4. Claim preclusion, or *res judicata*, works to preclude the relitigation of matters that have already been decided, as well as matters that could have been raised in a prior proceeding but were not. *Foster v. Plock*, 2016 COA 41, *reh'g denied* (Apr. 7, 2016), *cert. granted in part*, No. 16SC366, 2016 WL 4628185 (Colo. Sept. 6, 2016) (c*iting Argus Real Estate, Inc. v. E-470 Pub. Highway Auth.*, 109 P.3d 604, 608 (Colo. 2005)). The doctrine is intended to promote judicial economy and to confirm the finality of judgments by preventing inconsistent decisions. *Id*. For a claim in a second judicial proceeding to be precluded by a previous judgment, there must exist: "(1) finality of the first judgment, (2) identity of subject matter, (3) identity of claims for relief, and (4) identity or privity between parties to the actions." *Id*., *citing Argus,* 109 P.3d at 608.

5. Issue preclusion may be invoked in workers' compensation proceedings. *Sunny Acres Villa, Inc. v. Cooper,* 25 P.3d 44 (Colo. 2001). Issue preclusion precludes relitigation of an issue where: (1) the issue to be precluded is identical to an issue determined in the prior proceeding; (2) the party against whom preclusion is sought was a party to or in privity with a party to the prior proceeding; (3) there was a final judgment on the merits in the prior proceeding; and (4) the party against whom the doctrine is asserted had a full and fair opportunity to litigate the issue in the prior proceeding. *Id.* at 47; citing *Bebo Constr. Co. v. Mattox & O'Brien, P.C.,* 990 P.2d 78 (Colo. 1999); *Guar. Nat'l Ins. Co. vs. Williams*, 982 P.2d 306 (Colo. 1999) ; and *Indus. Comm'n v. Moffat County Sch. Dist. RE No. 1*, 732 P.2d 616 (Colo. 1987). See also *Pomeroy v. Waitkus*, 183 Colo. 344, 517 P.2d 396 (1973).

6. The doctrine of the law of the case is a discretionary rule of practice which directs that prior relevant rulings made in the same case generally are to be followed. *Governor's Ranch Professional Center, Ltd. v. Mercy of Colorado, Inc.,* 793 P.2d 648 (Colo. App.1990). Under the law of the case doctrine, "prior relevant rulings made in the same case are to be followed unless such application would result in error or unless the ruling is no longer sound due to changed conditions." *People v. Dunlap,* 975 P.2d 723, 758 (Colo. 1999); *see also People v. Warren,* 55 P.3d 809, 813 (Colo. App. 2002).

7. Reliance on a prior determination may be characterized as the "law of the case." However, application of the "law of the case" doctrine is discretionary. An ALJ may elect not to follow a prior ruling if new facts, changes in the law or other "persuasive circumstances" warrant modification of the ruling. *Dworkin, Chambers and Williams v. Provo*, 81 P.3d 1053 (Colo. 2003); *In re Younger*, W.C. No. 4-326-355 (ICAO, June 17, 2004).

8. As found, the issue of TTD benefits as presented by the claimant on February 7, 2018 and July 10, 2018 are not identical. As found, the respondents have failed to demonstrate by a preponderance of the evidence that the doctrines of issue preclusion, claim preclusion, and/or the law of the case bar the claimant's current claim for TTD benefits.

9. To prove entitlement to temporary total disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in

an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by a claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that a claimant establish physical disability through a medical opinion of an attending physician; a claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

10. As found, the claimant has demonstrated by a preponderance of the evidence that beginning February 20, 2018 he has suffered a wage loss which has impaired his ability to perform his regular employment. As found, the claimant has demonstrated by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits beginning February 20, 2018 and ongoing until terminated by law.

ORDER

It is therefore ordered that:

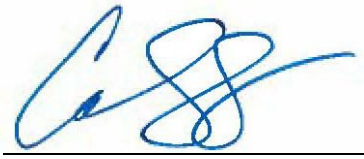
1. The claimant is entitled to temporary total disability (TTD) benefits beginning February 20, 2018 and ongoing until terminated by law.

2. As stipulated by the parties, the respondents are entitled to an offset related to the claimant’s receipt of unemployment benefits.

3. The insurer shall pay interest to the claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

Dated: August 9, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he has suffered a worsening of his original work-related condition, to warrant a reopening of his case?

II. Has Claimant shown, by a preponderance of the evidence, that he is entitled specific medical treatment, to include epidural steroid injections as requested by Dr. Kenneth Finn, as well as a surgical referral for L4-L5 surgical reassessment?

III. Is Dr. Ali Murad now an Authorized Treating Physician for this claim?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant sustained an admitted work injury to his low back on February 15, 2012. At the time of this injury, Claimant worked for Employer performing heavy industrial labor. Following the injury, Claimant developed pain in his low back, eventually displaying cauda equine syndrome and radicular symptoms in his lower extremities.

2. An MRI conducted on March 22, 2012, revealed severe levels of stenosis most significant involvement is at L4-5 where there is central and left lateral recess stenosis and likely L5 nerve root compression left greater than right. Other levels of narrowing at L3-4 on the left and bilaterally at L5-S1. (Ex. K, p. 53)

3. On April 19, 2012, Dr. Kenneth Finn (an ATP) performed right L5-S1 interlaminar epidural steroid injections based on the recommendation by Dr. Roger Sung, who noted claimant had multilevel lumbar degenerative disc disease and a left paracentral disc herniation. Claimant reported very good results from the injections. (Ex. T, p. 319)

4. Claimant returned to Dr. Finn on May 10, 2012, for a second set of epidural steroid injections to the right L5-S1 interlaminar region. Claimant reported a little bit of residual pain but no radicular symptoms when he returned to the ATP, Dr. Richard Nanes, on June 11, 2012.

5. Claimant was placed at MMI on August 13, 2012 by the ATP. A final admission of liability (FAL) was filed by respondents admitting for the 16% whole person impairment rating assigned by the ATP. No work restrictions were assigned and maintenance medical care was recommended. (Ex. P, pp. 223-227).

6. On October 29, 2013, Dr. Kenneth Finn proceeded with a right L5-S1 interlaminar epidural steroid injection. Claimant returned to the ATP, Dr. Nanes, on November 8, 2013, and

complained his severity of pain was 9/10 and that there was nothing he could do to help alleviate the pain.

7. On November 12, 2013, a repeat L5-S1 interlaminar epidural steroid injection was performed by Dr. Finn and claimant returned to the ATP on November 22, 2013, where Claimant indicated he was having extreme difficulty trying to walk or do any activities. The ATP opined that claimant's herniated disc at L4-5 did not get better with conservative treatment.

8. A MRI taken on December 4, 2013 revealed a large, extruded L4-5 herniated central disc. (Ex. 10, p. 193).Claimant had an emergency L4-5 microdiscectomy performed by Dr. Roger Sung on December 6, 2013. At the time of this surgery, it was discovered that Claimant had a large synovial fluid leak, secondary to the extrusion of the herniated disc. Dr. Sung could not repair the large leak so he was forced to use Floseal in an attempt to close it.

9. Following the December 6, 2013 surgery, Claimant had a significant decrease in his low back and lower extremity symptoms. Claimant progressed through post-surgical treatment and was placed at MMI on June 25, 2014 by his primary authorized treating provider, Dr. Richard Nanes at CCOM. Dr. Nanes returned Claimant to his pre-injury employment without restriction. He also noted that Claimant *"continues with right sided radiculopathy".* Dr. Nanes then noted the following:

> Ongoing medical needs: The patient will need ongoing medical care and pain medication in the form of Vicodin and Percocet. He may need a referral to a pain management specialist in the next 2 month time if he continues to need these medications. *There is a chance that he may have to get back to Dr. Sung if his low back condition should become worse again.* We will see him on a maintenance basis every 6 months for the next 2 year time. (Ex 1, p. 2) (emphasis added).

10. Claimant requested a Division IME that was performed by Dr. William Watson on December 2, 2014. Dr. Watson noted the history described above. Dr. Watson also noted that Claimant continued to complain of low back pain, with intermittent numbness in the *right* lower extremity in the *L5 overlapping with the S1 distribution.* Dr. Watson provided a 24% lumbar impairment rating. He also agreed with Claimant being released to unrestricted full duty as well as the maintenance recommendations made by Dr. Nanes.

11. On January 6, 2015, Respondents issued a Final Admission of Liability consistent with Dr. Watson's opinions. There was no objection to the FAL and the claim was allowed to close subject to Respondents general admission for maintenance medical care benefits, and the reopening provisions of the Colorado Workers' Compensation Act.

12. On July 20, 2015, claimant was evaluated by his pain management physician, Dr. Douglas Hess, who noted Claimant's UA from the last visit was inappropriate as it did not show any Percocet in claimant's urine, although he was being prescribed this medication. Dr. Hess further indicated that this was the fifth UA that Claimant did not have Percocet in his system and

this would imply he does not take the Percocet as prescribed. Dr. Hess told Claimant this was unacceptable and he must take the medication as prescribed (Ex. M, p. 150).

13. Following closure of the claim, Claimant continued to work unrestricted full duty for Employer in the heavy industrial labor arena. From the date of MMI in June of 2014 through the fall of 2017, Claimant testified that his condition essentially remained at baseline, which had been established by the MMI Report and Division IME Report. During this time, Claimant testified that he was not limited in his ability to perform his job functions due to low back or lower extremity symptoms. Claimant testified that he did not miss any time from work due to his low back or lower extremity symptoms. Claimant testified that that his symptoms would wax and wane during this period. Claimant further testified that during this period, his symptoms were manageable, and would always return to baseline.

14. From the time of MMI through the fall of 2017, Claimant continued to pursue his maintenance medical care. Claimant regularly attended appointments with his medical providers at CCOM in Pueblo, CO. Claimant was periodically seen for pain management and physiatry with Dr. Kenneth Finn at Springs Rehabilitation, PC.

15. Claimant also received medications from Physician Anesthesia of Pueblo with Dr. Brian Bell. The medical records of these providers document that Claimant's condition would wax and wane, with good days, bad days, good weeks, bad weeks. Overall, however, the condition remained essentially at the MMI baseline.

16. In the fall of 2017 Claimant testified that he began to experience an increase in his symptoms. The increase in symptoms was gradual; there was no event or incident which caused his symptoms to increase. By this time, Claimant had begun work for a new employer, Xcel Energy, as a plant operator. He described this position as occasionally requiring physical labor, but mostly consisting of watching a computer and physically inspecting machinery.

17. In October of 2017, Claimant experienced a severe increase in his low back and right leg symptoms. Claimant was unable to work for a few days due to this flare up. He could identify no cause which might have precipitated this. This was the first time since MMI that Claimant had to miss work due to his work-related low back and right leg condition. Claimant returned to work following this flare up but his condition never returned to baseline. By this time, Claimant was taking extra pain medication to get through the day.

18. Due to the increasing symptoms, and to the increasing functional deficit, Claimant requested that Dr. Bell fill out FMLA paperwork allowing Claimant to periodically miss time from work due to his low back and right leg condition. Dr. Bell filled out the paperwork, which was filed with Claimant's current employer. Since that time, Claimant has been unable to perform his job on numerous occasions and has had to use his FMLA leave.

19. In February of 2018, Claimant experienced another significant flare of this low back and right leg symptoms. Claimant first noticed that his right leg was going numb while standing and talking to a friend at a basketball game. The pain intensified over the weekend, by which

time he could barely get out of bed. He had to use a cane to get around. This time Claimant was unable to work for a period of approximately two weeks.

20. Due to this significant flare up of his symptoms, Claimant presented to Dr. Finn on February 9, 2018 for treatment. The medical record from Springs Rehabilitation dated February 9, 2018 documents Claimant's worsening of condition. Due to the significant increase in Claimant's symptoms, Dr. Finn recommended a contrast lumbar MRI.

21. On February 13, 2018, Claimant filed a Petition to Reopen his workers' compensation claim due to a worsening of his condition.

22. On March 13, 2018, Claimant underwent a contrast MRI with a Tesla 3 magnet. The MRI showed, in pertinent part, under Findings:

> L4-L5: There is *moderate to severe* posterior facet hypertrophy combining with broad based disc bulge to result in moderate to severe spinal canal stenosis. There is ***mild*** *right greater than left foraminal narrowing.*
>
> L5-S1: An eccentric left broad-based disc bulge *minimally* effaces the *l*eft lateral recess and approaches the descending *left greater than right S1 nerve.* There is *moderate* facet hypertrophy. There is ***mild*** *right greater than left* foraminal narrowing.

Under Impression:

> 1. There are **postsurgical changes** at the L4-L5 level. *Severe* posterior facet hypertrophy combines with a broad-based disc-osteophyte complex to result in *moderate to severe* spinal canal stenosis at this level.
>
> 2. There is *mild right greater than left foraminal narrowing* at L4-L5 and L5-S1. (Ex. 10, p. 199)(emphasis added).

23. Claimant followed up with Dr. Finn on March 19, 2018. At that time, Dr. Finn reviewed this MRI and recommended a surgical reassessment with Dr. Sung, as well as a lumbar epidural steroid injection. Dr. Finn requested a pre-authorization surgical evaluation and lumbar ESI. Authorization was denied.

24. On March 20, 2018, Dr. Finn requested authorization for lumbar epidural steroid injections (ESIs). A record review was done by Dr. John Aschberger, who opined the recommended lumbar ESI's were not reasonable necessary or related to the February 15, 2012 industrial injury. Dr. Aschberger further noted that claimant's lumbar radicular process and new changes were insufficient to warrant proceeding with the lumbar epidural injection. Claimant's back pain was described as worse than his leg pain and there was no progression regarding neurological deficit identified. Dr. Aschberger opined the stenosis identified in the MRI scan reflects progressive degenerative changes and that although claimant may have had persistent radicular symptomatology, nothing in the records indicates the need for interventional injections

or surgical intervention for the original work comp related abnormality. Dr. Aschberger also noted that Dr. Sung had already opined chronic issues are an expectation. (Ex. T, pp. 285-286)

25. Claimant then sought a surgical opinion outside the workers' compensation system. On May 10, 2018, Claimant was seen by Dr. Ali Murad at Parkview Neurosurgery Services. Dr. Murad took a medical history from Claimant and reviewed the March 19, 2018 MRI. Dr. Murad provided Claimant two treatment options.

> 1: conservative treatment with medications, physical therapy, interventional pain treatment. This will be favored as symptoms of radiculopathy have been present for about 3 months and he has not maximized medical treatment.
>
> 2: surgical treatment. This would be right L4-L5 reexploration decompression, with consideration of right L5-S1 as well. He had residual S1 numbness after the disc herniation at L4-L5 with cauda equina–like scenario. Surprisingly there is no L5 pattern distribution. So this is either due to variable dermatomes, or that S1 nerve root is more sensitive because of previous injury, but one *cannot exclude* that right L5-S1 lateral recess is contributing to his symptoms as well in addition to the L4-L5. (Ex. R, pp. 240-241).(emphasis added).

26. Dr. Murad also noted this conversation with Claimant from this appointment:

> We also had a frank discussion about the Workers Comp aspect of his situation. Unless there are acute findings following the incident at work- such as a fracture or new herniation, *it is not possible for me to say definitively* whether the findings on MRI are due to a work-related injury from 2012 or primarily a result of degenerative facet and ligamentum flavum hypertrophy. (Ex. R, p. 241)(emphasis added).

27. Claimant obtained written opinions from Dr. Bell and Dr. Finn. Both Dr. Finn and Dr. Bell opined that Claimant's condition is getting worse. (Ex. 5, 6).

28. Claimant also obtained an IME opinion from Dr. Miguel Castrejon. Claimant was seen by Dr. Castrejon on May 3, 2018. Dr. Castrejon reviewed the medical records, took a medical history from Claimant, and performed a physical examination. Dr. Castrejon opined:

> Based upon the repeat MRI, his examination findings today and in the absence of any new injury or aggravating activity it is my professional opinion that the claimant has experienced an *overall significant worsening of his lumbar spine condition* from the time of placement at maximum medical improvement. The subjective and objective findings support taking the claimant off maximum medical improvement so that he may proceed with curative treatment that *will in all medical probability include additional surgery.* (Ex. 3, p. 35) (emphasis added).

29. Respondents obtained an IME opinion with Dr. Mark Paz. Dr. Paz ultimately opined that Claimant's work-related medical condition has not worsened since MMI. Dr. Paz states that Claimant's condition has not worsened, because it continues to wax and wane as it has done since MMI. Dr. Paz also supports his position by stating that, although Claimant has begun to miss time from work due to his condition, he has been able to return to work each time. Dr. Paz also points out that Claimant is a "very fit for an individual with chronic back pain." Claimant is described as “functionally stable,” and “opioid dependent”

30. Dr. Paz opines that Claimant’s CDL application would necessitate the ability to lift 75 pounds. Dr. Paz ultimately asserts that Claimant's work-related medical condition has not worsened because the surgery in 2013 was to the L4-5 level and that Claimant also has MRI findings at the L5-S1 level. (Ex. J). Dr. Paz’ assessment in his report simply states “piriformis syndrome, right side, *possible*” (Ex. J, p. 8)(emphasis added).

31. In his oral testimony presented at hearing, Dr. Paz asserted that Claimant's work-related medical condition has not worsened because, in Dr. Paz' opinion, Claimant's current symptoms are not due to the L4-L5. Dr. Paz disagreed with Dr. Bell’s conclusions, as follows:

> A. …..Based on reasonable medical probability, the piriformis syndrome is the most likely explanation for current symptoms and would explain why there’s a substantial increase in pain. Second most likely probability would be an L5-S1 bulge. Less likely is L4-5 stenosis. Stenosis does not give you radicular symptoms down the leg. (Transcript, p. 153).

32. During his testimony, Dr. Bell, upon reading the MRI reports, indicated that the foraminal *narrowing* noted at L5-S1 was also present in the 2012 MRI, and opined that it appeared not to be progressing. He did not feel this *narrowing*- as opposed to actual *stenosis*- at either level, was sufficient to cause Claimant’s current symptoms. He could not state definitely that Claimant’s current symptoms were from L4-L5, as opposed to L5-S1. While he did not actively treat piriformis syndrome, he described such condition as “rather rare.”

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the LAJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers’ Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a

workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence.

C. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007). In this case, the ALJ finds Claimant to be credible, both in his courtroom testimony, and in the symptoms he has reported to the various medical providers along the way. The ALJ finds that Claimant sincerely wants to improve his health, and would rather cure the underlying issue, rather than simply treat the pain with medication-which he would rather stay off of. The ALJ finds plausible that Claimant would take the medication on an *as-needed* basis, which could vary with the waxing and waning of his symptoms. The fact that he would sometimes test negative for opioids suggests he is *not opioid dependent,* as otherwise surmised by Dr. Paz.

D. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Reopening Pursuant to C.R.S. 8-43-303

E. Section 8-43-303 authorizes an ALJ to reopen any award on the grounds of error, mistake, or a change in condition. The reopening authority reflects a "strong legislative policy" that the goal of achieving a fair and just result overrides the interests of litigants in obtaining final resolution of their dispute. *Padilla v. Industrial Commission*, 696 P.2d 273, 278 (Colo. 1985). Thus, a "final" award means only that the matter has been concluded subject to reopening if warranted under the applicable statutory criteria. *Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996). The authority to reopen a claim is permissive, and the decision whether to reopen a claim when the statutory criteria have been met is left to the ALJ's

discretion. *Id*. The party requesting reopening bears the burden of proof on any issue sought to be reopened. Section 8-43-304(4).

F. Here, Claimant is seeking to reopen his case based on a change of condition. In the reopening context, a change in condition refers "to a change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition which can be causally connected to the original compensable injury." *Chavez v. Industrial Commission*, 741 P.2d 1328, 1330 (Colo. App. 1985). Even if a claimant proves a change in condition, she is not automatically entitled to have his claim reopened. Rather, reopening is only appropriate if additional benefits will be awarded. *Richards v. Industrial Claim Appeals Office*, 996 P.2d 756 (Colo. App. 2000).

G. Claimant sustained a work injury to his low back on February 15, 2012. Following this injury, Claimant developed pain in his low back with cauda equine syndrome and radicular symptoms in his lower extremities. The MRI taken on December 4, 2013 revealed a large extruded L4-5 herniated disc, as well as findings at L5-S1. Claimant went on to have an urgent L4-5 microdiscectomy performed by Dr. Roger Sung on December 6, 2013. Following this December 6, 2013 surgery, Claimant had a significant decrease in his low back and lower extremity symptoms. Claimant progressed through post-surgical treatment and was placed at MMI on June 25, 2014 by his primary authorized treating provider.

H. Following closure of the claim, Claimant continued to work, unrestricted, at full duty for Employer performing heavy labor. From the time of MMI in June of 2014 through the fall of 2017, Claimant's condition essentially remained at baseline as established by the MMI Report and Division IME Report. During this time, Claimant was not functionally limited in his ability to perform his job functions due to low back or lower extremity symptoms. Claimant did not miss any time from work as a result of this injury. During this time, Claimant asserts, and the medical records support, that his symptoms would wax and wane. However, Claimant testified that during this time, his symptoms would eventually return to their baseline.

I. However, in the fall of 2017 Claimant began to experience and increase in his symptoms. The increase in symptoms was gradual and there was no event or incident that caused the symptoms to increase. Due to the significant increase in Claimant's symptoms, Dr. Finn recommended a contrast lumbar MRI. The MRI showed "There are ***postsurgical changes*** at the L4-5 level. Severe posterior facet hypertrophy combines with a broad based disc-osteophyte complex to result in moderate to severe spinal canal stenosis at this level."

J. The mere number of witnesses in support of a position is not dispositive of the issue. In this case the ALJ must weigh the opinions of Dr. Aschberger (who performed a record review) and Dr. Paz (who performed a complete IME examination), vs. those of Dr. Castrejon (who performed a complete IME examination), Dr. Bell (who has personally treated Claimant for over a year, after taking over his care from Dr. Hess), Dr. Finn (and ATP who has personally treated Claimant with several epidural steroid injections since 2012), Dr. Murad (who has consulted with Claimant privately), notes from Dr. Sung (who performed the original surgery), and Dr. Nanes (an ATP, who warned that his low back condition could worsen with time).

K. Several conclusions by Dr. Paz are not persuasive. Dr. Paz opines that Claimant is opioid dependent, as a result of not taking his opioids regularly. The suggestion at hearing was that Claimant was "diverting" his own pain medication, presumably to unnamed third parties. While the ALJ is not persuaded of this, assuming it were true, this would not make Claimant opioid dependent- it would make him quite the opposite. Dr. Paz asserts that Claimant must have fudged his CDL renewal, since he's have to be able to lift 75 pounds. Nowhere in Exhibit W does it indicate Claimant could lift 75 pounds, nor represented that he could. It appears from Exhibit W that Claimant accurately disclosed all his conditions. Claimant also credibly indicated that the class of CDL he sought to renew was not for a full-sized commercial truck. Dr. Paz asserts that Claimant has not suffered a worsening of his condition, since his condition would wax and wane. However, while that was true through fall of 2017, Claimant's symptoms worsened, no longer waxing and waning back to baseline. Claimant is no longer "functionally stable". Dr. Paz sees Claimant's overall fitness as evidence that he must not suffer from chronic pain. Equally plausible is that Claimant watches his diet, and endures the pain in spite of it.

L. Dr. Paz ultimately opines that the most likely culprit is now piriformis syndrome (a rare condition, according to Dr. Bell, whose practice is centered around treating pain). However, there is no evidence, objective or otherwise, in support of this theory. Claimant's current symptoms appear similar to those he experienced in 2013-which surgery to L4-L5 largely corrected. Claimant was not given piriformis treatment back then. The second most likely culprit, he says, is L5-S1. While that cannot be totally eliminated as a possibility, the ***right*** foraminal narrowing findings are not only *stable*, but also *mild* across both L4-L5, and L5-S1. The ALJ is not persuaded that foraminal narrowing is the cause, from either level. The *minimally* effacing disc bulge at L5-S1 is on the *left side;* Claimant's symptoms are on the *right.* Again, not persuasive.

M. The medical providers seeking to assist Claimant are candid in stating that they cannot definitely state that his original L4-L5 work related condition is now the cause of his existing symptoms. However, it need not be definitively proven in this forum. The ALJ finds, by the required preponderance of the evidence, that Claimant's original work injury to his L4-L5 lumbar spine, has now worsened, thus allowing his claim to be reopened.

Medical Benefits

N. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301(1)(c); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial*

Commission of Colorado v. Jones, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951).

O. Claimant has established that he is entitled to the lumbar ESI and surgical reassessment as recommended by Dr. Finn. Throughout this claim, both during the primary treatment phase, as well as during maintenance medical phase, Claimant has been recommended for and received several ESI's. These injections have provided benefit and are reasonable, necessary, and claim related. Furthermore, based upon the March 18, 2018 MRI, as well as Claimant's worsening symptoms, a surgical reassessment with Dr. Sung was, and is, reasonable, necessary, and related to the original claim.

P. Respondents have denied Claimant an opportunity to be evaluated by Dr. Sung after the March 18, 2018 MRI. Claimant pursued a surgical opinion on his own outside of the workers' compensation system. Claimant was seen by Dr. Murad who provided two treatment options. Option one is to treat conservatively with medications, physical therapy, and interventional pain treatment. Based upon a review of the medical records, it appears Claimant has undergone conservative treatment of his condition for many years. Notwithstanding the conservative treatment, Claimant's condition has worsened. Option two is a surgical option. The surgical option is the one favored by Claimant as he feels this will allow him to reduce or eliminate his pain medications. Furthermore, Claimant feels the surgical option gives him the greatest chance of obtaining long-term functionality, and without having to resort to a lifestyle of pain medications. As such, the surgical procedure recommended by Dr. Murad is reasonable, necessary, and claim related.

Authorized Treating Provider

Q. Section 8-43-404(5)(a), C.R.S. gives the respondents the right in the first instance to select the authorized treating physician (ATP). Authorization refers to a physician's legal status to treat the industrial injury at the respondents' expense. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *Popke v. Industrial Claim Appeals Office,* 944 P2d. 677 (Colo. App. 1997). Once an ATP has been designated the claimant may not ordinarily change physicians or employ additional physicians without obtaining permission from the insurer or an ALJ. If the claimant does so, the respondents are not liable for the unauthorized treatment. *Yeck v. Industrial Claim Appeals Office,* 996 P.2d 228 (Colo. App. 1999). If upon notice of the injury the employer fails forthwith to designate an ATP, the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office,* 746 P.2d 565 (Colo. App. 1987). The employer's obligation to appoint an ATP arises when it has some knowledge of the accompanying facts connecting an injury to the employment such that a reasonably conscientious manager would recognize the case might result in a claim for compensation. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006).

R. In this case, Claimant was referred to Dr. Roger Sung by Dr. Richard Nanes. Dr. Nanes was the primary authorized treating provider. As such, Dr. Sung became an authorized treating provider in this case. Claimant received treatment from Dr. Sung including the December 6, 2013 lumbar surgery. However, after Claimant obtained the March 18, 2018 MRI that showed a progression of Claimant's L4-5 pathology, Respondents refused to authorize

Claimant to see Dr. Sung. At that point, Claimant had no choice but to pursue a surgical evaluation on his own. The ALJ finds this to be reasonable and necessary to cure Claimant of his work related condition. Claimant chose Dr. Ali Murad at Parkview Neurosurgical Services. As such, Dr. Murad is an authorized treating provider for this claim.

ORDER

It is therefore Ordered that:

1. Claimant's original claim is reopened.

2. Respondents shall pay for the epidural steroid injections as recommended by Dr. Finn.

3. Dr. Ali Murad is now an Authorized Treating Physician.

4. Respondents shall pay for the surgical procedure as recommended by Dr. Murad.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-041-219-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 17, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 5/17/18, Courtroom 1, beginning at 1:30 PM, and ending at 3:00 PM). Anabel Cuadros-Yeiser was the official Spanish/English Interpreter.

Claimant's Exhibits 1, and 3 through 12 were admitted into evidence, without objection, with the exception of Exhibit 2, pages 5 through 9, and 18 through 36, to which Respondents objected and ruling was reserved. Respondents' objection is hereby sustained and those portions of Exhibit 2 are rejected. Respondents' Exhibits A through I were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ordered post-hearing briefs. Because the principal issue concerned Respondents' request to withdraw the General Admission of Liability (GAL), dated October 13, 2017, on the ground that the Claimant did not suffer a compensable injury, as previously admitted, the Respondents bear the burden of proof and the burden of going forward. Therefore, the ALJ ordered the Respondents to file the opening brief, which was filed on June 15, 2018. Also, the post-hearing evidentiary deposition of Timothy O'Brien, M.D., was filed on June 15, 2018. The Claimant's answer brief was filed on June 25, 2018. No timely reply brief was filed

within 5 days of the answer brief, or by July 2, 2018. Consequently, the matter was ready for decision on July 3, 2018. Due to an extended leave, the herein decision is past its due date of July 25, 2018. The decision is hereby issued.

ISSUE

The sole issue to be determined by this decision concerns Respondents' request to withdraw its previously filed GAL on the allegation that the Claimant did not suffer a compensable injury as now alleged, and to deny the Claimant's request for right rotator cuff repair as requested by Joseph, Hsin, M.D. of Cornerstone Orthopedics & Sports Medicine, a surgeon within the authorized chain of referrals.

The Respondents bear the burden of proof by a preponderance of the evidence. The Claimant has the burden of proof on the authorization of surgery by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant was born on February 9, 1967. She has been employed as production operator at Employer since September 2012.

2. The Claimant's admitted average weekly wage (AWW) is $605.78.

3. The Respondents filed a GAL, dated October 13, 2017, admitting for medical benefits; an AWW of $605.78; and, temporary total disability (TTD) benefits of $403.86 per week from February 9, 2017 through March 22, 2017, which the Respondents now seek to withdraw based on the Independent Medical Examination (IME) opinion of Timothy O'Brien, M.D., resulting from his IME of January 11, 2018, at the request of the Respondents, wherein Dr. O'Brien expressed the opinion that the Claimant "did not sustain an April 2016 work injury (Respondents' Exhibit I , bates stamp 000049). This after-acquired IME opinion of Dr. O'Brien basis of Respondents' request to withdraw the GAL.

4. The ALJ explicitly finds that on April 28, 2016, the Claimant injured her right shoulder when she was lifting a garbage can to dump it into a dumpster with her co-worker, Miguel Ramirez, who lifted the garbage can too high and too fast pulling the Claimant's right shoulder in the process.

5. The Claimant was completely asymptomatic prior to this work injury. There is no record on any treatment or pathology of the right shoulder prior to the date of April 28, 2016, incident.

6. The Claimant did not initially report the injury to her Employer because she thought the pain would subside. As the pain continued, the Claimant feared that if she reported the injury she would lose her job and the Employer would retaliate against her for getting injured on the job. Claimant claims that she had observed discrimination and retaliation by managers at the Employer toward co-workers that reported injuries. The truth or falsity of this perception is not in issue—it only goes to the Claimant's state of mind for not timely reporting her injury.

7. The Claimant continued to work her normal shifts, but had to change her manner of working to compensate for the pain she experienced in her right shoulder. The pain in her shoulder continued to worsen. In late August, the Claimant was lifting pallets and felt a sudden increase in pain in her right shoulder.

8. The Claimant went to her personal doctor on September 9, 2016, because she could not deal with the pain in her shoulder any longer (Claimant's Exhibit 5-51). She reported pain in her right shoulder for several months. She was diagnosed with rotator cuff strain (Ex. 5-52).

9. The Claimant reported the injury to Belinda Harrington at the Employer on September 26, 2016.

10. The Respondents referred the Claimant to Workwell where Terrell R. Webb, M.D., performed an examination on October 3, 2016 (Claimant's Exhibit 6-55). She reported injuring her right shoulder when lifting a trash can with a coworker (Claimant's Exhibit 5-56). Dr. Webb that the objective findings were consistent with the history and/or work related mechanism of injury (Exhibit 6-55). Dr. Webb diagnosed the Claimant with shoulder pain and sprain of right shoulder joint (Exhibit 6-58). Dr. Webb reported that the cause of the problem was not known at this time due to the time between the injury and the reporting (Exhibit 6-55, 58). Dr. Webb placed the Claimant on work restrictions.

11. The Claimant returned to Dr. Webb on October 17, 2016 (Exhibit 6-62). She reported that her symptoms persisted. Dr. Webb was of the opinion that the cause of the problem was related to work activities (Exhibit 6-63). Dr. Webb continued the Claimant's restrictions.

12. The Claimant underwent an MRI (magnetic resonance imaging) on December 9, 2016 (Exhibit 11). The MRI showed a superior labral tear, thinning of the biceps tendon, and mild supraspinatus tendinosis.

13. The Respondents referred the Claimant to Robert E. Fitzgibbons, M.D. (Exhibit 8). Dr. Fitzgibbons reviewed the MRI and was of the opinion that surgery was necessary to treat the work related injury (Exhibit 8-186).

14. The Claimant underwent right shoulder arthroscopy with extensive debridement, biceps tenotomy, and open subpectoral biceps tenodesis to repair her right shoulder on February 9, 2017 (Exhibit 8-179). This surgery was authorized.

15. The Claimant continued to experience symptoms in her right shoulder after the surgery. The symptoms did not cease despite ongoing physical therapy (PT) and physician care.

16. On February 22, 2017, Bill Ford, Nurse Practioner (NP) of Workwell, an authorized provider, examined the Claimant (Exhibit 6-86). Ford was of the opinion that the medical causation of the Claimant's injury was due to work related activities (Exhibit 6-87).

Respondents' Request to Withdraw the General Admission of Liability

17. The Respondents performed and investigation into the claim due to the late reporting of the injury. The investigation was performed by Covent Bridge Group (Exhibit 2-11-17). Claimant's statements were consistent with the account of the accident in the medical records and in testimony.

18. The Respondents filed a General Admission of Liability (GAL) on March 16, 2017. This was not filed by mistake or in error. Respondents had conducted a thorough investigation of the claim and decided to accept liability for the compensable injury. Respondents had an outside company conduct an investigation as well as the normal investigation performed by the adjuster (Exhibit 2).

19. The Claimant underwent an MRI on June 28, 2017 (Exhibit 12). The MRI showed tendinosis with mild understructure tear of the supraspinatus and marked thinning of the long head of the biceps tendon (Exhibit 12-203).

19. The Claimant underwent an injection of her AC joint by Dr. Fitzgibbons on July 18, 2017 (Ex. 8-170). The injection did not offer Claimant relief of her symptoms.

20. On August 7, 2017, the Claimant was treated by David Kistler, M.D., of Workwell (Exhibit 6-121). Dr. Kistler was of the opinion that the objective findings were consistent with the work related mechanism of injury (Exhibit 6-120).

21. The Claimant was referred for a second opinion to Joseph Hsin, M.D. (Exhibit 7). Dr. Hsin was of the opinion that the cause of the injury was the work related activities. Dr. Hsin concluded that the Claimant was a candidate for repeat surgery.

22. Claimant was seen by Bruce Cazden, M.D. of Workwell on September 14, 2017 (Exhibit 6-128). Dr. Cazden was of the opinion that the medical causation of the injury was the work related activities (Exhibit 6-129).

23. On November 17, 2017, Dr. Hsin recommended repeat shoulder surgery to repair the Claimant's right rotator cuff along with acromio/clavicular canvas (Exhibit 7-160). Dr. Hsin noted that the surgery was recommended and necessary to repair the tear shown on the MRI (Exhibit 7-158). Respondents denied Dr. Hsin's request for prior authorization request, pending resolution of their contest of the recommended repeat surgery (Claimant's Exhibit 7, pp.163,164). The ALJ infers and finds that this denial was ultimately parlayed into a request to withdraw the GAL.

Independent Medical Examination (IME) by Timothy O'Brien, M.D.

24. Respondents hired Dr. O'Brien to perform an IME (Exhibit 9). Dr. O'Brien also testified by deposition on May 7, 2018 (Depo.Tr. followed by a page number and line numbers").

25. Dr. O'Brien testified that Claimant was first treated on August 3, 2016 (Depo. Tr. p.28; ln.3). Dr. O'Brien noted that Claimant, however, was not seen for her work injury until October 3, 2016. Dr. O'Brien was not familiar with the basic facts of the case.

26. Dr. O'Brien testified that Dr. Webb was at first uncertain of the medical causation in the claim (Depo. Tr., p. 28; ln. 24). Dr. O'Brien went on to testify that Dr. Webb later came to the conclusion that the injury was the result of work activities (Depo. Tr., p. .29; ln 23).

27. Dr. O'Brien stated that he agreed with Dr. Fitzgibbons in both the analysis of the MRI and the first recommendation for surgical intervention (Depo. Tr., p. 31; lns 4,-9).

28. Dr. O'Brien testified that Dr. Webb and Mr. Ford came to similar conclusions as to medical causation after doing an analysis (Depo. Tr., p. 33; ln. 23).

29. Dr. O'Brien testified that the stated mechanism of injury **could have** caused the injury that Claimant has sustained (Depo. Tr. p. 38; ln. 8).

30. In his IME report, dated January 18, 2018 (Respondents' Exhibit I, bates stamp 000049), dr. O'Brien stated: "In summary, [Claimant] did not sustain an April

2016 work injury. her symptoms in October was (*sic*) a manifestation of nonorganic factors and personal health issues." Against a backdrop of the aggregate medical records of authorized treating physicians and medical providers, the ALJ finds Dr. O'Brien's opinion that the Claimant did **not** sustain a compensable injury as substantially lacking in credibility.

Ultimate Findings

31. The ALJ finds the Claimant's testimony regarding the injury incident to be credible and persuasive. The Claimant testified consistently with the investigative reports and the medical records as to the mechanism of injury.

32. The ALJ finds Dr. O'Brien's testimony lacking in credibility and persuasiveness in regard to the compensability of Claimant's injury. Dr. O'Brien agreed that the mechanism of injury could cause the injury. He also agreed that Claimant was asymptomatic according to the medical records prior to the date of injury. Furthermore, six different doctors were of the opinion that the injury was caused by the work related activities.

33. The ALJ does not find Dr. O'Brien's testimony persuasive or credible regarding the need for repeat surgery. Dr. Hsin is recommending repairing the rotator cuff, which did not occur in the first surgery. The rotator cuff repair is likely to relieve Claimant's symptoms from her injury.

34. Between conflicting medical opinions, the ALJ makes a rational choice to accept the opinions of the six authorized medical providers, including Dr. Hsin, and to reject the opinions of Dr. O'Brien.

35. The Respondents have failed to prove, by a preponderance of the evidence that a clerical error, warranting a prospective withdrawal of the GAL occurred. The Respondents do not get to re-litigate **compensability,** based on an after-acquired IME opinion (after the filing of a GAL) that the Claimant did not suffer a compensable injury.

36. The Claimant has proven, by preponderant evidence that the repeat surgery recommended by Dr. Hsin is warranted and appropriate. Dr. Hsin was credible and persuasive in this regard. The Claimant's need for repeat right shoulder surgery was reasonably necessary and causally related to her compensable injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony regarding the injury incident was credible and persuasive. The Claimant testified consistently with the investigative reports and the medical records concerning to the mechanism of injury. Also, Dr. O'Brien's testimony was lacking in credibility and persuasiveness in regard to the compensability of Claimant's injury. Dr. O'Brien agreed that the mechanism of injury could cause the injury. He also agreed that Claimant was asymptomatic according to the medical records prior to the date of injury. Furthermore, six different doctors were of the opinion that the injury was caused by the work related activities. Further, Dr. O'Brien's testimony was not persuasive or credible regarding the need for repeat surgery. Dr. Hsin is recommending repairing the rotator cuff, which did not occur in the first surgery. The rotator cuff repair is likely to relieve

Claimant's symptoms from her injury. As found, Dr. Hsin was credible and persuasive in this regard.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice to accept the opinions of the six authorized medical providers, including Dr. Hsin, and to reject the opinions of Dr. O'Brien.

Withdrawal of General Admission of Liability

c. Section 8-43-203(2) (d), C.R.S., does not require a showing of "fraud, mistake, or excusable neglect," in order to withdraw a general admission of liability prospectively. *See In the Matter of the Claim of Sherry Faulkner v. Alexander Dawson School*, W.C. No. 4-294-162, [Indus. Claim Appeals Office (ICAO), May 21, 1999]. A respondent, who has all the facts pertinent to a claimant's claim, cannot withdraw a general admission of liability. *Indus. Comm'n v. Johnson Pontiac*, *Inc.*, 344 P.2d 186, 187-88 (Colo. 1959); *Continental Casualty Co. v. Indus. Comm'n*, 367 P.2d 355, 358 (Colo. 1961). When an employer files an admission of liability, the employer has "admitted that the claimant has sustained the burden of proving entitlement to benefits." *City of Brighton v. Rodriguez*, 318 P.3d 496, 507 (Colo. 2014). If the employer subsequently seeks to withdraw its admission of liability, it must prove by a preponderance of the evidence that the claimant's injuries were not compensable. See § 8-43-201(1) ("a party seeking to modify an issue determined by a general or final admission … shall bear the burden of proof for any such modification."). Respondents have not shown that Claimant **did not suffer** a compensable injury. Claimant was injured in the course and scope of her employment. The medical records along with

Respondents own investigation supports that Claimant suffered a compensable injury for which they admitted liability. Under the unique circumstances of this case, the Respondents had all of the pertinent facts by virtue of its investigation, as found, before filing the GAL. It is contrary to the purpose of the Workers' Compensation Act to provide a speedy and efficient remedy to injured workers to allow re-litigation of "compensability," based on an after-acquired (after the GAL) IME opinion of non-compensability. Such scenario flies in the face of a self-executing system (admitting claims in lieu of litigation), designed to make the system speedy and efficient. Such a scenario would encourage more litigation. Besides being misplaced, Respondents' request to withdraw the GAL is overcome by an overwhelming preponderance of the evidence, establishing compensability.

Compensability

d. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7** presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment. Thereupon, it is incumbent to show that non-work related factors caused the injury. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant has established that she suffered a compensable injury on April 28, 2016.

Medical Benefits

e. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to her compensable right shoulder injury of April 28, 2016. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's need for repeat shoulder surgery was reasonably necessary and causally related to the compensable injury.

f. Workers' Compensation Rules of Procedure (WCRP), Rule 16, 7 CCR 1101-3, governs the authorization of medical procedures. There is no dispute that Dr. Hsin complied with Rule 16 in seeking authorization of the recommended surgery. Respondents denied his request, pending resolution of their contest of the repeat surgery. The surgery recommended by Dr. Hsin was found to be authorized, reasonably necessary and causally related to the compensable injury herein.

g. Respondents are liable for authorized medical treatment that is reasonably necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 [Indus. Claim Appeals Office (ICAO), May 31, 2006]; *In re Frazier*, W.C. No. 3-920-202 (ICAO, Nov. 13, 2000). As found, Respondents should be liable for all medical care related to the industrial injury herein, whicdh is reasonably necessary to cure and relieve the effects thereof, including the repeat surgery recommended by Dr. Hsin.

Burden of Proof

h. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Respondents have failed to sustain their burden with respect to the withdrawal of the GAL. The Claimant, however, has sustained her burden with respect to the repeat surgery recommended by Dr. Hsin.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents request to withdraw the general Admission of Liability, dated October 13, 2017, is hereby denied and dismissed. The general Admission shall remain in full force and effect.

B. Respondents shall pay the costs of all reasonably necessary and causally related medical care and treatment for the Claimant's compensable right shoulder injury of April 28, 2016, subject to the Division of Workers' Compensation Medical Fee Schedule, including the costs of the repeat right shoulder surgery recommended by authorized surgeon, Joseph Hsin, M.D.

C. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of August 2018.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

STIPULATION

Prior to the hearing, the parties stipulated that should the claimed injuries be found compensable, the Salud Family Health Centers and Dr. Douglas McFarland are authorized treating providers in this case.

REMAINING ISSUES

I. Whether Claimant demonstrated by a preponderance of the evidence that she suffered a compensable low back and SI joint injury on December 4, 2017.

II. If Claimant proved that she sustained compensable back/SI joint injuries, whether she also established, by a preponderance of the evidence, that she is entitled to receive reasonable, necessary and causally related medical benefits for these industrial injuries.

III. If Claimant established that she sustained compensable injuries on December 4, 2017, whether she also proved, by a preponderance of the evidence, that she is entitled to both a period of temporary total disability (TTD) and temporary partial disability (TPD) benefits.

IV. A determination of Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Dr. Burris, the ALJ enters the following findings of fact:

1. Claimant was hired by Respondent-Employer as a production baker. She testified that she was subsequently promoted to head baker and was working in this capacity at the time she injured her low back on December 4, 2017. Claimant testified that she began her workday on December 4, 2017 at approximately 4:00 a.m. According to Claimant, she would report to work at 4:00 a.m. on days when inventory was taken.

2. Based upon the evidence presented, Claimant's AWW while working for Respondent-Employer is $667.23.[1]

[1] Counsel for Claimant recalculated her AWW based on the full wage records in Respondents' exhibit packet and subsequently agreed with their calculation.

3. Claimant testified that around 7:00 a.m. on December 4, 2017, she entered the large freezer in the back of the bakery department where inventory is stored. Claimant testified that she went into the freezer so she could count supplies. As she entered the freezer, Claimant discovered a large pallet stacked with bagged ice blocking her path to the material she had to inventory. Claimant estimated the pallet of ice to be six feet in height. She sought to move the ice with a pallet jack. Claimant placed the pallet jack in position and lifted the pallet off the floor. She then pulled on the handle of the jack in an attempt to move the material out of the way. It did not move. Consequently, Claimant testified that she "put more strength into it," by forcefully pulling and twisting at the same time. As she pulled and twisted, Claimant felt a sharp pain in her lower back going down her left leg.

4. Claimant testified that she immediately attempted to locate the store director, Ms. Billi Warren to report the incident. Claimant recalled closing the freezer door and going to look for Ms. Warren directly. She also sent her a text message. Claimant located Ms. Warren in front of the customer service desk. She recalled telling Ms. Warren exactly what she testified to regarding her injury and how it occurred.

5. The first report of injury, completed by the claims adjuster for Respondents, indicated that Claimant was injured on December 4, 2017 at work and that the injury was reported to the Employer on December 4, 2017. This report documents that Claimant reported she was "doing inventory in the freezer and while [she] was moving a pallet of ice, [she] hurt [her] lower back." Ms. Warren, the store director for Employer, testified that she and Claimant were in the same room while the information regarding the injury was being relayed to the claims adjuster.

6. Claimant testified that Ms. Warren asked her if she was "okay." Claimant reportedly answered that she thought so. Therefore, she returned to work. Claimant testified further that she was not asked to fill out an incident report, nor was she given a list of medical providers to choose from to attend to her reported injury.

7. Claimant's pain did not subside. She continued working for a couple of weeks in the face of increasing pain. She eventually presented to the emergency room (ER) of Mt. San Rafael Hospital on December 29, 2017. Claimant testified that she decided to go to the ER because the pain associated with the December 4, 2017 incident was getting worse and because the night before she presented, i.e. December 28, 2017, she made a batch of bread, which required her to lift a 50-pound bag of flour triggering more pain.

8. While in the ER, Claimant reported lower back pain radiating into her left buttocks and posterior left thigh. The mechanism of injury (MOI) documented in the ER record was that Claimant frequently lifts 50-pound bags of flower and other ingredients at work and thinks her pain is from this. According to Claimant, she told the triage nurse that she injured her back pulling the pallet jack. She surmised that the history she gave concerning lifting bags of flour as the cause of her pain was misunderstood. She purportedly explained to the ER personnel that lifting the bag of flour was a recent event

exacerbating the pain caused by her December 4, 2017 and not the start of her presenting symptoms. Specifically, Claimant testified: "I didn't tell them I got injured with that. I told them [it] triggered my – my pain more." Physical examination documented painful range of motion. Claimant's pain was listed as acute and she was instructed to follow-up with her primary care provider (PCP).

9. Claimant testified at hearing that her primary care provider's offices were undergoing renovation. Consequently, she was unable to seek treatment from them until January 11, 2018. In the interim, Claimant presented to Mt San Rafael Hospital ER two more times before seeing her PCP. A January 5, 2018 note documents that her pain had persisted and increased since her last visit. A CT scan was performed. It demonstrated a large L4/5 disc protrusion, which was felt to be the source of Claimant's ongoing pain.

10. Claimant returned to the emergency room two days later on January 7, 2018. It was explained that Claimant was offered stronger pain medications two days prior, but she "wisely" refused the narcotics choosing instead to "tough it out." Unfortunately, Claimant's pain became too severe and she was prescribed hydromorphone until she was able to get in to see her PCP. It was noted that Claimant already had an appointment scheduled with her PCP in two days.

11. Claimant followed-up for treatment with her PCP, Salud Family Health Centers[2], on January 11, 2018. Physician Assistant (PA) Normajean Mower evaluated Claimant. PA Mower documented that Claimant was injured at work when she picked up a box and twisted wrong and pain developed. Claimant testified that she recalled telling PA Mower that she was trying to move the pallet of ice so that she could get to the boxes, not that she was injured lifting the boxes. According to Claimant, she spent approximately fifteen minutes total with PA Mower because she was very busy. PA Mower indicated that Claimant needed to remain off work until she could see and be evaluated by an occupational therapist.

12. Claimant underwent occupational therapy from January 22, 2018 through March 14, 2018, before seeing PA Mower again on April 3, 2018. Claimant presented to PA Mower asking for a work release. PA Mower indicated that Claimant could return to work with restrictions of no lifting more than five pounds. PA Mower also referred Claimant to Dr. McFarland; a level II accredited workers' compensation doctor for further evaluation.

13. Dr. McFarland evaluated Claimant on May 15, 2018. Dr. McFarland obtained a detailed description of the MOI. Dr. McFarland documented that Claimant injured herself on December 4, 2017 while working for the Employer. According to Dr. McFarland's report, Claimant was "[t]rying to move a pallet loaded with sacks of ice. She reports that she lifted the pallet with a pallet jack and pulled on it a couple of times. It was the 2nd time she pulled on it she felt a strain in her back. She reported that she

[2] Salud Family Health Centers was formerly known as Mt. Carmel Health, Wellness and Community Center.

tried treating the condition with ibuprofen and continued working, but continued to have problems." Claimant testified that she spent approximately one and a half hours with Dr. McFarland at her first visit with him. Dr. McFarland diagnosed Claimant with a low back strain, displacement of lumbar intervertebral disc without myelopathy, and left side sciatica. Dr. McFarland released Claimant to work with restrictions of no more than 10 pounds lifting or five pounds of repetitive lifting.

14. Claimant has a prior history of low back pain and what she testified was right sided sciatica for which she was received physical therapy. She testified that her prior low back and right leg pain was nothing like the left sided pain she experienced after pulling on the pallet jack on December 4, 2017. Per Claimant's testimony, the pain she experienced after pulling on the pallet jack handle was much worse and deteriorated with time.

15. Medical records concerning Claimant's prior low back and leg pain were admitted into evidence. These records establish that PA Jamie Nelson evaluated Claimant at "Spine Colorado" clinic on December 27, 2016. At the time of this evaluation, Claimant was complaining of low back pain and pain radiating down the posterior aspect of the legs bilaterally, left greater than right.[3] Physical examination revealed a positive seated straight leg raise on the *left* (emphasis added). X-rays were obtained which revealed "moderate disc space degeneration at L5-S1. Claimant was referred for an MRI and physical therapy (PT).

16. An MRI study was performed January 10, 2017. The MRI demonstrated "mild to moderate left lateral recess stenosis and moderate left and mild to moderate right neural foraminal stenosis at L5-S1 secondary to left sided paracentral and lateral recess disc extrusion, mild underlying circumferential disc bulge, and mild facet joint osteoarthritis. There was contact of the descending left S1 nerve root in the lateral recess and the bilateral exiting L5 nerve roots in the neural foramen. Claimant was also noted to have additional degenerative disc disease along with caudal central disc extrusion at the L4-L5 level. Moderate bilateral neural foraminal stenosis at L4-L5, sufficient to result in contact with the bilateral exiting L4 nerve roots was noted.

17. Claimant was reevaluated by PA Nelson on January 10, 2017, following her MRI. Discussion was had about the option of treating her ongoing symptoms with an interlaminar steroid injection at L5-S1. Claimant elected to try PT first. A follow-up examination was anticipated but never occurred as Claimant moved from the area.

18. As noted, Claimant relocated. She established care with PA Mower at Mt. Carmel Health, Wellness and Community Center (Mt. Carmel) on April 6, 2017. At the time she established care, Claimant had no complaints of low back or leg pain. Rather, she wanted to establish care for continued treatment of her diabetes.

[3] During cross-examination, Claimant testified that all references to left sided leg pain in her medical records are in error as she had right leg pain not left.

19. On May 17, 2017, Claimant returned to Mt. Carmel where PA Mower re-evaluated her. Claimant presented on this date with complaints of right sciatic nerve pain and numbness in her hands. The report from this date of visit indicates that Claimant had undergone an MRI in Durango a few months prior and that she had received PT, which "helped." PA Mower referred Claimant for additional PT for both her right sided sciatica, as well as her carpal tunnel syndrome.

20. Claimant began physical therapy for her right sided sciatica on May 22, 2017. During this initial visit, Claimant reported constant 3-9/10 lumbroscaral pain with the "right being worse than the left and pain that extends down the right posterior leg and toes. Based upon the evidence presented, the ALJ finds that Claimant enjoyed a short reprieve in the pain she experienced in her back and legs from 2016 into early 2017. The ALJ also finds that for reasons unknown Claimant had a return in her back and leg pain in May 2017. While she probably had pain in her legs bilaterally in 2016 and early 2017, the pain she developed in May 2017, was focused primarily in the right leg.

21. Claimant's last physical therapy session occurred on September 19, 2017. At this appointment, the therapist working with Claimant noted that her pain level that day was zero out of ten. Claimant's worst pain level was 4 out of ten. According to the physical therapist, Claimant was ready to be discharged from therapy. Claimant's primary therapist, Brandon Baca, discharged Claimant from PT on September 26, 2017. Per the PT note from September 26, 2017, Claimant experienced a significant reduction in pain, significant improvement in range of motion, and significant improvement in strength/stabilization.

22. The last medical record in evidence that pre-dates the December 4, 2017 work injury is a note from PA Mower dated October 9, 2017, approximately two months prior to the December 4, 2017 incident. PA Mower documented that Claimant had finished PT and was doing well. It was documented that Claimant had a hard time carrying boxes at work when she first began working for Respondent-Employer in April, but that she no longer had any problems carrying the boxes. The only additional treatment recommended by PA Mower at this time was for Claimant's carpal tunnel syndrome. Claimant testified that she had no back injuries and no subsequent flares ups of low back/leg pain after her release from PT up to the December 4, 2017 date of injury in this case. According to Claimant, she was "fine" after her PT concluded.

23. At the request of her attorney, Claimant underwent an independent medical examination (IME) with Dr. Timothy Hall on May 22, 2018. Dr. Hall performed a records review, a physical examination, and took the time to clarify Claimant's MOI. Claimant again reported that she was injured on her second attempt at moving the heavily ladened pallet jack. She described that she was pulling and twisting simultaneously when she felt a sharp pain on the left side of her upper buttock. Claimant was doing "quite a bit better" by the time of her evaluation with Dr. Hall, but she continued to have symptoms exacerbated by prolonged standing, walking, twisting, bending, or lifting. *Id.* Dr. Hall performed a physical examination, noting that Claimant

was “very tender” in the left SI/sacrotuberous ligaments and into the quadratus lumborum. Claimant’s IT band was tender on the left and not tender on the right. There was also some breakaway weakness involving the left dorsiflexors due to leg pain. Dr. Hall diagnosed Claimant with probable SI joint dysfunction/local myofascial pain and possible discogenic pain due to the potential for radiculopathy seen on imaging.

24. Dr. Hall opined that Claimant sustained a work-related injury to the body parts described above based on the fact that the injury occurred at work, the mechanism of injury was consistent with her symptoms, she had fully treated for and resolved her *right* sided sciatic issues prior, and that she was working with this employer at full duty when the incident occurred.

25. Claimant subsequently underwent an IME with Dr. John Burris on June 1, 2018 at the request of Respondents. Claimant reported the same MOI that was documented in her first report of injury and in the reports authored by both Drs. McFarland and Hall. Claimant also told Dr. Burris that she reported the incident right away and tried to treat herself over the next few weeks until the pain became intolerable prompting her to present to the ER. Dr. Burris, felt the MOI was not clear because: “[Claimant] provides 3 distinctly different histories.” Based upon his IME report, it is clear that Dr. Burris attributes the differences in the reported mechanisms of injury (MOI’s) to Claimant. Regardless of the documented histories, Dr. Burris concluded any of the stated MOI’s would be consistent with causing a minor soft tissue strain that would not be sufficient to cause structural damage to the lumbar spine. Dr. Burris supported his opinion by relying on the January 5, 2018 CT scan, which he indicated, “did not identify any acute abnormalities.” Dr. Burris opined that Claimant’s symptoms could not be causally related to an injury occurring on December 4, 2017 because of the “numerous subjective and objective inconsistencies” in the record. Thus, he concluded that Claimant’s symptoms, based upon the “overall” clinical picture” were consistent with the natural progression of pre-existing lumbar degenerative disc disease.

26. Dr. Burris testified via pre-hearing deposition on June 15, 2018. He confirmed the MOI reported to him was the same as the mechanism Claimant testified to at hearing. (Depo. 4:8-19). Dr. Burris felt that Claimant’s current symptoms were “very similar” to those that she had experienced in the past. (Depo. 7:17 – 8:5). He further opined that Claimant’s MRI findings from January of 2017 were likely to progress over time. (Depo. 9:13 – 10:23). However, Dr. Burris also testified that the CT scan from January of 2018 shows that the imaging findings “kind of regressed to a disc protrusion instead of a true herniation.” (Depo. 11:19 – 12:16). Dr. Burris testified that on physical examination, he did document a positive Patrick’s Maneuver on the left side, which is meant to stress the SI joint. (Depo. 13:8-21). Dr. Burris did feel that, if Claimant did experience an injury on December 4, 2017, it was likely a soft tissue strain. (Depo. 14:25 – 15:7). Dr. Burris was specifically asked about Dr. Hall’s SI joint diagnosis, to which he testified: “He’s saying sacroiliac joint dysfunction and local myofascial pain. That means muscle pain. So localized pain to the pelvis, to the back of- - in the low back from the SI joint. So I would agree with that.” The ALJ interprets Dr. Burris’ testimony to indicate that Claimant’s SI joint and localized myofascial low

back pain is would be related to the December 4, 2017 incident (assuming there was one), because the SI joint is held together by ligaments and tendons and muscles, and you can irritate that with the reported MOI's Claimant reported in this case. (Depo. 16:22 – 17:17). On cross-examination, Dr. Burris testified that he did not have the September 2017 physical therapy notes documenting that all of Claimant's PT goals had been met. He conceded that these notes would be significant in determining causation for an injury occurring months thereafter. (Depo. 20:22 – 21:19). Dr. Burris agreed that, if Claimant did sustain an injury, her initial treatment of physical therapy and imaging was appropriate. (Depo. 25:13-24).

27. Dr. Timothy Hall testified at hearing via telephone. Dr. Hall explained that the reported MOI to him was the pain Claimant experienced after the second attempt at moving the pallet by twisting and pulling. It was his opinion that this caused an SI joint sprain with myofascial pain. He explained that an SI joint sprain is common with maneuvers that involve loading of the low back and twisting or torqueing simultaneously. Dr. Hall was asked about his report indicating Claimant may have discogenic pain. He testified that low back pain is difficult when it comes to differentiating specific pain generators. He also noted that some of Claimant's pain maybe coming from sources such as a disc or facet given the significant abnormalities on her MRI but a medical practitioner would not be able to determine if Claimant's pain was discogenic without further testing.[4] Regardless, he felt the most likely cause of Claimant's symptoms was an SI joint strain.

28. Dr. Hall was asked to comment on Dr. Burris' opinion that Claimant sustained a "minor soft tissue sprain." His disagreement was with the use of the term "minor" because SI joint and soft tissue pain can create significant discomfort resulting in a major life event. Dr. Hall further disagreed with Dr. Burris that Claimant's clinical picture was consistent with the natural progression of her pre-existing degenerative disc disease (DDD) because there is no consistent presentation with DDD. According to Dr. Hall, if there were such a concept as "natural progression", such progression would not suddenly result in symptoms. Rather, Dr. Hall testified as follows:

> We all have degenerative disc disease and degeneration of our spines. Most of us will have only fleeting episodes of low back pain through our lives. So the natural progression, if - - if there is such a thing, is for it not to hurt. . . . When these degenerative events occur slowly over time, which is what they do naturally, they're usually not symptomatic.
>
> * * * *

[4] Dr. Burris' testimony tends to establish his agreement with Dr. Hall's opinion in this regard. Indeed, in response to a question on what symptoms he would expect a patient with MRI findings similar to those of Claimant would report, Dr. Burris answered as follows: "Well, the problem with that is that some symptoms don't always correlate with diagnostic testing, and sometimes we can see these types of findings if they're degenerative in nature. And they might have been there for a while, and the patient has no symptoms."

> So I disagree with the idea that this was - - that this can be characterized as simply something that was bound to happen despite what this patient may or may not have done.

28. Finally, Dr. Hall disagreed with Dr. Burris that Claimant's present symptoms would no longer be related to the initial injury because these injuries do not have some "inherent life span or predictable presentation…." According to Dr. Hall some soft-tissue injuries heal within days, others take months, and some never recover. Dr. Hall's testimony directly contradicts Dr. Burris' opinion that soft-tissue stains are self-limiting conditions that heal without complication regardless of treatment.

29. After examination from counsel, the ALJ asked Dr. Hall for clarification concerning his opinion(s). The ALJ asked if he understood Dr. Hall's testimony correctly to be that Claimant had two possible sources for her leg pain, both a discogenic source and a piriformis syndrome related to SI joint dysfunction. Dr. Hall indicated that was "very close," but clarified that he felt her lower extremity symptoms would either be caused by foraminal stenosis—not so much the disc itself—or the piriformis problem. Based on all current information, Dr. Hall reiterated his opinion that piriformis syndrome was the more likely cause of Claimant's symptoms, and that this would be related to the SI joint injury caused on December 4, 2017. Dr. Hall explained that if the SI joint is unstable, the piriformis, the quadratus lumborum, and the psoas will spasm or tighten in order to stabilize the pelvis. Because the sciatic nerve goes through the piriformis, patients get very similar leg symptoms from piriformis syndrome as they get from radiculopathy caused by stenosis.

30. Billi Warren testified at hearing in her capacity as the store director for Respondent-Employer. She testified that she did not recall receiving any report of injury from Claimant on December 4, 2017. According to Ms. Warren Respondent-Employer's procedure is to contact the call center to report the injury and then "go from there" as far as doctors' orders, and that this is the same procedure whether somebody requests treatment or not. Ms. Warren testified that she was not aware Claimant was claiming an injury until she brought in a doctor's note with restrictions in late December. Ms. Warren testified that Claimant did not make it clear that her need for work restrictions was attributable to an on the job injury. Ms. Warren testified that because Claimant did not indicate that her restrictions were related to an on the job injury, Claimant was taken off the schedule since Respondent-Employer does not allow injured workers to work with restrictions unless such restrictions are related to "work comp issues." Per Ms. Warren, Claimant was notified that she would be taken off the schedule and would have to produce another doctor's note releasing her back to full duty before she could return to work. After being so notified, Ms. Warren testified that Claimant reported her injury as being work related. Ms. Warren testified that Claimant reported the injury as being work related on January 31, 2018.

31. On cross-examination, Ms. Warren testified that she never bothered to ask Claimant about her injury or what caused it. Ms. Warren explained that she and Claimant were both involved in the formal reporting of the injury to the claims adjuster,

but had no explanation as to why the first report of injury documented that the injury was reported to the Employer on December 4, 2017.

32. Ms. Erlinda Encinias testified in her capacity as the bakery manager. Ms. Encinias explained that she was aware that Claimant had some form of a back condition that pre-dated December 4, 2017, as she too was getting PT in the same clinic as Claimant prior to her December 4, 2017 alleged injury. Ms. Encinias testified that she and she alone performed the inventory on December 4, 2017. Ms. Encinias testified that on the date of Claimant's alleged injury and that there was no pallet of ice in the freezer on this day. According to Ms. Encinias, she does inventory "as a ritual" every month and that the floors have to be empty because "we have to have accurate inventory." Ms. Encinias testified that she entered the freezer to organize it on the 31st; a day she claimed was "the day" prior to Claimant's alleged date of injury (DOI). She saw no pallet of ice when she went in. The ALJ takes judicial notice that there are only 30 days in November not 31. The ALJ further finds that the day before Claimant's alleged DOI in this case would have been December 3, 2017 as the injury allegedly occurred December 4, 2017. Consequently, the ALJ is not persuaded that Ms. Encinias did inventory on December 4 as she suggested. While it is possible that Ms. Encinias' organized the freezer several days prior to the December 4, 2017 incident, this is inconsistent with her testimony that she organized the freezer "the day prior." Moreover, assuming that Ms. Encinias entered the freezer the day before Claimant alleged injury, i.e. December 3, 2017 as she suggested, that does not persuasively establish that there was not a pallet of ice in the freezer on December 4, 2017. As presented, the ALJ finds Ms. Encinias' testimony both unreliable and unconvincing.

33. Claimant testified that she was effectively removed from work on January 1, 2018 after providing Respondent-Employer with a note from the ER imposing work restrictions. According to Claimant, Ms. Warren told she could not return to work until she could be "at her fullest", meaning that she had to be released to full unrestricted duty. Based upon the evidence presented, the ALJ finds that Claimant was unable to perform the essential functions of her position as a head baker for Respondent-Employer due to the effects of her industrial injury. The evidence also persuades the ALJ that Respondent-Employer did not provide Claimant with modified duty employment opportunities. Consequently, Claimant accepted a position at Bob & Earls Café as a hostess/cashier and part time waitress.

34. Based upon the payroll records admitted into evidence, Claimant's AWW while working for Bob & Earls Café equaled $286.31.

35. While Claimant asserted in her opening statement that she returned to work for Bob & Earl's Café on March 22, 2018, her opening remarks do not constitute evidence and she failed to establish an actual return to work date for the café. Payroll records admitted into evidence reflect that Claimant was paid $268.68 for a pay period extending from March 12, 2018 through March 25, 2018. While it is possible that Claimant returned to work on March 22, 2018, as she alluded to in her opening statement, the evidence presented is insufficient to make a finding concerning

Claimant's actual start date with Bob & Earl's Café. Consequently, while the evidence presented persuades the ALJ that Claimant is entitled to temporary total and temporary partial disability benefits, an ending date for Claimant's entitlement to TTD and a beginning date for her TPD cannot be determined.

36. The ALJ finds the opinions and analyses of Dr. Hall to be more credible and persuasive than those of Dr. Burris.

37. The ALJ finds the testimony of Claimant to be more credible and persuasive than the testimony of her supervisors.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principles

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

C. Assessing the weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo.App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals*

Office, 53 P.3d 1192 (Colo.App. 2002). While there are inconsistencies in the testimony of Claimant and medical records from the ER and PA Mower regarding the MOI in this case, the ALJ resolves those conflicts in favor of Claimant to conclude that Claimant's reported MOI in the ER and later to PA Mower was probably misunderstood and documented incorrectly. The ALJ finds Claimant's explanation regarding the likely cause of the inconsistencies between her testimony and the MOI described in the ER records from the ER and PA Mower's reports persuasive. Consequently, the ALJ concludes that Claimant's testimony concerning the cause of her alleged injury is reliable and persuasive.

D. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo.App. 1992)(ALJ may credit one medical opinion to the exclusion of a contrary opinion). In this case, the undersigned ALJ concludes that the expert medical opinions of Dr. Hall are credible and persuasive. Regardless of the documented MOI's, Dr. Burris agrees that they are all likely to cause a soft tissue injury. As found here, the ALJ credits Claimant's testimony regarding the MOI over the content of the records of PA Mower and the ER. Based upon the evidence presented, the ALJ concludes that Dr. Hall's opinion that the accepted MOI likely caused a SI joint strain is supported by the record evidence as a whole and in particular the physical examinations of both Dr. Burris and Dr. Hall.

Compensability

E. A "compensable" injury is one that requires medical treatment or causes disability. *Id*.; *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo.App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, supra; §8-41-301, C.R.S.

F. Under the Workers' Compensation Act, an injured employee is entitled to compensation where the injury or death is proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment. *Section 8-41-301(1), C.R.S.; Horodyskyj v. Karanian* 32 P.3d 470 (Colo. 2001). The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). Thus, an injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals,*

supra; Deterts v. Times Publ'g Co., 38 Colo.App. 48, 51, 552 P.2d 1033, 1036 (1976). Here, the ALJ finds that Claimant produced sufficient evidence to support a conclusion that her symptoms/injury occurred in the scope of employment while she tried to move a heavy pallet stacked with bags of ice in order to complete inventory for the bakery department. As found, Ms. Encinias' contrary testimony is unpersuasive.

G. While Claimant established that she was injured in the course and scope of her employment, it is necessary to address whether her symptoms/injury arose out of that employment. The term "arises out of" refers to the origin or cause of an injury. *Deterts v. Times Publ'g Co. supra.* There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of Denver, supra.* An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's employment contract. *Popovich v. Irlando supra.*

H. There is no presumption that an injury, which occurs in the course of employment, also arises out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968). The determination of whether there is a sufficient "nexus" or causal relationship between a claimant's employment and the injury is one of fact and one that the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo.App. 1996). As found, the totality of the evidence presented, including opinions of Drs. Hall and Burris persuade the ALJ that the pulling and twisting incident involved in this case likely resulted in an acute soft tissue sprain involving the low back and SI joint.[5] Accordingly, the injury is compensable.

Medical Benefits

I. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable, necessary, and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo.App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970)*;* § 8-41-301(1)(c), C.R.S. Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo.App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent

[5] While the MOI may have aggravated Claimant's preexisting lumbar degenerative disc disease, the evidence supporting this conclusion is insufficient to establish compensability based upon the testimony of Dr. Hall.

medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, *supra*.

J. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo.App. 1984). As found here, Claimant has proven by a preponderance of the evidence that she sustained an acute soft tissue injury involving the low back and SI joint. The evidence presented convinces the ALJ that these compensable "injuries" are the proximate cause of Claimant's need for medical treatment including her visits to the ER and her PCP. Moreover, the totality of the evidence presented establishes that the care received was reasonable and necessary in light of Claimant persistent symptoms and functional decline.

K. Medical services provided during a bona fide emergency are an exception to the normal requirement that a claimant obtain authorization for all treatment of the industrial injury. Larson's Workers' Compensation Law, § 94.02[6] (1999); *Sims v. Industrial Claim Appeals Office, 797 P.2d 777* (Colo.App. 1990). There is no precise legal test for determining the existence of a medical emergency.[6] Rather, the question of whether a claimant has proven a bona fide emergency is dependent on the particular facts and circumstances of the claim. *Timko v. Cub Foods,* W. C. No. 3969-031 (June 29, 2005). In this case, the ALJ is persuaded that Claimant's acute unrelenting back, leg and SI joint pain constituted a genuine medical emergency to rule out potentially life altering conditions such as "spinal epidural abscess, cauda equine syndrome and spinal cord compression syndrome . . ." Consequently, Claimant did not need to obtain prior authorization for the treatment associated with her treatment in the ER. As the emergent treatment was reasonable, necessary and directly related to Claimant's admitted work related injury, Respondents are liable to pay for it. While Respondents are liable for Claimant's ER care, they are not obligated to pay for care Claimant sought on her own after the emergency passed. Consequently, Respondents are not obligated for the care Claimant received from her PCP, PA Mower after being discharged from the ER. Even with a general award of medical benefits, Respondents retain the right to dispute whether the need for medical treatment is reasonable, necessary and related to the compensable injury. *See Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo.App. 2003) (a general award of future medical benefits is subject to the employer's right to contest compensability, reasonableness, or necessity).

Average Weekly Wage

[6] The exception is not limited to situations where life is threatened. *Bunch v. Industrial Claim Appeals Office of State of Colorado,* 148 P.3d 381 (Colo.App.2006).

L. The overall purpose of the average weekly wage (AWW) statute is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity resulting from the industrial injury. *See Campbell v. IBM Corp.,* 867 P.2d 77 (Colo.App. 1993); *National Fruit Prod. v. Crespin,* 952 P.2d 1207 (Colo.App. 1997). The ALJ concludes that Claimant's wage records constitute the best evidence concerning her earnings around the time she was injured. As noted, Claimant concedes that Respondent-Employer correctly calculated her AWW based upon her full wage records as contained in Respondents' exhibit packet. Accordingly, Claimant's AWW while working as a baker for Respondent-Employer is $667.23.

M. Concerning Claimant's employment at Bob & Earl's Café, the wage records support varied earnings based upon the payroll records admitted into evidence. Regarding this employment, Claimant's average weekly wage (AWW) is best calculated using the entire period of earnings given the fluctuating nature of Claimant's pay. Here, Claimant earned anywhere from $268.68 to $926.80 for any given pay period. Because of her irregular earnings, the ALJ concludes that using the broader 10 week time period of Claimant's employment with Bob & Earl's allows for the most accurate calculation of a figure that most closely approximates Claimant's diminished earning capacity after her December 4, 2017 compensable work related injury. Accordingly, the ALJ finds that Claimant's AWW while employed by Bob & Earl's Café is $286.31

Temporary Disability Benefits

N. To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts; that she left work because of the disability, and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo.App. 1997). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability to effectively and properly perform his/her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo.App. 1998).

O. In this case, the persuasive evidence demonstrates that Claimant was incapacitated by and suffered a wage loss as a direct and proximate consequence of her industrial injury. It is undisputed that Claimant's medical condition prevented her from returning to her regular employment as a baker for Respondent-Employer beginning January 2, 2018. Furthermore, the evidence presented is convincing of the fact that Respondent-Employer did not extend modified duty to Claimant. Although Claimant never returned to her regular position for Respondent-Employer, the evidence establishes that she subsequently went to work for Bob & Earl's Café where she was

employed as a hostess, cashier and part time waitress, albeit for less remuneration than she received as a baker for Respondent-Employer. The ALJ concludes that the evidence presented establishes that Claimant has proven that she is "disabled" within the meaning of section 8-42-105, C.R.S. and therefore, entitled to a period of TTD benefits as well as ongoing TPD benefits. See *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999); *Hendricks v. Keebler Company*, W.C. No. 4-373-392 (ICAO, June 11, 1999). Claimant last worked for Respondent-Employer on January 1, 2018, and as noted, returned to work for a different employer on date uncertain in March 2018. Because the evidence presented is insufficient to determine Claimant's return to work date for Bob & Earl's Cafe, an ending date for Claimant's entitlement to TTD and a beginning date for her TPD cannot be determined.

ORDER

It is therefore ordered that:

1. Claimant has proven by a preponderance of the evidence that she sustained a compensable injury to her lower back and SI joint on December 4, 2017, while working for Respondent-Employer.

2. Respondents shall pay for all reasonable, necessary, and related treatment for Claimant's lower back and SI joint conditions, including but not limited to her ER treatment on December 29, 2017, January 5, 2018 and January 7, 2018.

3. Claimant's AWW for purposes of her employment with Respondent-Employer is determined to be $667.23.

4. Claimant's AWW for purposes of her employment with Bob & Earl's Café is determined to be $286.31.

5. Claimant has proven that she is entitled to a period of TTD benefits and ongoing TPD benefits. Because the evidence presented is insufficient to determine Claimant's return to work date with Bob & Earl's Café, the ending date for TTD and beginning date for TPD cannot be determined.

6. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

7. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That

you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 14, 2018

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that the surgical procedures to her right wrist and elbow as recommended by Dr. Karl Larsen are reasonable, necessary and related to her admitted work injury?

II. Has Claimant shown, by either a preponderance of the evidence or by clear and convincing evidence, that she is entitled to penalties from Respondents for failure to timely exchange a medical report, pursuant to W.C.R.P. 5-4(A)(5)?

STIPULATIONS

The parties stipulated that the IME report of Dr. McCranie was received by Insurer on December 14, 2017, and was tendered to Claimant on January 26, 2018. The ALJ accepted this stipulation.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant has worked for over 30 years as a coil winder. She has worked for Employer for approximately 3 of those. Her job duties included operating machines which spun magnetic wire for use in transformers.

2. As a result of her employment, Claimant developed the progressive onset of symptoms in her right upper extremity, right shoulder, upper back and neck. In March 2015, the symptoms intensified, and prompted Claimant to seek medical attention. Respondents admitted liability for Claimant's injuries. March 31, 2015 was determined to be the date of injury.

3. George Johnson, M.D. at CCOM was the initial authorized treating physician. On May 18, 2015 Dr. Johnson took a medical history regarding Claimant's problems with her right shoulder, right arm, and upper back. At this time, Claimant reported her most significant pain was in her neck and upper back. Physical examination showed tenderness of the right rhomboid muscle with muscle spasm and multiple trigger points. Dr. Johnson's diagnoses included cervical and thoracic strains, right carpal tunnel syndrome, right shoulder AC joint sprain, and thoracic myofascial syndrome. Dr. Johnson administered trigger point injections and referred Claimant for physical therapy. He also referred her to Dr. Karl Larsen for consideration of carpal tunnel surgery. (Ex. 3, p. 131, Ex. 1, p. 17).

4. Claimant saw Dr. Larsen on June 1, 2015. His evaluation was primarily focused on the right elbow and right wrist. Dr. Larsen diagnosed severe carpal tunnel

syndrome on the right and recommended carpal tunnel release surgery. (Ex. 1, p. 19). Claimant also testified at hearing that the symptoms in her right hand and wrist prior to surgery were "miserable."

5. Claimant underwent right carpal tunnel release surgery on June 30, 2015. Subsequent medical records show that the surgery significantly reduced her symptoms. Claimant also testified that the symptoms in her right hand and wrist "all went away" after the surgery. She returned to full duty work on August 7, 2015. Dr. Larsen released her from his care regarding her carpal tunnel syndrome on August 10, 2015. (Ex. 1, p. 11).

6. Dr. Johnson then placed Claimant at MMI on September 25, 2015. On that date, he documented that her symptoms were significantly improved. Dr. Johnson opined that Claimant was at MMI with no permanent impairment and no permanent work restrictions. (Ex. 7, p. 165).

7. Respondents filed a Final Admission of Liability ("FAL") on September 30, 2015, denying liability for treatment after MMI. (Ex. 7, p. 164).

8. On November 16, 2015, Claimant returned to CCOM with complaints of worsening right shoulder pain. She denied any specific new injury to the shoulder and attributed the increased pain to her ongoing work duties. On physical examination, she had decreased right shoulder range of motion, decreased strength in the supraspinatus tendon and a positive empty can test. Dr. Johnson provided a cortisone injection, referred Claimant for physical therapy and put her back on "light duty." (Per Findings of Fact and Conclusions of Law by ALJ Spencer, dated 11/15/2016, Ex. 6, p.152). Claimant testified at hearing that Employer did not provide light duty work for her, and as a result she stopped working.

9. Claimant underwent a MRI of her right shoulder on December 23, 2015. Based on the results, Dr. Johnson referred her to Dr. John Pak for an orthopedic evaluation. (Ex. 6, pp. 152, 153). Respondents declined to authorize the referral.

10. Claimant underwent a DIME with Dr. Jeffrey Jenks on January 26, 2016. Dr. Jenks diagnosed right carpal tunnel syndrome and right shoulder pain, with probable impingement syndrome as work-related conditions. Dr. Jenks opined that Claimant had reached MMI on September 25, 2015. Dr. Jenks assigned permanent impairment based on residual right carpal tunnel syndrome and right shoulder symptomatology. Dr. Jenks calculated 10% right upper extremity impairment for the right wrist and 14% right upper extremity impairment for the right shoulder. Dr. Jenks recommended maintenance care to include periodic steroid injections for the right shoulder. (Ex. 6, p. 153).

11. Respondents filed a FAL on March 15, 2016, based on Dr. Jenks' DIME report. The FAL admitted for scheduled impairment only. Additionally, Respondents admitted liability for reasonable, necessary and related medical benefits after MMI. (Ex. 7, p. 163).

12. On April 1, 2016, Dr. Johnson evaluated Claimant and opined that she was at MMI. At that time, she reported continuing right upper back pain in conjunction with her right shoulder pain, worse with movement of her arm. She had reduced shoulder range of motion. O'Brien's test and impingement signs were positive. Claimant's right upper back was tender to palpation in the scapular region, with four trigger points noted. Dr. Johnson administered another series of trigger point injections and told Claimant he could repeat the injections up to three times per year as maintenance care. (Ex. 6, p. 153).

13. A hearing was held on October 5, 2016 before ALJ Spencer. Issues for the hearing included whether Clamant proved by a preponderance of the evidence that Dr. Johnson's referral to Dr. Pak was reasonable and necessary treatment after MMI. ALJ Spencer ruled the orthopedic evaluation with Dr. Pak was reasonable and necessary, and ordered Respondents to authorize and pay for the evaluation. (Ex. 6).

14. Dr. John Pak examined Claimant on January 30, 2017 and recommended right shoulder surgery. (Ex. 4, pp. 138-141). Claimant testified at hearing that her right hand and wrist continued to be "fine" prior to shoulder surgery. Dr. Pak performed the surgery on February 1, 2017. *Id.*

15. Claimant followed-up with Dr. Johnson after her shoulder surgery. He saw her on February 2, 16, and 23 of 2017. On each visit, he noted "the shoulder is stabilized in a shoulder immobilizer." (Ex. 3, pp. 132, 128, 124). At hearing, Claimant testified she wore a shoulder immobilizer device "all the time" after surgery, including when sleeping. Dr. Pak provided the immobilizer and told her to use it. This immobilizer prevented her shoulder and arm from moving.

16. Dr. Daniel Olson replaced Dr. Johnson at CCOM. He saw Claimant on March 30, 2017 and reported, "…She is also complaining of some wrist pain all of a sudden. She did have carpal tunnel syndrome with surgery about a year and a half ago. She is also noticing some elbow pain…" (Ex. 3, p. 119).

17. Claimant testified at hearing that the shoulder surgery had been successful, providing 90% relief of her symptoms. However, she explained that after the surgery on her shoulder, she began to experience symptoms again in the right wrist. It became painful and she experienced the sensation of "pins and needles," "falling asleep," and cramping. She began experiencing similar symptoms in the right elbow. Claimant testified she currently experiences pain, numbness, tingling, and cramping in both her right wrist and right elbow. The wrist, she testified, feels similar to the way it felt prior to the carpal tunnel surgery on June 30, 2015.

18. On May 3, 2017 Dr. Olson noted Clamant was pleased with the progress of her shoulder, but "…She has other complaints of pain including her elbow, her right wrist as well as her neck…She's got some aching in her wrist area. A little bit in the elbow and neck area…" (Ex. 3 p. 117).

19. On May 31, 2017 Dr. Olson noted, "…She is noticing more numbness and tingling in her right hand particularly at night…" (Ex. 3, p. 114). Under Comments, Dr. Olsen noted: "…She is having some recurrent carpal tunnel symptoms so I will have her use a cock-up splint at night…I am not sure why her carpal tunnel symptoms are returning. She did have surgery by Dr. Larsen about 2 years ago. I hope that the splint will help her nighttime symptoms and we don't have to reinvestigate this problem…" (Ex. 3, p. 115).

20. Dr. Jay Neubauer at CCOM then took over Claimant's care. On July 12, 2017 Dr. Neubauer reported, "…She continues to describe numbness and crampy pain in her wrist. She occasionally gets aching pain with use [sic] pins and needles in the whole hand. She notes increased numbness and typing [sic] and writing…" (Ex. 3, p. 108). Dr. Neubauer confirmed Claimant was improving from shoulder surgery, but under Comments, noted: "…Patient also has return of mild carpal tunnel symptoms. Will extend occupational therapy and physical therapy. Reevaluate in 4 weeks. I expect we will be close to MMI *unless carpal tunnel symptoms persist or get worse*. (Id. at 109)(emphasis added).

21. On August 9, 2017 Dr. Neubauer noted "…Patient continues to have ongoing myofascial pain in the right arm and intermittent tingling in the right hand. We'll refer to pain management specialist to consider options…" (Ex. 3, p. 105). He referred Claimant to Dr. Dwight Leggett. (Id. at 107).

22. Dr. Leggett examined Claimant on September 12, 2017. He reported, "…Examination into the elbow revealed a large amount of diffuse tenderness, over both the medial and lateral upper condyle, as well as into the tunnel region, and antebrachial region. Similar tenderness identified into the right wrist as well. This was present over the anterior and posterior aspect of the wrist…" (Ex. 2, p. 48). Dr. Leggett recommended a MRI of the cervical spine, and electrodiagnostic testing of the right upper extremity. (Id. at 49).

23. In his September 12, 2017 report, Dr. Leggett also noted that Claimant had diffuse pain in her right neck, shoulder, elbow, wrist and hand with hypersensitivity, making it difficult to differentiate between structural pain and discussed additional diagnostic testing with MRI and EMG. He noted the DRAM test showed presence of depressed and distressed symptoms. (Ex. C, pp. 4-5).

24. Dr. Michael Sparr performed electrodiagnostic testing on October 17, 2017. Under Impression, he reported, "This is an abnormal electrodiagnostic study of the right upper extremity. There is evidence of right sensory greater than motor, primarily demyelinating carpal tunnel syndrome without distal denervation. This is moderate in degree. This is evident despite the previous carpal tunnel release." (Ex. 2, p. 39).

25. Dr. Leggett reviewed the EMG results with Claimant on October 27, 2017. He referred her back to hand surgeon Dr. Karl Larsen for evaluation and treatment. (Ex. 2, p. 35).

26. Dr. Larsen met with Claimant on November 17, 2017 and reported, "…I last saw her in 2014 when she had been released following a carpal tunnel release surgery. She had had complete resolution of her symptoms and had done very well until this year. She has had problems with her shoulder that stemmed from before I was treating her. She ultimately came to surgery on February of this year with rotator cuff repair and some type of biceps tenodesis by Dr. Pak. Subsequent to this, she has developed numbness and tingling in the hand that was initially intermittent. It has been near constant for the past 4 months. She has been using her wrist brace at night that seems to help some but the relief is incomplete. She had a lot of swelling throughout her hand that she noted after the surgery…She complains of lot of pain along the medial elbow and this seems like an electric shock coming up from her elbow when something brushes against it or episodically while using her hand. She has had repeat electrodiagnostic studies and is now here for discussion of additional treatment options." (Ex. 1, p. 7).

27. Dr. Larsen examined Claimant and reviewed her EMG results. He concluded:

> Ms. Ruacho has what appears to be recurrent carpal tunnel syndrome as well as evidence of ulnar neuritis at the elbow. This seems to have happened subsequent to her shoulder surgery. I have seen this scenario a number of times where the swelling and physical alterations associated with a shoulder surgery seem to produce nerve compression. I think however that it would be worth trying nonsurgical treatment. In this case, I would recommend corticosteroid injection and continued use of wrist bracing and therapy with nerve gliding and desensitizing exercises, especially for the elbow." (Ex. 1, p. 8).

Dr. Larsen injected Claimant's right elbow. (Ex. 1, p. 9).

28. Dr. Kathy McCranie performed an Independent Medical Examination ("IME") at Respondents' request on November 30, 2017. At this IME it was noted: *"Medical documentation supports a causal relationship between her accident and carpal tunnel syndrome* as this can be caused by combined repetition and force as was evident by repetitive hammering" (Ex. E, p. 16)(emphasis added).

29. Dr. McCranie concluded that; "…I do think it is reasonable for her to follow-up with him [Dr. Larsen] and make a determination as to whether any additional carpal tunnel surgery is needed…" (Ex. E, p. 16). Dr. McCranie provided an opinion regarding a shoulder impairment rating, but then added "…Carpal tunnel rating is deferred as this condition may require additional treatment prior to MMI." (Ex. E, p. 17).

30. At hearing the parties stipulated that Respondent-Insurer received Dr. McCranie's report on December 14, 2017 but said report was not provided to Clamant until January 26, 2018.

31. At a follow-up appointment on December 29, 2017, Dr. Larsen reported, "…The corticosteroid injection performed last time helped her hand symptoms a lot and *it did not help her elbow symptoms.* The duration of benefit was about 1 ½ weeks, starting about 5 days after injection. She feels like she has returned to baseline. She has thought about her discussion last time and is specifically interested in pursuing surgery." (Ex. 1, p. 5)(emphasis added).

32. Dr. Larsen discussed the diagnosis and treatment plan:

> Ms. Ruacho has recurrent carpal tunnel syndrome as well as ulnar neuritis. She has some elbow pain associated with medial epicondylitis. We have discussed options. I think the corticosteroid injection response that her *wrist* [sic] is favorable indicator that she would benefit from a revision carpal tunnel release. I think in the same sitting it would be reasonable to pursue ulnar nerve decompression and through the same incision perform a medial epicondylar debridement repair to try to attack all of her medial elbow pain in one sitting. We also discussed the option of just proceeding with a carpal tunnel release and trying to manage her elbow nonsurgically. However, she is resistant to this idea and would like to try to address it all at once if she is going to the OR. (Ex. 1, p. 5).

33. Dr. Larsen submitted a "Surgery Authorization Request" to Insurer on January 3, 2018. (Ex. 1, p. 4). In said request, he requested "right revision carpal tunnel, [and] cubital tunnel vs SQUNT, [and] medial tennis elbow debridement/repair." Insurer denied it on January 11, 2018. (Ex. A). Insurer based its denial on a Rule 16 review conducted at its request by Dr. Thomas Mordick. Dr. Mordick never actually examined Claimant.

34. With regard to *cubital* tunnel surgery, Dr. Mordick's Rule 16 report states, "she has demonstrated an inconsistent examination and numerous complaints that have no relationship to a diagnosis of cubital tunnel syndrome. In addition she has had 2 EMG/NCV's that have demonstrated no evidence of this condition. Therefore clearly under the Cumulative Trauma Guidelines this should be denied." (Ex. A, p. 8).

35. With regard to *elbow pain*, Dr. Mordick's Rule 16 report states, "[Claimant] did have complaints of elbow pain in the spring of 2017. No diagnosis was ever established as her examination was not consistent with any specific diagnosis. This complaint resolved and only re-appeared many months later. Again no diagnosis has been established at this time. It appears her recurrent pain developed while she was un-employed. In medical probability *I cannot attribute her current complaints to her employment."* (Ex. A, p. 8)(emphasis added).

36. With regard to the *carpal tunnel* portion of the surgery, Dr. Mordick's Rule 16 report states that "[C]laimant has documented psychological stressors and her examination as documented by her various examiners demonstrates changing complaints and examinations over a brief time in the fall of 2017. This suggests there may be psychological issues at play. First, [Claimant's] pre-operative NCV's

demonstrated no response on the sensory latency and a motor latency of 10 msec. While these are still mildly abnormal on the repeat study in October 2017, they are markedly improved and the residual may simply represent some permanent damage to the median nerve at the carpal tunnel. On the balance, it would be my opinion, in medical probability that she will not benefit from a repeat carpal tunnel release. If surgery is to be entertained certainly a repeat psychological evaluation should be done first." (Ex. A, p. 8).

37. Dr. Larsen responded to the denial in a letter dated January 14, 2018. He noted, "…I think Dr. Mordick has made a very thorough records review but has not benefitted from being able to examine the patient and understand her condition." (Ex. 1, p. 2). Concerning the carpal tunnel issue, Dr. Larsen explained; "…I do believe this is a recurrence of her carpal tunnel syndrome. The condition is present electrodiagnostically and more importantly, she had a favorable response to corticosteroid injection *into the carpal tunnel.* Carpal tunnel syndrome is a condition that can recur and in true recurrences, people do benefit from release…" *(Id)*(emphasis added).

38. Regarding Claimant's elbow, Dr. Larsen explained:

> I recognize that ulnar neuritis is an irritation of the nerve that may not result in electrodiagnostic findings. Indeed even in some cubital tunnel cases, electrodiagnostic tests are not always terribly accurate detecting the condition and this is a well-recognized issue. More importantly when using this as a denial basis for surgery, I always advise that we recognize that we are operating on a person and not her electrodiagnostic tests. Again, this is something where examination and evaluation of the patient would be valuable. Dr. Mordick did not have [the] opportunity to do this…" (Id. at 2).

Dr. Larsen concluded:

> I would recommend reconsidering request for surgery for Ms. Ruacho. If it is intended to deny it, then I would recommend that she have an independent medical evaluation with another hand specialist to try to make some treatment determinations for her. Simply denying treatment is not an adequate answer and I would make the exam request recommendations for treatment to bring about resolution of Mr. Ruacho's condition. (Ex. 1, p. 3).

Respondents did not arrange for Claimant to be examined by another hand specialist.

39. Dr. Larsen testified by deposition on July 2, 2018. He explained his opinion regarding how the shoulder surgery most likely caused the recurrent carpal tunnel and the elbow problems;

A. Well, it -- this practice in this building, I have a lot of partners that do a lot of shoulder surgery, and so we see patients that were probably on the edge of developing carpal and cubital tunnel syndrome *of some sort, and they get a big shoulder operation. So that produces swelling in the arm, accumulation of fluid in the arm. Remember, the fluid is not water; it's bodily fluid. So it has the proteins and polysaccharides and things that comprise body fluid.*
And then they have disuse of the extremity, right? So edema or extra fluid in the arm generally gets milked out through your lymphatics under the muscle contractions in use of your limb, but if you're mobilized in a sling, you don't do any of that. So that residual fullness causes compression of structures in enclosed spaces, like the ulnar nerve at the elbow or the median nerve at the wrist.
And you would argue and say, "Wait a minute. She had her carpal tunnel released, right?" But the roof of the carpal tunnel does not remain open forever. It heals, and there's more space under it, but anything that would have caused accumulation or pressure, swelling in there, can bring that problem back.
(Dr. Larsen depo. pp. 15:8 to 16:7)(emphasis added).

40. Dr. Larsen testified about Dr. Mordick's assertion regarding possible "psychological issues" and his impressions regarding the electrodiagnostic testing;

Q. Have you ever been concerned about psychological issues in Ms. Ruacho's case?

A. It's not been a major concern of mine. I think they're valid in terms of affecting her outcomes, but it's not a decision about whether or not I'm going to proceed with her treatment.

Q. How about Dr. Mordick's opinions about the NCV studies?

A. He feels like that the nerve conduction studies don't -- are not terribly severe and they're better than they were before I did her first surgery. And so he feels like that they may be permanent changes, which is a valid concern. That's why I performed a diagnostic injection for her before considering doing a revision carpal tunnel release. That was the purpose to that.

Q. So that answered that question in your mind?

A. It did for me, yes.

Q. He addresses the cubital tunnel in the next paragraph and notes that she's had two electrodiagnostic studies that have demonstrated no evidence of cubital tunnel and opines that that makes it something that

should be denied under the cumulative trauma guidelines. What are your thoughts about the fact that the EMG testing did not show evidence of cubital tunnel syndrome and yet she presents to you with symptoms of cubital tunnel syndrome?

A. Well, I think it's a muddy circumstance, because we split cubital syndrome and ulnar neuritis apart a little bit. So ulnar neuritis is irritation or aggravation of the ulnar nerve at the elbow that's painful and produces symptoms, but electrodiagnostically looks pretty normal, right? The nerve can be bad but still conduct its signal appropriately. Cubital tunnel syndrome is really a manifestation of ulnar neuropathy. The nerve is unhealthy and does not conduct well. I started out earlier saying that electrodiagnostic tests have a subjective component to them. They're not purely objective tests, and for that reason, people can have subtle ulnar nerve issues that just don't show up very well electrodiagnostically. I felt like her exam was fairly consistent across my visits with her. He's made an opinion in here that she's been variable in her presentation, and that doesn't match with what I've seen.

Q. Okay. So the fact that the EMGs themselves, the NCVs, purport to show no evidence of cubital tunnel does not rule that out in your mind?

A. No. When I teach my medical students, one of the lessons I try to teach them is that we operate on people, not their tests. I think I used that in response to this also, and that's really the basis of trying to make a surgical decision. If we relied on our tests all the time, you don't need me, right? (Dr. Larsen depo. pp. 25:21 to 28:3)

41. Dr. Larsen acknowledged in his deposition that typically surgeons did not want to operate on medical epicondylitis as it is "largely self-limiting" and "if you wait long enough, will get over it." He also noted epicondylitis was a "very controversial" subject, "it's a condition that's generally agreed is not harmful, and while it's painful and aggravating, it's not dangerous," and "largely resolves." Therefore, he stated as the surgery "15 to 20 percent of the time doesn't do so well, you don't want to do that surgery very often unless you have no choice." (Larsen depo, pp. 18:20 to19:18). Dr. Larsen also acknowledged that the EMG/NCV studies, taken alone, did not demonstrate cubital tunnel or epicondylitis. (Larsen depo pp. 41:3-10).

42. Dr. Larsen also acknowledged that Dr. Mordick in his Rule 16 report noted that the nerve conduction study "are not terribly severe and they're better than they were before … her first surgery. [T]hey may be permanent changes, which is a valid concern." However, he believed Dr. Mordick's finding that the NCV results were "mildly abnormal and markedly improved" were possibly correct but that Dr. Mordick ignores Claimant's symptoms. (Larsen depo, pp. 26:2-11 and 38:3 to 39:6).

43. With regard to Claimant's symptoms, Dr. Larsen acknowledged that, at the time of his deposition, he was unaware of the DRAM testing (psychological testing) that Dr. Leggett completed due to his concerns of Claimant's diffused pain complaints. After reviewing Dr. Leggett's records, he advised it did not change his recommendations but instead added another layer to treatment. (Larsen depo at 39:7 to 41:2 and 42:4-22).

44. On Friday, January 26, 2018 at 2:26 p.m., the following email was sent to Respondent's Attorney by a paralegal for Claimant:

> Hi Greg,
>
> Did you receive the IME report from Dr. McCranie, and if so can you please provide?
>
> Thank you,

45. At 3:00 p.m. the same day, Respondent's Attorney Greg Plank sent the following response:

> Here it is.

(Ex. F) (The ALJ assumes with the IME report attached).

46. Beyond Exhibit F, there were no documents, nor pertinent testimony offered on this disclosure/penalty issue.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the LAJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

D. In this case, the ALJ finds Claimant to be sincere and credible in her courtroom testimony. Further, the ALJ finds that Claimant has, to the best of her abilities at all times pertinent, provided accurate descriptions of her ongoing symptoms to her medical providers in a sincere effort to get better. The ALJ is not persuaded by Dr. Mordick's opinion that a repeat psychological study should be performed, based on Dr. Leggett's simple observation that Claimant had rather diffuse pain complaints, and that her DRAM testing showed the presence of distressed/depressed symptoms. Being in disabling pain is distressing and depressing. Beyond assuring Claimant's overall well-being, her psychological condition was not of concern to her medical providers in forming an accurate diagnosis and treatment plan.

E. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). As found here, the opinions of Dr. Larsen are more persuasive than the contrary opinions of Dr. Mordick.

F. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Medical Benefits, Generally

G. Section 8-42-101(1), C.R.S., requires the employer to provide medical benefits to cure or relieve the effects of the industrial injury. See *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Consequently, compensability of the requested medical treatment is dependent on proof that the treatment is reasonably necessary to cure and relieve the effects of the industrial injury. See *Snyder v. Industrial Claim Appeals Office*, supra; *Westendorf v. Jackson & Jackson*, W.C. No. 4-598-193 (October 25, 2005). Because the claimant bears the burden to prove her entitlement to benefits, it is the claimant's burden to prove by a preponderance of evidence that the requested treatment is reasonably necessary to cure and relieve the effects of the industrial injury. *Madden v. Mountain West Fabricators*, 977 P.2d 861 (Colo. 1999); *Younger v. City and County of Denver*, 810 P.2d 647 (Colo. 1991). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The question whether medical treatment is reasonable and necessary to cure and relieve the effects of the injury is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Carpal Tunnel Surgery

H. Based upon the entirety of the record, the ALJ, finds, by a preponderance of the evidence, that the proposed Carpal Tunnel surgery as proposed by Dr. Larsen, is reasonable, necessary, and related to Claimant's original work injury. Even Respondents' IME physician largely concurs. The ALJ is not persuaded by Respondents that this surgery should be deferred, based upon Dr. McCranie's notation that the 2015 and 2017 EMG/NCV studies should be compared to see if Claimant's condition had markedly improved. Nor is the ALJ persuaded by Dr. Mordick's opinion that the lack of objective comparison between these studies renders Dr. Larsen's conclusions insufficiently persuasive. Dr. Larsen has considerable experience with Claimant, and has achieved good, if not permanent, results in treating Claimant since 2015. He has reasonably relied upon her reported symptoms, in addition to the objective data. The ALJ finds Dr. Larsen's conclusions more persuasive than Dr. Mordick's.

Cubital Tunnel Syndrome/Elbow Debridement and Repair

I. Based again on the entirety of the record, the ALJ finds, by a preponderance of the evidence, that these additional procedures, as recommended by Dr. Larson, are reasonable, necessary, and related to Claimant's underlying work injury. The ALJ is more persuaded by Dr. Larsen's analysis that a patient can be symptomatic in the absence of compelling objective data:

> *Well, I think it's a muddy circumstance, because we split cubital syndrome and ulnar neuritis apart a little bit. So ulnar neuritis is irritation or aggravation of the ulnar nerve at the elbow that's painful and produces*

symptoms, but electrodiagnostically looks pretty normal, right? The nerve can be bad but still conduct its signal appropriately. Cubital tunnel syndrome is really a manifestation of ulnar neuropathy. The nerve is unhealthy and does not conduct well. I started out earlier saying that electrodiagnostic tests have a subjective component to them. They're not purely objective tests, and for that reason, people can have subtle ulnar nerve issues that just don't show up very well electrodiagnostically. I felt like her exam was fairly consistent across my visits with her. He's [Dr. Mordick] made an opinion in here that she's been variable in her presentation, and that doesn't match with what I've seen.

Reasonable minds might differ on the wisdom of the elbow debridement and repair, but the ALJ is sufficiently persuaded that Claimant should have the opportunity to diminish her work related pain in this fashion. It is reasonable, necessary, and related to her work injury.

Penalties

J. C.R.S. §8-43-304(1) provides that;

> Any employer or insurer, or any officer or agent of either, or any employee, or any other person who violates articles 40 to 47 of this title 8, or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or panel, for which no penalty has been specifically provided, or fails, neglects, or refuses to obey any lawful order made by the director or panel or any judgment or decree made by any court as provided by the articles shall be subject to such order being reduced to judgment by a court of competent jurisdiction and shall also be punished by a fine of not more than one thousand dollars per day for each offense, to be apportioned, in whole or part, at the discretion of the director or administrative law judge, between the aggrieved party and the Colorado uninsured employer fund created in section 8-67-105; except that the amount apportioned to the aggrieved party shall be a minimum of twenty-five percent of any penalty assessed

K. The term "order" as used in this penalty provision includes a "rule." See §8-40-201(15), C.R.S. 2009; *Holliday v. Bestop, Inc.,* 23 P.3d 700 (Colo. 2001); *Spracklin v. Industrial Claim Appeals Office*, 66 P.3d 176 (Colo. App. 2002); *Pioneers Hospital of Rio Blanco County v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005). Section 8-40-201(15) defines an "order" as "any decision, finding and award, direction, rule, regulation, or other determination arrived at by the director or an administrative law judge." In *Rio Blanco County*, supra, the court of appeals affirmed the imposition of a penalty as a failure to obey an "order" within the meaning of §8-43-304(1), for failure to comply with then W.C.R.P. VIII which at the time provided workers' compensation adjudication rules. To summarize, violation of a Workers' Compensation Rule of Procedure is tantamount to violation of an order.

L. C.R.S § 8-43-304(1) identifies four categories of conduct and authorizes the imposition of penalties when an employer or insurer: (1) violates any provision of the Act; (2) does any act prohibited by the Act; (3) fails or refuses to perform any duty lawfully mandated within the time prescribed by the director or Panel; or (4) fails, neglects, or refuses to obey any lawful order of the director or Panel. *Pena v. Industrial Claim Appeals Office*, 117 P.3d 84 (Colo. App. 2005). The imposition of penalties under § 8-43-304(1), supra, requires a two-step analysis. The ALJ must first determine whether the disputed conduct constituted a violation of a rule or order. *Allison v. Industrial Claim Appeals Office*, 916 P.2d 623 (Colo. App. 1995). If the ALJ finds a violation, the ALJ must determine whether the employer's actions which resulted in the violation were objectively reasonable. *See City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003). The reasonableness of the employer's action depends on whether it is predicated in a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003).

M. Three criteria are to be considered when fashioning a constitutionally appropriate level for a fine. These include the following: (1) the degree of reprehensibility of the defendant's misconduct; (2) the disparity between the harm or potential harm suffered and the fine to be assessed; and (3) the difference between the fine imposed and the penalties authorized or imposed in comparable cases. *Associated Business Products v. Industrial Claim Appeals Office*, 126 P.3d at 326.

N. The imposition of a penalty under §8-43-304(1) is governed by an objective standard of negligence. As such, it is measured by the reasonableness of the insurer's action and does not require knowledge that the conduct was unreasonable or in bad faith. Thus, penalties may be assessed against an insurer neglecting to take action that a reasonable insurer would take to comply with either a lawful order or a provision of the Workers' Compensation Act. *Pueblo School Dist. v. Toth*, 924 P.2d 1094 (Colo. App. 1996). §8-43-304(1) does not require Claimant to demonstrate she has suffered specific "harm" as a result of Respondent's conduct.

O. C.R.S. § 8-43-304(4) provides that if the alleged violator cures the violation within a twenty day period, and the party seeking such a penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed. *Dennis Walker v. Mesa Vista of Boulder,* W.C. 4-751-936 (May 13, 2009) and *Matthys v. City of Colorado Springs,* W.C. No. 4-662-890 (April 2, 2007).

P. WCRP 5-4(A)(5) requires "[a] copy of every medical report not filed with the Division shall be exchanged with all parties within fifteen (15) business days of receipt."

Q. Insurer received Dr. McCranie's report on December 14, 2017. According to WCRP 5-4(A)(5), Insurer should have provided the report on January 8, 2018 (excluding weekends and the Christmas and New Year Day holidays).

R. This report was provided on January 26, 2018, by Respondents' counsel and within an hour of Claimant's counsel request for status of the report. Therefore, Respondents cured the violation in 18 days. Since Respondent's cured this violation within 20 days, Claimant must now show by clear and convincing evidence that Respondents knew or reasonably should have known that they were in violation of WCRP5-4(A)(5). The ALJ finds, by clear and convincing evidence, that Respondents *reasonably should have known* that they were in violation of said rule.

S. Nothing in the record suggests this was anything more than an honest administrative oversight by Respondents. All the parties knew full well that an IME had occurred; there was no serious consideration that this report could somehow be concealed. The issue was cured as soon as the issue was highlighted, in good faith, by Claimant. There is nothing before the ALJ suggesting that this is part of any pattern of noncompliance by Respondents.

T. Further, no showing of harm or prejudice to Claimant has been alleged or shown. While not a necessary component to establishing the prima facie elements for imposition of penalties, this plainly mitigates the penalty to be imposed. An Application for Hearing had yet to be filed when this all occurred.

U. There are no aggravating circumstances present. As noted above, the mitigating evidence as noted above substantially outweighs the nonexistent aggravation.

The ALJ finds that the penalty to be imposed should be calculated at $10.00 per day, times 18 days, for a total of $180.00. Although no harm or prejudice to Claimant has resulted, the ALJ apportions 50% of this penalty to Claimant, and 50% to Colorado Uninsured Employer Fund.

ORDER

It is therefore Ordered that:

1. Respondents shall authorize and pay for the surgical procedures for which Dr. Larson requested authorization on January 3, 2018.

2. Respondents shall penalties of $10.00 per day, for a period of 18 days, for a total of $180.00. Of this amount $90.00 shall be payable to Claimant, and $90.00 shall be payable to the Colorado Uninsured Employer Fund.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 14, 2018

/s/ William G. Edie

William G. Edie

2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

The issues set for determination included:

- Did Claimant suffer a compensable industrial injury on July 30, 2017, while working for Employer?
- If Claimant suffered a compensable injury, is he entitled to medical benefits to cure and relieve the effects of the injury?

FINDINGS OF FACT

1. Claimant was employed as a deputy for Employer. He has held that position for seventeen years and works at the detention center.

2. Claimant's medical history was significant in that he previously underwent surgery on his right knee in 2005. Claimant also suffered injuries to his right knee on September 12, 2012 and May 20, 2014. These injuries were industrial injuries for which Claimant received treatment.

3. On October 1, 2012, Claimant underwent an MRI of his right knee and the films were read by Melissa Simms, M.D. Dr. Simms' impression was: orthopedic hardware in the proximal tibia; mild blunting of the free edge of the anterior horn and body segment of the medial meniscus; focal full-thickness cartilage loss along the central to posterior weight bearing surface of the medial femoral condyle; focal full-thickness chondral loss along the anterior aspect of the lateral femoral condyle and high-grade partial thickness chondral degeneration along the posterior weight bearing surface of the lateral femoral condyle; focal four-thickness cartilage loss along the median patellar eminence and central aspect of the lateral trochlea; small knee joint effusion and mild edema of the lateral soleus muscle; intact lateral meniscus, cruciate and collateral ligaments.

4. Claimant underwent an MRI of his right knee on July 1, 2012. The films were read by Samuel Fuller, M.D. whose impression was: abnormal signal and pathology of the body and adjacent segment of the posterior horn of the medial meniscus; mild to moderate chondral degenerative changes in the medial and patellofemoral compartments; and small joint effusion.

5. Claimant underwent a meniscal excision surgery on his right knee, which was performed by David Beard, M.D. on August 4, 2014.

6. On September 22, 2014, Claimant was evaluated by Hope Edmonds, M.D. at Workwell. On this date, Dr. Edmonds noted: Patient returns doing very well. He

had a partial meniscectomy of both medial and lateral ligaments, as well as chondroplasty performed by Dr. Beard on August 4, 2014. He was released to ramp up to normal activity by Dr. Beard with prn follow up only. Dr. Beard indicated Claimant was performing all ADLs and there was no swelling and or pain in the right knee.

7. Dr. Edmonds diagnosed Claimant with a medial collateral ligament sprain and a medial meniscus tear. Dr. Edmonds placed Claimant at MMI and assigned a 31% lower extremity rating. Claimant was released to full duty. Dr. Edmonds did not recommend further medical treatment for Claimant's right knee.

8. Claimant returned to Dr. Beard on September 1, 2015, as he was experiencing bilateral knee pain, greater on the right side of the left. On examination, Dr. Beard found patellofemoral and tibiafemoral crepitus bilaterally. There was joint line tenderness in both the medial and lateral aspects of the right and left knees, but negative McMurray, Lachman, anterior and posterior drawer tests. X-rays showed evidence of prior tibial tubercle osteotomies, with screws in the proximal tibia. Degenerative changes were noted affecting the medial compartment of the right knee and there was evidence of patellofemoral arthrosis. Dr. Beard's assessment was: osteoarthritis, bilateral knees. Dr. Beard noted Claimant was trying to defer total joint arthroplasty as long as possible. He administered an intraarticular steroid injection in both knees at that appointment.

9. On May 6, 2016, Claimant was evaluated by Dale Martin, M.D. with complaints of increasing pain in both knees, along with popping, difficulty squatting, kneeling, crawling and climbing stairs in both knees. Dr. Martin noted the x-rays of the right knee showed advanced patellofemoral disease, along with medial compartment narrowing. Dr. Martin's impression was: bilateral knee osteoarthritis, worse right than left. Dr. Martin administered injections in both knees.

10. Claimant was evaluated by Bruce Cazden, M.D. on April 20, 2017. The chief complaint was right Achilles tendinitis, which Claimant had developed most recently.[1] No significant tenderness was noted in the right knee, nor was there effusion present. Claimant had full extension and flexion was approximately 125°. Dr. Cazden's diagnoses were: sprain/strains-medial collateral ligament of knee; tear of medial cartilage or meniscus of knee; Achilles tendinitis-right leg. Dr. Cazden stated he did not feel it was medically probable that this was related to the previous right knee work injury on May 20, 2014. Claimant was given a prescription for Naprosyn and physical therapy ("PT ") was recommended.

11. When Claimant returned to Dr. Cazden on May 12, 2017, it was noted that the treatment was covered under the previous knee surgery claim. The focus of this appointment was Claimant's right Achilles tendinitis. Claimant was working full duty and

[1] The date of injury listed was May 20, 2014 and the description of the accident was "responding to an emergency and knee popped". This related to the prior workers' compensation claim.

tolerating that well. Claimant had started physical therapy and was taking ibuprofen. Dr. Cazden continued the PT program and started a trial of meloxicam.

12. Claimant had objective evidence of degenerative changes in his right knee prior to July 2017.

13. Claimant testified he did not miss time from work from September 22, 2014[2] to July 30, 2017 due to the condition of his right knee.

14. Claimant testified he was working at the intake area on July 30, 2017 and was performing a ”status”, which involved walking the area every 15 minutes. There were bedrolls stacked up and he was carrying a bedroll which weighed 7 to 10 pounds. The bedroll bumped against his leg and his right knee buckled. When he attempted to catch himself, his knee popped and felt immediate pain.[3]

15. Claimant stated he called his supervisor, Sgt. Harteker and told him that his knee had popped. The pain continued and Claimant could not continue working. He was directed to medical treatment at Workwell.

16. Claimant was a credible witness.

17. Sgt. John Harteker testified on behalf of Employer. He stated Claimant reported that he bumped his knee with a bedroll and it was hurting. Sgt. Harteker stated Claimant had approached them approximately one month (June 2017) before the incident and said he was having some knee pain, requesting an accommodation where he would not have to walk up so many stairs or do as many status checks. Employer accommodated Claimant as much as it could. On cross-examination, Sgt. Harteker admitted Claimant looked like he was limping somewhat in the video on the day of the incident.[4] Sgt. Harteker did not question Claimant’s honesty or trustworthiness.

18. On July 31, 2017, Claimant was evaluated by Robert Dupper, M.D. at Workwell. On examination, Dr. Dupper found no laxity in the ACL, PCL, MCL and LCL. Claimant’s gait was antalgic, but no effusion was found. Tenderness was present over the medial joint line and swelling present in the knee. Dr. Dupper’s diagnosis was: derangement of unspecified meniscus due to old tear or injury, right; pain in right knee; unspecified abnormalities of gait and mobility. Dr. Dupper opined the cause of this problem was related to work activities and issued work restrictions. Dr. Dupper completed a WCM-164 which indicated that the objective findings of the complaints were consistent with history and/or work-condition.[5] Claimant’s restrictions included use

[2] Date of MMI for 2014 injury.

[3] Hearing transcript (“Hrg. Tr.”) p. 24:8-15.

[4] Hrg. Tr. p. 48:18-24.

[5] Respondent stipulated to this fact.

of crutches, sedentary duty, no carrying/lifting. Dr. Dupper did not recommend a specific course of treatment.

19. Claimant returned to Dr. Dupper on August 2, 2017, as he was having trouble sleeping due to pain. Tenderness was present over the medial joint line and active flexion measured 90°. This was an objective finding. Limitations in extension were noted, as well as mild swelling. The diagnoses were the same as the July 31, 2017 evaluation. Claimant's work restrictions were extended.

20. Dr. Dupper did not evaluate Claimant after August 2, 2017 and did not place him at MMI.

21. Claimant testified he has continued to work and has been on light duty since August 2, 2017.

22. An Employer's First Report of Injury was prepared on August 7, 2017, which specified Claimant was injured at 10:45 a.m. John Harteker was listed as the Employer representative notified, which comported with Claimant's testimony. The injury was listed as a right knee strain.

23. On August 22, 2017, Claimant underwent an MRI of his right knee. The films were read by Stanley Weinstein, M.D., whose impression was: diminutive body and posterior horn of the medial meniscus, which may be secondary to partial meniscectomy, however, recommend a correlation with operative history; small joint effusion; advancing chondromalacia at the lateral patellofemoral compartment.

24. On December 29, 2017, William Ciccone II, M.D. performed an independent medical evaluation, at Respondent's request. Claimant reported his current symptoms were numbness, throbbing, stabbing, giving out and tingling in the right knee. On examination, Dr. Ciccone noted normal alignment of the right knee, with range of motion ("ROM") of approximately 120° of flexion -0° of full extension. There was no effusion and no pain along the patellofemoral joint or along the lateral joint line. Pain was noted along the medial joint line, with negative McMurray's sign and medial-sided pain was present with circumduction maneuvers. Claimant was stable in varus, valgus and the cruciate ligaments were intact.

25. Dr. Ciccone opined Claimant did not suffer a work injury to the right knee, as it was unlikely that being struck by a seven-pound bedroll would cause a significant damage to the knee. This was confirmed by the August 2017 MRI which revealed no injury and no structural damage. Dr. Ciccone did not believe this event exacerbated or accelerated any already occurring degenerative changes in Claimant's knee, nor did he suffer an injury to the peroneal nerve. Dr. Ciccone stated Claimant had knee pain unrelated to the work injury, which could be the result of degenerative changes in the right knee. He did not believe Claimant required additional treatment or diagnostic testing and concluded Claimant was at MMI. The ALJ found the opinions expressed by Dr. Ciccone were credible. The ALJ inferred from Dr. Ciccone's conclusion that

Claimant suffered a temporary aggravation of the underlying osteoarthritis in his right knee and was at MMI as of December 29, 2017.

26. Dr. Ciccone testified as an expert in Orthopedic Surgery at his deposition taken on January 10, 2018. He is level II accredited pursuant to the WCRP. Dr. Ciccone stated the bedroll did not generate much force when it struck Claimant's right knee and to have a significant injury, the joint has to be hit with force. Dr. Ciccone said Claimant did not suffer an injury on July 30, 2017, which was borne out in the MRI findings on August 22, 2017. There was no evidence of an acute injury, including a contusion or soft tissue swelling. Dr. Ciccone noted arthritic joints tend to have small effusions, as found in the MRI done in July 2014.

27. Dr. Ciccone testified there was no diagnosis caused by the incident and opined this did not aggravate Claimant's pre-existing condition.[6] Claimant had advancing chondromalacia of the lateral patellafemoral compartment, which showed the progressive nature of arthritic changes in the knee that were unrelated to work activities. Progressive degenerative changes in knee tend to get worse.[7] Dr. Ciccone did not believe the incident at work exacerbated ongoing degenerative changes within Claimant's right knee. Dr. Ciccone agreed Claimant reported pain in the knee when he examined him. He also had less than full range of motion on flexion (120°). The ALJ noted this was an objective finding with regard to the right knee.

28. Dr. Dupper testified as an expert in Emergency Medicine at his deposition on March 7, 2018. He is Level II accredited pursuant to the WCRP. Dr. Dupper testified that at the initial evaluation, Claimant was unable to bear weight on his leg and was using crutches for ambulation. He observed swelling in the knee.[8] Dr. Dupper opined the reason he evaluated Claimant was a direct result of the July 30, 2017. Dr. Dupper stated there was objective evidence of injury (including the small joint effusion), which was caused by the July 30, 2017 work incident. Dr. Dupper's testimony supported the conclusion that the incident on July 30, 2017 was compensable.

29. On cross-examination, Dr. Dupper testified that the chondromalacia seen in the MRI was a degenerative finding. He believed the small joint effusion was more consistent with an acute injury, but did not dispute Dr. Ciccone's opinion that this could be consistent with degenerative changes. Dr. Dupper agreed with Dr. Ciccone's opinion that there was no objective evidence of structural damage from the July 30, 2017 work event. He also agreed with Dr. Ciccone there wasn't any aggravation or acceleration of a pre-existing pathology by the July 30, 2017 incident. He stated that in his initial report in the medical causation section, the "cause" of the problem referred to Claimant's increased pain.

[6] Ciccone deposition, pp. 8:22-9:3; 11;16-20.

[7] Ciccone deposition: p. 21:7-11.

[8] Dupper deposition, p. 8:8-9.

30. Claimant proved he suffered an aggravation of his right knee condition on July 30, 2018 when it was struck by a bedroll. This occurred while he was performing his job duties for Employer.

31. Claimant proved he was entitled to receive medical benefits to cure and relieve the effects of his industrial injury. Dr. Dupper and Workwell are authorized to provide said treatment.

32. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Compensability-Right Knee

Claimant was required to prove by a preponderance of the evidence that, at the time of the injury, he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. §§ 8-41-301(1)(b) & (c), C.R.S. (2016). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* (Colo. App. 1990).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995). Claimant must establish a nexus between the work activities and the claimed disability. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The question of whether Claimant met the burden of proof is one of fact for determination by the ALJ. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The question in the case at bar was whether the July 30, 2017 incident aggravated or accelerated the underlying condition of Claimant's right knee. In particular, did the increase in Claimant's symptoms, his need for medical treatment and work restrictions rise to the level of a compensable injury, where there was no evidence of structural damage to the right knee. Claimant argued that the evidence showed a compensable injury occurred and there was evidence of disability, as seen in the work restrictions. Respondent averred Claimant did not suffer a compensable injury and relied on the conclusions of Dr. Ciccone, who concluded there was no structural damage to the right knee. Respondent asserted, even if there was a temporary aggravation, Claimant returned to baseline and required no further treatment. On balance, the ALJ determined this was a compensable injury, albeit a minor one, which caused Claimant to experience symptoms and require treatment.

As a starting point, the medical evidence showed Claimant had prior injuries and degenerative changes present in the right knee. (Findings of Fact 2-9). Claimant required medical treatment for his right knee and, in fact, he underwent two surgeries on his right knee before July 2017. He also had pain complaints in his right knee for which he required treatment in 2015 and 2016. (Findings of Fact 10-11). Claimant reported he was having knee symptoms within one month of the injury. (Finding of Fact 17).

The ALJ concluded the incident occurred, as alleged by Claimant, who was a credible witness. Claimant was performing a "status" and was carrying a bedroll at the facility when he struck his right knee. (Finding of Fact 14). Respondent did not dispute the fact that the incident in which Claimant's right knee was struck by the bedroll occurred. Indeed, Claimant's testimony was corroborated by Sgt. Harteker. Claimant reported the injury immediately and was unable to complete his shift. (Finding of Fact 17). Accordingly, Claimant's injury arose out of and was in the course of his employment activities. The ALJ determined that the July 30, 2017 work incident caused an increase in pain in Claimant's right knee.

In this regard, the ALJ found the incident on July 30, 2017, caused symptoms and resulted in the ATP issuing work restrictions. Dr. Dupper documented restrictions in Claimant's range of motion in the right knee. As found, Dr. Dupper issued work restrictions as a result of the injury. (Findings of Fact 18-19). Claimant testified that he continued to work, but still had restrictions. (Finding of Fact 21).

As determined in Findings of Fact 23-26, Dr. Ciccone opined there was no structural damage to the Claimant's right knee as a result of the July 30, 2017 work injury. Dr. Ciccone articulated that this incident at work did not aggravate or accelerate the condition of Claimant's right knee and the ALJ credited these opinions. Dr. Dupper essentially agreed with the opinions concerning the pre-existing degenerative changes and the lack of structural damage. On cross-examination, Dr. Dupper agreed the work incident did not aggravate or accelerate the condition of Claimant's knee. However, the ALJ determined these opinions do not preclude the conclusion that the incident on July 30, 2017, however minor, caused a temporary aggravation of Claimant's right knee which required treatment.

Based on the totality of the evidence before the Court, the ALJ concluded Claimant satisfied his burden of proof to show that he suffered a compensable injury. First, the ALJ found there was no dispute the incident occurred and Claimant experienced symptoms as a result of the July 30, 2017 incident. Sgt. Harteker's testimony supported the conclusion that the incident, as described by Claimant, occurred and showed Claimant limping afterwards. This led the ALJ to conclude the injury was compensable.

Second, this incident required Claimant to seek treatment and when evaluated by Dr. Dupper, swelling was noted and work restrictions were issued. Claimant had not required treatment for more than a year before the injury (Finding of Fact 9) and had not missed time from work for almost three years (Finding of Fact 13), even though he subjectively reported pain one month prior to July 30, 2017. Thus, while the medical records revealed degenerative changes right, which caused periodic symptoms, this incident standing alone required medical treatment and restricted Claimant's ability to work. Under these circumstances, where the incident caused an underlying condition to become symptomatic and Claimant required treatment, it is compensable. *Duncan v. Industrial Claim Appeals Office*, *supra*, 107 P.3d at 1001.

The ALJ considered Respondent's argument that Claimant suffered a temporary aggravation of his underlying pre-existing condition, but was at MMI as of December 29, 2017 evaluation. A similar argument was put forth by Respondents in *Davis v. Little Pub Holdings, LLC*, W.C. No. 4-947-977-01 (ICAO June 17, 2015). Claimant alleged she suffered an injury to her low back while lifting an empty beer keg. Claimant suffered from fibromyalgia and a chronic pain syndrome, along with Sjogrens syndrome and other rheumatologic chronic pain symptoms. Respondents contested the compensability of the injury and referred Claimant for an independent medical evaluation with Allison Fall, M.D. The IME physician opined Claimant's presentation was consistent with her prior injury history of worsening back pain and stiffness and there was no new specific work-related injury or aggravation of the pre-existing condition. Dr. Fall determined Claimant's low back systems constituted the natural progression of her pre-existing condition.

After the hearing, the ALJ determined it was more probable than not Claimant suffered a compensable lower back injury. This entitled her to medical benefits, along with temporary disability benefits. However, the ALJ also concluded that the incident constituted a temporary aggravation of a chronic, pre-existing condition. This temporary aggravation was resolved by March 19, 2014 and accordingly Respondents were not liable for medical benefits or temporary disability benefits after that time.

The Industrial Claim Appeals Office set aside the ALJ's Order and concluded the ALJ erred in terminating TTD and medical benefits. The Panel determined the ALLJ lacked authority to determine MMI until there had been a medical determination of MMI by an ATP or a DIME. [Citing §8-40-201 (11.5) C.R.S and §8-42-107(8)(b)(I)(II). In determining that Claimant's temporary aggravation of her pre-existing condition had returned to baseline, the Panel found the ALJ implicitly determined MMI. However, there had been no medical determination of MMI by an ATP or a DIME. Accordingly, wage and medical benefits could not be terminated under these circumstances. *Davis v. Little Pub Holdings, LLC, supra,* at pp. 7-8. The case was remanded for further findings and a new Order on TTD benefits and medical benefits.

In the case at bar, there was evidence in the form of Dr. Dupper's treatment records, Claimant's testimony and the testimony of Sgt. Harteker which led the ALJ to conclude Claimant suffered a compensable aggravation of his right knee condition. While it may ultimately turn out this was a temporary aggravation of Claimant's right injury knee, that is a determination to be made by Dr. Dupper as an ATP.

Given the finding on the issue of compensability, the ALJ concluded Claimant proved he was entitled to medical benefits to cure and relieve the effects of his industrial injury. As the Panel noted in *Davis v. Little Pub Holdings, LLC,* this determination does not preclude Respondent from challenging the reasonableness, relatedness, and the necessity for any particular treatment.

ORDER

It is therefore ordered:

1. Claimant met his burden by a preponderance of the evidence to show he suffered a compensable injury to his right knee on July 30, 2017.

2. Respondent shall pay medical benefits to cure and relieve the effects of the aggravation of Claimant's right knee condition, including Dr. Dupper and Workwell.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail,

as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

- Whether Respondents have proven by a preponderance of the evidence that Claimant's injuries from November 28, 2014 are not the result of a compensable work-related assault.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. On November 28, 2014, Claimant was assaulted outside Employer's premises near the back of the building. Claimant reported that he was performing his job duty of taking out garbage at the time and that he did not know his assailants.

2. Respondents admitted the claim and paid benefits based on Claimant's representations.

3. In this action, Respondents seek to withdraw their admission alleging that Claimant's assault was personal in nature and not work related.

4. Video surveillance taken the night of the assault from inside Employer's location shows three men enter the restaurant. All three sat at a table across from the cash register and looked into the back, by the kitchen, where Claimant was working. Within moments, Claimant approached the register and leaned toward the table where the three men were sitting. At that point, the three men immediately got up and walked out of the restaurant. Claimant then left the restaurant a few minutes later.

5. Claimant repeatedly reported that he was taking out Employer's trash when assailants assaulted him.

- At the hospital on November 28, 2014, Claimant reported to Investigator Robinson of the Arapahoe Sheriff's Office that he "was taking the trash out to the dumpsters behind the business."

- On December 2, 2014, Claimant reported to physicians at the Medical Center of Aurora that on November 28, 2014 "he went to take the trash out of the restaurant when 4 other males assaulted him."

- On December 4, 2014, Claimant reported to his counselor Nick Neujahr at Aurora Mental Health Center, that "during an evening shift at work last Friday 11/28/14, while he was taking out the trash, [Claimant] was attacked by four men who assaulted him severely."

- Also on December 4, 2014, Claimant told Investigator Johnston that he remembered taking the trash out and that he believed it was the four men in the store earlier that had attacked him.

- On December 11, 2014, Claimant's medical provider noted that Claimant stated he "continues to struggle with physical and interpersonal complications as the result of being attacked while taking the trash out at work two weeks ago."

- On December 15, 2014, Claimant reported to the authorized treating provider, OccMed Colorado, that "he was taking trash out from his workplace at [Employer's location] when he was apparently assaulted by four different individuals…"

- At the December 20, 2017 hearing, Claimant testified that he told the Investigator that he was taking out the trash.

6. Claimant testified inconsistently at hearing about taking out the trash.

- Claimant testified that his manager, Ben Reiners, told him to take the trash out.

- At another point, Claimant testified that there was "a mountain of trash in the back" and he told Mr. Reiners he was going to take out the trash.

- Claimant testified that Mr. Reiners usually "took out the trash with me, but for some reason he didn't that night."

- At another point, Claimant testified, "Ben never took out the trash with me."

- Mr. Reiners testified that he did not send Claimant to take out the trash or to clean up the trash area on November 28, 2014. He also testified that Claimant did not tell him he was going to the trash area. Mr. Reiners testified that he went to the back of the restaurant and noticed there were many dirty dishes. He asked the other worker if he had seen Claimant. The co-worker had not, so Mr. Reiners started looking around. He testified he saw a "commotion" at [a neighboring establishment] and asked an officer if Claimant was involved.

7. Videotape of Claimant leaving the restaurant establishes that Claimant did not take trash with him. The video from inside the restaurant on November 28, 2014 shows Claimant leaving the restaurant with empty hands. Moreover, Claimant walked within inches of a full trash can on the way out of the restaurant without removing the bag from the container to bring with him.

8. Investigator Johnston testified that she reviewed video of the assailants running away after the assault and identified them as the same three men who appeared in the restaurant video.

9. The ALJ finds that video evidence directly contradicts Claimant's reports to his treatment providers and Arapahoe County Sheriff's investigators that he was taking trash out at the time of the assault.

10. After Investigator Johnston directly confronted Claimant about having nothing in his hands when he left the restaurant, Claimant changed his story. He then claimed that he went out either to smoke a cigarette, to break down boxes, or to clean up around the trashcans.

11. Mr. Reiners testified that the employee smoking area was between Employer's restaurant and at [a neighboring establishment], not where the assault occurred. During the hearing, Mr. Reiners identified the smoking area on Respondents' Exhibit H. Mr. Reiners also identified the garbage area where the assault took place. The ALJ finds that the dumpster is not near the employee smoking area.

12. Claimant gave contradictory reports about whether he knew the assailants and whether they took money from him.

- An ambulance transported Claimant to the hospital. At the hospital, on November 28, 2014, Investigator Robinson interviewed Claimant. Claimant reported:
    - He saw his assailants loitering behind the store earlier in his shift;
    - The assailants might have been in the restaurant before;
    - He was unsure whether anything had been taken from him;
    - He had been assaulted one week earlier while working;[1]
    - "Every time he is attacked, it is always by a black person."
    - Investigator Robinson noted that Claimant had $260 in new twenty-dollar bills in his wallet and asked whether he was missing any money. Claimant answered that he did not know.
- On December 3, 2014, when Investigator Johnston first spoke with Claimant, Claimant reported that he "really doesn't recall what happened other than [his assailants] trying to kill him." He also told the investigator that he "didn't really know if that was true, because that is what he had been told." Claimant's mother told the investigator she was nervous that whoever assaulted Claimant was someone Claimant knew.

[1] Claimant's mother told Investigator Robinson that no such event had occurred.

- On December 4, 2014, Claimant told Investigator Johnston that right before the assault, "four guys came into the [restaurant] and were "mean mugging" him.[2]

13. Having reviewed the videotapes, the ALJ finds that the three assault suspects appear to be looking specifically for Claimant.

14. Prior to the assault, Claimant had been treating with Nick Neujahr, his psychological therapist at the Aurora Mental Health Center for psychotherapy related to anxiety, paranoia, and depression. On December 4, 2014, –one or two hours before he first met with Investigator Johnston –Claimant attended an appointment with Mr. Neujahr. Mr. Neujahr's contemporaneous notes record Claimant stating that while he was taking out the trash at work, four men attacked and assaulted him. Claimant told Mr. Neujiahr that he vaguely knew the four men from approximately two years before when he assisted them in purchasing marijuana with his medical marijuana card.

- Mr. Neujahr confirmed at hearing that his report from December 4, 2014 was an accurate account of Claimant's statements made to him on December 4, 2014. As Claimant's counselor, Mr. Neujahr opined that Claimant did not appear to have any recall issues at the time he provided these statements nor did he believe Claimant was being deceptive.

- Mr. Neujahr testified that during their December 4, 2014 session, Claimant also stated that he suspected they attacked him because of his association with a friend of his who was in jail. Mr. Neujahr testified that Claimant's statements to him regarding the assailants never changed.

- Mr. Neujahr also testified that Claimant stated that he thought the assailants were rivals of a gang that he had been involved with years before. Claimant, however, testified that he had "never been in a gang in his whole life," and that he never told Mr. Neujahr that he had been.

15. The ALJ finds Mr. Neujahr credible and persuasive. The ALJ finds that, Claimant likely told Mr. Neujahr, as Claimant's therapist, things that he might not have told others. The ALJ finds that Claimant admitted to Mr. Neujahr that he knew his assailants and that they attacked him for personal reasons unrelated to work.

16. Claimant has a history of using and selling illicit drugs. Medical records document amphetamine abuse, cannabis abuse, heroin addiction, and "other substance-induced psychotic disorder with delusions." In 2006, Claimant was hospitalized after a suicide attempt. He reported to his provider that his main problem was "nightly dreams about his life as a drug dealer and user." His provider described him as having "severe and chronic drug addiction problems," and noted that Claimant had sold his bottle of

[2] The Online Slang Dictionary defines "mugging" when used as a verb, to mean, "To stare at a person in an aggressive way."

Adderall when last prescribed. The provider also noted that Claimant appeared to "like the rush" he got selling meth and buying alcohol for his underage friends.

17. Claimant testified that at the time of the assault he was receiving Methadone for a heroin addiction and was using recreational marijuana, which medical records support.

18. On December 2, 2014, Claimant presented at The Medical Center of Aurora. He reported that his "home medications" included oxycodone and Methadone. Claimant "is very clear about not wanting to stay in the hospital. He states he wants to go home and smoke a cigarette and have a blunt.[3]"

19. Claimant testified he had sold drugs in the past, but denied selling anything other than marijuana. Claimant's testimony was contrary to medical records documenting him selling his prescription Adderall and "meth."

20. Claimant admitted on cross-examination that he "jacked"[4] some people when he was selling drugs. He testified that one of them later confronted him, they fought, and he broke the person's nose.

21. Benjamin Reiners, general manager at the restaurant where Claimant was working, testified he had concerns that Claimant was using drugs at work. He testified that shortly before the assault, he observed Claimant in the back of the restaurant with a piece of foil inhaling something through a straw. Mr. Reiners testified he confronted Claimant who said, "It's not crack." Mr. Reiners told Claimant he could be fired for using drugs at work and that Claimant could not do that on work property.

22. Claimant denied that the incident of inhaling a substance through a straw occurred. He accused Mr. Reiners of making up the incident. He also accused a co-employee of making stories up about his drug use and testified the co-employee "was suspended for defamation of character." Claimant offered no persuasive evidence to support his version of the events.

23. Investigator Johnston testified that when she told Claimant that the video showed him leaving the restaurant without trash, Claimant volunteered, without any questioning on the subject, "This was not a drug deal." Her investigative report notes Claimant told her: "He knows I think this is a drug deal gone badly because of his past." "ALLEN brought this up on his own at no time did I ask him if this was a drug deal."

24. Medical providers have diagnosed Claimant with a number of mental health issues.

- Claimant carries diagnoses of non-specific mood disorder, mild mental retardation, and several substance addictions.

[3] "Blunt" is slang for a large marijuana cigarette.

[4] The Online Slang Dictionary defines "jack" when used as a verb, to mean, "injured."

- In October 2006, a medical provider at Kaiser Permanente diagnosed Claimant with schizoaffective disorder – Bi-polar type.

- Claimant reported struggling with rage episodes and that he could go from "being in a good mood to…fights…threatening people…"

- He reported anxiousness that made him "want to punch someone," and that he was worried about "exploding from stress."

25. Claimant testified that he has been on social security insurance (SSI) since he was ten years old and medical records from one month prior to the assault show he was receiving SSI at that time. While neither party presented evidence identifying what qualified Claimant for this benefit, the ALJ notes that prior to the November 28, 2015 assault, providers had diagnosed Claimant with a number of mental health issues.

26. Claimant exhibited paranoia after the assault.

- Claimant testified that after the assault he became paranoid of black people.

- Claimant testified, "Every time I went out, I took my smartphone out, and everybody that was black, and I thought was an – attempted assailant – I videotaped for my detective."

- He was convinced that black men who visited his neighbor were his assailants, and later that black men in another restaurant were his assailants.

- In both instances, Claimant called the investigator assigned to his case and reported that he had found his assailants.

- Claimant left a phone message for Investigator Johnston advising her that "he has been having his friend JOSH drive him around with a loaded weapon" in search of his assailants.

27. Claimant's prior psychotherapist at Aurora Mental Health Center, Nick Neujahr, testified that, in his professional opinion, the assault did not significantly affect Claimant's cognitive ability.

28. Claimant inconsistently reported whether and how much cash the assailants took from him during the assault.

- At the hospital, on November 28, 2014, Claimant told Investigator Robinson that he did not know whether he was missing any cash. According to Investigator Robinson's notes, Claimant had $260 in his wallet at the hospital the night of November 28, 2014.

- Investigator Johnston noted that Claimant later reported $400 missing following the assault. Then Claimant increased the missing amount to $500.

- Investigator Johnston testified Claimant reported that during the assault, he told the assailants that he had $500 and they should take it and leave him alone.

29. Claimant testified that he had an ACE Cash Express loan, that "if not paid the day it was due, they will garnish the whole lump sum that you owe." Claimant testified that the loan was due on November 28, 2014, and that he drew down his account to prevent ACE from garnishing his account.

30. Respondents admitted to an average weekly wage of $319.19. Claimant testified Employer paid him every two weeks. This would amount to a paycheck of approximately $638.38.

31. Investigator Johnston testified that a scenario in which assailants beat and robbed a person of $240, leaving the person with $260, did not make sense. She testified further that a scenario where the assailants took no money and just beat Claimant also did not make sense. "Usually there's a reason why people get assaulted or beat up." Investigator Johnston determined after investigating the assault that Claimant's story lacked credibility.

32. The ALJ finds it highly unlikely that Claimant had $500 in his wallet before the assault and $260 after the assault. The ALJ finds it highly unlikely that the assailants took part but not all of Claimant's money.

33. The ALJ finds Claimant's testimony concerning the circumstances of the assault not credible. Video evidence directly contradicts Claimant's reports to medical providers and criminal investigators that he was taking trash out when assaulted. . Additionally, the ALJ not credible Claimant's alternative stories that he instead went out to smoke a cigarette, or went to the garbage area to break down boxes, or to clean up trash. Additionally, Claimant's supervisor directly contradicted Claimant's story that his supervisor asked him to take the trash out or told him to pick up trash at the dumpster.

34. The ALJ finds Investigator Johnston, Mr. Neujahr and Mr. Reiners to be more credible and persuasive than testimony or evidence to the contrary.

35. The ALJ further finds that Respondents filed an admission in this case based upon Claimant's representations to his medical providers that he was performing the work-related task of taking out the trash when unknown assailants assaulted him.

36. Respondents later discovered that Claimant had contemporaneously reported to Mr. Neujahr, his personal psychotherapist, that he vaguely knew his assailants either from a drug deal, in association with a friend, or a rival gang. The ALJ finds the video evidence supports a finding that Claimant knew his assailants. It appears the three men on the video, who Investigator Johnston identified by as the assailants, came into

Employer's restaurant looking specifically for Claimant, as they were looking into the back by the kitchen while sitting at the table. Video evidence shows the three men left the restaurant immediately upon Claimant leaning toward them. Moreover, the video evidence shows Claimant left the restaurant a short time later with nothing in his hands, despite his reports to medical providers and police investigators that he was taking out the trash.

37. The ALJ finds the video evidence of the circumstances surrounding this claim to be persuasive.

38. The ALJ finds that Respondents have proven by a preponderance of the evidence that Claimant's November 28, 2014 injury was a personal assault and not a work-related, compensable incident.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Generally

The purpose of the Workers' Compensation Act (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1).

The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936).

Compensability - Assaults

For an injury to be compensable, it must arise out of and in the course of the employment. An accident "arises out of" employment when there is a causal connection

between the work conditions and the injury. *Marietta Corp. v. Faulk*, 158 Colo. 441, 407 P.2d 348 (1965).

Assaults in Colorado workers' compensation claims have been divided into three different categories: (1) assaults that result from the duties of the job (i.e., inherently work related); (2) assaults that are personal in nature or due to a personal dispute or connection (inherently non-work related); and (3) neutral assaults where "nothing connects it with the victim privately; neither can it be shown to have a specific employment origin" (deemed to be work related). *See In re Question by the U.S. Court of Appeals for the Tenth Cir.*, 759 P.2d 17 (Colo. 1988).

Withdrawal of Admissions

Section 8-43-201, C.R.S. generally establishes the burden of proof in disputes arising under the Workers' Compensation Act. It provides, in pertinent part, that:

> A claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer; a workers' compensation case shall be decided on its merits; and a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification.

Thus, under the provisions of section 8-43-201(1), the party seeking to modify an issue already determined by a general or final admission shall bear the burden of proof (a preponderance of the evidence) for any such modification. *Rodriguez v. City of Brighton,* W.C. No. 4-782-516 (I.C.A.O., Aug. 23, 2011). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Where a claimant files a timely objection to a final admission, then the admitted issues remain open, and respondents may seek a withdrawal of the final admission. *Fausnaucht v. Inflated Dough, Inc.* W.C. No. 4-160-133 (I.C.A.O., July 20, 1999). There being no issue raised indicating the objection to the admission was not timely, the ALJ infers that the parties concede this issue. Respondents carry the burden of establishing that there was no compensable injury on November 28, 2014.

However, where a claimant supplied materially false information upon which his employer and its insurer relied in filing an admission of liability, the admission is *void ab initio* and is therefore withdrawn retroactively. *Vargo v. Colo. Indus. Comm'n*, 626 P.2d 1164 (Colo. App. 1981).

As found above, Respondents initially filed an admission based on the assault being neutral in character as Claimant reported that he was taking out the trash and did not know the assailants. As further found, however, Respondents have established by a preponderance of the evidence that Claimant's November 28, 2014 assault was personal in nature, and was not work-related. *See In re Question by the U.S. Court of Appeals for the Tenth Cir.*, 759 P.2d 17 (Colo. 1988). As such, Claimant did not sustain a compensable injury arising out of and in the course of his employment with the employer on November 28, 2014. *Marietta Corp. v. Faulk*, 158 Colo. 441, 407 P.2d 348 (1965).

Based on substantial evidence and reasonable inference, the ALJ finds that Respondents admission of liability relied upon Claimant's misrepresentation that he was performing a work duty, in this case taking out the trash, when he was assaulted by unknown assailants who were trying to rob him. The ALJ finds that that Claimant's representation was materially false as detailed in the findings of fact above, as such, the admission in this claim is *void ab initio*. *Vargo v. Colo. Indus. Comm'n*, 626 P.2d 1164 (Colo. App. 1981).

ORDER

IT IS, THEREFORE, ORDERED THAT:

1. Respondents have proven by preponderance of the evidence that the assault on Claimant on November 28, 2014 was a personal assault, which did not result in a compensable injury.

2. Respondents have also proven by a preponderance of the evidence that their admission in this claim was filed pursuant to materially false information provided by Claimant. As such, the admission in this claim is hereby *void ab initio*.

3. The claim is denied and dismissed with prejudice.

DATED this 14th day of August 2018.

Administrative Law Judge

This decision of the Administrative Law Judge is final, unless a Petition to Review this decision is filed within twenty (20) days from the date of this decision is mailed. Section 8-43-301(2), C.R.S. The Petition to Review must be filed with the Office of Administrative Courts, 1525 Sherman Street 4th Floor, Denver, Colorado 80203. For statutory reference, see §8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. A Petition to Review form may be accessed at: http://www.colorado.gov/oac/appeals.

ISSUE

Whether Respondents have proven by a preponderance of the evidence that Claimant was an "independent contractor" pursuant to §8-40-202(2) C.R.S.

STIPULATION

The parties agreed that, if Claimant was an employee at the time of his injuries on December 19, 2017, his entitlement to medical and Temporary Total Disability (TTD) benefits will be considered at a future time.

FINDINGS OF FACT

1. Employer is a company that installs drywall on construction projects. Claimant began working with Employer on September 22, 2017 building framing and installing drywall on various projects. Claimant had in excess of 10 years of experience in the industry.

2. On September 20, 2017 Claimant executed a Subcontractor Agreement with Employer. The document specified that Claimant was a subcontractor of Employer who would provide labor and materials at the rate of $9.00 per sheet of drywall. Employer's president and part owner Patrick A. Hess testified that he reviewed the Subcontracor Agreement with Claimant. He remarked that Claimant had received an offer to work as an employee for Employer but rejected the proposal because he could earn more money as an independent contractor. Item eight of the Subcontractor Agreement specifically provided that Claimant agreed to permit only employees and supervisors covered by Workers' Compensation insurance on jobsites.

3. Because Employer maintains a policy that independent contractors must carry their own Workers' Compensation insurance, Claimant met with Travis Lease of Security Insurance Group to obtain insurance. Mr. Lease has provided a written statement noting that Claimant visited him on September 20, 2017 and requested insurance because he was working for himself. The insurance policy Claimant obtained identified him as operating under the business name of Noe Lopez Construction.

4. On September 20, 2017 Claimant also filed a Form W-9 to request a Taxpayer Identification Number. Claimant identified himself as Noe Lopez Construction and affirmed that he was the individual/sole proprietor of a single member LLC.

5. On September 22, 2017 Claimant met with representatives of Employer and submitted a Declaration of Independent Contractor Status Form. The Form provided that Claimant would operate as an independent contractor. Claimant would not receive Workers' Compensation benefits, was responsible for paying all federal and

state income taxes and would furnish Workers' Compensation insurance for any workers hired by Noe Lopez Construction. Claimant listed his trade name as Noe Lopez Construction and specified that he was the owner.

6. On September 22, 2017 Claimant began working on Employer's construction projects in Greeley and Fort Collins, Colorado. Claimant submitted invoices to Employer for work performed. When creating the invoices Claimant listed Noe Lopez Construction. The invoices provided a description of the work, unit price and amount of requested payment. As explained by Mr. Hess, Employer originally planned to pay Claimant by sheet of drywall, but because he did not have a partner, he was asked to do "back out work." Mr. Hess remarked that "back out work" could only be calculated on an hourly basis. Claimant received compensation at the rate of $24.00 per hour.

7. Mr. Hess confirmed that the majority of Employer's 40-60 person workforce is composed of employees. However, Employer also uses independent contractors to comprise its workforce. Mr. Hess outlined the differences between the employees and independent contractors who work for Employer. He remarked that supervisors could fire employees and direct them to complete a myriad of tasks. Employees have a specific start and end time every day, submit timecards and are told when they can take lunch breaks. In contrast, Claimant was an independent contractor who did not have to report when he was coming to work or taking a lunch break. Employer did not provide Claimant with any training or tools other than ladders and scaffolding.

8. On December 19, 2017 Claimant was working on a project at the Copper Leaf Apartments in Fort Collins, Colorado. While attempting to pass a ladder down to another worker, Claimant fell approximately 12 feet to the ground when a temporary railing failed. Claimant was transported by ambulance to the Poudre Valley Hospital in Fort Collins but then to the Medical Center of the Rockies in Loveland because of the severity of his injuries. He was diagnosed with a displaced and comminuted left anterior column acetabular fracture. Claimant also sustained various other injuries. Dr. Robert M. Baer performed an open reduction and internal fixation of the fracture on December 21, 2017.

9. Claimant was not required to work exclusively for Employer and was customarily engaged in an independent trade or occupation related to drywall installation. Claimant received a 1099 miscellaneous tax form from Employer that listed Noe Lopez Construction and reflected nonemployee compensation of $12,252. Claimant used the 1099 form to prepare his 2017 Federal Income Taxes. Claimant testified that the 1099 form did not represent all of his 2017 income because he also worked for another company. He noted that he earned approximately $900 per week in cash from the other entity. His total 2017 income was approximately $30,000-$40,000.

10. Claimant's testimony and tax documents reflect that he operated as an independent contractor throughout 2017. Claimant testified that he identified himself as self-employed in his 2017 Federal Tax Return and claimed deductions for various

business expenses. Claimant specifically took $3082 in deductions for truck expenses for traveling 5760 miles, $2250 for business insurance expenses, $2500 in work tool expenses and $360 for work phone expenses. Claimant commented that he drove approximately 10 miles each day for about 90 days for a total of 900 miles while working for Employer. However, because he deducted for a total of 5760 miles, he necessarily used his truck during 2017 for business activities unrelated to his work for Employer. Claimant also remarked that he paid $750 for his insurance for Employer but was unable to explain the remaining $1500 of his insurance deduction. Claimant further explained that he owned drills, screwdrivers, laser devices, tool belts, tool bags, work clothes and work shoes that he used for work. He commented that he had to purchase many power tools throughout the course of e year because they break and cost approximately $200-$400 each to replace. He thus incurred expenses of approximately $2500 for tools and supplies for the year 2017 even though he only worked for Employer for approximately three months at the end of the year. Finally, Claimant deducted $360 for a work cell phone but did not have a personal cell phone.

11. Claimant further confirmed at his deposition that he has previously worked under aliases and used different Social Security numbers. He has previously worked under the name of Sergio Macias for different employers.

12. On June 22, 2018 Project Foreman Blaine Mulnix testified through an evidentiary deposition in this matter. Mr. Mulnix was present at the Copper Leaf Apartments when Claimant was injured on December 19, 2017. He confirmed that Claimant was not an employee but an independent contractor. Mr. Mulnix explained that he awarded projects to Claimant and inspected the work upon completion. He did not work directly with Claimant and only saw him in the morning when he would arrive, possibly at lunchtime and at another two points during the day while completing his rounds. Mr. Mulnix explained that Employer did not supply Claimant or other independent contractors with tools, dictate work hours or provide any training. He detailed that with Claimant and other independent contractors he did not specify when they needed to be present at the jobsite. Claimant could choose to work certain days and not work for Employer on others.

13. Mr. Mulnix testified that Employer provided ladders and scaffolding to all independent contractors and subcontractors at a jobsite for purposes of safety and efficiency. He noted that the scaffolds are meticulously maintained, serviced and OSHA approved. Moreover, it would be inefficient for each independent contractor to move his own ladders and repeatedly build his own scaffolding at the jobsite.

14. Claimant testified at the hearing in this matter and through a post-hearing evidentiary deposition on June 15, 2018. He explained that he has approximately 10 years of experience framing and installing drywall. Claimant noted that he had previously worked for companies as an employee but not as an independent contractor. He provided his own tools while working for Employer, but Mr. Mulnix told him where to work every day. He worked approximately eight hours each day for Employer. Claimant explained that he recorded his daily hours on a form and earned $24.00 per

hour from Employer. Nevertheless, he acknowledged that he created invoices for Employer that included a unit price. Claimant stated that he did not understand the independent contractor forms he completed for Employer but received two days to review and complete the paperwork. Finally, Claimant acknowledged that his last Employer went out of business in 2015.

15. Respondents have proven that it is more probably true than not that Claimant was an "independent contractor" pursuant to §8-40-202(2) C.R.S. Initially, Claimant completed paperwork in which he acknowledged that he was an independent contractor responsible for his own Workers' Compensation insurance. On September 22, 2017 Claimant submitted a Declaration of Independent Contractor Status Form. The Form provided that Claimant would operate as an independent contractor. Claimant would not receive Workers' Compensation benefits, was responsible for paying all federal and state income taxes and would furnish Workers' Compensation insurance for any workers hired by Noe Lopez Construction. Furthermore, on September 20, 2017 Claimant executed a Subcontractor Agreement with Employer. The document specified that Claimant was a subcontractor of Employer who would provide labor and materials at a rate of $9.00 per sheet of drywall.

16. The record reflects that Claimant also operated as an independent contractor. Respondents have proven that Claimant was customarily engaged in an independent trade, occupation, profession, or business related to the services performed. Claimant was also not required to work exclusively for Employer. Claimant received a 1099 miscellaneous tax form from Employer that identified Noe Lopez Construction and reflected nonemployee compensation of $12,252. Claimant used the 1099 form to prepare his 2017 Federal Income Taxes. He testified that the 1099 form did not represent all of his 2017 income because he also worked for another company. He noted that he earned approximately $900 per week in cash from the other entity. His total 2017 income was approximately $30,000-$40,000. Because Claimant earned approximately $20.00-$30,000 during 2017 working for another entity his income was not significantly dependent upon continued employment with Employer.

17. Claimant also identified himself as self-employed in his 2017 Federal Tax Return and claimed deductions for various business expenses. Claimant specifically took $3082 in deductions for truck expenses for traveling 5760 miles, $2250 for business insurance expenses, $2500 in work tool expenses and $360 for work phone expenses. Claimant's tax documents thus reflect that he used his truck, drywall tools and phone to earn approximately $900 each week as an independent contractor for another entity.

18. The record also reveals that Claimant was free from direction and control in the services he performed. Mr. Hess outlined the differences between the employees and independent contractors who work for Employer. He remarked that employees have a specific start and end time every day, submit timecards and are told when they can take lunch breaks. In contrast, Claimant was an independent contractor who did not have to report when he was coming to work or when he was taking a lunch break.

Moreover, Mr. Mulnix credibly explained that he awarded projects to Claimant and inspected the work upon completion. He did not work directly with Claimant and only saw him in the morning when he would arrive, possibly at lunchtime and at another two points during the day while completing his rounds. He detailed that Claimant was not required to be at the jobsite on specified days or times. Claimant could choose to work certain days and not work for Employer on others.

19. Employer did not establish a quality standard for Claimant's drywall work. Mr. Mulnix did not work with Claimant or oversee his work. He simply inspected the work upon completion to address project specifications.

20. Claimant's payment arrangement with Employer also reflects that he operated as an independent contractor with Employer. Although Claimant received compensation at the rate of $24.00 per hour, his Subcontractor Agreement with Employer specified that he would provide labor and materials at a rate of $9.00 per sheet of drywall. Mr. Hess noted that Employer originally planned to pay Claimant by sheet of drywall, but because he did not have a partner, he was asked to do "back out work." Mr. Hess remarked that back out work could only be calculated on an hourly basis. Claimant also submitted invoices to Employer for work performed. He issued the invoices in his trade name of Noe Lopez Construction. The invoices provided a description of the work, unit price and amount of requested payment.

21. Employer also did not provide training to Claimant about drywall installation. Claimant had significant drywall experience and did not require supervision of his work. He acknowledged that he has approximately 10 years of experience framing and installing drywall. Mr. Hess and Mr. Mulnix also confirmed that Employer did not provide Claimant or other independent contractors with any training.

22. Employer did not provide tools or benefits to Claimant. Although Employer furnished ladders and scaffolding to all independent contractors for purposes of safety and efficiency, Employer did not provide Claimant with tools to complete his work. Claimant testified that he owned drills, screwdrivers, laser devices, tool belts, tool bags, work clothes and work shoes that he used for work. He commented that he has to replace many power tools throughout the course of a year because they break and cost approximately $200-$400 each.

23. The record thus demonstrates that Claimant was an independent contractor. Claimant completed extensive paperwork prior to working for Employer in which he agreed to operate as an independent contractor under the tradename Noe Lopez Construction. Claimant's testimony and tax documents establish that he was customarily engaged in an independent trade regarding drywall services. Finally, balancing the statutory factors in §8-40-202(2) C.R.S. reflects that Claimant operated as an independent contractor while working for Employer. Accordingly, Respondents have proven that Claimant was an independent contractor when he suffered injuries on December 19, 2017 at Copper Leaf Apartments.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Pursuant to §8-40-202(2)(a), C.R.S. "any individual who performs services for pay for another shall be deemed to be an employee" unless the person "is free from control and direction in the performance of the services, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent . . . business related to the service performed." Moreover, pursuant to §8-40-202(2)(b)(I), C.R.S. independence may be demonstrated through a written document.

5. A necessary element to establish that an individual is an independent contractor is that the individual is customarily engaged in an independent trade, occupation, profession or business related to the services performed. *Allen v. America's Best Carpet Cleaning Services,* W.C. No. 4-776-542 (ICAP, Dec. 1, 2009). The statutory requirement that the worker must be "customarily engaged" in an independent trade or business is designed to assure that the worker, whose income is almost wholly dependent upon continued employment with a single employer, is protected from the "vagaries of involuntary unemployment." *In Re Hamilton,* W.C. No. 4-790-767 (ICAP, Jan. 25, 2011).

6. The "employer" may also establish that the worker is an independent contractor by proving the presence of some or all of the nine criteria enumerated in §8-40-202(2)(b)(II), C.R.S. *See Nelson v. ICAO,* 981 P.2d 210, 212 (Colo. App. 1998). The factors in §8-40-202(2)(b)(II), C.R.S. suggesting that a person is not an

independent contractor include whether the person is paid a salary or hourly wage rather than a fixed contract rate and is paid individually rather than under a trade or business name. Conversely, independence may be shown if the "employer" provides only minimal training for the worker, does not dictate the time of performance, does not establish a quality standard for the work performed, does not combine its business with the business of the worker, does not require the worker to work exclusively for a single entity, does not provide tools or benefits except materials and equipment, and is unable to terminate the worker's employment without liability. *In Re of Salgado-Nunez,* W.C. No. 4-632-020 (ICAP, June 23, 2006). Section 8-40-202(b)(II), C.R.S. creates a "balancing test" to ascertain whether an "employer" has overcome the presumption of employment in §8-40-202(2)(a), C.R.S. The question of whether the "employer" has presented sufficient proof to overcome the presumption is one of fact for the Judge. *Id.*

7. As found, Respondents have proven by a preponderance of the evidence that Claimant was an "independent contractor" pursuant to §8-40-202(2) C.R.S. Initially, Claimant completed paperwork in which he acknowledged that he was an independent contractor responsible for his own Workers' Compensation insurance. On September 22, 2017 Claimant submitted a Declaration of Independent Contractor Status Form. The Form provided that Claimant would operate as an independent contractor. Claimant would not receive Workers' Compensation benefits, was responsible for paying all federal and state income taxes and would furnish Workers' Compensation insurance for any workers hired by Noe Lopez Construction. Furthermore, on September 20, 2017 Claimant executed a Subcontractor Agreement with Employer. The document specified that Claimant was a subcontractor of Employer who would provide labor and materials at a rate of $9.00 per sheet of drywall.

8. As found, the record reflects that Claimant also operated as an independent contractor. Respondents have proven that Claimant was customarily engaged in an independent trade, occupation, profession, or business related to the services performed. Claimant was also not required to work exclusively for Employer. Claimant received a 1099 miscellaneous tax form from Employer that identified Noe Lopez Construction and reflected nonemployee compensation of $12,252. Claimant used the 1099 form to prepare his 2017 Federal Income Taxes. He testified that the 1099 form did not represent all of his 2017 income because he also worked for another company. He noted that he earned approximately $900 per week in cash from the other entity. His total 2017 income was approximately $30,000-$40,000. Because Claimant earned approximately $20.00-$30,000 during 2017 working for another entity his income was not significantly dependent upon continued employment with Employer.

9. As found, Claimant also identified himself as self-employed in his 2017 Federal Tax Return and claimed deductions for various business expenses. Claimant specifically took $3082 in deductions for truck expenses for traveling 5760 miles, $2250 for business insurance expenses, $2500 in work tool expenses and $360 for work phone expenses. Claimant's tax documents thus reflect that he used his truck, drywall tools and phone to earn approximately $900 each week as an independent contractor for another entity.

10. As found, the record also reveals that Claimant was free from direction and control in the services he performed. Mr. Hess outlined the differences between the employees and independent contractors who work for Employer. He remarked that employees have a specific start and end time every day, submit timecards and are told when they can take lunch breaks. In contrast, Claimant was an independent contractor who did not have to report when he was coming to work or when he was taking a lunch break. Moreover, Mr. Mulnix credibly explained that he awarded projects to Claimant and inspected the work upon completion. He did not work directly with Claimant and only saw him in the morning when he would arrive, possibly at lunchtime and at another two points during the day while completing his rounds. He detailed that Claimant was not required to be at the jobsite on specified days or times. Claimant could choose to work certain days and not work for Employer on others.

11. As found, Employer did not establish a quality standard for Claimant's drywall work. Mr. Mulnix did not work with Claimant or oversee his work. He simply inspected the work upon completion to address project specifications.

12. As found, Claimant's payment arrangement with Employer also reflects that he operated as an independent contractor with Employer. Although Claimant received compensation at the rate of $24.00 per hour, his Subcontractor Agreement with Employer specified that he would provide labor and materials at a rate of $9.00 per sheet of drywall. Mr. Hess noted that Employer originally planned to pay Claimant by sheet of drywall, but because he did not have a partner, he was asked to do "back out work." Mr. Hess remarked that back out work could only be calculated on an hourly basis. Claimant also submitted invoices to Employer for work performed. He issued the invoices in his trade name of Noe Lopez Construction. The invoices provided a description of the work, unit price and amount of requested payment.

13. As found, Employer also did not provide training to Claimant about drywall installation. Claimant had significant drywall experience and did not require supervision of his work. He acknowledged that he has approximately 10 years of experience framing and installing drywall. Mr. Hess and Mr. Mulnix also confirmed that Employer did not provide Claimant or other independent contractors with any training.

14. As found, Employer did not provide tools or benefits to Claimant. Although Employer furnished ladders and scaffolding to all independent contractors for purposes of safety and efficiency, Employer did not provide Claimant with tools to complete his work. Claimant testified that he owned drills, screwdrivers, laser devices, tool belts, tool bags, work clothes and work shoes that he used for work. He commented that he has to replace many power tools throughout the course of a year because they break and cost approximately $200-$400 each.

15. As found, the record thus demonstrates that Claimant was an independent contractor. Claimant completed extensive paperwork prior to working for Employer in which he agreed to operate as an independent contractor under the tradename Noe

Lopez Construction. Claimant's testimony and tax documents establish that he was customarily engaged in an independent trade regarding drywall services. Finally, balancing the statutory factors in §8-40-202(2) C.R.S. reflects that Claimant operated as an independent contractor while working for Employer. Accordingly, Respondents have proven that Claimant was an independent contractor when he suffered injuries on December 19, 2017 at Copper Leaf Apartments. *See Industrial Claim Appeals Office v. Softrock Geological Services, Inc*., 325 P.3d 560 (Colo. 2015) (whether an individual is customarily engaged in an independent trade, occupation, profession, or business related to the service performed must be determined by applying a totality of circumstances test that evaluates the dynamics of the relationship between the individual and the putative employer).

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant worked for Employer as an independent contractor.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: August 9, 2018.

ISSUE

- Whether Respondents have proven by a preponderance of the evidence that Claimant's injuries from November 28, 2014 are not the result of a compensable work-related assault.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. On November 28, 2014, Claimant was assaulted outside Employer's premises near the back of the building. Claimant reported that he was performing his job duty of taking out garbage at the time and that he did not know his assailants.

2. Respondents admitted the claim and paid benefits based on Claimant's representations.

3. In this action, Respondents seek to withdraw their admission alleging that Claimant's assault was personal in nature and not work related.

4. Video surveillance taken the night of the assault from inside Employer's location shows three men enter the restaurant. All three sat at a table across from the cash register and looked into the back, by the kitchen, where Claimant was working. Within moments, Claimant approached the register and leaned toward the table where the three men were sitting. At that point, the three men immediately got up and walked out of the restaurant. Claimant then left the restaurant a few minutes later.

5. Claimant repeatedly reported that he was taking out Employer's trash when assailants assaulted him.

- At the hospital on November 28, 2014, Claimant reported to Investigator Robinson of the Arapahoe Sheriff's Office that he "was taking the trash out to the dumpsters behind the business."

- On December 2, 2014, Claimant reported to physicians at the Medical Center of Aurora that on November 28, 2014 "he went to take the trash out of the restaurant when 4 other males assaulted him."

- On December 4, 2014, Claimant reported to his counselor Nick Neujahr at Aurora Mental Health Center, that "during an evening shift at work last Friday 11/28/14, while he was taking out the trash, [Claimant] was attacked by four men who assaulted him severely."

- Also on December 4, 2014, Claimant told Investigator Johnston that he remembered taking the trash out and that he believed it was the four men in the store earlier that had attacked him.

- On December 11, 2014, Claimant's medical provider noted that Claimant stated he "continues to struggle with physical and interpersonal complications as the result of being attacked while taking the trash out at work two weeks ago."

- On December 15, 2014, Claimant reported to the authorized treating provider, OccMed Colorado, that "he was taking trash out from his workplace at [Employer's location] when he was apparently assaulted by four different individuals…"

- At the December 20, 2017 hearing, Claimant testified that he told the Investigator that he was taking out the trash.

6. Claimant testified inconsistently at hearing about taking out the trash.

- Claimant testified that his manager, Ben Reiners, told him to take the trash out.

- At another point, Claimant testified that there was "a mountain of trash in the back" and he told Mr. Reiners he was going to take out the trash.

- Claimant testified that Mr. Reiners usually "took out the trash with me, but for some reason he didn't that night."

- At another point, Claimant testified, "Ben never took out the trash with me."

- Mr. Reiners testified that he did not send Claimant to take out the trash or to clean up the trash area on November 28, 2014. He also testified that Claimant did not tell him he was going to the trash area. Mr. Reiners testified that he went to the back of the restaurant and noticed there were many dirty dishes. He asked the other worker if he had seen Claimant. The co-worker had not, so Mr. Reiners started looking around. He testified he saw a "commotion" at [a neighboring establishment] and asked an officer if Claimant was involved.

7. Videotape of Claimant leaving the restaurant establishes that Claimant did not take trash with him. The video from inside the restaurant on November 28, 2014 shows Claimant leaving the restaurant with empty hands. Moreover, Claimant walked within inches of a full trash can on the way out of the restaurant without removing the bag from the container to bring with him.

8. Investigator Johnston testified that she reviewed video of the assailants running away after the assault and identified them as the same three men who appeared in the restaurant video.

9. The ALJ finds that video evidence directly contradicts Claimant's reports to his treatment providers and Arapahoe County Sheriff's investigators that he was taking trash out at the time of the assault.

10. After Investigator Johnston directly confronted Claimant about having nothing in his hands when he left the restaurant, Claimant changed his story. He then claimed that he went out either to smoke a cigarette, to break down boxes, or to clean up around the trashcans.

11. Mr. Reiners testified that the employee smoking area was between Employer's restaurant and at [a neighboring establishment], not where the assault occurred. During the hearing, Mr. Reiners identified the smoking area on Respondents' Exhibit H. Mr. Reiners also identified the garbage area where the assault took place. The ALJ finds that the dumpster is not near the employee smoking area.

12. Claimant gave contradictory reports about whether he knew the assailants and whether they took money from him.

- An ambulance transported Claimant to the hospital. At the hospital, on November 28, 2014, Investigator Robinson interviewed Claimant. Claimant reported:
    - He saw his assailants loitering behind the store earlier in his shift;
    - The assailants might have been in the restaurant before;
    - He was unsure whether anything had been taken from him;
    - He had been assaulted one week earlier while working;[1]
    - "Every time he is attacked, it is always by a black person."
    - Investigator Robinson noted that Claimant had $260 in new twenty-dollar bills in his wallet and asked whether he was missing any money. Claimant answered that he did not know.
- On December 3, 2014, when Investigator Johnston first spoke with Claimant, Claimant reported that he "really doesn't recall what happened other than [his assailants] trying to kill him." He also told the investigator that he "didn't really know if that was true, because that is what he had been told." Claimant's mother told the investigator she was nervous that whoever assaulted Claimant was someone Claimant knew.

[1] Claimant's mother told Investigator Robinson that no such event had occurred.

- On December 4, 2014, Claimant told Investigator Johnston that right before the assault, "four guys came into the [restaurant] and were "mean mugging" him.[2]

13. Having reviewed the videotapes, the ALJ finds that the three assault suspects appear to be looking specifically for Claimant.

14. Prior to the assault, Claimant had been treating with Nick Neujahr, his psychological therapist at the Aurora Mental Health Center for psychotherapy related to anxiety, paranoia, and depression. On December 4, 2014, –one or two hours before he first met with Investigator Johnston –Claimant attended an appointment with Mr. Neujahr. Mr. Neujahr's contemporaneous notes record Claimant stating that while he was taking out the trash at work, four men attacked and assaulted him. Claimant told Mr. Neujiahr that he vaguely knew the four men from approximately two years before when he assisted them in purchasing marijuana with his medical marijuana card.

- Mr. Neujahr confirmed at hearing that his report from December 4, 2014 was an accurate account of Claimant's statements made to him on December 4, 2014. As Claimant's counselor, Mr. Neujahr opined that Claimant did not appear to have any recall issues at the time he provided these statements nor did he believe Claimant was being deceptive.

- Mr. Neujahr testified that during their December 4, 2014 session, Claimant also stated that he suspected they attacked him because of his association with a friend of his who was in jail. Mr. Neujahr testified that Claimant's statements to him regarding the assailants never changed.

- Mr. Neujahr also testified that Claimant stated that he thought the assailants were rivals of a gang that he had been involved with years before. Claimant, however, testified that he had "never been in a gang in his whole life," and that he never told Mr. Neujahr that he had been.

15. The ALJ finds Mr. Neujahr credible and persuasive. The ALJ finds that, Claimant likely told Mr. Neujahr, as Claimant's therapist, things that he might not have told others. The ALJ finds that Claimant admitted to Mr. Neujahr that he knew his assailants and that they attacked him for personal reasons unrelated to work.

16. Claimant has a history of using and selling illicit drugs. Medical records document amphetamine abuse, cannabis abuse, heroin addiction, and "other substance-induced psychotic disorder with delusions." In 2006, Claimant was hospitalized after a suicide attempt. He reported to his provider that his main problem was "nightly dreams about his life as a drug dealer and user." His provider described him as having "severe and chronic drug addiction problems," and noted that Claimant had sold his bottle of

[2] The Online Slang Dictionary defines "mugging" when used as a verb, to mean, "To stare at a person in an aggressive way."

Adderall when last prescribed. The provider also noted that Claimant appeared to "like the rush" he got selling meth and buying alcohol for his underage friends.

17. Claimant testified that at the time of the assault he was receiving Methadone for a heroin addiction and was using recreational marijuana, which medical records support.

18. On December 2, 2014, Claimant presented at The Medical Center of Aurora. He reported that his "home medications" included oxycodone and Methadone. Claimant "is very clear about not wanting to stay in the hospital. He states he wants to go home and smoke a cigarette and have a blunt.[3]"

19. Claimant testified he had sold drugs in the past, but denied selling anything other than marijuana. Claimant's testimony was contrary to medical records documenting him selling his prescription Adderall and "meth."

20. Claimant admitted on cross-examination that he "jacked"[4] some people when he was selling drugs. He testified that one of them later confronted him, they fought, and he broke the person's nose.

21. Benjamin Reiners, general manager at the restaurant where Claimant was working, testified he had concerns that Claimant was using drugs at work. He testified that shortly before the assault, he observed Claimant in the back of the restaurant with a piece of foil inhaling something through a straw. Mr. Reiners testified he confronted Claimant who said, "It's not crack." Mr. Reiners told Claimant he could be fired for using drugs at work and that Claimant could not do that on work property.

22. Claimant denied that the incident of inhaling a substance through a straw occurred. He accused Mr. Reiners of making up the incident. He also accused a co-employee of making stories up about his drug use and testified the co-employee "was suspended for defamation of character." Claimant offered no persuasive evidence to support his version of the events.

23. Investigator Johnston testified that when she told Claimant that the video showed him leaving the restaurant without trash, Claimant volunteered, without any questioning on the subject, "This was not a drug deal." Her investigative report notes Claimant told her: "He knows I think this is a drug deal gone badly because of his past." "ALLEN brought this up on his own at no time did I ask him if this was a drug deal."

24. Medical providers have diagnosed Claimant with a number of mental health issues.

- Claimant carries diagnoses of non-specific mood disorder, mild mental retardation, and several substance addictions.

[3] "Blunt" is slang for a large marijuana cigarette.

[4] The Online Slang Dictionary defines "jack" when used as a verb, to mean, "injured."

- In October 2006, a medical provider at Kaiser Permanente diagnosed Claimant with schizoaffective disorder – Bi-polar type.

- Claimant reported struggling with rage episodes and that he could go from "being in a good mood to…fights…threatening people…"

- He reported anxiousness that made him "want to punch someone," and that he was worried about "exploding from stress."

25. Claimant testified that he has been on social security insurance (SSI) since he was ten years old and medical records from one month prior to the assault show he was receiving SSI at that time. While neither party presented evidence identifying what qualified Claimant for this benefit, the ALJ notes that prior to the November 28, 2015 assault, providers had diagnosed Claimant with a number of mental health issues.

26. Claimant exhibited paranoia after the assault.

- Claimant testified that after the assault he became paranoid of black people.

- Claimant testified, "Every time I went out, I took my smartphone out, and everybody that was black, and I thought was an – attempted assailant – I videotaped for my detective."

- He was convinced that black men who visited his neighbor were his assailants, and later that black men in another restaurant were his assailants.

- In both instances, Claimant called the investigator assigned to his case and reported that he had found his assailants.

- Claimant left a phone message for Investigator Johnston advising her that "he has been having his friend JOSH drive him around with a loaded weapon" in search of his assailants.

27. Claimant's prior psychotherapist at Aurora Mental Health Center, Nick Neujahr, testified that, in his professional opinion, the assault did not significantly affect Claimant's cognitive ability.

28. Claimant inconsistently reported whether and how much cash the assailants took from him during the assault.

- At the hospital, on November 28, 2014, Claimant told Investigator Robinson that he did not know whether he was missing any cash. According to Investigator Robinson's notes, Claimant had $260 in his wallet at the hospital the night of November 28, 2014.

- Investigator Johnston noted that Claimant later reported $400 missing following the assault. Then Claimant increased the missing amount to $500.

- Investigator Johnston testified Claimant reported that during the assault, he told the assailants that he had $500 and they should take it and leave him alone.

29. Claimant testified that he had an ACE Cash Express loan, that "if not paid the day it was due, they will garnish the whole lump sum that you owe." Claimant testified that the loan was due on November 28, 2014, and that he drew down his account to prevent ACE from garnishing his account.

30. Respondents admitted to an average weekly wage of $319.19. Claimant testified Employer paid him every two weeks. This would amount to a paycheck of approximately $638.38.

31. Investigator Johnston testified that a scenario in which assailants beat and robbed a person of $240, leaving the person with $260, did not make sense. She testified further that a scenario where the assailants took no money and just beat Claimant also did not make sense. "Usually there's a reason why people get assaulted or beat up." Investigator Johnston determined after investigating the assault that Claimant's story lacked credibility.

32. The ALJ finds it highly unlikely that Claimant had $500 in his wallet before the assault and $260 after the assault. The ALJ finds it highly unlikely that the assailants took part but not all of Claimant's money.

33. The ALJ finds Claimant's testimony concerning the circumstances of the assault not credible. Video evidence directly contradicts Claimant's reports to medical providers and criminal investigators that he was taking trash out when assaulted. . Additionally, the ALJ not credible Claimant's alternative stories that he instead went out to smoke a cigarette, or went to the garbage area to break down boxes, or to clean up trash. Additionally, Claimant's supervisor directly contradicted Claimant's story that his supervisor asked him to take the trash out or told him to pick up trash at the dumpster.

34. The ALJ finds Investigator Johnston, Mr. Neujahr and Mr. Reiners to be more credible and persuasive than testimony or evidence to the contrary.

35. The ALJ further finds that Respondents filed an admission in this case based upon Claimant's representations to his medical providers that he was performing the work-related task of taking out the trash when unknown assailants assaulted him.

36. Respondents later discovered that Claimant had contemporaneously reported to Mr. Neujahr, his personal psychotherapist, that he vaguely knew his assailants either from a drug deal, in association with a friend, or a rival gang. The ALJ finds the video evidence supports a finding that Claimant knew his assailants. It appears the three men on the video, who Investigator Johnston identified by as the assailants, came into

Employer's restaurant looking specifically for Claimant, as they were looking into the back by the kitchen while sitting at the table. Video evidence shows the three men left the restaurant immediately upon Claimant leaning toward them. Moreover, the video evidence shows Claimant left the restaurant a short time later with nothing in his hands, despite his reports to medical providers and police investigators that he was taking out the trash.

37. The ALJ finds the video evidence of the circumstances surrounding this claim to be persuasive.

38. The ALJ finds that Respondents have proven by a preponderance of the evidence that Claimant's November 28, 2014 injury was a personal assault and not a work-related, compensable incident.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Generally

The purpose of the Workers' Compensation Act (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1).

The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936).

Compensability - Assaults

For an injury to be compensable, it must arise out of and in the course of the employment. An accident "arises out of" employment when there is a causal connection

between the work conditions and the injury. *Marietta Corp. v. Faulk*, 158 Colo. 441, 407 P.2d 348 (1965).

Assaults in Colorado workers' compensation claims have been divided into three different categories: (1) assaults that result from the duties of the job (i.e., inherently work related); (2) assaults that are personal in nature or due to a personal dispute or connection (inherently non-work related); and (3) neutral assaults where "nothing connects it with the victim privately; neither can it be shown to have a specific employment origin" (deemed to be work related). *See In re Question by the U.S. Court of Appeals for the Tenth Cir.*, 759 P.2d 17 (Colo. 1988).

Withdrawal of Admissions

Section 8-43-201, C.R.S. generally establishes the burden of proof in disputes arising under the Workers' Compensation Act. It provides, in pertinent part, that:

> A claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer; a workers' compensation case shall be decided on its merits; and a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification.

Thus, under the provisions of section 8-43-201(1), the party seeking to modify an issue already determined by a general or final admission shall bear the burden of proof (a preponderance of the evidence) for any such modification. *Rodriguez v. City of Brighton,* W.C. No. 4-782-516 (I.C.A.O., Aug. 23, 2011). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Where a claimant files a timely objection to a final admission, then the admitted issues remain open, and respondents may seek a withdrawal of the final admission. *Fausnaucht v. Inflated Dough, Inc.* W.C. No. 4-160-133 (I.C.A.O., July 20, 1999). There being no issue raised indicating the objection to the admission was not timely, the ALJ infers that the parties concede this issue. Respondents carry the burden of establishing that there was no compensable injury on November 28, 2014.

However, where a claimant supplied materially false information upon which his employer and its insurer relied in filing an admission of liability, the admission is *void ab initio* and is therefore withdrawn retroactively. *Vargo v. Colo. Indus. Comm'n*, 626 P.2d 1164 (Colo. App. 1981).

As found above, Respondents initially filed an admission based on the assault being neutral in character as Claimant reported that he was taking out the trash and did not know the assailants. As further found, however, Respondents have established by a preponderance of the evidence that Claimant's November 28, 2014 assault was personal in nature, and was not work-related. *See In re Question by the U.S. Court of Appeals for the Tenth Cir.*, 759 P.2d 17 (Colo. 1988). As such, Claimant did not sustain a compensable injury arising out of and in the course of his employment with the employer on November 28, 2014. *Marietta Corp. v. Faulk*, 158 Colo. 441, 407 P.2d 348 (1965).

Based on substantial evidence and reasonable inference, the ALJ finds that Respondents admission of liability relied upon Claimant's misrepresentation that he was performing a work duty, in this case taking out the trash, when he was assaulted by unknown assailants who were trying to rob him. The ALJ finds that that Claimant's representation was materially false as detailed in the findings of fact above, as such, the admission in this claim is *void ab initio*. *Vargo v. Colo. Indus. Comm'n*, 626 P.2d 1164 (Colo. App. 1981).

ORDER

IT IS, THEREFORE, ORDERED THAT:

1. Respondents have proven by preponderance of the evidence that the assault on Claimant on November 28, 2014 was a personal assault, which did not result in a compensable injury.

2. Respondents have also proven by a preponderance of the evidence that their admission in this claim was filed pursuant to materially false information provided by Claimant. As such, the admission in this claim is hereby *void ab initio*.

3. The claim is denied and dismissed with prejudice.

DATED this 14th day of August 2018.

/s/ Kimberly Turnbow
Kimberly Turnbow
Administrative Law Judge

This decision of the Administrative Law Judge is final, unless a Petition to Review this decision is filed within twenty (20) days from the date of this decision is mailed. Section 8-43-301(2), C.R.S. The Petition to Review must be filed with the Office of Administrative Courts, 1525 Sherman Street 4th Floor, Denver, Colorado 80203. For statutory reference, see §8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. A Petition to Review form may be accessed at: http://www.colorado.gov/oac/appeals.

ISSUES

The issues raised by Claimant were reasonable and necessary medical benefits and average weekly wage (AWW).

FINDINGS OF FACT

1. Claimant was born on July 23, 1975, and was 42 years of age at the time of the hearing. Claimant was employed at Employer as a certified nursing assistant.

2. On November 24, 2016, Claimant sustained a compensable industrial injury to her low back in the course and scope of her employment. The incident occurred when Claimant and a nurse lifted a patient into a wheelchair. Claimant felt the muscle in her middle to lower back on the right side "tear."

3. Claimant reported the incident and Concentra in Ft. Collins became her authorized treating physicians. Claimant was initially seen on November 25, 2016, at Concentra by Amber Payne, PA-C. Based upon Claimant's complaints and findings on physical examination, Claimant was diagnosed with a lumbar strain.

4. Review of Claimant's pain diagrams beginning November 25 and continuing through December 20, 2016, demonstrates Claimant only indicated symptoms on the right side of her mid to lower back. Beginning January 5, 2017, Claimant's pain diagram reflected pain in her right heel and, beginning March 5, 2017, Claimant reported right hamstring pain.

5. Claimant was referred for an orthopedic surgical evaluation by William D. Biggs, M.D. This took place on July 20, 2017. Claimant complained of bilateral leg pain which she claimed started following her work related injury. Claimant claimed her symptoms were consistent and progressive for the past eight months. Despite Claimant's complaints, the physical examination showed motor strength of 5/5 of all lower extremity muscle groups although on the right side she had decreased motor strength at approximately 4/5. Dr. Biggs found Claimant was neurovascularly intact with normal reflexes and had a normal appearing gait. Dr. Biggs' assessment/diagnosis was lumbar disc degeneration with stenosis. It was Dr. Biggs opinion based upon clinical examination as well as imaging reviews Claimant does not have a surgical lesion.

6. Claimant obtained a referral to Douglas W. Beard, M.D. for a second surgical opinion. Dr. Beard evaluated Claimant on August 16, 2017. Dr. Beard noted that in late December, Claimant had a secondary injury to her lumbar spine again lifting. Claimant reported that the secondary injury exacerbated and aggravated her low back pain. Claimant did not file a workers' claim for compensation for the subsequent intervening event.

7. Claimant complained to Dr. Beard of right leg pain present from the buttock all the way down to her heel. There is no medical record support of this claim from her authorized treating physician through June 2, 2017.

8. Despite Claimant's complaints of symptomatology, Dr. Beard and Dr. Biggs noted that Claimant's gait was normal. Dr. Beard noted that Claimant had a significant amount of somatization going on with her widened myriad complaints.

9. Dr. Beard interpreted Claimant's MRI showing degenerative disc disease. Dr. Beard did not have a reasonable medical explanation for Claimant's significant complaints. Dr. Beard opined that Claimant is not a good surgical candidate and Claimant's surgical outcome, based on her presentation, will be rather guarded. Dr. Beard warned Claimant that any type of surgical intervention presented significantly high potential risks of poor outcomes

10. Claimant underwent an Independent Medical Examination with Kathleen D'Angelo, M.D. on September 27, 2017. Dr. D'Angelo was offered and accepted as a medical expert in Occupational Medicine, Level II Accredited. Dr. D'Angelo reviewed all of Claimant's medical records. Dr. D'Angelo opined Claimant's diagnosis of degenerative disc disease with disc protrusion is not consistent with her examination findings or her EMG/NCV results. Dr. D'Angelo's medical opinion of Claimant's condition was lumbar strain for which Claimant reached MMI without impairment or permanent work restrictions. Dr. D'Angelo opined Claimant's MRI findings are incidental to and predate the Claimant's industrial injury. Dr. D'Angelo's opinions are credible and persuasive.

11. Claimant obtained a referral for a third surgical opinion from Michael Janssen, M.D. on December 5, 2017. Dr. Janssen's physical examination demonstrated that Claimant had no palpable muscle spasm, normal spinal contour, normal sensation and gross motor examination was within normal limits. Dr. Janssen opined that Claimant has a condition suggestive of a disc compression.

12. Dr. Janssen recommended a microscopic hemilaminotomy, partial discectomy, nerve root decompression at the L4-5 and L5-S1 levels to make more anatomical and physiological room for the nerve. Dr. Janssen's opinions are found to lack credibility and are unpersuasive.

13. During his deposition, Dr. Janssen testified the recommended surgery is an option and whether or not that helps the patient is variable. Dr. Janssen could not explain the cause of Claimant's problems.

14. After Dr. Janssen recommended surgery, Dr. D'Angelo was asked to perform a WCRP, Rule 16 evaluation. This occurred on December 18, 2017. Dr. D'Angelo opined Dr. Janssen's request for surgical authorization should be denied. Dr. D'Angelo relied on the fact that Claimant had symptoms which changed and metastasized over her treatment course. Dr. D'Angelo noted that Dr. Janssen

represents the third spinal surgeon consulted by Claimant when the prior surgical opinions were that Claimant was not a surgical candidate.

15. Dr. D'Angelo noted that Claimant exhibited physical agility which was inconsistent with Claimant's claim of pain and limitation seen in medical records. Dr. D'Angelo's observations made the doctor strongly recommend against future invasive procedure.

16. Claimant was evaluated by board certified Orthopedic Surgeon, Brian Reiss, M.D. on February 7, 2018. Dr. Reiss reviewed the MRI scans and Claimant's medical records. Dr. Reiss disagreed with Dr. Janssen surgical recommendation. Dr. Reiss was of the opinion Claimant sustained a lumbar strain at work. Dr. Reiss recommended no further injections in light of the lack of MRI findings and opined that decompression surgery for Claimant would be unlikely to have a positive effect on Claimant's low back or her lower extremity symptoms. Dr. Reiss' expert opinions were also found to be credible and persuasive.

17. It is specifically found Claimant failed to meet her burden of proof to establish by a preponderance of the evidence that the surgical procedure recommended by Dr. Janssen is reasonable and necessary to cure or relieve the effects of the work injury of the November 24, 2016, industrial injury.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant bears the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S.; *City of Boulder v. Streeb*, 706 P.2d 786, 789 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions, the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 p.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

3. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Benefits

4. Claimant seeks an order finding that Dr. Janssen's recommendation for surgery is reasonably necessary and related medical treatment which Respondents should be ordered to authorize. Respondents contend that, based on the opinions of numerous experts, Dr. Janssen's recommendation for surgery is not reasonably necessary or related medical treatment and Respondents should not be ordered to authorize this treatment.

5. It is concluded the expert medical opinions of Drs Reiss, D'Angelo, Biggs and Beard are more credible and more persuasive than the opinions of Dr. Janssen. It is concluded that Claimant failed to meet her burden of proof by a preponderance of the evidence that the surgical procedure recommended by Dr. Janssen is reasonable and necessary medical treatment.

AWW

6. Claimant contends that her AWW should be increased based on the cost to her of COBRA. The issue of AWW was added for consideration at hearing by a February 27, 2018, prehearing order of a prehearing administrative law judge. At the prehearing conference, Respondents' counsel did not object to the addition of AWW as an issue. At hearing and in a post hearing position statement, Respondents make no argument regarding Claimant's entitlement to increased AWW.

7. At hearing Claimant offered testimony regarding her health insurance. She testified that while employed by Employer, Claimant had health insurance. She testified that her health insurance was cancelled on December 31, 2017. Claimant testified that her health insurance covered her spouse. Claimant further testified that on December 23, 2017, she received a letter regarding her medical and dental insurance. Claimant submitted as an exhibit, "Exhibit 1," designated by Claimant as the "General Admission dated February 23, 2017." Attached to Exhibit 1 are wage records for Claimant for the period July 22, 2016, through January 4, 2017. The wage records contain no information regarding the cost of health insurance. The handwritten notations on the wage records concern AWW and temporary total disability rates. Testimony at hearing was not offered regarding Exhibit 1 or the notations on Exhibit 1.

8. Claimant failed to prove by a preponderance of the evidence that she is entitled to increased AWW or the amount of that increase. While it appears that this issue is uncontested, Claimant has the burden of proof to establish entitlement to increased AWW and the amount of that increase. The wage records and Claimant's testimony do not establish evidence regarding the COBRA increase. Claimant's argument in her

closing statement does not point to evidence presented at hearing regarding Claimant's AWW or the COBRA increase. In closing, Claimant argues generally that the law permits increasing AWW by the amount of the cost of COBRA and that therefore Claimant's AWW should be increased. Without more, the ALJ does not have substantial evidence to support a finding regarding increased AWW.

ORDER

1. Claimant's request for surgery, as recommended by Dr. Janssen, is denied and dismissed.

2. Claimant's claim for increased AWW is denied and dismissed.

MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable Workers' Compensation injury when he was bitten by a bug while working for Employer on August 15, 2015.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive authorized, reasonable and necessary medical treatment for his industrial injuries.

3. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period August 17, 2018 until terminated by statute.

4. Whether Claimant's claim is barred by the two-year statute of limitations in §8-43-103(2), C.R.S.

FINDINGS OF FACT

1. Employer is a city located in Colorado. Claimant worked for Employer at its waste processing plant.

2. Claimant testified that on August 15, 2015 he was cleaning the screens in Employer's treatment plant when he experienced a sudden, sharp pain in his left forearm. He noticed a red spot on the site and cleaned the area with hand sanitizer. Claimant believed he had been bitten by an insect, mosquito or spider but never identified a culprit.

3. On August 17, 2017 Claimant visited Loran David Sherwood, M.D. for an evaluation. Dr. Sherwood completed a Physician's Report of Workers' Compensation Injury. Claimant reported that he had not been feeling well since he was bitten by an insect on August 15, 2017 while working for Employer at a treatment plant. He specifically noted that he had been suffering fever, chills and fatigue over the previous two days. Dr. Sherwood remarked that claimant had not been suffering any headaches, back pain or myalgias. After conducting a physical examination Dr. Sherwood determined that Claimant's symptoms were most likely the result of a viral infection. Although Dr. Sherwood remarked that he could not rule out West Nile virus, the condition "would be uncommon at the elevation of the waste water treatment plant." He thus ordered blood testing for West Nile virus.

4. On August 20, 2017 Insurer issued a letter to Claimant. The document specified that its purpose was to provide Claimant "with important information about [his] Workers' Compensation claim."

5. On August 20, 2017 Claimant returned to Dr. Sherwood for an evaluation. Dr. Sherwood noted that Claimant presented for "follow-up on the presumed viral illness that developed after being bitten by a mosquito" while working at Employer's water treatment plant. He remarked that Claimant's fever had resolved and he was feeling "somewhat better." Dr. Sherwood stated that he was still waiting for the results of the West Nile virus test. He maintained that Claimant's symptoms were most likely the result of a viral infection. Although Dr. Sherwood remarked that he could not rule out West Nile virus, he reiterated that the condition "would be uncommon at the elevation of the waste water treatment plant."

6. On September 9. 2015 Respondents filed a Notice of Contest challenging Claimant's claim for compensation with the Division of Workers' Compensation. The Notice specified that Respondents planned to conduct further investigation into the claim.

7. On September 20, 2015 Claimant received a letter from the Division of Workers' Compensation. The letter explained that Claimant's Workers' Compensation claim had been denied and he should have received a Notice of Contest stating the reason for the denial. The letter provided that Claimant could challenge the denial by requesting a hearing before an Administrative Law Judge.

8. On December 21, 2015 Claimant visited William Lockwood, M.D. for an infectious disease follow-up. Dr. Lockwood remarked that Claimant had been suffering episodic fevers and fatigue since August 2015. However, a temperature diary revealed that Claimant had not experienced any fevers within the preceding week. Claimant reported new symptoms that included pain in his right knee and both feet. Dr. Lockwood diagnosed Claimant with chronic fatigue. He noted that Claimant "lacked many other symptoms and we are unable to make an initial diagnosis." Claimant had completed testing for lymphoma, TB and CMV but all results were negative. Claimant's testing and evaluation for West Nile virus were also negative.

9. On January 25, 2016 Claimant returned to Dr. Sherwood for an examination. Dr. Sherwood commented that Dr. Lockwood had not found anything related to an infectious disease that would cause the development of Claimant's symptoms after an insect bite while working at a treatment plant on August 15, 2015. He noted that an Epstein-Barr Virus (EBV) tier was positive, but was "not convinced" that Claimant's symptoms were secondary to an EBV infection. Dr. Sherwood explained that he discussed with Claimant that "there appears to be a clear correlation with the onset of his symptoms and wastewater plant." However, he cautioned that "obviously that does not prove causation, but does make it suspicious." Dr. Sherwood summarized that "we do not have a clear etiology for his symptoms at this point."

10. On January 23, 2018 Claimant filed an Application for Hearing. He sought a determination of compensability regarding the August 15, 2015 incident. Claimant also requested medical benefits and Temporary Total Disability (TTD) benefits.

11. On June 4, 2018 Gabriela Kaufman, M.D. performed a records review of Claimant's claim. She considered Claimant's mechanism of injury, symptoms, diagnostic

testing and medical treatment. Dr. Kaufman remarked that Claimant developed fever, chills, night sweats, fatigue, a swollen left neck lymph node and right knee pain after August 15, 2015. Although Claimant may have suffered a viral infection, there was no definitive diagnosis. Claimant did not meet the criteria for chronic fatigue syndrome because his symptoms have not existed in excess of six months. In assessing causation, Dr. Kaufman reasoned that "it would be very difficult to tie his symptoms to the alleged insect bite" because no insect was seen and there is no established diagnosis. Furthermore, she commented that the lack of a definitive diagnosis "makes the prognosis more difficult to establish." Dr. Kaufman remarked that, because Claimant has not suffered any more fevers and his lab tests were normal, he did not require a work-up or medications.

12. Claimant's claim is not barred by the two-year statute of limitations in §8-43-103(2), C.R.S. Section 8-43-103(2), C.R.S. provides that a claim for Workers' Compensation is barred unless a notice claiming compensation is filed within two years of the injury. The record reveals that Claimant realized he may have suffered a Workers' Compensation injury from an insect bite when he sought medical treatment with Dr. Sherwood on August 17, 2015. However, the record is replete with evidence that the Division of Workers' Compensation was apprised of Claimant's claim within two years of August 17, 2015.

13. On August 20, 2015 Insurer notified Claimant that he had initiated a Workers' Compensation claim. On September 9. 2015 Respondents filed a Notice of Contest challenging Claimant's claim for compensation with the Division of Workers' Compensation. The Notice specified that Respondents planned to conduct further investigation into the claim. On September 20, 2015 the Division of Workers' Compensation informed Claimant that his Workers' Compensation claim had been denied and he should have received a Notice of Contest stating the reason for the denial. The letter provided that Claimant could challenge the denial by requesting a hearing before an Administrative Law Judge. The record thus contains significant evidence that the Division of Workers' Compensation was aware of Claimant's claim and that Respondents had denied liability. Accordingly, the two year statute of limitations in §8-43-103(2), C.R.S. does not preclude Claimant's request for Workers' Compensation benefits.

14. Claimant has failed to demonstrate that it is more probably true than not that he suffered a compensable Workers' Compensation injury when he was bitten by a bug while working for Employer on August 15, 2015. Initially, on August 15, 2015 Claimant was cleaning the screens in Employer's treatment plant when he experienced a sudden, sharp pain in his left forearm. He noticed a red spot on the site and cleaned the area with hand sanitizer. Claimant believed he had been bitten by an insect, mosquito or spider. He subsequently developed a fever, chills and fatigue. There was thus a close temporal proximity between Claimant's insect bite and the development of symptoms. However, it is speculative to infer a causal connection between Claimant's insect bite and symptoms.

15. The medical records reflect that Claimant has undergone significant diagnostic testing and physicians have been unable to develop a plausible diagnosis for

his symptoms. Dr. Sherwood initially determined that Claimant's symptoms were most likely the result of a viral infection. Although Dr. Sherwood remarked that he could not rule out West Nile virus, the condition "would be uncommon at the elevation of the waste water treatment plant." Dr. Lockwood subsequently diagnosed Claimant with chronic fatigue. He noted that Claimant "lacked many other symptoms and we are unable to make an initial diagnosis." Claimant completed testing for lymphoma, TB and CMV but all results were negative. Claimant was also tested and evaluated for West Nile virus but all results were negative. In a subsequent evaluation Dr. Sherwood explained that "there appears to be a clear correlation with the onset of his symptoms and wastewater plant." However, he cautioned that "obviously that does not prove causation, but does make it suspicious." Dr. Sherwood summarized that "we do not have a clear etiology for his symptoms at this point." Finally, in assessing causation, Dr. Kaufman reasoned that "it would be very difficult to tie his symptoms to the alleged insect bite" because no insect was seen and there is no established diagnosis. Furthermore, she commented that the lack of a definitive diagnosis "makes the prognosis more difficult to establish." The record thus reflects that physicians were uncertain about the diagnosis and treatment for Claimant. Although Claimant's symptoms arose after the performance of a job function, he has not established a causal relationship. The coincidental correlation between Claimant's work activities and symptoms is insufficient to create a causal connection between his episodic symptoms and work activities. Accordingly, Claimant's Workers' Compensation claim is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Statute of Limitations

4. Section 8-43-103(2), C.R.S. provides, in relevant part, that "the right to compensation and benefits provided by said articles shall be barred unless, within two years after the injury … , a notice claiming compensation is filed with the division." The statute of limitations begins to run when the claimant, as a reasonable person, should have recognized the nature, seriousness, and probable compensable character of the industrial injury. *Intermountain Rubber Industries v. Valdez*, 688 P.2d 1133 (Colo. App. 1984). The claimant, as a reasonable person, must recognize that the injury is sufficiently serious that it entitles him to compensation benefits under the Act. *City of Colorado Springs v. Industrial Claim Appeals Office,* 89 P.3d 504 (Colo. App. 2004). Moreover, the "seriousness" of the injury refers to the claimant's recognition of the "gravity of the medical condition." *Finkenbinder v. Jefferson County Government,* W.C. No. 4-661-714 (ICAP July 13, 2006). The question of when a claimant, recognized the nature, seriousness and probable compensable character of the injury is one of fact for determination by the ALJ. *Id.*

5. As found, Claimant's claim is not barred by the two-year statute of limitations in §8-43-103(2), C.R.S. Section 8-43-103(2), C.R.S. provides that a claim for Workers' Compensation is barred unless a notice claiming compensation is filed within two years of the injury. The record reveals that Claimant realized he may have suffered a Workers' Compensation injury from an insect bite when he sought medical treatment with Dr. Sherwood on August 17, 2015. However, the record is replete with evidence that the Division of Workers' Compensation was apprised of Claimant's claim within two years of August 17, 2015.

6. As found, on August 20, 2015 Insurer notified Claimant that he had initiated a Workers' Compensation claim. On September 9. 2015 Respondents filed a Notice of Contest challenging Claimant's claim for compensation with the Division of Workers' Compensation. The Notice specified that Respondents planned to conduct further investigation into the claim. On September 20, 2015 the Division of Workers' Compensation informed Claimant that his Workers' Compensation claim had been denied and he should have received a Notice of Contest stating the reason for the denial. The letter provided that Claimant could challenge the denial by requesting a hearing before an Administrative Law Judge. The record thus contains significant evidence that the Division of Workers' Compensation was aware of Claimant's claim and that Respondents had denied liability. Accordingly, the two year statute of limitations in §8-43-103(2), C.R.S. does not preclude Claimant's request for Workers' Compensation benefits.

Compensability

7. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re*

Swanson, W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

8. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

9. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

10. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered a compensable Workers' Compensation injury when he was bitten by a bug while working for Employer on August 15, 2015. Initially, on August 15, 2015 Claimant was cleaning the screens in Employer's treatment plant when he experienced a sudden, sharp pain in his left forearm. He noticed a red spot on the site and cleaned the area with hand sanitizer. Claimant believed he had been bitten by an insect, mosquito or spider. He subsequently developed a fever, chills and fatigue. There was thus a close temporal proximity between Claimant's insect bite and the development of symptoms. However, it is speculative to infer a causal connection between Claimant's insect bite and symptoms.

11. As found, the medical records reflect that Claimant has undergone significant diagnostic testing and physicians have been unable to develop a plausible diagnosis for his symptoms. Dr. Sherwood initially determined that Claimant's symptoms were most likely the result of a viral infection. Although Dr. Sherwood remarked that he could not rule out West Nile virus, the condition "would be uncommon at the elevation of the waste water treatment plant." Dr. Lockwood subsequently diagnosed Claimant with chronic fatigue. He noted that Claimant "lacked many other symptoms and we are unable

to make an initial diagnosis." Claimant completed testing for lymphoma, TB and CMV but all results were negative. Claimant was also tested and evaluated for West Nile virus but all results were negative. In a subsequent evaluation Dr. Sherwood explained that "there appears to be a clear correlation with the onset of his symptoms and wastewater plant." However, he cautioned that "obviously that does not prove causation, but does make it suspicious." Dr. Sherwood summarized that "we do not have a clear etiology for his symptoms at this point." Finally, in assessing causation, Dr. Kaufman reasoned that "it would be very difficult to tie his symptoms to the alleged insect bite" because no insect was seen and there is no established diagnosis. Furthermore, she commented that the lack of a definitive diagnosis "makes the prognosis more difficult to establish." The record thus reflects that physicians were uncertain about the diagnosis and treatment for Claimant. Although Claimant's symptoms arose after the performance of a job function, he has not established a causal relationship. The coincidental correlation between Claimant's work activities and symptoms is insufficient to create a causal connection between his episodic symptoms and work activities. Accordingly, Claimant's Workers' Compensation claim is denied and dismissed.

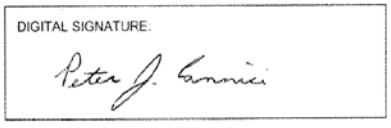
ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's Workers' Compensation claim is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: August 16, 2018.



Peter J. Cannici
Administrative Law Judge

Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that she is entitled to conversion of her right upper extremity impairment rating to a whole person impairment rating.

FINDINGS OF FACT

1. Claimant is a 54-year-old woman who has worked for Employer as a transportation officer for approximately 12 years. Claimant is responsible for transporting inmates to and from a facility. Claimant's work is below shoulder level.

2. Claimant suffered an admitted industrial injury to her right shoulder and left knee on July 1, 2016. Claimant slipped on stairs while attempting to exit a bus, hit her left knee, and pulled her right arm while holding onto an overhead handle. Following her injury, Claimant was referred to Workwell Occupational Medicine and Paul Ogden, M.D. for medical treatment.

3. Claimant underwent a right shoulder MRI on July 27, 2016, which revealed rotator cuff tendinosis with a partial thickness tear near the distal insertion, as well as tendon retraction and degenerative changes to the humeral head.

4. Claimant underwent surgery with Michael Hewitt, M.D. on January 10, 2017. The surgery consisted of an arthroscopic subacromial decompression, distal clavicle co-planing, superior labral debridement, and rotator cuff debridement.

5. Dr. Ogden placed Claimant at maximum medical improvement ("MMI") on June 7, 2017. On examination, Dr. Ogden noted there was no tenderness to palpation of the humerus, clavicle, scapula, AC joint or remainder of the shoulder, and that shoulder strength was otherwise normal. He noted Claimant was back to full duty work with some ongoing stiffness of the shoulder. Using the AMA Guides, Dr. Ogden provided 2% whole person impairment for right shoulder loss of motion, and 2% whole person impairment for left knee chondromalacia, combining for a 6% whole person impairment. Dr. Ogden released claimant to return to her regular duty with no restrictions and recommended Claimant have access to Dr. Hewitt for one to two visits over the course of the next year, if necessary, and medications.

6. Respondents filed a Final Admission of Liability based on Dr. Ogden's MMI report. Claimant challenged Dr. Ogden's impairment rating and sought a Division IME.

7. John D. Douthit, M.D. performed the Division IME on November 28, 2017. Dr. Douthit reviewed medical records and physically examined Claimant. He noted Claimant had been seen on May 18, 2011 for right shoulder pain after a fall. Claimant

reported having pain since that time. Claimant reported having persisting pain and limited motion in the right shoulder. Examination of the right shoulder revealed no crepitation, guarding and some mild atrophy. Active range of motion was 90 degrees abduction, 110 degrees flexion, 80 degrees internal rotation, 80 degrees of external rotation, 30 degrees adduction, and 50 degrees extension.

8. Dr. Douthit opined Claimant did not sustain any permanent impairment to the knee, but assessed 10% impairment of the right shoulder due to loss of range of motion. He noted this 10% extremity rating would be equal to 6% whole person impairment if converted. He advised Claimant participate in exercises to maintain her range of motion. He specifically stated, "I found no evidence of injuries of the trapezius or the neck area and the impairment is confined to the right shoulder."

9. Respondents filed a Final Admission of Liability based on Dr. Douthit's DIME report. Claimant timely objected to the Final Admission of Liability and filed an Application for Hearing seeking conversion of Dr. Douthit's 10% extremity rating to 6% whole person impairment.

10. Claimant testified at hearing that she had a prior right shoulder injury in 2011 for which she received medical treatment and injections. Medical records indicate Claimant was assessed with AC joint degenerative disease and rotator cuff tendinitis. Claimant testified that she did not continue to experience pain after the 2011 injury and was not assigned any impairment for the 2011 injury. Claimant testified her pain level is higher now than the 2011 level injury. She credibly testified prior to her injury on July 1, 2017, she was able to perform all of the essential functions of her job without restrictions to her right shoulder.

11. Claimant testified that, since the July 1, 2017 injury, she is no longer able to sleep on her right side without experiencing pain. She also testified that she is no longer able to carry her purse weighting 10 lbs. on her right shoulder due to pain, or lift objects above her head weighing more than 10 lbs. due to limitations with the use of her right shoulder girdle. Claimant testified she experiences pain in the front of her shoulder and numbness in the back of shoulder above her shoulder blade on a daily basis.

12. Claimant further testified that, following her placement at MMI and release to regular duty by Dr. Ogden, she had been able to perform her usual job duties of the Transportation Officer position she had been working at the time of, and prior to, her injury.

13. Ronald Swarsen, M.D. testified at hearing on behalf of Claimant as a Level II accredited expert in occupational medicine. Dr. Swarsen performed a medical records review but did not physically examine Claimant. Dr. Swarsen described the shoulder girdle as a scaffolding upon which the arm operates. He also described the shoulder as being anatomically distinct from the arm. Dr. Swarsen identified the structures which were surgically repaired on Claimant's right shoulder, and which are described on the MRI. He opined that all of the structures repaired are above the glenohumeral joint and to the right shoulder, not the arm. Dr. Swarsen opined that Claimant's injury is to her

right shoulder, and that Claimant has suffered functional impairment to her right shoulder, not her arm. Although Claimant has returned to work full duty, Dr. Swarsen opined that her right shoulder continues to be functionally impaired and a whole person impairment rating is appropriate. He testified that Dr. Douthit's conversion was appropriate under the AMA Guides and was consistent with the AMA Guides.

14. The testimony of Claimant and Dr. Swarsen is found more credible and persuasive than the opinion of Dr. Douthit.

15. Claimant has proven by a preponderance of the evidence she sustained functional impairment beyond her right arm at the shoulder and is entitled to the conversion of her 10% right upper extremity impairment rating to a 6% whole person impairment rating.

16. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or

none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Whole Person Impairment

The claimant bears the burden of establishing functional impairment beyond the arm at the shoulder and the consequent right to permanent partial disability benefits under§ 8-42-107(8)(c), C.R.S., by a preponderance of the evidence. *Maestas v. American Furniture Warehouse,* W.C. No. 4- 662-3 69 (June 5, 2007); *Johnson-Wood v. City of Colorado Springs,* W. C. No. 4-536-198 (ICAO June 20, 2005). The question of whether a claimant sustained a "loss of an arm at the shoulder" within the meaning of § 8-42-107(2)(a), C.R.S. or a whole person medical impairment compensable under § 8-42-107(8)(c), C.R.S. is one of fact for determination by the ALJ.

In resolving this question, the ALJ must determine the situs of the claimant's "functional impairment," and the site of the functional impairment is not necessarily the site of the injury itself. *Langton v. Rocky Mountain Health Care Corp.,* 937 P.2d 883 (Colo. App. 1996); *Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo. App. 1996); *Warthen v. Industrial Claim Appeals Office,* 100 P.3d 581 (Colo. App. 2004). There is no requirement that functional impairment take any particular form in order to be compensable under § 8-42-107(8)(c), C.R.S. Evidence of pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered impairment for this purpose. Aligaze *v. Colorado Cab Co. / Veolio Transportation*; W.C. No. 4-705-940 (ICAO April 29, 2009); *Chacon v. Nichols Aluminum Golden, Inc.,* W.C. No. 4-521-005 (ICAO November 29, 2004); *Guillotte v. Pinnacle Glass Company*, W.C. No. 4-443-878 (ICAO November 20, 2001), aff'd., *Pinnacle Glass Co. v. Industrial Claim Appeals Office*, (Colo. App. No. 01CA2386, August 22, 2002) (not selected for publication).

The courts have held that damage to structures of the "shoulders" may or may not reflect a "functional impairment" enumerated on the schedule of disabilities. *See Walker v. Jim Fouco Motor Company,* supra*; Strauch v. PSL Swedish Healthcare System,* supra, *Langton v. Rocky Mountain Health Care Corp.,* supra*; Price v. United Airlines,* W.C. No. 4-441-206 (ICAO January 28, 2002); *Johnson-Wood v. City of Colorado Springs,* supra. Although the opinions of physicians can be considered when determining this issue, the ALJ can also consider lay evidence such as the claimant's testimony regarding pain and reduced function. *Olson v. Foley's*, W.C. No. 4-326-898 (ICAO, September 12, 2000).

The ALJ concludes Claimant satisfied her burden in proving she sustained functional impairment beyond the right arm to her shoulder. Although Claimant was not

assigned permanent work restrictions and has returned to performing her regular work duties, Claimant's regular work duties only require movement below shoulder level. While permanent restrictions and ability to perform usual job activities are relevant considerations, the analysis of whether Claimant sustained functional impairment is not strictly confined to these or any one factor, as there is no requirement functional impairment take any particular form.

The ALJ credited testimony of Claimant and Dr. Swarsen over the opinion of Dr. Douthit. Claimant credibly testified that she is no longer able to reach overhead, sleep on her right side, or carry objects on her right shoulder without experiencing pain and discomfort. Claimant's injury and subsequent failed surgery resulted in continuing discomfort that has interfered with Claimant's ability to use a portion of her body. Dr. Swarsen credibly testified Claimant sustained damage to structures of the shoulder which resulted in functional impairment beyond the arm at the shoulder. Based on the totality of the evidence, Claimant has met her burden to establish she suffered functional impairment beyond the list of scheduled disabilities and is entitled to permanent partial disability ("PPD") benefits based on a whole person impairment rating.

ORDER

It is therefore ordered that:

1. Claimant's request to convert the scheduled impairment rating of her right shoulder to a whole person impairment is granted.

2. Respondents shall pay PPD benefits based on a 6% whole person impairment rating assigned by Dr. Douthit.

3. Respondents make take a credit for any PPD benefits previously paid to Claimant.

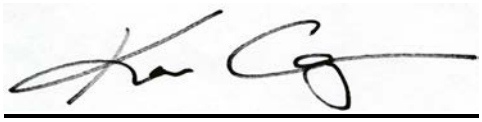
4. Respondents shall be given credit for any Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 16, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-036-365-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

SELF-INSURED,

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on August 7, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 8/7/18, Courtroom 2, beginning at 1:30 PM, and ending at 3:30 PM).

Claimant's Exhibits 1 through 8 were admitted into evidence, without objection. Respondent's Exhibits A through I were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondent. It was filed, electronically, on August 14, 2018. No timely objections thereto were filed. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUE

The issue to be determined by this decision concerns whether the Claimant is entitled to temporary total disability (TTD) benefits from November 23, 2016 through April 26, 2017, excluding the period from January 15, 2017 through January 20, 2017,

after the period from January 15, 2017 through January 20, 2017 (both dates inclusive, a total of 6 excluded days) is excluded, 149 days of TTD is in issue.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant is a former firefighter for the Employer. On November 21, 2016, she suffered a compensable right knee injury while descending a flight of stairs at the firehouse. Respondent filed a Notice of Contest on January 23, 2017 for further investigation. Respondent later admitted liability, filing a General Admission of Liability (GAL) on April 17, 2017.

2. The parties the stipulated that Claimant's average weekly wage (AWW) is $1,748.60, as admitted in Respondent's April 17, 2017 GAL. The ALJ finds that this AWW yields the maximum TTD weekly benefit of $939.82 for FY 2016/2017, or $134.26 per day.

Medical Chronology

3. Claimant was initially seen by Alisa Koval, M.D., the authorized treating physician (ATP) at Denver Health, on November 23, 2016. Claimant was diagnosed with a sprain of the right knee and was referred for physical therapy. Dr. Koval noted that the Claimant was scheduled to have the next 4 days off, and provided work restrictions of: no kneeling, no climbing ladders, no working at heights and no squatting.

4. The Claimant returned to Dr. Koval on November 30, 2016 with ongoing complaints of right knee pain. Dr. Koval referred the Clamant for an MRI (magnetic resonance imaging) of the right knee and continued the work restrictions provided on November 23, 2016.

5. The Claimant was next seen by Dr. Koval on December 5, 2016. At this evaluation, the Claimant was referred to an orthopedist. Work restrictions consisting of: no kneeling, no climbing ladder, no working at heights and no squatting, were continued. At a December 20, 2016 appointment with Dr. Koval, the work restrictions were continued. The Claimant did not attend scheduled appointments with Dr. Koval on January 11, 2017 and January 17, 2017.

6. Claimant was admitted to the emergency room (ER) at Sky Ridge Medical Center on the evening of January 14, 2017, with concerns of alcohol intoxication and

suicidal ideation. She was placed on an M1 hold, and stayed in in-patient rehabilitation at West Pines Medical Center until January 20, 2017. On January 20, 2017, the Claimant voluntarily admitted herself to an in-patient rehabilitation program at Parker Valley Medical Center. She remained at this rehabilitation facility until February 13, 2018.

7. The Claimant returned to Denver Health on March 9, 2017 and was evaluated by Sadie Sanchez, M.D. At this evaluation, Dr. Sanchez noted that the Claimant was requesting a release to full duty. Dr. Sanchez returned the Claimant to full duty without restrictions, pending approval for right knee surgery.

The Testimony at Hearing

8. At hearing, the Claimant testified regarding her employment and whether the Respondent made an offer of modified duty. She stated, with record support, that she continued working for the Respondent, albeit in a modified capacity, from the date of injury through January 14, 2017. The ALJ finds that the Claimant worked modified duty without a formal offer of modified duty from the Respondent, and that her job duties consisted primarily of warehouse functions.

9. Claimant testified that, on discharge from Parker Valley Medical Center, she would have returned to modified duty if she had been aware of a modified duty position available to her. Claimant testified that she did not remember whether her knee injury was the reason she did not work from February 13, 2017 through her release to full duty on March 9, 2017.

10. Claimant testified that she retired from her employment with the Respondent on June 1, 2018.

11. Records concerning doctor visits and medical appointments, other than those to Denver Health (which were related to her admitted right knee injury were referenced, however, the Claimant could not remember whether they were for her admitted right knee injury.

Ultimate Findings

12. The Claimant's testimony was credible and essentially undisputed, however, she could not remember specific times when she worked modified duty, or why she saw different medical providers other than those at Denver Health for her admitted injury and the providers of rehabilitation for the treatment of alcoholism. The medical opinions in evidence are undisputed and credible.

13. The Claimant was temporarily and totally disabled for the period November 23, 2016 through March 9, 2017, however, she continued to work in a

modified capacity for the Employer from the date of injury through January 14, 2018. She was paid by the Employer for her work during this time period. Because she was working during this time, albeit in a modified duty capacity at full pay, she cannot receive both TTD benefits and regular wages, and she is, therefore, she has failed to prove entitlement to TTD benefits from November 23, 2016 through January 14, 2017.

14. The ALJ finds that the Claimant was not working during her time in in-patient rehabilitation from January 15, 2017 through February 13, 2017. Claimant's wage loss for this period of time was because of non-work related rehabilitation for alcoholism. The Claimant is not entitled to TTD benefits from January 15, 2017 through February 13, 2017. Therefore, the Claimant has failed to prove entitlement to TTD benefits for this period of time.

15 The ALJ finds that the Claimant was unable to work due to her temporary work restrictions from February 14, 2017 through her release to full duty on March 9, 2017, a period of 23 days. Therefore, the Claimant has sustained her burden, by preponderant evidence that she is entitled to TTD benefits for the period from February 14, 2017 through March 9, 2017, both dates inclusive, a total of 23 days. She credibly testified that she would have worked during this period but for her work restrictions and the lack of a modified duty position provided by the Employer during this period of time. The Claimant was released to full duty, effective March 9, 2017. The Claimant has not yet reached maximum medical improvement (MMI).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, 2012 COA 85. The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability

or improbability) of a witness' testimony and/or actions As found, the Claimant's testimony was credible and essentially undisputed, however, she could not remember why she saw different medical providers other than those at Denver Health for her admitted injury and the providers of rehabilitation for the treatment of alcoholism. The medical opinions in evidence are undisputed and credible. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As further found, the Claimant testified credibly with respect to her periods of employment, work restrictions and time in rehabilitation. Her testimony was consistent with the records of the Employer reflecting when she was working and earning a regular wage and when she was not working. As found, the medical reports of Drs. Koval and Sanchez are credible with respect to Claimant's work restrictions and her release to full duty.

Temporary Total Disability Benefits

b. Pursuant to §§ 8-42-103, 8-42-105, C.R.S., a claimant is entitled to an award of TTD benefits if: (1) the injury or occupational disease causes disability; (2) the injured employee leaves work as a result of the injury; and (3) the temporary disability is total and lasts more than three regular working days. *See Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). A claimant must establish a causal connection between the industrial injury and the subsequent wage loss in order to be entitled to TTD benefits. Section 8-42-103, C.R.S.; *Liberty Heights at Northgate v. Industrial Claim Appeals Office*, 30 P.3d 872 (Colo. App. 2001). As found, the Claimant was unable to work due to her temporary work restrictions from February 14, 2017 through her release to full duty on March 9, 2017, a period of 23 days. Therefore, the Claimant has sustained her burden, by preponderant evidence that she is entitled to TTD benefits for the period from February 14, 2017 through March 9, 2017, both dates inclusive, a total of 23 days.

d. Sections §8-42-105(3)(a) through (d), mandate that temporary total disability benefits continue until the first occurrence of one of several factors, including: (a) Claimant reaches MMI; (b) Claimant returns to regular or modified employment; (c) The attending physician provides claimant a written release to return to regular employment; or (d) The attending physician gives claimant a written release to return to modified employment, such employment is offered to claimant in writing, and claimant fails to begin such employment. As found, the Claimant failed to establish that she was entitled to TTD benefits until February 14, 2017. As found, the Claimant was working in a modified duty capacity from November 23, 2016 through January 14, 2017. Because she was working, she was unable to establish that she was sustaining a temporary wage loss for this period because of her admitted injury. She also failed to establish that she was entitled to TTD benefits from January 14, 2017 through February 13, 2017. The Claimant was in a rehabilitation facility during this period of time for a non-work related condition, and her presence in rehabilitation was the cause of her wage loss.

e. Once the prerequisites for TTD are met (*e.g.,* no release to return to full duty, MMI has not been reached, a temporary wage loss is occurring in modified employment or modified employment is no longer made available, and there is no actual return to work), TTD benefits are designed to compensate for a 100% temporary wage loss. *See Eastman Kodak Co. v. Industrial Commission,* 725 P. 2d 107 (Colo. App. 1986); *City of Aurora v. Dortch,* 799 P. 2d 461 (Colo. App. 1990). As found, Claimant has established that she is entitled to TTD benefits from February 14, 2017 through March 9, 2017, both dates inclusive, a period of 23 days. As found, the Claimant would have worked during this period but for her work restrictions and the lack of a modified duty position provided by the employer under C.R.S. § 8-42-105(3)(d). Also, she has not yet reached MMI.

Burden of Proof

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to meet her burden of proof with respect to establishing entitlement to TTD benefits from November 23, 2016 through February 13, 2017. She has met her burden of proof with respect to TTD benefits from February 14, 2017 through her release to full duty on March 9, 2017, a period of 23 days.

ORDER

IT IS, THEREFORE ORDERED THAT:

A. Claimant's claim for temporary total disability benefits from November 23, 2016 through February 13, 2017 is hereby denied and dismissed.

B. Claimant's claim for temporary total disability benefits from February 14, 2107 through March 9, 2017 a total of 23 days, is hereby granted. Respondent shall pay the Claimant for 23 days of temporary total disability, at the rate of $939.82 per week, or $134.26 per day, in the aggregate amount of $3,087.98, which is payable retroactively and forthwith.

C. The Respondent shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

C. Otherwise, the General Admission of Liability, dated April 28, 2017, remains in full force and effect.

D. Any and all issues not determined herein are reserved for future decision.

DATED this___day of August 2018.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

Whether Claimant established by a preponderance of the evidence that he is permanently and totally disabled as a consequence of the admitted work-related injuries he sustained on July 22, 2012?

Whether Claimant established by a preponderance of the evidence that he is entitled to a general award of maintenance medical benefits?

FINDINGS OF FACT

1. Claimant is a 57-year-old former forklift operator at Employer's Distribution Center. On July 22, 2012, Claimant was injured when he slipped on soap that was spilled on the ground and fell into his forklift. He did the splits and twisted. Claimant filed a Worker's Claim for Compensation on December 4, 2012, reporting injuries to his lower back, buttocks and left hip as a consequence the July 22, 2012, injury.

2. Thereafter, Claimant was referred to Concentra Medical Centers for medical care. Claimant reported severe back pain and was treated with conservative care which reduced the spasms as well as persistent pain in his left hip and buttock, which was treated with injections. Claimant was referred to Dr. Jeffrey Wunder, a consulting physician at Concentra Medical Centers, for primary care and pain management. Claimant was referred to numerous orthopedists following the industrial injury who suggested that he may need a left total hip arthroplasty, may have a pinched nerve and may just require injections to control the pain.

3. Claimant returned to modified work with Employer but was advised in December 2012 that they could no longer accommodate his work restrictions.

4. After a course of conservative care for the lower back and left hip, Claimant was placed at maximum medical improvement (MMI) by Dr. Wunder on June 3, 2013, who assigned a 15% impairment of the left lower extremity that converted to a 6% impairment of the whole person. Dr. Wunder recommended maintenance medical care and assigned permanent work restrictions of 25 lbs. lift and no more than 20 minutes per hour of weight bearing, standing and walking.

5. Upon Claimant's placement at MMI, he requested a Division Independent Medical Examination (DIME). Dr. Wallace Larson was selected to serve as the DIME examiner and Claimant was evaluated on October 23, 2013. Dr. Larson opined that the Claimant was not at MMI and would most likely require a total left hip arthroplasty. He did also find, at that time, that there was not a ratable impairment of the lumbar spine.

6. On November 4, 2013, Claimant was approved for Social Security Disability benefits beginning in June 2013.

7. Following the DIME examination with Dr. Larson, Respondents filed a General Admission of Liability on February 28, 2014.

8. Dr. Wunder did not serve as the Claimant's authorized treating physician (ATP) immediately after Claimant's DIME with Dr. Larson. In February 2015, after Dr. Wunder returned to work following a leave of absence, Claimant re-commenced medical care with him. Claimant was referred to Joshua T. Snyder, M.D. for evaluation and treatment of his left hip condition.

9. On March 27, 2015, Claimant was evaluated by Dr. Joshua Snyder. Dr. Snyder noted that Claimant had back pain and joint swelling. After reviewing both old and new radiographs, Dr. Snyder recommended that Claimant undergo a left total hip arthroplasty.

10. Claimant underwent a left total hip arthroplasty on May 20, 2015. Dr. Snyder reported that the unanticipated size of implant was placed, had a good fit proximally though it was still slightly open distally, but that it seemed satisfactorily stable.

11. Post surgically, Claimant returned to Dr. Wunder for medical care. Dr. Wunder forwarded a letter to the Insurer on May 27, 2015. Dr. Wunder enclosed the surgical report and stated that there were some surgical complications and that Claimant was unable to fully weight bear and had an unsteady gait. He requested home health care assistance as Claimant was not doing well.

12. On June 1, 2015, along with other services and equipment, Dr. Wunder prescribed a front wheeled walker for Claimant. On July 8, 2015, Claimant treated with Dr. Wunder and Claimant's opiate medication was reduced. Dr. Wunder noted that Claimant is getting around better yet still is having pain in the left hip. Claimant reported to the doctor that he no longer requires assistance with activities of daily living (ADLs) but requires a housecleaner visiting two times a week and assistance with grocery shopping. On July 8, 2015, Claimant was still off work.

13. On August 12, 2015, Claimant returned to Dr. Wunder for medical care noting that Claimant was doing okay overall but had increased pain in his hip in the groin area occasionally radiating to his knee. He noted tenderness in the anterior hip area and groin with reduced mobility. Dr. Wunder prescribed a pistol grip adjustable cane to offload his hip during ambulation.

14. On September 9, 2015, Dr. Wunder noted that Claimant's pain was somewhat improved. Claimant's most recent urine drug screen yielded expected results and Claimant's cane was being used occasionally with good results. Records reflect that on September 9, 2015, Claimant is taking Vicodin 5/325 mg b.i.d. The treatment plan on September 9, 2015, was to wean Claimant from opiod usage.

15. On September 24, 2015, Claimant treated with Dr. Snyder. The doctor reported that Claimant did well until 3 weeks ago when he started having increased pain along the inside of the thigh down to the knee. At this appointment, Claimant used crutches

because of pain and the doctor observed an antalgic gait and quad atrophy. Dr. Snyder recommended strengthening and stretching of the adductor and decreased activity.

16. On October 7, 2015, Dr. Wunder evaluated Claimant who reported more pain. Claimant weaned off Vicodin and was prescribed naproxen, 500 mg b.i.d. Dr. Wunder noted reduced left hip range of motion.

17. On November 16, 2015, Claimant's symptoms persisted and he was ambulating with bilateral underarm crutches. Claimant treated with Dr. Wunder who recommended an EMG nerve conduction study of the left lower extremity and a left intra-articular hip injection to diagnose the pain generator and made a referral to Dr. Pouliot. No reference in this report was made to pain medication.

18. On November 19, 2015, Dr. Snyder found Claimant started having increasing pain in the medial thigh down the leg nine weeks ago. Dr. Snyder was unsure why this is happening and supported Dr. Wunder's search for the pain generator. Dr. Snyder did not believe that Claimant's pain was caused by his total hip replacement.

19. On November 19, 2015, Dr. Wunder responded to a letter from Respondents' counsel posing questions about Claimant's condition. Dr. Wunder opined that Claimant is not at MMI and that the pain generator had not been determined yet. Dr. Wunder recommended an EMG and intra-articular hip injection for diagnostic purposes.

20. On December 17, 2015, Dr. Wunder reported that Claimant continued to ambulate with crutches and had hip pain with internal rotation. Claimant's prescription for naproxen was refilled for pain control. Dr. Wunder obtained a urine drug screen which showed a compliant result. Dr. Wunder recommended a lumbar MRI to make sure a lumbar disc protrusion was not responsible for left groin and thigh pain.

21. On January 18, 2016, Dr. Wunder evaluated Claimant finding increased pain and continued ambulation with crutches. Dr. Wunder's request for authorization for a lumbar MRI and injection of Claimant's left hip remained unauthorized. Dr. Wunder noted that Claimant was unable to work.

22. On March 14, 2016, Dr. Wunder examined Claimant and indicated that the hip injection was still not authorized. Dr. Wunder re-prescribed hydrocodone for Claimant's pain and Belsomra for sleep. He remained of the opinion that Claimant was not at MMI and unable to weight bear and to work.

23. Claimant was referred for an independent medical examination (IME) with Dr. Jorge Klajnbart on April 6, 2016, at Respondents' request. Dr. Klajnbart noted that the Claimant ambulated with crutches on that date, Dr. Klajnbart challenged him on his crutch usage. He noted that the Claimant had an antalgic gait and was unable to heel toe walk for the exam and the doctor documented atrophy of his left thigh muscle. Dr. Klajnbart opined that none of the treatments or procedures Dr. Wunder sought authorization for were deemed to be work related, reasonable or necessary. He further opined that Claimant reached MMI, assigned a 36% impairment of the lower extremity and recommended that Claimant follow a home exercise program.

24. Claimant returned to Dr. Snyder for a 6 month follow up on May 2, 2016, Dr. Snyder noted that Claimant continued to have significant pain and that the doctor's recommendation that Claimant see a spine surgeon was not approved. X-rays showed no obvious problem with Claimant's hip replacement. Dr. Snyder reported that Claimant has chronic left hip pain since the left hip arthroplasty which was of undetermined origin. Dr. Snyder wanted Claimant to follow up with a joint specialist to see if there is something else that may be causing his pain and Dr. Snyder again recommended evaluation with a spine surgeon.

25. On May 13, 2016, Claimant was evaluated by Dr. Wunder who noted that Claimant had decreased hip mobility and hip range of motion produced left inguinal ligament pain. Claimant was non-weight bearing. Dr. Wunder continued to want to locate the pain generator since Claimant had undergone a total hip replacement one year earlier. He indicated that Claimant's case was at a standstill until this happened. Dr. Wunder continued to prescribe Belsomra for sleep and hydrocodone for pain control. Claimant was unable to return to work.

26. On July 11, 2016, Claimant returned to Dr. Wunder for medical care. Dr. Wunder noted nothing had changed and continued to express his frustration at the lack of authorization for medical treatment to pinpoint the pain generator. He found that the Claimant was unable to return to work and refilled his prescriptions for hydrocodone and Belsomra.

27. Parties proceeded to hearing on the issues of prior authorization for the medical care Dr. Wunder and Dr. Snyder had requested on August 12, 2016, before ALJ Peter J. Cannici. On October 7, 2016, ALJ Cannici issued an order directing Respondents to provide authorization for the lumbar MRI and left hip injection.

28. On November 22, 2016, Claimant proceeded to a follow-up DIME with Dr. Larson. Dr. Larson opined that Claimant reached MMI on April 6, 2016, assigned a 37% left lower extremity rating and opined that Claimant required no maintenance medical care. Dr. Larson opined that Claimant's pain complaints were out of proportion to objective findings.

29. Claimant returned to Dr. Wunder on December 6, 2016. Dr. Wunder opined that Claimant remained unable to return to work and, pursuant to Order of ALJ Cannici, Claimant was referred for the intra-articular left hip injection and lumbar MRI.

30. Claimant's lumbar MRI was completed in December 2016 and showed that there was no disc herniation. The upper lumbar segments are normal and there was some disc bulging at L3 to S1 with some degenerative changes including facet disease and minor foraminal stenosis at the L3-L4 and L4-L5 levels.

31. On December 19, 2016, Claimant returned to Dr. Wunder. Dr. Wunder reviewed the lumbar MRI scan and concluded the MRI effectively ruled out any significant defects which could lead to his symptom patterns. Dr. Wunder noted that he was scheduled for

the intra-articular left hip injection on December 21, 2016. He continued to opine that Claimant was unable to return to work.

32. On January 9, 2017, Claimant returned to Dr. Wunder following the intra-articular lidocaine injection. Claimant's pain level, on a scale of 1 to 10, went from a grade 6-7 down to a 1 on the day of the injection, the next day his pain was completely absent and subsequently Claimant's pain recurred. Dr. Wunder opined that the test strongly indicated that there is an intra-articular hip pain generator and Claimant should proceed with a second opinion from Dr. Brian White, M.D.

33. On March 14, 2017, Claimant returned for medical care to Dr. Wunder. Dr. Wunder reported that his referral to Dr. White was not approved by Insurer. Instead, Respondents requested that Claimant undergo a Functional Capacity Evaluation (FCE). Dr. Wunder reports that a FCE might cause harm since Claimant may have an intra-articular pain generator. Claimant continued to ambulate with a cane. He had reduced range of motion in his left hip with internal pain rotation and Dr. Wunder recommended a MRI arthrogram of Claimant's hip.

34. On March 15, 2017, upon the request of Respondents, Claimant participated in the FCE with Alexander Garrido, P.T., D.P.T., at Peak Form Physical Therapy. Physical Therapist Garrido noted Claimant exerted valid and consistent effort, showed no pain behaviors, did not exhibit Waddell signs and no extreme overt pain behaviors during the evaluation. Claimant's gait was antalgic and present throughout the exam.

35. Based on the FCE result, it was found that Claimant could safely occasionally carry 12 pounds, push 26 pounds and pull 23 pounds. He further found that Claimant could walk for 13 minutes with an assistive device and sit for approximately 15 minutes. The FCE recommendation is to allow Claimant to have authority to self-regulate and self-monitor the following activities: ambulation over slippery, uneven or unstable surfaces; repetitive flexion of the spine, including during activities such as forward bending, side bending, squatting and overhead use of the upper extremities, particularly during weight bearing work, and sit and stand as needed throughout a work shift.

36. On April 10, 2017, Claimant returned to Dr. Wunder for medical care. Dr. Wunder noted that Claimant was in a holding pattern waiting for care to be authorized and, therefore, Dr. Wunder refilled Claimant's prescriptions and again referred Claimant to Dr. White. Dr. Wunder opined contrary to the DIME opinion that Claimant is not at MMI.

37. On June 14, 2017, Claimant's overall pain levels were the same and Claimant was having more frequent aggravations. Dr. Wunder injected tender points in Claimant's left anterior thigh with lidocaine and Kenalog. The recommended MRI and referral to Dr. White had not been authorized, so Dr. Wunder refilled prescriptions for hydrocodone and Belsomra.

38. On August 10, 2017, and September 7, 2017, Claimant returned to Dr. Wunder and no medical treatment was authorized, so the doctor refilled Claimant's pain and sleep medications and restricted Claimant's work to "sit down work" only.

39. On August 23, 2017, Dr. Klajnbart completed an addendum of his IME evaluation of Claimant and was furnished a copy of the March 15, 2017, FCE. Dr. Klajnbart noted that Claimant gave maximum voluntary effort and he opined that he concurred with this FCE. The doctor opined that none of his earlier opinions were changed.

40. With regards to Claimant's past relevant education, the record shows that he attended Fort Collins High School and dropped out in the tenth grade. Claimant credibly testified that he struggled in school and was told that he had dyslexia, writing and spelling is difficult for him. His grades were poor in 10th grade. Claimant enrolled in night school to complete his high school diploma in 1982 at Centennial High School but was unable to complete the program. Claimant also completed a certificate program at the Denver Institute of Technology in HVAC, a primarily hands on study and a vocation in which Claimant never worked.

41. With regard to Claimant's past relevant work, he was employed as a stand-up forklift operator and order picker with lifting requirements of 100 lbs. for Employer for approximately 13 years. Prior to that he worked as a laborer at a concrete plant, shoveling rock onto a conveyor belt for several years. He worked in construction as a laborer, drywall installer, siding installer and framing carpenter. At a paper recycling center, he bundled and cut paper by hand. He worked in grounds maintenance doing sprinkler repairs and caring for lawns. As a teenager, Claimant worked in the kitchen at a Denny's. Claimant was separated from his employment with Employer in December 2012.

42. On September 7, 2017, Claimant underwent a vocational evaluation with William M. Hartwick, MS, CRC, CLCP a Certified Rehabilitation Consultant/Life Care Planner. Mr. Hartwick completed a medical records review, educational records review, FCE review, educational records review, a client interview, work history analysis and skills analysis, summarizing and concluding that Claimant is unable to perform any of his prior occupations due to the injury of his left hip, resultant surgical intervention, documented physical limitations and chronic pain. Mr. Hartwick further opined that given that Claimant's employment history is primarily unskilled labor positions and positions that required limited education, he will be unable to qualify for or perform any light or sedentary unskilled occupations that exist in the local or regional economy and will therefore be unable to earn any wages. Mr. Hartwick further opined that based on the Claimant's medical reports, testimony and interviews he had completed that, even if a job could be found that accommodated his work restrictions, that he would not be able to maintain sustained employment due to his frequent need for breaks and inevitable need to miss work, secondary to pain.

43. On February 12, 2017, Claimant was evaluated by Gail Pickett, MA, QRC, ABDA, Vocational Consultant and her vocational assessment report is dated September 12, 2017. Ms. Pickett completed a medical summary, educational summary, computer

skills summary, employment summary, license and certification and activity summary. She concluded that Claimant could obtain a position completing production work or a temporary position doing trimming work. Ms. Pickett opined that Claimant is employable using either set of work restrictions.

44. Ms. Pickett also furnished her testimony by deposition. Ms. Pickett opined that Claimant was employable, specifically stating that a trimmer at a mask company, an earring assembler, carporter, general cleaning, injection molding and produce sorting based upon the restrictions of Dr. Wunder and the FCE of March 2017. Ms. Pickett opined that Claimant had transferable educational skills which were derived largely from his completion of a HVAC certificate program despite never working in that position and the consistent report of having a learning disability, poor grades and inability to finish high school.

45. Ms. Pickett observed Claimant's antalgic gait. She testified that Claimant was precluded from all prior employment. Ms. Pickett testified that she believed that Claimant could work manufacturing small parts with his 15 minute sit and 13 minute stand with a cane restriction. Ms. Pickett identified an earring assembly job and trimming masks for Claimant. Ms. Pickett did not explain how the positions would be carried out without bilateral hand usage. Ms. Pickett further identified a singular position where a scope is picked up and looked through, which she believed Clamant could successfully perform the duties with one hand. Finally, Ms. Pickett testified that the FCE did not take the Claimant's stamina into consideration which is an important factor of employability. Ms. Pickett's testimony and opinions were found to be less credible and persuasive than the testimony and opinions of Mr. Hartwick.

46. On October 6, 2017, Claimant returned to Dr. Wunder who refilled his prescriptions for sleep and opioid pain medication. Dr. Wunder opined that Claimant could return to sit down work only. Dr. Wunder commented on Respondents continued refusal to authorize a MRI scan and referral of Claimant to Dr. White. Dr. Wunder opined that his hands were tied as long as the Insurer would not authorize treatment.

47. Claimant credibly testified that his pain had increased and that sleep was increasingly difficult due to pain complaints. He noted that he was only able to minimally weight bear on his left foot and essentially needed his cane for ambulation and balance. Claimant reported that a friend completes yard work and assists with or completes shopping activities. Claimant pays a cleaning agency $425.00 per month to assist with household chores, such as laundry, vacuuming, sweeping and dishes, which he was unable to complete on his own. Claimant's testimony is consistent with Dr. Wunder's reports and the assessments of the vocational experts.

48. Claimant was able to complete and gave maximum effort at the March 15, 2017, FCE but that he had to take frequent breaks where he laid down in between activities noting that he rested or laid down 1.5 hours out of the 4 hours of testing. Claimant testified that he can stand/walk for about 5 minutes before his pain increases and 30 minutes before the pain is unbearable.

49. Claimant has not sought work because he did not feel that he could furnish an employer with a full day of work. Claimant credibly testified that if he could work he would be and that he did not believe with his present pain and restrictions that he was employable. After Claimant was initially placed at MMI in June 2013, Claimant reported to the Workforce Center and was advised that the Workforce Center could not find work for him that complied with his 25-pound lift restriction and standing no more than 20 minutes per hour.

50. Mr. Hartwick credibly testified that Claimant was only able to complete sit down work which precluded him from employment for which he was qualified which had been medium to heavy unskilled labor. Mr. Hartwick credibly opined that Claimant's lack of training and learning disabilities in light clerical or customer service occupations precluded him from work. Claimant's employability was further complicated by his need to alternate between sitting and standing as well as his limitations with lifting while standing could be disruptive to the work flow and adversely affect his ability to perform sedentary jobs in an assembly or production setting. Mr. Hartwick further credibly testified that any job where Claimant was permitted a sit/stand option, he would be unable to use both his hands to complete the job while standing because he would need to keep one hand on his cane for balance.

51. Mr. Hartwick testified that, consistent with his report, Claimant is not employable nor able to earn wages secondary to his educational, vocational background, permanent work restrictions and chronic pain.

52. Dr. Klajnbart testified that he would offer alternative sleep aids as well as cease the opioid pain medications that Dr. Wunder was prescribing Claimant. Dr. Klajnbart believed that the left hip MRI and second opinion from Dr. White as requested by Dr. Wunder were reasonable, necessary and related and should be furnished to Claimant in pursuit of the answer to questions regarding pain generation. Dr. Klajnbart noted measurable atrophy between Claimant's left and right legs.

53. Dr. Larson offered deposition testimony consistent with the DIME report.

54. On March 23, 2018, Dr. Wunder provided rebuttal testimony by deposition. Dr. Wunder credibly testified that he continued to prescribe Claimant hydrocodone for pain management because treating providers of Claimant remained unable to establish the pain generator and Claimant has pain. Dr. Wunder testified that he was prescribing Belsomra for sleep. Dr. Wunder tried to change to a less expensive medication, and authorization was denied by Insurer. Dr. Wunder opined that as long as the Respondents continued to fail to authorize diagnostic testing necessary to isolate the pain generator that Claimant would need these medications indefinitely.

55. Dr. Wunder testified that the 85% improvement that Claimant experienced with the intraarticular injection showed that there was something happening in the hip that is causing pain which is why he requested a left hip MRI and referral to Dr. White, who is an expert in hips and would serve as fresh eyes as Claimant had already been to Dr. Snyder, his surgeon, multiple times for postsurgical evaluations. Dr. Wunder clarified

that he agreed with the assessment of the FCE evaluator in terms of frequent positional changes needed and an inability to perform multiple positions and that he did not agree that Claimant was capable of doing sit down work. Dr. Wunder clarified that he does believe that the Claimant's use of a cane is necessary from a medical standpoint.

56. Dr. Wunder testified that Claimant was no longer receiving functional improvement from his dosage of hydrocodone but that he believed he needed it for pain control. And, that he needed the Belsomra for sleep, that without it he would not have any sleep at all. Finally, Dr. Wunder testified that Claimant's presentation on the surveillance video was consistent with his presentation at the clinic.

57. Dr. Wunder is a level II accredited and board certified physician who furnished medical care to Claimant for more than 6 years and is in the best position to assess what medical care is needed to maintain MMI as well as the validity of the FCE and work restrictions.

58. Claimant, testified consistent with the record. His testimony was credible, reliable and persuasive.

59. Drs. Larson and Klajnbart credibly testified that the continued prescriptions of sleep and narcotic pain medication for Claimant was neither reasonable nor necessary medical benefit to maintain Claimant's condition at maximum medical improvement. Dr. Larson credibly opined that ongoing prescriptions of hydrocodone is also not within the Colorado Medical Treatment Guidelines. Dr. Larson points to the fact that Claimant did not undergo a psychological evaluation recommended under the Guidelines for ongoing opiod medication usage. Further, the prescribing physician has not maintained a record of Claimant's functional history nor set forth function goals. Also, Claimant did not sign a narcotic pain contract. Dr. Larson credibly testified the medications Claimant is currently taking are not reasonable or necessary and he requires a weaning program.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant bears the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S.; *City of Boulder v. Streeb*, 706 P.2d 786, 789 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the

reasonableness or unreasonableness (probability or improbability) of the testimony and actions, the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 p.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

3. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Permanent Total Disability

4. Claimant proved by a preponderance of the evidence that he is permanently and totally disabled as defined by Section 8-40-201(16.5), C.R.S. and has proven that he is unable to earn wages in the same or any other employment.

5. To prove permanent total disability, a claimant must show by a preponderance of evidence that he is incapable of earning any wages in the same or other employment. Section 8-40-201(16.5)(a), C.R.S. A claimant therefore cannot receive permanent total disability benefits (PTD) if he or she is capable of earning wages in any amount. *Weld County School Dist. RE-12 v. Bymer*, 955 P.2d 550, 556 (Colo. 1998). The term "any wages" means more than zero wages. *See, Lobb v. ICAO*, 948 P.2d 115 (Colo. App. 1997); *McKinney v. ICAO*, 894 P.2d 42 (Colo. App. 1995).

6. The critical test is whether employment exists that is reasonably available to a claimant under his particular circumstances. *Weld County School Dist. RE-12 v. Bymer, supra.* In determining whether the claimant is unable to earn any wages, the ALJ may consider a number of "human factors." 933 P.2d 1330 Colo. 1997) *Christie v. Coors Transp. Co., 933 P.2d 1330 (Colo. 1997)* These factors include the claimant's physical condition, mental ability, age, employment history, education, and the "availability to work" the claimant can perform. W*eld County School Dist., supra.* Another human factor is the claimant's ability to obtain and maintain employment within his physical abilities. *See Professional Fire Protection, Inc. v. Long,* 867 P.2d 175 (Colo. App. 1993).

7. The claimant is not required to establish that an industrial injury is the sole cause of his inability to earn wages. Rather the claimant must demonstrate that the industrial injury is a "significant causative factor" in his permanent total disability. *Seifried v. Industrial Commission*, 736 P. 2d 1262 (Colo. App. 1986). Under this standard, it is not sufficient that an industrial injury creates some disability which ultimately contributes to permanent total disability. Rather, *Seifried, supra,* requires the claimant to prove a direct causal relationship between the precipitating event and the disability for which the claimant seeks benefits. *Lindner Chevrolet v. Industrial Claim Appeals Office*, 914 P.2d 496 (Colo. App. 1995), rev'd on other grounds, *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996).

8. Here, Claimant provided substantial evidence that he suffered injuries to his left hip and lower back. The consequences of the injuries have limited Claimant's ability to sit or stand on a sustained basis and have affected his stamina. Further, Claimant's transferrable skills and work history qualifies him to perform an unskilled position with a sit or stand option. However, Claimant requires any position he might qualify for to be a position allowing use of only one hand while Claimant stands using his cane. It is concluded that Claimant's limitations effectively eliminated all positions found by Respondents' vocational expert. The relevant work restrictions are consistent with the findings and opinions of Dr. Wunder, Dr. Klajnbart and the findings of the FCE. It is further supported by the testimony of Claimant and vocational expert, William Hartwick.

9. A claimant's occasional ability to complete and perform work activities does not preclude a finding of permanent total disability if the evidence shows that a claimant would be unable to sustained the activities for a sufficient period of time to earn wages. *Moller v. North Metro Community Services*, W.C. No. 4-216-439, I.C.A.O. August 6, 1998. This is because the ability to earn wages inherently includes consideration of whether the claimant is capable of getting hired and sustaining employment. *See Christie v. Coors Transportation Co., supra; Cotton v. Econ. Lube N Tune*, W.C. No. 4-220-395 (January 16, 1997), aff'd, *Econ. Lube N Tune v. Cotton* (Colo. App. No. 97CA0193, July 17, 1997) (not selected for publication). Furthermore, a claimant's occasional performance of physical activities which are useful in the labor market does not preclude a finding of permanent total disability if the evidence indicates that the claimant is unable to sustain the activities for a sufficient period of time to be hired and paid wages. *See Marek v. Children's Hospital*, W.C. No. 4-2211-079 (September 30, 1996).

10. Mr. Hartwick credibly opined that Claimant's ability to work on a sustained basis, with his pain and physical limitations would adversely affect his ability to maintain employment as he would need frequent breaks to lay down as well as have frequent days off to recover from increased pain.

11. Having considered the evidence presented at hearing, Claimant has proven by a preponderance of the evidence that he is unable to earn a wage. The work injury is a significant causative factor in his inability to earn a wage. Further, the restrictions of Dr. Wunder and the March 2017 FCE most accurately reflect Claimant's physical limitations and abilities. The ALJ credits the opinions of Dr. Wunder and Dr. Klajnbart which corroborate the findings of the FCE.

12. Mr. Hartwick's testimony and vocational opinions were found to be more credible and persuasive than Ms. Pickett's deposition testimony and vocational report. Here, Claimant provided credible evidence that he suffered injuries to his left hip and lower back. Claimant further established by a preponderance of the evidence that the consequences of the injuries have limited Claimant's ability to sit/stand on a sustained basis and have affected his stamina. Further, Claimant proved that his need to have an unskilled position with a sit/stand option, which can be completed with the use of only one hand, while the Claimant stands using a cane, effectively eliminated all positions found by Respondents' vocational expert.

Maintenance Medical Benefits

13. Claimant sustained his burden of proof to establish that he is entitled to a general award of maintenance medical benefits. Colorado courts have ruled that the need for medical treatment may extend beyond the point of maximum medical improvement (MMI) where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). Respondents are obligated to provide treatment which is "reasonably needed" to cure and relieve the claimant from the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. Once the claimant establishes his entitlement to *Grover* type medical benefits, the respondents are liable for such treatment which is authorized. *Renate Owens v. Conam Management and American Home Assurance*, WC 4-350-674 (2001).

14. In establishing entitlement to *Grover*-type benefits, the claimant is not required to prove that a "particular" or "specific course of treatment" is anticipated. *See Stollmeyer v. Industrial Claim Appeals Office, supra.* Furthermore, there is no distinction between "active treatment" and "diagnostic procedures." *See Brock v. Jack Brach and Sons Trucking*, W.C. No. 3-107-451, December 15, 1995; *Atwood v. Western Slope Industries*, W.C. No. 3-069-135, November 28, 1994. Medical monitoring is a compensable benefit. *Atwood v. Western Slope Industries*, W.C. No. 3-069-135, November 28, 1994.

15. Claimant seeks an order continuing opiate pain and sleep medications prescribed by Dr. Wunder to address Claimant's left hip pain. Claimant contends, with the support of Dr. Wunder's testimony and medical reports, that these medications are reasonable and necessary medical maintenance medical benefits for Claimant's left hip injury.

16. Dr. Wunder's medical records document his prescription of hydrocodone and Belsomra. In his records and testimony, Dr. Wunder expresses frustration over Respondents' failure to authorize Claimant's arthrogram MRI and second opinion from Dr. Brian White for purposes of discovering the source of Claimant's pain generator. Dr. Wunder's continued prescription of sleep and pain medications for Claimant is justified primarily based upon Respondents' failure to authorize further medical treatment that might discover the source of Claimant's pain allowing treatment to be directed to the pain generator. The medical records reflect Dr. Wunder's awareness of the contra indicators for Claimant's continued use of sleep and narcotic pain medications yet the doctor continues his prescriptions for lack of a better alternative in the face of Respondents' failure to authorize additional treatment and tests

17. Respondents' argue Claimant's medications, hydrocodone and Belsomra, are not reasonable and necessary medications and that Claimant should be weaned from use of these medications. Drs. Larson and Klajnbart testified that the continued prescription of sleep and narcotic pain medication for Claimant is neither a reasonable

or necessary medical benefits to maintain Claimant's condition at maximum medical improvement.

18. Dr. Larson credibly opined that ongoing prescription of hydrocodone is not within Colorado Medical Treatment Guidelines. Dr. Larson points to the fact that Claimant did not undergo the psychological evaluation recommended under the Guidelines for ongoing opioid medication usage and did not sign a narcotic contract. Further, the prescribing physician has not maintained a record of Claimant's functional history nor set forth functional goals. Dr. Larson credibly testified the medications Claimant is currently taking are not reasonable or necessary and he requires a weaning program.

19. It is found and concluded that the pain medication, hydrocodone, and sleep medication, Belsomra, prescribed for Claimant are not reasonably necessary maintenance medical benefits. It is further found and concluded that Claimant shall be weaned from use of narcotic pain medication and Belsomra medication for sleep under Dr. Wunder's care and direction.

ORDER

1. Respondents shall be liable to Claimant for permanent total disability benefits.

2. Claimant is denied a general award of maintenance medical benefits. Specifically, Respondents shall be liable for weaning Claimant from use of opioid pain medication and Belsomra sleep medication.

DATED: August 20, 2018.

Margot W. Jones

MARGOT W. JONES
ADMINISTRATIVE LAW JUDGE

ISSUES

- Did Claimant prove by a preponderance of the evidence she suffered a compensable industrial injury to her left knee on September 20, 2017?

- If Claimant proved a compensable injury, with medical treatment she obtained at The Little Clinic on September 21, 2017 authorized?

- If Claimant proved a compensable injury, did she prove that a left knee arthroscopy recommended by Dr. Michael Simpson is reasonably necessary treatment to cure and relieve the effects of the industrial injury?

FINDINGS OF FACT

1. Claimant works for Employer as a convenience store clerk. She alleges a compensable left knee injury on September 20, 2017 while she was taking out the trash. She threw the trash into the dumpster and was turning to walk back into the store when she experienced a painful "pop" in her left knee. Claimant had lifted her left leg and was turning to the right with her weight on her right leg when the "pop" occurred. Claimant did not catch her foot or twist her knee, nor did she stumble, slip or trip. The ground was free from debris, obstructions or other surface defect.

2. Claimant saw her primary care provider at The Little Clinic on September 21, 2017. She described the onset of knee pain while taking out the trash at work. She also stated, "she does note hearing her knee pop two other times in the past and had a similar injury on the right knee as well." She was diagnosed with acute left knee pain and advised to use the RICE protocol.

3. Claimant went to the store on September 21, 2018 to discuss the incident with her manager, Keith Callahan. Mr. Callahan referred Claimant to Concentra.

4. Claimant saw Dr. Randall Jones at Concentra on September 22, 2017. Dr. Jones diagnosed a left knee strain and opined "on a greater than 50% probability I believe this is work-related."

5. On September 25, 2017, Claimant completed an incident report on which she stated, "I don't know why it happened. I just turned to my right to walk in [the] store and felt this happen."

6. Claimant underwent a left knee MRI on October 13, 2017. The radiologist appreciated a full thickness and partially displaced tear of the posterior root of the medial meniscus, degenerative changes of the body and posterior horn of the medial meniscus, mild chondromalacia of the medial compartment, grade 3 chondromalacia of the median

eminence and the inferior medial aspect of the femoral trochlea, patellofemoral joint effusion, tendinosis of the patellar tendon, and soft tissue edema.

7. Claimant saw Dr. Michael Simpson, an orthopedic surgeon, on October 23, 2017. He misunderstood the mechanism of injury as "at work taking the trash out and her knee *twisted*." (Emphasis added). Dr. Simpson diagnosed an acute root tear of the medial meniscus. He opined "she does have some chronic degenerative changes of her meniscus that predate this. I suspect that made her more prone to this injury." He recommended arthroscopic surgery, either a partial meniscectomy or a root repair.

8. Dr. Mark Failinger performed an IME for Respondent on December 7**,** 2017. Although Dr. Failinger agreed with Dr. Simpson's surgical recommendation, he disagreed it was proximately caused by the September 20 incident. He opined that "a twist with significant force on a flexed knee can cause further tearing of meniscus," but noted Claimant did not twist her knee. He thought the need for treatment was related to her degenerative meniscus and degenerative articular surface rather than her work.

9. Claimant saw Dr. Timothy Hall for an IME at the request of her counsel on March 1, 2018. Claimant described the injury mechanism as: "she went out with a small bag of garbage, threw it in the dumpster, backed up, turned to her right to walk away and apparently, rotated on a ***fixed right leg*** and felt a pop." (Emphasis added). Dr. Hall diagnosed an acute meniscal tear superimposed on pre-existing degenerative changes. He echoed Dr. Simpson's opinion that the pre-existing degenerative changes "predisposed her to this fairly significant injury despite relatively minor trauma." Dr. Hall opined the incident "obviously created enough force to cause a traumatic event, i.e., tearing of the meniscus." Although Dr. Hall opined Claimant suffered a knee injury as "the direct result" of her work, he also conceded "it appears to me this is more of a legal issue than a medical one."

10. Dr. Hall reiterated and expounded on his opinions in his deposition testimony.

11. Dr. Failinger testified at hearing and submitted a supplemental report after the hearing. He persuasively explained:

> One looks for a mechanism which would be consistent with tearing of meniscus, or even accelerating the pre-existing degenerative arthritis and/or degenerative medial meniscal tear. . . . I specifically tried to find a mechanism that would be consistent with causing new pathology, and I could not. Although I appreciate Dr. Hall's assumption that "something must have happened" that is not borne out by the objective studies . . . . I turn to page 3 of his Independent Medical Examination, which states the patient "rotated on a fixed right leg and felt a pop." The right knee is not even the knee involved. If the patient's weight was on [her] right knee, and the patient had a significant force such as a slip or a fall, one could certainly make a case for a right knee injury. The **left knee** is the involved knee, and therefore his rationale of a work-related left knee injury is not borne out by the history.

His rationale does not make sense from a mechanism standpoint. (Bold in original).

12. Dr. Failinger's opinions are credible and more persuasive than medical opinions in the record to the contrary.

13. Claimant failed to prove she sustained a compensable injury arising out of her employment on September 20, 2017. Claimant was bearing no weight on her left knee when she felt the painful pop. Claimant testified she felt the pop "after" she lifted her left foot, and no injurious force was being applied to the left knee at that time. Claimant was pivoting with her weight on her right leg, and her left leg was merely following the twisting motion of her body. Claimant's left knee spontaneously popped, with no causal influence from her job duties. Claimant's injury was not due to an employment risk, or a neutral risk that would not have been injurious "but for" being at work. The injury was "precipitated" by pre-existing degenerative changes in her knee rather than her work duties. There was no "special hazard" to take this out of the category of "purely personal" risks. Claimant's work did not aggravate, accelerate, or combine with her preexisting condition to cause the torn meniscus, and it was pure happenstance her symptoms developed at work.

CONCLUSIONS OF LAW

To prove a compensable injury, a claimant must prove the injury occurred while performing service arising out of and in the course of employment. Section 8-41-301(1)(b). The terms "arising out of" and "in the course of" are not synonymous. The "course of employment" requirement is satisfied if the injury occurred within the time and place limits of the employment relationship and during an activity that had some connection with the employee's job-related functions." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). The term "arising out of" is narrower, and requires an injury "has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered a part of the employee's employment contract." *Horodysyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001).

The mere fact that a claimant develops symptoms at work does not automatically establish a compensable injury. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968). The claimant must prove a causal connection between the injury and the duties or conditions of her work. *Ramsdell v, Horn,* 781 P.2d 150 (Colo. App. 1989).

The existence of a pre-existing condition does not disqualify a claim for compensation. If a claimant's work aggravates, accelerates, or combines with a preexisting condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain was proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). But the mere fact that a claimant experiences symptoms at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Cotts v. Exempla*, W.C. No. 4-606-

563 (August 18, 2005). Rather, when a claimant experiences symptoms at work, the ALJ must determine whether the subsequent need for treatment was caused by an industrial aggravation or due to the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (October 2, 2009).

In *City of Brighton v. Rodriguez*, 318 P.2d 496 (Colo. 2014), the Supreme Court addressed whether an unexplained fall at work satisfies the "arising out of" test. The court identified three categories of risks that cause injuries to employees: (1) employment risk directly tied to the work itself; (2) personal risks, which are inherently personal; and (3) neutral risks, which are neither employment -related more personal. The first category of risks encompasses risks inherent to the work environment and are compensable, whereas the second category of risks is not compensable, unless an exception applies. The court further defined the category of personal risks to encompass so-called idiopathic injuries, which are considered "self-originated" injuries that spring from a personal risk of the claimant, such as heart disease, epilepsy, or similar conditions. The third category — "neutral risks" — are compensable if application of a "but for" test shows any employee would have been injured simply by virtue of being at work at that time. The court was careful to point out that the "but for" test does not relieve the claimant the burden of proving causation, nor does it suggest that all injuries occurring at work are compensable.

When a claimant's injury is "precipitated" by a pre-existing condition, the injury is not compensable unless a "special hazard" of employment increased the probability or severity of the injury. *National Health Laboratories v. Industrial Claim Appeals Office*, 844 P.2d 1259 (Colo. App. 1992); *Gates Rubber Co. v. Industrial Commission*, 705 P.2d 6 (Colo. App. 1985). The classic case is the employee who suffers an epileptic seizure at work which causes him to fall from a scaffold or ladder. *E.g., Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989).

As found, Claimant failed to prove she suffered a compensable injury to her left knee on September 20, 2017. Claimant's left knee spontaneously popped, with no causal relationship to her job duties. Claimant's injury was not due to an employment risk, or a neutral risk that that was injurious simply because Claimant was at work. Claimant's injury was precipitated by pre-existing degenerative changes in her knee rather than her work duties, with no special hazard to take this out of the category of "purely personal" risks.

The ALJ finds the case of *Miles v. City and County of Denver*, W.C. No. 4-961-742-01 (December 15, 2015) analogous and instructive. In *Miles*, the claimant suffered a knee injury when she stepped forward to hand lunch boxes to her co-workers. The claimant had bent over to grab lunches for two employees, stood up, turned, and took a step with her left leg. As she stepped forward, she heard a pop and felt immediate pain in her left knee. The claimant did not twist her knee as she stepped forward, but "merely took a step forward with her left leg after which he experienced pain and heard a pop." She was diagnosed with a medial meniscus tear and degenerative arthritis. The ALJ in *Miles* found the claimant failed to prove a compensable injury arising out of her work, and the ICAO affirmed. The undersigned ALJ sees no meaningful distinction between the facts in *Miles* and the circumstances of Claimant's case.

Claimant clearly had pre-existing degenerative changes in her left knee, and the symptoms she developed on September 20, 2017 reflected the natural progression of her underlying condition. Her work did not aggravate, accelerate, or combine with her preexisting condition to cause the torn meniscus or other injury, and it was pure happenstance her symptoms developed at work. Thus, Claimant failed to prove a compensable injury.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits in W.C. No. 5-061-014 is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 22, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained compensable lower back and finger injuries on September 25, 2017 during the course and scope of his employment with Employer.

2. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of his industrial injuries.

3. A determination of Claimant's Average Weekly Wage (AWW).

4. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period October 3, 2017 until January 6, 2018.

5. Whether Employer is subject to penalties pursuant to §8-43-408(1), C.R.S. for failing to carry Workers' Compensation insurance on September 25, 2017.

6. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to recover penalties under §8-43-304, C.R.S. for Employer's failure to timely report his Workers' Compensation claim pursuant to §8-43-103(1), C.R.S.

7. Whether Claimant has established by a preponderance of the evidence that he is entitled to recover penalties for Employer's failure to timely admit or deny his Workers' Compensation claim pursuant to §8-43-203(2)(a), C.R.S.

FINDINGS OF FACT

1. Employer is a service establishment owned by Im Hoe. On July 26, 2017, Claimant began working for Employer.

2. On September 25, 2017 Claimant was working in the bar area of Employer's facility. Claimant testified that he injured his lower back, left little finger and right middle finger while changing a beer barrel in the bar area. Employer did not possess Workers' Compensation insurance on September 25, 2017.

3. Claimant immediately reported his injuries to General Manager Dong Gil Kim but was terminated on the following day. Mr. Kim informed Claimant that October 2, 2017 would be his last day working for Employer.

3. On October 2, 2017 Claimant drafted a letter to Mr. Hoe. He explained that he had been injured at work on September 25, 2017 at 11:00 p.m. He specifically

noted that he strained his back, sprained his left little finger and sprained his right middle finger. Claimant remarked that he reported his injuries to Mr. Kim and requested medical benefits. He stated that he would file a Workers' Compensation claim because he was uncertain about future treatment and recovery.

4. Employer did not respond to Claimant's request for medical treatment. Claimant thus obtained acupuncture and chiropractic treatment for his industrial injuries through personal providers. The chiropractic treatment included therapeutic massage and manipulation of Claimant's lower back. Claimant paid $60.00 to Yang Acupuncture and $2,743 to Kevin Hwang Chiropractic for a total of $2,803.

5. Claimant explained that he was unable to work for the period October 3, 2017 until January 6, 2018 because of his September 25, 2017 work injuries. The period consists of 95 days or 13.57 weeks.

6. For the period July 26, 2017 until October 2, 2017 Claimant earned total wages of $7050. The period covered 68 days or 9.71 weeks. Dividing $7050 by 9.71 yields an Average Weekly Wage (AWW) of $726.05. An AWW of $726.05 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

7. Claimant has established that it is more probably true than not that he sustained compensable lower back and finger injuries on September 25, 2017 during the course and scope of his employment with Employer. Claimant credibly testified that on September 25, 2017 he injured his lower back, left little finger and right middle finger while changing a beer barrel in Employer's bar area. In an October 2, 2017 letter to Employer Claimant explained that he was injured at work on September 25, 2017 at 11:00 p.m. He specifically noted that he strained his back, sprained his left little finger and sprained his right middle finger. Claimant reported his injuries to Mr. Kim and sought medical benefits for his injuries. Based on Claimant's credible testimony and a review of the record, Claimant suffered a disability that was proximately caused by injuries arising out of and within the course and scope of his employment with Employer.

8. Claimant has demonstrated that it is more probably true than not that he is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of his industrial injuries. Because Employer did not respond to Claimant's request for medical care he obtained acupuncture and chiropractic treatment for his industrial injuries at his own expense. The chiropractic treatment included therapeutic massage and manipulation of Claimant's lower back. Claimant paid $60.00 to Yang Acupuncture and $2,743 to Kevin Hwang Chiropractic for a total of $2,803. All of the preceding medical treatment was reasonable, necessary and related to Claimant's September 25, 2017 industrial injuries. Employer is thus financially responsible for the payment of Claimant's medical expenses for the treatment of his lower back and finger conditions.

9. Claimant has proven that it is more probably true than not that he is entitled to receive Temporary Total Disability (TTD) benefits for the period October 3,

2017 until January 6, 2018. Claimant's credible testimony reveals that he was unable to perform his job duties between October 3, 2017 and January 6, 2018. Claimant was obtaining medical treatment for his lower back and finger symptoms. He is entitled to an award of TTD benefits because his September 25, 2017 industrial injuries caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. Multiplying Claimant's AWW of $726.05 by 66.67% yields a weekly TTD rate of $484.06.

10. Employer was not insured on September 25, 2017. Claimant's disability benefits shall be increased by 50% because of Employer's failure to comply with the insurance provisions of the Act. Claimant is entitled to receive TTD benefits for the period October 3, 2017 until January 6, 2018. The period covers 95 days or 13.57 weeks. Claimant's TTD rate is $484.06, increased by 50% for a lack of insurance, to a TTD rate of $726.09 each week. Multiplying $726.09 for a period of 13.57 weeks yields a total TTD amount of $9853.04.

11. Claimant has failed to demonstrate that it is more probably true than not that he is entitled to recover penalties under §8-43-304, C.R.S. for Employer's failure to timely report his Workers' Compensation claim pursuant to §8-43-103(1), C.R.S. The record demonstrates that Claimant notified Mr. Kim of his September 25, 2017 work injuries on the date they occurred. Claimant also drafted a letter to Mr. Hoe on October 2, 2017 advising of his work injuries. However, Claimant has produced insufficient evidence that Employer failed to report the September 25, 2017 claim to the Division of Workers' Compensation within 10 days or advise Claimant that he might be entitled to Workers' Compensation benefits. Accordingly, Claimant's request for penalties pursuant to §8-43-103(1), C.R.S. is denied and dismissed.

12. Claimant has failed to establish that it is more probably true than not that he is entitled to recover penalties for Employer's failure to timely admit or deny his Workers' Compensation claim pursuant to §8-43-203(2)(a), C.R.S. Although Employer was informed of Claimant's work injuries, Claimant has produced insufficient evidence that he missed work as a result of the injuries. The record reveals that Claimant was terminated from employment on October 2, 2017 but is devoid of evidence that Employer was aware of Claimant's subsequent disability. Accordingly, Claimant's request for penalties pursuant to §8-43-203(2)(a), C.R.S. is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either

the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. As found, Claimant has established by a preponderance of the evidence that he sustained compensable lower back and finger injuries on September 25, 2017 during the course and scope of his employment with Employer. Claimant credibly testified that on September 25, 2017 he injured his lower back, left little finger and right middle finger while changing a beer barrel in Employer's bar area. In an October 2, 2017 letter to Employer Claimant explained that he was injured at work on September 25, 2017 at 11:00 p.m. He specifically noted that he strained his back, sprained his left little finger and sprained his right middle finger. Claimant reported his injuries to Mr. Kim and sought medical benefits for his injuries. Based on Claimant's credible testimony and a review of the record, Claimant suffered a disability that was proximately

caused by injuries arising out of and within the course and scope of his employment with Employer.

Medical Benefits

7. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

8. As found, Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of his industrial injuries. Because Employer did not respond to Claimant's request for medical care he obtained acupuncture and chiropractic treatment for his industrial injuries at his own expense. The chiropractic treatment included therapeutic massage and manipulation of Claimant's lower back. Claimant paid $60.00 to Yang Acupuncture and $2,743 to Kevin Hwang Chiropractic for a total of $2,803. All of the preceding medical treatment was reasonable, necessary and related to Claimant's September 25, 2017 industrial injuries. Employer is thus financially responsible for the payment of Claimant's medical expenses for the treatment of his lower back and finger conditions.

Average Weekly Wage

9. Section 8-42-102(2), C.R.S. requires the Judge to determine a claimant's AWW based on his earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a Judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed methods will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating an AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Therefore, §8-42-102(3), C.R.S. grants an ALJ substantial discretion to modify the AWW if the statutorily prescribed method will not fairly compute a claimant's wages based on the particular circumstances of the case. *In Re Broomfield,* W.C. No. 4-651-471 (ICAP, Mar. 5, 2007).

10. As found, for the period July 26, 2017 until October 2, 2017 Claimant earned total wages of $7050. The period covered 68 days or 9.71 weeks. Dividing

$7050 by 9.71 yields an AWW of $726.05. An AWW of $726.05 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

Temporary Total Disability Benefits

11. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, she left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999).

12. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive TTD benefits for the period October 3, 2017 until January 6, 2018. Claimant's credible testimony reveals that he was unable to perform his job duties between October 3, 2017 and January 6, 2018. Claimant was obtaining medical treatment for his lower back and finger symptoms. He is entitled to an award of TTD benefits because his September 25, 2017 industrial injuries caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. Multiplying Claimant's AWW of $726.05 by 66.67% yields a weekly TTD rate of $484.06.

Penalties for Employer's Failure to Carry Worker's Compensation Insurance

13. Every employer subject to the provisions of the Workers' Compensation Act shall carry workers' compensation insurance. §8-44-101, C.R.S. Section 8-43-408(1), C.R.S. provides that an injured employee's benefits shall be increased by 50% for an employer's failure to comply with the insurance provisions of the Act. If compensation is awarded the Judge shall compute and require the employer to pay a trustee an amount equal to the present value of all unpaid compensation or require the employer to file a bond within 10 days of the order. §8-43-408(2), C.R.S. The term "compensation" refers to disability benefits. *In Re of Shier,* W.C. No. 4-573-910 (ICAP, Dec. 15, 2005).

14. As found, Employer was not insured on September 25, 2017. Claimant's disability benefits shall be increased by 50% because of Employer's failure to comply with the insurance provisions of the Act. Claimant is entitled to receive TTD benefits for the period October 3, 2017 until January 6, 2018. The period covers 95 days or 13.57 weeks. Claimant's TTD rate is $484.06, increased by 50% for a lack of insurance, to a TTD rate of $726.09 each week. Multiplying $726.09 for a period of 13.57 weeks yields a total TTD amount of $9853.04.

Penalties for Employer's Failure to Timely Report Claim pursuant to 8-43-103(1), C.R.S.

15. Section 8-43-103(1), C.R.S. requires that an employer report an injury to the Division of Workers' Compensation (DOWC) within 10 days of notice or knowledge that an employee has suffered a lost-time injury. A "lost-time injury" is defined as one that causes a claimant to miss more than three shifts or three calendar days of work. *Grant v. Industrial Claims Appeals Office*, 740 P.2d 530 (Colo. App. 1987). An employer is deemed to have "notice" of an injury when the employer has some knowledge of the facts that would lead a reasonably conscientious manager to believe the claimant may seek benefits for the injury. *Jones v. Adolph Coors Co.*, 689 P.2d 681 (Colo. App. 1984).

16. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he is entitled to recover penalties under §8-43-304, C.R.S. for Employer's failure to timely report his Workers' Compensation claim pursuant to §8-43-103(1), C.R.S. The record demonstrates that Claimant notified Mr. Kim of his September 25, 2017 work injuries on the date they occurred. Claimant also drafted a letter to Mr. Hoe on October 2, 2017 advising of his work injuries. However, Claimant has produced insufficient evidence that Employer failed to report the September 25, 2017 claim to the Division of Workers' Compensation within 10 days or advise Claimant that he might be entitled to Workers' Compensation benefits. Accordingly, Claimant's request for penalties pursuant to §8-43-103(1), C.R.S. is denied and dismissed.

Penalties for Employer's Failure to Admit or Deny Liability

17. Section 8-43-203(1)(a), C.R.S. provides:

> The employer or, if insured, the employer's insurance carrier shall notify in writing the division and the injured employee . . . within twenty days after a report is, or should have been filed with the division pursuant to section 8-43-101, whether liability is admitted or contested; except that, for purpose of this section, any knowledge on the part of the employer, if insured, is not knowledge on the part of the insurance carrier.

18. Section 8-43-203(2)(a), C.R.S. specifies that if such notice is not filed, "the employer, or if insured, the employer's insurance carrier, may become liable to the claimant, if successful on the claim for compensation, for up to one day's compensation for each failure to so notify." Because the claimant seeks the imposition of a penalty for failure timely to admit or deny liability, the claimant bears the burden of proof to establish the circumstances justifying the imposition of the penalty. *See Pioneer Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005) (claimant seeking imposition of penalty under § 8-43-304(1) bore burden of proof to establish circumstances justifying a penalty).

19. Under the language of § 8-43-203(1)(a), knowledge of an insured may not be imputed to the insurer. *See State Compensation Insurance Fund v. Wilson,* 736 P.2d 33 (Colo. 1987); *Campbell v. IBM Corp.,* 867 P.2d 77 (Colo. App. 1993). Thus, an insurer is not responsible for admitting or denying liability until 20 days after it has knowledge of information that would require the employer to file a first report of injury with the DOWC under §8-43-101, C.R.S. Those circumstances include injuries that result in "lost time from work for the injured employee in excess of three shifts or calendar days." The mere knowledge that the claimant sustained an injury and that the injury resulted in restrictions resulting in a prescription for modified duty does not establish that the claimant missed work as a result of the injury or the number of days missed. *See Ralston Purina-Keystone v. Lowry,* 821 P.2d 910 (Colo. App. 1991); *Atencio v. Holiday Retirement Corp.,* W.C. No. 4-532-443 (ICAP Nov. 15, 2002).

20. As found, Claimant has failed to establish by a preponderance of the evidence that he is entitled to recover penalties for Employer's failure to timely admit or deny his Workers' Compensation claim pursuant to §8-43-203(2)(a), C.R.S. Although Employer was informed of Claimant's work injuries, Claimant has produced insufficient evidence that he missed work as a result of the injuries. The record reveals that Claimant was terminated from employment on October 2, 2017 but is devoid of evidence that Employer was aware of Claimant's subsequent disability. Accordingly, Claimant's request for penalties pursuant to §8-43-203(2)(a), C.R.S. is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered compensable lower back and finger injuries on September 25, 2017 during the course and scope of his employment with Employer.

2. Employer is financially responsible for payment of Claimant's medical expenses for the treatment of lower back and finger injuries as well as authorized medical treatment that is reasonable and necessary to cure or relieve the effects of his September 25, 2017 industrial injuries. Claimant has incurred medical expenses totaling $2,803 for acupuncture and chiropractic care.

3. Claimant earned an AWW of $726.05.

4. Claimant shall receive TTD benefits for the period October 3, 2017 until January 6, 2018. The period covers 95 days or 13.57 weeks. Claimant's TTD rate is $484.06, increased by 50% for a lack of insurance, to a TTD rate of $726.09 each week. Multiplying $726.09 for a period of 13.57 weeks yields a total TTD amount of $9853.04.

5. Claimant's request for penalties pursuant to §8-43-103(1), C.R.S. is denied and dismissed.

6. Claimant's request for penalties pursuant to §8-43-203(2)(a), C.R.S. is denied and dismissed.

7. In lieu of payment of the above compensation and benefits to Claimant, Respondent shall:

a. Deposit the sum of $14,000 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to and sent to the Division of Workers' Compensation, Attn: Sue Sobolik, Special Funds Unit, 633 17th St, Suite 900, Denver, CO, 80202, or

b. File a bond in the sum of $14,000 with the Division of Workers' Compensation within ten (10) days of the date of this order:

(1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation or

(2) Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation and benefits awarded.

c. Respondent shall notify the Division of Workers' Compensation and Claimant of payments made pursuant to this Order.

d. The filing of any appeal, including a petition for review, shall not relieve Respondent of the obligation to pay the designated sum to the trustee or to file the bond. §8-43-408(2), C.R.S.

Any interest that may accrue on a cash deposit shall be paid to the parties receiving distribution of the principal of the deposit in the same proportion as the principal, unless the agreement or order authorizing distribution of the principal provides otherwise.

8. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: August 22, 2018.

Denver, CO 80203

PRELIMINARY MATTERS

Respondents' June 27, 2018, motion to strike Claimant's post hearing position statement is granted to the extent the statement presents evidence that was excluded at hearing.

ISSUE

Whether Respondents overcame the Division independent medical examiner's opinion by clear and convincing evidence?

FINDINGS OF FACT

1. Claimant is a 55 year old female. In September 2014, Claimant was employed as an investigatory for an auto insurance company. She was a licensed independent claims examiner. She has a master's degree in psychology and business administration. Claimant's job at this time was in Colorado.

2. On September 3, 2014, Claimant was seen at OnPoint Urgent Care for an ankle injury. She stated that on September 2, 2014, she was at work wearing four inch heels and had inverted her right ankle, but did not actually fall. Claimant had ankle and foot pain that woke her from sleep. She presented with an abnormal gait and was too tender to walk on her right foot and ankle. Foot and ankle x-rays were normal. Minimal swelling was noted at the foot/ankle. The assessment was a foot and ankle sprain. She was given crutches and was to follow up, as needed.

3. On September 4, 2014, Claimant returned to OnPoint asking about a work note/restrictions. Medical records reflect that Claimant reported to Dr. Rogg, who had seen her the previous day that she had been told she could take 10 days off work. That information was not found in a review of her chart. They spoke with Dr. Leep who stated Claimant did not need work restrictions and could get an excuse for September 3 and 4 returning to work on September 5.

4. Claimant was seen at Concentra on September 8, 2014, and reported coming down stairs and fell and twisted her ankle. She complained of pain in her hip, upper leg, knee, lower leg and ankle. Examination of the right leg and ankle showed non-weight bearing on the right leg, swelling, tenderness, limited ROM and weakness. X-rays of foot and ankle appeared to be within normal limits. She was to continue using crutches. A foot and ankle MRI was ordered.

5. On September 10, 2014, a MRI of the foot was essentially normal with no evidence of fracture, dislocation or stress fracture. MRI of the right ankle showed what was read as complex longitudinal tears of the distal tibial tendon in the foot noted with tenosynovitis along with longitudinal tear of the peroneus longus tendon above the malleolus. No fracture or bone marrow contusion.

6. Claimant was referred to an orthopedist, Dr. Myers, for right ankle sprain. At a September 16, 2014, visit, her complaints on exam were mostly of pain in the arch of

her foot. She had been wrapping the ankle and was wearing a boot. Exam of the right lower extremity showed diffuse tenderness, with sensation to light touch globally decreased. The assessment was enthesopathy of ankle and tarsus, unspecified. For unknown reasons, Claimant left Dr. Myers office before he could complete his examination.

7. On September 18, 2014, Claimant returned to Concentra. Assessment was right ankle sprain, foot contusion and tear of the tendon of the right ankle. She was to follow up for care in Atlanta where she lived.

8. On October 8, 2014, Claimant was evaluated by Dr. Beskin at Peachtree Orthopaedic Clinic in Georgia. The mechanism of injury was reported as Claimant was going down stairs, another lady tried to grab her badge from her shirt and in the process she mis-stepped on the stairs twisting her right foot and ankle. She did not fall. Her pain was localized at the lateral aspect of the ankle and in the big toe area mostly plantar and in the distal arch. Minimal, if any, pain in the medial ankle. Clinical exam showed mild swelling at the lateral aspect of the right ankle with tenderness along the peroneal tendons. ROM was guarded by pain. Dr. Beskin did not think there was any significant instability. Foot swelling was minimal. X-rays showed the ankle mortise was well maintained and appeared stable. Clinical correlation with the MRI findings showed there was not much pain referable to the posterior tibial tendon area and the reported tear may not then be clinically significant. She was tender over the peroneal tendons but the MRI study showed relatively benign findings and that then might represent a chronic tendinopathy rather than an acute injury. There was no urgency for surgical intervention and he recommended physical therapy (PT) and increased activities out of the boot she had been wearing. Dr. Beskin opined that Claimant's pain was out of proportion to the x-ray and MRI findings.

9. Claimant returned to see Dr. Beskin on October 22, 2014. He ordered a DVT Doppler study and that was negative. Claimant was seven weeks post accident, complaining of pain involving the entire right leg, for which therapy was not helping and, without pain medications, Claimant broke a dental crown while clenching her teeth.

10. On exam, Dr. Beskin noted relatively normal appearance, temperature and color symmetric between the right and left side. Tape measurements revealed little if any discrepancy at the ankle and calf. Claimant complained of pain with any range of motion of the toes, ankle, knee or hip.

11. Dr. Beskin reviewed the imaging studies and noted that as the abnormal signal in the peroneus longus was relatively mild, it was unlikely to cause the amount of pain Claimant exhibited. Also, Claimant was only mildly symptomatic at the posterior tibial tendon where there was abnormal signal as well. Dr. Beskin noted Claimant's presentation did not correlate with the objective findings.

12. Dr. Beskin again noted that, from his perspective, Claimant's complaints were not supported by his findings. There was difficulty communicating with Claimant, and the doctor recommended Claimant should find another treater.

13. On November 11, 2014, Claimant saw Dr. Scott at Roswell Resurgens Orthopaedics. Her complaints were swelling, pain, a sense of imbalance and numbness and tingling to the toes. She had a significant antalgic gait and avoided pressure on the affected right leg. On exam, her calves were symmetrical. Mild swelling in the right ankle only. The right foot and ankle were diffusely tender. Right ankle x-ray showed maintained ankle mortise. The diagnosis was ankle pain. She was referred to PT and a pain management consult to, in part, rule out/evaluate early RSD related to her severe ankle pain post her ankle sprain.

14. On December 2, 2014, Claimant again saw Dr. Scott. He stated Claimant's pain seemed out of proportion to the nature of injury. The pain started at the ankle and radiated up the leg. He reviewed the ankle MRI taken in Colorado and stated he was unsure how her current pain complaints which were more lateral at the ankle and below the tip of the fibula related to those findings.

15. On January 2, 2015, Dr. Scott noted Claimant was scheduled to see Dr. Joel for sympathetic blocks. Dr. Joel was with the Pain Anesthesia Group across the street, and he had referred her there.

16. On January 30, 2015, Dr. Scott noted Claimant was to continue pain management with Dr. Joel. She was more comfortable on exam and not having nearly the pain levels she had presented with before.

17. On April 13, 2015, Dr. Scott noted Claimant presented with continued pain. She had a recent independent medical examination (IME). He did not see surgical indications at that point in time.

18. Claimant had an IME with Dr. Rizor on April 8, 2015. This was performed at the request of the Respondents. Dr. Rizor reviewed medical records as well as a copy of the *MTG,* WCRP, Rule 17, Exhibit 7 covering Complex Regional Pain Syndrome (CRPS).

19. On examination, the skin of the lower extremity showed normal and symmetrical color. There were no trophic changes in the skin or nails. The hair on both legs had been shaved. There were no gross differences in skin temperature between the two extremities. There was extensive amounts of fatty tissue in both lower extremities with the amount of fatty tissue in the right leg being greater than the left, making the right lower extremity in general appear larger than the left. There was no apparent edema in the lower extremities, with no pretibial pitting and no evidence of swelling in the toes.

20. Claimant was assessed for CRPS using the diagnostic criteria set forth in the *MTG.* While subjective findings were present, objective results were not. As such, Dr. Rizor stated the diagnosis of CRPS was not supported by objective evidence.

21. His assessment was Claimant had a tendon sprain with disuse changes secondary to immobilization and use avoidance behaviors. Recommended treatment was to focus on PT and perhaps cognitive/behavioral pain management to address fear

of movement. Pain medications were not appropriate for her condition. She was capable of full time employment.

22. On July 1, 2015, a nerve conduction study/EMG ordered by Dr. Scott in May, was read as normal. There was evidence of right tarsal tunnel syndrome. There was no evidence of peripheral neuropathy or lumbar radiculopathy. On exam, there was allodynia of the right foot. No temperature change or atrophy were noted.

23. On July 7, 2015, Dr. Scott indicated surgery was still not recommended due to the broad and diffuse nature of Claimant's pain complaints. EMG and NCV testing showed no evidence of peripheral neuropathy or radiculopathy but some evidence of tarsal tunnel syndrome.

24. On August 12, 2015, Dr. Scott indicated Claimant was much improved post sympathetic block and tarsal tunnel injection with Dr. Joel.

25. On October 9, 2015, Dr. Scott noted Claimant continued with significant ankle pain although better than she was a few months ago. She needed a neurology evaluation for EMG looking for evidence of any permanent nerve damage. She then needed to follow up and finish with Dr. Joel. She would then get rated for permanent impairment and a FCE might be helpful. Dr. Scott still did not think any surgical intervention would be sufficiently worth the risk. He welcomed additional opinions from orthopedic foot and ankle experts or other practitioners. As far as work, she could do a desk job where she sat and did not have to do lifting, carrying or climbing.

26. Per a December 24, 2015, report from Dr. Freschi, "In summary, these electro diagnostic studies were entitled normal and showed no evidence of peripheral nerve impairment in the right lower extremity." These studies were to evaluate complaints of right foot pain.

27. On January 15, 2016, Dr. Scott noted Claimant went in for an FCE but she was unable to participate to the full extent of the test so it was stopped. Dr. Scott's care was at an end and he had nothing surgical to offer. Her MRI in the past had showed a question of peroneal tear, yet her symptoms were not localized to that structure.

28. On February 12, 2016, Dr. Scott noted that on exam, patient's pain complaints were wide spread over her leg. Some of the pain continued to have an element of nonphysiologic pain.

29. A lower extremity veinous dopplar study conducted on July 29, 2016, at Northside Radiology showed normal venous flow in the right lower extremity with no evidence of deep vein thrombosis.

30. On August 26, 2016, Dr. Scott noted that at the last visit, Claimant's pain was very specific while now, that had broadened out again. He wanted to talk with Dr. Joel about the spinal cord stimulator. He also wanted a repeat higher quality ankle MRI to determine if there were tears at the peroneal tendons. She remained a possibility for surgery depending on the MRI results.

31. A right ankle MRI taken on September 6, 2016, showed only peroneal tensynovitis without associated tear.

32. On September 13, 2016, Dr. Scott noted again that Claimant's pain had expanded. The right ankle MRI was reviewed with her. She found it to be contradictory that the test results pointed to 'nothing is wrong with her.' While the MRI was read as not showing any tears in any tendons or ligaments, Dr. Scott looked at it and he noted he could not see the peroneus longus very well. No surgery was offered. Claimant was offered inversion tilt laxity ankle x-ray but she refused this.

33. On October 11, 2016, Dr. Scott noted the Claimant reported being in extreme pain. Additional treatment options were limited. He wanted to speak with Dr. Joel. Her pain complaints were once again much too broad to consider surgery.

34. On November 15, 2016, Dr. Scott noted Claimant had not seen Dr. Joel since this past summer for the ketamine injections. The injection caused only a slight improvement. Dr. Scott spoke with Dr. Joel who stated he had nothing else to offer and that Claimant was not a candidate for a spinal cord stimulator. Exam for ROM was very self-limited. She was two years post injury with pain complaints on both sides of her ankle. No surgery or additional treatment needed. Dr. Scott placed her at maximum medical improvement (MMI) with an impairment rating for ankle restrictions.

35. On December 1, 2016, Dr. Roth reviewed Dr. Scott's rating. Dr. Roth opined that based on the limited information he had, no rating was appropriate as the injury, an ankle sprain, should have healed without complications no later than 4-6 months post event. There was no physiological correlation to explain Claimant's pain complaints and impairment cannot be based on pain complaints alone.

36. On March 23, 2017 Dr. Ginsburg performed a Division independent medical examination (DIME). Throughout the course of his exam, Claimant exhibited a good deal of pain behavior. His examination of her lower extremities revealed no significant differences in appearance of palpation comparing the right and left sides. He saw no significant differences in the lower extremities. He did not take measurements, but he noted neither did Dr. Joel. Claimant had presented to Dr. Joel with a slow and shiny right lower extremity with temperature differences, Dr. Ginsburg did not appreciate that on his examination.

37. Dr. Ginsburg found it interesting that Dr. Joel's reported observations of Claimant's lower extremities did not fit his observations upon exam.

38. Dr. Ginsburg testified in his deposition that Dr. Joel was the only one of Claimant's treaters who made the finding of CRPS.

39. Dr. Ginsburg noted criteria which should be performed or at least attempted to document the presence of CRPS and that those were not done here.

40. He placed Claimant at MMI as of January 1, 2017, with a 10% whole person rating for CRPS, spinal cord, nervous system, station and gait. He admitted in his report

that his conclusion was ". . . less than satisfactory to me and it may be less than satisfactory to others reading this report." He concluded that Claimant needed to maintain her medications for about 1 year and then she should treat with her primary care physician.

41. On July 3, 2017, a DEXA axial skeleton, bone density study, showed findings within normal limits.

42. On July 6, 2017, Dr. Ginsburg conducted a repeat DIME. Claimant returned for repeat ROM testing. He noted that just as in his earlier report, Claimant not only did not improve with treatment, she seemed to have gone from being ambulatory to a far more restricted circumstance in her functional activity. He therefore believed there were, based on what he saw at each visit with Claimant, "significant elements of non-physiological problems".

43. Dr. Ginsburg admitted in deposition testimony that to his knowledge none of the tests traditional used to diagnose CRPS, e.g. triple phase bone scan or QSART, were performed in this matter. He admitted that his opinion about CRPS was made knowing that it conflicts with the mandates set forth in the MTG and that Dr. Joel was the only treater who diagnosed Claimant with CRPS.

44. Dr. Joel practices at the North Fulton Pain & Spine Center in Roswell, Georgia. Medical records reflect that one of Dr. Joel's go to treatment modalities for CRPS is having his patients undergo ketamine infusions. That drug use is not recognized in Colorado as treatment for patients validly diagnosed with CRPS.

45. Based upon the evidence presented at hearing, the ALJ credits the evidence tendered by Respondents over the exhibits Claimant tendered.

46. Claimant's diagnosis of CRPS is not supported by the record. The evidence presented persuades the ALJ that Claimant's symptoms and presentation do not establish grounds on which a CRPS diagnosis can be made. Given the totality of the medical records, the ALJ finds that Respondents sustained their burden of proof by clear and convincing evidence to establish that the DIME determination with regard to Claimant's CRPS diagnosis is most probably incorrect. Evidence presented by Claimant was unconvincing.

CONCLUSIONS OF LAW

1. The purpose of the Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the

reasonableness or unreasonableness (probability or improbability) of the testimony and actions, the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 p.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

3. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

4. As found in this case, the ALJ concludes that the clear and convincing evidence presented supports Respondents' argument that the DIME opinion regarding CRPS is most probably incorrect.

5. Sections 8-42-107(8)(b)(III) and (c), *supra*, provide that the finding of a DIME physician selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo.App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all the evidence, the trier-of-fact finds it to be highly probable and free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert*, *supra*. A mere difference of opinion between physicians fails to constitute error. *See, Gonzales v. Browning Ferris Indust. of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

6. The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S*.; Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). Since the DIME physician is required to identify and evaluate all losses and restrictions which result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Qual-Med v. Industrial Claim Appeals Office*, *supra.*

7. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio*, W.C. No. 4-660-149 (ICAP, June 30, 2008); see Andrade v. Industrial Claim Appeals Office, 121 P.3d 328 (Colo. App. 2005.

8. Here, the DIME chose to disregard the clear directive of *MTG*, WCRP 17, Exhibit 7 which defines the parameters required to make a diagnosis of CRPS. Only one of Claimant's treaters, Dr. Joel, diagnosed CRPS. Dr. Joel is from Georgia and he never applied any of the diagnostic tests required by WCRP 17, Exhibit 7 to make such a diagnosis. His diagnosis of CRPS came after he had only treated Claimant a few times.

9. The introductory words to the *MTG,* WRCP 17, Exhibit 7, states that:

> [The MTG] was prepared by the Colorado Department of Labor and Employment, Division of Workers' Compensation (Division) and should be interpreted within the context of guidelines for physicians/providers treating individuals qualifying under Colorado's Workers' Compensation Act as injured workers with Complex Regional Pain Syndrome (CRPS), formerly known as Reflex Sympathetic Dystrophy (RSD). Although the primary purpose of this document is advisory and educational, these guidelines are enforceable under the Workers' Compensation Rules of Procedure, 7 CCR 1101-3. The Division recognizes that acceptable medical practice may include deviations from these guidelines, as individual cases dictate. Therefore, these guidelines are not relevant as evidence of a provider's legal standard of professional care

10. The Division expressly states that the provisions are, indeed, "guidelines." Nevertheless, the Division adopted the provisions as an enforceable rule, not simply an unofficial policy position of the Division. The Guidelines expressly acknowledge that one can deviate from the *MTG* in particular cases, but the deviation should be explained. The primary purpose of the *MTG* is to advise and educate medical professionals and others about the current state of the medical literature. In so doing, the Guidelines provide an objective basis for decisions about causation of particular diagnoses, CRPS/RSD.

11. WCRP 17, Exhibit 7 contains general guideline principles. For instances, 'Positive patient response' is defined as:

> "Positive results are defined primarily as functional gains that can be objectively measured. Objective functional gains include, but are not limited to: positional tolerances, range-of-motion, strength, endurance, activities of daily living, ability to function at work, cognition, psychological behavior, and efficiency/velocity measures that can be quantified. Subjective reports of pain and function should be considered and given relative weight when the pain has anatomic and

physiologic correlation. Anatomic correlation must be based on objective findings."

12. Further, the MTG provides:

A. CRPS I is defined as a syndrome that usually develops after an initiating noxious event, is not limited to the distribution of a single peripheral nerve, and appears to be disproportionate to the inciting event. It is associated at some point with evidence of edema, changes in skin, blood flow, and abnormal sudomotor activity in the region of the pain, allodynia, or hyperalgesia.

B. A physical examination for CRPS should include changes in appearance including trophic changes, changes in hair and nail growth, muscular atrophy, changes in skin tugor, swelling and color changes.

C. Temperature evaluations should be based on objective testing and while differences of 1 degree Celsius may be significant, such also commonly occur with other pain complaints.

D. Edema is an important finding in CRPS. Its presence should be described in detail by the physician and when possible verified with objective testing such as volumetric testing or bilateral circumference measurements, usually performed by therapists.

E. "Sensory Evaluation: A detailed sensory examination is crucial in evaluating a patient with chronic pain complaints, including the presence of allodynia and the anatomic pattern of any associated sensory abnormalities to light touch, deep touch, pain, and thermal stimulation. Quantitative sensory testing may be useful."

F. "Evaluation of Non-physiologic Findings: Determine the presence of the following: variabilities on formal exam including variable sensory exam; inconsistent tenderness, and/or swelling secondary to extrinsic sources. Inconsistencies between formal exam and observed abilities of range-of-motion, motor strength, gait, and cognitive/emotional state; and/or observation of inconsistencies between pain behaviors, affect and verbal pain rating, and physical re-examination can provide useful information."

13. In *Hall v.* Industrial *Claim* Appeals *Office*, 74 P.3d 459 (Colo. App. 2003), the Colorado Court of Appeals noted that the guidelines are to be used by health care practitioners when furnishing medical aid. *See* Section 8-42-101(3)(b), C.R.S. While the Guidelines are regarded as accepted professional standards for care under the Workers' Compensation Act, it is well settled that they are not definitive*. See Hall v. Industrial Claim Appeals Office, supra*; *Jones v. T.T.C. Illinois, Inc.,* W.C. No. 4-503-150 (May 5, 2006), aff'd *Jones v. Industrial Claim Appeals Office* No. 06CA1053 (Colo. App. March 1, 2007)(NSOP)(it is appropriate for the ALJ to consider Guidelines on questions such as diagnosis, but the guidelines are not definitive). For instance, an ALJ's consideration of the Guidelines may include deviations from them where there is evidence justifying the deviations. *See Logiudice v. Siemans Westinghouse,* W.C. No. 4-665-873 (January 25, 2011). Accordingly, Section 8-43-201, C.R.S. was amended effective July 1, 2014, by S.B. 14-191 to add subsection (3) and to make explicit that when deciding whether certain medical treatment is reasonable, necessary and related "[t]he director or administrative law judge is not required to utilize the MTG as the sole basis for such determinations*." See Andregg v. Arch Coal*, WC4-629-269, January 24, 2017.

14. While the treatment guidelines cover various body parts, when dealing with CRPS, the admonition contained in the diagnostic criteria section of Rule 17 provides that CRPS is a controversial diagnoses. The diagnoses must be weighed against the evidence in this matter.

15. That evidence in this case shows Claimant had few or no objective findings that merit a CRPS diagnosis. Evidence established that Claimant had little to no positive patient responses to the myriad of care she received over three plus years. The evidence shows Claimant with little to no anatomic and physiologic correlation based on objective findings. Claimant's physical examination showed little to no changes in appearance including trophic changes, changes in hair and nail growth, muscular atrophy, changes in skin tugor, swelling and color changes.

16. During the course of Claimant's treatment, her test results did not show at least two positive diagnostic tests, e.g. comparative x-rays of both extremities, a triple phase bone scan, infrared stress thermography, QSART or sympathetic blocks, needed by the *MTG* to make a CRPS diagnosis.

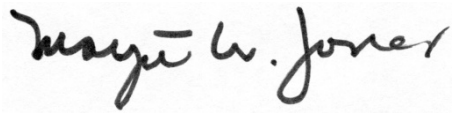
17. Based on the above, Respondent have provided clear and convincing evidence that it is highly probable Dr. Ginsburg's opinion that Claimant has CRPS is incorrect.

ORDER

Respondents overcame by clear and convincing evidence the DIME's opinion that Claimant has CRPS as a result of her ankle sprain in this matter.

Any and all issues not determined herein are reserved for future decision.

DATED: August 23, 2018.



MARGOT W. JONES
ADMINISTRATIVE LAW JUDGE

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant's Application for Hearing should be stricken and whether the claim is closed by failure to timely object to the final admission of liability.

FINDINGS OF FACT

1. On June 4, 2014, Claimant sustained an admitted work related injury.

2. Claimant underwent medical treatment and was placed at maximum medical improvement (MMI) on October 19, 2017. *See* Exhibit 4.

3. On November 1, 2017, Respondents filed a Final Admission of Liability (FAL). Claimant objected and requested a Division Independent Medical Examination (DIME). *See* Exhibits A, B.

4. In late January of 2018 Respondents' attorney and Claimant's attorney exchanged emails regarding settlement negotiations. Claimant's attorney indicated that her client had seemed to have been placed at a less than sedentary work capacity and that a settlement demand would likely start with the PTD value. Respondents' attorney indicated that her clients did not consider this a PTD claim and indicated that they should let the claim go through the DIME process and see how it goes and then discuss possible settlement again. *See* Exhibit 3.

5. On February 15, 2018, Claimant underwent a DIME. On March 5, 2018, the Division of Workers' Compensation issued a Notice of Receipt of Division IME (DIME) Report, DIME Process Concluded. The notice indicated that within 20 days, Insurer had to either admit liability consistent with the IME report or file an application for hearing. *See* Exhibit 4.

6. On March 15, 2018, Respondents filed a FAL. The FAL provides that if you disagree with the benefits admitted or not admitted you must within 30 days complete the attached objection form…and you must also file an application for hearing with the Office of Administrative Courts on any disputed issues. *See* Exhibits 4, E.

7. On April 6, 2018, Claimant filed an Objection to Final Admission of Liability. Paralegal for Claimant's attorney sent this form to the Division of Workers' Compensation and to Respondents' attorney. The form indicated that Claimant would mail or deliver an Application for Hearing form on disputed issues to the Office of Administrative Courts within 30 calendar days of the date of the Final Admission. The form also indicated on the certificate of mailing that it was placed in the U.S. mail or delivered to the carrier's attorney. *See* Exhibits 2, F

8. On April 6, 2018, Paralegal for Claimant's attorney emailed the Objection to Final Admission of Liability to Respondents' attorney and to the paralegal for Respondents' attorney. *See* Exhibit F.

9. On April 19, 2018, Respondents' attorney emailed Claimant's attorney indicating that she had received the objection to the FAL but had not received an application for hearing. She asked if an application for hearing had been filed, and if so, to please send her a copy. *See* Exhibit G.

10. On April 19, 2018, paralegal for Claimant's attorney responded to the email stating, "please see the application for hearing that was filed on 4/6/18." She attached a copy of the Application for Hearing to the email. *See* Exhibit G.

11. On April 20, 2018, Respondents' attorney emailed Claimant's attorney. She indicated that she had received an email the day prior with an application for hearing attached and that the email stated the application for hearing was mailed or emailed to her on April 6, 2018. She indicated that it was not emailed and that she had received the objection to final admission dated 4/6/18 but that there was not an application with it. She indicated that she had checked with OAC and that they had no application for hearing in the matter. She indicated that Respondents would be objecting to setting any hearing in the matter and took the position that the claim was closed by operation of the final admission. *See* Exhibit H.

12. Claimant's attorney respondent on April 23, 2018 indicating that the application for hearing had been served by mail. *See* Exhibit H.

13. On April 23, 2018, Respondents' attorney responded stating that she did not get a copy in the mail and that the OAC had advised that they did not get a copy either. *See* Exhibit H.

14. On April 24, 2018, paralegal for Claimant's attorney emailed Respondent's attorney and the Office of Administrative Courts. The email indicated the parties should see the attached hearing confirmation and application for hearing that was never received by OAC. *See* Exhibit J.

15. On May 2, 2018, OAC emailed both parties confirming that they received the application on 4/24/18. *See* Exhibit J.

16. The Application for Hearing at issue lists a certificate of mailing indicating that it was mailed or delivered to Respondent's attorney on April 6, 2018. Shawntell Sharrock, the paralegal to Claimant's attorney, signed the certificate of mailing. The Application for Hearing checked permanent total disability and overcoming the DIME as issues to be considered at hearing and the application was signed by Claimant's attorney. *See* Exhibit G.

17. At Hearing, Ms. Sharrock testified that she was the paralegal handling Claimant's file for Claimant's attorney. Ms. Sharrock testified that her normal practice was to fill out an Application for Hearing on her computer, print it out, sign and date the certificate of service, scan it into electronic form and then put the printed copies into envelopes for mailing. She then weighs the envelopes, stamps them, and puts them into a basket. At the end of each day, she takes any envelopes from the basket out the blue U.S. Postal mailbox outside their office. She testified that she knows that both an objection to the FAL and an application for hearing have to be filed. She testified that she filled out and served both documents in this case on April 6, 2018. Ms. Sharrock testified that she emailed the objection to the FAL to the division and Respondent's attorney but did not attach the Application for Hearing to the email, because the Application for Hearing does not go to the Division and goes to OAC. Ms. Sharrock testified that after she received an email from Respondent's attorney saying they had not received the Application for Hearing, she looked in the electronic file they maintain. She testified that the Application for Hearing was there and was filed, signed, dated, and scanned in on April 6, 2018 per the computer so she was confident she had completed the Application and mailed it on that day consistent with her normal practices.

18. Veronica Gonzalez, the paralegal for Respondents' attorney also testified at hearing. She testified that on April 19, 2018 she was asked to find out if OAC had an application for hearing. She testified that Respondents did not receive the Application for Hearing until April 19, 2018.

19. Ms. Sharrock is found credible and persuasive that she followed her routine practices and mailed the Application for Hearing to both OAC and Respondents on April 6, 2018.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony

and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Application for Hearing

Section 8-43-203(2)(b)(II), C.R.S., provides that a claim will be automatically closed "as to the issues admitted in the final admission if the claimant does not, within thirty days after the date of the final admission, contest the admission in writing and request a hearing on any disputed issues that are ripe for hearing." Section 8-43-203(2)(d), C.R.S., provides that once a case is closed under subsection (2) "the issues closed may only be reopened pursuant to section 8-43-303." The courts and the Industrial Claim Appeals Office have treated these provisions as jurisdictional. *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2002); *Dalco Industries, Inc. v. Garcia,* 867 P.2d 156 (Colo. App. 1993); *Lam v. Royal Crest Dairy,* W.C. No. 4-506-429 (I.C.A.O. November 4, 2005).

These provisions are part of an overall statutory scheme designed to provide a method to determine the claimant's medical condition, afford the claimant an opportunity to contest a determination of his or her medical condition, to close all issues when there is no dispute and need for a hearing, and to permit reopening on appropriate grounds including change of condition. *Peregoy v. Industrial Claim Appeals Office,* 87 P.3d 261 (Colo. App. 2004). In *Stefanski v. Industrial Claim Appeals Office,* 128 P.3d 282 (Colo. App. 2006), *aff'd. on other issues, Sanco Industries v. Stefanski,* 147 P.3d 5 (Colo. 2006), the court held that a "motion to strike" an FAL filed because the claimant was not referred to a follow-up Division-sponsored medical examination (DIME) constituted a sufficient written objection to the FAL for purposes of § 8-43-203(2)(b)(II). The court stated that, "any pleading that adequately notifies the employer that the claimant does not accept the FAL constitutes substantial, if not actual, compliance with the statutory obligation to provide written objection." In *Peregoy v. Industrial Claim Appeals Office, supra*, the court held that in order to contest an FAL by filing an application for hearing on issues ripe for a hearing, the claimant must file an application for hearing contesting some aspect of the FAL, and must "state the benefit to which he or she is entitled."

The Workers' Compensation Rules of Procedure at 7 CCR 1101-3, and specifically, rule 1-2 provide that unless a specific rule or statute states to the contrary, the date a document or pleading is filed is the date it is mailed or hand delivered to the Division of Workers' Compensation or the Officer of Administrative Courts. Similarly, the Procedural Rules for Workers' Compensation Hearings, specifically, OAC rule 4 provides that the date of filing shall be the date served on the OAC as indicated on the certificate of service, or, if no certificate of service is included, the date received by the OAC. OAC Rule 6 provides that service of pleadings on a party may be made by hand delivery, mail, facsimile, or email and that when an attorney represents a party, service shall be made on the attorney.

The existence of a business practice custom is sufficient to warrant a presumption that notice was sent, and it is the province of the trier of fact to decide whether that presumption is overcome by other evidence. *EZ Building Components Mfg., LLC v. Industrial Claim Appeals Office*, 74 P.3d 516 (Colo. App. 2003), citing *National Motors, Inc. v. Newman*, 484 P.2d 125 (Colo. App. 1971).

Ms. Sharrock credibly testified that she followed her normal business practice in filing the objection to the FAL and the application for hearing. As found above, the objection to FAL was sent and received on April 6, 2018 by email. Ms. Sharrock credibly testified that on the same date she mailed the Application for Hearing and that she later verified in the computer system that the Application for Hearing had been signed and scanned in on April 6, 2018 consistent with her normal business practices. Ms. Sharrock credibly explained why she did not email the objection to FAL and application for hearing at the same time, as the documents were going to different entities. The certificates on both the objection to FAL and application for hearing indicate that the documents were either mailed or delivered. Ms. Sharrock is credible that the objection was emailed while the application was placed in the U.S. mail. Both were sent to attorney of record for Respondents, as required by rule. The credible testimony creates a presumption that the notice was mailed on April 6, 2018. Although Respondents presented evidence that neither they nor the Office of Administrative Courts received the Application for Hearing until a later time, they have not presented sufficient evidence to overcome the presumption that the application was mailed on April 6, 2018 by paralegal to Claimant's attorney.

Thus, Claimant has established that the Application for Hearing, was mailed to the Office of Administrative Courts on April 6, 2018 and thus was timely filed within 30 days of the Final Admission of Liability. Respondents had the objection to FAL on April 6, 2018 and had the Application for Hearing on April 19, 2018. The April 6, 2018 Application for hearing is not stricken, the claim is not closed, and the claim may proceed on the merits.

ORDER

1. Claimant timely filed an Application for Hearing on April 6, 2018.

2. The April 6, 2018 Application for hearing is not stricken, the claim is not closed, and the claim may proceed on the merits.

3. All other issues are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 23, 2018

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

I. May Respondents withdraw the General Admission of Liability which was filed on March 1, 2018?

II. Has Claimant shown, by a preponderance of the evidence, that the spinal surgery which was performed by Dr. Serak was reasonable, necessary, and related to a work injury which occurred in July, 2017?

STIPULATIONS

The parties stipulated that Claimant's Average Weekly Wage is $600.00. The ALJ accepted this stipulation.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Respondents originally admitted this claim on 3/1/18. (Ex. 8). Respondents now seek to withdraw their General Admission of Liability.

2. Claimant testified that she currently works for Sabaru Auto Service ("Sabaru"), which is a family-owned business. Claimant's uncle, father, and brother are owners of this business, which repairs and sells cars in the Colorado Springs area.

3. Claimant testified that she had worked for Sabaru for about 3 ½ years prior to being injured.

4. Claimant testified that prior to being injured, her main job at Sabaru was the "front desk" which consisted of bookkeeping, writing up work orders, inventory, taking cars back to mechanics, and detailing used cars to get them ready for sale.

5. Claimant testified that after being injured, she now only works at the front desk and does not detail cars any longer.

6. Claimant testified that she never filed a Workers' Compensation claim prior to this injury.

7. Claimant testified that this injury occurred on July 1, 2017. She testified that the injury occurred on a Saturday (the ALJ takes administrative notice that July 1, 2017 was a Saturday), later in the afternoon, when she was detailing the interior

of a car, vacuuming, shampooing, and cleaning all the nooks and crannies of the vehicle. Claimant testified that while either shampooing or vacuuming a car when she was bending over, her back started to get very tight and really started hurting. Claimant testified that she knew something was immediately wrong that day because of the tightness and soreness in her back.

8. Claimant testified that her back was not hurting when she showed up at work on July 1, 2017 or in the days before the accident.

9. Claimant testified that the symptoms after the July 1, 2017 incident were very different than any prior back symptoms. She testified that before this accident, she would have some stiffness but she would stretch and do yoga which would help resolve any symptoms. After the accident, it was hard to sit or walk, and lying down was uncomfortable.

10. Claimant testified that in the 6 months prior to the accident, she would have some stiffness in her back, but that stiffness would go away with stretching.

11. Claimant testified that she was receiving "maintenance" work from her chiropractor approximately once a month prior to this work place accident.

12. In the latter part of 2016, Claimant treated with her chiropractor (Dr. Uthe) on these dates:

    8/3/16; 8/5/16; 8/8/16; 8/12/16; 8/15/16; 8/19/16; 8'22/16; 8/26/16; 8/29/16; 8/31/16;

    9/2/16; 9/5/16; 9/7/16; 9/9/16; 9/12/16; 9/19/16; 9/23/16; 9/26/16; 9/30/16;

    10/3/16; 10/7/16; 10/10/16; 10/14/16; 10/27/16; 10/24/16; 10/31/16;

    11/7/16; 11/11/16; 11/16/16; 11/21/16; 11/28/16;

    12/5/16; 12/23/16 (Ex. I, pp. 1-51)

13. Claimant treated with Dr. Uthe on 8 occasions in the 6 months prior to this incident on these dates:

    1/4/17;

    2/1/17;

    3/20/17;

    4/19/17;

5/9/17; 5/17/17; 5/26/17;

6/16/17. (Ex. 5, pp. 161 – 168).

14. Records show that Claimant treated with Dr. Uthe on 65 occasions in the 6 months after this incident on these dates:

    7/7/17; 7/10/17; 7/12/17; 7/14/17; 7/21/17; 7/24/17; 7/26/17; 7/28/17; 7/31/17;

    8/1/17; 8/2/17; 8/4/17; 8/7/17; 8/9/17; 8/10/17; 8/11/17; 8/14/17; 8/15/17; 8/21/17; 8/25/17; 8/28/17; 8/30/17;

    9/1/17; 9/4/17; 9/6/17; 9/11/17; 9/13/17; 9/15/17; 9/18/17; 9/20/17; 9/22/17; 9/25/17; 9/27/17; 9/29/17;

    10/23/17; 10/4/17; 10/6/17; 10/10/17; 10/13/17; 10/18/17; 10/20/17; 10/25/17; 10/27/17; 10/31/17;

    11/3/17; 11/7/17; 11/10/17; 11/14/17; 11/17/17; 11/20/17; 11/22/17; 11/24/17; 11/27/17; 11/29/17;

    12/4/17; 12/6/17; 12/8/17; 12/11/17; 12/13/17; 12/18/17; 12/19/17; 12/21/17; 12/22/17; 12/27/17; and 12/29/17. (Ex. 5, pp.169-263).

15. Claimant was admitted to the ER at UC Health on July 14, 2017. (Ex. 4, pp. 31 – 57). An MRI of the lumbar spine was taken in that visit. This MRI revealed:

    (1) The L2-3 disc demonstrates a 5 mm x 11 mm posterior midline protrusion with annular tear.

    (2) The L3-4 disc demonstrates a broad-based 5.1 mm posterior annular bulge with tear. There is mild left foraminal narrowing.

    (3) The L4-5 disc is narrowed, desiccated and demonstrates a 7.7 mm AP by 15.9 mm transverse left paracentral protrusion/extrusion. There is moderate canal stenosis measuring 5.6 mm. There is moderate left foraminal stenosis.

    No fluid leakage or sign of acute trauma was noted.

16. Claimant received physical therapy and an epidural steroid injection on her back. (Ex. 4, p. 58).

17. Claimant was also admitted to the ER at UC Health on January 18, 2018 due to her back condition. (Ex. 4, pp. 61–108). Another lumbar MRI was also performed.

18. Claimant testified that she informed her father that her back was hurting after this incident, but she did not tell him how it had happened.

19. Claimant testified that she waited until December of 2017 to file a Workers Compensation claim because she was not familiar with Workers' Compensation and she thought that she needed to "slip and fall or cut myself" in order for there to be a claim.

20. Claimant testified that she finally decided to file a Workers' Compensation claim when she and her mother were talking one day in December. Claimant testified that her mother informed her that because this happened at work, she should "at least try to file a claim." Claimant testified that she told her mother that since it was now December, she thought it would be too late to file the claim. Claimant testified that her mother said to report the injury and "at least put it on record."

21. Claimant testified that she informed her father in December, 2017 of the July injury, and he instructed her to file the necessary paperwork.

22. Claimant testified that she first sought legal help for this claim after her proposed back surgery had been denied in this claim. Claimant testified that when she originally filed this Workers' Compensation claim, she did not even think surgery would be required.

23. Claimant testified that the surgery in this matter was performed by neurosurgeon Dr. John Serak under her private insurance. Claimant testified that the back surgery was performed because she was starting to lose bladder function and she was experiencing muscle weakness. Claimant testified that physical therapy and chiropractic weren't engaging her muscles correctly and surgery needed to be performed. Claimant testified that the surgery was considered an emergency because she could have lost permanent function of her bladder and bowels if the surgery was not performed.

24. Claimant testified that that she had never lost control of her bladder prior to the July 1, 2017 work place incident.

25. Claimant testified that in the six months prior to the July 1, 2017 incident she was able to lift 20 pound car parts to provide to the mechanics. She performed yoga, and did walk/running. Claimant testified that after July 1, 2017 she can no longer lift 20 pound car parts, and can no longer perform those fitness activities.

26. Claimant testified that in 2016 she had had a little bit of low back pain but more of the left leg/sciatic nerve pinching. Claimant testified that she treated with physical therapy and chiropractic and within six months she was back to normal.

27. Claimant testified that the 2016 back pain was likely brought about by riding a bike. The day before that, she walked six blocks in high heels. Those two combined activities put a strain on her left leg. She testified that the back pain and left leg pain started in about July of 2016, but she was back to normal around January of 2017.

28. Claimant testified that in January of 2017, she had no medical restrictions, as she was again performing all activities she was able to perform prior to July of 2016.

29. Claimant testified that she never missed work due to this 2016 incident prior to the July 1, 2017.

30. Claimant testified that she had never received an MRI on her low back prior to the work incident. Claimant testified that she has now received 3 MRI's.

31. Claimant testified that she never received injections in her low back prior to July 1, 2017. Claimant testified that she has now received 3 injections in her left leg after July 1, and she has also received an epidural steroid injection in her low back.

32. Claimant testified that she was on a once-a-month maintenance program with her chiropractor in the months prior to this work place accident. Claimant testified that she chose to undergo these chiropractic treatments as prevention-type treatment. Claimant testified that she did not have to do the maintenance program. Claimant testified that she was not treating with any physicians in the 6 months leading up to this injury.

33. Claimant testified that the chiropractic treatment drastically changed after July 1, 2017, because of the back pain that she was experiencing and the pain in her leg.

34. Claimant testified that as a result of her work injury, her mother now lives with her. Claimant testified that her mother did not live with her prior to July 1, 2017. Claimant testified that she cannot do laundry now, she cannot clean now, and her mother has to take her children to school. Claimant testified that she could perform all of these duties prior to the July 1, 2017 accident.

35. Claimant testified that after July 1, 2017 she could only sit for 20 minutes max before she would have to walk around. Prior to the accident, she could sit for a couple of hours straight. Claimant testified that after July 1, 2017 she could only stand in one place for a couple of minutes and then she would have to walk around. Prior to the accident, she could stand for maybe 30 minutes without issue. Claimant testified that after the July 1, 2017 accident she could only sleep for about 3 hours or so, before she would wake up. Prior to the accident, she did not have these issues, and had no trouble sleeping through the night.

36. Claimant first started treatment with Dr. Uthe on August 3, 2016. (Ex. 5, pp.109, 208). In an opinion letter to Claimant's attorney, Dr. Uthe opined that she believes a back injury occurred at work on July 1, 2017:

> In the months leading up to this injury, Tiffany was doing very well on a once a month maintenance program between Dec. 2016 and July 1, 2017. She described her pain as minimal to none and was also increasing her exercise levels without complication. (Ex. 5, p.288)

37. Dr. Uthe agreed with Dr. Serak's request for an L4-5 microdisectomy to "decompress her nerve roots in order to relieve her pain and prevent worsening of her weakness." *Id.* at 289.

38. Dr. Uthe opined that the surgery performed by Dr. Serak on March 30, 2018 was reasonable, necessary, and related to the July 1, 2017 work place accident. *Id.*

39. Dr. Uthe opined that based on her treatment provided to Claimant, and her knowledge of the mechanism of injury, in her professional medical opinion, it is more likely than not that the work place accident of July 1, 2017 brought about/caused the immediate need for the current treatment/surgery. *Id.*

40. Dr. Shireen Rudderow is the Authorized Treating Physician in this claim. (Ex. 1). Responding to an inquiry from Claimant's attorney, Dr. Rudderow opined that, based upon her knowledge of the mechanism of injury and treatment provided to Claimant, she believes that Claimant sustained a back injury at work with Subaru Auto Service. (Ex. 1, p. 10).

41. Dr. Rudderow opined that her diagnosis of the injuries sustained by Claimant in the work place accident are: (1) L4/5 disc herniation, (2) lumbar radiculopathy, and (3) left leg weakness and paresthesia. *Id.*

42. Dr. Rudderow opined that based on her treatment provided to Ms. Morales and her knowledge of the mechanism of injury, in her professional medical opinion, it is more likely than not that the work place accident has brought about/caused the immediate need for the current treatment/surgery performed by Dr. Serak. *Id.* at 11.

43. Dr. Rudderow opined that the surgery performed by Dr. Serak was reasonable, necessary, and related to the work place injury. *Id.*

44. Dr. Tim O'Brien performed an IME for Respondents in this matter. (Ex. M). Dr. Rudderow provided the following response to Dr. O'Brien's IME:

> I have reviewed the IME by Dr. O'Brien, orthopedist. I disagree with Dr. O'Brien's conclusions regarding the cause of the injury. The patient does have history of lower back pain in the past that was resolved. It is reasonable to assume the cause of her current

> lower back pain is related to her duties at Sabaru, where she would spend hours bending awkwardly, cleaning cars. I do agree with Dr. O'Brien that surgical intervention should proceed. I am concerned that delay of care by her worker's compensation carrier may cause permanent neurologic damage. I think the claim should proceed." (Ex.1, p. 7).

45. Dr. Serak opined that based upon his knowledge of the mechanism of injury and treatment provided to Claimant that a back injury occurred at work on July 1, 2017 as "onset of symptoms correspond with back + leg pain developed while working per patient." (Ex. 2, p. 17).

46. In response to an inquiry by Claimant's attorney, Dr. Serak provided the following diagnosis of injuries: "Lumbar disc herniation with radiculopathy." *Id.*

47. Dr. Serak opined that based upon his treatment provided to Claimant and knowledge of the mechanism of injury, it is more likely than not that the work place accident of July 1, 2017 has brought about/caused the immediate need for the current treatment/surgery. *Id.* at 18.

48. Dr. Serak opined that the surgery that he performed on March 30, 2018 was deemed necessary due to: "Progressive lower extremity weakness and bladder incontinence consistent with signs + symptoms of the development of cauda equina syndrome." *Id.* at 18.

49. Dr. Serak opined that the surgery that he performed was reasonable, necessary, and related to the July 1, 2017 work place injury. *Id.*

50. Dr. Jack Rook performed an Independent Medical Examination for Claimant in this matter. (Ex. 7). Dr. Rook reviewed the medical records in this matter and performed a physical examination of Claimant.

51. Dr. Rook diagnosed Claimant's work related diagnosis as follows:

> (1) Permanent aggravation of lumbar degenerative disc disease with the development of, or worsening of a herniated disc at the L4-5 level and subsequent migration of the disc with nerve root impingement and then development of cauda equine syndrome.
>
> (2) Status post L4-5 decompression/laminectomy with postoperative gradual improvement of the preoperative cauda equine syndrome.
>
> The patient's history is consistent with the development of a clinically worsening low back pain and left lower extremity sciatica condition as a result of the work activities she performed on July 1, 2017. The patient had a subacute deterioration in her clinical condition with the progressive development of lumbar radiculopathy and eventually the

cauda equine syndrome within six months of the occupational injury event. (Ex. 7, pp. 319-320).

52. Dr. Rook opined that based on his knowledge of the mechanism of injury, after review of the medical records, and after examination of the Claimant, it is more likely than not that a back injury occurred at work on July 1, 2017. Specifically Dr. Rook stated:

> With respect to the mechanism of injury, the extreme twisting, bending, and awkward trunk positioning required of 'detailing' the interiors of motor vehicles for the two months prior to her DOI, are the types of motions that are known to place significant stress on structures in the lower lumbar spine." *Id.* at 320-321.

53. Dr. Rook opined that based upon his review of the medical records in this file and his examination of the Claimant, the work place injury of July 1, 2017 caused/brought about the need for the current treatment:

> There is chiropractic documentation possibly indicative of mild sciatica symptoms involving her left lower extremity. However, it is the patient's history that these problems were not incapacitating and her history is support by the paucity of medical documentation during this time frame. In contrast, the patient's clinical condition deteriorated significantly after July 1, 2017 and at that point became consistent with a frank lumbar radiculopathy which…progressed rapidly to cauda equine syndrome due to the presence of a huge disc herniation with migration at the L4-5 level. Prior to her date of injury, this patient was not experiencing such symptoms and she was not in need of surgical intervention." *Id*. at 321.

54. Dr. Rook further opined:

> There is no doubt that this patient had a pre-existing condition of degenerative disc disease in her lumbar spine. However, as noted above the injury that developed on July 1, 2017 *permanently aggravated* this pre-existing condition, and more than likely was associated with disc damage at the L4-5 level that led to a rapid progression of disc disease, disc migration, radiculopathy, and the development of cauda equine syndrome. *Id.* at 321-322. (emphasis added).

55. Claimant was again admitted into the Emergency Room at UC Health on January 18, 2017. (Ex. 4, pp. 61-105). In that visit, a 2nd MRI was taken and read by the neurosurgeon, Dr. Medel. The record indicate that Claimant is showing a disc rupture that would most likely require surgery." *Id.* at 75.

56. Respondents' IME physician, Dr. Timothy O'Brien, testified in a deposition that the surgery performed by Dr. John Serak on March 30, 2018 was reasonable for someone in Claimant's condition. (Deposition Transcript p. 32, l. 24).

57. Dr. O'Brien testified that he examined the Claimant on one occasion, on 2/9/18. (Deposition Transcript p. 32, l. 1). Dr. O'Brien testified that the Claimant had been "open and honest" about prior medical treatment with him. (Deposition Transcript p. 32 ll. 2–6 and 14–17).

58. Dr. O'Brien stated that if Dr. Serak's historical input he documented in the exam findings in March of 2017 were accurate, "then surgery is getting very, very close to necessary, necessary to preserve nerve function." (Deposition Transcript p. 33 ll.15–20).

59. Dr. O'Brien further noted that upon physical examination, Claimant did not display atrophy on her lower extremity, which did not correlate with her reported radicular symptoms. He attributed her lack of strength, both in his deposition and his written narrative, to "failed effort." He noted at the onset of injury, this was not recorded as an industrial incident in the records. He also noted that Claimant's pain increased on two occasions outside of work.

60. Dr. O'Brien opined that while Claimant did have documented back issues, there was not an actual incident at work. He reasoned that surgery was not reasonable and necessary at that time in that upon physical exam, claimant did not display neurological deficits. He also noted that there was not evidence in the July 14, 2017 MRI of an acute trauma.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado, §8-40-101 C.R.S., *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1) C.R.S.

2. Since Respondents are seeking to withdraw their General Admission of Liability, the burden of proof is on Respondents to prove, by preponderance of the evidence, that a compensable injury did not occur here. §8-43-201(1) C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clarke*, 592 P.2d 792 (Colo. 1979).

3. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office,* 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence.

4. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936).

5. In this instance, the ALJ finds Claimant to be credible in her testimony. Her explanation for delaying in reporting her injury is plausible, given her lack of legal sophistication. It was a family business; thus a lack of any adversarial relationship between employer and employee. The ALJ further finds her to be credible in reporting her symptoms to her medical providers, in a sincere effort to improve her condition. The ALJ is not persuaded by Dr. O'Brien's opinion that Claimant put submaximal effort into her IME physical exam.

Compensability/ Withdrawal of GAL

6. Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009). A compensable injury is an injury which "arises out of" and "in the course and scope of employment." §8-41-301(1)(b) C.R.S. The term "in the course and scope of employment" refers to the time, place and circumstances under which the injury occurred. The injury must have occurred in the time and place limits of the employment, and during an activity having connection with the employee's job functions. Additionally, the term "arising out of" establishes that there must be a causal relationship between the employment and the injury. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991).

7. A compensable injury may be the result of an industrial aggravation of a pre-existing condition as long as the aggravation is the proximate cause of the disability or need for the current treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). The mere fact that a claimant suffers from a pre-existing condition does not disqualify a claim for compensation or medical benefits if the work-related activities aggravated, accelerated, or combined with the pre-existing condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo.

1949). The claimant must prove by a preponderance of the evidence that his symptoms were proximately caused by an industrial aggravation of a pre-existing condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009).

8. The weight and credibility to be assigned to expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

9. In this instance, the ALJ has found Claimant to be a credible medical historian and witness. As concluded earlier, the ALJ finds that Claimant put a sincere effort into not only her IME exam, but in reporting her symptoms to her own medical providers. While it might be argued that there is a financial motive to put submaximal effort into an IME exam, the same cannot be said for a person being examined by her own neurosurgeon in anticipation of an expensive and difficult surgery being paid through private insurance. Her reported symptoms are consistent during the downward progression of her condition, which was occasioned by a work injury.

10. Claimant relied heavily upon her chiropractor in treating her back pain in 2016 and 2017. As measured by the number of visits, Claimant-consistent with her testimony-treated regularly in the fall of 2016, then got better by December. She remained on a near monthly maintenance regimen in the first half of 2017, then was clearly in considerable distress starting in July, with 65 visits in the next 6 months. (While not outcome determinative to this case, the ALJ notes that during her ER visit on 7/14/17, Claimant reported to ER personnel that this 'flareup' started on "*Saturday*; 6 days ago." (Ex. 4, p. 32). The ALJ finds that, more likely than not, this work injury while cleaning cars actually occurred on Saturday, July 8, 2017.)

11. While the mere number of witnesses for or against a proposition is not outcome determinative, the IME report and testimony of Dr. O'Brien is not sufficiently persuasive to outweigh the combined medical opinions of Dr. Rook, Dr. Rudderow, Dr. Serak, and her chiropractor, Dr. Uthe. The ALJ finds that on or about July 8, 2018, while at work, Claimant permanently aggravated her (admittedly) pre-existing L4/L5 condition, which then progressively worsened until she required surgery to correct it. The injury is compensable. Respondents may not withdraw the General Admission of Liability which had been filed on 3/1/2018.

Medical Benefits/Surgery by Dr. Serak

12. Respondents must provide all medical benefits which are reasonably needed at the time of injury and thereafter during the disability to cure and relieve the effect of the injury §8-42-101 C.R.S. Where the relatedness, reasonableness, or

necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. AllRight Colorado Inc.,* W.C., No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a Claimant from the effects of the injury, is a question of fact. *City and County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984).

13. The ALJ has found this work injury to be compensable. Claimant's treatment providers have opined that this surgery by Dr. Serak was reasonable and necessary; even Dr. O'Brien concurred that this procedure was reasonable and necessary for someone in Claimant's condition-assuming Claimant was accurately reporting her symptoms. The ALJ has found that Claimant did so accurately report them. Claimant could have suffered permanent harm and disability had this not been addressed promptly.

14. There is nothing in the record but speculation by Dr. O'Brien that some intervening event, such as a sneeze, between her work injury and the 2nd MRI caused Claimant's condition to further deteriorate, thus requiring the surgery. By a preponderance of the evidence, the ALJ finds that this surgery which was performed was reasonable, necessary, *and related* to her work injury. As such, Claimant is to be reimbursed for all costs incurred.

ORDER

It is therefore Ordered that:

1. Claimant suffered a compensable work injury in July, 2017. Respondents may not withdraw the General Admission of Liability filed in connection therewith.

2. Respondents shall reimburse Claimant for all costs associated with the surgery which was performed by Dr. Serak in March, 2018.

3. Claimant's Average Weekly Wage is $600.00

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 24, 2018

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that he is entitled to temporary partial disability (TPD) benefits for the period of April 1, 2017 through October 13, 2017.

- Whether the claimant has demonstrated by a preponderance of the evidence that he is entitled to permanent partial disability (PPD) benefits due to probable residual disability, if he had lived to reach maximum medical improvement (MMI).

- If the claimant successfully demonstrates entitlement to TTD and/or PPD benefits, what was the claimant's average weekly wage (AWW) at the time of the admitted March 31, 2017 work injury?

FINDINGS OF FACT

1. The claimant worked for the employer as a frac operator. On March 31, 2017, the claimant injured his left knee at work. On September 22, 2017, the employer filed a General Admission of Liability (GAL) admitting for medical benefits only.

2. At the time of his March 31, 2017 work injury, the claimant was paid $18.69 per hour. The employer pays employees every two weeks. The payroll records entered into evidence indicate that in the twelve (12) weeks prior the work injury, the claimant earned at total of $18,897.80. This total included regular hours, overtime hours, paid holidays, and additional bonuses. The ALJ calculates that this averages to $1,574.82 per week ($18,897.80 divided by 12 weeks).[1]

3. Following the March 31, 2017 injury the claimant received medical treatment from Dr. Lori Fay. The claimant was first seen by Dr. Fay on April 7, 2017. At that time, Dr. Fay assigned work restrictions that included no kneeling, squatting, climbing, or crawling.

4. Thereafter, the claimant was on a scheduled vacation from April 7, 2017 through April 19, 2017. The claimant returned to work, as scheduled, on April 24, 2017. Ms. Sutliff testified that the claimant's April 2017 vacation was scheduled prior to the March 31, 2017 work injury. While the claimant was on that vacation, his rate of pay was increased to $20.65 per hour.

[1] This would equate to an average of $3,149.64 for each two week pay period.

5. The claimant was on modified duty from his return to work on April 24, 2017 until October 2017. Ms. Sutliff testified that the claimant's final day of employment with the employer was October 11, 2017. Ms. Sutliff also testified that the claimant's employment ended on that date because he was injured at home.

6. Based upon the payroll records entered into evidence, from April 24, 2017 through October 7, 2017 the claimant's earnings were as follows:

> For the pay period of April 23, 2017 through May 6, 2017, the claimant's earnings were $1,404.11;
>
> For the pay period of May 7, 2017 through May 20, 2017, the claimant's earnings were $2,893.49;
>
> For the pay period of May 21, 2017 through June 3, 2017, the claimant's earnings were $2,214.62;
>
> For the pay period of June 4, 2017 through June 17, 2017, the claimant's earnings were $2,436.61;
>
> For the pay period of June 18, 2017 through July 1, 2017, the claimant's earnings were $2,255.92
>
> For the pay period of July 2, 2017 through July 15, 2017, the claimant's earnings were $1,721.60;
>
> For the pay period of July 16, 2017 through July 29, 2017, the claimant's earnings were $1,386.03;
>
> For the pay period of July 30, 2017, through August 12, 2017, the claimant's earnings were $3,226.47;
>
> For the pay period of August 13, 2017 through August 26, 2017, the claimant's earnings were $3,807.25;
>
> For the pay period of August 27, 2017 through September 9, 2017, the claimant's earnings were $2,312.71;
>
> For the pay period of September 10, 2017 through September 23, 2017, the claimant's earnings were $3,807.25;
>
> For the pay period of September 24, 2017 through October 7, 2017, the claimant's earnings were $709.76; and

It is clear from this evidence that there were pay periods in which the claimant earned less than he was earning before his March 31, 2017 work injury.

7. Prior to the claimant's work injury, he and his crew were working outside of Denver, Colorado. When the claimant returned to work on April 24, 2017, he was assigned to a job location near Parachute, Colorado. Ms. Sutliff testified that the claimant's entire crew experienced this change in job location, not just the claimant. While working at the Parachute job site, crew members worked fewer hours than they had worked while at the Denver location. Both Ms. Sutliff and Mr. Bevan testified that this reduction in hours occurred because noise restrictions limited the number of hours the crew was allowed to work.

8. On December 27, 2017, the claimant was seen by Dr. William Ciccone for an independent medical examination (IME). In connection with the IME, Dr. Ciccone reviewed the claimant's medical records, obtained a medical history from the claimant, and performed a physical examination. In his IME report, Dr. Ciccone diagnosed the claimant with left knee arthritis and opined that the claimant suffered a minor injury to his left knee at work. Dr. Ciccone further opined that the "development of arthritis predated the incident at work and is not related to a work injury". Dr. Ciccone noted that the claimant had reached maximum medical improvement (MMI) and that a permanent impairment rating would not be appropriate "given the claimant's long history of pain from his degenerative arthritis as it would be impossible to know the claimant's baseline range of motion prior to the incident".

9. The claimant died on January 4, 2018. The parties agree that the claimant's death is not related to the March 31, 2017 work injury.

10. On January 22, 2018, the respondents filed a Final Admission of Liability (FAL) admitting for medical benefits only.

11. On June 29, 2018, the claimant's counsel asked Dr. Fay to opine regarding whether the claimant would have had "probable residual disability" if he had lived to reach MMI. In her July 5, 2018 response, Dr. Fay opined that the claimant would have had probable residual disability. Based upon range of motion measurements taken by Dr. Ciccone at the IME, Dr. Fay also opined that the claimant would have had a 2% whole person impairment.

12. The ALJ credits the testimony of the respondents' witnesses and the payroll records entered into evidence and finds that it is more likely than not that after the claimant returned to work on April 24, 2017 his wages were lower because of the change in job location and not because of the claimant's work restrictions.

13. The ALJ credits the testimony of the respondents' witnesses and the payroll records entered into evidence and finds that the claimant was absent from work for a planned vacation from April 7, 2017 through April 23, 2017. Therefore any reduction in wages during that period of time was not related to the work injury or the actions of the employer.

14. The ALJ credits the opinion of Dr. Ciccone over the conflicting opinion of Dr. Fay and finds that the claimant had reached MMI as of the date of the IME and had

no permanent impairment. Therefore, the ALJ finds that the claimant has failed to demonstrate that that he had probable residual disability at the time of his death. Thus, the ALJ also finds that the claimant has failed to demonstrate that it is more likely than not that he is entitled to permanent partial disability (PPD) benefits.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. To prove entitlement to temporary partial disability (TPD) benefits, claimant must prove that the industrial injury contributed to some degree to a temporary wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). TPD payments ordinarily continue until either claimant reaches maximum medical improvement or an attending physician gives claimant a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment. *See* 8-42-106, C.R.S.

4. The Colorado Court of Appeals and the Industrial Claim Appeals Office (ICAO) have previously held that an injured worker's wage loss for "economic reasons" does not preclude him from the continued receipt to TPD benefits. *J.D. Lunsford v. Sawatsky*, 780 P.2d 76 (Colo. App. 1989). *See also Kaminski v. Grand County Roofing and Sheet Metal, Inc*. WC No. 4-525-562 (ICAO 2003); *Ashmore v. NU Horizon Window Systems, Inc.* WC No 4-593-027 (ICAO 2004); *and Edgar v. Halliburton Energy Services*, WC No 4-971-336-01 (ICAO 2015).

5. As found, the claimant's wage loss following his work injury was not related to his work restrictions. Rather, the reduction of the claimant's wages beginning April 24, 2017 was the result of reduced hours for the entire crew. However, given the holdings in the *Sawatsky* line of cases, the claimant has demonstrated by a preponderance of the evidence that he is entitled to TPD benefits for the period of April 24, 2017 through October 13, 2017. As found, the testimony of the respondents' witnesses and the payroll records are credible and persuasive.

6. Section 8-42-116, C.R.S., addresses the payment of benefits when a claimant dies of causes unrelated to the work injury. Specifically, the statute provides, in part:

> "(1) If death occurs to an injured employee, other than as a proximate cause of any injury, before indemnity ceases and the deceased leaves persons wholly dependent upon the deceased for support, death benefits shall be as follows: … (b) Where the injury proximately caused permanent partial disability, the death benefit shall consist of unpaid and unaccrued portion of the permanent partial disability benefit which the employee would have received had he lived."

7. To calculate permanent partial disability (PPD) benefits when a claimant dies before reaching MMI "[t]he proper procedure is to make the best possible medical estimate of the probable residual disability that would have remained had the employee had lived to complete his healing period." *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998) (*citing 4 Larson's Workers' Compensation Law* Section 58.45 (1997)). It is not necessary for a claimant to reach MMI before death for Section 8-42-116, C.R.S. to apply. *Id.*

8. As found, the claimant has failed to demonstrate by a preponderance of the evidence that he would be entitled to PPD benefits. As found, the claimant was at MMI at the time of the IME, with no permanent restrictions. Therefore, the claimant did not have probable residual disability at the time of his death. As found, the opinion of Dr. Ciccone is credible and persuasive.

9. The ALJ must determine a claimant's average weekly wage (AWW) by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

10. As found, the claimant's average weekly wage (AWW) at the time of the March 31, 2017 injury was $1,574.82. As found, the payroll records are credible and persuasive.

ORDER

It is therefore ordered that:

1. The claimant is entitled to temporary partial disability (TPD) benefits for the period of April 24, 2017 through October 13, 2017.

2. The claimant's claim for permanent partial disability (PPD) benefits is denied and dismissed.

3. The claimant's average weekly wage (AWW) was $1,574.82.

4. The insurer shall pay interest to the claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

Dated: August 27, 2018

Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

I. Whether Respondents produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinions of Dr. Jonathan Bloch regarding permanent impairment.

II. Whether Claimant established by a preponderance of the evidence that she is entitled to maintenance medical care under W.C. No. 5-034-574

III. Whether Claimant established by a preponderance of the evidence that she is entitled to medical impairment benefits based upon 14% of the right upper extremity rather than 39% of the right thumb.

IV. Whether Claimant established by a preponderance of the evidence that she is entitled to maintenance medical benefits under W.C. No. 5-020-726

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

Claimant's November 26, 2014, Low Back Claim- W.C. No. 5-034-574-001

1. At the time of her low back injury, Claimant worked for Employer as a resident program coordinator. On November 26, 2014, Claimant, along with a co-worker were loading a boxed artificial Christmas tree into vehicle when the box unexpectedly began to fall apart. Claimant was knocked off balance twisting suddenly to avoid falling to the ground. Claimant felt a "popping" in her lower back. Several hours later, she developed low back and right buttock pain.

2. Claimant called off work for a few days; however, when her pain failed to improve she sought treatment from her primary care physician (PCP) who administered two steroid injections and took an x-ray of the right hip that was reportedly negative for fracture.

3. Claimant's low back pain continued to worsen. She developed pain down the right leg extending to the lateral portion of the ankle along with numbness to the level of the knee.

4. On February 6, 2015, Claimant was evaluated by Dr. Joseph Zaremba for her "work injury." Claimant denied a prior history of back pain. After taking a history, Dr. Zaremba assessed Claimant with a lumbar sprain/strain and "overexertion from

sudden strenuous movement." As Claimant's pain was worsening, Dr. Zaremba suspected disc pathology. Consequently, he ordered an MRI, noting that if there was "significant pathology" on the MRI, he would refer Claimant to another physician for treatment options. He also noted that if there was nothing compressive on Claimant's MRI, he would refer her to Dr. Sparr for injection therapy.

5. An MRI of the lumbar spine was performed on February 16, 2015. The MRI revealed "[s]pondylosis and facet joint arthropathy involving [the] thoracolumbar spine . . .". The MRI was also read as being consistent with "reactive/inflammatory bone edema associated with right-sided facet joint arthropathy, at L4-5 and L5-S1."

6. Claimant would subsequently undergo a series of injections, including medial branch blocks with Dr. Stephen Scheper which would fail to provide lasting relief. Accordingly, she was referred for a radiofrequency nerve ablation (RFA), also referred alternatively to as a radiofrequency neurotomy, denervation and/or rhizotomy. Denervation of the L4-5 and L5-S1 facet joints was performed June 15, 2015.

7. On July 1, 2015, Claimant presented for a follow-up after undergoing the aforementioned ablation. She reported "remarkable improvement overall" with improved sleep quality and mobility." In addition, Claimant reported that she was not taking pain medication.

8. Although she had complete relief of her back and leg symptoms after her RFA procedure, she noticed a "gradual recurrence" of back and leg pain approximately one week later. Nonetheless, at the time of her July 1, 2015 appointment, Claimant reported they she was 60% improved.

9. Claimant's residual pain intensified and by July 27, 2015, she was reporting pain in the low back with radiation down the leg into the foot not resolved with a facet injection.

10. Electrodiagnostic (EMG) evaluation was carried out on August 3, 2015. At the time of this testing, Claimant reported "6/10 pain radiating into the anterior and posterior aspect of the thigh into the anterior, greater than posterior right leg below the knee, [but] not really into the foot." Claimant's EMG study demonstrated abnormal results consistent with a "chronic, latent L5 radiculopathy with chronic axonal loss in the right EDB, also likely on the left" without "evidence of recent neuropathology consistent with Claimant's symptoms within the timeframe of the DOI." According to Dr. Scheper, Claimant's conduction pattern was "potentially related to early findings of a peripheral polyneuropathy" rather than any traumatic injury. Dr. Scheper discussed the findings of Claimant's EMG with her. He noted that "without clear evidence of active neuropathology, per work comp guidelines there are no justifiable treatment options for her discogenic and radiating right lower extremity dermatonal pain." According to Dr. Scheper, Claimant's ongoing pain was "likely related to local inflammation from active facet arthritis and active inflammatory changes at the 2 lowest disks which were demonstrated with type I Modic changes." While Claimant's L4-5 and L5-S1

facetogenic pain was substantially improved with nerve ablation, Dr. Scheper opined that "no further treatment [was] necessary for [this] component of her injury."

11. On January 26, 2017, Claimant was evaluated by Dr. Eric Jepson of the Colorado Springs Orthopedic Group for bilateral hip pain. According to Dr. Jepson's note from this date of visit, Claimant "fell two years ago and had a right sided facet injury." He went on to document that Claimant was having similar symptoms on the left side with pain in the low back wrapping around to the groin and down the leg. He also noted that Claimant reported symptoms similar to those she had with a past blood clot in the leg. Dr. Jepson assured Claimant that he did not believe she had a hip condition nor did he think she required surgical intervention. Nonetheless, given her reported symptoms, Dr. Jepson referred Claimant for a venous ultrasound (US) of the left lower extremity to rule out a deep vein thrombosis (DVT) as well as an updated MRI.

12. Claimant's repeat MRI was performed February 10, 2017. The MRI demonstrated "minimal" disc bulging without spinal canal stenosis at L4-5. Mild facet joint osteoarthrosis was present as was minimal left neural fomaminal stenosis. At the L5-S1 level the findings were similar except that there was "mild bilateral, right-greater-than-left, facet joint osteoarthrosis present. Overall, the impression of the MRI findings was reported as revealing "no compressive disc disease, spinal canal stenosis or high-grade neural foraminal narrowing [present] at any level."

13. Claimant presented to Dr. Jepson in follow-up on March 2, 2017. During this visit, Claimant reported ongoing and worsening pain. Claimant noted pain across the low back with burning pain radiating down the left and right leg. She was unable to sit or sleep comfortably. Dr. Jepson documented that Claimant was to see Dr. William Lippert in consultation as Dr. Scheper was unable to "take her on as a patient because he saw her for work comp in the past and now . . . doesn't see patient under private insurance.

14. Claimant was placed at maximum medical improvement (MMI) without impairment and without the need for maintenance medical care on March 6, 2017 by Dr. Frank Polanco, the authorized treating physician (ATP) for her low back work injury.

15. Claimant was evaluated by Dr. Lippert on March 16, 2017. Dr. Lippert performed an additional medial branch blocks at L3, L4, L5, and S1.

16. Claimant requested a Division Independent Medical Examination (DIME) following her placement at MMI. Dr. Jonathan Bloch completed the requested DIME on August 18, 2017. After reviewing medical records, taking a history and completing a physical examination, Dr. Bloch assessed Claimant with a "low back strain with symptoms of bilateral lower extremity radiculopathy involving dermatomes L5, improved for 6 or more months post rhizotomies, first on the right and then on the left."

17. Dr. Bloch concurred with Dr. Polanco's date of MMI. He also opined that Claimant had an 18% whole person impairment arising from a Table 53(II)(C) rating at

L4-L5 and L5-S1, range of motion loss, and neurologic sensory and motor loss. He also opined that maintenance care would be appropriate as "outlined in the Division Guidelines for Chronic Pain Disorder Maintenance Management, Rule 17, Exhibit 9, Section H." He then documented four pages of copied "recommendations," including: home exercise programs, patient education, psychological management, non-opioid and opioid management, physical therapy, injections, and use of durable medical equipment.

18. The Division IME Unit issued an "Incomplete Notice – IME Report" because the medical maintenance recommendations were not "specific to the patient involved [or] justified by the medical record." The Division noted that while the medical treatment guidelines "reference treatments that may be appropriate to a population of patients" the recommendations "should not simply be copied for patient specific post-MMI care."

19. The Division IME Unit also noted that the DIME report invalidated Claimant's lumbar flexion measurements based upon straight-leg raise (SLR) validity testing, but that the range of motion measurements recorded were actually valid. Dr. Bloch was asked to review his report and clarify the discrepancy.

20. Dr. Bloch subsequently issued an "Addendum to Division Independent Medical Examination wherein he explained his position regarding post-MMI maintenance medical care. Per Dr. Bloch, the recommendations for maintenance care as set forth in his original DIME report were not "simply copied" and thus, represented care specific to Claimant. He reiterated that Claimant would require the following care: (1) a home exercise program that may include purchased equipment or a program to be conducted at an external facility if it would improve Claimant's compliance with exercise; (2) education and/or sessions with a personal trainer to improve exercise compliance; (3) psychological management for future exacerbation of symptoms; (4) non-opioid medication management; (5) opioid medications is required for symptom management; (6) additional therapy, including modalities for occasional exacerbations; (7) continued interventional injections; and (8) durable medical equipment/supplies. Dr. Bloch also addressed the concerns regarding his impairment for the lumbar spine noting that his range of motion measurements for lumbar flexion were valid when SLR validity testing was accounted for. Upon reviewing Claimant's range of motion (ROM) for lumbar flexion as requested, Dr. Bloch corrected an error in his original report concerning Claimant's impairment for ROM loss. In his original report Dr. Bloch assigned 7% whole person impairment for ROM loss. He corrected this error, noting that Claimant's actual ROM loss was 9% rather than 7%. All other aspects of Claimant's impairment rating remained unchanged. With the additional 2% impairment for ROM loss, Claimant's impairment rating increased to 20%.

21. Respondents requested an opinion from Dr. Allison Fall. Dr. Fall performed what she documented was an independent medical examination (IME) concerning Claimant's low back. As part of her IME, Dr. Fall reviewed medical records provided to her. While her report concerning Claimant's low back injury dated

December 7, 2017 contains a section entitled "Physical Examination", Dr. Fall admitted during her deposition that she did not physically touch Claimant's back. She did not palpate the back, test Claimant's reflexes or sensation nor did she take any range of motion measurements or perform SLR testing. Indeed, during her deposition, Dr. Fall admitted that the "majority of [her] opinions in this case [were] based upon the medical record review . . . as opposed to any physical examination findings [she] had at the time that [she] saw [Claimant]." Based upon a review of the "IME" report, including the section entitled "physical examination", the ALJ finds that Dr. Fall did not conduct a meaningful examination of Claimant to generate "examination findings" when she evaluated Claimant. At best, her "physical examination" can be said to consist of observational findings, concerning Claimant's gait pattern and ability to ambulate and otherwise move about the examination room. Consequently, the ALJ finds that Dr. Fall's IME essentially constitutes a medical records review.

22. In her IME report, Dr. Fall outlined the following errors she believes Dr. Bloch made in completing his DIME:

- Dr. Bloch merely copied and pasted his maintenance medical treatment recommendations from the Guidelines, which is inappropriate because not all treatments listed in the Guidelines are indicated for Claimant.

- Dr. Bloch provided for Table 53 ratings for L4-L5 and L5-S1 which is incorrect because, according to Dr. Fall, the L4-5 and L5-S1 spinal segment levels were never determined to be pain generators for Claimant. As stated by Dr. Fall, "[o]nly objective evidence of pain generators and not MRI findings should be rated."

- While technically valid, Dr. Bloch's measurements for sacral flexion were "quite rare," thus raising significant questions about the accuracy of his measurements.

- The impairment rating for neurologic system impairment was clearly incorrect given Claimant's EMG findings and the supporting opinions of Dr. Scheper regarding the same.

23. During her deposition testimony, Dr. Fall reiterated that there was no objective evidence confirming that L4-5 and L5-S1 were pain generators in this case. She explained that she would have expected a positive response to a radiofrequency neurotomy as evidence that these were Claimant's pain generators, but that Claimant did not have a positive response to her rhizotomy.

24. While Dr. Fall testified that it might be appropriate to assign 7% whole person for a single level under Table 53 due to "pretty significant degenerative changes," she took issue with the addition of assigning an additional 1% whole person impairment for L5-S1 as a second level under Table 53. According to Dr. Fall, Dr.

Bloch's decision to assign an additional 1% impairment for the L5-S1 level was an obvious error because Claimant's treatment focused on the L3-4 and L4-5 levels and there was no evidence that the L5-S1 level was a pain generator for Claimant.

25. As noted, Dr. Fall testified questioned the lumbar range of motion measurements obtained by Dr. Bloch. She specifically addressed the measurements for sacral flexion (forward flexing) at sixty degrees. She explained that in her twenty years of performing ROM measurements, she had never seen a patient with such "extreme" flexion. She testified that this "hyper-flexibility" in the sacral joint did not make clinical sense given Claimant's hip joint pain, low back pain, arthritis, and age.

26. Dr. Fall suspected that Dr. Bloch may have used an electronic device to measure Claimant's ROM, testifying further that it was possible that Dr. Bloch erroneously flipped the lumbar flexion angle (45 degrees) with the sacral range of motion (60 degrees). If these were flipped (i.e. sacral having 45 degrees of motion and flexion having 60 degrees), Claimant's ROM measurements would make clinical sense to Dr. Fall, given Claimant's age and comorbidities. Accordingly, Respondents contend that the impairment rating for ROM loss should be 7% whole person rather than 9% whole person based on Dr. Bloch's measurements.

27. With regard to neurologic system impairment assigned by Dr. Bloch, Dr. Fall testified he clearly erred because there was no nerve damage as a result of the work-related injury based upon Claimant's EMG testing results.

28. Based on the above, Dr. Fall testified that Claimant's impairment rating could be calculated as high 14% whole person impairment (7% under Table 53 and 7% for range of motion loss) or as low as 0% because Claimant had pre-existing and chronic pain complaints involving the right hip area and because there was insufficient objective evidence to support a Table 53 rating at either of the spinal levels identified by the Division IME (L4-5 and L5-S1). Without the Table 53 rating, Dr. Fall testified that no range of motion impairment could be assessed.

29. The evidence presented persuades the ALJ that Dr. Bloch erred in his assignment of neurologic system impairment. Indeed, the evidence presented is persuasive of the fact that Claimant did not have EMG findings consistent with neuropathy correlating with Claimant's symptoms within the timeframe of the DOI but rather findings supportive of the presence of findings consistent with early peripheral polyneuropathy, not traumatic injury. As noted, Dr. Scheper discussed the findings of Claimant's EMG with her, noting that "without clear evidence of active neuropathology, per work comp guidelines there are no justifiable treatment options for her discogenic and radiating right lower extremity dermatonal pain." According to Dr. Scheper, Claimant's ongoing pain was "likely related to local inflammation from active facet arthritis and active inflammatory changes at the 2 lowest disks which were demonstrated with type I Modic changes." Given the objective findings demonstrated on the EMG along with the opinions of Dr. Scheper, the ALJ finds Dr. Bloch's opinion concerning Claimant's entitlement to neurologic impairment highly probably incorrect.

Consequently, the ALJ finds Respondents have overcome the Division IME's impairment rating by clear and convincing evidence in this regard. The evidence presented persuades the ALJ that Claimant has no neurologic impairment associated with her admitted work-related low back injury.

30. While Dr. Fall has strong opinions about Claimant's ROM, her opinions do not convince the ALJ that Dr. Bloch erred in measuring Claimant's ROM. Although it may be quite rare for Claimant to have the degree of sacral flexion she demonstrated when evaluated by Dr. Bloch, Dr. Fall did not perform independent ROM measurements to confirm her suspicions that Dr. Bloch erroneously flipped the lumbar flexion angle (45 degrees) with the sacral range of motion (60 degrees) in this case. Consequently, the ALJ is not convinced that Dr. Bloch's ROM measurements are erroneous and highly probably incorrect. Moreover, the ALJ is not convinced that providing an additional 1% spinal impairment for the L5-S1 segment in this case was highly probably incorrect. As noted, Dr. Fall challenged Dr. Bloch's decision to assign an additional 1% impairment for the L5-S1 level on the grounds that Claimant's treatment focused on the L3-4 and L4-5 levels, that there was no evidence that the L5-S1 level was a pain generator for her and that she did not have a positive response to a radiofrequency neurotomy. The ALJ is not persuaded. As found above, Dr. Scheper opined that Claimant's ongoing pain was "likely related to local inflammation from active facet arthritis and active inflammatory changes at the 2 lowest disks which were demonstrated with type I Modic changes." Furthermore, while Claimant did receive some treatment directed to the L3-4 spinal level, denervation was carried out at both L4-5 and L5-S1. Contrary to Dr. Fall's testimony, the ALJ finds the record to contain substantial evidence that the rhizotomy provided her pain relief. Based upon the evidence presented the ALJ finds that there is simply a difference of opinion between Dr. Fall and Dr. Bloch as it pertains to the spinal impairment associated with Claimant's November 26, 2014 work-related low back injury.

31. Based upon the evidence presented, the ALJ finds the correct impairment rating for Claimant's admitted low back injury to equal the combined value of her 7% specific disorder rating from Table 53 plus the 1% for the additional spinal segment with the 9% measured ROM loss. Based upon the evidence presented, the ALJ is unable to render a specific finding concerning this combined value.

32. With regard to the maintenance recommendations of the Division IME, Dr. Fall testified that not all the recommended treatment is appropriate in this case. Specifically, she testified that: (a) psychological management was not reasonable or necessary as there was no work-related psychological or mental issue; (b) the recommendation for opioid medication management was not reasonable because short-acting opioids is not indicated for a chronic pain condition; (c) chiropractic treatment is not reasonable as it was already tried and determined to be ineffective for the claimant; (d) injection therapy was not reasonable because the claimant did not have a radiculopathy to support epidural or nerve root injections, there was no indication for facet injections due to the negative therapeutic response from the nerve ablation, and a SI joint injection was not causally related to the work-related diagnoses; (d) a

radiofrequency medial branch neurotomy was not reasonable because it was already tried and failed.

33. Dr. Fall testified the only reasonable maintenance care would be self-management and home exercises.

34. Although the evidence presented fails to support that any provider is currently requesting authorization to perform additional treatment and the ALJ is convinced that many of the maintenance treatment recommendations of Dr. Bloch are unnecessary, the evidence presented persuades the ALJ that Claimant benefited from a period injections and contrary to Dr. Fall's suggestion from a denervation procedure at L4-5 and L5-S1 in the past. Moreover, the record establishes that Claimant's condition has had a tendency to deteriorate necessitating additional treatment, specifically additional injections. Just as the prior medial branch injections and rhizotomy were beneficial in decreasing Claimant's pain, the ALJ concludes that additional maintenance injections, as suggested by Dr. Bloch are likely to relieve Claimant from ongoing low back symptoms caused by her work related injury. Consequently, the ALJ finds that substantial evidence demonstrates that there is an ongoing need to treat Claimant's chronic pain caused by the injuries sustained in this admitted claim. Claimant was injured in excess of three and one-half years ago, has undergone substantial care and yet continues to have persistent low back pain which she credibly testified is functionally limiting. Without ongoing maintenance treatment, the ALJ concludes that Claimant's present condition will likely deteriorate resulting in greater functional decline than that she presented at hearing. As such, Claimant has proven, by a preponderance of the evidence, that she is entitled to a general award of maintenance medical benefits for her low back.

Claimant's May 21, 2016, Right Thumb Injury- W.C. No. 5-020-726-001/002

35. On May 21, 2016, Claimant was offloading some residents of the senior center from an activity bus after a community outing. Claimant was forced to use a hand crank to lower a wheelchair bound client to the ground after the buses primary lift malfunctioned. As she was lowering the client, the crank released suddenly forcing Claimant's thumb backward into a hyperextended position. Claimant heard a pop and her thumb began to swell immediately.

36. Liability for Claimant's injury was admitted and she was evaluated by Dr. Lisa Baron on June 1, 2016. During this initial evaluation, Dr. Baron echoed Claimant's reported mechanism of injury (MOI) stating that Claimant's thumb pushed backward. Dr. Baron referred Claimant for further evaluation.

37. Claimant was evaluated by Dr. David Walden on June 6, 2016. Dr. Walden completed a physical examination of the right thumb which revealed "a small around (sic) of swelling over the volar surface of the metacarpophalangeal joint" and "slight swelling present at the interphalangeal joint. Palpation revealed "triggering" at the base of the metacarpophalangeal joint. Claimant's right thumb was noted to be

stable to AP and radial stress testing. Sensation was intact and there was good capillary refill. Dr. Walden documented that the "remainder of the hand shows no swelling" and his report is devoid of any reference to swelling of the wrist or forearm.

38. Claimant was evaluated by hand specialist, Dr. Timothy Hart on June 8, 2016. Prior to seeing Dr. Hart, Claimant completed patient intake forms wherein she documented that she was being seen due to an "injury to right thumb." Physical examination demonstrated pain and tenderness in the area of the A1 pulley. Active catching, locking and triggering of the right thumb was present. X-rays revealed mild age related arthritic changes of the right thumb, but "no acute bony injury." Claimant was diagnosed with a right trigger thumb and given a cortisone injection.

39. Claimant's injection failed to provide lasting relief. On June 22, 2016 she was noted to have a "locked right trigger thumb" on assessment of Dr. Hart. He recommended moving Claimant to ahead to surgery to release the A1 pulley as rapidly as possible. Claimant wanted a second opinion.

40. On July 11, 2016, Claimant was evaluated by Dr. Zaremba as part of a follow-up examination. Claimant reported off and on swelling of the hand with pain extending down into the wrist. Outside of IP tenderness of the right thumb, Claimant's right upper extremity examination was "normal." An MRI of the right thumb was ordered.

41. On July 15, 2016, Claimant returned to Dr. Hart's offices were she was evaluated by physician assistant (PA) Andrew Domer. PA Domer noted continued tenderness of the right thumb to palpation along with catching, locking and triggering. He also specifically noted that Claimant had "[g]ood overall range of motion throughout the remainder of the fingers as well as the hand and wrist. Based upon the content of PA Domer's record, the ALJ finds that he examined Claimant's right hand and wrist. No swelling of the hand, wrist or forearm was documented.

42. Claimant's right upper extremity was examined by Dr. Zaremba again on July 18, 2016. During this examination, Claimant reported "swelling when she firts (sic) wakes up in teh (sic) morning." She was treating her swelling with ice. Physical examination failed to reveal swelling in the extremities, loss of motion in the extremities, tenderness in the extremities or numbness in the extremities." It was noted that Claimant was scheduled for a July 19, 2016 surgery.

43. Dr. Hart performed a right thumb A1 pulley release procedure on July 19, 2016.

44. Claimant presented to Emergicare on July 25, 2016, where she was evaluated post-surgically by Dr. Baron. Claimant was noted to have trace swelling in the right thumb along with a swollen right hand. While Claimant was performing ROM exercises she had not been engaged in physical or occupational therapy.

45. Claimant presented to Dr. Hart on August 8, 2016. Dr. Hart noted that Claimant was "doing very well status post her right thumb A1 pulley release." Claimant was noted to have "full flexion, full extension, good pinch, good grip, good grasp, and [a] well-healed wound." According to Dr. Hart, Claimant was doing "wonderfully." She was released to full duty work without restriction or impairment.

46. Claimant was placed at MMI with regard to her right thumb injury on October 26, 2016 by Dr. Zaremba. Claimant was noted to have impaired ROM and sensation of the right thumb. Dr. Zaremba assigned 39% right thumb impairment for Claimant's ROM loss and impaired sensation. Thirty-nine percent right thumb impairment equates to 14% right upper extremity impairment.

47. On February 20, 2017, after an approximate 6-month hiatus and about 3 months after being placed at MMI, Claimant returned to Dr. Hart with complaints of continued numbness in her thumb. She also had a positive Tinel's, Phalen's and compression test of the right wrist. Dr. Hart diagnosed carpel tunnel syndrome (CTS) and ordered an electrodiagnositc evaluation (EMG).

48. An EMG was performed on April 4, 2017, by Dr. Dwight Caughfield. Test results were consistent with "[a]cute, severe right carpal tunnel syndrome."

49. Claimant presented to Dr. Hart in follow-up on June 28, 2017. Based upon Claimant's EMG findings, Dr. Hart recommended a forthwith right wrist carpal tunnel release. Claimant was adamant that her right thumb and hand were "normal" prior to her May 21, 2016 accident and was very concerned that her injury had altered the function of her right thumb and wrist. Although Dr. Hart submitted a request for approval of a carpal tunnel release procedure to Insurer, he noted that he did not want Claimant to "get lost in the weeds of causation" as her pathology was acute, severe and "should be addressed with surgery as soon as possible."

50. On October 18, 2017, Claimant was evaluated by Dr. Dale Cassidy for ongoing CTS symptoms. Dr. Cassidy completed both a right wrist and hand examination. Concerning the right wrist, his examination findings included appreciable thenar atrophy, decreased thumb abduction strength, a positive Tinel's, Phalen's and carpal compression test. He did not document the presence of wrist swelling; however, Dr. Cassidy noted that Claimant had arthritis in her hands which he felt was contributing to swelling and stiffness. Dr. Cassidy did not believe that Claimant's CTS explained all of her pain as she "clearly [had] arthritis involving her fingers as well as triggering. Carpal tunnel release was recommended.

51. Dr. Cassidy performed a right carpal tunnel release procedure on November 7, 2017.

52. Claimant contends that her carpal tunnel syndrome is causally related to her May 21, 2016 industrial injury. Consequently, Respondents sought an opinion from Dr. Fall. Similar to the request for an opinion regarding questions concerning Dr.

Bloch's low back impairment, Dr. Fall performed an IME to address questions regarding the cause of Claimant's CTS and her right thumb impairment.

53. In a report dated December 10, 2017, Dr. Fall concluded that Claimant's right CTS is unrelated to her May 21, 2016 industrial injury. According to Dr. Fall, Claimant's CTS is "most likely related to her history of thyroid disease."

54. Dr. Fall testified that Claimant's MOI is not consistent with the development of acute or occupationally related carpal tunnel syndrome. According to Dr. Fall, acute carpal tunnel syndrome is onset by a severe trauma "usually with fractures causing alteration of the anatomy of the canal or a severe degree of swelling with compression." She noted the swelling had to be present in the area of the median nerve for swelling to be a contributing factor in a carpal tunnel diagnosis. She testified that swelling of the thumb does not affect the median nerve, noting further that swelling in areas other than the carpal tunnel compartment (as described by Claimant) would not cause carpal tunnel syndrome. Dr. Fall testified that Claimant did not initially present with symptoms of carpal tunnel syndrome and that there was no temporal relationship between the MOI in this case and the onset of symptoms.

55. Dr. Fall testified carpal tunnel treatment is neither maintenance treatment for a right trigger thumb condition nor representative of a worsening of condition of the right trigger thumb condition.

56. Dr. Fall documented that Claimant had current complaints of buzzing in all the fingers radiating up her arm, forearm pain that starts in the hand and radiates into the forearm, a loss of grip strength, and weakness in the right thumb, index finger, hand, wrist, and lower arm. Dr. Fall testified she did not associate these radiation complaints to the thumb injury. She indicated the radiation complaints and pain into the forearm are inconsistent with a trigger thumb injury. According to Dr. Fall, Claimant's radiation complaints were likely related to her severe (and non-work-related) CTS. She also testified the weakness in the wrist and lower arm would also be related to the carpal tunnel syndrome rather than the thumb injury because it is a neurological condition that affects those muscles. Finally, Dr. Fall testified that Claimant does not have any functional loss of the upper extremity beyond her thumb related to her admitted industrial thumb injury.

57. Claimant testified she informed both Dr. Hart and Dr. Baron that she had symptoms in her wrist and that she had swelling throughout her forearm. She specifically testified she was swollen from her fingertips to her elbow "about twice the size of [her] arm." She described this swelling to be present daily for the first three months after the injury. To the extent that the medical records failed to document these symptoms or complaints, Claimant testified it must be an error or omission in the records.

58. Based upon a careful review of the medical record evidence, the ALJ finds that Claimant's initial thumb treatment records do not reference any wrist complaints,

symptoms, or diagnoses. The ALJ infers, from the evidence presented, that if Claimant was experiencing swelling to the levels she testified to, the initial medical reports would have documented such findings. The ALJ infers that the absence of any reference to severe swelling in the thumb and contrary documentation that no swelling of the hand or upper extremity was present on June 6th and July 18, 2016 is persuasive that Claimant's injury was limited to the right thumb.

59. The ALJ notes a singular reference to wrist pain in Claimant's treatment records prior to MMI. Specifically, Claimant reported pain in her wrist on July 11, 2016. However, four days later, Claimant was evaluated in preparation for her right thumb surgery and there is no documentation of wrist pain even though the wrist was examined during which "good overall range of motion throughout the remainder of the fingers as well as the hand and wrist" was documented. No other records reference wrist symptoms until February 2017.

60. Based upon the evidence presented, the ALJ is convinced that Claimant's CTS is not causally related to her admitted work-related right thumb injury. In so finding, the ALJ credits the IME report testimony of Dr. Fall. Claimant's contrary assertions, including her concerns regarding the dates listed on Dr. Fall's IME reports are unpersuasive.

61. As Claimant's CTS is not causally related to her admitted work-related right thumb injury, Claimant has failed to establish, by a preponderance of the evidence, that the treatment for this condition, including the CTS release procedure performed by Dr. Cassidy on November 7, 2017, is causally related to her work injury. Accordingly, her claim for medical benefits related to her CTS must be denied and dismissed. While Claimant failed to establish a causal link between her CTS and her May 21, 2016 industrial injury, the evidence presented persuades the ALJ that Claimant is entitled to a general award of maintenance treatment for her right thumb. Careful review of the medical record evidence establishes that Claimant has received substantial care, including injections and surgery to address her thumb pain, triggering, catching and locking. While surgery definitively addressed her triggering, catching and locking, Claimant still had numbness and tingling of the thumb on her follow-up visit to Dr. Hart on February 20, 2017. Dr. Zaremba recommended 12 months of maintenance care along with referral to Dr. Hart for injections and/or needed physical therapy by report dated November 15, 2016. For reasons similar to those outlined in ¶ 34 above, the ALJ is convinced that without ongoing office visits with Emergicare and/or Dr. Hart, Claimant's right thumb condition is prone to deterioration. As such, Claimant has proven, by a preponderance of the evidence, that she is entitled to a general award of maintenance medical benefits, without limitation regarding duration for her right thumb.

62. Based upon the evidence presented, the ALJ finds that Claimant did not sustain her burden to establish that conversion of her thumb impairment to an upper extremity impairment is appropriate in this matter. Rather, the ALJ is persuaded that Claimant's continued functional impairment in the right hand, wrist and forearm are,

more likely than not, caused by her non-work-related arthritis and carpal tunnel syndrome.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A workers' compensation case is decided on the merits. *Id.*

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

C. Assessing the weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo.App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo.App. 1992)(ALJ may credit one medical opinion to the exclusion of a contrary opinion). As found above, the undersigned ALJ concludes that the expert medical opinions of Dr. Fall concerning Dr. Bloch's decision to assign neurologic impairment in Claimant's low back case and causality concerning Claimant's CTS are credible and supported by the medical record as a whole. When the

evidentiary record is considered in its totality, the opinions of Dr. Fall are more persuasive than contrary opinions of Dr. Bloch and Claimant in these regards.

Overcoming the Division IME

D. A DIME physician's findings of causation and MMI are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo.App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI or the cause of a claimant's medical condition, the party challenging the DIME must demonstrate that the physician's determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo.App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

E. In this case, the totality of the evidence presented establishes that Respondents have proven by clear and convincing evidence that Dr. Bloch's decision to assign neurologic impairment as being associated with Claimant's low back injury are highly probably incorrect. As found, Dr. Fall credibly and persuasively testified that Dr. Bloch erred by including 5% whole person rating for neurologic system impairment when the record evidence, including the EMG findings establishes that Claimant's neurologic symptoms were likely related to early peripheral polyneuropathy rather than any active neuropathy caused by a traumatic injury. However, after considering the balance of the evidence presented, the ALJ concludes that Respondents have failed to produce unmistakable evidence establishing that the balance of Dr. Bloch's impairment rating, i.e. specific disorder rating(s) and his ROM impairment is highly probably incorrect. As found, the persuasive evidence establishes that Claimant likely has unusual sacral mobility which Dr. Fall failed to confirm when competing her IME. The evidence also persuades the ALJ that Claimant probably suffers from local inflammation from active facet arthritis and active inflammatory changes at the L4-5 and L5-S1 disc levels which demonstrated type I Modic changes. Thus, while Claimant did receive some treatment directed to the L3-4 spinal level, denervation was carried out at both L4-5 and L5-S1, which according to the record presented provided Claimant with what was described as "remarkable improvement overall." As such, the ALJ concludes that Dr. Fall's suggestion that Dr. Bloch "flipped" his ROM measurements is speculative. Furthermore, her opinion that the L5-S1 spinal segment was not determined to be a pain generator for Claimant along with her conclusion that Claimant did not have a positive response to her rhizotomy is contrary to the more persuasive record evidence. Here, the evidence presented supports a conclusion that there is difference of opinion between Dr. Bloch as the DIME physician and Dr. Fall, Respondents' retained medical

expert. A professional difference of opinion does not rise to the level of clear and convincing evidence that is required to overcome Dr. Bloch's opinion concerning spinal impairment. *See generally, Gonzales v. Browning Farris Indust. of Colorado, W.C. No. 4-350-356 (ICAO March 22, 2000),* Consequently, Respondents have failed to meet their required legal burden to set Dr. Bloch's spinal impairment rating determination aside. As found, the correct impairment rating for Claimant's admitted low back injury to equal the combined value of her 7% specific disorder rating from Table 53 plus the 1% for the additional spinal segment (8%) with the 9% measured ROM loss. Nonetheless, the evidence presented is insufficient for the ALJ to render a conclusion concerning this combined value.

Claimant's Entitlement to Low Back Maintenance Treatment

F. The need for medical treatment may extend beyond the point of maximum medical improvement where a claimant requires periodic maintenance care to relieve the effects of the work related injury or prevent deterioration of his condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). In *Milco Construction v. Cowan,* 860 P.2d 539 (Colo.App. 1992), the Court of Appeals established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission, supra*. The Court stated that an ALJ must first determine whether there is substantial evidence in the record to show the reasonable necessity for future medical treatment "designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition." If the claimant reaches this threshold, the Court stated that the ALJ should then enter "a general order, similar to that described in *Grover*." Even with a general award of maintenance medical benefits, respondents retain the right to dispute whether the need for medical treatment is reasonable, necessary and related to the compensable injury. *See Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo.App. 2003) (a general award of future medical benefits is subject to the employer's right to contest compensability, reasonableness, or necessity).

G. While a claimant does not have to prove the need for a specific medical benefit, and respondents remain free to contest the reasonable necessity of any future treatment; the claimant must prove the probable need for some treatment after MMI due to the work injury. *Milco Construction v. Cowan*, supra. The question of whether the claimant met the burden of proof to establish an entitlement to ongoing medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Industrial* Claim Appeals Office, 992 P.2d 701 (Colo.App. 1999); *Renzelman v. Falcon School District,* W. C. No. 4-508-925 (August 4, 2003). In this case, the ALJ concludes that Claimant has met her burden to establish entitlement to maintenance medical treatment. Dr. Bloch recommended maintenance care at the time of his DIME and Claimant credibly testified that she remains symptomatic despite extensive treatment. Here, substantial evidence demonstrates that although Claimant enjoyed pain relief following her injections and rhizotomy, her condition deteriorates as the effect of the blocks and rhizotomies wear off. Consequently, there is an ongoing need to treat Claimant's persistent pain caused the injuries sustained in the November 26, 2014 accident.

Without ongoing treatment, including injections, the ALJ concludes that Claimant's present condition will likely deteriorate.

Conversion of Claimant's Right Thumb Impairment to Upper Extremity Impairment

H. When a claimant's injury is listed on the schedule of disabilities, the award for that injury is limited to a scheduled disability award.[1] Section 8-42-107(1)(a), C.R.S. However, a claimant may establish that his/her injury has resulted in "functional impairment" beyond the schedule enumerated in C.R.S. §8-42-107(2)(a); thus, entitling him/her to "conversion" of the scheduled impairment to impairment beyond the schedule listed. This is true because the term "injury" as used in § 8-42-107(1)(a)-(b), C.R.S., refers to the part or parts of the body which have been impaired or disabled, not the situs of the injury itself or the medical reason for the ultimate loss. *Walker v. Jim Fucco Motor Co,* 942 P.2d 1390 (Colo. App. 1997); *see also Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo. App. 1996). The claimant carries the burden to prove a functional impairment beyond the scheduled body part. § 8-42-107(b)(1), C.R.S. Thus, while ratings issued under the AMA Guides are relevant to determining the issue, they are not decisive as a matter of law. *Strauch v. PSL Swedish Healthcare System, supra*. The question of whether the claimant proved function impairment beyond the thumb at the metacarpal bone is an issue of fact for the ALJ and depends upon the particular circumstances of the individual case. *See Delaney v. indus. Claim Appeals Office*, 30 P.3d 691.

I. "Functional impairment" is distinct from physical (medical) impairment under the AMA Guidelines and as noted above, the site of functional impairment is not necessarily the site of the injury itself. The site of functional impairment is that part of the body which has been impaired or *disabled*. *Strauch, supra*. Physical impairment relates to an individual's health status as assessed by medical means. Disability or "functional impairment", pertains to a person's ability to meet personal, social, or occupational demands, and is assessed by non-medical means. Consequently, physical impairment may or may not cause "functional impairment." *Lambert & Sons, Inc. v. Industrial Claim Appeals Office, 984 P.2d 656, 658 (Colo. App. 1998).* Physical impairment becomes a disability only when the medical condition limits the claimant's capacity to meet the demands of life's activities. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office, supra at 658.* Functional impairment need not take any particular form. *See Nichols v. LaFarge Construction, W.C. No. 4-743-367 (October 7,2009); Aligaze v. Colorado Cab Co., W.C. No. 4-705-940 (April 29, 2009); Martinez v. Albertson's LLC, W.C. No. 4-692-947 (June 30, 2008*). Accordingly, referred pain from the primary situs of the industrial injury to another part of the body may establish proof of functional impairment beyond the identified schedule listing including to the whole person." *Hernandez v. Photronics, Inc., W.C. No. 4-390-943 (July 8, 2005).* Nonetheless, symptoms of pain do not automatically rise to the level of a functional impairment. To the contrary, there must be evidence that such pain limits or interferes with Claimant's ability to use a portion of his body to be considered functional impairment. See *Mader*

[1] The loss of a thumb is compensated on the schedule. *See* §§ 8-42-107(2)(d)-(f), C.R.S.

v. Popejoy Construction Co., Inc., W.C. No. 4-198-489 (August 9, 1996), aff'd *Popejoy Construction Co., Inc.,* (Colo. App. No. 96CA1508, February 13, 1997)(not selected for publication)(claimant sustained functional impairment of the whole person where back pain impaired use of arm). In order to determine whether permanent disability should be compensated as physical impairment on the schedule or as functional impairment beyond the listing, including the whole person, the issue is not whether the claimant has pain, but whether the injury has impacted part of the claimant's body which limits his/her "capacity to meet personal, social and occupational demands." *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996). Consequently, the ALJ concludes that an injury to the thumb may or may not result in functional impairment of the upper extremity.

J. Based upon the evidence presented, the ALJ finds that Claimant has failed to meet her burden to establish that she has sustained functional impairment beyond the thumb warranting conversion to the scheduled impairment of the upper extremity. In this case, the evidence presented persuades the ALJ that Claimant's functional impairment, i.e. her upper extremity disability and continued hand, wrist and forearm pain are probably related to her non-work-related arthritis and carpal tunnel syndrome. Consequently, the ALJ concludes that Claimant's permanent impairment is limited to the 39% impairment of the right thumb. The claimant's request for additional permanent impairment of the upper extremity beyond the thumb is denied and dismissed.

Claimant's Entitlement to Post-MMI Medical Benefits for CTS

K. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable, necessary, and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo.App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970)*;* § 8-41-301(1)(c), C.R.S. Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo.App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, *supra*.

L. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the

injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo.App. 1984). As found here, Claimant has failed to prove by a preponderance of the evidence that her CTS and the treatment rendered for it are causally related to her May 21, 2016 industrial injury. Nonetheless, the evidence presented persuades the ALJ that Claimant is entitled to a general award of maintenance treatment for her right thumb subject to Respondents right to contest any recommended maintenance care on the grounds that it is no longer reasonable, necessary or related to the compensable injury. *See Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo.App. 2003)(a general award of future medical benefits is subject to the employer's right to contest compensability, reasonableness, or necessity).

ORDER

It is therefore ordered that:

1. Respondents request to set aside Dr. Bloch's Division IME opinion regarding impairment is granted in part. Dr. Bloch's opinion that Claimant sustained permanent neurologic impairment is highly probably incorrect and set aside. Respondents request to set aside the remainder of Dr. Bloch's impairment rating, specifically his specific disorders rating and impairment for associated ROM loss is denied and dismissed. Claimant is at MMI with whole person impairment equal to the combined value of her 8% impairment for specific disorder(s) and the 9% impairment associated with ROM loss.

2. Respondent shall provide all reasonable, necessary and related treatment to relieve and otherwise prevent deterioration of Claimant's low back condition subject to Respondents right to challenge any future request for treatment on the grounds that it is not reasonable, necessary or related to Claimant's November 26, 2014 industrial injury. *See generally*, *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo.App. 1995); Section 8-42-101 (1) (a), C.R.S.; *Hanna v. Print Expediters Inc., supra.*

3. Claimant's request for conversion of her 39% scheduled right thumb impairment to 14% upper extremity impairment is denied and dismissed.

4. Claimant's request for medical benefits related to her right CTS is denied and dismissed.

5. Respondent shall provide all reasonable, necessary and related treatment to relieve and otherwise prevent deterioration of Claimant's right trigger thumb, subject to Respondents right to challenge any future request for treatment on the grounds that it is not reasonable, necessary or related to Claimant's May 21, 2016 industrial injury. *See generally*, *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988); *Stollmeyer*

v. Industrial Claim Appeals Office, 916 P.2d 609 (Colo.App. 1995); Section 8-42-101 (1) (a), C.R.S.; *Hanna v. Print Expediters Inc., supra.*

6. The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 24, 2018

Colorado Springs, CO 80906

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that he is entitled to temporary partial disability (TPD) benefits for the period of April 1, 2017 through October 13, 2017.

- Whether the claimant has demonstrated by a preponderance of the evidence that he is entitled to permanent partial disability (PPD) benefits due to probable residual disability, if he had lived to reach maximum medical improvement (MMI).

- If the claimant successfully demonstrates entitlement to TTD and/or PPD benefits, what was the claimant's average weekly wage (AWW) at the time of the admitted March 31, 2017 work injury?

FINDINGS OF FACT

1. The claimant worked for the employer as a frac operator. On March 31, 2017, the claimant injured his left knee at work. On September 22, 2017, the employer filed a General Admission of Liability (GAL) admitting for medical benefits only.

2. At the time of his March 31, 2017 work injury, the claimant was paid $18.69 per hour. The employer pays employees every two weeks. The payroll records entered into evidence indicate that in the twelve (12) weeks prior the work injury, the claimant earned at total of $18,897.80. This total included regular hours, overtime hours, paid holidays, and additional bonuses. The ALJ calculates that this averages to $1,574.82 per week ($18,897.80 divided by 12 weeks).[1]

3. Following the March 31, 2017 injury the claimant received medical treatment from Dr. Lori Fay. The claimant was first seen by Dr. Fay on April 7, 2017. At that time, Dr. Fay assigned work restrictions that included no kneeling, squatting, climbing, or crawling.

4. Thereafter, the claimant was on a scheduled vacation from April 7, 2017 through April 19, 2017. The claimant returned to work, as scheduled, on April 24, 2017. Ms. Sutliff testified that the claimant's April 2017 vacation was scheduled prior to the March 31, 2017 work injury. While the claimant was on that vacation, his rate of pay was increased to $20.65 per hour.

[1] This would equate to an average of $3,149.64 for each two week pay period.

5. The claimant was on modified duty from his return to work on April 24, 2017 until October 2017. Ms. Sutliff testified that the claimant's final day of employment with the employer was October 11, 2017. Ms. Sutliff also testified that the claimant's employment ended on that date because he was injured at home.

6. Based upon the payroll records entered into evidence, from April 24, 2017 through October 7, 2017 the claimant's earnings were as follows:

> For the pay period of April 23, 2017 through May 6, 2017, the claimant's earnings were $1,404.11;
>
> For the pay period of May 7, 2017 through May 20, 2017, the claimant's earnings were $2,893.49;
>
> For the pay period of May 21, 2017 through June 3, 2017, the claimant's earnings were $2,214.62;
>
> For the pay period of June 4, 2017 through June 17, 2017, the claimant's earnings were $2,436.61;
>
> For the pay period of June 18, 2017 through July 1, 2017, the claimant's earnings were $2,255.92
>
> For the pay period of July 2, 2017 through July 15, 2017, the claimant's earnings were $1,721.60;
>
> For the pay period of July 16, 2017 through July 29, 2017, the claimant's earnings were $1,386.03;
>
> For the pay period of July 30, 2017, through August 12, 2017, the claimant's earnings were $3,226.47;
>
> For the pay period of August 13, 2017 through August 26, 2017, the claimant's earnings were $3,807.25;
>
> For the pay period of August 27, 2017 through September 9, 2017, the claimant's earnings were $2,312.71;
>
> For the pay period of September 10, 2017 through September 23, 2017, the claimant's earnings were $3,807.25;
>
> For the pay period of September 24, 2017 through October 7, 2017, the claimant's earnings were $709.76; and

It is clear from this evidence that there were pay periods in which the claimant earned less than he was earning before his March 31, 2017 work injury.

7. Prior to the claimant's work injury, he and his crew were working outside of Denver, Colorado. When the claimant returned to work on April 24, 2017, he was assigned to a job location near Parachute, Colorado. Ms. Sutliff testified that the claimant's entire crew experienced this change in job location, not just the claimant. While working at the Parachute job site, crew members worked fewer hours than they had worked while at the Denver location. Both Ms. Sutliff and Mr. Bevan testified that this reduction in hours occurred because noise restrictions limited the number of hours the crew was allowed to work.

8. On December 27, 2017, the claimant was seen by Dr. William Ciccone for an independent medical examination (IME). In connection with the IME, Dr. Ciccone reviewed the claimant's medical records, obtained a medical history from the claimant, and performed a physical examination. In his IME report, Dr. Ciccone diagnosed the claimant with left knee arthritis and opined that the claimant suffered a minor injury to his left knee at work. Dr. Ciccone further opined that the "development of arthritis predated the incident at work and is not related to a work injury". Dr. Ciccone noted that the claimant had reached maximum medical improvement (MMI) and that a permanent impairment rating would not be appropriate "given the claimant's long history of pain from his degenerative arthritis as it would be impossible to know the claimant's baseline range of motion prior to the incident".

9. The claimant died on January 4, 2018.

10. On January 22, 2018, the respondents filed a Final Admission of Liability (FAL) admitting for medical benefits only.

11. On June 29, 2018, the claimant's counsel asked Dr. Fay to opine regarding whether the claimant would have had "probable residual disability" if he had lived to reach MMI. In her July 5, 2018 response, Dr. Fay opined that the claimant would have had probable residual disability. Based upon range of motion measurements taken by Dr. Ciccone at the IME, Dr. Fay also opined that the claimant would have had a 2% whole person impairment.

12. The ALJ credits the testimony of the respondents' witnesses and the payroll records entered into evidence and finds that it is more likely than not that after the claimant returned to work on April 24, 2017 his wages were lower because of the change in job location and not because of the claimant's work restrictions.

13. The ALJ credits the testimony of the respondents' witnesses and the payroll records entered into evidence and finds that the claimant was absent from work for a planned vacation from April 7, 2017 through April 23, 2017. Therefore any reduction in wages during that period of time was not related to the work injury or the actions of the employer.

14. The ALJ credits the opinion of Dr. Ciccone over the conflicting opinion of Dr. Fay and finds that the claimant had reached MMI as of the date of the IME and had no permanent impairment. Therefore, the ALJ finds that the claimant has failed to

demonstrate that that he had probable residual disability at the time of his death. Thus, the ALJ also finds that the claimant has failed to demonstrate that it is more likely than not that he is entitled to permanent partial disability (PPD) benefits.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. To prove entitlement to temporary partial disability (TPD) benefits, claimant must prove that the industrial injury contributed to some degree to a temporary wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). TPD payments ordinarily continue until either claimant reaches maximum medical improvement or an attending physician gives claimant a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment. *See* 8-42-106, C.R.S.

4. The Colorado Court of Appeals and the Industrial Claim Appeals Office (ICAO) have previously held that an injured worker's wage loss for "economic reasons" does not preclude him from the continued receipt to TPD benefits. *J.D. Lunsford v. Sawatsky*, 780 P.2d 76 (Colo. App. 1989). *See also Kaminski v. Grand County Roofing and Sheet Metal, Inc*. WC No. 4-525-562 (ICAO 2003); *Ashmore v. NU Horizon Window Systems, Inc.* WC No 4-593-027 (ICAO 2004); *and Edgar v. Halliburton Energy Services*, WC No 4-971-336-01 (ICAO 2015).

5. As found, the claimant's wage loss following his work injury was not related to his work restrictions. Rather, the reduction of the claimant's wages beginning April 24, 2017 was the result of reduced hours for the entire crew. However, given the holdings in the *Sawatsky* line of cases, the claimant has demonstrated by a preponderance of the evidence that he is entitled to TPD benefits for the period of April 24, 2017 through October 13, 2017. As found, the testimony of the respondents' witnesses and the payroll records are credible and persuasive.

6. Section 8-42-116, C.R.S., addresses the payment of benefits when a claimant dies of causes unrelated to the work injury. Specifically, the statute provides, in part:

> "(1) If death occurs to an injured employee, other than as a proximate cause of any injury, before indemnity ceases and the deceased leaves persons wholly dependent upon the deceased for support, death benefits shall be as follows: … (b) Where the injury proximately caused permanent partial disability, the death benefit shall consist of unpaid and unaccrued portion of the permanent partial disability benefit which the employee would have received had he lived."

7. To calculate permanent partial disability (PPD) benefits when a claimant dies before reaching MMI "[t]he proper procedure is to make the best possible medical estimate of the probable residual disability that would have remained had the employee had lived to complete his healing period." *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998) (*citing 4 Larson's Workers' Compensation Law* Section 58.45 (1997)). It is not necessary for a claimant to reach MMI before death for Section 8-42-116, C.R.S. to apply. *Id.*

8. As found, the claimant has failed to demonstrate by a preponderance of the evidence that he would be entitled to PPD benefits. As found, the claimant was at MMI at the time of the IME, with no permanent restrictions. Therefore, the claimant did not have probable residual disability at the time of his death. As found, the opinion of Dr. Ciccone is credible and persuasive.

9. The ALJ must determine a claimant's average weekly wage (AWW) by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

10. As found, the claimant's average weekly wage (AWW) at the time of the March 31, 2017 injury was $1,574.82. As found, the payroll records are credible and persuasive.

ORDER

It is therefore ordered that:

1. The claimant is entitled to temporary partial disability (TPD) benefits for the period of April 24, 2017 through October 13, 2017.

2. The claimant's claim for permanent partial disability (PPD) benefits is denied and dismissed.

3. The claimant's average weekly wage (AWW) was $1,574.82.

4. The insurer shall pay interest to the claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he sustained a compensable injury on August 6, 2017.

II. Whether Claimant has established by a preponderance of the evidence that he is entitled to all reasonable, necessary, and related medical treatment stemming from a compensable work injury occurring on August 6, 2017.

III. Whether Claimant has proven by a preponderance of the evidence that he is entitled to temporary partial disability benefits beginning August 17, 2017 through September 25, 2017.

IV. Claimant's Average Weekly Wage.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On August 6, 2017, Claimant was working at Owens & Minor through ProLogistix, which is a subsidiary of EmployBridge.

2. While working at Owens & Minor, Claimant's job duties included unloading trucks.

3. Claimant testified that when he unloaded trucks at Owens & Minor, he would pull out all of the racks, which took 15 minutes, and then he would move boxes or bags coming off a rail system and place them onto a cart. Claimant testified that the weight of the boxes varied. He indicated that some of the boxes weighed 35 or 40 pounds, some weighed 60 or 70 pounds, and sometimes they were very light.

4. On August 6, 2017, Claimant was unloading a truck at Owens & Minor. Claimant testified that after working the first portion of his shift, he went to lunch. Claimant did not testify that he developed any pain or symptoms while working and before going to lunch. In addition, Claimant did not testify that he developed any pain or symptoms while at lunch. Claimant testified that while walking back from lunch, he developed the spontaneous onset of left hip pain. Claimant testified that he had "no clue" what happened, and that "it just started hurting."

5. Claimant testified that the pain in his hip area was 10/10. Despite his contention that his pain was 10/10, Claimant worked the remainder of the day and did not report a work injury and did not seek any medical treatment. Claimant testified

that he did not work the following day, but worked the remainder of his work schedule that week. However, wage records submitted at hearing document Claimant worked 40 hours, plus 3.38 hours of overtime, for the pay period of August 7, 2017 through August 13, 2017, which is the week following the alleged onset of his hip pain which he contends developed while walking back from lunch. Claimant's contention he had 10/10 pain on August 6, 2017, and had continuing problems is not credible in light of the fact that he worked the remainder of that day – without reporting a work injury - and then worked 43.38 hours the following week.

6. Despite alleging an injury occurred on August 6, 2017, which allegedly caused excruciating pain, Claimant did not obtain medical treatment until August 15, 2017.

7. On August 15, 2017, Claimant was seen at Concentra where he was examined by Physician's Assistant (PA) Glenn D. Petersen. Under chief complaint, the report notes:

> The patient presented today with DOI: 8/6/17 at 8:00 p.m. left leg, hip and gluteal region. Patient was moving boxes and felt pain instantly he is not sure if he twisted wrong.

Under History of Present Illness, the report states Claimant:

> Strained left hip and thigh squatting and lifting and pivoting while squatted heavy item at work August 6 about 8:00 PM, Sunday while at work.

The history PA Peterson documented is inconsistent with Claimant's testimony at hearing that he developed pain while walking back from lunch and that he had no clue what caused it. (*See* Clmt. Ex. 4, at 15).

Based on the history provided by Claimant, which this ALJ does not find credible because it is inconsistent with his hearing testimony, PA Petersen diagnosed Claimant with a strain of his left hip and thigh, and referred him to physical therapy. (Clmt. Ex. 4, at 16).

8. On August 16, 2017, Claimant started physical therapy. At that appointment, Claimant complained of pain in his left "glut," and denied pain, tingling, or numbness going down his left leg. (Clmt. Ex. 4, at 18). Treatment notes associated with Claimant's initial medical treatment revolve around a diagnosed strain of the left hip and thigh.

9. However, beginning on Claimant's September 1, 2017 appointment with Sharon O'Connor, M.D. at Concentra, treatment was directed at left sided sciatica associated with a disorder of the lumbosacral spine. (Clmt. Ex. 4 at 51.) Dr. O'Connor ordered an MRI of the left hip and the lumbar spine.

10. Claimant underwent an MRI of his lumbar spine on September 15, 2017. (Clmt. Ex. 7, pp. 126-39). Michael Preece, M.D. interpreted its findings, most notably finding what he described as an acute fracture of the left sacral ala, degenerative disc disease at the L5-S1 level with impingement on the exiting right L5 nerve and encroachment on the exiting left L5 nerve, and other assorted minor degenerative findings. *Id*. at 127.

11. Subsequent to his left hip MRI, Claimant was diagnosed with a fracture of the left sacral ala, as well as a right sided gluteus median tendon tear. *Id*. at 67 and Ex. 7 at 126-127). It is also noted that the right sided gluteus medius tendon tear had associated edema that could represent a relatively recent injury, but yet the muscle was mildly atrophic suggesting more chronicity. (Resp. Ex. C at 9).

12. Claimant was referred to John Sacha, M.D and evaluated on September 27, 2017. (Clmt. Ex. 4, at 77-79). Dr. Sacha's notes from the first evaluation document the following history:

> [W]hile doing a bunch of lifting and twisting before his lunch break, started feeling some mild stiffness in the low back and left the buttock He then went to lunch, and as he was walking back from lunch, he felt severe pain in the left buttock, posterior thigh, and down the left leg as well as some low back pain. It felt like his leg was giving way. (Clmt. Ex. 4 at 77).

His report also noted Claimant's current symptoms to be:

> Pain constant in nature to left low back, left buttock, down in the posterior thigh to the level of the ankle with occasional numbness and tingling to the foot. *Id* at 77.

The history Claimant provided Dr. Sacha is different than the history Claimant provided at hearing and the history noted by PA Peterson. At this visit, Claimant alleges he started developing some stiffness in the low back and left buttock while working and before going to lunch. The history also indicates Claimant has had pain down his left leg since August 6, 2017, which is inconsistent with the medical records and Claimant's first visit with Concentra's physical therapist on August 16, 2017, when Claimant denied pain going down his left leg.

Dr. Sacha also noted Claimant had pain with straight leg raise and neural tension testing on the left. However, this finding is different than PA Peterson's August 15, 2017, physical examination which noted a negative straight leg raise, bilaterally. (Clmt. Ex. 4 at 14).

13. Despite the inconsistencies in Claimant's medical records, Dr. Sacha diagnosed Claimant with lumbosacral radiculopathy. While he noted Claimant's evident gluteal tendon pathology on the right side and left sided sacral ala fracture, Dr. Sacha concluded that these were coincidental findings and could not be explained based upon the mechanism of injury provided by Claimant. *Id*. at 78. Dr. Sacha recommended a lumbar epidural injection/spinal nerve block at the L5-

S1 level and a bone scan to assess whether the sacral ala fracture was acute. *Id*.

14. Claimant obtained additional employment, taking a job at Home Depot. Claimant testified that he began this work at the end of September, roughly around September 25, 2017. Claimant could not testify as to the exact date, although he estimated that he began working part time at Home Depot, concurrent with his part time work with Respondents, on or around that date. Claimant subsequently resigned from his employment with Respondents entirely, taking instead another part-time position at Lowe's. Dr. Bird's October 2, 2017 treatment note indicates that this modified duty was easier for him, as he just had to stand and did not have to lift much. (Clmt. Ex. 4, p. 81).

15. The bone scan recommended by Dr. Sacha was performed on October 12, 2017. (Clmt. Ex. 4, p. 86). The bone scan revealed three-phase abnormalities along the left sacrum, which was noted to be consistent with the known sacral fracture, and three-phase abnormalities along the right sacroiliac joint, which "could indicate an inflammatory or degenerative arthritis." *Id*.

16. On November 16, 2017, Claimant underwent a left-sided L5 and S1 transforaminal epidural injection from Dr. Sacha. (Clmt. Ex. 5, pp. 110-112). Dr. Sacha also provided Claimant a pain diary. Although the purpose of the pain diary is not stated in Dr. Sacha's report, it appears the pain diary was provided so Claimant could track his symptoms after the injection in order to assist Dr. Sacha in determining whether Claimant had a diagnostic response to the injection. However, on the same day of the injection, Dr. Sacha interpreted the results of the injection as diagnostic, noting Claimant had greater than 80% relief of his subjective pain symptoms 30 minutes after the injection, combined with reproduction of Claimant's symptoms with placement of injectate at the L5 and S1 levels. *Id*. at 110. Dr. Sacha's finding that the injection was diagnostic, without considering Claimant's longitudinal pain diary data, seems premature.

17. Dr. Sacha also indicated Claimant was to return in a week to monitor his response to the injection. However, the next time Claimant was evaluated by Dr. Sacha was on December 4, 2017.

18. On December 4, 2017, Dr. Sacha evaluated Claimant and concluded Claimant had a diagnostic response and had excellent lasting relief from the injection and that Claimant's condition had improved 50-60%. However, there is no indication Claimant completed and provided Dr. Sacha his pain diary and whether Dr. Sacha's conclusion that the injection was diagnostic and that Claimant had improved 50-60% was based on his evaluation of Claimant's pain diary or statement made by Claimant on the day of the examination. On the other hand, Dr. Sacha noted Claimant was exhibiting moderate pain behaviors, but yet he does not comment as to whether the pain behaviors were non-physiologic and out of proportion with the working diagnoses, or consistent with the working diagnoses.

19. On January 3, 2018, Claimant attended a final appointment with Dr. Sacha who opined Claimant reached MMI and had a 7% whole person impairment. Despite

having previously ruled Claimant's sacral ala fracture a coincidental finding, i.e., not related to any work incident, Dr. Sacha assigned Claimant a 7% rating pursuant to the AMA Guides based upon that fracture and not for the lumbosacral radiculopathy at the L5-S1 level he previously identified and for which he performed the epidural steroid injection two months prior. Therefore, Dr. Sacha's rating of a condition he previously found to not be related diminishes the reliability and credibility of his opinions.

20. Claimant attended an Independent Medical Examination with Timothy Hall, M.D. on April 26, 2018. (Clmt. Ex. 3, pp. 7-11). Dr. Hall took a patient history from Claimant, performed a physical exam, and reviewed the medical record. Dr. Hall discussed Claimant's then-current pain complaints and found no difficulty in performing his job tasks with the exception of twisting, which would cause a significant increase in pain. Dr. Hall noted that that "[i]nterestingly, this is the activity he was doing when the injury occurred." *Id.* at 10. Finding the case unique, Dr. Hall concluded that Claimant had likely strained his left buttock on August 6, 2017, in part because Claimant did not present a "classic picture of radiculopathy or radiculitis." *Id*. Dr. Hall additionally agreed that Claimant's acute onset of pain was not related to the sacral fracture. However, Dr. Hall based his causation opinion on Claimant's assertion at the IME that his symptoms developed initially during the first part of his shift while moving boxes and that he had a pulling sensation on the left side of his buttock. Claimant also told Dr. Hall that he took a break [lunch] which was uneventful, and then went back to work and while moving more boxes, it started hurting more. The ALJ finds that time line Claimant provided to Dr. Hall regarding the onset of his symptoms is inconsistent with his testimony at hearing that he was not having any problems until he was walking back from lunch and developed the immediate onset of pain while merely walking. Therefore, because the ALJ does not find the history Claimant provided to Dr. Hall to be reliable, the ALJ does not find Dr. Hall's opinions to be reliable or persuasive.

21. Claimant subsequently attended an Independent Medical Examination with Eric Ridings, M.D. at Respondents' request on May 1, 2018. (Resp. Ex. C, pp. 8-16). Dr. Ridings took a patient history, performed a physical exam, and reviewed the medical record. The ALJ finds that Dr. Ridings performed a very thorough and detailed analysis of this case.

22. Dr. Ridings' conclusions differed markedly from those of Dr. Sacha and Dr. Hall. Dr. Ridings agreed that the sacral ala fracture could not be linked to any incident on August 6, 2017, as such fractures are typically insufficiency fractures caused because the bone is "insufficient" to support the weight of the body at that point. *Id*. at 16. Dr. Ridings did not agree with Dr. Sacha that Claimant showed signs of radiculopathy, placing emphasis on Claimant's initial report of no leg pain when he first presented to Concentra on August 15, 2017. *Id*. at 14. Contrary to Dr. Sacha's opinion that the epidural steroid injection was diagnostic, Dr. Ridings concluded Claimant did not have a diagnostic response to the injection because Claimant told Dr. Ridings that he had about 3-4 days of pain relief from the injection, but that the Marcaine contained in the injection would have numbed up

his back for a bit, possibly up to 6 hours, but not 3-4 days. Dr. Ridings also noted on the lack of documentation to support Dr. Sacha's contention that Claimant had 80% relief from the injection. Dr. Ridings stated in his report that although Dr. Sacha noted Claimant had a positive straight leg test, Dr. Sacha failed to document whether Claimant's pain complaints were down the left lower extremity or localized to the back and buttock, hence, one could not tell whether it was a positive straight leg test or not. In addition, Dr. Ridings noted that before Claimant was evaluated by Dr. Sacha, there were no complaints suggesting lumbosacral radiculopathy. Dr. Ridings also stated that Dr. Sacha's final discharge diagnosis regarding Claimant was sacral fracture and secondary lumbar radiculopathy, but yet such diagnosis does not make sense because it is not possible for a sacral ala fracture to secondarily cause radiculopathy. Moreover, Dr. Ridings also pointed out that although Dr. Sacha stated the sacral fracture was not work related, Dr. Sacha provided Claimant an impairment rating for the fracture.

23. In his report, Dr. Ridings makes a number of comments regarding his impression of the information he reviewed and how that factored into his opinion regarding causation. Dr. Ridings' comments include, but are not limited to, the following:

> The fracture of the left sacral ala was an unexpected finding. This is typically an insufficiency fracture with the most common risk factor being osteoporosis. These fractures are most common, therefore, in elderly women. At L5-S1 it was stated that there was "minimal disc bulging and mild bilateral facet arthropathy" causing the foraminal stenosis right greater than left with most significant effect on the right L5 nerve root radiographically. This is the side opposite the patient symptoms, and to this point there had been no documented symptoms or findings consistent with nerve root impingement. The gluteus medius tear appears to be acute on chronic, and again is on the opposite side as the patient's complaints. The patient's history to this point is entirely consistent with the left sacrum ala fracture without any necessary contribution from any of the other findings.

(Resp. Ex. C, pg. 9).

> The history [provided to Dr. Sacha] is not consistent with the more contemporaneous documentation when he was first seen at Concentra. He reported that his pain as in the left hip and thigh initially, but without any radiation further down the left lower extremity. The patient's history per Dr. Sacha was severe pain in the left buttock, posterior thigh, and down the left leg had continued for the following week. Dr. Sacha's history does not explain how the patient could continue working many hours a day moving heavy boxes throughout that week given the symptoms.

(Resp. Ex. C, pg. 10).

24. Dr. Ridings concluded that Claimant's symptoms flow from his left sacral ala fracture, and not from a lumbar radiculopathy as opined by Dr. Sacha or a left buttock muscle sprain/strain as opined by Dr. Hall. Dr. Ridings concluded that Claimant's left sacral ala fracture was not caused, aggravated, or accelerated by his activities at work, but was either something that could have happened at any point based on an underlying disease process, for which Claimant has not been evaluated, or less likely due to an episode of trauma that Claimant has not reported, given that he had an acute right gluteal muscle tear also seen on MRI for which there is no explanation. Dr. Ridings concluded that within a reasonable degree of medical probability, Claimant did not sustain a work-related injury on August 6, 2017.

25. Dr. Ridings also testified at hearing and testified consistent with his report.

26. The ALJ credits Dr. Ridings' opinions as set forth in his report and hearing testimony. The ALJ finds Dr. Ridings' opinions to be reliable, credible, and persuasive.

27. Dr. Sacha's deposition testimony of June 14, 2018, was also submitted to the court. The ALJ does not find Dr. Sacha's testimony to be persuasive. The ALJ finds Dr. Sacha's opinions as set forth in his deposition to be vague and somewhat conclusory. In other words, his opinions lack specificity, clarity, and persuasive analysis. For example, when offering an opinion as to whether Claimant sustained an injury at work, Dr. Sacha testified that:

> My opinion on this guy is that he probably tweaked his back or tweaked a disk in his back from the lifting and twisting activities. That's the normal mechanism and the normal and expected pathology for someone that's having lifting and twisting.

(Depo. Tr., at 7).

After testifying that Claimant probably "tweaked his back or tweaked a disk in his back," Dr. Sacha went on to testify that the injections he performed "proved that he had disk damage." Dr. Sacha testified that the injections were very diagnostic because:

> [Claimant] had reproduction of the symptoms with placement of the injectate; we saw mild foraminal narrowing on the epidurogram; [Claimant] had temporary relief of his symptoms, including with and without provocative maneuvers. So [Claimant] met all diagnostic criteria.

(Depo. Tr., at 12).

Dr. Sacha also based his opinion that the injection was diagnostic because he asserts Claimant had over 80 percent reduction in his pain symptoms due to the injection. (Tr., at 120.) However, a review of the VAS Pre and Post-Injection Pain Diagram, which is associated with Claimant's November 16, 2017, injection,

and attempts to quantify Claimant's response to the injection fails to provide the ALJ with sufficient reliable information to substantiate Dr. Sacha's testimony that that the injections were "very diagnostic." (Clmt. Ex. 5, at 112). For example, the Pre-Injection Pain Diagram has pain levels from 0-10 and asks the patient to rate their pain while resting and while engaging in aggravating activities. The Pre-Injection Pain Diagram has 1 and 2 circled for pain while resting and 6 and 7 circled for pain with aggravating activities. But, there is also the front, back, right side, and left side, of a human figure on which the location and type of pain complaints and symptoms the patient is experiencing are to be marked. The ALJ assumes that the Pre and Post-Injection pain complaints, pain levels, symptoms, and diagrams are analyzed to determine if the symptoms and alleged response to the injection are medically plausible and diagnostic. However, the human figures, for both Pre and Post-Injection symptoms are devoid of any markings outlining Claimant's pain complaints and symptoms before and after the injection. Moreover, although the pain diagram has a signature block for Claimant, Claimant never signed off of the pain diagram. (Clmt. Ex. 5, at 112). In addition, as previously found, Dr. Sacha's November 16, 2017, report indicates he provided Claimant a pain diary and the record is not clear as to whether Claimant completed the diary, provided the diary to Dr. Sacha, and whether Dr. Sacha analyzed the information in rendering his opinions. Therefore, the ALJ does not find Dr. Sacha's opinions and findings as set forth in his reports and testimony to be reliable or persuasive.

28. Claimant's hearing testimony and statements contained in the medical records regarding when and where he developed his symptoms, the extent of his symptoms, the location of his symptoms, and the temporal relationship of his symptoms to various work activities he was performing on the alleged date of injury are not found to be reliable or credible. Therefore, the ALJ finds Claimant's testimony was not credible or reliable.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

I. Whether Claimant established by a preponderance of the evidence that he sustained a compensable injury on August 6, 2017.

Claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005).

In addition, Claimant is not required to present medical evidence to prove the cause of his condition. *See Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997); *Apache Corp. v. Industrial Commission*, 717 P.2d 1000 (Colo. App. 1986). Pertinent lay testimony may support a finding of causation despite conflicting medical evidence or testimony. *See Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997); *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990).

However, the question of whether Claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As found, Claimant's hearing testimony as well as his statements contained in the medical records regarding the onset of his symptoms, where he was at when his symptoms developed, the extent of his symptoms, the location of his symptoms, and the relationship and timing of his symptoms to various work activities, were not reliable or credible. Therefore, any opinions or findings which relate Claimant's symptoms, need for medical treatment, or disability to his work are not found to be reliable or persuasive.

As found, the ALJ credited the opinions of Dr. Ridings. Dr. Ridings concluded that Claimant did not suffer an injury at work in the form of an acute injury or in the form of an aggravation or acceleration of a preexisting underlying condition. Dr. Ridings concluded Claimant most likely suffered from an insufficiency fracture of his left sacral ala that most likely occurred spontaneously, or less likely, a fracture due to a trauma. The fact that Claimant also had findings of a right sided gluteus median tendon tear, although asymptomatic, adds to the possibility that Claimant has been involved in a prior undisclosed non-work related accident - involving sufficient trauma to result in a torn gluteus median tendon and/or fractured sacral ala - and has not divulged such information.

The ALJ did not find the opinions of Dr. Hall or Dr. Sacha to be reliable or persuasive regarding the cause of Claimant's symptoms, need for medical treatment, or disability.

There is insufficient reliable and credible evidence for the ALJ to find and conclude Claimant's work activities caused, aggravated, or accelerated his sacral ala fracture – or any other condition - and necessitated the need for medical treatment or caused any disability.

Therefore, the ALJ finds and concludes Claimant has failed to establish by a preponderance of the evidence that he suffered a compensable injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 28, 2018

/s/ Glen Goldman

_____

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-066-750-02

ISSUE

- Whether Respondents proved by a preponderance of the evidence that Claimant's indemnity benefits should be reduced by 50% due to Claimant's willful failure to obey a reasonable safety rule pursuant to C.R.S. section 8-42-112(1)(a) and (b).

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a machine operator who Employer hired on November 18, 2004. Employer is a Colorado based steel contractor that employs shop laborers, including machine operators, fitters, welders, and fitter/welders.

2. Employer adopted and enforces to a company safety policy. Employer provides new employees a copy of its safety manual, and requires employees to certify they have reviewed the policies. Further, Employer's Safety Supervisor provides job safety training when an employee is first hired and when an employee starts a different position on the shop floor. Employer provides mandatory monthly safety training meetings often covering safe material handling practices. Employer has a seven-person safety committee. Employer enforces its safety rules, and when an employee receives written discipline for a safety rule violation, he or she loses their quarterly gain share for that quarter.

3. Claimant participated in new hire orientation and safety training. On January 7, 2015, Claimant certified that he reviewed the latest edition of Employer's safety manual. Claimant attended mandatory monthly safety meetings throughout his thirteen plus years with Employer.

4. Claimant attended three safety meetings exclusively devoted to safe material handling during the year prior to his work injury, including a meeting held less than a month before his injury. Kelly Miller, Employer's Quality Control Manager, ran the safety meetings and repeatedly emphasized that Employer's safe material handling policy required employees to set materials and material bins on flat, stable surfaces, which include floors and work horses. Outside of the safety meetings, Mr. Miller regularly reminded Claimant of safe material handling and counseled Claimant several times when he observed Claimant performing unsafe acts. Employer did not consider Claimant's prior unsafe acts to be serious enough to result in formal written discipline or loss of gain share.

5. Mr. Miller confirmed that Employer wrote up employees for unsafe material handling both before and after Claimant's injury.

6. On January 12, 2018, Hugo Carrazco, a fitter working on the shop floor with Claimant, placed a parts order requesting materials (angle irons) be brought to his work station. Claimant began moving the heavy angle irons from one side of the shop floor to Mr. Carrazco's workstation on the other side of the shop floor. Claimant gathered the angle irons in a bin next to Claimant's workstation. Claimant then used an overhead remote operated crane to hoist the bin and move it to a wheeled cart. Once Claimant lowered the bin onto the cart, he unhooked the bin from the crane so he could push the cart to the other side of the shop.

7. Mark Tanner, a fitter/welder, was walking by when he noticed Claimant by the cart. The bin was already on the cart, but Claimant still needed to push the cart to the other side of the shop. Because the bin of angle irons was heavy, Mr. Tanner helped Claimant push the cart towards Mr. Carrazco's workstation.

8. As the cart arrived at the east side of the shop, Mr. Carrazco walked by, and told Claimant to move the bin of angle irons to the floor of his workstation in front of a large stack of 3" x 3" metal tubes. He pointed to the floor to communicate non-verbally where he wanted the bin. Mr. Tanner, who was standing next to Claimant, heard Mr. Carrazco's instructions and described them as clear.

9. Mr. Tanner is a member of Employer's safety committee. He testified that if Mr. Carrazco had instructed Claimant to move the bin to the top of the stack of tubes, as Claimant claims, he would have immediately corrected those instructions because they created a dangerous situation and violated Employer's safe material handling policy. Mr. Tanner testified that he left to return to his own work and saw Mr. Carrazco walked over to his workstation and point directly at the ground in front of the stack of 3" x 3" tubes, again showing Claimant where he wanted him to move the bin.

10. The ALJ finds the testimony of Mr. Carrazco and Mr. Tanner regarding Mr. Carrazco's instructions to Claimant about where to place the bin is credible and persuasive. They each corroborated the same events, and their testimony is reasonable and consistent with Employer's policy and training.

11. After Claimant received Mr. Carrazco's instructions, Claimant hooked the metal bin to a second crane, and he hoisted the bin from the cart, moving the bin towards Mr. Carrazco's station. However, instead of lowering the bin to the floor, Claimant lowered the bin on top of a large stack of 3" x 3" heavy iron tubes.

12. The tubes were approximately five rows wide, of lengths differing between ten and twenty feet, and stacked approximately three feet high. A twenty foot 3" x 3" tube could weigh up to 100 pounds. The tubes are not truly flat, and do not sit square. An oil-based product used during the manufacturing process covers the tubes making them slippery. A stack of 3" x 3" tubes, such as the stack in front of Mr. Carrazco's workstation, is not a stable surface.

13. Claimant testified that the stack looked stable to him and that he tested its stability with his hand. Given the totality of the evidence, including the description above

of the stacked tubes and Employer's witnesses' testimony that the risk was obvious, the ALJ finds Claimant's testimony is not reasonable or credible. The ALJ also finds that Claimant's description of the events is unlikely.

14. Employer's witnesses testified that the stack of 3" x 3" tubes described above is an obviously dangerous surface to place material, such as a bin. They all recognized that whatever a worker placed on the stack could fall off, and/or cause the stack itself to shift, resulting in the entire load coming down.

15. On the date of the accident, directly behind the stack of 3" x 3" tubes was a stack of three equal length 14" x 6" tubes. The ALJ finds it more likely true than not that Claimant lowered the bin on the stack of 3" x 3" tubes. The bin did not lay flat on the 3" x 3" tubes; instead, it leaned against the larger and higher stack of 14" x 6" tubes.

16. Nathan Everson, a fitter whose station was next to Mr. Carrazco's station, saw Claimant lower the bin onto the 3" x 3" tubes. He recognized immediately that Claimant had created a dangerous situation. Before he could respond, Claimant pulled the bin toward himself, apparently trying to level the bin on the 3" x 3" tubes before unhooking the bin from the crane. At that time, the 3" x 3" tubes shifted and several of those tubes came down on Claimant's left leg. Claimant's left leg was wedged between an "L" piece of iron on the ground, and the fallen tubes, with other tubes landing on his leg, resulting in multiple left leg and ankle fractures.

17. Claimant's left leg was trapped under the pile of tubes, and he was in obvious distress. Several co-workers ran to the scene to help, including Mr. Miller, Mr. Everson, Mr. Carrazco, and Mr. Tanner. At the scene, Mr. Carrazco stated that he told Claimant to put the bin on the floor, not on the tubes. Mr. Everson heard this statement.

18. After emergency personnel came and took Claimant to the hospital, Mr. Miller conducted an accident investigation. He took several pictures of the aftermath showing there were two stacks of tubes, the 3" x 3" stack that had fallen over, and the 14" x 6" stack that remained upright. Mr. Miller also interviewed Mr. Everson, Mr. Tanner and Mr. Carrazco. The investigation report appends Mr. Carrazco, Mr. Everson and Mr. Tanners' witness statements.

19. Mr. Miller concluded that Claimant violated Employer's safe material handling safety rule. By putting the bin on the stack of 3" x 3" tubes, Claimant violated safe material handling training and company policy.

20. Claimant admitted that he intended to put the material bin on the 3" x 3" stack of tubes. Thus, the ALJ concludes that Claimant acted intentionally and that his intentional action directly resulted in his injuries.

21. The ALJ finds that Claimant's statements to the effect that he did not apprehend the risk of placing the bin on the stack of 3" x 3" tubes not credible or persuasive.

22. The ALJ finds that Respondents have met their burden of establishing that Claimant intentionally violated Employer's enforced safety policy and training concerning safe material handling, and that Claimant's injuries resulted therefrom.

CONCLUSIONS OF LAW

Section 8-42-112 (1), C.R.S., provides for a fifty percent (50%) reduction in benefits when an "injury is caused by the willful failure of the employee to use safety devices provided by the employer" or "(b) Where injury results from the employee's willful failure to obey any reasonable rule adopted by the employer for the safety of the employee." The term willful connotes deliberate intent. Mere carelessness, negligence, forgetfulness, remissness or oversight does not satisfy the statutory standard. *Bennett Properties Co. v. Industrial Commission,* 165 Colo. 135, 437 P.2d 548 (1968). Moreover, Respondents bear the burden proof to establish that claimant's conduct was willful. *Lori's Family Dining, Inc. v. ICAO*, 907 P.2d 715 (Colo. App. 1995); *Johnson v. Denver Tramway Corp*., 115 Colo. 214, 171 P.2d 410 (1946).

The elements of proving a violation of Section 8-42-112(1)(b) include the following:

1) There must be a safety rule adopted by the employer.

2) The safety rule must be reasonable.

3) The safety rule must be known by the employee; i.e. "brought home" to the employee and diligently enforced. *Pacific Employer's Insurance Co. v. Kilpatrick,* 111 Colo. 470, 143 P.2d 267 (Colo. 1943)

4) The meaning and content of the safety rule must be specific, unambiguous and definite, clear and non-conflicting. *Butland v. ICAO*, 754 P.2d 422 (Colo.App. 1988).

5) The violation of the safety rule must be willful, done with deliberate intent by the employee. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990).

Respondents carry the burden of proving each element justifying a reduction in compensation for willful failure to obey a reasonable safety rule. *Horton v. JBS Swift and Company*, W.C. No. 4-779-078 (2010); *Strait v. Russell Stover Candies*, W.C. No. 4-843-592 (2011). Whether Respondents met the burden of proof is one of fact for determination by the ALJ. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990). Here, the ALJ finds and concludes that Respondents have met their burden of proof.

Settled law provides that the alleged safety-rule "does not need to be formally adopted, does not have to be in writing, and does not have to be posted for reduction pursuant to section 8-42-112(1)(b) to apply. *Bennett Properties Co. v. Industrial Commission,* 165 Colo. 135, 437 P.2d 548 (1968). Rather, oral warnings, prohibitions, and directions are sufficient if heard and understood by the employee and if given by someone generally in authority. *Id.* Moreover, a safety rule, if sufficiently obvious to the claimant, can be based solely on common sense without any direction of the employer to

follow it. *Indus. Comm'n v. Golden Cycle Corp.*, 246 P.2d 902 (Colo. 1952). Finally, a willful violation of a safety rule may be established without direct evidence of the claimant's state of mind at the time of the injury because "it is a rare case where the claimant admits that the conduct was the product of a willful violation of the employer's rule." *Gargano v. Metro Wastewater Reclamation District*, W.C. No. 4-335- 104 (February 19, 1999).

An ALJ may infer willfulness from a variety of circumstantial evidence, including:

- The obviousness of the danger, *see Golden Cycle Corp.*, 246 P.2d at 906 ("the operator of a saw mill surely would not be held to liability for failure to post a notice reading, 'Keep your hands out of the buzz saw.'");

- The employee's knowledge of the safety rule and the deliberateness with which the employee performed an act prohibited by the rule. *See, e.g. Salamanca v. Golden Aluminum Co*., W.C. No. 4-416-802 (ICAO July 16, 2001).

The Industrial Claim Appeals Office has held that to establish that a claimant willfully violated the safety rule, "It is not necessary that the claimant specifically determined to break the rule. It is enough to show that knowing the rule; he intentionally performed the forbidden activity." *Romero v. Cherry Park Health Care*, W.C. No. 4-121-942 (ICAO Feb. 16, 1993).

In *Oldson v. Digital Communication*, W.C. No. 4-563-466 (2004), the Industrial Claim Appeals Office affirmed an ALJ's decision to reduce compensation benefits where claimant had not worn his seatbelt, and there was testimony that the injuries were caused or made more severe because of the failure to wear the seatbelt. The ICAO noted the following with regard to the determination of whether conduct is willful:

> Willfulness means that the claimant acted with deliberate intent. However, a finding of willfulness does not require the ALJ to find the claimant, having in mind the rule, determined to break it. Rather, it is sufficient to show that the claimant, knowing the rule, intentionally did the forbidden thing. *Stockdale v. Industrial Commission*, 76 Colo. 494, 232 P. 669 (1925). Willful conduct may be inferred from the circumstances, including evidence that the claimant was aware of the rule and the obviousness of the danger. *See Bennett Properties Co. v. Industrial Commission, 165 Colo. 135, 437 P.2d 548 (1968)*; *Gargano v. Metro Wastewater Reclamation District,* W.C. No. 4-335- 104 (February 19, 1999).

Applying these well-settled legal principles and rulings to the facts of this claim, the ALJ finds and concludes that Respondents have met their burden of proof, and Claimant's indemnity benefits should be reduced by 50% due to Claimant's willful violation of a safety rule. Claimant conceded that Employer trained him on safe material handling. He

conceded he reviewed the safety manual. In addition, he conceded that he intentionally placed the bin of angle iron on top of the stack of 3" x 3" tubes. Employer's frequent safe material handling training, constant reminders regarding safe material handling, and basic common sense dictate that placing a heavy bin on a large stack of different length tubes, several rows across, and several rows high, lubricated by oil and "bellied" in the middle, is inherently dangerous. Any force applied to such a stack could cause the stack to shift, and fall, which is what occurred in the instant case.

Claimant willfully violated a safety rule, and his indemnity benefits should thus be reduced by 50%.

PROPOSED ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have proven by a preponderance of the evidence that they are entitled to a 50% reduction of benefits pursuant to C.R.S. section 8-42-112(1)(a) and (d)

2. All matters not determined herein are reserved for future determination.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 28th day of August 2018.

/s/ Kimberly Turnbow
Kimberly Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment for Employer on October 29, 2017.

II. If Claimant has proven a compensable injury, whether Claimant has proven by a preponderance of the evidence that he is entitled to medical benefits and that Respondents are liable for medical treatment provided by PA-C Schoenefeld from October 11, 2017 through December 12, 2017.

III. If Claimant has proven a compensable injury, whether Claimant has proven by a preponderance of the evidence that he is entitled to temporary total disability benefits ("TTD") from November 16, 2017 and ongoing.

IV. If Claimant has proven a compensable injury and entitlement to TTD benefits, determination of Claimant's average weekly wage ("AWW").

V. If Claimant has proven a compensable injury and entitlement to TTD benefits, whether Respondents have proven by a preponderance of the evidence that Claimant is responsible for his termination.

FINDINGS OF FACT

1. Claimant is a 57-year-old man who worked for Employer as a heavy equipment operator.

Prior History

2. In 2013, Claimant had a workers' compensation claim in California involving an injury to his left shoulder and neck. A July 12, 2013 left shoulder MRI revealed tendinopathy of the supraspinatus tendon, moderately advanced degenerative changes at the acromioclavicular joint, and no full thickness retracted rotator cuff tear. Claimant also underwent a cervical spine MRI that revealed left C6-7 disc extrusion with C7 root compression. Claimant underwent a left C6-7 anterior cervical discectomy and fusion on August 22, 2013.

3. Claimant continued reporting neck, left shoulder and left upper extremity symptoms. On December 17, 2013, Michael Prince, MD diagnosed Claimant with left shoulder bursitis and impingement with positive AC symptoms and adhesive capsulitis, left shoulder tendinopathy of the supraspinatus tendon, moderately advanced degenerative disease of the AC joint, and cervical strain. Claimant treated with Alan Moelleken, MD for his cervical spine, and Chad Burgoyne, MD for his left shoulder.

4. A functional capacity evaluation was performed on June 10, 2014, which concluded Claimant was physically incapable of working as a heavy equipment operator.

5. On December 16, 2014, Claimant underwent anterior C6-7 hardware removal. As of February 9, 2015, Claimant expressed a desire to return to work as a heavy equipment operator due to financial concerns and Dr. Moelleken allowed Claimant to return to modified duty as an operator of a loader. At follow up evaluations in March and April 2015, Claimant reported worsening neck pain, and Dr. Moelleken provided restrictions of no lifting more than five pounds.

6. On April 29, 2015, Claimant reported to Dr. Burgoyne with increased left shoulder pain that he rated 7-10/10, noting the pain became worse in July 2013. He complained of increased pain, generalized weakness in the left hand and occasional numbness in his third, fourth and fifth digits. Claimant reported that chiropractic treatment provided temporary relief for his left shoulder, acupuncture treatment helped with relaxation, and the cortisone injection was not helpful. Claimant advised that he "would like to discuss shoulder surgery at this time." Dr. Burgoyne ordered a new left shoulder MRI scan to rule out possible rotator cuff tear or further soft tissue pathology.

7. On May 15, 2015, Dr. Moelleken placed Claimant at MMI with permanent medical impairment ratings for both the left shoulder and neck. Dr. Moelleken indicated Claimant was prohibited from returning to work as a heavy equipment operator due to his injuries.

8. The new left shoulder MRI recommended by Dr. Burgoyne was performed on June 10, 2015. Jennifer Kosek, MD provided the following impression:

> 1. No definitive tear or tendinosis seen of the biceps tendon. 2. Supraspintus tendinosis and suspected partial thickness tearing. No definitive full thickness rotator cuff tendon tear, although exam is limited by motion. 3. Possible defect in the anterior superior labrum, not well assessed on this exam, with labral tear not excluded.

9. On June 12, 2015, Dr. Burgoyne noted that Claimant "would like to discuss surgery at this time. He feels he is right back where he started when he was originally injured." Claimant rated his left shoulder symptoms 7-10/10. Dr. Burgoyne assessed left shoulder bursitis and impingement and left shoulder AC arthritis and recommended left shoulder surgery. Claimant did not undergo left shoulder surgery.

10. Claimant's prior workers' compensation claim was filed against multiple prior employers for continuous trauma to the left shoulder and neck. Claimant admitted he received an impairment rating for both the left shoulder and neck as a result of his injuries, and settled his claim against all of the employers and their insurers on March 24, 2017 for a sum of $170,000.

October 26, 2017 Alleged Work Injury

11. Claimant testified he relocated to Colorado in October 2015 to work as a heavy equipment operator. Claimant joined a union and worked for various companies in Colorado between 2015 and 2017. Claimant testified that he did not inform the union that he was medically restricted from working as a heavy equipment operator, nor did he inform Employer of his restrictions, despite being aware of such restrictions. In 2017, Claimant worked for Employer on several projects. He began for Employer on another project on October 26, 2017.

12. Claimant alleges he sustained an injury to his left shoulder while performing work duties for Employer on October 29, 2017. Claimant testified that, on the morning of October 29, 2017, his supervisor, Kiambu Dillard, drove a pickup truck to a shed that stored a 90-pound jackhammer. Claimant testified that he loaded the jackhammer and some tools into the back of the truck, then he and Mr. Dillard retrieved the air compressor. Claimant testified he hooked up the air compressor to the truck and then drove his excavator down to the job site. Claimant testified that, upon arrival at the job site, either he or Mr. Dillard retrieved the jackhammer from the truck. Claimant believes Mr. Dillard began using the jackhammer first, and that he and Mr. Dillard subsequently took turns using the jackhammer to break up concrete. Claimant testified he used the jackhammer for a total of approximately two to three hours, having to repeatedly pull out the jackhammer when it got stuck in the concrete.

13. Claimant further testified that the superintendent, Tom Gelsinger, eventually realized that they were not making progress, and went with and Mr. Dillard to retrieve a saw to cut the concrete. After Mr. Gelsinger and Mr. Dillard used the saw, Claimant was able to remove the concrete with his excavator. Claimant testified he then loaded the jackhammer back into the truck. He stated that he had problems lifting his left arm and shoulder when loading the jackhammer back into the truck. Claimant testified that he injured himself either during the process of using the jackhammer or lifting the jackhammer. Claimant testified he heard a pop stating, “I really didn’t feel it, per se, but I heard it, and it felt like somebody shot me with a gun.”

14. Claimant testified that he told Mr. Dillard of his injury at the end of the workday on October 29, 2017. He further testified that the following Monday, October 30, 2017, he told Mr. Dillard that he had a doctor’s appointment that following Wednesday.

15. Claimant continued to work for the following two weeks running other equipment. Claimant earned $27.75 per hour and was expected to work at least 40 hours per week.

16. Claimant presented to his personal physician, Steven Wayne Olson, MD, on November 1, 2017. Dr. Olson noted, “[Claimant] is a 56 y.o. male here for follow up hypertension…He has had worsening neck and left shoulder pain for 4 days since working with a jackhammer. No specific trauma though.” Dr. Olson diagnosed Claimant with hypertension, cervical spine stenosis, and a left shoulder injury and referred Claimant for an orthopedic evaluation.

17. Claimant testified he saw Eve Noel Schoenefeld, PA-C on November 15, 2017, and PA-C Schoenefeld recommended that he undergo an MRI. Claimant testified that he then immediately called Employer and spoke with who he believes was Melissa Perona and informed her that he had been injured on the job and required an MRI. The evidence admitted at hearing does not contain a November 15, 2017 medical record.

18. Claimant testified that he did not initially pursue a worker's compensation claim because he wanted to keep his job and planned on addressing the alleged injury on his own.

19. Claimant was terminated by Mr. Gelsinger on November 16, 2017. Claimant testified he worked his entire shift and was then informed by Mr. Gelsinger that he was being terminated due to a safety violation. The termination form completed by Mr. Gelsinger lists the following reasons for termination: "Won't wear gloves, doesn't follow safety policys (*sic*)." Claimant testified that, on one occasion, he was observed not wearing the required safety gloves because he was attempting to remove water from a work area and did not want to get the gloves wet.

20. Claimant testified that he has not worked since November 16, 2017.

21. On November 29, 2017, Claimant saw Eve Noel Schoenefeld, PA-C 2017 with complaints of left shoulder pain. He reported that he was using a jackhammer on October 29, 2017, went to lift the machine into a truck, and felt a pop. Claimant reported feeling a sharp pain in the anterior aspect of his left shoulder and hearing a pop. On shoulder examination, PA-C Schoenefeld noted decreased range of motion, tenderness to palpation, and positive Hawkins, Neer and CAA tests. She diagnosed Claimant with a shoulder injury, noted she was concerned about rotator cuff and biceps tendon injuries, and ordered an MRI.

22. On January 3, 2018, Claimant underwent a third left shoulder MRI without contrast. Louis Gregory Arvanetes, MD, noted subluxation of the biceps tendon anteriorly prior to insertion with "no definite labral tear although a prominent superior labral recess is present." He gave the following impression: partial thickness partial width tear supraspinatus insertion and AC joint edema.

23. On January 15, 2018, PA-C Schoenefeld diagnosed Claimant with an incomplete left rotator cuff tear and subluxation of tendon of long head of biceps. Claimant advised that he wished to proceed with surgery.

24. On January 25, 2018, Claimant presented to Sergiu Botolin, MD reporting progressive worsening of his ability to turn his head over the last few years and left shoulder pain. It was noted Claimant was scheduled for shoulder surgery.

25. On April 3, 2018, Claimant attended an independent medical examination ("IME") with Peter Weingarten, MD at the mandate of American Medical Experts in conjunction with a disability/pension claim he had with the California union regarding his prior workers' compensation claim. Dr. Weingarten's IME report contains no mention of

any October 2017 shoulder injury, despite the fact Claimant did advise Dr. Weingarten that he had not worked since being laid off in November 2017.

26. On June 19, 2018, Claimant underwent an IME with orthopedic surgeon James Lindberg, MD at the request of Respondents. Dr. Lindberg performed a records review and physically examined Claimant. Claimant provided the following history of injury to Dr. Lindberg:

> He stated on October 29, 2017, he was using a jackhammer, busting up concrete for three hours, when he felt like he was shot on the front of his left shoulder. He did not report it to work. It was only his third day on the job and he went to the doctor on his own to make sure he had a real injury before he reported it.

27. Dr. Lindberg reviewed three MRI scans of Claimant's left shoulder. He noted the July 13, 2013 MRI revealed tendinosis of the supraspinatus, AC arthritis and subluxation of biceps and no full thickness tear. He noted the June 10, 2015 MRI revealed a subluxed biceps tendon, questionable anterior labral tear, intact rotator cuff, tendinosis and partial thickness tearing of the bursal surface, type 1 acromion, large osteophyte in the anteriolateral humeral head and AC joint arthritis in the anterior biceps tendon that was difficult to evaluate because of motion artifact. He further noted the January 3, 2018 MRI evidenced some questionable anterior labral tear, subluxed biceps tendons, and AC joint arthritis with partial intrasubstance tearing and tendinosis of the supraspinatus and anterolateral bone mass. Dr. Lindberg opined that the January 3, 2018 MRI findings are "virtually identical in their presentation and appearance [to the June 10, 2015 MRI] except for motion artifact on the earlier MRI."

28. Dr. Lindberg noted inconsistencies in Claimant's reported mechanism of injury, that Claimant had been symptomatic in his left shoulder and neck since 2013. Dr. concluded that there was no evidence of progressive injury to Claimant's left shoulder and no evidence of a need for surgical intervention. Dr. Lindberg opined that Claimant did not sustain any permanent impairment and no treatment should be rendered under the workers' compensation system.

29. Dr. Lindberg testified at hearing on behalf of Respondents as a Level II expert in orthopedic surgery, specializing in knees, shoulders, and hips. Dr. Lindberg testified consistent with his IME report, and continued to opine that Claimant did not sustain any work-related injury to his shoulder as a result of his work for Employer. He testified Claimant informed him that he did not report the alleged injury to Employer, and that Claimant did not mention to him any history relating to lifting a jackhammer.

30. Dr. Lindberg testified that the three MRI scans he reviewed reflect virtually identical findings from year to year. He opined that there is no objective evidence of any progression or change in the structures of Claimant's shoulders, or objective evidence of any acute injury to the shoulder. Dr. Lindberg opined that the small partial thickness rotator cuff tear noted on the 2018 MRI was questionable, and explained that the questionable tear was present on the 2013 and 2015 MRIs. He opined that the

questionable tear would not cause the amount of pain Claimant alleges, and that Claimant would not benefit from surgery. Dr. Lindberg testified that Claimant's pain could be the result of pre-existing biceps tendon subluxation.

31. In Claimant's responses to interrogatories, regarding the mechanism of injury Claimant stated he was using the jackhammer at work on October 29, 2017, went home after work and started to feel pain in his neck and shoulder. He stated he then contacted the doctor to make an appointment to see what the problem was. Claimant's response does not contain any reference to lifting the jackhammer or hearing/feeling a pop.

32. Claimant testified that he believes he has been consistent with the reported mechanism of injury, but possibly did not tell Dr. Lindberg about lifting the jackhammer into the truck. He testified that he did not notify Mr. Gelsinger about his alleged shoulder injury or request medical attention at the time of his termination because he assumed Mr. Gelsinger already knew about the alleged injury. Claimant testified that he wants shoulder surgery because his arm is "pretty much dead."

33. Mr. Dillard testified at hearing on behalf of Respondents. Mr. Dillard testified that, on October 29, 2017, he worked as a lead man with Claimant breaking and removing concrete. He stated at no time did Claimant use the jackhammer. Mr. Dillard testified that he used the jackhammer while Claimant used the mini-excavator, which was Claimant's job duty per his union contract. Mr. Dillard further testified that at no time did he see Claimant lift the jackhammer in or out of the truck. Mr. Dillard testified that the jackhammer was already connected to the air compressor on the truck, and that, upon arriving to the worksite, he removed the jackhammer from the truck while Claimant was in the excavator. Mr. Dillard estimated he used the jackhammer from approximately 7:15 a.m. to 8:30 a.m. Mr. Dillard recalled re-attaching the air compressor and jackhammer to the truck and taking it back to the yard while Clamant remained on the excavator. Mr. Dillard testified he then brought the walk-behind saw to the job site with Mr. Gelsinger. Thereafter, he and Mr. Gelsinger began using the saw, and were successful in breaking up the concrete so that Claimant could remove it with his excavator. Mr. Dillard testified that this occurred at about 9:00 a.m. He testified that the tip of the jackhammer did not repeatedly get stuck in the concrete, as Claimant alleges. Mr. Dillard further testified that at no time on October 29, 2017, or at any time prior to or after the date of Claimant's termination, did Claimant ever report the alleged injury to him or request medical attention. Mr. Dillard testified that Claimant never told him he was seeking medical attention or that he had seen a doctor for a shoulder injury.

34. Mr. Gelsinger testified at hearing on behalf of Respondents. Mr. Gelsinger worked as a field superintendent the date of Claimant's alleged injury. Mr. Gelsinger testified that Claimant was hired through the union as a heavy equipment operator, which involved running the excavator and the skid steer. Mr. Gelsinger testified that he went around the jobsite checking on the progress of the crew. He testified that, on October 29, 2017, he did not observe Claimant or Mr. Dillard using a jackhammer. He testified that he did assist Mr. Dillard with using the walk-behind saw to break the concrete. Mr. Gelsinger stated that, at no time between October 29, 2017 and November 16, 2017 did Claimant report any work-related injury to him or request

medical care. Mr. Gelsinger testified that Claimant had performance issues leading up to his termination, and that Claimant was terminated for unsafe work practices.

35. Melissa Perona testified at hearing on behalf of Respondents. Ms. Perona is the Safety Manager/Workers Compensation Coordinator for Employer. She testified she was on vacation and did not become aware of Claimant's alleged injury until early December 2017, when her supervisor informed her of Claimant's allegations. She testified that she contacted Claimant, who told her he felt general soreness in his shoulder. She testified Claimant did not mention anything regarding a jackhammer, and did not identify a specific event resulting in the alleged injury. Ms. Perona stated that Claimant informed her he needed a workers' compensation claim number in order to undergo an MRI. Claimant testified that she was unaware of any alleged shoulder injury prior to Claimant's termination. Ms. Perona testified that she completed an Employer's First Report of Injury form on December 8, 2017, based on the information provided to her by her supervisor.

36. Claimant recently applied for and was deemed eligible to receive social security disability insurance benefits ("SSDI") beginning approximately June 2018. He is receiving SSDI at the rate of $2,540.00/month. Claimant testified that he is also receiving $1,283.00/month from the California Union, and $107.00/month from the Colorado Union as disability/pension. Claimant also received unemployment benefits.

37. Claimant's testimony is found less credible and persuasive than the testimony of Dr. Lindberg, which is supported by the medical records, and Mr. Dillard, Mr. Gelsinger, and Ms. Perona.

38. Claimant failed to prove by a preponderance of the evidence that he sustained a compensable industrial injury arising out of and in the course of his employment on October 29, 2017.

39. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The ALJ concludes Claimant failed to prove by a preponderance of the evidence that he suffered a compensable industrial injury arising out of and in the course of his employment for Employer on October 29, 2017. Claimant has an extensive documented history of pre-existing neck and left shoulder symptoms, for which Claimant underwent extensive treatment, received permanent impairment, and was restricted from continuing working as a heavy equipment operator. Claimant was requesting shoulder surgery as far back as June 2015, after reporting that he received no long term relief from chiropractic treatment, acupuncture, and cortisone injections.

Claimant's credibility is undermined by various inconsistencies in his reported mechanism of injury. Claimant testified that he distinctly remembered hearing a pop and feeling like he had been shot, but could not identify if this happened while using the jackhammer or when lifting the jackhammer. When Claimant presented to his personal physician on November 1, 2017, Claimant reported left shoulder symptoms in connection with jackhammer use, but did not report any specific trauma, and there was no mention in the medical record of a pop. On November 29, 2017, Claimant reported to PA-C Schoenefeld that a pop occurred while lifting the jackhammer. Ms. Perona credibly testified Claimant made no mention of a pop or a specific event when he discussed the alleged injury with her. In his responses to interrogatories, Claimant made no mention of feeling or hearing a pop or lifting a jackhammer. Claimant reported to Dr. Lindberg that he felt like he was shot after busting up concrete for three hours, with no mention of lifting a jackhammer or hearing/feeling a pop. In addition to these various inconsistencies, Claimant's versions of the alleged mechanism of injury are refuted by Mr. Dillard's credible testimony. Mr. Dillard was present with Claimant while working throughout the day on October 29, 2017, and denies Claimant ever lifted a jackhammer or used a jackhammer.

Similarly, there are inconsistencies as to whether Claimant reported the alleged injury to Employer. Dr. Lindberg credibly testified Claimant informed him he did not report the injury to Employer. Claimant's responses to interrogatories make no mention of reporting the injury to Employer, and Mr. Dillard, Mr. Gelsinger, and Ms. Perona credibly testified Claimant did not notify them of any injury between the date of the alleged injury and the time of Claimant's termination.

Even assuming, arguendo, that one of Claimant's many versions regarding the alleged mechanism of injury and his report of injury to Employer is credible, Dr. Lindberg credibly testified that there is no objective evidence Claimant sustained any progressive or acute injury on October 29, 2017. The record contains three left shoulder MRIs reports, two obtained prior to the alleged injury, and one obtained after the alleged injury. Dr. Lindberg reviewed the actual MRI film and credibly testified that the findings of each MRI were virtually identical. He further credibly testified that, to the extent a rotator cuff tear exists, such tear is questionable, it was present on prior MRI scans, and is not the cause of Claimant's reported symptoms. There is insufficient credible and persuasive evidence that Claimant's work duties caused, aggravated, accelerated, or combined with a pre-existing condition to produce a disability or need for medical treatment.

Based on the totality of the evidence, Claimant failed to prove it is more probable than not he sustained a compensable injury on October 29, 2017. As Claimant failed to prove a compensable injury, the remaining issues medical benefits, TTD, AWW, and responsibility for termination are moot.

ORDER

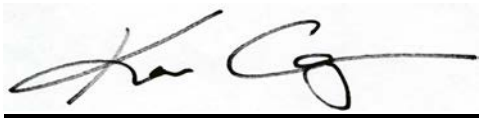
It is therefore ordered that:

1. Claimant's claim for benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 28, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The issues set for determination included:

- Did Claimant prove by a preponderance of the evidence that his condition worsened related to the injuries he suffered on September 6, 2013?

- If Claimant proved his condition worsened that requires a reopening of his claim, did Claimant prove by a preponderance of the evidence that he is entitled to TTD benefits from September 28, 2015 and continuing?

- If Claimant has proven his condition worsened, did he prove an entitlement to reasonable and necessary medical benefits?

1. On September 6, 2013, Claimant sustained an admitted industrial injury while working for Employer. He was working on an oil rig as a floor hand. Claimant was injured when a large piece of equipment hit him in the back and pushed his chest against a handrail.

2. Claimant was evaluated by Margaret Irish, D.O. at Workwell (the ATP for Employer) on September 6, 2013. At that time, he was complaining of pain in the upper and lower back, as well as ribs. X-rays showed no fractures of the spinous processes in the thoracic and lumbar spine. Limited range of motion ("ROM") was noted in the thoracic and lumbar spine.

3. Dr. Irish diagnosed Claimant with a chest wall contusion, back contusion and contusion of the thoracic spine. No diagnosis was given with regard to the lumbar spine. Claimant was given a prescription for Ibuprofen and Tramadol. Dr. Irish completed a M-164 that gave work restrictions of no lifting, pushing, pulling or carrying over 10 pounds and no reaching overhead/away from the body. Claimant was not to crawl, kneel or squat.

4. Claimant was evaluated by Dr. Irish, whose assessment was the same on September 9, 2013. Claimant received conservative treatment, including prescriptions. It was noted that a radiologist's review of the x-rays indicated there may be a cracked rib on the left posterior-lateral eighth rib. In the appointment on October 2, 2013, Claimant reported improvement. Claimant's lifting restrictions were increased to 40 pounds.

5. On October 16, 2013, Claimant returned to Dr. Irish. Claimant had good active ROM throughout his spine. Claimant was to continue physical therapy ("PT") as scheduled. Claimant was returned to regular duty.

6. When he returned to Dr. Irish on October 29, 2013, Claimant had complaints of chest and low back pain, shortness of breath, as well as leg pain. Dr. Irish reinstituted the 20 pound lifting restriction at that time. Dr. Irish also evaluated Claimant on November 7, 2013, at which time she reviewed the MRI and noted the MRI revealed small central disc protrusions at L4-5 and L5-S1. Dr. Irish opined these were probably pre-existing prior to the work injury. Claimant re-started PT and was given a home TENS unit. Claimant was also referred to a chiropractor. At the time of the December 5, 2013, Dr. Irish noted Claimant reported improvement with the chiropractic treatments.

7. Claimant received a total of nine PT sessions at Workwell from September 27 through December 11, 2013. He reported his back felt about the same, with a new throbbing pain in the lumbar spine.

8. Claimant received chiropractic manipulation from December 12, 2013 through January 21, 2014. He was complaining of lumbosacral pain and received adjustments from Michael Springfield, DC, Dipl. Ac., who concluded Claimant's symptoms were consistent with left piriformis syndrome.

9. Dr. Irish evaluated Claimant on February 6, 2016. Claimant was referred to Dr. Wunder for a second opinion. His prescriptions were continued and Dr. Irish anticipated MMI.

10. On February 13, 2014, Claimant was examined by Jeffrey Wunder, M.D. to whom he was referred by Dr. Irish. Claimant reported left lumbosacral pain, as well as pain radiating into the left groin. He also reported pain in his thoracic spine. Claimant rated his pain as 7/10. On examination, no spinal asymmetries were noted and there was no paravertebral muscle spasm. Claimant reported diffuse lumbosacral tenderness over the left sacroiliac joint area and the L4 to S1 facet joint area.

11. Dr. Wunder's impression was: thoracic strain; nonspecific low back pain. He opined that the physical examination shed no light on the underlying pain generator, as there was no evidence of disc injury, lumbosacral radiculopathy, facet syndrome or sacroiliac joint dysfunction. He also noted there was a one-month delay in the onset of low back pain. Dr. Wunder opined there was local tenderness thoracic area, but no pain with movement of the spine. He recommended an MRI of the thoracic spine and if no trauma was indicated, Claimant would be at MMI.

12. On March 13, 2014, Claimant underwent an MRI of his lumbosacral and thoracic spine. The films were read by Philip Cook, M.D. Dr. Cook's impression was small central disc protrusions at L4-5 and L5-S1interspaces, but otherwise negative exam. These were not causing significant encroachment on the canal or lateral recesses and there were no significant extra disk fragments or foraminal stenosis. An MRI of the thoracic spine was negative.

13. Dr. Wunder re-evaluated Claimant on March 20, 2014. Dr. Wunder noted

the thoracic spine MRI was completed on March 13, 2014, which was normal and had no evidence of osseous or disc abnormality or spondylosis. On examination, Claimant had no paravertebral muscle spasm in either the thoracic or lumbar area. He reported midline tenderness from T1 to S1, which differed from the previous exam. Dr. Wunder opined there was nothing to offer Claimant from a rehabilitation standpoint, as there were no objective findings. Claimant was at MMI, with 0% impairment. The ALJ found Dr. Wunder's opinions regarding Claimant's condition and need for treatment were persuasive.

14. Claimant returned to Dr. Irish on March 27, 2014. On examination, Dr. Irish noted pain complaints upon light palpation throughout the thoracic and lumbosacral areas. Dr. Irish's assessment was contusion, chest wall; contusion, back; pain, thoracic spine. Dr. Irish stated the cause of this problem was related to work activities, but there were no objective findings at the time of this examination. Claimant declined to participate in a Functional Capacity Evaluation. Dr. Irish determined Claimant was at MMI, with 0% medical impairment rating and returned him to regular duty.[1]

15. The ALJ found Dr. Irish evaluated Claimant at regular intervals as the ATP. She reviewed the diagnostic testing, as well as the PT treatments Claimant received. The ALJ credited Dr. Irish's opinions with regard to MMI and impairment, as she was in the best position to determine Claimant's status and need for treatment.

16. On April 29, 2014, a Final Admission of Liability ("FAL") was filed on behalf of Respondents. The FAL admitted for Dr. Irish's medical impairment rating (0%). Maintenance medical benefits were specifically denied.

17. There was no evidence in the record that Claimant objected to the FAL. There was no evidence Claimant requested a Division of Workers' Compensation Independent Medical Examination ("DIME").

18. On May 12, 2014, Claimant was evaluated by Sean Filipovitz, M.D. at SCH Monfort Family Clinic and reported low back pain. Dr. Filipovitz was not an ATP, as he was not within the chain of referral. Dr. Filipovitz concluded Claimant's pain was most consistent with piriformis syndrome. He prescribed Naproxen, Flexeril and a continuation of conservative treatments such as ice, heat, and stretching. There was no evidence that Dr. Filipovitz had Dr. Irish's records available for his evaluation. Claimant received PT at Northern Colorado Medical Center that day, which included therapeutic exercises, ultrasound, electrical stimulation, hot/cold packs.

19. Claimant did not return Northern Colorado Medical Center for PT and was discharged on June 11, 2014.

20. There was no evidence in the record Claimant was evaluated by a healthcare provider from June 12, 2014 until July 2015.

[1] Exhibit Q p. 215; Exhibit 9, p.6.

21. Edwin Healey, M.D. performed an IME on behalf of Claimant on July 17, 2015. At that time, Claimant was complaining of persistent lower thoracic and primarily left lumbar and left buttock pain, with burning, aching pain radiating into his left posterior thigh, calf and occasionally to his left anterior thigh. His pain level was 7 out of 10. On examination, mild hypertonicity was in the lower thoracic spine, with several trigger points and pain radiated to his left lumbar region into his left buttocks. Increased pain on examination was noted in the left piriformis and left sacroiliac joint.

22. Dr. Healey's diagnoses were: thoracic spine pain secondary to contusion sprain/strain with component of left lower T9 through T12 thoracic paraspinal myofascial pain with active trigger points; lumbosacral sprain/strain/contusion with lumbar paraspinal myofascial pain in active trigger points; (piriformis syndrome versus sacroiliac joint dysfunction, caused by the September 6, 2013 injury); left lumbar central disc protrusions at L4-5 and L5-S1; adult adjustment disorder with depression and anxiety due to chronic pain and decreased function. Dr. Healey concluded Claimant was not at MMI and required treatment of the thoracic and lumbar myofascial pain and SI joint, which he opined were related to the work injury. Dr. Healey provided an advisory medical impairment rating of 15% whole person, which included mental impairment.

23. On September 30, 2015, Claimant filed a Petition to Reopen. Claimant alleged a change in medical condition and attached Dr. Healey's July 17, 2015 report. Claimant also alleged that the FAL was not mailed to Claimant's counsel.[2]

24. Claimant was evaluated on December 3, 2015 by Eric Hoffman, PA-C[3] at Colorado Clinic. In the description of the injury, Claimant was noted to have been caught in between the rail of the platform and another 50 piece of machinery. The platform was then lowered, which caused Claimant to fall approximately 4 feet. (This reference to Claimant falling differed from the initial report of injury). Claimant stated since being placed at MMI, he has had increasing thoracic pain, with radiation to his flank, bilateral low back pain, radiation to the left leg down to the bottom of his foot.

25. On examination, PA-C Hoffman noted full ROM in Claimant's thoracic and lumbar spine, as well as his right hip. His left hip revealed no tenderness, edema or crepitus. PA-Hoffman's diagnosis was: history of work injury; thoracic pain, thoracic myofascial pain syndrome; lumbago; lumbar radiculopathy; and sciatica-left leg. The ALJ noted the symptom of sciatica was a new symptom. X-rays were ordered for the thoracic spine, as well as a lumbar MRI. Gabapentin was considered. This report was signed by C. Bradley Sisson, M.D.

---

[2] That issue was resolved by the Findings of Fact, Conclusions of Law and Order issued by ALJ Cannici on Respondents' Motion for Summary Judgment. Claimant's counsel confirmed at the outset of the hearing that Claimant was not contesting that ruling.

[3] From this report, it was not clear what medical records PA-C Hoffman had available at the time of the evaluation, although he referred to Dr. Healey's report.

26. On December 11, 2015, Claimant underwent an MRI of the lumbar spine. The films were read by Jeremy McCue, M.D., whose impression was: mild degenerative changes at L4-5 and L5-S1, with central annular fissure and small focal L5-S1 protrusion. There was no resulting stenosis. The MRI was objective evidence of the condition of Claimant's lumbar spine. The ALJ concluded the findings in the MRI in 2015 were not significantly different than those in the one Claimant underwent in 2014.

27. On December 17, 2015, Claimant returned to PA-C Hoffman after the x-rays and MRI were completed. Normal ROM was documented in the thoracic and lumbar spine, although Claimant reported pain in both areas. The diagnoses were the same as the previous evaluation, with the addition of lumbar degenerative disc disease. Claimant was prescribed Norco and Gabapentin, along with an epidural steroid injection.

28. Claimant underwent an interlaminar epidural steroid injection at L5-S1 on January 4, 2016. The procedure was performed by Doug Larner, NP.

29. Claimant returned to PA-C Hoffman on January 25, 2016. At that time, he reported his pain remained unchanged. PA-C Hoffman noted he would have expected benefit from the ESI and decided to defer that for now. He ordered an EMG to assess for radicular symptoms.

30. On February 15, 2016, Claimant was examined by Kathleen D'Angelo, M.D., at the request of Respondents. His complaints were mid- and low-back pain, leg pain and weakness, insomnia, leg numbness, and depression. On examination, Claimant's gait and posture were normal. Claimant had diffuse tenderness with palpation to the interscapular region, with pain behaviors on light touch. Claimant had diffuse complaints of discomfort with palpation of the paraspinal musculature at the thoracic and lumbar sacral region bilaterally. Full range of motion was found in the left and right hip.

31. Dr. D'Angelo's diagnoses were: contusion to the thoracic and lumbar region; chest contusion; myofascial pain complaints. Dr. D'Angelo reviewed Dr. Healey's report and disagreed with his conclusions. She noted it was reasonable to expect myofascial pain complaints in the 48-72 hours after Claimant's injury. Dr. D'Angelo said Claimant would have presented with immediate radicular symptoms, if he sustained an acute disc herniation with neurological impingement due to his work injury. Dr. D'Angelo also opined Claimant's statement that the ESI worsened his pain was not consistent with true lumbar radiculopathy. Dr. D'Angelo opined Claimant was at MMI and did not require further active or maintenance treatment, diagnostics or medications. The ALJ credited this opinion of Dr. D'Angelo regarding the cause of Claimant's pain complaints. Dr. D'Angelo stated Claimant required no impairment rating due to his minimal MRI findings, negative physical examination findings, the late onset of radicular complaints, as well as his lack of response to treatment.

32. Claimant was evaluated on February 22, 2016 by Alicia Feldman, M.D. Claimant reported bilateral low back pain with radiation to his left leg, down to the bottom of the foot. He had numbness and tingling in his left foot and specifically his big toe. Dr. Feldman noted that EMG studies were suggestive of peripheral neuropathy, no radiculopathy. She recommended consideration of a repeat injection, left TFESI.

33. Claimant testified he continues to have pain related to the work injury. Specifically, bending and twisting hurts his lower back and leg. He is still treating at the Colorado Clinic with Dr. Feldman and Dr. Sisson.

34. Claimant failed to prove that the condition of his lumbar and thoracic spine worsened.

35. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). The credibility of the parties' respective experts were at-issue in this case.

Reopening

§ 8-43-303(1), C.R.S. authorizes an ALJ to reopen any award within six years after the date of injury on a number of grounds, including error, mistake, or change in

condition. *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 220 (Colo. App. 2008); *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002).

A change in condition refers either "to a change in the condition of the original compensable injury or to a change in Claimant's physical or mental condition which can be causally connected to the original compensable injury". *Chavez v. Industrial Comm'n*, 714 P.2d 1328, 1330 (Colo. App. 1985).

The reopening authority granted ALJs by § 8-43-303, C.R.S. "is permissive, and whether to reopen a prior award when the statutory criteria have been met is left to the sound discretion of the ALJ". *Cordova v. Industrial Claim Appeals Office*, *supra,* 55 P.3d at 189. The party seeking reopening bears "the burden of proof as to any issue sought to be reopened". § 8-43-303(4), C.R.S. In the case at bar, Claimant was required to prove by a preponderance of the evidence that his condition worsened.

The medical evidence before the Court led to the conclusion that Claimant's condition did not worsen. First, the objective medical evidence demonstrated that the condition of Claimant's lumbar and thoracic spine had not changed appreciably from the time Dr. Irish placed him at MMI. Both Dr. Irish and Dr. Wunder evaluated his low back complaints. Dr. Wunder noted that his physical examination did not reveal a specific pain generator. As found, Dr. Wunder concluded after his evaluations there was no additional treatment to offer Claimant. (Finding of Fact No. 13). In addition, the MRIs Claimant underwent for his lumbar spine were substantially similar. (Finding of Fact No. 24). The ALJ credited the findings of Dr. D'Angelo with regard to a worsening of condition. (Finding of Fact No. 31). Claimant failed to introduced a sufficient quantum of evidence to show that his physical or mental condition worsened in a way that was causally connected to the compensable injury. *Chavez v. Industrial Comm'n*, *supra,* 714 P.2d at 1330. Therefore, the ALJ determined Claimant introduced insufficient evidence to meet his burden and show a worsening of condition.

Second, the failure to request a DIME constitutes a legal bar to Claimant's Petition to Reopen. Under the Act, contesting the finding of MMI by the ATP required Claimant to avail himself of the DIME process. § 8-42-107(8)(b)(II), C.R.S. No contrary authority was provided by Claimant. As determined in Finding of Fact No. 17, Claimant did not request a DIME and under these factual circumstances, the Petition to Reopen is denied.

The ALJ considered Claimant's argument that he was not provided the treatment necessary to remedy his low back condition. The ALJ concluded that as an ATP, Dr. Irish saw Claimant at regular intervals, as well as making referrals for diagnostic testing and to Dr. Wunder. The ALJ concluded Dr. Irish was in the best position to determine Claimant's need for treatment. (Finding of Fact No. 15). The ALJ was persuaded that Claimant received treatment to cure and relieve the effects of his injury. Claimant received conservative treatment, which included multiple evaluations by Dr. Irish, medications, PT and chiropractic treatment. Claimant also received diagnostic testing. Dr. Irish referred Claimant for a further evaluation (Dr. Wunder), as he was approaching MMI. (Findings of Fact No. 3-8, 10-14). In this regard, to the extent Claimant disagreed

with the authorized treating physicians as to the course of treatment and the MMI determination, it was incumbent on him to request a DIME.

In light of the ruling on the Petition to Reopen, Claimant's request for TTD benefits and medical benefits is moot.

ORDER

IT IS HEREBY ORDERED:

1. Claimant's Petition to Reopen his claim is denied and dismissed.

2. Claimant's request for medical and indemnity benefits is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether Claimant sustained an injury on October 4, 2017 to his left knee that occurred within and arose out of the course and scope of his employment.

- In the event of a compensable claim, whether the findings on the October 27, 2017 MRI study, with possible lateral meniscal tear, are reasonable, necessary, and related to the compensable injury.

STIPULATIONS

The parties stipulated, in the event of a compensable claim, to an AWW of $1,473.87.

FINDINGS OF FACT

1. Claimant is a package car driver for Employer. Claimant has worked for Employer for fifteen years. Employer annually trains its employees how to report work injuries. Claimant carries a Delivery Information Acquisition Device (DIAD), provided by Employer, during his deliveries. Claimant also carries a cell phone at all times and is capable of contacting an Employer supervisor on his phone.

2. Claimant suffered a left knee injury on or around February 14, 2012, and experiences chronic left knee pain. On September 5, 2012, Claimant underwent left knee surgery, which Dr. Rajesh Bazaz performed.

3. Claimant alleges that at approximately 2:30 p.m. on October 4, 2017, he suffered an injury to his left knee, while on his delivery route. Claimant claims that he stepped out of his package car with his right foot and that his left foot slipped, causing him to roll his left ankle. Claimant claims he heard a pop in his left knee.

4. Claimant testified at hearing that he experienced immediate pain because of the alleged injury and claims he injured both his left knee and left ankle. Claimant claims that his knee swelled "really bad" after the injury and he was limping "really bad" after the injury. Claimant claims that his pain was so bad "at that point" that he felt like he had torn his Achilles tendon.

5. Despite experiencing these immediate and severe symptoms, Claimant did not immediately contact any Employer supervisors or personnel to report a work-related injury. Rather, Claimant completed the remainder of his shift, through approximately 6:00 p.m., completing approximately ten stops on his route, carrying and delivering packages to their destinations.

6. On October 4, 2017, Employer contacted Claimant during his route, and directed him to drive from Monaco Street to Broadway (in Denver) to make a delivery. Claimant refused this directive and instead returned to Employer's Hub in Commerce City.

7. Upon his return to Employer's Hub, Claimant parked his package car and walked through the facility to "punch out," according to check out procedures. Claimant claims he walked with a limp at this time. Claimant testified that by that time he knew he was injured. Claimant acknowledged there were "a million" supervisors at the facility at the time, but still did not report his alleged injury.

8. Claimant left Employer's facility that evening, picked up his daughter, and went home. Claimant claims that his pain became worse at home and that his knee swelled to "two to three times the size" of his other knee.

9. On the morning of October 5, 2017, Claimant presented to work his scheduled shift. Claimant claims his knee was severely swollen and he could "barely walk into work." Claimant maintains that he had a limp at the time he came into work.

10. Josh Maddox, Claimant's supervisor, called Claimant into his office on the morning of October 5, 2017, when Claimant arrived at work. Claimant claims he still had a swollen and painful knee at the time. Claimant did not report a work injury or any pain complaints upon entering the office. Claimant claims that Tameka Austin, a union steward, was present at this meeting. Mr. Maddox terminated Claimant for insubordination. Then Claimant reported a work injury to Mr. Maddox.

11. Employer provided Claimant a list of medical providers and later that day, Claimant saw Emily Kuper, FNP, at Advanced Urgent Care.

12. Claimant reported left knee and ankle pain. RHE C at 36. Claimant reported injuring himself when he stepped out of his truck, caught his left foot/slipped, felt a pull to the posterior ankle, twisted to grab a package, and then felt a pop in his left knee. RHE C at 40. Claimant claimed 4/10 knee pain with weight bearing, and 8/10 ankle pain. Claimant reported no swelling but had some tenderness and swelling upon examination. Claimant reported a gait disturbance/imbalance but had a normal gait and station upon presentation as NP Kuper noted, "Ambulating normally." A left-knee x-ray taken on this date was unremarkable. NP Kuper diagnosed Claimant with a strain of the left knee and ankle and gave Claimant 10-pound work restrictions for lifting, carrying, pushing, and pulling.

13. Claimant appealed his termination through his union, which subsequently reinstated Claimant to his position at Employer several days after his termination. Upon reinstatement, Claimant worked a brief period of modified duty (temporary alternate work, or "TAW," per Employer nomenclature).

14. Claimant saw Dr. Julie Parsons (ATP), on October 17, 2017. Claimant continued to report a gait disturbance and that walking aggravated his pain. Dr. Parsons noted that Claimant had "limited ambulation." She kept Claimant on restrictions and recommended an MRI of his left knee.

15. Claimant returned to see Dr. Parsons on October 31, 2017, for a scheduled appointment at 11:15 a.m. Claimant again presented with limited ambulation. Dr. Parsons kept Claimant at 10-pound restrictions and restricted him from commercial driving. Dr. Parsons recommended an orthopedic consultation, which Insurer denied.

16. On November 30, 2017, Claimant presented to Brittany D'Orio, P.A. at Colorado Pain Management for left knee, left hip and left leg pain. The ALJ notes that Claimant received a prescription for Percocet on October 24, 2017. PA D'Orio noted concerns with medication intake. PA D'Orio assessed chronic pain syndrome, chronic pain due to trauma, and opioid dependence. Claimant underwent a random urine drug test, administered "to evaluate for drug misuse, abuse, or diversion in the practice population." PA D'Orio noted that both urine drug screens on file did not show Percocet. PA D'Orio stated that the reason the tests were negative was that Claimant "runs out of Percocet before his appointments, indicating that he is consuming more than his prescribed daily dosage." PA D'Orio was concerned because Claimant represented that he did not take Percocet when he drove, and previously gave several excuses for not being able to make it in for random pill counts. PA D'Orio stated, "If he doesn't take Percocet on these days, I'm not sure how he is taking them."

17. Claimant continued to work TAW through December 11, 2017, until TAW expired. Claimant was completely off work, with restrictions, from December 12, 2017, through April 4, 2018. While Claimant was off work, he did not treat with any providers. Claimant self-treated with rest and ice only. Claimant testified at hearing that "just being off of my knee" helped him regain function.

18. The ALJ finds the great weight of the evidence contradicts Claimant's testimony. Further, the timing of Claimant's claim is suspect. At best, Claimant's testimony is not persuasive.

19. On December 27, 2017, Claimant underwent a left knee MRI. The MRI showed "slightly complex tearing of the anterior horn of the lateral meniscus." The reading radiologist noted the findings to be "suspicious for degeneration and tearing" of the lateral meniscus, but no medial meniscal tear. There MRI revealed no cruciate or collateral ligament abnormality and a slight chondral irregularity in patellofemoral articulation.

20. On March 18, 2018, Dr. Kathleen D'Angelo evaluated Claimant for a Respondents sponsored IME. Claimant reported to Dr. D'Angelo that his knee was actually worse since the injury. Dr. D'Angelo opined that, given the absence of work for three months, it was medically probable that Claimant's left knee pain would have lessened over time and that his report of worsening was not a medically anticipated outcome. Claimant told Dr. D'Angelo that, at the time of the IME, his knee was "freakin' killing me," and that he was having difficulty picking up his two-year-old child. Dr. D'Angelo noted Claimant's gait was non-antalgic at the time of the IME and that Claimant appeared comfortable, lifting and carrying his daughter without pain.

21. Dr. D'Angelo noted that Claimant reported having unresolved, ongoing knee pain since his 2012 surgery, but that this simply became worse on October 4, 2017.

Claimant reported that, on the evening of October 4, 2017, he told the union "safety manager," Tameka Austin, about his alleged work injury because the part-time supervisors "don't listen to the drivers." Claimant told Dr. D'Angelo that he told other drivers, Steven Herrera and Chris Demling, about the injury the day it occurred. Claimant claims that the "safety manager" talked to Liberty Mutual, and that Claimant made the report "right when it happened." The ALJ finds that the undated transcript of a conversation between Claimant and Insurer's claims adjuster must have occurred on or after October 17, 2017, because the two discussed a medical visit with Dr. Parsons. Claimant first visited Dr. Parsons on that date.

22. Claimant testified that after his medical provider released him to TAW, his manager forced him to work beyond his restrictions.

- Claimant claims that on October 31, 2017, his supervisor sent him out on a route over his objections, where he worked from "8 or 9'ish" for about five hours.

- Dr. D'Angelo noted that Dr. Parsons' medical report from October 31, 2017, indicated that Claimant attended his 11:15 a.m. appointment without delay or mention of having aggravated his injury due to a violation of work restrictions.

- Claimant claimed that his knee was swollen "4 times the size" of his other knee on that date, prompting him to see Dr. Parsons.

- Dr. D'Angelo noted that Dr. Parson's medical note indicated no such swelling.

23. Dr. D'Angelo testified there was a significant disconnect between Claimant's subjective complaints of pain and his observed behavior. Dr. D'Angelo opined that she did not believe that there was likely any work-related injury. Dr. D'Angelo noted significant issues with Claimant's credibility, which affected her opinion of whether a work-related event occurred as Claimant claimed. Dr. D'Angelo noted that the MRI findings were not acute, but degenerative. She opined that she would not have expected an acute injury to result in a complex tear of the meniscus, as observed on the MRI. Dr. D'Angelo found no evidence of a strain or sprain to the left ankle and opined, "the left knee findings of mild effusion, upon examination, may be a consequence of underlying osteoarthritis." Dr. D'Angelo opined that Claimant was not a reliable historian and had no work-related diagnoses.

24. On April 5, 2018, Claimant returned to work, without restrictions. Claimant testified that he became better without medical treatment.

25. Joshua Maddox, Employer's station manager and Claimant's supervisor, testified at hearing as follows:

- All package car drivers receive annual training to report work injuries immediately, so that they can receive appropriate medical attention and so that Employer has the ability to investigate any reports of injury.

- Claimant carries a DIAD with GPS and communications capabilities that would allow Claimant to report immediately an injury where it occurred.

- He was aware that Claimant always carried a cellular phone, and was able to contact his supervisors by phone because Claimant had previously done so.

- At 2:30 p.m., the approximate time Claimant claims he injured himself; five supervisors would have been on duty to take an injury report.

- He had been in contact with Claimant throughout the day, on October 4, 2017, concerning his route.

26. Mr. Maddox testified that when drivers return to Employer's Hub, they come through the "gun shack," unload any pick-ups or Next Day Air, park their trucks in a bay, do a pre-trip with their DIAD, check-out near the check-in area, and walk into the dispatch office to return their DIADs. Mr. Maddox testified that supervisors would have been available in the Employer Hub during the checkout procedure. Part-time supervisors also are able to take reports of injury. Mr. Maddox testified that there is no time when a supervisor would not be available to take a report of injury.

27. Mr. Maddox testified that he personally interacted with Claimant on the evening of October 4, 2017, when Claimant was checking out at around 6:00 p.m. Mr. Maddox testified that Claimant was not limping and did not appear to be in pain at that time.

28. Mr. Maddox testified that, on October 5, 2017, he notified the union steward, Nate Weaver that he needed to see Claimant in his office and that Mr. Weaver and Claimant entered his office together. According to Mr. Maddox,

- Tameka Austin was not present at the meeting.

- Claimant was not limping when he came into the office and did not indicate that he was in any pain.

- He terminated Claimant under Article 17 of the master contract between Employer and the Teamsters union for "insubordination and other serious offenses."

- Claimant had a history of disciplinary issues involving failure to work as directed and acts of dishonesty.

29. Mr. Maddox testified that Claimant did not report a work-related injury until after he completed the termination meeting. Claimant then reported having rolled his ankle the previous day, and walked out of the meeting with an observable limp.

30. The ALJ finds Mr. Maddox's testimony to be credible and persuasive.

CONCLUSIONS OF LAW

Compensability

A compensable injury is one that arises out of and occurs within the course and scope of employment. § 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Industrial Claim Appeals Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009).

In determining whether a claimant has met his burden of proof, the ALJ may resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence. *Bodensleck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). When determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness, probability or improbability, of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice and interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936). The ALJ should consider an expert witness' special knowledge, training, experience, or research, and has broad discretion to determine the weight of evidence on this basis. *See Young v. Burke*, 338 P.2d 284 (Colo. 1959).

An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). Substantial evidence is that "quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. *See Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). It is not necessary that the ALJ address every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

Based on the totality of the evidence, the ALJ finds and concludes it highly unlikely that Claimant suffered a work-related injury on October 4, 2017, at the time and in the manner he claims. Claimant contends that he suffered an acute injury at 2:30 p.m. when he stepped out of his vehicle and rolled his ankle, causing his knee to "pop." The MRI does not reflect an acute injury but does show degenerative changes suffered over the course of time.

Claimant claims he experienced immediate, debilitating pain but did not report a work injury, as trained. Claimant instead finished the entirety of his shift, delivering the rest of his packages to approximately ten destinations, before returning to Employer's Hub to checkout. Claimant did not report a work-related injury at this time, despite having seen several supervisors, including Mr. Maddox. Claimant did not report an injury or seek medical treatment after returning home, despite claiming that his knee swelled to three times the size of his other knee. Instead, Claimant waited until Employer had terminated him to report an alleged work-related injury.

The ALJ resolves the multiple inconsistencies between Claimant and Mr. Maddox's testimony in favor of Mr. Maddox. For example, Claimant claims that he was experiencing significant pain and limping at the time he was checking out of work on October 4, 2017. However, Mr. Maddox testified that he observed no such limp and received no reports of pain when Claimant left the facility. Claimant claims that he was limping so badly the next day, October 5, 2017, that he could barely walk into work. However, Mr. Maddox testified that he did not observe a limp until after he terminated Claimant. Claimant claims that he immediately told several of Employer's personnel, including Tameka Austin, about his alleged injury. However, Claimant presented no persuasive evidence to support his claim.

Claimant also claimed that Employer forced him to deliver packages, in violation of his work restrictions, on October 31, 2017, for approximately five hours after 8-9 a.m. Claimant claims that his knee swelled to four times the size of normal because of this activity, prompting him to see Dr. Parsons. However, Claimant presented to Dr. Parsons at 11:15 a.m. on October 31, 2017 for a scheduled appointment. There was no indication that he was late, had injured himself at work, or had any significant increased swelling in the knee.

Dr. D'Angelo found Claimant's presentation to be grossly dissimilar to his complaints. Claimant complained of pain and discomfort with carrying his daughter but exhibited no such condition. Claimant also ambulated normally, despite having indicated he was worse than the time of the injury. While Dr. D'Angelo pined that it was medically improbable that Claimant suffered a complex tear in the manner described, especially considering the above evidence.

Last, Claimant claimed to have worsened from the time he was off work completely, to the time he saw Dr. D'Angelo, a period of over three months. Claimant claimed that he had done nothing but rest and ice during that time. Nevertheless, Claimant claimed improvement and was able to return to work at regular duty less than a month after he saw Dr. D'Angelo, with no change to his medical care.

Based on the totality pf the evidence, the ALJ finds and concludes that Claimant did not sustain his burden of proving by the preponderance of the evidence that he sustained a compensable injury.

ORDER

1. Claimant has failed to meet his burden to prove by a preponderance of the evidence that he sustained a compensability injury. Thus, Claimant's claim for compensation is denied and dismissed.

2. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Respondents overcome the DIME's determination Claimant is not at MMI by clear and convincing evidence?

- If Respondents overcame the DIME regarding MMI, did they overcome the DIME regarding impairment and proof by clear and convincing evidence Claimant sustained permanent impairment only to his left shoulder because of the admitted work accident?

FINDINGS OF FACT

1. Claimant suffered admitted injuries in a fall on September 3, 2015. He was "metalizing" a wind turbine tower laying horizontally on its side. He stepped backward and fell through an open door on the tower. He landed on his left side and upper back. He also hit his head, and his helmet was pulled off. At hearing, Claimant showed a post-accident photograph taken with his cell phone showing a large area of abrasion and bruising around his left thoracic and scapular area.

2. Claimant was taken to the emergency room at St. Mary Corwin Hospital. He reported left-sided chest wall pain, left shoulder pain, left hip pain, and left-sided neck pain. X-rays and CT scans of his chest, head, and neck were negative. The ER physician diagnosed "blunt injury of back" and left-sided rib contusions.

3. Claimant began treating with Teresa Turgeon, PA-C at the Hansen Clinic the following day. His primary complaint was constant aching over his left scapular region extending up over the superior aspect of the left shoulder. Physical examination showed pain with cervical range of motion, and tenderness to palpation over the scapular spine, medial border, infraspinatus fossa, and body of the scapula. He could not tolerate O'Brien's, Neer's and Speed's tests due to pain. PA-C Turgeon diagnosed "contusion scapula[ar] region" and placed Claimant in a left shoulder immobilizer.

4. By October 1, 2015, Claimant was noted to be "much better" but was still complaining of pain in the left shoulder, neck, and "across the upper traps." Cervical range of motion was inconsistently described as "full" and "decreased." Claimant had questions about ongoing "time loss episodes" and "memory loss," which PA-C Turgeon opined "most likely [are] from the concussion." Despite that, for unknown reasons, she "suggested that he see his primary physician for this."

5. Claimant returned to PA-C Turgeon on October 19, 2015. His left side complaints were improved, but he was having problems with his right shoulder. PA-C Turgeon documented "his right shoulder is painful even after being on vacation in Hawaii for 2 weeks. . . . [He] does not remember an injury and has not complained about this

prior to this visit." PA-C Turgeon gave Claimant a right shoulder steroid injection "for rotator cuff tendinitis." She opined "he has not mentioned or complained of the right shoulder pain prior to today's visit and had no mention or problems with this and [sic] his initial date of injury, so I do not feel that this is injury related."

6. At his next visit on October 27, 2015, Claimant reported "continued" pain in his right shoulder and mid back. He described an incident at work on October 23 where he was lifting an object and experienced pain in his mid-back at the thoracolumbar level. PA-C Turgeon stated the "new" mid back pain was in the T6 to T10 area.

7. Claimant started seeing Dr. Jorge Klajnbart, an orthopedic surgeon, on November 3, 2015. The treatment note contains some cloned information from prior notes, making it difficult to determine the actual exam findings. Dr. Klajnbart ordered a left shoulder MRI, which showed moderate-to-severe acromioclavicular osteoarthritis, moderate-to-severe tendinosis and a low-grade articular surface partial tear of the supraspinatus tendon. Dr. Klajnbart also ordered a thoracic MRI which showed degenerative changes but no acute pathology.

8. Claimant had an MRI of the right shoulder on January 27, 2016. It showed a full thickness tear of the mid-supraspinatus insertion, tendinopathy of multiple tendons, marked AC joint arthritis, and a degenerative tear of the superior labrum. When he reviewed the MRI in February 2016, Dr. Klajnbart described the right shoulder issues as "posttraumatic."

9. Dr. Klajnbart ultimately performed bilateral shoulder surgeries. He performed right shoulder surgery on March 22, 2016, and left shoulder surgery on September 22, 2016. Both surgeries were authorized and covered under this claim.

10. Dr. Matthew Furman administered thoracic facet blocks on February 24, 2016. The facet blocks provided good, but only temporary, relief. In July 2016, Dr. Klajnbart referred Claimant to Dr. Kenneth Danylchuk "for further evaluation and treatment regarding his thoracic pain." Claimant informed Dr. Klajnbart he attributed the thoracic pain to his original injury.

11. Claimant saw Dr. Danylchuk on September 13, 2016. Dr. Danylchuk noted Claimant had been referred by Dr. Klajnbart fro "ongoing neck, mid thoracic and lumbar spine pain. He has not had any previous neck, mid back or lumbar spine pain from any other source." was referred noted Claimant's pain was "mostly in the cervical spine." Dr. Danylchuk was "perplexed that he has not seen a physician for his neck and his back." He ordered cervical and lumbar MRIs. The cervical MRI showed degenerative changes producing spinal stenosis and neuroforaminal narrowing at multiple levels. There was also a paracentral disc protrusion at C7-T1. The lumbar MRI showed neuroforaminal stenosis and moderate facet joint disease, most notable at L4-5 and L5-S1.

12. On January 25, 2017, Dr. Joseph Fillmore performed a Physician Advisor record review for Insurer in response to a request for authorization of cervical ESIs from

C5-T1. He opined injections at four levels were not appropriate but recommended approval of injections at C5-6 and C6-7.

13. On February 3, 2017, Dr. Danylchuk responded to an inquiry from Insurer's nurse case manager regarding the cervical ESIs. He noted Claimant "had no treatment to his cervical spine prior to this significant fall at work. Even with the noted degenerative findings, his need for current treatment most likely is related to this work injury."

14. Dr. Stephen Ford performed three cervical ESIs in February, March, and April of 2017.

15. In May 2017, Claimant saw Dr. Gary Ghiselli, a spine surgeon, at Dr. Danylchuk's request. Claimant described neck pain, headaches, and numbness in his arms. He noted the April 2017 cervical ESI gave good pain relief for approximately eight days. Dr. Ghiselli's diagnoses included "upper neck pain and headaches since a work injury in September 2015." He opined that the precise pain generator "has not been thoroughly teased out as of yet." He recommended that Claimant "work closely with a physiatrist to get more specific injections such as facet injections and/or a right C3-4 TFESI. If the facets are teased out then a rhizotomy could be done. If the source of his pain is teased out and he wants to further discuss possible surgery then he can return to see us."

16. Dr. Allison Fall performed an IME for Respondents on July 27, 2017. Dr. Fall opined Claimant's injury-related conditions were limited to the left shoulder and left scapulothoracic area. She believed Claimant suffered a permanent aggravation of a pre-existing condition in the left shoulder for which surgery was appropriate. She also diagnosed left scapulothoracic myofascial pain, i.e., "myospasms." She opined Claimant had "no specific separate injury to the cervical spine," nor did he injure the lumbar spine. She opined Claimant was at MMI with permanent impairment limited to the left shoulder. She thought rating the scapulothoracic myofascial pain would be "duplicative" of the left shoulder rating.

17. Dr. Klajnbart reviewed Dr. Fall's IME in October 2017. He opined "I do not concur and do disagree with the IME results. . . . Individual [was] able to lay greater than 3000 pounds of concrete and working mechanized 50-pound machine prior to this injury. Although I do concur that there is pre-existing disease process in the cervical spine [this] individual was asymptomatic prior to this injury and presented with new findings and continues to progress with new findings significant on today's exam with neurological changes in the C7 C8 nerve root pattern." Dr. Klajnbart recommended a neurosurgical consultation, electrodiagnostic testing of the upper extremities, and "formalized counseling secondary to his chronic pain and inability to sleep with some family distress."

18. Dr. James Regan performed a 24-month DIME at Respondents' request on November 24, 2017. Dr. Regan opined Claimant's bilateral shoulders were at MMI, but Claimant was not at MMI for the cervical and thoracic issues. He recommended evaluation by a physiatrist for further treatment of the thoracic spine and cervical spines. He also thought Claimant should have a chance to follow-up with Dr. Ghiselli after

physiatric treatment. He agreed with Dr. Klajnbart's recommendation for EMG/NCV testing which "will help regarding any surgical considerations." Although he found Claimant was not at MMI, Dr. Regan calculated an advisory impairment rating of 38% whole person, encompassing the cervical spine, thoracic spine, and bilateral shoulders.

19. Dr. Fall reviewed the DIME and authored a supplemental report on January 17, 2018 stating her opinions regarding causation and MMI were unchanged. She also disagreed with Dr. Regan's impairment rating in several respects.

20. Dr. Fillmore performed an IME for Respondents on February 22, 2018. Dr. Fillmore indicated the fall could have irritated Claimant's cervical spine initially, but the current complaints were not related to the accident. He opined the right shoulder was not injury-related because there was no documentation Claimant fell on his right side, and the early records said Claimant recalled no injury to the right shoulder. He opined the thoracic symptoms were degenerative and not injury-related. Dr. Fillmore concluded the only injury-related body part is the left shoulder, for which Claimant was at MMI.

21. Respondents obtained several hours of video surveillance in March 2018. The video depicts Claimant performing a variety of activities, including operating a bobcat, performing yard work, picking up items in his yard, and driving his vehicle. Claimant does not demonstrate any overt pain behaviors and appears to perform all activities without difficulty.

22. Claimant saw Dr. Rook for an IME at the request of his counsel on March 12, 2018. Dr. Rook noted Claimant had a prior neck injury in 2009 that resolved without sequelae. He emphasized Claimant had no symptoms, limitations or treatment any neck or other musculoskeletal condition for several years before the industrial accident. Dr. Rook opined the accident aggravated Claimant's pre-existing but "previously asymptomatic" cervical and thoracic degenerative disc disease. He agreed with Dr. Regan's determination Claimant was not at MMI for his neck and mid back. He opined that Dr. Fall's opinions represented a mere "difference of opinion" with the DIME.

23. Dr. Rook reviewed the surveillance video after he issued his IME report. Dr. Rook acknowledged Claimant "did not appear to be in any distress" while performing various activities, but noted the activities "appeared to fall within a sedentary physical demand level." He opined the video did not change any of his conclusions regarding causation of the cervical and thoracic conditions, although it might be useful in assessing Claimant's physical restrictions.

24. Dr. Klajnbart testified in deposition for Respondents on May 4, 2018. He had minimal specific recollection of Claimant's history and had to rely primarily on his notes for details. Dr. Klajnbart was impressed with the surveillance video, which he believed was inconsistent with Claimant's clinical presentation. Dr. Klajnbart saw no evidence of any medical condition that required further treatment. He opined the left shoulder was the only injury-related condition and Claimant was at MMI.

25. Dr. Fillmore testified at hearing for Respondents. He had reviewed the surveillance video in the interim, which strengthened his conviction regarding the opinions expressed in his IME report. He opined the activities depicted on the video were inconsistent with Claimant's clinical presentation at the IME.

26. Respondents took a post-hearing deposition of Dr. Regan on June 29, 2018. In his deposition, Dr. Regan modified the opinions expressed in his DIME report. Dr. Regan explained he had not previously undertaken a detailed causation analysis because he assumed causation of the bilateral shoulders, thoracic spine and cervical spine was admitted and undisputed. Upon further questioning and reflection during the deposition, Dr. Regan affirmed his conclusion that Claimant's left shoulder and cervical spine problems were caused by the accident. Dr. Regan explained his use of the term "cervical" includes Claimant's left scapular pain, which he believes emanates from the cervical spine. He determined the right shoulder and low back are not causally related to the industrial accident.

27. Dr. Regan gave conflicting testimony regarding whether Claimant's ongoing thoracic symptoms are related to the September 3, 2015 fall or the October 23, 2015 lifting incident. Specifically, Dr. Regan's testified:

> A. I personally think the ongoing difficulties he had with his thoracic spine were from the workers' comp injury. (p. 40).
>
> * * * *
>
> A. I'm still going to stick with my original contention that the T-spine, midback dates back to the September 3, 2015 injury. (pp. 56-57).
>
> * * * *
>
> A. I don't think I'm going to be able to buttress my opinion, other than a subjective instinct. [ ] I'm not going to be able to, within the context of a reasonable medical doubt – or however we put that legally. I'm not going to be able to ascribe the thoracic pain to 9/3/15. Even if I believe that, I would not be able to prove it without reasonable doubt. So I have to agree that the intervening accident certainly muddles the situation, and it makes me unable to with certainty say from that point on any midback pain can be ascribed to 9/3 as opposed to the 10/23.
>
> * * * *
>
> Q. [H]ow about if I say that within a reasonable degree of medical probability we can only say as of today that the cervical spine and the left shoulder are body parts related to his original work accident?
>
> A. I'd agree with exactly what you just said. (p.73).
>
> * * * *

Q. [R]egarding the midback. . . . [is it] your opinion that this fall that, according to the emergency room, resulted in a blunt injury of his back . . . he had essentially resolved that condition by the time he had the subsequent lifting injury in October [2015]; is that your opinion?

A. That's not my opinion. I would agree that I can't with utter confidence claim that any ongoing back pain after the 10/23 event should still be traced to September. I already said that. I can't say with certainty, meaning that any ongoing pain thereafter could be from the 10/23 injury. (p.96).

28. The primary ambiguity arose when Dr. Regan was asked to agree with a question posed by Respondents' counsel whether he could state his opinion with a "reasonable degree of medical probability." When given the opportunity to state his opinion directly, he repeatedly expressed his belief Claimant's thoracic symptoms are related to the September 2015 accident. Dr. Regan was clearly confused about the degree of "certainty" to which he must express his opinions, and the ALJ doubts he could define the term "reasonable medical probability." [1] The ALJ finds Dr. Regan's true opinion is the thoracic spine is related to the admitted accident, even though he cannot state that opinion "with utter confidence," beyond "a reasonable medical doubt," or "with certainty."

29. Dr. Regan expressed conflicting opinions regarding MMI, stating at various points in the deposition Claimant was at MMI and was not at MMI. In the end, Dr. Regan maintained Claimant is not at MMI.[2]

30. Respondents failed to overcome the DIME's revised determination of MMI by clear and convincing evidence.

CONCLUSIONS OF LAW

The DIME's determination of MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c), C.R.S.; *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). This is a higher standard of proof than the typical "preponderance" standard. Clear and convincing evidence is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). The party challenging a DIME's conclusions must demonstrate it is "highly probable" that the MMI finding is incorrect. *Qual-Med*, 961 P.2d at 592; *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A "mere difference of medical opinion" does not constitute clear and convincing evidence that the DIME is incorrect. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016).

[1] Dr. Regan's confusion is understandable because the courts have "no consensus" as to the meaning of the phrase "reasonable medical probability." *People v. Ramirez*, 155 P.3d 371, 376, fn.6 (Colo. 2007). The Supreme Court described the phrase as "outdated," and the ALJ is aware of no authority which requires the DIME to state his conclusions with "reasonable medical probability."

[2] Dr. Regan concluded, "[T]he man I saw . . . was not at maximum medical improvement. I felt more could be done for his neck. . . . [T]here is a possibility that more can be done to help this individual until he is decreed to be at MMI, and I'm not content to do it just based on a video . . . ." (p.92).

In determining whether a claimant is at MMI, the DIME "inherently" must decide whether further treatment is causally related to the industrial injury, and the DIME's determination that a particular condition is or is not related to the industrial injury is binding unless overcome by clear and convincing evidence. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998). MMI is not "divisible," so Respondents must prove Claimant is at MMI for "each component of the injury." *Paint Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010); *Lozano v. Alvarados, Inc*., W.C. No. 4-904-266-06 (February 27, 2017).

The DIME's "determination" is not limited to conclusions reached in the initial report, but includes any supplemental reports and testimony. *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005). If the DIME issues conflicting or ambiguous opinions about whether the claimant's condition is work-related, or whether the claimant has reached MMI, the ALJ must determine the DIME's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2005). Once the ALJ clarifies any ambiguity regarding these issues, the party seeking to overcome the opinion must do so by clear and convincing evidence. *Id.*

As found, Respondents failed to overcome the DIME's revised determination regarding MMI and causation of the cervical and thoracic spines by clear and convincing evidence. As an initial matter, Dr. Regan's recommendations for further evaluation and diagnostic testing (evaluation by a physiatrist, EMG/NCV testing, reevaluation by Dr. Ghiselli) are sufficient to find Claimant not at MMI. Reasonably necessary diagnostic procedures are a prerequisite to MMI if they have a "reasonable prospect" of diagnosing or defining the claimant's condition so as to suggest a course of further treatment." *E.g., Soto v. Corrections Corp*., W.C. No. 4-813-582 (October 27, 2011); *Villela v. Excel Corporation*, W.C. No. 4-400-281 (February 1, 2001). Indeed, the recommendation for electrodiagnostic testing alone would be a legally justifiable basis for a not-at-MMI finding. *Soto v. Corrections Corp*., *supra*.

The persuasive evidence presented by Respondents does not rise to the level of "clear and convincing." The opinions expressed by Drs. Fall, Klajnbart, and Fillmore[3] amount to "mere differences of medical opinion" regarding causation and the need for further evaluation and treatment. While the surveillance video gives the ALJ pause regarding the reliability of Claimant's pain complaints, it was not compelling enough to convince Dr. Regan to change his ultimate conclusion regarding MMI. Dr. Rook expressed a similar opinion. Although the movements and activities demonstrated in the video would be compelling evidence on the issue of impairment,[4] the ALJ finds it less useful on the question of MMI. Although Claimant has probably exaggerated the severity of his symptoms to some extent, he does have significant objective pathology in his cervical and thoracic spines that is reasonably likely to produce some level of pain. There

[3] The ALJ notes Dr. Klajnbart and Dr. Fillmore have expressed conflicting opinions in this matter. In October 2017, Dr. Klajnbart disagreed with Dr. Fall's conclusions, but essentially agreed with her opinions in his deposition testimony. And Dr. Fillmore supported injections for Claimant's neck in January 2017, but later determined the neck was not related to the accident.

[4] Indeed, Dr. Regan agreed his advisory impairment rating is invalid given the significant discrepancy between clinical ROM measurements and the movements demonstrated on the video.

is no persuasive evidence he was symptomatic or required any treatment for his underlying cervical and thoracic degenerative changes before the accident. The impact from his fall was significant enough to cause a large area of bruising around his left scapula and mid back. The argument that Claimant's thoracic symptoms are instead related to the trivial event at work on October 23, 2015 is unpersuasive. Claimant reported neck pain from the outset — at the emergency room and at the Hanson Clinic — which he states never resolved. Dr. Danylchuk was "perplexed" why Claimant had still not received treatment for the neck a year after the accident. Dr. Regan credited Claimant's assertion that PA-C Turgeon discounted and failed to properly document his complaints, which is a legitimate basis for him to question the accuracy of the treatment records. Dr. Regan's conclusions are one reasonable interpretation of the available evidence, and the ALJ is not persuaded that his conclusions were "highly probably incorrect."

ORDER

It is therefore ordered that:

1. Respondents' request to overcome the DIME regarding MMI is denied and dismissed.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 30, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable right shoulder injury on December 13, 2017 or December 25, 2017 during the course and scope of his employment with Employer.

2. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive authorized medical treatment, including the right shoulder surgery recommended by Cary Motz, M.D., that is reasonable and necessary to cure or relieve the effects of his industrial injury.

4. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period February 26, 2018 until terminated by statute.

4. Whether Respondents have proven by a preponderance of the evidence that Claimant willfully failed to obey a safety rule in violation of §8-42-112(1)(b) C.R.S. on December 13, 2017 and his non-medical benefits should thus be reduced by fifty percent.

FINDINGS OF FACT

1. Claimant is a 61-year-old male Feeder Driver for Employer. He has worked as a long-haul driver for Employer for 13 years.

2. The record reflects that Claimant has suffered an extensive history of chronic right shoulder pain. On April 12, 2016 Claimant visited personal medical provider Peak Vista for right shoulder symptoms. He reported that the pain began four months earlier and was located in his right rotator cuff area. Claimant had been injured in a motor vehicle accident. He remarked that his right shoulder pain is aggravated by lifting but relieved by ice and chiropractic treatment. Katrina De Romana, NP diagnosed Claimant with chronic right shoulder pain and referred him for physical therapy.

3. On May 6, 2016 Claimant visited Parker Adventist Hospital for an initial physical therapy evaluation. He reported chronic right shoulder issues that were exacerbated after a December 2015 motor vehicle accident in which he struck the left, front quarter panel of his vehicle. Regular chiropractic visits did not alleviate Claimant's right shoulder symptoms. Claimant also reported a direct fall onto his right shoulder 30 years earlier and noticed a bump on his shoulder as a result of the incident. A physical examination revealed a prior AC joint separation. Claimant commented that he enjoyed golf and tennis but was unable to participate because of his right shoulder condition. His therapeutic goals included resuming golf and tennis as well as working around the

house without shoulder irritation. The physical therapist noted that Claimant suffered from a "chronic dysfunction that may not fully resolve."

4. A June 3, 2016 note from Parker Adventist Hospital stated that Claimant visited a chiropractor on a weekly or monthly basis. However, the treatment was not improving his symptoms.

5. On December 1, 2017 Claimant visited primary care physician Oladiran Oluwaseun, M.D. at Peak Vista. Claimant reported right shoulder pain.

6. Claimant testified that on December 13, 2017 he injured his right shoulder while working for Employer when detaching a tractor from a trailer. The process involved removing a portable fifth wheel or dolly that connects trailers. Claimant specifically remarked that he felt a pop in his right shoulder when he was lifting the tongue of the dolly. He commented that on December 25, 2017 he aggravated his right shoulder condition while completing the same activity.

7. On December 27, 2017 Claimant returned to Dr. Oluwausen at Peak Vista. Claimant reported "right shoulder pain, multiple injuries of past 45 years, wants to get stem cell injections." Dr. Oluwaseun noted that the onset of Claimant's condition was "45 years ago" and stable. The symptoms were persistent but relieved by physical therapy. Dr. Oluwaseun diagnosed Claimant with chronic right shoulder pain and ordered an MRI. Claimant did not report any work injury or acute onset of pain.

8. On January 5, 2018 Claimant underwent a right shoulder MRI. On the intake form Claimant noted "pain when raised," "MVA-2015" and "Golfing Sept. 2017." He remarked that the onset of symptoms was two years ago. Claimant did not mention any work injury or acute onset of pain around December 13, 2017 or December 25, 2017. The MRI revealed a full-thickness complete tear of the distal supraspinatus tendon with retraction of degenerated torn tendon fibers. Claimant also exhibited mild supraspinatus muscle atrophy without fatty infiltration. The clinical impression was "chronic right shoulder pain and recurrent prior trauma."

9. On January 16, 2018 Claimant reported a work injury to Employer. Claimant had recently been advised by Peak Vista that his right shoulder MRI revealed a rotator cuff tear. He noted that he suffered a right shoulder injury on December 13, 2017 when he lifted the tongue of a dolly from the stowed position to attach to the pintle hook of a tractor. He completed a written statement in which he explained that he felt something pull but did not think he was injured. However, he underwent an MRI and was advised that he had a rotator cuff tear. Claimant selected Carrie Burns, M.D. at Concentra Medical Centers as his Authorized Treating Physician (ATP).

10. On January 17, 2018 Claimant visited Gary Scofield, PA-C at Concentra for an evaluation. Claimant reported that on December 13, 2017 he was pulling a heavy dolly to a hitch at work and felt a sharp pain in his right shoulder. He did not mention any right shoulder injury on December 25, 2017. PA-C Scofield diagnosed Claimant

with a right rotator cuff tear. He assigned Claimant a 15 pound lifting restriction and referred him for an orthopedic evaluation. Claimant began working light duty.

11. On January 23, 2018 Claimant visited Orthopedic Surgeon Cary Motz, M.D. for an examination. Claimant reported a right shoulder injury while pulling a dolly at work on December 13, 2017. He did not mention an injury on December 25, 2017. Claimant denied any significant prior right shoulder issues. Dr. Motz diagnosed Claimant with: a right shoulder large rotator cuff tear, inferior clavicular spur and impingement syndrome. He recommended arthroscopic rotator cuff surgery. Dr. Motz remarked that his decision to recommend surgery was based on Claimant's functional loss and discomfort.

12. On January 24, 2018 Claimant underwent a physiatry evaluation with Shimon Blau, M.D. Claimant reported that he suffered a right shoulder injury at work on December 13, 2017 but did not report any injury on December 25, 2017. He was not currently experiencing right shoulder pain and was working light duty with restrictions. Dr. Blau agreed with the referral to orthopedist Dr. Motz and noted that he should assume Claimant's pain medication management.

13. On February 26, 2018 Claimant was terminated from light duty employment. He has not worked subsequent to his termination.

14. On May 31, 2018 Claimant underwent an independent medical examination with Kathleen D'Angelo, M.D. Claimant reported right shoulder pain after pulling a fifth wheel handle to release a trailer at work on December 13, 2017. He remarked that he aggravated his right shoulder condition while again pulling a fifth wheel handle on December 25, 2017. After reviewing Claimant's medical history and performing a physical examination Dr. D'Angelo determined that Claimant did not suffer a rotator cuff tear as a result of the December 13, 2017 or December 25, 2017 work incidents. She explained that Claimant has suffered a long history of chronic right shoulder problems. The rotator cuff tear was not an acute injury because Claimant was able to continue working for over one month after the fifth wheel incident. Dr. D'Angelo attributed Claimant's chronic right rotator cuff tear to atrophy and age. She commented that atraumatic rotator cuff tears are common in individuals over the age of 50.

15. Dr. D'Angelo testified at the hearing in this matter. Claimant reported that he had not suffered a right shoulder injury prior to December 13, 2017 but had some issues with the shoulder that stemmed from a motor vehicle accident. Dr. D'Angelo remarked that Claimant's clinical history was inconsistent with an acute rotator cuff tear because an acute injury would cause significant pain and disability. She would have expected evidence of significant swelling and subcutaneous blood deposits with an acute injury. However, swelling and blood deposits were absent at the time of his initial evaluation, MRI and subsequent examinations.

16. Dr. D'Angelo explained that Claimant's presentation and MRI findings were consistent with a degenerative rotator cuff tear. She noted that the right shoulder MRI reflected atrophy with no fatty infiltration. Dr. D'Angelo commented that it takes a

muscle approximately 18 months to two years to atrophy, but fatty infiltration does not develop for about three to five years after a degenerative tear. She thus reasoned that Claimant's degenerative right rotator cuff tear occurred approximately 18 months to five years prior to the January 5, 2018 MRI. Furthermore, Claimant's ability to continue working was consistent with a degenerative rotator cuff tear because they can be asymptomatic for extended periods of time. Claimant's ability to continue to use his shoulder at work by resting and using ice did not suggest an acute injury. An acute tear would have been traumatic, caused swelling and reflected bleeding on the MRI. Dr. D'Angelo thus summarized that Claimant did not suffer an acute rotator cuff tear while working for Employer on December 13, 2017 or December 25, 2017.

17. Claimant has failed to establish that it is more probably true than not that he sustained a compensable right shoulder injury on December 13, 2017 or December 25, 2017 during the course and scope of his employment with Employer. Initially, Claimant testified that he injured his right shoulder while detaching a tractor from a trailer. He specifically remarked that he felt a pop in his right shoulder when he was lifting the tongue of a dolly. However, the medical records are replete with evidence that Claimant has suffered an extensive history of chronic right shoulder symptoms from a degenerative tear that was not caused, aggravated or accelerated by his work activities for Employer on December 13, 2017 or December 25, 2017.

18. Claimant has experienced right shoulder symptoms and pain from a myriad of injuries over many years. Claimant acknowledged that he suffered from chronic right shoulder symptoms that were exacerbated after a December 2015 motor vehicle accident. Regular chiropractic visits did not alleviate Claimant's right shoulder symptoms. Claimant also reported a direct fall onto his right shoulder 30 years earlier and noticed a bump on his shoulder as a result of the incident. A physical examination at a May 6, 2016 physical therapy visit also revealed a prior AC joint separation. Even by December 1, 2017 Claimant reported to his primary care provider Dr. Oluwaseun that he had suffered multiple right shoulder injuries over 45 years and wanted stem cell injections. Furthermore, on the January 5, 2018 right shoulder MRI intake form Claimant noted "pain when raised," "MVA-2015" and "Golfing Sept. 2017." He remarked that the onset of symptoms was two years ago. Claimant did not mention any work injury or acute onset of pain around December 13, 2017 or December 25, 2017.

19. On January 16, 2018 Claimant reported a work injury to Employer after he had been informed that his MRI revealed a right rotator cuff tear. However, as Dr. D'Angelo persuasively explained Claimant's clinical history was inconsistent with an acute rotator cuff tear because an acute injury would have caused significant pain and disability. She commented that there would be evidence of significant swelling and subcutaneous blood deposits with an acute injury. However, swelling and blood deposits were absent at the time of Claimant's initial evaluation, MRI and subsequent examinations. Claimant's presentation and MRI findings were more consistent with a degenerative rotator cuff tear. Dr. D'Angelo noted that the right shoulder MRI reflected atrophy with no fatty infiltration. She explained that it takes a muscle approximately 18 months to two years to atrophy, but fatty infiltration does not develop for about three to five years after a degenerative tear. Dr. D'Angelo thus reasoned that Claimant's

degenerative right rotator cuff tear occurred approximately 18 months to five years prior to the January 5, 2018 MRI. Furthermore, Claimant's ability to continue working was consistent with a degenerative rotator cuff tear because they can be asymptomatic for extended periods of time. In contrast, an acute tear would have been traumatic, caused swelling and reflected bleeding on the MRI. Dr. D'Angelo thus summarized that Claimant did not suffer an acute rotator cuff tear while working for Employer on December 13, 2017 or December 25, 2017.

20. Claimant's extensive history of chronic right shoulder problems in conjunction with the persuasive opinion of Dr. D'Angelo reflects that he likely did not suffer an acute tear while working for Employer on December 13, 2017 or December 25, 2017. Claimant's job activities did not aggravate, accelerate or combine with a pre-existing condition to produce a need for medical treatment. In fact, Claimant worked full duty subsequent to December 17, 2017 and did not report a right shoulder injury to Employer until after discovering a right rotator cuff tear on an MRI. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re*

Swanson, W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable right shoulder injury on December 13, 2017 or December 25, 2017 during the course and scope of his employment with Employer. Initially, Claimant testified that he injured his right shoulder while detaching a tractor from a trailer. He specifically remarked that he felt a pop in his right shoulder when he was lifting the tongue of a dolly. However, the medical records are replete with evidence that Claimant has suffered an extensive history of chronic right shoulder symptoms from a degenerative tear that was not caused, aggravated or accelerated by his work activities for Employer on December 13, 2017 or December 25, 2017.

8. As found, Claimant has experienced right shoulder symptoms and pain from a myriad of injuries over many years. Claimant acknowledged that he suffered from chronic right shoulder symptoms that were exacerbated after a December 2015 motor vehicle accident. Regular chiropractic visits did not alleviate Claimant's right shoulder symptoms. Claimant also reported a direct fall onto his right shoulder 30 years earlier and noticed a bump on his shoulder as a result of the incident. A physical examination at a May 6, 2016 physical therapy visit also revealed a prior AC joint separation. Even by December 1, 2017 Claimant reported to his primary care provider

Dr. Oluwaseun that he had suffered multiple right shoulder injuries over 45 years and wanted stem cell injections. Furthermore, on the January 5, 2018 right shoulder MRI intake form Claimant noted "pain when raised," "MVA-2015" and "Golfing Sept. 2017." He remarked that the onset of symptoms was two years ago. Claimant did not mention any work injury or acute onset of pain around December 13, 2017 or December 25, 2017.

9. As found, on January 16, 2018 Claimant reported a work injury to Employer after he had been informed that his MRI revealed a right rotator cuff tear. However, as Dr. D'Angelo persuasively explained Claimant's clinical history was inconsistent with an acute rotator cuff tear because an acute injury would have caused significant pain and disability. She commented that there would be evidence of significant swelling and subcutaneous blood deposits with an acute injury. However, swelling and blood deposits were absent at the time of Claimant's initial evaluation, MRI and subsequent examinations. Claimant's presentation and MRI findings were more consistent with a degenerative rotator cuff tear. Dr. D'Angelo noted that the right shoulder MRI reflected atrophy with no fatty infiltration. She explained that it takes a muscle approximately 18 months to two years to atrophy, but fatty infiltration does not develop for about three to five years after a degenerative tear. Dr. D'Angelo thus reasoned that Claimant's degenerative right rotator cuff tear occurred approximately 18 months to five years prior to the January 5, 2018 MRI. Furthermore, Claimant's ability to continue working was consistent with a degenerative rotator cuff tear because they can be asymptomatic for extended periods of time. In contrast, an acute tear would have been traumatic, caused swelling and reflected bleeding on the MRI. Dr. D'Angelo thus summarized that Claimant did not suffer an acute rotator cuff tear while working for Employer on December 13, 2017 or December 25, 2017.

10. As found, Claimant's extensive history of chronic right shoulder problems in conjunction with the persuasive opinion of Dr. D'Angelo reflects that he likely did not suffer an acute tear while working for Employer on December 13, 2017 or December 25, 2017. Claimant's job activities did not aggravate, accelerate or combine with a pre-existing condition to produce a need for medical treatment. In fact, Claimant worked full duty subsequent to December 17, 2017 and did not report a right shoulder injury to Employer until after discovering a right rotator cuff tear on an MRI. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's Workers' Compensation claim is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or

service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Did Claimant prove by a preponderance of the evidence that the proposed vestibular testing is reasonable, necessary, and related to the industrial injury?

- Did Claimant prove by a preponderance of the evidence that the prescription for hearing aids is reasonable, necessary, and related to the industrial injury?

FINDINGS OF FACT

1. Claimant began working for Employer in approximately 2010. He worked as a driver/warehouse worker. In that capacity, he works in the warehouse loading and unloading trucks.

2. On May 6, 2010, Claimant sustained a work-related injury in which he tripped over a fence and struck his head. Albert Hattem, M.D. determined Claimant was at MMI on March 4, 2013. Dr. Hattem's impression was status post C4-5 anterior cervical decompression and fusion by Dr. Ghiselli on November 2, 2011 for severe spinal stenosis and associated instability. Dr. Hattem assigned a 20% whole person impairment, which included loss of range of motion for the cervical spine, C5 radiculopathy and a single level operation. Claimant was also assigned a 3% upper extremity impairment. At the time of this determination, no symptoms related to Claimant's hearing were noted, nor did Dr. Hattem identify issues with regard to balance. Claimant received a full duty release to return to work, with no restrictions.

3. Claimant's medical history was significant in that he saw his family physician regarding decreased hearing. More particularly, Claimant was evaluated on September 30, 2014 by Larry Doehring, D.O. at Complete Family Care. Decreased hearing was listed as the present illness, along with diabetes, back pain and flu immunization. In the review of systems, bilateral hearing loss was noted, but there was no indication in the report how that was determined. There was no record of the hearing testing done time. No treatment recommendations were made by Dr. Doehring with regard to the hearing loss.

4. On January 11, 2017, Claimant suffered an admitted industrial injury while working for Employer. He had unloaded carpet for customer and went to get another roll that was stuck. He pulled on the roll and fell in between the dock and the truck, hitting the back of his head against a forklift.

5. Claimant was transported to the hospital by ambulance. Claimant reported a loss of consciousness ("LOC") and was unable to identify the date. In the Denver Health and Hospital Paramedic Division report, EMT Leigh Foster's impression was:

head trauma. A dime-sized hematoma was noted on the left lateral occipital region. There was also a note that bystanders observed video footage and said there was not a LOC or seizure activity.[1]

6. Claimant was evaluated in the Emergency Department at Swedish Medical Center by Kelly Wong, PA and attending physician Glenda Quan, M.D. Claimant reported a loss of consciousness when he missed a step and fell, hitting his head. He complained of neck and shoulder pain, numbness and tingling in the hands and forearms, with right by pain. The CT demonstrated a failure of the fusion at C4-5 and Claimant was evaluated by Peter Syre, M.D. Dr. Syre recommended surgical decompression, likely C3-7 posterior fusion to address the cord compression.

7. On January 13, 2017, Claimant underwent surgery for his cervical spine, which was performed by Dr. Syre. In particular, Dr. Syre performed a C3-4, C4-5 and C5-6 laminectomy, C3-4 C4-5, C5-6 and C6-7 posterior arthrodesis and posterior instrumentation.

8. While Claimant was still hospitalized, on January 14, 2017, an MRI and plain x-ray films showed a contusion to the right lateral musculature of the right leg. Claimant was discharged on January 17, 2017.

9. On February 16, 2017, Claimant was evaluated by Hiep Ritzer, M.D. at Colorado Occupational Medicine. Claimant's complaints included multiple concussive-type symptoms-headache, blurred vision, hearing, neck pain, bilateral upper back pain and low back pain, bilateral upper extremity parasthesias. Dr. Ritzer's assessment was: closed head injury; concussion; central cord syndrome; cervical instability-stable post-surgery January 14, 2017, with parasthesias, bilateral upper extremities; right thigh hematoma; left calf strain, with negative DVT.

10. Dr. Ritzer concluded Claimant's complaints were consistent with history and work-related mechanism of injury. He was to continue with his medications and home PT. Dr. Ritzer referred Claimant to Dr. Politzer for visual complaints. Claimant's hearing loss and other cognitive complaints were to be monitored to see if there was improvement. The ALJ inferred Dr. Ritzer was of the opinion that the hearing loss, visual and cognitive complaints were causally related to work injury.

11. In a follow-up evaluation on March 13, 2017, Dr. Ritzer's diagnoses were the same as on February 16, 2107. Dr. Ritzer referred Claimant to Yusuke Wakeshima, M.D. for pain management.

12. On May 23, 2017, Matthew Lugliani, M.D. evaluated Claimant. At that time, Claimant was complaining of headaches, neck pain, persistent numbness and tingling involving both hands. Dr. Lugliani noted Dr. Wakeshima recommended referral to ENT and vestibular therapy. Dr. Lugliani's assessment was: closed head injury;

[1] The ALJ noted that it did not appear from this reference that the paramedics viewed the video. No video was admitted into evidence at hearing.

concussion; central cord syndrome; cervical instability, status post-surgery January 14, 2017, with bilateral upper extremity parasthesias.

13. On June 16, 2017, Dr. Wakeshima evaluated Claimant and included as part of the assessment: closed head injury, visual abnormalities and hearing loss. No specific treatment recommendations were made with regard to those problems.

14. Claimant returned to Dr. Lugliani on July 18, 2017. At that time, it was noted Claimant had not heard anything with regard to referrals for ENT and vestibular therapy. Dr. Luke Leon he issued new referrals for vestibular therapy and ENT. The ALJ inferred Dr. Lugliani was of the opinion that the vestibular complaints were causally related to work injury and Claimant required an ENT evaluation, which was the basis of the referral to Dr. Lipkin.[2]

15. Claimant was evaluated by Dr. Lipkin on August 7, 2017. Claimant stated he felt pressure both ears, along with constant high-pitched non-versatile tinnitus bilaterally. He also had experienced hearing loss since the accident and reported his hearing was normal prior to the injuries. Dr. Lipkin's assessment was tendinitis, bilateral; dizziness; bilateral sensorineural hearing loss; peripheral vertigo, specified laterality.

16. Dr. Lipkin noted Claimant was unsteady on his feet, with no focal vestibular signs. The audiogram showed hearing WNL sloping to a moderately severe SNHL, AU, which made Claimant a good candidate for high-quality hearing aids. Dr. Lipkin ordered a videonystagmogram, fistula test, and evoked potential studies.

17. Dr. Lipkin testified as an expert in Otolaryngology, the specialty in which he is board-certified. He is Level II accredited pursuant to the WCRP. Dr. Lipkin noted he was not the physician makes a determination as to whether someone has a brain injury.

18. Dr. Lipkin stated balance issues can be associated with cervical injuries. As an ear specialist, he generally dealt with patients like this concerning balance problems and hearing problems. Dr. Lipkin testified the testing he recommended could be helpful in treatment and these tests were consistent with the Medical Treatment Guidelines ("MTG"). Dr. Lipkin stated that although Claimant was not grossly unsteady on his feet, additional testing was warranted.

19. Dr. Lipkin disagreed with Dr. Lesnak who opined Claimant did not require balance evaluations, therapies, ENT evaluations or treatments. Dr. Lipkin stated:

[2] This was supported by Dr. Lugliani's note on August 29, 2017 questioning why ENT had not been approved by insurance and noting it was unclear whether or not vestibular therapy was approved.

”This is somebody with persisting lingering post-traumatic balance problems, has not been tested and could easily have a treatable condition. He might. He might not. But something that we need to try to find out”.[3]

The ALJ found this testimony to be persuasive, as Dr. Lipkin articulated why he believed the testing was necessary.

20. Dr. Lipkin also testified that it was difficult to make a determination whether hearing loss was associated with old age and the injury.[4] Claimant had nerve loss in both ears and it was not always completely possible to determine whether this was due to age or injury. Dr. Lipkin noted that audiogram can have all kinds of patterns and with blows to the occipital area, he had seen flat type of hearing loss. He had also seen patients with sloping high-frequency hearing loss out of proportion to what one would normally expect, as in the present case. Dr. Lipkin opined that the current symptoms appearing on his work-related to the 2017 injury. Dr. Lipkin went on to state that it was not possible to make an apportionment from pre-or post-injury, but the type of injury mechanism of injury can be associated with hearing loss. The ALJ noted Dr. Lipkin could not definitively state what portion of Claimant’s hearing loss preexisted the subject injury.

21. Claimant testified he noticed his hearing worsened after he was injured. He said he had trouble hearing what people were saying at work, which was noticed by his wife.[5]

22. On March 6, 2018, was evaluated by Lawrence Lesnak, M.D. at the request of Respondents. Claimant was complaining of constant frontal parietal headaches, which increased with activity. He also had mild suboccipital headaches and residual mild neck pain/stiffness. Claimant reported he had never had auditory/hearing tests.

23. Dr. Lesnak noted in his impression claimant suffered a possible cervical/trapezius strain/sprain injury that occurred on January 11, 2017. There was clinical evidence of residual cervical myelopathy, with possible associated C5-C6 radiculopathy, as well as chronic neck pain. There was no current clinical evidence of intrinsic shoulder joint pathology will continue impingement signs. Claimant also had possible bilateral tinnitus. A possible mild posterior scalp contusion was noted, but Dr. Lesnak said it there was no current clinical evidence that the patient sustained any type of traumatic brain injury or specific closed head injury. There was no current clinical evidence of cognitive abnormalities. Claimant’s previous ENT evaluations/hearing tests that apparently showed evidence of high-frequency sensory neural hearing loss, which he characterized as consistent with presbycusis-age-related nontraumatic hearing loss.

[3] Lipkin deposition, p.17:1-11.

[4] Lipkin deposition, p.10:17-11:4.

[5] Hearing Transcript (“Hrg. Tr.”) p. 17:18-18:3.

Dr. Lesnak said there was no current clinical evidence of nystagmus or any other clinical exam findings to suggest vestibular abnormality.

24. Dr. Lesnak testified as an expert in Physical Medicine and Rehabilitation on behalf of Respondents. He is Level II accredited pursuant to the WCRP. Dr. Lesnak testified that 95% of his practice involves patients with occupational injuries. He did two years in a neurosurgical program in his residence before switching to Physical Medicine and Rehabilitation.

25. Dr. Lesnak reviewed the audiogram, which showed a high high-frequency hearing loss. He stated this type of hearing loss was from noise exposure or age. He noted brain injuries that cause hearing loss results in hearing loss across the board, including low- and mid-frequency. Dr. Lesnak opined Claimant's hearing loss was not consistent with trauma. Dr. Lesnak noted Dr. Lipkin did not have Claimant's report of hearing loss in 2014 when he initially evaluated Claimant. Dr. Lesnak noted there was a question concerning whether Claimant suffered a loss of consciousness. Dr. Lesnak stated there was no evidence that Claimant's hearing problems related to any brain injury, especially January 11, 2017 incident.[6]

26. Dr. Lesnak testified Claimant had chronic cervical myelopathy, which was a result of his injury 2010 involving the spinal cord. Cervical myelopathy can cause gait issues.

27. Claimant proved that the vestibular testing, videonystagmogram, fistula test, and evoked potential studies were reasonable, necessary and related to the January 11, 2017 work injury.

28. Claimant failed to prove his need for hearing aids was reasonable, necessary and related to the January 11, 2017 work injury.

29. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

[6] Hrg. Tr. p.72:2-8.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). The credibility of the parties' respective experts were at-issue in this case.

Medical Benefits-Proposed Vestibular Testing and Hearing Aids

Respondents are liable for medical treatment reasonably necessary to cure or relieve the effects of the injury. § 8-42-101, C.R.S. Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability, which may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra*, 236 P.2d at 295-296.

The ALJ concluded the need for the proposed testing was related to the industrial injury. First, the findings of Claimant's ATPs, including Dr. Lipkin, supported the need for testing. Dr. Ritzer and Lugliani made referrals that led the ALJ to conclude they determined Claimant's balance and other issues were related to the work injury. The inference drawn from the referrals support the ALJ's conclusion that additional testing was necessary. (Findings of Fact 10,12 and 14).

As determined in Findings of Fact 18-19, the ALJ credited Dr. Lipkin's opinions (as an ear nose and throat specialist) regarding the reason for such testing. In this regard, Dr. Lipkin noted that testing could potentially identify the reason Claimant was experiencing balance issues. (Finding of Fact 19). The ALJ determined recommendation for such testing was reasonable, as it could potentially identify the etiology of Claimant's balance issues. On this question, Dr. Lipkin's testimony was more persuasive Dr. Lesnak's.

Second, there was objective evidence of trauma to the head, which supported the need for such testing. In this regard, Respondents contested whether Claimant lost consciousness and cited a conflict in the evidence. However, the paramedics report

documented a hematoma, which the ALJ concluded was directly related to the subject accident. (Finding of Fact 5). On this issue, the Colorado Workers' Compensation Medical Treatment Guidelines have application to the case at bar.

When determining the issue of whether the proposed medical treatment is reasonable and necessary, the ALJ also considered the provisions and treatment protocols of the MTG because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the MTG is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the MTG such weight as he or she determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009). The undersigned considered the MTG when determining whether Dr. Lipkin's proposed testing and recommendation for bilateral hearing aids were reasonable and necessary. MTG Rule 17, Exhibit 5, Section (J) provides in pertinent part:

"2. NEURO-OTOLOGIC TREATMENTS: For patients with dizziness causing nausea or affecting balance, treatment of these conditions may be necessary before other rehabilitative therapy can be accomplished.

a. Treatment of Fixed Lesions:

i. Post-Traumatic Tinnitus: Individuals with TBI may suffer from debilitating tinnitus (ringing in the ears). They may benefit from anti-depressants, anti-seizure medicines, and anxiolytics. In many situations, devices are recommended and may include hearing aids, maskers, and tinnitus trainers. Tinnitus trainers require a 30 day trial to determine masking. More sophisticated devices that use music as opposed to masking are not recommended due to no proof of their superiority.

ii. Hyperacusis/Sonophobia: Individuals with TBI may suffer from significant sensitivity to sound. These individuals may benefit from devices such as tinnitus trainers, musician's plugs, and simple noise plugs.

iii. Sensorineural Hearing Loss: Individuals with TBI may suffer from nerve hearing loss that may be treated with amplification (hearing aids). A full audiometric evaluation may determine if the individual could benefit from such devices.

iv. Vestibular Loss: Individuals with TBI may suffer from loss of inner ear balance function resulting in dizziness and imbalance. This can result from labyrinthine concussion, penetrating injuries, injury to the 8th nerve, and

explosive pressure changes. Vestibular rehabilitation is of benefit in speeding compensation for these losses".

These sections of the MTG reference the fact that treatment of the enumerated conditions may be necessary before other rehabilitative therapy. As found, Claimant suffered a closed head injury, as evidenced by the findings of the paramedics and Claimant's ATPs. (Finding of Fact 5-6, 9 and 12.) The ALJ concluded this injury led to the need for additional testing. (Finding of Fact 27.) Therefore, Dr. Lipkin's recommendation for additional testing is warranted.

The issue of whether Claimant proved the recommendation for hearing aids was reasonable and necessary is a close one. As found, Dr. Lipkin noted there is difficulty in distinguishing between age-related hearing loss and that related to trauma. (Finding of Fact 20.) Dr. Lipkin noted there can be hearing loss in various ranges, both with age-related hearing loss and trauma. Dr. Lipkin offered his view that Claimant's hearing loss was caused by work accident. However, Dr. Lipkin did not provide an explanation for this opinion. That fact, coupled with Claimant's report of hearing problems two years before the subject injury and Dr. Lesnak's testimony regarding the range of Claimant's hearing loss, led the ALJ to conclude Claimant failed to meet his burden of proof to show this was related to the subject accident. Thus, while Claimant sustained head trauma in this accident, on balance, he failed to prove the hearing loss was causally related. (Finding of Fact 28.) As such, his request for medical benefits, i.e. the hearing aids is denied.

ORDER

It is therefore ordered:

1. Respondents shall pay for the testing recommended by Dr. Lipkin as it is reasonable, necessary, and related to Claimant's January 11, 2017 industrial injury.

2. Claimant's request that Respondents pay for hearing aids is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS

STATE OF COLORADO

WORKERS' COMPENSATION NO. 5-034-710

STIPULATIONS

- The parties stipulated to an average weekly wage of $1,651.14.

- The parties stipulate that, if the claim is found compensable, Claimant is entitled to temporary total disability benefits during the period from December 13, 2016, through March 27, 2017, and temporary partial disability benefits from March 28, 2017, through April 27, 2017.

ISSUES

- Did Claimant establish by a preponderance of the evidence that she sustained a mild Traumatic Brain Injury (TBI) that arose out of the course and scope of her employment with Employer and was causally related to an accident that occurred on or around October 2, 2016?

- If Claimant did establish compensability by a preponderance of the evidence, did Claimant establish an entitlement to medical benefits by a preponderance of the evidence?

FINDINGS OF FACT

1. On October 2, 2016, Claimant, who is currently 63 years old, was walking into the emergency room at the Employer to commence her work day as a pediatric Emergency Room nurse. Claimant was holding a box of toys when she tripped on the sidewalk of the ambulance bay and fell. Claimant testified that she struck the right side of her face.

2. Claimant did not seek any medical treatment on the date of accident and Claimant was able to work and perform her regular shift duties on October 2, 2016. Claimant testified that she informally consulted with a co-worker who was a resident in the ER about her alleged head injuries, but Claimant agrees that this was not a medical evaluation and that Employer does not condone informal medical assessments between co-workers.

3. Claimant reported the trip and fall incident to Employer's "Ouch line" on October 3, 2016. The "Ouch line" report indicates that Claimant reported a hematoma to the eyebrow and an elbow abrasion related to the fall. The report confirms that Claimant declined medical treatment. Claimant agreed that she did not necessitate any medical

treatment for her elbow or hematoma. The report does not indicate that Claimant was experiencing a headache or any other symptoms related to a TBI.

4. Claimant testified that after her trip and fall on October 2, 2016, she began to experience symptoms such as increased anger, having a slower reaction time, feeling dizzy, confused, dazed, that she had a hard time processing, she was distracted, had difficulties with communication, and she felt that she was letting down her co-workers. Claimant testified that her symptoms remained the same in the days and weeks after the alleged date of accident. Claimant denied that her symptoms worsened, changed, or improved in the days and weeks after the date of accident.

5. On November 9, 2016, Claimant had her annual performance evaluation at the Employer. Claimant testified that it was her worst performance review in the history of her career. Claimant testified that she believed that her poor evaluation at work was caused by the TBI that she sustained on October 2, 2016.

6. Claimant's performance evaluation dated November 9, 2016, indicates that Claimant was an "excellent RN" with a "great pediatric skill set." Claimant was counseled in her performance evaluation for having a:

> " . . . difficult time managing her assignment. She often tends to focus on other patients in the department when there are things needing to be done while there is a delay in orders on her patients. [Claimant] often tends to come across to her coworkers as negative. In huddles she often focuses on the negative aspects of things rather than looking for the positive. She is very vocal about these things and her attitude rubs off on other employees. [Claimant] makes snyde remarks to staff and does not communicate very well. [Claimant] seems to have a hard time keeping up with her tasks and will focus on things that aren't as important as other things to get done, is slow at triaging." *See Respondents' Exhibit OO.*

7. Although the performance evaluation was dated November 9, 2016, Claimant agreed that she had been made aware of the performance evaluation by at least November 2, 2016. Claimant agreed that her performance evaluation is based on her performance over a one-year period, yet Claimant maintained at hearing that all the negative aspects in her review were caused by her the accident that had occurred only one month prior to her review being finalized. Claimant was very upset with the negative 2016 review. Claimant testified that this was her first only negative review that she had ever received.

8. Claimant did not seek medical treatment for her alleged work related TBI injuries until December 13, 2016, almost 10 weeks after her date of accident. Claimant described at this evaluation with Dr. Sanders that she was experiencing excessive fatigue, sleepiness, memory problems, and that she felt slower at work. Claimant described to Dr. Sanders that she just recently undergone the worse evaluation that she had ever had in her career. Claimant testified that as of December 13, 2016, she was

experiencing headaches and had a difficult time managing her patient load. These complaints are not noted in Dr. Sanders' medical report. *Claimant's Exhibit 6.*

9. Claimant has a long of history of pre-existing anxiety, depression, and ADHD predating her date of accident. Claimant testified that she has been taking anti-depressants, Abilify and Effexor, since 2009 and has been taking Aderrall since 2009 for ADHD, and she has a script of Ambien for sleep medication. Claimant agreed that she has been taking medication to assist with problems with concentration and focus since 2005. Claimant has a history of migraines dating back to 2003. Claimant has been taking Topamax on a daily basis for headaches since 2003. Claimant has additionally been taking Imitrex for migraines as needed prior to October 2, 2016. Claimant alleges that her headaches have "changed" since her October 2, 2016, in terms of the location of the headache.

10. Claimant's psychiatric medical records date back to 2011. On August 10, 2011, Claimant consulted with Lisa McGloin, M.D. for a history of depression, which she reported had been going on for over 20 years. Claimant described a history of in-patient hospitalizations for possible suicidal ideations. Claimant additionally diagnosed a history of anxiety with "some spaciness/difficulty with word finding and sleep difficulties as well as decreased focus." *See Respondent's Exhibit E, p. 11*.

11. At an October 21, 2011 evaluation with Dr. McGloin, Claimant reported that she was feeling less anxious at work with an increased dose of Effexor. On May 9, 2012, Claimant was evaluated by Dr. McGloin and was seen for continued depression and difficulty with focus and concentration. At another appointment with Dr. McGloin on October 2, 2013, Claimant reported that she was feeling as though she "doesn't fit in at work."

12. On January 8, 2014, Claimant discussed with Dr. McGloin that she had experienced chest pain at work as a result of stress. At a May 20, 2015 evaluation with Dr. McGloin, Claimant reported that she was feeling stressed, tired, and unable to keep up at work. Dr. McGloin increased Claimant's dosage of Effexor and noted that Claimant should consider restarting Abilify. Claimant reported on her intake form that she felt nervous, anxious and on edge nearly every single day.

13. On September 8, 2015, Claimant reported to Dr. McGloin that she was scheduled to transition from nighttime work to daytime work based on a promotion. Claimant testified that when she worked day shifts for the Employer that she was in a managerial position. Claimant described to Dr. McGloin that she was interested in pursuing therapy in addition to psychiatric medication management.

14. On February 15, 2016, Claimant reported to Dr. McGloin regarding recent hallucinations that she had experienced including seeing things out of the corner of her eye, that she thought she heard someone calling her name in a public bathroom and she thought she heard music that was not there. Claimant reported that she had switched to

day shifts in mid-September and that her work was very stressful, that she was having difficulty getting along with coworkers and that she was feeling tired and exhausted.

15. The following month, Claimant reported to Dr. McGloin on March 16, 2016, that she was talking to her manager about her difficulties at work with getting support. Claimant completed a general anxiety disorder self-report where she noted that she was feeling "easily annoyed or irritable nearly every day especially at work."

16. At a May 9, 2016, evaluation with Dr. McGloin, Claimant reported that the previous month she had decided that she could no longer handle working the day shift in the charge nurse position secondary to "lack of support/respect" and in order to step down from the charge nurse position, Claimant was required to transition back to night shifts. Claimant reported to Dr. McGloin that she was experiencing fatigue, poor focus, depression, and that she was feeling stressed and overwhelmed. Claimant continued to report hallucinations including thinking that someone was calling her name when that was not actually happening. Dr. McGloin diagnosed Claimant with generalized anxiety disorder, social anxiety disorder, ADHD, major depressive disorder and insomnia.

17. When Claimant stepped down as the day shift charge nurse, she wanted to stay on the day shift, but her supervisor did not accommodate that request. Claimant was disappointed to be required to transition back to the night shift in the spring of 2016.

18. Claimant's medical records confirm that she qualified for the diagnosis of chronic migraine as of May 18, 2016. On June 10, 2016, Claimant emailed Dr. McGloin and reported that she had been seen for complaints related to dizziness on May 19, 2016. Claimant agreed that she sought medical treatment related to complaints of dizziness in May 2016, five months prior to the date of accident.

19. At a July 18, 2016, evaluation with Dr. McGloin, Claimant reported that returning to the night shift over the past couple of months had taken a toll on her, that she was feeling overwhelmed, having a hard time focusing, that she was having a difficult time prioritizing her work, that she felt she had many "piles" at work and home, that she felt unsupported and defeated in many areas, including at work and at home with relationships. Claimant continued to report that she felt as though her "brain is playing tricks on her" and she reported that she had thought she had seen a Dalmatian in the back of a truck and when she looked again there was no Dalmatian, that she continued to think that she heard her name being called when there was no one there.

20. Claimant agreed that she was having hallucinations in the months preceding the alleged date of accident and Claimant believed that these hallucinations were caused by stress at work and at home.

21. On September 20, 2016, Claimant was evaluated by Dr. McGloin, less than two weeks prior to the date of accident in this case. At this evaluation, Claimant continued to report a feeling of extreme hopelessness at work, feeling overwhelmed, that she felt

stuck, and that she had experienced such decreased energy, interest, motivation, and hopelessness that she had a moment of suicidal ideation at work. Claimant described that she was finding the EPIC system inefficient and difficult to use and was experiencing difficulty keeping up with her work-flow.

22. Claimant testified that the EPIC system was a new computer software program that was implemented at Employer in the spring of 2016 to manage medical record documentation. Claimant agreed that she had a difficult time learning the new EPIC software program. Claimant agreed that she felt she was falling behind at work in the months prior to the date of accident because of the transition to the EPIC system.

23. On May 19, 2016, Claimant was evaluated by Lori Kaufman, PA at Employer for complaints of chronic intractable headache and dizziness.

24. On November 2, 2016, one month after the alleged date of accident, Claimant returned to Dr. McGloin for a psychiatric evaluation. Claimant reported to Dr. McGloin that she was feeling "better than at last visit, depression improving. 'Less angry' at work, feels less stuck. Focus a little better." Claimant described that she had recently had a poor performance evaluation and that there were comments about her difficulty managing the high patient load and regarding her negativity on the job. Claimant expressed to her psychiatrist that she felt betrayed and unsupported at work.

25. The November 2, 2016, report from Dr. McGloin does not make any mention of Claimant's alleged work related accident, a possible head injury, and there is no discussion of any symptoms attributable to the accident. To the contrary, the November 2, 2016, report indicates that Claimant's psychiatric condition had improved since the month prior to the alleged date of accident. Claimant agreed at hearing that her concentration and focus in November 2016 had improved as compared to her ability to concentrate and focus in September 2016. The November 2, 2016, evaluation does not support Claimant's allegation that she had sustained a work related traumatic brain injury on October 2, 2016. The report further rebuts Claimant's allegation that she was suffering from post-concussive type symptoms in the days and weeks following October 2, 2016.

26. On November 15, 2016, Claimant underwent a mental health intake with Shannon Richardson, LCSW at Employer. Claimant testified that this was an extensive evaluation as it was an initial intake and the evaluation occurred pursuant to a referral from her personal psychiatrist, Dr. McGloin. Claimant was in the process of setting up a new counseling and therapeutic relationship with counselor Richardson. Counselor Richardson's lengthy report does not make any mention of Claimant's alleged October 2, 2016, traumatic brain injury. Claimant provided an extensive medical history to Counselor Richardson, including a history of her anxiety, excessive worry, that she felt as though she would start talking in a group and almost blackout, that she had been experiencing hallucinations, that her diagnosis of depression and ADHD dated back to 2003, that she had been hospitalized for suicidal ideation in 2009, and had treated with Dr. McGloin since 2011. Given this extensive medical history provided by Claimant at this medical

evaluation, it is significant that there is no mention in the intake history of Claimant's alleged traumatic brain injury stemming from an October 2, 2016, fall.

27. On December 2, 2016, Claimant was evaluated by another new personal provider, psychologist, Trina Seefeldt, Ph.D. Claimant again described a long history of depression, anxiety, ADHD, and complained of a depressed mood, sleep disturbance, feeling hopeless and helpless, and experiencing psychosocial stressors at work and at home. Claimant described to Dr. Seefeldt that she was struggling with relationships at work after changing from the day shift charge nurse position and returning to the night shift in the emergency room in May 2016. Claimant described that she wanted to attempt to resolve her workplace stressors. Claimant discussed that her husband had chronic health problems and was retired and that she was forced to continue working due to financial constraints. Again, there is no mention of Claimant's alleged traumatic brain injury or the fall of October 2, 2016.

28. At a March 6, 2017, evaluation with Dr. Seefeldt, Claimant reported that she was frustrated because she wanted to retire but was financially unable to afford to do so.

29. On March 9, 2017, Claimant underwent an independent medical evaluation with Dr. John Burris. Dr. Burris testified at the hearing regarding his evaluation of Claimant, his review of Claimant's medical records, and his opinion regarding the October 2, 2016, event at work. Dr. Burris opined to a reasonable degree of medical probability that he does not believe Claimant sustained a concussion, post-concussive syndrome, and/or traumatic brain injury as a result of the slip and fall on October 2, 2016.

30. Dr. Burris explained that the typical presentation for a TBI is for the symptoms to be at their worst in the immediate days and weeks following the accident. The majority of mild traumatic brain injuries resolve within a period of days and weeks. Claimant's medical records are not consistent with the typical presentation of a traumatic brain injury. Claimant's first medical evaluation with Dr. McGloin on November 2, 2016, following the October 2, 2016, date of accident, documents an improvement of symptomatology. Claimant reported that she was feeling less fatigued, less overwhelmed, having less anxiety, and did not report symptoms such as a headache or memory loss.

31. Claimant underwent a neuropsychological evaluation on January 25, 2018, with Jennifer Peraza, Psy.D. Dr. Peraza spent over 12 hours performing the evaluation and neurological workup of Claimant. Dr. Peraza's findings as a result of the neuropsychological evaluation were that Claimant did not demonstrate any cognitive deficits, which would normally be attributable to a traumatic brain injury or postconcussive syndrome. Dr. Peraza attributed any deficits noted during the evaluation to Claimant's preexisting diagnosis of ADHD and to Claimant's long-term preexisting use of Topamax for treatment of chronic migraines. Dr. Peraza further postured that Claimant likely had a learning disability and should undergo a comprehensive evaluation to assess for a learning disability. Dr. Peraza recommended additional psychotherapy for stress management and stress reduction techniques.

32. Dr. Burris testified that the neuropsychological evaluation supported his conclusion that Claimant did not suffer from a traumatic brain injury or post-concussive syndrome related to the October 2, 2016, slip and fall event. Claimant reported to Peraza at her evaluation that "her symptoms started gradually about 2-3 weeks after the fall." Claimant alleged that 2-3 weeks after the fall she began to experience "problems with distractibility, fatigue, slower thinking, and trouble remembering and completing tasks." Claimant's report of the temporal onset of her symptoms 2-3 weeks after her fall is not consistent with a typical presentation for a traumatic brain injury or post-concussive syndrome. It is not typical for symptoms to start 2-3 weeks after a traumatic event.

33. The Colorado Medical Treatment Guidelines support that TBI symptoms start immediately after a traumatic event and improve within a period of 2-3 weeks.

34. Claimant's further reports of symptoms related to feeling fatigued, having slower processing, difficulty completing tasks, and feeling distracted are all preexisting complaints that are well supported by Claimant's preexisting medical records with Dr. McGloin. Claimant has been reporting complaints related to fatigue, processing difficulties, and distractibility for years prior to her date of accident in this claim and Dr. McGloin's medical records document that these symptoms peaked at their worst in the two weeks prior to October 2, 2016. Dr. Burris further explained that all of Claimant's alleged TBI symptoms were symptoms that were attributable to her extensive prescription medication regimen that she has been utilizing for almost a decade. Dr. Burris agreed with Dr. Peraza's conclusion regarding the likely impact of Claimant's lengthy history of utilizing Topamax as causing memory deficits.

35. Claimant underwent an independent medical evaluation with Dr. Bennett Machanic at her own expense. Dr. Machanic testified that he did not have an opportunity to review any of Claimant's predate of accident medical records. Dr. Machanic had not reviewed any of the pre October 2, 2016, medical records from Dr. McGloin.

36. Dr. Machanic agreed that a typical presentation for traumatic brain injuries is that within the first 72 hours following the acute accident the patient will experience the worst onset of symptomatology. Dr. Machanic specifically agreed that Claimant's TBI symptoms should have been at their worst during the first week following the October 2, 2016, date of accident.

37. Dr. Machanic agreed that at best Claimant's findings are indicative of a "very mild traumatic brain injury." Dr. Machanic went on to agree that the symptoms related to the very mild traumatic brain injury were "spotty," but Dr. Machanic felt there were cognitive deficits that could not otherwise be explained. When confronted with Dr. Peraza's conclusion that the cognitive deficits could be related to an undiagnosed learning disability, Dr. Machanic disagreed, but was unable to provide the medical basis for his disagreement, conceding that he has little to no experience with learning disabilities. Dr. Machanic agreed that he did defer to Dr. Peraza's interpretation of the neuropsychological data compiled during the neuropsychological testing. Dr. Machanic

agreed that the prescription for Topamax that Claimant had been utilizing for more than 10 years could have caused at least some of the memory deficits noted during the neuropsychological evaluation.

38. It is found that Dr. Machanic's opinions are less credible and persuasive than the opinions expressed by Dr. Burris and reflected by the medical record. Dr. Machanic did not have the advantage of reviewing Claimant's medical records dating back to 2011. Dr. Machanic was unaware of Claimant's symptom complaints that long predated October 2, 2016, alleged TBI, including complaints related to fatigue, processing difficulties, feeling of being overwhelmed and disorganized, and forgetful. Although Dr. Machanic is a neurologist, he testified that he does not typically treat or manage TBIs. Dr. Burris testified that he is currently managing TBIs. Thus, Dr. Machanic's personal experience and credentials do not render him better suited to render an opinion on the alleged TBI diagnosis than Dr. Burris.

39. Claimant's testimony is not credible as it is not supported by the weight of the medical evidence. If Claimant had in fact sustained a TBI on October 2, 2016, it is probable that this would have been documented in either the November 2, 2016, report from Dr. McGloin, the November 15, 2016, report from Ms. Richardson, or the December 2, 2016, report from Dr. Seefeldt. All three of these evaluations addressed issues that are central to the symptoms that Claimant now associates as being caused by a TBI and as such the absence of documentation of the alleged TBI in these reports strongly weighs against Claimant's credibility.

40. Claimant's belief that her negative annual performance review was caused by her TBI is not credible. Claimant's performance review documents snyde comments and negativity, which are not symptoms associated with a TBI. Further, it is implausible to conclude that the negative review was based on one month of work performance as Claimant contends, rather than a year of performance, which is the nature of an annual review.

41. Dr. Burris' opinion that the course of medical treatment that Claimant underwent per the referral of the COSH clinic was not reasonable and necessary is credited. There is no indication that Dr. Sanders or any of the COSH providers were aware of Claimant's medical history and pre-date of loss complaints to Dr. McGloin or that these providers considered the temporal history of Claimant's alleged TBI presentation.

CONCLUSIONS OF LAW

1. The purpose of the Act, Section 8-40-101, C.R.S. *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably

true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S.

4. A "compensable industrial accident is one which results in an injury requiring medical treatment or causing disability." *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). *Subsequent Injury Fund v. State Compensation Insurance Authority*, 768 P.2d 751 (Colo. App. 1988). It is undisputed that Claimant did not obtain medical treatment for almost ten weeks after the slip and fall on October 2, 2016, and that during this time period Claimant continued to work and perform her regular work duties. Claimant has failed to establish by a preponderance of the evidence that her October 2, 2016 injury caused an injury that required her to obtain medical treatment or caused a disability.

5. Claimant has failed to establish by a preponderance of the evidence that her industrial fall caused her to develop post-concussive syndrome or a mild TBI. The medical opinion of Dr. Burris is credited over the opinion of Dr. Machanic. Dr. Machanic rendered his opinions without the advantage of having reviewed the Claimant's pre-date of accident medical records. Claimant's pre-date of loss medical records document complaints that are identical to the post-accident complaints. Further, the temporal progression of Claimant's symptoms is not consistent with the typical presentation for a TBI in that Claimant's immediate presentation following the accident was better than her

presentation before the accident. Claimant's testimony is not credible and her allegation that her poor performance evaluation in November 2016 resulted from her TBI is not supported by the weight of the evidence.

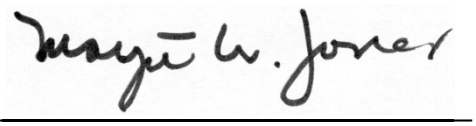
ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for workers' compensation benefits for an October 2, 2016, date of accident is denied and dismissed.

2. Any issues not determined in this decision are reserved for future determination.

DATED: October 4, 2018



Margot W. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

4. Claimant's medical history was significant in that she was previously diagnosed with fibromyalgia. Claimant treated with multiple physicians from 2005 through 2009 this condition.[1] In August 2013, Claimant was hospitalized for one day for back, hip and leg pain. She received physical therapy ("PT"), medications and chiropractic treatments. Claimant also treated for chronic low back pain in 2012-2015.

5. On December 16, 2013, Claimant underwent an initial evaluation at the Spine Correction Center.[2] In the patient history form, she said the onset of pain started in January 2013 and she received chiropractic care from January through April, as well as a cortisone shot in the right hip. She also reported radiating pain in legs and cramping in the right calf. The diagnosis was lumbago, low back; stiffness and low back; and myalgia. X-rays taken at the previous evaluation showed loss of/severely decreased lumbar lordotic curve. Claimant received a trigger point injection on December 23, 2013. Claimant received chiropractic treatments from December 16, 2013 through August 14, 2014, with the frequency of treatments decreasing over the last four months.

6. Claimant was evaluated by Anne Robinson, M.D. (Associates in Family Medicine P.C) on June 17, 2015, complaining of difficulty walking and going upstairs. On examination, Claimant exhibited tenderness in both hips. Dr. Robinson diagnosed Claimant with fatigue and noted Claimant did not want to try antidepressants or gabapentin. No medications were prescribed.

7. There was no evidence in the record Claimant missed time from work in 2014 and 2015 as a result of the prior treatment for her back.

8. Claimant testified she was injured on March 24, 2016 at work while sitting on the edge of her chair. The chair rolled out and caused her to fall onto the ground. She landed on her right elbow and gluteal region.

9. Respondents did not dispute the incident on March 24, 2016 occurred.

10. There was no evidence in the record that Respondents designated an ATP for Claimant before May 9, 2016.

11. Claimant testified she felt symptoms the next day, but continued to work. Two days later (Saturday), she did not have to work and applied ice to her hip and side. On Sunday, she experienced pain when putting dish away. She then went to Harmony Urgent Care.

---

[1] The ALJ notes the medical records which documented treatments were not initially admitted into evidence, but were summarized in the report prepared by Henry Roth, M.D.

[2] This facility was also associated with the name Physical Medicine Center of the Rockies, PLLC.

12. On March 27, 2016, Claimant was evaluated by Karen Hill, D.O. at Harmony Urgent Care [University of Colorado Health ("UC Health")].[3] At that time, she reported falling onto her right elbow and back on March 24, 2016. Claimant initially had upper back pain, which lessened and the following day had bilateral lumbar pain, left more than right. She also reported pain in her bilateral hips. X-rays were taken of the lumbar spine, which were read by J. Paul Doye, M.D. There was no evidence of acute osseous abnormality of the lumbar spine, but straightening of the normal lordosis was present, along with mild multilevel spondylosis. Claimant received a prescription for Valium.

Dr. Hill's diagnosis was low back pain without sciatica, unspecified back pain laterality. Dr. Hill completed a M-164 and issued work restrictions of no repetitive lifting, lifting, carrying and pushing/pulling limited to 5 pounds.

13. Claimant was evaluated by Colleen Wolf, PA-C at UC Health on March 29, 2016. She reported a rolling chair slid from underneath her, causing her to fall to the floor. She struck the right elbow and rear end on the floor. Claimant stated she didn't feel well that night, but was somewhat improved the next day. On Sunday she bent over to put a dish in the lower cabinet at home, which cause sudden pain and spasm. On examination, Claimant exhibited decreased range of motion ("ROM"), specifically with forward flexion and bilateral side bending. PA-C Wolf's assessment was: low back strain, initial encounter; sacroiliac joint dysfunction of the right side.

Claimant was taken off work for March 29-30, 2016 and a 5 pound lifting restriction was issued. PA-C Wolf completed a M-164, which was also signed by Kevin O'Toole, D.O. The work-relatedness of this premises injury was to be determined. Claimant was referred to Scott Parker, DC of Colorado Chiropractic and Sports.

14. Claimant was evaluated by Dr. Parker of Colorado Chiropractic and Sports Injury Specialist PC on March 30, 2016. She was complaining of bilateral low back pain (4/10), along with lateral thigh discomfort, as well as numbness and tingling. Restricted lumbar ROM was noted on examination. Dr. Parker's impression was: lumbosacral/ sacroiliac joint strain/dysfunction; reported fibromyalgia and goiter-unrelated; see past medical history. Claimant was scheduled for up to five chiropractic treatments.

15. On April 6, 2016, Claimant returned to Dr. Parker for a third chiropractic treatment with Dr. Parker. She reported improvement, but then had a setback. Claimant received manual lumbosacral traction and soft tissue mobilization, along with neuromuscular reeducation. Claimant was advised regarding home exercises, proper body mechanics and lifting techniques.

16. Within Dr. Parker's records, there was a note which stated the claim was denied by Insurer on April 7, 2016.[4]

[3] The evidence was unclear whether Respondents paid for Claimant's treatment at UC Health.

[4] Exhibit A, p.5.

17. On April 7, 2016, Claimant returned to UC Health and was evaluated by Tracey Stefanon, D.O. On examination, back ROM was limited in forward flexion-fingertips were just below the knee. Extension was approximately 5" and side bending/rotation were full and symmetrical. Dr. Stefanon's impression was: fall from rolling chair; low back pain with probable right SI dysfunction; history of fibromyalgia-not work-related, but could be contributing to current recovery; concern for delayed recovery. The ALJ inferred that Dr. Stefanon was of the opinion that will be low back pain and probable right SI dysfunction was work-related.

Dr. Stefanon instructed Claimant on a gentle range of motion stretching program to be before her PT began. Claimant's 5 pound lifting restriction was continued.

18. There was no evidence Claimant returned to UC Health for further treatment.

19. On April 13, 2016, a Notice of Contest was filed on behalf of Respondents.

20. On April 19, 2016, Claimant was evaluated at the Spine Correction Center. She was diagnosed with low back pain, radiculopathy and lumbosacral region, pain and right leg, myalgia, sacroiliitis and cervicalgia. A letter was signed by multiple providers at this facility. A subsequent note documented Claimant had received five treatments as of April 28, 2016. Seven more treatments were recommended.

21. A Designation of Medical Providers, was admitted into evidence.[5] Banner Occupational Health was selected as the provider. This document also had contact information for Insurer. Claimant signed this document and it was dated May 9, 2016.

22. There was no evidence in the record that Claimant treated at Banner Occupational Health.

23. On May 26, 2016, Claimant returned for treatment and was evaluated by Mary Eller-Conte NP at the Spine Correction Center. She was complaining of continuous low back pain, radiating to her buttocks. NP Eller-Conte's diagnoses were: low back pain; radiculopathy, lumbosacral region; pain and right leg; and myalgia. Claimant received therapeutic exercise, stretching treatments and neuromuscular reeducation.

24. On July 30, 2016, Claimant fell on a slippery surface at an apartment complex. She experienced pain and returned to the Spine Correction Center.

25. Henry Roth, M.D. performed an IME at the request of Respondents on November 2, 2016. Claimant complained of low back pain, buttock pain, and bilateral

---

[5] Exhibit 9.

leg pain. Dr. Roth felt that Claimant had a widespread pain presentation that was consistent with her pre-existing history of fibromyalgia and idiopathic back pain. Dr. Roth opined there was no structural abnormality that would explain Claimant's pain complaints.

In his testimony at hearing, Dr. Roth elaborated on the conclusions in the report. He is board-certified in Internal Medicine and has practiced in the Occupational Medicine field. He is level II accredited pursuant to the WCRP. Dr. Roth stated there was no medical evidence Claimant suffered any soft tissue or structural injuries as a result of the March 24, 2016 work incident. He testified that it is not medically probable or plausible that Claimant's sudden onset of symptoms was related to an event that had occurred over 72 hours earlier. He testified that in his expert opinion, Claimant did not suffer an injury or disability as a result of the March 24, 2016 incident. The ALJ credited the opinions of Claimant's treating physicians over those offered by Dr. Roth, which established that Claimant's symptoms and need for treatment resulted from the March 24, 2016 incident.

26. Claimant proved she suffered a compensable injury on March 24, 2016.

27. Claimant testified she did not know the exact amount of time she lost from work, but estimated it was 200 hours. Claimant failed to introduce evidence to fully support the TPD claim, including documents which showed hours worked and/or time lost during the period of March 24, 2016 through August 1, 2016.[6] The ALJ inferred from the evidence that Claimant's earnings were less than her AWW of $1,288.46, but had no specific evidence as to what those earnings were.

28. The July 30, 2016 fall constituted a subsequent intervening event. The ALJ found Claimant required medical treatment as a direct result of this incident. This event served to terminate Respondents' liability for wage and medical benefits.

29. Claimant was required to prove by a preponderance of the evidence that, at the time of the injury, she was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. §§ 8-41-301(1)(b) & (c), C.R.S. (2016). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment

[6] Exhibit 3 was a letter sent from Insurer to Employer, dated April 12, 2016, which documented that Claimant's hours were reduced to four hours per day and she was working with a lifting restriction. However, this document failed to show how long Claimant worked a reduced schedule and what her actual earnings were.

aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995). Claimant must establish a nexus between the work activities and the claimed disability. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). However, no compensability exists if the disability and need for treatment was caused as the direct result of an independent intervening cause. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002). The question of whether Claimant met her burden of proof is one of fact for determination by the ALJ. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

In the case at bench, the ALJ was persuaded Claimant suffered an aggravation of her underlying condition by working for Employer. Claimant was performing her job duties at the time she lost her balance and fell off a chair at work, which caused her to experience low back pain. This aggravated the condition of her low back. Respondents did not dispute the circumstances of this injury. As found, Claimant's treating physicians, Dr. Hill, Dr. O'Toole and Dr. Parker documented her symptoms, treatment, as well as work restrictions after she was injured. The ALJ concluded it is more probable than not that Claimant was injured arising out of and in the course of her employment.

30. Based upon the finding that Claimant suffered a compensable injury, Respondents are required to provide medical benefits to cure and relieve the effects of the industrial injury. As found, there was no evidence in the record that Respondents provided Claimant with a designation of provider until May 9, 2016. Therefore, Respondents are liable for the treatment to Claimant received through July 30, 2016, at which time she sustained a new injury.

31. Results flowing "proximately and naturally from an industrial injury are compensable". However, no compensability exists when a later accident or injury occurs as a direct result of an independent intervening cause. Whether a particular condition is a result of an independent intervening cause is a question of fact for resolution by the ALJ. *Owens v. Industrial Claim Appeals Office,* supra, 49 P.3d at 1188-1189. Here, Claimant's fall on July 30, 2016 constituted an independent intervening cause and the ALJ concluded this terminated Respondents' liability for wage and medical benefits.

32. As found, there was insufficient evidence to support Claimant's claim for TPD benefits. Claimant did not adduce evidence of the time she lost from work. In the absence of evidence which showed the number of hours Claimant worked, as well as the pay she received during the period of time, the ALJ found Claimant failed to prove this claim.

ORDER

It is therefore ordered:

1. Claimant met her burden of proof by a preponderance of the evidence to show she suffered a compensable injury on March 24, 2016 while working for Employer.

2. Respondents shall provide medical benefits to Claimant through July 30, 2016, including treatment received at University of Colorado Health, Colorado Chiropractic and Sports Injury (Dr. Parker) and Spine Correction Center.

3. Claimant's claim for TPD benefits is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

This decision is final and not subject to appeal unless a full order is requested. The Request shall be made at the Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203 within seven working days of the date of service of this Summary Order. § 8-43-215 (1), C.R.S. Such a Request is a prerequisite to review under § 8-43-301, C.R.S.

If a Request for Specific Findings of Fact and Conclusions of Law is made, Claimant's or Respondents' counsel may submit proposed Amended Specific Findings of Fact, Conclusions of Law, and Order (Amended) that substantially incorporates the above findings of fact and conclusions of law within five working days from the date of the Request. The proposed order must be submitted by e-mail in Word or Rich Text format to oac-dvr@state.co.us. The proposed order shall also be submitted to opposing counsel and unrepresented parties by e-mail, facsimile, or same day or next day delivery.

WORKERS' COMPENSATION NO. 4-959-328-005

ISSUES

The parties noticed the following issues for hearing:

- Whether Claimant established by a preponderance of the evidence that she sustained a compensable injury on January 26, 2014, while working for Employer.

- Whether Claimant established by a preponderance of the evidence that she is entitled to medical benefits.

    - Whether authorized treatment providers (ATPs) provided Claimant's treatment.

    - Whether Claimant's medical care was reasonable and necessary.

- What is Claimant's average weekly wage (AWW).

- Whether Claimant established by a preponderance of the evidence that she is entitled to temporary partial disability (TPD) benefits.

- Whether Claimant established by a preponderance of the evidence that she is entitled to temporary total disability (TTD) benefits.

- Whether Claimant established by a preponderance of the evidence that she is entitled to permanent total disability (PTD) benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Employer hired Claimant as a full time bus driver in 2009. Claimant passed Employer's pre-employment physical examination.

2. In 2006 and 2007, Claimant underwent cervical spine fusions at two levels and continued to treat her upper back symptoms at University Hospital. Claimant's low back was asymptomatic and she was able to perform her job duties without restrictions.

3. Claimant's job duties included driving the bus and helping passengers with wheelchairs, bicycles and luggage. The job description required the ability to lift up to 50 to 70 pounds. She worked from 2009 until 2013 without any difficulty. In early 2013, Claimant had surgery on a toe and was off work for approximately two months. She passed Employer's physical exam and returned to work full time (45 hours per week).

4. On January 26, 2014, Claimant was in a motor vehicle accident (MVA) in the course of her employment. She was driving Employer's bus at between 45 to 55 miles per hour when a car sideswiped the bus in a construction zone. She lost control of the bus and ran over the median and off the road. The bus struck two light polls and a sign before coming to a stop approximately twenty feet off the highway. The force of the accident was sufficient to break several lights inside the bus, dislodge the bus's windshield, crack and split the front bumper, and crush the iron bike rack mounted on the front of bus. Both the bus and the car that hit it were so badly damaged they were not drivable.

5. Claimant experienced the immediate onset of left knee pain. Her pain increased as the day progressed, and she reported to an emergency department. Medical providers evaluated Claimant and diagnosed arthritis and a bruised knee. Claimant did not complain of back pain at that visit or two days later when Dr. Raschbacher evaluated her and placed her at MMI. Claimant testified that she did not immediately return to work because she did not feel ready to go back to work.

6. Claimant credibly testified that her back pain began more than two days after the MVA. She testified that she had some stiffness in her low back right after the accident but thought her muscles were just sore. Additionally, at the time of the MVA Claimant was taking Voltaren (a/k/a Diclofenac) for her previously diagnosed arthritis and the Judge infers from the totality of the evidence that this medication could have masked her initial low back symptoms.

7. Because Dr. Raschbacher placed Claimant at MMI without restrictions, she returned to work for one week before taking a previously scheduled vacation. During the week she worked, Claimant began experiencing nagging pain in her low back, hip, and tailbone. Claimant took Tylenol and a previously prescribed anti-inflammatory to calm the pain. During her vacation, Claimant's back pain increased and she began to experience pain radiating down the back of her leg to her foot, and numbness in her left foot.

8. Claimant's symptoms caused her to make an appointment to have her low back evaluated. Claimant credibly testified that she saw the doctor approximately five days later, on February 13, 2014. Claimant's medical provider diagnosed sciatica.

9. On February 16, 2014, Claimant presented at the Emergency Department because her back pain was unbearable. Claimant associated her symptoms with her MVA. Claimant gave a history of being in a motor vehicle accident in January. The records of that visit indicate that the low back problem was something new and state: "Pain associated with an MVA".

10. On February 20, 2014, Claimant returned to University Hospital. The record for that visit mentions that Claimant's pain had come on two to three weeks previous to the visit, which puts it within four or five days after the January accident.

11. Claimant was working for Employer at that time and experienced difficulty with her routes because they required her to sit for four hours at a time, which exacerbated her pain.

12. On March 25, 2014, Claimant's medical provider prescribed Norco and took Claimant off work due to her high level of pain and the medication's sedating side effects. The University Hospital note states, "Work note provided since patient is a bus driver and is requiring pain medications."

13. Claimant took the provider's note to Employer. Employer's representatives did not instruct Claimant to return to Dr. Raschbacher or to seek medical treatment through Workers' Compensation. Rather, Employer terminated Claimant on March 23, 2014. Claimant has not worked since.

14. Claimant credibly testified that she did know she needed to report her back injury to Employer because Dr. Raschbacher had released her to full duty and placed her at MMI, and she initially was able to work her normal schedule of forty-five hours per week.

15. Respondents offered no persuasive evidence that Claimant previously sustained a low back injury, experienced symptomology in her low back, or received treatment to that part of her body.

16. At the time Employer terminated Claimant's employment, she was earning $20.25 dollars per hour and time and one-half for overtime. Claimant worked approximately forty-five hours per week. Employer provided Claimant's health insurance coverage. Her coverage expired in March 2015 because she was not able to pay the premium of approximately six hundred dollars per month.

17. The ALJ finds Claimant's average weekly wage is $961.88 plus the cost of her health insurance coverage.

18. Claimant continued to treat outside of the Workers' Compensation system. She participated in physical therapy and received injections without much benefit. Claimant eventually underwent surgery that fused her lumbar spine from L-4 through S-1.

19. While recovering from surgery, Claimant developed a MERSA infection. Her treatment required re-hospitalization for one to two months while she received IV antibiotics.

20. When Claimant was able to leave the hospital, she moved to her daughter's home in Mississippi to recuperate. While in Mississippi, Claimant treated with Dr. Cullom who recommended a spinal cord stimulator. Claimant also treated with pain specialists for pain medications. Because Claimant carried health insurance through the state of Colorado, she returned to Colorado to continue treatment.

21. Upon her return to Colorado, Claimant pursued treatment at Rocky Mountain Pain Solutions. Claimant's treatment provider prescribed OxyContin for breakthrough pain and Morphine around the clock. Claimant testified that her pain on these medications still ranges between three and four over ten, with breakthrough pain as high as six over ten. Claimant testified that she experiences side effects from the medication that prevent her from working. These include:

- Feeling like being in a fog,
- Constant sleepiness,
- An inability to concentrate, and
- Slow reflexes.

22. In June 2014, Claimant applied for Social Security Disability Benefits. In her application, Claimant stated she was not pursuing workers' compensation. Claimant credibly and persuasively testified that at the time she filled out the application she was not pursuing a workers' compensation because she was unaware that she could do so because Dr. Raschbacher had placed her at MMI and Employer did not have her seek further care when her back pain became so severe that she sought treatment.

23. Nurse Practitioner Lindsey Goldstein supported Claimant's application for FMLA, and Claimant remained on FMLA for twelve months. When Claimant's FMLA ended, Dr. Cullum's restrictions (no lifting, stooping, crawling, or prolonged sitting) prevented her from returning to work with Employer.

24. Dr. Collum supported Claimant's application for unemployment benefits. However, Employer opposed the application taking the position that Claimant was unable to perform any work.

25. Upon her return to Colorado, Claimant returned to treatment with Dr. Burger at University Hospital. Dr. Burger determined that the hardware from Claimant's L4-S1 fusion was in place, but that degenerative changes at L3-L4 caused Claimant's pain. Claimant's prior fusion caused the degenerative changes. Dr. Burger declined to place a spinal cord stimulator because the procedure could cause Claimant's previous MERSA infection to recur.

26. Based on the totality of the evidence, Claimant is not a candidate for additional surgery, including the placement of a spinal cord stimulator.

27. Katherine D'Angelo, MD, testified for Respondents at hearing. After examining Claimant once, she opined:

- Claimant's MVA was not related to any of her symptoms;
- Claimant's pain generator is osteoarthritis;

- Claimant sustained no trauma during the MVA that could have caused her current symptoms, need for surgery, or current pain.

28. Dr. D'Angelo spends 40% of her time performing Respondent-sponsored "Independent" Medical Evaluations.

29. Dr. D'Angelo acted as an advocate for Respondents. For example, she pointed out multiple times in her report that Claimant's pursuit of a workers' compensation claim coincided with Claimant's loss of personal insurance.

30. Dr. D'Angelo prepared an eighty-three page report for Respondents. Dr. D'Angelo charges fee scheduled rates for such work.

31. Although she is self-employed, Dr. D'Angelo testified that she did not know how much she has billed Respondents on this case. She "couldn't even estimate." She also testified that she could not recall whether she had done other work for Employer. The ALJ finds this testimony disingenuous.

32. Dr. D'Angelo relied on a study published in 2009 to support her opinion that Claimant's degenerative spine was genetically caused. However, the study she relied on studied micro-trauma, not macro-trauma that Claimant experienced.

33. Dr. D'Angelo acknowledged that the MVA could have caused injury to Claimant's low back, especially because that portion of Claimant's back exhibited degenerative disc disease.

34. Claimant's counsel asked Dr. D'Angelo whether she had reviewed the police report of the MVA to understand the magnitude of the impact. She responded, "Maybe." She acknowledged that she did not refer to the police report in her report.

35. The ALJ finds Dr. D'Angelo's opinions to be biased towards Respondents. She performs IMEs only for respondents and was disingenuous in responding to questions about whether she had done other work for Respondents, and not being able to estimate what she had billed Respondents for her work on this claim.

36. Hugh Macaulay, MD, testified at hearing and by deposition. Dr. Macaulay reviewed both the police report of the MVA and photographs of the accident site and determined that the MVA involved a significant amount of force. He determined that Claimant's back pain prior to the MVA related to her cervical spine and upper extremities. Claimant's low back was asymptomatic before the MVA. Dr. Macaulay relied on University Hospital notes from February 13, 2014, which recorded Claimant's low back symptoms as "new," and notes from February 16, 2014 where Claimant described having low back pain for two to three weeks. Dr. Macaulay opined that the MVA caused Claimant's low back to become symptomatic.

37. Dr. Macaulay testified that the MVA did not cause Claimant's degenerative disc disease, but it left her a "sitting duck," meaning that Claimant's low back was

compromised and that something of a relatively nature would become a significant problem.

38. Dr. Macaulay opined that Claimant's treatment at University Hospital and her subsequent providers was reasonable, necessary, and directly related to her January 26, 2014 work injury.

39. Dr. Macaulay opined that Claimant had an extremely limited functional capacity. Specifically:

- Claimant's right ankle reflex is absent due to nerve damage;
- Claimant has left foot problems in the L5 and S1 dermatomes;
- Claimant has left SI joint dysfunction; and
- Claimant experiences neural pain both from her lumbar fusion and from the MRSA infection.

Dr. Macaulay also noted that Claimant's medications limit her ability to work, and cause her to be ineligible for a driver's license.

40. The ALJ finds the opinions of Dr. Macaulay to be persuasive. They are consistent with Claimant's explanation of her experience and symptoms. They take into account the mechanism of injury. They acknowledge that Claimant had pre-existing degenerative disc disease and explain how that left Claimant susceptible to the injury she suffered.

41. Ms. Dorris Shriver testified as an expert in the fields of occupational therapy/vocational rehabilitation/and life care planner. Ms. Shriver evaluated Claimant on January 12, 2017 and issued a report containing her opinions. Ms. Shriver reviewed Claimant's medical records and was familiar with Claimant's work restrictions. Ms. Shriver opined Claimant is not employable even in part-time, sheltered position. Her opinion is supported by these findings:

- Claimant has issues with hand sensitivity and decreased ranges of motion in her low back, neck, and bilateral shoulders, hips, and knees.
- Claimant is a high school graduate with some learning delays.
- Claimant is unable to perform skilled labor and has no transferable skills.
- Claimant has exceptionally limited fine and gross motor skills.
- Claimant's use of narcotic pain medications would prohibit many employers from hiring Claimant.

- Claimant is in observable chronic severe pain, and cannot become pain free enough to work.

The ALJ finds Ms. Shriver's opinions to be well founded, credible, and persuasive.

42. Claimant testified she has not looked for work because her only experience is bus driving, and she remains on pain medication with no current plans to discontinue. Claimant continues to suffer from severe pain in her low back and legs.

43. Based on the totality of the evidence, Claimant is unable to return to work given her symptoms and the side effects of her medications. She can lift only approximately fifteen pounds on a less than daily basis. While she can walk, a walk of four or five blocks causes her symptoms to flare.

44. The ALJ finds that Claimant established by a preponderance that the low back injury she sustained on January 26, 2014, while working for Employer, constitutes a compensable work related injury.

45. The ALJ finds that Claimant established by a preponderance of the evidence that authorized treatment providers provided Claimant's treatment.

46. The ALJ finds that Claimant established by a preponderance of the evidence that the medical care she received was reasonable, necessary, and directly related to her work injury and complications from the treatment for that injury.

47. The ALJ finds that Claimant established by a preponderance of the evidence that Claimant's average weekly wage is $961.88 plus the cost of her health insurance coverage.

48. The ALJ finds that Claimant has not established by a preponderance of the evidence that she is entitled to temporary partial disability benefits.

49. The ALJ finds that Claimant has not established by a preponderance of the evidence that she is entitled to temporary total disability benefits.

50. The ALJ finds that Claimant established by a preponderance of the evidence that she is entitled to permanent total disability benefits as of March 24, 2014.

CONCLUSIONS OF LAW

The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

In determining credibility, the ALJ should consider the witness's manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990). Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968), *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this case, the ALJ finds the opinions of Dr. Macaulay and the testimony of Claimant to be credible and persuasive. The ALJ is not persuaded by the opinions of Dr. D'Angelo whom the ALJ finds to be biased.

In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

In workers' compensation law, an employer "takes the employee as he comes through the gate." A work injury is compensable if makes an underlying non-symptomatic condition become symptomatic. See: *Peter Kiewit Sons' Co. v Industrial Com. of Colorado*, 124 Colo. 217, 236 P.2d 296 (1951), *Seifried v. Industrial Com. of Colorado*, 736 P.2d 1262 (Colo.App.1986).

Although Claimant may have had pre-existing degenerative changes in her low back, she passed a physical exam when Employer hired her and passed repeated physical exams thereafter. Respondents presented no persuasive evidence that Claimant had low back complaints or had received treatment to that part of her body. Rather, Claimant performed her job duties without difficulty, including working overtime, prior to her January 26, 2014 work injury.

Immediately after the MVA, Claimant's low back was stiff. When it became increasing more painful, rather than resolving as she anticipated it would as a muscle strain, Claimant sought timely medical care.

Claimant tried over-the-counter medications without relief, and, finally, saw a physician regarding the problem on February 13, 2014, complaining of hip and low back pain. She sought treatment in the University Hospital ER on February 16, 2014 because of increasing back pain, and specifically, mentioned the January 26, 2014 accident. Claimant testified, without objection, that one of her treating physicians indicated that the bus accident probably aggravated her back problems and made them symptomatic. A

nurse practitioner also mentioned the bus accident as playing a role in Claimant's back problems in a FMA Application, dated April 15, 2014. The nurse practitioner stated:

> [Claimant] was involved in a MVC in 1/2014. . . . She has since been diagnosed with lumbar spondylolisthesis, which contributes to foraminal narrowing/nerve compression and is prone to worsening with events such as MVC.

Dr. Macaulay agreed with the nurse practitioner, explaining:

> The problem was that [Claimant] had significant degenerative change in her low back, and as such, she was a sitting duck. She was waiting for the right event at the right time to occur to cause her to develop symptoms. And in this case, with a . . . neural foraminal constriction, the holes through which the nerves exit in the low back to go down to the legs were significantly compromised so that something of a relatively minor nature could become a significant problem.
>
> We see this also a lot in older people who are working...depending on where the issue is located, they can go from asymptomatic to significantly changed, and that is the case with [Claimant], in my opinion.

Dr. Macaulay explained that nerve injuries can take some time to demonstrate themselves and this is why doctors will not do an EMG study until at least three weeks after a suspected injury to a nerve occurs.

The ALJ is not persuaded by Dr. D'Angelo's opinion that Claimant's onset of severe back pain within a week of the MVA was mere coincidence. Here, Claimant had performed all of her work duties for over four years, working 45 hours a week, without any low back problem. The ALJ finds it unlikely that Claimant's back would suddenly become symptomatic within a week of the MVA but for the MVA.

Dr. D'Angelo acknowledged that the Workers' Compensation Medical Treatment Guidelines in discussing radiologically noted spinal degenerative changes, state in part: "The presence of these (degenerative) findings cannot be used to justify an argument that back pain in a specific individual was inevitable and not due to a work-related exposures." Dr. D'Angelo admitted that Claimant's imaging studies showed that she had several herniated and protruding discs in her lumbar spine and that trauma to the spine can cause such findings.

The ALJ finds and concludes that more likely than not, the MVA on January 26, 2014, either caused actual injury to Claimant's lumbar spine, or played a significant role in making Claimant's underlying degenerative changes permanently symptomatic. The ALJ finds the opinions of Dr. Macaulay to be more persuasive than those of Dr. D'Angelo.

An employee is entitled to Permanent Total Benefits if he or she can no longer earn any wages and the loss of earning capacity is at least in part due to a work-related injury or condition. Section 8-40-201(16.5) provides the test is met if: "the employee is unable to earn any wages in the same or other employment."

In determining whether an employee meets the above test, the courts have set forth several "human factors" that need to be considered in addition to the residuals of the work-related injury itself. These include, but are not limited to age, education, work experience and vocational training, overall physical condition and mental condition. *See Best-Way Concrete Co. v. Baumgartner*, 908 P.2d 1194 (Colo.App.1995), *Weld County Sch. Dist. RE-12 v. Bymer*, 955 P.2d 550 (1998).

Claimant's testimony and the medical records establish that Claimant's fusion surgery was not successful. Claimant testified that she has never had any period where she was pain free since her fusion surgery.

Claimant's health care providers have indicated that she has very substantial limitations as the result of her back condition. A Medical Statement from E. Thomas Cullom, III, M.D., dated April 15, 2015, states that Claimant has chronic pain and is not able to lift, bend, crawl, or stoop, and can do no prolonged sitting, standing or walking. Claimant was also limited to lifting less than 10 pounds and would be expected to miss more than four days a month from work even if she could find a job.

Dr. Macaulay testified that Claimant has serious permanent damage to the nerves in her low back and that he agreed with the functional limitations set forth by the physicians in the records from Claimant's Social Security Disability case.

> Q. Now, in your actual physical examination, you indicated that her right ankle reflex was absent. What's the significance of that, if any?
>
> A. it means that the nerves that supply the reflex arc have been damaged.
>
> Q. And she has decreased sensation in her left L5 and S1 dermatomes of the left foot. What's the significance of that in layman's terms?
>
> A. She sustained neural damage.
>
> Q. And this type of damage, is this something that should improve with time or is it likely to be permanent in light of the fact she had it as of the time you saw her in June of 2016?
>
> A. It is likely to be permanent.
>
> ***
>
> Q. First of all, do you agree with the functional limitations set forth by these health care providers in these records that were provided from the Social Security Administration?

> A. They're consistent. They are consistent with what I saw and what [Claimant] related to me.
>
> Q. And in light of those restrictions, what opinion, if any, do you have on her ability to be able to perform any employment activities on any type of regular basis?
>
> ***
>
> A. In looking at the restrictions that they have listed, she does not appear to be a good candidate for about any that I can think of. Others may be able to define one, but it would be elusive to me.
>
> ***
>
> Q. And without the spinal cord stimulator, what is your prognosis for her as far as recovery to the point that she might be able to return to some type of employment?
>
> A. Improbable.

A spinal cord stimulator was not an option because Claimant ran too high a risk of experiencing a recurrent MRSA infection.

Vocational expert, Doris Shriver evaluated Claimant's abilities and reviewed her extensive medical records. Ms. Shriver's concluded that Claimant was not able to perform any employment. The report states in relevant part:

> [Claimant] has chronic pain, mental fatigue and physical weakness, which prohibit sustaining activities at home or at work. She is emotionally compromised with signs of depression/anxiety. Due to the combination of her vocational limitations, she would have difficulty sustaining even sheltered work. Vocational rehabilitation could be attempted, but the odds are against her being successful.

Ms. Shriver testified at the hearing that Claimant could not even do sheltered work, indicating that Claimant's functional capacity was so limited that no work was possible.

Respondents failed to provide any persuasive evidence to counter Ms. Shriver's opinion that Claimant is unemployable because of her multitude of health problems, including her low back condition and the side effects of her treatment. Further, Employer took the position that Claimant is disabled from employment when it contested Claimant's application for unemployment benefits. Further, the Social Security Administration found Claimant to be totally disabled based on her restrictions.

As result of the above evidence, this ALJ finds the opinions of Ms. Shriver, to the effect that Claimant is totally unemployable, to be consistent with the great weight of persuasive evidence.

Claimant incurred significant costs for the treatment of her low back conditions. Dr. Macaulay testified that the Claimant's surgery and subsequent treatment were all reasonable and necessary for her low back condition. Respondents offered no persuasive evidence to the contrary.

As mentioned above, Claimant filed an Application for Family Leave and the health care provider who completed the form, dated April 15, 2014, specifically mentioned the bus accident as being a possible cause of Claimant's back problem. The nurse practitioner who completed the form stated:

> Ms. Okoro was involved in a MVC in 1/2014. This may have exacerbated her low back and radicular leg pain. She has since been diagnosed with lumbar spondylolisthesis, which contributes to foraminal narrowing/nerve compression and is prone to worsening with events such as MVC.

Claimant provided the form to Employer, putting Employer on notice that a possible causal relationship existed between Claimant's work-related accident and her low back symptoms. This action triggered Employer's duty to provide medical care. Employer failed to provide any such treatment or to make a referral.

Once Claimant became aware that her injury might be compensable through Workers' Compensation, she formally notified Employer. Claimant filed a Claim for Compensation Form, on August 26, 2014, alleging that her low back condition related to her January 26, 2014 accident. In response, Respondents contested her case. As a result, Claimant had the right to pick an authorized provider pursuant to section 8-43-404(5)(a)(C.R.S.). Therefore, Respondent shall be responsible for reimbursing for Claimant's medical care for her low back in compliance with the relevant fee schedules.

In summary, the preponderance of evidence presented in this matter establishes that the work related MVA caused Claimant's low back to become symptomatic. Claimant's low back condition, and treatment she has received for it, has made her unemployable in any kind of employment. Testimony from Claimant, Dr. Macaulay and the vocational expert, Doris Shriver, support a conclusion that Claimant is permanently and totally disabled. Further, Respondents have failed to pay Claimant any wage loss benefits. Therefore, Claimant is entitled to Permanent Total Disability Benefits since her last day of employment with the Respondent-employer.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable low back injury in the course of her employment on January 26, 2014.

2. Respondent shall pay PTD benefits retroactive to March 24, 2014.

3. Respondent shall pay for any outstanding medical bills for treatment of Claimant's low back condition, and shall reimburse Claimant's Health Insurance Carrier, Medicaid, and/or Medicare for any expenses they incurred for the treatment of Claimant's low back condition, in compliance with the Workers' Compensation Fee Schedules.

4. Respondent shall pay for any reasonable and necessary continuing medical care for Claimant's low back injury in conformance with the Compensation Act.

5. Respondent shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

DATED: October 16, 2018

Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. ***For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.***

ISSUE

- Whether Claimant established by a preponderance of the evidence that he suffered a work related injury arising out of and in the course and scope of his employment on June 6, 2014.

FINDINGS OF FACT

1. Claimant is a 43 year old male with admitted to ongoing memory issues. Claimant acknowledged to a neurologist that he has a "lifelong history of excessive alcohol intake," that he had been in several alcohol treatment programs in the past, and he drinks large quantities of beer each day. That neurologist diagnosed "alcohol induced cerebellar degeneration and polyneuropathy," relating those issues to alcohol abuse over the years.

2. Claimant has carried diagnoses of alcoholism, alcohol dependence and alcohol abuse since at least 2009, and his medical records reveal a history of heavy alcohol abuse dating back to college. On June 3, 2009, when Claimant was admitted to Good Samaritan Hospital following a suicide attempt, he disclosed a 14 year alcohol abuse history, including that he usually drinks 10 to 12 beers each day and keeps a beer keg in his garage. On April 13, 2010, Claimant told his personal physician that he stopped drinking alcohol two weeks earlier after his teenage daughter wrote a paper about living with an alcoholic father. Less than three months later he was arrested for a DUI. On December 21, 2011, Claimant went to Kaiser Permanente with his mother to discuss his alcoholism, and on that date he admitted to drinking 8 to 10 beers every night since college. On March 27, 2012, Claimant admitted to drinking at least an 18 pack of beer per week. On July 29, 2014, his personal physician noted that Claimant drinks up to a case of beer each week. On December 21, 2015, when Claimant was admitted at Good Samaritan Hospital for a second suicide attempt, it was documented that he has a long history of alcohol abuse and that he "reports he drinks a 6 pack a day but he is likely minimizing his intake." At that time, Claimant admitted that he lost his job the prior summer due to drinking on the job. On December 29, 2015, Claimant was diagnosed with "alcohol dependence syndrome." On February 17, 2016, Claimant was advised he could develop dementia, an inability to walk, or a fatal alcohol withdrawal syndrome if he continued to drink alcohol. Claimant admitted that he continued to drink alcohol anyway. Multiple providers have opined that Claimant minimizes his alcohol consumption.

3. The competent evidence demonstrates that Claimant is an alcoholic who is likely in denial, and who also suffers from memory issues due to years of alcohol abuse. These problems negatively impact his credibility in this matter.

Claimant's Employment with Employer

4. Claimant was hired as the Key Accounts Manager by Employer on April 28, 2013. Employer is a family owned Denver company specializing in flooring for "turns" and renovations aimed at multifamily and commercial properties. Claimant's duties included developing high level relationships with upper management people in the multifamily housing industry in order to sell Employer's products. Claimant was expected to arrange evening entertainment events for high level clients and targets. Claimant was issued a company credit card to pay for these expenses.

5. Claimant's direct supervisor was Jennifer "Jenny" Jacobs, Employer's Vice President of Multifamily Services. At that time Ms. Jacobs ran all of the sales and customer service activities for Employer's multifamily division. As the Key Accounts Manager, Claimant worked very closely with Ms. Jacobs, and they continuously discussed his clients and prospects/targets. Claimant submitted a written list of prospects/targets with his sales plan to Ms. Jacobs on three separate occasions, including in September 2013, January 2014, and September 2014. Every Monday Ms. Jacobs would go over the prospects/targets and sales plan with Claimant. Ms. Jacobs was aware of all of Claimant's prospects/targets and every job he bid on. Claimant was not permitted to bid a project without Ms. Jacob's express authorization. Likewise, Claimant identified all clients and prospects/targets he wanted to entertain, but he could not entertain any clients or prospects/targets without clearing it with Ms. Jacobs and receiving her authorization.

6. In 2014, Employer purchased season tickets for Colorado Rockies' baseball games which employees could use for business purposes. Claimant signed up to use four tickets for a game scheduled for Friday night June 6, 2014. This is the night Claimant was involved in an altercation at a bar that led to this claim.

7. Shortly before June 6, 2014, Claimant notified Ms. Jacobs he wanted to take Mr. Jordan Brown (regional maintenance director for Rocky Mountain Mutual Housing Association), Mr. Brown's wife, and one of Mr. Brown's employees (identified as a maintenance technician) to the June 6th game. Mr. Brown and his company were existing clients. Ms. Jacobs authorized Claimant to take this group to the game.

8. Claimant alleged that Ms. Jacobs approved him to bring Bill Bryant of Riverstone Residential Group ("Riverstone") to the game on June 6, 2014. Mr. Bryant and Riverstone were not clients or targets at any time during Claimant's employment. Claimant never bid on a Riverstone project. Claimant did not entertain Mr. Bryant before or after June 6, 2014. Mr. Bryant and Riverstone were not identified on any of Claimant's prospect lists before or after June 6, 2014. Riverstone was not a target due to the fact that it was a national company who used national vendors and whose vendor decisions were made at a national level. Also, there was bad blood between Riverstone and Employer, and Riverstone had an exclusive agreement with a different flooring company, Arbor Carpet.

9. Claimant and Bill Bryant were friends and former coworkers, having worked together before Claimant went to work for Employer while at a different company. On several occasions prior to June 6, 2014, Claimant asked Ms. Jacobs if he could bring Mr. Bryant to Employer sponsored events, and each time Ms. Jacobs said no. Not only did Employer have no chance to obtain work from Mr. Bryant's employer, Riverstone, but Mr. Bryant had a reputation as a job hopper who moved around a lot and who liked to use vendors to obtain free things without coming through with work. Employer is a family run business with limited resources, and Ms. Jacobs did not want to waste Employer money, time and resources on entertaining Mr. Bryant given his shortcomings, and given the fact that there was no chance for Employer to obtain Riverstone's work.

10. Ms. Jacobs did not authorize Claimant to take Mr. Bryant to the Rockies' game on June 6, 2014. She repeatedly prohibited him from entertaining Mr. Bryant at Employer's expense. Claimant's testimony that Mr. Bryant and Riverstone were active targets/prospects at that time, and that Ms. Jacobs authorized him to entertain Mr. Bryant on June 6, 2014, is not credible and is rejected.

June 6, 2014 – The Date of Alleged Injury

11. On June 6, 2014, between 5:00 p.m. and 5:30 p.m., Claimant met with Jordan Brown, Mr. Brown's wife, and Bill Bryant at LoDo's, a bar near Coors Field where the Rockies' game was to be held at 6:30 p.m. that night. The group had drinks and dinner at LoDo's. Claimant charged $142.80 at LoDo's in the hour or so he was there.

12. Following LoDo's, Claimant, the Browns and Mr. Bryant went to the Rockies' game, arriving around 6:30 p.m. During the course of the game, Claimant spent $58 on food and more drinks. The true amount of alcohol he consumed at LoDo's and the Rockies' game is unclear, but given his known history of minimizing his alcohol intake, Claimant likely had many more than two alcoholic drinks throughout this night, which was a violation of Employer's alcohol policy.

13. The Browns left the Rockies' game after the 5th or 6th inning, leaving Claimant alone with Mr. Bryant at the Rockies' game, and subsequently at a bar. Once the Browns left, Claimant was no longer working, as he was no longer entertaining a client or a potential client. Claimant was simply drinking and hanging out with his friend and former coworker, Bill Bryant, while charging everything to Employer.

14. After Claimant and Mr. Bryant left the Rockies' game they walked towards their cars, but heard music emanating from Howl at the Moon bar and decided to go in for more drinks. Once inside Howl at the Moon, Claimant and Mr. Bryant ordered drinks. At some point, Claimant went to the bar to purchase additional drinks for himself, Mr. Bryant, and a bachelorette party that was standing at the bar. It was at that time he had an altercation with another bar patron, Jason Ruedy.

15. Jamie Boekhoff was a bartender at Howl at the Moon who served Claimant that night. Ms. Boekhoff confirmed that Claimant had been at the bar drinking for about an hour before his altercation with Mr. Ruedy. Claimant did not seem "overly" intoxicated.

Claimant bought drinks for himself and his friend, and later bought a round of shots and two drinks for a group of females Ms. Boekhoff identified as a bachelorette party.

16. When Mr. Ruedy first encountered Claimant at the bar, Claimant appeared drunk. Mr. Ruedy observed Claimant buy a round of drinks and drink shots of alcohol with the bachelorette party that was standing right next to him.

17. In the two plus hours Claimant was at Howl at the Moon, he spent $229.45 on his company credit card, none of which was spent on food, which is consistent with him drinking heavily before and after the incident in question. When Claimant went to the ER that night after his fight, he admitted to having several alcoholic beverages, and even at 2:05 a.m. the ER physician noted that Claimant was "intoxicated."

Claimant's Altercation with Jason Ruedy at Howl at the Moon

18. Mr. Ruedy was standing at the bar with a bachelorette party situated to his left. Claimant approached the bar, wedged himself between Mr. Ruedy and one member of the bachelorette party, he turned his back and buttock to Mr. Ruedy, and then "donkey-kicked" Mr. Ruedy apparently to make space, in the process breaking the big toe toenail off of Mr. Ruedy's sandaled foot. At that point Mr. Ruedy and Claimant had words, with Mr. Ruedy asking Claimant what his problem was. Claimant appeared drunk. Mr. Ruedy walked away to avoid an escalation, telling his friend Jason Clark that they needed to leave, and starting the process of closing out his tab. Claimant approached Mr. Ruedy and Mr. Clark, indicating he wanted to buy them shots in an apparent attempt to apologize. The three men drank the shots together, at which time Mr. Ruedy believed the situation was resolved. Claimant's mood changed, however, and he and Mr. Ruedy started having more words. Ms. Boekhoff saw Claimant and Mr. Ruedy standing face-to-face, quite close, as their discussion was getting heated.

19. Mr. Ruedy, a trained boxer, read Claimant's body language to indicate Claimant was about to throw a punch, as his body was leaning in and his wrist starting to come up. Mr. Ruedy beat Claimant to the draw striking Claimant in the nose, and knocking Claimant down, causing injuries.

20. According to Ms. Boekhoff, she saw Claimant get knocked down and fall to the floor, but he was not unconscious. This statement is consistent with what Claimant reported to the ER physicians later that night, including that after he was struck he fell backwards but did he lose consciousness.

21. Claimant called his wife to pick him up. Mr. Bryant made sure Claimant's bar tab was taken care of. Claimant continued to drink. Claimant's wife drove him to Good Samaritan Hospital where he was admitted at 1:29 a.m. As noted above, at 2:05 a.m., Claimant was still "intoxicated." Claimant was diagnosed with nasal fractures and his nose was set with splints.

June 9, 2014 – Claimant's Report of Incident to Employer

22. On the morning of June 9, 2014, Claimant phoned Jenny Jacobs to call in to work sick, notifying her that he would not be in due to the injuries he sustained in a fight after the Rockies' game on June 6, 2014. Claimant explained that after he went to the Rockies' game with Jordan Brown, Mr. Brown's wife and Mr. Brown's maintenance technician, the maintenance technician left and he and the Browns walked to their cars which were parked near the stadium across from Howl at the Moon. They decided to go into Howl at the Moon to allow traffic time to clear. They sat at a table, and when Claimant went up to the bar to get drinks for himself and the Browns, he ran into Bill Bryant. Claimant did not tell Ms. Jacobs that Mr. Bryant had been with him the entire night, nor that he was entertaining Mr. Bryant at Employer's expense. During that conversation, Claimant told Ms. Jacobs that as he was buying drinks for the Browns, he had a confrontation with Mr. Ruedy which resulted in him being assaulted, and injured. He claimed that Mr. Ruedy struck him blindside. He told Ms. Jacobs he went to the ER that night, and he needed further care, including surgery.

23. Ms. Jacobs was concerned for her employee. She told Claimant she was not sure whether his injuries would be covered under Employer's workers' compensation policy but she was going to report the claim to Employer's carrier just in case. She wanted to make sure the company was doing the right thing.

24. On June 10, 2014, Ms. Jacobs completed a hand written Employers' First Report of Injury within which she indicated Claimant was assaulted while "entertaining client" after a Rockies' game. The client Ms. Jacobs was referring to was Jordan Brown, as Claimant continued to maintain that Mr. Brown was with him at the bar. Ms. Jacobs had no issue with the claim being found compensable if Claimant was still entertaining Mr. Brown at the time of the assault.

25. Claimant continued to work for Employer until October 2014 when he left Employer to work for a different company. During those three months they spoke about the incident several times. Claimant never told Ms. Jacobs he was entertaining Bill Bryant at Employer's expense that night, or that the Browns had left the Rockies' game early and never went to Howl at the Moon. Claimant always maintained that the Browns were with him at Howl at the Moon, and that he simply ran into Mr. Bryant coincidentally while at the bar with the Browns. Ms. Jacobs only learned that Mr. Bryant was with Claimant the entire night and that Claimant was claiming that he was entertaining Mr. Bryant as a prospect/target three years later when Claimant applied for hearing.

26. Ms. Jacobs credibly testified that Bill Bryant was not a client, or a prospective client on the night of this incident. As found, on the night of June 6, 2014, Mr. Bryant was Claimant's former coworker, and Claimant's longtime friend, but he was not Employer's client or prospective client. Claimant was not performing any activity to benefit Employer after the Browns left the Rockies game earlier that night.

CONCLUSIONS OF LAW

General Legal Principals

The claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-43-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo. App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo.App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

In rendering a decision, the ALJ must make credibility determinations, draw plausible inferences from the record, and resolve essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* In determining credibility, the ALJ considers the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16.

Credibility is a significant consideration when determining compensability. As found here, Claimant's critical testimony regarding Mr. Bryant being a target/prospect on the night of June 6, 2014, is incredible and unconvincing, while Ms. Jacobs' testimony that Mr. Bryant was never a target/prospect is far more credible, and consistent with other evidence, including Claimant's own prospect/target lists.

Compensability

The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976).

Here, Claimant's injuries did not occur within the course and scope of his employment with Employer, as the altercation leading to his injuries took place well after Claimant's client (Jordan Brown) had gone home, while at a bar, while Claimant was

heavily drinking, and likely intoxicated, with his friend, Bill Bryant, buying shots for a bachelorette party. Mr. Bryant was not a client nor a prospective client, and Claimant was prohibited by his Employer from entertaining Mr. Bryant. Claimant's injuries occurred while drinking with Mr. Bryant at Howl at the Moon, buying drinks for a bachelorette party, and arguing/fighting with a bar patron, none of which constitute an activity connected to Claimant's job-related functions. Claimant's injuries did not occur within the course of his employment, and his claim is therefore denied.

Claimant's injuries also did not arise out of his employment with Employer. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). It is generally not necessary for an employee to be actually engaged in work duties at the time of the accident for an injury to be compensable. *See Phillips Contracting, Inc. v. Hirst*, 905 P.2d 9 (Colo. App. 1995) It is sufficient if the injury arises out of a risk which is reasonably incidental to the conditions and circumstances of the particular employment. *Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985)

When a personal deviation is asserted, the issue is whether the activity giving rise to the injury constituted a deviation from employment so substantial as to remove it from the employment relationship. *Silver Engineering Works, Inc. v. Simmons*, 180 Colo. 309, 505 P.2d 966 (1973); *Roache v. Industrial Commission,* 729 P.2d 991 (Colo. App. 1986)

Claimant's injuries did not arise out of his employment because the incident leading to his injuries was not sufficiently related to his employment to be considered part of his service to the employer. After Jordan Brown left, Claimant was not performing any service for Employer. There was no benefit to Employer provided by Claimant going to Howl at the Moon with Mr. Bryant. The competent evidence shows that Claimant was not entertaining Mr. Brown or Mr. Bryant when he was struck in the face. Claimant had substantially deviated from any employment activities by that time. Claimant was intoxicated and buying drinks for a bachelorette party when he initiated a confrontation that led to him being struck. "If the acts of an employee at the time of the injury are for the employee's sole benefit, then the injury does not arise out of and in the course of employment." *Kater v. Industrial Comm'n*, 728 P.2d 746 (Colo. App. 1986).

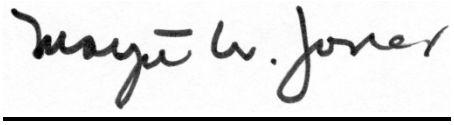
Here, Claimant had deviated from any possible employment activity when he entered Howl at the Moon. There was no evidence that anything that occurred within Howl at the Moon was an accepted part of Claimant's employment. Claimant was well outside of Employer's alcohol policy as well. As such, Claimant's injuries did not occur within the course and scope of his employment, and they did not arise out of his employment. Claimant failed his burden of proving a compensable claim, and his claim is therefore denied.

ORDER

Claimant has failed to establish by a preponderance of the evidence that he sustained injuries arising out of and in the course and scope of his employment on June 6, 2014.

Claimant's claim for workers' compensation benefits is denied and dismissed.

Dated: This 23 day of August, 2018.



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), CR.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Respondent's have overcome the Division Independent Medical Examiner's opinions regarding permanent impairment.

II. Whether Claimant has proven by a preponderance of the evidence that she is entitled to an award of maintenance medical benefits.

III. Whether Respondent's properly endorsed the issue of permanent impairment to be heard at the hearing.

IV. Disfigurement benefits.

PROCEDURAL MATTERS

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was born on December 12, 1960 and is 57 years old. She resides at 20426 Brookdale Lane, Parker, CO 80138.
2. Claimant is a Food Service Manager at Jefferson County Public Schools. She has worked at Jefferson County Public Schools since 2000.
3. On October 15, 2015, Claimant was on the job placing milk crates along the wall of the kitchen when she turned and slipped on water, landing on all fours. (Transcript at 95-96). Claimant fractured her right patella during the fall and was taken to Dr. Braden Mayer, M.D. for treatment. (Cl's Ex. 2 at 29).
4. On October 15, 2015, Dr. Braden diagnosed Claimant as suffering from a displaced transverse patellar fracture. Due to the significant displacement of the fracture, Dr. Braden recommended open reduction and internal fixation of her right patella. (Cl. Ex. 2 at 29.)
5. Dr. Braden Mayer performed surgery on October 16, 2015 to correct Claimant's fractured right patella. (Cl's Ex. 2 at 30-31). Dr. Mayer performed an open reduction and internal fixation of her right displaced patellar fracture. This required Dr. Mayer to reduce and compress the displaced fracture with screws and sternal wire. *Id.*
6. Claimant saw Dr. Mayer again on October 29, 2015 for a two-week follow-up on the operation. (Cl's Ex. 2 at 37). On December 17, 2015, Dr. Mayer saw Claimant

and reported a range of motion of zero to ninety degrees for Claimant's right knee. (*Id.* at 38).

7. Claimant saw Dr. Mayer on April 7, 2016 for left shoulder pain. (Cl's Ex. 2 at 180). Dr. Mayer's impression was that Claimant had left sided neck pain and left shoulder pain that was suggestive of muscular tightness and spasm. *Id.*

8. On May 19, 2016, Dr. Mayer saw Claimant to recheck her neck pain and review her May 16, 2016 MRI. (Cl's Ex. 2 at 181). Dr. Mayer reported degenerative disc changes in Claimant's cervical spine at the C5-C6 level. *Id.*

9. On September 29, 2016, almost a full year after Claimant's right knee surgery, Dr. Mayer documents that Claimant's right knee has only 135 degrees of flexion, a sub-normal range of motion. (Cl's Ex. 2 at 188). There is also a finding of "mild quad atrophy of her right lower extremity" and notes that "There is mild irregularity of the inferior articular surface region" of her right knee joint. *Id.* Dr. Mayer also discusses continued treatment needed for Claimant's right knee. *Id.*

10. On September 30, 2016, Dr. Mayer completed a Patient Enrollment & Prescription Form for Orthovisc injections. On the form, Dr. Mayer listed the ICD code as "unilateral primary osteoarthritis, right knee." (Cl's Ex. 2 at 187).

11. On October 20, 2016, Dr. Mayer again examined Claimant and documented right knee range of motion of 0 degrees extension and 125 degrees of flexion. *Id.* at 193. He also noted "minor joint space narrowing at the medial compartment." Id. at 193.

12. On October 26, 2016, Dr. Mayer performed a Orthovisc injection into Claimant's right knee to reduce her pain complaints due to the arthritic changes in her knee. (See (Cl's Ex. 2 at 187,188, and 194).

13. Dr. Sharon R. Walker, M.D. of On the Mend Occupational Medicine first saw Claimant on October 26, 2015. (Cl's Ex. 2 at 51). This examination is where Claimant first complains of pain in her right shoulder, only eleven days after her fall at work, and Claimant's first visit with a doctor who was not her right knee surgeon. *Id.* Dr. Walker documents that it is medically probable that Claimant's "complaints are the result of [Claimant's] work." *Id.* at 54.

14. On November 5, 2015, Dr. Walker examined Claimant and documented pain in her neck and back. (Cl's Ex. 2 at 56).

15. On May 9, 2016, Dr. Walker noted a history of "cervicothoracic somatic dysfunction" since February 3, 2016. Dr. Walker ordered an MRI of Claimant's cervical spine on May 9, 2016, as it was causing Claimant continued pain. (Cl's Ex. 2 at 99).

16. The MRI was performed on May 16, 2016 and revealed "degenerative disc and joint changes with mild dural sac indentation," and "foraminal narrowing most prominently at C5-C6 bilaterally." (Cl's Ex. 2 at 105). The MRI report itself documents "moderate disc space narrowing," along with "both foramina are moderately narrowed appears probably bony and due to uncinate hypertrophy,"

and “endplate edema is noted, active degenerative endplate changes Modic type I,” for the C5-C6 region. *Id.* at 208.

17. On September 1, 2016, Dr. Walker documents that Claimant has crepitus in her right knee. (Cl’s Ex. 2 at 117).

18. Dr. Walker documented a decreased range of motion in Claimant’s right knee on September 21, 2016, nearly eleven months after her surgery. (Cl’s Ex. 2 at 121). Claimant continued to see Dr. Walker periodically with continuing, documented pain in her right knee. *Id.* at 121-245. Dr. Walker did not record any figures for range of motion for Claimant’s right knee during this time. *Id.*

19. On January 30, 2017, Dr. L. Barton Goldman, M.D., evaluated Claimant, based on a referral from Dr. Walker. Dr. Goldman noted that Claimant’s right knee had full extension, but only 120 degrees of flexion. (Cl’s Ex. 2 at 257). Dr. Goldman’s impression of Claimant included a diagnosis of bilateral upper trapezius and middle trapezius myofascial pain with secondary cervical facet dysfunction resulting from the October 15, 2015 work injury. (Cl’s Ex. 2 at 258 and Tr. At 70:5-10). Dr. Goldman’s impression also included “status post right patellar fracture requiring internal fixation with aggravation of pre-existing degenerative joint disease and osteoarthritis secondary to October 15, 2015, work related injury” and a probable somatization disorder. (Cl’s Ex. 2 at 258).

20. On March 15, 2017, Zachary Fox, P.T. documented Claimant at 66% on the Neck Index with decreased range of motion for her cervical spine. (Cl’s Ex. at 321). Inclinometers were used to find the range of motion. *Id.*

21. On September 9, 2017, after nearly two years of treating Claimant for her right knee and neck injuries (and indicating at least twice that she anticipated permanent impairment), Dr. Walker found Claimant had reached maximum medical improvement (MMI) without any permanent impairment. (Cl’s Ex. 2 at 245, and *see* Cl’s Ex. 2 at 238 *and* 244 indicating that Dr. Walker anticipated Claimant would have permanent impairment rating three months before and less than one month before placing her at MMI). According to Division Impairment Rating Tips:

> Whenever 6 months of treatment of the spine has occurred and a Table 53 zero percent rating is assigned, the physician must provide justification for the zero percent rating, based on the lack of physiological findings. The rating physician shall be aware that a zero percent rating in this circumstance implies that treatment was performed in the absence of medically documented pain and rigidity. (R’s Ex. K at 127, ¶ 2)

Dr. Walker, however, did not offer any explanation for her assignment of a zero percent rating for Claimant’s cervical spine after almost two years of documented treatment. (Cl’s Ex. 2 at 245-249). Moreover, even though Dr. Walker noted Claimant’s knee had full range of motion, she did not provide

any indication that she actually measured Claimant's range of motion since actual numerical range of motion measurements are not listed in her report. (Cl's Ex. 2 at 245-249).

22. Dr. Stanley Ginsburg examined Claimant as the Division Independent Medical Evaluation (DIME) doctor on January 25, 2018. (Cl's Ex. 1 at 1). He found Claimant to be at MMI and assigned her a permanent impairment rating of 8% whole body impairment for her cervical spine and 16% lower extremity impairment for Claimant's right knee. *Id.* at 16-17. Dr. Ginsburg, using the AMA Guides, found 2% impairment for cervical spine mobility through reproducible range of motion tests with dual inclinometers and a 6% impairment through Table 53 II (C). *Id.* at 17. Dr. Ginsburg, after reviewing medical records and taking his own measurements, found that Claimant had decreased range of motion in her right knee as well as ratable arthritis and/or chondromalacia due to trauma (the fracture and surgery). *Id.* at 16. Dr. Ginsburg, disagreeing with previous evaluations and complying with Impairment Rating Tips, wrote:

> I must disagree respectfully with the opinion of some of the providers. I do think the patient has an impairment.
>
> In regard to the right knee, clearly the patient had significant trauma requiring surgery and does have residua. Range of motion is 11% impairment based on flexion. Extension is not impaired. Table 40, diagnosis is to be considered. Under #5, "arthritis due to any cause including trauma, chondromalacia," I believe the patient has 5%. Combining 11% and 5% is 16% lower extremity impairment, 16% lower extremity is 6% while person impairment. I think very clearly the pain, which the patient has had in the "shoulder," is in fact cervical pain. She does not have any pain distribution in the shoulder joint itself nor is she tender – I failed to mention this above. There is tenderness in the left paracervical/suprascapular area and I believe this is radicular. There is underlying pre-existing degenerative change but while one may say this is not accident-related, clearly she was asymptomatic previously and is not asymptomatic presently. The concluding evaluation states that she has marked improvement in pain but this is not the history seen throughout the charts – even considering somatization – and has discomfort now. A statement is made that the pain distribution does not conform to the distribution of abnormalities in regard to pre-existing changes but I believe there is generalized distribution of degenerative changes and again, I state that the patient was asymptomatic previously. There is 2% impairment for cervical mobility. On page 80, specific disorders, is IIC – 6%. This results in 8% impairment for cervical spine

> abnormalities. This results in 14% overall whole person impairment.
>
> There is no apportionment. Multiple body parts have been listed for analysis for impairment. Rather than listing all of these, I will say that only cervical spine and right knee should have impairment and I have so indicated this. *Id.* at 16-17.

23. Table 53, Section II, of the AMA Guides, provides for an impairment rating for "Intervertebral disc or soft-tissue lesions." (Ex. K, pg. 123.) Subsection II(C) provides a 6% rating for injuries to the cervical spine which are "Unoperated, with medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasm, associated with *moderate* to severe degenerative changes on *structural tests*; includes unoperated herniated nucleus pulposus with or without radiculopathy." (Emphasis added.) *Id.*

24. Claimant's MRI, i.e., a structural test, dated May 16, 2016, documents moderate degenerative changes. The MRI documents at the C5-6 region: "*moderately* dark disc signal with *moderate* disc space narrowing," along with "both foramina are *moderately* narrowed appears probably bony and due to uncinate hypertrophy," and "endplate edema is noted, active degenerative endplate changes Modic type I." (Emphasis added.) (Cl. Ex 2, pg. 208). The MRI report also documents at the C6-7 region: "*moderately"* dark signal with *moderate* disc space narrowing." (Emphasis added.) *Id.* Therefore, Claimant's MRI supports a 6% Table 53 II(C) rating based on "moderate" changes found on Claimant's MRI.

25. Claimant's medical records also demonstrate six months of cervical pain and rigidity, with and without muscle spasm. These findings also support a Table 53 Rating.

26. As stated above, Dr. Ginsburg concluded that: "A statement is made that the pain distribution does not conform to the distribution of abnormalities in regard to pre-existing changes but I believe there is generalized distribution of degenerative changes and again, I state that the patient was asymptomatic previously." Therefore, Dr. Ginsburg determined Claimant's MRI findings were consistent with her pain distribution. After physically evaluating Claimant, and reviewing her medical records, Dr. Ginsburg concluded Claimant qualified for a 6% rating pursuant to Table 53, Section II(C) of the AMA Guides.

27. Dr. Ginsburg also concluded that based on Claimant's range of motion deficits of her cervical spine, she was entitled to an additional 2% impairment.

28. Regarding Claimant's right knee, Dr. Ginsberg noted that Claimant had only 120 degrees of flexion and provided her an 11% scheduled rating for that decrease in range of motion. He also concluded that Claimant was entitled to an additional 5% extremity rating for arthritis and/or chondromalacia in her

knee. He therefore concluded that Claimant's knee extremity rating under the AMA Guides was 16%.

29. Table 39 of the AMA Guides provides for an 11% extremity rating if knee flexion is limited to 120 degrees. (Re. Ex. K at 122.)

30. Table 40, Section 5, of the AMA Guides, also allows the rating physician to provide additional impairment for "arthritis due to any cause including trauma; chondromalacia." (Re. Ex. K at 122.) The amount of additional impairment which can be assigned under Section 5 is discretionary and ranges from 0 to 20%. In this case, Dr. Ginsburg provided Claimant an additional 5% under Table 40, Section 5, of the AMA Guides for "arthritis due to any cause including trauma; chondromalacia." (Rs' Ex. D.)

31. Dr. Walker saw Claimant again on May 14, 2018 after Dr. Ginsburg's DIME exam. (Rs' Ex. A at 7). During that visit, Dr. Walker documented Claimant's right knee range of motion at "full extension and about 90 degrees of flexion," in clear conflict with Dr. Cebrian's findings. Id. at 9. Moreover, she did not provide any indication that she actually measured Claimant's range of motion since actual numerical range of motion measurements are not listed in her report. Instead, Dr. Walker stated Claimant has "full" extension and "about" 90 degrees of flexion. *Id*.

32. Respondent retained Dr. Carlos Cebrian, M.D. to examine Claimant on August 10, 2017. (Cl's Ex. 2 at 485). He concluded Claimant was at MMI and did not assign any permanent impairment rating. *Id.* at 514-516. Dr. Cebrian did not have any actual measurements with which to compare his range of motion findings for Claimant's right knee. Dr. Cebrian also failed to give weight to – or credibly explain why he dismissed - Zachary Fox's, P.T. cervical spine range of motion measurements when taking his own range of measurements of Claimant's cervical spine. (R's Ex. C at 45 and Tr. at 76:4-10). In his report, Dr. Cebrian briefly mentioned the physical therapy records. (R's Ex. C at 45). Dr. Cebrian's cervical spine range of motion measurements are inconsistent with Zachary Fox's, P.T. records. (*Compare* Cl's Ex. 1 at 3 *with* Cl's Ex. 2 at 320-440). Dr. Cebrian placed significant weight on Claimant's somatic symptom disorder diagnosis. However, Dr. Ginsburg gave Claimant permanent impairment despite the diagnosis and consideration of such underlying condition. The ALJ finds that Dr. Ginsburg, who is a board-certified in neurology and psychiatry (and completed a research fellowship in psychiatry), is more credible, and his opinions are more persuasive, regarding Claimant's somatic symptom disorder and analyze its impact in this case compared to Dr. Cebrian who is board-certified in family medicine. (Cl's Ex. 1 at 18; Tr. at 27:9-12; and Tr. at 78:11-14). Dr. Cebrian also agreed that a person with somatic symptom disorder is not faking their pain, and that the person experiences intense thoughts, feelings, and behaviors related to the symptoms that interfere with daily life. (Tr. at 82:7-13). Dr. Cebrian also stated that a person with somatic symptom disorder can experience symptoms more intensely than somebody else with a low level or no level of pathology. (*Id.* at 82:24 to 83:4). There is a clear pathology, however, with Claimant as Dr.

Goldman linked Claimant's shoulder pain as cervical pain secondary to the facet joints from the neck. (*Id.* at 85:14 to 86:3). The ALJ finds that Dr. Ginsburg's opinions are more credible and persuasive than those presented by Dr. Cebrian regarding whether Claimant has a ratable impairment to her cervical spine and right knee.

33. A Table (II)(C) diagnosis requires a minimum of six months of medically documented pain and rigidity, which Claimant had starting from at least her April 7, 2016 visit with Dr. Mayer through her visit with Dr. Ginsburg in January 2018. Dr. Goldman also documents Claimant's neck pain and attributes it to October 15, 2015 work injury. This neck pain can be with or without muscle spasm. The pain must also be associated with degenerative changes on structural tests. As found above, the May 16, 2016 MRI revealed degenerative joint changes on Claimant's cervical spine. Claimant meets the criteria for a Table (II)(C) diagnosis. In his testimony, Dr. Cebrian confirmed six months of documented pain involving Claimant's cervical spine and findings of degenerative changes – which he called mild - in Claimant's cervical spine. (Tr. at 68:9-20). Dr. Cebrian also acknowledged numerous documentations of right paracervical muscular tenderness, muscle knots, and other issues surrounding Claimant's cervical spine. (Tr. at 75:14-21).

34. Dr. Cebrian admitted that with the range of motion findings Dr. Ginsburg measured, Dr. Ginsburg was correct in his assignment of 11% impairment for Claimant's right knee for ROM loss. (*Id.* at 81:1-4).

35. Claimant credibly testified that she did not have any symptoms in her right knee, cervical spine, or right thumb before her fall on October 15, 2015. (Tr. at 104:9-12). Dr. Cebrian admitted that he was not aware of any medical symptoms or treatment for Claimant's right knee, cervical spine, or right thumb before her fall on October 15, 2015. (*Id.* at 65:20 to 66:9).

36. Dr. Cebrian noted, Claimant has been diagnosed with a Somatic Symptom Disorder by Dr. Hawkins. Dr. Cebrian noted that this provides an explanation as to why Claimant has had prolonged physical complaints, that at times, were resistant to treatment in addition to an expansion of her physical complaints. He further noted that with "a Somatic Symptom Disorder, there are complaints that suggest a physical cause that cannot be explained by the physical cause." (Ex. C, p. 48)

37. Dr. Cebrian also testified at hearing and stated that: "in individuals with somatic symptoms disorders it's incumbent on the regular treating doctors to make sure that what they are treating is based on pure objective evidence as opposed to the expression of the somatic symptoms disorder that was diagnosed by psychological testing that was performed by Rebecca Hawkins." (Hearing Transcript, p. 40-41)

38. Dr. Cebrian agreed with Dr. Hawkin's diagnosis of somatic symptom disorder. "That's an appropriate diagnosis and it also makes sense and kind of puts together why Claimant was treated for such an extensive period of time. Most of the time throughout her case the findings were all myofascial in origin

which is something you see a lot in people with somatic symptoms disorder because they – they handle stress on a physical – psychological stress presents itself in their body with physical complaints such as tight muscles and various things like that. And so based on the injuries that she had in her fall in October of 2015 the fact that she has a somatic symptom disorder explains why her treating doctors continue to treat her for two years as her symptoms were in excess of what the physical findings were." (Ex. C, p. 41)

39. With regards to Claimant's knee, Dr. Cebrian testified there was no documented injury to any internal structures such as her ligaments or meniscus. (Hearing Transcript, p. 44)

40. Dr. Cebrian testified, "the fracture healed and in the x-ray follow-ups with Dr. Myer it showed that there was good alignment of the fractured pieces and that it was healed." (Hearing Transcript, p. 44)

41. Dr. Cebrian testified that the AMA Guides do not provide an impairment rating specifically for a patella fracture. "Her range of motion when I evaluated her was 150 degrees of flexion and 0 degrees of extension which is a normal range of motion. She didn't have any positive tests for the internal derangement that we test for." (Hearing Transcript, p. 44-45)

42. Dr. Cebrian testified that Claimant did not qualify for a Table 40 rating for a specific disorder. "[T]here was no findings of post traumatic arthritis and so I didn't think it was appropriate to rate for that. She didn't have any removal of her meniscus or anything else, so there was no specific disorder impairment, so her impairment rating was zero." (Hearing Transcript, p. 45-46)

43. Dr. Cebrian testified that his range of motion measurements were identical to Dr. Walker's range of motion measurements. "[S]he didn't give the specific percentage or the degrees which you do not have to do if you're not going to assign impairment, but by saying there's full range of motion based on the guides that would be 150 degrees in flection so that would be the same as what I had." (Hearing Transcript, p. 47)

44. With regard to Dr. Ginsburg's range of motion measurements, Dr. Cebrian testified, "Dr. Ginsburg at the time of his DIME found range of motion measurements, flexion of the knee 30 degrees worse than had been documented more recently. And so it essentially, you know, sticks out like the oddball; that is so much worse than anything that had been seen before and he didn't give an explanation as to why he thought that the range of motion was significantly worse that had been identified before. And at this time he had the benefit of not only Dr. Walker's evaluation that I didn't have at the time, he also had my evaluation that had shown it was normal range of motion at that time." (Hearing Transcript, p. 48-49)

45. Dr. Cebrian testified that he disagreed with Dr. Ginsburg's assignment of an impairment rating under Table 40 as there's no evidence of any post-traumatic arthritis as a result of the patella fracture. (Hearing Transcript, p. 52)

46. Per Dr. Cebrian, if Claimant had arthritis, “you would expect to see findings of an x-ray that demonstrated arthritis in the patella. Potentially you could assign that post traumatic arthritis if the patella wasn’t aligned properly and there was significant displacement of the patella and that it didn’t heal properly, but you would base that on some diagnostic objective findings that you had.” (Hearing Transcript, p. 50-51) Dr. Cebrian further testified that Dr. Ginsburg did not cite to, and he was not aware of any, diagnostic x-ray that showed post traumatic arthritis or other diagnostic criteria. (Hearing Transcript, p. 51)

47. With regard to Claimant’s cervical spine, Dr. Cebrian testified, “in terms of the examination that I performed Claimant had discomfort palpation diffusely in the muscles. She had no spasms that were identified or trigger points. Her range of motion was within normal limits using dueling inclinometers and there was negative findings for radicular type pain with the Spurling’s Test and she didn’t have pain with acts of compression.” (Hearing Transcript, p. 53) Further, “there were no findings objectively on exam when I saw her.” (Hearing Transcript, p. 53)

48. Dr. Cebrian noted when Dr. Walker placed claimant at MMI, she did not include any neck injury as part of her assessment. With regard to the cervical spine, He stated that Dr. Walker found “tenderness to palpation of the paracervical musculature bilaterally, so the muscles on the side of the cervical spine, also into the bilateral trapezius muscles with some tightness in the trapezius muscles, worse on the left, and then there was also full range of motion.” (Hearing Transcript, p. 54)

49. Dr. Cebrian testified that these findings were similar to his. “I did not find any tightness, Dr. Walker did not document any spasms, but tightness was something that – that I didn’t appreciate.” (Hearing Transcript, p. 54)

50. Dr. Cebrian testified that individuals with somatoform pain disorders “tend to hold a lot of psychological stress in a physical way and can keep their shoulders tight and that can be something that can be seen in individuals with that diagnosis.” (Hearing Transcript, p. 54-55)

51. Dr. Cebrian testified that there was never a specific diagnosis of any structural abnormality of the cervical spine. He did, however, admit that Dr. Goldman at one point suggested Claimant’s cervical muscle spasms might be due to a facet problem. (Hearing Transcript, p. 55)

52. Dr. Cebrian testified that Claimant is not entitled to a Table 53 rating under the AMA Guides for a cervical spine injury. “[S]he did have an MRI that was…performed that showed some mild degenerative changes, there’s no disc herniation, there was no nerve root impingement that was found on the cervical MRI and plus the symptoms that she had were primarily myofascial in nature or consistently documented as myofascial in nature without objective findings to support them. Now, she did have some tightness at different times, there were trigger points documented at different times, spasms documented at different times but that doesn’t mean that those are permanent kind of conditions that deserve an impairment rating. And I think it’s important to note

even when Dr. Ginsburg evaluated her for the DIME he specifically documented that she had tenderness but no spasms and so he on his examination – even though he said there were radicular findings – there were no examination findings that he documented that would suggest any kind of evidence of radicular findings, the sensation exam was normal, strength was normal, reflexes were normal, and so he said that he thought there were radicular findings but on his examination apart from tenderness and range of motion restrictions the examination findings were completely normal." (Hearing Transcript, p. 56-57)

53. Dr. Cebrian also testified that Claimant's mechanism of injury (falling on her hands) would be unlikely to cause any kind of radicular symptoms. (Hearing Transcript, p. 57)

54. Dr. Cebrian also testified that Dr. Ginsburg assigned impairment to the cervical spine pursuant to Table 53(II)(C) which requires a medically documented injury and a minimum of six months of medically documented pain and rigidity with or without spasm associated with moderate to severe degenerative changes on structural tests which includes an operated herniated disc with or without radiculopathy. He further stated that: "So to the level at which Dr. Ginsburg decided to rate her at the moderate to severe level, there's no documentation that there's any moderate to severe level of degenerative changes that are correlating with her symptoms. He chose to rate her at quite a high level for that that is typically reserved for herniated nucleus pulposus, so if somebody has a disc protrusion that touches a nerve root, somebody has a herniated disc that causes symptoms, that would be the level that (C) is typically used for as opposed to just what he said were generalized degenerative changes…And so he's in err in assigning a (II)(C) impairment." (Hearing Transcript, p. 59-60)

55. Per Dr. Cebrian, the guidelines require a correlation between the impairment rating and objective evidence. "[T]he reason for that is that unfortunately once all of us get to a certain age – usually quite young – we all have degenerative findings. And so if we assign impairment ratings for degenerative findings only all of us would be walking around with very large impairment ratings." (Hearing Transcript, p. 60)

56. Dr. Cebrian opined that Dr. Ginsberg was clearly incorrect to assign a (II)(C) rating under the facts of this case. He noted that Dr. Ginsberg was the only Level II physician to assign an impairment rating for the neck (Hearing Transcript, p. 60-61).

57. Dr. Cebrian noted that upon his examination, and using cervical inclinometer testing, Claimant's range of motion was normal and he also stated that Dr. Walker also documented normal range of motion-even though there is not credible and persuasive evidence that she actually measured Claimant's cervical range of motion. (Hearing Transcript, p. 61) Further, he stated that pursuant to the AMA Guides, it is improper to assign a rating for loss of range of motion to the cervical spine without a proper Table 53 diagnosis. (Hearing

Transcript, p. 61) However, Dr. Ginsburg, determined Claimant's accident resulted in an injury to Claimant's cervical spine in the nature of an aggravation of her preexisting asymptomatic degenerative spine condition which resulted in radicular symptoms, with pain and rigidity, and that she qualified for a Table 53 rating. (Ex. D, pg. 66-67.)

58. Dr. Cebrian testified regarding alleged errors in Dr. Ginsburg's report. "It's a significant error. It's – he's rated at a level that isn't supported by the medical records, isn't supported by the information in the medical records, and it's wrong to rate at that level for the information that we have. And he also comments that he's aware of the – and I think he might have referred to it as somatization; that he was aware of that but discounting – even with all that he still felt that the findings were appropriate because she was asymptomatic before the injury and so he still assigned impairment even with all that information." (Hearing Transcript, p. 62)

59. On May 14, 2018, Claimant returned to Dr. Walker. Dr. Walker reviewed Dr. Ginsburg's DIME report and made several comments regarding some of his findings and recommendations. Dr. Walker's report has a section for "Permanent Impairment." After the section titled "Permanent Impairment:" Dr. Walker noted "Per Dr. Ginsburg." Therefore, Dr. Walker did not refute or dispute in her May 14, 2018 report the impairment rating provided by Dr. Ginsberg.

60. Dr. Ginsburg made maintenance care recommendations. Dr. Ginsburg stated that "during the year following assignment of maximum medical improvement, Claimant should be seen, perhaps two to four times, to see if any changes occurred and for appropriate medications. (Cl's Ex. 1 at 17).

61. Dr. Cebrian also made maintenance care recommendations, which included a short course of 4 to 6 visits of PT for any complaints that Claimant has when returning to regular duty over the first three months and to complete her final cognitive-behavioral counseling session with Dr. Hawkins. (Rs' Ex. C at 49).

62. While Dr. Walker initially stated there should be no medical maintenance treatment, she saw Claimant on May 14, 2018, and recommended maintenance care, including a right-hand x-ray and reevaluation following that x-ray. (Rs' Ex. A at 10).

63. The post MMI treatment recommended by Drs. Ginsburg, Cebrian, and Walker is reasonable and necessary medical treatment which is intended to relieve Claimant from the effects of her injury and prevent further deterioration of Claimant's condition.

64. Claimant has a scar on her right knee that is approximately three and a half to four inches long with suture marks and slight discoloration extending about a quarter of an inch in width for the length of the scar. (Tr. at 102:16 to 103:3). Claimant's right thumb has a very faint one-half-inch long scar and swelling at the base of her thumb. (Tr. at 103:25 to 104:8). These disfigurements are

related to the compensable injury, are permanent, and have been present for more than six months.

65. Claimant argued at hearing that Respondent's failure to check the box indicating that PPD was at issue constitutes a waiver of the issue and that the issue of PPD was closed and Respondent is bound by the impairment rating assigned by the Division Examiner, Dr. Ginsburg.

66. Respondent's Application for Hearing clearly stated, "Rule 5 application for hearing to overcome DIME physician's impairment rating."

67. Respondent's endorsement properly put the issue of Claimant's medical impairment rating – PPD – at issue and put Claimant on notice of the issues to be heard at the hearing set pursuant to Respondent's Application for Hearing.

68. The ALJ finds Respondent properly endorsed the issue of Claimant's permanent medical impairment – PPD - as it relates to the industrial injury and overcoming the rating provided by the Division Examiner, Dr. Ginsburg.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or

improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Respondents have overcome the Division Independent Medical Examiner's opinions regarding permanent impairment.

a. Whole Person Cervical Spine Rating

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000). Moreover, not every deviation from the rating protocols of the AMA Guides requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Logan v. Durango Mountain Resort,* W.C. No. 4-679-289 (ICAO April 3, 2009).

Dr. Ginsburg determined Claimant's work accident aggravated her preexisting asymptomatic degenerative cervical spine disease and resulted in pain, loss of range of motion, and radiculopathy, which are ratable under the AMA Guides. Dr. Ginsburg concluded Claimant is entitled to a 6% rating pursuant to Table 53 II(C) of the AMA Guides and an additional 2% for a loss of range of motion.

As found above, Table 53, Section II, of the AMA Guides, provides for an impairment rating for "Intervertebral disc or soft-tissue lesions." (Ex. K, pg. 123.) Subsection II(C) provides a 6% rating for injuries to the cervical spine which are "Unoperated, with medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasm, associated with *moderate* to severe degenerative changes on *structural tests*; includes unoperated herniated nucleus pulposus with or without radiculopathy." (Emphasis added.) *Id.*

As found, Claimant's MRI, i.e., structural tests, dated May 16, 2016, documents moderate degenerative changes. The MRI documents at the C5-6 region: "*moderately* dark disc signal with *moderate* disc space narrowing," along with "both foramina are *moderately* narrowed appears probably bony and due to uncinate hypertrophy," and "endplate edema is noted, active degenerative endplate changes Modic type I." (Emphasis added.) (Cl. Ex 2, pg. 208). The MRI report also documents at the C6-7 region: "*moderately"* dark signal with *moderate* disc space narrowing." (Emphasis added.) *Id.*

Moreover, Claimant's medical records demonstrate six months of cervical pain and rigidity, with and without muscle spasm.

In addition, as found, and stated above, Dr. Ginsburg concluded that: "A statement is made that the pain distribution does not conform to the distribution of abnormalities in regard to pre-existing changes but I believe there is generalized distribution of degenerative changes and again, I state that the patient was asymptomatic previously." Therefore, Dr. Ginsburg determined Claimant's MRI findings were consistent with her pain distribution and that such symptoms were radicular and such symptoms were caused by her work accident which resulted in an injury to her cervical spine. In other words, Dr. Ginsburg tied the MRI findings to Claimant's symptoms and he did not think the MRI findings were merely incidental or that Claimant's symptoms were not caused by an injury to her neck that occurred when she fell. He also did not think that her symptoms were purely the result of her somatization disorder. The ALJ has considered the fact Dr. Ginsburg is a neurologist and has training and board certification in psychiatry and finds his opinion that Claimant suffered an injury to her cervical spine, is having radicular symptoms due to the injury, and that such injury resulted in an 8% impairment rating under the AMA Guides to be credible and persuasive. Moreover, Dr. Ginsburg clearly notes in his report that Claimant has a somatization disorder and in spite of such condition, he concluded Claimant suffered an injury to her cervical spine – neck - and is entitled to an impairment rating pursuant to the AMA Guides. It should also be noted that although Claimant complained of pain in her shoulders, left knee, SI joint, and back, Dr. Ginsburg did not provide Claimant an impairment rating for those body parts based on her pain complaints.

Respondents contend Claimant did not suffer an injury to her cervical spine which is ratable under the AMA Guides. In support of their contention, they rely upon the zero percent rating provided by Claimant's primary treating physician as well as the opinions set forth by Dr. Cebrian in his report and hearing testimony. They also contend that Dr. Ginsburg committed numerous errors in providing Claimant a 6% whole person impairment rating for her cervical spine and a 16% scheduled rating for her right knee. However, as found, and stated above, the impairment rating provided by Dr. Ginsburg is based on his interpretation and application of the AMA Guides. The fact that Dr. Walker and/or Dr. Cebrian disagree with how Dr. Ginsburg interpreted and applied the AMA Guides does not rise to the level of clear and convincing evidence. Moreover, the ALJ finds and concludes that the "errors" Dr. Cebrian contends Dr. Ginsburg made in determining Claimant's cervical impairment rating are not true errors or mistakes, but merely differences of opinion as to how to interpret and apply the AMA Guides in general - and in this case.

Therefore, the ALJ concludes Respondents have failed to overcome by clear and convincing evidence the 8% whole person cervical spine impairment rating Dr. Ginsburg provided Claimant.

b. **Extremity Rating for Right Knee**

The burden of proof pertinent to a dispute concerning the impairment rating of a scheduled injury is a preponderance of the evidence. *Maestas v. American Furniture Warehouse,* W.C. No. 4-662-369 (June 5, 2007); *Ortiz v. Ingersoll-Rand Co.,* W.C. No. 4-981-218-04 (January 25, 2018); *see generally Delaney v. Industrial Claim Appeals Office,* 30 P.3d 691, 693 (Colo. App. 2000);*Wagoner v. City of Colorado Springs,* W.C. No. 4-817-985-03 (Oct. 21, 2013)(no presumptive weight afforded DIME physician concerning scheduled injuries; DIME opinion unnecessary to determination of scheduled impairment), *aff'd Wagoner v. Industrial Claim Appeals Office,* Colo. App. No. 13CA1983 (Oct. 23, 2014)(NSOP).

As found, Dr. Mayer performed surgery on October 16, 2015 to correct Claimant's fractured right patella. Dr. Mayer performed an open reduction and internal fixation of her displaced patella fracture. This required Dr. Mayer to reduce and compress the displaced fracture with screws and sternal wire.

As found, on September 29, 2016, almost a full year after Claimant's right knee surgery, Dr. Mayer documented that Claimant's right knee had only 135 degrees of flexion, a sub-normal range of motion. There is also a finding of "mild quad atrophy of her right lower extremity" and he also noted that "There is mild irregularity of the inferior articular surface region" of her right knee joint. Dr. Mayer also discusses continued treatment needed for Claimant's right knee.

As found, on September 30, 2016, Dr. Mayer completed a Patient Enrollment & Prescription Form for Orthovisc injections for Claimant. On the form, Dr. Mayer listed the ICD code for Claimant's condition as "unilateral primary osteoarthritis, right knee." On October 20, 2016, Dr. Mayer again examined Claimant and documented right knee

range of motion which consisted of 125 degrees of flexion. He also noted "minor joint space narrowing at the medial compartment."

In addition, on January 30, 2017, Dr. Goldman evaluated Claimant, based on a referral from Dr. Walker. Dr. Goldman noted Claimant's right knee had full extension, but had only 120 degrees of flexion. Dr. Goldman's impression – diagnosis –included "status post right patellar fracture requiring internal fixation with *aggravation of pre-existing degenerative joint disease and osteoarthritis secondary to October 15, 2015, work related injury.*" (Emphasis added.) Moreover, the decreased flexion found by Dr. Goldman on January 30, 2017 is the same amount measured and rated by Dr. Ginsburg during his DIME.

When Dr. Ginsburg evaluated Claimant's right knee pursuant to the DIME, he noted the following:

> In regard to the right knee, clearly the patient had significant trauma requiring surgery and does have residua. Range of motion is 11% impairment based on flexion. Extension is not impaired. Table 40, diagnosis is to be considered. Under #5, "arthritis due to any cause including trauma, chondromalacia," I believe the patient has 5%. Combining 11% and 5% is 16% lower extremity impairment

The ALJ finds that Dr. Ginsburg's impairment rating for Claimant's right knee for her loss of range of motion as well as her arthritis and/or chondromalacia to be consistent with the findings of Drs. Mayer and Goldman and is also consistent and in conformity with the AMA Guides. First, Dr. Ginsburg found Claimant's right knee flexion was limited to 120 degrees. This is the exact amount of limited flexion measured and documented by Dr. Goldman when he evaluated Claimant on January 30, 2017. This is also very close to the ROM measured and documented by Dr. Mayer on October 30, 2016. Moreover, limited knee flexion of 120 degrees, as measured by Dr. Ginsburg, results in an 11% extremity rating pursuant to Table 39 of the AMA Guides.

Second, Dr. Mayer also noted in his reports that there was "mild irregularity of the inferior articular surface region" of Claimant's right knee joint and that she also had "joint space narrowing at the medial compartment" of her right knee. Moreover, Dr. Mayer listed the ICD code for Claimant's right knee condition as "unilateral primary osteoarthritis, right knee" when prescribing Orthovisc injections. Lastly, Dr. Goldman's assessment and diagnosis included a diagnosis of "status post right patellar fracture requiring internal fixation with aggravation of pre-existing degenerative joint disease and osteoarthritis secondary to October 15, 2015, work related injury."

Table 40, Section 5, of the AMA Guides, allows the rating physician to provide additional impairment for "arthritis due to any cause including trauma; chondromalacia." (Re. Ex. K at 122.) The amount of additional impairment which can be assigned under Section 5 is discretionary and ranges from 0 to 20%. In this case, Dr. Ginsburg provided Claimant an additional 5% under Table 40, Section 5, of the AMA Guides for "arthritis due to any cause including trauma; chondromalacia." The ALJ concludes that Dr. Ginsburg's provision of an additional 5% under Table 40, Section 5, is consistent with the findings and opinions of Drs. Mayer and Goldman, and consistent and in conformity with the AMA Guides.

Respondent contends Claimant is not entitled to an impairment rating because when Claimant was placed at MMI by Dr. Walker, and provided a 0% impairment rating regarding her right knee fracture, Dr. Walker noted in her report Claimant's knee had full range of motion. However, there is no indication in her report that Dr. Walker actually measured Claimant's right knee range of motion and what those measurements were. As found above, Dr. Walker did not list any numerical measurements regarding Claimant's right knee when she placed Claimant at MMI and determined Claimant had no impairment due to her work accident. In addition, Claimant credibly testified that Dr. Walker did not formally measure her knee range of motion. Therefore, Dr. Walker's mere declaration, without more, is not persuasive to the ALJ that Claimant actually had normal range of motion of her right knee when Dr. Walker placed Claimant at MMI.

Respondent also contends that based upon the opinions of Dr. Cebrian, Clamant is not entitled to an impairment rating for the residuals of her right knee fracture for a number of reasons. First, Dr. Cebrian stated that the AMA Guides do not specifically provide an impairment rating for a patella fracture. While that might be true, the ALJ concludes that Dr. Ginsburg properly applied the AMA Guides, which allow for the rating of medical impairment caused by an injury, regardless of whether the name of the injury is specifically enumerated in the AMA Guides. Second, Dr. Cebrian asserted that because he found Claimant's range of motion of her knee to be normal – as did Dr. Walker - the deficiency found by Dr. Ginsburg is inconsistent and not reliable and therefore should not be used to support an impairment rating. However, as found, and noted above, Dr. Goldman evaluated and measured the range of motion of Claimant's knee joint and documented the exact deficit measured and rated by Dr. Ginsburg. Third, Dr. Cebrian also disagreed with the 5% Table 40 rating provided by Dr. Ginsburg. Dr. Cebrian testified that Claimant did not qualify for a Table 40, Section 5, rating under the AMA Guides for a specific disorder of arthritis because "there was no findings of post traumatic arthritis and so I didn't think it was appropriate to rate for that. She didn't have any removal of her meniscus or anything else, so there was no specific disorder impairment, so her impairment rating was zero." However, as found, and noted above, Dr. Mayer documented articular changes in Claimant's right knee such as "mild irregularity of the inferior articular surface region" and "joint space narrowing at the medial compartment" and also wrote a prescription for Orthovisc injections and listed the ICD code in support of such prescription as "unilateral primary osteoarthritis, right knee." Moreover, Dr. Goldman opined Claimant was suffering from "status post right patellar fracture requiring internal fixation with aggravation of pre-existing degenerative joint disease and osteoarthritis secondary to October 15, 2015, work related injury." Therefore, the ALJ does not find Dr. Cebrian's opinions that Claimant is not entitled to an impairment rating for her right knee due to a loss of range of motion or a Table 40, Section 5, rating based on arthritis or chondromalacia to be persuasive.

The ALJ finds Dr. Ginsburg's opinions to be very credible and very persuasive. Therefore, the ALJ concludes that Claimant has established by a preponderance of the evidence her entitlement to a scheduled permanent impairment rating for her right knee as determined by Dr. Ginsburg. Dr. Ginsburg appropriately assigned range of motion impairment to the right knee of 11%. Dr. Ginsburg also appropriately rated the arthritis and/or chondromalacia in the right knee post-fracture and post-surgery for an additional

5%. Therefore, the ALJ find and concludes that the 16% lower extremity rating provided by Dr. Ginsburg is appropriate.

II. Whether Claimant has proven by a preponderance of the evidence that she is entitled to an award of maintenance medical benefits.

The need for medical treatment may extend beyond the point of maximum medical improvement where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that Claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). The Claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003).

As found, Dr. Ginsburg made maintenance care recommendations. Dr. Ginsburg stated that "during the year following assignment of maximum medical improvement, Claimant should be seen, perhaps two to four times, to see if any changes occurred and for appropriate medications. Dr. Cebrian also made maintenance care recommendations, which included a short course of 4 to 6 visits of PT for any complaints that Claimant has when returning to regular duty over the first three months and to complete her final cognitive-behavioral counseling session with Dr. Hawkins. Moreover, although Dr. Walker initially stated there should be no medical maintenance treatment, she saw Claimant on May 14, 2018, and recommended maintenance care, including a right-hand x-ray and reevaluation following that x-ray.

The ALJ finds the recommendations of Dr. Ginsburg, Cebrian, and Walker for maintenance treatment to be credible and persuasive. The post MMI treatment recommended by Drs. Ginsburg, Cebrian, and Walker is reasonable and necessary medical treatment which is intended to relieve Claimant from the effects of her injury and prevent further deterioration of Claimant's condition. Thus, this ALJ concludes that Claimant has proven by a preponderance of the evidence her entitlement to maintenance medical treatment.

III. Whether Respondent's properly endorsed the issue of permanent impairment to be heard at the hearing.

Claimant argued at hearing that Respondent's failure to check the box indicating that "PPD" was at issue constitutes a waiver of the issue and that the issue of PPD was closed and the Respondent is bound by the impairment rating assigned by the Division Examiner, Dr. Ginsburg.

Respondent's Application for Hearing clearly stated under Other issues to be heard at this hearing are: "Rule 5 application for hearing to overcome DIME physician's impairment rating." As found, Respondent's endorsement properly put the issue of Claimant's permanent medical impairment rating at issue and put Claimant on notice of the issues to be heard at the hearing set pursuant to Respondent's Application for Hearing.

Claimant did not provide the ALJ with any legal authority for her position at the hearing or in her post-hearing filing that Respondent's endorsement was insufficient.

In *Leprino v. Industrial Claim Appeals Office*, 134 P.3d 475 (Colo. App. 2005), the court of appeals held that the requirements of §8-42-107.2(4), C.R.S. are jurisdictional and if the parties fail to request a hearing to contest the DIME physician's findings, those findings become binding on the parties and the ALJ and the ALJ lacks jurisdiction to resolve a dispute as to those findings. The court reasoned that the 30 day time limit was part of an overall statutory scheme designed to ensure the prompt payment of benefits without the necessity of litigation in cases that do not present a legitimate controversy. *Leprino v. Industrial Claim Appeals Office, supra*. The Leprino court also stated that the provisions of §8-42-107.2(4), C.R.S. are clear and require the insurer either to contest the DIME report within thirty days or to admit in accordance with the report. *See City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003 (upholding the imposition of penalties for the employer's failure to file an application for hearing or admit to the DIME report). Because these requirements have been construed to be jurisdictional, the requirements must be strictly construed. *Speier v. Industrial Claim Appeals Office*, 181 P.3d 1173 (Colo. App. 2008*); Leprino v. Industrial Claim Appeals Office, supra.; Schneider Nat'l Carriers, Inc. v. Industrial Claim Appeals Office*, 969 P.2d 817 (Colo. App. 1998)(because filing requirements are jurisdictional, statutory provisions governing such requirements must be strictly construed).

Moreover, substantial compliance with the statutory requirement for objecting to an FAL can be sufficient to prevent closure of a claim. *See, e.g., Mitchell v. Office Liquidators, Inc.,* W.C. No. 4-409-905 (December 29, 2000) (timely application for hearing sufficed for purposes of objecting to FAL). However, there must be evident a genuine effort to comply with statutory requirements. *See Pinon v. U-Haul*, W.C. No. 4-632-044 (April 25, 2007), aff'd *sub. nom*. *Pinon v. Industrial Claim Appeals Office* (Colo. App. 07CA0922, April 3, 2008) (not selected for official publication) (substantial compliance requires party intent to or actually make good faith or colorable effort to comply with statutory requirements).

The current version of §8-42-107.2(4), C.R.S. provides that the Respondent had to either file an admission of liability or "request a hearing before the division contesting one or more of the IME's findings or determinations."

Here, Respondent's clearly stated on their application for hearing that they were contesting the impairment rating provided by the Division Examiner, Dr. Ginsburg. Therefore, the ALJ finds and concludes Respondent's not only substantially complied and made a genuine effort to comply, but they did comply and properly endorsed the

issue of Claimant's impairment rating for hearing which was a finding and determination of Dr. Ginsburg.

Respondents' Application for Hearing unequivocally stated the endorsed issue, Claimant had notice of the issues for hearing, and therefore Claimant's argument regarding waiver is denied. The ALJ finds and concludes Respondent properly endorsed the issue of Claimant's medical impairment as it relates to the industrial injury and overcoming the impairment rating provided by the Division Examiner, Dr. Ginsburg.

IV. Disfigurement benefits.

As found, Claimant has a scar on her right knee that is approximately three and a half to four inches long with suture marks and slight discoloration extending about a quarter of an inch in width for the length of the scar. Claimant's right thumb has a very faint one-half-inch long scar and swelling at the base of her thumb. These disfigurements are related to the compensable injury, are permanent and have been present for more than six months.

Therefore, the ALJ concludes Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation in the amount of $1,200. *See* Sec. 8-42-108 (1), C.R.S.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondent shall pay Claimant permanent impairment benefits based on an 8% whole person rating of the cervical spine and a 16% scheduled lower extremity rating for the right knee;
2. Respondent shall pay Claimant $1,200.00 for disfigurement of Claimant's right knee and right thumb. Respondent shall be given credit for any amount previously paid for disfigurement in connection with this claim;
3. Respondent shall admit for a general award of maintenance medical benefits;
4. Respondent shall pay interest of 8% per annum on all benefits not paid when due;
5. Respondent shall file a final admission consistent with this Order as required by the Rule 5-5(C)(1); and
6. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after

mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 10, 2018

/s/ Glen Goldman

_____

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered left shoulder and cervical spine injuries during the course and scope of his employment with Employer on April 13, 2017.

2. Whether Claimant has established by a preponderance of the evidence that the cervical interlaminar epidural steroid injection at the C7-T1 level recommended by Usama Ghazi, D.O. is reasonable, necessary and causally related to his April 13, 2017 industrial injuries.

3. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period November 30, 2017 until terminated by statute.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $413.68.

FINDINGS OF FACT

1. Claimant is a 43-year-old male who works for Employer as a part-time box pre-loader. His job duties involve removing boxes from a rotating cage for placement in delivery trucks.

2. Claimant testified that approximately four to six weeks prior to April 13, 2017 he was pulling a box when he experienced a burning sensation in his left lower scapular area. He noted that he reported the injury to his supervisor but wanted to determine whether the condition would improve without the necessity for medical treatment.

3. On April 13, 2017 Claimant reported a work-related injury to his left shoulder. Claimant discussed the injury with supervisor Alexander Common. Mr. Common completed a First report of Injury and directed Claimant for medical treatment. The First Report of Injury provided that Claimant was injured while "loading packages from boxline into package car." The report specified that the "injury happened over time and that there wasn't a one-time incident that caused it."

4. On April 13, 2017 Claimant visited Authorized Treating Physician (ATP) Tomm VanderHorst, M.D. for an examination. Claimant reported left shoulder and arm pain. He did not mention a specific trauma or date of onset, but noted that his symptoms began approximately four to six weeks earlier. Claimant noted an inciting event when he "was pulling on a package and felt a burning irritation in his left lower scapular border area." Dr. VanderHorst diagnosed Claimant with a left scapular strain and brachial

plexopathy. He was unable to determine whether Claimant's condition was caused by his work activities. Dr. VanderHorst prescribed pain medications and therapeutic massage sessions.

5. On April 28, 2017 Claimant returned to Dr. VanderHorst for an evaluation. Dr. VanderHorst characterized Claimant's condition as "left scapulothoracic irritation." A cervical spine x-ray reflected multiple levels of degenerative changes but no evidence of an acute injury. A left shoulder examination revealed normal sensation and circulation. Claimant continued to work regular duty employment.

6. On May 1, 2017 Claimant began massage therapy at SCL Health, Wheat Ridge Occupational Medicine. Claimant had developed increased scapula area symptoms, left arm pain and hand paresthesis over the preceding few months. He told the therapist that he did not suffer a single incident at work that precipitated his symptoms but they gradually developed.

7. On May 26, 2018 Claimant again visited Dr. VanderHorst for an examination. Dr. VanderHorst recorded that Claimant had suffered persistent left shoulder pain. Claimant noted that, when he is off from work his symptoms improve, but they return when he begins working. Based on Claimant's continued exacerbation of symptoms Dr. VanderHorst assigned work restrictions. Employer accommodated the restrictions through the Temporary Alternative Work (TAW) program.

8. On June 6, 2017 Claimant reported to Dr. VanderHorst that he was no longer experiencing a significant exacerbation of pain while at work because of the TAW program. Claimant did not report any neck complaints and exhibited "full active range of motion" on physical examination.

9. On June 30, 2017 Claimant suffered an admitted fracture of his right foot while working for Employer. He specifically fractured the fifth metatarsal. Claimant was taken completely off work from July 31, 2017 until November 29, 2017 because of his foot injury.

10. On July 14, 2017 Claimant reported to Dr. VanderHorst that his left shoulder continued to improve with therapeutic massage and physical therapy. His shoulder became achy only when sitting for too long. Claimant exhibited full, active range of motion of the neck and Dr. VanderHorst anticipated that Claimant would reach Maximum Medical Improvement (MMI) after completing a home exercise and stretching program. Claimant's work restrictions consisted of seated duty with minimal walking because of hjs foot injury.

11. On July 25, 2017 Claimant underwent surgery for his right foot fracture. He used crutches for mobility.

12. On August 1, 2017 Dr. VanderHorst determined that Claimant had reached MMI for his left shoulder and arm symptoms. He did not assign any permanent impairment. Dr. VanderHorst also did not assign any left shoulder restrictions. He noted that Claimant had completed physical therapy and therapeutic massage with only reports

of mild ongoing discomfort into the left shoulder. Dr. Vanderhorst commented that Claimant might experience mild flares of brachial plexopathy with the use of his crutches but otherwise would have no significant issues. A physical examination of the neck revealed that it was nontender with full active range of motion and intact sensation. Dr. VanderHorst's diagnoses at the time of MMI was scapulothoracic syndrome and brachial plexopathy.

13. On August 10, 2017 Claimant visited Bernadette Niblo, LMT at Lutheran Medical Center. Claimant reported that "he was working out on Monday and overexerted himself and has been feeling intense constant pain in left upper back between scapula and spine." He stated that he had not slept the past two nights because of pain.

14. Claimant returned to Dr. VanderHorst on September 12, 2017 for a one-time evaluation. Dr. VanderHorst noted that Claimant had initially presented "after lifting boxes overhead at work and developing periscapular pain." He noted that Claimant reached MMI on August 1, 2017 but developed additional pain using crutches for his foot injury. Claimant specifically reported pain in the scapular and suprascapular region and was suffering persistent numbness in the right dorsal hand over the first, second and third metacarpals. He noted radiation into the posterior lateral neck. Claimant did not recall any history of significant cervical injury or trauma. Dr. VanderHorst revoked the assignment of MMI for the April 13, 2017 incident. He imposed a 10-pound restriction with minimal reaching overhead and away from his body with his left arm. Dr. VanderHorst referred Claimant to Usama Ghazi, D.O. for an evaluation. He also recommended an EMG of the left upper extremity.

15. Claimant underwent an EMG with Eric K. Hammerberg, M.D. on September 22, 2017. The EMG did not reveal any evidence of cervical radiculopathy or brachial plexopathy. The findings were compatible with clinical diagnoses of left carpal tunnel syndrome and left cubital tunnel syndrome.

16. On September 27, 2017 Claimant visited Dr. Ghazi for an evaluation. Dr. Ghazi noted that Claimant "felt a twinge burn while flexing his left shoulder to retrieve a small package" at work. He did not record a date of the incident. Dr, Ghazi characeterized the incident as a "lifting injury with the left rotator cuff in a forward-flexed position while grabbing a small package from overhead." He explained that Claimant subsequently had progressive symptoms that eventually encompassed his cervicothoracic spine with aching and burning into the left arm.

17. On October 16, 2017 Dr. VanderHorst commented that Claimant's EMG showed left carpal and cubital tunnel syndrome but no evidence of cervical radiculopathy or brachial plexopathy. He remarked that the abnormal EMG did "not rule out possible cervical radiculopathy."

18. On October 16, 2017 Claimant underwent an MRI of the cervical spine. The MRI reflected a large left paramedian/foraminal disc extrusion at C6-7 causing moderate/severe left foraminal stenosis with compressed C7 nerve root.

19. On October 25, 2017 Claimant returned to Dr. Ghazi for an examination. After reviewing the October 16, 2017 MRI, Dr. Ghazi diagnosed Claimant with a "large C6-7 protrusion with left C6-7 radiculopathy." He scheduled Claimant for two sets of cervical interlaminar epidural steroid injections performed at the C7-T1 level.

20. Insurer disputed the reasonableness, necessity and relatedness of Claimant's cervical condition and requested injections.

21. On October 31, 2017 Claimant returned to Dr. VanderHorst for an examination. Dr. VanderHorst recounted that he initially determined that, if Claimant's symptoms had a cervical origin, they were not work-related. However, he reviewed Claimant's mechanism of injury and changed his opinion. Dr. VanderHorst detailed that:

> [Claimant's] work requires him to reach forward and upward repeatedly with his neck in extended position while straining at packages. This combination of action can put increased pressure on the cervical discs and result in rupture. His history was one of rather sudden onset of symptoms while doing this type of activity. He failed to respond to protracted treatments to his shoulder and periscapular area and was ultimately found to have a cervical disc rupture which appears to be the proximate cause of his ongoing symptoms. I believe that this is a work causality condition with greater than 50% probability.

22. On November 3, 2017 F. Mark Paz, M.D. performed a Rule 16 utilization review regarding Claimant's request for prior authorization of cervical injections. He determined that neither Claimant's C6-7 herniated disc nor the C7 compressed nerve were causally related to the April 13, 2017 work incident. Dr. Paz noted that the mechanism of injury described by Claimant was not consistent with the symptoms. He thus recommended denial of the injections.

23. On November 6, 2017 Dr. Ghazi responded to Insurer's denial of the request for epidural steroid injections. He explained that Claimant's overhead activity with his neck hyperextended "could cause undue pressure on a disk and result in herniation." Dr. Ghazi summarized that:

> It is quite common, in my experience, that patients that do significant bending, twisting, and rotation with extension of the cervical spine, do suffer herniations, even though we tend to "classically" think of patient's only herniating in flexed positions. This is quite frankly, not the case. The proximal nature of the patient's activity with the onset of weakness, atrophy, and severe pain, all point towards this being a causally related cervical disk herniation which would be related to the mechanism of injury, in my profession medical opinion.

24. While Respondents were disputing medical care on the cervical spine, Claimant was released from treatment on his admitted foot claim with no permanent work restrictions on November 29, 2017. After Claimant's release at MMI Employer would

not permit him to return to work due to the temporary work restrictions assigned by Dr. VanderHorst for the shoulder and neck.

25. On March 8, 2018 Claimant underwent an independent medical examination with Dr. Paz. Claimant reported that in April of 2017 he was pulling packages out of cages for Employer. He began to experience a "tingling" sensation in his left scapula area. The "tingling" subsequently evolved into a "burning" sensation. After conducting a physical examination and reviewing Claimant's medical records, Dr. Paz performed a causation analysis. He reasoned that Claimant's medical record documented "an expanding symptomatology of the left scapula and infrascapular region over 6-8 weeks not specifically associated with work activities." Dr. Paz diagnosed Claimant with back pain.

26. Dr. Paz specifically addressed Claimant's C6-7 cervical disc extrusion. He concluded that the condition was not causally related to Claimant's April 2017 industrial incident. He specified that "having the neck in an extended posture is inconsistent with causing or contributing to the development of a disc extrusion in the cervical area." Dr. Paz also explained that Claimant's C6-7 disc extrusion was not aggravated or accelerated by his work activities for Employer in April 2017. Moreover, Claimant's left carpal/cubital tunnel syndrome and left rotator cuff strain were inconsistent with his mechanism of injury in pulling packages out of cages for Employer.

27. Claimant testified at the hearing in this matter. He explained that he was pulling a box out of a cage at waist level while working for Employer when he felt a burning sensation in his left shoulder. Although Claimant noted that he reported the injury to a supervisor, he waited a few weeks to obtain medical treatment. He specifically remarked that his symptoms worsened and he sought medical treatment on April 13, 2017. Claimant acknowledged that he trained and "shadowboxed' at a gym but ceased his workouts when he was injured. He remarked that he injured himself while performing physical therapy exercises on August 7, 2017.

28. Pre-load Manager for Employer Michael Romano testified at the hearing in this matter. Mr. Romano remarked that, in the weeks preceding the April 13, 2017 report of injury, Claimant was involuntarily moved from his preferred assignment at the middle cage load area to the top cage. He commented that at the top cage Claimant would not have been required to move packages higher than chest/shoulder height. The arrangement was designed so that employees could stay within their "power zone" while lifting packages. The purpose of the "power zone" is to eliminate stress and strain of the back and shoulder muscles to avoid injuries.

29. Dr. Paz also testified at the hearing in this matter. He maintained that Claimant's work activities on April 13, 2017 did not cause his left shoulder or cervical symptoms. He specifically addressed Dr. VanderHorst's explanation of Claimant's mechanism of injury. Dr. VanderHorst noted that Claimant's "work required him to reach forward and upward repeatedly with his neck extended while moving packages." He remarked that "this combination of actions can put increased pressure on the cervical discs and result in rupture." Dr. Paz disagreed with Dr. VanderHorst's analysis because

flexing or extending the head would not herniate a disc at the C7 level. Furthermore, based on the testimony of Claimant and Mr. Romano, Dr. Paz noted that Claimant was not involved in overhead lifting activity on April 13, 2017. Dr. Paz also disagreed with Dr. Ghazi's opinion that Claimant suffered a herniated disc from moving packages on a consistent basis. Instead, Claimant's activity of moving packages at waist level on April 13, 2017 did not cause his disc herniation.

30. Claimant has failed to demonstrate that it is more probably true than not that he suffered left shoulder and cervical injuries during the course and scope of his employment with Employer on April 13, 2017. Initially, Claimant explained that he was pulling a box out of a cage at waist level while working for Employer when he felt a burning sensation in his left shoulder. His symptoms worsened over a few weeks and he sought medical treatment on April 13, 2017. Although Claimant worked in a strenuous position and moved numerous heavy packages over an extended period of time, the record lacks sufficient evidence that he suffered an acute injury in April of 2017. Claimant's reports do not reveal a distinct injury and the medical opinions supporting his position are predicated upon incorrect presumptions about Claimant's mechanism of injury and development of symptoms.

31. The record is replete with evidence that Claimant did not suffer an acute injury on April 13, 2017 but his symptoms developed gradually over time. Claimant's supervisor Mr. Common completed a First Report of Injury on April 13, 2017. The Report provided that Claimant was injured while "loading packages from boxline into package car." The report specified that the "injury happened over time and that there wasn't a one-time incident that caused it." When Claimant visited Dr. VanderHorst on April 13, 2017 he reported left shoulder and arm pain. He did not mention a specific trauma or date of onset, but noted that his symptoms began approximately four to six weeks earlier. An April 28, 2017 cervical spine x-ray revealed multiple levels of degenerative changes but no evidence of an acute injury. At a physical therapy visit on May 1, 2017 Claimant reiterated that he did not suffer a distinct incident at work, but his symptoms gradually developed.

32. Drs. VanderHorst and Ghazi attributed Claimant's left shoulder and cervical spine symptoms to his work activities for Employer. Dr. VanderHorst was initially unable to determine whether Claimant's conditions were caused by his work activities. However, by October 31, 2017 Dr. VanderHorst determined that Claimant's conditions were work-related. He reasoned that Claimant's "work requires him to reach forward and upward repeatedly with his neck in extended position" while moving packages. The combination "of action can put increased pressure on the cervical discs and result in rupture." Dr. Ghazi explained that individuals who engage in significant bending, twisting, and rotation with extension of the cervical spine can suffer disc herniations. He attributed Claimant's disc protrusion to his overhead activity with his neck hyperextended. The opinions of Drs. VanderHorst and Ghazi are based on the presumption that Claimant gradually developed symptoms while moving packages upward and overhead.

33. In contrast, pre-load manager Mr. Romano credibly explained that Claimant did not reach upward or overhead while removing packages from cages for Employer.

He commented that at the top cage Claimant would not have been required to move packages higher than chest/shoulder height. The arrangement was designed so that employees could stay within their "power zone" while lifting packages. Claimant also noted that he was injured while pulling a box from a cage at waist level. The record thus does not reflect that Claimant was engaged in the upward or overhead movement of packages.

34. After conducting a physical examination and reviewing Claimant's medical records, Dr. Paz persuasively maintained that Claimant's work activities on April 13, 2017 did not cause his left shoulder or cervical symptoms. He specifically detailed that Claimant experienced "an expanding symptomatology of the left scapula and infrascapular region over 6-8 weeks not specifically associated with work activities." Dr. Paz remarked that "having the neck in an extended posture is inconsistent with causing or contributing to the development of a disc extrusion in the cervical area." He also explained that Claimant's C6-7 disc extrusion was not aggravated or accelerated by his work activities for Employer in April 2017. Moreover, Claimant's left carpal/cubital tunnel syndrome and left rotator cuff strain were inconsistent with his mechanism of injury in removing packages from cages. In specifically addressing Dr. VanderHorst's analysis, Dr. Paz noted that flexing or extending the head would not herniate a disc at the C7 level. Based on the testimony of Claimant and Mr. Romano, Dr. Paz explained that Claimant was not involved in overhead lifting activities on April 13, 2017. Moreover, Dr. Paz disagreed with Dr. Ghazi's opinion that Claimant suffered a herniated disc from moving packages overhead on a consistent basis. Instead, Claimant's activity of moving packages at waist level on April 13, 2017 did not cause his disc herniation. Accordingly, based on Claimant's inconsistent account of the development of symptoms, the incorrect presumptions about Claimant's mechanism of injury and development of symptoms by Drs. VanderHorst and Ghazi, and the persuasive opinion of Dr. Paz, Claimant has not demonstrated that he suffered acute left shoulder and cervical spine injuries while working for Employer on April 13, 2017. Claimant's Workers' Compensation claim and request for benefits is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to

a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered left shoulder and cervical injuries during the course and scope of his employment with Employer on April 13, 2017. Initially, Claimant explained that he was pulling a box out of a cage at waist level while working for Employer when he felt a

burning sensation in his left shoulder. His symptoms worsened over a few weeks and he sought medical treatment on April 13, 2017. Although Claimant worked in a strenuous position and moved numerous heavy packages over an extended period of time, the record lacks sufficient evidence that he suffered an acute injury in April of 2017. Claimant's reports do not reveal a distinct injury and the medical opinions supporting his position are predicated upon incorrect presumptions about Claimant's mechanism of injury and development of symptoms.

8. As found, the record is replete with evidence that Claimant did not suffer an acute injury on April 13, 2017 but his symptoms developed gradually over time. Claimant's supervisor Mr. Common completed a First Report of Injury on April 13, 2017. The Report provided that Claimant was injured while "loading packages from boxline into package car." The report specified that the "injury happened over time and that there wasn't a one-time incident that caused it." When Claimant visited Dr. VanderHorst on April 13, 2017 he reported left shoulder and arm pain. He did not mention a specific trauma or date of onset, but noted that his symptoms began approximately four to six weeks earlier. An April 28, 2017 cervical spine x-ray revealed multiple levels of degenerative changes but no evidence of an acute injury. At a physical therapy visit on May 1, 2017 Claimant reiterated that he did not suffer a distinct incident at work, but his symptoms gradually developed.

9. As found, Drs. VanderHorst and Ghazi attributed Claimant's left shoulder and cervical spine symptoms to his work activities for Employer. Dr. VanderHorst was initially unable to determine whether Claimant's conditions were caused by his work activities. However, by October 31, 2017 Dr. VanderHorst determined that Claimant's conditions were work-related. He reasoned that Claimant's "work requires him to reach forward and upward repeatedly with his neck in extended position" while moving packages. The combination "of action can put increased pressure on the cervical discs and result in rupture." Dr. Ghazi explained that individuals who engage in significant bending, twisting, and rotation with extension of the cervical spine can suffer disc herniations. He attributed Claimant's disc protrusion to his overhead activity with his neck hyperextended. The opinions of Drs. VanderHorst and Ghazi are based on the presumption that Claimant gradually developed symptoms while moving packages upward and overhead.

10. As found, in contrast, pre-load manager Mr. Romano credibly explained that Claimant did not reach upward or overhead while removing packages from cages for Employer. He commented that at the top cage Claimant would not have been required to move packages higher than chest/shoulder height. The arrangement was designed so that employees could stay within their "power zone" while lifting packages. Claimant also noted that he was injured while pulling a box from a cage at waist level. The record thus does not reflect that Claimant was engaged in the upward or overhead movement of packages.

11. As found, after conducting a physical examination and reviewing Claimant's medical records, Dr. Paz persuasively maintained that Claimant's work activities on April 13, 2017 did not cause his left shoulder or cervical symptoms. He specifically detailed

that Claimant experienced "an expanding symptomatology of the left scapula and infrascapular region over 6-8 weeks not specifically associated with work activities." Dr. Paz remarked that "having the neck in an extended posture is inconsistent with causing or contributing to the development of a disc extrusion in the cervical area." He also explained that Claimant's C6-7 disc extrusion was not aggravated or accelerated by his work activities for Employer in April 2017. Moreover, Claimant's left carpal/cubital tunnel syndrome and left rotator cuff strain were inconsistent with his mechanism of injury in removing packages from cages. In specifically addressing Dr. VanderHorst's analysis, Dr. Paz noted that flexing or extending the head would not herniate a disc at the C7 level. Based on the testimony of Claimant and Mr. Romano, Dr. Paz explained that Claimant was not involved in overhead lifting activities on April 13, 2017. Moreover, Dr. Paz disagreed with Dr. Ghazi's opinion that Claimant suffered a herniated disc from moving packages overhead on a consistent basis. Instead, Claimant's activity of moving packages at waist level on April 13, 2017 did not cause his disc herniation. Accordingly, based on Claimant's inconsistent account of the development of symptoms, the incorrect presumptions about Claimant's mechanism of injury and development of symptoms by Drs. VanderHorst and Ghazi, and the persuasive opinion of Dr. Paz, Claimant has not demonstrated that he suffered acute left shoulder and cervical spine injuries while working for Employer on April 13, 2017. Claimant's Workers' Compensation claim and request for benefits is thus denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's Workers' Compensation claim and request for benefits based on an April 13, 2017 incident is denied and dismissed.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: August 9, 2018.

Denver, CO 80203

ISSUE

Whether Respondents have established by a preponderance of the evidence that they are entitled to withdraw their December 12, 2006 Final Admission of Liability (FAL) that acknowledged reasonable, necessary and related medical maintenance benefits designed to relieve the effects of Claimant's April 25, 2004 industrial injury or prevent further deterioration of his condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

FINDINGS OF FACT

1. On April 25, 2004 Claimant suffered an admitted industrial injury to his lower back. Claimant testified that he specifically strained his lower back while lifting a heavy box over his head.

2. Claimant subsequently underwent conservative care that included physical therapy and chiropractic treatment. He also received facet and epidural steroid injections.

3. On October 28, 2004 John J. Aschberger, M.D. determined that Claimant had reached Maximum Medical Improvement (MMI). He assigned a 7% whole person impairment rating for Claimant's lower back condition.

4. Claimant challenged Dr. Aschberger's MMI determination and sought a Division Independent Medical Examination (DIME). Edwin M. Healey, M.D. performed the DIME. Dr. Healey determined that Claimant had not reached MMI and recommended additional treatment in the form of injections and a surgical consultation.

5. Claimant subsequently underwent additional epidural steroid injections with Dr. Aschberger. Orthopedic Surgeon Gary Ghiselli, M.D. concluded that continued conservative care was reasonable but Claimant was not a surgical candidate.

6. On November 20, 2006 Claimant visited Dr. Healey for a follow-up DIME. Dr. Healey determined that Claimant reached MMI on June 1, 2006 and assigned a 13% whole person impairment rating. He also recommended continued medications for Claimant's persistent back pain.

7. On December 12, 2006 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Healey's MMI and impairment determinations. Respondents also acknowledged that Claimant was entitled to receive continued reasonable, necessary and related medical maintenance benefits.

8. On September 5, 2007 Claimant returned to Dr. Aschberger for an evaluation. After conducting a physical examination, Dr. Aschberger determined that

Claimant's symptoms were suggestive of facet or SI joint irritation. He recommended use of anti-inflammatories, regular stretching and home exercises.

9. On August 21, 2008 Claimant again visited Dr. Aschberger. Dr. Aschberger recommended a short course of chiropractic care. He noted that he would discharge Claimant from treatment at the following appointment.

10. On April 28, 2010 Claimant returned to Dr. Aschberger. Dr. Aschberger noted Claimant's prior "good diagnostic response" to a lumbar facet block performed one year earlier. He thus recommended repeat facet blocks. Robert Kawasaki, M.D. subsequently performed bilateral facet injections at L4-L5 and L5-S1.

11. On December 15, 2010 Claimant again visited Dr. Aschberger and requested a repeat injection because the prior injection was wearing off. Dr. Aschberger responded that he could not justify a repeat injection because Claimant had reported no significant benefit in the months following the injection.

12. On March 29, 2011 Claimant visited Dr. Aschberger and reported increasing lower back pain. Claimant felt that the prior injection was wearing off. Although Dr. Aschberger cautioned against a repeat facet injection, he recommended medial branch blocks to address Claimant's symptoms.

13. Claimant's next appointment with Dr. Aschberger occurred on February 14, 2012. Claimant requested another injection. Dr. Aschberger commented that the medial branch block injection performed on June 17, 2011 had produced worsening symptoms and the facet injections administered two years earlier provided minimal relief. He recommended against further intervention.

14. On December 2, 2014 Claimant returned to Dr. Aschberger for care. Dr. Aschberger reviewed notes from Dr. Kawasaki's SI injection. Dr. Kawasaki commented that Claimant reported complete symptomatic relief after the injection, but his pain journal reflected 8/10 levels shortly after the injection. An x-ray did not reveal any evidence of acute injury or instability. Dr. Aschberger concluded that more therapy or other interventions were not warranted, but prescribed Robaxin and told Claimant he would see him as needed.

15. On June 10, 2015 Claimant returned to Dr. Aschberger for treatment. Claimant reported temporary benefits from chiropractic care. Because Claimant reported that Robaxin had been helpful, Dr. Aschberger authorized another prescription.

16. On September 10, 2015 Claimant visited Dr. Aschberger and requested intervention for his continued lower back symptoms. Dr. Aschbeger reiterated that he could not justify additional injections or other intervention. He instead recommended a TENS unit and prescribed Robaxin.

17. Claimant testified that on February 21, 2016 he went to Guatemala in order to complete the process to become a permanent legal resident of the United States. He remained in Guatemala until May 14, 2017. During his time in Guatemala Claimant did

not work or seek medical care. He also rationed his Robaxin.

18. Claimant explained that, when he returned to Colorado, he contacted Concentra Medical Centers to schedule an appointment with Dr. Aschberger. However, Insurer denied the request.

19. In March 2018 Claimant underwent an independent medical examination with John Tashof Bernton, M.D. Dr. Bernton also testified through a post-hearing evidentiary deposition in this matter on June 18, 2018. He reviewed Claimant's medical records and conducted a physical examination. Dr. Bernton maintained that additional medical maintenance treatment was neither reasonable, necessary nor related to Claimant's April 25, 2004 industrial lower back injury. He explained that Claimant suffered a lumbar strain while lifting a box 14 years earlier. Dr. Bernton summarized that injections of the SI, facet and epidural area did not produce a positive diagnostic response. Physicians have thus not identified a specific pain generator. Additional injections would be inconsistent with the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*).

20. Dr. Bernton explained that, to the extent Claimant presently requires care for his lower back, "it is not because he lifted a box 14 years ago." He noted that lumbar complaints are common and degenerative changes can occur over a 14 year period. Dr. Bernton detailed that Claimant exhibited some "soft findings" on examination as well as evidence of a psychological overlay for his symptoms. He commented that evaluation of whether Claimant suffered an intervening event within the 14 year period since his injury would be reasonable but not work-related. Dr. Bernton concluded that there was no reasonable medical probability that Claimant currently requires any medical treatment as a result of his April 25, 2004 admitted lower back injury.

21. Respondents have established that it is more probably true than not that they are entitled to withdraw their December 12, 2006 FAL that acknowledged reasonable, necessary and related medical maintenance benefits designed to relieve the effects of Claimant's April 25, 2004 industrial injury or prevent further deterioration of his condition. Initially, on April 25, 2004 Claimant suffered an admitted industrial lower back injury while lifting a box over his head. In a December 12, 2006 FAL Respondents acknowledged that Claimant was entitled to receive continued reasonable, necessary and related medical maintenance benefits. Claimant subsequently underwent extensive conservative treatment for his condition including medications and chiropractic care. He also underwent SI, facet and epidural injections for diagnostic purposes and treatment. However, Dr. Aschberger repeatedly noted that the injections did not produce a positive diagnostic response. Physicians have thus been unable to identify a specific pain generator. Dr. Aschberger ultimately explained that he could not justify additional injections or other intervention. Nevertheless, he recommended a TENS unit and prescribed Robaxin.

22. Dr. Bernton persuasively explained that additional medical maintenance treatment was neither reasonable, necessary nor related to Claimant's April 25, 2004

industrial lower back injury. Dr. Bernton commented that, to the extent Claimant presently requires care for his lower back, "it is not because he lifted a box 14 years ago." He noted that lumbar complaints are common and degenerative changes can occur over a 14 year period. Dr. Bernton detailed that Claimant exhibited some "soft findings" on examination as well as evidence of a psychological overlay for his symptoms. He concluded that there was no reasonable medical probability that Claimant currently requires any medical treatment as a result of his April 25, 2004 admitted lower back injury. Based on the medical records as well as the persuasive opinion of Dr. Bernton, Claimant has received extensive treatment in the form of injections, medications, physical therapy and chiropractic care for an injury that occurred 14 years ago with no improvement and physicians have been unable to identify a pain generator. Additional maintenance benefits are thus neither reasonable, necessary nor related to Claimant's April 25, 2004 lower back injury. Continued treatment would not be designed to relieve the effects of Claimant's April 25, 2004 industrial injury or prevent further deterioration of his condition. Accordingly, Respondents' request to withdraw the December 12, 2006 FAL is granted.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo.

1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

5. The court of appeals has previously concluded that the burden of proof to establish compensability remained on the claimant even when an employer was attempting to withdraw an admission of liability. However, the Colorado Workers' Compensation Act has since been amended to change the burden of proof when respondents are attempting to withdraw admissions of liability. Specifically, respondents must now prove by a preponderance of evidence that the claimant did not suffer a compensable injury as defined under Colorado law. §8-43-201(1) (2015), C.R.S. On February 8, 2008 Respondents filed a FAL in response to Dr. Crosby's MMI and impairment determinations. The FAL also specified that Claimant was entitled to receive reasonable, necessary and related medical benefits. In order to withdraw the FAL Respondents thus have the burden of proving by a preponderance of the evidence that Claimant is not entitled to receive reasonable, necessary and related medical maintenance benefits designed to relieve the effects of her April 18, 2005 industrial injury or prevent further deterioration of her condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

6. As found, Respondents have established by a preponderance of the evidence that they are entitled to withdraw their December 12, 2006 FAL that acknowledged reasonable, necessary and related medical maintenance benefits designed to relieve the effects of Claimant's April 25, 2004 industrial injury or prevent further deterioration of his condition. Initially, on April 25, 2004 Claimant suffered an admitted industrial lower back injury while lifting a box over his head. In a December 12, 2006 FAL Respondents acknowledged that Claimant was entitled to receive continued reasonable, necessary and related medical maintenance benefits. Claimant subsequently underwent extensive conservative treatment for his condition including medications and chiropractic care. He also underwent SI, facet and epidural injections for diagnostic purposes and treatment. However, Dr. Aschberger repeatedly noted that the injections did not produce a positive diagnostic response. Physicians have thus been unable to identify a specific pain generator. Dr. Aschberger ultimately explained that he could not justify additional injections or other intervention. Nevertheless, he recommended a TENS unit and prescribed Robaxin.

7. As found, Dr. Bernton persuasively explained that additional medical maintenance treatment was neither reasonable, necessary nor related to Claimant's April 25, 2004 industrial lower back injury. Dr. Bernton commented that, to the extent Claimant presently requires care for his lower back, "it is not because he lifted a box 14 years ago." He noted that lumbar complaints are common and degenerative changes can occur over

a 14 year period. Dr. Bernton detailed that Claimant exhibited some "soft findings" on examination as well as evidence of a psychological overlay for his symptoms. He concluded that there was no reasonable medical probability that Claimant currently requires any medical treatment as a result of his April 25, 2004 admitted lower back injury. Based on the medical records as well as the persuasive opinion of Dr. Bernton, Claimant has received extensive treatment in the form of injections, medications, physical therapy and chiropractic care for an injury that occurred 14 years ago with no improvement and physicians have been unable to identify a pain generator. Additional maintenance benefits are thus neither reasonable, necessary nor related to Claimant's April 25, 2004 lower back injury. Continued treatment would not be designed to relieve the effects of Claimant's April 25, 2004 industrial injury or prevent further deterioration of his condition. Accordingly, Respondents' request to withdraw the December 12, 2006 FAL is granted.

ORDER

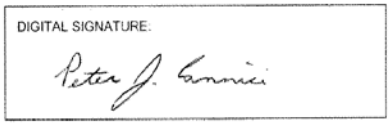
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents' request to withdraw the December 12, 2006 FAL acknowledging reasonable, necessary and related medical maintenance benefits is granted.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: August 20, 2018.



Peter J. Cannici
Administrative Law Judge

Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that she is entitled to maintenance medical treatment to prevent further deterioration to her physical condition pursuant to *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988).

- Whether the claimant sustained a serious permanent disfigurement to areas of her body normally exposed to public view, resulting in additional compensation, pursuant to Section 8-42-108 (1), C.R.S.

FINDINGS OF FACT

1. The claimant was employed by the employer on March 31, 2015 when she hit her bilateral elbows on a work bench. The claimant reported her injury to the employer and was referred for medical treatment with Dr. Theodore Sofish.

2. Dr. Sofish initially examined the claimant on April 3, 2015. At that time, Dr. Sofish noted a history of hand numbness in both hands since December 2013. The claimant reported that her work duties included breaking down boxes and electrical pieces using knives, wire cutters, and screwdrivers. Dr. Sofish diagnosed carpal tunnel syndrome of unknown etiology.

3. The claimant returned to Dr. Sofish on May 8, 2015, and reported pain of 4 out of 10, tingling, and numbness in both hands with neck pain. On that date, Dr. Sofish diagnosed work related bilateral carpal tunnel syndrome with probable non-work related neck pain.

4. The claimant again returned to Dr. Sofish on June 8, 2015 and reported ongoing hand pain that was waking her at night. The claimant also reported to Dr. Sofish that her job with the employer included a lot of cutting, bagging, and ripping open bags. Dr. Sofish noted that the claimant was no longer working for the employer. At that time, Dr. Sofish recommended that the claimant undergo an electromyelogram and nerve conduction (EMG/NCV) study.

5. The claimant underwent the recommended EMG/NCV with Dr. Mitchell Burnbaum on June 25, 2015. The EMG/NCV demonstrated bilateral carpal tunnel syndrome, (left greater than right).

6. The claimant returned to Dr. Sofish on July 14, 2015. At that time, Dr. Sofish noted the results of the EMG/NCV study and referred the claimant to Dr. Mitchell Copeland for bilateral carpal tunnel surgery.

7. Dr. Copeland's office evaluated the claimant on July 14, 2015. Dr. Copeland noted the claimant's complaints in both hands and the EMG/NCV results and opined that the claimant had classic carpal tunnel symptoms. Dr. Copeland recommended that the claimant could treat conservatively with cortisteroid injection or undergo surgery.

8. The claimant returned to Dr. Copeland on September 16, 2015 and was evaluated by John Rexroth, PAC. Mr. Rexroth noted that the claimant's injury resulted after repetitive motion at work. Mr. Rexroth discussed non-surgical options with the claimant, but the claimant elected to proceed with carpal tunnel release surgery.

9. On September 24, 2015, the claimant underwent left carpal tunnel release surgery. Thereafter, on December 1, 2015, the claimant underwent right carpal tunnel release surgery. Both surgeries were performed by Dr. Copeland.

10. On October 12, 2015, the respondents filed a general admission of liability (GAL) admitting for temporary total disability (TTD) benefits beginning September 24, 2015.

11. On January 13, 2016, the claimant was seen by Mr. Rexroth and reported that the numbness and tingling symptoms and pain in the median nerve distribution had resolved. Mr. Rexroth noted that he believed the claimant was at maximum medical improvement (MMI) and released the claimant to return to work without restrictions.

12. The claimant was seen by Dr. Sofish on January 18, 2016. On that date, Dr. Sofish noted that the claimant was released to return to work without restrictions and had full range of motion of her wrists and fingers with no reported paresthesias. Dr. Sofish instructed the claimant to return in one month and noted she would likely be placed at MMI at that time.

13. On February 25, 2016, the claimant returned to Dr. Sofish and reported discomfort to the bilateral wrists with pain of 2 out of 10. Dr. Sofish noted that the claimant had full range of motion of both wrists and well-healed surgical scars. Dr. Sofish diagnosed post bilateral carpal tunnel surgery. Also on that date, Dr. Sofish placed the claimant at MMI, with no permanent impairment, and opined that the claimant did not need post MMI maintenance care.

14. On March 23, 2016, the respondents filed a final admission of liability (FAL) on March 23, 2016 admitting for no permanent impairment and no post MMI medical benefits.

15. The claimant objected to the FAL and requested a Division-sponsored Independent Medical Examination (DIME). Dr. Jeffrey Krebs was selected as the DIME physician and the claimant was initially evaluated by Dr. Krebs on August 17, 2016. Dr. Krebs reviewed the claimant's medical records, obtained a medical history, and performed a physical examination in connection with the DIME. In his DIME report, Dr. Krebs noted the diagnosis of bilateral carpal tunnel syndrome and the related bilateral carpal tunnel release surgeries performed by Dr. Copeland. Dr. Krebs noted that after the surgeries the claimant continued to report subjective complaints of tingling and some weakness over her hands and wrists. In addition, the claimant complained of dropping things. Dr. Krebs noted that his examination revealed positive Tinel's signs (left greater than right), with tingling both sides to ulnar and radial aspects of the hand and on both sides of the thumb.

16. Dr. Krebs also noted that range of motion testing resulted in an impairment rating of 9% for the claimant's right upper extremity and 4% for the left upper extremity. In addition, Dr. Krebs noted that the claimant would likely need some further medical treatment, or even surgical treatment for what appeared to be some persistent weakness. Dr. Krebs recommended reevaluation with neurology and Dr. Copeland to determine if further surgery would be warranted.

17. The respondents sent the claimant for an independent medical examination (IME) with Dr. Thomas Mordick on December 20, 2016. Dr. Mordick reviewed the claimant's medical records, obtained a medical history, and performed a physical examination in connection with the IME. Dr. Mordick noted the claimant's complaints of numbness on the both dorsal and palmar aspect of the hand extending from the wrist out into the fingers, with pain in the claimant's bilateral shoulders, elbows, and wrists. On examination, Dr. Mordick found full range of motion of the claimant's wrists and hands. Dr. Mordick diagnosed the claimant with non-specific pain and numbness in the upper extremity that was not consistent with carpal tunnel syndrome. Dr. Mordick opined that the claimant's symptoms did not fit an anatomic diagnosis and that the claimant's carpal tunnel syndrome had been appropriately addressed. Dr. Mordick also agreed that the claimant was appropriately placed at MMI by Dr. Sofish.

18. The claimant underwent a repeat EMG with Dr. Burnbaum on February 16, 2017. The EMG results were reported as normal.

19. On March 3, 2017, the claimant returned to Dr. Copeland and continued to report symptoms in her right hand including pain, numbness, and tingling. Dr. Copeland's examination showed negative impingement signs bilaterally and a negative Spurling's test. Dr. Copeland noted that he did not see evidence of any recurrence of the claimant's carpal tunnel syndrome and recommended that the claimant "live with" her condition and continue to work as tolerated.

20. On April 27, 2017, the claimant was seen by Dr. Krebs for a follow up DIME. Dr. Krebs reviewed the most recent EMG results and evaluation notes from Dr. Copeland. Dr. Krebs noted that the EMG did not demonstrate any issues stemming from higher areas, such as the claimant's cervical spine or elbow. Dr. Krebs opined that the claimant was at MMI as of August 16, 2017 and assessed permanent impairment of 18% for the claimant's left upper extremity and 13% for the claimant's right upper extremity.

21. Included in Dr. Krebs' April 27, 2017 DIME report are recommendations for additional medical treatment. Dr. Krebs noted that although the claimant would not benefit from further surgical intervention, it was his opinion that active medical treatment for the claimant was warranted. In that same DIME report, Dr. Krebs recommended 16 visits of occupational therapy for the claimant's right and left wrists. In addition, Dr. Krebs recommended that the claimant undergo a functional capacity evaluation (FCE)

22. Thereafter, Dr. Mordick provided a supplemental IME report and noted that Dr. Krebs did not provide any explanation as to why the claimant continued to complain of reduced motor control over a year and half after surgery or how that may be related to the carpal tunnel release surgeries. Dr. Mordick opined that the claimant's range of motion measurements, although consistent with Dr. Krebs' prior report, were not medically consistent with the diagnosis and evidence that the claimant's presentation had changed over time, including her presentation at Dr. Mordick's IME in December 2016.

23. On September 6, 2017 and October 6, 2017, the parties attended a prior hearing before ALJ Keith Mottram in which the respondents sought to overcome Dr. Krebs' opinions regarding the claimant's permanent impairment. In ALJ Mottram's October 24, 2017 Findings of Fact, Conclusions of Law and Order, he found that the respondents failed to overcome the opinions of the DIME physician, Dr. Krebs, and ordered the respondents to pay permanent partial disability (PPD) benefits based upon Dr. Krebs' impairment ratings.

24. Thereafter, the respondents filed an amended FAL admitting for PPD benefits pursuant to ALJ Mottram's order, but denying liability for post MMI medical benefits because no such treatment was recommended by the claimant's treating physician. The claimant objected to the amended FAL and requested a hearing on the issues of *Grover* medical benefits and disfigurement.

25. Thereafter, the respondents asked Dr. Mordick to provide an opinion as to whether the post MMI treatment recommended by Dr. Krebs in the April 27, 2017 DIME report would be reasonable and necessary to allow the claimant to remain at MMI. Dr. Mordick responded in a letter dated April 3, 2018, and opined that there was no justification for the claimant to attend occupational therapy, and an FCE was not necessary because the claimant is not returning to work for the employer. Dr. Mordick's testimony at hearing was consistent with his written reports.

26. The claimant testified that she continues to have symptoms (including numbness in both hands) that were present when she was placed at MMI by Dr. Sofish. The claimant wants to have the ability to seek further medical care because she still has the same symptoms that she had at MMI. She testified that she does not know specially what medical care she might need in the future, but she wants her medical treatment to remain open.

27. The ALJ credits the medical records, the claimant's testimony, and the opinion of Dr. Krebs over the contrary opinion of Dr. Mordick and finds that the claimant has shown that it is more likely than not that she is in need of continued medical treatment to prevent further deterioration of her condition as a result of her compensable claim.

28. The ALJ is not persuaded by Dr. Mordick's position that because the claimant will not return to employment with the employer that an FCE is not necessary. On the contrary, the Colorado Medical Treatment Guidelines allow for various "special tests" including an FCE.

29. At the May 3, 2018 hearing, the claimant demonstrated that as a result of the March 31, 2015 injury and the related bilateral carpal tunnel surgeries she has thin, well healed surgical scars on both palms. Each scar measures approximately 2 inches long.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been

contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2014).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond the point of maximum medical improvement where a claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if support by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra*.

4. The Colorado Medical Treatment Guidelines (the guidelines) indicate that full functional capacity evaluations (FCEs) are rarely necessary and that in many cases, a work tolerance screening will identify the claimant's ability to perform certain job tasks. In the "frequency" section, the guidelines indicate that a FCE can be used initially to determine baseline status and that additional evaluations can be performed for case closure when the patient is unable to return to the pre-injury position and information is desired to determine permanent work restrictions.

5. As found, the claimant has demonstrated by a preponderance of the evidence that she is entitled to a general award of ongoing maintenance medical benefits based upon the opinion of Dr. Krebs and the claimant's ongoing complaints of persistent symptoms.

6. While the ALJ is persuaded by the specific recommendations of Dr. Krebs in finding that maintenance medical treatment is necessary for the claimant, the ALJ lacks jurisdiction to order the respondents to pay for specific medical treatment recommended by a DIME physician. *See Short v. Property Management of Telluride*, W.C. No. 3-100-726 (IAO May 4, 1995); and *Torres v. City and County of Denver*, W.C. No. 4-937-329-036 (ICAO May 15, 2018).

7. Section 8-42-108 (1), C.R.S. provides that a claimant may be entitled to additional compensation if, as a result of the work injury, she has sustained a serious permanent disfigurement to areas of the body normally exposed to public view.

8. As found, as a result of her March 31, 2015 work injury, the claimant has a visible disfigurement to her body consisting of scarring on her palms. Therefore, the claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view.

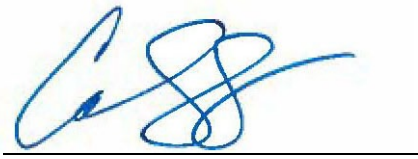
ORDER

It is therefore ordered that:

1. The respondents shall pay for maintenance medical treatment that is necessary to maintain the claimant at MMI and is designed to prevent further deterioration of her physical condition.

2. The insurer shall pay the claimant $500.00 for her disfigurement. The insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

Dated: September 4, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondents, which was filed, electronically, on August 29, 2018. The Claimant was given two working days within which to file objections. The matter was deemed submitted for decision on September 4, 2018. After a consideration of the proposed decision and the objections thereto, the ALJ has modified the proposal and hereby issues the following decision.

ISSUES

The initial issues designated by the Claimant concerned compensability; medical benefits; temporary total disability (TTD) benefits from March 1, 2018 through March 13, 20-18; and, temporary partial disability (TPD) benefits from March 19, 2018 and continuing. At the commencement of the hearing, the Claimant withdrew the TTD and TPD issues. In light of the following decision, compensability is the only issue and the medical benefits issue is moot.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Procedural Findings

1. The Claimant filed a Workers' Claim for Compensation after the slip-and-fall at work on January 31, 2018. Thereafter, Respondents filed a Notice of Contest, contesting the compensability of the work incident.

2 The Claimant filed an Application for Hearing on March 23, 2018.

The Non-Work Related Skiing Mishap

3. The Claimant's initial injurious event occurred when she was skiing down a mountain on January 19, 2018. This was not a work related event. The Claimant indicated that she twisted her knee, heard a pop, and fell to the ground. Her knee gave out when she tried to stand. She indicated that she dislocated her knee, but it popped back into place (Respondents' Exhibit A, pp. 4-5). In her testimony, the Claimant minimized the effects of this event.

4. The Claimant testified that she experienced immediate pain in her right knee when she fell. She stated that she had difficulty standing but was able to ski down the mountain.

5. On January 25, 2018, after the non-work related skiing mishap and before the slip-and-fall at work, the Claimant was evaluated by Deborah Saint-Phard, M.D. for injuries sustained in the ski accident. The Claimant reported an "achy" pain, instability in the knee, and indicated that she was unable to bear weight without significant limping. She further reported a history of left knee patella dislocation from playing soccer. Dr. Saint-Phard noted, "positive Lachman's" and "McMurray's is limited by pain Claimant sustained an injury to her right knee on January 19, 2018 while skiing. with flexion to 130°." Claimant was referred for an MRI (magnetic resonance imaging) of the right knee to "assess for internal derangement of the knee including anterior cruciate ligament tear resulting in instability and severe pain." Dr. Saint-Phard indicated that the "MRI would be used for surgical pre-procedural planning" (Respondents' Exhibit A, pp. 4-5).

The Alleged Compensable Event

6. On January 31, 2018, the Claimant alleges that she slipped on the floor while wearing booties and further injured her right knee. In the emergency room (ER), an x-ray was negative and no acute fractures or dislocations were noted. There was no persuasive evidence that the floor was slick, wet, or presented a special hazard to employees. The wearing of booties was standard for anyone in a similar hospital job. Consequently, it created no special hazard.

7. The Claimant underwent an MRI of the right knee on February 2, 2018, which had been requested by Dr. Saint-Phard on January 25, 2018. It was previously scheduled to address the effects of the skiing injury. The MRI revealed a complete mid-substance ACL tear, bone contusions consistent with a pivot shift injury, a large effusion, a complex medial meniscus posterior horn tear with meniscal extrusion, a lateral meniscal root tear, fluid collection in the posterior lateral corner, and torn fibers of the medial retinaculum along the medial edge patella, and a likely reflective patella dislocation (Respondents' Exhibit B, pp. 93-94).

8. The Claimant was referred to Henry Jules Roth, M.D. as the designated authorized treating physician (ATP) on February 7, 2018. Dr. Roth was of the opinion that the initial medical evaluation after the ski injury indicated there was already a medial meniscus, patella, and ACL injury (Respondents' Exhibit B, pp. 93-96).

9. The Claimant treated with Armando Vidal, M.D. on February 8, 2018. She had independently established care with Dr. Vidal following the non-work related ski injury. Dr. Vidal noted an ACL rupture, a peripheral posterior horn medial meniscus tear, and a low-grade MCL tear. He recommended an ACL reconstruction given the

Claimant's activity level and the demands of her job (Respondents' Exhibit A, pp. 13-14).

10. Dr. Roth authored a letter to insurance carrier on February 13, 2018, stating as follows: "I believe it is more likely than not...the current need for treatment reflects injuries sustained on 1/19/18" (Respondents' Exhibit B, p. 94)

11. The Claimant treated with Dr. Roth on February 21, 2018. Dr. Roth noted that the Claimant was scheduled for surgery. Dr. Roth was of the opinion that the need for surgery was pre-existing and not work related (Respondents' Exhibit B, pp. 97-100).

12. Without the receiving prior authorization, Claimant underwent a right knee arthroscopy, ACL reconstruction with quad autograft, and a meniscal repair performed by Dr. Vidal on March 2, 2018 (Respondents' Exhibit A, pp. 61-66).

13. Dr. Vidal testified at hearing by telephone. Dr. Vidal testified that the Claimant injured her ACL while skiing on January 19, 2018. He stated that the medial meniscus tear was caused by the ACL instability which was a direct result of the January 19, 2018 skiing injury. Dr. Vidal failed to persuasively establish a causal connection between the Claimant's work activities on January 31, 2018 and any injury to her right knee.

Independent Medical Examination (IME) by Timothy S. O'Brien, M.D.

14. Dr. O'Brien performed a records review at Respondents' request (Respondents' Exhibit C). According to Dr. O'Brien, [Claimant's] January 31, 2018 episode of right knee instability, which occurred while she was employed at University of Colorado Hospital, was a manifestation of her personal health. She did not sustain an acute anterior cruciate ligament tear on January 31, 2018. She did not sustain an acute medial meniscus tear on January 31, 2018 and she did not dislocate her patella on January 31, 2018. (Respondents' Exhibit C, p. 105).

15. Dr. O'Brien stated, "[t]he acute right knee anterior cruciate ligament and medial meniscus tears occurred on January 19, 2018, nearly 2 weeks prior to the episode of instability on January 31, 2018. The exam on January 25, 2018 definitively establishes the fact that there was a positive Lachman, which is pathognomic for an anterior cruciate ligament tear. There was also swelling. An MRI was ordered. All of these facts establish the presence of a pre-existing anterior cruciate ligament tear that dates back to the January 19, 2018 skiing injury" (Respondents' Exhibit C, p. 105).

16. Dr. O'Brien was of the opinion that no new injury occurred on January 31, 2018. He provided hearing testimony consistent with this opinion. Dr. O'Brien stated that what occurred on January 31, 2018 was yet another episode of instability of the right knee that is completely consistent and expected but based on the previous injury (Respondents' Exhibit C, p. 105). Dr. O'Brien noted that, "the presence of a medial meniscal tear, which occurred following the January 19, 2018 incident, would also produce the sense of instability or the giving way episodes" (Respondents' Exhibit C, p. 106)

17. Dr. O'Brien explained in his report that, "it is medically improbable that the giving way episode on January 31, 2018 produced more tearing in these structures that were already in essence completely disrupted" (Respondents' Exhibit C, p. 106). Dr. O'Brien was of the opinion that the incident of January 31, 2018 was causally insufficient to alter the pathological structure of the Claimant's right knee.

18. Dr. O'Brien noted that slipping on a floor is not the type of mechanism that would produce further tearing or any type of injury to the anterior cruciate ligament or meniscus. "One foot needs to be planted on the floor and then the body twisted around the fixed foot, ankle, and knee so that there is a torsional force that occurs while the knee is being loaded by the weight of the upper body (often times this occurs with contact); this mechanism produces tears of the ligamentous and meniscal structures. When one's foot is slipping across the floor and thus not planted, forces cannot be generated with a torsional effect such that these structures tear. Therefore, the mechanism of injury which [Claimant] indicates caused more tearing or damage to the knee is, in fact, not the type of injury mechanism that would do so" (Respondents' Exhibit C, p. 106)

19. According to Dr. O'Brien, the surgery performed by Dr. Vidal was not causally related to the incident at work on January 31, 2018. "The surgical intervention performed by Dr. Vidal was solely causally related to the January 19, 2018 incident and had no causal relationship to the sensation of instability that [Claimant] experienced on January 31, 2018 which was a manifestation of her underlying health.

20. Dr. Vidal testified that the course of recommended treatment did not change following the January 31, 2018 work incident.

21. No physician has rendered an opinion that a disability or a need for medical treatment resulted from the January 31, 2018 episode of instability. [Claimant] did not require any medical treatment or activity restrictions causally related to that incident. (Respondents' Exhibit C, p. 107).

Ultimate Findings

22. There is no credible medical evidence that the slip-and-fall incident at work on January 31, 2018, aggravated and accelerated the Claimant's non-work-related right knee injury of January 18, 2018, while skiing.

23. The Claimant's lay testimony is insufficient to overcome the weight of the medical evidence to the contrary.

24. The Claimant has failed to prove, by a preponderance of the evidence, that she sustained a compensable aggravation and acceleration of her right knee condition as a result of the slip-and-fall incident at work on January 31, 2018.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad

discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, there was no credible medical evidence that the slip-and-fall incident at work on January 31, 2018, aggravated and accelerated the Claimant's non-work-related right knee injury of January 18, 2018, while skiing.

b. Compensation can be awarded where there is competent evidence other than expert opinion. *Martin Marietta Corp. v. Faulk*, 158 Colo. 441, 407 P.2d 348 (1965). Such competent evidence includes lay testimony. *See Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Colorado Fuel & Iron Corp. v. Alitto*, 130 Colo. 130, 273 P.2d 725 (1954). *Also see Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997). The facts in these cases were extreme. As found, The Claimant's lay testimony is insufficient to overcome the weight of the medical evidence to the contrary.

Burden of Proof

c. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the C laimant failed to meet her burden of proof.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for workers' compensation benefits arising out of the slip-and-fall at work on January 31, 2018, are hereby denied and dismissed.

DATED this 4 day of September 2018.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that he has a change in medical condition justifying a reopening of his case.

2. Whether Claimant has proven by the preponderance of the evidence that the left reverse total shoulder operation requested by authorized treating physician, Dr. James Ferrari, is reasonable, necessary and related to this workers' compensation claim.

3. Whether Respondents violated WCRP 16 by failing to properly respond to the authorized treating physician's request for approval of surgery on June 2, 2017, and July 21, 2017, such that penalties against Respondents should be imposed.

4. Whether Respondents violated Section 8-43-203(4), C.R.S. by failing to produce the complete claims file within 15 days of June 17, 2017.

FINDINGS OF FACT

1. Claimant is a 62 year old man who had worked in the elevator construction and maintenance business since 2005. Claimant began his employment with Employer in July 2013. He was employed by Employer on October 15, 2013, as a new construction elevator mechanic assistant.

2. On October 15, 2013, Claimant tripped on warped plywood on a jobsite and fell, hitting and landing on his left forearm and elbow, jamming his left shoulder upwards.

3. The claim was admitted by Respondents with payment of medical care and temporary disability benefits.

4. Dr. Cedillo provided medical care and then acted as the primary care provider.

5. Dr. Cedillo referred Claimant to orthopedic surgeon, Dr. James Ferrari, who reviewed Claimant's MRI of the left shoulder and diagnosed Claimant with a massive left rotator cuff tear involving the entire supraspinatus and infraspinatus.

6. Claimant underwent surgical repair of his left shoulder by Dr. Ferrari on January 16, 2014.

7. Claimant underwent postsurgical physical therapy from February 18, 2014, until October 3, 2014.

8. Because Claimant continued to experience left shoulder pain with continued weakness after the surgery, a postsurgical MRI was ordered by Dr. Ferrari, which occurred on September 19, 2014. The MRI showed a recurrent large full thickness tear of the supraspinatus and infraspinatus tendons.

9. On September 29, 2014, Dr. Ferrari opined that Claimant was at maximum medical improvement (MMI), but that he will need maintenance medical care. Dr. Ferrari wanted to see Claimant once a year with x-rays to assess for worsening rotator cuff tear arthropathy. Dr. Ferrari indicated that if Claimant developed this as well as worsening function or increased pain due to arthrosis, his next step would be to do a reverse total shoulder operation. He further opined that he did not think Claimant was ready for that procedure at that time because he still had good function and his pain was not terribly bad.

10. Dr. Cedillo placed Claimant at MMI on October 27, 2014. He gave Claimant an 18% scheduled rating, which converted to 11% whole person. He recommended post maintenance medical benefits to consist of follow up with Dr. Ferrari in six months to be scheduled and annually there afterwards per Dr. Ferrari's discretion as he had opined on September 29, 2014, and a possible reverse total shoulder surgery in the future, per Dr. Ferrari as well.

11. Respondents filed a Final Admission of Liability admitting for 18% scheduled impairment and admitted for medical benefits after MMI, per Dr. Cedillo's report admitting to future medical benefits that are reasonable and necessary. Claimant did not object to the Final Admission of Liability.

12. Claimant's first maintenance medical appointment occurred March 23, 2015. Dr. Ferrari indicated he wanted to see Claimant in a follow-up appointment in one year with x-rays and thereafter annually for follow-up appointments.

13. Claimant returned to working with Respondents with the permanent restrictions pronounced by Dr. Cedillo. The restrictions were above waist level, lifting 25 pounds maximum on an occasional basis, repetitive lifting a 20-pound maximum, carrying 20 pounds maximum and a maximum of 10 to 15 pounds reaching overhead with the left arm and no lifting restrictions below waist level.

14. Claimant's next maintenance medical appointment was on December 7, 2015. At that time. Dr. Ferrari noted that supraspinatus strength was normal, but infraspinatus strength was weak. He did detect crepitus in the shoulder. X-rays were taken and compared revealing slightly worsening proximal humeral head migration with narrowing at the superior aspect of the glenoid as well as underneath the acromion. Dr. Ferrari opined that it was okay for the Claimant to continue working in his current capacity. He again indicated that at some point the Claimant may need a reverse total shoulder operation. He indicated this was likely in a few more years certainly he wanted to see him back in a year's time to repeat x-rays.

15. Claimant's next maintenance medical appointment with Dr. Ferrari occurred on August 22, 2016. Claimant was 60 years old at this appointment. He reported pain and decreased range of motion on the left side indicating the symptoms occurred occasionally and that Claimant rated his symptoms as mild to moderate. The pain was described as aching and the symptoms occurred with activity. Dr. Ferrari indicated on the WC 164 on August 22, 2016, that he should have a return appointment in a year

consisting of an annual follow-up and indicating that he will need a reverse total shoulder surgery in the future.

16. Claimant's next maintenance medical appointment with Dr. Ferrari occurred on May 17, 2017. Dr. Ferrari noted some atrophy in the supraspinatus and infraspinatus regions. He noted four out of five weakness in the infraspinatus and supraspinatus. He noted crepitus in the shoulder. X-rays taken showed significant worsening of his proximal humeral migration with bone on bone change between the humeral head and the acromion and the humeral head in the superior glenoid. Dr. Ferrari assessed advanced left shoulder rotator cuff tear arthropathy. Dr. Ferrari opined that Claimant's condition had progressed a lot faster than anticipated. He indicated his best option is to consider doing a reverse total shoulder replacement and to do so at that time. Dr. Ferrari indicated he would try and get the surgery scheduled for mid-June 2017.

17. On June 26, 2017, Claimant through counsel, via email, requested a complete claims file to be provided within 15 days pursuant to Section 8-43-203 (4), C.R.S. The claims file was not produced until October 5, 2017.

18. On June 2, 2017, Dr. Ferrari's staff member, Jade Gardner, contacted via telephone Insurer asking for approval for the surgery. The claims adjuster told Ms. Gardner that Claimant's workers' compensation case was closed. On the same date, Dr. Ferrari's office sent a surgery scheduling sheet requesting approval of the surgery on June 22 2017. Insurer took no further action regarding the surgery.

19. On July 21, 2017. Dr. Ferrari's office sent a request for surgery by a fax that was received by Insurer.

20. Dr. Ferrari's office received no answer to the July 21. 2017, fax.

21. Claimant through counsel filed a Petition to Reopen on September 20, 2017, alleging change in medical condition and attaching the surgery request by Dr. Ferrari and medical notes of May 17, 2017, September 29. 2014, March 25, 2015 and December 7, 2015. No pleading response was filed to the Petition to Reopen. Instead a letter was sent to Claimant's counsel stating that the petition was being denied.

22. Respondents then scheduled Claimant to see Dr. William Ciccone II on Novembers, 2017.

23. Dr. Ciccone opined that the Claimant suffered a strain/sprain of the left shoulder as a result of his fall at work and that the acute component of the injury was minor in nature. He further opined that it was a chronic rotator cuff tear that was not work related and that the Claimant's fall at work did not accelerate the natural history of rotator cuff disease. Dr. Ciccone was unable to state when such chronic condition started or what degree of it was present before the Claimant fell.

24. Dr. Ciccone agreed that a reverse arthroplasty would be a reasonable procedure for Claimant and he agreed that Claimant had an irreparable cuff tear at this point. Dr.

Ciccone opined that the rotator cuff tear did not happen at the time of Claimant's fall, and the majority of the tear was all chronic in nature.

25. Dr. Ciccone did not review the MRI films and only reviewed the reports.

26. Dr. Ferrari opined that the type of fall Claimant had was the type of injury that could damage the rotator cuff.

27. Claimant credibly testified that he had no previous problems with his left shoulder. He never required any assistance from co-workers for any shoulder problems. He had no pain or weakness with his shoulders. He had no previous medical care for any shoulder problems. He had no previous Workers' Compensation claims related to his shoulders. He was able to regularly work out at a gym prior to injury. He never missed any work because of any shoulder problems prior to this claim.

28. Dr. Ferrari disputed that Claimant's first MRI should have shown significant swelling if there had been acute trauma. The doctor opined that the first MRI test was an MRI arthrogram making finding swelling and Inflammation difficult.

29. Dr. Ferrari ordered a postsurgical MRI approximately 10 months after surgery because the Claimant was not progressing as Dr. Ferrari had hoped in terms of his strength. Claimant was weak in his external rotation which the doctor opined indicated problems with the infraspinatus.

30. The postsurgical MRI essentially showed a complete re-tear of what Dr. Ferrari had repaired during surgery.

31. Dr. Ferrari explained that rotator cuff repair retears are very common. He indicated that it is a failure of the tissue healing back into the bone not a failed suture or knot.

32. Dr. Ferrari opined that the postsurgical MRI showed moderate to advanced supraspinatus and Infraspinatus muscle atrophy caused by the tear in the rotator cuff. Once the rotator cuff surgery failed, the doctor credibly opined that the reverse total shoulder operation was the only reasonable medical option.

33. Dr. Ciccone opined that a superior capsule reconstruction procedure might be a more reasonable medical option at this time. Dr. Ciccone further asserted that when Dr. Ferrari did surgery he was addressing a minor strain or sprain and that no surgical procedure at this point should be found related to the work injury. Dr. Ferrari disagreed and opined that Claimant had a tear in his rotator cuff from the injury and that is what Dr. Ferrari fixed in the surgery.

34. Dr. Ferrari disputed Dr. Ciccone's contention that Claimant would have progressed to the point he is at now, with or without any trauma. Dr. Ferrari based his reasoning on the fact that Claimant suffered an acute tear. Alternatively, Dr. Ferrari indicated that, if there had been some pre-existing pathology, the trauma that Claimant

experienced when he fell is the type that could accelerate or aggravate a pre-existing condition.

35. Dr. Ferrari credibly opined Claimant's work-related injury caused an acute tear. The doctor offered in support of his opinion of work relatedness that Claimant had no previous symptoms, the work incident was not a minor fall and the MRI showed an acute event since the MRI showed no evidence of atrophy and fatty infiltration.

36. Finally, Dr. Ferrari opined that a superior capsule reconstruction procedure is contraindicated when there is arthritis between the humeral head and the acromion, a condition present in Claimant’s shoulder.

37. Dr. Ferrari noted worsening in the Claimant's condition when he evaluated the Claimant in May 2017. X-rays taken May 17, 2017, showed Claimant's arthritis had progressed faster than the doctor had anticipated. He opined that his best option was to do the reverse total shoulder replacement and that It did not make sense for him to continue to wait on this.

38. Although the need for the reverse total shoulder operation was established at the time the Claimant was placed at MMI, it was medically appropriate to put off the procedure, as long as possible.

39. Claimant credibly testified that he has now has increased pain symptoms, increased weakness and more frequent bouts of excruciating pain and episodes of his shoulder locking up compared to when he was placed at MMI. At this appointment with Dr. Ferrari on May 17, 2017, the Claimant reported pain and symptoms to be moderate to severe and he described the pain as aching, deep, sharp, throbbing and burning and he rated his pain numerically seven out of 10.

40. Dr. Ferrari noted that there was pre-existing AC joint arthritis but that is very different than glenohumeral arthritis. They are two different joints and the glenohumeral joint is the ball and socket of the shoulder. The AC joint, the acromion bone articulates with the clavicle which is basically a strut to keep the arm out. There is cartilage on the end of the clavicle and not really much on the acromion because there's a little disc in between. He indicated that AC joint arthritis would not be a reason to do a reverse total shoulder surgery. He explained that the main function that the rotator cuff has is to keep the ball centered in the socket so a reverse total shoulder operation is done in situations where there isn't a rotator cuff and there is arthritis or you've got such severe pseudoparalysis from a large rotator cuff tear. It is called a reverse because the surgeon cuts out the ball of the shoulder, the socket is ground down, and the socket is replaced with the ball and the ball is replaced with the socket and it fits tightly together with the fixed center of rotation, similar to a hip joint and then a rotator cuff is not needed for it to work because the deltoid muscle is what empowers the arm.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant bears the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S.; *City of Boulder v. Streeb*, 706 P.2d 786, 789 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 p.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

3. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Petition to Reopen

4. Section 8-43-303, C.R.S. permits a claim to be reopened based upon "a change in condition." A change in condition refers to either "a change in the condition of the original compensable injury or to a change in Claimant's physical or mental condition which can be causally connected to the original compensable injury." *Chavez v. Industrial Comm'n*, 714 P. 2d 1328, 1330 (Colo. App. 1985); *Accord Anderson v. Longmont Toyota, Inc.,* 102 P. 3d 323, 330 (Colo. 2004*); See also Helnicki v. Industrial Claim Appeals Office,* 197 P. 3d 220 (Colo. App 2008).

5. In this matter, attached to Claimant's Petition to Reopen were several medical records of his treatment since MMI which showed a gradual worsening of his condition, culminating in the visit of May 17, 2017, where Dr. Ferrari

recommended that the Claimant now go forward with the reverse total shoulder operation. Further, it should be noted that testimony from Claimant as to an increase in problems is sufficient to order reopening of the case. *Savio House v. Dennis,* 665 P. 2d 141 (Colo. App. 1983). There is both evidence through x-rays and expert medical opinion as well as Claimant's credible testimony as to the increase of weakness, increase in pain, increase in the shoulder locking up, as well as increase in the frequency of Claimant's ongoing symptomology.

6. The medical evidence shows that by May 17, 2017, the glenohumeral joint where the rotator cuff sits had deteriorated to the point that there was bone-on-bone change between the humeral head and the acromion and the humeral head and the superior glenoid. Dr. Ferrari noted significant worsening of the Claimant's proximal humeral migration in the x-ray of May 17, 2017. His assessment was advanced left shoulder rotator cuff arthropathy. Earlier x-rays and x-rays at the time of MMI did not show this positioning of the glenohumeral joint. Dr. Ferrari credibly opined that although the rotator cuff had either failed in surgery or was completely re-torn, initially at MMI, Claimant had less pain, less weakness and less loss of function than he presented on May 2017.

Medical benefits

7. Respondents are liable to provide medical treatment that is reasonably needed at the time of injury and thereafter during disability to cure and relieve the worker of the effects of the injury. *See* Section 8-42-101(1)(a). Case law has established that the need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P 2D 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P. 2d 609 (Colo. App. 1995).

8. Where Respondents have filed a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness and necessity of specific treatments. *Hanna v. Print Expediters Inc*., 77 P. 3d 863 (Colo. App. 2003). When Respondents dispute the Claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits.

9. Respondents in this case did file a Final Admission of Liability dated December 2, 2014, admitting for reasonable, necessary and related post-MMI medical benefits. Specifically, they stated, "per Dr. Cedillo's report rec'd 11/17/14; at MMI 10/27/14; admit to future medical that is reasonable/necessary."

10. Claimant has provided substantial evidence by way of expert medical testimony and objective medical documents including x-rays which document the worsening of his condition. Claimant offers credible and persuasive expert testimony to explain why it was important to put off the surgical procedure, as

long as possible. Even Respondents' expert agreed that it was important to do a reverse total shoulder operation as late as possible for a patient. Dr. Ferrari has explained why it is now reasonable to proceed with the surgery, why it is necessary and why it is related to the original fall and the failed surgery.

11. Both Dr. Ferrari and Dr. Cedillo agreed that the reverse total shoulder operation is the most reliable procedure for Claimant at this juncture. The surgery is necessary now since Claimant has reached a point where he can no longer handle the pain and the increasing loss of function due to the deterioration of the glenohumeral joint area. Dr. Ferrari provided credible testimony regarding what he observed by looking at the films of the MRA and MRI studies as well as the serial x-rays he took after surgery, and thereafter annually, which showed the gradual worsening to the point that Claimant has bone-on-bone in the joint. Both Dr. Cedillo and Dr. Ferrari opined that Claimant sustained injury to his shoulder when he fell on October 15, 2013. Claimant provided substantial evidence that the requested surgery is reasonable, necessary and related to the original injury.

12. Respondents shall be liable for maintenance medical benefits, specifically, Claimant's reverse total shoulder operation***.***

Penalties – Claims file

13. On September 28, 2017, Claimant filed an application for hearing raising the claim of a penalty violation for failure to timely provide the claims file. Claimant cited Section 8-43-203(4). Section 8-43-203(4) pertains to Respondents' duty to produce to Claimant the claims file within 15 days of the request. In Claimant's post hearing position statement, it is alleged that Respondents failure to timely produce the claims file justifies imposition of a penalty under the provision of Section 8-43-305, C.R.S.

14. Respondents assert, in defense to Claimant's penalty claim, the provisions of Section 8-43-304(4), C.R.S. Respondents pled in their response to application for hearing that Claimant failed to plead penalties with specificity. Respondents further contend that no penalty is justified because Respondents' explanation of the reason for their failure to timely produce the claims file was reasonable. Respondents explains that Claimant directed the request for production of the claims file to an employee at Insurer that was no longer employed by Insurer thus the request for the claims file went unattended.

15. Claimant's claim for penalties for failure to timely produce the claims file is denied because the claim lacks the requisite specificity. Claimant cites Sections 8-43-203(4), C.R.S. and 8-43-305, C.R.S. in support of the claim for penalties. However, neither of these sections, provide specificity regarding the specific nature of the penalty claim. Neither of the cited sections, Sections 8-43-203(4), C.R.S. and 8-43-305, C.R.S., provide a basis for the claim of penalties.

Penalties – Failure to respond to the request for authorization of medical treatment

16. Claimant also poses the question on the application for hearing whether a penalty violation occurred in regard to Respondents' failure to timely respond to the authorized treating physician's request for approval of surgery for the reverse total shoulder operation. In Claimant's post hearing position statement, he relies on Section 8-43-305, C.R.S. in support of the penalty claim.

17. Respondents again assert that Claimant's claim for penalties is not alleged with specificity. Respondents rely on Section 8-43-304(4) in arguing the Claimant's claim lacks specificity. Respondents also contend that a penalty should not be imposed because the letter requesting authorization for surgery was not properly addressed and therefore never reached Insurer for a response. Further, Respondents contend that the request for authorization of medical treatment was not valid under WCRP 16 because the request did not indicate that the need for surgery was related to Claimant's work injury.

18. Section 8-43-305, C.R.S. does not pertain to a specific penalty provision. Section 8-43-305 pertains to the legislative pronouncement that each day during which a party fails to perform any duty imposed by the Act shall constitute a separate and distinct violation for purposes of imposition of the penalty. A penalty may be imposed for each day the party is proven to be in violation of the Act.

19. It is concluded that the claim for penalties lacked the requisite specificity and is therefore denied. Claimant's application for hearing does not indicate what provision of Act is relied upon in claiming penalties.

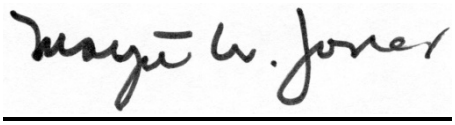
ORDER

1. Claimant's petition to reopen his claim is granted on the grounds of a worsened condition.

2. Respondents shall be liable for maintenance medical benefits. Specifically, it is concluded that Claimant sustained his burden of proof to prove by a preponderance of the evidence that the reverse total shoulder operation is a reasonable, necessary and related medical procedure.

3. Claimant's claims for penalties are denied and dismissed.

DATED: September 4, 2018



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4 th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove by a preponderance of the evidence he suffered a compensable work-related injury to his left knee on or about December 9, 2017?

- If Claimant proved a compensable injury, did he prove arthroscopic surgery recommended by Dr. David Walden is reasonably necessary treatment for the industrial injury?

STIPULATIONS

The parties stipulated to an average weekly wage of $797.77.

FINDINGS OF FACT

1. Claimant works for Employer as a correctional officer. He was hired in May 2016. As part of the hiring process, he completed a multi-day physical training program on defensive tactics, restraining prisoners, takedowns, and similar maneuvers. He also underwent a physical examination. Claimant satisfied all pre-employment physical requirements and performed the job without difficulty or limitation.

2. On December 9, 2017, Claimant was ascending a staircase after a meeting. He caught his toe on a metal strip on the top edge of a stair, stumbled, and began to fall. Although he stopped himself from falling, he hyper-flexed his left knee. Claimant felt pain in the knee, but finished climbing the stairs and walked to his "pod." By the time he arrived at the pod, the knee had "stiffened" and he noticed swelling in the back of the knee. Claimant completed his shift that day, which involved primarily sedentary duties in the control center.

3. Claimant's knee was "sore" that evening when he went home. He worked the next day and the knee continued to "throb." It also became stiff and painful with prolonged sitting associated with driving to and from work. At some point on Sunday, December 10, he tried to contact CCOM for an appointment but did not reach anyone.

4. Claimant formally reported the injury on December 11, 2017, and requested medical treatment. Employer referred him to Emergicare.

5. Claimant saw Dr. J. Douglas Bradley at Emergicare on the afternoon of December 11. The documented physical exam findings were relatively benign, with the only abnormality being tenderness in the back of the left knee. X-rays showed no fracture, joint effusion, or other findings of acute trauma. Dr. Bradley diagnosed a knee sprain and opined the objective findings were "consistent with the history and/or a work-related mechanism of injury." Dr. Bradley anticipated MMI in a week. He instructed Claimant to perform home exercises and released him to regular duties.

6. Claimant returned to Emergicare on December 15 due to worsening symptoms. He was having difficulty weightbearing and flexing or extending the knee fully. He walked with an antalgic gait. He was given a Toradol injection for pain. Dr. Bradley prescribed methocarbamol, Biofreeze, ibuprofen, and gave Claimant a hinged knee brace. Claimant was advised to continue the home exercises and stretching. Dr. Bradley imposed work restrictions including maximum 10 pounds lifting, no kneeling, squatting or crawling, and "minimal stairs." Employer initially accommodated Claimant's restrictions by assigning him to the control room. [1]

7. By December 20, Claimant was still reporting pain and difficulty weightbearing, so Dr. Bradley ordered an MRI.

8. Claimant had a left knee MRI on January 8, 2018. It showed joint effusion, a tear of the posterior horn of the medial meniscus, tearing of the anterior horn and body of the lateral meniscus, an ACL strain, patellar tendinitis, a popliteal strain, and patellofemoral degenerative changes.

9. After receiving the MRI results, Dr. Bradley referred Claimant to Dr. David Walden for an orthopedic evaluation.

10. Claimant saw Dr. Walden on January 25, 2018. Dr. Walden's physical examination appears more detailed than any conducted at Emergicare, showing significant findings including trace effusion, crepitus with range of motion, and pain along the medial and lateral joint lines. McMurray's testing was positive for the medial meniscus and equivocal for the lateral meniscus. Dr. Walden ordered x-rays which showed "mild" osteoarthritis. He reviewed the MRI images which he interpreted as showing a tear of the posterior horn of the medial meniscus, a possible tear of the anterior horn of the lateral meniscus, and ACL edema. He diagnosed an acute medical meniscus tear and "unspecified type" tear of the lateral meniscus. Dr. Walden opined "his mechanism of injury, clinical evaluation, and MRI findings are all consistent with a medial meniscus tear and a possible lateral meniscus tear." He recommended arthroscopic surgery.

11. Respondent filed a Notice of Contest on February 12, 2018. The attached cover letter explained "denial is based on the MRI documenting pre-existing degenerative joint disease and the description of the accident as just a normal body movement without any special hazard specific to work. Please be advised we are willing to pay for conservative treatment with your employer's authorized medical provider until 2/14/18. Any treatment after that date will be considered your responsibility."

12. Dr. Gwendolyn Henke, an orthopedic surgeon, performed a record review for Respondent on May 11, 2018. Dr. Henke reviewed the MRI images and interpreted them differently than the radiologist and Dr. Walden. She opined the meniscal tears were degenerative rather than traumatic. She appreciated horizontal cleavage tears of the anterior and posterior horns of the lateral meniscus, and degenerative changes "throughout" the posterior horn of the medial meniscus. She saw no vertical or radial

[1] Claimant was placed on FMLA leave in May 2018. The parties reserved the issue of temporary disability benefits.

meniscal tears, or other evidence of acute trauma such as effusion, hemarthrosis, or bone contusion. Dr. Henke noted "moderate" degenerative arthritis affecting all three compartments. She opined Claimant's clinical presentation in the days after the accident was not consistent with a traumatic meniscal tear because there was no documented swelling or increased joint fluid, or reports of catching, locking, or giving away.

13. Dr. Henke disagreed with the recommendation for surgery. She thought the meniscal tears pre-dated the incident and were not likely pain generators. She further opined:

> [C]urrent orthopedic guidelines do not recommend arthroscopic meniscal surgery for patients with radiographic evidence of osteoarthritis. Many studies (involving hundreds of thousands of patients) have concluded that arthroscopic partial meniscectomy is contraindicated in knees with degenerative changes since there is no improvement in their long-term (greater than six months) pain or function.

14. Dr. Henke opined the accident did not change to the underlying anatomy of Claimant's knee but "resulted in an exacerbation of his underlying pre-existing left knee condition." Ultimately, she concluded surgery is neither reasonably necessary nor causally related to the December 9, 2017 accident.

15. Dr. Miguel Castrejon performed an IME for Claimant on May 31, 2018. Although he had no records to review, the verbal history he obtained from Claimant was consistent with that documented in the medical records. Claimant described pain, popping, clicking, and occasional locking of the knee. He also reported two prior episodes of knee buckling associated with a sudden onset of sharp pain in the medial aspect of the knee. Dr. Castrejon's physical exam findings were similar to those documented by Dr. Walden.

16. Regarding causation, Dr. Castrejon noted an injury is not compensable merely because it happened at work, and if the injury arose "out of purely natural phenomenon – the internal workings of the human body – the employment situation may then be an irrelevant coincidence." He summarized his understanding of the law regarding pre-existing conditions as:

> For the purpose of compensability . . . a condition does not have to be caused by work . . . [or] permanently aggravated . . . . If the job . . . aggravates a pre-existing or non-work-related condition and renders the condition more symptomatic and, in this case, more painful to the point where it interferes with the employee's work, the employee is entitled to medical care under the [Act].

17. Dr. Castrejon concluded claimant sustained a work-related injury and should be allowed to proceed with surgery, followed by an appropriate course of physical rehabilitation.

18. Dr. Henke testified for Respondent in a deposition dated July 10, 2018. Regarding the statement in her report that the accident "exacerbated" Claimant's pre-existing condition, she explained:

> My use of that word means that he had a flare, that the incident of stumbling and falling on the steps created an increase in his symptoms, caused his arthritis to become symptomatic. And it's kind of synonymous with a flare-up.

19. Dr. Henke elaborated on her opinion that the meniscal changes shown on MRI are degenerative rather than traumatic. She reiterated that surgery for meniscal tears is "not indicated" if the patient has degenerative arthritis. She indicated there are "many studies" showing arthroscopic surgery does not change the natural history of arthritis or prevent the need or desire for total knee arthroplasty in the future, but provided no citations or other identifying information to allow verification of their findings or conclusions. She opined arthroscopy in this context is "not cost-effective" and can accelerate the progression of underlying arthritis.

20. Dr. Castrejon testified via deposition on July 16, 2018. Dr. Castrejon agreed Claimant has pre-existing arthritis, but it was asymptomatic and caused no functional limitations before December 9, 2017. Dr. Castrejon emphasized the physically demanding nature of Claimant's job including prisoner "takedowns." He explained whether the meniscal tears are traumatic or pre-existing is not dispositive because, "I've had many patients who have had an aggravation of a joint condition, and yet, the MRI only demonstrates pre-existing degenerative changes."

21. Dr. Castrejon disagreed with Dr. Henke's interpretation of the medical literature regarding arthroscopy for meniscal tears. His literature review showed the decision whether to pursue surgery cannot be categorically ruled out or in, but must be made on a "case-by-case" basis. [2] He also relied on outcomes from his patient population, noting "some have not done well; but . . . the majority have done, actually, better, in terms of being able to regain their function for home activities and getting back to work."

22. Dr. Castrejon's opinions regarding the aggravation of a pre-existing condition and the reasonable necessity of surgery are credible and more persuasive than those of Dr. Henke.

23. Claimant proved by a preponderance of the evidence he suffered a compensable injury to his left knee. The incident at work on December 9, 2017 proximately caused disability and a need for medical treatment.

24. The arthroscopic surgery recommended by Dr. Walden is reasonably necessary to cure and relieve the effects of the compensable injury.

---

[2] Dr. Castrejon referenced specific literature supporting his position including a 2013 study in The New England Journal of Medicine and the MeTeOR Trial.

CONCLUSIONS OF LAW

A. Compensability

To obtain medical or indemnity benefits, a claimant must prove he suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S.; *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The claimant must prove an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to benefits by a preponderance of the evidence. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally for either the claimant or respondents. Section 8-43-201.

If an industrial injury aggravates, accelerates, or combines with a preexisting condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-91-616-03 (September 9, 2016).

Even a "minor strain" or a "temporary exacerbation" of a pre-existing condition can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused him to seek medical treatment*. E.g., Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (April 17, 1996).

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause, and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work and caused symptoms does not necessarily establish a compensable injury. Rather, a compensable injury requires medical treatment or causes a disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016).

As found, Claimant proved he suffered a compensable injury on December 9, 2017. Dr. Henke is probably correct that at least some of the meniscal tears in Claimant's knee are degenerative rather than traumatic. But that does not end the analysis, because a claimant is entitled to medical benefits if an accident aggravates a preexisting but previously asymptomatic condition. Although Claimant has a remote documented history of intermittent left knee pain and treatment, there is no persuasive evidence he was symptomatic or required any treatment for at least ten years before the accident. Nor is there any persuasive evidence of preinjury functional limitations caused by his left knee. Claimant obtained and maintained a physically demanding job as a correctional officer

without difficulty for more than a year before the accident. Dr. Henke agreed the accident "exacerbated" Claimant's pre-existing arthritis and caused it to become symptomatic. The new symptoms reasonably prompted Claimant to seek treatment and interfered with his ability to perform his regular job. The December 9 accident either caused one or more acute meniscal tears or aggravated pre-existing tears that were previously asymptomatic. Either scenario results in a compensable claim.

B. The proposed surgery is reasonably necessary and related to the compensable injury

The respondents must provide medical treatment reasonably needed to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a). But the mere fact that a claimant suffers a compensable injury does not mean all requested treatment is reasonably necessary or caused by the industrial injury. A claimant is only entitled to treatment that flows proximately and naturally from the injury, and must prove the requisite causal connection by a preponderance of the evidence. *See Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must also prove the requested treatment is reasonably necessary, if disputed. *Id*.

The Director has adopted Medical Treatment Guidelines (MTGs) to advance the statutory mandate to assure the quick and efficient delivery of medical benefits to injured workers at a reasonable cost to employers. WCRP Rule 17, Exhibit 6 addresses lower extremity conditions, including meniscal pathology. As the final arbiter of disputes regarding medical treatment, the ALJ may consider the MTGs as an evidentiary tool. *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (January 25, 2011). But the ALJ is not bound by the MTGs when determining whether requested medical treatment is reasonably necessary or injury-related. Section 8-43-201(3).

As found, Claimant proved by a preponderance of the evidence the surgery recommended by Dr. Walden is reasonably necessary to cure and relieve the effects of his compensable injury. Even if the meniscal tears were pre-existing, they were asymptomatic before December 9, 2017.

Dr. Henke's opinion that meniscal surgery is "contraindicated" and ineffective for patients with osteoarthritis is not consistent with the Lower Extremity MTGs. Congruent with Dr. Castrejon's opinions, the MTGs countenance arthroscopic surgery as a viable option for meniscal pathology despite the presence of arthritis. Rule 17, Exhibit 6 § (E)(1)(f)(iv)(D) provides:

> There is *some* evidence that, for many patients with nontraumatic degenerative tears of the medial meniscus, an exercise program alone will be an adequate treatment for up to 5 years post initiation of symptoms. *However, one-third of patients initially treated conservatively may go on to require surgery and will have an outcome similar to patients treated with early surgery*.

> There is *some* evidence that, in patients with degenerative tears of the medial meniscus, a conservative treatment plan *may* yield substantial functional and symptomatic benefits similar to arthroscopic meniscectomy when measured 2 years after the beginning of treatment. This conservative treatment plan must include both supervised physical therapy and a home exercise program.
>
> There is good evidence that, in the initial management of knee OA with a torn meniscus, it is reasonable to *start with* nonoperative physical therapy. *There is also good evidence that about 30% of patients may not respond to PT alone*. (Italics added).

Similar language is found in § (E)(1)(f)(iv)(G):

> There is some evidence that, in the setting of non-traumatic meniscal tears, a treatment plan focusing on supervised exercise followed by home exercise has an equal probability of success as a treatment plan involving early arthroscopic partial meniscectomy. *This assumes that a surgical option is offered to patients who have persistent knee limitations after several months of exercise therapy*.
>
> * * *
>
> [T]here is strong evidence that partial meniscectomy provides no clear benefit over initial exercise therapy for patients with an *isolated* degenerative meniscal tear. Therefore, it is ***not recommended***. *It may be appropriate for the patients who continue to have significant functional deficits of activities of daily living or work duties after six weeks of therapy*. (Bold italics in original, non-bold italics added).

Based on the MTGs, the primary dispute in the literature involves the comparative efficacy of surgery versus therapy and exercise. The upshot of the aforementioned provisions is that surgery is a reasonable option for patients who do not respond to conservative treatment. Thus, the MTGs do not support Dr. Henke's opinion that partial meniscectomy is categorically "contraindicated" for patients with degenerative changes. Claimant remains symptomatic and functionally impaired despite many months of home exercises and relative rest. After considering all the evidence presented, the ALJ concludes the proposed arthroscopy is reasonably necessary and causally related to the compensable injury.

ORDER

It is therefore ordered that:

1. Claimant's claim for a left knee injury is compensable.

2. Claimant's AWW is $797.77 per the parties' stipulation.

3. Respondent shall cover all reasonably necessary treatment to cure and relieve the effects of Claimant's compensable left knee injury, including, but not limited to, the arthroscopic surgery recommended by Dr. Walden.

4. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 5, 2018

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that she suffered a compensable injury on or about December 29/30, 2017?

II. If compensable, has Claimant shown, by a preponderance of the evidence, that she is entitled to all reasonable, necessary, and related medical treatment for said injury?

III. If compensable, is Claimant entitled to Temporary Total Disability ("TTD") payments?

IV. If TTD payments are awarded, have Respondents shown, by a preponderance of the evidence, that Claimant was responsible for her own termination?

V. If compensable, have Respondents shown, by a preponderance of the evidence, that Claimant willfully violated a safety rule of Employer?

STIPULATIONS

1. The parties stipulated that if the injury were compensable, Claimant's Authorized Treating Physician ("ATP") is to be Michael Sparr-assuming he will accept Claimant as a patient.

2. The parties stipulated that Claimant's Average Weekly Wage ("AWW") is $326.44.

The ALJ accepted and adopted these stipulations.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant was employed with Employer as a resident and care specialist ("RCS") at Cedarwood Senior Living, working overnight shifts from 10pm to 6am. Claimant started work with Employer on October 24, 2017.

2. Claimant testified that at the time of her hiring, she had reached a verbal agreement with Director of Nursing Sharonda Camacho that she would be able to arrive to work 15 minutes after the start of her shift and leave 15 minutes before the end of her shift in exchange for working through her half hour lunch. Claimant has also worked for some time as the caregiver for her disabled daughter, and she would need to be present at 10:00 p.m. and again at 6:00 a.m. in order to provide her daughter the

medications she required. The ostensible purpose of this arrangement was to facilitate Claimant providing her daughter's care in this fashion. On those days when her work was too hectic to allow this procedure to be followed, Claimant testified that she would stay past 6 a.m. in order to finish her duties as necessary, or forego her half-hour lunch break.

3. At hearing, Claimant recalled one incident where she was disciplined for attendance prior to her injury date of 12/29/17, but no details were provided at hearing.

4. Claimant's employee records indicate that Claimant did occasionally arrive to work roughly 15 minutes after 10 p.m. and leave about 15 minutes before 6 a.m. (Ex. B, pp. 17-18). The records additionally show that Claimant would, on occasion, stay past 6 a.m.

5. Claimant testified that in the early hours of December 30, 2017, a coworker asked for her assistance in dealing with 'Zita', a resident at Cedarwood. Tammy was not able to help with Zita, and as such asked for Claimant's help in moving Zita who needed to use the restroom. Zita had limited mobility and use of her legs and had to be physically lifted from her bed in order to use the restroom.

6. Claimant was emphatic that the Hoyer lift batteries (which must be charged in order for the lift to function) were never charged for use on the overnight shift; instead, they were "left out on a desk". Claimant testified that she only saw the Hoyer lift being used a total of four times during her entire tenure, each time on 'Zita'. Otherwise, she never saw it being used, nor did she ever use it herself. She testified that she was never trained by Cedarwood in the use of the Hoyer lift, and was never aware that the "no lift" policy was ever enforced; this, despite lifting residents was a regular part of her job duties. Employees were 'expected' by Employer to lift residents without assistance; This would occur "almost every shift."

7. When Claimant was hired she was provided written orientation with the employee handbook (Ex. B, pp. 3-10). Clamant acknowledged receipt and review of the employee handbook (Ex. B, p. 10). In the employee handbook there is a heading entitled Employers' Notice of Workers Compensation Coverage contained therein there are two bullet points:

- You have a responsibility to follow all safety rules and procedures, including immediate notification to your supervisor or manager of all unsafe working conditions or injuries.

- If you have an on the job injury or work-related illness, you are required to fully complete, sign and date a written employee incident report as soon as possible and deliver to your supervisor/manager by the end of your work shift.

One of the safety rules taught to claimant was Cedarwood is a no lift facility. If a resident needed to be transferred, the CNA's were required to use a Hoyer lift.

8. Claimant testified that on her way to Zita's room, she asked for assistance in moving her from Damian Elswick, an RN on duty that evening. She testified that Elswick refused to assist her; he had referred to Zita as a "bitch". As help was not available at the time, Claimant testified that she proceeded to move Zita herself, putting her in a 'bear hug' and then lifting and rotating her to the right to place her on the commode. Claimant testified that as she lifted Zita, she immediately felt a shooting pain down her spine, from her neck to her lower back and down her right leg.

9. Claimant testified that in the aftermath of this injury, she reported what had just happened to Vera Holeckova, the RN she was assigned to work with that evening. Holeckova offered her ibuprofen, which she accepted. Claimant testified that she finished her shift, returned home, and lay down, hoping that her back pain would subside. When the pain did not go away by around 4 p.m., she presented for treatment at UC Health. Claimant testified that she called Camacho to tell her that she had hurt herself during her shift and to tell her she was seeking medical treatment.

10. Claimant testified that at her appointment with UC Health on December 30, 2017, she was taken off of work until January 3, 2018. In the narrative from Respondents' IME, it indicates that Claimant was diagnosed with an acute lumbar sprain, acute lumbar strain, upper back strain, and neck strain. (Ex. D, p. 41). Claimant was instructed to follow up with her doctor in three to four days and given prescriptions for various medications to control her pain and symptoms.

11. For reasons entirely unclear, the UC Health treatment records referenced in this IME narrative were not tendered by either party at hearing. The only medical records tendered at hearing are three prescriptions filled out on December 30, 2017 for pain relief and muscle stiffness-consistent with the above diagnoses.

12. Claimant testified that when she returned to work after January 3, 2018, she attempted to obtain from Employer a medical provider she could see to address her injury. She testified that this conversation kept getting put off, and no provider list was ever offered. Claimant accordingly never received medical treatment beyond her one visit to UC Health on December 29-30, 2017.

13. On January 8, 2018, Barbara Waters wrote a note, apparently to Claimant's personnel file, reading in its entirety:

> I spoke with Kennyne and discussed the need for her to see our Occupational Health physician. She refused to go Occupational Health as *she had an order to return to work already*. I discussed with her how she injured herself lifting a resident herself rather than utilizing the mechanical lift as care planned. She said she couldn't get anyone else *as they were out on break.* I explained that she should not have transferred the resident independently. Ex. B, p. 20)(emphasis added).

14. Claimant was terminated on January 23, 2018. (Ex. B, p. 16). The reason cited in Employer's Disciplinary Action Record ("DAR") is for Claimant's 15 days of absence from work, of which "at least" two were evidently recorded as being "No call, No show". Claimant refused to sign the DAR. The DAR does not record the dates of initial, second, or final warnings, nor does it indicate that any prior disciplinary steps were ever taken. Claimant testified that she had received disciplinary action on one occasion prior to December 29, 2017 stemming from an incident which had occurred in November.

15. By her own estimation Ms. Waters had been informed of Claimant's work injury by January 8, 2018 at the latest. Waters then filed an injury report on February 7, 2018. (Ex. B, p. 21). In it, she indicated that Claimant injured her neck and lower back by lifting a resident without assistance. Waters also completed an Injury Review Process ("IRP") form on that date, indicating that Claimant had failed to use a mechanical lift or receive assistance with moving a resident, resulting in her injury. No recommended corrective actions were listed, as Claimant had been terminated two weeks before.

16. At Respondents' request, Claimant attended an Independent Medical Exam ("IME") with Eric Ridings, M.D. on May 14, 2018. (Ex. D, pp. 39-45). Dr. Ridings reviewed the medical record, took a patient history, and performed a physical exam. As of May 14, 2018, Claimant was still complaining of pain through her thoracic and lumbar spine. Claimant's cervical spine complaints had reportedly resolved, so long as she did not rotate her neck too far to the right.

17. Dr. Ridings noted that Claimant had to shift around frequently in order to reduce pain in her legs and low back. Dr. Ridings ultimately concluded that, barring the existence of records indicating a pre-existing condition was causing her complaints, Claimant's injury was work related. In his report, Dr. Ridings did not detect signs of symptom magnification in Claimant's presentation and found Claimant to be "very motivated to try to improve as quickly as possible, both to be able to get back to work to support her family, and simply to be able to perform her caregiving activities at home." Dr. Ridings recommended that Claimant begin treatment with a lumbar MRI, electrodiagnostic testing, physical therapy, and potentially meet with a spinal surgeon.

18. Barbara Waters was deposed on July 11, 2018. (Ex. E, pp. 46-64). Waters testified that she had been an administrator at Cedarwood for over three years. Her primary responsibilities included ensuring compliance with state and federal law, as well as directing staff and ensuring the safety and care of facility residents. She testified that the attendance policy at Cedarwood provided in its employee handbook indicates that employees are to arrive on time. Late appearances are considered "tardies," and three instances of tardiness are considered one "occurrence." Seven occurrences in a given rolling twelve-month period would be grounds for termination of the offending employee.

19. Waters further testified that Cedarwood is a "no-lift facility," meaning that employees are not permitted to lift residents without the assistance of another employee

or the use of a mechanical lift. Waters also testified that Claimant was educated on Cedarwood policy with respect to both attendance and lifting residents, and that Claimant was terminated on January 23, 2018 due to attendance issues. Waters noted that an employee "could be disciplined" for violating the "no-lift" policy. Waters also testified that Claimant had come to her to discuss the work injury on January 8, 2018. She testified that she offered Claimant a referral to see Cedarwood's occupational health physician, and that Claimant refused to go.

20. Damien Elswick testified by telephone at hearing on behalf of Respondents. Mr. Elswick could not recall whether or not Claimant worked on the night of December 29, 2017, nor could he recall being asked to assist with moving a resident named Zita. Despite not recalling this incident, he did state that he would have "absolutely helped" because he had "always helped the CNAs when they've needed help." Elswick testified that Claimant did not report an injury to him on that date. He also testified that he did not refer to Zita as a bitch. Elswick also testified that the Hoyer lifts used at Cedarwood were charged prior to the night shift, and that they were in regular use. He also indicated that a no-lift policy was taught to employees such as Claimant.

21. Vera Holeckova testified by telephone at hearing on behalf of Respondents. Holeckova is employed as a nurse at Cedarwood, and has worked there for three years. She testified that she worked the night shift between December 29 and December 30, 2017; however, she could not remember whether Claimant approached her that evening about an injury. Holeckova did indicate that normal procedure would be for an injured worker to fill out an incident report and give it to Barbara Waters. She did also concede that Camacho could have been an appropriate contact for an injured worker.

22. Denise Steininger also testified by telephone at hearing on behalf of Respondents. Ms. Steininger worked at Cedarwood in an HR capacity on December 29, 2017. She testified that Cedarwood is a non-lift facility, meaning that staff members would not normally be permitted to lift residents alone. The purpose of this policy was to prevent injuries associated with lifting residents.

23. Steininger testified that Claimant had contacted her several times, although she could not recall when those contacts occurred. She testified that Claimant contacted her to complain about her administrator, and to indicate that the schedule was being changed on her. She testified that she followed up on this complaint, and concluded that no such thing had occurred. Ms. Steininger further testified that Claimant was terminated due to attendance issues, stemming from the facility's "no-call, no-show" policy. She testified that Claimant was terminated based upon this policy, and not as a result of reporting a work injury.

24. Sharondo Camacho testified in-person at hearing on behalf of Respondents. Ms. Camacho is the director of nursing at Cedarwood, where she has worked for over a year. Although she normally works during the day, she testified that she has occasionally had to work the night shift when staffing required it. As such, she

was familiar with normal hospital procedure at such times. Camacho testified that in those instances the no-lift policy was followed, and that several types of lifts are available for use depending upon the ability of the resident being moved to support their own weight.

25. Camacho also testified that she was familiar with the 'Zita' in question, and that as a resident she required use of a Hoyer lift when being moved. Ms. Camacho testified that all resident care specialists such as Claimant go through a training process to explain use of such lifts, although she did not perform the demonstration component of this training herself. She further testified that she had personally educated Claimant on the transfer process, and to get help if needed.

26. Camacho also testified directly as to Claimant's schedule. She contradicted Claimant's assertion that they had reached any arrangement as to when Claimant was to arrive to work, indicating that it would have to be a "big computer process" to accommodate Claimant's schedule, as Claimant had testified. However, Camacho did testify that she was aware that Claimant cared for her disabled daughter and had to be present to provide her daughter's medications at appropriate intervals.

27. Dr. Ridings subsequently testified in-person at hearing on behalf of Respondents. At hearing, Dr. Ridings cast some doubt on the reliability of Claimant's reported mechanism of injury and pain complaints. Dr. Ridings testified that he did not see outward signs of pain symptoms while observing Claimant's in-person hearing testimony, and that this was inconsistent with her behavior at his IME. Despite diagnosing Claimant with a possible acute disc herniation in his IME report, Dr. Ridings testified that Claimant's presentation of decreased sensation along the L4, L5, and S1 dermatomes was non-diagnostic.

28. Although he found Claimant to be credible in his May 14, 2018 report, Dr. Ridings in his testimony questioned the veracity of Claimant's pain complaints and her range of motion, saying that "we can all just stop bending whenever we want to." Dr. Ridings did agree that Claimant's reported mechanism of injury was consistent with her reported complaints and that he had received no indication that Claimant either had lumbar pain pre-dating December 30, 2017, nor had she suffered an acute incident involving increased back pain after that date.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. § 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of

litigation. C.R.S. § 8-40-102(1). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

Compensability

3. Claimant must prove by a preponderance of the evidence that she is a covered employee who suffered an injury arising out of and in the course of employment. C.R.S. § 8-41-301(1); S*ee*, *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett, 33 P.3d 1230* (Colo. App. 2001). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 592 P.2d 792 (Colo. 1979).

4. An injury occurs "in the course of" employment where Claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" requirement is narrower and requires claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract.

5. Claimant testified sufficiently credibly as to how she attempted to lift 'Zita', during which she immediately felt pain along her entire spine, as well as her right leg. Some Cedarwood employees indicated that Claimant did notify them that she had sustained a work injury stemming from lifting a resident. Claimant's description of this

incident is reasonably consistent across the record, from her testimony in court to her discussion with Dr. Ridings. While Dr. Ridings was uncertain at hearing that an injury occurred, his IME report acknowledged that "in the absence of objective evidence to the contrary…..the patient's injury is work-related." He recommended a lumbar MRI in the near future. He also found Claimant not to be at maximum medical improvement. The ALJ concludes, by a preponderance of the evidence, that Claimant suffered a compensable injury while lifting the patient "Zita"- in willful violation of a safety rule, as noted below.

Medical Benefits

6. The Claimant has the burden to prove her entitlement to medical benefits by a preponderance of the evidence. C.R.S. §8-43-201. The respondents are only liable for the medical treatment that is reasonable and necessary to cure and relieve the work-related injury. C.R.S. §8-42-101(1)(a).

7. The Claimant is not entitled to medical care that is not causally related to his work-related injury or condition. As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 10, 2007), "A showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary." Where the relatedness, reasonableness or necessity of medical treatment is disputed, the claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.,* W.C. No. 4-117-758 (ICAO April 7, 2003).

8. The ALJ concludes that Claimant is entitled to all reasonable, necessary, and related medical treatment as it relates to the December 30, 2017 lifting injury. Although Claimant has evidently not received more than a single episode of medical treatment to address the injury she sustained on that date, the close temporal proximity of that medical visit to the work injury and Claimant's discussions with Ms. Camacho would indicate that this visit was due to the work injury. Additionally, Dr. Ridings concluded in his IME report that Claimant did sustain a work injury on December 30, 2017, for which she had not yet reached a point of maximum medical improvement. Accordingly, the ALJ concludes that Claimant is entitled to all reasonable, necessary, and related medical treatment to address said injury through the parties' agreed-upon ATP, Dr. Sparr.

Temporary Total Disability Benefits

9. To prove entitlement to temporary total disability ("TTD") benefits, the Claimant must prove: that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). C.R.S. § 8-42-103(1)(a), requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM*

Molding, Inc. v. Stanberg, supra. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

10. The ALJ concludes that Claimant meets the threshold requirements for access to TTD benefits. Claimant's medical visit on December 30, 2017 resulted in her being ordered off of work until January 3, 2018. As such, Claimant was unable to work for at least those four days, some of which she was scheduled to work, but under doctors' orders not to return to work. While Claimant apparently declined a visit to a physician as offered by Cedarwood later in January, she has yet to be cleared by an ATP to return to work without restrictions.

Claimant Responsible for her Own Termination

11. An injured worker's access to TTD is ended when that worker is responsible for termination of employment. § 8-42-105(4)(a), C.R.S. This notably includes situations involving at-fault termination of the employment relationship. *Anderson v. Longmont Toyota, Inc.*, 102 P.3d 323 (Colo. 2004). The ALJ concludes that the Claimant's termination on January 23, 2018 was not due to her work injury; rather, it was for repeat violations of the written attendance policy of Cedarwood.

12. While the ALJ has found that Claimant has credibly established a compensable injury, this does not extend to her testimony on her attendance. However much Claimant wished to have special dispensation to see to her daughter's needs, she has not shown that it was given by Cedarwood. The ALJ does not find her testimony on this issue to be persuasive; Respondents' credible witnesses have established to the ALJ's satisfaction, by a preponderance of the evidence, that she was terminated for repeat violations of the written attendance policies. While Claimant insists that her schedule was repeatedly changed by administration with no notice to her, the ALJ finds otherwise. Except for the days following her work injury, Claimant repeatedly missed work without justification. Her reported work injury had nothing to do with losing her job. Claimant was responsible for her own termination, effective January 23, 2018.

Willful Violation of Safety Rule

13. Section 8-42-112(1)(b), C.R.S. permits imposition of a 50 percent reduction in compensation where Respondents prove that the Claimant's injury resulted from the employee's willful failure to obey any reasonable rule adopted by the employer for the safety of the employee. Under § 8-42-112(1)(b), C.R.S., it is the Respondents' burden to prove every element justifying a reduction in compensation for the willful failure to obey a reasonable safety rule. *Triplett v. Evergreen Builders, Inc.*, W.C. No. 4-576-463 (May 11, 2004). In order to impose the reduction of compensation it is not enough for the employer to demonstrate that the claimant failed to obey a safety rule.

Johnson v. Denver Tramway Corp., 171 P.2d 410 (Colo. 1946). Rather, it is also necessary for respondents to show that there was a "willful" violation of the rule. *City of Las Animas v. Maupin*, 804 P.2d 285, 286 (Colo. App. 1990). The term "willful" connotes deliberate intent. Mere carelessness, negligence, forgetfulness, remissness, or oversight does not satisfy the statutory requirement. *Bennett Properties Co. v. Industrial Commission*, 165 Colo. 135, 437 P.2d 548 (1968). Whether Respondents meet their burden to prove a willful safety rule violation is generally one of fact for determination by the ALJ. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995).

14. "The most frequent ground for rejecting imposition of a penalty, whether it be for violation of a safety rule or willful misconduct, is the lack of enforcement of the rule or policy by an employer with knowledge of and acquiescence in its violation." *Lori's Family Dining*, 907 P.2d at 719, *citing Pacific Employers Insurance Co. v. Kirkpatrick*, 111 Colo. 470, 143 P.2d 267 (1943) (rule against jumping on moving vehicles that was not diligently enforced could not be invoked to reduce compensation).

15. The evidence presented at hearing shows that Cedarwood is a "no-lift" facility where employees are required to lift residents with the assistance of another employee, a mechanical lift, or often both. The ALJ finds such rule to be reasonable, and for the safety of the employees of Cedarwood. The ALJ also finds that the Hoyer lift is a safety device, as contemplated by C.R.S. 8-42-112(1)(a). The ALJ finds the witnesses presented by Respondent on this issue to be credible. This is policy-no exceptions. The only person claiming that this policy is loosely enforced is Claimant herself. The ALJ is not persuaded that the Hoyer lift batteries were never charged, and instead were "left out on a desk." The ALJ further finds Claimant not to be credible when she claims that she was never trained by anyone in its usage. Cedarwood would have every reason to insist on strict compliance with this rule, both for the safety of its workers, and for the residents. While Claimant was lifting "Zita" (against policy) and felt this pain, the results could have been catastrophic-*for Zita, as well as Claimant.* Claimant knew better, but did so anyway. 'Zita' may well have been a difficult customer, but it was not Claimant's call to cut corners to avoid dealing with her further.

16. Claimant argues that since she was not terminated for violating the "no-lift" policy, it was not being enforced at all. The ALJ is not persuaded. Claimant was fired for cause for attendance violations; there was no need to fire her further for "no lift" violations. One ground for termination is adequate. The ALJ is unaware of case law which goes as far as stating that workers must be formally disciplined upon first violation of a safety rule in order for Employer to avoid being held "acquiescent" to the conduct. Claimant was admonished by a supervisor upon Employer's first finding out what had occurred. If Claimant violated this rule with regularity, the ALJ finds no evidence that Cedarwood was aware of it. Claimant's willful violation of this clearly stated, reasonable, and enforced "no-lift" policy and use of a safety device was the proximate cause of her back injury, and the ALJ so finds, by a preponderance of the evidence.

ORDER

It is therefore Ordered that:

1. Claimant suffered a compensable work injury; Respondents are responsible for all reasonable, necessary, and related medical treatment.

2. Claimant's ATP is Dr. Michael Sparr, MD- assuming he accepts Claimant as a patient.

3. Claimant's AWW is $326.44.

4. Claimant was responsible for her own termination, effective 1/23/2018. TTD payments are terminated, effective that date.

5. Claimant willfully violated a safety rule of Employer, which was the proximate cause of her injuries. Claimant's Workers Compensation benefits are to be reduced according to C.R.S. 8-42-112(1).

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove by a preponderance of the evidence the left shoulder surgery recommended by Dr. Reister is reasonably necessary and causally related to his admitted industrial injury?

FINDINGS OF FACT

1. Claimant worked for Employer as an electrician. He suffered admitted injuries on October 27, 2016 in an electrocution accident. He was working on a ladder replacing a light fixture when someone came into the area and turned on the light switch. This sent 270 volts of electricity through his body, entering at the right thumb and exiting out the left hand. Claimant was "pinned in place with a wicked, titanic contraction of muscle." Eventually he wiggled his feet off the ladder and fell approximately 4 feet to the floor.

2. Claimant was initially treated at the Sky Ridge emergency room, and referred to the burn clinic at Swedish Medical Center for the electrical burns on his hands.

3. Claimant saw Dr. James Woodward, an orthopedic surgeon, on November 14, 2016. He reported pain in both shoulders and his neck. Dr. Woodward documented reduced range of motion in both shoulders and ordered MRIs.

4. The MRIs were performed on November 29, 2016. The left shoulder MRI showed a partial tear of the supraspinatus tendon, a partial tear of the subscapularis tendon superimposed on mild tendinopathy, mild subacromial/subdeltoid bursitis; superior labral fraying, an arch ligament sprain, and capsular edema and edema in the rotator interval consistent with adhesive capsulitis. The right shoulder MRI showed a full thickness subscapularis tear, a SLAP tear, and a dislocated biceps tendon.

5. Claimant saw Dr. Douglas Scott on January 2, 2017 for an IME at Respondents' request. His primary complaints were bilateral shoulder pain and low back pain. The right shoulder was significantly worse than the left. Dr. Scott noted, "he has soreness in his left shoulder from what he believes is over compensation for his right shoulder." Dr. Scott measured "good" active left shoulder ROM. Dr. Scott opined Claimant injured "the tissues in his right arm, right shoulder, right upper chest quadrant, left upper chest quadrant left shoulder and left arm. This was the probable course of the electrical current as a passed through [his] body."

6. Claimant saw Dr. Reister, Dr. Woodward's partner, on January 4, 2017. Dr. Reister opined Claimant needed surgery on the right shoulder but the left shoulder could be treated conservatively. He gave Claimant a left shoulder cortisone injection and

instructed him on rotator cuff strengthening exercises. He opined Claimant's bilateral shoulder problems were "100% related" to the accident.

7. Dr. Scott performed a Rule 16 records review on January 17, 2017 and recommended approval of right shoulder surgery.

8. Although Respondents approved the surgery in January 2017, there was substantial delay in getting it done. Surgery was scheduled and canceled several times. The delay was partially attributable to Claimant moving out of state, and partially due to apparent lack of motivation and timely follow through on Claimant's part. On September 11, 2017, ALJ Goldman suspended Claimant's TTD benefits under § 8-43-404(3) for unreasonably delaying treatment.

9. Dr. Reister performed a right biceps tenodesis and rotator cuff repair in October 2017.

10. Claimant started post-surgical therapy in December 2017. At the initial evaluation, he reported bilateral shoulder pain, worse on the right. Left shoulder active ROM was reduced, although not as much as the right shoulder. Manual muscle testing of the left shoulder was unremarkable. The therapist opined "the patient's present symptoms are directly related to injuries sustained at the time of the accident."

11. Claimant returned to Dr. Reister on January 3, 2018. The right shoulder was progressing well, but he was still having problems with the left shoulder. Dr. Reister noted:

> His other injuries from the same accident include a left shoulder which although not as symptom producing as the right has been symptom producing all along. [He] has been treated with extensive physical therapy and has had MRI identifying low-grade partial tears in the rotator cuff and mild bursal symptoms and his exam has been classic for bursitis and impingement and he is now ready to deal with it as the right shoulder is improving and the left shoulder is not; the left shoulder becoming the more symptomatic shoulder and he is a failure of conservative management for bursitis and partial cuff tear. [T]he next step for his left shoulder is going to be EUA arthroscopy, subacromial decompression, and thorough inspection.

12. Dr. Scott performed a Rule 16 record review regarding the proposed left shoulder surgery on January 15, 2018. He recommended Respondents deny the surgery as not reasonably necessary or related to the industrial accident. He noted Claimant's left shoulder ROM was normal at his IME in January 2017. He opined the November 2016 MRI findings appeared congenital or degenerative and stated, "any 10/27/2016 work accident with a soft tissue injury to the left shoulder resolved and was at MMI without permanent impairment by 1/2/2017." Irrespective of causation, he agreed the left shoulder required additional treatment, but surgery was premature because Claimant had not tried conservative care as set forth in the Medical Treatment Guidelines.

13. Dr. Scott issued an addendum report on May 30, 2018 after reviewing additional records and a surveillance video. He reiterated the original left shoulder

capsular injury was “improved and resolved” by the time of his January 2017 IME. He noted no medical records or other evidence of ongoing left shoulder pain between January 4, 2017 and January 3, 2018. He concluded, “[Claimant’s] current complaints of left shoulder pain occurred after his 10/12/2017 [sic] right shoulder injury, i.e., an exacerbation of a previously asymptomatic left shoulder condition.” He diagnosed “recurrent left shoulder pain due to overcompensating for his right shoulder after right shoulder surgery,” and opined Claimant’s prognosis was “guarded for the left shoulder without further treatment.” He again recommended conservative treatment, but opined “if further nonsurgical treatment does not resolve [Claimant’s] left shoulder condition he may require shoulder surgery as proposed by Dr. Reister.” Dr. Scott went on to state, inconsistently, that the left shoulder condition was “0% apportioned to his 10/27/2016 accident,” and “probably not directly related to the 10/27/2016 work accident.” He did not find the video significant.

14. Dr. Scott testified at hearing to elaborate on the opinions expressed in his reports. He maintained his opinion surgery is premature but agreed it “would not be unreasonable” if Claimant fails conservative care. He opined any treatment is related to underlying congenital and degenerative changes, not the industrial accident.

15. There is no persuasive evidence Claimant had any pre-injury left shoulder symptoms, treatment or limitations. He maintained employment as an electrician for an extended period before the accident.

16. Dr. Reister’s reports and opinions are credible and persuasive.

17. Claimant proved by a preponderance of the evidence the surgery proposed by Dr. Reister is reasonably necessary to cure and relieve the effects of his October 27, 2017 industrial injury.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). Even if the respondents admit liability, they retain the right to dispute the relatedness of any particular treatment, and the mere occurrence of a compensable injury does not mean that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (July 2, 2010). Where the respondents dispute the claimant’s entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must also prove that the requested treatment is reasonably necessary, if disputed. Section 8-42-101(1)(a). A claimant is entitled to treatment for new conditions caused by an accident, and pre-existing conditions aggravated by the accident. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

The Director has adopted Medical Treatment Guidelines (MTGs) to advance the statutory mandate to assure the quick and efficient delivery of medical benefits to injured workers at a reasonable cost to employers. WCRP Rule 17, Exhibit 6 addresses lower extremity conditions, including meniscal pathology. As the final arbiter of disputes regarding medical treatment, the ALJ may consider the MTGs as an evidentiary tool, but the ALJ is not bound by the MTGs when determining whether requested medical treatment is reasonably necessary or injury-related. Section 8-43-201(3); *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (January 25, 2011).

As found, Claimant proved the surgery recommended by Dr. Reister is reasonably necessary to cure and relieve the effects of his October 2017 injury. All providers agree Claimant suffered some injury to shoulder in the accident, and Dr. Scott's supposition that the left shoulder injury "resolved" by January 2017 is not persuasive. Admittedly, there is no documentation of left shoulder symptoms between January and November 2017, but that is because Claimant apparently saw no providers during that interval. Absence of evidence is not necessarily evidence of absence, and in this case the lack of documented symptoms is more likely a function of limited medical appointments. The available records show ongoing shoulder pain throughout the claim, dating to Dr. Woodward's initial evaluation in November 2016. Claimant told Dr. Reister in January 2018 the left shoulder "has been symptom-producing all along" and "is not improving," and the ALJ sees no persuasive evidence to contradict those statements. In any event, Dr. Scott opined the current left shoulder symptoms are due to "overcompensating for his right shoulder after right shoulder surgery," which would also be a sufficient causal nexus to entitle Claimant to treatment.

Dr. Scott is probably correct that at least some of the MRI findings are degenerative and predate the industrial accident. But there is no persuasive evidence Claimant had symptoms or needed treatment for his left shoulder before the electrocution. To the extent some (or even all) of Claimant's shoulder pathology was pre-existing, the credible evidence shows the accident aggravated his pre-existing condition and proximately caused the need for treatment.

The ALJ is not persuaded Claimant must complete additional conservative care before he can have surgery. Claimant has completed at least some conservative treatment outlined in the MTGs, *i.e*., a steroid injection and home exercise, but his symptoms have not resolved. Dr. Reister believes Claimant has "failed" conservative management and is how an appropriate candidate for surgery, and the ALJ is not persuaded to second-guess the treating surgeon in favor of a non-surgeon who has not seen Claimant since January 2017. It has been almost two years since the industrial accident and surgery appears to be the most efficacious and expeditious way to bring Claimant to MMI.

ORDER

It is therefore ordered that:

1. Insurer shall cover the left shoulder arthroscopic surgery recommended by Dr. Reister.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. Office of Administrative Courts

ISSUES

I. Whether Claimant established by a preponderance of the evidence that she is entitled to maintenance medical care.

II. Whether Claimant established by a preponderance of the evidence that her scheduled right upper extremity impairment should be converted to impairment beyond the hand to the arm at the shoulder or beyond to whole person impairment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant is a long term employee of Employer having worked for Employer for approximately 19 years. She is employed as a baker. On July 13, 2014, Claimant injured her right long finger when a baking tray fell between the shelves of a baking rack used to hold baked goods. Claimant's right long finger was crushed between the tray and the shelves.

2. Claimant initially sought treatment at the Parkview Medical Center Emergency Room with a complaint of "chronic ongoing right middle finger PIP joint pain and swelling status post an injury a year ago, which she reinjured . . . today." X-rays were read as showing a "possible tiny avulsion chip fracture at the dorsal base of the third middle phalanx". An aluminum splint was applied to the right middle finger.

3. On July 14, 2014, Claimant elected to treat with the Southern Colorado Clinic where Dr. Terrence Lakin evaluated her. Dr. Lakin prescribed Tramadol, Ibuprofen, and continued splinting. Claimant was released to return to work with no use of the right hand. She returned to Dr. Lakin on July 28, 2014, with ongoing complaints of pain at a level 2/10. Dr. Lakin opined, "Suspect from patient history of continued pain and limited ROM of digit, that the recent injury exacerbated previous injury of 5/2013." To expedite Claimant's recovery, Dr. Lakin referred her to hand specialist, Dr. Philip Marin, for further evaluation and treatment.

4. Dr. Marin evaluated Claimant on August 25, 2014. Dr. Marin diagnosed a crush injury to the middle finger with a PIP dorsal fracture near the central slip sight. Dr. Marin prescribed a custom splint and topical anti-inflammatory gel. Although she noted improvement, Claimant continued to experience middle finger PIP joint swelling and pain. Dr. Marin performed cortisone injections to treat Claimant's joint inflammation. He also discussed with Claimant that if her pain continued, she might require an arthroplasty with a silicone joint. On July 27, 2015, Dr. Marin recommended against

further cortisone injections and instead offered Claimant a silicone arthroplasty, if the pain was intolerable. On March 3, 2016, Dr. Marin performed a right middle finger silicone arthroplasty at the PIP joint. Following surgery, Dr. Marin recommended that Claimant "really push" the finger joint passively and actively to increase her range of motion. Additional cortisone injections were performed to "loosen up" the scar tissue. Dr. Marin continued to recommend aggressive therapy and stretching the finger passively.

5. Claimant continued to complain of pain and loss of range of motion. Dr. Lakin re-evaluated Claimant on May 5, 2016. She reported that she was going slow and did not want to be aggressive as suggested by occupational therapy and Dr. Marin. Dr. Lakin advised Claimant to perform occupational therapy like the therapist and Dr. Marin recommended. On June 17, 2016, Claimant reported dissatisfaction with her work and described a long list of problems she felt had contributed to the "her hand not getting better". Dr. Lakin opined arthritis was playing a part in Claimant's general right-hand pain. He encouraged Claimant to soak her hand in warm Epsom salt water a couple of times per day and to perform stretching exercises in the warm bath. On July 11, 2016, Claimant presented to Dr. Lakin voicing frustration of the replaced joint not working well. Dr. Lakin modified Claimant's lifting limitations to 1 pound. He also encouraged her to try and use her finger. Claimant presented in follow-up on November 4, 2016. During this appointment, Claimant's voiced persistent pain despite ongoing physical and occupational therapy. She reported depression due to the loss of her son in October. Dr. Lakin noted he was "not optimistic" that Claimant's joint arthroplasty would improve her function, noting further that she "may need scar release or revision." By November 29, 2016, Dr. Lakin opined that Claimant did not appear to be gaining much with physical therapy.

6. Dr. Gregg G. Martyak evaluated Claimant for purposes of a second opinion on January 17, 2017. Dr. Martyak diagnosed a failed right long finger PIP joint arthroplasty. He recommended removal of the silicone implant, and revision surgery of the right long finger PIP joint. Dr. Martyak performed the recommended surgery on March 3, 2017. Following surgery, Claimant resumed physical and occupational therapy. Her work was completely restricted until April 18, 2017, when Dr. Lakin released her to return to modified work, with minimal use of the right hand with pencil/pen, light clipboard type activity. Claimant was also instructed to wear a protective splint or guard. Dr. Lakin noted that Claimant was still grieving the loss of her son, reported high anger to drivers in her neighborhood and high anxiety about returning to work. Dr. Lakin opined, "with her pain, anxiety of returning to work, and son that was killed, she has BSPE (biopsychosocial economic) profile that is not helping her recovery. The claimant was encouraged to schedule an appointment with psychologist, Dr. Gary Neuger, as she was "very stressed out due to multiple family issues with her mother and adult children". Despite treatment, Claimant remained very reserved about her progress. She expressed her condition was "about the same" and "not going to be able to use it".

7. Dr. Martyak evaluated Claimant on July 11, 2017 and placed her at MMI for her right long finger injury.

8. A Functional Capacity Evaluation was performed on July 27, 2017, documenting near full, but not entirely full, effort on Claimant's part, as well as some inconsistencies to the reliability/accuracy of her subjective reports of pain and limitation.

9. Dr. Lakin placed Claimant at MMI on August 23, 2017. He assigned 14% hand impairment for Claimant's right long finger injury. He combined the 14% hand impairment with 7% impairment for a right PIP implant arthroplasty to reach 19% right upper extremity scheduled impairment. Nineteen percent upper extremity scheduled impairment converts to 11% whole person impairment. Dr. Lakin imposed permanent work restrictions of lifting ten to fifteen pounds, occasionally. He further noted that Claimant had limited grip strength, with an ability to manipulate only three to four pounds with the right hand. He recommended medical treatment to maintain MMI, including follow up with the hand surgeon, every 3-6 months, if needed, for two years and steroid injections or repeat surgery, if warranted.

10. Insurer filed a Final Admission of Liability (FAL) consistent with Dr. Lakin's opinions on MMI, impairment, and medical treatment post-MMI. The FAL specifically admitted to Claimant's 14% hand impairment listed as body code 03, "Hand below the wrist". Claimant objected and requested a Division Independent Medical Examination (DIME).

11. Dr. Nicholas Kurz performed the DIME on January 2, 2018. Based on his review of the medical records and physical examination findings, Dr. Kurz agreed with the assigned August 23, 2017, MMI date. Due to documented improvement in range of finger motion since August 23, 2017, Dr. Kurz assigned 12% scheduled impairment of the hand below the wrist. Twelve percent hand below the wrist scheduled impairment converts to 11% arm at the shoulder scheduled impairment, which converts to 7% whole person impairment. Regarding maintenance medical care, Dr. Kurz opined that since Claimant adamantly refused any future surgical intervention or injections, including fusion or amputation, no maintenance treatment is warranted.

12. Insurer filed an Amended Final Admission of Liability consistent with Dr. Kurz's opinions on MMI, impairment and the claimant's need for medical treatment post-MMI on January 26, 2018. The amended FAL specifically admitted for 12% scheduled hand below the wrist impairment.

13. Claimant testified that none of the treatment modalities provided in connection with the July 13, 2014, injury, including rest, relative rest, medications, physical therapy, occupational therapy, cortisone injections, or surgery have improved the pain or stiffness in her right long finger. Claimant specifically noted that while the cortisone injections help decrease her swelling, they did not help decrease her pain. On direct exam, Claimant testified that she feels more rehabilitation is necessary to improve the range of motion (ROM) in her finger. She testified that she would like to revisit physical therapy to see if it will help her achieve "a little more movement" at the tip of her right long finger. Claimant has undergone over 80 physical therapy sessions, without

improvement in pain complaints or function. She reportedly must hold things with both hands secondary to reduced ROM and grip strength.

14. Dr. Kurz testified that it is not medically probable that additional therapy will result in improvement of Claimant's right long finger ROM. Dr. Kurz testified the Claimant's passive range of finger motion has consistently exceeded her active range of finger motion, suggesting that Claimant is either not giving full effort on active testing or is not performing the required home exercise program to maintain gains achieved in range of motion through therapy.

15. Dr. Kurz credibly testified that Claimant demonstrated no sustained meaningful improvement in reported pain levels or gains in function resulting from any treatment modality provided to date. Dr. Kurz's testimony that Claimant does not require medical treatment to maintain her condition at MMI is persuasive and supported by the medical record evidence presented.

16. Claimant has failed to prove, by a preponderance of the evidence, that she requires medical treatment to maintain her condition at MMI. Rather, the ALJ is persuaded that Claimant's ROM can be sufficiently maintained by her active participation in her home exercise program.

17. Dr. Kurz' testified that Claimant's injury is to her right long finger and her functional impairment relates to use of the hand below the wrist. Although Claimant has impaired ROM in the right finger, she retains a functional gripping angle in the PIP joint of the middle finger at 40 degrees of ROM, according to Dr. Kurz. Consequently, Dr. Kurz testified that Claimant has no functional impairment beyond the finger/hand. Based upon the evidence presented, including the medical records and testimony of Dr. Kurz, the ALJ is not persuaded that Claimant has functional impairment beyond the hand below the wrist. The evidence presented does not support a finding that Claimant's functional impairment extends beyond the hand to the wrist, arm, shoulder or whole person as argued by Claimant. Indeed, the evidence presented indicates that as of the date she was placed at MMI, Claimant had trouble with fine motor movements, including the ability to apply makeup and write. She also was experiencing loss of grip strength in the right hand resulting in her dropping items. Consequently, the ALJ finds the situs of Claimant's functional impairment to involve the hand, below the wrist.

18. Claimant has failed to prove that the situs of her functional impairment extends beyond the hand below the wrist, arm, shoulder or whole person. Therefore, § 8-42-107(7)(b)(II), C.R.S. precludes an award of medical impairment benefits based on conversion to the upper extremity or whole person in this case. The evidence presented persuades the ALJ that Claimant sustained an 12% scheduled impairment of the hand below the wrist due to the July 13, 2014, industrial injury as admitted by Respondents in this case.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A workers' compensation case is decided on the merits. *Id.*

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

C. Assessing the weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo.App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo.App. 1992)(ALJ may credit one medical opinion to the exclusion of a contrary opinion). In this case, the ALJ finds and concludes that the testimony of Dr. Kurz is credible and more persuasive than the contrary testimony of Claimant and opinions of Dr. Lakin.

Claimant's Entitlement to Maintenance Treatment

D. The need for medical treatment may extend beyond the point of maximum medical improvement where a claimant requires periodic maintenance care to relieve the effects of the work related injury or prevent deterioration of his/her condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). In *Milco Construction v. Cowan,* 860 P.2d 539 (Colo.App. 1992), the Court of Appeals established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission, supra*. The Court stated that an ALJ must first determine whether there is substantial evidence in the record to show the reasonable necessity for future medical treatment "designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition." If the claimant reaches this threshold, the Court stated that the ALJ should then enter "a general order, similar to that described in *Grover*." Even with a general award of maintenance medical benefits, respondents retain the right to dispute whether the need for medical treatment is reasonable, necessary and related to the compensable injury. *See Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo.App. 2003) (a general award of future medical benefits is subject to the employer's right to contest compensability, reasonableness, or necessity).

E. While a claimant does not have to prove the need for a specific medical benefit, and respondents remain free to contest the reasonable necessity of any future treatment; the claimant must prove the probable need for some treatment after MMI due to the work injury. *Milco Construction v. Cowan*, supra. The question of whether the claimant met the burden of proof to establish an entitlement to ongoing medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Industrial* Claim Appeals Office, 992 P.2d 701 (Colo.App. 1999); *Renzelman v. Falcon School District,* W. C. No. 4-508-925 (August 4, 2003). In this case, the ALJ concludes that Claimant has failed to meet her burden to establish entitlement to maintenance medical treatment. The evidence presented establishes that Claimant has received extensive treatment for her industrial injuries including rest, physical/occupational therapy, splinting, medications, injections and two surgeries. While, Claimant testified that she would like to participate in additional physical therapy in an effort to see if it would help her achieve additional ROM at the tip of her right long finger, more than 80 physical therapy sessions failed to produce improvement in Claimant's pain complaints or increase her ROM. Indeed, outside of some improvement concerning the amount of swelling in the finger after steroid injections, Claimant admitted that she did not receive any functional benefit or pain relief from any of the treatment modalities provided, including therapy. Consequently, the ALJ is not persuaded that additional maintenance medical treatment, is likely to relieve the effects of the injury or to prevent deterioration of the Claimant's present condition. Rather, the evidence presented persuades the ALJ that Claimant's condition, including her ROM can be maintained by active participation in her home exercise program. Accordingly, the claim for maintenance treatment must be denied and dismissed.

Conversion of Claimant's Right Upper Extremity Impairment to Whole Person Impairment

F. When a claimant's injury is listed on the schedule of disabilities, the award for that injury is limited to a scheduled disability award.[1] Section 8-42-107(1)(a), C.R.S. However, a claimant may establish that his/her injury has resulted in "functional impairment" beyond the schedule enumerated in C.R.S. §8-42-107(2)(a); thus, entitling him/her to "conversion" of the scheduled impairment to impairment beyond the schedule listed. This is true because the term "injury" as used in § 8-42-107(1)(a)-(b), C.R.S., refers to the part or parts of the body which have been impaired or disabled, not the situs of the injury itself or the medical reason for the ultimate loss. *Walker v. Jim Fucco Motor Co,* 942 P.2d 1390 (Colo.App. 1997); *see also Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo.App. 1996). The claimant carries the burden to prove a functional impairment beyond the scheduled body part. § 8-42-107(b)(1), C.R.S. Thus, while ratings issued under the AMA Guides are relevant to determining the issue, they are not decisive as a matter of law. *Strauch v. PSL Swedish Healthcare System, supra*. The question of whether Claimant proved functional impairment beyond the finger at the PIP joint is an issue of fact for the ALJ and depends upon the particular circumstances of the case. *See Delaney v. indus. Claim Appeals Office*, 30 P.3d 691.

G. "Functional impairment" is distinct from physical (medical) impairment under the AMA Guidelines and as noted above, the site of functional impairment is not necessarily the site of the injury itself. The site of functional impairment is that part of the body which has been impaired or *disabled*. *Strauch, supra*. Physical impairment relates to an individual's health status as assessed by medical means. Disability or "functional impairment", pertains to a person's ability to meet personal, social, or occupational demands, and is assessed by non-medical means. Consequently, physical impairment may or may not cause "functional impairment." *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 658 (Colo.App. 1998). Physical impairment becomes a disability only when the medical condition limits the claimant's capacity to meet the demands of life's activities. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office, supra at 658.* Functional impairment need not take any particular form. *See Nichols v. LaFarge Construction,* W.C. No. 4-743-367 (October 7,2009); *Aligaze v. Colorado Cab Co.,* W.C. No. 4-705-940 (April 29, 2009); *Martinez v. Albertson's LLC,* W.C. No. 4-692-947 (June 30, 2008). Accordingly, referred pain from the primary situs of the industrial injury to another part of the body may establish proof of functional impairment beyond the identified schedule listing, including to the whole person." *Hernandez v. Photronics, Inc.,* W.C. No. 4-390-943 (July 8, 2005). Nonetheless, symptoms of pain do not automatically rise to the level of a functional impairment. To the contrary, there must be evidence that such pain limits or interferes with Claimant's ability to use a portion of his body to be considered functional impairment. See *Mader v. Popejoy Construction Co., Inc.*, W.C. No. 4-198-489 (August 9, 1996), aff'd *Popejoy Construction Co., Inc.,* (Colo.App. No. 96CA1508, February 13, 1997)(not selected for publication)(claimant sustained functional impairment of the whole person where back pain impaired use of arm). In order to determine whether permanent disability should be compensated as physical impairment on the schedule or as functional impairment beyond the listing, including the whole person, the issue is not whether the claimant has

[1] The loss of a finger is compensated on the schedule. *See* §§ 8-42-107(2)(d)-(f), C.R.S.

pain, but whether the injury has impacted part of the claimant's body which limits his/her "capacity to meet personal, social and occupational demands." *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996). Consequently, the ALJ concludes that an injury to the finger may or may not result in functional impairment of the whole person.

H. In this case, Respondents have admitted to impairment of the hand below the wrist. Claimant seeks conversion of her admitted impairment beyond the hand up to and including the whole person. Based upon the evidence presented, the ALJ is not convinced that conversion is warranted in this case. While Claimant may have continued pain to areas of the body beyond the right fingers/hand, i.e. the wrist, forearm arm and shoulder, neither these symptoms nor the index injury have caused "functional impairment" or disability beyond the hand. Indeed, the evidence presented regarding functional impairment is limited to fine motor movements involving the fingers and hand, i.e. applying makeup, writing and gripping items with the hand itself. Claimant's functional capacity, as demonstrated, substantially erodes her claims that the injury has resulted in a decreased capacity to meet her personal, social or occupational demands. Based upon a totality of the evidence presented, the ALJ concludes that the situs of Claimant's functional impairment does not extend beyond the hand to the arm at the shoulder or the whole person. Consequently, Claimant's request for additional permanent impairment of the upper extremity beyond the hand, to the upper extremity or beyond to the whole person must be denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant's request for an award of medical benefits to maintain her condition at MMI is denied and dismissed.

2. Claimant's request for conversion of the 12% hand below the wrist scheduled impairment assigned by the Division IME, Dr. Nicholas Kurz, to 11% arm at the shoulder scheduled impairment or 7 % whole person impairment is denied and dismissed.

DATED: September 7, 2018

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after

mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Are Respondents entitled to penalties as a result of Claimant's violation of the December 1, 2017 Order requiring Claimant to repay $13,354.60 at the rate of $50.00 per month?

II. Are Respondents entitled to penalties as a result of Claimant's violation of the January 2, 2018 Order requiring Claimant to attend a medical examination with ATP Dr. Frank Polanco?

III. Are Respondents entitled to an 8% penalty, pursuant to C.R.S. 8-43-401?

IV. Shall all ongoing medical benefits shall be terminated?

V. If ongoing medical benefits are terminated, shall this claim shall be closed?

PROCEDURAL BACKGROUND

The ALJ takes administrative notice of case WC 4-907-620 in its entirety.

Claimant was employed by Respondent-Employer, and sustained a compensable injury on December 27, 2012. Respondents paid Claimant indemnity benefits in excess of the statutory cap, resulting in an overpayment in indemnity benefits totaling $13,354.60. A hearing was held on this issue of overpayment. Administrative Law Judge Richard M. Lamphere ordered Claimant to repay the overpayment to Respondents. ALJ Lamphere also ordered Claimant to participate in an opioid weaning program with Dr. Polanco in effort to bring the claim to closure.

A prehearing conference was held on January 2, 2018 regarding Respondents' Motion to Compel Claimant to attend medical examination with Dr. Polanco. Consistent with ALJ Lamphere's Order, PALJ John A. Steninger ordered Claimant to attend a medical examination with Dr. Polanco. Claimant did not so attend this examination. Additionally, Claimant has informed Respondents as well as the Office of Administrative Courts that he is no longer willing to participate in the Workers' Compensation system due to their "biases" and "violations of his Constitutional Rights".

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Claimant's Failure to Repay the Overpayment as Ordered by ALJ Lamphere.

1. On November 7, 2017, a hearing took place on the issue of overpayment. The *pro se* Claimant did not appear for the hearing. ALJ Lamphere noted in his order, "Claimant made it clear that he would not appear for nor would he participate in the proceeding on the grounds that the Courts and ALJ's were prejudiced against him." (Ex. A, p.1) ALJ Lamphere found that Claimant had knowingly and voluntarily waived his appearance at hearing.

2. On December 1, 2017, ALJ Lamphere issued an Order requiring Claimant to repay $13,354.60 to Respondents at a rate of $50.00 per month. (Ex. A, p.13)

3. On December 4, 2017, Respondents emailed Claimant requesting repayment to commence on January 15, 2018. (Ex. C, p. 19) Claimant did not respond to that email and Claimant has not made any payment to Respondents.

Claimant's Refusal to Follow Orders by ALJ Lamphere and PALJ Steninger

4. ALJ Lamphere also ordered Respondents to pay for maintenance medical treatment associated with weaning Claimant from the opioid medication, coordinated through Dr. Polanco. (Ex. A, p. 13) ALJ Lamphere ordered Claimant's ongoing medical appointments with the treating providers to be tapered down and discontinued over a time "left to the sound medical discretion of Dr. Polanco." (Ex. A, p. 13)

5. On December 6, 2017, Respondents' counsel sent a letter to Claimant informing him of a demand appointment scheduled with Dr. Polanco on December 18, 2017. (Ex. D, p. 20) Claimant did not respond to this letter, nor did he attend the demand appointment with Dr. Polanco.

6. On December 19, 2017, Respondents sent correspondence to Claimant notifying him a demand appointment with Dr. Polanco was *rescheduled* for January 4, 2018. (Ex. E, p. 24) Claimant responded with an email to Respondents dated December 20, 2017, stating, "I will not be attending Dr. Polanco's apt. on January 4, 2018. This is a forced appointment on me, by a Judge and court that is bias, and has denied and ignored my Constitutional Rights; therefore, I will not any [sic] judgement forced upon me. . . ." (Ex. F, p. 28)

7. On December 20, 2017, Respondents' counsel emailed Claimant conferring on a prehearing conference to compel him to attend a demand appointment with Dr. Polanco. (Ex. G, p. 29) Claimant responded with an email stating, "there will be no more pre-hearing conferences, nor hearings, that includes me with a lower court system that has deemed my United States Constitutional rights null and void; moreover, ignoring their own rule . . . I would appreciate no more contact from your firm, that pushes the Agenda of the U.S. Constitutional Rights bias." (Ex. G, p. 29)

8. On January 2, 2018, a prehearing conference was held regarding Respondents' oral Motion to Compel Claimant to attend a medical examination with Dr. Polanco, which Claimant had not attended. (Ex. B, p. 15) PALJ Steninger issued a prehearing order on January 2, 2018, stating, "Claimant, as self-represented, notified the Division, by email, on 12/22/2017 that he was *refusing* to appear for this prehearing conference. Such communication shows that Claimant had actual notice of the prehearing conference." (Ex. B, p. 15) (emphasis added).

9. PALJ Steninger found:

> Claimant's *refusal* to attend the medical appointment appears to this PALJ as an act of resistance to Judge Lamphere's order. The judge specifically found that the continued use of opioids is not reasonable, necessary, or related to the injury. However, the judge, humanely did not require "cold turkey" withdrawal from the opioids . . . . The Claimant's *refusal* to start the weaning process appears to be designed to sabotage the judge's order through extra-judicial means. (Ex. B, p. 16)(emphasis added).

10. PALJ Steninger noted, "[s]hould the Claimant fail to start a drug rehabilitation (weaning) process it is likely that the opioid medications will ultimately be terminated. . . ." (Ex. B, p. 16) PALJ Steninger granted Respondents' Motion to Compel and ordered Claimant to attend a medical examination on January 4, 2018 with Dr. Polanco. (Ex. B, pp. 16-17) PALJ Steninger ordered, "Claimant is advised and admonished that failure to attend the appointment may require him to pay for the cost of the missed appointment and other sanctions pursuant to the Rules of Procedure and the WC Act." (Ex. B, p. 17)

11. PALJ Steninger further explained:

> Claimant may think that refusal to start the weaning process means that his prescription for opioids will continue uninterrupted. Ultimately, this will not be the case. In the opinion of this PALJ, Judge Lamphere wanted the opioid medications terminated but in such a way that would provide the least difficulty for the Claimant. No one can force an individual to perform an action (short of incarceration in criminal cases) or to go to a medical appointment. However, failure to perform such an action, when compelled to do so, has other consequences under the WC Act. (Ex. B, p. 16).

12. On January 5, 2018, Dr. Polanco's office called and informed Respondents that Claimant did not attend the demand appointment. Ever since PALJ Steninger's Order was issued, Claimant has not attended an appointment with Dr. Polanco. After this second "no show" by Claimant, no further attempts were made by Respondents to reschedule further.

Claimant's Hearing Testimony

13. In summary, Claimant now acknowledges that he must repay the overpayment. He would like to be able to do so, but has been unsuccessful at obtaining employment-at least employment he feels capable of performing. To date, he has paid nothing towards this debt, due to an inability to do so. His only current source of income is child support arrearage payments from his ex-wife, payable at $168.00 every two weeks-although his children are now grown, and they don't need these payments for their own support. He lives with his brother, to whom he contributes $125.00 towards the rent of $625.00. The rest of his income goes towards food and basic expenses. He feels hopeless and depressed.

14. Further, Claimant is now obtaining medical care through Medicaid, and has not been taking any opioid medications "for the past two months" (as of the hearing date). Claimant would like to forego further Workers Compensation medical benefits, in exchange for 'nullifying' his overpayment obligations. At hearing, the ALJ notes that Claimant displayed none of the defiance which had permeated his earlier interactions with all concerned.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Penalties, Generally

A. Section 8-43-304(1), C.R.S. provides for penalties against an employee, employer or insurance carrier who does any of the following: "(1) violates any provision of the Workers' Compensation Act (Act); (2) does any act prohibited by the act; (3) fails or refuses to perform any duty lawfully mandated within the time prescribed by the director or the Panel; or (4) fails, neglects, or refuses to obey any lawful order of the director or the Panel." *Pena v. Industrial Claim Appeals Office*, 117 P.3d 84, 87 (Colo. App. 2004).

B. The imposition of penalties under Section 8-43-304(1), C.R.S. is a two-step process, first requiring the ALJ to determine if the person's conduct violated the Act, a rule, or an order. If a violation occurred, the ALJ must determine whether the party's actions were objectively reasonable. *Colorado Compensation Insurance Authority v. Industrial Appeals Office*, 907 P.2d 676 (Colo. App. 1995); *see also Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003) (reasonableness of conduct in defense of penalty claim is predicated on rational argument based in law or fact); *but see Pioneers Hospital of Rio Blanco County v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005) (conduct examined to determine whether conduct was merely unreasonable without consideration of whether it was based on a rational argument).

C. Section 8-43-305, C.R.S., provides:

> [E]very day during which any employer or insurer, or officer or agent of either, or any employee, or any other person fails to comply with any lawful order of an administrative law judge, the director, or the panel or fails to perform any duty imposed by articles 40 to 47 of this title shall constitute a separate and distinct violation thereof. In any action brought to enforce the same or to enforce any penalty provided for in said articles, such violation shall be considered cumulative and may be joined in such action.

D. Section 8-43-304(1), C.R.S. provides for the imposition of a penalty up to $1,000.00 per day if a party fails or refuses to perform a duty lawfully required within the time prescribed, for which no penalty has been specifically provided, or if a party fails or refuses to obey any lawful order. *Mills v. Jacobs Entertainment, LLC*, W.C. No. 4-609-019 (April 6, 2012)(ICAO affirmed the ALJ's order awarding penalties for claimant's violation of an order, although the respondents did not suffer great prejudice.)

E. C.R.S. 8-43-306 states:

> [A] certified copy of any final order of the director or an administrative law judge ordering the payment of any penalty or repayment of overpayments pursuant to articles 40 to 47 of this time may be filed with the clerk of the district court of any county in this state at any time after the period of time provided by articles 40 to 47 of this title for appeal or seeking review of the order has passed without appeal or review being sought. . . .

Claimant's Failure to Repay the Overpayment

F. Here, by his own admission, Claimant violated ALJ Lamphere's court order by failing to repay the Court ordered overpayment. By a preponderance of the evidence, the ALJ finds that Claimant's violation of this order was objectively unreasonable, since Claimant refused to comply with the order and court proceedings due to alleged "judicial bias" and violation of his Constitutional rights. Claimant has been in violation of the December 1, 2017 order for 233 days, dated from January 15, 2018, when the first payment was requested, to the date of this hearing. Claimant's actions knowingly and needlessly protracted the course of the litigation. They cost Respondents time and money in having to file a Motion to Compel and Application for Hearing. The ALJ finds that, while Claimant may not have been able to pay $50.00 per month with regularity, he could have paid *something*- and communicated with Respondents to this effect. Due to Claimant's mitigated personal circumstances, the ALJ finds that a penalty of $2.00 per day is sufficient to meet the statutory purposes of the penalty provisions, for a total of $466.00. The ALJ, pursuant to C.R.S. 8-43-304(1), apportions said penalties to be payable 50% to Respondents, and 50% to the Colorado Uninsured Employer Fund.

Claimant's Failure to Attend Medical Examinations

G. Claimant was ordered by ALJ Lamphere to attend the medical examination with Dr. Polanco, to wean off his opioid medication. This was scheduled initially for December 18, 2017. Claimant had proper notice, and willfully failed to attend this appointment. After a prehearing conference was held, Claimant was ordered by the PALJ to appear at the rescheduled appointment with Dr. Polanco on January 4, 2018. Claimant not only willfully failed to do so; he clearly stated his intentions in writing to not so appear. Not unreasonably, Respondents ceased further efforts to seek compliance, as it was clear to all concerned that Claimant would not attend another rescheduled appointment. Claimant's defiant email showed he was not "yanking anyone's chain"; he made it clear up front that Respondents were wasting their time pursuing the matter further.

H. The ALJ finds that this willful and objectively unreasonable violation of the ALJ's and PALJ's Orders began on December 18, 2017 (when Claimant failed to appear the first time), and ended on January 4, 2018, (when he failed to appear the second time), for a total of 18 days, inclusive. The ALJ declines to find (in contrast to his failure to repay on an ongoing basis, noted above) that this is an ongoing violation that extended up to the hearing date. Respondents knew full well that that game was over as of January 4, 2018. No further efforts were expended on Claimant until this Application was filed. Nor were any further Court orders issued in connection therewith.

I. The ALJ finds that Respondents gave their best effort in helping Claimant follow ALJ Lamphere's order providing maintenance medical treatment, but have been unduly burdened by Claimant's behavior and prolonging of this claim. All Claimant needed to do to avoid being penalized was discontinue his opioids, or attend the appointments. He was duly and fairly warned by the PALJ that there would be consequences for noncompliance. He chose instead to waste everyone's time with his Quixotic antics. Such conduct was unreasonable, knowing, and willful, and the ALJ so finds, by a preponderance of the evidence. The ALJ finds that the statutory purposes of the penalty provisions are best met with a penalty of $100.00 per day, for a total of $1,800.00. The ALJ, pursuant to C.R.S. 8-43-304(1), apportions said penalties to be payable 50% to Respondents, and 50% to the Colorado Uninsured Employer Fund.

Respondents' Request for Penalties of 8% under C.R.S 8-43-401.

J. Respondents have stated their intentions to enforce the overpayment judgment against Claimant by obtaining an Order which will allow them to pursue enforcement against Claimant in District Court under Section 8-43-306, C.R.S., if needed. This they may do, with no further action by the Office of Administrative Courts. Respondents may also seek, through the District Court, any post-judgment interest allowable by statute.

K Respondents have further requested an 8% penalty, citing C.R.S. 8-43-401. Such reliance is misplaced. C.R.S. 8-43-401(2) plainly states that such remedies are available solely against insurers or employers who delay or withhold payments

owed to an injured worker; no such remedy is available to an employer or insurer seeking repayment of an overpayment *from* an injured worker.

Termination of Medical Maintenance Benefits

L. Pursuant to Section 8-43-201(1), C.R.S., Respondents carry the burden by a preponderance of the evidence, to terminate their liability for ongoing maintenance medical treatment. *See Bolton v. Cherry Creek School District*, W.C. No. 4-935-211-03 (April 20, 2018), *see also Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (June 5, 2012). In *Salisbury v. Prowers County School District*, the ICAO held that previously admitted maintenance medical treatment shall be terminated where such treatment is not reasonable, necessary or related.

M. The ICAO has held it is appropriate to terminate a claimant's maintenance medical benefits where a claimant failed to participate in treatment arguing, "the workers' compensation system is biased against him as a characteristic unconstitutional breach of substantive due process." *Munoz v. JBS Swift & Co. USA*, W.C. No. 4-780-871-03 (October 7, 2014).

N. PALJ Steninger's January 2, 2018 Order states, "[p]resumably, Claimant is still receiving and using opioid medications. A judge has already found that these medications are not reasonable, necessary, or related to the injury." (Ex. B, p.16) However, PALJ Steninger noted ALJ Lamphere humanely awarded Claimant a mechanism for weaning off his opioid use.

O. Claimant has indicated, both through his conduct and in writing, that he is not willing to take reasonable-and court ordered- steps to utilize the medical benefits awarded to him. Further, Claimant testified at hearing that he quit using opioids "about two months ago" (from the date of hearing). Claimant has expressed to the Court his unwillingness to participate in this "lower court system" due to bias and violation of Constitutional due process. While Claimant was collecting indemnity benefits, he apparently saw nothing unconstitutional in the Workers Compensation statutes. Despite that, as PALJ Steninger stated in his January 2, 2018 Order, Claimant has been afforded due process in this system and has refused to participate. Claimant's unwillingness to participate in court procedures and follow orders are sufficient grounds alone for terminating maintenance benefits.

P. However, independent of Claimant's non-cooperation, the ALJ finds, by a preponderance of the evidence, that any further usage of prescription opioids is no longer reasonable or necessary to treat Claimant for his work injuries in this case. He has, to his credit, quit taking them on his own. Accordingly, the ongoing maintenance medical benefits shall be terminated.

Closure of Claim

Q. Section 8-43-203(2), C.R.S., provides a mechanism for the administrative closure of claims, without the necessity of litigation, in cases presenting no legitimate

controversy. *Cibola Construction v. Industrial Claim Appeals Office*, 971 P.2d 666 (Colo. App. 1998). The ICAO had held that a claimant's failure to comply with orders is grounds for dismissing a claim with prejudice. See *Muragara v. Manitou & Pikes Peak Railway*, W.C. No. 4-698-365-07 (July 8, 2014) (The claim was properly dismissed with prejudice, based on claimant's failure to comply with discovery orders.) If maintenance medical benefits are terminated, this claim shall be closed, as these benefits were the final remaining benefit in this claim. The ALJ finds that this claim should be closed, unless otherwise permitted by law to be reopened.

ORDER

It is therefore Ordered that:

1. Claimant shall pay penalties of $466, apportioned 50% to Respondent, and 50% to the Colorado Uninsured Employer Fund, for his continuing failure to pay towards his overpayments as ordered by ALJ Lamphere.

2. Claimant shall pay penalties of $1800 apportioned 50% to Respondent, and 50% to the Colorado Uninsured Employer Fund, for his failure to attend the medical appointments as ordered by ALJ Lamphere and PALJ Steninger.

3. Ongoing maintenance medical benefits are terminated in their entirety.

4. This case is closed, subject only to reopening as permitted by law.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-972-988-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on August 23, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 8/23/18, Courtroom 4, beginning at 8:30 AM, and ending at 11:30 AM).

Claimant's Exhibits 1 through 15 were admitted into evidence, without objection. Respondents' Exhibits A through TT were admitted into evidence, without objection. The evidentiary deposition of Timothy R. Kuklo, M.D., taken on July 18, 2018, served in lieu of his testimony at the hearing.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule. The Claimant's opening brief was filed, electronically, on August 30, 2018. Respondents' answer brief was filed on September 4, 2018. No timely reply brief was filed as September 6, 2018, the due date. Therefore, the matter was deemed submitted for decision on September 7, 2018, and the ALJ hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern permanent total disability (PTD); post maximum medical improvement (MMI) medical maintenance benefits; overpayment of $48,836.84, by the Respondents, of permanent **medical** impairment benefits; and, issue preclusion as it pertains to PTD, based on a February 14, 2018 decision of ALJ Kimberley B. Turnbow, which determined that Respondents had overcome the Division Independent Medical Examination (DIME) opinion of Brian Shea, D.O., and the Final Admission of Liability (FAL) insofar as it admitted liability for 18% whole person, based on DIME Dr. Shea's opinion. ALJ Turnbow also determined that the DIME opinion concerning MMI as of March 17, 2016 had not been overcome.

The judicial doctrine of issue preclusion bars the re-litigation of an issue when the following four elements are present:

(1) The issue sought to be precluded is identical to an issue actually determined in a prior proceeding;
(2) The party against whom estoppel is asserted has been a party to or is in privity with a party to the prior proceeding;
(3) There is a final judgment on the merits in the prior proceeding; and,
(4) The party against whom the doctrine is asserted had a full and fair opportunity to litigate the issue in the prior proceeding.

Feeley v. Indus. Claim Appeals Office, 195 P.3d 1154 (Colo. App. 2008).

The issue allegedly precluded in the present case is whether ALJ Turnbow's determination that the DIME of Dr. Shea's opinion had been overcome as to permanent **medical** impairment, based on the opinions of Barry Ogin, M.D., and Brian Reiss, M.D. [independent medical examiners (IMEs) hired by the Respondents]. Their opinions were that the admitted back injury of January 20, 2015, amounted to a temporary aggravation of a pre-existing degenerative back condition, insofar as it pertained to permanent **medical** impairment, thus, precluding a consideration of PTD because the doctrine of issue preclusion applies. Respondents argue that ALJ Turnbow's decision, based on a factual determination that the opinions of Dr. Ogin and Dr. Reiss that the admitted injury was a temporary aggravation of the Claimant's degenerative arthritic back insofar as **permanent medical impairment** was concerned, triggers the doctrine of issue preclusion concerning **permanent total disability (PTD).** Resolution of this issue concerning Dr. Ogin's and Dr. Reiss' opinions, in part, implicates credibility determinations, based on the totality of the evidence insofar as the issue of **permanent total disability** is concerned. It also implicates whether the Claimant had a full and fair opportunity to litigate the issue of **permanent total disability** before ALJ Turnbow at the December 12, 2017 hearing before her, which resulted in her February 14, 2018 decision.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Determinations Based on ALJ Turnbow's Decision of February 14, 2018

1. Claimant is collaterally estopped from re-litigating ALJ Turnbow's determination that Claimant's MMI date was March 17, 2016. Therefore, the doctrine of issue preclusion applies to the MMI determination.

2. Claimant is collaterally estopped from re-litigating ALJ Turnbow's determination that Respondents overcame DIME Dr. Shea's opinion of 18% whole person and the subsequent Final Admission of Liability (FAL), dated April 5, 2018 (Respondents' Exhibit QQ) for zero **permanent medical** impairment. Therefore, the doctrine of issue preclusion applies to this **medical impairment** determination.

3. The factors in a PTD determination (a disability concept as opposed to a strict **medical** impairment concept) differ substantially from the factors in making a **medical** impairment determination based on a Division of Workers' Compensation (DOWC) accredited physician's opinions with reference to the American Medical Association's (AMA's) *Guides to the Evaluation of Permanent Impairment,* 3rd Ed., Rev. **Permanent total disability** refers to the ALJ's evaluation of a claimant's ability to earn a wage under the claimant's particular circumstances. Permanent **medical** impairment refers to an accredited physician's medical diagnosis of a claimant's physical condition and its relation to the industrial injury. The latter is strictly governed by medical guidelines. The former is the result of a totality of the circumstances analysis that considers but is not determined by the DIME and the **permanent medical impairment** rating.

4. At the commencement of the hearing on August 23, 2018, the parties stipulated that the Claimant was overpaid $48,836.84 in **permanent medical impairment** benefits, in light of ALJ Turnbow's determination that Respondents had overcome the DIME concerning **permanent medical impairment,** the net effect being zero permanent **medical** impairment.

Procedural Posture

5. Brian Shea, D.O., performed a Division Independent Medical Examination (DIME) on August 25, 2016. He placed the Claimant at maximum medical improvement

(MMI) on March 17, 2016, and assigned the Claimant an 18% whole person impairment rating. Dr. Shea stated that the Claimant should be restricted from lifting or carrying of greater than twenty pounds and limiting pulling to forty pounds. Dr. Shea further restricted the Claimant from squatting, pivoting, crawling, or kneeling (Claimant Exhibit 4, bates 33). Ultimately, Respondents' Independent Medical Examiner (IME), Barry Ogin, M.D., agreed with these permanent restrictions. Based on the description of the Claimant's job, he could not work at his pre-injury job with these permanent restrictions.

6. Respondents filed a Final Admission of Liability (FAL) based on Dr. Shea's report (Claimant's Exhibit 15, bates 130). The Claimant timely objected to the FAL and filed an Application for Hearing. In their Response to the Application for Hearing, the Respondents endorsed medical benefits, offsets, and causal relatedness (Respondents' Exhibit TT, bates 177).

7. Hearing was held on December 12, 2017, before ALJ Kimberley Turnbow. In her decision of February 14, 2018, ALJ Turnbow found that the Claimant suffered a temporary aggravation to a pre-existing condition as pertains to **permanent medical impairment.** Consequently, she ruled that Respondents met their burden of clear and convincing evidence, in overturning Dr. Shea's 18% whole person impairment rating (Respondents' Exhibit TT, bates 187). The Claimant did **not** have an opportunity to litigate the issue of **permanent total disability (PTD)** at the December 12, 2017 hearing before ALJ Turnbow.

8. After ALJ Turnbow's decision, the Claimant filed an Application for Hearing on May 15, 2018, endorsing the issues of medical benefits (*Grover* medicals), authorized provider, reasonably necessary, and **permanent total disability benefits (PTD).**

9. On July 31, 2018, Respondents submitted a Motion for Partial Summary Judgment. In their Motion, Respondents alleged that the decision of ALJ Turnbow implicates the doctrine of issue preclusion and precludes the Claimant from contending at hearing that the symptoms in his back, and by necessary implication, his permanent physical restrictions, are causally related to his admitted industrial injury of January 20, 2015.

10. In the Response to Respondents' Motion for Partial Summary Judgment, the Claimant cited to *Dish Network*, which states that once a claimant applies for PTD benefits, the DIME opinion no longer carries its presumptive weight. "The determination of the DIME physician as to which body parts and resulting work restrictions were related to the work injury can be considered, but they are not entitled to additional weight by the statute." *Cole v. Dish Network*, W.C. No. 4-918-651-02 [Indus. Claim Appeals Office (ICAO), January 15, 2016] (*aff'd sub nom. Dish Network v. Indus. Claim Appeals Office,* 2016 WL 7404847 (Colo. App., December 22, 2016). (Claimant's Exhibit 5, Response to Respondents' Motion for Partial Summary Judgment).

11. The Claimant argued that a claimant has the burden to establish, by preponderant evidence, that the industrial injury acts as a "significant causative factor" in a determination of PTD. *Id*.

12 On August 22, 2018, ALJ Peter Cannici denied Respondents' Motion for Partial Summary Judgment. ALJ Cannici agreed that because the Claimant is now asserting PTD, the DIME opinion and the subsequent decision of ALJ Turnbow do not function in the same capacity as they did during the **permanent medical impairment** stage of the claim.

13. In his Order Denying Partial Summary Judgment, ALJ Cannici found that the analysis required to determine whether or not the Claimant is entitled to PTD differs from the analysis used by ALJ Turnbow in deciding if the DIME doctor erred in his medical impairment rating of the Claimant's back. ALJ Cannici concluded that the Claimant has the burden to prove that his industrial injury acts a "significant causative factor" in making him permanently and totally disabled.

Issue Preclusion

14. In the first Final Admission of Liability (FAL), dated September 28, 2016, Respondents admitted for post maximum medical improvement (MMI); medical benefits; an average weekly wage (AWW) of $938.37; temporary total disability benefits of variable amounts from January 21, 2015 through March 17, 2016 (a period of almost one year and two months); and **permanent medical impairment** of 18% whole person, based on DIME Dr. Shea's opinion, which amounted to $48, 836.84 in aggregate **permanent medical impairment** benefits (Claimant's Exhibit 15).

15. Respondents sought a hearing to overcome the DIME's 18% whole person rating. The Claimant sought to overcome the DIME's MMI date of March 17, 2016.

16. ALJ Turnbow conducted a hearing on December 12, 2017 and as a result thereof issued a decision, dated February 14, 2018 (Respondents' Exhibit TT), that the Respondents had overcome DIME Dr. Shea's **medical** impairment rating of 18% whole person by clear and convincing evidence, based on the opinions of IMEs, Dr. Ogin and Dr. Reiss; and, that the admitted injury was a temporary aggravation of the Claimant's underlying degenerative back condition as it pertains to permanent **medical impairment.**

17. As a result of ALJ Turnbow's decision, the Respondents filed a subsequent FAL, dated April 5, 2018, denying post-MMI medical benefits, re-affirming the previous admission for one year and almost two months TTD benefits (from January

21, 2015 through March 17, 2016); and, admitting for zero permanent **medical impairment** (Respondents' Exhibit QQ). Thereafter, the Claimant applied for a hearing on the issues of **permanent total disability (PTD)** and post-MMI medical maintenance benefits, which had previously been admitted in 2016.

18. Based on a review of ALJ Turnbow's decision of February 14, 2018, the ALJ herein finds that the Claimant did not have a full and fair opportunity to litigate the issue of **permanent total disability** at the hearing before ALJ Turnbow. No vocational evidence was referenced in her decision. There was no indication that human factors, including vocational abilities, work in the competitive, commutable labor market, age, education, etc., were considered in the hearing before ALJ Turnbow. There was no indication that these factors entered into the opinions of Dr. Ogin and Dr. Reiss. Indeed, their opinions were strict medical opinions that the Claimant's admitted injury amounted to a temporary aggravation of the Claimant's medical condition as it related to permanent **medical impairment.** As found herein below, Dr. Ogin was of the opinion that the Claimant's permanent restrictions were causally related to the admitted injury. This opinion is inconsistent with the "temporary aggravation" opinion.

19. Respondents have not sought to withdraw the FAL, including the subsequent FAL, filed almost two months after ALJ Turnbow's decision which, among other things, re-affirmed the admission for one year and almost two months' TTD benefits. The ALJ infers and finds that this was apparently the alleged temporary aggravation of Claimant's admitted low back injury of January 20, 2015, at least according to Dr. Ogin and Dr. Reiss. Both doctors articulate the legal terms "did not aggravate or accelerate." Respondents focus their issue preclusion argument on the latter proposition as this relates to causation of PTD. In light of the totality of the evidence, including the evidence that Claimant was able to perform heavy duty work, full time, prior to the admitted injury of January 20, 2015 and has not been able to work since that time, the ALJ herein infers that the Respondents' argument "pushes the outer edges of the envelope" by parlaying a **medical impairment** determination into a dispositive determination concerning **permanent total disability**, creating a disingenuous twist as it pertains to PTD.

20. Based on the evidence presented at the August 23, 2018 hearing before the ALJ herein, the ALJ infers and finds that the Claimant was a regular and consistent worker at "heavy duty" tasks before the admitted injury of January 20, 2015. He graduated from high school in 1988 and consistently worked at heavy duty jobs ever since that time. He consistently worked as a tow truck driver from 1992 through 2014, before working for the Employer herein. He has not worked since January 21, 2015. The ALJ finds that the Claimant credibly expressed a desire to return to work but he cannot return to his former heavy job of mill mechanic at the mine in Leadville, Colorado, or any other job he has done in the past. Based on the Respondents' argument concerning "temporary aggravation" as it relates to PTD, the ALJ infers that Respondents' theory must be that it is coincidentally related to the Claimant's

underlying, progressive back degeneration that the Claimant has not worked since January 21, 2015, and the inability to earn a wage is not caused by the admitted injury, but by the progression of this 48-year old man's (date of birth, November 17, 1969) return to a baseline of his naturally progressing degenerative condition—after the one-year and two month, alleged "temporary aggravation." In weighing this theory against the idea that the admitted injury was the "straw that broke the camel's back," thus, ultimately causing the Claimant's inability to earn wages in the competitive, commutable labor market, the latter is more persuasive.

21. The ALJ finds that there is not an identity of issues between **permanent medical impairment** and **permanent total disability.** There no incentive or ability to litigate **permanent total disability** in a hearing involving **overcoming a DIME on permanent medical impairment.** An attempt to litigate PTD factors in such a hearing would be irrelevant. Consequently, there was not a full and fair opportunity for the Claimant to litigate PTD before ALJ Turnbow at the hearing of December 12, 2017. Degree of permanent medical impairment can be one of many factors considered in a **permanent total disability** determination, to be weighed along with other factors.

PERMANENT TOTAL DISABILITY

Pre-Existing Back Problems

22. A few weeks prior to the work injury, Claimant treated for low back problems with a chiropractor, Dr. Clark, and with Physician Assistants Tyler Norton and Amy King at Dr. Lisa Zwerdlinger's office. On January 4, 2015, Tyler Norton, PAC, noted that Claimant injured his back three weeks prior when he picked something heavy off the ground. After this incident, Claimant continued working full-time at heavy duty jobs. Claimant treated several times with Dr. Clark. Claimant reported pain severity of 5/10, increasing to 8/10 with walking. Claimant's pain was constant and radiated down the back of his buttocks and right leg. On January 8, 2015, Amy King PA reported Claimant still had a lot of back pain despite medication and Ms. King prescribed Vicodin. (See Respondents' Exhibit C and Exhibit TT, para 2 of ALJ Turnbow's February 14, 2018 order).

23. Despite the Claimant's previous back pain and treatments, he continued working full time at his heavy duty jobs with the Employer. The question at hand, is whether the admitted injury of January 20, 2015, contributed significantly to the Claimant's inability to earn wages and **permanent total disability** thereafter. In terms of **permanent total disability,** was the admitted injury of January 20, 2015 the "straw that broke the camel's back." Contrary to the description of the January 20, 2015 incident, Dr. Ogin states that there was no identifiable traumatic event on that date. This fact creates a credibility gap in Dr. Ogin's overall opinions. Along with his attribution of the Claimant's permanent restrictions to the admitted injury, it undermines his opinion of "temporary aggravation" to a significant degree.

The Circumstances of the Admitted Injury

24. On January 20, 2015, the Claimant suffered an admitted industrial injury while employed by the Employer, located in Leadville, Colorado (Claimant's Exhibit 4, bates 30).

25. The Claimant injured himself when he, and three other coworkers, carried a magnetic belt weighing an estimated 400-450 pounds. One of the workers lost his grip on the belt, jolting the Claimant forward and causing him to fall to his knees (Claimant's Exhibit 4, bates 30).

26. The Claimant immediately felt severe pain in his lower back. Lisa Zwerdlinger, M.D., the Claimant's primary care physician, saw him on the same day of his injury. She took the Claimant off work. Since his date of injury, the Claimant has not worked (Claimant's Exhibit 4, bates 32) nor has he been released to return to his pre-injury job by an authorized treating physician.

27. The Claimant had seen Dr. Zwerdlinger prior to his injury. Although Dr. Zwerdlinger's reports indicate that the Claimant had back pain prior to January 4, 2015, she noted that the Claimant's back pain had "significantly improved" after visits with a chiropractor (Respondents' Exhibit C, bates 31).

28. At hearing of August 23, 2018, the Claimant stated that the pain prior to his injury was related to his hip. Notwithstanding the Claimant's prior symptoms, the Claimant testified that he had no problems performing the duties related to his heavy duty job for the Employer until his admitted injury occurred on January 20, 2015.

Medical

29. The Claimant had an MRI (magnetic resonance imaging) on March 16, 2015. He then had an X-ray done on March 25, 2015. After reviewing the findings, Donald S. Corenman, M.D., D.C. -- the Claimant's primary authorized treating provider (ATP) -- found a central L3-L4 disc herniation with mild to moderate central stenosis. He also found an L4-L5 disc bulge and left lateral recess stenosis. Dr. Corenman stated that the Claimant was unable to work. He further added, "I do not expect [Claimant] will ever be able to do heavy lifting" (Claimant's Exhibit 6, bates 43-44). The ALJ infers that Dr. Ogin and Dr. Reiss considered this disc **herniation** as a "temporary aggravation" of the "naturally progressing" degenerative arthritic condition that "coincidentally" occurred at the time of the Claimant's admitted January 20, 2015 injury.

30. On May 6, 2015, Kelly Lindauer, M.D., performed an MRI on the Claimant's lumbar spine. Dr. Lindauer found a disc protrusion at both Claimant's L3-4 and L4-5 (Claimant's Exhibit 10, bates 104-105).

31. Two years later, in April of 2017, Dr. Lindauer performed an additional MRI on the Claimant. She compared her findings to the prior imagining from May of 2015. At the L3-L4, Dr. Lindauer found an "unchanged broad-based 5 mm central disc protrusion." She agreed that the findings were similar to the prior imaging done on the Claimant's lumbar spine in 2015. At Claimant's L4-5, Dr. Lindauer found that the pathology had progressed since the earlier imaging noting a "left posterolateral disc extrusion" (Claimant's Exhibit 10, bates 106-107).

32. ATP Dr. Corenman placed the Claimant at maximum medical improvement (MMI) on March 17, 2016. After performing a range of motion test on the Claimant's lumbar spine, he gave the Claimant a **permanent medical impairment** rating of 11%. Dr. Corenman placed the Claimant on permanent restrictions including no lifting of more than twenty pounds; no pushing or pulling of more than forty pounds; and no squatting, pivoting, crawling, or kneeling (Respondents' Exhibit S, bates 70-71). The ALJ infers and finds that the Claimant cannot perform his pre-injury work with these permanent restrictions, and this proposition is medically supported in the evidence. IME Dr. Ogin agrees with these restrictions and attributes them to the admitted injury.

Timothy R. Kuklo, M.D.

33. In January of 2018, according to the Claimant, he googled orthopedic surgeons who accept Medicare and scheduled an appointment with Dr. Kuklo. The Claimant sought an evaluation from Dr. Kuklo, an expert in spinal disorders. In his report, Dr. Kuklo stated that the Claimant has a herniated disc in his L3-L4 and L4-L5 lumbar region. Dr. Kuklo noted that the Claimant has tried physical therapy, chiropractic manipulations, and over twenty spinal injections without relief. He called the lack of further intervention "egregious." Dr. Kuklo further asserted that the Claimant would benefit from a L3-L5 two-level fusion with laminectomy (Claimant's Exhibit 2, bates 17). In her testimony, Respondents' vocational expert, Donna Ferris, assumed the recommended surgery would occur and be successful. Consequently, she speculated that the Claimant could become even more employable than she believed he was at the present time. The ALJ infers and finds that such speculation is unwarranted and Ferris' opinion must be weighed as if there was no surgery and no surgical outcome.

34. Furthermore, Dr. Kuklo offered the opinion that this is "clearly a workers' compensation injury" (Claimant's Exhibit 2, Bates 17). In his evidentiary deposition (taken on July 18, 2018 and not available to ALJ Turnbow at the December 12, 2017 hearing or as of her February 14, 2018 decision), Dr. Kuklo explained that a "450-pound load can literally hit 1500 pounds of force across the disk (*sic*), which tears the annulus or the outer rim resulting in a disk (*sic*) bulge, back pain, [or] strain." (Kuklo Depo. Tr., p.

9, bates 11-20). Dr. Kuklo is of the opinion that the Claimant's condition has worsened since his industrial injury, which he attributed to standing and ambulating. "He [Claimant] clearly has significant stenosis that worsens with standing in the upright posture" (Claimant's Exhibit 2, bates 17). As the Claimant's condition relates to his inability to earn wages, the ALJ finds Dr. Kuklo's opinion highly persuasive and credible. Dr. Kuklo's opinions were not available to ALJ Turnbow before her decision of February 14, 2018.

35. Dr. Kuklo recommended back surgery: "it is unclear to me, [how] anyone could recommend no intervention" and he reported that the "recommendations given to him to date have been egregious." Subsequently, Dr. Kuklo testified that he would not have recommended surgery two-years prior either, but Claimant's condition changed for the worse and he needs surgery now. Dr. Kuklo anticipated that surgery will lessen Claimant's pain and that Claimant will be more functional after surgery. Dr. Kuklo related the Claimant's present back problems to the January 20, 2015, admitted work injury. Dr. Kuklo discounted prior back symptoms as regular back aches that we all experience. Dr. Kuklo dismissed that Claimant's diabetes played any role in Claimant's lower extremity symptoms. Dr. Kuklo has effectively rendered an opinion, to a reasonable degree of medical probability that the admitted injury of January 20, 2015, permanently aggravated and accelerated Claimant's underlying degenerative back condition. The ALJ finds this opinion highly persuasive, credible, and corroborated by the weight of credible medical evidence in the exhibits.

Further Medical

36. ATP Dr. Corenman reviewed an MRI with the Claimant in February of 2018. He found an L4-5 angular collapse and central disc herniation and an annular tear at the L3-L4. Dr. Corenman noted that the Claimant's symptoms have become worse since his January 20, 2015, industrial injury. He reiterated that he does not expect the Claimant to return to heavy lifting (Claimant's Exhibit 6, bates 69).

37 At hearing, the Claimant testified that he has undergone a host of conservative treatments, including numerous physical therapy sessions and several injections, without finding relief from his symptoms. He stated that these symptoms significantly limit his functional ability. The Claimant stated that he has not been able to work since the day of his injury. He testified that he applied for numerous jobs in and around the Leadville area without any success at finding work. The ALJ finds the Claimant's testimony persuasive and credible in this regard.

38. The Claimant testified that he has exhausted all medical options, with the possible exception of the surgery recommendation of Dr. Kuklo who, as found herein below, is neither authorized nor within the chain of authorized referrals.

Claimant's Vocational Expert Cynthia Bartmann

39. On March 28, 2018, Cynthia Bartmann performed an employment evaluation of the Claimant. In her report, Bartmann concludes that the Claimant is incapable of earning a wage and is permanently and totally disabled (Claimant's Exhibit 1, bates 14).

40. In support of her opinion, Bartmann stated that because the Claimant's job with the Employer required him to lift up to 150 pounds, in additional to standing and walking the entire shift, the Claimant is unable to return to his job with the Employer (Claimant's Exhibit 1, bates 12).

41. Bartmann stated that because the Claimant is restricted from stooping, bending, or twisting, he would not be able to find work in the light duty category (Claimant's Exhibit 1, bates 13).

42. Bartmann noted that the Claimant worked as a mechanic for his father's Ford dealership. The Claimant also owned and operated his own towing company from 1992 to 2014. His primary responsibilities included driving the tow truck and performing mechanical work on the trucks. Because the Claimant's entire work history consists of operating a tow truck and performing mechanical work, Bartmann is of the opinion that the Claimant does not have any marketable, transferable skills consistent with his permanent restrictions (Claimant's Exhibit. 1, bates 12-13).

43. Bartmann also focused on the job market in and around the Leadville area. She noted that Leadville is a "small mountain rural town with few employment opportunities." She further found that most common occupations in Leadville include "construction, retail trade, arts, entertainment, recreation, educational services, professional, science, technical services, public administration, [and] healthcare, and social assistance." Because of the Claimant's physical limitations and lack of transferable skills, Bartmann is of the opinion that the Claimant would not be able to find work in Leadville (Claimant's Exhibit 1, bates 13).

44. If the Claimant were to travel outside of Leadville to work, Bartmann is of the opinion that a commute of thirty to forty-five minutes would be reasonable. Nonetheless, Bartmann noted that the towns closest to Leadville are small communities with limited employment opportunities. She further stated that the Claimant would have substantial difficulty travelling outside of Leadville during winter without significantly increasing his commute time (Claimant's Exhibit 1, bates 13).

Respondents' Vocational Expert, Donna Ferris

45. In her report, Donna Ferris stated her opinion that the Claimant is not permanently and totally disabled. To support her opinion, Ferris stated that the Claimant is capable of performing light duty and sedentary work (Respondents' Exhibit A, bates 20). At hearing, Ferris modified her opinion stating that the Claimant would be substantially limited in finding work at this time. As one of her assumptions, Ferris relied heavily on the proposition that the January 20, 2015 admitted injury was a "temporary aggravation," based on ALJ Turnbow's February 14, 2018 decision and the opinions of Dr. Ogin and Dr. Reiss. "Permanent Total Disability," however, is a different issue than **permanent medical impairment** upon which Dr. Ogin and Dr. Reiss rendered opinions.

46. Ferris prepared reports dated April 6, 2018, (Respondents' Exhibit A) and August 1, 2018 (Respondents' Exhibit B), and she testified at hearing. Ferris testified that Claimant's work injury did not impact or have any effect on Claimant's employability or access to the labor market based on ALJ Turnbow's conclusions and order that Claimant suffered a "temporary work-related aggravation" of a pre-existing back condition that resolved without permanent impairment. In addition, Ferris testified that, independent of ALJ Turnbow's determination, Claimant remained employable in his local labor market based on Dr. Corenman's and Dr. Shea's recommended light duty restrictions at the time of MMI of no lifting more than 20 pounds, no pushing or pulling more than 40 pounds, no squatting, pivoting, crawling or kneeling, limited stooping, bending, twisting, and limited overhead lifting and work. Ferris mentioned several job positions within Claimant's restrictions and labor market that included: parking booth attendant, ticket scanner, visitor center ambassador, doorperson, gate guard, and cashier. The ALJ infers and finds that these positions are purely academic and not readily available in the Claimant's Leadville labor market. Indeed, at hearing, Ferris modified her opinion stating that the Claimant would be substantially limited in finding work at this time. According to Ferris, based on Dr. Ogin's recent restrictions, the Claimant's current employability is significantly hampered.

47. Ferris assumed that the surgery recommended by Dr. Kuklo would occur and be successful. Consequently, she speculated that the Claimant could become even more employable than he was as of the present time. The ALJ infers and finds that such speculation is unsubstantiated by the totality of the evidence, and Ferris' opinion must be weighed as if there was no surgery and no favorable surgical outcome.

Respondents' Independent Medical Examiner (IME), Brian Reiss, M.D.

48. On April 16, 2016, Dr. Reiss performed a Respondent sponsored IME. Dr. Reiss stated the opinion that Claimant suffered a work-related temporary exacerbation of a pre-existing condition that resolved without impairment. Dr. Reiss was of the opinion that Claimant had reached MMI on May 6, 2015. Dr. Reiss noted "If physical restrictions are needed they would be related to his pre-existing condition." (See Exhibit T, and Exhibit TT, para 11 of ALJ Turnbow's February 14, 2018 order). Because of the Findings herein above and herein below, the ALJ infers and finds that Dr. Reiss' opinions are contrary to the totality of the evidence and lacking in credibility on the issue of **permanent total disability.** Indeed, his opinion concerning restrictions is contrary to IME Dr. Ogin's ultimate opinion that Dr. Corenman's permanent restrictions are attributable to the "occupational injury."

49. Dr. Reiss' recitation of the legal terms "no aggravation or acceleration" is accorded no weight because it is a phrase that does not significantly amplify Dr. Reiss' medical opinions.

50. The ALJ finds Dr. Reiss' ultimate opinions lacking in persuasiveness and credibility because they are contrary to the weight of the evidence.

Respondents' Independent Medical Examiner (IME), Barry Ogin, M.D

51. Dr. Ogin, the Respondents' IME, attributed the Claimant's symptoms to degenerative spine disease. Nonetheless, Dr. Ogin noted that the Claimant has had a disc herniation in his L3-L4 and a disc bulge in his L4-L5 as of March 2015. He further noted that the Claimant has experienced a "significant functional decline" due to the pathology in his lumbar spine. He also noted that the Claimant now has a disc herniation in his L4-L5. Regarding treatment, Dr. Ogin stated that the Claimant may require lumbar fusion surgery (Respondents' Exhibit MM, bates 155-157). Dr. Ogin's conclusory statement that the admitted injury did not "aggravate or accelerate" Claimant's pre-existing back condition is contradicted by the totality of the evidence and by the inconsistency in his attribution of the Claimant's permanent restrictions to the occupational injury versus his previous opinion that the admitted injury amounted to a "temporary aggravation" of the Claimant's underlying degenerative back condition. The "temporary aggravation" opinion was for the purpose of strict **medical** impairment determination.

52. Because of the Claimant's pathology in his lumbar spine, Dr. Ogin stated that the Claimant would not be able to stand for long periods of time. He further noted that the Claimant's functional limitations would prevent him from performing any of the work activities discussed by Donna Ferris in her report (Respondents' Exhibit MM, bates

157). Regarding the Claimant's permanent work restrictions, Dr. Ogin stated that he agreed with the work restrictions from Dr. Corenman and Dr. Shea, and he was of the opinion that the Claimant's permanent work restrictions related to his industrial injury. The ALJ infers and finds that the "industrial injury" is the admitted injury of January 20, 2015.

In his IME Report of June 27, 2018, Dr. Ogin stated as follows:

> I believe that the physical restrictions offered to him by Dr. Corenman at the time of Maximum Medical Improvement as well as by Dr. Shea at the time of the Division Independent Medical Examination, remain appropriate **as related to the occupational injury** (emphasis supplied)

(Respondents' Exhibit MM, bates 156).

53. The ALJ finds that IME Dr. Ogin's attribution of the Claimant's permanent work restrictions to the "occupational injury" is inconsistent with his previous opinion concerning "temporary aggravation," which was not available to ALJ Turnbow at the time of her February 14, 2018 decision. Indeed, as it pertains to **permanent total disability**, in light of the totality of the evidence, which includes Cynthia Bartmann's vocational opinion, Donna Ferris' ultimate concession in her testimony at hearing, and the Claimant's lay testimony, Dr. Ogin's attribution of the permanent restrictions to the admitted injury in question undermines the credibility of his previous opinion concerning a "temporary aggravation," and illustrates that his opinion concerning "temporary aggravation" strictly went to **medical impairment** and not to **permanent total disability**.

THE CRUX OF RESPONDENTS' ARGUMENTS

The two linchpins of Respondents' arguments are: (1) ALJ Turnbow's decision of February 14, 2018, precludes consideration of the issue of **permanent total disability;** and, (2) if consideration of the issue of **permanent total disability** is not precluded, then, Claimant's **permanent total disability** would be attributable to his pre-existing back condition and not to an aggravation/acceleration thereof, occurring on January 20, 2015.

As found herein above, Dr. Ogin's attribution of the Claimant's permanent work restrictions to the "occupational injury" is inconsistent with his opinion concerning "temporary aggravation," which was not available to ALJ Turnbow at the time of her February 14, 2018 decision. Indeed, as it pertains to **permanent total disability**, in light of the totality of the evidence, which includes Cynthia Bartmann's vocational

opinion, Donna Ferris' ultimate concession in her testimony at hearing, and the Claimant's lay testimony, Dr. Ogin's attribution of the permanent restrictions to the admitted injury in question, undermines the credibility of his previous opinion concerning a "temporary aggravation," and illustrates that his opinion concerning "temporary aggravation" went strictly to **medical impairment** and not to **permanent total disability**. Other than these arguments, Respondents assail the credibility of the seriousness of the consequences of the admitted injury of January 20, 2015, which the ALJ does not find persuasive in light of the totality of the evidence.

Ultimate Findings

54. Regardless of the different facts and posture in *Dish Network*, once a claimant applies for **permanent total disability** benefits, a DIME opinion no longer carries its presumptive weight. "The determination of the DIME physician as to which body parts and resulting work restrictions were related to the work injury can be considered, but they are not entitled to additional weight by the statute." *Cole v. Dish Network*, W.C. No. 4-918-651-02 [Indus. Claim Appeals Office (ICAO), January 15, 2016] (*aff'd sub nom. Dish Network v. Indus. Claim Appeals Office,* 2016 WL 7404847 (Colo. App., December 22, 2016). Consequently, the ALJ finds that a consideration of the issue of **permanent total disability** is **not precluded** by virtue of ALJ Turnbow's decision of February 14, 2018. Her decision was based on a consideration of strict medical factors leading to a determination of **permanent medical impairment** – not to **disability** factors, such as matching permanent restrictions with the ability to earn wages. Indeed, IME Dr. Ogin was of the opinion that the Claimant's permanent restrictions were attributable to the admitted work injury.

55. A consideration of the issues of **permanent medical impairment** and MMI is precluded by virtue of ALJ Turnbow's February 14, 2018 decision. It is established fact that the degree of the Claimant's **permanent medical impairment** is zero; and that MMI was reached on March 17, 2016.

56. The ALJ finds that the weight of the medical evidence, including the opinions of ATP Dr. Corenman, Dr. Zwerdlinger and Spine Surgeon, Dr. Kuklo, are more credible and persuasive than the IME opinions of Dr. Reiss and Dr, Ogin-- for purposes of a consideration of **permanent total disability**. Indeed, Dr. Ogin's attribution of the Claimant's permanent work restrictions to the "occupational injury" is inconsistent with his previous opinion concerning "temporary aggravation," which was not available to ALJ Turnbow at the time of her February 14, 2018 decision. As it pertains to **permanent total disability**, in light of the totality of the evidence, which includes Cynthia Bartmann's vocational opinion, Donna Ferris' ultimate concession in her testimony at hearing, and the Claimant's lay testimony, Dr. Ogin's attribution of the permanent restrictions to the admitted injury in question, undermines the credibility of his previous opinion concerning a "temporary aggravation," at least as it goes to a consideration of **permanent total disability**; and, it illustrates that his opinion

concerning “temporary aggravation” was strictly for **medical impairment** and not for **permanent total disability**.

57. The Claimant’s lay testimony concerning “before-and-after” the admitted back injury of January 20, 2015, plus the totality of facts and circumstances, outweigh the opinions of Dr. Reiss and Dr. Ogin concerning “temporary aggravation.” Before the admitted injury, the Claimant was able to work full duties, full time at heavy and demanding work. After the admitted injury, he has not worked for 3 ½ years. Respondents argue “so what” –the reason for this is not causally related to an “aggravation and acceleration” of the Claimant’s pre-existing degenerative back condition, but to a “temporary aggravation” thereof. This alleged “temporary aggravation” lasted for one year and two months—the time Respondents admitted for continuing TTD benefits. Although this fact alone does not disprove a “temporary aggravation,” when considered with other factors, such as permanent restrictions conceded as causally related to the admitted injury by IME Dr. Ogin, it is a significant in determining whether the Claimant is permanently and totally disabled.

58. The ALJ finds that the Claimant presented credibly and although Respondents allege that he Claimant’s minimizes his pre-existing back condition, the lay evidence supports the fact that the Claimant worked full time at a heavy duty job for years before the admitted injury and he has not been able to work in the last 3 ½ years because of his permanent physical restrictions.

59. The ALJ finds the vocational opinions of Cynthia Bartmann more persuasive and credible than the vocational opinions of Donna Ferris, which were heavily premised on ALJ Turnbow’s decision on medical impairment and the idea of a “temporary aggravation.” Ferris’ opinion was equivocal when she speculated on the proposed occurrence and success of the surgery recommended by Dr. Kuklo, Dr. Corenman and Dr. Ogin. Also, Ferris conceded that based on Dr. Ogin’s recent restrictions, the Claimant’s current employability is significantly hampered. Bartmann’s credible opinion is that the Claimant is incapable of earning a wage in the competitive, commutable labor market from Leadville and is, thus, permanently and totally disabled. The ALJ accepts Bartmann’s opinion as more credible than Ferris’ opinion.

60. Between conflicting opinions, evidence and testimony, the ALJ makes a rational decision, based on substantial evidence, to accept the opinions of ATP Dr. Corenman, Spine Surgeon Dr. Kuklo, Vocational Specialist Cynthia Bartmann and the Claimant, and to reject any opinions, evidence, and testimony to the contrary.

61. The ALJ finds that the Claimant’s admitted injury resulted from a concurrence of his pre-existing degenerative back condition and the admitted injury of January 20, 2015, when the Claimant and three other workers were carrying a 400-450 pounds magnetic belt, one of the workers lost his grip on the belt, jolting the Claimant forward and causing him to fall on his knees, as found herein above. As Dr. Ogin

conceded, this injury resulted in the Claimant's present, permanent restrictions. Although the direct cause of the Claimant's **permanent total disability** may have been his underlying degenerative back condition, the admitted injury of January 20, 2015 contributed significantly to the Claimant's **permanent total disability** by virtue of his permanent restrictions, attributable to the admitted injury, which would not permit him to return to his pre-injury work. Therefore, the ALJ finds that the admitted injury of January 20, 2015 permanently aggravated and accelerated the Claimant's condition to the extent that he is now **permanently and totally disabled.**

62. The ALJ finds that although significant weight is accorded to the opinions of Dr. Kuklo, he was neither authorized nor was in the chain of authorized referrals.

63. The Claimant has proven, by a preponderance of the evidence, that he is incapable of earning a wage in the competitive, commutable labor market and he is, therefore, permanently and totally disabled, attributable to the admitted back injury of January 20, 2015.

64. Based on the Claimant's admitted average weekly wage of $938.37, the permanent total disability weekly benefit is $625.58, or $89.37 per day.

65. Based on the Stipulation of the parties, the Claimant was overpaid $48, 836.84 in **permanent medical impairment benefits.**

66. At the present time, Dr. Kuklo, ATP Dr. Corenman and Respondents' IME Dr. Ogin recommend a surgery.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Issue Preclusion

a. Sections 8-42-108, C.R.S., provides a method for determining a **permanent medical impairment** rating as the result of an industrial injury. First, the authorized treating physician (ATP) assigns a **permanent medical impairment** rating. Any party dissatisfied with the ATP's rating may request a Division Independent Medical Examination (DIME). A physician accredited to complete the DIME examines the injured worker and assigns a **permanent medical impairment** rating. The DIME opinion carries presumptive weight on the issue of any **permanent medical impairment** rating unless overcome by clear and convincing evidence. *Leprino Foods v. Indus. Claim Appeals Office*, 134 P.3d 475, 482-84 (Colo. App. 2005); *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). Thus, the determination of a claimant's **permanent medical impairment** and attendant right to receive permanent partial

disability benefits is based a physician's medical diagnosis and rating. *See Leprino Foods*, 134 P.3d at 482-83.

b. Permanent total disability refers to the ALJ's evaluation of a claimant's ability to earn a wage under the claimant's particular circumstances. Permanent medical impairment refers to an accredited physician's medical diagnosis of a claimant's medical condition and its relation to the industrial injury. The latter is strictly governed by medical guidelines. The former is the result of a totality of the circumstances analysis that considers but is not determined by the DIME and the **permanent medical impairment** rating.

c. Because the focus of the query is different, the DIME physician's assessment of **permanent medical impairment** is not entitled to special weight in a permanent **total** disability determination and is merely a factor to be evaluated by the ALJ in conjunction with other factors. *Leprino Foods*, 134 P.3d at 483; *Dish Network*, at *3. It follows that a court's determination that a respondent overcame the DIME's evaluation of claimant's **permanent medical impairment** rating is only one factor in determining permanent total disability. The Workers' Compensation Act considers **medical impairment** benefits and disability benefits differently for various purposes. *Wal-Mart Stores, Inc. v. Indus. Claim Office*, 989 P.2d 251, 253 (Colo. App. 1999). Even when a claimant has pre-existing conditions which were aggravated by the work-related injury, that aggravation, if found to be a significant cause of the inability to earn a wage, can be appropriate grounds to find that the claimant suffers from a permanent total disability which is compensable. *Seifried v. Indus. Comm'n*, 736 P.2d 1262, 1263 (Colo. App. 1986); *Dish Network* at *4-5. Therefore, because there is no privity of issues between the **permanent medical impairment** and **permanent total disability** determination, the doctrine of issue preclusion does not bar a claimant from asserting **permanent total disability** on the same facts by which the claimant was found not to warrant a **permanent medical impairment** rating.

d. The ALJ concludes that the doctrine of issue preclusion does **not** apply to this case.

Credibility

e. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. *Arenas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S. As found, the weight of the medical evidence, including the opinions of ATP Dr. Corenman, Dr. Zwerdlinger and Spine Surgeon, Dr. Kuklo, are more credible and persuasive than the IME opinions of Dr. Reiss and Dr, Ogin for purposes of a consideration of **permanent total disability**. Indeed, Dr. Ogin's attribution of the Claimant's permanent work restrictions to the "occupational injury" is inconsistent with his previous opinion concerning "temporary aggravation," which was not available to ALJ Turnbow at the time of her February 14, 2018 decision. As it pertains to **permanent total disability**, in light of the totality of the evidence, which includes Cynthia Bartmann's vocational opinion, Donna Ferris' ultimate concession in her testimony at hearing, and the Claimant's lay testimony, Dr. Ogin's attribution of the permanent restrictions to the admitted injury in question, undermines the credibility of his previous opinion concerning a "temporary aggravation," at least as it goes to a consideration of **permanent total disability**; and, it illustrates that his opinion concerning "temporary aggravation" was strictly for **medical impairment purposes** and not for **permanent total disability**.

f. Compensation can be awarded where there is competent evidence other than expert opinion. *Martin Marietta Corp. v. Faulk*, 158 Colo. 441, 407 P.2d 348 (1965). Such competent evidence includes lay testimony. *See Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Colorado Fuel & Iron Corp. v. Alitto*, 130 Colo. 130, 273 P.2d 725 (1954). *Also see Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997). As found, the Claimant's lay testimony concerning "before-and-after" the admitted back injury of January 20, 2015, plus the totality of facts and circumstances, outweigh the opinions of Dr. Reiss and Dr. Ogin concerning "temporary aggravation." As found, before the admitted injury, the Claimant was able to work full time at a heavy duty job. After the admitted injury, he has not worked for 3 ½ years. Respondents argue "so what" –the reason for this is not causally related to an "aggravation and acceleration" of the Claimant's pre-existing degenerative back condition, but to a "temporary aggravation" thereof. This alleged "temporary aggravation" lasted for one year and two months—the time Respondents admitted for continuing TTD benefits. Although this fact alone does not disprove a "temporary aggravation," when considered with other factors, such as permanent restrictions conceded as causally related to the admitted injury by IME Dr. Ogin, it is significant.

g. As found the Claimant presented credibly and although Respondents allege that the Claimant's minimizes his pre-existing back condition, the lay evidence supports the fact that the Claimant worked full time at heavy duty before the admitted injury and he has not been able to work in the last 3 ½ years.

h. As further found, the vocational opinions of Cynthia Bartmann were more persuasive and credible than the vocational opinions of Donna Ferris, which were heavily premised on ALJ Turnbow's decision on medical impairment and the idea of a "temporary aggravation." Ferris' opinion was equivocal when she speculated on the proposed occurrence and success of the surgery recommended by Dr. Kuklo. Also, Ferris conceded that based on Dr. Ogin's recent restrictions, the Claimant's current employability is significantly hampered. Bartmann's credible opinion is that the Claimant is incapable of earning a wage in the competitive, commutable labor market from Leadville an is, thus, permanently and totally disabled. The ALJ accepts this opinion as more credible than Ferris' opinion.

Substantial Evidence

i. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of

conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting opinions, evidence and testimony, the ALJ made a rational decision, based on substantial evidence, to accept the opinions of ATP Dr. Corenman, Spine Surgeon Dr. Kuklo, Vocational Specialist Cynthia Bartmann and the Claimant, and to reject any opinions, evidence, and testimony to the contrary.

Aggravation and Acceleration of Pre-Existing Condition for Permanent Total Disability Purposes

j. A claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a pre-existing condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*; *Duncan v. Indus. Claims Apeals. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's pre-existing disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the Claimant's admitted injury resulted from a concurrence of his pre-existing degenerative back condition and the admitted injury of January 20, 2015, when the Claimant and three other workers were carrying a 400-450 pounds magnetic belt, one of the workers lost his grip on the belt, jolting the Claimant forward and causing him to fall on his knees, as found herein above. As Dr. Ogin conceded, this injury resulted in the Claimant's present permanent restrictions. Although the direct cause of the Claimant's **permanent total disability** may have been his underlying degenerative back condition, the admitted injury of January 20, 2015 contributed significantly to the Claimant's **permanent total disability** by virtue the permanent restrictions, attributable to the admitted injury, which would not

permit him to return to his pre-injury work. Therefore, as found, the admitted injury of January 20, 2015 permanently aggravated and accelerated the Claimant's ability to earn a wage to the extent that he is now **permanently and totally disabled.**

Permanent Total Disability

k. An employee is permanently and totally disabled if he is unable to earn any wages in the same or other employment. § 8-40-201(16.5) (a) C.R.S. The "full responsibility rule," applicable to claims for permanent total disability benefits, provides that the industrial injury need not be the sole cause of a claimant's permanent total disability. Under the rule, when an "employer hires an employee who, by reason of a pre-existing condition or by reason of a prior injury, is to some extent disabled, he takes the man (person) with such handicap," and the employer is liable for a "full award of benefits" if a subsequent industrial injury combines with the pre-existing disability to produce permanent total disability. See *United Airlines, Inc. v. Indus. Claim Appeals Office,* 993 P.2d 1152, 1154,1155 (Colo. 2000). The only exception to the established rule is where the industrial injury is not a significant causative factor in the claimant's disability. See *Seifried v. Indus. Comm'n,* 736 P.2d 1262 (Colo. App. 1986) [the claimant suffered from several pre-existing ailments, and the treating physician opined that the claimant had reached maximum medical improvement, and concluded that the claimant remained disabled because of non-occupational factors]; *Lindner Chevrolet v. Indus. Claim Appeals Office,* 914 P.2d 496 (Colo. App. 1995). *See also Holly Nursing Care Center v. Indus. Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). As found, the facts in the present case are significantly distinguishable from the facts in *Seifried.* Here, the Claimant had a non-disabling back condition (as found herein above, he was able to work full time, full duty at heavy work before the admitted injury and now he has not worked for 3 ½ years.

l. In determining whether a claimant is permanently and totally disabled, an ALJ may consider the claimant's "human factors," including the claimant's age, work history, general physical condition, education, mental ability, prior training and experience, and the availability of work that the claimant could perform. *Weld County School District RE-12 v. Bymer,* 955 P.2d 550 (Colo. 1998*); Joslins Dry Goods Co. v. Indus. Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001). The term "any wages" means more than zero wages. *See Lobb v. Indus. Claim Appeals Office,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. Indus. Claim Appeals Office,* 894 P.2d 42 (Colo. App. 1995). The critical test is whether employment exists that is reasonably available to a claimant under his or her particular circumstances. *Weld County School Dist. Re-12 v. Bymer*, *supra*. This means whether employment is available in the competitive job market, which a claimant can perform on a reasonably sustainable basis. *See Joslins Dry Goods Company v. Indus. Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001). As found, the Claimant has proven that he is incapable of earning wages in the competitive labor market, on a reasonably sustainable basis, and there is no work reasonably available to him in his commutable labor market. Permanent total disability

does not need to be proven by medical evidence. *See Baldwin Construction, Inc. v. Indus. Claim Appeals Office,* 937 P.2d 895 (Colo. App. 1997); *Calvert v. Roadway Express, Inc.,* W.C. No. 4-355-715 [Indus. Claim Appeals Office (ICAO), November 27, 2002]; *In re Claim of Randy Blocker v. Express Personnel,* W.C. No. 4-622-069-04 (ICAO, July 1, 2013). Ultimately, as found, the Claimant is permanently and totally disabled.

Authorized Post-MMI Maintenance Medical Care

m. To be authorized, all referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). As found, Dr. Kuklo was neither authorized nor within the chain of authorized referrals. ATP Dr. Corenman as of February 13, 2018, however, recommends a surgical procedure to de-compress nerves.

Post-MMI Medical Maintenance Benefits

n. An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Grover v. Indus. Comm'n, supra*. Such evidence may take the form of a prescription or recommendation for a course of medical treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer v. Indus. Claim Appeals Office, supra*. An injured worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity. *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). Treatment to **improve** a claimant's condition does **not** fall under the purview of *Grover* benefits. *Shalinbarger v. Colorado Kenworth, Inc.,* W.C. No. 4-364-466 [Indus. Claim Appeals Office (ICAO), March 12, 2001]. As found, Claimant is entitled to maintenance medical care, which is reasonably necessary to address the injury at the hands of ATP Dr. Corenman. Dr. Kuklo is neither authorized nor within the chain of authorized referrals.

Burden of Proof

o. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo.

App. 2012); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000).. Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden on permanent total disability and on post-MMI medical maintenance benefits.

Overpayment

p. As stipulated, Respondents are entitled to recover an overpayment of $48,836.84 in **permanent medical impairment** benefits. The ALJ concludes that this recovery should be from **permanent total disability** benefits.

MMI and Permanent Total Disability Benefits

q. The Claimant reached MMI on March 17, 2016. The Claimant's PTD rate is $625.58 per week (less than the statutory maximum for FY 2014/2015), or $89.37 per day. The date of MMI, March 17, 2016, through the date of hearing, August 23, 2018, both dates inclusive, equals 890 days. At the daily rate, past due PTD benefits equal $79,539.30. Less the overpayment of permanent medical impairment benefits to be recovered by the Respondents, net past due PTD benefits equal $30,702.46.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay the Claimant permanent total disability benefits of $625.58 per week, or $89.37 per day, from the MMI date of March 17, 2016, through the hearing date of August 23, 2018, both dates inclusive, a total of 890 days, in the aggregate amount of $79, 539.30, less the overpayment credit to the Respondents of $48, 836.84, in the net aggregate amount of $30,702.46, which is payable retroactively and forthwith.

B. From August 24, 2018 and continuing for the rest of the Claimant's natural life, Respondents shall pay the Claimant permanent total disability benefits of $625.58 per week.

C. Respondents shall pay the costs of authorized, causally related and reasonably necessary post maximum medical maintenance care, including care by Donald S. Corenman, M.D., D.C., and by Lisa Zwerdlinger, M.D. subject to the Division of Workers' Compensation Medical Fee Schedule. Respondents are not liable for the costs of Timothy R. Kuklo, M.D.

D. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

DATED this_____day of September 2018.

ISSUES

- Is Claimant entitled to TTD benefits from November 2, 2017 to April 3, 2018, when he was placed at MMI by his ATP?
- Did Respondents prove Claimant was responsible for termination of his employment?
- What is Claimant's average weekly wage? Is it $658.77 as proposed by Claimant, $299.50 as proposed by Respondents, or some other amount?

STIPULATIONS/RESOLVED ISSUES

At the beginning of the hearing, Respondents agreed to accept liability for Claimant's injury and admit compensability and medical benefits. Respondents agreed to cover reasonably necessary medical benefits including treatment received at Concentra, at Memorial hospital on November 29, 2017, at the Children's Hospital Thrombosis Clinic on and after November 30, 2017, and medications including factor injections Claimant required for a torn muscle and associated uncontrolled bleeding, subject to the fee schedule. Respondents agreed Claimant satisfied the threshold eligibility requirements (disability and wage loss) and is otherwise entitled to TTD from November 2, 2017 through April 2, 2018, unless he was "responsible for termination" of his employment.

FINDINGS OF FACT

1. Claimant worked for Employer as a drywall installer. He worked in a crew with his father and brother. Claimant and his family members did not work for Employer every day, but only when jobs were available. Employer's project manager, Gregory Steele, was pleased with their work and offered jobs when possible, but work not guaranteed in any given week. Mr. Steele would generally contact Claimant and his family through text messages or telephone calls. Most of the time Claimant was the primary point of contact due to language issues with Claimant's father. Claimant and his family were free to accept or decline any offered job with no impact on their eligibility for future work. The jobs were frequently in the Denver area, and Claimant typically commuted with his family members to the various job sites in their personal vehicles.

2. Wage records covering the year before Claimant's injury show he worked from November 2016 through the first week of April 2017 but did not work again until October 2017. Claimant earned gross wages of $19,480.50 in the 48-week period starting with the paycheck dated November 18, 2016 through November 3, 2017.[1]

[1] It appears the parties calculated their respective proposed AWW based on net rather than gross earnings. The ALJ has used Claimant's gross earnings as reflected in Claimant's Exhibit 7/47-58.

3. Claimant's average weekly wage is $405.84 per week.

4. Claimant injured his right leg while working for Employer on November 1, 2017. He formally reported the injury on November 3 and Employer referred him to Concentra. He also received evaluations and treatment at several other facilities. Initially, the injury was thought to involve the right knee. Subsequent workup and evaluation revealed Claimant suffered a muscular tear which led to uncontrolled bleeding due to his pre-existing hemophilia. The bleeding caused marked soft tissue swelling throughout the thigh, including the knee area.

5. Concentra took Claimant off work at the initial visit on November 3, 2017. On November 9 he was released to sedentary work with accommodations for the use of crutches. On November 16 he was released to light work, with lifting no over 20 pounds. Claimant's work as a drywall installer was physically demanding, likely falling in the medium to heavy category. Claimant could not perform his regular job duties after the injury and did not return to work for Employer after November 1, 2017.

6. Claimant texted Mr. Steele a photograph of the restrictions from Concentra on November 9. Employer was willing to accommodate Claimant's restrictions, but no formal offer of modified employment was made. Although Mr. Steele "reached out" to Claimant via text and voicemail more than once, the text messages submitted into evidence contain no offer of modified work. Nor does the record contain a written offer of modified employment in any other format, such as email or a letter. Mr. Steele told Claimant verbally on November 16 Employer would provide modified work, but Claimant "declined saying leg hurt too badly." Neither Mr. Steele nor any other management personnel heard from Claimant after that.

7. After Claimant's injury, Mr. Steele began communicating with Claimant's brother about work because Claimant was nonresponsive. On November 26, Claimant's brother texted Mr. Steele to decline future employment. Specifically, the text stated:

> Hey Greg, so we aren't going to be able to make it cause the van we got is breaking down. We can't make the trips no more. We decided to find jobs here in the springs. Thanks for everything though. Whenever we get a better van we will call you.

8. Respondents proved Claimant was responsible for the termination of his employment on November 26, 2017. Respondents failed to prove Claimant was responsible for termination of his employment before November 26, 2017.

CONCLUSIONS OF LAW

A. TTD Benefits

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the wage loss to

obtain TTD benefits. *Id*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Respondent stipulated that Claimant was "disabled" and left work due to the injury, but assert TTD is barred because he was responsible for termination of his employment.

Section 8-42-103(1)(g) provides that a claimant who might otherwise be considered temporarily disabled is not eligible for TTD benefits if he or she was "responsible for termination of employment." *Kerstiens v. All American Four Wheel Drive*, W.C. No. 4-865-825-04 (August 1, 2013). The respondents must prove that a claimant was terminated for cause or responsible for the separation from employment by a preponderance of the evidence. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). The respondents must show the claimant performed a volitional act or otherwise exercised "some degree of control over the circumstances which led to the termination." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). Whether the claimant acted volitionally or exercised control over the circumstances of the termination is a question of fact, which must be evaluated based on the totality of circumstances. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

As found, Claimant was responsible for termination of his employment on November 26, 2017. It is well-established that a claimant who voluntarily resigns his job is "responsible for termination" unless the resignation was prompted by the injury. *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2008); *Kiesnowski v. United Airlines*, W.C. No. 4-492-753 (May 11, 2004). Claimant resigned (through his brother) on November 26, due to transportation and other logistical issues. There is no persuasive evidence Claimant's decision to resign was due to injury-related factors. Thus Claimant's eligibility for TTD benefits terminated on November 26, 2017.

The ALJ is not persuaded by Respondents' argument Claimant's TTD should be terminated before November 26 because he failed to report to work. A temporarily disabled claimant has no affirmative obligation to seek work within his restrictions, and the onus is on the employer to perfect an offer of modified employment. *Denny's Restaurant, Inc. v. Husson*, 746 P.2d 63 (Colo. App. 1987); *Schlage Lock v. Lahr*, 870 P.2d 615 (Colo. App. 1993); *Vigil v. Denver Catholic Community Services*, W.C. No. 3-796-867 (April 29, 1993). A claimant's willingness to seek work "is irrelevant on the issue of entitlement to temporary disability benefits." *Cobb v. Terry Personnel Service*, W.C. No. 3-970-262 (October 22, 1991). Although Employer could have justifiably terminated Claimant for job abandonment or refusing to work, it did not do so. A claimant's "failure to begin" modified employment is only a terminating event if the offer was in writing. Section 8-42-105(3)(d)(I). Here, although it appears Mr. Steele verbally offered Claimant modified

work, there is no persuasive evidence of a written offer. Consequently, Claimant's failure to report to work after he was released to modified duty on November 9 does not affect his entitlement to TTD.

B. Average Weekly Wage

Section 8-42-102(2) provides that compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the AWW in any manner that seems most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity as a result of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993).

Respondents advocate averaging Claimant's earnings over the year before the injury, which is reasonable because it encapsulates a broad swath of earnings. Claimant's proposed methodology artificially inflates the AWW by excluding all weeks in which he did not work. Claimant's wages generally fluctuated based on the work available. There were many weeks he earned no wages, and the ALJ sees no persuasive reason that pattern would have changed had the injury not intervened.

The fairest method of computing Claimant's AWW is to average the 48 paychecks from November 16, 2016 through November 3, 2017. Claimant grossed $19,480.50 during that period, which equates to an AWW of $405.84, and a corresponding TTD rate of $270.56 ($19,480.50 ÷ 48 = $405.84 x 2/3 = $270.56).

ORDER

It is therefore ordered that:

1. Claimant's average weekly wage is $405.84, with a corresponding TTD rate of $270.56.

2. Insurer shall pay Claimant TTD at the rate of $270.56 per week from November 2, 2017 through November 25, 2017.

3. Insurer shall pay statutory interest of 8% per annum on all indemnity benefits not paid when due.

4. Claimant's request for TTD benefits from November 26, 2017 to April 3, 2018 is denied and dismissed.

5. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or

service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUE

Whether Respondents have proven by a preponderance of the evidence that Claimant was an "independent contractor" pursuant to §8-40-202(2) C.R.S.

STIPULATION

The parties agreed that, if Claimant was an employee at the time of his injuries on December 19, 2017, his entitlement to medical and Temporary Total Disability (TTD) benefits will be considered at a future time.

FINDINGS OF FACT

1. Employer is a company that installs drywall on construction projects. Claimant began working with Employer on September 22, 2017 building framing and installing drywall on various projects. Claimant had in excess of 10 years of experience in the industry.

2. On September 20, 2017 Claimant executed a Subcontractor Agreement with Employer. The document specified that Claimant was a subcontractor of Employer who would provide labor and materials at the rate of $9.00 per sheet of drywall. Employer's president and part owner Patrick A. Hess testified that he reviewed the Subcontracor Agreement with Claimant. He remarked that Claimant had received an offer to work as an employee for Employer but rejected the proposal because he could earn more money as an independent contractor. Item eight of the Subcontractor Agreement specifically provided that Claimant agreed to permit only employees and supervisors covered by Workers' Compensation insurance on jobsites.

3. Because Employer maintains a policy that independent contractors must carry their own Workers' Compensation insurance, Claimant met with Travis Lease of Security Insurance Group to obtain insurance. Mr. Lease has provided a written statement noting that Claimant visited him on September 20, 2017 and requested insurance because he was working for himself. The insurance policy Claimant obtained identified him as operating under the business name of Noe Lopez Construction.

4. On September 20, 2017 Claimant also filed a Form W-9 to request a Taxpayer Identification Number. Claimant identified himself as Noe Lopez Construction and affirmed that he was the individual/sole proprietor of a single member LLC.

5. On September 22, 2017 Claimant met with representatives of Employer and submitted a Declaration of Independent Contractor Status Form. The Form provided that Claimant would operate as an independent contractor. Claimant would not receive Workers' Compensation benefits, was responsible for paying all federal and

state income taxes and would furnish Workers' Compensation insurance for any workers hired by Noe Lopez Construction. Claimant listed his trade name as Noe Lopez Construction and specified that he was the owner.

6. On September 22, 2017 Claimant began working on Employer's construction projects in Greeley and Fort Collins, Colorado. Claimant submitted invoices to Employer for work performed. When creating the invoices Claimant listed Noe Lopez Construction. The invoices provided a description of the work, unit price and amount of requested payment. As explained by Mr. Hess, Employer originally planned to pay Claimant by sheet of drywall, but because he did not have a partner, he was asked to do "back out work." Mr. Hess remarked that "back out work" could only be calculated on an hourly basis. Claimant received compensation at the rate of $24.00 per hour.

7. Mr. Hess confirmed that the majority of Employer's 40-60 person workforce is composed of employees. However, Employer also uses independent contractors to comprise its workforce. Mr. Hess outlined the differences between the employees and independent contractors who work for Employer. He remarked that supervisors could fire employees and direct them to complete a myriad of tasks. Employees have a specific start and end time every day, submit timecards and are told when they can take lunch breaks. In contrast, Claimant was an independent contractor who did not have to report when he was coming to work or taking a lunch break. Employer did not provide Claimant with any training or tools other than ladders and scaffolding.

8. On December 19, 2017 Claimant was working on a project at the Copper Leaf Apartments in Fort Collins, Colorado. While attempting to pass a ladder down to another worker, Claimant fell approximately 12 feet to the ground when a temporary railing failed. Claimant was transported by ambulance to the Poudre Valley Hospital in Fort Collins but then to the Medical Center of the Rockies in Loveland because of the severity of his injuries. He was diagnosed with a displaced and comminuted left anterior column acetabular fracture. Claimant also sustained various other injuries. Dr. Robert M. Baer performed an open reduction and internal fixation of the fracture on December 21, 2017.

9. Claimant was not required to work exclusively for Employer and was customarily engaged in an independent trade or occupation related to drywall installation. Claimant received a 1099 miscellaneous tax form from Employer that listed Noe Lopez Construction and reflected nonemployee compensation of $12,252. Claimant used the 1099 form to prepare his 2017 Federal Income Taxes. Claimant testified that the 1099 form did not represent all of his 2017 income because he also worked for another company. He noted that he earned approximately $900 per week in cash from the other entity. His total 2017 income was approximately $30,000-$40,000.

10. Claimant's testimony and tax documents reflect that he operated as an independent contractor throughout 2017. Claimant testified that he identified himself as self-employed in his 2017 Federal Tax Return and claimed deductions for various

business expenses. Claimant specifically took $3082 in deductions for truck expenses for traveling 5760 miles, $2250 for business insurance expenses, $2500 in work tool expenses and $360 for work phone expenses. Claimant commented that he drove approximately 10 miles each day for about 90 days for a total of 900 miles while working for Employer. However, because he deducted for a total of 5760 miles, he necessarily used his truck during 2017 for business activities unrelated to his work for Employer. Claimant also remarked that he paid $750 for his insurance for Employer but was unable to explain the remaining $1500 of his insurance deduction. Claimant further explained that he owned drills, screwdrivers, laser devices, tool belts, tool bags, work clothes and work shoes that he used for work. He commented that he had to purchase many power tools throughout the course of e year because they break and cost approximately $200-$400 each to replace. He thus incurred expenses of approximately $2500 for tools and supplies for the year 2017 even though he only worked for Employer for approximately three months at the end of the year. Finally, Claimant deducted $360 for a work cell phone but did not have a personal cell phone.

11. Claimant further confirmed at his deposition that he has previously worked under aliases and used different Social Security numbers. He has previously worked under the name of Sergio Macias for different employers.

12. On June 22, 2018 Project Foreman Blaine Mulnix testified through an evidentiary deposition in this matter. Mr. Mulnix was present at the Copper Leaf Apartments when Claimant was injured on December 19, 2017. He confirmed that Claimant was not an employee but an independent contractor. Mr. Mulnix explained that he awarded projects to Claimant and inspected the work upon completion. He did not work directly with Claimant and only saw him in the morning when he would arrive, possibly at lunchtime and at another two points during the day while completing his rounds. Mr. Mulnix explained that Employer did not supply Claimant or other independent contractors with tools, dictate work hours or provide any training. He detailed that with Claimant and other independent contractors he did not specify when they needed to be present at the jobsite. Claimant could choose to work certain days and not work for Employer on others.

13. Mr. Mulnix testified that Employer provided ladders and scaffolding to all independent contractors and subcontractors at a jobsite for purposes of safety and efficiency. He noted that the scaffolds are meticulously maintained, serviced and OSHA approved. Moreover, it would be inefficient for each independent contractor to move his own ladders and repeatedly build his own scaffolding at the jobsite.

14. Claimant testified at the hearing in this matter and through a post-hearing evidentiary deposition on June 15, 2018. He explained that he has approximately 10 years of experience framing and installing drywall. Claimant noted that he had previously worked for companies as an employee but not as an independent contractor. He provided his own tools while working for Employer, but Mr. Mulnix told him where to work every day. He worked approximately eight hours each day for Employer. Claimant explained that he recorded his daily hours on a form and earned $24.00 per

hour from Employer. Nevertheless, he acknowledged that he created invoices for Employer that included a unit price. Claimant stated that he did not understand the independent contractor forms he completed for Employer but received two days to review and complete the paperwork. Finally, Claimant acknowledged that his last Employer went out of business in 2015.

15. Respondents have proven that it is more probably true than not that Claimant was an "independent contractor" pursuant to §8-40-202(2) C.R.S. Initially, Claimant completed paperwork in which he acknowledged that he was an independent contractor responsible for his own Workers' Compensation insurance. On September 22, 2017 Claimant submitted a Declaration of Independent Contractor Status Form. The Form provided that Claimant would operate as an independent contractor. Claimant would not receive Workers' Compensation benefits, was responsible for paying all federal and state income taxes and would furnish Workers' Compensation insurance for any workers hired by Noe Lopez Construction. Furthermore, on September 20, 2017 Claimant executed a Subcontractor Agreement with Employer. The document specified that Claimant was a subcontractor of Employer who would provide labor and materials at a rate of $9.00 per sheet of drywall.

16. The record reflects that Claimant also operated as an independent contractor. Respondents have proven that Claimant was customarily engaged in an independent trade, occupation, profession, or business related to the services performed. Claimant was also not required to work exclusively for Employer. Claimant received a 1099 miscellaneous tax form from Employer that identified Noe Lopez Construction and reflected nonemployee compensation of $12,252. Claimant used the 1099 form to prepare his 2017 Federal Income Taxes. He testified that the 1099 form did not represent all of his 2017 income because he also worked for another company. He noted that he earned approximately $900 per week in cash from the other entity. His total 2017 income was approximately $30,000-$40,000. Because Claimant earned approximately $20.00-$30,000 during 2017 working for another entity his income was not significantly dependent upon continued employment with Employer.

17. Claimant also identified himself as self-employed in his 2017 Federal Tax Return and claimed deductions for various business expenses. Claimant specifically took $3082 in deductions for truck expenses for traveling 5760 miles, $2250 for business insurance expenses, $2500 in work tool expenses and $360 for work phone expenses. Claimant's tax documents thus reflect that he used his truck, drywall tools and phone to earn approximately $900 each week as an independent contractor for another entity.

18. The record also reveals that Claimant was free from direction and control in the services he performed. Mr. Hess outlined the differences between the employees and independent contractors who work for Employer. He remarked that employees have a specific start and end time every day, submit timecards and are told when they can take lunch breaks. In contrast, Claimant was an independent contractor who did not have to report when he was coming to work or when he was taking a lunch break.

Moreover, Mr. Mulnix credibly explained that he awarded projects to Claimant and inspected the work upon completion. He did not work directly with Claimant and only saw him in the morning when he would arrive, possibly at lunchtime and at another two points during the day while completing his rounds. He detailed that Claimant was not required to be at the jobsite on specified days or times. Claimant could choose to work certain days and not work for Employer on others.

19. Employer did not establish a quality standard for Claimant's drywall work. Mr. Mulnix did not work with Claimant or oversee his work. He simply inspected the work upon completion to address project specifications.

20. Claimant's payment arrangement with Employer also reflects that he operated as an independent contractor with Employer. Although Claimant received compensation at the rate of $24.00 per hour, his Subcontractor Agreement with Employer specified that he would provide labor and materials at a rate of $9.00 per sheet of drywall. Mr. Hess noted that Employer originally planned to pay Claimant by sheet of drywall, but because he did not have a partner, he was asked to do "back out work." Mr. Hess remarked that back out work could only be calculated on an hourly basis. Claimant also submitted invoices to Employer for work performed. He issued the invoices in his trade name of Noe Lopez Construction. The invoices provided a description of the work, unit price and amount of requested payment.

21. Employer also did not provide training to Claimant about drywall installation. Claimant had significant drywall experience and did not require supervision of his work. He acknowledged that he has approximately 10 years of experience framing and installing drywall. Mr. Hess and Mr. Mulnix also confirmed that Employer did not provide Claimant or other independent contractors with any training.

22. Employer did not provide tools or benefits to Claimant. Although Employer furnished ladders and scaffolding to all independent contractors for purposes of safety and efficiency, Employer did not provide Claimant with tools to complete his work. Claimant testified that he owned drills, screwdrivers, laser devices, tool belts, tool bags, work clothes and work shoes that he used for work. He commented that he has to replace many power tools throughout the course of a year because they break and cost approximately $200-$400 each.

23. The record thus demonstrates that Claimant was an independent contractor. Claimant completed extensive paperwork prior to working for Employer in which he agreed to operate as an independent contractor under the tradename Noe Lopez Construction. Claimant's testimony and tax documents establish that he was customarily engaged in an independent trade regarding drywall services. Finally, balancing the statutory factors in §8-40-202(2) C.R.S. reflects that Claimant operated as an independent contractor while working for Employer. Accordingly, Respondents have proven that Claimant was an independent contractor when he suffered injuries on December 19, 2017 at Copper Leaf Apartments. **Claimant's Workers' Compensation claim is thus denied and dismissed.**

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Pursuant to §8-40-202(2)(a), C.R.S. "any individual who performs services for pay for another shall be deemed to be an employee" unless the person "is free from control and direction in the performance of the services, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent . . . business related to the service performed." Moreover, pursuant to §8-40-202(2)(b)(I), C.R.S. independence may be demonstrated through a written document.

5. A necessary element to establish that an individual is an independent contractor is that the individual is customarily engaged in an independent trade, occupation, profession or business related to the services performed. *Allen v. America's Best Carpet Cleaning Services,* W.C. No. 4-776-542 (ICAP, Dec. 1, 2009). The statutory requirement that the worker must be "customarily engaged" in an independent trade or business is designed to assure that the worker, whose income is almost wholly dependent upon continued employment with a single employer, is protected from the "vagaries of involuntary unemployment." *In Re Hamilton,* W.C. No. 4-790-767 (ICAP, Jan. 25, 2011).

6. The "employer" may also establish that the worker is an independent contractor by proving the presence of some or all of the nine criteria enumerated in §8-

40-202(2)(b)(II), C.R.S. *See Nelson v. ICAO,* 981 P.2d 210, 212 (Colo. App. 1998). The factors in §8-40-202(2)(b)(II), C.R.S. suggesting that a person is not an independent contractor include whether the person is paid a salary or hourly wage rather than a fixed contract rate and is paid individually rather than under a trade or business name. Conversely, independence may be shown if the "employer" provides only minimal training for the worker, does not dictate the time of performance, does not establish a quality standard for the work performed, does not combine its business with the business of the worker, does not require the worker to work exclusively for a single entity, does not provide tools or benefits except materials and equipment, and is unable to terminate the worker's employment without liability. *In Re of Salgado-Nunez,* W.C. No. 4-632-020 (ICAP, June 23, 2006). Section 8-40-202(b)(II), C.R.S. creates a "balancing test" to ascertain whether an "employer" has overcome the presumption of employment in §8-40-202(2)(a), C.R.S. The question of whether the "employer" has presented sufficient proof to overcome the presumption is one of fact for the Judge. *Id.*

7. As found, Respondents have proven by a preponderance of the evidence that Claimant was an "independent contractor" pursuant to §8-40-202(2) C.R.S. Initially, Claimant completed paperwork in which he acknowledged that he was an independent contractor responsible for his own Workers' Compensation insurance. On September 22, 2017 Claimant submitted a Declaration of Independent Contractor Status Form. The Form provided that Claimant would operate as an independent contractor. Claimant would not receive Workers' Compensation benefits, was responsible for paying all federal and state income taxes and would furnish Workers' Compensation insurance for any workers hired by Noe Lopez Construction. Furthermore, on September 20, 2017 Claimant executed a Subcontractor Agreement with Employer. The document specified that Claimant was a subcontractor of Employer who would provide labor and materials at a rate of $9.00 per sheet of drywall.

8. As found, the record reflects that Claimant also operated as an independent contractor. Respondents have proven that Claimant was customarily engaged in an independent trade, occupation, profession, or business related to the services performed. Claimant was also not required to work exclusively for Employer. Claimant received a 1099 miscellaneous tax form from Employer that identified Noe Lopez Construction and reflected nonemployee compensation of $12,252. Claimant used the 1099 form to prepare his 2017 Federal Income Taxes. He testified that the 1099 form did not represent all of his 2017 income because he also worked for another company. He noted that he earned approximately $900 per week in cash from the other entity. His total 2017 income was approximately $30,000-$40,000. Because Claimant earned approximately $20.00-$30,000 during 2017 working for another entity his income was not significantly dependent upon continued employment with Employer.

9. As found, Claimant also identified himself as self-employed in his 2017 Federal Tax Return and claimed deductions for various business expenses. Claimant specifically took $3082 in deductions for truck expenses for traveling 5760 miles, $2250 for business insurance expenses, $2500 in work tool expenses and $360 for work phone expenses. Claimant's tax documents thus reflect that he used his truck, drywall

tools and phone to earn approximately $900 each week as an independent contractor for another entity.

10. As found, the record also reveals that Claimant was free from direction and control in the services he performed. Mr. Hess outlined the differences between the employees and independent contractors who work for Employer. He remarked that employees have a specific start and end time every day, submit timecards and are told when they can take lunch breaks. In contrast, Claimant was an independent contractor who did not have to report when he was coming to work or when he was taking a lunch break. Moreover, Mr. Mulnix credibly explained that he awarded projects to Claimant and inspected the work upon completion. He did not work directly with Claimant and only saw him in the morning when he would arrive, possibly at lunchtime and at another two points during the day while completing his rounds. He detailed that Claimant was not required to be at the jobsite on specified days or times. Claimant could choose to work certain days and not work for Employer on others.

11. As found, Employer did not establish a quality standard for Claimant's drywall work. Mr. Mulnix did not work with Claimant or oversee his work. He simply inspected the work upon completion to address project specifications.

12. As found, Claimant's payment arrangement with Employer also reflects that he operated as an independent contractor with Employer. Although Claimant received compensation at the rate of $24.00 per hour, his Subcontractor Agreement with Employer specified that he would provide labor and materials at a rate of $9.00 per sheet of drywall. Mr. Hess noted that Employer originally planned to pay Claimant by sheet of drywall, but because he did not have a partner, he was asked to do "back out work." Mr. Hess remarked that back out work could only be calculated on an hourly basis. Claimant also submitted invoices to Employer for work performed. He issued the invoices in his trade name of Noe Lopez Construction. The invoices provided a description of the work, unit price and amount of requested payment.

13. As found, Employer also did not provide training to Claimant about drywall installation. Claimant had significant drywall experience and did not require supervision of his work. He acknowledged that he has approximately 10 years of experience framing and installing drywall. Mr. Hess and Mr. Mulnix also confirmed that Employer did not provide Claimant or other independent contractors with any training.

14. As found, Employer did not provide tools or benefits to Claimant. Although Employer furnished ladders and scaffolding to all independent contractors for purposes of safety and efficiency, Employer did not provide Claimant with tools to complete his work. Claimant testified that he owned drills, screwdrivers, laser devices, tool belts, tool bags, work clothes and work shoes that he used for work. He commented that he has to replace many power tools throughout the course of a year because they break and cost approximately $200-$400 each.

15. As found, the record thus demonstrates that Claimant was an independent contractor. Claimant completed extensive paperwork prior to working for Employer in which he agreed to operate as an independent contractor under the tradename Noe Lopez Construction. Claimant's testimony and tax documents establish that he was customarily engaged in an independent trade regarding drywall services. Finally, balancing the statutory factors in §8-40-202(2) C.R.S. reflects that Claimant operated as an independent contractor while working for Employer. Accordingly, Respondents have proven that Claimant was an independent contractor when he suffered injuries on December 19, 2017 at Copper Leaf Apartments. *See Industrial Claim Appeals Office v. Softrock Geological Services, Inc*., 325 P.3d 560 (Colo. 2015) (whether an individual is customarily engaged in an independent trade, occupation, profession, or business related to the service performed must be determined by applying a totality of circumstances test that evaluates the dynamics of the relationship between the individual and the putative employer). **Claimant's Workers' Compensation claim is thus denied and dismissed.**

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant worked for Employer as an independent contractor. **Claimant's Workers' Compensation claim is thus denied and dismissed.**

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he suffered a worsening of a work-related medical condition entitling him to reopen workers' compensation claim 5-004-293-01.

II. Determination of Claimant's authorized treating physician.

III. Whether Claimant is entitled to additional medical treatment.

FINDINGS OF FACT

1. Claimant is a 41 year old man who works for Employer as a cement truck driver.

2. On July 17, 2015 sustained an admitted industrial injury to his back and left wrist when he slipped and fell while exiting out of a cement truck (W.C. 4-991-664). Tanya Michelle Kern, MD diagnosed Claimant with a distal radius fracture of the left wrist, lumbar strain and thoracic myofascial strain. Claimant treated for his injuries with medication, physical therapy, occupational therapy and chiropractic treatment. Claimant continued to experience pain in his lumbar spine.

3. Claimant sustained a subsequent admitted industrial injury on October 26, 2015, (W.C. 5-004-293), which is the subject of Claimant's petition to reopen. While driving a cement truck, Claimant was rear-ended by a semi-trailer doing over 50 miles per hour.

4. Claimant treated with Tomm VanderHorst, MD as his authorized treating physician. On October 28, 2015, Dr. VanderHorst gave the following assessment: mild cervical strain, scalp contusion without evidence of concussion, mild headache, and exacerbation of pre-existing chronic low back strain from the July 17, 2015 injury. Dr. VanderHorst recommended Claimant continue chiropractic treatment and medications, and placed Claimant on temporary work restrictions. Claimant was subsequently diagnosed with tinnitus. On October 30, 2015, Dr. VanderHorst released Claimant to full duty work with no restrictions.

5. On November 5, 2015, Dr. Kern noted Claimant had been improving prior to the October 26, 2017 injury and placed Claimant at maximum medical improvement ("MMI") for his injuries related to the July 17, 2015 work injury. Dr. Kern opined Claimant did not require any permanent impairment rating, restrictions or maintenance care as a result of the July 17, 2015 injury.

6. On November 17, 2015, Claimant underwent a lumbar spine MRI which revealed edema in the anterior superior endplate of L3 and L4, minimal disc desiccation and disc

bulge at L2-L3, and mild disc bulge at L4-L5. Whitney J. Morgan, MD provided the following impression: "1. Edema in the anterior superior endplates of L3 and L4 may reflect bone contusion from recent injury versus discogenic endplate edema. No vertebral body height loss. 2. Mild degenerative changes in the lumbar spine without spinal canal or foraminal stenosis."

7. On December 15, 2015, Dr. VanderHorst noted Claimant had 12 physical therapy sessions and 8 sessions of chiropractic treatment, with no ongoing benefit from physical therapy. Claimant reported 8/10 back pain across the mid and low back, with no radiation, paresthesias or weakness. Dr. VanderHorst referred Claimant for a physiatry evaluation for his persistent low back pain.

8. Claimant continued to treat with Dr. VanderHorst and continued to report 7-8/10 back pain, with no radiation, paresthesias or weakness. Claimant continued to work full duty.

9. On April 16, 2016, Robert Kawasaki, MD performed bilateral L2-3 and L3-4 facet injections which were without immediate or long-term benefit. On April 18, 2016, Claimant reported to Dr. VanderHorst developing generalized muscle pain in both upper and lower extremities after the injections.

10. On May 2, 2016, Dr. VanderHorst referred Claimant to Rebecca Hawkins, PhD for six sessions of biofeedback.

11. Claimant sought treatment outside of the workers' compensation system at Denver Back Pain Specialist. On May 12, 2016, Claimant was seen by Jason Redington, PA-C, under the supervision of Scott Bainbridge, MD. Claimant denied having any radicular symptoms and weakness. On exam, PA-C Redington noted increased pain with lumbar extension and quadrant maneuvers bilaterally with pain produced in the mid to lower lumbar spine, as well as tenderness to palpation over L2-4 and moderate paraspinal muscle spasms bilaterally. PA-C Redington gave the following assessment: intervertebral disc degeneration and displacement in the lumbar region, low back pain, and lumbosacral spondylosis without myelopathy or radiculopathy. PA-C Redington recommended Claimant undergo medial branch block testing.

12. Claimant treated with Dr. Hawkins on June 23, 2016, July 19, 2016 and July 16, 2016. At each visit he reported 8/10 back pain. On July 26, 2016, Dr. Hawkins noted that when Claimant sat upright using good posture his EMG biofeedback readings were entirely normal and he did not appear to be guarding or over recruiting. She further noted that, except when slouching, there was no indication of neuromuscular dysfunction contributing to his low back pain to include guarding, hypertonicity, lack of flexion, relaxation phenomenon, or muscle spasm. It was her impression that no further treatment was needed. Dr. Hawkins stated, "…given his complaints of widespread muscle pain that would likely not be considered claims-related, I suggested [Claimant] consider following-up with his PCP to rule out an underlying medical condition..."

13. On July 8, 2016, Dr. Bainbridge performed medial branch blocks at levels L3-5. Claimant had a non-diagnostic response to the medial branch blacks.

14. On August 15, 2016, Dr. VanderHorst placed Claimant at MMI for the October 26, 2015 work injury. Claimant reported to Dr. VanderHorst constant 8/10 midline upper low back pain with no radiation into the lower extremities, no paresthesias, and no muscular weakness. Dr. VanderHorst noted Claimant was not taking any medications and had been working 13.5 hour days, 65 hours a week with overtime in the summer. His final assessment was, *inter alia*, chronic midline low back pain without sciatica. Dr. VanderHorst opined Claimant did not sustain any permanent impairment, and did not require any permanent restrictions or maintenance care.

15. Dr. Bainbridge performed an impairment rating on November 28, 2016. He opined Claimant was MMI as of that date. Claimant complained of 9/10 low back pain, as well as pain in his right thigh and calf that began approximately three months prior. Dr. Bainbridge reviewed the November 17, 2015 lumbar MRI and indicated the MRI revealed L2-3 disc protrusion with degenerative changes. Dr. Bainbridge gave the following assessment: other intervertebral disc displacement of the lumbar region, and L2-3 disc protrusion with discogenic pain. Dr. Bainbridge noted Claimant had a permanent injury, but was not taking any medications and continued to work. He assigned a 12% total combined whole person impairment, apportioning 6% to the July 2015 work injury. He noted,

> [Claimant] did have questions regarding future care, but given his functional level a lumbar fusion would not be indicated at this point. We also did discuss a clinical trial we are currently a site for that utilizes donor stem cells to treat lumbar discogenic pain. [Claimant] did express his interest in this option once his case is settled.

16. On December 13, 2016, Claimant underwent a Division Independent Medical Examination "(DIME") performed by J.E. Dillon, MD. Dr. Dillon noted she reviewed some medical records, but was not provided a complete medical record for review, including no imaging reports. Claimant reported low back pain with "vaguely described" radiation into the right leg and thigh. He denied paresthesias and saddle area symptoms. On exam, Dr. Dillon noted diffuse muscle tenderness in the lumbar region, and intact neurovascular function in the lower extremities with normal strength, sensation, reflexes. Dr. Dillon agreed with Dr. Bainbridge's MMI date of November 28, 2016. She opined that Claimant had residual low back pain with vaguely described right-sided lower extremity radiation, and assigned a total combined 13% whole person impairment. She did not specifically address restrictions or maintenance care.

17. Respondents filed a Final Admission of Liability on January 30, 2017 admitting to the 13% whole person impairment assigned by Dr. Dillon. Medical maintenance care was denied.

18. On April 19, 2017, Claimant returned to Dr. Bainbridge for reevaluation. Dr. Bainbridge noted Claimant returned with complaints of "increased low back pain," rating

the pain at 8/10. Dr. Bainbridge noted Claimant had been taking medication for hyperlipidemia and began to experience pain and weakness in his legs, which resolved when Claimant stopped taking the medication. Claimant reported taking ibuprofen once or twice per week to manage his pain, along with medication to aid in sleeping. On examination, Dr. Bainbridge noted upper lumbar pain with thoracolumbar flexion and extension. Dr. Bainbridge remarked, "After [Claimant] has settled his case, he may be a candidate for the Mesoblast study."

19. Claimant next returned to see Dr. Bainbridge on September 7, 2017. Claimant again reported back pain at the level of 8/10. No abnormal exam findings were noted. Dr. Bainbridge noted Claimant was a better candidate for a Relevient Study, and planned to follow up once Claimant's workers' compensation case was settled.

20. Claimant also sought treatment with Kevin Smith, MD, who performed bilateral L2-3 epidural steroid injections on October 6, 2017. The injections initially increased Claimant's pain, and then provided some relief before the pain ultimately returned to Claimant's normal level by mid-December 2017.

21. Claimant underwent a repeat lumbar spine MRI on November 10, 2017. A combination of Modic type 1 and type 2 endplate changes were observed along the anterosuperior margin of the L2 vertebral body with no protrusion, and mild Modic type 2 endplate changes on the anterior superior margin of the L4 endplate. David Solsberg, MD provided the following impression:

> 1. There are degenerative endplate changes at L3 and L4 more pronounced at the L3 level. 2. There is no fracture, bone lesion or malallgnment (*sic*). There is straightening of the normal lordosis and this may be seen with muscle spam or may be related to positioning. 3. There are small zygapophyseal joint effusions at L4-5. This may by physiologic or may be seen with mild synovitis or arthritis. 4. There is no protrusion. There is no stenosis.

22. On December 4, 2017, Dr. Smith performed a discogram at L2-3, L3-4 and L4-5. Claimant had a positive pain response at L2-3.

23. Claimant underwent a post-discography lumbar spine CT scan on December 4, 2017, which revealed a grade 3 annular tear at L2-3, grade 1 annular tears at L3-4 and L4-5, and mild sacroiliac arthritis.

24. On December 15, 2017, Claimant saw Adrian Sutter PA-C under the supervision of Giancarlo Checa, MD. Claimant reported 9/10 low back pain. PA-C Sutter diagnosed Claimant with lumbar disc herniation, lumbar disc degeneration and chronic pain syndrome. He noted, "We have discussed the stem cell option, but he cannot afford the out-of-pocket cost." PA-C Sutter referred Claimant for a surgical consultation.

25. On February 5, 2018, Claimant was seen at the Rocky Mountain Spine Clinic by David Whatmore, PA-C, under the supervision of Chad J. Prusmack, MD. Claimant reported having significant upper lumbar pain and some intermittent radiculopathy into

the legs since the October 26, 2015 injury. PA-C Whatmore reviewed the results of diagnostic testing, noting the discogram showed concordant pain response at L2-3, and the CT scan showed a grade 3 annular tear at L2-3. On exam, PA-C Whatmore noted some paresthesias and some weakness into the L3 distribution and diminished sensation bilaterally in the L3 distribution. He diagnosed Claimant with low back pain. He opined that if Claimant did not improve, Claimant could potentially require correction of the damaged disc at L2-3 with a decompression and minimally invasive lumbar fusion. A March 9, 2018 addendum by Dr. Prusmack noted he reviewed Claimant's chart, records and November 10, 2017 MRI, and agreed Claimant's injuries and subsequent need for surgery were caused by the October 26, 2015 injury.

26. Claimant filed a Petition to Reopen his claim on March 22, 2018, supported by the medical records of Dr. Smith and Dr. Checa.

27. On March 29, 2018, counsel for Respondents replied to Claimant's Petition to Reopen, declining to voluntarily reopen the claim, and designating Dr. VanderHorst as Claimant's authorized treating physician. Respondents specifically noted Drs. Prusmack, Whatmore, Sutter, Prospect, Checa and Smith are not authorized treating physicians.

28. On April 17, 2018, Dr. VanderHorst reevaluated Claimant in connection with Claimant's petition to reopen. He noted Claimant presented with interest in surgical intervention. Claimant reported experiencing continuing 8/10 pain in the upper lumbar region with some mild bilateral radiation. Claimant reported having constant bilateral calf discomfort and lateral thigh aches and tickling/tingling sensation in his lateral hip and thigh since undergoing bilateral L2-3 intraforaminal epidural steroid injections in October 2017. Dr. VanderHorst reviewed records of previous treatment and subsequent evaluations. He noted Claimant's November 10, 2017 MRI revealed degenerative endplates changes at L2 vertebral body and L4 endplate, and that the CT scan showed grade 3 annular tear at L2-3 and grade 1 annular tear at L3-5, and the lumbar discogram reported concordant pain at L2-3. Dr. VanderHorst referred to the MTG regarding discography, noting discography is accepted but rarely indicated and remains extremely controversial as an invasive diagnostic procedure to identify or refute a discogenic source of pain, particularly in symptomatic patients with annular tears.

29. On examination, he noted tenderness to percussion at L2-3 level midline, moderate tenderness to palpation of the bilateral paraspinous musculature at the same levels, mild discomfort with extension, and increased upper lumbar pain with forward flexion to knees. Lower extremity reflexes and sensation were symmetric. Dr. VanderHorst gave the following assessment: chronic midline low back pain and onset of sciatica following bilateral L2-3 intraforaminal steroid injection October 2017. He noted Claimant had a failed response to physical therapy, chiropractic, acupuncture, NSAID use, muscle relaxants, Lyrica, duloxetine, lumbar facet injections and lumbar epidural injections. Dr. VanderHorst stated,

> The location of his low back pain is primarily axial though he does report some bilateral thigh and calf symptoms including 'tickling sensation'

> bilaterally, without distinctly radicular component to these complaints and these later symptoms historically began following a non-authorized lumbar injection in October 2017. His pain level and location (as indicated on his self completed pain charts at each visit in our office) have shown no change in pain location or intensity from February 2016 to today.

30. Dr. VanderHorst noted that, although the discogram report indicated concordant pain at L2-3, it was unclear to him if there was a significant increase in Claimant's pain level, as no definitive pre-injection and post-injection pain levels were documented. Dr. VanderHorst noted Claimant continued to work his regular job duties, working 8-12 hours per day, and continued to perform normal activities of daily living. He remarked that, while he understood Claimant's desire to be pain free, additional intervention could put him at some level of risk. Dr. VanderHorst noted that Claimant's primary desire was to get rid of his pain, and reviewed with him that maintenance of normal life functions can be a wiser goal than elimination of pain. He ultimately referred Claimant to Dr. Roderick Lamond for a second opinion regarding lumbar surgical options.

31. Respondents denied authorization of the appointment with Dr. Lamond.

32. On June 18, 2018, John D. Douthit, MD performed an Independent Medical Examination ("IME") at request of Respondents. Dr. Douthit performed a medical record review and physically examined Claimant. Claimant reported back pain at the mid back at approximately the lower thoracic upper lumbar spine level, with pain going to the sides of his legs. On examination, Dr. Douthit noted no objective physical signs and a normal neurologic findings.

33. Dr. Douthit noted that the discogram produced concordant pain at L2-3, and the November 10, 2017 MRI revealed osteophyte formation and edema in the anterior space at L2-3, but more severe changes at L3-4. Dr. Douthit remarked that discograms are subjective tests and "cannot be depended upon to localize or identify the sole source of back pain." He opined that Claimant has low back pain with reactionary changes of the upper lumbar spine, related to his 2015 work injury, that Claimant remained at MMI, and disagreed with the recommendation of L2-3 fusion surgery due to insufficient correlation between the MRI, discogram, and the localization of pain.

34. Claimant testified at hearing that his back pain has worsened since being placed at MMI in November 2016. Claimant testified that he has experienced increased back pain and leg pain and tingling since the October 2017 injections. He testified that although he has worked full duty since shortly after the October 26, 2015 injury, at times it feels impossible to do his job, and participating in non-work recreational activities and chores is becoming increasingly more difficult. Claimant stated he desires to undergo the surgery recommended by Dr. Prusmack. He stated he has not incurred any additional injuries since October 26, 2015.

35. The ALJ credits Claimant's testimony and Dr. Prusmack's opinion, as supported by the medical records, over the opinions of Drs. VanderHorst and Douthit, and finds that Claimant's work-related condition has worsened since being placed at MMI.

36. Claimant has proven by a preponderance of the evidence that W.C. No. 5-004-293 should be reopened due to a change in Claimant's work-related condition.

37. The ALJ further finds that the right of selection did not pass to Claimant. Dr. VanderHorst is the authorized treating physician.

38. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Petition to Reopen

Section 8-43-303(1), C.R.S., provides that an award may be reopened on the ground of, *inter alia*, change in condition. The claimant shoulders the burden of proving his condition has changed and his entitlement to benefits by a preponderance of the evidence. Section 8-43-201; *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725 P.2d 63 (Colo. App. 1986). A change in condition refers either to change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). Reopening is warranted if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo. App. 1988).

Colorado recognizes the “chain of causation” analysis holding that results flowing proximately and naturally from an industrial injury are considered to be compensable consequences of the injury. Thus, if the industrial injury leaves the body in a weakened condition and the weakened condition plays a causative role in producing additional disability or the need for additional treatment such disability and need for treatment represent compensable consequences of the industrial injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970); *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082 (Colo. App. 2002); *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). However, no compensability exists if the disability and need for treatment were caused as a direct result of an independent intervening cause. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002).

The question of whether the claimant met the burden of proof to establish a causal relationship between the industrial injury and the worsened condition is one of fact for determination by the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *City of Durango v. Dunagan, supra.* Similarly, the question of whether the disability and need for treatment were caused by the industrial injury or by an intervening cause is a question of fact. *Owens v. Industrial Claim Appeals Office, supra.*

Claimant proved by a preponderance of the evidence he sustained a change in his condition that is causally related to the October 26, 2015 work injury. Claimant credibly testified his back and leg condition has worsened since being placed at MMI. Diagnostic tests taken subsequent to Claimant being placed at MMI reveal additional findings at level L2-3. During PA-C Whatmore’s February 5, 2018 examination, he noted paresthesias and weakness and diminished sensation into the L3 distribution, which was not reported by Claimant at or prior to being placed at MMI. Dr. Prusmack credibly opined that Claimant’s current condition and potential need for surgery is related to the October 26, 2015 work injury. While Dr. VanderHorst opined that the level and location of Claimant’s back pain has remained the same, he acknowledges Claimant has developed new leg symptoms and referred Claimant for a second surgical opinion. No

evidence was presented at hearing regarding an intervening injury. Based on the totality of the evidence, Claimant has proven it is more probable than not that he has suffered a worsening of his work-related condition, and his claim should be reopened.

Authorized Treating Physician

When a claim has been closed and the claimant seeks to reopen based on a worsened condition, the burden is upon the claimant to give notice to the respondent that additional benefits are sought, and such notice triggers the respondent's duty to designate an authorized treating physician. The right to select the physician passes to the claimant only if the respondent fails to authorize a physician upon notice the claimant seeks to reopen the claim. See *Twiggs v. Hoffman Structures*, W.C. No. 4-430-471 (ICAO December 11, 2001), *Gonzalez v. Crowley County Nursing Center*, W.C. No. 4-250-651 (ICAO November 27, 2000).

Claimant acknowledges Respondents authorized Dr. VanderHorst to see Claimant subsequent to the filing of Claimant's Petition to Reopen. However, Claimant argues that Respondents' refusal to authorize Dr. VanderHorst's referral to Dr. Lamond equates to a failure to authorize the care and treatment of Dr. VanderHorst, resulting in the right of selection passing to Claimant. The ALJ disagrees.

On March 29, 2018, Respondents declined to voluntarily reopen the claim, but specifically designated Dr. VanderHorst as the authorized treating physician. Dr. Dr. VanderHorst reevaluated Claimant on April 17, 2018. Respondents' subsequent denial of Dr. VanderHorst's referral to Dr. Lamond does not result in the right of selection passing to Claimant under these circumstances.

Medical Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

Claimant's position statement states it is premature to determine whether the potential fusion surgery is presently reasonably necessary, as no surgical request has been made. Dr. Prusmack has referenced a potential need for surgery in the event Claimant does not improve. The ALJ notes Claimant has yet to be evaluated by Dr. Lamond, as recommended by authorized treating physician Dr. VanderHorst. As Claimant has met his burden to reopen the claim, Respondents are liable for reasonably necessary and related medical treatment. However, the ALJ considers the issue of the reasonableness and necessity of a specific surgery withdrawn at this time and does not make a determination regarding any specific surgery.

ORDER

It is therefore ordered that:

1. Claimant's petition to reopen W.C. No. 5-004-293 is granted.

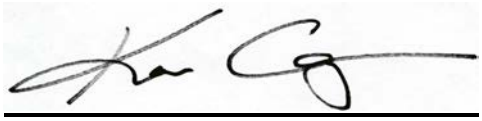
2. The right of selection did not pass to Claimant. Dr. VanderHorst is the authorized treating physician.

3. Respondents are liable for reasonably necessary and related medical treatment.

4. All matters not determined herein, including whether a fusion surgery is reasonably necessary, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 13, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant has proven a preponderance of the evidence that his claim should be reopened based on a worsening of condition since being placed at MMI on February 28, 2014.

II. If the claim is reopened, whether Claimant has proven by a preponderance of the evidence he is entitled to temporary total disability benefits from June 30, 2016 and ongoing.

FINDINGS OF FACT

Based upon the evidence submitted, the ALJ enters the following findings of fact:

Procedural Background

1. The above captioned claim has been the subject of three prior hearings: August 7, 2014, March 23, 2016, and October 23, 2016. Following hearing, the ALJ issued detailed Findings of Fact, Conclusions of Law, and Order for the August 7, 2014 and October 23, 2016 hearings. Concerning the March 23, 2016 hearing, the Parties submitted a Stipulation and Motion for Approval, which the ALJ approved on April 28, 2016. The aforementioned Orders are final as neither party appealed the ALJ issued Orders. The undersigned ALJ takes judicial notice of the prior orders and incorporates relevant findings of fact, stipulated facts, conclusions of law and orders from the prior Orders into the findings of fact, conclusions of law and order in the present matter. The prior orders have been entered into evidence by Respondents in their hearing submissions without objection from Claimant.

Claimant's Admitted Work Injury

2. Claimant sustained an admitted work-related accident on September 15, 2011. At the time of the September 15, 2011 injury, claimant worked for the employer as a roofing salesperson. Claimant stepped off a curb while carrying a ladder on the date of injury and "rolled" his right ankle. Claimant reported the injury and medical treatment was provided by the respondents. As set forth below, Claimant would subsequently develop complex regional pain syndrome (CRPS) in his right lower extremity.

3. Claimant has treated with several authorized providers and their associates for his September 15, 2011 industrial injury, including Dr. Douglas Bradley (Claimant's primary ATP), Dr. Michael Simpson (Claimant's surgeon), Dr. Michael Sparr (Claimant's rehabilitation provider), and Dr. Scott Primack (Claimant's current rehabilitation provider for post-MMI medical treatment). Dr. Primack and other providers, including Dr. Levi Miller and Dr. Tashof Bernton at Colorado Rehabilitation &

Occupational Medicine (CROM) clinic have provided, *inter alia*, diagnostic testing and injections to treat Claimant's condition and maintain him at MMI.

Claimant's Initial Placement at MMI

4. Claimant reached maximum medical improvement (MMI) for his September 15, 2011 injury on February 28, 2014 according to Dr. Bradley. Dr. Bradley found Claimant would require post-MMI medical care due to ongoing complaints of pain in his right lower extremity. Dr. Bradley determined claimant had a 15% scheduled impairment rating for his right lower extremity work injury.

5. Respondents filed a Final Admission of Liability (FAL) on March 17, 2014 consistent with Dr. Bradley's reports. The Final Admission admitted to the February 28, 2014 MMI date and a 15% scheduled impairment rating of the right lower extremity. The Final Admission also admitted for post-MMI medical care.

Claimant's First Application for Hearing on Reopening

6. Claimant objected to the FAL and filed an application for hearing dated April 15, 2014 endorsing, among other issues, reopening of the claim based upon a change of condition. Claimant did not file a Notice and Proposal seeking an opinion regarding MMI and/or permanent impairment from a Division Independent Medical Examiner (DIME). Instead, Claimant filed the aforementioned application for hearing asserting his right lower extremity injury worsened less than two months after he was placed at MMI by Dr. Bradley. As part of his application for hearing, Claimant requested an order finding he was no longer at MMI and entitled to additional benefits, including temporary total disability benefits, medical benefits and disfigurement. Claimant's April 15, 2014 application for hearing was heard by Judge Walsh on August 7, 2014.

7. After the August 7, 2014 evidentiary hearing, Judge Walsh issued his Findings of Fact, Conclusions of Law and Order on September 19, 2014. In his order, Judge Walsh found that Claimant was alleging that his "condition worsened on or about March 11, 2014" and that he was requesting an "order declaring he is no longer at MMI as of March 11, 2014 and temporary total disability (TTD) benefits should be paid from March 11, 2014 and ongoing." ALJ Walsh addressed the alleged worsening of condition finding that Claimant's testimony regarding the frequency and location of his lower extremity pain along with the presence and frequency of cramping and the presence of a sleep disorder was incredible and unpersuasive. Consequently, ALJ Walsh concluded that Claimant failed to meet his burden of proof on his petition to reopen based on worsening of condition. While Judge Walsh did award addition disfigurement benefits as part of his September 18, 2014 full order, he denied and dismissed Claimant's request to reopen the claim as well as his request for temporary total disability benefits. That order became final twenty (20) days after it was served on September 19, 2014, because neither party filed an appeal.

Claimant's Second Application for Hearing on Reopening

8. On February 7, 2015 (less than five months after Judge Walsh denied his request to reopen his claim), Claimant filed a new petition to reopen along with an application for hearing. In his February 7, 2015 application for hearing, Claimant requested a determination of whether he was at MMI, whether he suffered a worsening of his condition, and a request for medical benefits. Claimant subsequently withdrew his February 7, 2015 application for hearing and did not proceed to hearing.

Post-MMI Medical Care

9. Respondents admitted for post-MMI medical care in their April 15, 2014 Final Admission of Liability. Post-MMI medical care has been regularly provided to Claimant from February 28, 2014 when he was placed at MMI to the present. For more than four years, Claimant has been provided post-MMI maintenance care from Dr. Bradley, Dr. Primack and providers associated with Dr. Primack. Post-MMI care has been directed at Claimant's persistent symptoms in the right lower extremity associated with his September 15, 2011 industrial injury.

10. On March 24, 2015, Dr. Bradley returned Claimant to Dr. Scott Primack for a follow-up evaluation of Claimant's persistent right lower extremity symptoms. Dr. Primack referred Claimant to Dr. Tashof Bernton in his office for completion of autonomic testing.

11. On May 6, 2015, Dr. Scott Primack, issued a report noting that Claimant completed autonomic testing with Dr. Bernton and the testing was "consistent for someone with complex regional pain syndrome" (CRPS). Dr. Primack noted Dr. Bernton suggested Claimant proceed with a lumbar sympathetic injection[1] and, if that injection improved his function, including the motion in his ankle, then Claimant would meet the diagnostic criteria for CRPS of the right lower extremity.

12. Claimant's persistent right lower extremity symptoms were present when Dr. Bradley found Claimant attained MMI on February 28, 2014 and they persisted after Claimant reached MMI. Dr. Primack and Dr. Bernton determined the persistent symptoms met the criteria for CRPS, which provided a name for the symptoms but did not change Claimant's MMI status. Given Claimant's clinical examination on May 6, 2015, coupled with the results of his autonomic testing and the "entire record," Dr. Primack opined was at MMI with an 8% impairment of the whole person for his 2011 work injury. Dr. Primack's report contained an MMI date and impairment award inconsistent with the reports of Dr. Bradley. Arguably, this conflicting MMI date and whole person impairment rating created an obligation on the part of Respondents to take action to file either an admission of liability or an application for hearing.

[1] Claimant would go on to receive multiple lumbar sympathetic blocks on a maintenance basis as administered by Dr. Stephen Scheper and CROM physicians, including Dr. Primack, Dr. Miller, and Don Fresques, NP ("NP Fresques").

Respondents' Application for Hearing

13. Respondents elected to file an application for hearing after receiving Dr. Primack's MMI and Impairment Rating. Dr. Primack's MMI date and impairment rating were inconsistent with Dr. Bradley's MMI date and impairment rating. Respondents requested a determination of when Claimant attained MMI and what permanent impairment he should receive for his September 11, 2011 work injury.

14. Hearing on Respondents' November 25, 2015 application for hearing was set for March 23, 2016. The parties and Judge Walsh convened the hearing via telephone, as a blizzard closed Interstate 25 between Denver and Colorado Springs that morning, preventing travel to Pueblo by Respondents' counsel. The parties, in a telephone conference, agreed to submit the matter to ALJ Walsh for an order on written argument. Following the hearing, the parties agreed to file a "Stipulation and Motion for Approval (for Resolution of the March 23, 2016 Hearing Set with Judge Walsh)" in lieu of written argument. In the stipulation, the parties agreed that Dr. Primack's May 6, 2015 medical report did not affect the closed status of the claim and respondents had no duty to act on the report from Dr. Primack. The parties agreed further that Respondents' March 17, 2014 Final Admission of Liability admitting for a February 28, 2014 MMI date with impairment and the September 18, 2014 Final Order issued September 19, 2014 by Judge Walsh "closed all issues except post-MMI medical treatment." BN 081. Claimant signed the stipulation, along with counsel. The stipulation was approved by Judge Walsh on April 28, 2016.

Claimant's Third Application for Hearing on Reopening

15. Claimant filed his third application for hearing on June 29, 2016. In the June 29, 2016 application for hearing, Claimant alleged his condition had worsened, that he was no longer at MMI, and that his claim should be reopened for additional TTD. Claimant clarified at hearing on October 20, 2016 that he was seeking an order finding he was entitled to TTD from June 29, 2016 forward due to a worsening of condition. In response to the June 29, 2016 application for hearing filed by Claimant, Respondents, asserted, *inter alia*, that Claimant remained at MMI according to the opinions of Drs. Bradley and Primack and, because his MMI status had not changed, he was not entitled to additional TTD.

16. During his testimony at the October 20, 2016 hearing, Claimant described his symptoms as persistent 8-9/10 pain, poor balance, lower extremity weakness, sensitivity to touch that spread up his right leg to the hip, and impaired sleep. Claimant received injections to maintain his pain complaints. Claimant testified on October 20, 2016 he was offered pain medication for his ongoing pain complaints he associates with his injury, but he preferred to use medical marijuana rather than prescription pain medications. Claimant testified on October 20, 2016 that he had new or different symptoms than what he experienced in the past.

17. In a January 11, 2017 Corrected[2] Findings of Fact, Conclusions of Law and Order, the undersigned ALJ found the evidence presented at the October 20, 2016 did not support Claimant's assertions. Rather, the undersigned found that careful inspection of the medical records demonstrated that Claimant's complaints were consistent with those he has had prior to and after MMI. As noted, Claimant attempted to reopen his claim for worsening in 2014 after Dr. Bradley placed Claimant at MMI. At the August 7, 2014 hearing before Judge Walsh, Claimant testified to the myriad of conditions that plagued him after Dr. Bradley placed him at MMI on February 28, 2014. The complaints as expressed then mirrored his past symptoms and his complaints at the October 20, 2016 hearing. Specifically, at the August 7, 2014 hearing, Claimant testified he had a change in the location of his pain. He testified that where his pain was isolated to the foot and toes prior to MMI changed to involve the entire right leg from the toes to the hip 10 days after MMI. Claimant also testified that he felt pain "more often following MMI during the August 7, 2014 hearing. ALJ Walsh determined that Claimant's assertion that he had more pain in a different location than when placed at MMI was not credible or persuasive since he had severe constant pain at or before MMI in the same locations, according to the medical records submitted. Similarly, Claimant's reports of spasm or cramping as a new condition were not credible or persuasive, since cramping had been a constant complaint since 2012. Claimant also reported his sleep had been disrupted since he was placed at MMI. However, evidence presented documented Claimant's sleep complaints prior to MMI. Claimant testified at the 2014 hearing he only slept for a little over an hour before his pain disrupts his sleep. Judge Walsh found Claimant had sleep disturbances that were well documented in the records and actively treated prior to MMI. Finally, Claimant testified in 2014 he was worsened because of new shooting pain. Based upon the evidence presented, Judge Walsh found that Claimant had well documented numbness and shooting pain throughout the records prior to MMI.

18. In addition to allegations of new or worsened complaints since MMI, Claimant also argued in his post hearing position statement following the August 7, 2014 hearing that his condition had worsened because his diagnosis changed after MMI and he was provided with post-MMI injections in excess of what was contemplated at MMI. Claimant asserted this constituted "strong evidence" that his condition had worsened and that he was no longer at MMI." Judge Walsh rejected this argument finding claimant failed to prove a worsening of condition.

19. In the January 11, 2017 Corrected Findings of Fact, Conclusions of Law and Order, the undersigned found Claimant's assertions raised during the 2014 hearing on reopening and rescission of MMI significant because Claimant made similar assertions during the October 20, 2016 hearing, namely that a new diagnosis after MMI and treatment after MMI for that condition compelled a reopening for worsening.

20. In the findings of fact, conclusions of law and order for the October 20, 2016 hearing, the undersigned compared the intensity, frequency and location of Claimant's pain complaints between 2014 and the October 20, 2016 hearing. Based

[2] Corrected Findings of Fact, Conclusions of Law, and Order were issued to correct a scrivener's error.

upon that review the undersigned found very little difference between Claimant's 2014 complaints and his complaints at the 2016 hearing.

21. While Claimant asserted in testimony at the October 20, 2016 hearing that he had new complaints of sensitivity to touch that began six months earlier, the undersigned ALJ found Claimant's sensitivity to touch, in general, was not a new complaint, concluding that Claimant's sensitivity to touch was an allegation he asserted during his 2014 hearing concerning reopening.

22. At the time of his October 20, 2016 hearing, Claimant's assertion that his sensitively was "spreading" up the leg was not convincing to the undersigned based in part on Judge Walsh's September 18, 2014 findings which reflected that Claimant reported pain extending into the hip girdle in 2014. Moreover, Claimant conceded that he was "exquisitely tender to even light touch" in 2014 when treating with Dr. Sparr. At the 2014 hearing, Claimant complained of sensitivity to jeans and shoes. In 2014, Claimant testified he began changing his shoes every three to four hours to cope with the sensitivity of his lower extremity, a routine he continued to follow in 2016 according to his October 20, 2016 testimony. Consequently, the undersigned found Claimant's problems with sensitivity likely extended beyond the ankle and into the leg as of 2014, when Judge Walsh denied the claim for reopening and rescission of MMI status.

23. Similarly, Claimant testified at the October 20, 2016 hearing testified he developed a problem with balance after he was placed at MMI for his 2011 injury. At the October 20, 2016 hearing, Claimant asserted his balance problem justified a conclusion that his condition had worsened after he was placed at MMI. At the October 20, 2016 hearing, Claimant testified he stumbles and falls because of balance issues. The undersigned, however, found the balance issue, like the sensitivity to touch, was not a new complaint. In the 2014 hearing before Judge Walsh, Claimant testified he developed a difficulty walking, balancing when standing, and climbing ladders. He testified around March 11, 2014, he lost his ability to climb ladders because of balance issues. He decided in 2014 he must use a cane to keep from falling. In the Order issued following the October 20, 2016 hearing, the undersigned found Claimant's balance issues were not a new problem for him. Rather, it was present in 2014, if not earlier, when Judge Walsh denied the request for a reopening and removal of Claimant's MMI status.

24. In the findings of fact, conclusions of law and order following the October 26, 2016 hearing, the undersigned found there was no evidence that Claimant worked since leaving work for Employer in 2013. Claimant testified at the October 20, 2016 hearing he had not earned a wage since leaving work for Employer in this matter. At the October 20, 2016 hearing, Claimant testified he tried out a job with another family employer (Calvin Turner Roofing), but after observing the job, he determined he could not perform the work. Accordingly, the undersigned concluded that no persuasive evidence was presented to establish that Claimant's ability to work had changed since being placed at MMI. His permanent restrictions remained in place and were unchanged. Even if Claimant's condition had worsened, there is no credible evidence that he had greater restrictions on his ability to work. During the October 20, 2016

hearing, Claimant maintained he has been unable to work in any capacity since 2013 due to his 2011 work injury.

25. In the Order issued after the October 20, 2016 hearing, the undersigned found that Claimant continued to treat with and be evaluated in follow-up appointments by Dr. Bradley and Dr. Primack. Prior to the October 20, 2016 hearing, neither Dr. Bradley nor Dr. Primack rescinded MMI and neither doctor reported a worsening of condition. To the contrary, the undersigned found Dr. Bradley continued to maintain his February 28, 2014 MMI date in reports written before and after Dr. Primack's May 6, 2015 report. Medical records from February 28, 2014 to August 2016 (the last report received prior to the October 20, 2016 hearing was from August of 2016), establish that Dr. Bradley consistently opined that Claimant was at MMI and he reached MMI on February 28, 2014. Moreover, Claimant's work restrictions remained in place and were not altered. Maintenance treatment from February 28, 2014 through the hearing on October 20, 2016 focused on controlling Claimant's persistent pain, primarily with injections.

26. In the Order issued following the October 20, 2016 hearing, the undersigned ALJ found Claimant's testimony regarding the alleged worsening of his condition unpersuasive**.** The undersigned found no physician treating Claimant since he was placed at MMI documented that his symptoms had changed or that his condition had deteriorated. Moreover, the undersigned found Claimant's symptoms, including his pain levels, were similar to those he experienced when he was placed at MMI. The evidence presented at the October 20, 2016 hearing persuaded the undersigned ALJ that Claimant continued to have symptoms consistent with a CRPS diagnosis as expected. Consequently, while Claimant's diagnosis was refined to CRPS, he failed to prove at the October 20, 2016 hearing that the affects (symptoms) caused by that condition had worsened with time. Similar to the conclusion reached by ALJ Walsh, the undersigned found that Claimant had failed to present sufficient objective evidence of a worsened condition at the October 20, 2016 hearing that would warrant removing Claimant from MMI and reopening the case for additional TTD benefits. Accordingly, Claimant's requests were denied and dismissed.

27. The January 11, 2017 Order was not appealed and became final on January 31, 2017.

Claimant's Petition to Reopen and Fourth Application for Hearing on Reopening

28. Approximately three months after the aforementioned Order became final, Claimant filed another Petition to Reopen his claim on April 25, 2017. In the Petition to Reopen, Claimant alleged a change in condition, error, and mistake. Claimant attached several reports from Dr. Primack's office for dates of service between February 2017 and April 2017.

29. On May 18, 2017, Claimant filed an Application for Hearing, endorsing the issues of reasonably necessary medical benefits and petition to reopen claim. In their Response to Application for Hearing, Respondents endorsed causation, law of the case,

and res judicata in addition to the issues listed by Claimant in his application for hearing. The matter was set for hearing on September 14, 2017; however, the parties reached a tentative settlement of the claim at an August 25, 2017 settlement conference. The September 14, 2017 Hearing was vacated. After cancellation of the hearing, Claimant changed his mind and the agreement to settle was not finalized.

Claimant's Fifth Application for Hearing on Reopening

30. Claimant filed a new application for hearing on September 14, 2017. In addition to the issues he applied for in his May 18, 2017 Application for Hearing (reasonably necessary medical benefits and petition to reopen), Claimant added the issues of TTD from June 30, 2016 and ongoing; Mistake/Error; no longer at MMI; and worsening of condition. Respondents filed their Response to Application for Hearing endorsing: "Law of the case; res judicata; causation; closure of issues with final orders from prior litigation of the same issues (generally, see the final order of the undersigned ALJ served on January 11, 2017); offsets, if any." The hearing on Claimant's September 14, 2017 Application for Hearing was set for March 8, 2018 at 1 p.m. The March 8, 2018 hearing was cancelled after the parties learned they were missing medical records necessary to prepare for hearing.

Claimant's Sixth Application for Hearing on Reopening

31. Claimant filed the Application for Hearing that is the subject of this Order on March 6, 2018. Claimant endorsed reasonably necessary medical benefits; petition to reopen, Temporary Total Disability from June 30, 2016 and ongoing; Mistake/Error; no longer at MMI; and worsening of condition. Respondents filed their response to the application for hearing on April 4, 2018 endorsing: "Law of the case; res judicata; estoppel; whether claimant remains at MMI; the relatedness of claimant's alleged worsening and need for continuing treatment; statute of limitations for new conditions; [and] a determination of work-related conditions." The Claim was set for hearing on June 28, 2018 at 1:00 p.m. in Pueblo.

32. As noted above, the parties, absent the Claimant appeared for the June 28, 2018 hearing where they submitted hearing exhibits which were admitted into evidence without objection. No witnesses testified at hearing. The parties requested permission to submit written arguments to the ALJ. The request was granted. The ALJ also permitted the parties to submit their written argument without a page limitation given the extensive prior litigation and the complexity of the claims and defenses presented. Claimant filed an unopposed motion to extend the deadline for filing written argument to August 17, 2018, which was granted. The written position statements were received on the amended deadline at which time the matter became ready for an order.

Claimant's Arguments for Reopening

33. In his April 25, 2017, Petition to Reopen, Claimant seeks reopening of his claim based on a change/worsening of condition, error and mistake. Claimant contends that the evidence is strongly in favor of his position that his claim should be reopened as

his diagnosis/pain has changed significantly since being placed at MMI. In support of his position, Claimant argues that after being placed at MMI, Claimant was discovered to have complex regional pain syndrome (CRPS). At first, the CRPS was confined to the Claimant's right leg, where he originally sustained an injury to his right ankle. However, the CRPS subsequently spread into his arm right arm, and more recently to the left arm causing worsening pain and the need for treatment to different areas of the body. Based upon a careful review of the voluminous records submitted in association with the claim, the ALJ agrees with Claimant that the record evidence supports a finding that his condition has changed and worsened since being placed at MMI and after the October 20, 2016 hearing.

34. Here, Claimant's primary treating physician Dr. Miller, has stated that the Claimant is not at MMI. He stated his opinions in detail in a letter dated October 13, 2017. For ease of reference, some of the significant statements by Dr. Miller in that letter are set forth here. Dr. Miller confirmed that the CRPS in Claimant's right leg and right upper extremity are both related to the work-injury. After stating that Dr. Primack diagnosed CRPS of the right leg on May 6, 2015, Dr. Miller went on to add the following:

> The patient later then developed right upper extremity symptoms and was evaluated by Dr. Bernton with a Comprehensive Consultation performed May 25, 2017, who, again, based upon objective testing, including autonomic test battery, thermography, as well as clinical presentation including signs and symptoms, diagnosed the patient with complex regional pain syndrome type 2 of the right upper extremity which meets the Colorado Workers Compensation criteria for CRPS.
>
> * * *
>
> Yes, in my opinion, these two diagnoses are related to the Workers' Compensation injury of September 15, 2011, where the patient was working as a roofing salesman, stepped off a curb, resulting in ankle injury, receiving multiple surgeries, with signs and symptoms later developing into complex regional pain syndrome, and subsequently spreading unilaterally to the right upper extremity.

35. Dr. Miller then went on to explain that Claimant was no longer at MMI. According to Dr. Miller, "[Claimant's] condition has clearly worsened since [being placed at MMI]. As stated above, he subsequently has developed signs and symptoms consistent with complex regional pain syndrome type 2 in the right upper extremity." Claimant's changed diagnosis has precipitated additional treatment focused on curing and relieving him of the ongoing effects of his spreading CRPS.

36. Based upon the record evidence presented, the ALJ finds Dr. Miller's opinion that Claimant's condition has worsened to be supported by not only by his treatment records, but also the reports Dr. Bernton. Dr. Bernton's analysis of Claimant's CRPS and its eventual spread into both arms is sophisticated and favorable to the

Claimant. Some highlights of the treating records that document/support a change in Claimant's condition and a worsening of his diagnosis/pain include the following:

- A January 17, 2017, report form Dr. Miller wherein he noted Claimant's concern that his CRPS was "moving" based upon numbness and tingling in the right arm.

- A February 7, 2017 report of NP Fresques, co-signed by Dr. Miller documenting Claimant's persistent right upper extremity radicular symptoms in a C6 dermatomal which raised concern for migrating CRPS versus potential carpal tunnel or cervical radiculopathy as a cause for Claimant's ongoing symptoms.

- A March 30, 2017 report from Dr. Miller wherein he noted Claimant's ongoing right upper extremity symptoms were "similar to that in the lower extremity", including burning and aching on the lateral portion of the right arm across the radial aspect of the forearm and into the thumb and index finger. EMG testing was completed on this date which failed to "demonstrate evidence of medial neuropathy, i.e. carpal tunnel syndrome, nor evidence of acute denervation. Moreover, Claimant was noted to have "no clinical evidence of cervical radiculopathy. Consequently, thermography and QSART testing was recommended to assess for the spread of CRPS.

- A May 25, 2017 record of Dr. Tashof Bernton offering a very thorough opining documenting the spread of Claimant's CRPS into his right arm based upon both autonomic testing battery and stress thermography testing results conducted at that time. This report documents the start of the problems with the right arm. According to the report, "[Claimant] noted that six months ago he . . . started to have twitching of a finger on his right hand. This was followed progressively by increased pain in the upper extremity and he has ultimately developed swelling, pain, color difference and hyperglesia most prominent in the hand and ulnar distributions but diffusely throughout the hand and proximally into the upper extremity. He notes the presence of swelling, color difference, weather changes, decreased range of motion of the wrist and of the hand itself and some hyperalgesia. Patient denies any injury to the right hand or arm and notes he has had no problems with the hand or arm in the past." Dr. Bernton went on to note that the spread of CRPS from the right leg to the right arm is the second most common pattern seen. (Claimant's Exhibits, Pg. 450). Per Dr. Bernton, "[s]pread ipsilaterally of complex regional pain syndrome from an upper to lower or lower to upper extremity on the same side is the second most common pattern of spread of complex regional pain syndrome." (Claimant's Exhibits, Pg. 450). The most common pattern of spread, according to Dr. Bernton, is "mirror image" spread to the extremity on

the opposite side." Importantly, Dr. Bernton would conclude that Claimant had "complex regional pain syndrome type 2 of the upper extremity as a complication of his initial CRPS."

- In order to eliminate other possible causes for Claimant's right arm symptoms, an EMG was done. A report dated July 7, 2017, ruled out "a right median or ulnar neuropathy, cervical radiculopathy, brachioplexopathy, neurogenic thoracic outlet syndrome or generalized polyneuropathy." (Claimant's Exhibits, Pg. 445-6). Based upon the totality of the evidence presented, the ALJ finds that Claimant's CRPS best accounts for the pain he had been experiencing in his right arm up to the EMG study.

- An October 3, 2017, medical report indicating that Claimant has right CRPS, as well as a documented positive response to treatment for CRPS. (Claimant's Exhibits, Pg. 420).

- Dr. Miller's October 13, 2017 letter outlining Claimant's MMI status, the spread of his CRPS to the upper extremities and its relatedness to the index injury associated with this claim.

- Dr. Miller's continued express opinion on October 31, 2017, November 21, 2017, and January 16, 2018 that Claimant's right lower extremity CRPS had migrated into the bilateral upper extremities.

- The February 6, 2018, treatment report of Dr. Miller documenting that he administered a right L3 sympathetic block and a right stellate ganglion block based on the diagnoses of CRPS in the right arm and right leg. (Claimant's Exhibits, Pg. 395). The response to this treatment was diagnostic for CRPS as Claimant experienced warmth in the right upper extremity along with a visible decrease in the swelling of his right distal extremity, diminishment of allodynia and a slight improvement in his grip.

- A diagnostic stress thermography report of the upper extremities that was completed April 19, 2018. According to the report thermography testing demonstrated asymmetrical temperature differences that supported the diagnosis of CRPS. Accordingly, Dr. Bernton noted: "The findings in the upper extremities are clearly present for complex regional pain syndrome, including inability to fully close the fist and new area of left upper extremity involvement following IV placement." Dr. Bernton noted that even though Claimant's treatment is helping with the CRPS, the CRPS is still showing up on the diagnostic testing. "Integration of findings on thermographic imaging and clinical assessment indicate it is probable that mitigation of sympathetic instability has occurred in response to sympathetic blockade." "Patient

remains symptomatic and clear findings of complex regional pain syndrome remain, both clinically and with autonomic testing battery."

- A report from Dr. Bernton concerning the results of Claimant's April 19, 2018, autonomic testing battery of the upper extremity wherein Dr. Bernton noted that "with 3 points on the laboratory scale and 5 points on the clinical scale, this represents positive diagnostic result for complex regional pain syndrome."

- The April 19, 2018 "Comprehensive Medical Consultation" report from Dr. Bernton that was also written on the same day he did the diagnostic testing, April 19, 2018. This report contains an excellent encapsulation of the history and medical findings that establish the spread of Claimant's CRPS and the worsening of his condition/pain related to his September 15, 2011 industrial injury. The report contains reference to Claimant's development of an onset of "twitching of the finger of the right hand followed progressively by pain in the upper extremity developing into swelling, pain, color difference, and hyperalgesia." Findings were consistent with "complex regional pain syndrome, possibly type 2." The report goes on to indicated that Claimant also experienced an "onset of severe pain in the left forearm and wrist over the dorsoradial aspect following placement of the IV for one of his blocks in the left hand", which had been a "persistent" problem. Claimant pain was documented as being worse in both the upper and lower extremities with activity and worse in the lower extremity with prolonged standing or walking and better following blocks with medication." Physical examination demonstrated a significantly antalgic gait with "failure to go into toe off on the right foot" and with the right foot being externally rotated while ambulating. Examination of the upper extremity demonstrated "some hyperalgesia over the distal forearm on the right and also over the radial aspect of the distal forearm dorsally on the left." Claimant was unable to make a fist fully with either hand" and a tremor was present with extension of the fingers. "Asymmetry of coloration [was] noted and there is some fusiform swelling of the fingers…." Dr. Bernton opined that Claimant had CRPS in three of his limbs, and was likely in need of some additional treatment that had not been tried. According to Dr. Bernton, consideration of bisphosphonate (with due regard for potential side effects including osteonecrosis of the jaw) might prove helpful in this case."

- A report from a May 29, 2018 visit with Dr. Miller wherein he documented that, Claimant was seen for right L3 sympathetic block and right stellate ganglion block, which was done to treat CRPS of both the right lower extremity and the right upper extremity.

- A report from a June 5, 2018 follow-up visit with Dr. Primack wherein he documented the following: "[Claimant] underwent a repeat QSART per Dr. Bernton. This confirms CRPS which has migrated to his upper extremities. Claimant was assessed with "Complex regional pain syndrome, bilateral upper extremities and right lower extremity".

37. Given the above, the ALJ finds that Dr. Bernton performed diagnostic testing to confirm the spread of CRPS to the upper extremities, not once, but twice. Both tests yielded results consistent with the presence of CRPS in the arms, albeit not in the left upper extremity until April 29, 2018, following placement of an IV in the left hand for one of his blocks. Nonetheless, the evidence presented persuades the ALJ that Claimant's pain pattern had changed and he was definitively diagnosed with CRPS involving the right upper extremity by Dr. Bernton on May 25, 2017. Importantly, Dr. Bernton related Claimant's right upper extremity symptoms and treatment to his initial CRPS. While Dr. Miller raised concern for the potential that Claimant's CRPS had spread as early as February 2017, CRPS was not confirmed by objective diagnostic testing until Dr. Bernton completed both an autonomic battery and stress thermography testing on May 25, 2017. Accordingly, the ALJ finds that there was an objective change in Claimant's condition, both diagnostically and symptomatically following his placement at MMI as of May 25, 2017, after the October 20, 2016 hearing.

38. Dr. Rachel Basse conducted an independent medical examination (IME) of Claimant at the request of Respondents on February 27, 2018. As part of the IME, Dr. Basse reviewed all available medical reports from September 16, 2011 to February 13, 2018 and summarized them in her report. Dr. Basse concluded Claimant remains at MMI for his September 15, 2011 work injury and his upper extremity complaints are not related to the work injury and do not affect the MMI status of Claimant's September 15, 2011 work injury.

39. Dr. Basse found Claimant's upper extremity symptoms were first documented in the medical records on January 13, 2017 by Dr. Miller of Dr. Primack's office, more than five years after Claimant's injury. The symptoms and Claimant's alleged disability from his right upper extremity symptoms, began more than five (5) years after Claimant's September 15, 2011 work injury. Dr. Basse found it would be very odd for Claimant to develop symptoms in his right upper extremity related to his September 15, 2011 injury when the CRPS in his right lower extremity remained in the lateral aspect of his right leg. Dr. Basse found Claimant does not have CRPS symptoms in the medial portion of his right leg and foot. Dr. Basse opined the CRPS would have spread into the medial portion of his right lower extremity before it moved up into his right upper extremity. Further, Dr. Basse opined it would be unusual for Claimant to develop CRPS in his upper extremities more than five years after the work injury.

40. Dr. Basse also concluded that Claimant's right lower extremity CRPS may have burned itself out given the time and amount of treatment since Claimant was diagnosed with CRPS and his improved symptoms. Dr. Basse recommended that Dr. Primack's group reevaluate Claimant's right lower extremity CRPS to determine

whether Claimant continued to suffer from CRPS in this right leg. Dr. Basse recognized there are some parts of Claimant's history and physical exam that support a continuing diagnosis of CRPS in Claimant's right lower extremity, but the majority of his history and physical examination did not support a diagnosis of CRPS in his right lower extremity. Dr. Basse noted it had been three years since Claimant was tested for CRPS in his right lower extremity. Dr. Basse opined CRPS can and does "burn out" over time.

41. In an April 10, 2018 report, Dr. Primack agreed with Dr. Basse's recommendation and ordered CRPS testing. As noted above, testing, including a stress thermogram of both the upper and lower extremities, was conducted by Dr. Bernton on April 19, 2018, which testing results demonstrated that Claimant continues to experience symptoms from CRPS in both his right lower extremity and in this upper extremities. Dr. Bernton did not comment on Claimant's MMI status.

42. Dr. Primack evaluated Claimant again on June 5, 2018. Dr. Primack addressed the testing by Dr. Bernton, noting that Claimant's CRPS had migrated to the upper extremities. He also noted that Claimant was receiving regular injections to control his symptoms and was being prescribed Levorphanol, an opioid medicine designed to control his pain. Claimant reported the injections provided him with more pain relief than Levorphanol. Consequently, Dr. Primack reported he would start weaning Claimant off Levorphanol. Dr. Primack did not comment on Dr. Bernton's suggestion, as expressed on April 19, 2018 that Claimant may need of some additional treatment that had not been tried, including consideration of bisphosphonate, with due regard for its potential side effects. Dr. Primack did not address Claimant's MMI directly. Rather, he opined simply that overall Claimant was doing well status post injections.

43. Respondents contend that the evidence supports a finding that Claimant remains at MMI for the effects of his September 15, 2011 injury. As support for their contention, Respondents cite Dr. Primack's April 17, 2018 report wherein he noted: "I do believe the patient is still at Maximum Medical Improvement." Respondents also rely upon Dr. Bradley's March 8, 2018 report which indicates Claimant attained MMI on February 28, 2014 as well as Dr. Basse's opinion as stated in her February 28, 2018 report that in her opinion Claimant remains at MMI. Based upon a totality of the evidence presented, the ALJ is not persuaded. As cited, Drs. Basse and Primack reached their opinions regarding MMI prior to the completion of diagnostic testing by Dr. Bernton on April 19, 2018. The ALJ regards the results of Claimant's May 25, 2017 and April 19, 2018 diagnostic testing as key medical evidence that establishes that Claimant's condition had fundamentally changed and that he was experiencing new and worsening pain which in the eyes of Dr. Bernton warranted additional treatment that had not been tried.

44. Based upon the evidence presented, the ALJ is persuaded that Claimant's condition had objectively changed by May 25, 2017, when it was confirmed that his CRPS had spread to his upper extremities. To the extent that they differ from the opinions of Dr. Bernton, the ALJ finds the opinions of Drs. Primack, Bradly and Basse regarding the relatedness of Claimant's upper extremity symptoms to his CRPS

unpersuasive. Moreover, the evidence presented convinces the ALJ that Claimant's worsening CRPS diagnosis and symptoms, more probably than not, warranted additional curative treatment which he had not received by April 19, 2018, when repeat testing confirmed the presence of CRPS in the upper extremities for a second time, prompting Dr. Bernton to comment regarding Claimant's need for additional care. Accordingly, the ALJ finds that Claimant's condition was no longer stable and was likely to respond to and improve with further curative treatment as of May 25, 2017. Simply put, the ALJ finds that Claimant was no longer at MMI as of May 25, 2017. To the extent there is evidence to the contrary, including the opinions of Drs. Primack, Bradley and Basse, the Court has considered such evidence and finds it unpersuasive.

45. Claimant has proven by a preponderance of the evidence that he is entitled to additional TTD benefits beginning May 25, 2017 and continuing until such benefits can be terminated in accordance with law.

46. Respondents' reliance on res judicata or issue preclusion is misplaced as such doctrines do not apply where the issue involves reopening a claim. *Casias v. Interstate Brands Corporation*, W.C. No. 4-740-818-01 (March 21, 2013). This is especially true where the evidence here, involving the spread of the CRPS into the right and left arms, is different from the evidence that was presented at Claimant's prior hearings on reopening --- as none of Claimant's prior hearings involved a petition to reopen based upon the spread of CRPS into the upper extremities.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principles

A. The purpose of the Workers' Compensation Act of Colorado (Act) §§8-40-101, *et seq*. C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section* 8-40-102(1), C.R.S. The claimant bears the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-43-301(1), C.R.S.; *Faulker v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo.App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo.App. 2001). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of a claimant nor in favor of the rights of respondents. Section 8-43-201, C.R.S. A workers' compensation claim is decided on its merits. Section 8-43-201, *supra*.

B. In accordance with §8-43-215, C.R.S., this decision contains specific findings of fact, conclusions of law and an order. In rendering this decision, the ALJ has

made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice, or interest in the outcome of the case. Colorado Jury Instructions, Civil, 3:16. As found here, the ALJ credits the opinions of Dr. Bernton and the evidentiary record as a whole to conclude that Claimant continues to suffer from a medical condition requiring ongoing maintenance care, i.e. right lower extremity CRPS which subsequently spread to his upper extremities resulting in worsening symptoms and the need for additional curative treatment, including but not limited to the administration of bisphosphonate, that has not been attempted to date. Accordingly, the ALJ concludes that Claimant has proven that there has been a change in his condition and that he was no longer at MMI as of May 25, 2017. As found, the contrary opinions of Drs. Primack, Bradley and Basse, are unpersuasive. Based upon the evidence presented, the ALJ concludes that reopening of this claim is appropriate.

Reopening of the Claim

D. Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based upon a change in condition. In seeking to reopen a claim the Claimant shoulders the burden of proving his/her condition has changed and that he/she is entitled to benefits by a preponderance of the evidence. *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo.App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or, as presented here to a change in a Claimant's physical condition that is causally connected to the original injury. *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo.App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (Industrial Claims Appeals Office, Oct. 25, 2006).

E. The question of whether a claimant has proven a change in condition of the original compensable injury or a change in his/her physical or mental condition which can be causally connected to the original compensable injury is one of fact for determination by the ALJ. *Faulkner v. Industrial Claim Appeals Office*, 12, P.3d 844 (Colo.App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo.App. 1999); *In re Nguyen,* W.C. No. 4-543-945 (ICAP, July 19, 2004). Reopening is warranted if the claimant proves that additional medical treatment or disability benefits relating to the original injury are warranted. *Richards v. Industrial Claim Appeals Office*, 996 P.2d 756 (Colo.App. 2000); *Brickell v. Business Machines,*

Inc., 817 P.2d 536 (Colo. App. 1990)(reopening is appropriate if additional benefits are warranted). Reopening is not warranted if once reopened, no additional benefits may be awarded. *Richards v. Industrial Claim Appeals Office, supra.*; *Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo.App. 1988).

F. In this case, the evidence presented persuades the ALJ that Claimant has proven that his work related condition, i.e. CRPS has worsened since being placed at MMI on February 28, 2014. At the time of MMI, Claimant was experiencing symptoms associated with right lower extremity CRPS only. He was maintained at MMI and the symptoms associated with his right lower extremity CRPS had not changed by the time of the October 20, 2016 hearing. Indeed, Claimant's symptoms in his right lower extremity were similar to those he experienced when he was placed at MMI and his pain levels similar to those he had at MMI. Consequently, the evidence presented during the October 20, 2016 hearing was insufficient to establish a worsening of condition to warrant reopening of the claim and the request to reopen the claim was denied and dismissed.

G. Subsequently, Claimant's CRPS spread to his upper extremities and he experienced worsening pain associated with that CRPS. By April 19, 2018, Dr. Bernton recommended new and different treatment that had not be tried previously. The ALJ is persuaded that the evidence presented establishes a causal link between Claimant's September 25, 2011 industrial injury, his lower extremity CRPS and its eventual spread to his upper extremities. Moreover, the evidence is persuasive of the fact that Claimant's condition has fundamentally changed and worsened as measured objectively by diagnostic testing on May 25, 2017. Moreover, the evidence presented convinces the ALJ that Claimant is in need of treatment designed to cure and relieve him form the continued effects of this upper extremity CRPS. Consequently, the ALJ concludes that Claimant's has proven a worsening of his condition. Therefore, the request to reopen this claim is GRANTED.

H. Because Claimant has proven that he is entitled to reopening based upon a change of condition, this order does not address the request to reopen based upon error or mistake.

Claimant's Entitlement to TTD

I. Pursuant to § 8-43-303(1), C.R.S. "[a]t any time within six years after the date of injury, . . . an administrative law judge may . . . review and reopen any award on the ground of fraud, an overpayment, an error, a mistake, or a change of condition . . ." Based upon the evidence presented, the ALJ concludes that Claimant filed his petition to reopen the claim within the prescribed statutory time limits. Nonetheless, Respondents assert that Claimant is not entitled to TTD pursuant to § 8-41-206, C.R.S. because any disability associated with the spread of CRPS to his upper extremities did not manifest for more than five years after the date of injury. Section 8-41-206, C.R.S. provides that "[a]ny disability beginning more than five years after the date of injury shall be conclusively presumed not to be due to the injury, except in cases of disability or death resulting from exposure to radioactive materials, substances, or machines or to

fissionable materials, or any type of malignancy caused thereby, or from poisoning by uranium or its compounds, or from asbestosis, silicosis, or anthracnosis." Because any perceived or founded disability was not caused any of the aforementioned materials, machines or substances and began five years after the September 25, 2011 injury, Respondents contend that Claimant precluded from receiving TTD. The ALJ is not convinced. Rather, the ALJ concludes that Respondents have misinterpreted the application of the aforementioned statutory provision to this case. In this case, Claimant's disability had manifest itself at the time he was placed at MMI as evidenced by permanent impairment and the imposition of restrictions. Consequently, his disability began inside of five years. The ALJ reads § 8-41-206, C.R.S. to indicate that any disability that does not "begin", i.e. manifest itself within five years from the date of injury is presumed not to arise from the injury except in those cases where disability is caused by exposure to radioactive materials, substances, or machines or to fissionable materials, or any type of malignancy caused thereby, or from poisoning by uranium or its compounds, or from asbestosis, silicosis, or anthracnosis. While the question of whether Claimant's condition worsened, thereby causing greater disability as evidenced by further impairment of Claimant's earning capacity (which may entitle Claimant to TTD) remains unanswered, the ALJ finds the evidence presented conclusive of the fact that his disability began less than five years after he was injured on September 25, 2011. Consequently, the ALJ finds and concludes that Respondents reliance on § 8-41-206, C.R.S. as a bar to TTD in this case is misplaced.

J. To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts; that he left work as a result of the disability, and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo.App. 1997). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the Claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo.App. 1998).

K. In this case, the medical record supports that Claimant was assigned 15% scheduled impairment of his leg at the hip by final admission of liability (FAL) filed March 17, 2014. In the medical report outlining Claimant's permanent partial impairment, Dr. Bradly noted the following restrictions: "This will affect his daily living activities and his job by limiting him to not lift over 65 lbs. or carry over 35 lbs. He is not to push over 100 lbs. or pull over 50 lbs." At the time of the report of MMI/impairment, Claimant had not been assessed as having CRPS in his upper extremities. Based upon the medical record evidence, the ALJ is persuaded that the spread of CRPS to Claimant's upper extremities, as definitively diagnosed on May 25, 2017, probably restricted the use of his arms thereafter, further impairing his wage earning capacity.

While the evidentiary record is devoid of references to specific upper extremity restrictions after May 25, 2017, the ALJ finds it reasonable to conclude that Claimant's upper extremity use was likely restricted beyond that allowed for by Dr. Bradly when he placed Claimant at MMI. Simply put, the medical record evidence regarding the condition of Claimant's arms along with the treatment employed to treat the pain associated with his upper extremity CRPS persuades the ALJ that Claimant was probably unable to lift 65 lbs., carry 35 lbs., push 100 lbs. or pull 50 lbs.

L. Based upon the evidence presented, the ALJ is persuaded that Claimant was "disabled" within the meaning of § 8-42-105, C.R.S. beginning May 25, 2017, during which time frame he experienced a wage loss. Thus, he is entitled to TTD benefits. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999); *Hendricks v. Keebler Company*, W.C. No. 4-373-392 (Industrial Claim Appeals Office, June 11, 1999). Consequently, the ALJ concludes that Claimant is entitled to TTD benefits beginning May 25, 2017 and ongoing until such benefits can be terminated according to law.

Collateral Estopple (Issue Preclusion) & Res Judicata (Claim Preclusion)

M. Issue/Claim preclusion principles, although developed in the context of judicial proceedings, may be applied to administrative proceedings in Workers Compensation Claims. *Sunny Acre Villa Inc. v. Cooper*, 25P3d 44 (Colo.App.). Issue and claim preclusion work to preclude the relitigation of matters that have already been decided. *Argus Real Estate, Inc. v. E-470 Pub Highway Auth.,* 109 P3d 604, 608 (Colo. 2005). The doctrines are intended to promote judicial economy and to confirm the finality of judgments by preventing inconsistent decisions. *Argus,* 109 P3d at 608, 611. As found here, Respondents' reliance on res judicata or issue preclusion is misplaced in this case as the issues/claims begin litigated are different from those litigated at Claimant's prior hearings on reopening. Neither of the prior hearings involved a petition to reopen based upon the spread of CRPS into the upper extremities. Insofar as Respondents have failed to meet an element required to be established for the doctrines of issue preclusion/claim preclusion to apply, the ALJ concludes that Claimant is not estopped/precluded from litigating the issue of whether Claimant's cased should be reopened based upon a change/worsening of his diagnosis/condition.

ORDER

It is therefore ordered that:

1. Claimant's request to reopen his claim based upon a change/worsening of condition is GRANTED.

2. Claimant's request for additional TTD benefits after MMI is GRANTED IN PART. The evidence presented establishes that Claimant's condition changed/worsened on May 25, 2017. Consequently, Respondent-Employer shall pay Claimant, along with computed interest at a rate of 8% per annum on all amounts of

compensation not paid when due, TTD benefits from May 25, 2017 and ongoing until such benefits can be terminated according to law.

3. All matters not determined herein are reserved for future determination.

DATED: September 13, 2018

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether the recommended electric mobility scooter is reasonable and necessary medical treatment.

II. Whether Respondents failed to comply with WCRP 16, and if so, whether such failure mandates a finding that the electric mobility scooter is reasonable and necessary medical treatment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was born on April 14, 1993. On the date of the hearing, Claimant was 25 years old.
2. Claimant worked for Employer as a credit manager. On October 29, 2014, Claimant suffered an admitted work-injury to her right knee when she tripped while lifting a twin bunk bed mattress.
3. Throughout the course of her treatment, Claimant has undergone four surgeries on her right knee. Claimant's condition has progressed and she has been diagnosed with complex regional pain syndrome (CRPS) and being treated for such.
4. On February 8, 2018, shortly before the recommendation for an electric scooter was made, Claimant was evaluated by Dr. Kathy McCranie. Dr. McCranie evaluated Claimant and noted that although Claimant meets the Budapest criteria for clinical CRPS, she has not completed a diagnostic workup for this condition. Dr. McCranie also noted that review of Claimant's past medical history indicates a pre-existing history of significant psychological issues including Somatic Disorder and Conversion Disorder and that these conditions might be impacting Claimant's symptoms and prolonging her recovery. Based on her assessment, Dr. McCranie concluded that in addition to the additional diagnostic testing to confirm whether Claimant has CRPS, she recommended a psychiatric evaluation with review of past psychiatric history, and indicated that "*it is extremely important the patient's treatment be based on objective rather than subjective pain complaints*." (Emphasis added.) (Ex. A, p. 14).
5. There was no credible and persuasive evidence submitted that Claimant has undergone the additional diagnostic testing and psychiatric evaluation recommended by Dr. McCranie.
6. Dr. Thos Evans is an authorized treating physician (ATP) of Claimant and resides in Colorado. Claimant, however, was going to move to Washington.

7. On February 26, 2018, Dr. Evans wrote a letter regarding his assessment of Claimant and referring Claimant for further treatment at the Rehabilitation Institute of Washington. Dr. Evans also recommended Claimant pursue treatment through the specific CRPS program at the Institute. Dr. Evans indicated that his office would be sending all of Claimant's medical records to the Institute in Washington so they could take over her care.

8. Dr. Evans stated in his letter:

> [Claimant] has been dealing with severe CRPS symptoms in her right lower extremity following a series of right knee surgeries. She is extremely hypersensitive to light touch, especially around her right foot, and has allodynia and hyperalgesia of the right lower extremity. We have also noticed temperature discrepancies between her legs, and the right leg is often a bright purple color. This is one of the more severe CRPS cases we have seen here at the Steadman Clinic.

(Ex. 1, pg. 1).

9. In his February 26, 2018 letter, Dr. Evans also stated:

> [Claimant] will be moving to Seattle, we would like her to continue care with the Rehabilitation Institute of Washington, and we have recommended she pursue the specific CRPS program they have at this institute.

(Ex. 1, pg. 1).

10. In March, 2018, Claimant moved to Tacoma, Washington.

11. On March 12, 2018, despite transferring her care to another provider, but still being an authorized provider, Dr. Evans issued a "[p]rescription for [m]obility [s]cooter for [Claimant]." (Ex. 2, pg. 2). In attempting to explain the need for the mobility scooter, Dr. Evans stated:

> [Claimant] has been suffering from a severe CRPS flare after her right knee surgery on 8/11/17. She has been unable to transition off of crutches due to her severe leg pain. [Claimant] states any weight bearing on her leg increases her pain. She is having difficulty with mobility secondary to her pain. I recommended a scooter to allow for more mobility and limit her weight bearing on this leg. Please consider coverage of a scooter to increase her mobility while she is obtaining treatment of her CRPS pain.

(Ex. 2, pg. 3).

12. There is no credible and persuasive evidence establishing when the prescription for the electric scooter was provided to Respondents in an attempt to obtain prior authorization. (Ex. 2).

13. In addition, there is a lack of credible and persuasive evidence that a proper request for prior authorization for the electric scooter was presented to Respondents as set forth in Rule 16-10(E). To complete a proper request for prior authorization pursuant to Rule 16-10(E), the provider shall concurrently explain the reasonableness and the medical necessity of the services requested, and shall provide relevant supporting medical documentation. Supporting medical documentation is defined as documents used in the provider's decision-making process to substantiate the need for the requested service or procedure. Although Dr. Ayyar's report indicates he reviewed additional documentation he received from Sedgwick, there is no indication the documentation was provided by Dr. Evans and was used in his decision making process, or whether the documentation was provided by Sedgwick to Dr. Ayyar for his consideration in rendering an opinion.

14. Therefore, there is no credible and persuasive evidence that anything other than the March 12, 2018, prescription from Dr. Evans was presented to Respondents at some point in time.

15. On March 19 or March 22, 2018, Respondents' referred the recommendation for an electric scooter to Dr. Ayyar to review the request. (Exhibit C).

16. On March 26, 2018, Dr. Ayyar issued a report and found the scooter was not reasonable and necessary. Dr. Ayyar explained:

> The request for a scooter 4WHLGO Go Elite for the right knee is not medically necessary. As noted on page 172 of the Colorado Chronic Pain Disorder Medical Treatment Guidelines, purchase or rental of articles of durable medicals to include the item in question should be done only if assessment by the physician and/or therapist has determined the effectiveness, compliance, improved, and/or maintained function by its application. Here, however, both the requesting provider's 03/12/18 prescription form and an IME report dated 02/18/18 suggested that the request for a scooter in question was being driven largely owing to the claimant's complaints of pain and the fact that the claimant was described as exhibiting pain dependent behaviors. It did not appear, in short, that the claimant had a bona fide gait or mobility deficit compelling provision of the device in question. Furnishing the claimant with the device in question would likely have minimized rather than maximized the claimant's day-to-day activity levels and functional levels. The request in question, thus, was at odds with page 172 of the Colorado Chronic Pain Disorder Medical Treatment Guidelines. Therefore, the request for scooter 4WHLGO Go Elite for the right knee is not medically necessary.

(Ex. C, p. 18).

17. Pursuant to the Colorado Medical Treatment Guidelines, the purchase of durable medical equipment is addressed. Although not directly on point regarding an electric scooter, the guidelines provide:

> It is recognized that some patients may require ongoing use of self-directed modalities for the purpose of maintaining function and/or analgesic effect. Purchase or rental of modality based equipment should be done only if the assessment by the physician and/or physical/occupational therapist has determined the effectiveness, compliance, and improved or maintained function by its application. It is generally felt that large expense purchases such as spas, whirlpools, and special mattresses are not necessary to maintain function.

See Department of Labor and Employment, Division of Workers Compensation, CCR 1101-3, Rule 17, Exhibit 9, Chronic Pain Disorder Medical Treatment Guideline, pg., 172.

18. On March 26, 2018, Respondents' notified Dr. Evans and the parties that the recommended mobility scooter was denied. (Ex. 5, pg. 9).

19. On July 9, 2018, Dr. Heather Kroll, Claimant's ATP at the Rehabilitation Institute of Washington issued a letter stating:

> [Claimant] is currently a patient at our clinic, participating in a structured intensive multidisciplinary program. She currently ambulates with forearm crutches and reportedly does well for short distances; however, longer distances are a struggle. Because of this, she would benefit from a mobility scooter to aid in travel for longer distances.

(Ex. 3, pg. 4).

20. Dr. Kroll's July 9, 2018, letter specifically notes that Claimant's mobility, as subjectively reported by Claimant, is limited to short distances. She also notes that the scooter will, according to Claimant, aid in travel for longer distances. But, Dr. Kroll fails to articulate how the electric scooter will improve Claimant's overall functioning, relieve her symptoms, or prevent the development of other problems. In other words, Dr. Kroll, who is currently treating Claimant at the Rehabilitation Institute of Washington, has failed to articulate a sufficient medical basis to support a finding that an electric scooter is medically reasonable and necessary.

21. On July 24, 2018, Claimant was evaluated by PA-C Kelsey Wozniak at the Rehabilitation Institute of Washington. Under the "Strength & Conditioning" section, PA-C Wozniak noted, "[Claimant] is still struggling with significantly increasing weight bearing on her R foot due to reported pain symptoms." (Ex. 4, pg. 7).

22. Claimant testified that prior to moving to Washington and beginning treatment with the Rehabilitation Institute of Washington, she was unable to ambulate without the use of crutches and unable to bear any weight on her right leg.

23. Claimant testified that she is currently able to function "better than it was." She testified that she is able to "get up and down" by herself. She is able to "put a little bit of weight" on her leg but is not able to "go far distances".

24. Claimant testified she is unable to stand on her own but with crutches can stand "10 to 15 minutes before [she] starts to really hurt." Claimant testified that she can walk with crutches "maybe a block before it starts to really hurt." Claimant also testified that she uses a manual wheelchair to travel longer distances.

25. Claimant testified that she believes the recommended mobility scooter would help her "to get out of the house" and for moving longer distances.

26. It is found that neither Dr. Evans nor Dr. Kroll credibly and persuasively explained how the use of an electric scooter would improve or maintain function for Claimant.

27. It is also found that neither Dr. Evans nor Dr. Kroll explained how the use of the electric scooter would be more effective than the manual wheelchair Claimant testified she uses when traveling longer distances.

28. Claimant has failed to establish by a preponderance of the evidence that an electric scooter is reasonable and necessary to cure or relieve her from the effects of her injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008).

I. Whether the recommended mobility scooter is reasonable and necessary medical treatment.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve Claimant from the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

In this case, Claimant has failed to establish by a preponderance of the evidence that the electric mobility scooter is reasonable and necessary to cure or relieve Claimant from the effects of her industrial injury. Although Dr. Evans indicated that he recommended the scooter to allow for more mobility and to limit her weight bearing on her right leg which would reduce her pain complaints, (as self-reported by Claimant), the ALJ does not find his opinion to be persuasive that the electric scooter is medically reasonable and necessary. For example, there is no indication how being able to travel greater distances in an electric scooter will medically improve her condition or allow her to engage in activities of daily living, which she cannot perform while using crutches or a manual wheelchair. In addition, Dr. Evans failed to provide a credible and persuasive rationale as to why the electric scooter is medically reasonable and necessary in light of the issues raised by Dr. McCranie. He also failed to address how the use of an electric scooter is medically reasonable and necessary while Claimant is undergoing treatment in Seattle to increase her mobility and increase the use of her right lower extremity and not decrease the use of her right lower extremity.

As found, Claimant has crutches and she also has a manual wheel chair which she can use, if she thinks she needs it, to travel longer distances. Moreover, the use of an electric scooter seems contrary to the treatment being provided at the Rehabilitation Institute of Washington which is working with Claimant to increase the weight bearing and use of her right lower extremity.

In addition, Dr. McCranie opined that although Claimant meets the Budapest criteria for CRPS, she has not had sufficient diagnostic testing, nor a psychiatric evaluation, to assist in confirming a diagnoses of CRPS. In light of such, Dr. McCranie concluded that treatment recommendations should be based on objective data, instead of Claimant's subjective pain complaints.

Contrary to Dr. McCranie's opinion, which this ALJ credits and finds persuasive, Dr. Kroll and Dr. Evans appear to have prescribed the scooter based on Claimant's subjective pain complaints and not on objective data and the testing and evaluations recommended by Dr. McCranie.

Furthermore, Dr. Kroll, who is currently treating Claimant at the Rehabilitation Institute of Washington, failed to articulate the medical necessity for the electric scooter. As found, Dr. Kroll's July 9, 2018, letter specifically notes that Claimant's mobility, as subjectively reported by Claimant, is limited to short distances. She also notes that the scooter will, according to Claimant, aid in travel for longer distances. But, Dr. Kroll fails to articulate how the electric scooter will improve Claimant's overall functioning, relieve her symptoms, or prevent the development of other problems. What is missing from Dr. Kroll's recommendation for an electric scooter is how the electric scooter will provide additional mobility that will further alleviate Claimant from the effects of her industrial injury and that the need for such additional mobility is medically reasonable and necessary.

If Claimant was unable to use her crutches, was unable to safely ambulate with her crutches, or was developing other medical conditions due to the use of her crutches, those factors could be used to support a finding that an electric scooter is reasonable and necessary. But, those factors are not present in this case.

In addition, although Claimant testified that an electric scooter would allow her to get out of the house and allow her to travel longer distances, there was a lack of credible and persuasive evidence presented at hearing demonstrating where Claimant would use the electric scooter, where she would go with the electric scooter, and how she would transport her electric scooter anywhere else based on her inability to bear her full weight on her right lower extremity.

Therefore, the ALJ concludes Claimant has failed to establish by a preponderance of the evidence that an electric scooter is reasonable and necessary medical treatment at this time.

II. Whether Respondents failed to comply with WCRP 16, and if so, whether such failure mandates a finding that the electric mobility scooter is reasonable and necessary medical treatment.

Claimant contends Respondents failed to timely respond to Dr. Evans' prescription for the electric scooter and therefore payment for the scooter is deemed authorized and Respondents are responsible to pay for the scooter.

Workers' Compensation Rule of Procedure 16-10(C) provides that Respondents have seven (7) business days from receipt of the provider's completed request for prior authorization, as defined in section 16-10(E). The duty to respond to a provider's written request applies without regard for who transmitted the request. However, in order to trigger the time requirements of Rule 16-10(C), there must be a "proper request" as defined by section 16-10(E). A "proper request" pursuant to Rule 16-10(E) requires the following:

1. The provider shall concurrently explain the reasonableness and the medical necessity of the services requested,
2. The provider must also provide relevant supporting medical documentation, and
3. The supporting medical documentation is defined as documents used in the provider's decision-making process to substantiate the need for the requested service or procedure.

See WCRP 16-10(E)

As found, there is no credible and persuasive evidence establishing when the prescription for the electric scooter was provided to Respondents in an attempt to obtain prior authorization. In addition, there is a lack of credible and persuasive evidence that a proper request for prior authorization for the scooter was presented to Respondents as required by Rule 16-10(E).

To complete a proper request for prior authorization pursuant to Rule 16-10(E), the provider shall concurrently explain the reasonableness and the medical necessity of the services requested, and shall provide relevant supporting medical documentation. Supporting medical documentation is defined as documents used in the provider's decision-making process to substantiate the need for the requested service or procedure. Although Dr. Ayyar's report indicates he reviewed additional documentation he received from Sedgwick, there is no indication the documentation was provided by Dr. Evans and was used in Dr. Evans' decision making process, or whether the documentation was provided by Sedgwick to Dr. Ayyar for his consideration in rendering an opinion. Therefore, the timing of any response is irrelevant.

Moreover, even if the request was proper, Respondents' denial was timely. Dr. Ayyar's report indicates he received a facsimile from Sedgwick on March 19, 2018, and the referral on March 22, 2018. Using either date, his report dated Mach 25, 2018, was mailed to Claimant and Dr. Evans on March 26, 2018. Therefore, even if there had

been a proper request, Respondents timely responded to the request pursuant to Rule 16.

In addition, even if Respondents failed to timely respond to a proper request for prior authorization for the electric scooter, the ALJ does not find such a failure mandates a finding that Respondents are liable for the disputed medical benefit pursuant to Rule 16, unless Claimant also establishes the medical benefit is reasonable and necessary to treat the work injury. And, Claimant has failed to establish by a preponderance of the evidence that an electric scooter is reasonable and necessary to treat her work injury.

Therefore, the ALJ concludes Claimant has failed to establish that Respondents violated Rule 16 and are responsible for payment for the electric scooter.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for an electric scooter is denied and dismissed.

2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-066-750-02

ISSUE

- Whether Respondents proved by a preponderance of the evidence that Claimant's indemnity benefits should be reduced by 50% due to Claimant's willful failure to obey a reasonable safety rule pursuant to C.R.S. section 8-42-112(1)(a) and (b).

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a machine operator who Employer hired on November 18, 2004. Employer is a Colorado based steel contractor that employs shop laborers, including machine operators, fitters, welders, and fitter/welders.

2. Employer adopted and enforces to a company safety policy. Employer provides new employees a copy of its safety manual, and requires employees to certify they have reviewed the policies. Further, Employer's Safety Supervisor provides job safety training when an employee is first hired and when an employee starts a different position on the shop floor. Employer provides mandatory monthly safety training meetings often covering safe material handling practices. Employer has a seven-person safety committee. Employer enforces its safety rules, and when an employee receives written discipline for a safety rule violation, he or she loses their quarterly gain share for that quarter.

3. Claimant participated in new hire orientation and safety training. On January 7, 2015, Claimant certified that he reviewed the latest edition of Employer's safety manual. Claimant attended mandatory monthly safety meetings throughout his thirteen plus years with Employer.

4. Claimant attended three safety meetings exclusively devoted to safe material handling during the year prior to his work injury, including a meeting held less than a month before his injury. Kelly Miller, Employer's Quality Control Manager, ran the safety meetings and repeatedly emphasized that Employer's safe material handling policy required employees to set materials and material bins on flat, stable surfaces, which include floors and work horses. Outside of the safety meetings, Mr. Miller regularly reminded Claimant of safe material handling and counseled Claimant several times when he observed Claimant performing unsafe acts. Employer did not consider Claimant's prior unsafe acts to be serious enough to result in formal written discipline or loss of gain share.

5. Mr. Miller confirmed that Employer wrote up employees for unsafe material handling both before and after Claimant's injury.

6. On January 12, 2018, Hugo Carrazco, a fitter working on the shop floor with Claimant, placed a parts order requesting materials (angle irons) be brought to his work station. Claimant began moving the heavy angle irons from one side of the shop floor to Mr. Carrazco's workstation on the other side of the shop floor. Claimant gathered the angle irons in a bin next to Claimant's workstation. Claimant then used an overhead remote operated crane to hoist the bin and move it to a wheeled cart. Once Claimant lowered the bin onto the cart, he unhooked the bin from the crane so he could push the cart to the other side of the shop.

7. Mark Tanner, a fitter/welder, was walking by when he noticed Claimant by the cart. The bin was already on the cart, but Claimant still needed to push the cart to the other side of the shop. Because the bin of angle irons was heavy, Mr. Tanner helped Claimant push the cart towards Mr. Carrazco's workstation.

8. As the cart arrived at the east side of the shop, Mr. Carrazco walked by, and told Claimant to move the bin of angle irons to the floor of his workstation in front of a large stack of 3" x 3" metal tubes. He pointed to the floor to communicate non-verbally where he wanted the bin. Mr. Tanner, who was standing next to Claimant, heard Mr. Carrazco's instructions and described them as clear.

9. Mr. Tanner is a member of Employer's safety committee. He testified that if Mr. Carrazco had instructed Claimant to move the bin to the top of the stack of tubes, as Claimant claims, he would have immediately corrected those instructions because they created a dangerous situation and violated Employer's safe material handling policy. Mr. Tanner testified that he left to return to his own work and saw Mr. Carrazco walked over to his workstation and point directly at the ground in front of the stack of 3" x 3" tubes, again showing Claimant where he wanted him to move the bin.

10. The ALJ finds the testimony of Mr. Carrazco and Mr. Tanner regarding Mr. Carrazco's instructions to Claimant about where to place the bin is credible and persuasive. They each corroborated the same events, and their testimony is reasonable and consistent with Employer's policy and training.

11. After Claimant received Mr. Carrazco's instructions, Claimant hooked the metal bin to a second crane, and he hoisted the bin from the cart, moving the bin towards Mr. Carrazco's station. However, instead of lowering the bin to the floor, Claimant lowered the bin on top of a large stack of 3" x 3" heavy iron tubes.

12. The tubes were approximately five rows wide, of lengths differing between ten and twenty feet, and stacked approximately three feet high. A twenty foot 3" x 3" tube could weigh up to 100 pounds. The tubes are not truly flat, and do not sit square. An oil-based product used during the manufacturing process covers the tubes making them slippery. A stack of 3" x 3" tubes, such as the stack in front of Mr. Carrazco's workstation, is not a stable surface.

13. Claimant testified that the stack looked stable to him and that he tested its stability with his hand. Given the totality of the evidence, including the description above

of the stacked tubes and Employer's witnesses' testimony that the risk was obvious, the ALJ finds Claimant's testimony is not reasonable or credible. The ALJ also finds that Claimant's description of the events is unlikely.

14. Employer's witnesses testified that the stack of 3" x 3" tubes described above is an obviously dangerous surface to place material, such as a bin. They all recognized that whatever a worker placed on the stack could fall off, and/or cause the stack itself to shift, resulting in the entire load coming down.

15. On the date of the accident, directly behind the stack of 3" x 3" tubes was a stack of three equal length 14" x 6" tubes. The ALJ finds it more likely true than not that Claimant lowered the bin on the stack of 3" x 3" tubes. The bin did not lay flat on the 3" x 3" tubes; instead, it leaned against the larger and higher stack of 14" x 6" tubes.

16. Nathan Everson, a fitter whose station was next to Mr. Carrazco's station, saw Claimant lower the bin onto the 3" x 3" tubes. He recognized immediately that Claimant had created a dangerous situation. Before he could respond, Claimant pulled the bin toward himself, apparently trying to level the bin on the 3" x 3" tubes before unhooking the bin from the crane. At that time, the 3" x 3" tubes shifted and several of those tubes came down on Claimant's left leg. Claimant's left leg was wedged between an "L" piece of iron on the ground, and the fallen tubes, with other tubes landing on his leg, resulting in multiple left leg and ankle fractures.

17. Claimant's left leg was trapped under the pile of tubes, and he was in obvious distress. Several co-workers ran to the scene to help, including Mr. Miller, Mr. Everson, Mr. Carrazco, and Mr. Tanner. At the scene, Mr. Carrazco stated that he told Claimant to put the bin on the floor, not on the tubes. Mr. Everson heard this statement.

18. After emergency personnel came and took Claimant to the hospital, Mr. Miller conducted an accident investigation. He took several pictures of the aftermath showing there were two stacks of tubes, the 3" x 3" stack that had fallen over, and the 14" x 6" stack that remained upright. Mr. Miller also interviewed Mr. Everson, Mr. Tanner and Mr. Carrazco. The investigation report appends Mr. Carrazco, Mr. Everson and Mr. Tanners' witness statements.

19. Mr. Miller concluded that Claimant violated Employer's safe material handling safety rule. By putting the bin on the stack of 3" x 3" tubes, Claimant violated safe material handling training and company policy.

20. Claimant admitted that he intended to put the material bin on the 3" x 3" stack of tubes. Thus, the ALJ concludes that Claimant acted intentionally and that his intentional action directly resulted in his injuries.

21. The ALJ finds that Claimant's statements to the effect that he did not apprehend the risk of placing the bin on the stack of 3" x 3" tubes not credible or persuasive.

22. The ALJ finds that Respondents have met their burden of establishing that Claimant intentionally violated Employer's enforced safety policy and training concerning safe material handling, and that Claimant's injuries resulted therefrom.

CONCLUSIONS OF LAW

Section 8-42-112 (1), C.R.S., provides for a fifty percent (50%) reduction in benefits when an "injury is caused by the willful failure of the employee to use safety devices provided by the employer" or "(b) Where injury results from the employee's willful failure to obey any reasonable rule adopted by the employer for the safety of the employee." The term willful connotes deliberate intent. Mere carelessness, negligence, forgetfulness, remissness or oversight does not satisfy the statutory standard. *Bennett Properties Co. v. Industrial Commission,* 165 Colo. 135, 437 P.2d 548 (1968). Moreover, Respondents bear the burden proof to establish that claimant's conduct was willful. *Lori's Family Dining, Inc. v. ICAO*, 907 P.2d 715 (Colo. App. 1995); *Johnson v. Denver Tramway Corp*., 115 Colo. 214, 171 P.2d 410 (1946).

The elements of proving a violation of Section 8-42-112(1)(b) include the following:

1) There must be a safety rule adopted by the employer.

2) The safety rule must be reasonable.

3) The safety rule must be known by the employee; i.e. "brought home" to the employee and diligently enforced. *Pacific Employer's Insurance Co. v. Kilpatrick,* 111 Colo. 470, 143 P.2d 267 (Colo. 1943)

4) The meaning and content of the safety rule must be specific, unambiguous and definite, clear and non-conflicting. *Butland v. ICAO*, 754 P.2d 422 (Colo.App. 1988).

5) The violation of the safety rule must be willful, done with deliberate intent by the employee. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990).

Respondents carry the burden of proving each element justifying a reduction in compensation for willful failure to obey a reasonable safety rule. *Horton v. JBS Swift and Company*, W.C. No. 4-779-078 (2010); *Strait v. Russell Stover Candies*, W.C. No. 4-843-592 (2011). Whether Respondents met the burden of proof is one of fact for determination by the ALJ. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990). Here, the ALJ finds and concludes that Respondents have met their burden of proof.

Settled law provides that the alleged safety-rule "does not need to be formally adopted, does not have to be in writing, and does not have to be posted for reduction pursuant to section 8-42-112(1)(b) to apply. *Bennett Properties Co. v. Industrial Commission,* 165 Colo. 135, 437 P.2d 548 (1968). Rather, oral warnings, prohibitions, and directions are sufficient if heard and understood by the employee and if given by someone generally in authority. *Id.* Moreover, a safety rule, if sufficiently obvious to the claimant, can be based solely on common sense without any direction of the employer to

follow it. *Indus. Comm'n v. Golden Cycle Corp.*, 246 P.2d 902 (Colo. 1952). Finally, a willful violation of a safety rule may be established without direct evidence of the claimant's state of mind at the time of the injury because "it is a rare case where the claimant admits that the conduct was the product of a willful violation of the employer's rule." *Gargano v. Metro Wastewater Reclamation District*, W.C. No. 4-335- 104 (February 19, 1999).

An ALJ may infer willfulness from a variety of circumstantial evidence, including:

- The obviousness of the danger, *see Golden Cycle Corp.*, 246 P.2d at 906 ("the operator of a saw mill surely would not be held to liability for failure to post a notice reading, 'Keep your hands out of the buzz saw.'");

- The employee's knowledge of the safety rule and the deliberateness with which the employee performed an act prohibited by the rule. *See, e.g. Salamanca v. Golden Aluminum Co*., W.C. No. 4-416-802 (ICAO July 16, 2001).

The Industrial Claim Appeals Office has held that to establish that a claimant willfully violated the safety rule, "It is not necessary that the claimant specifically determined to break the rule. It is enough to show that knowing the rule; he intentionally performed the forbidden activity." *Romero v. Cherry Park Health Care*, W.C. No. 4-121-942 (ICAO Feb. 16, 1993).

In *Oldson v. Digital Communication*, W.C. No. 4-563-466 (2004), the Industrial Claim Appeals Office affirmed an ALJ's decision to reduce compensation benefits where claimant had not worn his seatbelt, and there was testimony that the injuries were caused or made more severe because of the failure to wear the seatbelt. The ICAO noted the following with regard to the determination of whether conduct is willful:

> Willfulness means that the claimant acted with deliberate intent. However, a finding of willfulness does not require the ALJ to find the claimant, having in mind the rule, determined to break it. Rather, it is sufficient to show that the claimant, knowing the rule, intentionally did the forbidden thing. *Stockdale v. Industrial Commission*, 76 Colo. 494, 232 P. 669 (1925). Willful conduct may be inferred from the circumstances, including evidence that the claimant was aware of the rule and the obviousness of the danger. *See Bennett Properties Co. v. Industrial Commission, 165 Colo. 135, 437 P.2d 548 (1968)*; *Gargano v. Metro Wastewater Reclamation District,* W.C. No. 4-335- 104 (February 19, 1999).

Applying these well-settled legal principles and rulings to the facts of this claim, the ALJ finds and concludes that Respondents have met their burden of proof, and Claimant's indemnity benefits should be reduced by 50% due to Claimant's willful violation of a safety rule. Claimant conceded that Employer trained him on safe material handling. He

conceded he reviewed the safety manual. In addition, he conceded that he intentionally placed the bin of angle iron on top of the stack of 3" x 3" tubes. Employer's frequent safe material handling training, constant reminders regarding safe material handling, and basic common sense dictate that placing a heavy bin on a large stack of different length tubes, several rows across, and several rows high, lubricated by oil and "bellied" in the middle, is inherently dangerous. Any force applied to such a stack could cause the stack to shift, and fall, which is what occurred in the instant case.

Claimant willfully violated a safety rule, and his indemnity benefits should thus be reduced by 50%.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have proven by a preponderance of the evidence that they are entitled to a 50% reduction of benefits pursuant to C.R.S. section 8-42-112(1)(a) and (d)

2. All matters not determined herein are reserved for future determination.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 12th day of September 2018.

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 1259 Lake Plaza Drive, Suite 230, Colorado Springs, CO 80906	
In the Matter of the Workers' Compensation Claim of: **RANDALL J. HOLLAR,** Claimant, vs. **DOCUMART** Employer, and **CHUBB INDEMNITY INSURANCE COMPANY,** Insurer, Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 4-960-165-07**

SUPPLEMENTAL ORDER FOLLOWING RESPONDENTS' PETITION TO REVIEW

The above captioned matter is before Administrative Law Judge (ALJ) Richard M. Lamphere on Respondents' PETITION TO REVIEW. Upon careful review of the petition, the ALJ is fully advised in the premises of the particular errors and objections raised by Respondents to the June 26, 2018 Findings of Fact, Conclusions of Law and Order issued by the undersigned ALJ. This "Supplemental Order" is being issued pursuant to C.R.S. § 8-43-301(5) following that review.

PROCEDURAL HISTORY

Hearing in the above captioned matter was held before Administrative Law Judge (ALJ), Richard M. Lamphere on May 15, 2018. The ALJ digitally recorded the proceeding in Courtroom No. 2 of the Colorado Springs Office of Administrative Courts between 1:00 and 4:51 p.m.

Claimant was present and represented by Aaron S. Kennedy, Esq. Kristin A. Caruso, Esq. represented Respondents. Testimony was taken from Claimant, Dr. Jack Rook, Dr. Miguel Castrejon and Dr. Kathleen D'Angelo. In addition to the aforementioned testimony, the ALJ admitted the following exhibits into evidence: Claimant's Hearing Exhibits 1-18 and Respondents' Hearing Exhibits A-N.

Following the presentation of evidence, the ALJ held the record open through June 4, 2018, to allow counsel time to file post hearing position statements in lieu of closing argument. The parties' position statements were timely received via electronic transmission after which the ALJ entered his Findings of Fact, Conclusions of Law and Order which was served upon the parties on June 26, 2018. On June 28, 2018, Respondents filed a Petition to Review alleging that the ALJ misapplied the law concerning the standard of proof necessary to overcome a Division Independent Medical Examination and otherwise abused his discretion in denying Respondents request for apportionment of Claimant's impairment rating as being inconsistent with the

facts as determined and the applicable law. Following the issuance of a briefing schedule, the parties submitted their respective briefs in support of and opposition to Respondents petition to review. Having received and carefully reviewed the parties post hearing pleadings, the ALJ agrees with Respondents that ¶ 28 of the June 26, 2018 Findings of Fact, Conclusions of Law and Order is poorly written and unartfully attributes statements to Dr. Castrejon that he did not testify to. As written, the paragraph does not convey what the ALJ had intended. Consequently, the ALJ believes that it is necessary to issue this Supplemental Order which supersedes both ¶ 28 of the Findings of Fact and ¶ F of the Conclusions of Law of the June 26, 2018 order.

While the ALJ is persuaded that the aforementioned amendments are necessary to clarify the ALJ's June 26, 2018 Order, the changes do not otherwise effect the Order articulated by the ALJ. Nonetheless, the ALJ makes the following amendments to the findings of fact and conclusions of law. Finding of Fact, ¶ 28 is amended to read as follows:

> 28. In his DIME report, Dr. Mathwich summarized Claimant's May 20, 2009, March 22, 2014 and December 8, 2015 MRI reports. In his DIME report, Dr. Mathwich noted the following regarding these MRI reports:
>
> > 5/20/09 MRI of lumbar spine. Lipomatosis of the dorsal epidural space L1-2 down to L5-S1 worse at L2-3 down to L4-5, particularly L4-5, with a posterior desiccated disc bulge at L4-5 contributing to the marked thecal sac effacement without evidence of cauda equine compression. There is bilateral neural foraminal narrowing at L4-5, worse on the left without evidence of nerve root impingement.
> >
> > 3/22/14 MRI lumbar spine. Severe spinal stenosis at L4-5 and bilateral foraminal narrowing without change since previous examination L5-S1 severe bilateral foraminal narrowing worse on the left. Mild to moderate central canal stenosis at L3-4. Mild central stenosis and right foraminal stenosis at T10-11.
> >
> > 12/8/15 MRI lumbar spine. Small left laminotomy defect at L5-S1 mild degenerative retolisthesis at L5-S1 anterior listhesis at L4-5, mild straightening and reversal of lordosis. L5-S1- moderately severe narrowing, mild facet arthropathy and right ligamentum flavum hypertrophic canal stenosis. There is severe bilateral bony foraminal stenosis. L4-5- moderate narrowing and diffuse disc bulging. Moderately severe facet arthropathy and broad posterior disc bulging is mild but with facet changes resulting in severe central canal stenosis. Moderately severe left foraminal stenosis. L3-4 mild facet arthropathy.

> Although Dr. Mathwich did not comment on it, the ALJ notes that both the March 22, 2014 MRI as well as the December 8, 2015 MRI reports document the existence of annular tearing in the radiologist's reports. Concerning this annular tearing, the March 22, 2014 MRI provides the following reference at the L4-5-disc level: "There is high signal intensity in the posterior annulus consistent with associated annular tear. The findings of Claimant's March 22, 2014 MRI were compared with the findings from 2009. The 2009 MRI report fails to reference any changes consistent with annular tearing. Consequently, the ALJ finds that Claimant's 2014 posterior annular tearing at the L4-5-disc level probably represents a new injury related finding. The December 8, 2015, MRI references the following regarding annular tearing at the L4-5-disc level: "Multifocal posterior annular tearing centrally and left subarticular with extension into the neural foramen" (emphasis added). The report alternatively described Claimant's left sided annular tearing as "near the exiting nerve L4 nerve root." The ALJ infers from Dr. Castrejon's testimony that Claimant's annular tearing was the likely cause of Claimant severe pain and Dr. Mathwich failed to appreciate the annular tearing as a pain generator when he (Dr. Mathwich) opined in his DIME report that the "MRI completed after his 12/27/13 incident correlate (sic) with those MRIs prior to the date and showed no significant acute changes or pathology which would be considered pain generators." Based upon the evidence presented, the ALJ finds that Dr. Mathwich failed to consider the presence of annular tearing when he opined that Claimant's MOI caused a "minor exacerbation" of Claimant's pre-existing spinal disease which he (Dr. Mathwich) opined "resolved very quickly."

Given the amendment to Finding of Fact, ¶ 28, the ALJ also amends ¶ F of the Conclusions of Law to read:

> The question of whether the Claimant has overcome the DIME physician's findings regarding causality, MMI and impairment is one of fact for the ALJ's determination. *Metro Moving and Storage Co. v. Gussert*, *supra*. In deciding whether Claimant has met his burden of proof, the ALJ is empowered, "[t]o resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). Moreover, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). In this case, the issue of whether Claimant was properly placed at MMI by Dr. Mathwich involves a complex medico-legal question regarding the cause of Claimant's low back symptoms and his need for a spinal fusion surgery. Claimant, through Dr. Rook, contends that Dr. Mathwich erred when he "took

it upon himself to re-write the legally determined compensability issues in this case, essentially doing his own causation analysis for a case that had already been litigated in front of an administrative law judge, who ruled that the patient's low back spinal condition was compensable and related to the injury that occurred at his workplace on December 27, 2013." The ALJ agrees with Respondent's position that, as part of the DIME process, Dr. Mathwich is permitted to address causation, regardless of the prior decision of ALJ Walsh. See, *Nunnally v. Eastman Kodak Co.*, W.C. No. 4-720-435 (ICAO, May 28, 2009); see also, *Holcomb v. FedEx Corp*., W.C. No. 4-824-259-05 (ICAO, March 24, 2017)(doctrine of issue preclusion inapplicable where the burdens of proof in two adjudications are not the same). While the ALJ agrees that Dr. Mathwich was permitted to address causation as part of the DIME completed in this case, the evidence presented is convincing that his conclusion that Claimant's MOI caused a "minor exacerbation" of pre-existing spinal disease, which "resolved very quickly" is erroneous and highly probably incorrect. To the contrary the ALJ is convinced that Claimant's MOI, more probably than not, caused additional traumatic injury to Claimant's lumbar spine which never completely resolved and simply regressed with time despite attempts at activity modification. Indeed, the MRI of 2014 and 2015 reveal previously undisclosed annular tearing which the ALJ finds/concludes, based upon the totality of the evidence presented, Dr. Mathwich failed to completely account for in addressing causality and before placing Claimant at MMI.

ORDER

It is therefore ordered that:

1. Claimant's request to set aside the DIME opinion of Dr. Mathwich regarding maximum medical improvement is GRANTED. Claimant is found to have reached MMI effective September 22, 2016 as originally assigned by Dr. Castrejon.

2. Claimant's request to set aside the DIME opinion of Dr. Mathwich regarding permanent impairment is GRANTED. The 0% whole person impairment assigned by Dr. Mathwich is set aside and replaced by the 23% impairment rating assigned by Dr. Rook which is supported by Dr. Castrejon.

3. Respondents' request to apportion Claimant's 23% whole person impairment is denied and dismissed.

4. Claimant is entitled to maintenance care, including, but not limited to follow-up visits with Dr. Mitchell subject to Respondents right to challenge any future request for treatment on the grounds that it is not reasonable, necessary or related to Claimant's December 27, 2013 industrial injury.

5. Claimant is entitled to and Respondents shall pay disfigurement benefits in the amount of $3,500.00.

6. Respondents' request to recoup a stipulated $2,407.50 overpayment of indemnity benefits is denied and dismissed as moot since the MMI determination of Dr. Mathwich has been overcome and set aside.

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Did Claimant suffer a compensable work injury to his lumbar spine while working for Employer on or about February 24, 2018?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant was injured while working as a cook for Employer ("Wingstop"). As a cook, his duties included moving boxes of chicken wings from the freezer to the defrost cooler, cooking and saucing the wings, then placing them in boxes for the customers.

2. The Claimant testified that at approximately 6:30 p.m. on Saturday, February 24, 2018, as he was carrying a case of chicken from the freezer to the defrost cooler, he slipped on an unknown substance on the floor. This caused him to twist his back and fall to his knees, falling forward onto the box of chicken he was carrying. He felt an immediate stabbing pain in his lower back and down his left leg. The pain was located across his lower back, mainly on his left side.

3. When Claimant tried to stand up, he was unable to. Instead, he fell back down to his knees due to his pain. He testified that the box of chicken weighed between 35 to 38 pounds; the weight was written on the box. No one directly witnessed the accident. At the time of the incident, the Claimant was wearing 'Shoes for Crews', which were non-slip shoes for persons in the food preparation business.

4. There were two other employees working this shift at Wingstop: Crystal Salazar and Tara (last name unknown). Crystal Salazar was the cashier and Tara was the shift leader. Claimant testified he does not believe either individual witnessed the injury, but Crystal heard him scream when he fell, and both Crystal and Tara immediately came around the corner where he had fallen. Since he did not have his own cell phone, he borrowed Tara's phone.

5. Tara called Brittney, the store manager, on her cell phone and then gave the phone to the Claimant so he could explain what happened. The Claimant testified that he told Brittany that he had slipped on the floor while carrying a box of wings from the freezer to the defrost cooler and hurt his back. Brittany directed him to seek care under his personal insurance. Claimant did so. Both Tara and Brittney, as the shift

leader and store manager, were the Claimant's supervisors.

6. Claimant attempted to work the remainder of his shift, but could not due to his back pain. Two days later, he sought treatment at St. Mary-Corwin emergency room. The emergency room gave him paperwork outlining this visit, which included an off-work slip. He took that paperwork back to Wingstop and gave it to the cashier on duty, who told him that she would give it to Brittany. Claimant did not see this cashier physically give the paperwork to Brittany. He was not directed where to seek treatment by anyone at Wingstop.

7. Claimant did not return to work until Thursday, March 1, and last worked on March 3, 2018. (Ex. G, p. 9). On March 4, 2018, Claimant went to Parkview Hospital emergency room. He did not give the paperwork from this visit to his employer, since he had received no response from his supervisor up to that point in time. He testified he still had not been directed by Wingstop at this point where to seek treatment.

8. The Claimant then followed up with his primary care physician, Dr. Sergio Murillo; this visit was paid for by Medicaid. Dr. Murillo eventually referred the Claimant for an MRI. Once he reviewed the results, Dr. Murillo told Claimant that he should seek treatment through the worker's compensation system.

9. The MRI of Claimant's lumbar spine taken May 4, 2018, under 'Impression' stated:

> 1. At the L4-L5 level, a central and left central lateral recess broad-based disc protrusion are noted with mild central canal stenosis and moderate left lateral recess stenosis. Focal disc desiccation and mild-to-moderate circumferential disc bulge component noted.
>
> 2. Mild disc desiccation and disc space narrowing at the L5-S1 level. No stenosis is noted. (Ex. 6, p 39).

10. At hearing, Claimant acknowledged signing documents when he was hired at Wingstop. These documents, signed 1/31/18, reflected that James LaCoursiere was the human resources contact. Wingstop also provided a list of designated treatment providers that employees should seek treatment with if they are injured on the job (Exhibit G1, G2).

11. Claimant was eventually treated by Respondents' authorized treating physician, Dr. Daniel Olsen, on April 30, 2018. Dr. Olsen's record notes that the Claimant had injured his back carrying a case of chicken which weighed between 35-45 pounds when he slipped and injured his lower back. Dr. Olsen recommended physical restrictions to include no lifting, carrying, pushing or pulling over 2 pounds and no bending, squatting. No lifting overhead. (Ex. 7, p. 45) Dr. Olsen's notes that "The cause of this problem is related to work activities." *Id.*

12. The Claimant was next by Dr. Olsen on June 4, 2018. Prior to this appointment, he had "no showed" several times with this ATP. The Claimant testified that the reason for the gap in treatment was that he had traveled to Parker, Colorado with his father to see his brother. While in Parker, his father was involved in a very serious motor vehicle accident, and could not travel back to Pueblo. Claimant testified that he had no other form of transportation, so he was unable to travel back to Pueblo until his father's condition improved. Claimant stayed in Parker and cared for his father until he was strong enough to travel back to Pueblo. Claimant testified that since he has no transportation of his own, it has made getting to and from medical appointments difficult.

13. The Claimant testified that the St. Mary Corwin emergency room record from February 26, 2018 (Ex. 4, p. 10) which noted that the Claimant "had prior intermittent back problems but nothing on a continuous basis" was incorrect. He testified that he did not tell the emergency room physician that he had preexisting back problems and has no idea where the physician would have gotten this information. He testified that he has never had, complained of, or received treatment for any preexisting back problems.

14. Claimant testified that he still has pain in his lumbar spine which radiates down his left leg to his foot. He thinks his condition has actually improved some since the injury. He has not had any previous injuries to his back, nor has he had any lumbar injury since the date of this industrial claim. Claimant also testified that he has a bad memory for specific dates. He testified that he had no knowledge who James LaCoursiere was, did not know he was the human resources representative for Wingstop. He had never heard Mr. LaCoursiere's name, and had never seen him prior to the date of the hearing.

15. As noted, Claimant had originally sought treatment at St. Mary Corwin emergency room on February 26, 2018. The ER report reflects that the Claimant "presented to the emergency department complaining of low back pain and achiness down his left posterior thigh. Started two days ago. After lifting had a sudden onset of pain that dropped into his knees….There is no direct trauma". (Ex. 4, p. 10)

16. The Parkview Hospital emergency room record dated March 4, 2018 reflects that the Claimant "presented with complaint of left lateral lower back pain. The patient states the pain started after he injured his back on February 25 after moving some heavy items". (Ex. 5, p. 17).

17. Claimant testified that he vaguely remembered speaking with a gentleman named Sean at some point after he was injured. He testified that he had a brief telephone conversation with Sean where he told him about his injury. He did not know who Sean was, did not know the purpose of the conversation, nor was he aware that Sean was the new manager of Wingstop. Between March 4, 2018 and April 30, 2018, the Claimant sought treatment with his primary care physician, Dr. Murillo, a 'couple of times'. He also had the MRI done at Dr. Murillo's request.

18. Jim LaCoursiere testified on behalf of the Respondents. Mr. LaCoursiere is the vice president of operations for Wingstop in the State of Colorado. He has never spoken to the Claimant personally, nor has he met the Claimant prior to the date of this hearing. Neither Brittany, Crystal Salazar or the Claimant notified Mr. LaCoursiere of Mr. Tindol's injury.

19. Mr. LaCoursiere testified that he did not receive notification of the Claimant's injury until March 17, 2018, when the new manager, Sean Bogardus, told him about the injury. He testified that Sean Bogardus took over management of the store where Claimant was injured in mid-March of 2018. He testified that Brittany and Tara were direct supervisors of the Claimant. He also testified that the Claimant was never given his own hard copy of the documents which he had signed on his first day of employment (Ex. G, pp. 1-2). Those documents stayed in the employment file.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. The claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-41-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo.App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo.App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

B. In accordance with § 8-43-215, C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).*

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16.

Compensability

D. For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. In this regard, there is no presumption that an injury which occurs in the course of a worker's employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." A compensable injury is one which requires medical treatment or causes a disability. It. is the Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. § 8-43-201, C.R.S. 2006; *Ramsdell v, Horn,* 781 P.2d 150 (Colo. App. 1989).

E. The existence of a causal relationship between the Claimant's lumbar spine injury and his duties at Wingstop is a question of fact. *F.R. Orr Construction v. Rinta, 717 P.2d 965 (Colo. App. 1985).* Whether there is a sufficient "nexus" or causal relationship between the Claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996).

F. The evidence shows that Claimant injured his lower back on February 24, 2018 when he slipped and fell while carrying a box of chicken wings from the freezer to the defrost cooler. While Respondent notes that this event was unwitnessed, the ALJ finds that it was credibly witnessed-by Claimant himself. The ALJ finds his testimony sufficient to prove that it occurred. While Claimant sincerely believed his two co-workers were on break, all he can really state is that they were out of his presence when he slipped. Like the proverbial tree in the forest, he still fell. There is also insufficient evidence that Claimant had previously injured or had treatment on his lumbar spine. To the extent one treatment note indicates prior intermittent back issues, Claimant has satisfactorily explained that he did not say this to the nurse. No medical record beyond this conversation indicate prior medical issues with his back.

G. Claimant's testimony is sufficiently persuasive on the mechanism of the injury, as well as when and how Claimant reported the injury. Immediately after he slipped and fell, he felt a sharp pain in his lumbar spine which was intense enough to

keep him from standing up. Right after the slip and fall, he used a co-worker's phone to call and notify the store's general manager, Brittany, of the injury. Upon speaking to Brittany and explaining that he had slipped and hurt his back while carrying a box of chicken wings, he was told by Brittany to seek treatment under his private health insurance. He did so two days later, on February 26, 2018, when he sought treatment at St. Mary-Corwin Hospital emergency room. This ER record reflects that the Claimant hurt his back two days before when lifting. Upon discharge from St. Mary-Corwin, the Claimant took the paperwork he had been given by the hospital to the store and gave it to a Wingstop cashier, who told Claimant she would forward it to Brittany.

H. The medical record from the Claimant's second emergency room visit at Parkview Hospital also notes that the Claimant hurt his back while lifting something on February 25, 2018. The Claimant testified that he is terrible at remembering dates. The ALJ finds that while Claimant is quite unsophisticated, he is sincere in describing the essential elements of the events as they unfolded. Yes, the events he describes at different times vary somewhat in their details, but the essential elements remain. Claimant's lack of sophistication also helps explain his lack of assertiveness in securing proper treatment through an Authorized Treatment Provider on a more timely basis.

I. Brittany, the store manager, apparently did not notify the human resource director, Jim LeCoursiere of Claimant's injury. This does not render his injury non-compensable. Claimant signed paperwork for the employer on his first day of his employment with Wingstop. (Ex. G, pp. 1-2) which reflected that Mr. LeCoursiere was the human resources contact. It also listed Authorized Treatment Providers in the event of an industrial injury. However, Claimant was never given his own copy of the documents he signed. Rather, they were kept in his employment file. Claimant, unsophisticated as he is, reasonably relied upon his chain of command to guide him through the process. This did not occur, although the ALJ finds Mr. LeCoursiere acted in good faith, and his testimony to be credible in its entirety.

J. The ALJ concludes that the Claimant has proven by a preponderance of the evidence, that his lumbar spine injury occurred within the course and scope of his employment with Respondent Employer Wingstop on Saturday, February 24, 2018. Clamant returned to work on Thursday, March 1, 2018.

ORDER

It is therefore Ordered that:

1. Claimant's back injury from February 24, 2018 is compensable.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 20, 2018

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

- Whether the respondents have demonstrated by a preponderance of the evidence that the claimant no longer needs maintenance medical treatment to prevent further deterioration to her physical condition pursuant to *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988), thereby allowing the respondents to withdraw their admission for those benefits.

FINDINGS OF FACT

1. The claimant suffered cumulative trauma to her bilateral upper extremities with an onset date of November 1, 2010. In 2012, the claimant underwent right elbow ulnar nerve transposition surgery. In early 2013, the claimant underwent left elbow ulnar nerve transposition surgery. These surgeries were performed by Dr. Thomas Dwyer. The claimant's employment with employer ended in May 2018.

2. On July 30, 2013, the claimant was placed at maximum medical improvement (MMI) by Dr. Jeffery Krebs. At the time of MMI, Dr. Krebs assessed permanent impairment of 12 percent whole person. With regard to post-MMI medical treatment, Dr. Krebs recommended that the claimant receive osteopathic adjustment to her neck, massage therapy, and continue prescription medications (including Norco, Gabapentin and Flexeril). Dr. Krebs indicated in his MMI report that the claimant should receive the recommended treatment for three years.

3. Since being placed at MMI, the claimant has continued to treat with Dr. Daniel Olson for osteopathic manipulation. The claimant testified that she receives treatment from Dr. Olson every two to three months. The claimant testified that she sought this ongoing medical treatment because she still has discomfort, especially with prolonged sitting. The claimant also testified that following treatment with Dr. Olson, she has improved function and is able to sleep. The claimant testified that she wishes to continue treatment with Dr. Olson because it helps with her symptoms.

4. On August 12, 2013, the respondents filed a Final Admission of Liability (FAL). With regard to post-MMI treatment the respondents admitted for "reasonable and necessary medical care, related to this work injury, by an authorized treating physician."

5. On March 3, 2014, the claimant began new employment with Sitel. The claimant's job duties with Sitel were similar to those she had while employed with the employer. However, the claimant was able to sit less and while working for Sitel. The claimant's symptoms from her injury in this case continued throughout her employment with Sitel. As a result, the claimant continued to seek treatment with Dr. Olson. The claimant's employment with Sitel ended in January 2017. The claimant testified that

although her employment with Sitel has ended, she continues to have the same symptoms she had when she was placed at MMI.

6. On April 27, 2017, the claimant returned to Dr. Dwyer and reported slight persistent symptoms in her left elbow and increasing pain and numbness in her left upper extremity. Dr. Dwyer opined that the claimant's left arm symptoms could be related to sensitive scar tissue from her left elbow surgery. At that time, Dr. Dwyer recommended an electromyography (EMG) study and a magnetic resonance image (MRI) of the claimant's left elbow.

7. On August 2, 2017, an MRI was taken of the claimant's left elbow and showed acute angulation of the ulnar nerve distal to the transposition as it exits the mediocollateral ligament, with scar tissue around the nerve.

8. On January 29, 2018, the claimant again sought treatment with Dr. Dwyer who noted that the claimant's left elbow MRI was "certainly abnormal". However, Dr. Dwyer did not make any conclusions regarding the cause of the claimant's symptoms and again recommended an EMG study. At that time, Dr. Dwyer also noted that the claimant experienced some temporary improvement from Dr. Olson's treatment.

9. On February 26, 2018, the claimant attended an independent medical examination (IME) with Dr. Thomas Moore. In connection with the IME, Dr. Moore reviewed the claimant's medical records, obtained a medical history from the claimant, and performed a physical examination. In his IME report, Dr. Moore noted that the maintenance medical treatment recommended by Dr. Krebs in 2013 was for three years. Therefore, Dr. Moore opined that the claimant's treatment should have ended in June 2016.

10. On March 9, 2018, the respondents sent a letter to the claimant notifying her that beginning April 6, 2018, the insurer would no longer cover post-MMI medical treatment. The respondents specifically stated that payment for post-MMI medical treatment was ending because the treatment was no longer reasonable, necessary, or related. In addition, on July 31, 2018, the claimant was notified by Dr. Olson's staff that the insurer would no longer pay for treatment.

11. On April 12, 2018, Dr. Michael Hehmann conducted an EMG study. Dr. Hehmann noted that the EMG results were normal.

12. The ALJ credits the medical records and the claimant's testimony and finds that the respondents' have failed to demonstrate that it is more likely than not that they are entitled to withdraw authorization for post-MMI medical treatment. The ALJ is not persuaded by the opinion of Dr. Moore that the claimant's post-MMI treatment should have stopped in June 2016 merely because Dr. Krebs' recommendations were for three years. The ALJ is also not persuaded that the claimant's employment with Sitel created an intervening event sufficient to end post-MMI medical treatment. On the contrary, the ALJ is persuaded that the claimant continued to experience the same

symptoms before, during, and after her employment with Sitel and these symptoms continue to be the result of her compensable occupational disease.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado (the Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S.

2. Typically, a claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. However, in this case respondents issued an FAL for claimant's occupational disease admitting for post-MMI medical treatment. Section 8-43-201 C.R.S. provides, in part, that "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification". Therefore, in this case the burden shifts to the respondents to prove by a preponderance of the evidence that the claimant no longer need post-MMI medical treatment.

3. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

4. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2010).

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. The need for medical treatment may extend beyond the point of maximum medical improvement where a claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an

order for future maintenance treatment if support by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra*.

7. As found, the respondents have failed to prove by a preponderance of the evidence that they should be allowed to withdraw admission of *Grover* post-MMI medical treatment. As found, the medical records and the claimant's testimony are credible and persuasive.

ORDER

It is therefore ordered that the respondents' request to withdraw *Grover* post-MMI medical treatment is denied and dismissed.

You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that his hip condition is causally related to his February 23, 2017, work injury.

II. Whether Claimant established, by a preponderance of the evidence, that the right hip arthroscopy recommended by Dr. Brian White is reasonable and necessary to treat Claimant's February 23, 2017, work injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 21-year-old professional installer for Allied Insulation. (Hearing Transcript from Hearing on July 24, 2018, (hereinafter "T") 12:5-15) Part of Claimant's job requires the use of a pressurized hose with a spray-gun to spray foam insulation overhead, often on stilts. (T 12:26; 1-7 13:1-7)

2. On February 23, 2017, Claimant was on stilts and spraying foam insulation overhead using his right arm. While spraying foam insulation, with a back and forth motion, Claimant felt a pop in his right shoulder. Claimant reported his injury and was referred for medical treatment.

3. On February 24, 2017, Claimant went to Advanced Urgent Care and Occupational Medicine. Claimant was evaluated by Dr. Mary Louder. The medical report from that date indicates Claimant provided the following description of the accident:

> Pt sprays insulation in to the corners, ceilings and nearly always overhead. While he is doing this, he is typically standing on stilts. He frequently has to reach high and into awkward spaces. While working overhead today with back and forth motions and overhead, he felt a pop and pain in his right shoulder and on the "upper side" of his shoulder blade.

Respondents' Exhibit (hereinafter "R. Ex.") A.

4. As set forth in the medical report from the first visit, Dr. Louder physically examined Claimant's right shoulder and noted her examination and findings in detail. There is no indication in the medical report that Claimant complained of any other injuries at this visit. Based on Claimant's description of the work accident, his pain complaints which were limited to his right shoulder, and the

results of her physical examination, Dr. Louder diagnosed Claimant with a right shoulder strain. She prescribed motrin and directed Claimant to follow up with Dr. Parsons within the next week. (R. Ex. B, Bates 3)

5. Claimant described a very minor incident to Dr. Louder. He also described to Dr. Louder symptoms that were limited to his right shoulder. Despite this, Claimant went on to report virtually unrelenting symptoms involving his right shoulder as well as an expanding list symptoms involving other body parts.

6. On March 1, 2017, Claimant was evaluated by Dr. Parsons. Claimant advised Dr. Parsons that during the incident, he felt a pop in his right shoulder. He also complained of developing low back pain, which was not noted on his initial visit with Dr. Louder. Claimant stated his pain level was 9/10. There is no indication Claimant complained of right sided hip pain. Based on Claimant's presentation and her examination, Dr. Parsons diagnosed Claimant with an unspecified injury to his right shoulder and prescribed physical therapy and some additional medications for his right shoulder. (R. Ex. B, Bates 8)

7. On March 9, 2017, Claimant started physical therapy at Injury Care Colorado Physical Therapy. Physical therapist Jennifer Volger describes Claimant's pain complaints in detail, specifying the exact areas affected in Claimant's shoulder and arm, but nowhere in her report from March 9, 2017, does Ms. Volger document any hip complaints. (R. Ex. C, Bates 73-74)

8. At the March 9, 2017, physical therapy appointment, Claimant provided another description of the accident. As noted by the physical therapist, Claimant described the accident and his pain as follows:

> [Claimant] presents to PT with complaints of right shoulder pain following an injury he sustained at work when he was spraying foam insulation with his arm overhead. He reports that he felt a pop and pain when reaching overhead and across his body with the sprayer. The remainder of the day and the following day his pain persisted and he went in to see the physician. He is currently experiencing posterior shoulder and scap pain, pain into the top of his shoulder and he states that he has anterior shoulder pain when it is at its worst. He also has intermittent numbness/tingling sensations down his arm, more towards the fourth and fifth digits and medial aspect of his forearm.

There is no indication in this description of the accident that Claimant injured his right hip or back. Also absent from this description of the accident is any alleged mechanism of injury that could account for an injury to Claimant's low back or hip. (Ex. C, Bates 73-74)

9. On March 15, 2017, Claimant underwent additional physical therapy. The report from this visit indicates Claimant complained of shoulder pain. Again, there is no indication Claimant complained of hip or back pain. There is also no indication that Claimant had extremely high levels of pain which precluded him from

participating in physical therapy. As noted, the physical therapist was able to demonstrate various exercises and Claimant was able to perform those exercises. (Ex. C, Bates 75-76)

10. On March 15, 2017, after going to physical therapy, Claimant returned to Dr. Parsons. At this appointment, Claimant was still complaining of right shoulder pain and low back pain at 9/10. There is, however, no indication in the report that Claimant complained of any right sided hip pain. Based on Claimant's pain complaints, Dr. Parsons diagnosed Claimant with a shoulder strain and back strain. (R. Ex. B, Bates 11-13)

11. Claimant's pain complaints to Dr. Parsons of 9/10 pain, on March 15, 2017, and a lack of such debilitating pain during his PT appointment the same day, results in the ALJ finding the extent of Claimant's pain complaints as reported by Claimant to be suspect.

12. On March 17, 2017, Claimant underwent additional physical therapy. At this appointment, three weeks after his accident, Claimant complained of his shoulder and neck being in a lot of pain. He also complained of hip pain. (Ex. C, Bates 77)

13. On March 29, 2017, Claimant returned to Dr. Parsons. At this appointment, Claimant complained of pain in his neck and right upper extremity. He also rated his pain level at 8-9/10. He also complained of right groin pain. Due to Claimant's complaints of significant neck pain and radicular symptoms in his right upper extremity, Dr. Parsons ordered an MRI of his cervical spine. (Ex. B, Bates 21-23)

14. On April 18, 2017, Respondents filed a General Admission of Liability.

15. On April 21, 2017, Claimant underwent an MRI of his cervical spine.

16. On May 1, 2017, Claimant returned to Dr. Parsons. At this appointment, Claimant still rated his pain at 8-9/10. Dr. Parsons noted multiple pain behaviors. She also went over Claimant's cervical spine MRI results, which she described as normal. Due to Claimant's presentation, and what appear to be limited findings, she discussed with Claimant the possibility of a pain management consultation and made a referral for such to Ryan Mansholt, PAC. (Ex. C, Bates 29)

17. On May 17, 2017, Claimant returned to Dr. Parsons. Due to ongoing complaints of 8-9/10 shoulder and hip pain, she ordered an MRI of his shoulder and hip. However, she also noted the following discussion she had with Claimant regarding the lack of a mechanism of injury regarding his hip complaints:

> Long discussion regarding hip pain into inguinal area; his initial complaint was right shoulder pain. He is insistent that the right low back, hip, and inguinal pain are related to his injury although he had no mechanism of injury. I explained to him that the insurer may not recognize the above areas as part of the injury.

(R. Ex. B, Bates 31-34)

18. Throughout the medical records, Claimant describes the injury inconsistently throughout the records, only noting hip pain, and later changing the description to a “pop.”

19. Claimant did not report any hip pain until three weeks after his work accident. During that time, Claimant attended multiple appointments with his authorized treating physician (“ATP”) and physical therapist. Yet none of the records from these initial visits reflect any report of hip pain.

20. On May 31, 2017, Claimant underwent an MRI of his right shoulder. The MRI was read by Dr. Michael Kershen. His report indicates that there was some signal alteration concerning for a small free edge tear of the posterior superior labrum. Therefore, his impression was that there was a small posterior superior free edge tear of the labrum, but it was of indeterminate clinical significance. (R. Ex. J, Bates 241)

21. On May 31, 2017, Claimant also underwent an MRI of his right hip. The MRI of his hip was also read by Dr. Kershen. He concluded that while some of the findings may reflect a normal variant sulcus, it was difficult to entirely exclude a small partial tear of the hip labrum. Therefore, he did not conclude the MRI demonstrated a torn labrum. (R. Ex. J, Bates 242)

22. On June 13, 2017, Claimant starting treating with Dr. David Yamamoto. While treating with Dr. Yamamoto, Claimant complained of neck pain, right shoulder pain, right hip pain, and low back pain. On June 23, 2017, Claimant advised Dr. Yamamoto that his back pain was 7/10. Dr. Yamamoto noted that there was no documentation from the beginning documenting a back injury. Despite this comment, Dr. Yamamoto continued treating Claimant’s pain complaints, including his low back.

23. On August 23, 2017, Claimant returned to Dr. Yamamoto, with continued pain complaints, including low back pain which Claimant still rated at 7/10. Due to ongoing complaints of back pain, Dr. Yamamoto referred Claimant for an MRI of his lumbar spine. The MRI findings, as documented by the radiologist, were mild facet arthropathy and a minor L5-S1 disc bulge.

24. On September 21, 2017, Claimant returned to Dr. Yamamoto with the same pain complaints. Dr. Yamamoto stated in his report that Claimant is getting acupuncture, manual therapy, and physical therapy for his low back. Dr. Yamamoto noted in his report Claimant stated the treatment is helping. However, Claimant is still rated his back pain at 7/10, which is the exact same rating he has had while treating with Dr. Yamamoto. Based on Claimant’s contention that the treatment Dr. Yamamoto prescribed helped his back pain, which is in direct conflict with his pain rating, Dr. Yamamoto wrote a new prescription for physical therapy, manual therapy, and acupuncture. In other words, there is no indication – from a pain relief standpoint - that the treatment prescribed by Dr. Yamamoto was helping. Nevertheless, Dr. Yamamoto prescribed more treatment without reconciling Claimant’s statements that treatment is helping, but yet his pain complaints remained the same.

25. Due to Claimant's ongoing pain complaints regarding his right hip, Dr. Yamamoto referred Claimant to Dr. Brian J. White. Contrary to the findings of the radiologist who read the MRI, Dr. White stated that the MRI confirms a labral tear of Claimant's right hip. Dr. White also stated that based on his physical examination of Claimant, which he said fit the findings of a labral tear, he recommended Claimant undergo a right hip arthroscopy. However, Dr. White did not explain how the findings fit with a labral tear. (R. Ex. H, Bates 234).

26. On June 29, 2017, Claimant was evaluated by Dr. Ellman. Dr. Ellman stated he reviewed Claimant's MRI of his hip and said it "demonstrated a rather obvious posterior superior to superior labral tear that appears to be full-thickness." (R. Ex. G, Bates 226-230) However, Dr. Ellman's statement regarding the findings demonstrated by the MRI are contrary to the findings of the radiologist.

27. On October 4, 2017, Respondents had orthopedic surgeon, Dr. William Ciccone, review the matter. He was asked whether the current exams and findings of the various providers substantiated Claimant's shoulder and hip complaints. Dr. Ciccone reviewed Claimant's medical records and concluded that Claimant had no obvious findings one would associate with acute pathology on MRI imaging. He also concluded that while he thought it was possible Claimant suffered a right shoulder sprain / strain, he did not believe Claimant suffered a work-related hip injury. (R. Ex., Bates 145-253).

28. Dr. Ciccone was also deposed. During his deposition, he also testified that the MRI does not definitely show a torn labrum regarding Claimant's hip. (T., pg. 7) He also indicated that he did not think Claimant's right hip complaints were related to his work accident because Claimant:

> didn't have any complaints of hip pain at his initial evaluation and even after he was seen for complaints of hip pain there's really been no description of any mechanism of injury that he - - how he actually injured his hip. (T., pg. 9)

29. On February 20, 2018, Claimant underwent right shoulder surgery, which was performed by Dr. Armodios Hatzidakis. Although the preoperative diagnosis was "work related right shoulder strain with possible labral tear," his postoperative diagnosis noted a right shoulder strain with no evidence of labral or rotator cuff pathology. (R. Ex., Bates 270) It is noted that Dr. Hatzidakis' surgical findings were consistent with Dr. Ciccone's opinion that Claimant's MRI findings did not support a finding of acute pathology regarding his shoulder labrum or rotator cuff.

30. On April 20, 2018, Claimant presented to Dr. Rebekah Martin for a Respondent-sponsored Independent Medical Evaluation ("RIME") to address a Rule 16 denial of Dr. Tracy's recommendation that Claimant undergo L3-4 and L4-5 injections. Additionally, Dr. Martin addressed Dr. White's recommendation for hip surgery during her RIME. (R. Ex. Q)

31. According to Dr. Martin, a provider would expect Claimant's type of pain to be reported within the first dew days of injury, stating "When there's a significant injury, especially with some sort of tissue damage and tear usually people notice

something extremely quickly, usually within the first few days there in a -- have some sort of a report of severe pain somewhere." (T 49:3-7)

32. Upon identifying that Claimant's first report of hip pain was earlier than she initially identified in the records, Dr. Martin testified she still would have expected the hip pain to be reported sooner. Specifically, within the first few days of the injury. (T 29:3-7)

33. In her report, Dr. Martin summarized:

> The patient did not report hip pain within a reasonable amount of time following the incident. In addition, his hip symptoms are not consistent with any specific diagnosis. He is actually pointing out pain to the right lower quadrant rather than the groin region, which is not where hip pathology would be expected to be symptomatic. His right hip arthrogram did not even show a definitive tear to the labrum. Most importantly, the patient's mechanism of injury would not cause intra-articular pathology. Therefore, the patient is having hip pain of unclear etiology, and I would not relate his current right hip complaints to the incident on 2/23/17.

(R's Ex. Q, Bates 294)

34. At hearing, Claimant testified that he "was spraying with my right hand and it jerked me back so like pushed me in and it went like that. And I felt a pop in my hip, that it started bugging me and my shoulder was bugging me a lot, too. I was seeing my shoulder bugging me a lot. I started feeling immediate pain in those and then my back started hurting as well." (T 14:21-25; 15:1)

35. Dr. Martin opined that Claimant's mechanism of injury could not have caused the type of injury Claimant describes. (T 34:16-18) In order to cause a tear, there must be rotational force, and Claimant does not describe rotational force in his description of the injury. Dr. Martin explained:

> Typically with the way the hip joint is, you need to have some sort of rotational force. It's a ball and socket joint and you need to have some sort of rotation to put a lot of strain through the labrum and cause pathology or a tear. All the records as well as with the – what the patient is stating is I simply step back to steady myself. So I wouldn't – I wouldn't consider that enough force or having **any** rotational force to cause a tear. (T 34-35 (*emphasis added*))

36. Claimant did not credibly or persuasively describe a rotational force to his hip in any of his accounts of the accident.

37. Claimant also testified that he has to "awkwardly sit and maneuver around, or else I get pain in my hip." (T 18:7-11)

38. Dr. Martin found this sitting issue to be remarkable. She testified that Claimant described having to “sit on the edge of a chair and actually straighten his leg to find some sort of position of comfort.” (T 31:5-7)

39. She explained that this sitting behavior is not normal. Dr. Martin has seen hundreds of labrum tears, from large to small, and the size of the tear doesn’t necessarily affect how symptomatic a person is. “But I haven’t necessarily seen someone quite as painful and have such a gait impairment have to alter the way they’re sitting in a chair. There was several things that didn’t – I had not seen in other patients.”

40. Dr. Martin also testified that Claimant’s pain on examination was “more pronounced than what I would expect, especially for the limited objective findings.” (T 17-19)

41. Dr. Martin also performed range of motion testing. Initially, when Claimant was aware that the she was rotating his hip, both internal and external rotation caused him subjective pain. However, when Claimant was distracted, she performed the same test in a different manner using the foot, and Claimant did not have the same pain response. (T 32:4-14) She explained that this different response to the same mechanism is a “red flag.” (T 32:16-19)

42. Dr. Martin focused on trying to identify and diagnose the source of Claimant’s pain. On physical examination, Claimant indicated he was having pain in two locations, “a location just above the greater trochanter, which is the outer part of the hip where the bone sticks out” and then “rather than pointing to the groin area, which is very typical for hip pathology, he was actually pinpointing the right lower quadrant.” (T 31:16-22) Dr. Martin further testified that “I remember asking specifically twice ‘is this, are you sure this is where you’re having pain?’ Because it was a little bit surprising, it was higher than where I had anticipated.” (T 31:22-25)

43. Claimant filled out a pain diagram in which he circled the expected area of pain, but he did not point to that area on exam. (T 42:23-24) Dr. Martin explained that she puts more weight on where the patient actually points to their pain rather than where they draw it, because it is more accurate. (T 43:9-11) In this case, when Claimant’s areas to which he pointed did not match his pain diagram, Dr. Martin asked him twice to clarify where he was feeling pain.

44. She testified that, “I was surprised that it wasn’t a pinpoint area of pain, which is what I typically see with labrum tears.” (T 48:8-18)

45. Dr. Martin looked to the MRI report to further investigate Claimant’s issues, and she explained the radiologist’s findings “Outlines that some of the contrast was underneath the upper and the back part of the labrum.” And he goes on to say “This may reflect a normal variance, but it is difficult to entirely exclude a small partial tear, specifically of the labrum.” (T 33:4-8)

46. Based on the radiologist’s report, her examination of Claimant, and lack of formal diagnosis, Dr. Martin did not recommend Claimant undergo the recommended surgical repair to his hip labrum. She stated that before moving forward with

surgery, “the basis of that is to actually find a diagnosis, what is causing this person’s pain. I do not feel like that has been found in this case, which is the biggest issue. Another major issue that I have, the patient has had significant conservative care, which I think has been very appropriate, but now we’re at the point where if we have continued subjective complaints I think it’s very reasonable to do a hip injection and see if the patient actually has improvement. If there’s improvement with that, then we actually have – we’re a step closer to a diagnosis. If there’s no improvement, we still don’t have a diagnosis.” (T 33-34:1-6)

47. When asked about her opinion that the “Right hip arthrogram did not even show a definitive tear in the labrum” and asked specifically, “Now, it is your opinion that he does not have a tear?” Dr. Martin testified, “Probably no, correct.” (T 43:17-18)

48. Dr. Ciccone echoed these concerns in the report from his October 4, 2017, medical records review and opined that Claimant’s hip pain was unrelated to his work injury.

49. According to Dr. Ciccone, “I believe that Claimant’s hip pain is unrelated to work. While the Claimant did complain of right shoulder pain at his initial medical visits there were no complaints of hip pain until 5 weeks after the injury. I do not believe that Claimant suffered an injury to the right hip at work. While the Claimant may desire further orthopedic care, this should not be covered by worker’s compensation.” (R. Ex. K, Bates 252)

50. Ultimately, Dr. Ciccone and Dr. Martin both concluded Claimant’s hip complaints are unrelated to his work injury.

51. This ALJ finds the medical opinions of Dr. Martin as set forth in her report and hearing testimony to be credible and persuasive.

52. The ALJ also finds the medical opinions of Dr. Ciccone as set forth in his report and in his deposition testimony in which he opines that Claimant did not sustain a work related injury to his right hip to be credible and persuasive.

53. At hearing, Claimant alleged that “I mentioned it to [my ATP] and we believed it was just a strain that it would go away. And it didn’t go away, so I brought it up again to her, because it kept hurting a lot.” (T 16:17-19) The ALJ does not find this testimony to be credible. It is not logical that Dr. Louder and Dr. Parsons would choose to ignore symptoms reported by Claimant and not document those symptoms and injuries right after his accident when they are trying to determine the scope of his injuries and the proper course of treatment. Moreover, Drs. Louder and Parsons assessed Claimant as suffering from a shoulder – rotator cuff – strain up through March 15, 2017. If each physician was willing to document a shoulder strain, it does not make sense that they would intentionally not document an alleged hip strain.

54. Claimant also testified at hearing that immediately after the work accident, he had the sudden onset of stabbing hip pain. (T 15:6-22) It is not credible that Claimant had the immediate onset of stabbing hip pain and told his physicians

about his stabbing pain, but yet the physicians chose to not document his pain complaints regarding his right hip. Therefore, the ALJ finds that Claimant did not have the onset of hip pain immediately after his work accident. The ALJ also finds that Claimant did not tell Dr. Louder or Dr. Parsons about his alleged hip pain until Dr. Parsons documented it in her chart notes.

55. The ALJ does not find Claimant's testimony to be credible or persuasive.

56. Dr. Martin also addressed Claimant's shoulder condition during her IME. Although treatment for Claimant's right shoulder is not at issue, the ALJ finds Dr. Martin's opinions regarding Claimant's left shoulder to be relevant and insightful regarding the credibility and persuasiveness of her opinion regarding her causation assessment of Claimant's hip complaints and the request for hip surgery. Dr. Martin noted in her report the following:

> Given that no solid diagnosis was ever given to the [Claimant] in regards to his shoulder, it is very surprising to me that surgical intervention was pursued in the first place. The [Claimant] is now post-surgical, where very minimal findings were found during surgery with the exception of an inflamed subacromial/subdeltoid bursa. The [Claimant] is reporting no improvement to his shoulder pain, despite extensive conservative measures and surgical intervention. The only possible diagnosis for the pain that he is describing would be an irritation to the biceps tendon, not the bursa, given the [Claimant's] location of pain. The [Claimant] has had appropriate treatment thus far, and acute biceps tendonitis would have been expected to improve within a matter of weeks following the incident. I would not expect for the [Claimant] to have any permanent restrictions from an irritation to the biceps tendon, nor will he need any ongoing care. He has had extensive physical therapy for his shoulder.
>
> The [Claimant] also does not describe any lasting benefit from ongoing massage therapy or acupuncture therapy; therefore, it is not reasonable to continue with these treatments if they are not giving the [Claimant] any benefit.

57. The ALJ finds some similarities between the primarily subjective symptom based treatment provided to Claimant for his shoulder and the primarily subjective symptom based surgical recommendation for his right hip. Claimant complained relentlessly about his right shoulder and it was questionable as to whether the MRI showed any pathology, such as a torn labrum, which would be amenable to surgery. And, despite limited physical findings, he was prescribed surgery, underwent surgery - which failed to document a torn labrum – and did not get any relief from the surgery. Regarding Claimant's right hip, Claimant has complained of ongoing hip pain. And, even though there is not a documented mechanism of injury and there are limited physical findings - as described by Dr. Martin -

surgery is being recommended. The ALJ finds that under these circumstances, the prescribed hip surgery is not reasonable and necessary.

58. The ALJ finds that Claimant's pain complaints are of limited value in determining causation and determining whether surgery is reasonable and necessary.

59. The ALJ also finds it hard to reconcile the extent of diagnostic studies and medical treatment provided and prescribed in this case based on the mechanism of injury and Claimant's description of his symptoms as documented by his providers shortly after the accident.

60. Claimant has failed to establish by a preponderance of the evidence that he injured his right hip on February 23, 2017.

61. Claimant has failed to establish by a preponderance of the evidence that his hip problems are related to his February 23, 2017, work accident and injury.

62. Claimant has failed to establish by a preponderance of the evidence that the hip surgery recommended by Dr. White is reasonable and necessary.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ

determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established, by a preponderance of the evidence, that his hip condition is causally related to his February 23, 2017, work injury.

Claimant must prove a causal relationship between the injury and the medical treatment for which the worker is seeking benefits. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997). Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1189 (Colo. App. 2002).

In this case, Claimant suffered a compensable injury to his right shoulder which has been accepted by Respondents. Claimant now seeks a determination as to whether his right hip complaints are compensable. Claimant, however, has failed to prove, by a preponderance of the evidence, that his right hip complaints arose out of his employment. Claimant's failure, is based upon a number of findings which include, but are not limited to, the following:

- Claimant failed to report his hip injury until three weeks after his date of injury - and he was actively treating for his shoulder at this time.
- Dr. Martin and Dr. Ciccone both found Claimant's failure to report during this period of time indicates that any hip issues he may currently be experiencing are unrelated to his work injury. Dr. Martin opined that a hip injury with pain at a level Claimant described would probably be reported in the first couple of days after the injury.
- Dr. Martin credibly and persuasively explained that rotational force is necessary to cause a labral tear, and Claimant has not described a rotational force in any of his accounts of the accident. Therefore, even if Claimant had reported the injury sooner, his mechanism of injury could not have caused the symptoms he describes.
- Despite describing a very minor incident to Dr. Louder shortly after the accident, and despite describing symptoms that were limited to his right shoulder shortly after the accident, Claimant's reported symptoms have migrated to other body parts, including his back and right hip.

- Claimant's own ATP, Dr. Julie Parsons, agreed with Dr. Martin's conclusion that Claimant's injury could not have caused Claimant's hip symptoms. Notably, Dr. Parsons found, "He is insistent that the right low back, hip, and inguinal pain are related to his injury although he had no mechanism of injury. I explained to him that the insurer may not recognize the above areas as part of the injury." (R. Ex. B, Bates 34)
- The Claimant was not found to be credible regarding the cause, onset, and extent of his hip problems.

Therefore, the ALJ concludes Claimant has failed to establish by a preponderance of the evidence that Claimant's hip injury was caused by the accident that occurred on February 23, 2017.

II. Whether Claimant established, by a preponderance of the evidence, that the right hip arthroscopy recommended by Dr. Brian White is reasonable and necessary to treat Claimant's February 23, 2017, work injury.

Respondents are only liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S; *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The question of whether medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *Wal-Mart Stores, Inc. v. Industrial Claims Office, supra*.

Claimant failed to establish, by a preponderance of the evidence, that his hip condition was caused by, or is related to, his employment and work accident of February 23, 2017. Therefore, Claimant is not entitled to medical benefits to relieve him of his hip condition.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant did not sustain an injury to his hip as a result of his July 23, 2017, work accident.

2. Claimant's request for the hip surgery recommended by Dr. White is denied and dismissed.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 20, 2018

Denver, CO 80203

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that on February 6, 2018 he sustained an injury arising out of and in the course and scope of his employment with the employer.

- If the claimant proves a compensable injury, whether the claimant has demonstrated by a preponderance of the evidence that the medical treatment he received was reasonable and necessary to cure and relieve him from the effects of the injury.

- If the claimant proves a compensable injury, whether the claimant has demonstrated by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits beginning February 8, 2018 and ongoing, until terminated by law.

- If the claimant proves entitlement to TTD, whether the respondents have demonstrated by a preponderance of the evidence that the claimant was responsible for the termination of his employment, thus ending the claimant's entitlement to TTD benefits.

- At hearing, the parties stipulated to an average weekly wage (AWW) of $1,134.44.

FINDINGS OF FACT

1. The employer provides payroll related services to various clients. One such client of the employer is Caminante Trucking. The claimant was hired by Caminante Trucking on November 1, 2017. At that time, the claimant became an employee of the employer.

2. Caminante Trucking has a contract to provide trucking services to the United States Postal Service (USPS). The claimant's job duties involved transporting bulk mail to and from USPS locations/annexes. Prior to his employment with Caminante Trucking, the claimant held a similar position with Albuquerque Trucking. The claimant testified that his employment with Albuquerque Trucking ended when that company's contract with the USPS ended and Caminante Trucking's contract began.

3. While employed with the employer, the claimant was assigned to drive the "scarlet route". Another driver, Jason, was assigned to the "main route". The claimant testified that on February 6, 2018, he began his day as he normally would and completed his first run of the scarlet route. However, when he returned to the USPS annex, he learned that his coworker, Jason, had failed to report for his shift. As a result,

the claimant was required to complete the remainder of his scarlet route runs, as well as the runs for the main route. The claimant also testified that he attempted to report Jason's absence to Caminante Trucking, but he was unable to reach anyone.

4. The claimant testified that it was on that same date, February 6, 2018, that after returning to the USPS annex, he lost his footing while he was climbing out of his truck, and fell to the ground. The claimant testified that he fell backwards and landed on his back, and struck his head. The claimant testified that he immediately felt a sharp pain in his low back and a pop in his neck, but he did not lose consciousness.

5. After the incident, the claimant communicated with a USPS employee, Mr. Rocha. At that time, the claimant told Mr. Rocha that he had fallen and hurt his back. Mr. Rocha encouraged the claimant to seek medical treatment. It is undisputed that the claimant's conversation with Mr. Rocha was not notification of the injury to the employer.

6. The claimant testified that he finished his shift on February 6, 2018 and reported for his scheduled shift on February 7, 2018. The claimant was able to complete both the scheduled scarlet route and the main route on the morning of February 7, 2018. Thereafter, the claimant was approached by his supervisor, Mr. Robles. The claimant testified that he did not tell Mr. Robles that he fell and hurt his back.

7. The claimant testified that Mr. Robles told the claimant that Caminante Trucking wanted him "to take some time off". The claimant testified that he asked Mr. Robles if he was fired and Mr. Robles informed the claimant that he should contact Juan or Carlos with Caminante Trucking.

8. At that time, Mr. Robles showed the claimant an email that the USPS sent to Caminante Trucking regarding various concerns. The claimant testified that the allegations contained in the email referencing him are not true. The claimant also testified that many of the allegations in that email pertain to the other driver, Jason. The ALJ finds the claimant's testimony on this issue to be credible and persuasive.

9. The claimant testified that he was not told that his employment was terminated. He was only told to "take some time off". The claimant learned that his employment with Caminante Trucking had been terminated when he attempted to access payroll information on the employer's website. Employment records entered into evidence indicate that the employer terminated the claimant's employment on February 7, 2018 because of a "physical fight [with] one of the postal workers". The claimant denies that he ever engaged in a verbal or physical altercation with anyone while employed with the employer. The ALJ finds this testimony to be credible and persuasive.

10. The claimant has not returned to work for the employer. Nor has the claimant obtained employment with any other employer.

11. On February 8, 2018, the claimant contacted the employer and reported the February 6, 2018 fall. The claimant testified that the employer scheduled him an appointment for medical treatment with Work Partners that same day.

12. On February 8, 2018, the claimant was seen at Work Partners by Dr. Lori Fay. At that time, the claimant reported aching, stabbing, and throbbing pain in his low back that was accompanied by tingling. In her physical exam, Dr. Fay noted that the claimant had no swelling, ecchymosis (bruising), or bony deformity. Dr. Fay also noted that the claimant had tenderness over the right paravertebral muscles down into the lumbosacral junction and increased tightness in the right paraspinous muscle. Dr. Fay diagnosed a low back strain/sprain and recommended rest, ice, heat, and over the counter anti-inflammatory medication. In addition, Dr. Fay placed the claimant on work restrictions that included no lifting, carrying, pushing, or pulling over five pounds.

13. On February 15, 2018, the claimant returned to Work Partners and was seen by Erica Herrera, PA. The claimant reported that he continued to have low back pain that was stabbing and sharp. In addition, the claimant also reported that he felt a 65% improvement in his symptoms. At that time, Ms. Herrera referred the claimant for massage therapy and chiropractic treatment with Dr. Christopher Angello. Ms. Herrera placed the claimant on work restrictions of no lifting, carrying, pushing, or pulling over eight pounds. The claimant testified at hearing that he continues to have these same work restrictions. The claimant also testified that he did not return for a third visit with Dr. Fay or Work Partners because his claim was denied by the respondents.

14. Although his claim was denied, the claimant obtained and continued to undergo chiropractic treatment with Dr. Angello into April 2018. The claimant testified that he discontinued treatment with Dr. Angello when he could no longer afford it.

15. The claimant testified that his current symptoms include low back pain with sharp pain when he moves from sitting to standing. The claimant also testified that he has tingling in his fingers, shooting pain into his legs, and his legs go to sleep easily.

16. At the request of the respondents, the claimant attended an independent medical examination (IME) with Dr. Douglas Scott on May 16, 2018. In connection with the IME, Dr. Scott reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report, Dr. Scott opined that the claimant suffered a low back sprain/strain on February 6, 2018. Dr. Scott also opined that the claimant was approaching maximum medical improvement (MMI) with no permanent impairment from his injury. With regard to the claimant's other symptoms, Dr. Scott opined that the claimant may have myogenic or neurogenic thoracic outlet syndrome, but that diagnosis would be unrelated to the claimant's work injury. Dr. Scott's testimony at hearing was consistent with his IME report.

17. The medical records entered into evidence indicate that the claimant told Dr. Fay that he did not have a history or back issues. However, the claimant was seen for back pain by Dr. Britta Seppi on July 29, 2014 and by Dr. Michael Pramenko on September 7, 2017.

18. During the IME, Dr. Scott specifically asked the claimant about these two visits. The claimant recalled that the 2014 visit with Dr. Seppi related to a muscle strain. The claimant testified that the 2014 strain resolved and he had no further issues. The claimant testified that he sought medical treatment in September 2017 because he had pain on his right side that he believed was caused by a kidney infection. However, the claimant did not have a kidney infection and Dr. Pramenko diagnosed musculoskeletal back pain that was likely caused by obesity.

19. Mr. Robles testified at hearing and identified himself as the claimant's supervisor. Mr. Robles testified that on February 7, 2018, he informed the claimant that his employment was terminated. Caminante Trucking chose to discharge the claimant because of the allegations listed in the email from the USPS. Mr. Robles agreed that the claimant was considered the scarlet route driver. Mr. Robles also confirmed that the claimant was required to complete both the scarlet and main routes on February 6 and 7, 2018 because the other driver, Jason, failed to report for work.

20. USPS employee, Mr. Rocha, testified at hearing. Mr. Rocha testified that the claimant informed him of his February 6, 2018 fall on that same date. Mr. Rocha shared that information with his direct supervisor. Thereafter, Mr. Rocha learned that he claimant had been "banned" from the USPS annex, was fired by Caminante Trucking, and that the employer would take no other action with regard to the February 6, 2018 fall.

21. Mr. Rapier, another USPS employee testified at hearing. Mr. Rapier testified that the email sent to Caminante Trucking was authored by him. Mr. Rapier further testified that Caminante Trucking was a risk of losing their contract with the USPS because of the actions of the claimant. However, Mr. Rapier was certain in his testimony that the claimant was the main route driver and not the scarlet route driver. The ALJ does not find Mr. Rapier's testimony to be credible or persuasive.

22. The ALJ credits the medical records, the testimony of the claimant, and the testimony of Mr. Rocha and finds that the claimant did fall while exiting his work vehicle while at work on February 6, 2016, resulting in a low back sprain/strain. Therefore, the ALJ finds that the claimant has demonstrated that it is more likely than not that the claimant suffered an injury that arose out of and in the course and scope of his employment with employer. Although the claimant had two prior instances of reported back issues, the ALJ finds that those prior issues are not related to the fall and related injury that the claimant suffered on February 6, 2018.

23. It is clear from the record that following the injury the claimant notified the employer on February 8, 2018 and was referred for medical treatment with Work Partners. The ALJ finds that the claimant has demonstrated that it is more likely than not that the medical treatment he received from Work Partners, and any providers referred to by Work Partners (including Dr. Angello) was authorized medical treatment.

24. The ALJ credits the medical records and the claimant's testimony and finds that the claimant has demonstrated that it is more likely than not that medical treatment he has received to treat his low back pain is reasonable and necessary to cure and relieve him from the effects of the work injury.

25. The ALJ credits the medical records and the claimant's testimony and finds that the claimant has demonstrated that it is more likely than not that as a result of his work injury he continues to have work restrictions of no lifting, carrying, pushing or pulling over eight pounds. The ALJ credits the claimant's testimony that he has not worked since his work injury. Therefore, the ALJ finds that the claimant has demonstrated that it is more likely than not that his wage loss was caused by his work injury.

26. The ALJ credits the claimant's testimony over the contrary testimony of Mr. Rapier and finds that the employer's decision to discharge the claimant was based upon untrue information received from the USPS. Therefore, the ALJ finds that the respondent has failed to demonstrate that it is more likely than not that the claimant is responsible for the termination of his employment.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado (the Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been

contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

4. As found, the claimant has demonstrated by a preponderance of the evidence that on February 6, 2018, he suffered an injury that arose out of an in the course and scope of his employment with the employer. As found, the medical records and the testimony of the claimant and Mr. Rocha are credible and persuasive.

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. As found, the claimant has demonstrated by a preponderance of the evidence that the medical treatment he has received from Work Partners and Dr. Angello constitutes reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, the medical records and the testimony of the claimant are credible and persuasive.

7. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician. Claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

8. As found, the claimant has demonstrated by a preponderance of the evidence that he continues to have work restrictions due to his work injury. As found, the claimant has demonstrated by a preponderance of the evidence that his wage loss was caused by his work injury. Therefore, the claimant is entitled to temporary total disability (TTD) benefits beginning February 8, 2018 and ongoing until terminated by law. As found, the medical records and the claimant's testimony are credible and persuasive.

9. Sections 8-42-105(4) and 8-42-103(1)(g), C.R.S., contain identical language stating that in cases "where it is determined that a temporarily disabled employee is responsible for termination of employment the resulting wage loss shall not be attributable to the on-the-job injury." In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P3d 1061 (Colo. App. 2002), the court held that the term "responsible" reintroduced into the Workers' Compensation Act the concept of "fault" applicable prior to the decision in *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Hence, the concept of "fault" as it is used in the unemployment insurance context is instructive for purposes of the termination statutes. *Kaufman v. Noffsinger Manufacturing*, W.C. No. 4-608-836 (Industrial Claim Appeals Office, April 18, 2005). In that context, "fault" requires that the claimant must have performed some volitional act or exercised a degree of control over the circumstances resulting in the termination. *See Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1995) *opinion after remand* 908 P.2d 1185 (Colo. App. 1995).

10. As found, the respondents have failed to demonstrate by a preponderance of the evidence that the claimant is responsible for his termination of employment. The employer terminated the claimant's employment based upon untrue allegations presented to them by the USPS. As the claimant did not engage in the behaviors for which he was terminated, the ALJ concludes that the claimant did not exercise any volitional act that resulted in his termination. As found, the claimant's testimony is credible and persuasive.

ORDER

It is therefore ordered that:

1. The claimant suffered a compensable injury on February 6, 2018.

2. The respondents shall pay for reasonable and necessary medical treatment including treatment the claimant has received from Work Partners and Dr. Christopher Angello.

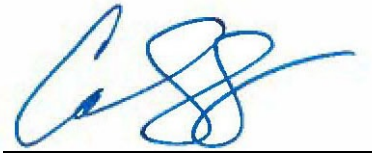
3. The claimant is entitled to temporary total disability (TTD) benefits beginning February 8, 2018 and ongoing until terminated by law.

4. The claimant's average weekly wage (AWW) for this claim is $1,134.44.

5. The claimant was not responsible for termination of his employment with the employer.

6. The insurer shall pay interest to the claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

Dated: September 20, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-046-462

ISSUE

➢ Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable injury on April 22, 2017.

STIPULATION

➢ If Claimant did sustain compensable injuries, then by stipulation of the parties, the medical care he received at Concentra is reasonable, necessary, and related medical treatment to cure and relieve him of the effects of those injuries.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Employer hired Claimant to work as a Chiropractor in its practice group. Claimant began working for Employer on April 17, 2017.

2. Claimant alleges a co-worker chiropractor, Dr. Rob Buechners, injured him at work when Dr. Buechners adjusted his spine on April 22, 2017. Claimant further alleges that he was training Dr. Buechners at the time, and that therefore his injury occurred during the course and scope of his employment.

3. According to Claimant, Dr. Jeremy Casagrande, the owner of the practice group, hired Claimant to help train Dr. Buechners, "to help get him up to speed." Claimant asked Dr. Buechners for the adjustment as a training exercise.

4. The great weight of the evidence contradicts Claimant's allegation that Claimant was training Dr. Buechners.

- Claimant testified that Dr. Doug Burson was present when Dr. Jeremy allegedly requested Claimant train Dr. Buechners. However, both Dr. Burson and Dr. Casagrande testified that Dr. Casagrande gave no such instruction.

- Claimant's job duties, as enumerated in his employment contract, do not include training other Chiropractors.

- Claimant's compensation agreement does not include anything about training other Chiropractors.

- When Claimant reported the incident in a May 5 note to Dr. Casagrande, Claimant did not mention Dr. Buechners' adjustment was part of any training or teaching Claimant was doing at Dr. Casagrande's direction.

- Dr. Casagrande testified that he was the only one who trained chiropractors in the practice group.

- Dr. Burson testified that chiropractors in the practice group learned new techniques by attending classes and practicing on mannequins and then other students in the class.

- Claimant presented no persuasive evidence that he told Dr. Buechners that his adjustment was for training purposes or that Claimant provided Dr. Buechners with any feedback or critique.

5. Claimant's reports to treatment providers also contradict his allegation that he was training Dr. Buechners when he received his adjustment.

- On May 11, 2017, Claimant reported to Health Images of Boulder for an MRI. He reported "Acute neck pain x3 weeks. Unknown trauma." In the same report, he indicated that his problem was "acute" and "non-traumatic."

- On August 9, 2017, Claimant saw Peter Gulla, D.C., at the "Concussion Place." Dr. Gulla recorded that after Employer hired Claimant, he began hearing complaints from mutual clients about a particular doctor and post-adjustment pain. Claimant "decided to have said provider adjust him to see if he experienced a similar response."

6. The great weight of the evidence supports a finding that Claimant asked Dr. Buechners for a "courtesy" adjustment for personal reasons not related to work.

- Claimant testified he moved his belongings to the Boulder area just before his job began.

- Dr. Buechners testified he provided a professional courtesy adjustment on Claimant, who asked for such due to a sore neck as he had been sleeping on a couch.

- Dr. Burson testified Claimant asked him for an adjustment a few days after Dr. Buechners adjusted him. Claimant told Dr. Burson his neck was sore from sleeping on a couch.

- Drs. Burson, Casagrande, and Buechners all testified that chiropractors at the practice group provided "professional adjustments" or "courtesy adjustments" on each other as a matter of course. They do these simply to

adjust each other; not to learn or practice new techniques. Employer does not require chiropractors to adjust each other.

7. Based upon the totality of the evidence, the ALJ credits Respondents' witnesses' testimony and exhibits over the Claimant's testimony and exhibits.

8. Claimant did not establish by a preponderance of the evidence that his symptoms and need for treatment arose out of his employment with Employer. The ALJ finds that Dr. Buechners adjusted Claimant as a professional courtesy. Such was not a requirement of his job, and provided no benefit to Employer. The benefit of the courtesy adjustment was strictly personal to Claimant.

9. The ALJ concludes that Claimant's testimony was neither credible nor persuasive.

10. The ALJ concludes that the testimony from Respondents witnesses was credible and persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. *2008).* In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo.App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning

credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo.App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); §*8-41-301(I)(b), C.R.S.*

Respondents' witnesses credibly testified that the adjustment Claimant received was strictly personal and not part of his job duties or job expectations.

Claimant's injury was not caused by his work activities.

The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Here, Claimant's alleged injury occurred within the time and place limits of his employment relationship with Employer. Nonetheless, the question of whether the alleged conditions, for which Claimant seeks benefits, "arose out of" his employment must be resolved before the injury is deemed compensable.

The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). The fact that Claimant may have experienced an onset of pain while 'at work', does not mean that he sustained a work-related injury. An incident which merely elicits pain symptoms without a causal connection to the industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988)*; Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989).

Under the Workers' Compensation Act (hereinafter Act), there is a distinction between the terms "accident" and "injury". An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *see also*, §8-40-201(2)(injury includes disability resulting from accident). Consequently, a "compensable" injury is one which requires medical treatment or causes disability. *Id*.; *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, supra; §8-41-301, C.R.S.

Given the distinction between the terms "accident" and "injury." An employee can experience symptoms, including pain from an "accident" at work without sustaining a compensable "injury." This is true even when the employee is clearly in the course and scope of employment performing a job duty. See *Aragon*, supra, ("ample evidence" supports ultimate finding that no injury occurred even where the claimant experienced pain when struck by a bed she was moving as part of her job duties); see also, *McTaggart-Kerns v. Dell, Inc.,* W.C. No. 4-915-218 (ICAO, May 29, 2014)(where Claimant involved in motor vehicle accident without resultant injuries, no compensable injury occurred). As found above, the ALJ is not persuaded that Claimant's need for care arose from a compensable incident at work on April 22, 2017.

The "arising out of" element is narrower than the "course" element and requires the claimant to prove that the injury had its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). The "arising out of" test is one of causation and generally requires that the injury have its origin in an employee's work-related functions and be sufficiently related thereto so as to be considered part of the employee's service to the employer.

As presented, the evidence does not support that Claimant sustained a compensable injury on April 22, 2017 that arose out of or that was incidental to his service to Employer. Consequently, the ALJ concludes that Claimant has failed to prove, by a preponderance of the evidence, that there is a causal connection between his employment and the resulting conditions for which medical treatment was sought. §8-43-201, C.R.S.; *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

Because Claimant failed to establish he suffered a compensable "injury" as defined by the aforementioned legal opinions, his claim must be denied and dismissed. Accordingly, the claims for medical benefits need not be addressed.

ORDER

It is therefore ordered that:

1 Claimant failed to prove by a preponderance of the evidence he sustained a compensable injury that occurred in the course and scope and arose out of his employment for the employer.

2 Consequently, Respondents are not liable for any indemnity benefits, medical benefits or any other benefits under the Colorado Workers Compensation Act. Claimant's claims are denied and dismissed.

3 Any issues not determined herein are reserved for future decision.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 20, 2018

/s/ _ Kimberly B. Turnbow ___
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Did Claimant prove a compensable left shoulder injury on March 28, 2018?
- If the claim is compensable, did Respondents prove Claimant was responsible for termination of his employment?
- If compensable, did Respondents prove the predicate elements for entitlement to a 50% reduction of indemnity benefits based on intoxication under § 8-42-112.5? If so, did Claimant prove by clear and convincing evidence his injury did not result from intoxication?

STIPULATIONS

If the claim is compensable, the parties stipulated:

1. Claimant's average weekly wage is $703.83, with a corresponding TTD rate of $469.22.

2. Claimant was disabled from his regular work and otherwise entitled to TTD benefits from March 29, 2018 through April 15, 2018, subject to Respondents' affirmative defenses of responsibility for termination and intoxication.

3. Claimant returned to work for a different employer on April 16, 2018, terminating TTD. He is entitled to temporary partial disability benefits to the extent he did not earn his preinjury wage, from April 16, 2018 until terminated according to law.

4. Evaluation and treatment for the left shoulder at Rocky Mountain Urgent Care on March 29, 2018, and subsequent care rendered by Dr. John Aschberger at Concentra, was reasonably necessary and authorized.

5. Dr. John Aschberger is Claimant's ATP.

FINDINGS OF FACT

1. Claimant worked for Employer as an apprentice electrician, beginning in December 2017. Claimant's job duties primarily involved electrical installation in new construction. When work was slow, he was assigned to work in the warehouse organizing equipment and supplies.

2. Claimant was working warehouse duties on March 28, 2018 moving boxes of materials He felt pain and a "weird pop" in his left shoulder while lifting a heavy box onto a shelf above shoulder level. Claimant finished his shift and did not report the incident that day because he initially "didn't think much of it" and "didn't think it would be a big

deal." That evening the pain increased significantly so he decided to report the injury the next morning.

3. When Claimant got to work the next day (March 29), his supervisor, John Kingsolver, called Claimant into his office. Mr. Kingsolver planned to speak with Claimant about job performance issues and "coach him on ways to improve his performance." Claimant immediately stated he had strained his shoulder lifting heavy items onto a shelf the day before. Mr. Kingsolver then took Claimant to Mike Garcia (Mr. Kingsolver's supervisor) to discuss the injury. Mr. Garcia had Claimant fill out an incident report, instructed him to take a post-injury drug test, and referred Claimant to Employer's designated provider, Rocky Mountain Urgent Care ("RMUC").

4. On the incident report, Claimant indicated he injured his "left shoulder" due to "lifting heavy objects awkwardly." He circled the left shoulder on the pain body diagram. He answered "yes" to the question whether he had previously injured that body part, and wrote "over six years ago I had minor shoulder injuries." No persuasive evidence was presented regarding any shoulder issues immediately before the incident.

5. Mr. Kingsolver and Mr. Garcia testified Claimant reported injuring his right shoulder. But Claimant identified his "left shoulder" as the injured body part on the incident report, and to the medical providers. The ALJ resolves this conflict by giving greater weight to Claimant's handwritten reports and his statements to providers.

6. Claimant saw NP Jovan Mack at RMUC on March 29, 2018 and reported left shoulder pain and reduced range of motion. He said he "was lifting pallets and boxes at work. The pain began yesterday but started hurting worse last night." Physical examination showed "moderate" limitations of left shoulder ROM in all planes. NP Mack put Claimant in a sling, prescribed NSAIDs, and restricted him to "light duty until cleared by PT."

7. Claimant also underwent a urine drug screen on March 29. On April 5, 2018, the results came back positive for marijuana and cocaine.

8. Employer terminated Claimant's employment on April 5. The reason for termination was stated on the paperwork as "we received results from the lab today 4-5-18 that he had failed his [drug] test so he will be terminated for violation of company policy." Although Mr. Kingsolver and Mr. Garcia had concerns about Claimant's job performance before the injury, they did not plan to terminate Claimant. The failed drug test was the direct catalyst for — and thus the proximate cause of — Claimant's termination.

9. When Claimant was hired by Employer he received materials to review, including an employee handbook. Under the heading "Drugs and Alcohol," the handbook states,

> The Company is committed to a safe, healthy, and productive work environment for all employees, free from the effects of illegal or non-prescribed drugs and alcoholic beverages. Use of drugs and alcohol alters employee judgment resulting in increased safety risks, employee injuries, and faulty decision making. Therefore, the possession, use, sale of controlled substances or alcohol on Company premises or during Company time is prohibited. This includes working after the apparent use of marijuana, ***regardless of marijuana's legal status***. Furthermore, working after the use of alcohol, a controlled substance, or abuse of any other substance is prohibited. (Emphasis in original).

10. Mr. Kingsolver interacted with Claimant "on most days," and there were no occasions he believed Claimant was under the influence of drugs or alcohol at work. He testified he would have "absolutely" taken immediate action if he had any evidence Claimant used drugs or alcohol at work or was intoxicated while working.

11. At hearing, Claimant admitted using marijuana and cocaine at a party the weekend before his injury. Claimant denied using any marijuana or cocaine at work or immediately before work. Respondents presented no persuasive evidence to contradict Claimant's timeline or establish he used drugs at work or immediately before work.

12. Claimant proved by a preponderance of the evidence he suffered a left shoulder injury on March 28, 2018.

13. Respondents failed to prove Claimant was responsible for termination of his employment. Specifically, Respondents failed to prove Claimant violated Employer's drug policy as set forth in the employee handbook. Respondents did not prove Claimant more likely than not used drugs at work or immediately before work, and the ALJ finds it at least equally likely Claimant used drugs during his free time on the weekend. Although Claimant's supervisors had other concerns about his performance, they planned to "counsel" him about those issues, and only decided to fire him after receiving the positive drug test.

14. Respondents proved the predicates to invoke the statutory presumption of intoxication under § 8-42-112.5(1). Claimant failed to overcome the presumption by clear and convincing evidence. Respondents are entitled to a 50% reduction of indemnity benefits.

CONCLUSIONS OF LAW

A. Compensability

To obtain medical or indemnity benefits, a claimant must prove he suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S.; *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The claimant must prove an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must

prove entitlement to benefits by a preponderance of the evidence. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally for either the claimant or respondents. Section 8-43-201.

Even a "minor strain" or a "temporary exacerbation" of a pre-existing condition can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused him to seek medical treatment*. E.g., Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (April 17, 1996).

As found, Claimant proved he suffered a compensable injury to his left shoulder on March 28, 2018. The mechanism of injury and progression of symptoms described by Claimant are reasonable and uncontroverted by any persuasive countervailing evidence. Although there was conflicting evidence regarding whether Claimant initially reported right shoulder pain, he wrote "left" shoulder on the incident report and told NP Mack his left shoulder was injured. Examination of the left shoulder revealed restricted range of motion and NP Mack found the clinical presentation sufficient to warrant immobilizing Claimant's arm with a sling in putting him on work restrictions. The ALJ is not persuaded Claimant fabricated the injury in a "panic" over being confronted by his supervisor as argued by Respondents. Based on the evidence presented, the ALJ is persuaded Claimant probably experienced a painful pop in the left shoulder at work as he described. He did not report the injury immediately because he assumed it was not a "big deal" and would resolve on its own. But the pain worsened that evening and he realized he needed to see a physician. Claimant reasonably requested medical treatment the next day and Employer obliged. There is no persuasive evidence of any shoulder symptoms or limitations immediately before the incident, and the mere fact Claimant had some "minor" shoulder problems "over six years ago" is not dispositive of whether he had a discrete injury in March 2018.

B. Responsible for termination

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the subsequent wage loss to obtain TTD benefits. *Id*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

Respondent stipulated that Claimant was "disabled" and left work due to the injury, but assert TTD is barred because he was terminated for cause (*i.e.*, failing the drug test). Section 8-42-103(1)(g) provides that a claimant who might otherwise be considered temporarily disabled is not eligible for TTD benefits if he or she was "responsible for

termination of employment." *Kerstiens v. All American Four Wheel Drive*, W.C. No. 4-865-825-04 (August 1, 2013).

The respondents must prove by a preponderance of the evidence that a claimant was terminated for cause or was responsible for the separation from employment. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). To establish that a claimant was responsible for termination, the respondents must show the claimant performed a volitional act or otherwise exercised "some degree of control over the circumstances which led to the termination." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). The mere fact that the employer discharged the claimant in accordance with its personnel rules does not automatically establish that the claimant acted volitionally or exercised control over the circumstances of the termination. *Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. App. 1987). The ALJ must consider the totality of the circumstances to determine whether the claimant was responsible for his termination. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

As found, Respondents failed to prove Claimant was responsible for termination of his employment. The reason for the termination was the positive drug test, and Respondents did not prove Claimant violated Employer's policy as set forth in the handbook. While many employers have so-called "zero tolerance" anti-drug policies that prohibit use of illegal drugs away from work, this is not one of those policies. The plain language of Employer's handbook explicitly prohibits use of drugs or alcohol *on Employer's premises or during work hours*. Although it also prohibits working "after" using drugs or alcohol, the ALJ interprets the term "after" to imply a temporal qualifier, meaning the employee may not work immediately after using drugs or alcohol. For example, an employee would violate this policy by smoking marijuana or drinking alcohol at home or in his car before going in to work. But the term "after" cannot reasonably be read in a literal sense to apply to an employee who merely used drugs or alcohol at any time in the past. A reasonable employee would not interpret this policy as prohibiting drug or alcohol use during the employee's free time away from work, unless they were still intoxicated when their shift began. Employer's policy appears intended to prevent employees from working under the influence of drugs or alcohol, and does not purport to regulate the employees' nonwork recreational activities. Claimant testified he used cocaine and marijuana at a party the weekend before his injury, and Respondents presented no persuasive evidence to the contrary.[1] There is no persuasive evidence Claimant used drugs at work or was under the influence at work, and the ALJ finds it at least equally likely Claimant used drugs during nonwork hours. Employer never conveyed to Claimant he could be fired for drug use on the weekend. Accordingly, Respondents failed to prove Claimant engaged in a "volitional act" he would reasonably expect to result in termination.

[1] The ALJ recognizes under § 8-42-112.5(1) an employee who tests positive for controlled substances after an injury is "presumed" to have been intoxicated at the time of the injury. But that presumption is confined to application of the 50% benefit reduction, and does not roam free in a claim to satisfy an employer's burden of proof in all other circumstances. Respondents cannot bootstrap the termination defense on the intoxication statute, but must affirmatively prove a volitional act leading to termination.

C. 50% reduction for intoxication

Section 8-42-112.5(1) provides indemnity benefits shall be reduced by fifty percent,

> [W]here the injury results from the presence in the worker's system, during working hours, of controlled substances . . . that are not medically prescribed . . . as evidenced by a forensic drug or alcohol test . . . . If the test indicates the presence of such substances . . . it is presumed that the employee was intoxicated and that the injury was due to the intoxication. This presumption may be overcome by clear and convincing evidence.

As found, Respondents proved the predicates to invoke the statutory presumption of intoxication under § 8-42-112.5(1), and Claimant failed to overcome the presumption by clear and convincing evidence. Claimant concedes he tested positive for marijuana and cocaine but argues Respondents did not prove the drugs were "above acceptable levels, or had any improper influence on his work performance." The ALJ is not persuaded by these arguments. Although the intoxication statute references a threshold level for alcohol, there is no minimum level for controlled substances. Respondents must only show the "presence" of drugs in Claimant's body, meaning the penalty applies to any level greater than "none." Nor must Respondents affirmatively prove Claimant was under the influence at the time of the injury. Rather, Respondents can rely entirely on the statutory presumption, as they have done here. *E.g.*, *City of Littleton v. Industrial Claim Appeals Office*, 370 P.2d 157 (Colo. 2016) (statutory presumption is "a substitute for evidence"). As such, it is incumbent on Claimant to rebut the presumption of intoxication by clear and convincing evidence, which Claimant failed to do.

ORDER

It is therefore ordered that:

1. Claimant's claim for a left shoulder injury on March 28, 2018 is compensable.

2. Insurer shall cover all medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's compensable injury, including, but not limited to, charges from RMUC and Dr. Aschberger.

3. Claimant's average weekly wage is $703.83, with a corresponding TTD rate of $469.22.

4. Respondent's affirmative defense that Claimant was responsible for termination of his employment is denied and dismissed.

5. Insurer shall pay TTD benefits from March 29, 2018 through April 15, 2018 based on the stipulated TTD rate.

6. To the extent he earned less than his stipulated AWW, Claimant is entitled to TPD benefits from April 16, 2018 until terminated according to law. The parties did not present post-injury wage records, so no specific order regarding TPD may issue.

7. Insurer may reduce all nonmedical benefits by 50% pursuant to § 8-42-112.5.

8. Insurer shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.

9. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

Whether Respondents have proven by a preponderance of the evidence that Claimant is responsible for his termination from employment; and

Whether Claimant has proven by a preponderance of the evidence that he is entitled to an order awarding temporary total disability benefits (TTD).

PROCEDURAL MATTERS

- The parties stipulated to an average weekly wage of $1,389.02, which would apply if Claimant were determined to be entitled to indemnity benefits.

- At the June 22, 2018, hearing, counsel for Claimant raised an oral motion to compel the production of Employer's computer hard drive. The ALJ reserved ruling and permitted Claimant to submit a written motion within 10 days from the date of hearing, at which point Respondents would have 10 days to file a response. Claimant did not file a written motion, as permitted. Counsel for Claimant renewed his oral motion to compel at the August 27, 2018, hearing, which the ALJ denied.

- The parties appeared for hearing on June 22, 2018. At the conclusion of the hearing, the parties had additional evidence to present and a second hearing date of August 13, 2018, was set. All the participant appeared for hearing on August 13, 2018, except Claimant. Claimant's counsel could not explain Claimant's absence, but counsel requested a continuance of the hearing date. The request for continuance was granted and the hearing was rescheduled to August 27, 2018, at which time the evidence presentation was concluded.

FINDINGS OF FACT

1. Claimant is a 37 year old man who worked for Employer as a floor manager. Claimant commenced employment for Employer in approximately May 2017.

2. Claimant worked as a manager at Employer on the date of injury, October 22, 2017. On that day, a fight broke out between employees of Employer and individuals attempting to enter the club. The fight occurred at approximately 2:00 a.m. Gunshots were fired, and Claimant's co-worker was shot. Claimant testified he was punched several times in the face.

3. Claimant continued to work after the injury. On November 4, 2017, Claimant was given permission to view surveillance videos of the fight by Michele Poague. Claimant thereafter attempted to download numerous surveillance videos to his Google Drive account. He attempted to download the videos during two shifts which began the evenings of November 4 and November *5*. On November 6, Employer could no longer access the surveillance videos Claimant copied (downloaded or

uploaded). Claimant offered to help retrieve the lost data, and the Employer accepted his offer. On November 9, 2017, Claimant left his physician's office where for the first time he received medical restrictions to not work, and left for the Employer's premises to retrieve the data. While attempting to retrieve the data on November 9 at the Employer's premises, he was arrested by Glendale PD for destruction of evidence related to the October 22 fight. Employer terminated Claimant on November 9, per the Employment Separation form Ms. Poague completed. In dispute is whether Claimant was responsible for his own termination as a result of violating company policy by copying videos without permission.

4. Michele Poague credibly testified at hearing. She is a management supervisor and human resources (HR) Manager. Ms. Poague reports directly to one of the owners, Debra Matthews, and handles HR and payroll matters. Ms. Poague testified that prior to the events relevant to Claimant's termination, Claimant was written-up for an incident of using excessive force against a customer. Claimant was alleged to have choked a customer who was not combative. That incident is the subject of a disciplinary write-up Ms. Poague prepared. Ms. Poague testified Claimant's termination was discussed internally at that time. She testified an incident of that type would normally have caused termination. However, they compromised with Glendale PD that it would not arrest Claimant, and Claimant would stay employed, if he attended training sessions at Glendale PD.

5. At the Employer's business, administrative password access was required to view saved surveillance videos, such as the ones in question from the October 22 fight, and the only people with access were Michelle Poague, Kevin Gulbranson, Jeff Orick and Maciek Trubowitz. The Employer's policies, providing for non-disclosure of confidential information, prohibited disclosure, distribution, transmission or copying of confidential information. This policy encompassed Employer's surveillance videos. The non-disclosure of confidential information policy is contained in writing and is shared with Employer's employees. Confidential information is defined as any information an employee learns of as a result of working for Employer that is not publicly available. Employer's surveillance system includes extremely sensitive information due to surveillance taken of inside the club and inside locker rooms.

6. On the evening of November 4, Claimant was writing a report of what happened on the night of the shooting and fight. Ms. Poague asked if it would be helpful for him to view the videos in conjunction with writing his report, and he stated it would. She asked Mr. Gulbranson, the IT manager, to log Claimant in and open the videos.

7. It is found that, consistent with Ms. Poague's testimony, Claimant did not ask to copy the videos, nor did she tell him he could copy videos. Ms. Poague never gave anyone permission to copy videos on to a personal device. Ms. Poague testified doing so would render secure files insecure, which was not allowed based on the confidentiality policy. Ms. Poague believed it was clear from their confidentiality policy that Claimant was not supposed to copy sensitive data. Ms. Poague allowed

other employees to view the videos to complete their statements regarding the October 22 fight. Ms. Poague was unaware of any other employee needing to copy Employer's videos.

8. Ms. Poague credibly testified that Employer's employees, Mr. Trubowitz and Mr. Gulbranson, were the only ones with authority to copy videos. Claimant, as one of Employer's managers himself, had been advised that all management employees required that any videos to be copied had to be accessed by either, Mr. Trubowitz and Mr. Gulbranson. Ms. Poague testified that she assumed that Claimant could not regain access at a later date, because he did not have administrative password access as a floor manager.

9. Ms. Poague went to work on Sunday, November 5, when Mr. Gulbranson informed her that Claimant's Google Drive was open on the computer and he was uploading files to his personal drive. Ms. Poague and Debbie Matthews, the owner, discussed terminating Claimant. Ms. Poague recommended Claimant's termination, but Ms. Matthews decided not to terminate him at that time. Ms. Poague did not speak with Claimant about his copying of videos, because she was not given authority to do so by Ms. Matthews. However, she left work on November 5, with no concerns about Claimant accessing the videos again, as she did not believe he had ability to access the videos.

10. On November 6, Ms. Poague was shown by Mr. Gulbranson the files accessed by Claimant. Based on Ms. Matthew's direction, Ms. Poague took no action on November 6 against Claimant for copying Employer's files.

11. On November 6, later in the day, another employee was preparing a report regarding the fight and shooting incident and needed to view a video to refresh his memory. Mr. Gulbranson informed Ms. Poague at that time that he could not access the video files. Ms. Poague testified that once she realized the files were gone, she became concerned and called Ms. Matthews. Ms. Poague recommended to Ms. Matthews that Claimant should be fired immediately because the video surveillance were missing. Ms. Matthews did not want to give permission to fire Claimant because she hoped that Claimant would retrieve the missing files.

12. Claimant was terminated on November 9, 2017, after Claimant was arrested, as noted on the termination form Ms. Poague completed. Ms. Poague testified she understood that she could terminate Claimant at that time, because if Glendale PD arrest someone on property they are trespassed and cannot return to the premises. Ms. Poague terminated Claimant for violating Employer's non-disclosure of confidential information policy by copying Employer's surveillance files.

13. Mr. Gulbranson testified credibly at hearing that he was the IT manager for Employer. He maintained cameras inside and outside, including on the dance floor and in the locker rooms at Employer's place of business. He stored videos for 8-10 days before the videos are overwritten but the surveillance system had the ability to

permanently save specific videos. Mr. Gulbranson saved videos for viewing on four computers. Mr. Gulbranson permitted Claimant to view the videos from a station in an upstairs conference room. Mr. Gulbranson saved videos believing that he was only providing limited password access. Mr. Gulbranson explained that any manager's password could access the computer, but additional access with an administrative password is needed to access saved videos. Mr. Gulbranson believed that the only people with knowledge of the administrative password were him, Ms. Poague, Mr. Orick, and Mr. Trubowitz.

14. Mr. Gulbranson agreed there could be some way of which he was not aware in which videos could have been accessed without the administrative password. Mr. Gulbranson saved videos of the October 22 incident to fulfill Glendale Police Department's requests. With Ms. Poague's direction, he allowed Claimant to view the videos. Mr. Gulbranson did not allow Claimant or any employee to copy files.

15. Mr. Gulbranson credibly testified he logged on to the computer and allowed Claimant to watch videos at approximately 6:30 p.m. on November 4. He testified he did not provide Claimant the administrative password, was unaware Claimant intended to view videos multiple times or copy videos. Mr. Gulbranson was not worried about logging off the computer before he left that night, because the computer would automatically log off after five minutes of inactivity.

16. On November 5 at 10 a.m., Mr. Gulbranson arrived at work and saw a Google Drive login associated with Claimant open. The open tabs on the computer showed what appeared to be multiple video files which had been copied to Claimant's Google Drive. Mr. Gulbranson observed from the computer screen that Claimant had attempted to upload 38 surveillance video files. When Mr. Gulbranson realized what had happened, he notified Ms. Poague.

17. Mr. Gulbranson arrived at work at 7 a.m. on November 6. He again noticed there were additional open files on the computer. Claimant's Google Drive was open. Mr. Gulbranson observed that there was a "New Folder" screen that had not previously existed, containing Employer's video files.

18. Mr. Gulbranson credibly testified that when he made this discovery, there did not appear to be any missing files. He left the computer as he found it and notified Ms. Poague of what he found. When later that day, he came back to the computer to allow another employee to view the videos for purposes of that person writing a police statement, the open screen and New Folder seen earlier was no longer there. Mr. Gulbranson assumed that instead of being simply copied, the files were actually dropped into the new folder, the folder was attempting to make a compressed file of the data into the Google Drive, and once the compression completed, it deleted the New Folder and the files were no longer on the computer. He notified Ms. Poague at this time the files were missing.

19. Mr. Gulbranson did not know how Claimant gained access to the files on the evening of November 5, but he speculated the only way was for Claimant to "hack" into the system. Claimant should have taken 15-20 minutes to view the videos he needed, and any other access was unauthorized.

20. Mr. Gulbranson purchased software to recover the lost files, although he could not be sure they recovered all files. Mr. Gulbranson had been impressed by Claimant's computer skills and believed Claimant to be more knowledgeable than him on IT issues.

21. Mr. Gulbranson credibly testified that Ms. Poague misunderstood that he spent six hours attempting to retrieve the missing files. Mr. Gulbranson further credibly testified that it would have been impossible for him to have deleted the files because the files went missing without him performing any activities on the computer.

22. Ms. Matthews terminated Claimant on November 9, and he was notified of his termination around November 11-12, when she notified him in texts that he had been trespassed and could not return to work.

23. Ms. Matthews testified that, initially, she did not want to terminate Claimant on the morning of November 5 after Claimant's first copy attempt. She did not believe he had taken the files, he could not access the files again, and she was not sure about his intent for copying the videos. When she was notified by Ms. Poague on November 6 of Claimant's second attempt to copy videos, Ms. Matthews agreed he needed to be terminated, she first wanted to work with Claimant to recover the data, which was attempted on November 9.

24. Ms. Matthews called the Glendale PD police chief on November 9. On that day, Claimant had been attempting to retrieve the data for several hours. Ms. Poague was worried that Claimant's retrieval effort was taking so long and in that process Claimant had taken apart Employer's computer. Ms. Matthews had previously informed Glendale PD there had been an issue with the videos being lost due to Claimant's actions. Therefore, Ms. Matthews notified Glendale PD on November 9 and asked if it was ok for Claimant to have taken apart the computer. She was told that was not ok, and that the police chief was going to send someone to stop what Claimant was doing.

25. Ms. Matthews credibly testified that no employee had permission to copy the surveillance videos, and if Claimant had requested permission, she would not have allowed it due to the videos being evidence in an attempted murder investigation. She also testified the non-disclosure of confidential information policies for Employer encompassed the surveillance videos Claimant made inaccessible. The videos were confidential and sensitive regardless of whether there had been a criminal investigation. She testified all managers are instructed that surveillance videos are considered to be confidential information. She testified that was discussed specifically in meetings involving Claimant. In her opinion, Claimant violated the

confidentiality policy of the Employer by trying to copy the surveillance videos. She testified Claimant could not have accessed the videos the second night with his floor manager password, and he would have had to "hack" the system to regain access.

26. Ms. Matthews testified Claimant's employment was already on thin ice due to the incident where he used excessive force on a customer. She testified his ultimate termination resulted from his unauthorized access and copying of videos, and regardless of whether he recovered the data, he would have been terminated. He also would have been terminated regardless of whether he had been arrested, although his being arrested led to him being considered trespassed as well.

27. Lt. Roy Martin with the Glendale PD testified at hearing. Officer Martin responded to the October 22 incident as the on-call commander that night. He testified there was still an open investigation and Glendale PD was utilizing Employer's surveillance video in the course of that investigation. Lt. Martin testified that the Glendale PD had requested video from Employer on several occasions. He testified that as of November 4-5, 2017, Glendale PD was still requesting video.

28. Lt. Martin testified that on November 9, he was notified there was an incident involving lost video relevant to the investigation of the October 22 fight. He went to Employer's premises with Sgt. Trace Warrick. He saw a computer hooked up to a docking station, and Claimant informed them he was trying to download video files. His understanding at that time was Claimant had worked on the computer, made the files inaccessible, and he was again working on the computer. Lt. Martin called the on-call District Attorney and was advised he had probable cause to arrest Claimant for a felony destruction of evidence. He testified his determination at the time of arrest was that Claimant acted intentionally to render the files inaccessible.

29. Tyler Mintz testified at hearing. He was a supervisor at Employer. He testified that on November 6, when he learned Claimant deleted files from Employer's computer, he called Claimant asking Claimant to "tell me something that is going to make me feel good about you deleting files off of our computer last night." Claimant told him he was having problems "wrapping his mind" around the shooting. Mr. Mintz then told him he should take some time off work.

30. Claimant testified at hearing and contended that he was granted permission to view videos because he needed to clarify how close he was standing to the employee who was shot. Claimant testified he could gain access to the surveillance videos with his floor manager password. Claimant testified he requested permission to copy the videos to watch them at home. He admitted Mr. Gulbranson logged him in to view videos on November 4.

31. Claimant maintained that he had no idea why Mr. Gulbranson logged him in if he had his own access to the videos. He testified he requested permission to copy videos so he could watch the videos to deal with his PTSD, and he did not want to take up time at work watching "hours and hours" of videos. Nonetheless, surveillance video on November 4 and 5 reflects that Claimant spent more than two

hours at work looking at the video. When asked about this time spent at work looking at the video, Claimant maintained that he was actively writing his statement for the Glendale PD when he was observed viewing the videos at work.

32. Claimant admitted he was uploading 38 video files to his Google Drive account during his November 4-5 shift. Claimant testified that during the November 5-6 shift, he attempted to compress the files to upload. He testified he compressed 41 files. Claimant testified he did not believe he required permission to copy the videos, even though he asked for permission to do so. Claimant testified he did not believe the files were potential evidence in the investigation of the October 22 fight, because he believed, and continues to believe, Glendale PD had all copies of the video they needed. Claimant admitted the videos were password protected.

33. Claimant admitted signing the Confidentiality Policy and Pledge. He agreed that "technically" surveillance videos of Employer was information that was "not otherwise publicly available." He later stated he would not agree videos would constituted confidential information. Claimant was asked if he has expertise in "hacking," and he denied as much.

34. Claimant testified he was not reprimanded for using excessive force against a customer, he did not receive additional training at Glendale PD as a result thereof, and he claimed the October 31, 2017, coaching and counseling form documenting the incident was fabricated after he was fired.

35. The ALJ finds and concludes that Respondents sustained their burden of proof to establish by a preponderance of the evidence that Claimant is responsible for his termination from employment. Therefore, since Claimant is responsible for his wage loss, he is not entitled to an order awarding TTD.

36. The ALJ finds the collective testimony of Michele Poague, Kevin Gulbranson, Debbie Matthews, Tyler Mintz, and Lt. Roy Martin was more credible than Claimant's testimony. The credible and persuasive evidence presented at hearing established that Claimant possessed a superior knowledge of computers than Employer's IT manager, human resources manager, and majority co-owner. The ALJ concludes Claimant was provided permission to watch surveillance video on a computer at work following a violent altercation, he was not given permission to upload confidential computer surveillance files to his personal Google drive account, and he used his superior computer knowledge to upload videos in violation of Employer's policies regarding the non-disclosure of confidential information.

37. The ALJ further finds the evidence establishes that Claimant, as a manager, was apprised of Employer's policies, and he was terminated as a direct result of both his violation of these policies, and his subsequent arrest for destruction of evidence, which was a direct result of his violation of the Employer's policies.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant bears the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S.; *City of Boulder v. Streeb*, 706 P.2d 786, 789 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 p.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

3. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Temporary Total Disability Benefit (TTD)

4. To obtain TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 639 (Colo. App. 1997). A claimant must establish a causal connection between a work-related injury and a subsequent wage loss. Section 8-42-103(1)(a), C.R.S*.; PDM Molding, Inc. v. Stanberg,* 898 P.2d 542, 546, 546 (Colo. 1995).

5. Under Sections 8-42-105(4) and 8-42-103(1)(g), C.R.S., the claimant is precluded from receiving TTD if he is found to be responsible for his wage loss. The concept of "responsibility" in Sections 8-42-105(4) and 8-42-103(1)(g), is similar to the concept of "fault" under the previous version of the statute. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). "Fault" requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994). Fault does not require willful intent. *Richards v. Winter Park Recreational Association*, 919 P.2d 933 (Colo. App. 1996)(unemployment insurance). The claimant is not at fault if the termination is due to claimant's physical or mental inability to perform assigned duties, but poor job performance can be claimant's fault. *Johnston v. Deluxe/Current Corporation*, W.C. No. 4-376-417 (Industrial Claim Appeals Office, June 7, 1999).

6. It is found and concluded that Respondents sustained their burden of proof to establish by a preponderance of the evidence that Claimant is responsible for his termination from employment. Since Claimant is responsible for his wage loss, he is not entitled to an order awarding TTD.

7. The credible and persuasive evidence presented at hearing established that Claimant possessed a superior knowledge of computers. The evidence established that Claimant had greater knowledge of computers than Employer, specifically, Employer's IT manager, human resources manager and the co-owner. It is concluded that Claimant had permission to watch a surveillance video on a computer at work following a violent altercation. Claimant was not given permission to upload confidential computer surveillance files and to transfer those files to Claimant's personal Google drive account.

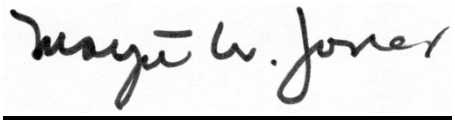
8. The evidence further established that Employer considered surveillance videos to be confidential information. Under Employer's policies, Claimant was expected to safe guard confidential information. Claimant, as a manager, was apprised of Employer's policies. Respondents established that Claimant was terminated from employment because of his actions in uploading confidential surveillance video to his personal Google account and being arrested and trespassed by the Glendale PD.

9. It is found and concluded that Claimant's actions uploading confidential surveillance videos was proven to be a volitional act which lead to his termination from employment, arrest and trespass by Glendale PD and wage loss. Since Respondents established that Claimant was responsible for his wage loss, Claimant is not entitled to an award of TTD.

ORDER

It is ordered that Claimant's claim for TTD is denied and dismissed.

DATED: September 25, 2018



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), CR.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant established, by the preponderance of the evidence, that she sustained a compensable injury to her left shoulder on January 27, 2018.

II. If claimant proved that she sustained a compensable injury to her left shoulder, did she also establish that the medical treatment she obtained at Parkview Hospital on and after February 11, 2018, is authorized, reasonable, necessary, and causally related to the January 27, 2018, left shoulder injury.

III. If claimant sustained a compensable injury to her left shoulder on January 27, 2018, did she prove that she is entitled to temporary total disability (TTD) benefits beginning January 27, 2018, through the present and ongoing.

IV. Whether Claimant's Average Weekly Wage is $289.77 or $392.31.

Because the ALJ concludes that Claimant failed to prove that she sustained a compensable injury, this order does not address issues II-IV above.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Employer operates a marijuana farm where marijuana plants are cultivated, harvested and processed for sale. The operation is spread over multiple buildings on twenty-seven acres; however, the restricted area where growing and processing occurs is limited to seven acres.

2. Claimant was hired to work inside as a cultivator by on September 1, 2017. Claimant's employment was probationary initially. At the end of her probationary period (around November 14, 2017), Claimant was hired as a full time employee. On January 3, 2018, Claimant received and acknowledged reviewing Employer's employee handbook. Section 4.5 of that handbook, "Safety," required claimant to report, "[A]ll accidents and injuries, regardless of how minor".

3. Claimant was paid a weekly salary of $850.00 at the time she was hired on December 1, 2017, following her probationary period. However, as explained by Brittney Kern, Claimant began having increasing and unacceptable attendance problems concerning her work around the middle of December 2017. According to Ms. Kern, Claimant would often come to work late, leave early and take multiple unexcused breaks. She was also using excessive sick time. Therefore, on January 16, 2018,

Claimant was taken off of her previous salary, and paid $9.81 per hour. This change was permanent.

4. Ms. Kern testified that she met with Claimant and explained this new policy, informing her that it was put in place due to excessive work absences, leaving her work station without cause or excuse, and unacceptable work performance. Ms. Kern met with Claimant and told her that she would not be paid for two days she had missed from work due to his change. Ms. Kern testified, and Claimant acknowledged during her testimony, that she was upset about this change in her rate of pay.

5. Claimant would frequently leave her work station inside employer's processing building where she would trim harvested marijuana plants to go outside. According to Claimant she like to work outside. Billy Osborn testified that employees of the farm were either designated as outside or inside workers. They were designated as such to avoid cross contamination/pollination of plants. Mr. Osborn testified that he would often find Claimant, who had been identified as an inside worker, outside in the barn or wandering the property. Mr. Osborn testified that he would instruct Claimant to go back inside and not to leave her work station; however, Claimant continued to leave her work station, occasionally later on the same day after she had been reprimanded for leaving her work area previously. Mr. Osborn testified that Claimant's unexcused absences from her work station had increased and she was missing more and more time from work.

6. Steven Ansley testified that he would frequently find Claimant outside, often in the barn where she would be engaged in activities unrelated to her position as a cultivator. According to Mr. Ansley Claimant reported being tired of being inside and asked to help with outside work so he allowed her to assist. Mr. Ansley testified that Claimant never reported to him that she had sustained an injury to her left shoulder at work and he never observed any behavior on Claimant's part after January 27, 2018 suggesting that she had sustained such an injury.

7. Manuel Gallardo, Claimant's immediate supervisor, testified that during November and December 2017 and January 2018, Claimant was assigned to work indoors in the processing area of the farm. Mr. Gallardo testified that Claimant would remove herself from the processing area by manipulating other managers for Employer. Mr. Gallardo testified that while he directed Claimant to stay indoors and complete her assigned duties, he had assigned her to inventory items in the barn. Mr. Gallardo also testified that after January 27, 2018, he never observed any evidence suggestive of the fact that Claimant suffered an injury to her left shoulder.

8. Based upon the testimony of Claimant's managers the ALJ finds that Claimant was frequently leaving her assigned workstation, generally without permission, to engage in activities unrelated to her position as a cultivator. Moreover, the testimony presented persuades the ALJ that these unexcused absences were increasing and that Claimant had been told repeatedly to return inside and attend to her assigned work duties.

9. On January 27, 2018, Claimant left her work station in the processing building after lunch in the early afternoon without permission. Claimant testified she went to the barn on Employer's property. Within the barn is a small storage room less than 20 feet by 16 feet, where shallow plastic trays measuring 8 feet long by 4 feet wide, and six inches deep, were stacked on their sides, resting against the walls of the room. These plastic trays were used in the spring to house young newly potted marijuana plants as they began to grow. The trays were not used for anything in January 2018, and there was nothing requiring their use on January 27, 2018. Employer did not direct Claimant to do any work with these trays. The trays were simply being stored in this room for the winter.

10. Claimant testified that she started cleaning the trays to inspect them for cracks and get them ready for the upcoming season. on January 27, 2018. In order to clean the trays, Claimant testified that she drag them while they lay flat on the ground about 10-12 feet into the center of the room. She testified that she would sweep the trays out, check the tray for cracks, wash the trays, and then move the trays into a stack of not cracked or stack of cracked trays. She testified she could not and did not lift the trays. Claimant could not recall how many trays she moved, inspected, or sorted, but estimated it was less than twenty (20).

11. Claimant testified that while she was moving one of these trays on January 27, 2018, she felt a pull and developed sharp, burning pain in her left shoulder. She thought she testified that she pulled a muscle and would take care of it on her own. The alleged incident was unwitnessed.

12. Claimant testified that she tried to tell Ms. Kern about her alleged injury on January 27, 2018, but that Ms. Kern was not available. Ms. Kern testified she was available and that she does not recall any attempt by Claimant to contact her that day. Claimant testified that she finished her January 27, 2018 shift a bit early, approximately 3:00 p.m. and left work. Claimant returned to work in the ensuing days completing her routine jo duties, on her normal shifts without any complaint or encumbrance. While Claimant had access to her managers both at work on January 27, 2018, and in the succeeding days, both in person (due to her return to work) and by telephone or text message, the record is devoid of any indication that she reported this alleged injury to anyone working at Employer. Indeed, Mr. Osborn, Mr. Ansley, Mr. Gallardo and Ms. Kern all testified that they were unaware that Claimant injured her shoulder as she never reported any injury to them. According to Ms. Kern, she learned about the alleged injury after being contacted by Insurer.

13. Claimant did not appear for work at the beginning of February 2018. Attempts to reach her by phone and text message failed. Consequently, Mr. Osborn contacted Claimant's sister, who is also an employee of the farm, to find out where Claimant was and if she was coming to work. Claimant's sister was able to reach her. After being contacted by her sister, Claimant reached out to Mr. Osborn informing him that she did not report to work because she was ill.

14. On February 8, 2018, Claimant was late to work. She told Mr. Osborn that she was late because she car trouble. On February 10 and 11, 2018, Claimant called off of work reportedly because she was sick. Claimant did not say or allege that she was late for work or ill because of the purported work injury occurring January 27, 2018.

15. Mr. Ansley, the maintenance manager for employer, testified that the storage trays Claimant alleges to have moved and cleaned on January 27, 2018, are not cleaned or used in the barn, as there is no water in the barn and no need to clean the trays when the trays were stored in the barn. The trays are just kept stacked on their sides against the walls in the barn for storage in the winter months. They were stored this way on January 27, 2018. The trays are only used when new plantings are put in the trays to grow in the spring time. Mr. Ansley was not at work on January 27, 2018, and he did not instruct Claimant to move any of the storage trays.

16. Brittney Kern, the human resource and general manager for Employer, testified that she hired Claimant as a probationary employee for the first 90 days of employment at an hourly rate. According to Ms. Kern, Claimant was brought on as a salaried employee around November 14, 2018. After attendance problems and absenteeism worsened in December 2017 and January 2018, Ms. Kern testified that it was not fair to other employees who were working and adhering to employer's attendance policy that Claimant remain a salaried employee. Consequently, Claimant was returned to an hourly employee on or about January 16, 2018.

17. On February 1, 2018, Claimant asked Ms. Kern why she was not paid for her missed days of work in January. Ms. Kern explained that she would not be paid for this time, and it was unfair to pay her for time she did not work when other salaried employees were working their expected days and hours. According to Ms. Kern, Claimant was upset, indicating that it was unfair not to pay her because she had missed work because her back was hurting. Per Ms. Kern, Claimant was clear that it was her back that was causing her symptoms and missed time from work. She did not tell Ms. Kern during this confrontation that she had suffered a left shoulder injury or that she missed time from work due the same. Claimant did not ask to file a workers' compensation claim nor did she request treatment for her shoulder.

18. During cross examination, Ms. Kern testified that the trays in question could not have been moved as Claimant described during her testimony. Ms. Kern explained the trays are very heavy and awkward, and cannot be moved by a single person. Per Ms. Kern, the trays did not need to be moved, cleaned, and sorted on January 27, 2018 as Claimant alleged. Moreover, Ms. Kern testified that the room where the trays are stored is very small, used for storage only, and as it is a storage room there are other items, including many pots and dirt, taking up the entire floor of the room. The room was full of equipment and supplies stored for winter. Consequently, Ms. Kern testified that there was no space in the room to move, or lay down, the stacked trays as Claimant alleged.

19. Claimant did not work on February 9 or 10, 2018, calling off sick. Ms. Kern testified Claimant reported that she missed these work days because her back was hurting. According to Ms. Kern, Claimant did not show any signs of or make any reference to a shoulder injury when discussing this lost time from work during a February 12, 2018 discussion.

20. On February 11, 2018, Claimant presented to the emergency room (ER) at Parkview Hospital with complaints of "left arm pain and tingling that [had] been fairly constant over the last two wks (weeks)." Claimant reported that she worked on a farm doing "manual labor". She could move her arm in all directions, and while she heard a pop in her left shoulder before the pain started she did not describe a specific inciting event for the onset of her pain nor did she mention that she was moving trays at work when that pop occurred. X-rays of claimant's left shoulder on February 11, 2018, were negative for acute osseous injury. A CT of the cervical spine was obtained and interpreted to demonstrate "[m]ultilevel age-related cervical disc degeneration, most pronounced at C3-C4, C5-C6 and C6-C7" in addition to "[a]symmetric erosive or inflammatory arthropathy of left C3-C4 facet joint, which can be seen in the setting of an inflammatory spondyloarthropathy such as rheumatoid arthritis or septic arthropathy". Claimant refused additional emergent imaging and thus, was discharged home with "very close outpatient follow-up and strict return precautions".

21. Claimant completed a Worker's Claim for Compensation form on February 12, 2018. In this form Claimant noted that she injured her left neck and shoulder while lifting and moving 4 x 8, thick plastic trays. According to Claimant, 2-3 vertebra where affected and she pulled a muscle down her shoulder. Claimant's claim for compensation was received by the Division of Workers Compensation Customer Services Unit on February 15, 2018.

22. Claimant returned to the ER at Parkview Hospital's Pueblo West facility on February 16, 2018, around 7:47 p.m. (1947) with complaints of a temperature and persistent shoulder and neck pain. The report from this date of visit indicates that Claimant had been seen the preceding Sunday "for the same thing" and that she had left shoulder pain from being "injured while 'lifting heavy trays at work'". The ER physician evaluating Claimant recommended additional lab work and an emergent MRI given the concern for septic arthropathy based upon the questionable fluid collection in the cervical spine noted on CT scan from February 11, 2018. Transport to Parkview Main via ambulance was recommended. Claimant refused. Consequently, she was instructed regarding the importance of further work up and told to go to the main emergency room that night for evaluation. She did not go.

23. Claimant returned to the ER at Parkview Hospital's main facility on February 18, 2018 at 8:13 a.m. (0813). She was evaluated by Dr. Brad Roberts. The report from this date of visit indicates that Claimant presented to the ER for pain in the left neck that radiates into the left shoulder. According to the history of present illness (HPI), Claimant reported that on January 27, 2018, she was "working on her farm and doing arduous work when she hurt her left shoulder". She stated that the pain radiated

from the shoulder up into the neck “making the muscles in those areas ‘rock hard’”. The note is devoid of a specific incident causing her shoulder pain. Moreover, the record indicates that Claimant was seen in the ER on February 16, 2018, at which time a CT scan revealed features consistent with septic arthropathy between C3-C4. Consistent with the ER note from February 16, 2018, the record from this date of visit indicates that Claimant was instructed to undergo additional imaging (MRI), but that this was not done. Accordingly, Claimant had returned for completion of the MRI study.

24. The aforementioned MRI was completed and interpreted to show C3 and C4 facet joint effusion and reactive marrow edema within the left C3-C4 in addition to epidural fluid collection and findings concerning for C3-C4 left septic arthroplasty with epidural extension and epidural abscess. Dr. Roberts consulted with neurosurgical services, specifically Dr. William Lu. Dr. Lu reviewed Claimant’s MRI concluding that the findings likely represented early onset epidural abscess. He recommended hospital admission and treatment through the infectious disease service, noting further that Claimant may need IV antibiotics and possible draining of the C3-C4 effusion.

25. Claimant’s suspected condition and proposed treatment plan were discussed with her at which time she became upset, anxious, restless, and tearful. She stated that she did not want to stay in the hospital because she wanted to smoke. Claimant smokes both cigarettes and marijuana. Dr. Roberts offered Claimant a nicotine patch and medication to assist with her anxiety. Claimant reported that she could not stay because she had partied all night the night before. Concern was raised by Dr. Lu for possible drug use because of Claimant’s worry about undergoing drug testing. The seriousness of Claimant’s condition was explained to her and a family member encouraged her to stay in the hospital. Nonetheless, Claimant elected to sign out against medical advice (AMA).

26. Claimant returned to the ER at 5:39 p.m. (1739) on February 18, 2018, following her self-discharge from the hospital against medical advice. She was evaluated in the ER by Dr. Timothy Varallo. Dr. Varallo noted that Claimant presented to the ER “requesting to be admitted for [an] abscess on [the] spine”. He noted further that Claimant was supposed to be admitted earlier but left AMA to “take care of things”. Dr. Varallo’s history of present illness (HPI) indicates that Claimant’s diagnosis was significant for C3-C4 septic arthropathy on MRI, that Claimant had an onset of pain in the left shoulder on January 27, 2018, that she believed was “precipitated by lifting heavy objects” and that subsequent evaluation with CT scan was concerning for septic arthropathy with recommendation for MRI. Claimant was admitted to the hospital and subsequently evaluated in the ER by Dr. Harshal Shah who noted that Claimant had “presented to the hospital with about a 2 weeks’ history of sudden onset neck pain associated with left shoulder pain” which she attributed to a “work-related injury when she was lifting very heavy trays”. Dr. Shah recommended that Claimant be consulted by the infectious disease services for antibiotic management for “septic arthritis of the c-spine”.

27. Claimant was subsequently evaluated by infectious disease specialist, Dr.

Michael Harris. Dr. Harris took a detailed history regarding Claimant's present illness, noting that she was "initially complaining of a somewhat abrupt onset of cervical neck pain which she says started around 2 weeks ago after she was carrying some heavy loads at her workplace". According to Dr. Harris, Claimant reported that "initially it felt like she pulled a muscle in her shoulder" and she "ended up having radicular-type symptoms with radiation and neuropathy-type pain down to her fingertips". Dr. Harris also obtained a social history at which time Claimant reported that she smoked one (1) pack of cigarettes every three days. Although she denied any drug use, including IV drugs, Claimant admitted that she smoked marijuana. She reported that she worked at a "grow farm which is where she was carrying heavy loads that *she says initially led to her neck pain*" (emphasis added). Claimant's upper extremity strength was graded as within normal limits and her sensory examination was "normal".

28. Claimant was discharged from the hospital following satisfactory arthrocentesis on February 22, 2018. While in the hospital, Claimant was never diagnosed with nor was she treated for any left shoulder injury/condition. To the contrary, treatment was focused to the cervical spine and the suspected infection/abscess at the C3-C4 facet joint. Based upon the evidence presented, the ALJ finds Claimant's suspected C3-C4 septic arthropathy unrelated to her work duties.

29. Upon Claimant's discharge from the hospital, an Employer's First Report of Injury was completed and Claimant selected Dr. Terrance Lakin as her designated provider.

30. Claimant saw Dr. Lakin, D.O. on March 13, 2018. After taking a detailed history regarding the purported mechanism of injury (MOI) and outlining Claimant's treatment to date, Dr. Lakin opined that he could not conclude that "manipulation of 40 pounds (sic) objects that she is not picking up, only scooting along the ground, would be significant enough to markedly exacerbated (sic) very significant cervical DJD (degenerative joint disease) and likely left shoulder DJD." While Claimant had a MOI that "could" be consistent with a soft tissue left shoulder strain, Dr. Lakin felt that there were "strong indications" that Claimant's symptoms were emanating from "progressive cervical and left shoulder degenerative osteoarthritis and perhaps a (sic) inflammatory spondylitis", in the absence of a significant work related MOI.

31. As noted above, Dr. Lakin testified by post hearing deposition. During his deposition, Dr. Lakin testified that Claimant did not disclose to him that she suffered a prior serious infection which required hospitalization and extensive treatment in July 2016. Dr. Lakin testified that disclosure of this information would be very important to a causation analysis in the instant claim as a prior infection increases the risk of subsequent infection.

32. Claimant also did not disclose to Dr. Lakin the fact that she had been hospitalized for what was felt by her treatment providers to be an abscess and cervical septic arthropathy from February 18-22, 2018, during her March 13, 2018 appointment. Although she did not provide information regarding her recent hospitalization, Dr.

Lakin's office accessed Claimant's prior medical records from Parkview Hospital at which time he discovered that Claimant had been hospitalized for a cervical spine abscess and infection.

33. During his deposition, Dr. Lakin stood by the conclusions he reached regarding the cause of Claimant's neck and shoulder symptoms reached after his March 13, 2018 examination. He testified:

> I believe that the imaging and the records at Parkview were indicating more of a septic joint that was two level facet septic joint level on the cervical spine. This seems more consistent with the inflammatory or perhaps rheumatoid arthritis or septic arthritis, and I believe the images even show that there were erosions on the facet joint, which indicates it was long-standing. She has very significant multilevel degenerative changes at that level also and throughout her C-spine. I think it's unfortunate that she has this, but I would say that the causation more is that process rather than -- and that she just perhaps noted it at work, and the predominant factor of this is it was going to happen to her anyway.

34. Dr. Lakin also explained, with medical literature support that claimant's spontaneous sepsis was caused by her underlying arthritis.

35. The ALJ finds the opinions of Dr. Lakin credible and persuasive.

36. Claimant sought a follow-up MRI of her cervical spine and was referred to Colorado Springs Imaging by nurse practitioner (NP) Dawn Evert. The follow-up MRI was completed on April 24, 2018. While the findings suggested "[m]oderate spondylosis of the C3-4 disc space with advanced hypertrophic arthropathy of the left facet joint and moderate to advanced arthropathy of the right facet joint, the study was noted to be "grossly limited" secondary to motion artifact. The ALJ finds this MRI study to be of limited relevance to the questions presented for determination.

37. Claimant also sought an MRI of the left shoulder through Colorado Springs Imaging on the referral of NP Evert. This study was completed on May 4, 2018, with findings of among other things, "moderate osteoarthritic changes with joint effusion and synovitis change" and "tendinosis/tendinopathy change rotator cuff without cuff tear". Given the degree of joint effusion and osteoarthritic change in conjunction with the degenerative changes present in the rotator cuff, surgical consultation was recommended.

38. The ALJ credits Dr. Lakin's opinions to find that while Claimant "could" have sustained a soft tissue injury to the shoulder, she most probably did not. The persuasive evidence presented establishes that Claimant's shoulder pain is more likely related to a combination of referred pain from her severe, progressive, non-work related cervical DJD, including the pain caused by the septic arthropathy at C3-C4 in addition to

the natural progression of the degenerative osteoarthritis in her left shoulder as evidenced by increasing joint effusion in the absence of rotator cuff tearing.

39. Claimant has failed to prove that she sustained a compensable injury to her cervical spine or left shoulder as a consequence of performing work duties for Employer, including pulling large plastic trays as she described.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with § 8-43-215, C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

C. Assessing the weight, credibility and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo.App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence presented. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). Although there is conflicting evidence in this case regarding Claimant's assigned work duties and the events leading up to Claimants alleged injury in this case, the ALJ finds that Claimant probably was moving

the trays as she described. Nonetheless, the medical record evidence presented fails to support a conclusion that Claimant's neck and shoulder symptoms are causally related to that activity. As found, the overwhelming evidence presented at hearing persuades the ALJ that Claimant suffers from pre-existing, progressive non-work related DJD in her cervical spine and the left shoulder as evidenced by significant effusion months after her alleged injury in the absence of any rotator cuff tearing. Based upon the medical record as a whole, the ALJ finds support for Dr. Lakin's conclusion that Claimant's neck and shoulder symptoms probably arose from a combination of the natural progression of these conditions rather than by pulling/dragging of the planting trays as Claimant asserts.[1]

D. Under the Workers' Compensation Act, an injured employee is entitled to compensation where the injury or death is proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment. *Section 8-41-301(1), C.R.S.; Horodyskyj v. Karanian* 32 P.3d 470 (Colo. 2001). The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). Thus, an injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo.App. 48, 51, 552 P.2d 1033, 1036 (1976). While the ALJ is convinced that Claimant's alleged injury occurred "in the course" of her employment, the evidence presented fails to establish that Claimant's symptoms and need for treatment arose out of her employment.

E. The term "arises out of" refers to the origin or cause of an injury. *Deterts v. Times Publ'g Co. supra.* There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of Denver, supra.* An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's employment contract. *Popovich v. Irlando supra.*

F. There is no presumption that an injury, which occurs in the course of employment, also arises out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968). The determination of whether there is a sufficient "nexus" or causal relationship between a claimant's employment and the injury is one of fact and one that the ALJ must determine based on the totality of the circumstances. *In*

[1] The degree to which Claimant's non-work related septic arthropathy contributed to her neck/shoulder pain cannot be quantified. Nonetheless, the ALJ notes that the suspected arthropathy was located at the C3-C4 facet joint and Claimant reported lateral neck pain extending down the arm. The ALJ finds it reasonable to infer that the general malaise associated with a suspected infection warranting hospitalization likely intensified Claimant's radicular type pain leading her to the reasonable lay person conclusion that it was coming from her shoulder.

Re Question Submitted by the United States Court of Appeals, 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo.App. 1996). As found, the totality of the evidence presented, including opinions of Dr. Lakin persuades the ALJ that Claimant's neck and shoulder pain is probably related to the natural progression of a pre-existing condition rather than any injury arising out of her employment with Beulah Valley Farms.

G. A pre-existing condition "does not disqualify a claimant from receiving workers' compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo.App. 2004). To the contrary, a claimant may be compensated if his or her employment "aggravates, accelerates, or "combines with" a pre-existing infirmity or disease "to produce the disability and/or need for treatment for which workers' compensation is sought". *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo.App. 1990). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo.App. 1981). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities and not the underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940).

H. While pain may represent a symptom from the aggravation of a pre-existing condition, the fact that Claimant may have experienced an onset of pain while performing job duties does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of the natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo.App. 1995); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (August 18, 2005). Here, the totality of the evidence presented persuades the ALJ that Claimant's symptoms and need for treatment, including her February 18-22, 2018 hospitalization were probably related to her long standing pre-existing cervical and left shoulder DJD. While the ALJ is convinced that Claimant's need for treatment was reasonable and necessary, the persuasive evidence establishes that it was not related to an industrial cause. Because Claimant failed to establish her employment caused, aggravated, accelerated, or combined with a pre-existing infirmity or disease to produce the disability and/or need for treatment, she failed to establish the requisite causal connection between her employment and the alleged injury. Simply put, Claimant failed to prove that she suffered a compensable injury.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is hereby denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 26, 2018

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable work injury to his right knee on June 13, 2016?

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to an order awarding reasonably necessary and related medical benefits?

FINDINGS OF FACT

1. Claimant works as a police officer for the Employer. Claimant is presently working in the motorcycle unit. Claimant is a 48 year old male who is six foot nine inches tall weighing approximately 280 pounds,

2. In 1997, Claimant was attempting to pull over a traffic violator. He drove into a residential area, got out of his car and ran. Claimant pursued the traffic violator on foot and went over a side fence between two homes. His right leg landed in a hole and he sustained a tibial plateau fracture. He ultimately underwent surgery to repair the condition.

3. The tibial plateau fracture set in motion the onset of a progressive degenerative and arthritic process in the right knee.

4. Claimant injured his right knee again in 2004 when playing recreational basketball.

5. Claimant had a MRI scan of his right knee completed on February 6, 2004. The radiologist provided the following impression: (1) impacted subchondral fracture of lateral femoral condyle; small focal full-thickness chondral defect within the posterior lateral femoral condyle; (2) small slightly impacted subchondral fracture of central weight bearing surface of lateral tibial plateau and focal depression of subchondral bone involving a small region of the central tibial plateau; finding may be chronic in etiology as little associated surround marrow edema; and (3) a complete (grade 3) tear of anterior cruciate ligament; extensive edema adjacent superficial band of medial collateral ligament consistent with grade 1-2 MCL injury.

6. As a result, the injury resulted in an ACL tear, which Claimant had surgically repaired in 2004.

7. Claimant alleges he sustained another work injury to his right knee in 2009. Claimant was at monthly training for his motorcycle unit. He tried to support the bike with his right leg when he felt his knee jam. Claimant treated with Dr. Beatty on May 6, 2009. The diagnosis provided at that time was a right knee

sprain with underlying degenerative joint disease. Claimant alleged an injury without any significant precipitating trauma.

8. Claimant had another MRI scan of his right knee on May 13, 2009. The impression included tri-compartmental arthritis seen with near complete chondral loss in the lateral compartment. The tibial plateau fracture occurred in 1997 caused injury to the lateral compartment.

9. Claimant alleged a fourth injury to his right knee in November of 2015. He was working patrol and when getting out of the car, his knee was at an awkward angle. He experienced grinding and pain in the right knee.

10. Claimant again alleged an injury from a daily activity without any significant precipitating trauma. At this time, there was significant progressive arthritis in all three compartments of the knee due to the 1997 tibial plateau fracture.

11. The day after the incident in November of 2015, Claimant sought treatment with Dr. Gray at Rocky Mountain Medical Group. In the history section of the report, Claimant advised that he had not been able to completely straighten his knee for several years and had some popping in his knee as well.

12. A MRI was obtained on November 12, 2015. The impression included arthritis of the knee worse in the lateral compartment where there was evidence of both edema and eburnation. As a result, there was evidence of chronic findings in the right knee.

13. On December 1, 2015, Claimant sought treatment with PA-C Sakryd at the Steadman Hawkins Clinic. PA-C Sakryd evaluated Claimant and then noted they discussed the "natural history and progression" of Claimant's right knee issues. PA-C Sakryd also advised Claimant he may need a total knee arthroplasty.

14. Claimant subsequently saw Dr. Beatty on December 2, 2015. Dr. Beatty reviewed Claimant's knee history and current presentation. In the treatment plan, Dr. Beatty wrote as follows: "Unfortunately because of the tibial plateau fracture his knee is deteriorating quicker than expected and he's developed significant arthritis which most likely will need a knee replacement."

15. Dr. Faber performed a records review on December 11, 2015. In the history of present illness, Dr. Farber recorded that Claimant began to develop right knee pain after being transferred from a motorcycle officer to using a police vehicle. Claimant's knee was always in an abnormal position and he developed swelling and pain. For administrative purposes, the alleged date of injury was established as November 2, 2015.

16. Dr. Farber noted Claimant's long history of injuries to the right knee and his well-documented right knee lateral compartment chondral loss. Dr. Farber opined that Claimant had no recent acute traumatic injury and his current symptoms were suggestive of symptomatic osteoarthritis of the right knee, which pre-dated the alleged incident.

17. During krav maga arrest training on May 11, 2016, Claimant again alleged an injury to his right knee. Claimant planted on his right leg and kicked with his left leg. The alleged mechanism of injury failed to involve any significant trauma and instead appeared to be due to the underlying degenerative condition.

18. A MRI of the right knee was obtained on June 7, 2016, following the krav maga training incident. The impression was arthritis of the knee worse in the lateral compartment where there was evidence of both edema and eburnation, which was unchanged, and the reactive bone marrow edema was unchanged.

19. On June 13, 2016, Claimant alleged an injury to his right knee which is the alleged injury at issue in this case. Around midnight, the police department received a call from a woman that her nephew was trapped under a car in the garage and not breathing. Claimant was the first to arrive on the scene. Claimant attempted to lift the car while his sergeant put cinder blocks underneath the car to support it. During one of the lifts, Claimant heard a pop and experienced pain in his right knee.

20. The First Report of Injury listed a specific incident of assisting to lift a vehicle off of a subject that was trapped as the mechanism of injury on June 13, 2016.

21. There was no mention of an alleged occupational disease which occurred over time in the First Report of Injury.

22. Dr. Noonan, a treating orthopedic surgeon, examined Claimant on July 7, 2016. Dr. Noonan's impression included lateral compartment arthritis with degenerative lateral meniscus tear, mild medial compartment chondral degeneration and significant loss of range of motion. Claimant confirmed to Dr. Noonan that he never regained full knee range of motion after the tibial plateau fracture. Dr. Noonan opined that the tibial plateau fracture led to his arthritic changes and current condition.

23. During Claimant's July 20, 2016, visit with Dr. Beatty, they discussed Claimant's treatment options. Dr. Beatty noted that, while Claimant continued to have right knee pain, it had returned to baseline following the recent work injury. Dr. Beatty recommended Claimant talk to Employer about re-opening the 1997 case.

24. Dr. Beatty opined that the work injury on June 13, 2016, had returned to baseline and that Claimant's current right knee condition was related to the work injury and the 1997 tibial plateau fracture.

25. Claimant contacted the adjuster for the 1997 claim to see if the claim would be voluntarily reopened. Claimant was told that the claim would not be voluntarily reopened.

26. On August 9, 2017, Dr. Beatty changed his causation opinion that the right knee condition was due to the tibial plateau fracture in 1997. Dr. Beatty opined that Claimant's years of working as a police officer caused the need for Claimant to undergo a right knee replacement. Dr. Beatty opined Claimant's condition was due both to an acute event in 1997 and an occupational disease due to Claimant's ongoing work as a police officer.

27. No other physician supported Dr. Beatty's amended causation opinion.

28. Claimant admitted that he had been told and knew he would need a knee replacement dating to 2009.

29. Claimant filed a Workers' Claim for Compensation on November 6, 2017. Claimant did not allege that his knee condition was due to an occupational disease in his own statement about the cause of his condition.

30. Dr. O'Brien, an orthopedic surgeon, evaluated Claimant for an independent medical examination (IME.) He reviewed the information about Claimant's 1997 fracture. Dr. O'Brien explained the significance of the fracture is that it was comminuted, meaning it involved a fracture to the bone and to the cartilage. Dr. O'Brien testified that Claimant literally shattered his knee joint. The bone can heal back together but when cartilage is injured, it cannot be repaired and cartilage will not re-grow. Dr. O'Brien testified that Claimant's injury would cause damage to all three compartments but particularly affect the lateral compartment.

31. Dr. O'Brien credibly testified that in his experience, 100% of injuries like that one Claimant sustained in 1997 cause accelerated or premature severe degenerative arthritis. Dr. O'Brien added that Claimant would have required this total knee replacement regardless of whether he suffered any additional injuries after the tibial plateau fracture in 1997.

32. Dr. O'Brien explained that Claimant's 2004 ACL tear also was an accelerating factor that lead to Claimant's need for a knee replacement. Dr. O'Brien cited scientific data that found that 80% of patients with reconstructed ACL injuries develop arthritis and may require premature total knee arthroplasties.

33. Dr. O'Brien explained that the 2009 MRI demonstrated complete loss of cartilage in the outside compartment of the knee. Dr. O'Brien testified the results of the MRI would be expected based on Claimant's history of a 1997 tibial plateau fracture and 2004 ACL tear. Dr. O'Brien opined the 2009 injury was innocuous and all of the findings on the MRI were chronic and longstanding.

34. Dr. O'Brien also reviewed the November 2015 MRI scan. He testified the tearing was not abnormal but rather predictable and expected because of the fracture and other changes in the knee because of the 1997 injury.

35. Dr. O'Brien reviewed the June 2016 MRI scan and noted there was no significant change from the prior MRI and that the scans were essentially the same. The same radiologist reviewed both scans.

36. Dr. O'Brien testified that it was very common for one with arthritis in the knee to have episodes of pain with daily activities or innocuous injuries. Dr. O'Brien noted that Claimant was a candidate for a total knee replacement in 2015 when Claimant had end-stage arthritis, bone-on-bone contact, eburnation, bone edema and complete loss of cartilage. This opinion was also supported by Dr. Noonan, another orthopedic surgeon who reviewed the claim.

37. Dr. O'Brien testified that Claimant had a temporary aggravation of his pre-existing and longstanding right knee osteoarthritis after the injury on June 13, 2016. Dr. O'Brien found there was no substantial tissue breakage or yielding as a result of the work incident. He added that the aggravation should not be considered a causal factor leading to Claimant's need for a total knee replacement.

38. Dr. O'Brien opined there was no need for medical care related to the alleged injury in June of 2016.

39. No physician opined that lifting of the car in June of 2016 caused the need for a knee replacement.

40. Dr. O'Brien opined that Claimant did not suffer from an occupational disease. He pointed to orthopedic peer-reviewed journals and studies that fail to link occupations and arthritis. Dr. O'Brien explained that Claimant has incurable osteoarthritis that results in episodic pain, which is not the results of any identifiable trauma, but the predictable manifestation of Claimant's underlying condition.

41. In conclusion, based on the totality of the medical records and the opinions of Dr. O'Brien, it is found that Claimant's claim for a determination that he suffered a work injury on June 13, 2016, is denied and dismissed. Any claim

for medical treatment of right knee, either viscosupplementation or total knee replacement, is not reasonably necessary or related medical treatment.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Act, Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant bears the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S.; *City of Boulder v. Streeb*, 706 P.2d 786, 789 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of the respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions, the motives of the witness, whether the testimony has been contradicted and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 p.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

3. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

4. Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. Div. 5 2009). The claimant's right to compensation initially hinges upon a determination that "at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment." Section 8-41-301(1)(b), C.R.S. The "arising out of" test is one of causation which requires that the injury have its origins in an employee's work-related functions. There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal*

Indemnity Co., 124 Colo. 210, 236 P.2d 293 (1951). A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co., supra.*

5. The claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

6. As found, it is concluded that Claimant failed to prove by a preponderance of the evidence that he sustain a compensable work related injury or occupational disease on June 13, 2016.

Medical Benefits

7. Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. Respondents may, nevertheless, challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care in a case. *See Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra; Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999). A claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990).

8. Claimant failed to establish by a preponderance of the evidence that the need for viscosupplementation or total knee replacement is reasonable, necessary, and related medical benefits

ORDER

1. Claimant's claim for a June 13, 2016, work injury or occupational disease is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

STATE OF COLORADO
OFFICE OF ADMINISTRATIVE COURTS

W.C. No. 5-073-689-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on September 19 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 9/19/18, Courtroom 3, beginning at 8:30 AM, and ending at 11:39 AM).

Claimant's Exhibits 1 through 11 were admitted into evidence, without objection. Respondents' Exhibits A, B, C, G, H, J, K were admitted into evidence, without objection. Respondents' Exhibit I was voluntarily withdrawn. Claimant's objection to Exhibit D for hearsay was sustained. Claimant's objection to Exhibit E was withdrawn and Exhibit E was admitted into evidence. Claimant's objection to Exhibit F for hearsay was overruled and Exhibit F was admitted into evidence.

ISSUES

The issues to be determined by this decision concern whether the Claimant sustained a compensable injury on November 8, 2017. If so, what are the consequences of the injury: *i.e.,* entitlement to medical benefits, average weekly wage (AWW), and temporary partial disability (TPD). By agreement, the parties withdrew issues concerning temporary total disability (TTD).

The Claimant bears the burden of proof on all issues by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Stipulated Findings

1. At the commencement of the hearing, the parties stipulated to an AWW of $408.74, if the case is determined to be compensable.

Preliminary Findings

2. The Claimant was born on September 21, 1971. She began working for the Employer as a laundry specialist in June 2017, and she worked until her resignation in late December 2017.

Compensability

3. The Claimant's job responsibilities entailed picking up dirty sheets from the Employer's storage unit and then going to a designated laundry facility to wash them. In this regard, the Employer mainly serviced Airbnb's.

4. Jackie Mitchell, a supervisor with the Employer, would send money to the Claimant, via smart phone application, to the Claimant's personal bank account. The Claimant would then go to her personal bank, withdraw the specific amount of money in cash, and then drive to the laundry facility to deposit the money on a laundry card. These transfers would happen weekly and for varying amounts depending on the amount of laundry needed to be done. Proof of these transactions was required to be photographed by the Claimant and sent to Mitchell.

5. Mitchell went on maternity leave from the Employer from November 1, 2017 to December 1, 2017. Megan Gonzalez took over Mitchell's supervisory responsibilities while Mitchell was on maternity leave. Gonzalez claims that she left $100 in cash at the storage facility for the Claimant to load onto the laundry card. The Claimant denied knowing about the $100 and no one knows what happened to it. This could be an enduring mystery.

6. On November 8, 2018, the Claimant arrived at the Employer's storage facility around 6:45 AM. After picking up the dirty laundry, the Claimant claims that she forgot her debit card at her home and could not access her personal bank account without it, where money from Mitchell was left over. Gonzalez implies that there should not have been money left over. The Claimant then proceeded to drive to her home to pick up her debit card. After retrieving her debit card, she proceeded to her personal

bank to withdraw the funds necessary to do the laundry. On the way to the bank from her home, the Claimant was in a car accident caused by another driver (hereinafter "Tortfeasor"). The Claimant sustained injuries from the accident but returned to work, full time, shortly after.

7. Around late December 2018, the Claimant voluntarily resigned from her job with Employer explaining, in text, that it was because of "car problems." Neither Mitchell nor Gonzalez testified that the Claimant had advised them that she resigned because she could no longer do the work. The Claimant testified that she resigned because she started having trouble doing the laundry work. In this regard, the ALJ finds Mitchell and Gonzalez more credible than the Claimant.

8. The Claimant found temporary full time work in early 2018, and is currently employed by the Salvation Army as a clothing sorter. She claims this is lighter work.

9. From Nov 2017 to March 2018, the Tortfeasor's insurance paid for the Claimant's medical bills, up to a cap of $25,000.

Medical

10. On November 8, 2017, the Claimant went to Lutheran Medical Center several hours after the accident. The Claimant informed the doctors that there of a family emergency and she departed before imaging was performed. The next day she went to the Denver Health emergency room (ER). Cervical and thoracic spine x-rays were performed. She was prescribed Flexeril and Ibuprofen. The Claimant later went back to Lutheran Medical Center's ER. Lutheran performed a CAT scan of her head and neck. She was discharged with Vailum and Norco. The Claimant was referred to Antero Medical Group for evaluation

11. From November 21, 2017 to March 7, 2018, the Claimant regularly saw physicians at Antero Medical Group for follow-up and physical evaluation.

12. In at least eight medical questionnaires, in response to the question: Is your condition **work-related** (emphasis supplied)?" The Claimant answered: "**No.**" In her testimony, the Claimant offered no explanation for this inconsistency with her claim, nor did Respondents cross-examine her in this regard.

13. Claimant's Exhibit 4 is an Initial Medical Consultation report from Usama Ghazi, D.O., to Dr. Laura Graber, D.C., dated January 15, 2018. The second page of that report under "Occupational History," Dr. Ghazi writes "[t]he patient denies any history of work injuries" (Claimant's Exhibit.4, p. 5). While this may be one incident that does not undermine the Claimant's credibility by itself, the Claimant then repeatedly writes that **this is not a work related incident over several months on eight different health insurance claim forms** (emphasis supplied). In these eight health insurance claim forms, the Claimant indicates that her injury from the accident is not employment related. "Box 10" of these health insurance claim forms asks "Is Patient's

Condition Related To" followed by three options: "Employment, Auto Accident, and Other Accident." Next to each of these options is a box to mark "yes" or "no." "Box 12" of these forms also provides a spot for "Patient's or Authorized Person's Signature." The Claimant's evidence provides eight of these health insurance claim forms in which "Box 10" is marked with a "no" next to "employment" and where "Box 12" indicates "signature on file" with relevant dates. Details of these health insurance claim forms are as follow:
:

- Lutheran Medical Center's Emergency Department's service for 11/8/2018, signed and dated 3/15/18 (Ex. 7 p.67).
- Forte Health, DII Central, signed and dated 12/15/2017 (Ex. 7 p. 71).
- Colorado Rehab and Occ Med, signed and dated 1/15/18 by the Claimant and 2/15/2018 by Dr. Usama Ghazi. (Ex. 7 p. 72)
- Forte Health, Antero Medical for $350, signed and dated 12/22/2017 (Ex. 7 p. 73)
- Forte Health, Antero Medical for $450, signed and dated 12/22/2017 (Ex. 7 p. 74)
- Forte Health, Antero Medical, signed and dated 12/15/2017 (Ex. 7 p. 75)
- Forte Health, Antero Medical, signed and dated 1/19/2018 (Ex. 7 p. 76)
- Forte Health, Antero Medical, signed and dated 1/15/2018 (Ex. 7 p. 77)

14. The Claimant's own evidence explains why she may seek worker's compensation months after the accident. Claimant's Exhibit 3 contains multiple reports from Antero Medical Group where the Claimant was a patient from November 2017 to March 2018. In the report dated March 6, 2018, it is listed that "patient returns to clinic reporting that she has changed her representation. She was recently informed that she cannot get into Colorado Pain Clinic for '2 or 4 years' due to her insurance (Tortfeasor's) status" (Claimant's Exhibit 3, p. 19). After this report from Antero Medical Group, the Claimant obtained representation from counsel to file a Workers' Compensation claim in April 2018. During the hearing, the Claimant testified that the tortfeasor's insurance would only pay for $25,000, however, the ALJ draws a plausible inference that the Claimant decided to pursue a worker's compensation claim several months after the car accident because the tortfeasor's limit of $25.000 on medical was reached or close to being reached,

Ultimate Findings

15. Based on the totality of the evidence, especially the Claimant's denials of work-relatedness to medical providers, the ALJ does not find the Claimant's claim of a work-related injury as a result of the auto accident on November 8, 2017 credible. Also, the fact that the Claimant worked at her regular job with the Employer and continued to do so until she voluntarily resigned for "car problems," with nothing in writing that she felt she could no longer perform her job duties, further undermines her credibility. The fact that the Claimant is presently working full time at a lesser wage, $10.20 an hour, and seeks TPD benefits based on 2/3 of the differential between her pre-injury wage of $12 an hour and the present $10.20 an hour, in and of itself does not lead to a plausible inference that would affect the credibility of the Claimant's compensability claim. It is the confluence of events that happened in 2018, which causes the ALJ to draw a plausible inference, along with the totality of the other evidence, that the Claimant's

claim of work-relatedness is not credible: (1) the $25,000 limit on medical bills in the Tortfeasor's insurance was reached; (2) The Claimant's Worker's Claim for Compensation, dated April 5, 2018 was filed (the Claimant was working full time at a lesser wage at this time); (3) after the auto accident of November 8, 2017, the Claimant checked off "not work-related" at least eight times. The ALJ infers and finds that there are too many anomalies in the Claimant's version of events to render her version of compensable injuries credible.

16. On the other hand, the ALJ finds the testimony of Jackie Mitchell and Megan Gonzalez forthright and making sense. Indeed, their descriptions of the strange and apparently inefficient method of doing business tends to enhance their credibility. Their testimony, however, elevates the anomalies in the Claimant's version of events to a level of incredulity. Contrary to the Respondents' theory that this case is not compensable because the auto accident happened on a detour that took the Claimant outside the course of employment, the ALJ finds that the case turns on overall credibility and, as found herein above, the Claimant's claim is not credible.

17. For the reasons specified herein above, the ALJ finds that the Claimant has failed to prove that she suffered compensable injuries on November 8, 2017, arising out of the course and scope of her employment, thus, the Claimant has failed to sustain her burden of proof by a preponderance of the evidence.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or

unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's claim is lacking in credibility on whether the November 8, 2018 incident amounted to a compensable event. The Claimant now claims the incident was work related and compensable injuries resulted there from, but the totality of the evidence shows that pursuing a workers' compensation claim was not her intention until recently.

b. The Claimant offers a theory positing that the incident was work related due to the awkward, yet consistent, business practice of withdrawing money from her personal bank while on company sent money, via a smart phone to the Claimant's bank account, after which the Claimant withdrew enough money from her account to add sufficient credits to the laundromat's laundry card. Even if the practice of driving from her home to the bank was within the course and scope of work, the Claimant's testimony and the credibility of the Claimant's claim is undercut by her own evidence.

c. As found, Claimant's Exhibit 4 is an Initial Medical Consultation report from Dr. Usama Ghazi, D.O., to Dr. Laura Graber, D.C., dated January 15, 2018. The second page of that report under "Occupational History," Dr. Ghazi writes "[t]he patient denies any history of work injuries." (Ex. 4 p. 5). While this may be one incident that does not undermine the Claimant's credibility in and of itself, the Claimant then repeatedly writes it is not a work related incident over several months on eight different health insurance claim forms. In these eight health insurance claim forms, the Claimant indicates that her injury from the accident is not employment related. "Box 10" of these health insurance claim forms asks "Is Patient's Conditioned Related To" followed by three options: Employment, Auto Accident, and Other Accident. Next to each of these options is a box to mark "yes" or "no." "Box 12" of these forms also provides a spot for "Patient's or Authorized Person's Signature." The Claimant's evidence provides eight of these health insurance claim forms in which "Box 10" is marked with a "no" next to "employment" and where "Box 12" indicates "signature on file" with relevant dates. Details of these health insurance claim forms are as follow:
:

- Lutheran Medical Center's Emergency Department's service for 11/8/2018, signed and dated 3/15/18 (Ex. 7 p.67).
- Forte Health, DII Central, signed and dated 12/15/2017 (Ex. 7 p. 71).
- Colorado Rehab and Occ Med, signed and dated 1/15/18 by the Claimant and 2/15/2018 by Dr. Usama Ghazi. (Ex. 7 p. 72)
- Forte Health, Antero Medical for $350, signed and dated 12/22/2017 (Ex. 7 p. 73)
- Forte Health, Antero Medical for $450, signed and dated 12/22/2017 (Ex. 7 p. 74)

- Forte Health, Antero Medical, signed and dated 12/15/2017 (Ex. 7 p. 75)
- Forte Health, Antero Medical, signed and dated 1/19/2018 (Ex. 7 p. 76)
- Forte Health, Antero Medical, signed and dated 1/15/2018 (Ex. 7 p. 77)

d. As found, the Claimant's own evidence explains that she sought worker's compensation benefits months after the auto accident. because the Tortfeasor's insurance cap of $25,000 on medical benefits either ran out or was about to run out. As further found, Claimant's Exhibit 3 contains multiple reports from Antero Medical Group where Claimant was a patient from November 2017 to March 2018. In the report dated March 6, 2018, it is stated that "patient returns to clinic reporting that she has changed her representation. She was recently informed that she cannot get into Colorado Pain Clinic for '2 or 4 years' due to her insurance status" (Claimant's Exhibit 3 p. 19). After the report from Antero Medical Group, the Claimant obtained representation from counsel to file a Workers' Compensation claim in April 2018. As found, during the hearing, the Claimant testified that the Tortfeasor's insurance would only pay for $25,000 of medical bills. the ALJ drew a plausible inference that the Claimant decided to purrsue a worker's compensation claim several months after the car accident.

Compensability

e. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7.** A manner of conceptualizing the matter is, essentially, that a presumption of work-relatedness may arise when an unexplained injury occurs during the course of employment. However, it is incumbent to show that non-work related factors caused the injury. Nonetheless, proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000*); Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, it was not credible that the Claimant's injury arose out of or occur within the course and scope of the Claimant's employment with Employer. Therefore, as found, the Claimant did no sustain compensable injuries on November 8, 2017, within the purview of workers' compensation coverage.

Burden of Proof

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App.

2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to meet her burden of proof.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for workers' compensation benefits arising out of theClaimant's accident on November 8, 2017, are hereby denied and dismissed.

DATED this_____day of September 2018.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-068-179

ISSUES

- Whether Claimant proved, by a preponderance of the evidence, she sustained a right shoulder injury in the course and scope of her employment on December 15, 2017.

- If compensable, whether Claimant proved, by a preponderance of the evidence, that the right shoulder arthroscopy with rotator cuff repair, and decompression of subacromial space with partial acromioplasty, requested by authorized treating physician Joel B. Gonzales, M.D., is reasonable, necessary and related to the compensable injury.

STIPULATIONS

The parties stipulated at hearing that Claimant's average weekly wage ("AWW") at the time of her injury was $826, and that Claimant was not entitled at the time of hearing to any temporary partial or total disability benefits. Additionally, Claimant withdrew her request for change of physician.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is 61 years old, having a date of birth of August 27, 1956, and has worked as a supervisor and cook for Employer since April 7, 1991, a period of approximately 27 years.

2. Claimant did not experience any medical symptoms or limitations related to her right upper extremity until her workplace accident on December 15, 2017.

3. On December 15, 2017, Claimant reported to work and started her shift at 5:00 a.m. Claimant's typical shift was from 5:00 a.m. to 1:30 p.m., Wednesday through Saturdays.

4. Claimant credibly testified that she mixed potatoes for the morning meal using an industrial mixer; she lifted the pot of potatoes from the floor mixer up to the top shelf on a cart that was approximately three feet high. Photographs of the industrial mixer and the cart appear at Claimant's Exhibit 3, pp. 5-7. Claimant credibly testified that she is 5 feet 3 inches in height. While lifting the bowl of potatoes to the top of the cart, Claimant felt burning and tearing

sensations in her right shoulder. She testified she immediately felt pain in her neck and shoulders, pain radiating down her arm, and tingling in her fingers.

5. On December 15, 2017, Claimant immediately filled out an "Employee Report of Injury" indicating that "lifting the big bowl of mashed potatoes out of the machine (heard a crack) . . . right shoulder hurt."

6. Claimant went to Urgent Care – American Family Care, where Johnny Shen, M.D. evaluated her. Dr. Shen recorded Claimant's history as follows:

> 61 y/o female presents to clinic for works comp. Pt reports that she works at a nursing home. Pt states that she was cooking mashed potatoes she picked up the bowl and bowl was too heavy. Pt states that she hurt her right shoulder/neck. Says pain radiates down to arm and has mild numbness/tingling.
> Neck pain
> Stiffness
> Shoulder pain

7. Following Claimant's evaluation, Dr. Shen issued a "WC 164" opining that Claimant's injury was consistent with a work-related mechanism of injury and illness. Dr. Shen assigned temporary work restrictions.

8. On December 20, 2017, Claimant returned to Urgent Care – American Family Care. Nurse Practitioner ("NP") Kimberly Rea took a history of illness noting:

> Shoulder pain [Onset: 5 Day(s) Sudden; frequency: Constant; Char.: Reports Neck pain, Tingling, Achy, Sharp, Lifting Injury; Location: Reports Right shoulder; Assoc. Sx: Reports Tenderness, Reduced range of motion, Back Pain; . . . Work comp injury – pt is very worried about her shoulder/trapezius area and radiation of pain into right arm. **She is requesting MRI and further evaluation because she thinks she tore something.** Has continued to work in the kitchen without restrictions and pain has not improved at all. Intensity: Min-7]
>
> * * *
>
> Normal musculoskeletal posture; ABNORMAL: Right trapezius and shoulder with + TTP and grimacing with movement all directions

NP Rea opined that Claimant's injury was related to a workplace injury and increased Claimant's temporary work restrictions to zero pounds lifting. NP Rea referred Claimant for an orthopedic evaluation.

9. On January 2, 2017, Claimant returned to Dr. Shen who noted that Claimant had not heard from the orthopedic referral and that Claimant wanted an MRI before she started physical therapy. Dr. Shen maintained Claimant's zero-pound lifting restrictions and again opined that Claimant's injury was work-related.

10. On January 4, 2018, Claimant went to Orthopedic Associates where Joel B. Gonzales, M.D., who took a history of present illness, performed a general exam and set forth the following:

> **History of Present Illness**
>
> 61-year-old right hand dominant female cook at eye [sic] liff rehabilitation center injured her right shoulder at work on 12/15/17 lifting a heavy bowl of mashed potatoes. Patient felt a tear in the posterior lateral aspect of the right shoulder as she lifted the bowl. Since that time she has had continued severe pain in the right shoulder. Pain seems to be in the cuff distribution, and anterior, occasionally she feels that the arm hurts all the way from the shoulder down to the elbow. No history of previous problems with the right shoulder. She has tried some formal physical therapy and anti-inflammatories but this is not improved.
>
> * * *
>
> **Treatment Plan:**
> Given her specific injury and examination we have recommended an MRI of the right shoulder to evaluate for rotator cuff tear. We'll set this up and see her back to review it and discuss further treatment.

11. On January 5, 2018, Claimant underwent an MRI at Health Images with a history set forth as "[a]cute lifting injury." The radiologist who read the scan recorded the following impression:

> 1. Large full-thickness tear of the distal supraspinatus and infraspinatus tendons measuring 4.2 cm transverse x 3.3 cm AP. Supraspinatus musculotendinous junction is retracted to the level of the glenoid and there is moderate fatty atrophy of the supraspinatus and infraspinatus muscles.

> 2. Moderately severe subscapularis tendinosis with partial tearing of the distal fibers of the subscapularis tendon.
>
> 3. High-grade partial tearing long head of biceps tendon.
>
> 4. Superior and posterior superior labral tear.
>
> 5. Subacromial impingement/rotator cuff impingement syndrome. . . .

12. On January 11, 2018, Claimant returned to Dr. Gonzales who noted, "since non operative measures have not given lasting relief and pain persists, arthroscopy with rotator cuff repair of the involved shoulder was advised." Dr. Gonzales submitted a request for:

> Requested Procedure: RIGHT SHOULDER ARTHROSCOPY WITH ROTATOR CUFF REPAIR, DECOMPRESSION OF SUBACROMIAL SPACE WITH PARTIAL ACROMIOPLASTY, DME COLD THERAPY AND ULTRASLING.
> Diagnosis: Strain of muscle(s) and tendon(s) of the rotator cuff of right shoulder, subsequent encounter Right

13. When Respondents received Dr. Gonzales' request for surgery, Insurer requested a peer review from Brian F. McCrary, D.O. Respondents' physician McCrary gave inconsistent opinions in his written report on the issue of causation. At one point, he opined that Claimant's mechanism of injury was "consistent with a mild strain or acute exacerbation of a preexisting degenerative condition at the right shoulder." Yet in a different part of the report, he opined that Claimant experienced a "short-term exacerbation of a preexisting condition."

14. Respondents also retained the services of Mark Failinger, M.D. He testified at hearing consistent with his report that Claimant's medical records were devoid of any problems in either shoulder, except for one record on February 11, 2014, for the right shoulder and another record on January 23, 2017, which concerned Claimant's left shoulder.

15. Dr. Failinger testified consistent with his report that Claimant was not at maximum medical improvement ("MMI"). He deemed Dr. Gonzales' recommendation for right shoulder surgery "reasonable." However, he opined that because Claimant had pathology preexisting her injury, her need for surgery did not relate to the December 15, 2017, events.

16. Dr. Failinger testified at hearing as an expert in orthopedics. He characterized Claimant's injury and symptoms as classic of a degenerative tear and that each event would bring on symptoms that would sometime go away, but at some point in time if the symptoms did not settle down, require treatment.

17. On cross-examination, Dr. Failinger agreed with Dr. Shen's December 15, 2017 opinion that related the work-related mechanism of injury to objective findings. He also testified that Dr. Shen was correct to assign temporary work restriction of 20 pounds based on Claimant's diagnosis.

18. Dr. Failinger agreed that NP Rea's conclusion that Claimant suffered a work-related injury on December 20, 2017 was appropriate. He also agreed that it was appropriate for NP Rea to increase Claimant's temporary work restrictions at the December 20, 2017 visit based upon Claimant's symptomatology.

19. Dr. Failinger conceded that although Claimant would have eventually required surgery on her right shoulder, he could not speculate when that need would arise. He also conceded that Claimant's symptoms that require treatment stem from Claimant's lifting event on December 15, 2017.

20. It was clear from the context of his testimony that Dr. Failinger misapprehended the circumstances of Claimant's mechanism of injury. He based his opinion on the assumption that Claimant was working with household-sized equipment. He was unaware that Claimant was working with an industrial sized mixer, the empty bowl of which weighed thirteen pounds, and which contained between fifteen and thirty pounds of potatoes. When Dr. Failinger saw photographs of the actual equipment Claimant was using, he expressed surprise and testified that when he formed his opinions, he did not think Claimant was using equipment like that pictured.

21. Claimant credibly testified that she continues to have numbness and tingling in her fingers, which was not present prior to the events of December 15, 2017, along with tightness in the area of her trapezius and the right side of her neck. Claimant credibly testified that she understood the risk of surgery, and still desired to have the surgery Dr. Gonzales recommended.

22. The ALJ finds it is more likely than not that Claimant injured her right shoulder when lifting an industrial sized mixing bowl full pot of potatoes from a low level to Claimant's shoulder level, to place the bowel onto the top shelf of a cart. Claimant's medical records are devoid of shoulder problems except for one visit in 2014 for right shoulder symptoms that quickly resolved. Claimant's original treating physicians opined that Claimant's mechanism of injury was consistent with the events and Respondents' expert Dr. Failinger opined that the events of December 15, 2017 brought on the symptoms for which Dr. Gonzales has requested surgery.

23. The ALJ is not persuaded by Respondents' experts' testimony to the contrary and finds the report of Claimant's treatment providers at Urgent Care – American Family Care and Orthopedic Associates more persuasive.

24. Additionally, to the extent that a subsequent authorized treatment provider Lynne Yancey, M.D., answered questions from Respondents indicating that she agreed with Dr. Failinger's findings on "objective pathology," Dr. Failinger opined that Claimant is still not at MMI and requires the surgery. Dr. Yancey does not opine on her two check marks to Respondents' letter and thus her opinions, to the extent they are contrary, are rejected.

25. Based on the totality of the evidence, the ALJ finds Claimant proved, by a preponderance of the evidence, that she sustained a right shoulder injury in the course and scope of her employment on December 15, 2017.

26. The parties have stipulated that Claimant's average weekly wage is $826 and that Claimant is entitled to no temporary total disability or temporary partial disability benefits.

27. The ALJ having found the Claimant's claim is compensable, it was Respondents' own expert that opined ATP Gonzales' recommendation for surgery was reasonable and, thus, when considering Claimant's testimony, in addition to the medical records along with that of Respondents' expert, the ALJ finds the surgery recommended by ATP Gonzales to be reasonable, necessary and related to Claimant's admitted industrial injury.

28. The ALJ finds all medical care rendered by Urgent Care – American Family Care, which referred Claimant to Health Images for an MRI, and Orthopedic Associates, where Joel B. Gonzales, M.D. evaluated her are reasonable, necessary and related. This includes Dr. Gonzales' request for surgery.

29. Any determination concerning other issues is premature at this time.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ does not address every piece of evidence that might lead to a conflicting conclusion. The ALJ may reject evidence contrary to the findings above as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions;

the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

In order to recover benefits a claimant must prove that she sustained a compensable injury. A compensable injury is one that arises out of and in the course of employment. Section 8-41-301(1)(b), C.R.S. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work-related functions. *Finn v. Indus. Comm'n,* 165 Colo. 106, 437 P.2d 542 (1968). It is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. *Ramsdell v. Horn,* 781 P.2d 150 (Colo. App. 1989).

Based on the totality of the evidence, the ALJ concludes that Claimant has sustained her burden of proving by a preponderance of the evidence that she sustained a right shoulder injury on December 15, 2017 and, therefore, is entitled to benefits under the Workers' Compensation Act.

Once compensability is established, Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. *See Colorado Compensation Insurance Authority v. Nofio,* 886 P.2d 714 (Colo. 1994); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ, and an ALJ's resolution should not be disturbed if supported by substantial evidence in the record.

Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Kilwein v. Industrial Claim Appeals Office*, 198 P.3d 1274 (Colo. App. 2008); *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002). Respondents designated Concentra as the authorized provider.

The question of whether medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999). The ALJ concludes the medical care rendered Urgent Care – American Family Care and its referrals to Orthopedic Associates and Health Images are reasonable, necessary and related, as well as ATP Gonzales' request for right shoulder arthroscopy with rotator cuff repair, decompression of subacromial space with partial acromioplasty.

Claimant has established by a preponderance of the evidence that her earnings equate to an average weekly wage of $826.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has established by a preponderance of the evidence that she suffered a compensable injury to her right shoulder on December 15, 2017.

2. Claimant's has established by a preponderance of the evidence an average weekly wage off $826.00 at the time of her on-the-job injury.

3. Respondents shall pay for all medical care rendered to date by the physicians at Urgent Care – American Family Care, including their referrals to Orthopedic Associates and Health Images and the subsequent transfer of care to Concentra Medical Centers, as the care rendered was reasonable, necessary and related, including ATP Gonzales' request for right shoulder arthroscopy with rotator cuff repair, decompression of subacromial space with partial acromioplasty.

4. Respondent shall pay to Claimant interest at the rate of 8% per annum on all amounts of compensation not paid when due.

5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 25, 2018

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant established by a preponderance of the evidence that the surgery performed by Dr. John Serak on November 30, 2017 was reasonable, necessary, and causally related to the admitted injury of July 25, 2017?

II. Whether claimant is entitled to disfigurement benefits.

STIPULATIONS

I. The parties stipulated that if the surgery is found to be reasonably necessary and related to the admitted industrial injury of July 25, 2017, Claimant is entitled to a closed period of temporary total disability (TTD) benefits from December 1, 2017 to March 1, 2018.

II. The parties further stipulated to a TTD rate of $948.15.

FINDINGS OF FACT

1. Claimant is a 47 year old man employed by Employer as an elevator repair mechanic.

2. Claimant had a previous work-related low back injury in 2013 for which Claimant underwent conservative treatment in 2013 and 2014. Chad Prusmack, MD recommended Claimant undergo an L4-S1 fusion for the 2013 injury. Claimant did not undergo the fusion and subsequently returned to full duty work.

3. Claimant sustained an admitted industrial injury to his low back on July 25, 2017 when he attempted to steady an elevator machine that had begun to fall through the flatbed of a truck. Claimant lifted both hands overhead in an attempt to steady the machine, which weighed approximately 2200 pounds, and prevent it from falling on his co-worker. Claimant testified he immediately felt pain in his low back and right leg.

4. Claimant presented to Ron Rasis, PA-C at Concentra on July 25, 2017. Claimant reported he heard a pop and complained of low back pain and stiffness, and radiating pain with tingling and numbness down his right leg. PA-C Rasis diagnosed Claimant with a lumbar strain, referred Claimant for physical therapy, and assigned temporary work restrictions.

5. PA-C Rasis reevaluated Claimant on July 26, 2017. He noted Claimant denied a prior back injury, but did discuss with Claimant his review of prior medical records from the 2013 injury. PA-C Rasis noted Claimant informed him he was "virtually pain free for

4 yrs prior to his recent OJI." PA-C Rasis recommended Claimant undergo a lumbar MRI and referred Claimant to Dr. Burris, who was familiar with Claimant for ongoing claim management.

6. Claimant underwent the lumbar MRI on July 31, 2017. Andrew Olsen, MD gave the following impression: "1. Mild degenerative disc disease particularly at L3-4 and L4-5 superimposed on congenital narrowing of the central spinal canal on the basis of short pedicles. 2. There is no significant central spinal canal or neural foraminal compromise or evidence of neural impingement."

7. On August 1, 2017, Claimant sought treatment on his own at Dr. Prusmack's office. David Whatmore, PA-C evaluated Claimant and noted Claimant had treated with Dr. Prusmack for his 2013 injury, improved after conservative management, and had returned to work full duty. He noted Claimant's primary complaint from the 2013 injury was axial back pain, which had "basically resolved," and that at no time during the prior injury was right leg radiculopathy a major complaint. On examination, PA-C Whatmore noted positive right straight leg raise findings with radicular pain into the L5 distribution including the foot, dorsiflexion weakness of 3/5 "which is a completely new finding compared to prior exams," and increased axial back pain with bending.

8. PA-C Whatmore reviewed and compared Claimant's 2014 MRI to his recent July 2017 MRI, noting Claimant's 2014 MRI revealed three bulging discs at L2-3, L3-4 and L4-5. Regarding the 2017 MRI, he disagreed with the radiologist's findings of minimal degenerative issues in the spine stating, "I believe the patient has significant right-sided foraminal stenosis at the L4-5 level with marked narrowing of the foraminal diameter. The patient also has moderate facet arthropathy at the L4-5 level as well." PA-C Whatmore opined that Claimant had acute onset of right L5 radiculopathy with limb weakness due to the July 25, 2017 work injury. He recommended Claimant undergo a right L4-5 transforaminal epidural steroid injection. PA-C Whatmore noted that, if Claimant did not adequately improve with the injection, he may need a decompressive procedure of the foramen at L4-5 on the right side.

9. Claimant underwent a right L4-5 transforaminal epidural steroid injection on August 25, 2017.

10. Dr. Prusmack testified by deposition that he evaluated Claimant on September 7, 2017 and agreed Claimant required a decompression of the right L4-5 to relieve his right foot weakness.

11. On October 6, 2017, Dr. Prusmack submitted a request for authorization to perform an L4-5 and optionally L3-4 decompression surgery. Dr. Prusmack testified he considered the need for surgery urgent.

12. On October 12, 2017, Respondents denied the request for authorization of the surgery pursuant to WCRP 16. An independent medical examination (IME) was scheduled with Brian Reiss, MD for December 20, 2017.

13. Claimant returned to PA-C Whatmore for a follow-up visit on November 7, 2017. PA-C Whatmore noted,

> The patient has known stenosis in the lumbar spine at L3-4 and L4-5 and we have recommended that he undergo a decompression on the right side at L4-5 due to foot weakness that he has developed as a result of his original work injury.
>
> * * *
>
> The patient clearly has dorsiflexion weakness in the right foot at 3/5 and now has stated that he is having more issues with tripping and falling.
>
> * * *
>
> From a medical standpoint, I am concerned that the patient is now running the risk of permanent nerve root injury given the delay in undergoing surgery that Dr. Prusmack has recommended for the patient. This patient will move ahead with the evaluation as requested by Worker's Compensation and we reiterate our indication that the patient would benefit from a decompression on the right side of L4-5.

14. PA-C Whatmore reevaluated Claimant on November 15, 2017 and again commented on his concern in delaying the requested surgery stating, "I explained to the patient that I am concerned about this progressive weakness that he is developing in the leg with marked dorsiflexion weakness now into the left foot of 3/5."

15. Respondents obtained video surveillance of Claimant on November 24, 2017. The video surveillance footage was not offered as an exhibit at hearing. Drs. Serak, Prusmack and Reiss observed the video footage. Claimant is described as performing yard work, including walking, bending over, lifting a trash bag and cutting a bush. Dr. Serak testified he did not see Claimant dragging his foot on the footage, but that Claimant's presentation on the video did not mean Claimant was not suffering from radiculopathy or that he did not require surgery. Dr. Prusmack testified that the video clearly showed Claimant's foot drop, and that individuals with foot drop tend to adapt using other muscles. Dr. Reiss testified that Claimant's presentation on the surveillance footage was inconsistent with his reported symptoms and need for surgery.

16. On November 30, 2017, Claimant fell in his garage. Claimant testified at hearing that he and his co-worker drove to Claimant's residence to retrieve some tools. Claimant testified that while in the garage he stumbled because of leg weakness and fell to the ground.

17. Claimant's co-worker transported him to the emergency department at Sky Ridge Medical Center where he was seen by the neurosurgeon on call, John Serak, MD. Claimant presented with worsening right lower extremity weakness, including severe quadriceps weakness and weakness in dorsi and plantar flexion. Dr. Serak noted that the MRI evidenced severe central and foraminal stenosis from L3-5 as well

as some spondylolisthesis and severe facet arthropathy. Based on his examination of Claimant and the MRI findings, Dr. Serak determined Claimant should undergo an indirect decompression and fusion.

18. On November 30, 2017, Dr. Serak performed an L3-5 lateral lumbar interbody fusion with percutaneous pedicle screws.

19. In follow-up examinations with Dr. Serak on December 19, 2017 and February 8, 2018, Claimant reported improvement in back pain and almost complete resolution of leg pain and weakness. By April 12, 2018, Claimant reported complete resolution of right lower extremity pain and weakness, and some continued back pain that had not worsened. Claimant continued to report complete resolution of right leg symptoms in subsequent follow-up evaluations with Dr. Serak on June 25, 2018 and July 15, 2018.

20. Claimant was unable to attend the IME with Dr. Reiss as originally scheduled on December 20, 2017 due to undergoing surgery. Dr. Reiss subsequently performed the IME on January 31, 2018. Dr. Reiss reviewed Claimant's medical records and performed a physical examination. He concluded Claimant likely sustained a lumbar strain as a result of the July 25, 2017 industrial injury, which would have been expected to resolve in a few weeks. Dr. Reiss reviewed the actual film from the 2017 MRI and agreed with the radiologist's findings. Dr. Reiss opined that the 2017 MRI findings are most likely degenerative without any acute changes and, to the extent some moderate foraminal narrowing exists, it does not cause any significant compression of exiting nerve roots to account for weakness. Dr. Reiss opined that there was no pathology on the MRI to account for the need for any surgical intervention. He further opined that the surgery performed was not indicated for lower back pain, and was not the most appropriate surgery for nerve root pain and weakness. He concluded Claimant's current symptomatology and any potential restrictions or limitations are related to the surgery and no longer related to any effects of the work incident.

21. On May 25, 2018, Dr. Prusmack responded to a letter from Claimant's counsel inquiring as to Claimant's condition and status. Dr. Prusmack opined that Claimant's right lower extremity weakness was a consequence of his July 25, 2017 industrial injury, and that Claimant's right lower extremity deficit worsened to the extent that it became a foot drop. He further opined that the surgery performed by Dr. Serak was appropriately performed as an emergency and was reasonable, necessary and consequential to the July 25, 2017 industrial injury.

22. Dr. Serak testified by pre-hearing deposition. Dr. Serak was offered as an expert in neurosurgery. Dr. Serak completed a residency in neurosurgery and spine surgery in 2017. He is board eligible, but not board certified nor Level II accredited. Respondents did not stipulate to Dr. Serak's expertise. Based on Dr. Serak's training, the ALJ finds Dr. Serak possesses specialized knowledge which will assist the ALJ in determining a fact in issue. Accordingly, the ALJ finds Dr. Serak is qualified as an expert.

23. Dr. Serak testified his examination of Claimant revealed severe right lower extremity weakness which he believed was causing Claimant to fall. Dr. Serak explained that Claimant had compression of nerve roots in the lumbar spine causing dysfunction of the nerves resulting in the weakness to his right lower extremity. He testified the surgery he performed was urgent in nature due to the severity of Claimant's lower extremity weakness, and opined that Claimant was at risk for potential permanent long-term disability if the surgery had not been performed. Dr. Serak specifically opined that the surgery was reasonable and necessary for Claimant's condition based on Claimant's presentation at the emergency room on November 30, 2017 and his MRI findings. He testified the surgery was a success, with Claimant has experiencing good functional recovery. On cross examination, Dr. Serak testified he was unaware of Claimant's 2013 injury. He stated Claimant informed him of the July 2017 injury and Claimant related his progressive weakness to that injury. Dr. Serak acknowledged he could not determine the age of the pathology and he could not say for certain what caused the pathology.

24. Dr. Prusmack testified by pre-hearing deposition as an expert in neurosurgery. Dr. Prusmack testified that PA-C Whatmore works in consultation with Dr. Prusmack at Rocky Mountain Spine. He explained that, while PA-C Whatmore is not a radiologist, PA-C Whatmore reads approximately 10 MRI studies daily in his practice and has done so in the context of neurosurgery for the last 14 years. Dr. Prusmack further explained that the surgery performed by Dr. Serak was not the same surgery he recommended, but asserted there was a "very clear-cut need of surgical decompression and/or fusion" in Claimant's case to relieve nerve root impingement causing weakness in Claimant's right lower extremity.

25. Dr. Reiss testified by both pre-hearing deposition and at hearing as a Level II accredited expert in orthopedic surgery with a specialization in the spine. Dr. Reiss testified consistent with his IME report and continued to opine the surgery performed by Dr. Serak was not indicated for or related to the July 25, 2017 industrial injury. Dr. Reiss testified he performed an IME of Claimant in September 2014 for Claimant's 2013 injury. At that time, Dr. Reiss opined the recommended fusion surgery was not needed as there was no localization of the pain generator, Claimant had multiple levels of degenerative change, axial back pain without instability, and no significant neurologic involvement.

26. Dr. Reiss testified Claimant driving himself approximately from July 26 to November 29, 2017 and Claimant's assertion he had a foot drop during this time are inconsistent, opining that if a person had a "real foot drop, you really wouldn't want to be driving with your right foot." He testified that a person with foot drop would have to significantly modify their driving technique or use the other foot, as it would be difficult to bring the foot back up.

27. Dr. Reiss further testified the July 2017 MRI documented the following pathology: multiple levels of degeneration with multiple levels of different degenerative findings such as a "little bit of crowding, little bit of bulging, little bit of spurring, little bit of

thickening, all of which was degenerative, preexistent," and do not amount to significant nerve compression.

28. Dr. Reiss testified in his expert opinion the surgery Dr. Serak performed on December 1, 2017, was not reasonably needed to cure and relieve claimant from or related to the effects of the July 25, 2017 injury, stating,

> The surgery was performed at the L3-4 and L4-5 level. The proposed indirect decompression, if there was any compression, would have opened up the foramina, the exiting point of the third nerve and the fourth nerve. The third and the fourth nerve are the only ones that would have been affected by this procedure. The third and the fourth nerve go to the front of the thigh; they do not go into the buttock, posterior thigh, calf, or foot. If he was having numbness in any of his toes, it was not due to these nerves being compressed. If he was having sciatic pain, these nerves do not make up any part of the sciatic nerve, they make part of the femoral nerve, which is in the front of the thigh. These nerves would not have caused pain down his leg into his calf or his foot or numbness and tingling in his toes. So if he got better, that would be difficult to explain medically because the procedure performed did not do anything to the L5 or S1 nerve roots.

29. Claimant testified that after the July 25, 2017 he experienced pain and weakness in his right leg, and by late October 2017 he was having difficulty ambulating and had developed a problem with stumbling when walking. Claimant testified that following the July 25, 2017 injury he returned to light duty work for Employer and continued performing light duty work until he underwent surgery on November 30, 2017. Claimant further testified most of his leg pain resolved immediately after the surgery, and continued to improve. He stated that walking is no longer a problem and his weight lifting restrictions increased from 15 pounds to 65 pounds. Claimant testified he is basically performing the same duties now as before the injury. Claimant testified that the surgery costs were covered by his personal health insurance carrier.

30. Claimant's testimony is found credible and persuasive.

31. The ALJ finds the testimony of Dr. Serak and Dr. Prusmack more credible and persuasive than the testimony of Dr. Reiss.

32. The ALJ finds Claimant has proven by a preponderance of the evidence that the L3-5 lateral lumbar interbody fusion with percutaneous pedicle screws performed by Dr. Serak on November 30, 2017 was emergent and was reasonably necessary and related to the July 25, 2017 industrial injury.

33. The ALJ examined Claimant's mid-to-low back at hearing and finds that, as a result of his July 25, 2017 industrial injury, Claimant has a visible disfigurement to the body consisting of five surgical scars, the first three of which are circular, measuring approximately ¾ of an inch to an inch, both in length and width. The fourth scar, a bit

lower, is approximately ½ inch in length and width. The scars are darker than the surrounding skin, impressed into the low back, with texture on three of the four scars. On the left side there is a fifth surgical scar approximately two inches long, less than ¼ of an inch in width. It is also darker and indented in places. The ALJ finds Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation.

34. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as

unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

As found, Claimant established by a preponderance of the evidence the surgery performed by Dr. Serak was reasonable, necessary and causally related to the July 25, 2017 industrial injury. Although Claimant had a prior back injury for which he underwent conservative treatment, Claimant reported being virtually pain free leading up to the July 25, 2017 injury and, more importantly, did not previously have right leg symptoms as a major complaint. Claimant credibly testified he had right leg symptoms immediately following the incident, and the medical records consistently document right leg complaints and findings of right leg weakness on examination. Claimant credibly testified that the weakness in his leg had progressed over time, which is corroborated by the medical records. On more than one occasion, PA-C Whatmore commented on his concern regarding the progression of Claimant's right leg symptoms, and the potential risk for permanent nerve root injury. Dr. Prusmack credibly opined that Claimant's right lower extremity weakness was a consequence of his July 25, 2017 industrial injury and that the need for surgery was urgent.

Although Dr. Prusmack originally requested a decompression surgery and Dr. Serak ultimately performed a fusion surgery, both Dr. Serak and Dr. Prusmack credibly testified the November 30, 2017 surgery involved indirect decompression, and was urgent, reasonable and necessary based on Claimant's exam findings and MRI findings. Claimant credibly testified that his right leg symptoms significantly improved after undergoing the surgery, which is corroborated by the medical records. Based on the totality of the evidence, Claimant has proven it is more probable than not that the surgery performed by Dr. Serak was reasonable, necessary and causally related to the July 25, 2017 work injury. Accordingly, Respondents are liable for the costs of the surgery.

Disfigurement

Section 8-42-108(1), C.R.S. provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view."

As found, Claimant has surgical scars as a result of his compensable injury. The ALJ concludes Claimant should be awarded $1,200.00 for this disfigurement.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the costs of the emergent surgery performed by Dr. Serak, including reimbursement to Claimant for any out-of-pocket expenses, and any expenses paid by Claimant's health insurance carrier for the surgery.

2. Respondents shall pay Claimant TTD from December 1, 2017 to March 1, 2018 at the rate of $948.15 per week.

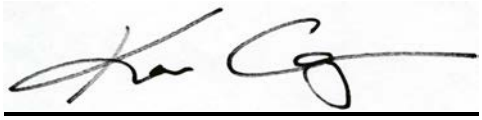
3. Respondents shall pay Claimant $1,200.00 for disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 26, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that his low back condition is related to his July 18, 2016, admitted work injury.

II. If it is found that the back condition is related, whether L5-S1 fusion surgery, ASIF with 1B cage requested by Dr. Birney, is reasonable, necessary, and related to the work incident of July 18, 2016.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 58-year-old man who was a field supervisor for Respondents. On July 18, 2016, Claimant was unchaining a concrete well pit from a back hoe. While unchaining the well pit, Claimant fell and hit the bucket and then landed in the well pit.
2. Despite Claimant alleging he fell approximately 12 feet, Claimant did not seek medical treatment after the fall until August 22, 2016, more than a month after the work incident.
3. On August 22, 2016, Claimant was evaluated by Dr. Kenneth S. Raper.
4. On October 27, 2016, Respondents filed a General Admission of Liability. Over time, Claimant has undergone a cervical fusion, left hip surgery, and treatment of the left shoulder under this claim.
5. Claimant now seeks an order approving an L5-S1 fusion. This was requested by Dr. Birney for treatment of degenerative disc disease with left foraminal stenosis and has been denied by Respondents. *Ex. C, Bates 17, Ex. B, Bates 14.*
6. Claimant has a prior workers' compensation injury involving his L5-S1. Surgery occurred under that claim, and was not successful. As of 2004, Claimant's diagnosis was failed back syndrome at L5-S1. At the close of that claim, a fusion was a possible option, and Claimant was provided a choice. As noted by his authorized treating physician at that time, Dr. G. Thomas Morgan, claimant had the choice of MMI or a "discography and possible lumbar fusion." As of July 27, 2004, Claimant chose MMI and it was noted that Claimant would prefer "not to undergo any further surgery at this time." *Ex. G, Bates 89.* Claimant was provided a 26% impairment rating, and settled that claim for $75,000. *Ex. R.*
7. Claimant testified that his prior back problems ultimately resolved, that his prior back

problems did not restrict him from performing his job duties, and that he had no back problems at the time of the July 18, 2016 incident. He also testified that his symptoms from his prior injury were limited to his right side, and that since the work incident, his symptoms were different and on the left. He testified that his pain in the left side is now a 4/10. He testified that he did not have any pain level on the left side prior to the work incident. He stated, "I didn't have any problems until I fell." The records show this is not a credible statement.

8. Despite Claimant's testimony at hearing, and statement to Dr. Birney that his back pain completely resolved after his 2003 back injury, records show Claimant continued to treat for his failed back syndrome after being placed at MMI in 2004.

9. As of February 22, 2005, he was taking OxyContin 20 mg b.i.d and Celebrex, and was prescribed ultracet by Dr. Morgan. *Ex. G, Bates 82.*

10. In addition, Claimant was treating with Dr. Michael Sparr. In Dr. Sparr's records, Claimant was described as having chronic lumbosacral pain and taking tramadol and hydrocodone for his chronic back pain on regular basis. *Ex. F, Bates 78, 80.*

11. On June 11, 2015, Claimant was seen by Dr. Sparr for medication management for his chronic lumbosacral pain. Dr. Sparr noted Claimant's daily routine in managing his chronic low back pain and his pain medication regimen. As set forth in his report, Claimant advised Dr. Sparr that his mornings were somewhat difficult due to his back pain. Claimant indicated that he would wake up with back pain and begin taking his medication in stages to help manage his back pain throughout the day. Claimant advised Dr. Sparr that he would start out by taking his tramadol. Then, approximately an hour later, he would take his hydrocodone and nabumetone. In order to help control his chronic back pain, Claimant would then take a second dose of his tramadol, hydrocodone, and nabumentone about 4 hours later. *Ex. F, Bates 80.*

12. On December 22, 2015, Claimant returned to Dr. Sparr for ongoing pain management regarding his chronic low back pain. Claimant again recited his daily medication regimen (taking his pain medications in the morning and then taking a second dose of his pain medications later in the day). *Ex. F. Bates 80.*

13. On May 16, 2016, one month prior to the work incident, Claimant complained of a flare-up in left sided gluteal and lateral thigh pain. He had pain in the left lateral gluteal region with radiation to the left hip and lateral thigh. He was still taking nambumeton, hydrocodone, and tramadol for his pain. Claimant was diagnosed with degenerative disc disease of the lumbar spine, lumbar disc derangement, trochanteric bursitis, and myofascial pain/myalgia.

The medical report also indicates:

> He has had a flareup in left-sided gluteal and lateral thigh pain. He is not certain what caused the flareup. He reportedly has stopped digging at this job as he felt it was too painful.") *Ex. F, Bates 76*.

This medical record is significant because it shows Claimant was symptomatic and his underlying back condition was getting worse. At this appointment, Claimant

was experiencing radicular symptoms in his left buttock and left lower extremity as well as disability. Claimant's increase in pain symptoms in his left buttocks - gluteal area – and thigh caused Claimant to increase his pain medication by doubling his use of hydrocodone. *Ex. F, Bates 76.* Claimant's worsening of his underlying condition was occurring only a month prior to the work incident. This note is also significant because it directly contradicts Claimant's testimony and statements to Dr. Birney regarding his alleged lack of symptoms before the July 18, 2016, work incident.

14. Claimant presented at hearing a series of pain drawings included in "Spinal Pain Sheets" completed by ATP Dr. Kenneth Raper under this workers' compensation claim. He argues that these show that he complained of his back from the beginning of treatment. Dr. Reiss testified that the symptoms documented in the initial charts are the same as those reflected in the May 16, 2016, notes from Dr. Sparr, confirming that these complaints existed before the work incident.

15. Dr. Sparr took up continued treatment, now under this workers' compensation matter. Claimant was also referred to Dr. Timothy Birney at Western Orthopedics.

16. On October 13, 2017, Claimant presented to Dr. Birney. Dr. Birney's report is captioned "New Complaint." As noted in Dr. Birney's report, Claimant advised Dr. Birney that although he had a prior back injury in 2003, which required surgery, "he had complete relief of his right lower extremity radicular pain without residual neurologic symptoms in the right lower extremity and "***no issues with back pain***." *Ex. 9. Bates 136*. [emphasis supplied.] Claimant's representation to Dr. Birney that he completely recovered from his 2003 back injury and did not have any residual back pain is not true. Dr. Birney did note, however, that on June 28, 2017, Claimant developed radiating pain and numbness in his left lower extremity without additional injury or overuse. *Ex. 10. Bates 136.* Dr. Birney also noted in his report that Claimant's back had been improving, but during September of 2017, Claimant had the spontaneous worsening of back pain, which has persisted, and Claimant also developed at that time "new radiating left lower extremity pain and numbness." *Ex. 10. Bates 137.* After this evaluation, Dr. Birney went on to perform a cervical fusion for Claimant under this workers' compensation claim.

17. It should also be noted that shortly after Claimant's first back surgery in November of 2003, and without any inciting event or accident, Claimant had a recurrent or spontaneous disc herniation at the L5/S1 level. *Ex. H. Bates 106*.

18. Dr. Birney, is also the physician who has recommended the lumbar fusion as well. In his January 29, 2018 report, he noted that he was following up after Claimant's January 11, 2018, cervical fusion, and would order post- surgical X rays three weeks in the future. He noted that then, Claimant "indicates he would like to then plan on lumbar surgery subsequently with respect to his issues of chronic left L5 radiculopathy that appears primarily related to left L5-S1 foraminal stenosis." *Ex. C, Bates 20.* That is, the symptoms on the left correspond with left L5-S1 degenerative foraminal stenosis. Dr. Birney's impression regarding the lumbar was, "work related, fall-induced, chronic low back pain secondary to an exacerbation including previous **asymptomatic** severe degenerative disk disease at L5-S1, status post distant right

L4-L5 and L5-S1 discectomies…Work-related **acute** left L5 radiculopathy in the context of L5-S1 formainal stentosis." *Ex. C, Bates 26.* [emphasis supplied]. Dr. Sparr's pre-injury records clearly show that Dr. Birney is mistaken: Claimant's condition was not asymptomatic and there were left sided radicular complaints prior to the work incident. Therefore, Dr. Birney's opinion that the need for surgery is due to an exacerbation of Claimant's asymptomatic underlying back condition based on the July 18, 2016, work accident is not found to be reliable or persuasive.

19. Dr. Birney's lumbar fusion request was reviewed by Dr. Michael Janssen on February 28, 2018. Dr. Janssen noted that he received and reviewed medical information regarding this matter. He took into consideration Claimant's contention that he fell 12 feet during the incident. Dr. Janssen concluded that the primary indication for the requested surgery was the degenerative pathology, which he concluded was secondary to the previous decompressive laminectomy in 2003 and not related to the work incident. He concluded that the surgery would not be related to the work incident. *Ex. B*.

    Dr. Janssen stated in his report the following:

> Most important though is that his history of low back pain in fairly chronic in nature and underwent a prior lumbar reconstruction surgery with a decompression at the L4-L5 and L5-S1 levels previously. This dates back to an in injury in the early 2000s. The patient underwent a decompression procedure for that, partial discectomy, and subsequently now has disc resorptive syndrome which is most likely foraminal encroachment.
>
> . . .
>
> After critical review of all this, it is clear that it is a reasonable indication for a patient with chronic L5 radiculopathy, vertical instability, and vertical collapse to consider indirectly opening up the foramen through an anterior lumbar interbody arthrodesis, but in this particular patient, in particular circumstances, the lack of any documentation that the underlying indications for surgery are directly related to this event on 07/18/16 is completely lacking. It appears more likely than not the only indications for surgery secondary to the chronic vertical instability of L5-S1, the foraminal stenosis at L5–S1, and secondary to the previous lumbar decompressive procedure that was performed many years ago…. The primary indications, in my professional opinion, for this recommended surgery is secondary to the previous decompressive laminectomy and not related to an incident on 07/18/16, based upon all the medical information provided to me.

    Ex. B., and Ex. 11 Bates 151-152.

20. Claimant was evaluated by Dr. Brian Reiss, who issued a report and testified as an expert at hearing. *Ex. A. Bates 1-13*. Dr. Reiss reviewed the medical records, evaluated and interviewed Claimant, and reviewed the diagnostic films himself. After this detailed review, he agreed with Dr. Janssen's conclusion. Claimant has "significant" degeneration of the lumbar spine, with severe degeneration at L5-S1, moderate disc space narrowing and osteophytes at L5-S1 and mild osteophytes at L3-4 and L4-5. *Ex. A, Bates 3.* Dr. Reiss testified that this spinal condition was not caused by the work incident of July 18, 2016. Dr. Reiss also testified that Claimant's pathology was not accelerated by the work incident.

21. The primary basis for the lumbar surgery request under this claim is Dr. Birney's understanding that the lumbar condition was aggravated by the work incident. This is disputed by respondents and Dr. Reiss. It is Dr. Reiss' opinion and conclusion that there is not an aggravation of the lumbar condition that warrants treatment under this workers' compensation claim. Dr. Reiss opined Claimant has moved to baseline or better for his degenerative lumbar spine, and points to the significant improvement in complaints and medication dependence following Claimant's left hip surgery. *Ex. F.* In review of Dr. Sparr's May 12, 2017 evaluation [*Ex. F, Bates 66]*, Dr. Reiss concluded, "this would indicate to me that any increased pain he was having after his work injury was probably more secondary to his hip and not due to his lower back. This would also point away from and L5 nerve irritation or an S1 joint dysfunction. In any case his pain level appears to be less than baseline prior to the work injury." *Ex. A, Bates 5, 6.*

22. Dr. Reiss explained that the surgery done at L5-S1 in 2004 predisposed Claimant for ongoing degeneration and collapse at that level, which did occur in this case. Dr. Reiss indicated that there is left foraminal stenosis that has developed and which could cause the current complaints. Dr. Reiss pointed to the documentation after the 2004 MMI to show that Claimant had ongoing treatment for chronic low back pain since that time, including ongoing pain medication. There was no documentation that Claimant's pain resolved. Dr. Reiss discussed the May 16, 2016, pre-injury record, pointing out that Claimant's medication intake had increased to tramadol 4 times per day because of increased pain to the left, and that this was interfering with Claimant's work. Dr. Reiss reviewed Dr. Birney's characterization of the back and his surgery recommendation. He pointed out that it did not appear that Dr. Birney reviewed prior records, and that his statement that the back was asymptomatic before the July 18, 2016, work incident was incorrect. Dr. Reiss also turned to the medical records to show that the symptoms which are the justification for Dr. Birney's surgical recommendation were not "acute" (in relation to the fall) and did not develop until late 2017. Dr. Reiss' opinion is consistent with the October 13, 2017, report from Dr. Birney where he documented that during September of 2017, Claimant had the spontaneous worsening of back pain, which has persisted, and that Claimant also developed at that time "new radiating left lower extremity pain and numbness." *Ex. 10. Bates 137*.

23. Dr. Reiss testified that Claimant clearly had a waxing and waning of his symptomatology in his back and the medical records document that. There is insufficient credible and persuasive evidence that the work incident itself changed

that. There is insufficient credible and persuasive evidence that the work incident caused the new symptoms down into the left leg and new irritation at L5. If the new symptoms into his left leg appeared after the work incident, more likely than not that is something that would have occurred with or without the work incident. Dr. Reiss did not believe the work incident changed the pre-existing condition at all. Dr. Reiss testified that the work incident did not aggravate the underlying condition or accelerate the need for treatment. He testified that the treatment for the low back is not to cure and relieve the effects of the work incident. Dr. Reiss credibly testified that the low back condition and treatment requested is not related to the work incident.

24. As found above, Claimant's testimony and statements to Dr. Birney that his back symptoms fully resolved after his prior work injury and that he did not have any back pain or left sided symptoms before his July 18, 2016, work incident is not found to be credible or reliable. Claimant's medical records document the following:

    a. On July 27, 2004, Claimant was evaluated by Dr. Morgan. Dr. Morgan noted that Claimant was evaluated by Dr. Illig and Dr. Illig noted that Claimant could either undergo a discography and a possible lumbar fusion or be placed at MMI with severe restrictions. As noted by Dr. Morgan, after surgery, Claimant suffered a recurrent disc herniation at the L5/S1 level. Dr. Morgan noted that Claimant did not want any additional surgery at that he was approaching MMI. He diagnosed Claimant as suffering from failed back syndrome, with a herniated disc at the L5/S1; status post microdisscectomy with a recurrent disc herniation at the L5/S1 level and scar tissue formation around the right S1 nerve root, as well as degenerative disc disease at the L4/5 level with an associated annular tear. *See Ex. G. Bates 85-90*.

    b. On August 12, 2004, Claimant was evaluated by Dr. McCranie. In her report, she noted Claimant's surgeon, Dr. Illig indicated Claimant may require additional surgery in the future and in the form of a fusion. *Ex. H. Bates 103, 107*.

    c. On August 17, 2004, Dr. Morgan placed Claimant at MMI and provided him a 26% impairment rating for his low back. Claimant's medical impairment rating was comprised of an 11% rating for structural defects of his lumbar spine and 4% for neurological deficits. The remainder was based on decreased range of motion. Ex. G. Bates 85-88.

    d. On August 25, 2004, Dr. Morgan discussed Claimant's MMI status and need for ongoing medications for at least one year.

    e. On or about October 7, 2004, Claimant settled his prior workers' compensation case on a full and final basis for $75,000.

    f. On February 22, 2005, Claimant returned to Dr. Morgan, for ongoing back pain. Dr. Morgan noted that Claimant was taking oxycontin and Celebrex. At that appointment, he also prescribed Claimant Ultracet for breakthrough pain.

    g. On June 11, 2015, Claimant was seen by Dr. Sparr for medication management for his chronic lumbosacral pain. Dr. Sparr noted Claimant's daily routine in managing his chronic low back pain and his pain medication regimen. As set

forth in his report, Claimant advised Dr. Sparr that his mornings were somewhat difficult due to his back pain. Claimant indicated that he would wake up with back pain and begin taking his medication in stages to help manage his back pain throughout the day. Claimant advised Dr. Sparr that he would start out by taking his tramadol. Then, approximately an hour later, he would take his hydrocodone and nabumetone. In order to help control his chronic back pain, Claimant would then take a second dose of his tramadol, hydrocodone, and nabumentone about 4 hours later. During this visit, Dr. Sparr examined Claimant's lumbar spine and noted mild to moderate myofascial tightness in his right greater than left lumbar musculature from L2 all the way through S1. Claimant was also tight and tender over the quadratus and lumborum musculature. He also noted Claimant had restricted flexion and extension and that facet loading testing was positive. *Ex. A. Bates 80*.

h. On December 22, 2015, Claimant returned to Dr. Sparr for ongoing pain management regarding his chronic low back pain. Claimant recited his medication regimen again (taking his pain medications in the morning and then taking a second dose or his pain medications later in the day). At this visit, Dr. Sparr noted full lumbar range of motion and facet loading was not positive. He did, however, note Claimant was tender across the gluteal and lumbar musculature, but the tenderness was not significant. *Ex. A. Bates 78*.

25. On May 16, 2016, one month prior to the work incident, Claimant complained of a flare-up in left sided gluteal and lateral thigh pain. He had pain in the left lateral gluteal region with radiation to the left hip and lateral thigh. He was still taking nambumeton, hydrocodone, and tramadol. But, Claimant doubled at times the amount of hydrocodone he was taking. The report from this visit provides:

> He has had a flareup in left-sided gluteal and lateral thigh pain. He is not certain what caused the flareup. He reportedly has stopped digging at this job as he felt it was too painful." Claimant was diagnosed with degenerative disc disease of the lumbar spine, lumbar disc derangement, trochanteric bursitis, and myofascial pain/myalgia.

Ex. F, Bates 76.

26. Claimant's testimony at hearing and representations to his physicians and medical providers regarding the onset and extent of his symptoms which tend to establish the work incident caused or aggravated his low back pain and radicular symptoms are not found to be credible or reliable. Moreover, the medical records upon which Claimant contends support his contention that he injured his back, or aggravated his preexisting back condition, are premised on the unreliable history Claimant reported and are therefore no more reliable than the history provided by Claimant.

27. The medical records of Dr. Raper are not a model of clarity, precision, or consistency. Despite this, Dr. Raper's initial hand written notes from August 22, 2016, contain a pain diagram which was completed by Dr. Raper. The pain diagram shows a human figure from the rear. The figure documents Claimant's pain complaints and that he was having pain in his low back, left buttocks, and the outer

portion of his left leg, which is consistent with lateral thigh pain. *Ex. 4. Bates 15*. As noted by Dr. Reiss during his testimony, these are the same complaints Claimant had on May 16, 2016, when he was evaluated by Dr. Sparr about a month before the work incident.

28. Moreover, the pain diagrams contained in Dr. Raper's records show a waxing and waning of back and radicular symptoms as reported by Claimant.

    For example:

    - On June 1, 2017, the pain diagram does not document any low back pain or radicular symptoms. *Ex. 4. Bates 37*
    - On July 17, 2017, the pain diagram demonstrates upper back pain, but no lower back pain or radicular symptoms. *Ex. 4. Bates 40.*
    - On August 25, 2017, the pain diagram again demonstrates only upper back pain and no lower back pain or radicular symptoms. *Ex. 4. Bates 43*.
    - On September 28, 2017, the pain diagram shows only some lower back pain, but not gluteal or radicular complaints. *Ex. 4. Bates 50*.
    - On November 2, 2017, the pain diagram indicates left sided back pain with radicular complaints which also appear to radiate around and to the front side of Claimant's left lower extremity.
    - On November 30, 2017, the pain diagram only demonstrates low back pain. *Ex. 4. Bates 58*.
    - On February 22, 2018, the pain diagram does not note any low back pain or radicular symptoms. *Ex. 4. Bates 61*.
    - On June 1, 2018, the pain diagram notes low back pain with radicular symptoms going all the way down Claimant's left leg and to his ankle. *Ex. 4. Bates 65*.

29. The July 18, 2016, work incident did not cause or result in an injury to Claimant's low back.

30. The July 18, 2016, work incident did not aggravate or accelerate Claimant's preexisting back condition.

31. The July 18, 2016, work incident did not cause the need for medical treatment for his low back.

32. The July 18, 2016, work incident did not accelerate Claimant's need for medical treatment for his low back.

33. Claimant's low back pain, radicular symptoms, and need for medical treatment are due to the natural progression of his preexisting back condition.

34. Claimant's need for medical treatment for his low back, including the surgery recommended by Dr. Birney, was not caused by the July 18, 2016, work incident.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. **Whether Claimant has proven by a preponderance of the evidence that his low back condition is related to his July 18, 2016, admitted work injury.**

II. **Whether L5-S1 fusion surgery, ASIF with 1B cage requested by Dr. Birney, is reasonable, necessary, and related to the work incident of July 18, 2016.**

According to C.R.S. §8-43-201, "(a) claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer, and a workers' compensation case shall be decided on its merits." *Also see Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590, 592 (Colo. App. 1998) ("The Claimant has the burden of proving an entitlement to benefits by a preponderance of the evidence."); *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915, 918 (Colo. App. 1993) ("The burden is on the claimant to prove his entitlement to benefits by a preponderance of the evidence."). Proof by a preponderance of the evidence requires Claimant to establish that the existence of a contested fact is more probable than its nonexistence. *Hosier v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 (ICAO March 20, 2002).

Respondents are liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. Claimant bears the burden of proof of showing that medical benefits are causally related to his work-related injury or condition. *Ashburn v. La Plata School District 9R,* W.C. No. 3-062-779 (ICAO May 4, 2007). Therefore, Claimant is not entitled to medical care that is not causally related to his work-related injury or condition. Respondents do not "implicitly" admit for a disputed condition by paying for medical benefits. *Hays v. Hyper Shoppes*, W.C. No. 4-221-570 (ICAO April 13, 1999). Respondents remain free to contest the compensability of any particular treatment. *Id.* As noted in *Ashburn, supra,* "it has generally been held that payment of medical services is not in itself an admission of liability. This is based on the sound public policy that carriers should be allowed to make voluntary payments without running the risk of being held thereby to have made an irrevocable admission of liability." Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *See* C.R.S. §8-41-301(1)(c); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). In other words, Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *See Wal-Mart Stores v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). Therefore, Claimant is not entitled to medical care that is not causally related to his work-related injury or condition. As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (ICAO May 10, 2007), "a showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary."

Claimant must prove a causal nexus between the claimed need for treatment and the work-related occupational disease or injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). While a pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment, *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990), the mere occurrence of symptoms at work does not require the ALJ to conclude that the industrial exposure caused the symptoms and consequent need for treatment, or that the industrial exposure aggravated or accelerated any pre-existing condition. Rather, the occurrence of the symptoms may be the result of a natural progression of a pre-existing condition that is unrelated to the employment, or may be attributable to some intervening cause. *See Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002); *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995).

Moreover, the mere fact Claimant experiences symptoms in a body part following a workers' compensation claim does not require the inference there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO August 18, 2005). The courts have long recognized that symptoms could represent the "logical and recurrent consequence" of the preexisting condition. *See Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO April 10, 2008); *F.R. Orr Construction, supra*. As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO October 27, 2008), simply because Claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The Panel in *Scully* noted that "correlation is not causation." Merely because there is a coincidental correlation between the claimant's work and his symptoms does not mean there is a causal connection between claimant's injury and his work.

Claimant has failed to carry his burden to prove by a preponderance of the evidence that his lower back condition and need for medical treatment is related to his July 18, 2016, work accident/injury.

Claimant had a prior workers' compensation injury involving his L5-S1. Surgery occurred under that claim, and was not successful. As of 2004, Claimant's diagnosis was failed back syndrome at L5-S1, which included a recurrent disc herniation at L5-S1. At the close of that claim, a fusion was a possible option, and Claimant was provided a choice. As noted by his authorized treating physician at that time, Dr. G. Thomas Morgan, Claimant had the choice of MMI or a "discography and possible lumbar fusion." As of July 27, 2004, Claimant chose MMI and it was noted that Claimant would prefer "not to undergo any further surgery at this time." Therefore, Claimant was placed at MMI and provided a 26% impairment rating. Claimant ultimately settled that claim in 2004 for $75,000.

Claimant testified that his back problems ultimately resolved after 2004 and that he had no back problems at the time of the July 18, 2016, incident. He also testified that his symptoms from his prior injury were limited to his right side, and that since the work incident, his symptoms were different and on the left. He testified that his pain in the left side is now a 4/10. He testified that he did not have any pain level on the left

side prior to the work incident. He stated, “I didn’t have any problems until I fell.” The medical records, however, demonstrated Claimant’s testimony, and statement to Dr. Birney, alleging that he had the complete resolution of his prior back injury before the July 18, 2016, work accident was not credible.

Despite Claimant’s testimony at hearing, and statement to Dr. Birney that his back pain completely resolved after his 2003 back injury, records demonstrated Claimant continued to treat for his failed back syndrome after MMI in 2004. As of February 22, 2005, he was taking OxyContin 20 mg b.i.d and Celebrex, and was prescribed ultracet by Dr. Morgan.

In addition, Claimant was treating with Dr. Sparr. In Dr. Sparr’s records, Claimant was described as having chronic lumbosacral pain and taking tramadol and hydrocodone for his chronic back pain on regular basis.

On June 11, 2015, Claimant was seen by Dr. Sparr for medication management for his chronic lumbosacral pain. Dr. Sparr noted Claimant’s daily routine in managing his chronic low back pain and his pain medication regimen. As set forth in his report, Claimant advised Dr. Sparr that his mornings were somewhat difficult due to his back pain. Claimant indicated that he would wake up with back pain and begin taking his medication in stages to help manage his back pain throughout the day. Claimant advised Dr. Sparr that he would start out by taking his tramadol. Then, approximately an hour later, he would take his hydrocodone and nabumetone. In order to help control his chronic back pain, Claimant would then take a second dose of his tramadol, hydrocodone, and nabumentone about 4 hours later.

On December 22, 2015, Claimant returned to Dr. Sparr for ongoing pain management regarding his chronic low back pain. Claimant again recited his daily pain medication regimen (taking his pain medications in the morning and then taking a second dose of his pain medications later in the day).

Then, on May 16, 2016, one month prior to the work incident, Claimant complained of a flare-up in left sided gluteal and lateral thigh pain. He had pain in the left lateral gluteal region with radiation to the left hip and lateral thigh. He was taking nambumeton, hydrocodone, and tramadol. He was diagnosed with degenerative disc disease of the lumbar spine, lumbar disc derangement, trochanteric bursitis, and myofascial pain/myalgia. It was noted by Dr. Sparr that Claimant had a flare-up in left-sided gluteal and lateral thigh pain. It was also noted that Claimant was not certain what caused the flare-up. This medical report is extremely significant, showing that Claimant was symptomatic and that his condition was worsening and that it was disabling. As set forth in the report, and as found, Claimant was beginning to experience radicular symptoms in his left buttock and left lower extremity due to his preexisting low back condition only a month prior to the work incident. In other words, Claimant was experiencing a worsening of condition based on the natural progression of his preexisting back condition. This medical report is also significant because it directly contradicts Claimant’s testimony and statement to Dr. Birney that his back pain from his 2003 back injury had resolved.

Consequently, the ALJ does not find Claimant's testimony and statements to his medical providers regarding the onset, extent, and cause of his symptoms which tend to relate his symptoms to the work accident to be credible or reliable.

Claimant was evaluated by Dr. Brian Reiss, who testified as an expert at hearing. Dr. Reiss reviewed the medical records, evaluated and interviewed Claimant, and reviewed the diagnostic films himself. After this detailed review, he agreed with Dr. Janssen's conclusion. Claimant has "significant" degeneration of the lumbar spine, with severe degeneration at L5-S1, moderate disc space narrowing and osteophytes at L5-S1 and mild osteophytes at L3-4 and L4-5. Dr. Reiss testified that this spinal condition was not caused by the work incident of July 18, 2016. Dr. Reiss also testified that Claimant's pathology was not accelerated by the work incident.

In addition, the primary basis for the lumbar surgery request under this claim is Dr. Birney's understanding that the lumbar condition was aggravated by the work incident. It was Dr. Reiss' opinion and conclusion that there was not an aggravation or acceleration of Claimant's lumbar condition due to the July 18, 2016, work accident that warrants treatment under this workers' compensation claim.

Dr. Reiss explained that the surgery done at L5-S1 in 2004 predisposed Claimant for ongoing degeneration and collapse at that level, which did occur in this case. Dr. Reiss indicated that there is left foraminal stenosis that has developed and which could cause the current complaints. Dr. Reiss pointed to the documentation after the 2004 MMI to show that Claimant had ongoing treatment for chronic low back pain since that time, including ongoing pain medication. There was a lack of credible and persuasive evidence that Claimant's pain resolved. Dr. Reiss discussed the May 16, 2016, pre-injury record, pointing out that Claimant's medication intake had increased to tramadol 4 times per day because of increased pain to the left, and that this was interfering with Claimant's work. Dr. Reiss reviewed Dr. Birney's characterization of the back and his surgery recommendation. He pointed out that it did not appear that Dr. Birney reviewed prior records, and that his statement that the back was asymptomatic before the July 18, 2016, work accident was incorrect. Dr. Reiss also turned to the medical records to show that the symptoms which are the justification for Dr. Birney's surgical recommendation were not "acute" (in relation to the fall) and did not develop until late 2017. Dr. Reiss' opinion is consistent with the October 13, 2017, report from Dr. Birney where Dr. Birney documented that during September of 2017, Claimant had the spontaneous worsening of back pain, which has persisted, and that Claimant also developed at that time "new radiating left lower extremity pain and numbness." The statement by Dr. Birney that Claimant's worsening back pain and the development of new radiating left lower extremity pain and numbness during September of 2017, a year after Claimant's work accident, is another example of Claimant's condition worsening on its own, without any type of inciting event. Again, this is consistent with the natural progression and worsening of his 2003 back injury and surgical procedure which was not successful and similar to Claimant having a spontaneous disc re-herniation at L5-S1 after his surgery in 2003.

Dr. Reiss testified that Claimant clearly had a waxing and waning of his symptomatology in his back and the medical records document that. There is a lack of credible and persuasive evidence that the work incident itself changed that. There is a

lack of credible and persuasive evidence that the work incident caused the new symptoms down into the left leg and new irritation at L5. If the new symptoms into his left leg appeared after the work incident, more likely than not that is something that would have occurred with or without the work incident. Dr. Reiss did not believe the work incident changed the pre-existing condition at all. Dr. Reiss testified that the work incident did not aggravate the underlying condition or accelerate the need for medical treatment. He testified that the treatment for the low back is not to cure and relieve the effects of the work incident. Dr. Reiss credibly testified that the low back condition and treatment requested is not related to the work incident. The ALJ credits Dr. Reiss' opinions and conclusions that the work accident of July 18, 2016, did not result in a low back injury. The ALJ also credits Dr. Reiss' opinions and conclusions that Claimant's work accident did not aggravate or accelerate Claimant's preexisting back condition and necessitate the need for medical treatment, which includes the surgery recommended by Dr. Birney.

Dr. Janssen also evaluated the request for surgery. The ALJ finds Dr. Janssen's conclusion to be credible and persuasive. Dr. Janssen concluded that:

> It appears more likely than not the only indications for surgery secondary to the chronic vertical instability of L5-S1, the foraminal stenosis at L5–S1, and secondary to the previous lumbar decompressive procedure that was performed many years ago.… The primary indications, in my professional opinion, for this recommended surgery is secondary to the previous decompressive laminectomy and not related to an incident on 07/18/16, based upon all the medical information provided to me.

After the July 18, 2016, work accident, Claimant did complain of increased back pain and worsening radicular symptoms at various times. Moreover, his reported symptoms waxed and waned. However, Claimant did not seek treatment for his work related injuries for approximately one month after the accident. And, the ALJ found Claimant to not be credible or reliable as it relates to statements regarding the extent of his pain and symptoms, the timing or onset of his symptoms, and the cause of those symptoms.

The ALJ concludes Claimant has failed to establish by a preponderance of the evidence that his low back condition was caused or aggravated by the work accident. Claimant has also failed to establish by a preponderance of the evidence that his need for medical treatment regarding his low back was caused or accelerated by his work accident. Therefore, the treatment of Claimant's back condition is not the liability of Respondents. Thus, the proposed fusion surgery is not reasonable, necessary, or related to treat the effects of the work incident of July 18, 2016.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

A. Claimant's low back condition is not related to the work injury that occurred on July 18, 2016.

B. Claimant's claim for medical benefits associated with his back condition are denied and dismissed, including the surgery requested by Dr. Birney.

C. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 26, 2018

/s/ Glen Goldman

_____

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-990-890 & 5-063-873

STIPULATIONS

At the outset of the July 26, 2018 proceeding, the parties stipulated to consolidate the claims for the purposes of hearing. Respondent also stipulated that the surgery recommended by Dr. Walden on February 27, 2018 is authorized as medical treatment to cure and relieve the Claimant from effects of his December 4, 2017 industrial injury which has been assigned W.C. No. 5-063-873 (hereinafter the 2017 injury). Claimant stipulated that he is not seeking the April 13, 2017 surgical recommendation of Dr. Walden under either his 2015 or 2017 claim. The parties' stipulations are approved.

As part of its post hearing submission, Respondent conceded that should Claimant be determined to be at MMI for his August 12, 2015 injury underlying W.C. No. 4-990-890 (2015 injury) then he should be returned to the Division IME at some point for consideration of permanent impairment.

REMAINING ISSUES

I. Whether Respondent established by clear and convincing evidence that Dr. Tyler erred in concluding that Claimant is not at maximum medical improvement (MMI) for his 2015 injury?

III. Whether Claimant entitled to the surgery recommended by Dr. Walden on February 27, 2018 under his 2015 injury claim or his 2017 injury claim.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant works as a correctional officer for Employer. His duties include transporting offenders and/or their personal belongings about the facility in a designated prison vehicle when necessary. Claimant is also required to participate in a yearly pressure point control tactic (PPCT) refresher course.

2. Claimant suffered two on the job injuries as part of the aforementioned work duties/requirements.

Claimant's Admitted August 12, 2015- Left Shoulder Injury

3. On August 12, 2015, Claimant was assigned to transport some offenders. The job entailed picking up the inmates, their files and personal property from a loading dock on prison grounds. The ALJ understands from Claimant's testimony that these materials were sitting on the dock and from Claimant's position below the dock he had to lift them above his

chest to remove them from the dock. According to Claimant, he picked up the files with his right arm and put them on his right shoulder. He then grabbed the duffle bag with his left hand, lifted it slightly and began to pull it from the dock when he felt pain in his left shoulder. Medical documentation indicates the bag weighed approximately 15 lbs. *Ex.A*, pp. 1, 38.

4. Claimant's testimony is inconsistent with the mechanism of injury (MOI) he described to his authorized treating provider on August 12, 2015. During an appointment with Physician Assistant (PA) Steven Quakenbush on August 12, 2015, Claimant reported that he was "carrying a box of medical files on his right shoulder holding the files with his right hand and lifted the inmate's duffle bag, with the inmate's property in it, lifting straight up from the groun (sic) to his side". He also reportedly indicated that he carried the box and the duffle bag about 40 yards to the gate" and as he "approached the gate his left hand became numb and he put the box and the duffle bag down". Claimant rated his pain a six out of 10, and indicated he experienced this pain 90% of time. He was diagnosed with a shoulder/trapezius strain and was prescribed physical therapy along with prescription medications. *Ex.B*, pp. 9-10.

5. The following day, Claimant's pain had decreased to a 5/10, and he was only experiencing that pain 50% of the time. Physical therapy was giving him immediate relief. He had decreased reproducible pain upon physical examination. Nonetheless, Claimant was referred for a MRI and an orthopedic consultation, because the physical therapist suspected a tear in the left shoulder. *Ex.B*, pp. 12-13.

6. MRI was completed August 17, 2015. It revealed an anterior and superior labral tear with subchondral cyst superior bony glenoid. *Ex.B*, p. 15; Ex 7, p. 269

7. On October 16, 2015, Claimant underwent surgery with Dr. Keith Minihane. Dr. Minihane performed a labral repair.

8. On April 8, 2016, Claimant underwent a second surgery with Dr. Minihane. Dr. Minihane performed a subacromial decompression as well as a bursectomy. *Ex.B*, p. 29; Ex 7, p. 236.

9. On August 3, 2016, Claimant had another MRI.

10. On September 6, 2016, Claimant saw orthopedic surgeon Dr. David Weinstein for a second opinion regarding his left shoulder upon the request of a Dr. Daniel Olson, Claimant's authorized provider. Claimant reported no improvement following either of his two prior surgeries. Dr. Weinstein performed a physical examination. He found no atrophy or deformity in the left shoulder. He found well healed surgical wounds with no erythema or increased warmth. He found no specific tenderness in the biceps or anterior and posterior joint line. The biceps and triceps were intact. However, Dr. Weinstein did find moderate tenderness over the scapular rotators, trapezius and lateral deltoid. He also noted significant guarding during his physical examination.

11. Dr. Weinstein reviewed the MRI imaging from August 3, 2016. He found no evidence of any tearing at the rotator cuff or biceps, and no glenohumeral changes. He

found the labrum to be intact. He diagnosed myofascial pain. This diagnosis was based upon his physical examination, review of the MRI imaging and a diagnostic injection, all of which led him to conclude that the Claimant's ongoing symptoms were unrelated to any structural deficiencies.

12. Dr. Weinstein concluded that Claimant would be at MMI at his next appointment with Dr. Olson given his opinion that there was nothing more to do to help Claimant's condition other than home exercise and pain management. He did not think a third surgery would be beneficial.

13. Dr. Minihane reviewed the August 3, 2016 MRI and determined he had nothing further to offer Claimant. *Ex.B*, pp. 27, 35.

14. Claimant underwent a two rounds of injections with Dr. Dwight Leggett yet continued to have pain with activity as high as 9/10. Consequently, Dr. Olson referred him to Dr. Walden for another orthopedic evaluation.

15. Dr. David Walden evaluated Claimant on April 13, 2017. Dr. Walden's physical examination revealed a normal shoulder with no deficits other than mild atrophy of the deltoid. *Ex.B*, p. 39. X-rays were taken and revealed a healthy glenohumeral joint, evidence of previous surgery, no acute fractures or dislocations and no loose bodies. Dr. Walden interpreted the x-ray as essentially normal. *Ex.B*, pp. 37, 39. Nonetheless, he recommended a third shoulder surgery in the form of an anterior inferior capsular shift. *Ex.B*, p. 40. Dr. Walden recognized, however, that Claimant had underlying multidirectional instability in his left shoulder prior to the work incident. E*x.B*, p. 40.

16. On June 13, 2017, Claimant returned to Centura Centers for Occupational Medicine (CCOM) where he was evaluated by Dr. Thomas Centi. Claimant reported little change in the condition of his left shoulder to date. *Ex.B*, p. 41.

17. On September 28, 2017, Claimant saw Dr. Timothy O'Brien, M.D. for an independent medical examination (IME) at Respondent's request.

18. Claimant returned to Dr. Centi on October 10, 2017. He again noted little change in the condition of his left shoulder. Claimant told Dr. Centi that he felt his left shoulder was stable. He rated his pain at eight. *Ex.B*, p. 43.

19. On October 16, 2017, Dr. O'Brien issued a report following the September 28, 2017 IME. Dr. O'Brien was qualified as an expert in both orthopedics and occupational medicine at his post hearing deposition. *O'Brien Deposition*, pp. 5-6, Exhibit A.

20. As part of his IME, Dr. O'Brien reviewed relevant medical records, took a history from the Claimant and performed a physical examination. Dr. O'Brien concluded that the mechanism of injury (MOI) on August 12, 2015 was insufficient to produce any tissue breakage or yielding in the left shoulder and therefore, injury. *Ex.B*, p. 60.

21. In support of his opinion, Dr. O'Brien stated that the MRI studies show no evidence of acute injury. Instead, they show subchondral cysts. According to Dr. O/Brien,

the presence of subchondral cysts indicates underlying degeneration in the labrum and the hyaline cartilage overlying the labrum taking years to become evident. *Id.*

22. Dr. O'Brien stated that Claimant's initial complaints immediately after the work incident were localized in the trapezius as opposed to the labrum or rotator cuff, lending credence to his opinion that an acute labral tear did not occur. Indeed, Dr. O'Brien opines that labral tears would not be expected from the MOI described by Claimant during the IME. *Ex.B*, p. 61.

23. Dr. O'Brien pointed out that there is no evidence that Dr. Walden undertook a complete medical record review or causation analysis prior to recommending a third surgery in April 2017. *Ex.B*, p. 61.

24. On November 2, 2017, Claimant returned to CCOM and was evaluated by Dr. Centi. He reported a pain level of 5/10. He reported to Dr. Centi that he felt his left shoulder was stable. Dr. Centi noted that Claimant's condition had showed little change to date. He reviewed Dr. O'Brien's IME report with Claimant. Dr. Centi placed Claimant at MMI and instructed him to follow up with his personal care provider for continued care. He assigned no permanent impairment to the work injury. *Ex.A*, pp. 3-4.

25. Respondent filed a Final Admission of Liability (FAL) consistent with the opinions of Dr. Centi on November 13, 2017. *Ex.A*, p. 2. Claimant would object to the FAL and request a Division Independent Medical Examination (DIME) which would subsequently take place with Dr. John Tyler. However, before completion of the DIME, Claimant would suffer a second injury to the left shoulder.

Claimant's Admitted December 4, 2017- Left Shoulder Injury

26. On December 4, 2017, Claimant was participating in PPCT training when he reinjured his left shoulder. As part of a tactical handcuffing exercise, Claimant's left arm was forcibly pulled behind his back. Claimant felt a pop in the left shoulder and immediately developed extreme pain. The pain was so intense that Claimant could not get off of the ground. *Ex.B*, p. 40; *Hearing*, pp. 32, 35.

27. Claimant presented to his physician reporting that his left shoulder symptoms had "significantly increased" after the handcuffing procedure. *Ex.C*, p. 71. An MRI was ordered on December 7, 2017, to help distinguish between new injuries from December 4, 2017 and the Claimant's prior left shoulder injuries. *Ex.C*, p. 74.

28. MRI was completed on December 21, 2017. Imaging revealed a full thickness rotator cuff tear. *Ex.C*, pp. 78, 80, 92, 108.

29. On December 28, 2017, Claimant reported that he was having persistent popping in his left shoulder. *Ex.C*, p. 81.

30. On January 18, 2018, the Claimant returned to Dr. Walden. In addition to a rotator cuff tear, Dr. Walden noted that the MRI findings raised the potential for an acute re-

tear of the labrum. Dr. Walden recommended arthroscopic surgery for a rotator cuff repair and any acute changes to the labrum. *Ex.C*, p. 92.

31. On February 27, 2018, Dr. Walden's office submitted a recommendation for surgery, to include a subacromial decompression, rotator cuff repair and "likely" anterior inferior labral repair. *Ex.C*, p. 112.

Claimant's DIME with Dr. Tyler

32. On March 1, 2018, Claimant saw Dr. John Tyler for completion of the requested DIME as part of his 2015 injury. Dr. Tyler's specialty is physical medicine and rehabilitation (PM&R).

33. In the report generated following Claimant's DIME, Dr. Tyler stated that he was "not paid to review the entire chart which would have required at least 2 hours of review so only 1 hour of review was performed on the remaining records." He further noted that he would "skip through much of the follow-up visits, secondary to same, that [Claimant] had with CCOM and move on to the pertinent aspects of his diagnosis and future treatment". *Ex.C*, p. 121.

34. Dr. Tyler did not review Dr. O'Brien's IME report nor did he review existing records after December 6, 2017. *Ex.C*, p. 123. Because Claimant's MRI following his December 4, 2017 injury was not completed until December 21, 2017, the ALJ finds that Dr. Tyler was unaware of the extent of pathology existing in Claimant's left shoulder following the December 4, 2017 injury nor was he fully advised as to the surgical recommendation of Dr. Walden. Indeed, the record supports that Dr. Tyler understood the only surgery being recommended at the time of his DIME to be the capsular shift procedure recommended by Dr. Walden in April 2017. *Ex.C*, p. 122, 124.

35. Dr. Tyler found that the diagnostic injection administered by Dr. Weinstein in September 2016 pointed away from pathology in the rotator cuff. *Ex.C*, p. 122.

36. When asked by Dr. Tyler what symptoms Claimant was experiencing before the December 4, 2017 injury, Claimant did not include popping. Indeed, Dr. Tyler stated that Claimant informed him of having "new pathology also that he has suffered from the 2nd accident to the left shoulder." *Ex.C*, p. 123. Dr. Tyler made it clear he was only addressing "aspects" of the first injury.

37. Dr. Tyler concluded that Claimant was not at MMI for his 2015 injury. He reasoned that Claimant's acute onset of pain on August 12, 2015 indicated that he was entitled to the third surgical procedure recommended by Dr. Walden in April 2017. *Ex.C*, p. 124. As noted, Claimant stipulated that he is not seeking the April 13, 2017 surgical recommendation of Dr. Walden under either his 2015 or 2017 claim.

38. On March 14, 2018, the Claimant's primary complaint was popping in the left shoulder. *Ex.C*, p. 127.

39. On July 9, 2018, the Claimant's primary complaint was popping in the left shoulder. *Ex.C*, p. 139.

40. On June 20, 2018, Dr. O'Brien issued a supplemental report. He reviewed all relevant medical records since his first report, including the December 2017 x-ray and MRI reports, Dr. Walden's two reports from 2018, and Dr. Tyler's DIME report. *Ex.C*, pp. 135-37.

41. Dr. O'Brien opined that the MOI involved in Claimant's 2017 injury was of sufficient force and magnitude to cause acute tears in the rotator cuff and labrum. He stated that the December 21, 2017 MRI confirms a full-thickness rotator cuff tear and a possible labral tear. Dr. O'Brien concluded that the surgery recommended by Dr. Walden on February 27, 2018 should be provided under the 2017 claim. *Ex.C*, p. 137.

42. On July 3, 2018, the parties took the evidentiary deposition of Dr. O'Brien. Dr. O'Brien testified that at the time of his original IME he felt the Claimant was at MMI for his 2015 injury with no permanent impairment. *O'Brien Deposition*, pp. 6-7. He testified that any injury the Claimant suffered on August 12, 2015 would have been "quite minor" due to the mechanism involved. *O'Brien Deposition*, p. 7.

43. Dr. O'Brien agrees with Dr. Centi's November 2, 2017 date of MMI for the 2015 injury. *O'Brien Deposition*, pp. 7-9.

44. Dr. O'Brien testified that both he and Dr. Centi identified non-organic factors underlying Claimant's presentation. Specifically, his complaints of decreased strength were not verified by objectively determined atrophy. The presence of these non-organic factors made it impossible to determine if there were organic sources for Claimant's symptomology. *O'Brien Deposition*, pp. 12, 47.

45. Dr. O'Brien testified that the pathology targeted by Claimant's first surgery, including his labral tears, was not related to the August 12, 2015 date of injury. He testified that it takes a dislocation to produce an acute labral tear. Accordingly, he opined that Claimant's lifting of a duffel bag of average weight at chest level is "just not enough trauma to produce a labral tear." *O'Brien Deposition*, pp. 14-15.

46. Dr. O'Brien testified that the Claimant's first post 2015 injury MRI performed pre-surgery does not show any sign of acute tissue breakage or yielding. There is no bleeding, no effusion and no extra fluid in the joint. He elaborated that the presence of subchondral cysts in the area of the labrum indicates degeneration versus an acute injury. *O'Brien Deposition*, pp. 15-16.

47. Dr. O'Brien testified that the Claimant's primary complaints of hand numbness and trapezius pain made immediately after the 2015 injury are inconsistent with an acute labral tear. *O'Brien Deposition*, p. 17. Based upon the evidence presented, the ALJ finds that Dr. O'Brien believes that any labral tearing identified on MRI after Claimant's 2015 injury is degenerative in nature rather than acute.

48. At the outset of the Claimant's second surgery, Dr. Minihane was able to objectively confirm that the first surgery had stabilized the left shoulder. *O'Brien Deposition*,

pp. 17-18. During the second surgery, Dr. Minihane debrided scar tissue from the previous surgery and removed any bony or soft tissue structures that may have been impinging upon the rotator cuff. Dr. Minihane found rotator cuff disease but not enough to repair. *O'Brien Deposition*, p. 18.

49. Dr. O'Brien testified that he disagreed with Dr. Walden's April 2017 assessment that a third surgery was needed to address instability because Dr. Minihane had objectively ruled out instability as part of the 2016 surgery and because Dr. Walden completed his assessment of instability while the Claimant was awake whereas Dr. Minihane completed an objectively more accurate assessment while the Claimant was asleep. Moreover, Dr. Weinstein, who examined the Claimant in September 2016 as found no instability. *O'Brien Deposition*, pp. 20-21.

50. Dr. O'Brien testified that the December 21, 2017 MRI showed a new rotator cuff tear. He testified that this rotator cuff tear would have "definitely" appeared on the prior MRI imaging if it existed at the time of the MRI. *O'Brien Deposition*, pp. 24.-25, 36.

51. Dr. O'Brien testified that the December 21, 2017 MRI imaging shows no new frank labral tear. *O'Brien Deposition*, p. 25.

52. Dr. O'Brien testified that the surgery recommended by Dr. Walden on February 27, 2018 is a "completely different surgery" than that recommended in April 2017. The 2018 procedure is aimed at the rotator cuff, and Dr. Walden stated that he will address any other pathology he may find while the Claimant is under anesthesia, including in the labrum. *O'Brien Deposition*, pp. 25-26.

53. Dr. O'Brien testified that Dr. Walden's surgical recommendation in 2018 recognizes that the instability he recommended surgically treating in 2017 does not exist. *O'Brien Deposition*, p. 37.

54. Dr. O'Brien testified that he disagrees with Dr. Tyler's opinion that the Claimant is not at MMI for his 2015 injury. *O'Brien Deposition*, p. 27.

55. Dr. O'Brien testified that any causation opinions offered by Dr. Tyler are suspect because he did not review the entire medical record. *O'Brien Deposition*, pp. 27-28. Specifically, Dr. Tyler's failure to review any medical records after December 6, 2017 means that he did not appreciate that he was examining a completely different shoulder than existed prior to the December 4, 2017 work injury. *O'Brien Deposition*, p. 28.

56. Dr. Tyler's opinion regarding MMI is contradicted by Dr. Walden's 2018 opinion that there is no instability in the left shoulder. Dr. O'Brien testified that Dr. Tyler appeared to be "relying upon 'Walden 2017.'" *O'Brien Deposition*, p. 30.

57. Dr. Tyler's opinion that the two prior surgeries did not address the Claimant's problems because they were due to an anterior and inferior dislocation or subluxation is another way for Dr. Tyler to say the surgeries did not repair the instability. This position, however, is contradicted by the fact that Dr. Minihane was able to objectively verify a lack of instability when the Claimant was asleep for his second surgery. Dr. Tyler's position is also

contradicted by Dr. Weinstein's subsequent determination that no instability remained. *O'Brien Deposition*, pp. 32-33.

58. Dr. O'Brien testified that the Claimant could have experienced pain from his degenerative shoulder without there being any physiological change, i.e. tearing to the shoulder. *O'Brien Deposition*, p. 69.

59. Based upon the evidence presented, the ALJ finds that Respondents have overcome the MMI determination of Dr. Tyler by clear and convincing evidence. In finding that the MMI opinion of Dr. Tyler has been overcome, the ALJ credits the totality of the medical records and the opinions of orthopedic surgeon Dr. O'Brien. As noted, Dr. Minihane indicated that no further surgery was needed. Treating orthopedic surgeon Dr. Weinstein also indicated that further surgical intervention was not warranted and Claimant, by his own account, stated that his shoulder was stable as of October 2017. Consequently, the ALJ finds record support to conclude that Claimant, more probably than not, had reached the point in time when any medically determinable physical impairment as a result of his 2015 injury has become stable and when no further treatment was reasonably expected to improve the condition by November 2, 2017.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the voluminous record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992)(ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this case, the opinions of Dr. O'Brien are based upon a thorough review of the medicals records existing for both Claimant's 2015 and 2017 injuries. After careful review of the record evidence submitted for consideration, the ALJ

finds/concludes that the opinions or Dr. O'Brien are credible and persuasive. Conversely, the opinions expressed by Dr. Tyler as part of the DIME are not convincing as they are based upon a truncated records review and thus represent an incomplete understanding of the case.

Overcoming the DIME

C. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42- 107(8) (b) (III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI and/or causation is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). In other words, to overcome a DIME physician's opinion regarding MMI and/or the cause of a particular condition asserted to be related to Claimant's industrial injury, the party challenging the DIME must demonstrate that the physician's determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

D. The question of whether the Respondent has overcome the DIME physician's findings regarding causality and MMI is one of fact for the ALJ's determination. *Metro Moving and Storage Co. v. Gussert*, *supra*. In deciding whether Respondent has met their burden of proof, the ALJ is, as noted above, empowered, "[t]o resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). Moreover, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). In this case, the issue of whether Claimant was properly placed at MMI by Dr. Tyler involves a complex medico-legal question regarding the cause of Claimant's ongoing shoulder symptoms and his need for a third shoulder surgery.

E. Here, Dr. Minihane, felt that a third surgery was unwarranted as of the end of 2016. At this same time, Dr. Weinstein opined that the Claimant was at MMI and that his ongoing symptoms were myofascial as opposed to structural in nature. Dr. Weinstein agreed with Dr. Minihane that no further surgery was indicated. Dr. Walden did recommend a third surgery in April 2017 to address instability. But that recommendation was made in the face of a normal physical examination, a normal x-ray and objective evidence that the second surgery resolved any instability. There is no indication that Dr. Walden reviewed the medical history prior to making this recommendation to ensure reasonableness, necessity or causation. Finally, Dr. Walden recognizes that the Claimant had shoulder instability

preexisting the work injury but fails to reconcile the resulting causation issues concerning the proposed capsular shift procedure.

F. Dr. Tyler opted to skip through the progress notes from the authorized treating providers. If he had, he would have noted that the Claimant's reported symptomology has remained essentially the same from the end of 2016, when both treating surgeons on the case recommended no further treatment, to the date he was placed at MMI. In December 2016, the Claimant rated his active pain at eight and his resting pain at four. In January 2017, after having one round of injections, the Claimant again rated his active pain at eight. In March 2017, after a second round of injections, the Claimant rated his active pain at eight to nine and his resting pain at four to five. In April 2017, Dr. Walden's physical exam and x-ray revealed a normal shoulder. In October 2017, the Claimant told his treating provider that his shoulder was stable. In November 2017, the Claimant reported that his shoulder remained stable, and he was thus placed at MMI. Dr. Tyler was unable to see this plateau in the year leading up to MMI because he failed to adequately review the medical record.

G. Dr. Tyler also did not have for review medical records beyond December 6, 2017. Consequently, he did not possess the factual knowledge to support his opinion that there was "absolutely no reason why [Claimant] should not have been allowed to proceed forward with what was medically prescribed by Dr. David Walden". Had he reviewed records after December 6, 2017 he would have been apprised that the proposed surgery upon which he based his "Not at MMI" opinion is no longer being recommended by Dr. Walden or sought by the Claimant. Dr. Walden is now recommending a different surgery that does not include the anterior inferior capsular shift intended to address labral instability. Dr. Walden intends to only address acute rotator cuff and labral changes, if any, at this point in time. He does not discuss instability or the need for a capsular shift in either of his 2018 reports. Yet, that capsular shift is the only surgical recommendation of which Dr. Tyler is aware.

H. Finally, Dr. Tyler failed to reconcile Claimant's 2017 injury with his opinion that the Claimant is not at MMI for his 2015 injury. Again, he lacked the factual foundation to incorporate this new injury into his opinions because he did not review any medical records subsequent to December 6, 2017. The extensive medical records subsequent to that date include a new x-ray, a new MRI and two return appointments to Dr. Walden. As noted above, these records include a new and distinct surgical recommendation from Dr. Walden. Without seeing these records, Dr. Tyler is unaware that the shoulder he examined was completely different from the shoulder that existed prior to the 2017 injury. Because the ALJ concludes that Dr. Tyler's opinions concerning MMI are based upon an abbreviated medical records review and an incomplete understaning of the interplay betweeen Claimant's 2015 and 2017 injuries, the ALJ finds/concludes that his opinions are mistaken and highly probably incorrect. Accordingly, Respondents have presented clear and convincing evidence to overcome his MMI determination.

Burden of Proof Regarding Claimant's Entitlement to Additional Surgery

I. Claimant maintains that Respondent bears the burden to overcome Dr. Walden's 2018 surgical recommendation by clear and convincing evidence as part of its burden to overcome the DIME as to MMI. The ALJ concludes this assertion is incorrect. It is the Claimant's burden to prove entitlement to the currently recommended surgery under

his 2015 injury by a preponderance of the evidence. As noted above, the proposed surgery upon which Dr. Tyler bases his "Not at MMI" opinion is no longer being recommended. Indeed, Claimant stipulated at the outset of hearing that he was not seeking this proposed surgery under either claim. The DIME is totally unaware of the only surgery currently recommended or sought at this point in time. Because the surgery proposed in 2018 was not part of the DIME report or contemplated by the DIME, the ALJ concludes that the question of its authorization does not fall under the Respondent's burden to overcome the DIME as to MMI.

J. "As required by § 8–42–107(8), C.R.S. 2005, a DIME physician's opinions concerning MMI and permanent medical impairment are given presumptive effect. Both determinations inherently require the DIME physician to assess, as a matter of diagnosis, whether the various components of a claimant's medical condition are causally related to the industrial injury. Therefore, a DIME physician's determinations concerning causation are binding unless overcome by clear and convincing evidence." *Leprino Foods Co. v. ICAO*, 134 P.3d 475, 482-483 (Colo. App. 2005). The reasoning behind this rationale is that a DIME physician, or any physician for that matter, cannot fully assess MMI and permanent impairment without first determining what conditions are related to the work injury. This rationale does not extend to a DIME physician's determination(s) that specific medical treatment modalities are related to the industrial injury. While its position is that the Claimant's shoulder is at MMI for the 2015 injury, the Respondent does not challenge the relatedness of the shoulder "condition" to that claim. Obviously, Respondent has provided extensive treatment for the condition caused by Claimant's 2015 work injury. This difference between denial of a condition and denial of a treatment modality makes all the difference under *Leprino Foods Co.,* supra. DIME determinations regarding causation of conditions are subject to the heightened burden of proof whereas DIME opinions concerning the relatedness of specific treatment modalities are not. See *Moore v. American Furniture Warehouse*, W.C. No. 4-665-024 (ICAO, June 27, 2007)(the increased burden required by the DIME report did not apply to the claimant's entitlement to a particular medical treatment); *Briggs v. Willard Plumbing and Heating*, W.C. No. 4-526-000 (ICAO, March 9, 2007)(where the sole issue before the ALJ was the claimant's entitlement to medical benefits, we do not believe the claimant was required to overcome the DIME report by clear and convincing evidence). The Industrial Claim Appeals Office (ICAO) has recently affirmed on two separate occasions that the burden does not shift to the Respondent under facts similar to those presented here noting as follows: "Regardless whether a treating physician or the DIME physician recommended future medical treatment, the respondents were free to deny liability and place the burden on the claimant to prove by a preponderance of evidence that he needed future medical treatment." *Yuetter v. CBW Automation, Inc.*, W.C. 4-895-940-03, p.7 (ICAO, February 26, 2018). See also *Morris v. Olson Hearing and Plumbing Co.*, W.C. No. 4-980-171-2 (ICAO, July 6, 2018)(respondent not required to overcome a DIME's recommendations as to future treatment by clear and convincing evidence).

K. In this case, the persuasive evidence supports a conclusion that Claimant suffered a new and distinct injury to his left shoulder on December 4, 2017. In this regard, the ALJ again credits the opinions of Dr. O'Brien. The only ascertainable basis for the currently recommended surgery is a rotator cuff tear that did not exist prior to the 2017 injury. If there is any treatment to the labrum as part of this surgery, it will be to correct acute changes caused by the 2017 injury. Dr. Walden's plan in 2018 to address only acute

changes in the labrum indicates his recognition that the latent instability he focused upon in 2017 does not now exist. Unlike the mechanism of injury in 2015, the mechanism of injury in 2017 is of a force and magnitude sufficient to cause permanent physiological changes in Claimant's shoulder. Indeed, Claimant's own statements to his providers drive home the reality the he suffered a new and distinct injury. Based upon the evidence presented, the ALJ concludes that there is no causal connection between the surgery proposed in 2018 by Dr. Walden and Claimant's 2015 injury. Accordingly, the surgery recommended by Dr. Walden on February 27, 2018, is authorized as reasonable, necessary treatment for the Claimant's 2017 injury.

ORDER

It is therefore ordered that:

1. Respondent's request to set aside the MMI determination of Dr. Tyler that Claimant is not at MMI for his August 12, 2015 industrial injury underlying W.C. 4-990-890 is GRANTED. Claimant is determined to have reached MMI for this claim as of November 2, 2017. Claimant shall return to the DIME physician for consideration of permanent impairment related to W.C. 4-990-890 when appropriate.

2. Claimant's request that the surgery recommended by Dr. Walden on February 27, 2018 be provided under W.C. No. 4-990-890 is DENIED. Respondents shall authorize and pay for the surgery recommended by Dr. Walden on February 27, 2018 as treatment needed to cure and relieve Claimant from the effects of his December 4, 2017 industrial injury underlying W.C. 5-063-873.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 27, 2018

/s/ Richard M. Lamphere

Richard Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-061-214-001

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable work injury on October 24, 2017.

2. Whether Claimant is entitled to an order awarding reasonably necessary and related medical benefits.

3. Whether Claimant was disabled by is usual employment by the work injury and therefore is entitled to an order awarding temporary total disability benefit.

STIPULATION OF FACT

Claimant's average weekly wage is $1,292.85. This stipulation is approved and accepted by the ALJ.

FINDINGS OF FACT

1. Claimant was involved in a motor vehicle accident (MVA) on March 4, 2014, and sustained injuries to his neck, low back and right shoulder. He also suffered from headaches.

2. On June 17, 2014, Claimant continued to report cervical, thoracic and lumbar pain as well as persistent right shoulder pain and headaches while treating with Dr. Lichtenberg.

3. Claimant admitted he had been in the 2014 MVA, but denied suffering any injury to his neck. After initially denying he injured his neck as a result of the 2014 MVA, Claimant subsequently was forced to admit he actually injured his neck.

4. Claimant nevertheless continued to deny any injury to his right shoulder. Claimant bizarrely testified that the medical records were incorrect that he never complained of shoulder pain.

5. In fact, when confronted with Dr. Lichtenberg's report which documented that Claimant reported four out of ten pain in his right shoulder, Claimant testified that he had never treated with Dr. Lichtenberg and continued to deny any injury to his right shoulder. This testimony was directly inconsistent with the medical records.

6. Claimant admitted he pursued litigation and ultimately settled the 2014 motor vehicle claim.

7. After settling his 2014 MVA claim, Claimant was involved in a work-related MVA on July 27, 2016, and complained of neck and low back pain and headaches.

8. Claimant treated for his neck and low back injuries for the July 27, 2016, claim until at least the summer of 2017. As a result, Claimant had ongoing neck and low back medical treatment.

9. Claimant admitted that while he was still treating for his 2016 workers' compensation claim he was involved in a non-work-related MVA on April 14, 2017.

10. Claimant began treating for his non-work-related MVA, but he failed report to his physicians or insurance carrier that he had a prior workers' compensation claim. Specifically, Claimant failed to tell his new physicians that he has been treating for the same body parts leading up to and immediately before the MVA in 2017.

11. Dr. John Burris, a board-certified occupational medicine physician, performed an independent medical examination (IME) and a records review regarding both of Claimant's workers' compensation claims. Dr. Burris opined that after a review of all of Claimant's treatment records from his workers' compensation injury and his prior MVAs, it was clear that Dr. Higgins, who was treating Claimant for his April 2017 MVA, was unaware that Claimant had a prior injuries to the same body parts.

12. Dr. Burris opined that after reviewing Dr. Watson's Division IME report, that Claimant was improving from his July 2016 workers' compensation injury, when he was involved in a MVA in April 2017 and that Claimant's symptoms significantly worsened after that time.

13. Claimant admitted he settled his April 2017 MVA claim approximately a month prior to alleging another workers' compensation claim on October 24, 2017. As a result, Claimant settled his claim related to the prior MVA in 2017 and immediately alleged a new work injury to the same body parts.

14. Claimant also admitted he continued to have neck problems after he settled his April 2017 MVA claim. As a result, Claimant's neck problems continued despite receiving a settlement for the injury.

15. Claimant testified that on October 24, 2017, there was a 200 pound box of awning rolls that were stacked eight feet high and fell on top of his shoulder and rolled to his neck. This alleged injury occurred just a month or so after Claimant settled the prior MVA claim.

16. Claimant completed and signed the Employee Statement of Injury on October 26, 2017. Claimant wrote that he was lifting boxes from overhead to the ground to the forklift and injured his neck. He failed to mention anything falling on him in his written

description. As a result, Claimant's own initial written description of the incident was inconsistent with what he subsequently alleged occurred at work.

17. Claimant alleged that he reported his injury to Don Martinez on October 24, 2017. Don Martinez denied this allegation when speaking with Claimant's supervisor, Brett Martin.

18. Claimant reported to Concentra on October 26, 2017, that he experienced neck pain from lifting boxes down from overhead from a trailer to a forklift. This report is consistent with his Employee Statement, and inconsistent with his later allegations of an awning roll actually falling on him.

19. Claimant testified the October 26, 2017, medical record was incorrect in the description of the alleged mechanism of injury. As a result, he also alleged that his own written statement was incorrect as well.

20. Claimant failed to explain why there was such a discrepancy in the reporting of the alleged mechanism of injury.

21. Mark Ballinger, an employee of Awning Company of America, testified that he was working with Claimant, unloading a truck on October 24, 2017. Mr. Ballinger testified that the load, which was 18 feet to 20 feet long, was stacked funny and strapped against the wall. Mr. Ballinger testified that he assisted Claimant to restack them, so they did not fall. Mr. Ballinger testified that he did not see anything fall and strike Claimant in the shoulder or neck.

22. Mr. Ballinger also testified that there was no evidence that the straps holding the load had broken.

23. Mr. Ballinger testified that at no time during the unloading of the truck did Claimant state he had been injured. Finally, Mr. Ballinger testified that he did not notice anything that would suggest that Claimant had been injured during their time together.

24. The ALJ finds Mr. Ballinger's testimony credible and persuasive. As a result, a neutral employee from a different employer failed to support Claimant's allegation that he suffered a work injury in October of 2017.

25. Brett Martin, the operations manager for the employer, met with Claimant and credibly testified that he was first informed of the injury on October 26, 2017, two days after it allegedly occurred. Mr. Martin denied Claimant's allegation that the alleged incident was reported on October 24, 2017.

26. Mr. Martin spoke with Don Martinez as part of his investigation into Claimant's claim as to when the incident had been reported by Claimant. Mr. Martinez confirmed that Claimant did not report the work injury until October 26, 2017.

27. Claimant reported to Mr. Martin that he was moving long boxes from overhead to a forklift. Claimant never told Mr. Martin that a strap broke in the truck and something fell on him.

28. Claimant completed a written statement regarding the alleged injury on October 26, 2017. This written statement is consistent with what Claimant told Mr. Martin him, that nothing fell on him.

29. According to Mr. Martin, the medical release was signed by Claimant and dated October 25, 2017, and was given to Claimant at the same time, on October 26, 2017. The medical authorization initially was dated by Claimant as October 25, 2017, but was corrected to reflect the accurate date of October 26, 2017.

30. Furthermore, the medical release dated October 25, 2017, indicated in Paragraph 2 that Claimant received his injuries on October 26, 2017. Claimant further provided on the medical releases that he sustained his injuries on October 25, 2017. It is found that Claimant misdated the medical releases with the October 25, 2017, date.

31. On October 25, 2017, Claimant presented to Dr. Higgins, who had treated Claimant for the April 2017 MVA. Claimant reported to Dr. Higgins that "his neck pain has been worse with a constant pressure type headache present that has gradually gotten worse since his release from active care in July."

32. On October 25, 2017, Dr. Higgins reported that Claimant specifically denied any new trauma or injury. Claimant complained of bilateral neck pain and upper shoulder. Claimant did not allege a work injury when receiving medical treatment a day after the alleged work injury.

33. When confronted with the October 25, 2017 medical record which confirmed that Claimant had suffered no recent trauma, Claimant testified that the medical record was wrong and that he actually reported to Dr. Higgins that he injured himself at work. Claimant's testimony that he informed Dr. Higgins that he suffered a new work-related injury lacks credibility. Dr. Higgins inquired whether there was a new trauma, and Claimant denied any injury or event.

34. Dr. Burris, Respondents' IME, credibly testified that after a review of all the records, Claimant did not mention to his providers that something fell on him on October 24, 2017, until nearly a month later when he described the incident to Dr. Sacha.

35. Dr. Burris opined that based on Dr. Higgins' October 25, 2017, medical record, it was documented that Claimant had no new trauma or injury and that Claimant's symptoms were the result of a gradual worsening after being released from care from the MVA.

36. Dr. Burris credibly testified that after a review of all of the medical records and his prior medical evaluation that Claimant did not sustain an injurious event on October

24, 2017. In forming his opinion, Dr. Burris opined that Dr. Higgins' October 25, 2017 report is crucial in determining whether any injury occurred since Dr. Higgins had been treating Claimant for his MVA injuries and that Claimant denied any new injury and explained his increased pain as a gradual onset of pain from lack of treatment.

37. The ALJ credits Dr. Burris's testimony and Dr. Higgins' October 25, 2017, medical report and finds that Claimant did not sustain a new injury on October 25, 2017.

38. Dr. Burris testified that, after reviewing the April 14, 2017 CT scan and the December 26, 2017 MRI scan, there were no objective changes suggesting a new work injury. Dr. Burris testified that the radiologist who compared the before and after imaging studies reported that his opinion was Claimant's condition was "grossly unchanged."

39. Additionally, Dr. Burris evaluated Claimant one and a half months prior to his alleged October 24, 2017, injury, and Dr. Burris credibly testified that Claimant's complaints at that time were the same as his complaints after the alleged October 24, 2017 injury.

40. Dr. Sacha, Claimant's authorized treating provider, has continued to treat Claimant under this workers' compensation claim; however, Dr. Burris noted that it did not appear from Dr. Sacha's reports that he had knowledge of Dr. Higgins' treatment records and more specifically, the October 25, 2017 medical report,.

41. Given the lack of objective findings on imaging demonstrating any new injury and Claimant's similar subjective pain complaints before and after the alleged new injury on October 24, 2017, the ALJ finds that Claimant did not sustain any new injury on October 24, 2017.

42. On April 21, 2018, Claimant was involved in a bar fight and he was hit in the head between his eyebrows with a mug. He had a loss of consciousness and a resulting scar. Claimant was hospitalized on April 22, 2018.

CONCLUSIONS OF LAW

General Legal Principals

The claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-43-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo. App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo.App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

In rendering a decision, the ALJ must make credibility determinations, draw plausible inferences from the record, and resolve essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* In determining credibility, the ALJ considers the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16.

Credibility is a significant consideration when determining compensability. As found here, Claimant's contradictory reports to medical professionals and the lack of objective evidence of a new injury makes Claimant's claim unsustainable.

Compensability

A claimant's right to compensation initially hinges upon a determination that "at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment." Section 8-41-301(1)(b), C.R.S. The "arising out of" test is one of causation which requires that the injury have its origins in an employee's work-related functions. There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951).

Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. Div. 5 2009). The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the proximate causal relationship between an incident/injury and the need for medical treatment, plus entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. (2013). See City of *Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Lutz v. Industrial Claim Appeals Office*, 24 P.3d 29 (Colo. App. 2000).

The credible and persuasive evidence established that Claimant had significant pre-existing injuries to his neck and shoulder dating back to at least 2014, when he was involved in a motor vehicle accident as documented in Dr. Lichenberg's medical records. Claimant's testimony to the contrary is not credible. The records are clear that Claimant has been treating for neck, back and shoulder problems dating back at least four years.

Claimant also provided inconsistent testimony about the alleged mechanism of injury. He initially admitted that nothing fell on him. However, he later changed the mechanism of injury and alleged that awning rolls fell on him. In addition to these credibility issues, Claimant's objective testing does not support that any new injury occurred. Similarly, Claimant's subjective Claimant's before and after October 24, 2017 were the same.

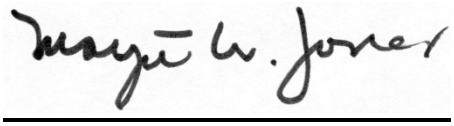
Based on all of the facts above and the significant credibility issues, the ALJ concludes that Claimant did not sustain any new work injury on October 24, 2017.

ORDER

1. Claimant failed to prove that he suffered a compensable injury on October 24, 2017. As a result, the claim is dismissed with prejudice.

2. Claimant's request for temporary disability benefits is also dismissed with prejudice.

Dated: This 26 day of September, 2018.



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. In case 5-051-231-03 with date of injury of June 16, 2017, whether Claimant has established by a preponderance of the evidence that her claim should be re-opened due to mistake or change in condition.

2. In case 5-068-047 with date of injury of January 17, 2018, whether Claimant has established by a preponderance of the evidence that she sustained a compensable injury.

3. Whether Claimant has established by a preponderance of the evidence that the arthroscopic right shoulder surgery recommended by Michael Hewitt, M.D. is reasonable, necessary, and causally related to her June 16, 2017 injury and worsened condition.

4. Whether Claimant has established by a preponderance of the evidence that a cervical MRI recommended by John Aschberger, M.D. is reasonable, necessary, and casually related to her new January 17, 2018 injury or her worsened condition and June 16, 2017 injury.

FINDINGS OF FACT

1. Claimant was employed by Employer in the position of qualified medical assistant personnel (QMAP). Claimant's job duties included assisting residents of a nursing home with medications, medical needs, and providing assistance with care.

2. In both June of 2017 and January of 2018, Claimant was so employed by Employer. Claimant no longer works for Employer and has been working full time as a phlebotomist since March of 2018.

3. On June 16, 2017, Claimant sustained a compensable injury. Claimant was assisting a large and combative patient on that date. As she attempted to assist the patient with standing up, the patient jerked her right arm backwards. Claimant felt a pop and pain in her trapezius on the top of her shoulder.

4. Respondents filed a general admission of liability and Claimant began conservative treatment for the injury.

5. On June 20, 2017 Deana Halat, N.P., evaluated Claimant. Claimant reported that she was assisting a heavy patient to stand up and that she pulled him forward and he resisted and that soon after she had pain in her right shoulder and later

on did not have strength in her right arm and hand. Claimant reported now that she was also having pain in her underarms. Claimant reported that her right trapezius and shoulder were bothering her and that she told her employer and was given some pain patches but that she had not improved. Claimant reported feeling weakness in her left arm as compared to the right and some numbness and tingling in her arm. Claimant reported that she had been getting massages to her upper back and shoulders from her family. On exam, NP Halat found tenderness in the supraspinatus muscle and in the trapezius muscle of the right shoulder. NP Halat assessed sprain of the right rotator cuff capsule and strain of the right trapezius muscle. NP Halat planned physical therapy three times per week for two weeks and planned follow up. NP Halat opined that the injury was work related after helping hold a patient up. *See* Exhibits 10, B.

6. On June 26, 2017, NP Halat evaluated Claimant. Claimant reported that she was not able to follow her restrictions because her employer was giving her heavier patients. Claimant reported she fell to the ground and was having even more pain after this second injury to her right arm. NP Halat continued the assessments of sprain of right rotator cuff capsule and strain of right trapezius muscle and planned an MRI of the right shoulder as well as an orthopedic specialist referral. NP Halat opined that the history and mechanism were consistent with the presenting symptoms and physical exam. *See* Exhibits 10, B

7. On July 3, 2017, Claimant underwent an MRI of her right shoulder. The findings included mild fusiform enlargement with intra substance edema in the anterior aspect of the infraspinatus tendon consistent with tendinosis with an intent tendon. Minimal hypertrophic degenerative changes were found in the acromioclavicular joint with a small superior osteophyte. Claimant was found to have a downward sloping lateral acromion with a flat undersurface and mild sub acromial sub deltoid bursitis. The impression provided was: tendinosis of the infraspinatus components with no full thickness rotator cuff tear, and a type II downward sloping lateral acromion with impingement on the infraspinatus tendon. *See* Exhibits 11, C.

8. On July 6, 2017, orthopedist Mark Failinger, M.D. evaluated Claimant. Claimant reported that on June 16 she was trying to help a very heavy and morbidly obese patient. Claimant reported that the patient always tries to resist. Claimant reported that after the patient had fallen, she tried to help him up and had pain and discomfort initially in her neck. Claimant reported that she kept getting placed back with this very obese patient and that it was very difficult to help him. Claimant reported that she had completed maybe eight sessions of therapy but still had pain in her neck and pain in the right ulnar fingers. Claimant reported no history of prior injury. On exam, Dr. Failinger found some mild tenderness of the right side of the neck with palpation. He found some discomfort on range of motion. Dr. Failinger noted that most of the pain was centered around the trapezius. Dr. Failinger noted that the MRI showed perhaps some mild sub acromial bursitis but no other obvious structural lesions. Dr. Failinger provided the impression of: right trapezial and periscapular pain; right upper extremity possible radiculopathy; and right shoulder rotator cuff tendinosis. Dr. Failinger opined that there was not a surgical lesion and that he thought most of Claimant's pain was coming from the periscapular

region and the area of the neck on the right side with numbness. Dr. Failinger injected Claimant's shoulder with a cortisone shot. Dr. Failinger recommended a consult with physiatry since he did not see a surgical lesion and opined that they could hopefully help with more of her pain than he could since it was a non-surgical problem. *See* Exhibits 12, D.

9. On July 7, 2017, NP Halat evaluated Claimant. Claimant continued to report right shoulder pain. Claimant also reported muscle pain in the forearm, joint pain, back pain, neck pain, joint swelling, and joint stiffness. NP Halat noted that this was not a surgical case per the orthopedist and referred to a physiatrist for evaluation and treatment. *See* Exhibits 10, B.

10. On July 24, 2017 Claimant was evaluated by physiatrist John Sacha, M.D. Claimant reported that she was at work pulling a patient forward and that as she pulled she felt an acute onset of pain localized to the right shoulder and right trapezius and then eventually to the bilateral neck. Claimant reported some numbness and tingling in the fourth and fifth digits of the right hand. Claimant reported her symptoms of pain were fairly constant and localized to the right trapezius, right anterior superior shoulder, and bilateral neck. Claimant reported no prior work comp, neck, shoulder, or motor vehicle accidents or injuries. On exam, Dr. Sacha found mild pain behaviors, positive Hawkins and neer tests on the right shoulder, diminished range of motion with internal rotation in the right shoulder, some trapezius spasm on neck examination, right greater than left. Claimant also had poor posture with forward protrusion of the neck. Claimant had mild pain with extension and external rotation on the right side. Dr. Sacha provided the impression of shoulder impingement and rule out cervical pathology versus myofascial pain. Dr. Sacha noted that it appeared Claimant had a shoulder injury and that he could not rule out the possibility that she also had a cervical injury. He recommended a trial of chiro and acupuncture and a topical pain cream. Dr. Sacha opined that he would see Claimant back in a couple of weeks and that if her symptoms were improving or resolving, it would help with causality but that if she was not improving he could not rule out further diagnostic studies including an MRI of the cervical spine. *See* Exhibits 12, E.

11. On August 4, 2017, NP Halat evaluated Claimant. Claimant reported that an injection in her right shoulder helped only slightly with her pain and that Dr. Sacha felt she had right shoulder impingement and recommended massage therapy and physical therapy. Claimant also reported that Dr. Sacha believed her symptoms might be related to her neck and that she might need additional diagnostic testing to evaluate for cervical involvement if she did not respond well to continued conservative care. *See* Exhibits 10, B.

12. On August 9, 2017, Dr. Sacha evaluated Claimant. He noted there was delay in authorization with the chiro and acupuncture so it was unclear what the clinical response was as of yet. Claimant reported some slight improvement of her symptoms with time and home exercises. Dr. Sacha again noted some mild pain with Hawkins and neer testing and some mild tenderness over the trapezius. Dr. Sacha recommended Claimant finish chiro and acupuncture before re-evaluation. *See* Exhibits 12, E.

13. On August 30, 2017, Dr. Sacha evaluated Claimant. Dr. Sacha noted that since last being seen, Claimant was doing great. Claimant reported that her symptoms were tolerable and improving with chiro and acupuncture. Dr. Sacha opined that further care was not indicated and he felt comfortable with duty a full duty trial. He noted that Claimant still had some soreness and stiffness with reaching overhead but that he anticipated that improving over time. On exam, Dr. Sacha noted some mild tenderness over the trapezius and mild pain with Hawkins and neer testing. He provided the impression of resolved shoulder impingement and secondary myofascial pain. Dr. Sacha opined that Claimant was approaching maximum medical improvement (MMI) with no evidence of permanent impairment. Dr. Sacha opined that Claimant was okay for a full duty work trial and discharged her with follow up as needed. He recommended Claimant have 6-8 visits further of chiro and acupuncture to use on an as needed basis for symptom control. Dr. Sacha anticipated a slight increase in soreness with Claimant's return to work. *See* Exhibits 12, E.

14. On September 6, 2017, NP Halat evaluated Claimant. Claimant reported that she continued to have pain in her shoulder and was not ready to return to full duty work because she could not push the cart. Claimant requested referral for a second opinion on her continued pain in the right shoulder, trapezius, and the radiation into her right deltoid and upper arm. Claimant was quite upset that she would have to go to full duty work because she believed she would have worse problems with her arm. Claimant reported pain at a 5/10. NP Halat referred Claimant for a evaluation and treatment with a second orthopedic specialist. *See* Exhibits 10, B.

15. September 20, 2017 NP Halat evaluated Claimant. Claimant reported that she returned to full duty work but that sometimes when she had to push her med cart off the elevator, she had to use her abdomen to help since the wheels got stuck. Claimant also reported that when at home; lifting to reach her microwave or cupboards caused her pain in the right side of her neck and trapezius area. Claimant reported she had not heard anything about the second orthopedic opinion that had been ordered. NP Halat opined that Claimant appeared more comfortable than before. On exam, Claimant had pain at the end range of rotation both left and right in her neck. Claimant had mild tenderness to palpation in the trapezius. NP Halat continued to assess shoulder impingement, sprain of right rotator cuff capsule, and strain of right trapezius muscle. NP Halat opined that Claimant was doing better but still had some pain in the upper back and right neck. NP Halat recommended Claimant continue remaining chiropractic and massage therapy under maintenance care as recommended by Dr. Sacha. NP Halat planned to discharge Claimant at maximum medical improvement with maintenance per Dr. Sacha. NP Halat opined that no impairment was indicated for the injury. NP Halat noted that if Claimant had any further problems, Claimant should notify her employer and was welcome to return to the clinic. NP Halat released Claimant from care. Nancy Strain, D.O. signed off on the September 20, 2017 report. *See* Exhibits 10, B.

16. On September 23, 2017, Trina Bogart, M.D. submitted form WC164, Physician's Report of Workers' Compensation Injury. Dr. Bogart indicated that Claimant

was able to return to full duty work on September 20, 2017 and that she reached MMI on September 20, 2017 with no permanent impairment. Dr. Bogart indicated that maintenance care after MMI was required to complete chiropractic. *See* Exhibit B.

17. On September 25, 2017, Claimant was evaluated by orthopedist Michael Hewitt, M.D. Claimant reported that she was assisting a patient, helping him stand and that she went to pull the patient upwards when she noted pain in her trapezius and lateral shoulder that increased later that day. Claimant reported no prior history of shoulder injury. Claimant reported that she had undergone a sub acromial injection with approximately 20-30% improvement in symptoms for one week. Claimant reported lateral sided shoulder pain without radicular symptoms or numbness. Dr. Hewitt found mild tenderness within the right sided trapezius musculature. Dr. Hewitt found shoulder impingement testing positive, mild AC tenderness, and moderate anterior impingement tenderness. Dr. Hewitt reviewed the MRI from July, 2017. Dr. Hewitt assessed right shoulder clinical impingement. Dr. Hewitt discussed treatment options for impingement including observation, activity modification, anti-inflammatory medications, physical therapy, repeat cortisone injection, and finally arthroscopy. After much discussion, Claimant stated that she wanted to proceed with arthroscopic sub acromial decompression and Dr. Hewitt opined that she was an appropriate surgical candidate. *See* Exhibits 13, F.

18. On October 13, 2017, Respondents filed a final admission of liability. Claimant did not timely request or file a notice and proposal to select an independent medical examiner but she did timely file an objection to the FAL and an Application for Hearing. On the Application for Hearing, Claimant endorsed medical benefits among other issues. *See* Exhibit K

19. On October 15, 2017, Dr. Hewitt submitted a request for surgery. *See* Exhibit 13.

20. On October 25, 2017, John Douthit, M.D. performed a medical records review. Dr. Douthit provided the impression that Claimant had suffered an injury to her neck and right shoulder after assisting a patient with a transfer. Dr. Douthit noted that Claimant has had pain in her shoulder and neck since and had not responded to physical therapy or injection. Dr. Douthit opined that the MRI was essentially normal. Dr. Douthit noted that Claimant had two orthopedic consultations with Dr. Failinger believing Claimant was not a surgical candidate and Dr. Hewitt recommending arthroscopic surgery and debridement. Dr. Douthit noted that the diagnosis appeared to be right shoulder strain with possibly some inflammatory process associated with the injury. Dr. Douthit opined that the surgical indications were very marginal and at the early date there was still opportunity for spontaneous recovery. Dr. Douthit recommended the injury be given 2-3 more months of rest and rest with respite to allow healing. He suggested no aggressive physical therapy or treatment and only maintain range of motion and that another sub acromial steroid injection may benefit. Dr. Douthit opined that if Claimant was not recovering an arthroscopic procedure after the first year might be considered. Dr. Douthit noted the red flags and doubted very much whether Claimant would benefit from surgery.

Dr. Douthit opined that her injury was very likely an inflammatory process and that an arthroscopy may do nothing more than aggravate. He did not recommend any further passive care such as acupuncture or chiropractic care. *See* Exhibits 14, G.

21. Despite the recommendation from Dr. Douthit of 2-3 months of rest and rest with respite to allow time for healing, Claimant continued to remain at full duty work and continued to work full duty for Employer.

22. On November 10, 2017, NP Halat evaluated Claimant. Claimant requested a copy of her MRI because she wanted another provider to evaluate since she was still continuing to have pain in her shoulder that radiated into her upper arm. Claimant reported that she was taking 1000 mg of Tylenol and then could work. NP Halat noted that it was confusing whether the surgery recommended by Dr. Hewitt was approved or denied. On exam, NP Halat found Claimant's right shoulder to be slightly drooped as compared to the left with tenderness in the bicipital groove, the deltoid, the supraspinatus, the trapezius, and in the superior shoulder. NP Halat found limited range of motion in all planes particularly painful in internal and external rotation. NP Halat found a positive Neer rotator cuff test and a positive lift off test. NP Halat opined that Claimant was at functional goal, but not at end of healing. NP Halat continued to asses shoulder impingement, sprain of right rotator cuff capsule, and strain of right trapezius muscle. NP Halat gave Claimant a copy of her MRI. NP Halat contacted the adjustor of record, but noted it sounded like Claimant was working with someone else named Becky. NP Halat planned to follow up with Becky regarding how to proceed. *See* Exhibits 10, B.

23. On December 11, 2017, Dr. Hewitt evaluated Claimant. Dr. Hewitt noted that Claimant was there to follow up on her right shoulder. Dr. Hewitt noted that in September Claimant was diagnosed with clinical impingement and that a recommended surgery had been denied. Claimant reported that her symptoms had deteriorated over the past three months and that she had no further trauma. Dr. Hewitt found on examination a significantly positive impingement test and mild rotator cuff weakness. Dr. Hewitt noted that Claimant was five months post work related injury and had undergone appropriate conservative management. He again opined that Claimant was an appropriate surgical candidate and noted a diagnostic response to a sub acromial injection. Dr. Hewitt noted that Dr. Douthit had denied surgery after a review of the case and that he had recommended repeat injections. Dr. Hewitt noted that Claimant had undergone 2 cortisone injections and Dr. Hewitt did not recommend further injections noting the orthopedic protocol of limiting to 2 injections per year. Dr. Hewitt also noted that Claimant's symptoms had not spontaneously resolved. Given the duration from the injury, Dr. Hewitt recommended proceeding with arthroscopic sub acromial decompression and noted he would re submit his request. *See* Exhibits 13, F.

24. On December 28, 2017 Pre-Hearing ALJ Michael Harr issued an Order. PALJ Harr granted Respondents' motion to strike the issue of medical benefits to the extent the issue constructively challenged the authorized treating physician's determination of maximum medical improvement.

25. On December 28, 2017, Claimant submitted an Application for Hearing in case 5-051-231-03. Claimant checked Petition to Reopen as an issue and noted that Claimant had been placed at MMI on 9/20/17 by an ATP but that another ATP put in a request for surgery on 9/25/17. Claimant wrote "mistake? Petition to Reopen? Claimant desires surgery from ATP Hewitt." *See* Exhibit 1.

26. Claimant was still working full duty for Employer during this time period. On January 17, 2018 Claimant was assisting a patient to the lunchroom by pushing a wheelchair. While maneuvering the wheelchair, Claimant felt pain in her right shoulder and upper back through her scapula.

27. On January 17, 2018, NP Halat evaluated Claimant. Clamant reported that she was pushing a large patient in a wheelchair to the lunchroom and afterwards she had pain in her right shoulder and upper back through her scapula. Claimant also reported a tingling sensation in her right dorsal hand and that her right ring finger was shaking. On exam, Claimant had tenderness in the anterior glenohumeral joint and in the trapezius muscle. Claimant had full range of motion with pain in the right shoulder. Claimant was assessed with: sprain of right hand and sprain of right elbow. NP Halat ordered occupational therapy for the shoulder impingement and right elbow sprain and right hand sprain. NP Halat opined that the incident was a work related injury due to pushing a large patient in a wheelchair. *See* Exhibits 15, B.

28. On January 26, 2018, NP Halat evaluated Claimant. Claimant reported that she was upset she was not getting any care for her continued and worsening right shoulder and arm pain. Claimant reported that now when she pressed her right ulnar wrist, pain shoots up her entire arm to the right side of her neck. Claimant reported pain at a 5/10 and often much worse. Claimant reported periodic numbness and tingling in her right arm as well. NP Halat noted that a prior MRI from July of 2017 showed tendinosis of the infraspinatus, a type II downward sloping lateral acromion, and impingement on the infraspinatus tendon. NP Halat noted that around that time surgery was discussed with Dr. Hewitt and that Claimant wanted to proceed with surgery. Claimant reported being unhappy that she had to go through therapy and everything else again and felt that things should be moving faster at this time. NP Halat noted that Claimant had a prior injury to the right shoulder with surgery recommended by Dr. Hewitt due to an MRI showing impingement. NP Halat referred Claimant to Dr. Hewitt for re-evaluation due to a re-injury of the right shoulder when pushing a large patient in a wheelchair. NP Halat also referred Claimant to pain management for expanding symptoms from the right wrist ulnar aspect radiating pain to the right neck. *See* Exhibits 15, B.

29. On February 8, 2018, Scott Richardson, M.D. evaluated Claimant. Claimant reported that she was pulling back on a wheelchair with a heavy client on board when she felt sudden pain in the right dominant shoulder area and that she had constant pain at a 6/10 at rest and at an 8/10 with movement. Dr. Richardson noted it was in the glenohumeral area plus trapezius and pectoral area and that Claimant had some neck pain on the right and occasional numbness in her arm. Claimant reported that after her June 2017 injury, a suggested surgery was denied and she was declared to be at MMI.

Claimant reported that the pain never went away from her prior injury and that she was still using Tylenol and had 7-8/10 pain but was released to regular duty. On exam, Claimant was diffusely tender to palpation at the glenohumeral, trapezius, and lateral pectoral areas. Dr. Richardson assessed right shoulder strain and referred Claimant to physical therapy. *See* Exhibit H.

30. On March 7, 2018 Claimant was evaluated by physiatrist John Aschberger, M.D. Claimant reported that she was pulling back on a wheelchair and had an onset of pain at the right trapezius and neck into the shoulder. Claimant reported a prior course of treatment for irritation at the trapezius and shoulder with a diagnosis of shoulder impingement. Dr. Aschberger noted that Claimant had an MRI scan showing findings consistent with impingement and that Dr. Hewitt had previously advised surgery which was denied and the case was closed. Claimant reported that her overall symptoms were low level but persistent and that she had an aggravation or recurrence when the incident involving the wheelchair occurred on January 17, 2018. Claimant reported that she felt a pop in the shoulder and had shaking in her hand which had since subsided. Claimant reported continued pain at the right shoulder anteriorly and superiorly as well as at the right trapezius. Claimant reported tightness at the anterior upper chest. Claimant reported some benefit with physical therapy. On exam, Dr. Aschberger found tightness at the trapezial musculature bilaterally and pain with shoulder abduction. Dr. Aschberger found right shoulder impingement positive for pain and positive hoffmann's test. Dr. Aschberger assessed: right shoulder impingement; upper back myofascial pain; triceps weakness, rule out radiculopathy; and increased reflexes, rule out myelopathy. Dr. Aschberger ordered a cervical MRI. He opined that if the MRI were negative further treatment options would include potential for repeat shoulder injection or follow up regarding shoulder surgical intervention. Dr. Aschberger recommended light work duty restrictions with no repetitive motion at the arm, no lifting more than 5 pounds to above chest height, and no repetitive cervical motion. *See* Exhibits 16, I.

31. On March 7, 2018, Dr. Richardson evaluated Claimant. Dr. Richardson noted that Claimant had seen Dr. Aschberger and that there was concern about pathology in the neck causing Claimant's arm symptoms. Dr. Richardson noted that a cervical MRI was ordered. Claimant reported constant pain in her right neck, trapezius area, shoulder, and down to her hand. Claimant reported that moving her neck seemed to cause pain in the arm. Claimant reported decreased sensation in the right ulnar forearm and ring/little fingers. *See* Exhibits 15, H.

32. On March 21, 2018, Dr. Aschberger evaluated Claimant. He noted that the cervical MRI was not authorized. Dr. Aschberger opined that Claimant did have some findings of concern on her physical examination and that prior to any surgical intervention at the shoulder, clearance of the neck would be required. Claimant reported continued pain. Dr. Aschberger assessed: right shoulder impingement, rule out C7 radiculopathy, rule out myelopathy. Dr. Aschberger opined that work restrictions should continue and opined that an MRI of the neck would be required prior to any additional intervention or more aggressive intervention for the shoulder. *See* Exhibits 16, I.

33. On March 29, 2018, Dr. Richardson evaluated Claimant. Dr. Richardson noted that the cervical MRI had been denied. Claimant reported constant pain in the right neck, trapezius area, shoulder area, and pain down her right arm with right hand weakness. Dr. Richardson assessed right shoulder strain, neck strain, and right shoulder impingement. He recommended massage therapy. *See* Exhibits 15, H.

34. On April 2, 2018, Claimant underwent an independent medical evaluation performed by Carlos Cebrian, M.D. Dr. Cebrian issued a report on April 17, 2018. Claimant reported that she was initially injured on June 16, 2017 when assisting a big and tall resident stand up. Claimant reported standing on his left side with her right hand holding his left hand and that there was another co-worker on his right side. Claimant reported that he was combative and while she was holding his hand he jerked his arm backwards causing her arm to go backwards and that she felt a pain and a pop and had pain in her right trapezius on the top of her shoulder. Claimant reported she was given a pain patch, two Tylenol, and finished her shift but that when she got home her arm was shaking and it was difficult to hold a glass of water. Claimant reported she was referred for treatment, had physical therapy, an MRI and underwent an injection that did not help. Claimant reported that she asked for a second opinion and was referred to Dr. Hewitt who told her she needed surgery. Claimant reported she continued to have pain over the next few months and was in constant pain. Claimant reported that on January 17, 2018 she had a second injury after pulling and twisting a resident backwards in a wheelchair to get him close to the wall and that she felt sharp pain in her right shoulder that increased for 30 minutes. Claimant reported currently that she had pain on the right side of her neck, in her right trapezius, and in her right shoulder and down her right arm, in her right shoulder blade, and in her right pectoral muscle and right scapular region. *See* Exhibits 17, J.

35. Claimant reported no prior right shoulder complaints and denied prior motor vehicle accidents. Dr. Cebrian reviewed medical records and performed a physical examination. Dr. Cebrian noted in the cervical spine that Claimant's range of motion was reduced in all movements and that she reported pain in all movements with increased pain on the right side. On cervical spine examination, Claimant was tender to palpation diffusely on the right side and tender into the trapezius. On right shoulder examination, Claimant reported pain in all movements and pain with impingement testing. Dr. Cebrian assessed right shoulder/trapezius strain. *See* Exhibits 17, J.

36. Dr. Cebrian opined that no further medical treatment was indicated for Claimant's June 16, 2017 claim and that she was appropriate placed at MMI on September 20, 2017 by Dr. Bogart. Dr. Cebrian opined that there had been no worsening of Claimant's claim related condition since being placed at MMI. Dr. Cebrian opined that the claim related diagnosis was right trapezius/shoulder strain and that the mechanism of injury was very mild and opined that from the beginning, Claimant's subjective complaints have been out or proportion to the objective findings. *See* Exhibits 17, J.

37. Dr. Cebrian opined that the July 3, 2017 MRI showed some tendinosis of the infraspinatus and showed a type II acromion impinging the infraspinatus with

osteophytes present and that the findings were not causally related to the June 16, 2017 incident and were incidental findings. Dr. Cebrian noted that Dr. Failinger opined there was obviously not a surgical lesion and that it was unclear whether Dr. Hewitt had the entire medical file indicating: minor mechanism, subjective complaints our of proportion, diffuse and non focal complaints. Dr. Cebrian further opined that arthroscopic surgery in the setting of sub acromial shoulder pain for impingement had not been shown to be superior to no surgery in studies. Dr. Cebrian opined that Claimant remained at MMI for the June 16, 2017 claim and was able to work in full and unrestricted capacity and that maintenance care was not indicated. *See* Exhibits 17, J.

38. Dr. Cebrian also opined that Claimant's right shoulder and upper extremity complaints attributed to the January 17, 2018 incident with the wheelchair were independent incidental and unrelated to the January 17, 2018 claim. Dr. Cebrian opined that there was not a mechanism of sufficient force to cause an injury or accelerate or aggravate a pre-existing condition and that the mechanism of injury was minimal. Dr. Cebrian opined that Claimant may have experienced symptoms of her prior right shoulder condition but that the mechanism on January 17, 2018 did not require any medical treatment or work restrictions. Dr. Cebrian opined that further evaluation, diagnosis, and treatment under workers' compensation was not medically reasonable, necessary, appropriate, or related. *See* Exhibits 17, J.

39. Several years prior to the June 2017 and January 2018 incidents, Claimant was involved in a motor vehicle accident.

40. On July 3, 2014, Claimant reported that she was very sore over her anterior chest and back of shoulders and neck after hitting a wall on June 30 at 20 mph. Claimant was noted to have a primary encounter diagnosis of whiplash injury of neck and sternum contusion. See Exhibit L.

41. On July 14, 2014, Claimant reported bilateral shoulder and neck pain for the past two weeks after a motor vehicle accident where she was the driver and hit a cement wall on the driver's side of the vehicle. Claimant reported that the air bags deployed and that an ambulance came to the scene and she was taken to the emergency room. Claimant reported pain in the shoulders and right neck that was worse when moving her shoulders or neck. Claimant reported that massage helped. Claimant was diagnosed with bilateral shoulder joint pain and with neck pain. See Exhibit A.

42. Claimant testified at hearing. Claimant testified credibly that her pain complaints were now at an 8/10 where as they were previously at a 5/10 at the time she was released at MMI. Claimant credibly testified that she had worsened after being placed at MMI. Claimant testified credibly that she is now on work restrictions and able to work within her restrictions for a new employer. Claimant testified credibly that after the motor vehicle accident in 2014 she had no treatment for her right shoulder or neck and no problems in those areas until June 2017.

43. Dr. Cebrian testified at hearing consistent with his independent medical examination report. He opined that Claimant's record showed prior problems with her neck and shoulder despite her denial of prior problems. Dr. Cebrian opined that Claimant's July 2017 MRI showed tendinosis which is a chronic change in a tendon due to wearing away and loss of elasticity. He opined that it also showed a type II acromion that can cause impingement. Dr. Cebrian opined that the MRI did not show any acute tear.

44. Dr. Cebrian testified that although Dr. Hewitt said Claimant had a diagnostic response to injection in the right shoulder, Claimant only reported 20-30% improvement and therefore the injection was not diagnostic. Dr. Cebrian opined that although Claimant says subjectively she has more pain, Claimant is not worse and the areas of pain and symptoms are the same or similar to symptoms before Claimant was placed at MMI. Dr. Cebrian opined that objectively, Claimant had not worsened before January of 2018 and has not worsened now. Dr. Cebrian opined that her complaints now were similar to complaints prior to MMI. Dr. Cebrian also opined that the January 2018 incident did not cause a new injury or new aggravation and opined that there was a minimal mechanism of injury. Dr. Cebrian noted that Claimant felt discomfort on this date due to her prior problem but that Claimant was just having ongoing symptoms and did not aggravate or suffer a new injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684

(Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Petition to Reopen

Mistake

An FAL which has not been challenged in accordance with statutory procedures constitutes an "award" for purposed of the reopening statute. Consequently an unchallenged FAL is binding unless the claim is reopened. *See* § 8-43-203(2)(d), C.R.S., *Berg v. Industrial Claim Appeals Office,* 128 P.3d P.3d 270 (Colo. App. 2005).

An "award" may be reopened on the ground of "mistake." *See* § 8-43-303, C.R.S. The party seeking to reopen bears the burden of proof to establish grounds to reopen. *See Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000).

The term "mistake" refers to any mistake whether one of law or fact. *Renz v. Larimer County School District Poudre R-1,* 924 P.2d 1177 (Colo. App. 1996). The authority to reopen is discretionary provided the statutory criteria have been met. *Berg v. Industrial Claim Appeals Office, supra*. In order to reopen based on mistake the ALJ must determine that there was a mistake that affected the prior award. If there was a mistake the ALJ must determine whether, under the circumstances, it is the type of mistake that justifies reopening the claim. *Travelers Insurance Co. v. Industrial Commission,* 646 P.2d 399 (Colo. App. 1981). Factors the ALJ may consider when determining whether a mistake warrants reopening include the potential for injustice if the mistake is perpetuated, and whether the party seeking to reopen could have avoided the mistake by the exercise of due diligence in the handling or adjudication of the claim. *Klosterman v. Industrial Commission,* 694 P.2d 873 (Colo. App. 1984); *Travelers Insurance Co. v. Industrial Commission, supra*.

In this case, Claimant was believed to have been improving and was placed at MMI and a Final Admission of Liability closed her case. At the time she was placed at MMI, Claimant had reported improved symptoms and the providers believed that she would continue to improve with maintenance chiropractic care. Although, eventually, they were proven wrong when Claimant did not continue to improve and when she worsened, the closing of the claim was not by "mistake." The ALJ fails to find that there was a mistake of fact or law to justify a re-opening of the claim. Further, if Claimant believed

Respondents to be mistaken when they placed her at MMI, she had the recourse to request a division independent medical examination to challenge the determination that she was doing better and was at MMI and could have avoided what she believes was a "mistake" by exercising due diligence and requesting a DIME. Additionally, although Claimant was never evaluated by the physician who signed off on the final report, Claimant had been regularly evaluated by NP Halat. NP Halat had made multiple referrals to MDs who had evaluated Claimant and had come to similar conclusions. The physician who signed off on the report implicitly agreed with the determinations made by NP Halat and the other providers. There was no mistake in the determination to place Claimant at MMI and to file a FAL.

Change in Condition

Section 8-43-303(1), C.R.S., provides that an award may be reopened on the ground of change in condition. The claimant shoulders the burden of proving his condition has changed and his entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201; *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725 P.2d 63 (Colo. App. 1986). A change in condition refers either to change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). Reopening is warranted if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo. App. 1988).

Colorado recognizes the "chain of causation" analysis holding that results flowing proximately and naturally from an industrial injury are considered to be compensable consequences of the injury. Thus, if the industrial injury leaves the body in a weakened condition and the weakened condition plays a causative role in producing additional disability or the need for additional treatment such disability and need for treatment represent compensable consequences of the industrial injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970); *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082 (Colo. App. 2002); *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). However, no compensability exists if the disability and need for treatment were caused as a direct result of an independent intervening cause. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002).

The question of whether the claimant met the burden of proof to establish a causal relationship between the industrial injury and the worsened condition is one of fact for determination by the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *City of Durango v. Dunagan, supra.* Similarly, the question of whether the disability and need for treatment were caused by the industrial injury or by an intervening cause is a question of fact. *Owens v. Industrial Claim Appeals Office, supra.*

Claimant has established by a preponderance of the evidence that case 5-051-231-03 with an injury date of June 16, 2017 should be reopened due to a change of

condition. As found above, Claimant was placed at MMI on September 25, 2017. A FAL was filed closing her claim with no impairment on October 13, 2017. Claimant, at that time, had improved and was expected to continue to improve with her remaining chiropractic care visits. Claimant, at that time was working full duty. Although Dr. Hewitt saw Claimant on September 25, 2017 and recommended arthroscopy as an option, he also recommended other options including observation. On September 25, 2017 Dr. Hewitt noted moderate impingement.

After the FAL and after the case closed, Claimant worsened. In his medical records review performed on October 25, 2017, Dr. Douthit recommended 2-3 months of rest and rest with respite to allow Claimant healing. He recommended she only maintain range of motion. At the November 10, 2017 evaluated with NP Halat, Claimant was noted to have a slightly drooped shoulder on the right. At the December 11, 2017 evaluation with Dr. Hewitt, Claimant credibly reported that her symptoms had deteriorated over the last three months since she was placed at MMI. Dr. Hewitt found a significantly positive impingement test as opposed to the moderate impingement he noted in September. During this period of time, Claimant continued to work full duty without restriction for Employer, despite Dr. Douthit's recommendation of 2-3 months of rest and rest with respite.

During this time, while worsening from her original injury, Claimant experienced an incident on January 17, 2018 which caused her to worsen even further. On that date, Claimant had significant symptoms in the injured areas when pushing a patient in a wheelchair. Claimant is credible that her symptoms increased on this date. On a visit on January 26, 2018 Claimant was noted to be upset that she was not getting care for her worsening and continued right shoulder and arm pain.

The ALJ concludes that Claimant has established a worsening sufficient to reopen her claim for the June 16, 2017 injury. However, Claimant did not experience a new case/claim on January 17, 2018. Rather, on that date she was working full duty when recommended to be on rest and respite and her continued symptoms got even worse than before. As found above, Dr. Sacha had noted that if Claimant was not improved, a cervical MRI could not be ruled out back when evaluating Claimant for the June 16, 2017 injury. Dr. Hewitt recommended surgery twice for her right shoulder prior to January 17, 2018. Dr. Douthit even acknowledged that if after one year Claimant was not improved, shoulder surgery could be considered (although he doubted it would help much). Claimant's symptoms began to worsen shortly after she was placed at MMI and her case was closed. Although the physicians placed her at MMI when they believed she was doing better and believed she would continue to do better and could continue to improve with maintenance, she did not. Claimant worsened shortly after, continued to work full duty when she should have been on rest/respite/restrictions, and not surprisingly got worse. Pushing a patient and maneuvering a patient in a wheelchair while working with a worsening condition would be expected to increase symptoms and contribute to worsening.

Claimant has met her burden of proof to establish that her worsened condition now is causally related to her original work related injury on June 16, 2017. The need for

treatment was caused by the original injury. The ALJ finds that pushing the patient in the wheelchair on January 17, 2018 was not an intervening event or new injury but rather demonstrated the continued worsening of her original injury. The original injury left Claimant's body in a weakened condition and she was in a weakened condition when pushing the wheelchair. The claim is thus ordered to be re-opened based on Claimant's change of condition and worsened condition.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). As the case is ordered re-opened based on a worsened condition, Respondents are liable for medical treatment reasonable and necessary to cure and relieve the effects of Claimant's worsened condition and injury.

Claimant has established, by a preponderance of the evidence that the need for the right decompression shoulder surgery recommended twice by Dr. Hewitt was caused by her initial June 16, 2017 injury and her now worsened condition in her shoulder. The ALJ finds the surgery to be reasonable, necessary, and casually related to the June 16, 2017 injury. Although some providers hoped she would improve without surgery and although she improved slightly when placed at MMI, the ALJ finds it credible and persuasive that she has deteriorated to the point that surgery is necessary and related to the June 16, 2017 injury. Claimant has had persistent, and now worse, symptoms since the injury. Although Claimant had some symptoms in her right shoulder and neck following an earlier motor vehicle accident, the ALJ finds Claimant credible and persuasive that Claimant was able to work full duty and with no ongoing complaints prior to June 16, 2017. Claimant's right shoulder symptoms, although improved for a period of time, never subsided and are now worse. Dr. Hewitt has recommended surgery twice and even Dr. Douthit noted after a year it might be considered. The ALJ finds that Claimant has met her burden to show that the right shoulder surgery is reasonable, necessary, and causally related to the June 16, 2017 claim based on her now worsened condition.

Claimant has also established by a preponderance of the evidence that the need for a cervical MRI was caused by her initial June 16, 2017 injury. Claimant's cervical symptoms and symptoms into her digits were concerning prior to January 17, 2018. As found above, Dr. Sacha noted that if Claimant did not improve, a cervical MRI could not be ruled out when evaluating her for her June 16, 2017 injury. Although Claimant was placed at MMI on that claim when she was believed to be improving, she has worsened and the ALJ finds that a cervical MRI has now been recommended consistent with the note from Dr. Sacha that it may be needed if she did not improve. Claimant has thus established that a cervical MRI is reasonable, necessary, and causally related to her worsened June 16, 2017 injury. Claimant has had cervical concerns and symptoms dating back to the original injury that have now worsened. The MRI is reasonable, necessary, and casually related to the June 16, 2017 injury.

Compensability

The claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to establish that she sustained a new injury or an aggravation to a pre-existing condition on January 17, 2018 when pushing a patient in a wheelchair. Rather, on that date, Claimant experienced symptoms at work as the result of the condition of her neck and right shoulder that had been injured on June 16, 2017 and had worsened between September and January. The incident on January 17, 2018 did not cause disability or need for medical treatment. Claimant already had disability and the need for medical treatment prior to this date based on her prior and worsened condition from her June 16, 2017 injury.

ORDER

1. Claimant has established by a preponderance of the evidence that her June 16, 2017 claim shall be reopened due to a change of condition.

2. Claimant has established, by a preponderance of the evidence, that the right shoulder surgery and cervical MRI are reasonable, necessary, and causally related to her worsened June 16, 2017 injury.

3. Respondents shall re-open claim 5-051-231-03 and authorize the right shoulder surgery and cervical MRI.

4. Claimant did not sustain a new injury/new aggravation on January 17, 2018. Rather, on that date she had continued and worsened symptoms from her original injury. Thus compensability in case 5-068-047 is denied.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant demonstrated by a preponderance of the evidence she sustained a compensable left shoulder injury on September 15, 2017?

STIPULATIONS

If the claim is found compensable, Respondents agree to provide reasonable, necessary and related medical care and to pay the Sacred Heart Hospital medical bill contained in Exhibit O.

FINDINGS OF FACT

1. Claimant is a 59 year old woman employed by Employer as a flight attendant. Claimant alleges she sustained a left shoulder injury while working for Employer on September 15, 2017.

2. Claimant had a prior non-work-related left shoulder injury in 2006. Claimant fell while ice skating and sustained a nondisplaced fracture of the greater tuberosity of the left humerus. Claimant testified the bone "healed perfectly" and she did not experience any residual left shoulder symptoms.

3. Claimant was also involved in a motor vehicle accident in November 2009 that caused an injury to her neck and wrist. Claimant testified she received treatment for her neck through 2016, and that she experienced residual neck symptoms.

4. On September 15, 2017, Claimant began a four-day trip as a flight attendant. The first leg of the trip was from Denver, Colorado to Salt Lake City, Utah.

5. Claimant testified that, upon boarding the plane on the first day, she put her luggage in the first-class closet. She testified Ms. Sandvik informed her she was not allowed to put her bags in the first-class closet and instructed Claimant to place her bag in an overhead bin. Claimant testified she told Ms. Sandvik that lifting over her shoulders caused her neck to hurt, but placed the bag in the overhead bin as instructed.

6. The first flight was completed without incident. After landing, Claimant and the other members of the flight crew, including flight attendant Cindy Sandvik, took a shuttle bus from the airport to a hotel in Salt Lake City. While traveling on the highway, a car in the far right lane cut off the shuttle bus, causing the shuttle bus driver to slam on his brakes to avoid a collision. No collision occurred. Clamant was seated immediately behind the driver with her carry-on baggage on the seat to her immediate right. Claimant testified she reached out with both arms to brace herself for impact, with the

left arm fully extended, and both arms made contact with the driver's seat. Claimant testified that the abrupt stop caused her bag to move to the console area of the shuttle bus. She testified that immediately thereafter the top of her left shoulder did not "feel right" and felt "awkward."

7. Claimant did not mention any alleged injury to the flight crew or report any alleged injury to Employer at that time. She retrieved her luggage and checked into the hotel, and subsequently completed the remaining three days of the flight itinerary performing her regular duties.

8. Ms. Sandvik testified that she did not say anything to Claimant regarding her bags on the first day of the trip, but did confront Claimant about putting her luggage in the first-class closet on the second day of the trip. Ms. Sandvik testified Claimant said she hurt her arm and that was why she was using the closet. Ms. Sandvik testified that since Claimant placed her luggage in the first-class closet on the first day of the trip as well, she assumed Claimant hurt her arm before the first day of their four-day trip.

9. Claimant continued working full duty until October 13, 2017. On October 13, 2017, Claimant presented to the UCHealth Emergency Department for dizziness, vertigo, and lightheadedness that began on a work flight. Claimant also complained of shoulder pain and asked to have her shoulder evaluated to ensure it was not broken. On examination, Claimant exhibited normal range of motion with tenderness in the proximal third of the humerus. The shoulder x-ray revealed mild acromioclavicular arthrosis with no fracture or dislocation. It was recommended Claimant follow-up with her primary care provider.

10. On October 17, 2017, Claimant saw her primary care provider, Anita Westafer, MD for a follow-up of her recent hospital visit. In addition to dizziness and vertigo, Claimant again reported left arm pain. Dr. Westafer noted,

> L shoulder broken in past ice skating at keystone, now 102017 a month of pain, had pushed double cart but didn't file on the job injury, then a car pulled out in front of her on way to hotel and driver slammed on brakes and didn't have accident but reached out with left arm and that worsened it.

Claimant testified Dr. Westafer erroneously reversed the sequence of events in her note, and that the reference to the shuttle incident should have come before the reference to pushing the double cart.

11. On examination, Dr. Westafer noted pain in the deltoid into the neck, and normal movement of all extremities. Dr. Westafer referred Claimant for an orthopedic evaluation and a brain MRI, which ultimately revealed Claimant suffered from a cerebral ischemia. Claimant was also referred to a neurologist who confirmed Claimant suffered a stroke on October 13, 2017. Claimant took a leave of absence from her position with Employer due to the stroke.

12. Claimant did not report her alleged injury to Employer until approximately mid-October 2017. Claimant testified she failed to report the alleged injury sooner because she has a high tolerance for pain, thought her symptoms would improve and that it would be "a nothing situation." Claimant testified she also did not want to be taken off of work due to the injury, as she is the sole financial provider in her household. Claimant testified she is aware of Employer's reporting protocols and that Employer requires immediate reporting of work injuries by contacting the manager on duty by phone. Claimant acknowledged she had three prior workers' compensation claims with Employer in 2007, 2016 and 2017, for an injured ribcage, food poisoning, and a spider bite, respectively. Claimant admitted that she reported each of those injuries to Employer immediately.

13. Ms. Sandvik testified Employer policy is to immediately notify the pilot and then contact the manager on duty whenever there is a work injury. She further testified that when an employee is injured, they fill out an Irregular Operations Report (IOR) online.

14. Claimant reported the injury to Employer by submitting an IOR online on or around October 13, 2017. Claimant indicated an injury date of September 15, 2017 and provided the following incident description: "Hotel shuttle driver had to slam on brakes to prevent hitting a car that came across three lanes of traffic in front of us. I extended my arms to the back of the drivers seat to brace for possible impact."

15. On November 2, 2017, Claimant presented to orthopedic specialist Christopher O'Grady, MD. She reported developing left shoulder symptoms on September 15, 2017 as a result of a car accident. On examination, Dr. O'Grady noted full range of motion in all planes, full strength, no tenderness to palpation, no atrophy, no laxity, and a positive empty can test. Dr. O'Grady gave the following assessment: possible rotator cuff tear and acute pain of the left shoulder. He ordered an x-ray and MRI of the left shoulder.

16. Respondents filed a Notice of Contest on November 27, 2017.

17. Claimant underwent an MRI of the left upper extremity on November 28, 2017 which revealed a low grade partial thickness tear of the subscapularis, age undetermined, and a SLAP type 2 tear of the superior labrum, age undetermined. There was also mild glenohumeral and moderate acromioclavicular osteoarthritis with a chronic appearance.

18. Claimant attended a follow-up evaluation with Dr. Westafer on January 3, 2018 requesting an extension of her medical leave due to continued dizziness. On examination of the shoulder, Dr. Westafer noted decreased and painful range of motion in the left shoulder and back. Dr. Westafer included an exhaustive list of differential shoulder diagnoses, but her ultimate assessment was pain of left shoulder joint. She recommended Claimant see an orthopedic specialist.

19. On July 20, 2018, F. Mark Paz, MD performed an independent medical record review at the request of Respondents. Dr. Paz reviewed Claimant's medical records dating back to December 2006, including the November 28, 2017 left upper extremity

MRI. Based on the history documented in the records, the findings on physical examination, and the radiographic findings, Dr. Paz opined that it was not medically probable that the left shoulder subscapularis partial thickness tear, SLAP lesion and/or acromioclavicular arthritis were causally related to, or aggravated or accelerated by, the September 15, 2017 incident. Dr. Paz concluded that the documented mechanism of injury did not correlate with the left shoulder diagnoses identified on the MRI.

20. Claimant testified she did not have any prior treatment to the deltoid area of her left shoulder. She stated she currently experiences pain, popping and range of motion deficits in her left shoulder, and wants to undergo left shoulder treatment.

21. The ALJ finds the opinion of Dr. Paz, as supported by the medical records, more credible and persuasive than the testimony of Claimant.

22. Claimant failed to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment.

23. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert

testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As found, Claimant failed to establish, by a preponderance of the evidence, she suffered a compensable injury to her left shoulder on September 15, 2017. While Claimant purports she immediately felt an issue with her shoulder after the shuttle bus incident, Claimant did not report any alleged injury or seek treatment for her shoulder symptoms until approximately one month later. Claimant continued working full duty and was physically able to perform her regular job duties. Claimant only mentioned shoulder symptoms during an emergency room visit on October 13, 2017 for which her primary complaint was dizziness and nausea related to what was later determined to be a stroke. Claimant acknowledged she was aware of Employer’s policy to immediately report an alleged work injury, and that she had followed the policy in immediately reporting work injuries in 2007, 2016 and 2017. The ALJ is not persuaded by Claimant’s testimony as to her reasoning behind the significant delay in reporting the alleged

September 2017 injury, particularly when Claimant had three prior work injuries of seemingly varying severity that she reported promptly.

Regarding the MRI findings, the age of both the partial tear of the subscapularis and the SLAP tear of the superior labrum were undetermined. Dr. Paz credibly opined that September 15, 2017 did not cause, aggravate, or accelerate the partial subcapularis tear, SLAP tear, or acromioclavicular joint osteoarthritis. Based on the totality of the evidence, Claimant failed to prove she sustained a compensable injury by a preponderance of the evidence.

ORDER

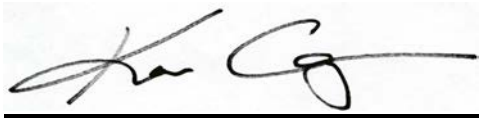
It is therefore ordered that:

1. Claimant's claim for benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 27, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Did Claimant prove by a preponderance of the evidence he suffered a compensable right knee injury on January 12, 2018?

STIPULATIONS

The parties stipulated to the following if the claim is compensable:

1. Claimant's average weekly wage is $1,560.88.

2. Claimant is entitled to a closed period of TTD benefits from January 12, 2018 to February 5, 2018.

3. Concentra is the ATP.

FINDINGS OF FACT

1. Claimant works for Employer as a delivery driver. He operates a tractor-trailer delivering food and supplies to restaurants in northern Colorado and southern Wyoming.

2. On January 11, 2018, Claimant began his shift at approximately 8:30 p.m. He made deliveries in Cheyenne, Fort Collins, Loveland, and Greeley. Between approximately 12:30 and 1:00 a.m. on January 12, he made a delivery to a Chick-fil-A restaurant in Fort Collins. While he was climbing down from the tractor cab, one of the steps broke, causing him to fall to the ground.

3. Claimant had noticed a problem with the step approximately one week earlier. He reported it to the dispatch manager, Gregory Nevicker, but repairs had not been completed by the time of his accident.

4. Claimant fell approximately two feet and landed on his right knee. He felt "intense" pain in the knee and remained on the ground for a moment or two. After the pain subsided, he got up and continued with the delivery. At that point, his knee was minimally painful and he did not think he had sustained any significant injury.

5. On the night of the injury, Claimant was working with a "helper," Juan Heide. When they arrived at the Chick-fil-A in Fort Collins, Mr. Heide went into the trailer to start moving product. Claimant gathered the paperwork and keys for the restaurant, exited the vehicle, and fell to the ground. Although Mr. Heide did not testify at hearing, the ALJ infers he did not observe Claimant's fall or see him on the ground. Claimant and Mr. Heide completed the Chick-fil-A delivery and made two or three other deliveries afterward. Claimant did not mention the accident to Mr. Heide.

6. Claimant completed his route and returned to the dispatch office around 9:00 a.m. He went into the office to turn in his paperwork and spoke with Joshua Yakes, the operations manager. Mr. Yakes told Claimant he needed to move the tractor trailer because the parking lot was being re-striped that day. Claimant left the office to move his truck, and Mr. Yakes went outside to check the area where he wanted Claimant to park.

7. When Claimant pulled into the parking area, he turned his vehicle too sharply and snapped the "pigtail" that runs from the tractor to the trailer. Mr. Yakes was standing near the truck and heard the pigtail snap. Claimant parked the truck and climbed down. Mr. Yakes mildly chastised Claimant for breaking the pigtail and reminded him about "basic driving skills." Claimant agreed he had turned too tightly and apologized for the damage.

8. Mr. Yakes then saw the broken step on the tractor, which was "pretty noticeable" because it was a new truck. He asked Claimant about it, and Claimant said the step had been broken for a couple of days. He did not mention the fall in Fort Collins earlier that night. Mr. Yakes called Penske, Employer's maintenance provider, about the step. Coincidentally, a Penske maintenance technician was already en route to repair the step. The ALJ infers Penske was coming to fix the step in response to Claimants' report to Mr. Nevicker several days before.

9. After the call to Penske, Mr. Yakes and Claimant walked approximately 100 yards back to the office. Chick-fil-A was a new account for Employer, so they discussed how the deliveries were going. Mr. Yakes noticed no pain behaviors or other indication of knee problems during the time they interacted in the yard that morning. Mr. Yakes "didn't really pay attention" when Claimant was climbing down from the tractor but recalled no obvious issue.

10. Employer has a policy requiring employees to report any work-related injury immediately "no matter how minor it may appear to you at the time." Claimant acknowledged awareness of this policy.

11. Claimant did not mention the incident to Mr. Yakes "because I thought it was a bruise, you know, nothing serious." The ALJ finds this testimony credible. The ALJ also infers Claimant was probably apprehensive about mentioning the incident since he had just been reprimanded for the broken pigtail moments before.

12. Later that evening, when he was getting ready to go to bed, Claimant's knee pain increased dramatically and it swelled noticeably. Claimant called a supervisor and was directed to the emergency room.

13. Claimant presented to the Swedish Medical Center emergency department the evening of January 13, 2018, and gave the following account of the accident:

> The patient reports fall from approximately 18 inch step out of his truck yesterday while at work. He landed directly on the right knee. He feels like the knee "was out of place" and popped back in. He now feels that it has subsequently "popped back out" again. 10/10 pain markedly worsened with

> any range of motion. He is unable to bear weight fully on the extremity. Denies prior or associate injury. Intermittent numbness in the right knee. This was an isolated injury.

14. On examination, right knee range of motion was "limited secondary to pain." The ER physician observed swelling of the right knee. Claimant could not tolerate a full ligamentous exam, but there was no grossly palpable patellar tendon disruption. X-rays were negative for fracture, dislocation, or obvious soft tissue abnormality. The ER physician noted Claimant "has a soft tissue swelling consistent with a soft tissue injury with reassuring x-rays." Since there was no fracture or obvious orthopedic injury, Claimant was given a knee immobilizer and crutches, prescribed medication, and released to "outpatient follow-up."

15. Employer referred Claimant to its designated facility, Concentra. He saw PA-C Jordan Maas at the initial visit on January 15, 2018, and described the accident as,

> He was stepping out of a semi truck with his left leg when the step broke and he fell, landing on his right flexed knee. Patient was initially able to walk but then when he got home later that day felt the knee "pop" out of place and then had excruciating pain and inability to bear weight. . . . He denies h/o prior knee injury.

16. Claimant was using crutches to keep weight off his right leg. The physical exam showed diffuse tenderness over the anterior knee and limited ROM in all planes. Patellofemoral apprehension test was positive; other tests were negative. PA-C Maas noted no ecchymosis or swelling. Claimant was advised to discontinue the immobilizer and given a hinged knee brace. PA-C Maas diagnosed a right knee contusion and ordered an MRI to rule out internal derangement. Claimant was adamant about not returning to work "until he knows what exactly is wrong with his knee," so PA-C Mass took him off work pending the MRI results.

17. Respondents filed a Notice of Contest on January 25, 2018.

18. Claimant returned to Concentra on January 29 and saw PA-C Jim Keller. His symptoms had improved somewhat but he was still having 5/10 pain in the right knee. PA-C Keller stated, "with the concurrence of Trina Bogart, MD, due to [Claimant's] w/c claim being denied, he is at MMI & able to return to work w/o restrictions & will f/u with his PCP for his R knee pain as needed."

19. Claimant saw Nurse Rachele Salter at Columbine Family Practice on January 31, 2018. Nurse Salter appreciated tenderness, limited ROM and edema of the right knee. She documented,

> [H]e was at work and came off the truck when the step gave way and he fell on his knee. Since then he has had a significant amount of pain. His knee will swell up and locks in place where he can't even move it. He filed a workmans comp case the day of the injury and he has seen the workmans comp doctor. They had suggested that he get an MRI but they are saying

> they will not pay for it. Nor have they offered him physical therapy. He is in a lot of pain and has not been able to go back to work yet due to the pain. He wants help but feels like his work is not helping him figure out what is wrong with his knee. He has never had a knee injury before and this is not a pre-existing condition. Financially he is struggling because he has not been able to work since the knee injury. I will order the MRI for now and I have recommended that he see a lawyer for options.

20. Claimant returned to work with Employer on February 5, 2018.

21. Dr. Lesnak performed a records review for Respondents on July 18, 2018. He noted no documentation of any abrasions, contusions or ecchymosis in the ER records. He noted Claimant "did not report any type of injury whatsoever to Mr. Yakes," and Mr. Yakes "noticed no physical abnormalities whatsoever." Dr. Lesnak opined Claimant "did not sustain any type of injurious event during work hours on 01/12/2018," and "any medical evaluations or treatments for any pain complaints/musculoskeletal pathology would appear to be completely unrelated to the alleged occupational injury." Dr. Lesnak indicated Claimant may have fabricated the injury "in retaliation for being reprimanded" about the pigtail.

22. Claimant had no known history of any right knee problems before the injury.

23. There is no persuasive evidence of any other injurious incident involving the right knee besides the incident at work on January 12, 2018.

24. Claimant proved by a preponderance of the evidence he suffered a right knee injury at work on January 12, 2018. Claimant's description of the incident at hearing was credible and his reports to medical providers were consistent. Although Claimant's failure to mention the incident to his coworker or Mr. Yakes is somewhat puzzling, his explanation is plausible. He felt "intense" pain immediately after striking the knee on the pavement, but the pain subsided within a few moments and he was able to resume working. He assumed he had a minor bruise and did not realize it was serious until that evening when the pain increased and the knee swelled. The ER physician observed knee swelling, an objective finding consistent with a recent injury. Dr. Lesnak's opinions, including his suggestion Claimant fabricated his injury in retaliation for being reprimanded, are not persuasive.

25. Claimant is entitled to TTD benefits from January 12, 2018 to February 5, 2018, per the parties' stipulation. Based on the stipulated AWW of $1,560.88, TTD is payable at the maximum rate of $948.15.

CONCLUSIONS OF LAW

To obtain medical or indemnity benefits, a claimant must prove he suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S.; *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). Workers' compensation benefits are only payable if an accident results in a compensable "injury." *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). The mere fact that an incident occurred at work and caused symptoms does not necessarily establish a compensable injury. Rather, a compensable injury requires medical treatment or causes a disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016). The claimant must prove an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

As found, Claimant proved he more likely than not suffered a compensable injury to his right knee on January 12, 2018. His testimony regarding the incident was credible and he described the accident to multiple medical providers in a consistent manner. While the better practice would have been to report the injury when he returned to the dispatch office, Claimant's explanation for not doing so is plausible. The "intense" pain he felt immediately after striking his knee on the pavement subsided within a few moments and he was able to continue working. At that point, he did not believe he had any significant injury. He probably would never have mentioned the incident had the pain not flared severely later. The ALJ also notes Claimant had been reprimanded by Mr. Yakes for breaking the pigtail on his truck, and he probably did not want to increase friction with his manager by raising what he thought was a minor, temporary issue that would resolve on its own. It was not until that evening — when the pain increased and the knee swelled — that Claimant realized he had a serious problem with the knee. Dr. Lesnak's opinions, including his suggestion Claimant fabricated his claim in retaliation for being reprimanded, are not persuasive.

ORDER

It is therefore ordered that:

1. Claimant's claim for a right knee injury on January 12, 2018 is compensable.

2. Respondents shall provide reasonably necessary medical treatment from authorized providers to cure and relieve the effects of Claimant's compensable injury.

3. Insurer shall pay Claimant TTD benefits at the rate of $948.15 per week from January 12, 2018 to February 5, 2018, per the parties' stipulation.

4. Insurer shall pay Claimant statutory interest of 8% per annum on all indemnity benefits not paid when due.

5. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 28, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that his 20% lower extremity impairment rating should be converted to the whole person?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant was hired as a machine operator for Employer on March 4, 2013. (Ex. A). On September 28, 2016, Claimant was injured while working for Employer when he fell, pinning his right foot between a stair rail and a large piece of machinery. (Ex. A, B). Claimant sustained a crushing type injury to his right ankle and foot, which also resulted in nerve damage to the nerves in his foot. (Ex. F, G)

2. Claimant's authorized treating provider ("ATP") was Terrence Lakin, M.D., at Southern Colorado Clinic. (Ex. B, F). Claimant was also treated by Lance Farnsworth, M.D., and Clark Johnson, DPM. (Ex. C, D, J, 3, 4). On April 16, 2017, Claimant underwent right ankle and foot surgery consisting of an arthroscopy with extensive debridement, Brostrom-Gould stabilization, and tenolysis by Dr. Johnson. (Ex. D, p. 27) Claimant then received post-operative care from Dr. Johnson and Dr. Lakin. (Ex. F, 2, 3, 4)

3. On August 29, 2017, Dr. Johnson diagnosed osteochondritis dissecans of the right ankle and right foot. (Ex. 3, p. 99). He did not provide any diagnoses beyond the right foot. On that date, Dr. Johnson recommended Claimant follow-up with Dr. Lakin for MMI determination and a possible impairment rating. On that date, the physician's notes for Claimant state: "Denies back pain." (Ex. 3, p. 98)

4. On October 1, 2017, Claimant wrote a five-page letter which he presented to Dr. Lakin at his impairment rating evaluation. (Ex. 2, pp.24-28). In his letter, Claimant lists a number of activities that he either cannot do, or is limited in doing, but makes no mention of having any issues with pain or swelling beyond his right foot. At no point is back pain mentioned as an issue.

5. On October 3, 2017, Claimant went through a Functional Capacity Evaluation ("FCE") for the diagnosis of "right ankle pain." (Ex. E, p. 30). The provider's notes indicate that the Patient's complaints that day were listed as "continued right ankle and foot pain." There was no indication within the FCE report that Claimant was having any issues to any body part beyond his right foot and ankle. (Ex. E).

6. On October 6, 2017, Claimant was seen by Dr. Lakin for an impairment rating. (Ex. F). On that date, Dr. Lakin documented Claimant's mechanism of injury, his initial complaints, and his treatment course. (Ex. F at pp. 43-44) There was no documentation of any issues or treatment beyond the right foot and ankle. Dr. Lakin performed a physical examination, noting only findings in Claimant's right foot and ankle regions. (*Id* at 45-46)

7. Dr. Lakin's 'assessments' at MMI were "Crushing injury to right lower leg. Right ankle status post arthroscopic debridement, primary repair of anterior talofibular and calcaneofibular ligaments. Right sural and right deep peroneal nerve injury." (Ex. F, p. 46). There is no reference in this report that Claimant had any issues or complaints of pain or dysfunction beyond his right foot and ankle regions. Dr. Lakin's impairment rating was entirely related to Claimant's right foot and ankle, including the nerves serving the right foot. (Ex. F, pp. 47-51). Claimant was assigned a 21% right lower extremity rating, which *if converted,* would convert to an 8% whole person rating. *Id.*

8. On the date of his impairment rating evaluation, Claimant filled out a pain diagram documenting for Dr. Lakin where his residual pain issues existed. (Ex. F, p. 52). Claimant's pain diagram identified issues only in his right foot and ankle area, with no residual issues in his left hip, left ankle, or low back. *Id.*

9. Respondents requested a Division Independent Medical Evaluation ("DIME"). Dr. Lloyd Thurston was selected as the DIME physician for this claim. (Ex. G). Dr. Thurston saw Claimant on January 9, 2018, and issued a report dated March 4, 2018. *Id.* In his report, Dr. Thurston identified Claimant's primary complaint as "constant pain in right ankle", his secondary complaint as "limited usefulness of the right foot/ankle". He also commented that Claimant had "continued nerve pain, tightness, and pain in the ankle." (*Id* at p. 55)

10. The DIME report made no reference to Claimant injuring his back in the initial injury, *or as the result of an altered gait.* Dr. Thurston documented Claimant's reported "current symptoms," which were limited to his right foot and ankle. (Ex. G, p.57), Likewise, his physical examination identified only findings in Claimant's right foot and ankle regions. Like Dr. Lakin, Dr. Thurston opined Claimant was at MMI on Oct 6, 2017. He assigned a 20% lower extremity rating for right foot range of motion deficits, arthritis, and nerve damage, which *if converted*, would convert to an 8% whole person rating. (*Id* at pp.60-62)

11. As part of the DIME process, Claimant filled out a pain diagram. (Ex. G, p. 63). Once again, Claimant only identified issues in his right foot and ankle areas.

12. On March 13, 2018, Insurer filed a Final Admission of Liability admitting to Dr. Thurston's right lower extremity scheduled impairment rating of 20% lower extremity. (Ex. H). Maintenance care was admitted within that admission.

13. On March 22, 2018, Claimant filed this Application for Hearing, exclusively on the issue of "conversion." (Ex. I). Claimant did not attempt to overcome any of Dr. Thurston's DIME opinions, including his MMI determination, or his opinion that Claimant's only ratable body parts were Claimant's right foot and ankle.

14. On May 17, 2018, Claimant answered interrogatories served on him by Respondents. (Ex. L) In response to the interrogatory requesting why Claimant believes his scheduled rating should be converted to a whole person rating, Claimant made no mention of having any pain or dysfunction in his low back, left hip or left ankle regions. Instead, Claimant references the provisional whole person rating provided by Drs. Lakin and Thurston, and refers the reader to their medical reports. (Id. at p.110)

15. At hearing, Claimant testified that he injured his back at the time of the injury. He further testified that at his visits with Dr. Lakin or Dr. Lakin's assistant he would occasionally mention that his back, hip or ankle were bothering him because of favoring his injured foot, but they would change the subject or just move on. He felt his providers were focusing on his right foot, and glossing over the other issues.

16. Claimant stated that during Dr. Lakin's impairment rating examination, Dr. Lakin did perform a more thorough exam than did Dr. Thurston. He acknowledged that he completed the pain diagram on the date of MMI, and on that date he did not have any problems beyond his right foot. Claimant did not recall whether he told Dr. Thurston about having back, hip or left ankle problems during the DIME evaluation. The symptoms he described were all with regard to his right ankle/foot, and that he did not specifically identify symptoms to his back, hip or left ankle. Claimant further admitted that when he saw Dr. Thurston for the DIME, he completed another pain diagram, and he did not indicate he had any issues beyond his right foot and ankle at that time.

17. At hearing, Claimant did recount the issues he currently suffers from, and reiterated the activities referenced in his letter to Dr. Lakin are either restricted or not possible to perform.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, et seq., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-

of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the Claimant nor in favor of the rights of Respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

B. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

Conversion from Scheduled Impairment to the Whole Person

C. Section 8-42-107, C.R.S., sets forth two different methods of compensating medical impairment. Subsection (2) provides a schedule of disabilities and Subsection (8) provides a DIME process for whole person ratings. The threshold issue is application of the schedule. This is a determination of fact based upon a preponderance of the evidence. When a claimant's injury is listed on the schedule of disabilities, the award for that injury is limited to a scheduled disability award. Section 8-42-107(1)(a), C.R.S. However, a claimant may establish that his injury has resulted in "functional impairment" beyond the schedule enumerated in C.R.S. §8-42-107(2)(a); thus, entitling him to "conversion" of the scheduled impairment to impairment of the whole person. This is true because the term "injury" as used in § 8-42-107(1)(a)-(b), C.R.S., refers to the part or parts of the body which have been impaired or disabled, not the situs of the injury itself or the medical reason for the ultimate loss. *Walker v. Jim Fucco Motor Co,* 942 P.2d 1390 (Colo. App. 1997); *see also Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo. App. 1996).

D. "Functional impairment" is distinct from physical (medical) impairment under the *AMA Guidelines.* As noted above, the site of functional impairment is not necessarily the site of the injury itself. The site of functional impairment is that part of the body which has been impaired or disabled. *Strauch, supra*. Physical impairment relates to an individual's health status as assessed by medical means. Disability or functional impairment, on the other hand, pertains to a person's ability to meet personal, social, or occupational demands, and is assessed by non-medical means. Consequently, physical impairment may or may not cause "functional impairment" or disability.

E. Functional impairment need not take any particular form. *See Nichols v. LaFarge Construction, W.C. No. 4-743-367 (October 7, 2009); Aligaze v. Colorado Cab Co., W.C. No. 4-705-940 (April 29, 2009); Martinez v. Alberston's LLC, W.C. No. 4-692-947 (June 30, 2008).* "Referred pain from the primary situs of the industrial injury may establish proof of functional impairment to the whole person." *Hernandez v. Photronics, Inc., W.C. No. 4-390-943 (July 8, 2005).* Nonetheless, mere symptoms of pain do not automatically rise to the level of a functional impairment. To the contrary, there must be evidence that such pain limits or interferes with Claimant's ability to use a portion of his body to be considered functional impairment. See *Mader v. Popejoy Construction Co., Inc.*, W.C. No. 4-198-489 (August 9, 1996), aff'd *Popejoy Construction Co., Inc.,* (Colo. App. No. 96CA1508, February 13, 1997).

F. In this case the ALJ concludes that conversion of Claimant's admitted to scheduled lower extremity impairment rating to whole person impairment rating has not been shown. The medical evidence at MMI-and thereafter-clearly documents that Claimant's residual functional disability and impairment is entirely in his right foot region. This is documented clearly in the MMI and post MMI medical records of Dr. Farnsworth, the FCE, Dr. Lakin and Dr. Thurston. Additionally, Claimant filled out two separate pain diagrams, one at MMI, the other on the date of his DIME evaluation. Both documented that his only residual issues at and after MMI were in his right ankle and foot region.

G. Claimant argues he now suffers from low back functional impairment, left hip functional impairment, and left ankle impairment. Indeed he might. However, the ALJ is not persuaded that the symptoms he now complains of are causally related to his original ankle injury. Nor is the ALJ persuaded that the issues he now complains of are permanent in nature. There is simply an insufficient testimonial record to conclude that he suffers from anything but intermittent back and hip pain; the available medical reports don't even suggest that much. The evidence demonstrates that Claimant's complaints and treatment have been limited to his right foot and ankle. The ALJ therefore concludes that Claimant has not shown, by a preponderance of the evidence, that he has sustained residual "functional impairment" of bodily function which is not listed on the schedule of disabilities, which would warrant conversion to the whole person.

ORDER

It is therefore Ordered that:

1. Claimant's Application to convert his extremity impairment rating to the whole person is denied.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 4, 2018

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

I. Whether Claimant has established by a preponderance of the evidence that the left hip arthroscopy recommended by Dr. Snyder is reasonable, necessary, and related to her work injury.

II. Whether Claimant's Average Weekly Wage is $116 or $514.90.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On August 31, 2017, Claimant sustained an admitted injury to her left hip while employed on behalf of Respondents as a Patient Care Technician.

2. On August 31, 2017, Claimant obtained medical treatment and was provided crutches. Due to her work injury, Claimant was unable to continue performing her regular job duties. (Clmt. Ex. 3, p. 51-52; Clmt. Ex. 3, pg. 7).

3. Respondents issued a General Admission of Liability on October 19, 2017, and provided medical treatment to address Claimant's left hip injury. (Clmt. Ex. 3, p. 7). At that time, Respondents also admitted for Temporary Total Disability ("TTD") benefits as of September 1, 2017, and an Average Weekly Wage ("AWW") of $514.90. *Id*.

4. Claimant's description of the August 31, 2017, incident has remained fairly consistent across the medical record and her testimony at hearing. Therefore, the ALJ finds Claimant to be credible.

5. On August 31, 2017, Claimant was at work on that date and was standing in a lunch line to get food for her patients with her weight on her right leg; when she shifted her weight to her left leg and twisted as she reached to get some food for a patient, she felt a pop and immediate pain in her left hip and across the region of her left groin. (Clmt. Ex. 5 at 23, 26; Clmt. Ex. 4 at 15, Resp. Ex. H at 38, HT., p.15-16). Claimant reported feeling her left hip pop out of place and this was evidently accompanied by acute severe pain and an inability to bear weight on the left leg. (Resp. Ex. H, p. 38).

Left Hip Arthroscopy

6. Claimant was first seen at UC Health on August 31, 2017. (Clmt. Ex. 8, pp. 35-51). Claimant would continue treating through UC Health as her Authorized Provider for the duration of her medical treatment, where her treating physician was Patrick Quigley, M.D. *Id*. at 52. Dr. Quigley referred Claimant for an orthopedic evaluation

on September 7, 2017. *Id*. Claimant was given crutches to assist with walking and restricted to sedentary duty. *Id*.

7. Claimant first presented to the Orthopaedic and Spine Center of the Rockies on September 13, 2017, for an initial evaluation where she was seen by Mark McFerran, M.D. (Clmt. Ex. 5, p. 23-24). Dr. McFerran did not find evidence of a traumatic event, rather indicating the likelihood of "a hip flexor tear, a hip flexor strain, or irritation of the hip with bursitis *or a labral tear in the hip*." *Id*. at 24 (emphasis added). Dr. McFerran recommended a left hip MRI. *Id*.

8. On October 22, 2017, Claimant underwent a left hip MRI. (Clmt. Ex. 9, p. 84). The results of this imaging were interpreted by Derek Burdeny, M.D. *Id*. Per the reading of Dr. Burdeny, the MRI revealed evidence of chondral delamination with "mild reactive marrow edema and small subcortical cyst deep to the subchondral plate of the anterior superior acetabulum." *Id*. Notably, Dr. Burdeny also found Claimant's acetabular labrum to be intact. *Id*.

9. Claimant returned to Dr. McFerren on October 30, 2017. (Clmt. Ex. 5, p. 25). Dr. McFerren noted that "the labrum itself looks pretty good" based upon his review of the MRI findings, but nonetheless noted that Claimant did have an injury to the articular cartilage in her left hip when she stepped on her foot. *Id*. Based upon that conclusion, Dr. McFerren opined that Claimant "probably needs a hip scope." *Id*. Dr. McFerren referred Claimant to Joshua Snyder, M.D. in order to obtain his opinion of the MRI results. *Id*.

10. Claimant was examined by Dr. Snyder on October 31, 2017. On physical examination, Dr. Snyder noted the following:

> A pleasant female alert and oriented x3, cooperative with the examination in no apparent distress. An uncomfortable hip is noted. She walks with an antalgic gait and utilizes crutches placing minimal weight on the left lower extremity. She has decreased range of motion and flexion up to about 100, internal rotation to 10, external rotation to 15 with severe pain and a positive impingement. Positive FABER and positive snapping hip.

(Clmt. Ex. 5, pp. 26-27).

11. Contrary to Dr. Burdeny's assessment, Dr. Snyder found edema within the superior acetabular dome, as well was stating that "there could be a small loose body or possible an os acetabui, which appears to be unstable with underlying articular cartilage damage. A small labral tear is noted as well." *Id*. at 26. Dr. Snyder subsequently refered to a "possible small labral tear," indicating that his concern was that Claimant also suffered from a loose body, chondral injury, and impingement in the left hip. *Id*. Dr. Snyder concluded that Claimant was unlikely to improve with conservative management, and that physical therapy could worsen Claimant's chondral injury should the identified loose body move within the joint. *Id*. Accordingly, Dr. Snyder recommended a "left hip arthroscopy, removal of loose body

or os, possible microfracture, possible labral repair and decompression of the acetabular and femoral neck lesions." *Id*. at 26-27.

12. There is no indication made by Dr. Snyder in his report that Claimant's pain complaints, symptoms, MRI findings, and physical examination were non-physiological or that there were concerns about Claimant suffering from a somatization disorder.

13. Dr. Snyder's surgical request was denied on November 10, 2017, citing a need for Dr. Quigley's assessment as to the relatedness of the surgery to Claimant's work injury. (Resp. Ex. R, p. 202). Dr. Quigley's causation assessment, completed on November 20, 2017, was inconclusive as to the relatedness of the surgery. (Resp. Ex. Q, pp. 195-96). Dr. Quigley found Claimant's diagnosis of left hip sprain to be "neither non-industrial nor industrial" as he indicated that the reported mechanism of injury "is not one that would have been expected to result in sufficient stress on the left hip to cause a sprain." *Id*. at 195. Dr. Quigley finally demurred that the "presence of industrial conditions has yet to be determined" and indicated that whether Claimant's injury was industrial or non-industrial would be best left to an independent reviewer rather than a treating physician "in order to avoid a conflict of interest." *Id*. at 196.

14. On January 15, 2018, Claimant attended an IME with Jack Rook, M.D. (Clmt. Ex. 4, pp. 15-22). Dr. Rook reviewed the medical record, took a patient history from Claimant, and performed a physical exam. *See id*. Dr. Rook concluded that based upon the history he obtained from Claimant, she must have sustained an acute injury on August 31, 2017. *Id*. at 21. In support of this conclusion, he cited Claimant's lack of relevant medical history or prior acute injuries to the left hip, Claimant's lack of physical limitations prior to that date, Claimant's not requiring medical attention for her left hip prior to that date, and the lack of other acute events around the same period which might provide an alternate explanation for the injury. *Id*. at 21-22. Dr. Rook opined that Claimant would require further medical treatment, "which in this case will be surgical in nature." *Id*.at 22. Dr. Rook further cautioned that should Claimant wait too long for the necessary treatment, she would be at risk for the development of accelerated arthritis within the left hip that would necessitate a future total hip replacement. *Id*.

15. On March 6, 2018, Claimant attended an IME on Respondents' request with Lawrence Lesnak, M.D. (Resp. Ex. C, pp. 7-19). Dr. Lesnak placed great emphasis upon Claimant's subjective pain complaints, as well as what he described as "multiple pain behaviors." *Id*. at 43. Dr. Lesnak opined that Claimant likely suffers from a somatic pain disorder, as he did not find her subjective pain complaints to be correlative with what he described as a lack of findings on imaging tests. *Id*. at 45. Dr. Lesnak additionally based this conclusion upon Claimant's "high level of somatic pain complaints" based upon her responses to Dr. Lesnak's psychosocial screenings that Claimant completed prior to the appointment. *Id*. Those screenings were not provided as part of Dr. Lesnak's report, nor were they submitted into the record elsewhere.

16. Despite the claim being admitted, Dr. Lesnak repeatedly emphasized his conclusion that Claimant did not sustain an injury on August 31, 2017. *E.g., id*. at 45. Dr. Lesnak was not convinced that Claimant shifting her weight from the right leg to the left in order to get some food for a patient would be sufficient to cause an injury of the kind and pain severity described by Claimant. *Id*. The presence of an injury and a surgery's relation to it notwithstanding, Dr. Lesnak in fact argued against providing any surgery for Claimant, finding her high level of somatic pain complaints rendered her not a surgical candidate "regardless of causality." *Id*.

Average Weekly Wage

17. On August 28, 2017, Claimant accepted a what was called a "new" position with Employer, as a Patient Care Technician, but on a PRN (as needed) basis and signed a job offer to that effect. (Resp. Ex. G, p. 36). This would be the same job Claimant was performing when she got hurt, (i.e., Patient Care Technician), but she would be working fewer hours. Claimant testified that she took this new position in order to work on an associate's degree set to begin September 4, 2017, with Pima Medical Institute that would ultimately result in a degree in radiology. Claimant testified that pursuant to that associate's program, she would have classes from 8 a.m. through noon Monday through Friday, with six to eight hours of homework daily. Claimant testified that this program also featured practical aspects where she would have to be able to stand 80% of the time and also assist with moving residents.

18. Claimant testified that she did not realize that she was accepting a position as a PRN (as needed basis), but rather thought that she was accepting merely part-time employment to be scheduled on Saturdays, and that she would work 12 hours each Saturday.

19. Claimant testified that she intended to maintain both her associate's program and her ongoing work for Employer for the duration of her associate's program.

20. The PRN position began September 10, 2017, and Claimant was to be paid $14.50 per hour. Per the testimony of Amy Lauridsen, the employees in that position who work on weekends would receive a $1.50 shift differential, increasing her rate of pay to $16 per hour. The shifts Claimant was set to work would be over the course of an eight hour work day, coming to a total of $136. Working one day per week, Claimant would thus have an average weekly wage of $136. Moreover, Ms. Lauridsen testified that Claimant's hours, as a PRN - as needed basis – were not guaranteed, and that Claimant would be called in as staffing is needed based on other staffing levels. Therefore, the ALJ finds that on the one hand there was no guarantee Claimant would be scheduled to work every Saturday, but on the other hand there was no guarantee that Employer would not request Claimant to work more than every Saturday based on their staffing needs.

21. After she began the PRN position, Claimant was assigned modified duty that accommodated her work restrictions due to her work injury. This modified duty was provided through February 24, 2018. Claimant testified that Employer informed her

that they would be unable to continue accommodating these restrictions and that she would need to go on medical leave. Claimant has not worked since that date.

22. Claimant was asked to withdraw from Pima Medical Institute associate radiology program on April 26, 2018, as she was unable to physically perform the tasks required of her as part of that program. Claimant testified that her director, Selina Muccio, told her that she needed to withdraw from the program due to her physical limitations. Therefore, Claimant withdrew from the program.

23. As of August 31, 2017, the date of the work injury, Claimant's work injury precluded her from performing her regular job duties as a Patient Care Technician on a full-time or part-time basis.

24. As of August 31, 2017, Claimant's work injury diminished her earning capacity because her injury prevented her from being able to perform her job duties as a Patient Care Technician or any other job which required similar physical abilities.

25. Claimant's work injury also precluded Claimant from completing her associate degree in radiology and she withdrew from such the program as of April 26, 2018.

Testimony

26. Ms. Amy Lauridsen testified at the hearing. Ms. Lauridsen testified, consistently with Claimant's testimony, that Claimant had accepted a position with Employer at reduced hours in order to begin working on a radiology program. Ms. Lauridsen testified that Claimant was set to work one day per week as a PRN, which she described as an as-needed employee who would work when required based on hospital staffing at the time. While she did not confirm Claimant's statement that those days were "guaranteed" to fall on Saturdays, she did note that Claimant evidently worked Saturdays consistently once the change in scheduling and employment status occurred. Ms. Lauridsen emphasized that schedules are not promised but did indicate that they would accommodate an employee's desire to work weekends as those days typically see fewer volunteers for open shifts.

27. Dr. Lawrence Lesnak testified by telephone at the hearing. Dr. Lesnak testified consistent with his report, emphasizing his conclusion that Claimant did not suffer an acute injury on August 31, 2017, and that Claimant does not require any form of surgery for any incident that occurred on that date. Despite the actual wording of Dr. Snyder's surgical request, Dr. Lesnak testified that the surgical request was actually based upon Claimant's subjective pain complaints and he further testified that no surgery should be provided upon that basis. Dr. Lesnak additionally testified that Claimant presented to her IME in a wheelchair, contrary to her normal use of crutches referenced elsewhere in the record.

28. In his testimony, Dr. Lesnak placed significant weight upon Dr. Burdeny's MRI findings which did not identify acutely abnormal pathology. In his estimation, Dr. Burdeny's initial MRI readings are to be given greater weight than those of Dr. Snyder, who subsequently identified pathology that rendered Claimant a surgical candidate. Dr. Lesnak found the suggestion that Claimant may require a labral repair entirely inappropriate, as he strongly emphasized that Claimant does not have a

labral tear. Based upon Dr. Burdeny's status as a radiologist, Dr. Lesnak indicated that he was far more inclined to trust those initial findings over Dr. Snyder's subsequent reevaluation which included physically examining Claimant and testing Claimant's hip joint in which he found Claimant had:

(i) a positive test result for impingement,

(ii) a positive FABER test, and

(iii) a positive snapping hip test.

29. On cross examination, Dr. Lesnak refused to concede that Dr. Snyder's surgical request was based upon Dr. Snyder's identification of acute pathology. Dr. Lesnak's responses to cross examination were evasive and he consistently chose not to respond directly to questioning, instead reverting back to his conclusions as to the surgical request rather than the question actually put to him at the time.

30. Dr. Lesnak was also asked whether he was a trained psychologist or psychiatrist. Instead of answering the direct question, Dr. Lesnak stated that: "I am not a board certified psychologist or psychiatrist, but I screen – or have the patients that I evaluate undergo the psychologic screens all the time. Dr. Lesnak was further asked what set of criteria he was relying upon in determining that Claimant could be suffering from a somatoform disorder. Dr. Lesnak stated that "the psychological screen says that she did just prior to my evaluation where she reported a high level of somatic complaints." (HT., pg. 74)

31. Dr. Lesnak is not a trained psychiatrist or psychologist. In addition, Dr. Lesnak admitted that that he is not familiar with the criteria for a somatic pain disorder listed in the most recent edition of the Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition. Dr. Lesnak merely indicated that he requests those workers he examines to complete psychosocial screenings such as the ones completed by Claimant and makes his assessment on the basis of those screenings. Despite his admitted lack of familiarity with the criteria for a somatic pain disorder, Dr. Lensak concluded in his report that Claimant likely has an underlying somatic – somatoform – disorder, and suggested Claimant was embellishing or exaggerating her symptoms due to such disorder. In essence, Dr. Lesnak used the alleged results of the psychological screening tool as a sword to discredit Claimant and as a shield from having to personally demonstrate any expertise in diagnosing such a disorder.

32. Moreover, absent from Dr. Lesnak's report or testimony is any explanation why his physical examination did not include the physical tests conducted by Dr. Snyder, such as an impingement test, a FABER test, or a snapping hip test. Moreover, if he was unable to perform such testing, Dr. Lesnak did not address why the results of the testing noted by Dr. Snyder did not support Dr. Snyder's findings, opinions, and recommendation for surgery.

33. Claimant testified live at hearing. In addition to the testimony mentioned above, Claimant also testified as to the condition of her hip prior to August 31, 2017. Claimant testified that she had never experienced a problem with her left hip akin to the pain she began to experience on that date, denied any prior acute injuries to the joint, and indicated that since her injury her prior level of functionality has not

returned. Claimant testified that she has ridden horses for years until the August 31, 2017, incident, at which point the pain in her hip precluded her from returning to horseback riding. She further testified that prior to that date she had never experienced pain in her left hip or experienced any other acute injury while riding horses.

34. On cross examination, Claimant conceded that she arrived to her IME with Dr. Lesnak in a wheelchair. She explained that this was because she had slipped and fallen on ice while using her crutches on February 4, 2018. Claimant testified that she slipped and landed on her left side, causing an increase in pain and reduced ability to bear weight on her left leg.

35. The parties took the deposition of Dr. Rook after the hearing on July 31, 2018. (Rook Depo. pp. 1-37). Dr. Rook testified consistent with his report that he found Claimant to have sustained an acute injury on August 31, 2017, and concluded that Claimant would require the surgery recommended by Dr. Snyder to address that injury. *See id*. at 9. Dr. Rook found the reading of Claimant's MRI by Dr. Snyder to be persuasive, finding that Claimant's reported mechanism of injury would be consistent with her hip joint popping out of place, causing the bony injury cited on the MRI, as well as damaging her labrum. *Id*. at 10.

36. Dr. Rook found that Dr. Snyder's interpretation of the MRI showed significant pathology for a patient of Claimant's relatively young age. (Rook Depo., p. 12). Combined with Claimant's physical limitations in the aftermath of her August 31, 2017, injury and her reported pain, Dr. Rook found surgery to be the most reasonable course of treatment available. *Id*. Explaining his report's conclusion that surgery should not be delayed lest Claimant risk development of accelerated arthritis, Dr. Rook explained that allowing an unstable joint to continue moving uncorrected would cause further damage to the soft tissue in the joint, finding it "prone to accelerate a breakdown." *Id*. at 11.

37. Contrary to the opinions of Dr. Lesnak, Dr. Rook did not find his physical examination of Claimant troubling. (Rook Depo, p. 15). In fact, Dr. Rook considered Claimant's behaviors, reported pain, and limited range of motion to be consistent with the MRI findings. *Id*. Although their opinions differed markedly on this point, Dr. Rook testified that he reviewed neither Dr. Lesnak's report nor his testimony at hearing in reaching those conclusions. *Id*. at 18. Accordingly, Dr. Rook concluded that Dr. Snyder's request for surgery was reasonable, necessary, and related to the August 31, 2017 admitted injury. *Id*. at 15-16.

38. On cross examination, Dr. Rook noted that Dr. Snyder's request for surgical authorization was based at least in part upon possible pathology identified to be operated upon arthroscopically. (Rook Depo., p. 27). However, he noted that this is common when performing arthroscopies, as "[a] lot of times you can't tell until you get in there" what specific pathology will require operation. *Id*. Dr. Rook also opined that MRI interpretation often varies between the readings of orthopedists and radiologists, as had been the case with Dr. Snyder and Dr. Burdeny, respectively. *See id*.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. § 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1).

The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

Medical Benefits

Claimant has the burden to prove her entitlement to medical benefits by a preponderance of the evidence. C.R.S. §8-43-201. Respondents are only liable for the medical treatment that is reasonable and necessary to cure and relieve the work-related injury. C.R.S. §8-42-101(1)(a).

Claimant is not entitled to medical care that is not causally related to her work-related injury or condition. As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 10, 2007), "A showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary." Where the relatedness, reasonableness or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is

causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.,* W.C. No. 4-117-758 (ICAO April 7, 2003).

The ALJ concludes that Claimant has established by a preponderance of the evidence that the left hip arthroscopy requested by Dr. Snyder is reasonable, necessary, and related to Claimant's August 31, 2017 work injury.

The ALJ does not find Dr. Lesnak's opinions on this issue to be credible or persuasive. While portions of Dr. Lesnak's report and testimony may be well-founded in the evidence, his evasive testimony and particularly his delving into psychological and psychiatric matters to justify denying surgery were not found to be credible based on the medical record and testimony as a whole. There is no doubt that Claimant experienced pain as a result of her admitted injury, but the surgical request by Dr. Snyder did not refer to her pain as being the basis of his request. To the contrary, Dr. Snyder identified pathology and findings on physical examination that would require surgical intervention in order to correct.

Given that Claimant's pain is evidently explained by the presence of such pathology, labeling Claimant's pain complaints as forming a somatic pain disorder is simply inaccurate – that disorder characterizes pain whose source cannot be explained by objective findings, which is not the case here. Additionally, Dr. Lesnak made no attempt to explain how such a disorder would present itself only after a medically documented acute onset of pain and inability to bear weight upon the left leg. Moreover, Dr. Lesnak also evidently found this somatic disorder to be sufficiently serious to recommend against Claimant receiving surgery regardless of whether or not the need for such surgery was related to the August 31, 2017, injury. None of Claimant's treating physicians shared this concern, nor did any even address such a problem as being relevant.

The ALJ finds the opinions of Dr. Rook and Dr. Snyder to be persuasive. In his testimony, Dr. Rook stated that he found Claimant's physical examination to be entirely consistent with the MRI findings cited by Dr. Snyder, and that conclusion more adequately accounts for the evidence presented. Dr. Rook's report actually accounts for Claimant's acute onset of pain and instability on August 31, 2017, and deals specifically with the record generated subsequent to that event. Although Dr. Rook did not comment directly upon the opinions of Dr. Lesnak, one can see that he does not find the idea of a somatic pain disorder in Claimant's case to be a reasonable explanation. Moreover, neither Dr. Rook nor any of Claimant's treating physicians found Claimant's subjective pain complaints to be excessive under the circumstances, nor were those complaints focused on as possibly disqualifying her from being a good candidate for surgery. Additionally, as one of Claimant's treating physicians, the ALJ places significant weight upon the opinion of Dr. Snyder. Neither Dr. Rook nor Dr. Lesnak are orthopedists, and as such his opinion as to whether Claimant would require surgery is based upon his direct practice.

While the ALJ finds many of Dr. Lesnak's opinions to have been given in good faith, the manner in which he presented them and the reasons he cited as support for that position more closely resemble an attempt to deny surgery rather than to come to a factual determination of the issue. In comparison, the ALJ finds Dr. Rook's testimony

and report to be more consistent with the evidence both available in the record and elicited at hearing. Taken together, the opinions of Dr. Snyder and Dr. Rook are consistent with the record that Claimant experienced an acute medical event on August 31, 2017, that caused the immediate onset of pain and a marked change in Claimant's physical abilities from that date that have continued unabated ever since, and necessitated the need for surgery.

Therefore, the ALJ concludes Claimant has established by a preponderance of the evidence that the surgery recommended by Dr. Snyder is reasonable, necessary, and related to Claimant's August 31, 2017, work accident and injury.

Average Weekly Wage

The calculation of an injured worker's AWW is essential to determine the award of workers' compensation benefits. Section 8–42–102(1) describes the AWW as "the basis upon which to compute compensation payments." § 8–42–102(1), C.R.S. For example, permanent total and temporary disability benefit awards are calculated as a certain percentage of the worker's AWW subject to weekly maximum benefits specified in the statute. §§ 8–42–105(1), –106(1), –111(1); *see also* § 8–42–107(8)(d) (establishing permanent partial disability benefit awards as the percentage of the AWW multiplied by various factors including the medical impairment rating). *Avalanche Indus., Inc. v. Clark*, 198 P.3d 589, 591–92 (Colo. 2008), *as modified on denial of reh'g* (Jan. 20, 2009), *overruled on other grounds in Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010).

By statute, an injured worker's average weekly wage (AWW) is ordinarily calculated based on their earnings at the time of the injury. § 8-40-201(19)(a); § 8-42-102(2). However, § 8-42-102(3) grants the ALJ substantial discretion to modify the AWW if, for any reason, the statutorily prescribed methods will not fairly compute the wage in view of the particular circumstances of the case. *Pizza Hut v. Industrial Claim Appeals Office,* 18 P.3d 867 (Colo. App. 2001). The overall objective in calculating the AWW is to arrive at a "fair approximation of the claimant's wage loss and diminished earning capacity." *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993).

The testimony elicited at hearing indicated that prior to her injury, Claimant received an average wage of $514.90 for her work on behalf of Employer as a Patient Care Technician. Claimant, however, wanted to go to school to earn an associate degree in radiology. Days before her injury, Claimant accepted a position with Employer as Patient Care Technician, the same job, but on a PRN or as needed basis. At the time she accepted the part time employment, Claimant expected that she would net approximately one day of work per week, which would result in lower earnings given the reduction in hours that would accompany such a change to as-needed employment status. However, the reason Claimant accepted this position is because Claimant wanted to, and subsequently did, begin a program whereby she could earn an associate degree in radiology. However, due to the admitted injury Claimant sustained on August 31, 2017, Claimant was unable to continue performing her regular job duties. In addition, due to her work injury, Claimant was unable to continue working for Employer performing modified job duties, even on a PRN basis, and was unable to continue her

radiology program and obtain an associate degree. As such, after February 24, 2018, Claimant was unable to continue earning a wage with employer performing modified duty. And, after April 26, 2018, Claimant was also unable to continue her education and obtain an associate degree to further her career due to the work injury.

Furthermore, although Claimant anticipated going to school and working one day a week before she was injured, the work injury was disabling and prevented Claimant from being able to perform the job she was doing when she got hurt as well as the hours she was working each week. Therefore, the work injury and her restrictions, i.e., disability, diminished Claimant's ability to obtain and maintain the type of employment she had at the time of the accident and earn the wages she was earning at the time of the accident. Although Claimant anticipated only working one day a week, the work injury diminished Claimant's physical ability to work more if her circumstances changed and she wanted to, or needed to, work more than one day a week.

As Claimant's work restrictions and loss of both wages and her educational opportunity are linked inexorably to her admitted injury which prevents Claimant from being able to perform her regular job duties for any period of time, admitting to the lower rate would not accurately account for the wage loss and diminished earning capacity Claimant has suffered due to her work injury. Respondents have failed to establish and convince the ALJ that Claimant's AWW should be reduced based on the facts and circumstances of this case. Accordingly, the ALJ concludes that Claimant's AWW is $514.90 as initially admitted.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall pay for the left hip arthroscopy requested by Dr. Snyder, subject to the Medical Fee Schedule.
2. Claimant's Average Weekly Wage is $514.90.
3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding

procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 21, 2018

/s/ Glen Goldman

_____

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has proven by a preponderance of evidence that she sustained a compensable left knee injury arising out of and in the course and scope of her employment on June 27, 2016.

2. Whether Claimant is entitled to temporary total disability benefits (TTD) from May 5, 2017, and ongoing until terminated by law.

STIPULATION OF FACT

The parties stipulate and agree that Claimant's average weekly wage is $806.52.

FINDINGS OF FACT

1. Claimant is a 62 year old female who worked as a shuttle driver for Employer. Claimant worked for Employer for ten years. On June 27, 2016,, she was loading a vehicle when her foot got caught on a passenger's luggage and she tripped and fell forward onto her left knee. Claimant called her manager and returned to Employer's property at the airport to report the incident.

2. Claimant was subsequently referred to Concentra Medical Clinic and was initially seen by Dr. Scott Richardson on June 29, 2016. Claimant denied any prior left knee injuries to Dr. Richardson. Dr. Richardson diagnosed Claimant with a left knee contusion, took x-rays and ordered an MRI without contrast.

3. The x-rays revealed advanced tricompartmental osteoarthritic changes with joint effusion. No dislocation was seen. Dr. Richardson anticipated maximum medical improvement (MMI) on October 1, 2016.

4. The MRI was completed on July 1, 2016, and revealed a chronic ACL tear along with a chronic macerated tear of the meniscus and/or prior partial meniscectomy. No fractures or other acute findings were identified on the MRI.

5. Prior to the June 27, 2016, incident, Claimant was involved in a motor vehicle accident on July 25, 2013 in which she injured her left knee when hitting the dashboard. At the time, Claimant treated with her primary care providers, Dr. Steven Archer and Panorama Orthopedic & Spine Center (Panorama).

6. Claimant was seen by Dr. Jared Foran with Panorama on August 15, 2013, and reported severe pain in the left knee that occurred constantly. Pain was aggravated by bending, climbing stairs, movement, walking and standing. Dr. Foran noted that Dr. Archer had previously given Claimant a cortisone injection which had temporarily helped with symptoms but Claimant had received no other treatment. Dr. Foran obtained x-rays which revealed severe

bone-on-bone arthritis in the medial compartment of the bilateral knees. She also had radio densities in the medial aspect of her proximal tibias consistent with possible stress reaction. Dr. Foran administered a second cortisone injection for diagnostic and therapeutic purposes which provided almost complete relief. Dr. Foran concluded that a substantial portion of Claimant's pain and maybe all of her pain was coming from her osteoarthritis.

7. He discussed pain control via anti-inflammatories, injections, weight loss and possible total knee replacement.

8. On June 25, 2014, Claimant was referred by Dr. Archer to Dr. Jeffrey Sabin at Precision Orthopedics for her low back and right leg. These records documented probable degenerative joint disease (DJD) n Claimant's right knee, as well.

9. After completion of the July 1, 2016, MRI, Claimant was referred to orthopedic surgeon Dr. Mark Failinger for further evaluation. Dr. Failinger evaluated Claimant on July 14, 2016, and reviewed her MRI and x-rays. He diagnosed Claimant with left knee severe DJD, tricompartmental and left knee contusion. He remarked that "this is end-stage arthritis unfortunately. She knows she is headed for a knee replacement. I am amazed that she has not had a knee replacement up to this point given the severity of arthritis." After discussing the various treatment options, he injected Claimant with cortisone for the knee pain.

10. Claimant followed up with Dr. Failinger on September 1, 2016. At this appointment, Dr. Failinger noted that Claimant was "confused" about what to do. He explained the various treatment options regarding her arthritis and that a total knee replacement would most likely not be covered under workers' compensation. Dr. Failinger also noted that Claimant had tried therapy and now wanted to proceed with "something else including viscosupplementation." Dr. Failinger again commented that Claimant had "end stage arthritis" and performed a second cortisone injection.

11. Claimant also treated with Dr. Archer after the June 27, 2016, incident. Claimant was initially seen on July 22, 2016, for what Dr. Archer described as a second opinion for left knee injury. Dr. Archer opined that Claimant needed to see an orthopedist for total knee arthroplasty of the left knee because she had end stage DJD aggravated by fall and torn meniscus.

12. Dr. Archer next saw Claimant on January 18, 2017. This appointment followed an episode of vaginal bleeding and a second fall onto the left knee. He noted a large area of bruising and swelling of the knee and Claimant was walking with a limp. The knee was swollen and painful. Dr. Archer ordered x-rays of the left knee which revealed moderate to severe osteoarthritis with multiple bone spurs and loss of the medial joint line space. No fracture or

dislocation was noted. The impression from the x-rays were probable soft issue contusion over the patella and advanced tricompartmental osteoarthritis with a knee effusion.

13. Claimant's next follow up was three months' later on April 26, 2017. At this appointment, it was suggested that Claimant get a second opinion regarding her knee injury and not from a workers' compensation provider.

14. Claimant's was then seen by Dr. Archer on May 16, 2017. At that time, Dr. Archer referred Claimant to Dr. Chris Isaacs, orthopedic surgeon, for evaluation for either arthroscopy or total knee arthroplasty. Claimant was to return to Dr. Archer for preoperative clearance. Claimant returned to Dr. Archer on June 20, 2017, for the scheduled preoperative testing and was cleared for the planned surgery. This note stated that Claimant had end stage DJD of the left knee and "had failed all conservative measures." Surgery with Dr. Isaacs was scheduled for July 12, 2017.

15. Claimant returned to Dr. Archer on September 6, 2017, where he noted that she did not have the scheduled knee surgery and no longer had medical insurance. There was no explanation provided for why the surgery did not proceed. Dr. Archer also commented that Claimant was feeling more depressed with poor motivation and had "retained a lawyer for her case against Hertz."

16. Claimant testified on her own behalf at the hearing. Claimant admitted that she had a prior left knee injury but denied any ongoing symptoms from the bone-on-bone arthritis diagnosed in 2013 and disputed the pre-existing ACL tear documented in the records. She also testified that Dr. Failinger had given her a prescription for physical therapy which was denied and that she had no other treatment since her last appointment with Dr. Failinger. Claimant requested authorization of treatment to complete the physical therapy purportedly prescribed by Dr. Failinger back on September 1, 2016.

17. Claimant acknowledged that she returned to office work for the Employer following the incident and continued to work in that capacity earning her regular wages until May 4, 2017, when she was told the position was no longer available.

18. At the request of Respondents, Claimant underwent an independent medical examination by Dr. William Ciccone on October 22, 2016. Dr. Ciccone examined Claimant and reviewed medical records. Dr. Ciccone's impression was left knee sprain/strain and left knee degenerative changes. Dr. Ciccone opined that Claimant had sustained a minor strain/sprain to the left knee as a result of the June 27, 2016, incident and that it had not aggravated or accelerated Claimant's underlying degenerative arthritis. He concluded that the findings on Claimant's July 1, 2016, MRI were chronic and not related to

the June 27, 2016, fall. He further opined that any residual pain after 10 to 12 weeks was related to the underlying arthritis, not the June 27, 2016, incident.

19. In Dr. Ciccone's April 11, 2018, deposition testimony, he reiterated that he did not believe Claimant's degenerative arthritis was aggravated or accelerated by the June 27, 2016, incident. He explained that degenerative arthritis is a progressive disease of the articular cartilage of the bones that, by nature, is progressive. It can be intrinsically genetic and takes time to develop. Once present, arthritis remains present and a bone-on-bone articulation in a joint can be painful. According to Dr. Ciccone, Claimant had ongoing progressive arthritis, noted in 2013, when a total knee replacement was discussed and her current pain was secondary to degenerative changes and not the event at work.

20. Upon his review of the 2016, MRI of Claimant's left knee, Dr. Ciccone noted degenerative changes within the joint, a chronic ACL tear, and abnormal medial meniscus changes. Dr. Ciccone explained Claimant's ACL tear was chronic and she may have had an injury in the past where she had torn the ACL. A torn ACL is something that does not heal and is always present on an MRI. Dr. Ciccone further explained that the radiologist noted the meniscal abnormalities compatible with chronic macerated tear, which is a degenerative change and not related to the June 2016, event.

21. With respect to the June 27, 2016, incident, Dr. Ciccone explained that if you have an event where you fall directly onto the front of your knee, you can suffer a minor sprain or strain on the front of the knee as you are tripping or falling. However, it was Dr. Ciccone's credible opinion that this event was not enough to exacerbate or accelerate the underlying degenerative changes that had already been occurring and preexisted the event. A minor injury could lead to some pain, which would suggest a few visits of physical therapy to get into a home exercise program to re-establish the strength around the knee to return to work activity but no other treatment would be necessary and no permanent impairment would result.

22. According to Dr. Ciccone, Claimant was "going to have persistent pain and symptoms due to the arthritic changes" which were unrelated to the June 27, 2016, incident. He opined that Claimant would have reached maximum medical improvement within 10-12 weeks following the incident, in approximately September or October of 2016, with or without physical therapy. Any ongoing symptoms she was experiencing after that time were related to the underlying DJD.

23. Dr. Ciccone added that as a result of the incident it would not have been necessary for Claimant to have any work restrictions that would have prevented her from returning to work in her role as a bus driver. Furthermore, it was Dr. Ciccone's opinion that any restrictions Claimant did need would be

related to the pain secondary to the arthritis and not any strain or sprain that may have resulted from the June 17, 2016, incident.

24. Dr. Ciccone's testimony and opinions regarding the cause of Claimant's symptoms is consistent with the medical records of Dr. Archer. Both Dr. Ciccone and Dr. Failinger opined that Claimant's need for a total knee replacement was due to her pre-existing degenerative arthritis and not related to the June 27, 2016, incident. Medical records from Dr. Archer and Dr. Foran support the conclusion that Claimant's underlying arthritis and need for a total knee replacement pre-dated June 27, 2016, and is not work-related.

25. The ALJ credits the opinion of Dr. Ciccone that Claimant did not aggravate or accelerate her underlying degenerative arthritis as a result of the June 27, 2016, incident and that her ongoing symptoms and any disability Claimant may have suffered are not related to the June 27, 2016,.

26. Claimant has failed to prove by a preponderance of the evidence that she sustained a compensable injury as a result of the June 27, 2016, incident.

CONCLUSIONS OF LAW

General Legal Standards

1. The purpose of the "Workers' Compensation Act of Colorado" (Act), Title 8, Articles 40 to 47 C.R.S., is to ensure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to the employers without the necessity of any litigation. Section 8-40-102(1), C.R.S. Claimant, in a workers' compensation claim, has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-40-101, C.R.S. A preponderance of the evidence is that which leads the trier of fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). A claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ does not address every piece of evidence that might lead to a conflicting conclusion and rejects evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness'

testimony and/or actions; the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industr. Claim Appeals Offc*., 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industr. Claim Appeals Offc.*, 55 P.3d 186 (Colo. App. 2002). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof*). See Young v. Burke*, 139 Colo. 305, 338 P.2d 284 (1959).

Compensability

4. A claimant is required to prove that an injury arose out of and in the course of the claimant's employment. *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). *See also*, Section 8-41-301(1)(b) & (c) C.R.S. A claimant must also prove by a preponderance of the evidence that there is a proximate causal relationship between an incident/injury and the need for medical treatment, plus the entitlement to benefits Sections 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. ICAO*, 12 P.3d 844 (Colo. App. 2000); *Lutz v. ICAO*, 24 P.3d 29 (Colo. App. 2000).

5. The fact that a claimant experiences symptoms while performing work does not require the inference there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc*., W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the logical and recurrent consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *see Chasteen v. King Soopers, Inc*., W.C. No. 4-445-608 (ICAP, Apr. 10, 2001*); see also Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAP, Oct. 27, 2008).

6. There is a distinction between the terms "accident" and "injury." The term accident refers to an "unexpected, unusual or undesigned occurrence." Section 8-40-201(1), C.R.S. A "compensable" injury is one which is disabling and entitles the claimant to compensation in the form of disability benefits. *City of Boulder v. Payne*, 426 P.2d 194 (1967); *Romero v. Industrial Comm'n*, 632 P.2d 1052 (Colo. App. 1981). No benefits flow to the victim of an industrial accident unless an "accident" results in a compensable "injury." *Id*.; Section 8-41-301, C.R.S. An injury that does not result in any lost time, does not result in a compensable claim. *Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014).

7. Claimant admitted that she returned to work immediately following the June 27, 2016, incident and suffered no lost time from work until ten months later beginning on May 5, 2017. As found, Claimant's ongoing symptoms lasting more than 10-12 weeks after the incident and any disability she may have suffered are not related to the June 27, 2016, incident. Therefore, under *Loofbourrow, supra,* it is concluded that Claimant did not sustain a compensable injury.

8. When considering the totality of the evidence, the ALJ concludes that, even if there was a minor knee strain/sprain, Claimant failed to prove that her ongoing symptoms are causally related to the alleged work incident or caused any disability.

TTD

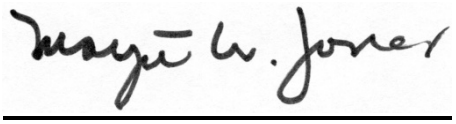
9. To establish entitlement to temporary disability benefits, the claimant must prove that the industrial injury has caused a "disability," and that she has suffered a wage loss which, "to some degree," is the result of the industrial disability. Section 8-42-103(1), C.R.S.; *see Liberty Heights at Northgate v. Industrial Claim Appeals Office*, 30 P.3d 872, 873 (Colo. App. 2001). As found, Dr. Ciccone credibly testified that the cause of Claimant's ongoing symptoms and any disability she may have suffered were related to Claimant's underlying degenerative arthritis not the June 27, 2016, incident.

10. Claimant has failed to prove any disability or wage loss related to a work injury and thus has no entitlement to TTD. *See, Culver, supra; Hendricks v. Keebler Co*., W.C. No. 4-373-392 (June 11, 1999).

ORDER

Claimant's claim for benefits under the Act is denied and dismissed.

Dated: September 7, 2018



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable lower back injury during the course and scope of his employment with Employer on July 10, 2017.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive authorized, reasonable and necessary medical treatment for his industrial injury.

3. A determination of Claimant's Average Weekly Wage (AWW).

4. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period July 11-12, 2017, Temporary Partial Disability (TPD) benefits for the period July 13, 2017 until July 28, 2017 and TTD benefits from July 29, 2018 until terminated by statute.

5. Whether Respondents have proven by a preponderance of the evidence that Claimant was responsible for his July 29, 2017 termination from employment under §8-42-105(4) C.R.S. and §8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving TTD benefits.

6. Whether Respondents have demonstrated by a preponderance of the evidence that Claimant failed to report his claim in writing until November 7, 2017 and thus should lose one day of compensation for every day he failed to report the claim in writing pursuant to §8-42-105(4) C.R.S.

7. Whether Respondents have established by a preponderance of the evidence that they are entitled to recover penalties for 39 days under §8-43-304, C.R.S. for Claimant's violation of PALJ Broniak's May 30, 2018 discovery order.

FINDINGS OF FACT

1. Employer is a landscaping company located in Littleton, Colorado. Peter Van has been the President of Employer since 2011. Employer operates year round. On a typical day, landscapers report to Employer's company office at 7:00 a.m. and are assigned to one of four work crews. Each crew has a project manager. The crew then drives together in a company truck to their designated project.

2. Claimant initially began working for Employer on April 1, 2016. However, Claimant regularly missed work without notifying Mr. Van. In fact, timesheets reflect that Claimant missed 56 days of work between April 1, 2016 and October 30, 2016. Claimant testified that he missed work because of appointments with attorneys and court

appearances. He also noted that on some days Employer did not have any work for him to perform. However, because of Claimant's repeated absences Mr. Van fired him at the end of October 2016.

3. Between April 2016 and October 2016 Claimant regularly requested lighter job tasks to protect his lower back. During the period Claimant occasionally told Mr. Van that his back hurt and he would obtain relief through massage or suction therapy. Claimant even showed Mr. Van suction marks on his back where he had received treatment.

4. On November 1, 2016, February 16, 2017, and April 10, 2017 Claimant sent text messages to Mr. Van requesting his job back. When Claimant spoke to Mr. Van by phone on April 10, 2017 he explained that he had changed his ways, would be a good worker and would not miss work. Mr. Van thus re-hired Claimant to the same position. Claimant's first day back at work was April 11, 2017.

5. Between April 11, 2017 and mid May 2017 Claimant worked on Project Manager Tony Ipson's crew. When he observed that Claimant did not perform the same tasks as the other landscapers. Mr. Ipson communicated with Claimant through his bilingual foreman. When Mr. Ipson inquired about Claimant's lack of contribution he responded that he was experiencing back issues. Claimant specifically noted that his back "always" hurt. Mr. Van confirmed that prior to July 10, 2017 Claimant continued to request lighter duty jobs because of his back problems.

6. Prior to July 10, 2017 Claimant continued to have attendance issues. He missed 14 days of work between April 10, 2017 and July 9, 2017.

7. Employer paid Claimant $130 per day for a 10-hour shift. If he worked less than a full day, he received a portion of his day rate. In the 13-week period between April 11, 2017 and July 9, 2017 Claimant earned a total of $7,696. Dividing $7,696 by 13 weeks yields an Average Weekly Wage (AWW) of $592.

8. Claimant testified that he injured his lower back at work on July 10, 2017 while lifting paver stones out of the back of a truck. He remarked that he informed his Manager Paco and Mr. Van about the injury while at the jobsite. He was unable to perform his job duties. Supervisor Derek Stevens drove Claimant back to Employer's office so he could return home for the day.

9. In contrast, Mr. Van explained that he was neither on the jobsite with Claimant on July 10, 2017 nor informed of a lower back injury. Furthermore, Claimant's time sheet for July 10, 2017 reflects that Employer paid him for working a full shift.

10. Claimant explained that he was unable to work on July 11-12, 2017 because of his lower back pain. He returned to work on July 13, 2017 but was unable to resume his regular job duties.

11. The record reflects that between July 11, 2017 and July 28, 2017 Claimant missed six more scheduled work shifts. Claimant failed to notify Mr. Van or his

supervisors that he was missing work for his back symptoms or any other reason. Mr. Van noted that Claimant's absences occurred during Employer's busy season and made operations difficult. He thus terminated Claimant from employment on July 29, 2017.

12. As of July 29, 2017 Claimant had not reported an injury orally or in writing to Employer, was not under work restrictions and had not sought medical care. After his termination Claimant did not contact Mr. Van or visit Employer's office to report a claim.

13. On November 7, 2017 Claimant completed a Workers' Claim for Compensation form with the aid of his attorney. Claimant asserted that he injured his lower back on July 10, 2017 when unloading sod from a truck while working for Employer. He noted that Antonio witnessed the incident. Claimant specified that he notified Employer on the day of the incident and returned to work on July 12, 2017.

14. On November 8, 2017 Claimant sent a letter and the Workers' Claim for Compensation form to Employer. Mr. Van remarked that Employer had not received any prior written or oral notice of Claimant's claim. He thus conducted his own investigation of any July 10, 2017 incident. Mr. Van spoke to his foremen and project managers. However, they were unaware that Claimant had suffered any injuries on July 10, 2017.

15. On November 17, 2017 Respondents filed a First Report of Injury. Employer noted "past employee indicates that an injury occurred on 7/10/17. Injury was not reported to employer." On December 5, 2017 Insurer filed a Notice of Contest challenging Claimant's claim.

16. On February 5, 2018 Claimant visited Denver Health Medical Center for an examination. He reported chills, a headache, a cough and nasal congestion. Stephanie R. Augustine, M.D. diagnosed Claimant with flu-like symptoms. Although Claimant was able to obtain medical treatment he did not mention any lower back symptoms or any work incident on July 10, 2017.

17. On April 17, 2018 Claimant returned to Denver Health for an examination. Claimant reported that approximately one year earlier he injured his lower back while lifting heavy stones at work. He specifically noted that he "felt a strong immediate pain in his low back centrally." He explained that he suffered pain on most days and work involving physical labor had become very difficult. Claimant's exam findings were limited to tenderness and lumbar spasm. He had a negative straight leg raise, normal sensation, no swelling and normal muscle tone. Jessica F. Wallace, PA diagnosed Claimant with chronic lower back pain including sciatica. She recommended a lumbar spine MRI.

18. On June 4, 2017 Claimant returned to Denver Health for an evaluation. PA Wallace continued to diagnose Claimant with chronic lower back pain including bilateral sciatica. A lumbar MRI revealed "no evidence of fracture or malalignment. Mild lower lumbar spine degenerative changes with low-grade canal and foraminal narrowing as above, but no nerve compression."

19. Claimant has failed to demonstrate that it is more probably true than not that he suffered a compensable lower back injury during the course and scope of his

employment with Employer on July 10, 2017. Claimant testified that he injured his lower back at work on July 10, 2017 while lifting paver stones out of the back of a truck. He explained that he immediately reported the incident to Employer and his symptoms prevented him from performing his regular job duties. However, the record reveals that Claimant suffered from pre-existing back issues that caused him to miss time from work and he significantly delayed reporting or seeking medical treatment for his condition.

20. Timesheets reflect that Claimant missed 56 days of work between April 1, 2016 and October 30, 2016. Claimant testified that he missed work because of appointments with attorneys and court appearances. However, Mr. Van credibly explained that Claimant occasionally mentioned back pain and he obtained relief through massage or suction therapy. Furthermore, when Mr. Ipson observed that Claimant did not perform the same tasks as the other landscapers, Claimant responded that he was experiencing back issues. Mr. Van confirmed that Claimant requested lighter duty job assignments because of his back condition.

21. Claimant did not complete a Workers' Claim for Compensation form until November 7, 2017. On November 8, 2017 Claimant sent a letter and the form to Employer. Mr. Van remarked that Employer had not received any prior written or oral notice of Claimant's claim. After Mr. Van conducted an investigation by speaking to his foremen and project managers there was no evidence that Claimant suffered any injuries on July 10, 2017. Although Claimant obtained medical treatment at Denver Health on February 5, 2018 he did not mention any lower back symptoms or note any work incident on July 10, 2017. Claimant finally reported a lower back injury to PA Wallace at Denver Health on April 17, 2018 or approximately nine months after the lifting incident at work. However, Claimant's physical examination findings were minimal and his MRI reflected only degenerative changes. Claimant was diagnosed with chronic lower back pain including sciatica.

22. The record reveals that Claimant suffered from pre-existing back issues that caused him to miss time from work prior to July 10, 2017. Moreover, Claimant significantly delayed reporting an injury and did not seek medical treatment until approximately nine months after the July 10, 2017 lifting incident. The temporal proximity between the July 10, 2017 incident and request for medical treatment creates an attenuated connection between Claimant's employment and lower back condition. It is thus speculative to attribute Claimant's degenerative back symptoms to his work activities for Employer. Claimant's job duties on July 10, 2017 thus did not aggravate, accelerate, or combine with his pre-existing condition to produce a need for medical treatment. Accordingly, Claimant's Workers' Compensation claim is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A

preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job

function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered a compensable lower back injury during the course and scope of his employment with Employer on July 10, 2017. Claimant testified that he injured his lower back at work on July 10, 2017 while lifting paver stones out of the back of a truck. He explained that he immediately reported the incident to Employer and his symptoms prevented him from performing his regular job duties. However, the record reveals that Claimant suffered from pre-existing back issues that caused him to miss time from work and he significantly delayed reporting or seeking medical treatment for his condition.

8. As found, timesheets reflect that Claimant missed 56 days of work between April 1, 2016 and October 30, 2016. Claimant testified that he missed work because of appointments with attorneys and court appearances. However, Mr. Van credibly explained that Claimant occasionally mentioned back pain and he obtained relief through massage or suction therapy. Furthermore, when Mr. Ipson observed that Claimant did not perform the same tasks as the other landscapers, Claimant responded that he was experiencing back issues. Mr. Van confirmed that Claimant requested lighter duty job assignments because of his back condition.

9. As found, Claimant did not complete a Workers' Claim for Compensation form until November 7, 2017. On November 8, 2017 Claimant sent a letter and the form to Employer. Mr. Van remarked that Employer had not received any prior written or oral notice of Claimant's claim. After Mr. Van conducted an investigation by speaking to his foremen and project managers there was no evidence that Claimant suffered any injuries on July 10, 2017. Although Claimant obtained medical treatment at Denver Health on February 5, 2018 he did not mention any lower back symptoms or note any work incident on July 10, 2017. Claimant finally reported a lower back injury to PA Wallace at Denver Health on April 17, 2018 or approximately nine months after the lifting incident at work. However, Claimant's physical examination findings were minimal and his MRI reflected only degenerative changes. Claimant was diagnosed with chronic lower back pain including sciatica.

10. As found, the record reveals that Claimant suffered from pre-existing back issues that caused him to miss time from work prior to July 10, 2017. Moreover, Claimant significantly delayed reporting an injury and did not seek medical treatment until approximately nine months after the July 10, 2017 lifting incident. The temporal proximity between the July 10, 2017 incident and request for medical treatment creates an attenuated connection between Claimant's employment and lower back condition. It is thus speculative to attribute Claimant's degenerative back symptoms to his work activities for Employer. Claimant's job duties on July 10, 2017 thus did not aggravate, accelerate, or combine with his pre-existing condition to produce a need for medical treatment. Accordingly, Claimant's Workers' Compensation claim is denied and dismissed.

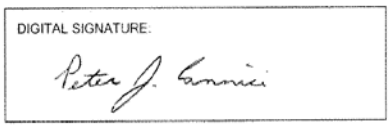
ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's Workers' Compensation claim is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: September 6, 2018.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-061-214-001

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable work injury on October 24, 2017.

2. Whether Claimant is entitled to an order awarding reasonably necessary and related medical benefits.

3. Whether Claimant was disabled by is usual employment by the work injury and therefore is entitled to an order awarding temporary total disability benefit.

STIPULATION OF FACT

Claimant's average weekly wage is $1,292.85. This stipulation is approved and accepted by the ALJ.

FINDINGS OF FACT

1. Claimant was involved in a motor vehicle accident (MVA) on March 4, 2014, and sustained injuries to his neck, low back and right shoulder. He also suffered from headaches.

2. On June 17, 2014, Claimant continued to report cervical, thoracic and lumbar pain as well as persistent right shoulder pain and headaches while treating with Dr. Lichtenberg.

3. Claimant admitted he had been in the 2014 MVA, but denied suffering any injury to his neck. After initially denying he injured his neck as a result of the 2014 MVA, Claimant subsequently was forced to admit he actually injured his neck.

4. Claimant nevertheless continued to deny any injury to his right shoulder. Claimant bizarrely testified that the medical records were incorrect that he never complained of shoulder pain.

5. In fact, when confronted with Dr. Lichtenberg's report which documented that Claimant reported four out of ten pain in his right shoulder, Claimant testified that he had never treated with Dr. Lichtenberg and continued to deny any injury to his right shoulder. This testimony was directly inconsistent with the medical records.

6. Claimant admitted he pursued litigation and ultimately settled the 2014 motor vehicle claim.

7. After settling his 2014 MVA claim, Claimant was involved in a work-related MVA on July 27, 2016, and complained of neck and low back pain and headaches.

8. Claimant treated for his neck and low back injuries for the July 27, 2016, claim until at least the summer of 2017. As a result, Claimant had ongoing neck and low back medical treatment.

9. Claimant admitted that while he was still treating for his 2016 workers' compensation claim he was involved in a non-work-related MVA on April 14, 2017.

10. Claimant began treating for his non-work-related MVA, but he failed report to his physicians or insurance carrier that he had a prior workers' compensation claim. Specifically, Claimant failed to tell his new physicians that he has been treating for the same body parts leading up to and immediately before the MVA in 2017.

11. Dr. John Burris, a board-certified occupational medicine physician, performed an independent medical examination (IME) and a records review regarding both of Claimant's workers' compensation claims. Dr. Burris opined that after a review of all of Claimant's treatment records from his workers' compensation injury and his prior MVAs, it was clear that Dr. Higgins, who was treating Claimant for his April 2017 MVA, was unaware that Claimant had a prior injuries to the same body parts.

12. Dr. Burris opined that after reviewing Dr. Watson's Division IME report, that Claimant was improving from his July 2016 workers' compensation injury, when he was involved in a MVA in April 2017 and that Claimant's symptoms significantly worsened after that time.

13. Claimant admitted he settled his April 2017 MVA claim approximately a month prior to alleging another workers' compensation claim on October 24, 2017. As a result, Claimant settled his claim related to the prior MVA in 2017 and immediately alleged a new work injury to the same body parts.

14. Claimant also admitted he continued to have neck problems after he settled his April 2017 MVA claim. As a result, Claimant's neck problems continued despite receiving a settlement for the injury.

15. Claimant testified that on October 24, 2017, there was a 200 pound box of awning rolls that were stacked eight feet high and fell on top of his shoulder and rolled to his neck. This alleged injury occurred just a month or so after Claimant settled the prior MVA claim.

16. Claimant completed and signed the Employee Statement of Injury on October 26, 2017. Claimant wrote that he was lifting boxes from overhead to the ground to the forklift and injured his neck. He failed to mention anything falling on him in his written

description. As a result, Claimant's own initial written description of the incident was inconsistent with what he subsequently alleged occurred at work.

17. Claimant alleged that he reported his injury to Don Martinez on October 24, 2017. Don Martinez denied this allegation when speaking with Claimant's supervisor, Brett Martin.

18. Claimant reported to Concentra on October 26, 2017, that he experienced neck pain from lifting boxes down from overhead from a trailer to a forklift. This report is consistent with his Employee Statement, and inconsistent with his later allegations of an awning roll actually falling on him.

19. Claimant testified the October 26, 2017, medical record was incorrect in the description of the alleged mechanism of injury. As a result, he also alleged that his own written statement was incorrect as well.

20. Claimant failed to explain why there was such a discrepancy in the reporting of the alleged mechanism of injury.

21. Mark Ballinger, an employee of Awning Company of America, testified that he was working with Claimant, unloading a truck on October 24, 2017. Mr. Ballinger testified that the load, which was 18 feet to 20 feet long, was stacked funny and strapped against the wall. Mr. Ballinger testified that he assisted Claimant to restack them, so they did not fall. Mr. Ballinger testified that he did not see anything fall and strike Claimant in the shoulder or neck.

22. Mr. Ballinger also testified that there was no evidence that the straps holding the load had broken.

23. Mr. Ballinger testified that at no time during the unloading of the truck did Claimant state he had been injured. Finally, Mr. Ballinger testified that he did not notice anything that would suggest that Claimant had been injured during their time together.

24. The ALJ finds Mr. Ballinger's testimony credible and persuasive. As a result, a neutral employee from a different employer failed to support Claimant's allegation that he suffered a work injury in October of 2017.

25. Brett Martin, the operations manager for the employer, met with Claimant and credibly testified that he was first informed of the injury on October 26, 2017, two days after it allegedly occurred. Mr. Martin denied Claimant's allegation that the alleged incident was reported on October 24, 2017.

26. Mr. Martin spoke with Don Martinez as part of his investigation into Claimant's claim as to when the incident had been reported by Claimant. Mr. Martinez confirmed that Claimant did not report the work injury until October 26, 2017.

27. Claimant reported to Mr. Martin that he was moving long boxes from overhead to a forklift. Claimant never told Mr. Martin that a strap broke in the truck and something fell on him.

28. Claimant completed a written statement regarding the alleged injury on October 26, 2017. This written statement is consistent with what Claimant told Mr. Martin him, that nothing fell on him.

29. According to Mr. Martin, the medical release was signed by Claimant and dated October 25, 2017, and was given to Claimant at the same time, on October 26, 2017. The medical authorization initially was dated by Claimant as October 25, 2017, but was corrected to reflect the accurate date of October 26, 2017.

30. Furthermore, the medical release dated October 25, 2017, indicated in Paragraph 2 that Claimant received his injuries on October 26, 2017. Claimant further provided on the medical releases that he sustained his injuries on October 25, 2017. It is found that Claimant misdated the medical releases with the October 25, 2017, date.

31. On October 25, 2017, Claimant presented to Dr. Higgins, who had treated Claimant for the April 2017 MVA. Claimant reported to Dr. Higgins that "his neck pain has been worse with a constant pressure type headache present that has gradually gotten worse since his release from active care in July."

32. On October 25, 2017, Dr. Higgins reported that Claimant specifically denied any new trauma or injury. Claimant complained of bilateral neck pain and upper shoulder. Claimant did not allege a work injury when receiving medical treatment a day after the alleged work injury.

33. When confronted with the October 25, 2017 medical record which confirmed that Claimant had suffered no recent trauma, Claimant testified that the medical record was wrong and that he actually reported to Dr. Higgins that he injured himself at work. Claimant's testimony that he informed Dr. Higgins that he suffered a new work-related injury lacks credibility. Dr. Higgins inquired whether there was a new trauma, and Claimant denied any injury or event.

34. Dr. Burris, Respondents' IME, credibly testified that after a review of all the records, Claimant did not mention to his providers that something fell on him on October 24, 2017, until nearly a month later when he described the incident to Dr. Sacha.

35. Dr. Burris opined that based on Dr. Higgins' October 25, 2017, medical record, it was documented that Claimant had no new trauma or injury and that Claimant's symptoms were the result of a gradual worsening after being released from care from the MVA.

36. Dr. Burris credibly testified that after a review of all of the medical records and his prior medical evaluation that Claimant did not sustain an injurious event on October

24, 2017. In forming his opinion, Dr. Burris opined that Dr. Higgins' October 25, 2017 report is crucial in determining whether any injury occurred since Dr. Higgins had been treating Claimant for his MVA injuries and that Claimant denied any new injury and explained his increased pain as a gradual onset of pain from lack of treatment.

37. The ALJ credits Dr. Burris's testimony and Dr. Higgins' October 25, 2017, medical report and finds that Claimant did not sustain a new injury on October 25, 2017.

38. Dr. Burris testified that, after reviewing the April 14, 2017 CT scan and the December 26, 2017 MRI scan, there were no objective changes suggesting a new work injury. Dr. Burris testified that the radiologist who compared the before and after imaging studies reported that his opinion was Claimant's condition was "grossly unchanged."

39. Additionally, Dr. Burris evaluated Claimant one and a half months prior to his alleged October 24, 2017, injury, and Dr. Burris credibly testified that Claimant's complaints at that time were the same as his complaints after the alleged October 24, 2017 injury.

40. Dr. Sacha, Claimant's authorized treating provider, has continued to treat Claimant under this workers' compensation claim; however, Dr. Burris noted that it did not appear from Dr. Sacha's reports that he had knowledge of Dr. Higgins' treatment records and more specifically, the October 25, 2017 medical report,.

41. Given the lack of objective findings on imaging demonstrating any new injury and Claimant's similar subjective pain complaints before and after the alleged new injury on October 24, 2017, the ALJ finds that Claimant did not sustain any new injury on October 24, 2017.

42. On April 21, 2018, Claimant was involved in a bar fight and he was hit in the head between his eyebrows with a mug. He had a loss of consciousness and a resulting scar. Claimant was hospitalized on April 22, 2018.

CONCLUSIONS OF LAW

General Legal Principals

The claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-43-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo. App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo.App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

In rendering a decision, the ALJ must make credibility determinations, draw plausible inferences from the record, and resolve essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* In determining credibility, the ALJ considers the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16.

Credibility is a significant consideration when determining compensability. As found here, Claimant's contradictory reports to medical professionals and the lack of objective evidence of a new injury makes Claimant's claim unsustainable.

Compensability

A claimant's right to compensation initially hinges upon a determination that "at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment." Section 8-41-301(1)(b), C.R.S. The "arising out of" test is one of causation which requires that the injury have its origins in an employee's work-related functions. There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951).

Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. Div. 5 2009). The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the proximate causal relationship between an incident/injury and the need for medical treatment, plus entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. (2013). See City of *Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Lutz v. Industrial Claim Appeals Office*, 24 P.3d 29 (Colo. App. 2000).

The credible and persuasive evidence established that Claimant had significant pre-existing injuries to his neck and shoulder dating back to at least 2014, when he was involved in a motor vehicle accident as documented in Dr. Lichenberg's medical records. Claimant's testimony to the contrary is not credible. The records are clear that Claimant has been treating for neck, back and shoulder problems dating back at least four years.

Claimant also provided inconsistent testimony about the alleged mechanism of injury. He initially admitted that nothing fell on him. However, he later changed the mechanism of injury and alleged that awning rolls fell on him. In addition to these credibility issues, Claimant's objective testing does not support that any new injury occurred. Similarly, Claimant's subjective Claimant's before and after October 24, 2017 were the same.

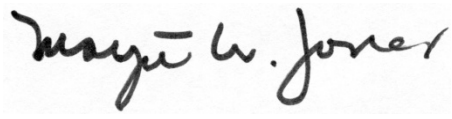
Based on all of the facts above and the significant credibility issues, the ALJ concludes that Claimant did not sustain any new work injury on October 24, 2017.

ORDER

1. Claimant failed to prove that he suffered a compensable injury on October 24, 2017. As a result, the claim is dismissed with prejudice.

2. Claimant's request for temporary disability benefits is also dismissed with prejudice.

Dated: This 26 day of September, 2018.



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), CR.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm

ISSUE

Whether Claimant has produced substantial evidence that the continuing prescription for Wellbutrin or Bupropion requested by Authorized Treating Physician (ATP) John J. Aschberger, M.D. is a reasonable, necessary and causally related maintenance medical benefit that is designed to relieve the effects of her November 12, 2006 industrial injury or prevent further deterioration of her condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

FINDINGS OF FACT

1. Claimant worked as a Firefighter Captain for Employer. On November 12, 2006 Claimant suffered an admitted industrial injury to her cervical spine during the course and scope of her employment.

2. Claimant underwent a course of conservative treatment involving multiple interventions and injections. On April 8, 2009 Authorized Treating Physician (ATP) Jill Castro. M.D. determined that Claimant had reached Maximum Medical Improvement (MMI). She assigned Claimant a 59% whole person permanent impairment rating. The impairment consisted of ratings for the cervical spine, lumbar spine and headaches. Dr. Castro did not assign a mental impairment.

3. On June 30, 2009 Respondent filed a Final Admission of Liability (FAL) consistent with Dr. Castro's MMI and permanent impairment determinations. The FAL also acknowledged "reasonable, necessary and related maintenance medical treatment subject to Respondent's right to challenge."

4. In a report dated March 9, 2012 Dr. Castro remarked that Claimant had been followed at the clinic for "chronic pain as it relates to her neck injury." She noted that Claimant continued to experience daily headaches, migraines, neck pain and referred facial pain. Claimant described the pain as "sharp, aching, throbbing, lancinating and vise-like." Dr. Castro added that Claimant was suffering "more depression as a result of the chronic pain." She thus prescribed Wellbutrin.

5. On February 10, 2014 John J. Aschberger, M.D. assumed care as Claimant's ATP. Dr. Aschberger noted that Claimant had suffered a neck injury during an obstacle course training exercise in 2006. He detailed that "she has a long and complicated history including performance of facet rhizotomies and surgical intervention with C5-C6 ACDF in September of 2010 and a follow-up fusion in 2012." Dr. Aschberger reviewed Claimant's current prescriptions including Wellbutrin 200mg.

6. Claimant continued to receive maintenance care through Dr. Aschberger. The care consisted of ongoing medial branch blocks, rhizotomies and medications. The maintenance treatment was directed at maintaining and controlling Claimant's cervical spine pain and chronic headaches.

7. On April 26, 2016 Claimant returned to Dr. Aschberger for an examination. Dr. Aschberger continued to prescribe hydrocodone, Floricet, Wellbutrin and Cymbalta. He also recommended repeated rhizotomies and prescribed a topical compound cream. Dr. Aschberger diagnosed chronic cervical pain but did not mention depression. He remarked that medications could be refilled as needed.

8. On July 7, 2016 Respondent requested Pharmacy Benefit Management Company IPS to complete a peer-to-peer drug utilization review. Avrom Simon, M.D. considered Claimant's medical records and had a peer-to-peer discussion with Dr. Aschberger. He recommended continuation of the Butalbital/Acetaninophen/Caffeine because they had decreased Claimant's pain and improved his function. Dr. Simon also noted that the Clonazepam, Diclofenac 3%, Tetracaine 10%, Versatile Base (cream) and Memantine should be discontinued. However, if they were continued they should be paid for outside of the Workers' Compensation system because they were unrelated to Claimant's compensable injury. Dr. Simon remarked that Claimant's Vicodin should also be gradually weaned and discontinued because it duplicated therapy. He summarized that detox should be considered for Claimant. Finally, Dr. Simon.commented that Claimant might be a candidate for cognitive behavioral treatment and/or a chronic pain management program.

9. In specifically addressing Claimant's Bupropion HCL ER Dr. Simon noted that it should be continued but paid for outside of the Workers' Compensation system. He concluded that the medication was unrelated to Claimant's November 12, 2006 industrial injury. Dr. Simon explained that Bupropion is a generic antidepressant designed for the treatment of mood disorders and depression. He commented that, although Claimant was receiving the Bupropion prescription to treat depression, it provided little benefit. However, Dr. Simon endorsed continuation of the medication until an alternative could be found to treat Claimant's depressive symptoms. In reviewing his peer-to-peer discussion with Dr. Aschberger, Dr. Simon stated that the "drug had been prescribed by others before and [Dr. Aschberger] inherited the patient." Dr. Aschberger mentioned that Claimant's list of medications was from her prior medical provider and suggested that she might be a candidate for a chronic pain management program. Dr. Simon concluded that Bupropion should be paid for outside of the Workers' Compensation system because it was not related to Claimant's industrial injury.

10. On July 14, 2016 Claimant returned to Dr. Aschberger for an examination. Claimant reported that she had been suffering headaches since her last rhizotomy. Dr. Aschberger noted that Claimant "look[ed] somewhat improved in terms of motion and pain behaviors." He diagnosed chronic cervical pain and headaches. Dr. Aschberger recommended tapering Claimant's Wellbutrin and referred her to Joel Cohen, Ph.D. for a psychological evaluation.

11. On August 19, 2016 Claimant visited Dr. Cohen for an evaluation. Dr. Cohen noted that Claimant recently separated from her employment and filed an EEOC claim against Employer. He commented that Claimant presented with symptoms of both moderate anxiety and depression. Dr. Cohen further noted that an increased presentation of emotional symptoms could be related to stress from Claimant's separation from employment. He diagnosed Claimant with somatic system disorder and "an injury-related diagnosis of adjustment reaction with mixed emotional features." Dr. Cohen did not directly attribute Claimant's ongoing depression to her work injury. He recommended six to eight additional sessions of cognitive behavioral therapy.

12. On November 15, 2016 Claimant returned to Dr. Cohen for an evaluation. Dr. Cohen noted that Claimant had recently experienced a "significant escalation" in headaches. He emphasized that Claimant should use cognitive behavioral therapy to alter her pain perspective, retain function and maintain mood stability while diminishing the stress-related elements to her problems. Dr. Cohen addressed whether Claimant's EEOC lawsuit against Employer and recent termination from employment were "causing her depression and stress and not her residual emotional issues around the original accident." He explained that he was recommending intervention not because of the Claimant's lawsuit and termination but instead based on "living with pain for an extended period of time and dealing with the impact that has had on quality of life and function."

13. On April 25, 2017 Claimant again visited Dr. Aschberger for an examination. Dr. Aschberger noted that Claimant was taking Wellbutrin and using two antidepressants. He remarked that Claimant would continue on her "current regimen." Dr. Aschberger expressed that he was uncertain why continued follow-up appointments with Dr. Cohen had been discontinued because Claimant had been approved for eight visits. He remarked that additional visits with Dr. Cohen "would be helpful for myself to judge tapering the medication."

14. On September 29, 2017 Claimant returned to Dr. Aschberger for an examination. Claimant reported increasing headache symptoms. Her current medications consisted of Wellbutrin, Cymbalta and Namenda. In addressing Claimant's psychiatric condition Dr. Aschberger commented that she was "negative for anxiety, suicidal thoughts, mood disorder, depression, suicide attempts [and] emotional problems." He did not diagnose any depression or other psychological issues related to Claimant's November 12, 2006 industrial injury.

15. On November 16, 2017 Kathy McCranie, M.D. conducted a records review of Claimant's case. After considering Claimant's medical history, Dr. McCranie addressed specific inquiries from Respondent. She considered the reasonableness, necessity and relatedness of Claimant's use of Bupropion or Wellbutrin. Dr. McCranie noted that Claimant was currently using 200mg of Bupropion twice daily. She explained that Claimant had used the medication prior to her November 12, 2006 industrial injury. Dr. McCranie specifically remarked that in January 2006 Claimant's medications included 100 mg of Bupropion and three tablets of 200 mg of Serzone at bedtime for depression. Although Claimant's dosage of Bupropion was lower prior to her industrial

injury, her dose of Serzone exceeded the maximum recommended amount. Dr. McCranie reasoned that Claimant was taking high doses of antidepressants prior to her industrial injury. She thus explained that "it is unlikely that 11 years postinjury the current use of antidepressants is still related to [Claimant's] work injury." Dr. McCranie remarked that it was "unclear" why Claimant's Bupropion 'was transferred into the Workers' Compensation arena."

16. The record reveals that Claimant began receiving Bupropion or Wellbutrin in 2001. Specifically, on April 2, 2001 Claimant visited Diane Grant, LPN at Kaiser Permanente. LPN Grant recommended a prescription for Wellbutrin SR 100 MG twice daily. Subsequent Kaiser records reflect that Claimant received or continued a prescription for Wellbutrin at the following evaluations: May 6, 2002, July 3, 2003, July 25, 2003, August 5, 2004, December 14, 2004 and January 14, 2005. At Claimant's most recent Kaiser evaluation prior to her work injury Kathryn Wood, RN prescribed Wellbutrin for "depression, major, single episode, complete remission." Claimant also received a prescription for nefazodone 200 mg three tablets at bed time.

17. Claimant testified at the hearing in this matter. She acknowledged that she utilized Wellbutrin prior to her work injury. However, Claimant noted that her depression symptoms after her November 12, 2006 injury are different from those she had previously experienced. She explained that her industrial injury completely changed her work and personal life. Claimant emphasized that she has suffered daily pain since her November 12, 2006 industrial injury.

18. Dr. McCranie testified at the hearing in this matter. She maintained that Claimant's current use of 200 mg of Wellbutrin twice daily is unrelated to her industrial injury. Dr. McCranie explained that Claimant had used Wellbutrin prior to her November 12, 2006 work injury and her present symptoms reflected her long-term diagnosis of depression. She noted that Claimant's use of the antidepressant Cymbalta also has a pain mitigation effect and is therefore reasonable. However, Wellbutrin does not have a concurrent pain mitigation effect and only impacts Claimant's pre-existing depression. Dr. McCranie thus summarized that Claimant's use of Wellbutrin is not related to her November 12, 2006 industrial injury. Nevertheless, she acknowledged that Claimant should be weaned from Wellbutrin through a tapering process and treatment with a psychotherapist.

19. Claimant has failed to produce substantial evidence that the continuing prescription for Wellbutrin or Bupropion requested by Dr. Aschberger is a reasonable, necessary and causally related maintenance medical benefit that is designed to relieve the effects of her November 12, 2006 industrial injury or prevent further deterioration of her condition. Initially, on November 12, 2006 Claimant suffered an admitted industrial injury to her cervical spine. On April 8, 2009 Dr. Castro determined that Claimant had reached MMI. She assigned Claimant a 59% whole person permanent impairment rating for her cervical spine, lumbar spine and headaches. Dr. Castro did not assign a mental impairment.

20. On March 9, 2012 Dr. Castro noted that Claimant was suffering "more depression as a result of the chronic pain." She thus provided a prescription for Wellbutrin. After Dr. Aschberger assumed Claimant's care as her ATP he continued Claimant's Wellbutrin prescription. On July 7, 2016 during a drug utilization review Dr. Simon commented that, although Claimant was receiving the Bupropion prescription to treat depression, it provided little benefit. However, Dr. Simon endorsed continuation of the medication until an alternative could be found to treat Claimant's depressive symptoms. He concluded that Bupropion should be paid for outside of the Workers' Compensation system because it was not related to Claimant's industrial injury. By July 14, 2016 Dr. Aschberger recommended tapering Claimant's Wellbutrin and referred her to Dr. Cohen for a psychological evaluation. Dr. Cohen recommended continuing intervention based on Claimant's chronic pain but did not directly attribute her ongoing depression to her work injury.

21. The record reveals that Claimant has suffered from pre-existing depression. She began receiving Bupropion or Wellbutrin in 2001. Specifically, on April 2, 2001 LPN Grant of Kaiser recommended a prescription for Wellbutrin SR 100 MG twice daily. Subsequent Kaiser records reflect that Claimant received or continued a prescription for Wellbutrin at numerous evaluations from 2002 into 2005. At Claimant's most recent Kaiser evaluation prior to her work injury RN Wood prescribed Wellbutrin for "depression, major, single episode, complete remission." Dr. McCranie persuasively explained that, although Claimant's dosage of Bupropion was lower prior to her industrial injury, her dose of Serzone exceeded the maximum recommended amount. Dr. McCranie reasoned that Claimant was taking high doses of antidepressants prior to her industrial injury. She thus explained that it was unlikely that Claimant's current use of antidepressants was still related to her work injury from 11 years earlier. Dr. McCranie remarked that it was "unclear" why Claimant's Bupropion 'was transferred into the Workers' Compensation arena." Similarly, Dr. McCranie testified that Claimant's current use of 200 mg of Wellbutrin twice daily is unrelated to her industrial injury. She explained that Claimant had used Wellbutrin prior to her November 12, 2006 work injury and her present symptoms reflected her long-term diagnosis of depression. However, Dr. McCranie acknowledged that Claimant should be weaned from Wellbutrin through a tapering process and treatment with a psychotherapist.

22. In contrast, Claimant testified that her depression symptoms after her November 12, 2006 injury are different from those she had previously experienced. She emphasized that she has suffered daily pain since her November 12, 2006 industrial injury. However, Claimant began receiving Wellbutrin for depression more than five years before her industrial injury and the persuasive testimony of Dr. McCranie reveals that the medication is thus designed to treat Claimant's pre-existing depression symptoms. Furthermore, although Dr. Aschberger has continued Claimant's Wellbutrin prescription, he has not directly attributed Claimant's chronic depression to her work injury and suggested a tapering program. Accordingly, it is speculative to connect Claimant's need for Wellbutrin to her November 12, 2006 industrial injury. Claimant has failed to produce substantial evidence that her current prescription for Wellbutrin is causally related to her industrial injury. Claimant's request for Wellbutrin is thus denied and dismissed. Nevertheless, the bulk of the evidence demonstrates that Claimant is

entitled to undergo a weaning program from Wellbutrin through a tapering process and treatment with a psychotherapist.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To prove entitlement to medical maintenance benefits a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of her condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment she "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

5. As found, Claimant has failed to produce substantial evidence that the continuing prescription for Wellbutrin or Bupropion requested by Dr. Aschberger is a reasonable, necessary and causally related maintenance medical benefit that is

designed to relieve the effects of her November 12, 2006 industrial injury or prevent further deterioration of her condition. Initially, on November 12, 2006 Claimant suffered an admitted industrial injury to her cervical spine. On April 8, 2009 Dr. Castro determined that Claimant had reached MMI. She assigned Claimant a 59% whole person permanent impairment rating for her cervical spine, lumbar spine and headaches. Dr. Castro did not assign a mental impairment.

6. As found, on March 9, 2012 Dr. Castro noted that Claimant was suffering "more depression as a result of the chronic pain." She thus provided a prescription for Wellbutrin. After Dr. Aschberger assumed Claimant's care as her ATP he continued Claimant's Wellbutrin prescription. On July 7, 2016 during a drug utilization review Dr. Simon commented that, although Claimant was receiving the Bupropion prescription to treat depression, it provided little benefit. However, Dr. Simon endorsed continuation of the medication until an alternative could be found to treat Claimant's depressive symptoms. He concluded that Bupropion should be paid for outside of the Workers' Compensation system because it was not related to Claimant's industrial injury. By July 14, 2016 Dr. Aschberger recommended tapering Claimant's Wellbutrin and referred her to Dr. Cohen for a psychological evaluation. Dr. Cohen recommended continuing intervention based on Claimant's chronic pain but did not directly attribute her ongoing depression to her work injury.

7. As found, the record reveals that Claimant has suffered from pre-existing depression. She began receiving Bupropion or Wellbutrin in 2001. Specifically, on April 2, 2001 LPN Grant of Kaiser recommended a prescription for Wellbutrin SR 100 MG twice daily. Subsequent Kaiser records reflect that Claimant received or continued a prescription for Wellbutrin at numerous evaluations from 2002 into 2005. At Claimant's most recent Kaiser evaluation prior to her work injury RN Wood prescribed Wellbutrin for "depression, major, single episode, complete remission." Dr. McCranie persuasively explained that, although Claimant's dosage of Bupropion was lower prior to her industrial injury, her dose of Serzone exceeded the maximum recommended amount. Dr. McCranie reasoned that Claimant was taking high doses of antidepressants prior to her industrial injury. She thus explained that it was unlikely that Claimant's current use of antidepressants was still related to her work injury from 11 years earlier. Dr. McCranie remarked that it was "unclear" why Claimant's Bupropion 'was transferred into the Workers' Compensation arena." Similarly, Dr. McCranie testified that Claimant's current use of 200 mg of Wellbutrin twice daily is unrelated to her industrial injury. She explained that Claimant had used Wellbutrin prior to her November 12, 2006 work injury and her present symptoms reflected her long-term diagnosis of depression. However, Dr. McCranie acknowledged that Claimant should be weaned from Wellbutrin through a tapering process and treatment with a psychotherapist.

8. As found, in contrast, Claimant testified that her depression symptoms after her November 12, 2006 injury are different from those she had previously experienced. She emphasized that she has suffered daily pain since her November 12, 2006 industrial injury. However, Claimant began receiving Wellbutrin for depression more than five years before her industrial injury and the persuasive testimony of Dr. McCranie reveals that the medication is thus designed to treat Claimant's pre-existing

depression symptoms. Furthermore, although Dr. Aschberger has continued Claimant's Wellbutrin prescription, he has not directly attributed Claimant's chronic depression to her work injury and suggested a tapering program. Accordingly, it is speculative to connect Claimant's need for Wellbutrin to her November 12, 2006 industrial injury. Claimant has failed to produce substantial evidence that her current prescription for Wellbutrin is causally related to her industrial injury. Claimant's request for Wellbutrin is thus denied and dismissed. Nevertheless, the bulk of the evidence demonstrates that Claimant is entitled to undergo a weaning program from Wellbutrin through a tapering process and treatment with a psychotherapist.

ORDER

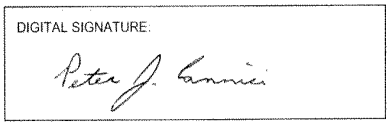
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for Wellbutrin is denied and dismissed. Nevertheless, Claimant is entitled to undergo a weaning program from Wellbutrin through a tapering process and treatment with a psychotherapist.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: October 2, 2018.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Respondent established, by a preponderance of the evidence, that they are entitled to withdraw their February 20, 2018 and March 6, 2018 General Admissions of Liability (GAL) which admitted liability for payment of medical and temporary total disability (TTD) benefits associated with a February 9, 2018 industrial injury.

II. If Claimant did suffer a compensable injury on February 9, 2018, whether she established, by a preponderance of the evidence, that the C4-5 cervical fusion surgery performed by Dr. Christopher Gallus on April 16, 2018 was reasonable, necessary and related to said February 9, 2018 injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant works as a heavy equipment operator maintaining county roads for Respondent-Employer. On Friday, February 9, 2018, approximately an hour and a half before the end of her shift, Claimant was pulling a ditch when the blade on the grader she was operating hit a large concealed rock adjacent to the roadway jolting the machine. Claimant's head jerked back and forth violently upon impact causing an immediate headache and the onset of severe neck pain.

2. Claimant returned to Respondent-Employer's equipment barn and without explaining what had happened, angrily reported to her supervisor that her neck was hurting and that she was going to quit her job. She finished up her shift and returned home where she took Advil for her headache and neck pain.

3. The following morning, Saturday, February 10, 2018, Claimant woke with the "worst pain ever". She had an appointment with her tax adviser during which she reportedly had constant shooting pain in the back of her head.

4. Claimant's headache persisted into Sunday. She described her head as feeling like a balloon on the verge of popping.

5. Claimant does not work weekends and the administrative offices of Respondent-Employer are closed.

6. On Monday, February 12, 2018, at approximately 6:00 a.m. Claimant called her supervisor Randy Aredondo reporting to him that her neck was "killing" her, that she wanted to see a doctor and would not make it in to work. She did not explain

what had happened on February 9, 2018. Claimant later called the Human Resources Department for Respondent-Employer and spoke to April Quintana. Claimant testified that she explained to Ms. Quintana that she hit a rock with her grader causing her to jerk her head and neck. The "Employer's First Report of Injury", completed by Ms. Quintana on February 12, 2018, indicates that Claimant was "blading a road in county motor grader" that she was "working on a bumpy road" and that she "jarred [her] neck and back". The report does not indicate that Claimant hit a rock while pulling a ditch.

7. Ms. Quintana provided Claimant with a choice of physicians to attend to her alleged injuries. Dr. David Arnett was among the physicians on the list. Dr. Arnett is also Claimant's personal care provider (PCP). Although she was reluctant to treat with Dr. Arnett initially, Claimant ultimately chose him over the other designated provider, the Regional Occupational Medicine Program (ROMP) Clinic in Alamosa, for what the ALJ infers was personal convenience given the distance she would have to travel to attend appointments at the ROMP Clinic.

8. Claimant presented to the offices of Dr. Arnett on February 13, 2018. The documented reason for her visit was recorded as: "Pt presents for neck/right shoulder pain x4 days. Pt unsure if it happened at work. WC related injury, heavy lifting over the last week". Physical examination revealed findings consistent with the following assessments: "Cervical spine stenosis long tract signs; affecting R leg; pain/radiculopathy; L4-5; R arm; sx suggest C5-6, 6-7. Cervical radiculopathy". Dr. Arnett requested an MRI.

9. While she was sitting in Dr. Arnett's waiting room, Claimant received a phone call from Staci Metter, an adjuster with Respondent-Employer's third party administrator. Ms. Metter testified that the purpose of her call was to gain a better understanding of how Claimant's injury occurred. According to Ms. Metter, she typed the contents of her conversation with Claimant into her computer as the two spoke. Ms. Metter testified that Claimant told that she felt her injury occurred because she was looking down while operating the grader. Ms. Metter testified that Claimant did not attribute her injury to hitting a rock and jerking back and forth violently. Claimant testified that she could not recall her exact words to Ms. Metter, but explained that she would have to look down to watch the ditch she was pulling but that looking down did not affect how the accident happened.

10. Respondent-Employer, through Ms. Metter filed a General Admission of Liability (GAL) on February 20, 2018.[1] Ms. Metter did not have any medical records in her possession at the time she filed the February 20, 2018 GAL. Ms. Metter testified that as Claimant was missing time from work she gave her the benefit of the doubt when filing the GAL.

11. An MRI of the cervical spine as recommended by Dr. Arnett on February

[1] An Amended GAL was filed on March 6, 2018 to reflect that the three-day waiting period for payment of TTD under § 8-42-103(1)(b), C.R.S. had been met, thus entitling Claimant to TTD as of February 10, 2018 rather than February 15, 2018.

13, 2018 was completed February 21, 2018. Findings from the MRI were interpreted as being consistent with "[m]oderate spinal canal stenosis at C4-5, C5-6 and C6-7 [which] may compress the C5, C6 and C7 nerve roots.

12. Following her MRI, Claimant was referred to and evaluated by Dr. Christopher Gallus on March 13, 2018. Dr. Gallus obtained the following history: "Patient is here to discuss neck pain that started on 2/9/2018. The patient works in construction and drives heavy equipment". "She was driving heavy machinery (Road maintainer) and hit a rock that was buried under ground. The machine completely stopped and jerked her head forward and then back". Dr. Gallus reviewed Claimant's MRI and after image review reached, among others, the following impression: "C4-5 moderate spondylosis. Disc osteophyte complex with central disc protrusion which is causing ventral cord compression". Dr. Gallus expressed concern for Claimant's situation because her MRI demonstrated cord compression, she was hyperreflexic on examination and was having difficulty with tandem gait. He noted that he would make an attempt to treat Claimant conservatively and should that fail to provide relief of symptoms he would recommend a C4-5 anterior cervical discectomy and fusion because this level demonstrated an "acute, central disc herniation with cord compression which does explain the patient's acute symptoms".

13. Claimant failed conservative care. Consequently, Dr. Gallus sought authorization to proceed with the recommended C4-5 discectomy and fusion surgery. Respondent-Employer requested an opinion from Dr. Wallace Larson. Dr. Larson was asked to review Claimant's prior medical history and opine as to whether Claimant's need for surgery, as recommended by Dr. Gallus, was causally related to her February 9, 2018 industrial incident.

14. Dr. Larson completed a medical records review and on March 26, 2018, he opined that the surgical procedure contemplated by Dr. Gallus was "not related as a direct result" to Claimant's February 9, 2018 work incident. Instead, Dr. Larson concluded that Claimant's February 21, 2018 MRI demonstrated "significant degenerative disc disease within the cervical spine. He opined that it was "unlikely" that Claimant need for surgery related to her work duties. Rather, Dr. Larson opined that Claimant's need for surgery was related to her falling from a horse in 2006 as well as the "natural progression of her pre-existing degenerative disc disease in the cervical spine". Claimant testified she never injured her neck in the fall from a horse. Dr. Larson does not cite to any records to corroborate his theory that Claimant injured her neck in 2006 and the records submitted at hearing are devoid of any indication that Claimant received treatment for her neck after falling from a horse.

15. It is unclear whether Dr. Larson actually reviewed the MRI film. His report simply indicates that he reviewed records including the February 21, 2018 MRI report. Based upon the content of the report and the specific assignment Dr. Larson was handed, the ALJ finds it probable that he did not review the images from Claimant's February 21, 2018 MRI. Nonetheless, he opined that there was "no objective evidence of acute injury."

16. Dr. Larson's opinions are in direct conflict with those of Dr. Gallus who both reviewed Claimant's MRI and examined her. As noted, Dr. Gallus opined, as a spine surgeon, that Claimant's MRI demonstrated a large "acute, central disc herniation with cord compression which [did] explain [Claimant's] acute symptoms" (emphasis added).

17. Based upon Dr. Larson's opinions Respondent-Employer denied Dr. Gallus' request for surgical authorization. Consequently, Claimant elected to proceed with surgery under her health insurance. She was taken to the operating room by Dr. Gallus on April 16, 2018 where he performed a C4-5 anterior cervical discectomy and fusion with structural titanium interbody device with local autograft and allograft. In his April 16, 2018 operative report, Dr. Gallus reiterated that he obtained, reviewed and compared Claimant's February 21, 2018 MRI with a previous study completed June 23, 2010. When compared the February 16, 2018 MRI demonstrated a large, new central disc protrusion which was causing ventral cord compression. According to Dr. Gallus, Claimant's described right arm paresthesia was "more myelopathic in nature as opposed to radicular". Claimant testified that the surgery provided instant relief of her symptoms.

18. Claimant does have a history of prior neck pain dating back to 2009 when she developed an insidious onset of pain in her neck and right arm with numbness extending to the right hand. Diagnostic workup revealed carpal tunnel syndrome along with a "very small amount" of stenosis at the entrance zone to the foramen at C6-7 and "mild" degenerative changes at the C4-5 and C5-6 spinal levels. Claimant was treated with spinal injections and underwent a carpal tunnel release.

19. Claimant saw Dr. Arnett on July 27, 2012. At that time, Claimant was also reporting a new onset of neck pain without any known trauma. Dr. Arnett documented that Claimant had known degenerative disc disease (DDD) since 2009 and was further noted to have a herniated disc (HD) at C6-7. Dr. Arnett discussed with Claimant that her pain was "due to DDD w/ R C6-7 radiculopathy."

20. Claimant saw Dr. James Wigington on January 29, 2013 for neck pain of one week in duration. According to Dr. Wigington's report, Claimant was known to have a history of cervical disease. The note from this date of visit reflects that Claimant would suffer periodic increases in her pain in the absence of trauma. Claimant's increased pain would respond to rest and medication but was prone to re-aggravation should she engage in certain activities such as truck driving.

21. On April 6, 2018, Respondent-Employer filed an Application for Hearing seeking to withdraw their prior GALs on the basis that Claimant's cervical spine condition is unrelated to an industrial cause but rather the natural progression of her underlying pre-existing progressive DDD leading directly to her need for surgery. Accordingly, Respondent-Employer contends that the GALs were filed by mistake as Ms. Metter did not have the benefit of reviewing medical records before filing the

admission(s).

22. In advance of the hearing to resolve the aforementioned issues, Respondent-Employer requested an independent medical examination (IME) of Claimant with Dr. Elizabeth Bisgard. Claimant presented to Dr. Bisgard on May 21, 2018 and she "finalized" her exam by written report on May 31, 2018. Dr. Bisgard obtained a history from Claimant which the ALJ finds is materially consistent with that she provided at hearing and other providers including Dr. Gallus. In her IME report, Dr. Bisgard references that Claimant followed-up with Dr. Gallus to "compare the MRI scan from June 2010 to the recent MRI from February 2018 and that Dr. Gallus concluded that Claimant had sustained an acute central disc herniation that was causing her symptoms. Nonetheless, Dr. Bisgard noted that she could not "state within a reasonable degree of medical probability that the onset of cervical symptoms is directly related to an incident at work. Contrary to the suggestion advanced by Dr. Larson that Claimant's symptoms and need for surgery were causally related to the natural progression of her pre-existing DDD, Dr. Bisgard simply noted that there were conflicting reports regarding the onset of symptoms and that the question of whether Claimant's need for surgery was related to a work related event would have to be determined based upon medical records she requested from Dr. Greg Poulter.

23. Claimant requested in IME with Dr. Timothy Hall. Dr. Hall evaluated Claimant on June 18, 2018. Dr. Hall notes in his IME report that he "specifically" asked Claimant for the year prior to the February 9, 2018 incident whether she had any "therapy, medication, or doctor visits regarding her neck" and the answer supplied was "No". Some of the notes from Claimant's PCP visits with Dr. Arnett bear this out. Indeed, Dr. Arnett's reports from January 24, 2014 and November 10, 2017, for example contain the following reference under his review of symptoms: "No Neck Pain". In addition, there is no testimony or medical records that suggest Claimant was recommended for neck surgery prior to the alleged injury in this case.

24. At hearing, Dr. Bisgard focused much her testimony around Claimant's pre-existing cervical DDD. She testified that based on the history Claimant provided regarding the onset of prior neck pain without an ensuing trauma, and the findings of the 2009 MRI it was inevitable that she would continue to have episodic bouts of neck pain without trauma. According to Dr. Bisgard, Claimant's history of waxing and waning symptoms leads to an inference that her cervical spine condition is progressive and her development of symptoms is related to the natural progression of this condition. Simply put, Dr. Bisgard testified that the degenerative changes found on the 2009 MRI would progress so that it was inevitable that Claimant would develop symptoms that would require surgery. Dr. Bisgard's testimony does not persuasively address the contrary opinion of Dr. Gallus that Claimant's acute C4-5-disc herniation explains her acute symptoms.

25. Dr. Bisgard also suggested that Claimant was not credible based on what she perceived were inconsistencies in what Claimant reported to the Adjuster and what she gleaned from the medical records concerning the mechanism of injury (MOI) as well

as Claimant's failure to report the injury sooner. Here, Dr. Bisgard requested during her IME that Claimant provide her details as to how she believed the February 9, 2018 injury occurred, and to whom and when did she report it. Claimant told Dr. Bisgard that, while operating a road maintainer, she was pulling dirt out of a ditch, that the blade of the maintainer hit a rock, which resulted in her head being jerked back and forth. Claimant told Dr. Bisgard that she experienced the immediate onset of severe pain, beginning from the base of her head and neck region around to the side of her head. Claimant also told Dr. Bisgard that, just prior to this reported incident, she was experiencing no pain whatsoever. Consequently, Dr. Bisgard testified that, if the incident at work occurred as Claimant described, then it was extremely likely that she knew that she just experienced an acute work injury and yet she did not report it as such after returning to the shop. Dr. Bisgard testified that, in 24 years of her experience treating injured workers, these workers know exactly what, where, when, and how an injury occurred which resulted from going from zero pain to extreme levels of pain. Given what she felt was overall conflicting evidence concerning Claimant's reported MOI and her delay in reporting an injury coupled with her pre-existing DDD, Dr. Bisgard opined that Claimant likely experienced another bout of insidious pain caused by the natural progression of her underlying condition and that her need for treatment, including surgical intervention, was not related to her work duties.
