treatment without improvement. He diagnosed Claimant with "chronic intractable low back pain." Claimant underwent impairment evaluations with Dr. Orgel on September 29-30, 2016. Dr. Orgel assigned Claimant an 11% range of motion impairment for his lower back and a 7% impairment for a specific disorder of the coccyx and sacral fracture pursuant to Table 53 of the *AMA Guides*. He also assigned Claimant a 13% right upper extremity impairment for wrist range of motion deficits. Combining Claimant's ratings yielded a 25% whole person impairment as a result of his March 19, 2014 industrial injuries.

35. Claimant subsequently underwent a DIME with Dr. Beatty. Dr. Beatty diagnosed Claimant with a lumbar spine strain, a right wrist fracture, a sacral fracture and a coccyx fracture. Dr. Beatty agreed that Claimant had reached MMI on September 29, 2016. He assigned Claimant a 5% impairment for a specific disorder of the lumbar spine pursuant to Table 53 of the *AMA Guides* and a 7% rating for range of motion deficits. Dr. Beatty also assigned Claimant an 8% whole person impairment rating for range of motion loss of the right wrist. The impairments combined for a 19% whole person rating. Dr. Beatty recommended lumbar spine maintenance treatment for six months. He did not recommend any additional treatment for Claimant's DVT because it was not causally related to the March 19, 2014 industrial injuries. Dr. Beatty specifically explained that he did not "believe that treatment for the deep venous thrombosis is appropriate [because] the patient is at high risk for DVT due to varicose veins and there was never any surgical

procedure performed on his lower extremities that would account for a work-related DVT." Dr. Paz agreed that Claimant's lower back, coccyx and right wrist conditions were work-related but his left lower extremity DVT and adjustment disorder were not caused by his work accident. He also agreed that Claimant reached MMI on September 29, 2016. Dr. Paz specified that the DIME opinion of Dr. Beatty was consistent with the Workers' Compensation Level II Physician Accreditation Curriculum for determining MMI.

36. In contrast, Dr. Castrejon determined that Claimant has not reached MMI for his pudental pain syndrome or reactive depression and anxiety due to lack of treatment. He agreed that Claimant has reached MMI for his other symptoms. Dr. Castrejon remarked that many medical providers had mentioned possible pudental nerve entrapment but Claimant never completed urodynamic studies or received treatment. He also suggested psychological treatment involving biofeedback and psychotropic medications to address Claimant's anxiety. Finally, Dr. Castrejon commented that Claimant's DVT was related to his March 19, 2014 industrial injuries because the accident caused severe deconditioning. Although Dr. Castrejon disagreed with Dr. Beatty's MMI determination and the relatedness of Claimant's DVT, he did not outline any specific errors in Dr. Beatty's application of the *AMA Guides*.

37. Despite Dr. Castrejon's opinions, the bulk of the record reflects that Dr. Beatty properly applied the *AMA Guides* in concluding that Claimant reached MMI on September 29, 2016 and his DVT was not causally related to his March 19, 2014 industrial injuries. The persuasive medical records and opinions support Dr. Beatty's determinations. Initially, Dr. Beatty simply affirmed the MMI determination of ATP's Drs. Orent and Orgel. Moreover, Dr. Paz persuasively explained that Claimant's work injury did not cause any pudental nerve involvement. He reasoned that, because Claimant already had a caudal epidural steroid injection on June 3, 2015 with a non-diagnostic/therapeutic response, there was no need for sacral nerve root blocks. Dr. Paz emphasized that Claimant presented with only subjective symptoms and had no "pain" pattern in the pudental nerve distribution. Finally, Dr. Moe concluded that Claimant suffers from adjustment disorder, anxiety and depression as a result of his March 19, 2014 accident. However, he concluded that additional treatment for Claimant's psychological conditions could be completed as maintenance care and was not required for Claimant to attain MMI. The record thus demonstrates that the contrary opinions of Drs. Castrejon and Healey constitute mere differences of medical opinion regarding Claimant's treatment. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Beatty's MMI and causation determinations were incorrect.

38. Claimant has demonstrated that it is more probably true than not that he is entitled to receive reasonable, necessary and related medical maintenance benefits that are designed to relieve the effects of his March 19, 2014 industrial injuries or prevent further deterioration of his condition. Dr. Beatty recommended lumbar spine maintenance treatment for six months. Furthermore, Dr. Moe concluded that Claimant suffers from adjustment disorder, anxiety and depression as a result of his March 19, 2014 accident. Treatment for the conditions would constitute maintenance care. He recommended 8-10 sessions of psychotherapy and possibly medications for depression and anxiety. Dr.

Castrejon agreed with Dr. Moe that Claimant's psychological treatment could occur after MMI as maintenance care. Finally, Claimant noted that he has experienced significant depression since his work injury and would like to visit a Spanish-speaking psychologist. In contrast, Dr. Paz concluded that Claimant did not require any medical maintenance treatment. However, the bulk of the persuasive evidence and medical records reflect that Claimant is entitled to receive medical maintenance treatment in the form of lumbar spine care for six months, 8-10 sessions of psychotherapy with a Spanish-speaking provider and medications for depression and anxiety.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,*

81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

. 6. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

7. As found, Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Beatty that he reached MMI on September 29, 2016 for his March 19, 2014 admitted industrial injuries. Claimant has also failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Beatty that his DVT was not related to his March 19, 2014 industrial injuries. Initially, Claimant suffered industrial injuries to his right wrist, coccyx and lower back when he fell from a ladder on March 19, 2014. Claimant subsequently received a lengthy course of medical treatment. Although his right wrist healed after surgeries, he continued to suffer lower back pain. Moreover, physicians noted urological symptoms and a possible pudental nerve injury. By October 15, 2015 ATP Dr. Orent reiterated that Claimant required a urologic evaluation but the workup had not been completed because of severe back pain. Claimant also received treatment for a left calf DVT as well as anxiety and depression.

8. As found, on August 16, 2016 Claimant underwent a final evaluation with Dr. Orent. Dr. Orent remarked that Claimant had undergone injections, physical therapy and chiropractic treatment without improvement. He diagnosed Claimant with "chronic intractable low back pain." Claimant underwent impairment evaluations with Dr. Orgel on September 29-30, 2016. Dr. Orgel assigned Claimant an 11% range of motion impairment for his lower back and a 7% impairment for a specific disorder of the coccyx and sacral fracture pursuant to Table 53 of the *AMA Guides*. He also assigned Claimant a 13% right upper extremity impairment for wrist range of motion deficits. Combining Claimant's ratings yielded a 25% whole person impairment as a result of his March 19, 2014 industrial injuries.

9. As found, Claimant subsequently underwent a DIME with Dr. Beatty. Dr. Beatty diagnosed Claimant with a lumbar spine strain, a right wrist fracture, a sacral fracture and a coccyx fracture. Dr. Beatty agreed that Claimant had reached MMI on September 29, 2016. He assigned Claimant a 5% impairment for a specific disorder of the lumbar spine pursuant to Table 53 of the *AMA Guides* and a 7% rating for range of motion deficits. Dr. Beatty also assigned Claimant an 8% whole person impairment rating for range of motion loss of the right wrist. The impairments combined for a 19% whole person rating. Dr. Beatty recommended lumbar spine maintenance treatment for six months. He did not recommend any additional treatment for Claimant's DVT because it was not causally related to the March 19, 2014 industrial injuries. Dr. Beatty specifically explained that he did not "believe that treatment for the deep venous thrombosis is appropriate [because] the patient is at high risk for DVT due to varicose veins and there was never any surgical procedure performed on his lower extremities that would account for a work-related DVT." Dr. Paz agreed that Claimant's lower back, coccyx and right wrist conditions were work-related but his left lower extremity DVT and adjustment disorder were not caused by his work accident. He also agreed that Claimant reached MMI on September 29, 2016. Dr. Paz specified that the DIME opinion of Dr. Beatty was consistent with the Workers' Compensation Level II Physician Accreditation Curriculum for determining MMI.

10. As found, in contrast, Dr. Castrejon determined that Claimant has not reached MMI for his pudental pain syndrome or reactive depression and anxiety due to lack of treatment. He agreed that Claimant has reached MMI for his other symptoms. Dr. Castrejon remarked that many medical providers had mentioned possible pudental nerve entrapment but Claimant never completed urodynamic studies or received treatment. He also suggested psychological treatment involving biofeedback and psychotropic medications to address Claimant's anxiety. Finally, Dr. Castrejon commented that Claimant's DVT was related to his March 19, 2014 industrial injuries because the accident caused severe deconditioning. Although Dr. Castrejon disagreed with Dr. Beatty's MMI determination and the relatedness of Claimant's DVT, he did not outline any specific errors in Dr. Beatty's application of the *AMA Guides*.

11. As found, despite Dr. Castrejon's opinions, the bulk of the record reflects that Dr. Beatty properly applied the *AMA Guides* in concluding that Claimant reached MMI on September 29, 2016 and his DVT was not causally related to his March 19, 2014 industrial injuries. The persuasive medical records and opinions support Dr. Beatty's determinations. Initially, Dr. Beatty simply affirmed the MMI determination of ATP's Drs. Orent and Orgel. Moreover, Dr. Paz persuasively explained that Claimant's work injury did not cause any pudental nerve involvement. He reasoned that, because Claimant already had a caudal epidural steroid injection on June 3, 2015 with a non-diagnostic/therapeutic response, there was no need for sacral nerve root blocks. Dr. Paz emphasized that Claimant presented with only subjective symptoms and had no "pain" pattern in the pudental nerve distribution. Finally, Dr. Moe concluded that Claimant suffers from adjustment disorder, anxiety and depression as a result of his March 19, 2014 accident. However, he concluded that additional treatment for Claimant's psychological conditions could be completed as maintenance care and was not required for Claimant to attain MMI. The record thus demonstrates that the contrary opinions of

Drs. Castrejon and Healey constitute mere differences of medical opinion regarding Claimant's treatment. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Beatty's MMI and causation determinations were incorrect.

Medical Maintenance Benefits

12. To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

13. As found, Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive reasonable, necessary and related medical maintenance benefits that are designed to relieve the effects of his March 19, 2014 industrial injuries or prevent further deterioration of his condition. Dr. Beatty recommended lumbar spine maintenance treatment for six months. Furthermore, Dr. Moe concluded that Claimant suffers from adjustment disorder, anxiety and depression as a result of his March 19, 2014 accident. Treatment for the conditions would constitute maintenance care. He recommended 8-10 sessions of psychotherapy and possibly medications for depression and anxiety. Dr. Castrejon agreed with Dr. Moe that Claimant's psychological treatment could occur after MMI as maintenance care. Finally, Claimant noted that he has experienced significant depression since his work injury and would like to visit a Spanish-speaking psychologist. In contrast, Dr. Paz concluded that Claimant did not require any medical maintenance treatment. However, the bulk of the persuasive evidence and medical records reflect that Claimant is entitled to receive medical maintenance treatment in the form of lumbar spine care for six months, 8-10 sessions of psychotherapy with a Spanish-speaking provider and medications for depression and anxiety.

Disfigurement

14. Section 8-42-108, C.R.S. provides that a claimant may obtain additional compensation if he is seriously disfigured as the result of an industrial injury. As found, as a result of Claimant's March 19, 2014 industrial injuries, he sustained permanent disfigurement to his right upper extremity area. The disfigurement consists of three scars on his right wrist. Two of the scars are about three inches long and one is two inches long. Claimant also cannot completely straighten his right hand. The disfigurement is

serious, permanent and normally exposed to public view. Claimant is thus entitled to a disfigurement award in the amount of $1,900.00.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. .Claimant reached MMI on September 29, 2016 as a result of his March 19, 2014 industrial injuries.

2. Claimant's DVT was not related to his March 19, 2014 industrial injuries.

3. Claimant shall receive medical maintenance benefits.

4. Claimant shall receive a disfigurement award in the amount of $1,900.00.

5. Any issues not resolved in this Order are reserved for future determination.
