nurse, Christie Good-Plutt, RN, documented that the claimant was having pain and swelling.

12. Steven Quakenbush, PA-C, examined the claimant at CCOM on December 2, 2015. Mr. Quakenbush referred the claimant for an MRI of the right shoulder and right elbow with attention on the distal biceps, along with an MRI of the lumbar and thoracic spines. He assigned the claimant with restrictions of no lifting more than 1 pound with his right upper extremity and to alternate walking, standing, and sitting every half hour as needed during work.

13. The claimant was first examined by Dr. Richard Nanes during his follow-up to CCOM on December 10, 2015. He explained the same mechanism of injury to Dr. Nanes and that he recalled a “popping sensation” in his distal right biceps at the time of the incident. The claimant also reported to Dr. Nanes that his right shoulder symptoms had worsened by the day after the incident. The claimant further reported to Dr. Nanes that he did have a right rotator cuff repair two years ago and a right distal biceps repair approximately four years ago, both of which resolved without residual problems.

14. Dr. Nanes’ physical examination on December 10, 2015 documented that the claimant was only able to abduct his arm to 90 degrees and was very painful. He also noted that the claimant had tenderness at the right antecubital fossa and that the “Tendon appears to be retracted.” The claimant also had pain with full range of motion of his thoracic spine.” He noted that the claimant was to see orthopedist, Dr. Karl Larsen, on December 16, 2015 and that “he will probably need ortho care for his right shoulder.”

15. An MRI of the right shoulder and right elbow were performed on December 11, 2015. The radiologist believed the right shoulder MRI showed tendinosis and thinning with partial articular surface tear of the supraspinatus tendon, tendinosis and partial articular surface tear of the infraspinatus tendon, and thickening and tendinitis through the subscapularis tendon. The radiologist noted there was some thinning of the right biceps tendon, but did not see a tear.

16. Dr. Karl Larsen examined the claimant for the first time on December 16, 2015. Dr. Larsen documented that the claimant has had pain in the anterior and lateral elbow with limited use of the arm “in terms of gripping and forceful pushing activities.” Physical examination revealed “obvious proximal migration of the biceps compared to the contralateral side.” Dr. Larsen suspected that the claimant had a “delaminating” injury where he has torn through the sutures and previous tendon repair, “which is

certainly visible on the MRI" and which is "clearly evidenced by the proximal migration of the biceps…."

17. Dr. Larsen plainly stated "This is not going to improve on its own and the options are to just live with his deficient biceps or consider a revision repair." On December 22, 2015, Dr. Larsen requested prior authorization for a right arm revision distal biceps repair and possible allograft.

18. The claimant followed up with Mr. Quakenbush on December 21, 2015. It was noted that Dr. Larsen recommended surgery for the right biceps and that he also referred the claimant to Dr. Derek Purcell for evaluation of his right shoulder supraspinatus tendon tear.

19. Dr. Purcell examined the claimant on December 24, 2015. He noted that the claimant has a right sided distal biceps rupture and likely high grade partial thickness tear at the right long head of the biceps. Dr. Purcell personally reviewed the MRI films during the examination and opined that the claimant has a full thickness tear in the supraspinatus and a high grade partial thickness tear of the superior margin of the subscapularis, along with significant tearing at the long head of the biceps within the proximal bicipital groove.

20. Dr. Purcell discussed the claimant's options with him. He explained to the claimant that conservative methods would be futile and that the "rotator cuff will not heal on its own." On December 30, 2015, Dr. Purcell requested prior authorization for a right shoulder arthroscopic rotator cuff repair, subacromial decompression, distal clavicle resection, and biceps tenodesis.

21. Dr. Nanes was sent a letter by the claimant's counsel asking for his opinion regarding causation of the claimant's injuries and his need for surgery. Dr. Nanes opined that the claimant's mechanism of injury was consistent with his physical exam and imaging studies. He also opined that the claimant sustained a compensable injury on November 28, 2015 and that the surgical repairs for both the claimant's right shoulder and right biceps were reasonable and appropriate for the injuries he sustained. Dr. Nanes concluded, "In summary, I am not sure why his surgeries have been denied unless the insurance company has further information that I am not aware of."

22. Dr. Derek Purcell was also sent a letter by the claimant's counsel asking for his opinions in regards to the claimant's injuries. Dr. Purcell explained in detail how the claimant's mechanism of injury causes loading of the shoulder that may lead to rupture/tearing of the rotator cuff, long head of the biceps, or long head of the biceps

insertion at the superior labrum. He also explained that this mechanism of injury was consistent with his findings on physical examination that revealed weakness of the rotator cuff on external rotation, thumbs down abduction, and abduction. Dr. Purcell expressed that his review of the MRI was consistent with a full-thickness tear of the supraspinatus and associated high grade partial-thickness tear of the superior margin of the subscapularis. Dr. Purcell concluded, “Within a reasonable degree of medical probability, [the claimant] sustained this injury to his right shoulder secondary to his fall on 11/28/2015.” Dr. Purcell gave a detailed explanation as to why he was recommending each specific procedure, explained that the claimant’s injuries will not heal on their own, and that the surgeries being requested were reasonable, necessary, and appropriate.

23. Dr. Jack Rook performed an independent medical examination of the claimant on March 29, 2016. Dr. Rook documented the claimant’s mechanism of injury as him falling forwards, getting his right arm caught in the shelving, resulting in his body twisting and falling to the ground. Upon physical examination, Dr. Rook noted an obvious deformity with bunching of the biceps muscle in the distal upper arm. Examination of the right shoulder revealed moderate to severe tenderness of the anterior shoulder capsule, the subacromial space, and the right upper trapezius muscle. Evaluation of the thoracic spine revealed tenderness of the mid thoracic spinous process and tenderness along the right-sided thoracic paraspinal musculature.

24. Dr. Rook diagnosed the claimant as having right shoulder rotator cuff and biceps tendon ruptures, right elbow biceps tendon rupture, thoracic strain, and sleep disturbance related to pain associated with his injuries. Dr. Rook concluded that it was his expert opinion within a reasonable degree of medical probability that he developed an acute on-the-job injury involving his right upper extremity and back when he fell on November 28, 2015. Dr. Rook believes his conclusion was supported by the fact that the claimant developed immediate pain and deformity in his right arm after the slip and fall, that he was having no problems with his right upper extremity prior to this injury, he was having no functional deficits prior to this injury, and that there are no medical records between the treatment for his right upper extremity years ago and the current injury to suggest that his condition is related to his previous injuries. Dr. Rook also noted that multiple physicians, including the claimant’s ATP, have all uniformly agreed that the claimant sustained a compensable injury. He agreed with the surgical procedures requested by the claimant’s treating surgeons as being reasonable, necessary, and related to the work incident.

25. Dr. Jon Erickson performed an IME of the claimant on March 31, 2016 and authored his report on April 13, 2016. His physical examination of the claimant

documented weakness and pain to resisted right elbow flexion and resisted forearm supination. Dr. Erickson also noted that there was “obvious shortening of the biceps muscle.” Dr. Erickson’s interpretation of the MRI results led him to believe that there was no evidence of an acute trauma to the shoulder. He further concluded that none of the claimant’s imaging or physical findings, “save for the shortened distal biceps deformity,” were consistent with an acute rupture of the distal biceps. Dr. Erickson did admit that he has “no explanation for the obvious inconsistency.”

26. The respondents’ Exhibit K is the respondent-employer’s surveillance video taken during the evening of November 28, 2015, when the slip and fall incident occurred. The video spans from 4:52:01 p.m. to 6:12:28 p.m. of that evening. At 4:52:58, the video shows the claimant exiting the elevator pushing a cart into the prep kitchen area downstairs. The video then shows the claimant bring the cart back upstairs in the elevator at 4:58:02. While getting on the elevator it is apparent that the claimant is favoring his right arm and avoids using it to move the cart. At 5:06:26, Mr. Gore is seen exiting the elevator with a mop and bucket. He is then seen at 5:07:06 entering into the prep kitchen area where the walk-in freezer connects to. Mr. Gore remains in this area and the claimant exits the elevator and walks into the prep kitchen area at 5:12:50. Approximately 40 seconds later, the claimant is seen exiting the prep kitchen area back into the view of the surveillance camera. At 5:13:36, the video clearly shows the claimant examining the upper portion of his right arm. A few seconds later, he is seen comparing the right arm to his uninjured left arm. At 5:13:54, the claimant is shown lifting up his sleeve and looking directly at his right biceps. He then goes up the elevator out of view to report the injury to his supervisor.

27. The claimant explained during cross-examination that they have multiple carts that they use at work. The claimant explained that the cart he was pulling that was loaded with food was already in the prep kitchen and it was a completely different cart than the empty one that was seen being brought back upstairs in the elevator. He explained that they had already brought the food downstairs throughout the day and that “We go up and down the…. elevator constantly. There’s food all over the place” and that there is no storage in the upstairs kitchen.

28. Dr. Rook testified at hearing consistently with his written report. He recounted the claimant’s mechanism of injury as, “He started to fall. He got his right arm caught in a metal rack, which caused a traction injury to his arm as he fell to the ground.” Dr. Rook explained that a traction injury causes pulling or tugging on the arm as a result of the claimant’s 200+ pounds trying to be supported by only his right arm. He explained that this mechanism of injury was reasonably likely to cause a rotator cuff tear and biceps ruptures. It also caused a thoracic strain due to the twisting and falling.

29. When asked about whether the specific procedures requested by the claimant's treating surgeons were reasonable, necessary, and related, Dr. Rook expressed that he is not an orthopedic surgeon, but there is obvious deformity in the claimant's arm that needs some sort of procedure to be corrected. Dr. Rook was clear though that if the claimant does need surgery as recommended by both of his treating surgeons and ATP, that it was related to the occupational injury because he was having no functional loss or other problems with the right upper extremity prior to this incident.

30. The claimant's supervisor and the owner of the business, Ms. Debbie Neugebauer, confirmed that the claimant had no problems with the physical demands of his job at any time prior to November 28, 2015.

31. The ALJ finds the analyses and opinions of Dr. Larsen, Dr. Purcell, Dr. Rook, and Dr. Nanes to be credible and more persuasive than medical analyses and opinions to the contrary.

32. The ALJ finds the claimant to be credible.

33. The ALJ finds that the claimant has established that it is more likely than not that on November 28, 2015 he suffered injury to his left upper extremity and his thoracic spine arising out of and in the course of his employment with the respondent-employer.

34. The ALJ finds that the claimant has established that it is more likely than not that the surgeries, as recommended by Dr. Larsen and Dr. Purcell to cure or relieve him from the effects of his injury, are reasonable, necessary, and related to the industrial injury.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S.

2. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004).

3. The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A workers' compensation case is decided on its merits. § 8-43-201, C.R.S.

4. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claims Appeals Office,* 5 P.3d 385, 389 (Colo. App. 2000).

5. It is within the ALJ's purview as the finder of fact to determine the credibility of the witnesses and resolve conflicts in the evidence. *Metro Moving & Storage v. Gussert*, 914 P.2d 411 (Colo. App 1995).

6. When determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (1936).

7. In resolving inconsistencies the ALJ may credit all, part or none of an expert's testimony, and the ALJ's failure to cite an expert's opinion inherently reflects that the ALJ did not find it persuasive. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

8. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. §8-41-301 (1)(c) C.R.S.; *Faulkner v Industrial Claim Appeals Office*, 12 P 3.d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for the determination by the ALJ. *Faulkner,* 12 P.3d at 846.

9. For an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Off.,* 919 P.2d 207, 210, 210 (Colo. 1996); *Schepker v. Daewoo North*, W.C. No. 4-528-434 (ICAO April 22, 2003). An injury "arises out of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions as part of the employee's services to the employer. *See Schepker, supra.* "In the course of" employment refers to the time, place, and circumstances of the injury. *Id.* There is no

presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment. *Finn v. Indus. Comm'n,* 165 Colo. 106, 108-09, 4437 P.2d 542 (1968).

10. In deciding whether claimant has met his burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Kroupa v. Indus. Claim Appeals Off.*, 53 P.3d 1192, 1197 (Colo. App. 2002).

11. The claimant has the burden to prove his entitlement to medical benefits by a preponderance of the evidence. §8-43-201, C.R.S. The respondents are only liable for the medical treatment that is reasonable and necessary to cure and relieve the work-related injury. §8-42-101(1)(a), C.R.S. Even after an admission of liability is filed, respondents retain the right to dispute the relatedness of the need for continuing treatment. This principle recognizes that the mere admission that an injury occurred cannot be construed as a concession that all subsequent conditions and treatments were caused by the admitted injury*. HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990); *Snyder v. ICAO*, 942 P.2d 1337 (Colo. App. 1997).

12. The claimant is not entitled to medical care that is not causally related to his work-related injury or condition. As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 10, 2007), "A showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary." Where the relatedness, reasonableness or necessity of medical treatment is disputed, the claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.,* W.C. No. 4-117-758 (ICAO April 7, 2003).

13. Although a preexisting condition does not disqualify a claimant from receiving workers' compensation benefits, the claimant must prove a causal relationship between the injury and the medical treatment the claimant is seeking. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997). Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1189 (Colo. App. 2002). And where an industrial injury merely causes the discovery of the underlying disease to happen sooner, but does not accelerate the need for the surgery for the underlying disease, treatment for the preexisting condition is not compensable. *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

14. The ALJ concludes that the analyses and opinions of Dr. Larsen, Dr. Purcell, Dr. Rook, and Dr. Nanes are credible and more persuasive than medical analyses and opinions to the contrary.

15. The ALJ concludes, as found above, that the claimant is credible.

16. As found above, the ALJ concludes that the claimant has established by a preponderance of the evidence that he sustained an injury arising out of and in the course of his employment with the respondent-employer.

17. As found above, the ALJ concludes that the claimant has established by a preponderance of the evidence that he is entitled to reasonable, necessary, and related medical care to cure or relieve him from the effects of his injury. Specifically, the surgeries as recommended by Dr. Larsen and Dr. Purcell.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

1. The claimant's claim for benefits under the Workers' Compensation Act of Colorado is compensable and the respondent-insurer is liable for the benefits flowing therefrom.

2. The respondent-insurer shall authorize and pay for the surgeries as recommended by Dr. Larsen and Dr. Purcell.

3. The respondent-insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that the anterior cervical decompression and fusion at C5-C7 recommended by Dr. Wong is reasonable, necessary, and related to his September 24, 2013 work injury.

FINDINGS OF FACT

1. Claimant is employed by Employer as a flooring and décor specialist and has been so employed since approximately 2006.

2. On September 24, 2013 Claimant sustained a compensable injury while so employed. On that date, Clamant was assisting another associate with moving a cabinet onto a shelf. They attempted to slide the cabinet from a flat cart onto a shelf when the cabinet slipped and started to fall toward Claimant. The cabinet weighted approximately 150 to 200 pounds. When it slipped, Claimant caught the cabinet with his left arm outstretched and felt it pull his arm downward.

3. Claimant did not immediately report the injury. He knew his arm had been yanked hard but didn't realize it was a serious injury. The following day his pain was worse and when he returned to work for his next scheduled shift on September 26, 2013 he reported the injury.

4. Claimant was referred by Employer for treatment.

5. On September 27, 2013 Claimant was evaluated by Ted Villavicencio, M.D. Claimant reported that a large shelf slipped and that he had the full weight on his left arm and shoulder. Claimant reported sudden pain in his left shoulder and trapezius area that was similar to his right shoulder when he had a rotator cuff in the right shoulder. Claimant reported some numbness from his trapezius to his forearm and that he had no past left shoulder or neck injuries. Dr. Villavicencio assessed: lifting injury, neck and shoulder pain; and exam with radicular findings for left upper extremity but suspicion for primary shoulder disorder and possible rotator cuff tear. Dr. Villavicencio noted that conservative treatment would be started. *See* Exhibit 1.

6. On October 4, 2013 Claimant was evaluated by Dr. Villavicencio. Claimant had decreased radicular symptoms and findings for the left upper extremity and Dr. Villavicencio assessed a primary shoulder disorder and possible rotator cuff tear. *See* Exhibit 1.

7. On October 23, 2013 Claimant was evaluated by Dr. Villavicencio. Claimant had less neck pain and left upper extremity paresthesia and better mobility in

his neck and shoulder. Dr. Villavicencio noted that a cervical spine MRI would be ordered. *See* Exhibit 1.

8. On November 20, 2013 Claimant was evaluated by Scott Richardson, M.D. Claimant reported tingling and numbness in his entire left arm that came and went and that he had pain in the left shoulder area with motion. Dr. Richardson diagnosed cervical strain and left shoulder strain. Dr. Richardson noted he had re-ordered an MRI of the cervical spine.

9. On December 5, 2013 Claimant was evaluated by Robert Kawasaki, M.D. Claimant reported catching a shelf at work that pulled his left arm downward and that he had an ache and pain in the left shoulder and trapezial region with subsequent worsening of soreness in the left shoulder, trapezial region, and into his neck. Claimant reported numbness and tingling down his entire left extremity focused on the small and ring digits and also involving the thumb, index, and middle digits at times. Dr. Kawasaki provided the impression of cervical strain and signs/symptoms of upper extremity parasthesias. Dr. Kawasaki noted that electrodiagnostic testing was completed and showed a negative EMG/nerve conduction study with no evidence of cervical radiculopathy, brachial plexopathy, or compression neuropathy. Dr. Kawasaki opined that symptomatically Claimant may have cervical radiculitis and myogenic thoracic outlet syndrome without evidence of nerve damage on EMG. *See* Exhibit 3.

10. On December 10, 2013 Claimant underwent an MRI of his cervical spine interpreted by Patrick O'Malley, M.D. Dr. O'Malley provided the impression of: multilevel degenerative changes; bone lesion within the T3 vertebral body with sclerotic appearance. *See* Exhibit H.

11. On December 18, 2013 Claimant was evaluated by Dr. Villavicencio. Dr. Villavicencio noted that the cervical spine MRI showed multilevel degenerative changes, and bone lesions within T3 vertebral body- sclerotic. Dr. Villavicencio noted that Claimant had a lifting injury with neck and shoulder pain with persisting possible left upper extremity radicular symptoms and that Claimant likely had a primary shoulder disorder. *See* Exhibit 1.

12. On February 6, 2014 Claimant was re-evaluated by Dr. Kawasaki. Claimant continued to complain of pain in the left side of his neck and down his left upper extremity with numbness and tingling into his triceps area and forearm into his hand. Dr. Kawasaki provided the impression of: cervical spondylosis; signs and symptoms compatible with C6 and potentially C5 radiculopathy; and some symptoms for thoracic outlet syndrome, likely secondary to myofascial irritation. Dr. Kawasaki noted that Claimant would try additional conservative treatment and if no improvement, then he may consider interventional procedures with potentially C5-6 and C6-7 spinal nerve root blocks. *See* Exhibit 3.

13. On March 6, 2014 Claimant was evaluated by Dr. Kawasaki. Claimant reported continued pain in the cervical region down the left upper extremity. Claimant

reported that conservative treatment had not been helpful. Dr. Kawasaki recommended diagnostic and hopefully therapeutic spinal nerve root blocks with four injections at left C4-5, C5-6, and C6-7 to see if they could figure out which nerve root was irritated and responsible for Claimant's symptoms into the upper extremity. *See* Exhibit 3.

14. Claimant continued to be evaluated by Dr. Villavicencio with no major changes in assessment or symptoms from December until April. On April 3, 2014 Dr. Villavicencio noted that Dr. Kawasaki was recommending injections at C4-C7 to help identify the pain generator. Dr. Villavicencio noted the mechanism of injury as well as the temporal relationship with no prior complaints of neck or left upper extremity pain/paresthesia. Dr. Villavicencio opined that the September 24, 2013 injury caused an exacerbation of Claimant's pre-existing cervical spine pathology and was therefore work related. Dr. Villavicencio noted that an EMG had been performed and was negative. Dr. Villavicencio noted that Claimant was planning on injections with Dr. Kawasaki and opined that Claimant's primary pain generator was from the cervical spine and was an exacerbation of pre-existing changes in the cervical spine. Dr. Villavicencio opined that injections would serve to identify if the MRI changes were a pain generator. *See* Exhibit 1.

15. On April 30, 2014 Claimant was evaluated by Dr. Villavicencio. Dr. Villavicencio noted that Claimant had persisting left cervical and left shoulder pain, and noted the plan would be to order an MRI of the left upper extremity. Dr. Villavicencio assessed cervical radiculopathy and shoulder strain. *See* Exhibit 1.

16. On June 17, 2014 Claimant was evaluated by Dr. Villavicencio. Dr. Villavicencio assessed: cervical radiculopathy; labral tear of shoulder; and shoulder strain. Dr. Villavicencio noted that cervical injections had not been approved and that Claimant had persisting cervical and left shoulder pain. *See* Exhibit 1.

17. On July 17, 2014 Claimant was evaluated by John Burris, M.D. Dr. Burris noted that an EMG of the left upper extremity on December 5, 2013 was negative and that an MRI of the cervical spine on December 10, 2013 showed no acute abnormalities. Dr. Burris opined that the MRI showed significant multilevel degenerative changes. Dr. Burris noted that Claimant had undergone physical therapy, chiropractic manipulation, and acupuncture without benefit and that staged nerve root blocks recommended by Dr. Kawasaki had been denied. Dr. Burris noted that Claimant had an MRI of the left shoulder revealing a labrum tear and that Dr. Failinger performed a left shoulder injection that provided temporary relief and that Claimant was awaiting a second opinion on the left shoulder. Dr. Burris diagnosed left shoulder strain. Dr. Burris noted a normal EMG with no acute findings on cervical MRI and no evidence of cervical radiculopathy on examination. *See* Exhibit 1.

18. On September 5, 2014 Claimant underwent left shoulder surgery to repair the torn labrum in his shoulder.

19. On November 6, 2014 Claimant was evaluated by Dr. Burris. Dr. Burris noted Claimant was post surgery to the left shoulder and that Claimant continued to report diffuse pain extending from the left neck region all the way down his arm. Dr. Burris noted that Claimant had significant workup to the cervical spine including MRI showing degenerative changes and an EMG that was negative. Dr. Burris noted that Claimant chose to spend the visit arguing about medication dosage believing he needed the maximum dose, and arguing about his neck pain complaints and the insurer's denial of neck treatment. Dr. Burris noted that the interaction was very confrontational and that Claimant was very argumentative. *See* Exhibit 1.

20. On February 26, 2015 Claimant was evaluated by Caroline Gellrick, M.D. Dr. Gellrick diagnosed evidence of radiculopathy with asymmetrical reflexes left upper extremity with definite evidence of C7 radiculopathy and questioned C5 radiculopathy of the left upper extremity emanating from the cervical spine, although she opined that a brachial plexus lesion could not be excluded. Dr. Gellrick noted that Claimant had semi conservative treatment for his cervical spine and recommended a repeat MRI of the cervical spine and repeat EMG nerve conduction study of the left upper extremity. Dr. Gellrick noted that once the tests were completed, further treatment recommendations could be made. *See* Exhibit 5.

21. On March 13, 2015 Claimant underwent EMG testing performed by Barton Goldman, M.D. Dr. Goldman noted the goal of ruling out left C6 or C7 chronic radiculopathy vs. upper trunk neurogenic TOS. After testing, Dr. Goldman concluded that there was a mildly abnormal study showing left neuropraxic thoracic outlet syndrome involving the upper trunk of the brachial plexus. Dr. Goldman opined that there was no electrodiagnostic evidence for peripheral polyneuropathy, cervical radiculopathy, entrapment mononeuropathy, or myopathy. Dr. Goldman opined that although Claimant may be experiencing referred upper limb pain from the neck, the study and shoulder MRI report suggested that the primary pain generators were within the shoulder joint and were from upper trunk brachial plexus irritation of myogenic origin. *See* Exhibit D.

22. On March 26, 2015 Claimant was evaluated by Dr. Gellrick. Dr. Gellrick noted the EMG/nerve conduction study from March of 2015 showed neurapraxia consistent with thoracic outlet syndrome. Dr. Gellrick referred Claimant to Dr. Hompland for pain management intervention for the cervical spine. *See* Exhibit 5.

23. On April 15, 2015 Claimant was evaluated by Scott Hompland, D.O. Claimant reported a pins and needles sensation in his left shoulder radiating down into the left hand and aching and stabbing in the left side and right side of his neck and aching into his left shoulder. Dr. Hompland assessed: work related injury with symptoms of pain and decreased sensation in the left shoulder and pain radiating down the left upper extremity; MRIs consistent with multilevel foraminal stenosis; and electrodiagnostic studies consistent with brachial plexopathy but not cervical radiculopathy. Dr. Hompland noted that the Claimant had symptoms of sensory abnormalities in the C5 and C6 dermatome in the left upper extremity that could be

consistent with neural foraminal encroachment although he would have anticipated the electrodiagnostic studies to show cervical radiculopathy. Dr. Hompland opined that the physical findings were also consistent with brachial plexopathy identified by Dr. Goldman and opined that the mechanism of injury could have resulted in a stretch of the brachial plexus. *See* Exhibit 4.

24. On May 6, 2015 Jeffrey Smith, M.D. performed a peer review and opined that the request for an MRI of the cervical spine was not medically necessary. Dr. Smith noted that Claimant had a prior MRI of the cervical spine on December 10, 2013 and that Claimant recently underwent an EMG/NCS of the left upper extremity which identified peripheral nerve injuries outside of the neck. Dr. Smith opined that there was no significant rationale to justify a repeat MRI of the cervical spine. *See* Exhibit C.

25. On May 28, 2015 Claimant underwent a second surgery for his left shoulder to repair a new labral tear. Claimant's left shoulder improved with physical therapy but he continued to report numbness and weakness in his left upper extremity.

26. On June 10, 2015 Allison Fall, M.D. performed an independent medical evaluation. Dr. Fall took a statement from Claimant, reviewed medical records, and examined Claimant. Dr. Fall provided the impression of: status post left shoulder surgery x2; upper extremity traction injury causing mild upper trunk brachial plexopathy without evidence of motor loss on EMG; and chronic pre-existing cervical degenerative changes likely unrelated to mechanism of injury and current symptomatology. Dr. Fall opined that Claimant suffered an injury to his left shoulder and to his upper trunk of the brachial plexus that were causally related to his mechanism of injury on September 24, 2013. Dr. Fall opined that the appropriate diagnosis was not cervical radiculopathy but was upper trunk brachial plexopathy. *See* Exhibit A.

27. On August 5, 2015 Claimant was evaluated by Dr. Gellrick. Dr. Gellrick noted that Claimant still had pain in the neck and numbness down his left arm that did not dissipate following Claimant's shoulder surgery. Dr. Gellrick noted that the abnormalities on EMG pointed toward the shoulder and thoracic outlet syndrome. Dr. Gellrick noted that an MRI taken that day of the cervical spine was reviewed and showed multiple levels of degenerative disk change and disk disease with what appeared to be neural foraminal narrowing at C5 and C6. Dr. Gellrick recommended having Dr. Hompland review the new cervical MRI and noted that cervical spine injections would not be attempted until Claimant healed more from his shoulder surgery. *See* Exhibit 5.

28. On August 24, 2015 Claimant was evaluated by Dr. Hompland. Dr. Hompland noted that since the last visit Claimant had an MRI of the cervical spine performed that was slightly worse from the prior MRI. Dr. Hompland assessed: work related injury resulting in left C6 dermatomal pain; electrodiagnostic study suggesting brachial plexopathy; and severe C5-C6 neural foraminal stenosis. Dr. Hompland planned to perform a left C5-C6 transforaminal epidural steroid injection to decrease inflammation and hopefully decrease Claimant's C6 radicular symptoms. Dr. Hompland

also opined that it was possible that Claimant actually had two injuries, one from foraminal stenosis and the second being a traction type injury of the brachial plexus. Dr. Hompland opined that it was possible that Claimant's pain was coming from a stretching injury to the C6 nerve root. *See* Exhibit 4.

29. On September 3, 2015 Claimant was evaluated by Dr. Gellrick. Dr. Gellrick noted that Claimant was going to undergo epidural steroid injections at C5-6 on the left side and she opined that the injections should decrease the C6 radicular symptoms. *See* Exhibit 5.

30. On September 4, 2015 Dr. Hompland performed a left C5-6 transforaminal epidural steroid injection/selective nerve root block. Dr. Hompland noted that Claimant had a positive response to the local anesthetic but no long term response to the steroid from the injection. Claimant reported his pain got worse after the first day and that the injection provided him no benefit. *See* Exhibit 4.

31. On September 22, 2015 Claimant was evaluated by Dr. Hompland. Dr. Hompland opined that Claimant had a positive response to the local anesthetic but no long term response to the steroids from the injection. Dr. Hompland recommended that Claimant follow up with Dr. Gellrick and that future considerations included a C5-C6 neural foraminal decompression. Dr. Hompland noted that an electrodiagnostic evaluation could be done by Dr. Goldman to determine whether the nerve was healing and that it seemed that a severe compressed neural foramen would put Claimant at a risk of a C6 stretch injury which is what seemingly occurred as a result of the work injury. Dr. Hompland recommended a surgical consultation. *See* Exhibit 4.

32. On September 28, 2015 Claimant again underwent nerve conduction studies performed by Dr. Goldman. Dr. Goldman noted that Claimant had a very mild relative delayed left lateral antebrachial cutaneous sensory nerve action and that all other nerve conduction study parameters were normal. Dr. Goldman opined that all EMG parameters were normal including the cervical multifidi. Dr. Goldman concluded that Claimant had a mildly abnormal but stable study with very mild left neuropraxic thoracic outlet syndrome unchanged from the prior study and he again concluded that there was no electrodiagnostic evidence for cervical radiculopathy, entrapment mononeuropathy, peripheral polyneuropathy, or myopathy. Dr. Goldman opined that overall the study was unchanged from March. *See* Exhibit D.

33. On September 30, 2015 Claimant was evaluated by Douglas Wong, M.D. Claimant reported pain since an accident at work in September of 2013. Dr. Wong noted that a previous MRI showed C5-7 degenerative disk disease with foraminal narrowing and C4-5 left foraminal narrowing. Dr. Wong noted that Claimant reported the injury occurred at work and that Claimant reported no previous episodes. Dr. Wong felt that a ACDF C5-7 would be appropriate and noted he would work on getting it approved. *See* Exhibit F.

34. On October 8, 2015 Dr. Fall provided an addendum to her June 10, 2015 independent medical evaluation. Dr. Fall opined that cervical spine surgery was not medically reasonable, necessary, or related to the September 24, 2013 work injury. *See* Exhibit A.

35. On October 8, 2015 Claimant was evaluated by Dr. Gellrick. Dr. Gellrick noted that the repeat EMG with Dr. Goldman continued to reveal evidence of left neuropraxtic thoracic outlet syndrome with no evidence of cervical radiculopathy, and that the EMGs had been negative for the upper extremities. Dr. Gellrick noted that Claimant's shoulder surgeon was pointing to the cervical spine as a pain generator but that shots with Dr. Hompland were unsuccessful. Dr. Gellrick noted, however, that despite the negative EMGs and the unsuccessful shots, Dr. Wong was recommending surgery and she considered the shoulder surgeon to agree with Dr. Wong's recommendation. *See* Exhibit 5.

36. Dr. Gellrick and Dr. Fall testified at hearing consistent with their prior written reports and opinions. Overall, the testimony of Dr. Fall is found more credible and persuasive.

37. Dr. Fall opined that the mechanism of injury did not result in a cervical spine injury and that the evidence pointed to an injury to the left shoulder and upper trunk of the brachial plexus. She noted that the MRIs performed revealed acute tearing in the left shoulder and abnormalities of the brachial plexus but that the objective testing did not reveal an acute cervical injury. Dr. Fall noted that Claimant had degeneration in his cervical spine but that it was not caused by the work injury and that it was not causing Claimant's current symptoms and opined that the current symptoms were caused by the brachial plexus. Dr. Fall disagreed that the mechanism of injury aggravated Claimant's pre-existing cervical spine degenerative condition and pointed to the MRI showing degenerative changes with no acute findings.

38. Dr. Gellrick opined that the mechanism of injury could be consistent with a brachial plexus traction injury, a cervical spine injury, or both. Dr. Gellrick's conclusion that there was a cervical spine injury discounts the objective medical evidence showing thoracic outlet syndrome and no evidence of cervical radiculopathy and her opinion relies heavily on medical records showing a positive response to the spurling's maneuver. Although Claimant had multiple positive spurling's maneuvers he also had multiple negative spurling's maneuvers. The multiple negative spurling's maneuvers noted, the negative EMGs performed, the MRI negative for acute injury, and the negative response to cervical injection all weigh towards showing more likely than not that a cervical injury was not suffered. Therefore, Dr. Fall's opinion is accepted over that of Dr. Gellrick.

39. Claimant also testified at hearing. His testimony surrounding the mechanism of injury was credible. However, his testimony surrounding prior injuries or pain to the same area is not credible or persuasive. The evidence established that Claimant had similar pain complaints several years prior to his work injury. On August

26, 2011 Claimant was evaluated by Brian Wegner, M.D. Claimant reported that his left arm was numb involving all five left fingertips and the whole arm, and that the symptoms began the night prior. Claimant reported ongoing chronic shoulder pain. Dr. Wegner assessed: acute sensory disturbance of the skin; acute cervicalgia; and chronic shoulder pain. Dr. Wegner opined that it seemed that Claimant had nerve root compression/swelling at the left neck of quite possibly a strain of the left brachial plexus and opined that the symptoms should resolve over one week. *See* Exhibit G.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical benefits

Respondents are required to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). The claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to establish by a preponderance of the evidence that he sustained an acute injury to his cervical spine or that he aggravated a pre-existing cervical spine condition on September 24, 2013. Rather, it is more persuasive that Claimant suffered a left shoulder injury and a brachial plexus traction injury on that date. The testimony of Dr. Fall in that regard is found credible and persuasive. Dr. Fall's opinions are also consistent with the objective medical testing. Three EMG tests performed in this case were negative for cervical radiculopathy but the two more recent EMG tests demonstrated abnormalities of the brachial plexus and thoracic outlet syndrome. Additionally, the MRI performed showed no acute injury to the cervical area and showed no evidence of an acute exacerbation or aggravation of the pre-existing degeneration that was present throughout the cervical spine. Further, the cervical epidural steroid injection did not provide Claimant relief, which would be expected if the cervical spine or cervical radiculopathy was the cause of Claimant's ongoing symptoms.

Claimant argues that the positive spurling's maneuvers noted at several appointments demonstrated that he has a cervical radiculopathy. It is noted that at several appointments the spurling's maneuver was noted to be positive. However, it also was noted to be negative at several appointments and whether or not it is noted to be positive or negative depends on Claimant's subjective reports, so the test overall is not as objective as the EMG or MRI tests performed in this case. Additionally, although several providers opined that a cervical injury might also have been suffered and although it is possible that Claimant may have suffered both a cervical injury as well as a brachial plexus injury, Claimant has failed to establish more likely than not that both injuries were suffered. Rather, the credible and persuasive evidence shows that he suffered both a shoulder injury and a brachial plexus injury and that his ongoing symptoms are related to the brachial plexus traction injury and not to cervical radiculopathy. The symptoms Claimant has displayed since the injury could be consistent with either a cervical injury or a brachial plexus injury. However, the objective testing and the persuasive medical opinions establish more likely than not that the symptoms are from the brachial plexus. Therefore, Claimant has failed to meet his burden to establish that medical treatment aimed at his cervical spine including the surgery recommended by Dr. Wong is reasonable, necessary, or causally related to his September 24, 2013 work injury.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish that cervical spine surgery recommended by Dr. Wong is reasonable, necessary, or casually related to his September 24, 2013 work injury. His request for surgery is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 15, 2016,

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-985-073-02

ISSUES

The issues to be determined by this decision are:

1. Whether the claimant has proven by a preponderance of the evidence that he sustained a traumatic injury to his left scapula arising out of and in the course of his employment with the respondent-employer on or about January 27, 2015;

2. If so, whether the claimant has proven by a preponderance of the evidence that the medical benefits requested for his left shoulder symptoms and diagnoses, including need for the shoulder surgery proposed by Dr. Jinkins are causally related to his work injury on or about January 27, 2015;

3. If so, whether the motor vehicle accident injuring the claimant on February 16, 2015, is an intervening, superseding cause of his need for medical and indemnity benefits and thus severs the nexus between the industrial injury and his need for benefits for his left shoulder region's symptoms and diagnoses after that date;

4. If so, whether the claimant is entitled to temporary total disability (TTD) benefits beginning February 5, 2015, and ongoing; and,

5. If so, what is the claimant's average weekly wage (AWW)?

PROCEDURAL MATTERS

The parties reached the following stipulations:

1. The claimant withdrew his request for temporary partial disability (TPD) benefits;

2. The claimant stipulated that his authorized provider if the claim is found compensable is Emergicare, and that other medical providers are not authorized; and,

3. The respondents reserved the Workers' Compensation Medical Fee Schedule for any medical benefits awarded or ordered.

These stipulations were approved and accepted by the ALJ.

FINDINGS OF FACT

1. The claimant was employed by the respondent-employer and began employment on September 20, 2013.

2. The claimant testified that on January 19, 2015 he was working as a rough carpenter where he frames walls. The claimant began to walk away from a conversation when a steel beam fell and hit him on his left posterior shoulder and knocked him to the ground. The claimant estimates the beam weight to be over 300 pounds. His coworker John Pace estimates the weight as about 80 pounds. Afterwards the claimant began experiencing pain in his back near the left scapula and numbness down his left arm to his elbow. He did not complain of neck pain.

3. There appears to be some discrepancies in the date of the actual injury, which the claimant currently states as January 19, 2015. On January 30, 2015, Robert Owens, the director of the construction division for the respondent-employer, prepared a First Report of Injury for presentation to the respondent-insurer. This document indicates that the claimant suffered an on-the-job injury to his left shoulder on January 27, 2015. The date of notification was entered as January 29, 2015. The Type of Injury Sustained section indicates: "No injury Really sore."

4. On January 29, 2015 the claimant initially presented to the Emergicare clinic regarding the pain in his shoulder and scapula area and numbness down left arm from elbow down. X-rays were ordered, and there were no fractures. Physical examination during this initial evaluation revealed grossly unremarkable neck exam and full range of motion of the spine. However, physical examination of the muscoskeletal was abnormal over the scapula area. The examination revealed:

> he has tenderness to palpation of the posterior left scapula, with decreased flexion, extension, and abduction of the left shoulder. He has normal radial pulse present. He has no ac joint tenderness, no humeral head tenderness. Biceps is nontender, Elbow with FROM, motor in hand shows he has a previous left thumb tendon injury and cannot fully extend the thumb, but he is able to abduct the fingers, wrist flexion and extension is normal and he can cross fingers.
>
> Median, ulnar, and radial motor function is intact.

5. The claimant was diagnosed with contusion of the scapular region, sprain/strain of back, unspecified fall, accidents occurring in other specified places.

6. The claimant had x-rays done on January 30, 2015 of the thoracic spine and left scapula.

7. The claimant returned to Emergicare on February 4, 2015 for his initial physical therapy appointment with swelling, decreased range of motion, weakness, and difficulty with functional use of his left shoulder.

8. On February 5, 2015, the claimant had a follow-up appointment regarding his shoulder. The claimant was put on work restrictions with max lifting of 15 lbs.

9. The claimant was in a car accident on February 16, 2015 where he was rear-ended and the claimant complained of cervical spine pain at back of head and neck. Additionally, he complained of pain in his chest, abdomen, pelvis, low back, thoracic back, extremities, and other locations. CT scans were ordered; nothing abnormal.

10. On February 20, 2015 the claimant had a follow-up with Dr. Joseph Zaremba. As noted above, four days before, on February 16, 2015, the claimant was in a motor vehicle accident. Dr. Zaremba ordered an MRI of the left shoulder and noted:

> Pt has a new nonwork related injury. I suspect this is the primary cause of his pain. I am requesting MRI of the left shoulder to evaluate further. If he has a tear around scapula, it would be work related. If it is anterior or rotator cuff, it would likely be from the accident and not work related. Depending on the MRI findings, he could be at MMI in 1 week.

11. On March 9, 2015 the claimant met with Dr. Randall Jones of Concentra regarding his left shoulder pain. Dr. Jones noted that the claimant had tenderness at his AC joint and scapula and limited range of motion. Assessment was that the claimant had contusion on left back wall of thorax, rib fractures, and rotator cuff tear. During this encounter the claimant concealed the fact that he had been in a MVA.

12. The claimant met with Dr. Wiley Jinkins, orthopedic surgeon, on March 10, 2015. Anticipated MMI date was moved to May 11, 2015. Dr. Jinkins noted from his exam of the claimant that there is “allodynia and tenderness in all areas along the medial border of the scapula, the deltoid region, and also anteriorly.” Dr. Jinkins administered an injection to the claimant. The claimant was diagnosed with left shoulder contusion with possible internal derangement.

13. On March 17, 2015 the claimant had a follow-up appointment with Dr. Jones. The claimant reported that the injection he received had increased his pain. Additionally, PT was put on hold as "made worse" with 1 session.

14. On March 31, 2015 the claimant had another orthopedic consultation with Dr. Jinkins. A request for MRI of the thoracic spine was submitted on this date.

15. On April 6, 2015 the claimant had a follow-up appointment with Dr. Jones.

16. On April 14, 2015 the claimant had a follow-up appointment with Dr. Jinkins, where the claimant indicated that he was "no better." The physical examination revealed "significant guarding with significant discomfort even to the lightest tactile palpation."

17. On April 15, 2015 a MRI of the claimant was done of the thoracic spine.

18. On May 11, 2015 the claimant reported to the Penrose St. Francis emergency room with chronic lower back pain.

19. On May 12, 2015 the claimant had a follow-up appointment with Dr. Jinkins. The claimant was referred to a chiropractor by Dr. Jinkins.

20. On May 14, 2015 the claimant met with Dr. Albert Hattem, a delayed recovery specialist, who placed the claimant on modified activity with the following work restrictions: no lifting over 5 lbs, no pushing or pulling over 10 lbs of force, no reaching above shoulders. The claimant was referred to Dr. Polvi for up to 6 chiropractic/acupuncture treatments. An MRI was scheduled.

21. On May 21, 2015 the claimant had an MRI of his left shoulder, which found a "small full-thickness tear of the distal anterior supraspinatus tendon" and a "small linear full-thickness tear of the anterior supraspinatus tendon" and a "small partial-thickness tear of the articular surface of the distal supraspinatus tendon."

22. Based upon the results of the MRI and Dr. Zaremba's assessment of February 20, 2015, the claimant would have reached maximum medical improvement for the work-related injury one week after February 20, 2015.

23. On June 9, 2015 the claimant had a follow-up appointment with Dr. Jinkins. The claimant has still had no significant improvement in his left shoulder. Dr. Jinkins recommended considering an arthroscopic subacromial decompression with arthroscopic rotator cuff repair.

24. On August 11, 2015 an Independent Medical Examination of the claimant was completed by Dr. Eric Ridings. Dr. Ridings opined that the claimant's diagnosis was a contusion to the left scapular region. He opined, in accord with Dr. Zaremba, that blunt trauma to the scapula could not be the etiology of the claimant's rotator cuff tear seen on his shoulder MRI. He further opined that the claimant was at MMI for his work injury on February 20, 2015, four or five days after he was rear-ended and provided a zero percent impairment rating.

25. On August 18, 2015 the claimant met with Dr. Hattem. The claimant stated that left shoulder pain persists unchanged. Upon physical examination the claimant withdraws and winces with only very slight palpation over along his left shoulder.

26. On September 14, 2015, Dr. Timothy Hall performed an IME of the claimant.

27. Dr. Hall opined that the claimant still needed more treatment, and recommended an MRI of the brachial plexus and one of the cervical spine. He opined that it was within a "reasonable degree of medical probability that [the claimant's] present symptoms including his parascapular pain, shoulder area pain, and upper extremity symptoms are the direct consequence of a January 27, 2015 fall and that he requires more treatment and is not at maximum medical improvement."

28. On January 20, 2016, Dr. Riding provided an update to his IME report regarding an MRI performed on January 2, 2016. His opinion did not change.

29. A deposition of Dr. Ridings took place on December 21, 2015. During the deposition, Dr. Ridings testified consistent with him IME report. Dr. Ridings testified that the claimant's report of the injury was not credible due to the claimant's lack of memory and inconsistencies.

30. At hearing, John Pace testified that he was with the claimant when the steel beam hit the claimant. He testified that he was facing towards the claimant and one of the poles leaning against the wall fell striking the claimant in the middle of his left shoulder causing the claimant to go down. Mr. Pace testified that he helped get the pole off of the claimant after it hit him and made sure he was alright. He then retracted that on cross-examination stating that the column "kind of rolled off of him to the side onto the floor." Additionally, Mr. Pace indicated that it was a bit between the center and the end of the column that struck the claimant and not the top of the column as indicated by the claimant.

31. The claimant received full pay from February 5, 2015 through February 16, 2015, the date of the MVA. The claimant lost no wages as a result of the compensable injury.

32. The claimant earned $3,840.50 in the 10 weeks of continuous work before his injury in this claim occurred. His AWW is $384.05.

33. The ALJ finds, for the most part, the analyses and opinions of Dr. Ridings are credible and more persuasive than medical analyses and opinions to the contrary.

34. The ALJ finds the analyses and opinions of Dr. Zaremba to be credible and persuasive.

35. The ALJ finds that the claimant has established that it is more likely than not that he sustained an injury to his left scapula arising out of and in the course of his employment with the respondent-employer, sometime on or between January 19, 2015 and January 28, 2015.

36. The ALJ finds that the respondents have established that it is more likely than not that the claimant sustained only a minor contusion to the scapula area.

37. The ALJ finds that the respondents have established that it is more likely than not that the February 16, 2015 motor vehicle accident is a subsequent intervening event which has caused the need for the claimant's current medical care with respect to his left shoulder. Any medical care subsequent to February 16, 2015 is not related to the claimant's industrial injury. This is not to say that the claimant is at MMI for his industrial injury as only the claimant's ATP or a DIME physician can make that initial determination.

38. The ALJ finds that the claimant has failed to establish that it is more likely than not that the claimant is entitled to temporary total disability benefits from February 5, 2015 and ongoing.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S.

2. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004).

3. The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A workers' compensation case is decided on its merits. § 8-43-201, C.R.S.

4. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claims Appeals Office,* 5 P.3d 385, 389 (Colo. App. 2000).

5. It is within the ALJ's purview as the finder of fact to determine the credibility of the witnesses and resolve conflicts in the evidence. *Metro Moving & Storage v. Gussert*, 914 P.2d 411 (Colo. App 1995).

6. When determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (1936).

7. In resolving inconsistencies the ALJ may credit all, part or none of an expert's testimony, and the ALJ's failure to cite an expert's opinion inherently reflects that the ALJ did not find it persuasive. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

8. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. §8-41-301 (1)(c) C.R.S.; *Faulkner v Industrial Claim Appeals Office*, 12 P 3.d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for the determination by the ALJ. *Faulkner,* 12 P.3d at 846.

9. For an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Off.,* 919 P.2d 207, 210, 210 (Colo. 1996); *Schepker v. Daewoo*

North, W.C. No. 4-528-434 (ICAO April 22, 2003). An injury "arises out of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions as part of the employee's services to the employer. *See Schepker, supra.* "In the course of" employment refers to the time, place, and circumstances of the injury. *Id.* There is no presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment. *Finn v. Indus. Comm'n,* 165 Colo. 106, 108-09, 4437 P.2d 542 (1968).

10. In deciding whether claimant has met his burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Kroupa v. Indus. Claim Appeals Off.*, 53 P.3d 1192, 1197 (Colo. App. 2002).

11. The claimant has the burden to prove his entitlement to medical benefits by a preponderance of the evidence. §8-43-201, C.R.S. The respondents are only liable for the medical treatment that is reasonable and necessary to cure and relieve the work-related injury. §8-42-101(1)(a), C.R.S. Even after an admission of liability is filed, respondents retain the right to dispute the relatedness of the need for continuing treatment. This principle recognizes that the mere admission that an injury occurred cannot be construed as a concession that all subsequent conditions and treatments were caused by the admitted injury*. HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990); *Snyder v. ICAO*, 942 P.2d 1337 (Colo. App. 1997).

12. The claimant is not entitled to medical care that is not causally related to his work-related injury or condition. As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 10, 2007), "A showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary." Where the relatedness, reasonableness or necessity of medical treatment is disputed, the claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.,* W.C. No. 4-117-758 (ICAO April 7, 2003).

13. Pursuant to §§8-42-103 and 8-42-105, C.R.S., a claimant is entitled to an award of TTD benefits if: (1) The injury or occupational disease causes disability; (2) The injured employee leaves work as a result of the injury; and (3) the temporary disability is total and lasts more than three (3) regular working days. *See, Lymburn v. Symbios Logic,* 952 P.2d 831(Colo. App. 1997). A claimant must establish a causal

connection between the industrial injury and the subsequent wage loss in order to be entitled to TTD benefits. §8-42-103 C.R.S; *Liberty Heights at Northgate v. Industrial Claim Appeals Office,* 30 P.3d 872 (Colo. App 2001). The ALJ concludes that the claimant has failed to meet his burden of proof that he is entitled to temporary disability benefits. The claimant had no wage loss from January 29, 2015 through February 16, 2015, the date of the MVA. The ALJ concludes that the claimant is not entitled to temporary total disability benefits.

14. The ALJ concludes that the analyses and opinions of Dr. Ridings are credible and more persuasive than medical analyses and opinions to the contrary.

15. The ALJ concludes that the analyses and opinions of Dr. Zaremba are credible and persuasive.

16. As found above, the ALJ concludes that the claimant has established by a preponderance of the evidence that he sustained a contusion injury to his left scapula arising out of and in the course of his employment with the respondent-employer.

17. As found above, the ALJ concludes that the claimant has established by a preponderance of the evidence that he is entitled to reasonable, necessary, and related medical care to cure or relieve him from the effects of his injury. Specifically, the care received prior to February 16, 2015.

18. As found, the ALJ concludes that the respondents have established by a preponderance of the evidence that the subsequent intervening motor vehicle accident of February 16, 2016 severs the causality of the claimant's need for future medical care from his industrial injury such that future medical care is not related to the industrial injury.

19. As found above, the ALJ concludes that the claimant has failed to establish by a preponderance of the evidence that he suffered a wage loss from February 5, 2015 and ongoing that is attributable to his industrial injury.

20. As found above, the ALJ concludes that the claimant's average weekly wage is $384.05.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

1. The claimant's claim for benefits under the Workers' Compensation Act of Colorado is compensable.

2. The respondent-insurer shall pay for all reasonable, necessary, and related medical care to cure or relieve the claimant from the effects of the injury, including the care received prior to February 16, 2015.

3. The claimant's request for temporary total disability benefits is denied and dismissed.

4. The respondents' request to sever liability subsequent to the February 16, 2015 MVA is granted.

5. The claimant's average weekly wage is $384.05

6. The respondent-insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation, if any, not paid when due

7. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATE: June 16, 2016

/s/ original signed by:

Donald E. Walsh
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle, Suite 810
Colorado Springs, CO 80906

ISSUES TO BE DETERMINED

The following issues were raised for consideration:

- What is Claimant's average weekly wage (AWW)?

- Whether Claimant is entitled to an award of temporary partial disability (TPD) benefits.

- Did Respondents overcome the Division Independent Medical Examiner's (DIME) opinion on maximum medical improvement (MMI) and impairment rating by clear and convincing evidence?

STIPULATIONS OF FACT BY THE PARTIES

The parties entered into the following stipulations of fact.

1. The parties stipulated and agreed that Claimant's average weekly wage (AWW) at Respondent Employer was $528.91.

2. If Claimant proves she had concurrent employment, the AWW for Babytopia was $290.00 and for Duran's Demo Works the AWW was $73.62.

3. The parties stipulated that if Claimant is found to be entitled to an award of TPD, the benefit would end on September 4, 2014, when Claimant was released to full duty work.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant sustained an injury to her low back region on January 16, 2014. At the time she was moving a trash bag and felt pain in her low back. She was later moving a microwave along the counter and felt a second twinge of low back pain.

2. Claimant treated with Dr. Noel for the work injury. She was given work restrictions effective January 17, 2014. As of September 4, 2014, Claimant was released to a full duty work trial.

AVERAGE WEEKLY WAGE

3. On the date of injury, Claimant was employed as a janitor for CCS. The parties stipulated to an AWW of $528.91 based on this employment. Claimant was provided modified duty at CCS and is not seeking TPD based on this employment.

4. On the date of injury, Claimant was also employed as a day care floater at Babytopia using the name Carmen Martinez. Claimant testified she was known as both Nelly Martinez and Carmen Martinez. She worked at Babytopia using the same Social Security number (SSN) she used at CCS. The parties stipulated her AWW at Babytopia was $290. Claimant was concurrently employed at Babytopia on the date of injury.

5. Claimant testified she also worked for Duran's Demo Works before and after the date of injury. The wage records reflect an AWW of $73.62; however, these wage records, for Carmen Martinez, do not reflect Claimant's SSN. The wage records show an Individual Taxpayer Identification Number (ITIN). The ITIN documentation indicates an ITIN is to be used only if the employee does not have a SSN. Claimant had a SSN in 2007 when she began working for CCS. Claimant failed to sustain her burden of proving concurrent employment at Duran's Demo Works.

6. It is found Claimant combined AWW from Respondent Employer and Babytopia was $818.91.

TEMPORARY PARTIAL DISABILITY (TPD)

7. Michael Blackmoon, owner of Babytopia, testified Claimant began working at Babytopia as a day care floater in December 2013. After her injury, Claimant was moved into the baby room to accommodate her restrictions. She was able to perform this work and was considered a good worker. Mr. Blackmoon further testified that Claimant voluntarily terminated her employment effective June 27, 2014, stating she had too much on her plate with school and other work obligations. Mr. Blackmoon testified Claimant said she planned to contact him again after completing educational classes that would allow her to work as a teacher rather than a teacher's aide. At the time of her resignation, Claimant's work restrictions were being accommodated. The testimony of Mr. Blackmoon is found to be credible.

8. Claimant testified she worked as a demonstrator for Duran's Demo Works. After her work injury, she was given a lighter table and products to accommodate her restrictions. Claimant testified she had difficulty performing this job due to standing for several hours at the job. Claimant admitted she did not have any restrictions against standing. The wage records from Duran's indicate Claimant continued to work through at least December 2014. Claimant testified she continued this employment until around May 2015. Claimant had a full duty release in September 2014. Claimant failed to prove she had wage loss from Duran's as a result of her work injury.

9. Claimant is not entitled to an award of TPD because the credible and persuasive evidence at hearing failed to establish that Claimant's inability to work at concurrent employment was caused by her January 16, 2014 work injury.

THE CONFLICTING DIME OPINIONS REGARDING MMI

10. A Division IME was done by John Hughes, M.D. on September 23, 2015. He noted gradually emerging signs and symptoms consistent with left S-1 radiculopathy. He reported the symptoms were consistent with a worsening of condition. He concluded Claimant was not at MMI and recommended further evaluation of possible S-1 radiculopathy.

11. Prior to MMI, Dr. Ghiselli saw Claimant for a surgical consultation. Dr. Ghiselli reported Claimant had pre-existing spondylolisthesis at L4-5. There was mild degenerative disc disease but no disc extrusion or herniation compressing any nerve. He indicated her pain was due to irritation of the facet joints. He did not report evidence of radiculopathy.

12. Claimant saw Dr. Lesnak for a physical medicine evaluation and possible injections. At the first appointment on May 23, 2014, Dr. Lesnak reported Claimant was quite anxious but displayed no pain behaviors or nonphysiologic findings. He recommended a bilateral L4-5 facet joint injection trial.

13. Claimant saw Dr. Lesnak on August 14, 2014. He noted there were no pain behaviors or nonphysiologic findings. Tenderness was localized over her lower lumbar facet joints. He recommended a trial return to work full duty. If she had no significant flare up with return to work, she would be at MMI.

14. On September 18, 2014, Dr. Noel reported Claimant had done very well with a full duty work trial. She was able to use the backpack vacuum. Dr. Noel placed Claimant at MMI with no permanent impairment and no work restrictions.

15. Claimant also saw Dr. Lesnak on September 18, 2014. He reported she had returned to full duty and was actually working some overtime. Dr. Lesnak noted Claimant reported her low back pain had completely resolved. She reported no buttock or leg symptoms whatsoever. Dr. Lesnak reported her overall symptoms and function had dramatically improved and nearly normalized. He agreed she was at MMI with no permanent impairment and no work restrictions.

16. Claimant continued to work regular duty at CCS after being placed at MMI. She did not return for medical treatment until April 3, 2015, when she saw Dr. Noel. He felt she had a thoracic/lumbosacral strain which appeared to be mainly muscular and probably secondary to use of the backpack vacuum.

17. On April 29, 2015, Dr. Lesnak reported Claimant began to develop recurrent low back pain several months after being placed at MMI. She also reported new symptoms involving diffuse neck, upper back and bilateral suprascapular region pain. Also new were pain behaviors not seen in 2014. She had diffuse complaints but

no distinct trigger points or muscle spasm. She had at least 2 of 5 positive Waddells and psychological factors. There was no clear evidence of recurrent lower lumbar facet joint symptoms. There was no evidence of SI joint dysfunction. She had subjective complaints with relatively new onset of diffuse pain. Since there were no localized trigger point sites, she was not a candidate for trigger point injections. At this point, her symptoms were so diffuse Dr. Lesnak did not recommend any repeat facet joint injections. He recommended a brief course of physical therapy. Dr. Lesnak stated Claimant remained at MMI.

18. Claimant had follow up appointments with Dr. Noel. On May 1, 2015, he reported complaints of generalized nonspecific discomfort involving her neck, shoulders and back. On May 22, 2015, he noted lots of subjective pain in her back. He discussed the case with Dr. Lesnak. His diagnosis was recurrent diffuse back pain felt to be myofascial in nature. On May 28, 2015, Dr. Noel again noted many generalized complaints which had been worked up and felt to be myofascial in nature. Dr. Noel confirmed Claimant was at MMI with no ratable impairment. Claimant remained at full duty.

19. After the DIME opinion stating Claimant was not at MMI, Claimant was sent back to the authorized treating physicians, Dr. Noel and Dr. Lesnak for review of the DIME report and further evaluation and treatment.

20. Dr. Lesnak saw Claimant in follow up appointment on November 4, 2015. He performed an EMG on November 12, 2015. The EMG was negative. There was no evidence of S-1 radiculopathy.

21. Dr. Lesnak commented on the DIME report on October 29, 2015. He noted Claimant had never had any evidence of radiculopathy and any new findings of radiculopathy would be unrelated to the work injury. Claimant had a multitude of symptoms entirely unrelated to the work injury. In his office note from November 4, 2015, Dr. Lesnak reported diffuse pain behaviors and nonphysiologic findings including 4 of 5 positive Waddell signs. Claimant reported progressive diffuse symptoms without any objecting findings. He felt she may have a fibromyalgia like syndrome but this would be completely unrelated to her work injury. He confirmed Claimant had reached and remained at MMI since September 18, 2014, with no impairment.

22. On February 11, 2016, Dr. Lesnak reported Claimant was developing progressive pain behaviors and nonphsiologic findings which made no sense as it pertained to a work injury over 2 years ago. Dr. Lesnak concluded Claimant remained at MMI for the work injury, with no impairment and no restrictions.

23. Dr. Noel saw Claimant in follow up on February 25, 2016. He had discussed the case with Dr. Lesnak and noted Claimant developed progressive diffuse pain throughout her entire body, probably secondary to the development of fibromyalgia. This was not considered to be work related and Claimant was advised to see her primary care physician (PCP) for further medical care. Dr. Noel confirmed Claimant was already at MMI for her work injury.

24. Allison Fall, M.D. performed an IME for Respondents on January 6, 2016. Dr. Fall agreed with Dr. Lesnak that Claimant had no findings on EMG to evidence S-1 radiculopathy as suspected by the DIME. Dr. Fall concluded Claimant had sustained a minor lumbar strain on the date of injury which fully resolved by September 18, 2014. Claimant's current complaints were not related to the work injury of January 16, 2014. Without correlating objective findings, there was no basis for treatment or an impairment rating. Dr. Fall agreed that Claimant reached MMI as of September 18, 2014, with no impairment and no restrictions.

25. The DIME physician, Dr. Hughes, testified at hearing. After reviewing the EMG testing done in November, 2015, Dr. Hughes acknowledged there was no objective evidence of S-1 radiculopathy. Dr. Hughes testified that in the absence of positive EMG findings, his diagnosis of possible S-1 radiculopathy could not be supported.

26. After reviewing the medical history, Dr. Hughes withdrew his prior opinion that Claimant was not at MMI. Dr. Hughes concluded Claimant had reached MMI as of September 18, 2014, and remained at MMI.

27. Respondents have overcome the original DIME opinion of "Not at MMI" with clear and convincing evidence. The DIME physician's opinion has been revised and Dr. Hughes testified he agreed Claimant reached MMI as of September 18, 2014.

28. It is found Claimant reached MMI on September 18, 2014.

IMPAIRMENT RATING

29. Dr. Hughes provided a provisional rating of 15% whole person at the time of the DIME appointment. Dr. Hughes acknowledged this rating was done at a time when Claimant was reporting a flare up of her symptoms. Dr. Hughes revised his impairment rating at the time of hearing.

30. Dr. Hughes initially based his Table 53 rating on a possible diagnosis of S-1 radiculopathy. After this was ruled out by the subsequent EMG, Dr. Hughes changed his Table 53 diagnosis to spondylolisthesis at L4-5, which he said would qualify Claimant for a rating of 8% whole person.

31. Dr. Fall testified at the hearing. She explained the difference between spondylolisthesis and facet joint irritation. Spondylolisthesis is present in a small percentage of the population and is a bony abnormality where one vertebra sits off center of the adjoining vertebrae. Facet joint irritation is distinct from spondylolisthesis. Facet joints are between the vertebrae. Treatment includes injections into the facet joints to relieve the irritation of the facet joint. Claimant's spondylolisthesis was pre-existing and not the source of her post injury pain. The etiology of Claimant's work related symptoms was facet joint irritation. This testimony is supported by the medical records of Dr. Ghiselli, Dr. Noel and Dr. Lesnak.

32. Dr. Hughes did not testify that the etiology of the pain was the spondylolisthesis. The DIME report said the source of the pain was S-1 radiculopathy.

33. Dr. Fall testified it was error to use a diagnosis for a Table 53 rating if the diagnosis was not the etiology of the pain.

34. Dr. Hughes' DIME opinion regarding Claimant's impairment rating was shown by clear and convincing evidence to be most probably incorrect. Dr. Hughes testified that Claimant was entitled to an 8% whole person impairment rating consistent with *American Medical Association Guides to the Evaluation of Permanent Impairment, Third Edition (Provide) (AMA Guides)*, Table 53 III (A), because of Claimant's L4-5 Grade I spondylolysis. It was established that Dr. Hughes was most probably incorrect because Claimant's Grade I spondylolysis was not related to the work injury but preexisted the injury.

35. Drs. Lesnak, Hughes and Fall agreed that Claimant's lower lumbar facet joints were the pain generators. None of the doctors could address with certainty whether Claimant had six months of medically documented pain. However, the doctors agreed that Claimant was released at MMI by Dr. Noel with a prescription for Tramadol, a narcotic pain medication. Dr. Fall and Dr. Hughes agreed that a narcotic pain medication would not be prescribed by Dr. Noel in the absence of Claimant's complaints of pain.

36. Dr. Fall affirmed that the Level II accreditation course offered to physicians by the Division of Workers' Compensation allowed for a 5% whole person impairment rating under Table 53 II (B) where there is a facet joint pain generator in the lower lumbar spine with six months of medically documented pain and rigidity with or without muscle spasms associated with none to minimal degenerative changes.

37. Dr. Fall testified the Level II accreditation training instructs the rating physician to perform an impairment rating at the time of MMI. If the rating is performed after the date of MMI, the condition must be stable. Since Claimant was reporting a flare up of her symptoms at the time Dr. Hughes performed the impairment rating on September 23, 2015, Dr. Fall testified the impairment rating should have been deferred until it was determined Claimant’s work related condition was stable. Dr. Fall testified that it was an error for Dr. Hughes to base his impairment rating on range of motion measurements done at a time when Claimant’s symptoms were reportedly worse than at MMI.

38. Dr. Noel, Dr. Lesnak and Dr. Fall all agreed Claimant did not have a medical condition to support a rating under Table 53 of the AMA Guides.

39. In his report dated October 29, 2015, Dr. Lesnak concludes there is no objective evidence to support an impairment rating. Claimant’s range of motion limitations were from fear of pain and cannot be utilized for an impairment rating.

40. Respondents have overcome the DIME opinion on impairment by clear and convincing evidence.

41. Once the DIME opinion has been overcome, the Administrative Law Judge must determine the appropriate rating. Dr. Noel, Dr. Lesnak and Dr. Fall have consistently opined that Claimant has no objective findings to support an impairment rating although they identified the initial pain generator as the lumbar facet joints. Dr. Fall testified the AMA Guides would support a rating of 5% whole person based on lumbar facet joints with six months of medically documented pain and rigidity with or without muscle spasms associated with none to minimal degenerative changes.

42. The DIME performed range of motion measurements during a period when Claimant reported a worsening since MMI. The other treating and examining physicians found no loss of range of motion as a result of this work injury. It is found Claimant has no objective findings to support a rating for range of motion deficits.

43. Claimant has permanent impairment of 5% whole person for the lumbar spine related to this work injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

GENERAL LEGAL PROPOSITIONS

1. The purpose of the Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

AVERAGE WEEKLY WAGE

2. To determine a claimant's AWW, the ALJ may choose from two different methods set forth in Section 8-42-102, C.R.S. The first method, referred to as the "default provision," provides that an injured employee's AWW "be calculated upon the monthly, weekly, daily, hourly, or other remuneration which the injured or deceased employee was receiving at the time of injury." Section 8-42-102(2), C.R.S. The second method for calculating a claimant's AWW, referred to as the "discretionary exception," applies when the default provision will not fairly compute the employee's AWW. Section 8-42-102(3), C.R.S. In such a circumstance, the ALJ has discretion to compute the AWW of a claimant in such other manner and by such other method as will, based upon the facts presented, fairly determine the employee's AWW. *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010).
3. Claimant has presented the court with wage records using both a Social Security number and an Individual Taxpayer Identification Number. An ITIN is to be used

only if the employee does not have a SSN. The name used with the ITIN is not the same as the name Claimant used during her employment with CCS. The ALJ determines the wages to be used in calculating AWW include those reported under Claimant's SSN. The AWW includes wages from CCS and Babytopia.

4. Based on the wage records from CCS and Babytopia, and the stipulation of the parties, the ALJ concludes Claimant's AWW is $818.91.

TEMPORARY DISABILITY BENEFITS

5. Section 8-42-103(1)(a), C.R.S. requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain temporary total disability benefits (TTD). *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999).

6. Claimant's employer at Babytopia testified they made accommodations for Claimant's work restrictions by placing her in the baby room. Claimant was able to perform the duties of this job. Mr. Blackmoon testified Claimant voluntarily resigned stating she had too much on her plate but would check back after she had completed her educational classes. Claimant has failed to sustain her burden of proving wage loss from Babytopia was the result of her work injury and restrictions.

7. Claimant testified she continued to work for Duran's Demonstrations into 2015, after the date she had a full duty release. Claimant has failed to sustain her burden of proving wage loss associated with employment at Duran's.

8. Claimant is not entitled to an award of TPD because the credible and persuasive evidence that hearing failed to establish that Claimant's inability to work at concurrent employment was caused by her January 16, 2014, work injury.

MAXIMUM MEDICAL IMPROVEMENT

9. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001).
10. If the DIME physician offers ambiguous or conflicting opinions concerning MMI, it is for the Administrative Law Judge to resolve the ambiguity and determine the DIME's

true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385, 388 (Colo. App. 2000). In doing so, the Administrative Law Judge should consider all of the DIME's written and oral testimony. *Lambert & Sons, Inc., v. Industrial Claim Appeals Office*, 984 P.2d 656 (Colo. App. 1988).

11. The DIME physician, Dr. Hughes, testified that medical testing done subsequent to the DIME appointment caused him to change his opinion as to whether Claimant had reached MMI. At hearing, Dr. Hughes testified Claimant reached MMI as of September 18, 2014, and remained at MMI. This is consistent with the medical opinions of Dr. Noel, Dr. Lesnak and Dr. Fall. Respondents have overcome the original DIME opinion that Claimant was not at MMI with clear and convincing evidence.

12. The ALJ concludes Claimant reached MMI as of September 18, 2014.

PERMANENT PARTIAL DISABILITY

13. A DIME physician must apply the *AMA Guides* when determining the claimant's medical impairment rating. Sections 8-42-101(3.7), C.R.S.; 8-42-107(8)(c), C.R.S. The questions of whether the DIME physician properly applied the *AMA Guides*, and ultimately whether the rating was overcome by clear and convincing evidence presents questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000). Not every deviation from the rating protocols of the *AMA Guides* requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the *AMA Guides* constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Adams v. Manpower,* W.C. No. 4-389-466 (I.C.A.O. August 2, 2005).

14. The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* Section 8-43-210, C.R.S; One *Hour Cleaners v. Indus. Claim Appeals* Office, 914 P.2d 501 (Colo. App. 1995).

15. Dr. Hughes initially based his provisional rating on a diagnosis of S-1 radiculopathy. At hearing Dr. Hughes conceded Claimant did not have S-1 radiculopathy as a result of her work injury. Respondents have overcome the DIME's provisional impairment rating by clear and convincing evidence.

16. At hearing Dr. Hughes said he would change his rating so that it would be based on the diagnosis of spondylolisthesis at L4-5. Dr. Hughes agreed the spondylolistheis was pre-existing. He did not refute the medical records and testimony of Dr. Fall which stated the spondylolisthesis at L4-5 was not the pain generator. The medical evidence, in particular the report by Dr. Ghiselli and the testimony of Dr. Fall,

supports the conclusion that the pain generator was irritation of the facet joints, not the pre-existing spondylolisthesis.

17. Dr. Fall affirmed that the Level II accreditation course offered to physicians by the Division of Workers' Compensation allowed for a 5% whole person impairment rating under Table 53 II (B) where there is a facet joint pain generator in the lower lumbar spine with six months of medically documented pain and rigidity with or without muscle spasms associated with none to minimal degenerative changes.

18. Dr. Fall also testified the range of motion measurements are to be done at the time of MMI or if done at a later date, when the condition is stable. Dr. Hughes reported and testified that Claimant was having a flare up of her symptoms at the time he performed range of motion measurements. The ALJ finds Dr. Fall's testimony persuasive and concludes the range of motion measurements by Dr. Hughes should not be used to determine Claimant's impairment rating.

19. The ALJ concludes Claimant has 5% whole person impairment of the lumbar spine as a result of her work injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's average weekly wage is $818.91.

2. Claimant's claim for temporary partial disability is denied and dismissed.

3. Claimant reached maximum medical improvement on September 18, 2014.

4. Claimant has sustained permanent impairment of 5% whole person for the lumbar spine as a result of this injury.

5. Respondents shall pay statutory interest at the rate of 8% per annum on all amounts due and not paid when due.

DATED: June 17, 2016__

ISSUES

1. Whether the claimant sustained a compensable left shoulder injury on September 10, 2014;

2. If so, whether the claimant is entitled to a general award of any and all reasonable and necessary medical benefits for her compensable left shoulder injury; and,

3. If so, whether the claimant's ATP is Dr. Michael Dallenbach.

Based upon the finding and conclusions below that the claim is not compensable, the ALJ does not address the remaining issues.

FINDINGS OF FACT

1. On September 10, 2014, during the course and scope of her employment, the claimant was moving a patient who was in a wheelchair. The wheelchair became stuck in the doorframe. The claimant took a hold of the chair and pulled forcefully. While pulling, the claimant felt a "pop" in her left shoulder area and felt an instant onset of pain. She immediately reported the incident to her supervisor, Al Cole. A report of injury form was then completed. The claimant did not seek medical care at this time.

2. The claimant was provided with a designated provider list.

3. The claimant had a prior work injury of October 21, 2011 to her neck and right shoulder. At the time of the September 10, 2014 incident, she was treating with Dr. Michael Dallenbach and Dr. Scott Bainbridge for the October 21, 2011 injury.

4. The claimant saw Dr. Scott Bainbridge on October 10, 2014 for the 2014 injury. At the October 10, 2014 appointment, the claimant presented with right greater than left C7-T2 facet pattern of pain with approximately one year of relief from prior facet blocks. It was noted her prior medical history was significant for right upper extremity pain and paresthesias of unclear ideology possibly related to soft tissue

tightness and response to pain, which resolved also following the last set of facet injections. There was no mention of the left shoulder incident or left shoulder pain at the appointment of October 10, 2014. Dr. Bainbridge conducted pain provocative maneuvers or positions with the claimant without mention of left shoulder pain.

5. The claimant saw Dr. Michael Dallenbach on November 3, 2014. At the November 3, 2014 appointment, claimant reported the following:

- Since June 18, 2014, claimant developed significant increase in her neck pain for which she presented to Jay Scott Bainbridge, MD.
- The claimant received bilateral C7-T2 facet joint injections on October 10, 2014.
- Within three to four days after the procedure, the claimant noted a significant pain associated with tingling, pins and needles sensation in her left upper extremity as well as significant headaches.
- The claimant told Dr. Dallenbach "he told me that I probably irritated a nerve and gave me Gabapentin and the Dosepak.
- The claimant reported a significant improvement in her left upper extremity symptomology and to a lesser degree her neck pain.
- The claimant has been able to work without restrictions and her neck pain is exacerbated with repetitive head motion, reaching away or overhead. She has no complaints regarding right shoulder.

6. Dr. Dallenbach noted the following with regard to the left shoulder on his report of November 3, 2014.

- There is decrease light touch sensation in the distal anterolateral aspect of her left arm extending through the entirety of the anterolateral of her left forearm.
- Motor, sensory, and deep tendon reflex function and vascular status of the upper extremities are intact, equal, and within normal limits.
- Active range of motion of the right shoulder is within functional limits, however, it is slightly less than that of the left.
- Strength at the right shoulder is 5/5, equal to that of the left.

7. There was no mention of the left shoulder incident of September 10, 2014. Dr. Dallenbach clearly examined the left shoulder as evidenced by his notation in his record. The record indicates that the claimant developed significant pain associated with tingling, pins and needles sensation in her left upper extremity three to four days after the injection by Dr. Bainbridge. The claimant also noted that the Gabapentin and Dosepak prescribed by Dr. Bainbridge resulted in significant improvement in her left upper extremity symptomology.

8. The claimant was seen by Dr. Dallenbach again on February 16, 2015. At that time, she reported development of pain, numbness, pins and needles sensation and tingling into her bilateral upper extremities, left side greater than right. Dr. Dallenbach's notes specifically indicate the claimant denies new injury in two separate sentences in his notation. Dr. Dallenbach also indicates that the strength of the right shoulder is 5/5, equal to that of the left.

9. The claimant was seen by Dr. Dallenbach on March 30, 2015. At that time, Dr. Dallenbach reviewed electrodiagnostic studies that had been performed by Dr. Caughfield. Dr. Dallenbach discussed the carpal tunnel syndrome and requested authorization for her to be seen by hand surgeon Karl Larsen, MD for an evaluation including causality assessment, treatment recommendations regarding bilateral carpal tunnel syndrome.

10. Dr. Dallenbach does not discuss anything about claimant's left shoulder complaints or the incident of September 10, 2014.

11. There is no mention of the September 10, 2014 incident anywhere in Dr. Dallenbach's records.

12. Dr. Carlos Cebrian examined the claimant on two different occasions. The first examination was on July 31, 2015 relative to the October 21, 2011 injury and the carpal tunnel syndrome.

13. Dr. Cebrian determined that the carpal tunnel syndrome was not related to the October 21, 2011 injury. The claimant returned to Dr. Cebrian on March 17, 2016.

14. The claimant told Dr. Cebrian that her left shoulder hurt for two to three days and then resolved.

15. Dr. Cebrian concluded that the claimant's left shoulder supraspinatus tear and need for treatment are independent and unrelated to the September 10, 2014 incident.

16. Dr. Cebrian based his conclusions on the following:

- The claimant indicated that her left shoulder problems resolved after two to three days.

- No medical treatment was required as a result of the September 10, 2014 incident.

- The claimant did not mention the incident to Dr. Bainbridge on October 10, 2014.

- The claimant did not mention the injury to her left shoulder to Dr. Dallenbach on November 3, 2014.

- The examination by Dr. Dallenbach on November 3, 2014 including 5/5 strength in the left shoulder as well as comparison of the right shoulder range of motion to the left shoulder did not indicate a recent injury.

- Dr. Cebrian credibly testified that if an acute tear would have occurred on September 10, 2014, claimant would have had some significant symptoms and would not have had the physical examination results documented by Dr. Dallenbach.

- The claimant continued to work full duty without restrictions.

- Dr. Cebrian opined that it is his opinion that the left shoulder supraspinatus tear is a degenerative finding that predates the September 10, 2014 incident because there were no sign of weakness or impingement.

17. Dr. Dallenbach did not testify within a reasonable degree of medical probability that claimant's left supraspinatus tear was caused by the incident of September 10, 2014. Dr. Dallenbach indicated that he could not tell from the MRI when the tear occurred.

18. The ALJ finds the analyses and opinions of Dr. Cebrian to be credible and more persuasive than medical analyses and opinions to the contrary.

19. The ALJ finds that the claimant has failed to establish that it is more likely than not that the claimant suffered an injury to her left upper extremity arising out of and in the course of her employment with the respondent-employer.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S.

2. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004).

3. The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A workers' compensation case is decided on its merits. § 8-43-201, C.R.S.

4. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claims Appeals Office,* 5 P.3d 385, 389 (Colo. App. 2000).

5. It is within the ALJ's purview as the finder of fact to determine the credibility of the witnesses and resolve conflicts in the evidence. *Metro Moving & Storage v. Gussert*, 914 P.2d 411 (Colo. App 1995).

6. When determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (1936).

7. In resolving inconsistencies the ALJ may credit all, part or none of an expert's testimony, and the ALJ's failure to cite an expert's opinion inherently reflects that the ALJ did not find it persuasive. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

8. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. §8-41-301 (1)(c) C.R.S.; *Faulkner v Industrial Claim Appeals Office*, 12 P 3.d

844, 846 (Colo. App. 2000). The question of causation is generally one of fact for the determination by the ALJ. *Faulkner,* 12 P.3d at 846.

9. For an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Off.,* 919 P.2d 207, 210, 210 (Colo. 1996); *Schepker v. Daewoo North*, W.C. No. 4-528-434 (ICAO April 22, 2003). An injury "arises out of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions as part of the employee's services to the employer. *See Schepker, supra.* "In the course of" employment refers to the time, place, and circumstances of the injury. *Id.* There is no presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment. *Finn v. Indus. Comm'n,* 165 Colo. 106, 108-09, 4437 P.2d 542 (1968).

10. In deciding whether claimant has met his burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Kroupa v. Indus. Claim Appeals Off.*, 53 P.3d 1192, 1197 (Colo. App. 2002).

11. The ALJ concludes that the analyses and opinions of Dr. Cebrian are credible and more persuasive than medical analyses and opinions to the contrary.

12. The claimant has failed to prove by a preponderance of the evidence that she sustained a compensable injury as the result of the September 10, 2014 incident. The ALJ is persuaded by the findings and opinions of Dr. Cebrian, which are credible and supported by the evidence in this case. Specifically, the ALJ concludes based upon the totality of the evidence that the claimant's left shoulder injury did not result from the incident of September 10, 2014.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

The claimant's claim for benefits under the Workers' Compensation Act of Colorado is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, CO 80906

ISSUES

1. Compensability

2. Medical Benefits—Reasonable and Necessary

3. Temporary Partial and Temporary Total Disability, 4/10/15-- ongoing

Based upon the findings and conclusions below that the claim is not compensable the ALJ does not reach a decision on the remaining issues.

FINDINGS OF FACT

1. The claimant was hired by the respondent-employer to work as an over-the-road truck driver on May 2, 2014, and was in that position with the respondent-employer as of April 20, 2015.

2. The claimant wears a prosthetic on his lower extremity and has done so for more than 30 years.

3. Despite advising both Dr. Beatty and Dr. Hall that his injury occurred on March 8, 2015, the claimant testified at hearing that he sustained an injury to his lower back on April 1, 2015 while trying to hook up a trailer to his cab and working a stuck crank to lift the trailer into place.

4. The claimant testified at hearing that the date of injury he provided to various medical providers including Dr. Beatty and Dr. Hall was incorrect because he had trouble recalling dates when he met with these medical providers as he was taking opiates which caused memory issues.

5. The medical records reveal that on March 29, 2015 the claimant was seen at the University of Colorado Emergency Room with complaints of low back pain. The claimant reported that his low back and right groin were painful after driving trucks, no falls were reported. The claimant was diagnosed with musculoskeletal low back pain.

6. Due to complaints of flank pain, the claimant completed a CT scan of his abdominal area on March 29, 2015 with the University of Colorado Hospital which noted mild degenerative changes in the claimant's lower thoracic and lumbar spine, with no kidney, ureters, or bladder stones and no findings to explain the claimant's reported flank pain. The claimant did not undergo an MRI scan at that time. Dr. Beatty observed that a CT scan only reveals bony injuries, while a MRI scan is able to detect soft tissue changes with ligaments, tendons, the spinal cord and tumors, thus a CT scan would not reveal the presence of spinal stenosis.

7. On April 8, 2015 the claimant was evaluated by Dr. Curt Heimbach and PA Evan Jones at the Memorial Regional Medical Center in Mechanicsville, Virginia. At that evaluation, the claimant was diagnosed with sciatica and released back to work on April 10, 2015 with no restrictions. The medical reports do not describe a specific mechanism of injury.

8. On April 14, 2015 the claimant was evaluated by Dr. Amar Bhardwaj at St. Joseph's Medical Center in Joliet, Illinois. The claimant was diagnosed with lumbago or muscular back pain, HTN (Hypertension) and a nodule on his right lung. He was released to regular activity as tolerated and was referred to his primary care physician for his HTN and right nodule issues. These records again do not specify any specific mechanism of injury and do not reveal any spine or back fracture.

9. Thereafter, the claimant returned to the University of Colorado Emergency Department on April 20, 2015. He was evaluated by Dr. Kristen Nordenholz and PA Kristen Devick, and was diagnosed with low back pain. The claimant stated at that evaluation that he sustained low back pain after falling from his truck 4 days prior, or on April 16, 2015. He specifically reported that when he was getting out of his truck that his leg "locked up" and he fell directly on his lower and thoracic back. Dr. Nordenholz does not mention anything related to the claimant having sustained an injury to his low back on April 1, 2015 or any other date while using a crank to hook up a trailer. The claimant underwent a complete workup including x-rays, which did not reveal any back facture. He was diagnosed with acute low back pain and released to regular duties as of April 26, 2015.

10. On April 20, 2015 the claimant reported to the respondent-employer that he had sustained an injury subsequent to falling from his truck on April 8, 2015. The records from the respondent-employer do not reveal that the claimant ever reported to the respondent-employer injuring his back while attempting to work a defective crank on April 1, 2015 or on any other date.

11. The next medical report in the record is dated September 1, 2015 and is an IME from Dr. Timothy Hall, an expert retained by the claimant. In this report, the claimant advised Dr. Hall that he sustained his injury on March 8, 2015 when he was trying to hook up a trailer with a crank. He advised Dr. Hall that he thought he had pulled a muscle so he continued working. He reported that he saw a physician in Virginia 5-6 days later and was diagnosed with sciatica, and then sustained a second injury when he fell out of his truck and landed on his back in Illinois. He reported that he was seen at the emergency room in Joliet, Illinois and was diagnosed with a back fracture. He further advised Dr. Hall that when he returned to Denver, he began treating with a physician at Spine One and was to commence treatment with a physician in Parker, Colorado.

12. No medical records from Spine One or any physician in Parker, Colorado have been produced in the record and have not been reviewed by any of the treating physicians in this case. Furthermore, the claimant did not list any such treating physicians in his Interrogatory Responses served on Respondents on October 5, 2015.

13. Dr. Hall did not review any MRI scan of the claimant's lumbar spine, and has not reviewed all of the medical evidence in this case. Dr. Hall opined that the claimant sustained a specific event on March 8, 2015 while working a trailer crank that caused an injury to his lower back, and he based his conclusions solely on information the claimant reported to him. The ALJ is not persuaded by the opinion provided by Dr. Hall.

14. The claimant moved to Maryland in the fall of 2015 and testified that he commenced treatment with Dr. Tucker at the Medical Health Group. Although the claimant testified that he began treating with Dr. Tucker at the time he moved to Maryland, the first medical report in evidence from Dr. Tucker is dated December 21, 2015. Dr. Tucker's records in evidence begin on December 21, 2015 and end on January 29, 2016. These records address the claimant's back pain, constipation issue, a subsequent fall on ice around the 29th of January, 2016 and contain no work restrictions or release from work of any kind.

15. On December 15, 2015 the claimant completed an MRI scan at the request of Dr. Brian Neuman in Baltimore, Maryland, which revealed spinal stenosis at L3-4, L4-5 and L5-S1. No medical records from Dr. Neuman appear in the record.

16. The claimant was eventually evaluated by Dr. Miele in Maryland, who saw the claimant for an initial consultation on February 4, 2016. Dr. Miele noted that the claimant reported his symptoms starting after a fall at work in April 2015, with no

mention of any incident hooking up a trailer using a defective crank. Dr. Miele diagnosed spinal stenosis and neuroforaminal stenosis bilaterally at L3-4, L4-5 and L5-S1, recommended surgical intervention, and performed bilateral L3-4, L4-5 and L5-S1 medial facetectomoies and foraminotomies on March 1, 2016. At the time the claimant underwent surgery, Dr. Miele noted the claimant had complained of lower extremity radiculopathy symptoms for greater than one year.

17. Dr. Miele released the claimant to light duty work effective March 18, 2016. The claimant testified that he no longer considers himself an employee of the respondent-employer as he has not returned to work since April 20, 2015. He further testified that he is not working or looking for work in Maryland, and was not aware he had been given work restrictions from Dr. Miele.

18. The respondent obtained an IME with Dr. Brian Beatty on November 6, 2015. Dr. Beatty completed an initial report after evaluating the claimant, as well as a follow-up report subsequent to receipt of additional medical information, and testified at the hearing in this matter. After reviewing all of the medical records generated in this case including the December 15, 2015 MRI scan and the operative report from Dr. Miele, Dr. Beatty agreed with the diagnosis of spinal stenosis. He further testified that based on the MRI scan, which ruled out the cause of the claimant's spinal stenosis due to a tumor or acute injury, the claimant's spinal stenosis is degenerative and congenital, and was caused by his spine naturally progressing with age over time and not due to any injury sustained with the respondent-employer.

19. He testified that spinal stenosis is only caused by an acute injury when the trauma results in bone fragmentation that damages the spinal canal, which did not occur in this case based on the MRI findings. He further testified that neither the alleged cranking incident of either March 8, 2015 (the date of injury reported to him by the claimant) or April 1, 2015 (the date of injury testified to by the claimant at hearing), or any alleged falling incident in April was sufficient enough to cause spinal stenosis to develop in his spine. Therefore, Dr. Beatty opined that the claimant did not have a diagnosable work related injury with the employer.

20. The ALJ finds Dr. Beatty's analyses and opinions to be credible and more persuasive than medical analyses and opinions to the contrary.

21. The ALJ finds that the claimant did not suffer an injury, an exacerbation of a prior condition, or an acceleration of the need for medical care of a prior condition as the result of any incident occurring on or between March 8, 2015 and April 20, 2015.

22. The ALJ finds that the claimant has failed to establish that it is more likely than not that he sustained an injury to his back arising out of and in the course of his employment with the respondent-employer at anytime on or between March 8, 2015 and April 20, 2015.

CONCLUSIONS OF LAW

1. The Workers' Compensation Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undersigned occurrence." See §8-40-201(1) C.R.S. In contrast, an injury contemplates the physical or emotional trauma caused by an accident. An accident is the cause and an injury is the result. No benefits flow to the victim of an industrial accident unless the accident causes compensable injury. A compensable injury is one that causes disability or the need for medical treatment. See *City of Boulder v. Payne,* 162 Colo. 345, 426 P.2d 194 (1967). See also *Soto-Carrion v. C&T Plumbing, Inc., W.C. 4-650-711 (ICAO Probate 15 2007).* Compensable injuries involve an "injury" which requires medical treatment or causes disability. See *H&H Warehouse v. Victory,* 805 P.3d 1167 (Colo. App. 1990). Whether compensable injury has been sustained is a question of fact to be determined by the ALJ. See *Lou v.* ICAO, 224 P.3d 397 (Colo. App. 2009).

2. The mere fact that claimant experienced pain at work does not necessarily require a finding of a compensable injury. In *Miranda vs. Best Western Rio Grande Inn*, W.C. No. 4-663-169 (ICAO April 11, 2007) the Panel stated, "pain is a typical symptom caused by the aggravation of a pre-existing condition. However, an incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable injury." The occurrence of symptoms at work may represent the result of a natural progression or a preexisting condition that is unrelated to the employment. See *F.R. Orr Construction v. Renta,* 717 P.2d. 965 (Colo.App.1995).

3. A preexisting disease or susceptibility to an injury does not disqualify a claim if the employment aggravates, accelerates, or combines with a pre-existing disease or condition to produce a disability or need for medical treatment. See *Duncan v. ICAO,* 107 P.3d.999 (Colo. App. 2004).

4. Claimant shoulders the burden of proof of proving by a preponderance of the evidence that she sustained an injury arising out of and within the course of her employment and that she is entitled to benefits under the Act. See §8-43-201(1), §8-41-

301(1). See also *City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985). A preponderance of the evidence is that which leads the triar–of–fact, after considering all of the evidence, to find that a fact is more probably true than not. See *Page v. Clark* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimant nor in favor of the rights of respondents. See §8-43-201.

5. It is the claimant's burden to prove that the alleged injury is a "significant" cause of the need for treatment in a sense that there is a direct relationship between the alleged precipitating event and the need for treatment. The claimant must prove a causal relationship between the injury alleged and the medical treatment claimant is seeking. See *Snyder v. ICAO,* 942 P.2d 1337 (Colo. App. 1997.) Treatment for a condition not caused by employment is not compensable. See *Owens v. ICAO*, 49 P.3d 1187 (Colo. App. 2002.) Where an industrial injury does not accelerate the need for treatment for the underlying disease, treatment for the preexisting condition is not compensable. See *Robinson v. Youth Track* 4-649-298 (ICAO May 15, 2007).

6. In order to prove that an industrial injury was the proximate cause of the need for medical treatment, an injured worker must prove a casual nexus between the need for treatment and the work related injury. See *Singleton v. Kenya Corp.* 961 P.2d. 571 (Colo. App. 1998). It is up to the ALJ, as the fact finder, to determine whether a need for medical treatment is caused by the industrial injury or some other intervening injury. See *F.R. Orr, supra.*

7. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered to resolve conflicts in the evidence, make credibility and determinations, determine the weight to be accorded to expert testimony, and draw reasonable inferences from the evidence. See *Bodensieck v. ICAO,* 183 P.3d 684 (Colo. App. 2008). In determining credibility the fact finder should consider, among other things, the consistency or inconsistency of the witnesses testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936).

8. The ALJ concludes, as found above, that the claimant has failed to establish by a preponderance of the evidence that he suffers from an injury, occurring on or from March 8, 2015 through April 20, 2015 that arose out of and occurred in the course of his employment with the respondent-employer. Neither did he suffer an exacerbation or acceleration of a pre-existing condition as a result of any such incident.

ORDER

It is therefore ordered that:

The claimant’s claim for benefits under the Workers’ Compensation Act of Colorado is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATE: June 17, 2016

/s/ original signed by:
Donald E. Walsh
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle, Suite 810
Colorado Springs, CO 80906

ISSUES

1. Whether the respondents proved, by clear and convincing evidence, that DIME physician Miguel Castrejon, M.D. erred in finding that the claimant has not reached maximum medical improvement (MMI) for the consequences of the April 22, 2014 injury because she requires a left total knee replacement under that claim;

2. If so, whether the respondents proved, by clear and convincing evidence, that DIME physician Miguel Castrejon, M.D., erred in finding that the claimant has a permanent impairment of 27% lower extremity attributable to her April 22, 2014 claim; and,

3. Whether the total knee replacement recommended by Dr. Duffey is reasonable, necessary and related medical treatment for the April 22, 2014 compensable left knee injury.

Based upon the findings and conclusions below that the claimant is not at MMI the ALJ does not reach a decision on the issue of the permanent impairment rating.

FINDINGS OF FACT

1. The claimant is a 55 year old female who worked for the respondent-employer as a head start teacher since 1990.

2. The claimant has a long history of left knee malalignment and pain pre-dating this claim. On May 13, 1999, the claimant was evaluated by Jacob Patterson, M.D., an orthopedic surgeon, who noted that the claimant had bilateral "knock-knees" (valgus deformities) since she was a young girl, and the claimant thought her knee deformities were worsening. The claimant measured at 5'4" in height and 232 pounds. Between January 8, 2001 and March 13, 2008, the claimant complained to her personal physician, Dr. Gary Mohr, of left leg pain and left knee pain issues.

3. On January 15, 2009, the claimant presented to Dr. Mohr with left knee pain at a 10/10 level. She was tender along the lateral collateral ligament and below the patella, and she unable to kneel or squat. A left knee MRI was ordered.

4. The claimant's January 26, 2009 left knee MRI showed a horizontal tear of the lateral meniscus, a parameniscal cyst, mild osteoarthritis most pronounced in the lateral compartment (fissuring down to the bone), and mild patellar tendonitis.

5. On February 9, 2009, the claimant returned to Dr. Patterson, who reported the claimant had a progressively worsening left knee with pain and difficulty getting around. Dr. Patterson's impression was "progressive congenital valgus which ultimately will lead to wear on that lateral side which is premature." He recommended an arthroscopy to repair degenerative tears. In his pre-operative report, Dr. Patterson reported that the claimant "has had left knee pain for years, slowly getting worse."

6. On February 24, 2009, Dr. Patterson performed an arthroscopic partial lateral meniscectomy and chondroplasty of the lateral femoral condyle and of the patella. Post-operative diagnoses included a complex tear of the middle one-third of the lateral meniscus, Grade 3 lesion on the lateral femoral condyle, a stable medial meniscus tear, and Grade 2 patellofemoral chondromalacia.

7. The claimant was kept off work until March 14, 2009, and thereafter she returned to work while still recovering from surgery.

8. Less than three months after her surgery, on May 5, 2009, the claimant was at work when she was kicked in the front of her left knee by a 3 or 4 year old girl. This incident resulted in a compensable workers' compensation claim. On May 7, 2009, the claimant started in care at CCOM, where she was initially diagnosed with a left knee contusion.

9. A May 22, 2009 left knee MRI was read as showing a lateral meniscal tear, probable parameniscal cysts, joint effusion, chondromalacia, and a subtle irregularity of the medial meniscus likely representing a subtle tear.

10. The claimant returned to Dr. Patterson, who recommended surgery and on August 13, 2009, Dr. Patterson performed arthroscopic partial medial and lateral meniscectomies, and a chondroplasty of the medial and lateral femoral condyles.

11. The claimant was followed post-operatively at CCOM and by Dr. Patterson who noted the claimant did well with that surgery. Ultimately, on February 24, 2010, Dr. Julian Venegas of CCOM placed the claimant at MMI with a 14% left lower extremity rating. On February 26, 2010, the insurer for the May 5, 2009 claim filed a final admission consistent with Dr. Venegas' opinions.

12. On October 28, 2010, the claimant returned to CCOM, reporting that she

was having left knee issues that were interfering with her job duties. She was referred back to Dr. Patterson, who subsequently injected her left knee on three occasions. When those injections failed, the claimant was referred to Dr. David Walden for a surgical opinion.

13. On June 7, 2011, Dr. Walden noted the claimant had left knee osteoarthritis affecting the lateral compartment, status post partial meniscectomies, and genu valgus alignment secondary to arthritis, with symptoms likely due to arthritis. He recommended a left knee MRI and opined apportionment would be required if a total knee replacement was needed.

14. On July 1, 2011, the claimant's left knee MRI showed a large partial tear of the lateral meniscus and a small tear of the medial meniscus, with substantial degeneration of the medial meniscus, and probable marrow edema in the posterolateral tibial plateau.

15. On August 18, 2011, Dr. Walden reviewed the MRI and provided impressions of possible new medial and lateral meniscal tears and "significant non-work related underlying osteoarthritis." Dr. Walden recommended arthroscopic surgery despite the osteoarthritis.

16. On September 29, 2011, the claimant suffered a second work-related injury when a child grabbed her right leg; she lost her balance, and fell on her right knee. The claimant's left knee was not injured as part of this accident.

17. On December 1, 2011, Dr. Walden again noted that the July 1, 2011 MRI showed large tearing in the lateral meniscus, a small tear in the medial meniscus, and substantial degeneration in the medial meniscus. Dr. Walden indicated that the claimant understood that all of her problems would not be solved by an arthroscopy given her severe arthritis, and in the future she may need a total knee replacement.

18. On December 2, 2011, Dr. Walden performed a left knee arthroscopic partial medial meniscectomy, partial lateral meniscectomy, and chondroplasty. The postoperative diagnoses included Left knee medoial meniscus tear; left knee lateral meniscus tear; and, left knee severe osteoarthritis affecting primarily the weightbearing surface of the medial femoral condyle (grade 3).

19. On December 9, 2011, the insurer for the May 5, 2009 claim filed a general admission reopening that claim.

20. The claimant had continued left knee issues following surgery. Othovisc

injections were administered through Dr. Walden’s office on February 6, 2012, February 13, 2012, and February 20, 2012. The claimant’s exam findings were consistent with osteoarthritis. The injections did not help.

21. On July 12, 2012, Dr. Nanes placed the claimant at MMI for her May 5, 2009 claim, noting the claimant had a poor outcome with surgery. Dr. Nanes noted that the claimant was aware she could need a total knee replacement several years down the road.

22. Dr. Nanes provided a permanent impairment rating for the partially torn medial and lateral menisci and left knee range of motion deficits. He did not provide a rating for the severe osteoarthritis, indicating that issue was preexisting and unrelated. Dr. Nanes’ full rating was 16% lower extremity, but he apportioned out the prior rating, resulting in a final rating of 6% left lower extremity. Permanent restrictions were continued.

23. On July 18, 2012, the insurer for the May 5, 2009 claim filed a final admission consistent with Dr. Nanes’ opinions.

24. Thereafter, the claimant continued in care for her left leg and knee with Dr. Mohr, her PCP. On January 20, 2014, the claimant was seen by Dr. Mohr seeking Vicodin for issues that included left knee pain. Dr. Mohr noted that, according to Dr. Patterson, the claimant was not a candidate for a for left knee total knee replacement due to her age.

25. On April 22, 2014, the claimant sustained a work-related injury when she tripped over a tree stump that had been holding a door open, landing on both of her knees, her left elbow, and right palm.

26. Following her accident, the claimant came under the care of Dr. Nanes and his physician assistant, Steven Quackenbush, at CCOM. Those providers noted the claimant had bruising (ecchymosis) over her left knee.

27. X-rays taken on April 22, 2014 indicated that the claimant had soft tissue swelling along the prepatellar soft tissues left knee; Moderate degenerative change left knee with lateral compartment narrowing; Minimal medial compartment narrowing right knee; and, Both knees otherwise negative. MRIs were subsequently ordered to rule out internal damage.

28. On April 29, 2014, a left knee MRI was read as showing edema in the lateral tibial plateau, extensive degenerative changes in the lateral joint compartment

with loss of cartilage and probable chronic tear or postsurgical changes of the lateral meniscus, and medial meniscus post-surgical changes or chronic tear. The radiologist noted that the edema in the lateral tibial plateau raised the possibility of microfractures or bone contusions probably related to the fall.

29. On May 9, 2014, the claimant was referred to Keith Minihane, M.D., an orthopedic specialist. On May 14, 2014, Dr. Minihane rendered diagnoses of bilateral knee contusions, bilateral pes anserinus bursitis, bilateral degenerative knee arthritis, and left ACL strain. Dr. Minihane administered a left pes anserinus bursal injection and referred the claimant to therapy.

30. On June 30, 2014, Dr. Minihane reported the claimant's knee contusions had resolved, but he administered additional injections for bursitis. On August 5, 2014, Dr. Nanes noted that the claimant wanted a referral to a surgeon, so he referred her to Dr. James Duffey.

31. On September 2, 2014, Dr. Duffey evaluated the claimant and opined the claimant had advanced end-stage osteoarthritis, and the next step was a total knee replacement. Dr. Duffey indicated causation would need to be determined.

32. On September 15, 2014, Dr. Christopher Isaacs, an orthopedic surgeon, reviewed the total knee replacement request and opined that "the need for that surgery would not be related to her work injury."

33. On March 6, 2015, Dr. Andrew Parker, also an orthopedic surgeon, opined that the claimant's primary diagnosis of degenerative arthritis was longstanding and unrelated to this claim, and the total knee replacement should be denied as the arthritis predated even the first claim.

34. After the claimant's surgery was denied, Dr. Nanes instructed the claimant to complete physical therapy, and he scheduled the claimant for an impairment rating. On August 13, 2015, Dr. Nanes placed the claimant at MMI, and provided a 16% left lower extremity rating, reduced to 2% after apportionment.

35. On September 17, 2015 the respondent-insurer filed a final admission consistent with Dr. Nanes' 2% lower extremity rating and August 13, 2015 MMI date. On October 2, 2015, the claimant objected to the final admission, and filed a notice and proposal for a DIME.

36. In a DIME report dated January 6, 2016, Dr. Miguel Castrejon detailed his review of records available to him, and the history he obtained from the claimant. In his

DIME report, Dr. Castrejon opined that the claimant was not at MMI because she required a total knee replacement. Dr. Castrejon generally cited "medical literature" to support this opinion, indicating that while the osteoarthritis was clearly preexisting, a meniscal tear can lead to the advancement of osteoarthritis, as can meniscectomies.

37. On February 5, 2016, Jon Erickson, M.D., an orthopedic surgeon, reviewed Dr. Castrejon's DIME report, noting that he agreed with Drs. Isaacs and Parker that the claimant's degenerative arthritic changes pre-dated the April 22, 2014 work injury, and the total knee replacement was a consequence of substantial and significant pre-existing, non-occupational factors, and not the work injury.

38. On February 8, 2016, the respondents applied for hearing to challenge the DIME opinions of Dr. Castrejon on MMI, causation and impairment.

39. The respondents had the claimant evaluated by Mark Failinger, M.D., a Level II, board certified orthopedic surgeon who specializes in knee surgeries, and who regularly assesses the causation of the need for total knee replacements. Dr. Failinger reviewed available records, obtained a history from the claimant, examined the claimant, and issued a report dated April 18, 2016. Dr. Failinger's initial impression was left knee degenerative joint disease, status post multiple arthroscopies for chondroplasty and meniscectomy. Dr. Failinger opined the claimant's body habitus and preexisting arthritis began a cascade of events from which she never rebounded, and that the work-related injuries did not cause further acceleration of the arthritis.

40. At the time of his initial report, Dr. Failinger did not have the actual left knee imaging (x-ray or MRIs) for 2009, 2011, or 2014, nor did he have the medical reports from Dr. Patterson. Subsequently, Dr. Failinger was provided those materials, which he reviewed, and then issued an addendum report dated May 2, 2016. In his addendum report, Dr. Failinger opined:

> [i]t is quite clear that the patient had problems dating back to 2009 with congenital valgus as noted by Dr. Patterson. This places a patient at risk for developing lateral compartment increased stress forces which increases the risk of degenerative joint disease. The patient is noted to have had multiple surgeries by Dr. Patterson and she developed the expected progressive natural progression of degenerative joint disease which occurred from 2009 over the next 5 years, with multiple surgeries trying to settle down symptoms that would flare up, for which Dr. Patterson saw the patient. Dr. Patterson's note indicated significant degenerative changes of the lateral compartment prior to 2014.

41. Therefore, with the above noted including preexisting arthritis and body habitus, it is clear, and I agree with Dr. Jon Erickson, that the work incident did not cause any further damage and did not cause any further acceleration of the arthritis, but, rather, caused a temporary exacerbation of preexisting degenerative joint disease which was present and no new tears are noted in my evaluation of the films from 04/29/2014.

42. Dr. Castrejon was deposed by the parties.

43. At the deposition Dr. Castrejon was presented with new medical records that he was able to review for the first time. At the end of direct examination, Dr. Castrejon, having been presented with new medical records for the first time, was somewhat unsure of his ultimate opinion on MMI and the need for additional medical records. The deposition ended prematurely due to commitments of the Dr. Castrejon with cross-examination resuming several days later.

44. During the second part of the deposition, Dr. Castrejon was asked by the claimant's counsel whether he had an opportunity to review the medical records between the first and second part of the deposition. Dr. Castrejon testified that he did have a chance to review the medical records again. Dr. Castrejon testified that in light of the information provided during the first deposition, and his review of the medical records between the two parts of the deposition, the opinions he expressed in his written report had not changed. Dr. Castrejon opined that the claimant is not at MMI for her April 22, 2014 left knee injury and that she needs a total knee replacement to bring her to MMI. Dr. Castrejon opined that "I still think it is a combination, but I do think that the April 22nd was the straw that broke the camel's back . . ."

45. Consistent with the opinions expressed in the January 6, 2016 DIME report, and the opinions expressed by Dr. Castrejon in the two-part deposition, this ALJ finds that it is the ultimate opinion of Dr. Castrejon that the claimant is not at MMI for her April 22, 2014 left knee injury because she needs a total knee replacement.

46. This ALJ finds that Dr. Castrejon's ultimate opinion is that the April 22, 2014 industrial injury is the straw that broke the camel's back causing the need for the total knee replacement to be accelerated. Dr. Castrejon correctly observed in the body of the DIME report that "a preexisting disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce the need for medical treatment."

47. Dr. Failinger was likewise deposed by the parties. He explained that

osteoarthritis is a loss of surface cartilage traditionally caused by genetics, and the natural course of the disease, once it becomes symptomatic, is a “relentless march of deterioration; the rate of which is based on multiple things.” Dr. Failinger opined the claimant was a candidate for a total knee replacement due to her osteoarthritis, with other contributory factors, but unrelated to the April 22, 2014 event.

48. He opined that Dr. Castrejon’s deposition opinion that the April 22, 2014 incident was the straw the camel’s back was wrong. Dr. Failinger indicated that prior to April 22, 2014, the claimant had severe osteoarthritis that was bone-on-bone, and a total knee replacement would have been reasonable. The April 22, 2014 incident resulted in surface bruising, but no new internal damage.

49. Dr. Failinger explained that he personally reviewed the April 29, 2014 MRI, and he compared it to the July 1, 2011 MRI, noting the April 29, 2014 MRI showed absolutely no acute damage and no new pathology, and Dr. Castrejon’s opinion that the April 22, 2014 accident resulted in bone bruises or micro-fractures was, in his opinion, absolutely wrong. Dr. Failinger explained that the MRI findings (edema in the posterolateral tibial plateau) which the radiologist interpreted as possibly being bone bruises or micro-fractures, were findings present at the time of the July 1, 2011 MRI. Additionally, the area in question (the tibial plateau) is at the back and mid-portion of the knee, and is not the area of direct impact, which was the front of the knee.

50. The ALJ finds the analyses and opinions of Dr. Castrejon to be credible and more persuasive than medical analyses and opinions to the contrary.

51. The ALJ finds the opinions of Dr. Failinger do not arise to anything other than differences of opinion. Although he has an opinion that Dr. Castrejon is “clearly wrong” it is nonetheless only an opinion.

52. The ALJ finds the opinion of Dr. Duffey to be credible and persuasive that the claimant’s next step is a total left knee arthroplasty.

53. The ALJ finds that the respondents have failed to overcome the DIME physician’s finding, by clear and convincing evidence, that the claimant is not at maximum medical improvement.

54. The ALJ finds that the claimant has established that it is more likely than not that the claimant requires a total left knee arthroplasty as recommended by Dr. Castrejon and Dr. Duffey, and that such surgery is reasonable, necessary, and related to the claimant’s April 22, 2014 industrial injury.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S.

2. A claimant in a workers' compensation claim generally has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004).

3. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI, permanency or the cause of a particular component of a claimant's medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra*.

4. The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A workers' compensation case is decided on its merits. § 8-43-201, C.R.S.

5. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claims Appeals Office,* 5 P.3d 385, 389 (Colo. App. 2000).

6. It is within the ALJ’s purview as the finder of fact to determine the credibility of the witnesses and resolve conflicts in the evidence. *Metro Moving & Storage v. Gussert*, 914 P.2d 411 (Colo. App 1995).

7. When determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (1936).

8. In resolving inconsistencies the ALJ may credit all, part or none of an expert's testimony, and the ALJ's failure to cite an expert's opinion inherently reflects that the ALJ did not find it persuasive. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

9. In deciding whether a proponent has met their burden of proof, the ALJ is empowered “to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence.” *See Kroupa v. Indus. Claim Appeals Off.*, 53 P.3d 1192, 1197 (Colo. App. 2002).

10. Colorado case law clearly establishes that it is the duty of the ALJ to ascertain the true opinion of the DIME physician in cases where the DIME physician’s opinion is challenged. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). In so doing, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v .Industrial Claim Appeals Office*, 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's finding of MMI and permanent impairment consists not only of the initial report, but also any subsequent opinion given by the physician. See *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005); see also, *Jarosinski v. Industrial Claim Appeals Office*, 62 P.3d 1082 (Colo. App. 2002). The issue of the DIME physician's actual opinion is a factual one. A reviewing body may not interfere with the ALJ's resolution of these issues if supported by substantial evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, supra.

11. Once the ALJ has determined that DIME physician’s ultimate opinion, the ALJ can determine whether the challenging party has overcome the DIME physician’s opinion.

12. This ALJ concludes that the opinions of Dr. Castrejon and the opinions of Dr. Failinger differ as to whether the April 22, 2014 left knee injury caused the need for the total knee replacement. The ALJ concludes that the difference of opinion between Dr. Castrejon and Dr. Failinger is insufficient to establish that Dr. Castrejon's opinion is clearly erroneous.

13. The ALJ concludes, that based upon a totality of the evidence, the analyses and opinions of Dr. Castrejon are credible and more persuasive than medical analyses and opinions to the contrary.

14. The ALJ concludes, that based upon a totality of the evidence, the analyses and opinions of Dr. Duffey are credible and more persuasive than medical analyses and opinions to the contrary with respect to the claimant's need for a left total knee arthroplasty.

15. The claimant has the burden to prove his entitlement to medical benefits by a preponderance of the evidence. §8-43-201, C.R.S. The respondents are only liable for the medical treatment that is reasonable and necessary to cure and relieve the work-related injury. §8-42-101(1)(a), C.R.S. Even after an admission of liability is filed, respondents retain the right to dispute the relatedness of the need for continuing treatment. This principle recognizes that the mere admission that an injury occurred cannot be construed as a concession that all subsequent conditions and treatments were caused by the admitted injury. *HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990); *Snyder v. ICAO*, 942 P.2d 1337 (Colo. App. 1997).

16. The claimant is not entitled to medical care that is not causally related to his work-related injury or condition. As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 10, 2007), "A showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary." Where the relatedness, reasonableness or necessity of medical treatment is disputed, the claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.,* W.C. No. 4-117-758 (ICAO April 7, 2003).

17. The ALJ concludes, as found above, that the respondents have failed to establish by clear and convincing evidence that DIME physician Miguel Castrejon, M.D. erred in finding that the claimant has not reached maximum medical improvement (MMI) for the consequences of the April 22, 2014 injury because she requires a left total knee replacement under that claim.

18. The ALJ concludes, as found above, that the claimant has established, by a preponderance of the evidence, that the left total knee arthroplasty recommended by Dr. Castrejon and Dr. Duffey is reasonable, necessary, and related to the claimant's industrial injury of April 22, 2014.

ORDER

It is therefore ordered that:

1. The respondents' request to overcome the DIME is denied and dismissed.

2. The respondent-insurer shall authorize and pay for the claimant's left total knee arthroplasty as recommended by Dr. Castrejon and Dr. Duffey.

3. The respondent-insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, CO 80906

ISSUES

1. Whether the claimant has proven by a preponderance of the evidence that she sustained a traumatic injury arising out of and in the course of her employment with the respondent-employer on July 16, 2015; and,

2. If so, whether the claimant has proven by a preponderance of the evidence that the medical benefits requested and provided are causally related to her work injury on July 16, 2015.

Based upon the findings and conclusions below that the claim is not compensable, the ALJ does not reach a decision on medical benefits.

FINDINGS OF FACT

1. The claimant, a 47 year-old full time employee of the respondent-employer since August 4, 2014, worked at one of the respondent-employer's stores in Pueblo, Colorado as a front end supervisor. On July 16, 2015, the claimant was assisting other cashiers during a busy period by operating a cash register in one of the store's checkout lines. On that date a courtesy clerk, Ms. Janet White, pulled a cart through the space between the claimant and the checkout cashier working behind the claimant at another cash register. The cart contacted the claimant in the low back. The claimant's back was to Ms. White, and the other cash register, and the claimant facing straight ahead and her body was not turned when the incident occurred. The claimant simply felt the cart contact her.

2. The claimant testified that the impact was focal, in the middle of her lower back.

3. The claimant testified at hearing that she felt immediate, intense pain when the accident occurred, with pain felt in her lower back and down both of her legs. She stated at the hearing that the pain was so severe that he legs buckled and she fell to her knees.

4. Dr. Douglas Scott, who testified at the hearing, testified the claimant denied falling to the floor or having her legs buckle when he saw her for the examination

the respondent requested on January 5, 2016. The claimant also did not report this fall when she described the incident and her symptoms to Dr. Paul Merchant at CCOM at her initial visit there on July 17, 2015. While the claimant alleged this incident caused her intense pain, she worked the rest of her scheduled sifts, over six hours, without reporting this injury or claim to anyone at work. Instead, the claimant waited until the end of her shift when Mr. Decesaro and other store managers were no longer working to tell a pharmacist at the store she was injured and give him her report of the injury.

5. Mr. Decesaro explained in his testimony that he did not know why the claimant did not report the injury when, or in the hours after, it occurred. He explained, that the claimant had his cell phone number and would call him frequently to discuss many other issues or problems. He opined that the claimant, as a supervisor at the store, and because she had filed a previous worker's compensation claim, knew well the store's requirements and procedures for reporting injuries after they occurred.

6. The claimant testified that she awoke after sleeping at home on July 17, 2015, with pain in her back and both legs. She testified she wanted to go to the emergency room, but instead went to the store where she met for several minutes with Mr. Decesaro to report this claim and complete the claim's reporting paperwork. She also received the respondent's designated provider list at this meeting and selected CCOM as her designated provider.

7. Mr. Decesaro explained at the hearing that he questioned the claimant's claim. He noted the claimant had a past worker's compensation claim with an identical injury mechanism on January 21, 2015, and that the claimant unsuccessfully tried to reopen that claim before bringing the allegations made in this claim. He also thought it was suspicious that in both claims the claimant stated that a new, inexperienced courtesy clerk was alleged to have caused the injuries, and that he found the claimant had pressured Ms. White to sign the statement the claimant drafted to support the claimant's version of events in this claim. He also noted that claimant had been subject to recent escalating warnings and discipline at work due to mistakes and violations of employer's policies, and had refused to sign the last disciplinary notice on June 28, 2015. He thought the claimant was disgruntled about her work and employment when this claim occurred. Mr. Decesaro also filled out an Employee Incident Questionable Claim form on July 17, 2015, noting that the claimant had unsuccessfully requested time off after her prior January, 21, 2015 claim occurred, and that after this incident she wanted to obtain time off over the weekend.

8. The claimant's subjective symptoms were not, Dr. Scott explained, compatible with the described mechanism of injury, and would not be caused by the

injury as claimed. Dr. Scott testified that the injury mechanism did not cause any anatomic or physiologic injury and that there were no findings on his exam or in the examinations with Dr. Merchant at CCOM that would show any physical trauma. Dr. Scott explained that no physical findings on exam or diagnostic studies supported the existence of any anatomic or physiologic injury, that the claimant's alleged symptoms were not supported by any findings, and that they could not have been caused by the injury claimant alleges in this claim. He noted how the claimant's range of motion testing was not valid and was inconsistent. He felt her motion limitations were not physiologic. Dr. Scott said the claimant's complaints to Dr. Merchant of 10 out of 10 pain were inconsistent with his examination's findings and the claimant's abilities demonstrated during his examinations of the claimant including normal strength.

9. Dr. Scott's conclusions were shared by Dr. Merchant at CCOM. On July 21, 2015, Dr. Merchant wrote in the comments section:

> Based on the information provided by the patient and review of her medical records from Parkview family medicine is unlikely that the described mechanism of injury is responsible for her current symptomatology.

10. At his next appointment with claimant, he opined:

> The patient symptoms are inconsistent with the mechanism of injury. It is unlikely that being struck in the back with a shopping cart would cause her knees to hurt, her pelvis and hips to become stiff and the posterior portion of both thighs to have radiating pain.

11. Dr. Scott credibly explained that the bruise required no medical treatment to resolve or be cured, and that it resolved simply with the passage of time. That bruise was also in a different location on claimant's lower back, lateral to the midline, than in the middle of her spine over her vertebrae where she testified at the hearing that the shopping cart contacted her. The records from CCOM bear out Dr. Scott's opinion that this bruise required no medical treatment to resolve or be treated, for it was gone by the claimant's second appointment at CCOM on July 21, 2015, wherein Dr. Merchant found that on examination of her back he found no edema, erythema or ecchymoses. This bruise also, as Dr. Scott credibly testified, lead to no disability and could not cause the claimant's severe symptoms and subjective limitations. Additionally, Dr. Merchant opined in his July 21, 2015 report that the objective findings are not consistent with the history of a work-related etiology.

12. Dr. Scott explained at the hearing that the claimant's continued back pain and subjective symptoms are not causally related to the July 16, 2015, incident, and are

instead related to and explained by her severe, long-standing degenerative lumbar spine changes seen on the lumbar spine x-ray done January 23, 2015, the MRI done June 13, 2015, and her obesity. Dr. Scott said the claimant's degenerative spine conditions' long chronicity was seen by the MRI's reveal of endplate changes. He testified that those severe degenerative changes develop over years, and were not caused by or aggravated by this claim's injury. He testified they are clearly sufficient to cause and explain claimant's back pain that was symptomatic and requiring medical treatment before this claim's injury occurred and were independent of any injury alleged in this claim. Only Dr. Scott had all of the claimant's medical records available to review and the benefit of focusing on the causation and compensability issues in his report and hearing testimony. His conclusions are not rebutted by any other medical opinion, and are consistent with the medical records and findings of Dr. Merchant and the claimant's other providers.

13. The ALJ does not find the claimant to be credible.

14. The ALJ finds Dr. Scott's analyses and opinions to be credible and more persuasive than medical analyses and opinions to the contrary.

15. The ALJ finds that the claimant has failed to establish that it is more likely than not that the claimant suffered a compensable injury arising out of and in the course of her employment with the respondent-employer.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S.

2. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004).

3. The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A workers' compensation case is decided on its merits. § 8-43-201, C.R.S.

4. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claims Appeals Office,* 5 P.3d 385, 389 (Colo. App. 2000).

5. It is within the ALJ’s purview as the finder of fact to determine the credibility of the witnesses and resolve conflicts in the evidence. *Metro Moving & Storage v. Gussert*, 914 P.2d 411 (Colo. App 1995).

6. When determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (1936).

7. In resolving inconsistencies the ALJ may credit all, part or none of an expert's testimony, and the ALJ's failure to cite an expert's opinion inherently reflects that the ALJ did not find it persuasive. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

8. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. §8-41-301 (1)(c) C.R.S.; *Faulkner v Industrial Claim Appeals Office*, 12 P 3.d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for the determination by the ALJ. *Faulkner,* 12 P.3d at 846.

9. For an injury to be compensable under the Workers’ Compensation Act, it must “arise out of” and “occur within the course and scope” of the employment. *Price v. Indus. Claim Appeals Off.,* 919 P.2d 207, 210, 210 (Colo. 1996); *Schepker v. Daewoo North*, W.C. No. 4-528-434 (ICAO April 22, 2003). An injury "arises out of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions as part of the employee's services to the employer. *See Schepker, supra.* "In the course of" employment refers to the time, place, and circumstances of the injury. *Id.* There is no presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment. *Finn v. Indus. Comm’n,* 165 Colo. 106, 108-09, 4437 P.2d 542 (1968).

10. In deciding whether claimant has met his burden of proof, the ALJ is empowered “to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence.” *See Kroupa v. Indus. Claim Appeals Off.*, 53 P.3d 1192, 1197 (Colo. App. 2002).

11. The ALJ concludes that the analyses and opinions of Dr. Scott and Dr. Merchant are credible and more persuasive than medical analyses and opinions to the contrary.

12. The ALJ concludes that, although the claimant may have been contacted by the shopping cart, the evidence does not establish that she sustained a compensable injury as a result.

13. The ALJ concludes, as found above, that the claimant has failed to prove by a preponderance of the evidence that she sustained a compensable injury as the result of the July 16, 2015 incident. The ALJ is persuaded by the analyses and opinions of Dr. Scott and Dr. Merchant, which are credible and supported by the evidence in this case.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

The claimant's claim for benefits under the Workers' Compensation Act of Colorado is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATE: June 21, 2016

/s/ original signed by:
Donald E. Walsh
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle, Suite 810
Colorado Springs, CO 80906

ISSUES

The issues for hearing were:

1. Whether the claimant has overcome the DIME physician's 0% impairment rating by clear and convincing evidence; and,

2. Whether the claimant established by a preponderance of the evidence that the claimant is entitled to post-maximum medical improvement medical benefits.

FINDINGS OF FACT

1. The claimant sustained a work related injury on May 27, 2014 when she bent forward to pick up five to six one gallon cans of paint, one at a time.

2. The claimant reported the injury to the respondent-employer, and began treating with Dr. Terrance Lakin ("ATP") at Southern Colorado Clinic, P.C.

3. On August 7, 2014, Dr. Lakin noted that "the severity of [the claimant's] complaints appear excessive for [the] mechanism of injury."

4. On August 8, 2014, Dr. Lakin again stated that "given [the claimants] low mechanism of injury I believe that returning to full duties at next visit, plus or minus on a trial basis and she should be at MMI and closing case in next one to two months."

5. On August 27, 2014 Dr. Lakin indicated that he "anticipate[d] MMI and no impairment."

6. Thereafter, although it is unclear why, the claimant was sent for an MRI of the lumbar spine.

7. On November 19, 2014 the claimant was seen by Dr. Ford for L4-L5 and L5-S1 facet joint injections. The claimant's pre-procedure pain was rated as a 7/10 and post procedure was indicated as a 4/10.

8. The following day, November 20, 2014, the claimant was seen by Dr. Lakin, where she reported with an increased, 6/10 pain level.

9. On January 2, 2015, the claimant reported she was doing great and was in no pain.

10. Despite her zero pain level, the claimant was sent for another injection on January 7, 2015.

11. The claimant was finally placed at maximum medical improvement (“MMI”) on January 27, 2015. Dr. Lakin prepared the impairment rating report and opined that the claimant had sustained a 12% whole person impairment. Dr. Lakin also prescribed medical maintenance of a gym membership for 12 months, and additional facet injections with Dr. Ford every 3-6 months, as needed, for up to 3 years.

12. The respondent admitted on the 12% permanent impairment given by Dr. Lakin. The respondent paid out approximately $11,084.48 on the 12%.

13. The claimant objected to the Final Admission on the 12%, and requested the DIME.

14. The respondent sent Dr. Lakin’s medical maintenance recommendations for peer review by Physician Based Medical Management. Dr. Moshe Lewis reviewed the maintenance requests and indicated that the requested maintenance was not recommended.

15. Dr. Wallace Larson was selected as the physician to perform the DIME.

16. Dr. Larson evaluated the claimant on September 29, 2015, eight months post-MMI, to complete the Division IME.

17. As part of the DIME, Dr. Larson reviewed the claimant’s prior medical records, including Dr. Lakin’s treatment records, Dr. Ford’s facet joint injections, and the October 15, 2014 MRI report.

18. As to the claimant’s prior history, the DIME pointed out that “[The claimant] was noted to have a previous history of depression” by Dr. Lakin “and it was unsure if this may be affecting poor response to therapy.” The note indicates severity of complaints appear excessive for mechanism of injury.

19. The DIME physician also noted that the treatment notes on August 8, 2014 indicated that “given her low mechanism of injury I [Dr. Lakin] believe that returning to full duties at next visit, plus or minus on trial basis and she should be at MMI and closing case in next 1-2 months.”

20. The DIME physician reviewed the claimant’s October 15, 2014 MRI scan of the lumbar spine, and indicated that “there was no evidence of acute abnormality.”

21. The DIME physician also conducted a physical examination of the claimant.

22. Per the physical examination, the DIME physician concluded that “sensory examination is normal bilaterally …. [The claimant] has no external deformities. The spine is straight. Strength is within normal limits. Peripheral pulses are normal. She has no muscle atrophy. Deep tendon reflexes are normal.”

23. The DIME physician further indicated that his “physical examination of the patient does not appear to be consistent with lumbar radiculopathy nor is it highly suggestive of lumbar strain.”

24. This was in contrast to the claimant’s subjective complaints indicating that “she can’t function like a normal person ….has nonstop pain….standing and partial bending ‘kills [her].’”

25. As a result of his medical record review and physical examination of the claimant the DIME physician concluded that “there is no objective indication that [the claimant] had damage to her L5-S1 disc…. The patient does not have a specific identified injury. She does not have a specific ratable impairment….My impairment rating is 0%. She does not require any additional treatment or diagnostic studies and does not require maintenance care.”

26. The respondent filed a Final Admission of Liability admitting on the zero percent (0%) permanent impairment rating. In response the claimant objected and filed an application for hearing.

27. An evidentiary deposition of the ATP, Dr. Terrance Lakin, was taken on March 15, 2016.

28. At the deposition, the ATP testified that the first step to rendering an impairment rating is "to have a mechanism of injury that correlates with the patient's complaints"

29. The ATP further indicated that in his opinions the facet injections "give us pretty good evidence that she was having irritation or inflammation at the facet joints"

30. When asked by counsel for the claimant as to whether the DIME properly performed his impairment rating, Dr. Lakin testified, "I think he came to the conclusion that, you know, she didn't have a mechanism of injury that warranted a permanent change or an impairment rating"

31. When asked whether the DIME ignored the objective evidence and instead made a subjective conclusion, the ATP was unable to answer, and simply indicated that he would hold more to his impairment rating values.

32. The ATP also testified that it would be appropriate to give a zero percent impairment rating when a physician believes that the mechanism of injury was not causing the pain complained of, and noted that "that is probably what Dr. Larson did."

33. When asked: "Why do you think you and Dr. Larson arrived at different conclusions as to an impairment rating?" Dr. Lakin indicated:

34. I think we have different medical opinions about this. These cases are hard. And on a daily basis, there's five or six patients that it's hard to deal with reaching conclusions of causality. You know, we have an older patient base that are in manual labor jobs, and discerning normal aging process or degenerative disc disease or joint disease and what creates their symptomatic pain at the time is hard for us to discern. And that's why, you know, we're – doctors rely on what the patient tells them and the data we can get. But also, I think there needs to be another aspect of investigation or workplace validation of what the mechanism was and when it happened.

35. At the hearing Dr. Lakin testified for the claimant.

36. At that time Dr. Lakin again admitted that the claimant did not have a "severe" mechanism of injury.

37. He also admitted that he has a limited understanding of the facility of the injections.

38. The ALJ finds that the analyses and opinions of Dr. Larsen are credible and persuasive.

39. The ALJ finds that the differing opinions of Dr. Lakin amount only to a difference of medical opinion and does not establish that Dr. Larsen was wrong in his assessments.

40. Dr. Larsen concluded that the claimant had no objectively identifiable injury other than perhaps a relatively minor back strain that would have resolved no later than January 27, 2015.

41. The ALJ finds that without an identifiable injury based on objective findings the provision of a 0% impairment rating is appropriate.

42. Additionally, the ALJ finds that without an objectively identifiable injury no maintenance medical benefits are appropriate as determined by Dr. Larsen.

43. The ALJ finds that the claimant has failed to establish that Dr. Larsen clearly erred in finding that the claimant had a 0% impairment rating.

44. The ALJ finds that the claimant has failed to establish that it is more likely than not that she is entitled to post-MMI maintenance medical benefits.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S.

2. A claimant in a workers' compensation claim generally has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004).

3. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-

107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI, permanency or the cause of a particular component of a claimant's medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra*. Accordingly, the ALJ is bound by the DIME physician's resolution of the issue in the absence of clear and convincing evidence to the contrary. *Hart v. Century Communications, Inc.,* 2001 Colo. Wrk. Comp. LEXIS 139, *3.

4. The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A workers' compensation case is decided on its merits. § 8-43-201, C.R.S.

5. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claims Appeals Office,* 5 P.3d 385, 389 (Colo. App. 2000).

6. It is within the ALJ's purview as the finder of fact to determine the credibility of the witnesses and resolve conflicts in the evidence. *Metro Moving & Storage v. Gussert*, 914 P.2d 411 (Colo. App 1995).

7. When determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (1936).

8. In resolving inconsistencies the ALJ may credit all, part or none of an expert's testimony, and the ALJ's failure to cite an expert's opinion inherently reflects

that the ALJ did not find it persuasive. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

9. In deciding whether a proponent has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Kroupa v. Indus. Claim Appeals Off.*, 53 P.3d 1192, 1197 (Colo. App. 2002).

10. C.R.S. 8-42-107(8)(c) dictates that a "physician shall not render a medical impairment rating based on chronic pain without anatomic or physiological correlation." C.R.S. 8-42-107(8) further provides that "Anatomic correlation must be based on objective findings." Both the DIME and the ATP agree that disc abnormalities are common in even asymptomatic individuals. Here, the DIME physician opined that the claimant's mechanism of injury was not significant enough to have caused the pain and symptoms complained of. While the ATP believed that the claimant's response to the injections provided objective evidence. The DIME Physician found that the claimant's subjective complaints that she could not function and was in constant pain were inconsistent with her physical examination and medical history, especially in light of the mechanism of injury.

11. The DIME physician found that the claimant had sustained a "relatively minor lumbar strain" and that her "symptoms both in terms of severity and chronicity are far out of proportion to the incident at work." The DIME further opined that the "[claimant's] treatment extended far longer than would be reasonable. . . . There is no objective evidence that [the claimant] had damage to her L5-S1 disc." The DIME further indicated that "The patient does not have a specific identified injury. She does not have a specific ratable impairment" and therefore, assigned her a zero percent impairment rating. The DIME's findings were based on both his review of the medical records in this matter, and his physical examination of the Claimant.

12. It is rudimentary that "as a matter of diagnosis, the assessment of impairment requires a rating physician to identify and evaluate all losses and restrictions which result from the industrial injury." *Qual-Med, Inc.,* 961 P.2d *at 592.* Moreover, it is well established that assessing whether the complained of injury was the cause of the claimant's permanent impairment is "an inherent part of the physician's rating and, therefore, is subject to the standard of clear and convincing." *Id. See also Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000).

13. The ALJ concludes that the claimant has failed to prove by clear and convincing evidence that the DIME's opinion on causation, and subsequently impairment, was mistaken. Instead, the ATP's own testimony was that he and the DIME physician arrived at different conclusions because they have "different medical opinions." Dr. Lakin also acknowledged that dealing with conclusions of causality is hard, that medicine is not an exact science, and that he and Dr. Larson simply went down different paths in reaching their conclusions.

14. The claimant contends that Dr. Larson's failure to abide by the AMA guidelines in rating the claimant's permanent impairment is fatal to his rating. The ALJ concludes that Dr. Larson's initial evaluation on causation, as to whether the mechanism of injury resulted in a ratable impairment, required the result that no permanent impairment resulted. Additionally, assuming *arguendo* that Dr. Larsen did deviate from the *Guides*, it is well established that a DIME's failure to properly apply the AMA guidelines does not require the result that the DIME physician's impairment rating is incorrect. *See Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1119 (Colo App. 2003), *see also In Re: Riffle v. Current USA,* 2009 Colo. Wrk. Comp. LEXIS 109, at * 7 ("Proof that a DIME physician deviated from the rating protocols of the AMA does not compel the ALJ to find that the rating has been overcome by clear and convincing evidence.").

15. "The claimant has the burden to show, by a preponderance of the evidence, that her request for maintenance medical benefits is reasonable, necessary and related to relieve the effects of the claimant's industrial injury or to prevent further deterioration of the claimant's condition." *See Van Meter v. City Market,* 2012 Colo. Wrk. Comp. LEXIS 162, *5-6 (citing to *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995).)

16. Here, the claimant has failed to offer sufficient evidence that would support her request for maintenance care.

17. As found above, the ALJ concludes that the claimant has failed to establish by clear and convincing evidence that the 0% impairment rating of the DIME physician was clearly wrong.

18. As found above, the ALJ concludes that the claimant has failed to establish by a preponderance of the evidence that she requires post-MMI maintenance medical care.

ORDER

It is therefore ordered that:

1. The claimant's request to overcome the DIME physician's opinion on impairment is denied and dismissed.

2. The claimant's request for post-MMI maintenance medical benefits is denied and dismissed.

3. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATE: June 22, 2016

/s/ original signed by:
Donald E. Walsh
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle, Suite 810
Colorado Springs, CO 80906

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable injury on January 18, 2015.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to medical benefits to treat a January 18, 2015 work injury.

3. Whether Claimant has established by a preponderance of the evidence that he is entitled to temporary total disability (TTD) from January 19, 2015 through March 18, 2015.

STIPULATIONS

1. Claimant's average weekly wage (AWW) is $1,284.73.

2. The parties agree that Banner Health, Medical Center of the Rockies, Eye Care Center of Northern Colorado, University Hospital, Dr. Hebard, and Dr. Milchak are authorized providers.

FINDINGS OF FACT

1. Claimant worked for Employer beginning in August of 2014. Claimant worked on oil field rigs.

2. As part of his new hire training, Claimant received training on safety including the use of a respirator. Claimant had trouble initially passing the test for wearing a respirator, and after coaching, was able to pass the test.

3. Employees at the drill site were required to wear protective clothing and respirators when working with chemical agents added to hydraulic fracturing fluid and when working with sand particles.

4. Claimant, and all employees, received training regarding the awareness of what constituted a respiratory hazard, ways to mitigate the risk, and the proper use of personal protective equipment including respirators.

5. In addition to the initial training, Employer performed weekly safety meetings that employees were required to attend. The safety topics at those weekly meetings would sometimes include when and how to use a respirator, which cartilage to use (particulate vs. vapor), and inspecting or cleaning the respirator.

6. One of the chemicals that Claimant worked with was Buffer 10, a caustic chemical that contained acetic acid and acetic anhydride which could cause irritation and burning to the lungs if inhaled. Material Safety Data Sheets (MSDS) explaining this chemical and other chemicals was available at each job equipment site.

7. The MSDS sheet for Buffer 10 required use of the respirator if a risk assessment indicated it was necessary. Employer policy for the site required that employees use a respirator when working with Buffer 10.

8. On January 18, 2015 Claimant was working on “rigging down” a process that involved taking down equipment and removing chemicals from pumps.

9. Claimant was working with three other employees in this process. The three other employees were all wearing their respirators. However, Claimant was not wearing his respirator.

10. Claimant provided differing accounts of where he was and how he was assisting in the process to medical providers and in his hearing testimony. Nicholas Smith, a co-worker who was working alongside Claimant on the date in question, testified that Claimant had been assigned to pick up trash and that Claimant was nowhere near the Buffer 10 when they were emptying the valves and “rigging down.” Mr. Smith also testified that Claimant had been fooling around throughout the shift pretending to inhale chemicals and faint before getting up and laughing.

11. At some point in the “rigging down” process, Claimant may have been exposed to Buffer 10 for a very short duration of time and he may have been as close to the Buffer 10 as was needed to hold a bucket to open and check a valve to ensure no chemical remained in the valve. Claimant alleges he was holding a 5 gallon bucket under the valve when he opened it to check it and expected maybe a few drops to come out, but that a large amount came out. Claimant alleges he dropped the bucket after a short period because he felt off and walked away 20 feet and has no memory afterwards.

12. Claimant was discovered passed out by a co-worker and was taken to Employer’s main trailer. After observing Claimant for a period of time, a supervisor drove Claimant to Colorado Plains Medical Center.

13. On January 18, 2015 Claimant was evaluated at Colorado Plains Medical Center. Claimant reported that his chest was burning beginning one hour prior. Claimant was gagging, was agitated, reported he could not breathe, was periodically rolling his eyes back and having brief clonic tonic seizures, and stated he could not stand. The supervisor who drove Claimant to the medical center reported that Claimant may have inhaled Buffer and provided the medical center with a MSDS sheet for Buffer. The supervisor also reported that Claimant’s symptoms were not as bad earlier. Claimant was noted to have labored breathing moderate grunting and mild wheezing breath sounds. Claimant was also noted to be holding his breath and having periodic

jerky intentional deep breaths with chest clutching. Claimant's pulse oxygen levels were normal. A chest radiograph was performed and the impression was: suggestion of mild central airway thickening, a finding which can be seen in the setting of bronchitis or reactive airway disease. The MSDS sheet listed a caustic chemical inhalation and after discussing the case, a doctor recommended transfer to the Medical Center of the Rockies for a higher level of care. Claimant was transported by helicopter. *See* Exhibit 3.

14. Claimant was hospitalized at the Medical Center of the Rockies from January 18, 2015 through January 23, 2015.

15. On January 20, 2015 while hospitalized, Claimant was evaluated by Richard Milchak, M.D. Claimant underwent spirometry testing that Dr. Milchak noted was an unintelligible evaluation. Dr. Milchak opined that Claimant gave poor effort but that there was no obvious intra or extra thoracic obstruction. *See* Exhibit H.

16. On January 22, 2015, Claimant was evaluated by Dr. Milchak. Dr. Milchak performed a pulmonary function test questioning reactive airway distress syndrome due to chemical inhalation. Dr. Milchak opined that Claimant gave poor effort and did not meet the criteria for acceptable or reproducible effort. Claimant reported his chest hurt too much to give full effort. Dr. Milchak opined that the tests were not helpful. *See* Exhibit H.

17. On January 23, 2015 Claimant was discharged from the Medical Center of the Rockies. While hospitalized, Claimant reported a 20 second exposure to chemical fumes followed immediately by extreme shortness of breath. Claimant reported wearing protective eye wear and a chemical gown but not a respirator. Claimant reported his symptoms quickly resolved after breaking away for fresh air, then worsened when he returned to the spill for cleaning and reported that he got very weak and dizzy and subsequently passed out. Claimant reported chest tightness and shortness of breath, gastric pain and nausea, weakness, dizziness, and dysuria. Chest x-rays were performed and were negative. While hospitalized, an RN noted that Claimant was able to take normal deep breaths when he was not aware he was being listened to, but that he took shallow inhalations when being listened to with a stethoscope. On discharge, the final diagnoses were listed as: suspected inhalation injury; weakness of unknown etiology; and microcytosis. It was noted that Claimant had a possible inhalation injury but that chest x-rays were normal, room air saturations were greater than 90 percent, and that spirometry was not a useful test. It was noted to be unclear how possible chemical inhalation could contribute to Claimant's reported painful urination. *See* Exhibit E.

18. On January 27, 2015 Claimant was evaluated by James Hebard, M.D. Claimant reported an inhalation chemical exposure to Buffer 10 while closing down a fracking rig. Claimant reported that he did not have direct contact with the chemical but that he felt burning and tightness in his chest as well as weakness. Claimant reported left sided deep chest pain with breathing and a headache. Claimant's exam was noted

to be normal and unremarkable with clear lungs. Dr. Hebard diagnosed: inhalation of chemical fumes; chest pain with shortness of breath; headache; and dizziness. Dr. Hebard referred Claimant for a pulmonary follow up. *See* Exhibit 5.

19. On February 17, 2015 Claimant was evaluated by Dr. Milchak. Claimant reported continued shortness of breath and chest pain as well as dizziness and visual acuity changes. Dr. Milchak opined that Claimant's symptoms did not necessarily fit well with inhalation of Buffer 10. Dr. Milchak noted that he reviewed the Buffer 10 MSDS sheets and found no cause for Claimant's pleuritic chest pain. Dr. Milchak noted that Claimant reported passing out so theoretically Claimant could have hit his chest causing a traumatic chest wall injury. Dr. Milchak noted that a CT scan of the chest would be done to look for evidence of air trapping, interstitial changes, or chest wall injury. Dr. Milchak also opined that the injury could give way to a reactive airway distress syndrome but noted Claimant had no bronchospasm. Dr. Milchak noted that Claimant's spirometry showed moderate restriction but with very poor effort. Dr. Milchak opined that until the tests were completed he could not determine causality with the inhalation and Claimant's symptomatology. *See* Exhibit C.

20. On February 23, 2015 Claimant was evaluated by Dr. Hebard. Claimant reported continued left chest pain and dizziness. Claimant's bilateral lungs had clear breath sounds, but he breathed very shallow and complained of left sided deep chest pain. Dr. Hebard noted that Claimant was being scheduled for a chest ct, opthamology consult, and a pulmonary function test. *See* Exhibit 5.

21. On February 24, 2015 Claimant underwent a CT of his chest. Claimant's scan was noted to be unremarkable other than decreased liver density compatible with hepatic steatosis. *See* Exhibit G.

22. On February 25, 2015 Claimant underwent an independent medical evaluation performed by Jeffrey Schwartz, M.D. Claimant reported no chest problems until an exposure at work on January 18, 2015. Claimant reported that day was his second day working with chemicals and that he was unable to tolerate wearing a respiratory protective device. Claimant reported the hose draining the chemical Buffer 10 was removed by a co-worker and that he placed a bucket underneath to catch the remaining chemical. Claimant reported that after placing the bucket he quickly backed away and five minutes later felt dizziness, shortness of breath, chest pain, and a cough and thinks he may have passed out. Claimant reported he was then taken to a local hospital and later flown to Loveland. Claimant reported that he still had intermittent dizziness, blurriness of vision, and chronic left anterior chest pain. *See* Exhibit A

23. Dr. Schwartz noted that Claimant had a brief exposure to Buffer 10 and that while the agent can cause respiratory irritation, Claimant's exposure was brief and outdoors so the amount of fumes to which he was exposed seemed fairly limited. Dr. Schwartz opined that all of Claimant's lung exams had been normal as well as chest CT scan and chest x-rays. Dr. Schwartz noted that exposure to a high concentration of chemical with irritating properties can cause reactive airway disease, the diagnosis

would depend on the finding of reversible airflow obstruction of a methacholine challenge test demonstrative hyper-responsive airways and that Claimant was unable to perform the necessary spirometries to allow for the assessment of reversible airflow obstruction or hyper-responsive airways. Dr. Schwartz opined that the cause of Claimant's left pleuritic chest pain remained unclear and that the evaluation showed no pleural or chest wall abnormality. Dr. Schwartz noted that Claimant had a history of what was thought to be a psychosomatic disorder in August of 2014 and opined that since Claimant's chronic severe left chest pain was not consistent with his exposure to Buffer 10 on January 18, 2015 Claimant's reported chest pain may also have a psychosomatic basis. *See* Exhibit A.

24. Dr. Schwartz agreed with Dr. Milchak's assessment that Claimant's symptoms were out of proportion to any objective evidence of an injury and that anxiety could be playing a role. Dr. Schwartz opined that Claimant's extensive evaluation showed no evidence of respiratory disorder or any work related injury occurring on January 18, 2015. *See* Exhibit A.

25. On February 27, 2015 Claimant underwent pulmonary function testing performed by Christopher Hatzis, M.D. Dr. Hatzis opined that there were inconsistent findings and that Claimant had an inability to meet standards for testing so definitive conclusions could not be made. Dr. Hatzis noted that Claimant had difficulty holding his breath or taking deep breaths due to his reported chest pain and that there was marked decreasing lung function after bronchodilator which was likely due to Claimant's effort. *See* Exhibit H.

26. On March 2, 2015 Claimant was evaluated by Dr. Milchak. Claimant reported continued severe left sided chest pain, dizziness, and visual changes. Dr. Milchak opined that Claimant's symptoms were out of proportion to the data that had been obtained. Dr. Milchak reviewed the MSDS for Buffer 10 and opined that there was no reason for Claimant's severe chest wall pleuritic pain. Dr. Milchak noted that a CT scan of the chest wall was unrevealing. Dr. Milchak opined that anxiety could be playing a part and that there was no reason for further testing. *See* Exhibit C.

27. On March 3, 2015 Claimant was evaluated at the Eye Center of Northern Colorado by Randall Smith, M.D. Claimant reported inhalation chemical exposure to Buffer 10 while closing down a fracking unit on January 18, 2015 and that he had blurry vision in both eyes especially in the distance and also was dizzy and had chest pain since the accident. Dr. Smith assessed cataracts, myopia, and loss of vision. Dr. Smith noted he would need to further research the chemical claimant was exposed to and that he would have Claimant return for visual field testing and OCT. *See* Exhibit 6.

28. On March 10, 2015 Claimant was again evaluated by Dr. Smith. Dr. Smith opined that there was no physiological reason for Claimant's loss of vision explained by testing. Dr. Smith explained to Claimant that the PH of the chemical exposed to was an acid that would have caused scarring and burns. *See* Exhibit D.

29. On March 25, 2015 Claimant was evaluated by Dr. Hebard. Claimant reported continued chest pain and dizziness. Dr. Hebard noted than an EKG performed on March 4, 2015 was normal, that the ophthalmologist Dr. Smith concluded there was no physiological reason for vision loss explained by testing, and that pulmonologist Dr. Schwartz found there was no objective evidence that Claimant sustained an inhalation injury. Dr. Hebard noted past medical records reported a similar episode of persistent severe left chest pain with no objective evidence of injury after a low speed motor vehicle accident. Dr. Hebard opined that Claimant did not sustain a traumatic chest injury and that there was no objective evidence of an inhalation injury or respiratory disorder. Dr. Hebard opined that Claimant had no evidence of an ongoing work related injury as a result of his January 18, 2015 exposure and that Claimant was at maximum medical improvement with no impairment as of March 19, 2015. *See* Exhibit 5.

30. Dr. Hebard concluded that it was reasonable that Claimant could have had some initial respiratory irritation from the reported chemical inhalation but that all subsequent and current complaints were out of proportion and lacked objective evidence and that no current condition was reasonably attributable to the January 18, 2015 inhalation injury. *See* Exhibit 5.

31. On August 21, 2014 Claimant was involved in a very low speed motor vehicle accident with very minimal damage to his automobile. Claimant was ambulating at the scene and then had a bizarre event with pseudo-syncope and was taken to the emergency room. A full workup with CT scans of the head, chest, abdomen, and pelvis were performed and were all negative. Claimant's blood work was also all negative. Claimant reported continued pain throughout the night and that his chest pain was so debilitating he thought he would fall down. Claimant had normal vital signs and there was concern for a behavioral component as they could not find anything physiological. *See* Exhibit F.

32. Claimant reported left sided chest pain despite no identifiable injuries by imaging or clinically other than a slight bruise on the left trapezius consistent with a seatbelt. Claimant reported not being able to breath and had shallow irregular breathing despite pulse oxygen on room air being in the high 90s. Given the normal imaging studies, Claimant's behavior was opined to be suggestive of an underlying anxiety disorder and/or psychiatric illness. *See* Exhibit F.

33. Claimant testified at hearing. Claimant reported that on the date of the incident he was working on chem add. Claimant reported he was told to bring a bucket to place under a valve and top open the valve/check to see if anything was left in the blow out process. Claimant thought maybe a few drops might come out but that a large amount of Buffer 10 came out. Claimant testified that he couldn't hold the bucket anymore because he was dizzy and that he dropped the bucket and went out approximately 20 feet away and doesn't remember what happened next until he was at the headquarters trailer of the jobsite. Claimant reported he was in extreme pain, his eyes were dripping, he was coughing a lot, and that nothing was done for approximately 40 minutes when he was then driven to Ft. Morgan to a doctor.

34. Claimant, overall, is not found credible or persuasive. Claimant notably has acted differently at times and has exaggerated his symptoms and complaints to medical providers. When initially taken to a medical center on January 18, 2015 Claimant's supervisor reported that he was not as bad before he arrived and then at the medical center his symptoms increased dramatically. Additionally, a nurse in the initial few days of treatment noted that Claimant was able to breathe much better when he thought he was not being observed. Claimant reported symptoms that providers noted had no possible link to exposure to Buffer 10 and Claimant has throughout the claim exaggerated and/or faked symptoms for unknown reasons. Due to the overall presentation Claimant has presented and the inconsistencies, Claimant's testimony can not be relied upon to any degree of certainty.

35. The opinion of Dr. Schwartz is found credible and persuasive. His opinion that Claimant did not suffer a work related injury on January 18, 2015 is supported by the medical records that show that Claimant did not suffer an inhalation injury and that Claimant does not have a reactive airway disorder or respiratory disorder due to inhalation of Buffer 10. The opinion of Dr. Schwartz is also supported by the opinions of other providers who found no objective evidence of any injury after medical testing was performed. The totality of medical evidence does not support a finding of an injury on January 18, 2015.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. *See* § 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The Workers' Compensation Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undersigned occurrence." *See* § 8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Wherry v. City and County of Denver,* W.C. No. 4-475-818 (ICAO March 7, 2002).

Claimant has failed to establish by a preponderance of the evidence that he suffered a work related injury on January 18, 2015 due to exposure to Buffer 10. Initially, it is unclear as to whether Claimant was even exposed to any degree as testimony and evidence differs. However, even assuming Claimant's testimony is accurate and that he was holding a bucket under a valve when Buffer 10 came out, the exposure was for a minimal amount of time and did not result in any objective injury, irritation, or reason for Claimant's multitude of reported symptoms many of which would not result from an exposure to Buffer 10. The only objective test that supports Claimant's contention of an acute work injury is an initial chest radiograph that showed mild central airway thickening that could be seen in the setting of bronchitis or reactive airway disease. However, later testing showed that Claimant did not suffer from reactive airway disease as a result of inhalation of Buffer 10. Claimant has failed to show that any exposure that he may have suffered resulted in an injury or need for medical treatment resulted in the continued symptoms he reports. As found above, there is insufficient objective evidence establishing the existence of an injury or the aggravation of a prior injury. Although some physicians opined that he possibly could have suffered an initial irritation due chemical inhalation, the mere possibility of irritation is not supported by objective evidence showing no injury or damage to his respiratory functioning beyond his unreliable subjective symptoms. There was no ultimate diagnosis related to inhalation of Buffer 10 and there is no objective evidence to support Claimant's pain complaints and presentation throughout this claim. Dr. Hebard is the only provider to even suggest that Claimant might have had some initial respiratory irritation due to Buffer 10 exposure. However, the majority of the evidence does not support this theory and it is not found persuasive. Claimant's initial bizarre symptoms on January 18, 2015 are not supported by possible inhalation of Buffer 10 and the symptoms that Claimant continued to report during two months of treatment are also not explained by inhalation of Buffer 10. The totality of the evidence does not support the finding that a compensable injury occurred on January 18, 2015. The opinion of Dr. Schwartz is credible and persuasive and his opinion is supported by the ultimate conclusions of Dr. Hebard and Dr. Milchak who similarly could not find that Claimant suffered an injury.

Claimant overall is not credible or persuasive. Claimant reported in his testimony that he was holding a bucket under the valve while checking the valve and that a large amount of Buffer came out and he dropped the bucket, walked 20 feet away, and passed out. If Claimant had dropped a bucket in this process and immediately walked away and passed out, it would seem more credible that his co-workers would have noticed the dropped bucket, the overflowing bucket if indeed a large amount was coming out of the valve as Claimant reports, and that Claimant immediately passed out. Claimant also provided a differing report to the Medical Center of the Rockies when he reported he was exposed to Buffer for twenty seconds, had shortness of breath then got fresh air and improved but returned to clean up a spill and then felt weak and dizzy and passed out. Claimant further reported to Dr. Schwartz a different version of events indicating that he was draining the valves and five minutes afterwards he felt dizzy. The ALJ cannot find Claimant's testimony credible or persuasive and how the potential exposure occurred is unclear. Even if exposure did occur, at most it was minimal and did not result in any injury or medical problems for Claimant.

Medical benefits

Respondents are required to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). The claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805

P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to establish by a preponderance of the evidence that he sustained an industrial injury on January 18, 2015. Although there was an incident at work where Claimant reportedly passed out, the passing out and/or the symptoms Claimant reported later are not related to inhalation of Buffer 10. The objective testing does not support an inhalation injury and Claimant's multiple symptoms are not explained by objective testing or by inhalation. Claimant's multiple symptoms were similar to a prior non-work related episode in September of 2014 and are more likely due to non work related issues.

Claimant has failed to establish that his multiple reported symptoms for which he sought medical treatment on and after January 18, 2015 were, more likely than not, caused by a work related exposure to Buffer 10. The symptoms Claimant reported and the treatment he sought was not due to a work injury arising out of and in the course of his employment. Any exposure to Buffer 10 was at most minimal and objective testing shows there was no injury suffered due to any exposure. Therefore, Claimant has failed to meet his burden to prove a causal nexus between his employment and any need for medical treatment. As there was no industrial injury suffered on January 18, 2015, Respondents are not liable for medical treatment benefits.

Temporary Total Disability

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an

ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

Claimant has failed to establish an entitlement to TTD benefits. Claimant did not suffer an industrial injury and suffered no medical incapacity as the result of inhaling Buffer 10. Claimant's bizarre symptoms could not be explained by multiple medical providers and medical testing and the symptoms Claimant reported were not based on a work injury of inhalation. Claimant did not establish that an inhalation injury impaired his ability to earn wages or to resume his prior work. Although Claimant was placed under work restrictions by a provider, the restrictions were based on Claimant's incredible subjective complaints and that were not grounded in an actual work related injury. To be entitled to TTD Claimant must have suffered a work related injury and here he did not.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury on January 18, 2015. His claim is denied and dismissed.

2. Claimant has failed to establish by a preponderance of the evidence that he is entitled to medical benefits. His request for medical benefits is denied and dismissed.

3. Claimant has failed to establish an entitled to temporary total disability benefits. His request for TTD benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-963-620-04

ISSUE

The issue whether Claimant proved a spinal cord stimulator trial is reasonable, necessary, and related to his October 1, 2014, work injury was presented for consideration at hearing.

FINDINGS OF FACT

Having considered the evidence presented at hearing, the following findings of fact are entered.

1. On October 1, 2014, Claimant suffered injury to his left foot when he was loading produce into a truck and fell into a space between the truck and the dock.

2. Respondents filed a General Admission of Liability which admitted to ongoing temporary total disability benefits and all reasonably necessary medical benefits to relieve or cure Claimant of his October 1, 2014, work injury.

3. Claimant has received treatment for his work injury. Treatment included emergent surgery as a result of compartment syndrome, skin grafts following surgery to relieve the compartment syndrome, injections, physical therapy, and pool therapy, among others. Claimant's pain in the low back and left lower extremity persists.

4. On January 19, 2016, Dr. Christopher Huser noted the failure of previous treatment options to provide significant pain relief for Claimant's low back and left lower extremity pain. In an effort to facilitate another option for pain relief, Dr. Huser requested pre-authorization to proceed with a trial spinal cord stimulator. A spinal cord stimulator is a surgically implanted device about the size of a stopwatch. It delivers mild electrical signals to the epidural space near the patient's spine through one or two leads.

5. Respondents timely filed an Application for Hearing to contest the request for authorization of the spinal cord stimulator trial, which resulted in the subject hearing.

6. At hearing, the parties submitted exhibits which provided varying opinions regarding whether Claimant should undergo a spinal cord stimulator trial, and ultimately a permanent spinal cord stimulator.

7. Dr. Huser's request for pre-authorization outlines the benefits of the spinal cord stimulator. Dr. Huser's request for pre-authorization was pro-device and, at least

in part, the pre-authorization request contained product literature. The ALJ questions whether Dr. Huser exercised independent judgment and analysis of the potential benefits of a spinal cord stimulator for this particular Claimant.

8. Dr. Huser is not the only treating physician to offer opinions as to whether Claimant should undergo a spinal cord stimulator trial. Prior to Dr. Huser's recommendation, both Dr. Michael Ladwig and Dr. Franklin Shih advised Claimant that a spinal cord stimulator is not medically indicated, nor is it likely to provide pain relief. Drs. Ladwig and Shih are individuals who have been Claimant's treating providers for extended periods and are intimately involved with his care. Their consensus regarding the viability and appropriateness of a spinal cord stimulator is persuasive.

9. On September 9, 2015, Dr. Ladwig, Claimant's authorized treating provider, advised Claimant not to pursue the spinal cord stimulator.

10. On September 15, 2015, Dr. Shih also indicated he did not recommend Claimant receive a spinal cord stimulator and also stated, "I did discuss this with Dr. Ladwig and he is also not supportive of the spinal cord stimulator."

11. At hearing, Dr. Castro, Respondents' independent medical examiner, testified consistent with his report, which he issued following an examination of Claimant and his medical records.

12. Dr. Castro opined a spinal cord stimulator (trial or permanent) is not indicated in Claimant's circumstances. Initially, Dr. Castro opined that spinal cord stimulators, overall, fail to provide long-term pain relief. In an April 15, 2016, report Dr. Castro states at page 3, Claimant's "lower extremity pain is quite significant. It is not clear whether some of this CRPS (complex regional pain syndrome) versus primary leg pain from the fasciotomy versus some psychologic overlay. In my opinion, this type of pain will not be effectively treated and I think would not largely be changed by the use of a spinal cord stimulator. In my experience, spinal cord stimulators are poor controllers of pain; and often if they do work, it is generally for a transient period of time. I do not believe this patient will benefit from a spinal cord stimulator."

13. Dr. Castro also credibly opined Claimant's low back pain would not be relieved by a spinal cord stimulator.

14. The July 18, 2015, medical record reflects that Claimant underwent an MRI of the lumbar spine. The MRI revealed "multilevel degenerative disc changes resulting in central canal and foraminal encroachment." (R. Ex. I, bates 318)

15. Dr. Castro credibly opined, "the degenerative process that [Claimant] has I don't think would be fixed or improved by stimulation." (T: 41 21—22)

16. A spinal cord stimulator trial is a phase in the ultimate installation of a permanent spinal cord stimulator. A determination of whether a spinal cord stimulator trial is reasonably necessary necessitates an analysis of whether a permanent spinal cord stimulator is reasonably necessary.

17. A spinal cord stimulator trial does not accurately predict the long-term outcome of a permanent spinal cord stimulator. Dr. Castro credibly testified, "I don't think the trials help improve the long-term predictability of an outcome." (T:37 21-24) "Trials frequently have reasonably good results in the trial. And go on to implantation, and then their—the outcomes are not very good." (T: 38 3-5)

18. Dr. Castro credibly opined, based on his experience, that a permanent spinal cord stimulator presents a considerable risk of worsening Claimant's condition.

19. Dr. Castro credibly testified at hearing that the installation of a permanent spinal cord stimulator requires operating on a healthy body part "doing a laminectomy, which is a major back surgery, which can cause problems in and of itself at where the device goes in. This is an operation at a level that's – that's not problematic now. That's in the T12-L1 thoracic-lumbar junction." (T: 37 6-15)

20. A spinal cord stimulator would substantially impair the ability of medical providers to obtain accurate imaging. If Claimant were to receive a permanent spinal cord stimulator, Claimant will likely be unable to receive an MRI, which means he will need what is called a CT scan or a CT myelogram.

21. Claimant may be unable to receive a CT myelogram due to his previous clotting issues and his need to take anticoagulants.

22. Dr. Castro credibly explained that if additional imaging is necessary and a CT myelogram or CT scan are unsuccessful, the spinal cord stimulator may need to be removed in order to obtain appropriate imaging, including an MRI.

23. Dr. LaCerte, Claimant's psychologist, prepared a report that was made part of the record at hearing. Dr. LaCerte only spoke to Claimant's psychological preparedness for the spinal cord stimulator trial.

24. Claimant also testified he is suffering from a great deal of pain and is willing to try a spinal cord stimulator. Dr. Castro credibly explained that Claimant's willingness to try the spinal cord stimulator is not justification for its authorization.

25. Dr. Castro's medical opinions regarding the efficacy of spinal cord stimulators are persuasive.

26. Claimant is understandably seeking to pursue every option in an effort to obtain significant and long-lasting pain relief. Based on the testimony and exhibits

presented at hearing, however, a spinal cord stimulator is not indicated to provide the relief sought. In fact, the spinal cord stimulator appears to not only provide guarded chances of pain relief, but also creates significant risks of worsening Claimant's condition.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

1. The purpose of the Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ does not address every piece of evidence that might lead to a conflicting conclusion. The ALJ may reject evidence contrary to the findings above as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

4. Respondents are only liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S; *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994).

5. The question of whether medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999). The claimant bears the

burden of proof to establish the right to specific medical benefits. *Wal-Mart Stores, Inc. v. Industrial Claims Office, supra*.

6. Here, Claimant failed to prove, by a preponderance of the evidence, that the requested spinal cord stimulator trial is reasonably necessary to cure and relieve the effects of the subject industrial injury.

ORDER

It is therefore ordered that:

Claimant’s request for a spinal cord stimulator trial is denied and dismissed

All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed

it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. ISSUES

The issue to be determined by this decision concerns whether Respondents have proven that the opinion of the Division Independent Medical Examiner (DIME) was overcome by clear and convincing evidence regarding causation and maximum medical improvement.

FINDINGS OF FACT

Having considered the evidence presented at hearing, including the post hearing deposition of Dr. Lindberg, the following Findings of Fact are entered.

1. On November 21, 2013, Claimant, a 54 year old male who was employed by the Employer as an electrician, suffered an admitted work-related injury. On that day, Claimant slipped on snow and ice and suffered a blow to his bilateral anterior knees in the course and scope of his employment. The work injury was a slip-and-fall on an incline at a construction site that was covered with snow and ice in Carbondale, Colorado. He reported the injury on the same date to the Employer.

2. Claimant credibly testified that he worked for Employer for three years. Employer placed Claimant on job sites for temporary work as an electrician on commercial electrical projects. Claimant's duties required that he wear a tool belt all day weighing 25 to 30 lbs. Claimant's duties also required that he carry extra equipment. Among the extra equipment carried by Claimant were ladders weighing 50 to 175 lbs. and hydraulic benders weighing 175 lbs. Prior to the job site where Claimant suffered the work injury, Claimant worked at a four story building, where his duties required him to walk the four stories up and downstairs all day.

3. Following Claimant's slip and fall on November 21, 2013, Claimant continued to work full duty and overtime on the project until he took Christmas break and returned to Denver. Claimant first requested medical attention for the knees on December 30, 2013, Claimant treated with Marion Wells, a physician's assistant (PA-C) (PA Wells). Claimant's knees bothered him with popping involving the patella. Ms. Wells provided Claimant restrictions and Vicodin. X-rays were taken on this date, which revealed right joint space loss and osteophyte formation in the medial and patellofemoral joint.

3 On January 29, 2014, Claimant returned to see PA Wells who noted that the left knee pain was 10/10 and the right was 8/10. She recommended bilateral MRIs and Claimant's prescription was refilled.

4. On February 7, 2014, Claimant had the recommended MRIs, which revealed moderate to severe degenerative changes in the medial compartment, mild degenerative

changes in the patellofemoral compartment, macerated appearance to the medial meniscus, small Baker's cyst and mild pre-patellar bursitis; on the left advanced degenerative arthrosis of the medical compartment including bare subarticular bone, meniscal degeneration, and degenerative meniscal tearing, abnormal signal pattern in the ACL consistent with low-grade sprain of the ligamentous degeneration

5. On February 13, 2014, Claimant saw Dr. Failinger, an orthopedic specialist, who noted that the MRI showed medial compartment high grade degenerative arthritis in the absence of both medial menisci. Dr. Failinger recommended cortisone injection in the left knee, and if it responded well, cortisone injection in the right knee, and speculated that an unloader brace and viscosupplementation, as possible remedies.

6. On February 27, 2014, Claimant returned to Dr. Failinger who noted that the injection on the left was ineffective, and then recommended viscosupplemenation.

7. On May 1, 2014, Dr. Failinger noted that there was an attempt to get viscosupplementation approved.

8. On May 15, 2014, a record review was completed by Dr. Scott Primack, a physical medicine and rehabilitation specialist, Level II accredited, who stated: "…clear that the patient had an aggravation of his underlying bilateral osteoarthritis of the knees. There was also a strain of the ACL." Dr. Primack stated that: "per the Medical Treatment Guidelines" there was not enough exposure to necessitate knee replacements in the employment with the Respondent. Dr. Primack noted that the Claimant had significant underlying problems and could consider the conservative treatment offered by Dr. Failinger but that the "long-term" need for the patient would be knee replacements, but this would not be considered work-related within a reasonable degree of medical probability. Dr. Primack recommended conservative interventions.

9. Dr. Failinger, who initially treated Claimant, indicated in a June 30, 2014, note in a response to a question by Respondent's counsel that he agreed that any knee replacement surgery would not be related to the knee contusions on the job with Employer.

10. On December 4, 2014, another record review was performed by Dr. Gwendolyn Henke, M.D., a board certified orthopedist who is Level II accredited. Dr. Henke indicated that the work-related fall: "…aggravated his pre-existing advanced medial compartment osteoarthritis." Dr. Henke also found tenderness and swelling over both kneecaps and limitation of flexion. The doctor offered her opinions that Claimant reached maximum medical improvement by December of 2014 and that the Claimant's symptoms at that time reflected the natural history of osteoarthritis of his knees. She also offered her opinion that the knee contusions in the course and scope of employment with the Respondent were a temporary aggravation of his pre-existing arthritis and would not lead to any permanent impairment. Dr. Henke offered her further opinion that
Claimant does need knee replacement surgery, but that would be directly related to "pre-existing, underlying degenerative changes, and not a result of the aggravation by a work injury."

10. On February 10, 2015, Claimant saw Dr. Stull, a treating physician, who felt that a total knee replacement would be appropriate, opining that: "…the physical demands of his job as an electrician over the last 30 years and work-related injury contributed to his knee arthritis and need for joint replacement."

11. On May 5, 2015, Claimant saw Dr. Derrick Johnson, another treating physician, who opined that were it not for the work injury, Claimant would not be presenting for a total knee arthroplasty.

12. Claimant treating physician at Concentra was Theodore Villavicencio. Dr. Villavicencio found Claimant to be at MMI on June 7, 2015. He indicated that he had reviewed the report by Dr. Henke authored on December 4, 2015, and the early report of Dr. Primack on May 15, 2014 and agreed with the orthopedic specialist that the Claimant had an exacerbation of chronic knee problems and had no new identified internal derangement. He indicated that knee replacement surgery was necessary, although "surgery would be related to the underlying chronic problems, rather than the workplace injury." Dr. Villavicencio assigned Claimant a 9% lower extremity rating on both the left and the right sides, equating to an 8% impairment of the whole person, for both knees.

13. On November 16, 2015, Claimant had a Division Independent Medical Examination (DIME) with Dr. Bennett Mechanic, a neurologist, whose objective findings included:

> "…significant knee pain bilaterally." "There is significant crepitance on both sides, I would say right easier to feel than left." "At this point in time, I feel reluctant to declare this man at maximum medical improvement. Granted he does have severe pathology on magnetic resonance imaging studies, but I certainly would wonder whether some type of surgical procedure or injection approach might make a difference. I noted in the records comments by orthopedic surgery that he is either end-stage or could respond to conservative therapy." "There is a question here of a total knee arthroplastic procedure; that is orthopedic judgment, and I cannot disagree or agree with this." "In summary at this point, I think it is best that we consider him not at maximum medical improvement, and due to the profound knee problems, explore the possibility that additional therapeutic intervention might make some sense."

14. On January 26, 2016, an independent medical evaluation was performed on Claimant by Dr. James Lindberg, an orthopedic specialist, at the request of Respondents' counsel. Dr. Lindberg's conclusion was that Claimant had bilateral severe osteoarthritis which pre-existed the work-related incident with the Respondent. He found that the mechanism of injury would have little impact on the Claimant's need for surgery and he found it improbable, within a reasonable degree of medical certainty, that the Claimant's workers' compensation injury caused his need for a total knee replacement. Dr. Lindberg noted the prior opinions of two other orthopedic surgeons

who concluded the same thing, Dr. Failinger and Dr. Henke. He indicated “I would add myself to this group as opining that this is not work-related.” Dr. Lindberg’s opinion was that Claimant would have needed the knee replacement whether or not he had the injury with the Respondent in November 2013.

15. On February 24, 2016, an independent medical evaluation was performed on Claimant by Dr. Joseph Ramos, at the request of Claimant’s counsel. Dr. Ramos’ findings included, in pertinent part: “I have review all of the records extensively, and I do not find anywhere that states [Claimant] had difficulties with his knees prior to this fall. There is no evidence that he has ever seen a doctor for knee pain; used medications for knee pain; or that he had any sort of knee pain that limited his ability to work and do the things he enjoyed in life.” “In sum, [Claimant] is not at MMI at this time, and should be provided with the additional and necessary care as recommended by Dr. Failinger and Dr. Johnson – which include bilateral total knee arthroplasties as part of his workers’ compensation related injury unless there is some identifiable proof of similar symptomology prior to this fall.” “In ending, it is clear that [Claimant] has suffered significant injuries and requires ongoing medical care. Once he has undergone bilateral total knee arthroplasties, he will require ongoing medical care that should be directed by his primary treating physician and his orthopedic surgeon.”

16. Dr. Machanic’s opinions regarding causation and MMI have not been overcome by clear and convincing evidence. Dr. Machanic has offered a well reasoned opinion regarding the cause of Claimant’s need for treatment of his bilateral knees. He has considered the opinions of other medical experts in reaching his conclusions regarding causation. The Judge finds no clear and convincing evidence the DIME opinion on causation is incorrect. Flowing from the determination on causation made by the DIME physician is the conclusion that Claimant requires additional medical treatment to cure and relieve him from the effects of the injury. Dr. Failinger recommends that Claimant be evaluated by an orthopedic specialist who has not previously examined Claimant for determination of the nature of the treatment that Claimant should receive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

1. The purpose of the Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In most cases, Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

2. In cases such as this one, a DIME physician's findings regarding causation, MMI and impairment are binding on the parties unless overcome by “clear and convincing evidence.” Section 8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). “Clear and convincing evidence” is evidence that demonstrates that it is “highly probable” the DIME physician's opinions regarding causation, MMI and impairment rating are incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, “there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt.” *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). Since the DIME physician is required to identify and evaluate all losses and restrictions which result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Qual-Med v. Industrial Claim Appeals Office*, *supra.*

3. In this case, Respondent failed to sustain its burden of proof to establish that Dr. Machanic’s DIME opinion with regard to causation and MMI is most probably incorrect. Respondent relies on the opinions of Drs. Lindberg, Henke, Failinger and Primack. Respondent argues that Claimant’s need for a total knee arthroplastic procedure is not related to the work injury and therefore Dr. Machanic’s conclusion that Claimant is not at MMI because Claimant requires referral to an orthopedic specialist for consideration whether there is treatment to cure and relieve the effects of the work injury is most probably incorrect. Respondent contends that Claimant would require total knee replacement whether or not the work injury occurred.

4. In the DIME report, Dr. Machanic acknowledges the opinions of Claimant’s treating physician, Dr. Villavicencio, orthopedic surgeons, Drs. Failinger and Henke, and a physiatrist, Dr. Scott Primack. Dr. Machanic notes that records indicate that Claimant was seen by another orthopedic surgeon, Dr. Johnston, whose records were not made available to Dr. Machanic. Dr. Machanic comments that he does not understand the opinions of Drs. Failinger, Henke and Primack that Claimant’s need for total knee replacements is not work related. Dr. Machanic opines that the cause of Claimant’s bilateral knee injury and his current need for treatment is work related. Mr. Machanic notes that Claimant was fully able to perform his work duties before the work injury and after the work injury he has been unable to perform his work.

5. Dr. Machanic further comments that the question of the total knee replacement or more conservative treatment is for an orthopedic specialist to make. Dr. Machanic concludes in the DIME report that the opinion of an orthopedic surgeon who has not previously seen Claimant should be authorized to “reassess the situation in terms of what would be appropriate for therapeutic intervention.” Even Respondent’s expert, Dr. James Lindberg, M.D. an orthopedic surgeon who conducted an independent medical evaluation at Respondent’s request, agrees that the DIME’s recommendation for evaluation by another orthopedic surgeon is a reasonable course of action and that the DIME report is not erroneous in this regard.

ORDER

It is therefore ordered that:

1. Respondent failed to overcome the opinion of the DIME physician, Dr. Machanic, by clear and convincing evidence on the issues of causation and MMI.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable left shoulder injury during the course and scope of his employment with Employer on April 29, 2015.

2. Whether Claimant has proven by a preponderance of the evidence that his request for a total left shoulder replacement is reasonable, necessary and causally related to his April 29, 2015 industrial injury.

3. Whether Kaiser Permanente was authorized to perform Claimant's August 19, 2015 total left shoulder replacement.

FINDINGS OF FACT

1. Claimant primarily worked for Employer as a Sheriff's Sergeant at the county jail. He was also a Training Officer on Employer's Special Operations Response Team (S.O.R.T.).

2. Claimant testified that he has suffered degenerative arthritis in his left shoulder for a number of years. He specified that he has had a total of three rotator cuff repairs and a subacromial decompression to his left shoulder. He recounted that in approximately 2005-2006 he began experiencing arthritis pain in his left shoulder. Claimant regularly received left shoulder treatment from Melissa D. Koenig, M.D. at Kaiser Permanente that included medications and injections. Over the years Claimant's left shoulder pain progressed into a constant, dull aching sensation. Although his medications increased, he was able to complete his regular work activities.

3. On September 15, 2008 Claimant visited Dr. Koenig at Kaiser for a left shoulder examination. Claimant had been referred for an evaluation of left shoulder pain and stiffness. He reported that approximately five years earlier he had developed impingement syndrome. He underwent physical therapy, steroid injections and surgical intervention. Claimant recounted that in about January of 2008 he began suffering left shoulder pain after working out. He also experienced pain while sleeping and suffered range of motion deficits. After conducting a physical examination Dr. Koenig diagnosed Claimant with moderate to severe glenohumeral arthritis. She recommended treatment with injections and medications. Dr. Koenig discussed possible surgical intervention but expressed concerns because Claimant was only 37 years old. She noted that Claimant would likely require some type of left shoulder replacement surgery but he sought to delay the procedure for as long as possible.

4. In 2009 Claimant was involved in a motor vehicle accident and sustained a number of injuries including left shoulder symptoms. He acknowledged that he suffered a significant degeneration of his left shoulder joint as a result of the accident. Claimant also explained that his left shoulder condition continued to deteriorate after the motor vehicle accident.

5. Dr. Koenig initially provided Claimant with quarterly cortisone injections for his left shoulder pain. When the injections became less effective she administered a course of viscosupplementation. In a January 12, 2011 note Dr. Koenig documented that she had spoken to Claimant at length regarding left shoulder options. She recounted that she had spoken to six shoulder surgeons and they agreed that she should try Supartz treatment because of Claimant's young age. If Supartz treatment was unsuccessful, they suggested a variety of potential surgical options.

6. On September 12, 2014 Claimant returned to Dr. Koenig for an examination. Dr. Koenig summarized that Claimant had been maintaining his left shoulder pain with periodic fluoro-guided injections and viscosupplementation. Claimant desired to discuss his left shoulder options because viscosupplementation had been discontinued. They considered a variety of surgical options but Dr. Koenig recommended delaying surgery as long as possible because of Claimant's physically demanding job duties.

7. Claimant testified that on April 29, 2015 he was arranging S.O.R.T. team gear in his truck after a day of training. As he moved a box or pelican case in the bed of his truck he heard a "pop" in his left shoulder and experienced immediate pain. The pelican case contained training weapons and weighed approximately 50-60 pounds. Claimant reported his symptoms to Employer on April 30, 2015 and was referred to HealthOne Occupational Medicine and Rehabilitation for treatment.

8. Claimant initially received treatment from Robert Broghammer, M.D. Claimant reported that he felt a sudden "pop" and pain in his left shoulder while lifting a pelican case in his truck bed at work on April 29, 2015. He explained that his left shoulder pain had significantly increased since the incident. Claimant remarked that he had an extensive history of left shoulder pain from degenerative joint disease. He had undergone three rotator cuff repairs and a subacromial decompression. He then developed degenerative joint disease and has received treatment in the form of Synvisc and cortisone injections. Claimant commented that his April 29, 2015 industrial injury elevated his pain from baseline levels. Dr. Broghammer diagnosed Claimant with left shoulder pain and an extensive history of left shoulder arthritis. He stated that Claimant's "objective findings appear[ed] consistent with a work-related mechanism of injury." Dr. Broghammer assigned work restrictions of no more than one pound of lifting, carrying, pushing, pulling or reaching with Claimant's left arm.

9. On June 12, 2015 Claimant returned to Dr. Broghammer for an evaluation. Claimant sought to discuss other options regarding medications for daytime use. Dr. Broghammer diagnosed Claimant with left shoulder pain including a history of severe degenerative changes and a small rotator cuff tear. He modified Claimant's

work restrictions to no more than five pounds of lifting, carrying, pushing, pulling or reaching with his left arm.

10. On July 16, 2015 Claimant visited Kareem G. Sobky, M.D. at Kaiser for a second surgical opinion. Dr. Sobky reported that he was not able to rotate Claimant "internally more than about 70 degrees." When reviewing an MRI, Dr. Sobky noted "there is a very large loose body under the coracoid, as well." After discussing treatment options Dr. Sobky recommended a total left shoulder replacement.

11. On July 17, 2015 Claimant again visited Dr. Broghammer for an examination. Claimant stated that he had been transferred to the records department at work and his left shoulder had improved. He also remarked that he had visited his doctors at Kaiser and they had recommended a total left shoulder replacement. Dr. Broghammer assessed Claimant with "left shoulder pain with significant degenerative changes. Awaiting shoulder replacement."

12. On July 17, 2015 Respondent's Adjuster Kurt Muehler called Dr. Broghammer's office and "advised that [Respondent] had not authorized the 07/17/15 visit under the WC claim," and also "advised that [he was] not authorizing anything further on the claim." Claimant thus explained that Dr. Broghammer's office called him and explained that he could not return after July 17, 2015.

13. On July 29, 2015 Claimant underwent a pre-operative physical evaluation with Nurse Practitioner Nicole B. Adams. NP Adams noted that Claimant had "failed optimal medical management of arthritis" including medications, injections, exercise and weight control. Radiographs had revealed "severe arthritis with joint space narrowing and deformity." NP Adams commented that Claimant elected to proceed with surgery.

14. On August 19, 2015 Claimant underwent a total left shoulder replacement with Dr. Sobky at Kaiser. Claimant did not suffer any post-operative complications including repeat surgery or delayed healing. .

15. On September 10, 2015 Claimant underwent an independent medical examination with Nicholas K. Olsen, M.D. Claimant reported that he injured his left shoulder at work on April 29, 2015 after completing a training day. While moving a pelican box weighing approximately 60 pounds in the back of his truck Claimant "felt a crunch and a pop" in his left shoulder. Claimant recounted a pre-existing history of osteoarthritis in his left shoulder. He noted that with previous "arthritis flare-ups" he would ice his shoulder overnight and his symptoms would decrease. However, when he awoke on April 30, 2015 his arm was "frozen to the side" and extremely painful. After conducting a physical examination and reviewing diagnostic studies Dr. Olsen determined that Claimant did not suffer an industrial injury on April 29, 2015 while moving the pelican case in the back of his truck. Instead, Claimant was simply experiencing symptoms of left shoulder end-stage osteoarthritis. The left shoulder MRI did not reveal any evidence of a traumatic injury to Claimant's rotator cuff but instead reflected pre-existing end-stage osteoarthritis. Dr. Olsen thus concluded that Claimant's

need for left shoulder surgery on August 19, 2015 was not causally related to the events of April 29, 2015 but was attributable to his left shoulder degenerative osteoarthritis.

16. In a May 3, 2016 letter Dr. Sobky addressed Dr. Olsen's conclusions from his independent medical examination. Dr. Sobky acknowledged that Claimant suffered from pre-existing left shoulder osteoarthritis. He occasionally experienced "arthritic flare-ups" that were managed without surgery. Claimant was also able to perform his regular work duties. However, after the April 29, 2015 incident Claimant exhibited a significant decline in function and severe pain inhibited his ability to perform his job duties. Dr. Sobky noted that, if the April 29, 2015 incident had constituted a simple arthritic flare-up, Claimant's symptoms should have improved. Dr. Sobky remarked that Claimant would have required a left shoulder replacement as a result of his pre-existing osteoarthritis. However, the April 29, 2015 incident "exacerbate[d] his pre-existing condition to the point of [a] significant decline in pain control and [a] decline in function of his shoulder that was not improving." The injury "accelerated the timeline" for surgical intervention. Dr. Sobky concluded that a total left shoulder replacement was the only treatment option for Claimant.

17. Dr. Olsen testified at the hearing in this matter. After reviewing Claimant's medical records Dr. Olsen reiterated that Claimant suffered from pre-existing, degenerative left shoulder arthritis. He explained that in 2000 Claimant had undergone left shoulder surgery for a rotator cuff tear. By 2008 imaging studies reflected moderate to severe glenohumeral arthritis in Claimant's left shoulder. Claimant's condition continued to deteriorate and a 2010 MRI revealed structural left shoulder changes that constituted severe osteoarthritis. Dr. Olsen explained that, although Claimant was a candidate for left shoulder replacement surgery in 2011, physicians sought to delay the procedure because of his young age and uncertainty about whether he would require repeat surgery later in life. He reasoned that Claimant was in imminent need of a left shoulder replacement regardless of the April 29, 2015 incident. Dr. Olsen specified that the April 29, 2015 incident did not cause a worsening of Claimant's left shoulder condition or accelerate the need for a left shoulder replacement. The April 29, 2015 accident merely constituted a temporary aggravation or flare-up of Claimant's pre-existing left shoulder osteoarthritis.

18. Claimant has demonstrated that it is more probably true than not that he suffered a compensable left shoulder injury during the course and scope of his employment with Employer on April 29, 2015. Claimant credibly testified that on April 29, 2015 he was arranging S.O.R.T. team gear in his truck after a day of training at work. As he moved a box or pelican case in the bed of his truck he heard a "pop" in his left shoulder and experienced immediate pain. The pelican case contained training weapons and weighed approximately 50-60 pounds. Claimant initially received treatment from Dr. Broghammer at HealthOne. Dr. Broghammer diagnosed Claimant with left shoulder pain and noted an extensive history of left shoulder arthritis. He stated that Claimant's "objective findings appear[ed] consistent with a work-related mechanism of injury." Dr. Broghammer assigned work restrictions of no more than one pound of lifting, carrying, pushing, pulling or reaching with his left arm. Furthermore, surgeon Dr. Sobky noted that prior to the April 29, 2015 incident Claimant was able to

perform his regular work duties. However, after the April 29, 2015 incident Claimant exhibited a significant decline in function. Severe left shoulder pain also inhibited his ability to perform his job duties. Dr. Sobky summarized that the April 29, 2015 incident exacerbated Claimant's pre-existing left shoulder arthritis.

19. In contrast, Dr. Olsen determined that Claimant did not suffer an industrial injury on April 29, 2015 while moving the pelican case in the back of his truck. Instead, Claimant was simply experiencing symptoms of left shoulder end-stage osteoarthritis. However, the record demonstrates that Claimant's work activities aggravated, accelerated or combined with his pre-existing left shoulder osteoarthritis to produce a need for medical treatment. Claimant credibly reported that he felt a sudden "pop" and pain in his left shoulder while lifting the pelican case in his truck bed at work on April 29, 2015. Although Claimant acknowledged a history of left shoulder osteoarthritis, he explained that his left shoulder pain had significantly increased since the incident. Accordingly, Claimant's need for medical treatment subsequent to April 29, 2015 was caused by the industrial aggravation of his pre-existing left shoulder condition.

20. Claimant has failed to prove that it is more probably true than not that his request for a total left shoulder replacement is reasonable, necessary and causally related to his April 29, 2015 industrial injury. Dr. Olsen persuasively explained that Claimant had an extensive history of pre-existing, degenerative left shoulder osteoarthritis. By 2008 imaging studies reflected moderate to severe glenohumeral arthritis in Claimant's left shoulder. Claimant's condition continued to deteriorate and a 2010 MRI revealed structural left shoulder changes that constituted severe osteoarthritis. Dr. Olsen explained that, although Claimant was a candidate for left shoulder replacement surgery in 2011, physicians sought to delay the procedure because of his young age and uncertainty about whether he would require repeat surgery later in life. He reasoned that Claimant was in imminent need of a left shoulder replacement regardless of the April 29, 2015 incident. Moreover, Claimant's left shoulder MRI subsequent to the April 29, 2015 incident did not reveal any evidence of a traumatic injury to his rotator cuff. The MRI instead reflected end-stage osteoarthritis that existed before the April 29, 2015 incident. Dr. Olsen specified that the industrial incident did not cause a worsening of Claimant's left shoulder condition or accelerate the need for a left shoulder replacement. Finally, Claimant's pre-operative evaluation reflects that he had "failed optimal medical management of arthritis" including medications, injections, exercise and weight control. Radiographs had revealed "severe arthritis with joint space narrowing and deformity."

21. In contrast, Dr. Sobky explained that the April 29, 2015 incident exacerbated Claimant's pre-existing condition and caused a significant decline in left shoulder function. He remarked that the injury "accelerated the timeline" for surgical intervention. However, Claimant's history of progressive, degenerative left shoulder osteoarthritis and prior consideration of surgery suggest that the need for a total left shoulder replacement was caused by the natural progression of Claimant's pre-existing condition. Although Claimant suffered an incident at work on April 29, 2015 it did not accelerate his need for left shoulder surgery. Furthermore, Claimant's pre-operative evaluation demonstrates that his total left shoulder replacement was predicated on his

chronic, degenerative osteoarthritis and not an acute injury. Accordingly, based on the extensive medical records of degenerative, pre-existing osteoarthritis, in conjunction with the persuasive opinions of Dr. Olsen, the need for a total left shoulder replacement was not causally related to the April 29, 2015 work accident. Because Claimant's total left shoulder replacement was not reasonable, necessary or causally related to the April 29, 2015 work incident, it is unnecessary to address whether Kaiser was authorized to perform the procedure.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable left shoulder injury during the course and scope of his employment with Employer on April 29, 2015. Claimant credibly testified that on April 29, 2015 he was arranging S.O.R.T. team gear in his truck after a day of training at work. As he moved a box or pelican case in the bed of his truck he heard a "pop" in his left shoulder and experienced immediate pain. The pelican case contained training weapons and weighed approximately 50-60 pounds. Claimant initially received treatment from Dr. Broghammer at HealthOne. Dr. Broghammer diagnosed Claimant with left shoulder pain and noted an extensive history of left shoulder arthritis. He stated that Claimant's "objective findings appear[ed] consistent with a work-related mechanism of injury." Dr. Broghammer assigned work restrictions of no more than one pound of lifting, carrying, pushing, pulling or reaching with his left arm. Furthermore, surgeon Dr. Sobky noted that prior to the April 29, 2015 incident Claimant was able to perform his regular work duties. However, after the April 29, 2015 incident Claimant exhibited a significant decline in function. Severe left shoulder pain also inhibited his ability to perform his job duties. Dr. Sobky summarized that the April 29, 2015 incident exacerbated Claimant's pre-existing left shoulder arthritis.

8. As found, in contrast, Dr. Olsen determined that Claimant did not suffer an industrial injury on April 29, 2015 while moving the pelican case in the back of his truck. Instead, Claimant was simply experiencing symptoms of left shoulder end-stage osteoarthritis. However, the record demonstrates that Claimant's work activities aggravated, accelerated or combined with his pre-existing left shoulder osteoarthritis to produce a need for medical treatment. Claimant credibly reported that he felt a sudden "pop" and pain in his left shoulder while lifting the pelican case in his truck bed at work

on April 29, 2015. Although Claimant acknowledged a history of left shoulder osteoarthritis, he explained that his left shoulder pain had significantly increased since the incident. Accordingly, Claimant's need for medical treatment subsequent to April 29, 2015 was caused by the industrial aggravation of his pre-existing left shoulder condition.

Medical Benefits

9. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

10. Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the insurer will compensate the provider. *Bunch,* 148 P.3d at 383; *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those to whom the employer directly refers the claimant and those to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Suetrack USA v. Industrial Claim Appeals Office,* 902 P.2d 854 (Colo. App. 1995).

11. As found, Claimant has failed to prove by a preponderance of the evidence that his request for a total left shoulder replacement is reasonable, necessary and causally related to his April 29, 2015 industrial injury. Dr. Olsen persuasively explained that Claimant had an extensive history of pre-existing, degenerative left shoulder osteoarthritis. By 2008 imaging studies reflected moderate to severe glenohumeral arthritis in Claimant's left shoulder. Claimant's condition continued to deteriorate and a 2010 MRI revealed structural left shoulder changes that constituted severe osteoarthritis. Dr. Olsen explained that, although Claimant was a candidate for left shoulder replacement surgery in 2011, physicians sought to delay the procedure because of his young age and uncertainty about whether he would require repeat surgery later in life. He reasoned that Claimant was in imminent need of a left shoulder replacement regardless of the April 29, 2015 incident. Moreover, Claimant's left shoulder MRI subsequent to the April 29, 2015 incident did not reveal any evidence of a traumatic injury to his rotator cuff. The MRI instead reflected end-stage osteoarthritis that existed before the April 29, 2015 incident. Dr. Olsen specified that the industrial incident did not cause a worsening of Claimant's left shoulder condition or accelerate the need for a left shoulder replacement. Finally, Claimant's pre-operative evaluation

reflects that he had "failed optimal medical management of arthritis" including medications, injections, exercise and weight control. Radiographs had revealed "severe arthritis with joint space narrowing and deformity."

12. As found, in contrast, Dr. Sobky explained that the April 29, 2015 incident exacerbated Claimant's pre-existing condition and caused a significant decline in left shoulder function. He remarked that the injury "accelerated the timeline" for surgical intervention. However, Claimant's history of progressive, degenerative left shoulder osteoarthritis and prior consideration of surgery suggest that the need for a total left shoulder replacement was caused by the natural progression of Claimant's pre-existing condition. Although Claimant suffered an incident at work on April 29, 2015 it did not accelerate his need for left shoulder surgery. Furthermore, Claimant's pre-operative evaluation demonstrates that his total left shoulder replacement was predicated on his chronic, degenerative osteoarthritis and not an acute injury. Accordingly, based on the extensive medical records of degenerative, pre-existing osteoarthritis, in conjunction with the persuasive opinions of Dr. Olsen, the need for a total left shoulder replacement was not causally related to the April 29, 2015 work accident. Because Claimant's total left shoulder replacement was not reasonable, necessary or causally related to the April 29, 2015 work incident, it is unnecessary to address whether Kaiser was authorized to perform the procedure.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. On April 29, 2015 Claimant suffered a left shoulder injury during the course and scope of his employment with Employer.

2. Claimant's request for a total left shoulder replacement is denied and dismissed.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

The parties participated in a prehearing conference with PALJ Gallivan on May 24, 2016. By order dated May 24, 2016, PALJ Gallivan ordered that the parties first have determined the legal issues raised by the respondents' application for hearing. Specifically the issues framed by that Order are:

1. Whether the relief sought by the respondents in the application for hearing is permitted by the settlement agreement;

2. Whether a petition to reopen is required prior to contesting the reasonableness and necessity of medical treatment; and,

3. Who has the burden of proof with regard to the determination of reasonably necessary medical treatment.

FINDINGS OF FACT

1. The claimant sustained two admittedly compensable work-related injuries while working within the course and scope of his employment for the respondent-employer occurring on December 13, 1985 and April 19, 1991 respectively.

2. The parties to those claims entered into a "Stipulation for Full and Final Settlement and Release of All Claims" (hereafter, the "Agreement") which was dated and signed by the parties on October 14, 1994 and approved as an Order of the Department of Labor and Employment, Division of Workers" Compensation on November 14, 1994.

3. Pursuant to the terms of Paragraph 10 of the Agreement, the parties stated that it "contained the entire agreement between the parties, and the terms herein are contractual and not a mere recital."

4. The ALJ finds that the parties pursuant to the execution of the Agreement and its approval by the Department of Labor and Employment, Division of Workers" Compensation entered into a settlement agreement pursuant to the terms of C.R.S. 8-43-204 (1994). This section permits an injured employee to settle "all or part of any claim for compensation, benefits, penalties, or interest."

5. The respondents have now filed an application for hearing pursuant to which the issue endorsed is: “Respondents seek a finding that ongoing medical care is not reasonable necessary and related to the subject injury.” No specific medical care or procedure is cited; thus, the ALJ finds by the terms of the application for hearing, that the respondents seek to terminate all medical going forward under the theory that no possible medical care could be reasonable, necessary, or related to the subject claims.

6. As it relates to medical benefits, the parties in the Agreement devoted a significant portion of the Agreement to the claimant’s ongoing medical needs. Paragraph 5 (d) of the Agreement states as follows:

> The Claimant understands that, under the Workers’ Compensation Act of Colorado, he is entitled to ongoing medical, surgical, and hospital benefits from the Respondents. The Respondents in W.C. No. 4-109-301 [respondent-employer and respondent-insurer], agree to leave medical benefits open for the remainder of the Claimant’s life. The Respondents in W.C. No. 4-109-301, agree to pay for all reasonable and necessary medical, surgical, or hospital treatment required by the Claimant arising out of his work-related injuries on December 13, 1985 and April 19, 1991, including, but not limited to, treatment for Claimant’s head, ears, eyes, neck, back, left hip, left lower extremity, and psychological and emotional injuries. Claimant will not be required to establish whether the care and treatment is causally related to the December 13, 1985 or the April 19, 1991 injuries, as the Respondents in W.C. No. 4-109-301 will be responsible for all ongoing medical care and treatment required by the Claimant’s two work-related injuries…”

7. The ALJ has reviewed the entirety of the Agreement and finds that it is not ambiguous in such a nature as a matter of law that parol or extrinsic evidence is necessary to understand the intention of the parties when entering into the Agreement that was approved as an Order of the Department of Labor and Employment, Division of Workers” Compensation on November 14, 1994.

8. The ALJ finds that the respondent-insurer agreed to leave the claimant’s “medical benefits open for the remainder of the Claimant’s life.” The Agreement provides that the respondent-insurer agrees “to pay for all reasonable and necessary medical, surgical, or hospital treatment required by the Claimant arising out of his work-related injuries on December 13, 1985 and April 19, 1991, including, but not limited to, treatment for Claimant’s head, ears, eyes, neck, back, left hip, left lower extremity, and psychological and emotional injuries.”

9. The ALJ finds that by the terms of the Agreement the respondent-insurer is precluded from contesting all future medical care. Under the Agreement as long as the claimant can establish that care is reasonable, necessary, and related the respondent-insurer is required to provide that care. If the respondent-insurer were allowed to stop all future care without the claimant being given the opportunity to establish that the care is reasonable, necessary, and related then the claimant loses the benefit of the bargain, that is, that medical benefits remain "open for the remainder of the Claimant's life."

10. The ALJ further finds pursuant to the terms of the Agreement that since the issue of medical benefits is "open for the remainder of the Claimant's life" that the respondent-insurer may contest any specific care on the grounds that it is not reasonable, necessary, or related to the admitted claims without having to file a Petition to Reopen. When a specific medical benefit is contested the claimant still has the burden to prove that any specific medical care is reasonable, necessary, and related to one or the other of the claims; although, if the proof is such that the claimant can establish that the care must be related to one or the other of the claims, he need not prove which of the two is implicated.

CONCLUSIONS OF LAW

1. Facts in a workers' compensation case must be interpreted neutrally neither in favor of the rights of the claimant nor in favor of the rights of the respondents. See §8-43-201, C.R.S.

2. A Workers' Compensation case is decided on its merits. §8-43-201(1).

3. The purpose of the Workers' Compensation Act of Colorado in §8-40-101, et seq. C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers without the necessity of litigation. See §8-40-102(1)

4. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved: The ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. The ALJ's decision need not address every item contained in the record. See *Magnetic Engineering, Inc., v. ICAO,* 5 P. 3d 385 (Colo. App. 2000).

5. The interpretation of a contract is a question of law. *Ad Two, Inc. v. City and County of Denver,* 9 P.2d 373, 376 (Colo. 2000). The meaning of a contract is found by the examination of the entire instrument and not by viewing clauses or phrases in isolation. *U.S. Fid. & Guar. Co V. Budget Rent-A-Car Sys., Inc.,* 842 P.2d 208, 213 (Colo. 1992. The ALJ must review the document in its entirety with the end in view of seeking to harmonize and to give effect to all provisions so that none will be rendered meaningless. *Copper Mountain, Inc. v. Indus. Sys., Inc.,* 208 P.3d 692, 697; *Preserve at the Fort, Ltd. v. Prudential Huntoon Paige Assocs.,* 129 P.3d 1015, 1017 (Colo. App. 2004).

6. The fact that the parties differ in their understanding of the agreement does not create an ambiguity. *Fiberglas Fabricators, Inc., v. Kylberg,* 799 P.2d 371, 374 (Colo. 1990). An ambiguity permitting resort to extrinsic evidence is established where different provisions of a contract are in irreconcilable conflict. See, *Ryan v. Fitzpatrick Drilling Co.,* 139 Colo. 471, 342 P.2d 1040 (1959). Under certain circumstances, extrinsic evidence may be conditionally admitted to determine whether the contract is actually ambiguous in the first place. *E. Ridge of Fort Collins, L.L.C. v. Larimer & Weld Irrigation Co.,* 109 P.3d 969, 974 (Colo. 2005).

7. The parol evidence rule or the admission of extrinsic evidence to give interpretation to the meaning of a contract is a principle of contract law, rather than a rule of evidence. See, *Restatement (Second) of Contracts Section 213 cmt. a (1979).* Where the rule applies, evidence of prior or contemporaneous agreements or negotiations may not be used to contradict a written agreement or vary the terms thereof. *Neves. v. Potter,* 769 P.2d 1047, 1054 (Colo. 1989); generally, an unambiguous document must be interpreted based only on information contained within its “four corners.” *McGuire v. Luckenbach,* 131 Colo. 333, 281 P.2d 997 (1955). A court should only resort to the admission of parol evidence when the contract between the parties is so ambiguous that their intent is unclear. *Cheyenne Mountain School Dist. #12 v. Thompson,* 861 P.2d 711 (Colo. 1993). In the absence of fraud, accident, or mistake in the formation of the contract, parol evidence may not be admitted to add to, subtract form, vary, contradict, change, or modify an unambiguous integrated contract. *Tripp v. Cotter Corp.,* 701 P.2d 124 (Colo. App. 1985).

8. The ALJ concludes as found above that the Agreement is not ambiguous.

9. The ALJ concludes as found above that the medical benefits issue remains open by the plain meaning of the Agreement. The ALJ concludes therefore that the respondents need not resort to a Petition to Reopen in order to contest medical benefits for a specific medical issue.

10. The ALJ concludes that the respondents are seeking to terminate all medical care. While the filing of a Petition to Reopen is not a requirement, the ALJ concludes that the respondent-insurer is precluded from attempting to terminate all future care by the plain terms of the Agreement.

11. Since no specific medical benefits are at issue the remaining issue concerning the burden of proof is moot.

12. The ALJ concludes that the respondents are precluded from a broad-based challenge of all future medical care by the terms of the Agreement.

13. The ALJ finds that a Petition to Reopen is not required for the respondent-insurer to challenge specific medical care on the grounds that the care is not reasonable, necessary, or related to the admitted claims.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

1. The respondents request to terminate all future ongoing medical care is denied and dismissed.

2. The respondent-insurer need not file a Petition to Reopen to contest specific medical care on the grounds that the medical care is not reasonable, necessary, or related to the admitted claims.

3. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATE: June 23, 2016

/s/ original signed by:
Donald E. Walsh
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle, Suite 810
Colorado Springs, CO 80906

ISSUES

1. Whether the claimant met his burden of proof to overcome the Division Independent Medical Examination (DIME) opinions of Dr. Shank regarding maximum medical improvement (MMI) and impairment by clear and convincing evidence.

2. Whether the claimant's scheduled impairment rating should be converted to a whole person rating.

3. Whether the respondents' correctly calculated the claimant's average weekly wage (AWW).

4. Whether the claimant is entitled to additional temporary total disability (TTD) benefits from June 24, 2014 to February 18, 2015.

5. Whether the respondents have failed to provide reasonable, necessary, and related medical care.

6. Whether the claimant is entitled to an award for disfigurement.

STIPULATIONS

The parties stipulated that the claimant is entitled to reasonable, necessary and related post maximum medical improvement (MMI) benefits and the ALJ accepted this stipulation.

FINDINGS OF FACT

1. The claimant was employed by the respondent-employer and was employed as temp to hire. The claimant was working with a dam reconstruction company on June 24, 2014 where his duties included pulling out rebar from a demolished building and piling it up. While engaged in these activities he was entrapped by a closing tailgate on an earth moving truck. The claimant was seen at Pikes Peak Regional Hospital in the city of Woodland Park.

2. The claimant was evaluated by Dr. Michael Simpson on June 25, 2014 who diagnosed the claimant with a fourth metatarsal head fracture to his left foot, a comminuted fracture of the fifth metatarsal head involving the left foot with a displaced fracture of the fourth toe proximal phalanx, left foot, with an avulsion fracture of the interphalangeal joint of the right great toe.

3. On July 3, 2014 the claimant underwent surgery on his left foot.

4. The claimant's care was followed by Dr. Zaremba who found the claimant to be at maximum medical improvement on May 26, 2015.

5. Dr. Zaremba provided the claimant with a 4% impairment for the left lower extremity and a 3% impairment for the right lower extremity.

6. The respondents filed a Final Admission of Liability (FAL) on June 24, 2015. The respondents admitted to Dr. Zaremba's opinions and specifically an MMI date of May 26, 2015 and scheduled impairment of 4% for the left lower extremity and 3% for the right lower extremity. The claimant objected to the FAL and requested a division independent medical evaluation (DIME).

7. On August 25, 2015, prior to the DIME, the claimant underwent a claimant Independent Medical Examination with Dr. Hall. Dr. Hall opined the claimant received excellent care with Dr. Simpson and agreed with the opinions of Dr. Zaremba, however, due to the claimant's ongoing pain complaints he recommended the claimant receive a second opinion with Dr. Shank.

8. Ultimately, the claimant underwent a DIME with Dr. Shank on October 22, 2015. Dr. Shank agreed with Dr. Zaremba's opinion regarding MMI. He found the claimant reached MMI on May 26, 2015. He found a slightly lower impairment rating, however, and opined a 3% left lower extremity impairment and 3% right lower extremity impairment.

9. The respondents filed an amended FAL on November 16, 2015 admitting to the DIME report on MMI and impairment.

10. The claimant objected and filed an application for hearing requesting a hearing on the issues as stated above.

11. The claimant testified that he disagrees with the outcome of his case. He wants the respondent-insurer to acknowledge ligament and tendon damage. Additionally, he believes the damage is not limited to his small toe and 4th toe but also to

the Achilles and plantar tendon to the toes and heel. The claimant believes he should be entitled to a loss of the foot at the ankle. The claimant states that he wants a proper diagnosis and prognosis.

12. The claimant disagrees with the average weekly wage indicating that he rarely worked less than 9 hours.

13. The ALJ finds the analyses and opinions of Dr. Shank to be credible and persuasive. While the claimant has opined that he disagrees with some of Dr. Shank's findings, there are insufficient medical or lay opinions to the contrary that would rise to the level of showing that Dr. Shank clearly erred in his determination of MMI and impairment.

14. The ALJ finds there is insufficient evidence to establish that the claimant's scheduled ratings should be converted to a whole person rating. There is insufficient evidence to establish that there is a loss of function beyond the lower extremities.

15. The respondent-insurer admitted to an average weekly wage (AWW) of $309.00 and a temporary total disability (TTD) rate of $206. This AWW was calculated based upon the gross wages the claimant earned between May 6, 2014 and June 23, 2014. The wage records reflect the claimant earned gross wages of $2,163.01 during the 7 weeks the claimant was employed. The ALJ finds that because the claimant was a temporary employee that this is an appropriate method to determine AWW. The ALJ finds that the claimant's AWW is $309.00.

16. The respondent-insurer admitted for TTD for the period June 24, 2014 through August 24, 2014 as well as for the period December 30, 2014 through February 18, 2015. The ALJ finds that there is insufficient evidence to establish that the claimant was temporarily totally disabled during any other period of time.

17. The ALJ finds that the claimant failed to provide sufficient evidence to establish that the respondents have failed to pay for or provide any reasonable, necessary, and related medical care.

18. The ALJ finds that as a result of his June 24 2014 work injury, the claimant has a visible disfigurement to the body consisting of an amputation of the small toe of the left foot. On the top surface of the left foot is a surgical scar that is approximately two and one-half inches in length and one and one-half inches in width. The fourth toe on the left foot has a hammer toe appearance. On the right foot on the 2d through the 4th toes are areas of scarring. All of the scarring is discolored when compared to the surrounding tissue. The ALJ finds that the claimant has sustained a serious permanent

disfigurement to areas of the body normally exposed to public view, which entitles him to additional compensation.

CONCLUSIONS OF LAW

1. The purpose of the Workers’ Compensation Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S.

2. A claimant in a workers' compensation claim generally has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004).

3. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by “clear and convincing evidence.” Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). “Clear and convincing evidence” is evidence that demonstrates that it is “highly probable” the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI, permanency or the cause of a particular component of a claimant’s medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be “unmistakable and free from serious or substantial doubt.” *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra*. Accordingly, the ALJ is bound by the DIME physician’s resolution of the issue in the absence of clear and convincing evidence to the contrary. *Hart v. Century Communications, Inc.,* 2001 Colo. Wrk. Comp. LEXIS 139, *3.

4. The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A workers' compensation case is decided on its merits. § 8-43-201, C.R.S.

5. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claims Appeals Office,* 5 P.3d 385, 389 (Colo. App. 2000).

6. It is within the ALJ's purview as the finder of fact to determine the credibility of the witnesses and resolve conflicts in the evidence. *Metro Moving & Storage v. Gussert*, 914 P.2d 411 (Colo. App 1995).

7. When determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (1936).

8. In resolving inconsistencies the ALJ may credit all, part or none of an expert's testimony, and the ALJ's failure to cite an expert's opinion inherently reflects that the ALJ did not find it persuasive. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

9. In deciding whether a proponent has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Kroupa v. Indus. Claim Appeals Off.*, 53 P.3d 1192, 1197 (Colo. App. 2002).

10. Drs. Zaremba and Shank agreed the claimant reached MMI on May 26, 2015. The impairment ratings assigned were nearly identical. The claimant's own IME doctor, Dr. Hall, did not find any error in Dr. Zaremba's rating and opined the claimant received excellent care from Dr. Simpson.

11. Ultimately, the claimant provided no persuasive testimony and no medical opinion supporting his assertion Dr. Shank erred in his opinions.

12. The ALJ concludes that the claimant failed to prove, by clear and convincing evidence, that Dr. Shank erred.

13. The term injury refers to the part of the body that has sustained ultimate loss. *Mountain City Meat Company v. Oqueda*, 919 P.2d 246 (Colo. 1996). In the

context of Section 8-42–107(1), the term “injury” refers to the part or parts of the body that have been functionally impaired or disabled as a result of the injury. *Maree v. Jefferson County Sheriff’s Department*, WC No. 4–260–536 (ICAO August 6, 1998), citing *Strauch v. PSL Swedish Healthcare*, 917 P. 2d 366 (Colo. App. 1996).

14. Section 8–42–107(1)(a), C.R.S. (2003), limits medical impairment benefits to those provided in subsection (2) where the claimant’s injury is one enumerated on the schedule. The schedule of specific injuries includes, in section 8–42–107(2), the loss of the loss of the leg. *Maree v. Jefferson County Sheriff’s Department*, *supra*. Our courts have construed that the dispositive issue is whether the claimant sustained a functional impairment to the portion of the body that is listed on the schedule of disabilities. See *Strauch v. PSL Swedish Healthcare*, *supra*. Thus, the ALJ is constrained to determine the situs of the functional impairment, not the situs of the initial harm, in deciding whether the loss is one listed on the schedule of disabilities. *Id*.

15. The ALJ concludes that the claimant’s loss in his lower extremities does not extend beyond the leg and thus he is not entitled to a whole person rating.

16. The claimant bears the burden to prove any entitlement to temporary disability benefits. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997).

17. The claimant endorsed the issue of TTD between June 24, 2014 and February 18, 2015. The respondent-insurer admitted for TTD for the period June 24, 2014 through August 24, 2014 as well as for the period December 30, 2014 through February 18, 2015.

18. The claimant presented no evidence or testimony to show entitlement to any additional TTD between June 24, 2014 and February 18, 2015.

19. The claimant failed to prove, by a preponderance of the evidence that he is entitled to any additional TTD benefits.

20. The respondents assert the claimant’s average weekly wage is $309.00. This is based on the claimant’s gross wages from May 6, 2014 through June 23, 2014.

21. At hearing, the claimant asserted his AWW should be based on earnings of $12 per hour. The claimant, however, did not present any evidence supporting this position. The only evidence presented by the claimant was one paystub reflecting he earned year to date gross wages of $2,163.01. The record is consistent with those wages contained in the respondents’ Exhibit G.

22. The ALJ concludes that the claimant failed to prove, by a preponderance of the evidence, that the respondents incorrectly calculated his AWW and TTD rates.

23. The respondents are only liable for medical treatment reasonably necessary to cure or relieve an employee from the effects of a work injury. C.R.S. §8-42-101 (2015).

24. The claimant offered no persuasive evidence that the respondents failed to pay any reasonable, necessary and related medical treatment for the admitted injury.

25. The respondents stipulated at hearing to reasonable, necessary, and related medical benefits post-MMI as admitted in their FAL dated November 16, 2015.

26. The claimant failed to prove, by a preponderance of the evidence, the respondents neglected to pay any reasonable, necessary and related pre-MMI medical benefits.

27. The ALJ concludes as found above that the claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles him to additional compensation. Section 8-42-108 (1), C.R.S.

28. The ALJ Orders that the respondent-insurer shall pay the claimant $2,500.00 for that disfigurement. The respondent-insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

1. The claimant's request to overcome the DIME physician's opinions on MMI and impairment is denied and dismissed.

2. The claimant' request to convert the scheduled rating to a whole person rating is denied and dismissed.

3. The claimant's request to change the average weekly wage is denied and dismissed.

4. The claimant's request for additional TTD benefits is denied and dismissed.

5. The claimant's request for additional medical benefits beyond those stipulated to by the respondents is denied and dismissed.

6. The respondent-insurer shall pay the claimant disfigurement benefits in the amount of $2,500.00.

7. The respondent-insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

8. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, CO 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-969-245-02

ISSUES

- Whether Respondents have proven by clear and convincing evidence that the DIME opinion that Claimant is not at maximum medical improvement is incorrect.

- Whether Respondents have proven by clear and convincing evidence that the DIME opinion that Claimant sustained permanent medical impairment is incorrect.

- Whether Claimant has proven by a preponderance of the evidence that he is entitled to post-MMI medical maintenance benefits.

INITIAL PROCEDURAL MATTER

On April 29, 2016, Claimant filed a written motion for partial summary judgment and attached a copy of Caroline Gellrick, M.D.'s April 20, 2016, deposition. Claimant argued that Respondents had conceded that Claimant was not at MMI based on a statement made by Respondents' counsel at the deposition which Claimant argued should be construed as a judicial admission.

The motion was not ruled on before hearing because the time allowed for Respondents to respond to the motion had not expired. At hearing, Claimant's counsel attempted to argue the motion, but the undersigned ALJ declined to rule on the motion and proceeded to a hearing on the merits. Upon further consideration, the ALJ will address the motion for partial summary judgment.

After Claimant's counsel asked his first question at Dr. Gellricks' deposition, Respondent's counsel objected to the deposition in its entirety, "[b]ecause I've already said we're conceding Dr. Gellrick's opinion that [Claimant] is not at MMI." Respondents' counsel's next words were, "We've had quite a bit of discussion," and that there was only half an hour for the deposition to be concluded. During the deposition, it became clear that Respondents' counsel's statement, taken in context, was part of a larger discussion and agreement, the whole of which is not before the ALJ. During her cross examination of the witness, Respondents' counsel states as part of a question, "When we were off the record, we talked a little bit about why you recommended and then having a physiatrist review the MRI results. We also talked off the record about how the MRI has now been authorized for both the lumbar and cervical spine, and they're scheduled to occur tomorrow."

In order to be successful on a motion for summary judgment, the movant needs to demonstrate that "there is no disputed issue of material fact and that the party is entitled to judgment as a matter of law." OAC Rule 17. Here, based on the evidence submitted with Claimant's motion, the ALJ finds that Claimant has not established that there is no disputed issue of material fact.

Therefore, the ALJ denies Claimant's motion for partial summary judgment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant, a 28 year- old male, sustained injuries in a work-related motor vehicle accident (MVA) on November 28, 2014. The MVA occurred when Claimant applied the brakes in his company vehicle to avoid hitting the car in front of him that had stopped for a deer in the road. While Claimant was able initially to avoid hitting the car in front of him, he was subsequently hit from behind by a vehicle traveling approximately 30 miles per hour. The impact of that collision pushed Claimant's vehicle into the car in front of him.

2. A police report of the MVA states that Claimant's vehicle had minor damage to the front of the vehicle and moderate damage to the rear of the vehicle. Claimant was seat belted and the airbags in his vehicle did not deploy.

3. EMS responded to the scene where Claimant was ambulatory and able to remember the entire accident.

4. At the emergency department, Claimant complained of diffuse cervical, thoracic, and lumbar pain, and right hip pain. Claimant's back was examined and no edema, ecchymosis or step off was found. He initially complained of some right shoulder "numbness and tingling" which then resolved. Claimant denied headache and neurological deficits. Claimant had a negative straight leg raise bilaterally. X-rays taken the day of the accident of the cervical spine, lumbar spine, and pelvis all were negative for fracture or acute pathology. Claimant did not hit his head or experience any loss of consciousness.

5. Claimant came under Dr. Robert Broghammer's care for his work-related injuries. Dr. Broghammer initially evaluated Claimant on December 1, 2014, and assessed right arm pain, cervical strain, and lumbar strain. He reported that Claimant had full range of motion of the cervical spine but with some stiffness on flexion and extension. Dr. Broghammer did not report any muscle spasm in Claimant's cervical spine. Claimant also had some mild, diffuse tenderness in the thoracic and lower back with some mild spasms in the trapezius and lumbar musculature.

6. On December 5, 2014, Dr. Broghammer identified some diffuse tenderness on palpation of the cervical and thoracic back extending into the lumbar spine but he did not report any further muscle spasms. He prescribed physical therapy twice a week.

7. On December 17, 2014, Dr. Broghammer noted that Claimant was feeling 40% worse even though physical therapy had helped "a little bit" to alleviate his symptoms. Dr. Broghammer noted that examination of Claimant's right arm revealed a subjective decrease in sensation throughout the entire upper extremity, inconsistent with a nerve root lesion or a peripheral nerve root injury. The color, temperature, and circulation of the right upper extremity were within normal limits, and Claimant had full range of motion of the hand, wrist, and elbow. Examination of Claimant's lumbar spine revealed no evidence of spasm and no atrophy. Seated straight leg raising was negative for radicular symptoms bilaterally. Dr. Broghammer stated there was "marked overreaction to light palpation throughout the lumbar spine and the paraspinous muscles with light touch causing a significant withdrawal reflex and complaints of pain." Dr. Broghammer stated: "I am unable to explain his plethora of symptoms, which are somewhat vague and protean in nature. There appears to be a component of symptom magnification and additional functional overlay initial worker." Dr. Broghammer recommended additional consults with physiatry and/or neurology and psychiatry.

8. Also on December 17, 2014, three weeks after the MVA in which Claimant did not impact his head, Claimant reported experiencing memory difficulty and concentration issues. An MRI of the head and brain was conducted on December 22, 2014. It identified no acute intracranial abnormality but a few punctate foci of sub-cortical white matter signal abnormality bilaterally, which were nonspecific.

9. On December 29, 2014, Dr. Broghammer noted that there were minimal findings on the MRI brain scan. He could not explain Claimant's high levels of pain given no objective findings. He recommended a physiatry referral. He did not report any muscle spasms in Claimant's cervical or lumbar spine.

10. Claimant received physical therapy from December 11, 2014 through January 7, 2015. Except for the initial evaluation on December 11, 2014 noting "spasm" in an unidentified part of Claimant's body, none of the physical therapy reports identified muscle spasm. The therapist did note numerous areas of complaint and hypersensitivity to touch, and/or that the claimant could not tolerate "hands-on" therapy. The therapist discussed with Claimant "that an MRI for his back is probably not warranted at this time as it is felt that the back is soft tissue in orientation and that the MRI would not give helpful additional information." On the last day of physical therapy, the therapist stated that Claimant presented "without progress (subjectively and objectively)."

11. Claimant underwent massage therapy from April 15, 2015 through August 24, 2015 by Bruce Leibbrandt. The initial findings on April 15, 2015 included restricted range of motion in the cervical and lumbar spine. On palpatory examination, the therapist routinely noted hypertonicity (muscle tension) in many muscle groups. With each consecutive massage session, the therapist noted improvement in the hypertonicity and that Claimant was "progressing well with treatment." The therapist also noted less restricted range of motion in the cervical and lumbar spine with each visit, until August 3, 2015 when the therapist noted that range of motion "revealed nothing apparent." As of the last massage session on August 24, 2015, the therapist

continued to note no range of motion deficit. Importantly, the massage therapist never reported that he detected muscle spasms.

12. On January 12, 2015, Dr. Gretchen Brunworth saw Claimant for neck pain, bilateral shoulder pain, constant low back pain but no leg pain, headaches, and short-term and long-term memory problems. On palpatory examination, Claimant was tender to "very, very light touch diffusely throughout the low back area." Dr. Brunworth was unable to appreciate any muscle spasms. Claimant complained of low back pain with essentially any movement. In both seated and supine positions, Claimant's straight leg raise was negative bilaterally. Dr. Brunworth noted non-physiologic findings regarding Claimant's low back complaints. She also noted some non-physiologic cognitive complaints. In the cervical region, Claimant was tender to mild palpation diffusely throughout the cervical spine.

13. Also on January 12, 2015, Dr. Brunworth conducted a "Computerized Outcome Analysis" which analyzes psychosocial components of pain. Claimant's score placed him in the "distressed somatic category of psychosocial functioning (which was) consistent with his presentation today with some non-physiologic findings." Dr. Brunworth stated, "Certainly this is concerning." Nonetheless, she recommended a diagnostic ultrasound of the right shoulder and an evaluation by a neuropsychologist.

14. On January 13, 2015, Dr. Broghammer reported that Claimant had increasing pain across his collarbone and anterior aspect of his right shoulder girdle musculature. He noted that Dr. Brunworth had recently evaluated Claimant and while doing so, she pressed on his arm which caused increased upper and lower back pain. Dr. Broghammer had "no explanation for how this would have occurred." Passively, Dr. Broghammer was able to "easily move the worker's shoulder to approximately 170 degrees of abduction on the right." Claimant had "diffuse tenderness to palpation of the posterior shoulder girdle musculature on the right, primarily over the trapezius but also over the rhomboid, infraspinatus, levator scapulae, and posterior cervical spine." Except for the tenderness reported by Claimant, Dr. Broghammer's examination was essentially negative. He did not report any finding of muscle spasms or a positive straight leg raise test. Dr. Broghammer referred Claimant for neuropsychiatric testing with Rebecca Hawkins, Ph.D.

15. On January 23, 2015, a MRI of Claimant's right shoulder was performed. The results were "unremarkable."

16. On February 10, 2015, Dr. Scott Primack conducted a sonographic analysis of Claimant's shoulders. The results were negative. There was no evidence of right shoulder impingement syndrome, right partial or full thickness rotator cuff tear, or right shoulder instability. Dr. Primack did not foresee any significant permanent residual impairment.

17. On February 12, 2015, Dr. Broghammer reported that Claimant's multiple complaints with regard to his neck, upper back, right arm, lower back, and central nervous system continued without improvement. Claimant continued "to have a diffuse

array of musculoskeletal symptoms, as well as some central nervous complaints and complaints of being unable to concentrate when driving." Dr. Broghammer did not have an explanation for most of these complaints. His assessment was multiple injuries with a wide variety of complaints, right arm and shoulder pain of unclear etiology, cervical strain, and lumbar pain. He did not report any finding of muscle spasm or a positive straight leg raise test. However, he recommended EMG/nerve conduction studies.

18. On March 5 and March 6, 2015, Claimant saw Rebecca Hawkins, Ph.D. for neuropsychological screening. Claimant reported multiple symptoms related to cognitive functioning, including memory problems. However, the Weschler Adult Intelligence Scale - Fourth Edition (WAIS-IV), Full Scale IQ (FSIQ) placed Claimant's intelligence in the superior range when compared to a normative sample. "As such," Dr. Hawkins said, "there is no indication whatsoever that he has experienced a decline in his overall cognitive/intellectual abilities."

19. In contrast to Claimant's report of short-term memory loss and problems with attention and concentration, Dr. Hawkins noted "that he placed within the superior range for the Immediate and Delayed Memory Indexes on the WMS – IV, and within the high average and superior range for the Visual Working Memory and Working Memory Indexes." Instead, Dr. Hawkins detected evidence of somatization. Claimant's MMPI-2 RF profile suggested somatic dysfunction based on multiple somatic complaints. Claimant appeared to be preoccupied with physical health concerns and was likely prone to develop physical symptoms in response to stress. Dr. Hawkins noted that Claimant portrayed "his life circumstances as unusually difficult at this time, and may have specific psychological concerns…. If psychosocial risk factors are also present, the possibility that symptom magnification is interfering with recovery should be considered." Further, Dr. Hawkins said testing indicated that Claimant's "pain experience considerably exceeds his resources for coping and is perceived as intolerable and disabling. Indeed, (Claimant's) score for Functional Complaints indicated an extremely high level of perceived disability (99th percentile) that would suggest a perception that he is entirely disabled across all domains of life. In fact, only 1% of patients report being more disabled…. In light of the fact that he has not sustained a catastrophic injury, such would certainly be considered disproportionate to what would be expected based on his medical findings. Additionally, that he reports a moderately high level of Muscular Bracing (82nd percentile) suggests that stress related physical reactivity may be contributing to (his) symptomatology…." Furthermore, Claimant "produced an elevation for Compensation Focus, suggesting he is more likely than the average patient to believe he is deserving of compensation for pain and suffering. Such is concerning, as it may pose a barrier in one's efforts at rehabilitation…. (Claimant) designated diffuse aching for the entire back of his head, neck, thoracic, and lumbar regions." He noted a variety of symptoms in other areas of his body as well. "In light of there being several different areas of diffuse numbness that did not appear to follow any particular dermatomes, his (pain) drawing was felt to be abnormal (unless such was explained by the upcoming electrodiagnostic testing)."

20. Dr. Hawkins concluded that the indication of "a significant level of somatic preoccupation, which in tandem with what appears to be a recent emergence of

depression, may indeed contribute to the perception of persisting cognitive difficulties. In addition to reactive muscular tension, (Claimant's) somatic complaints are also likely to contribute to heightened pain sensitivity…. (Claimant) may qualify for a diagnosis of Somatic Symptom Disorder. Last, it is also duly noted that I cannot conclusively rule out the possibility that he may be grossly exaggerating his cognitive complaints for the purpose of secondary gain."

21. On March 17, 2015, Claimant underwent an EMG/nerve conduction study of his neck, bilateral shoulders, and arms by Dr. Carolyn Burkhardt. She reported that the EMG/NCS were all within normal limits. At that appointment, Claimant reported experiencing "muscle spasms *in his entire body* when he is in a relaxed state.

22. On March 24, 2015, Dr. Broghammer once again noted that Claimant's complaints tended to be somewhat diffuse in nature. He noted that the EMG testing was negative. He made no mention of muscle spasms or a positive straight leg raise test. He noted that Dr. Hawkins had completed a neuropsychiatric evaluation, and that she had concluded that Claimant had not only symptom magnification but possible malingering regarding his symptoms. Dr. Hawkins recommended biofeedback sessions. Dr. Broghammer agreed with the recommendation for biofeedback and neurocognitive behavioral therapy. Dr. Broghammer released Claimant to full and unrestricted duties.

23. Respondents admitted liability for Claimant's injury, and paid temporary disability benefits from December 1, 2014 through March 23, 2015.

24. From April 9, 2015 through May 20, 2015, Dr. Hawkins provided counseling and biofeedback sessions. Dr. Hawkins discharged Claimant because he had "acquired an excellent skill set for managing his residual pain complaints and psychosocial stressors."

25. On May 5, 2015, Claimant reported to Dr. Broghammer that he was improving. He had been treating with Dr. Hawkins and had had four massage therapy visits. Dr. Broghammer did not report any findings of muscle spasms or positive straight leg raise test. Claimant was working full duties and continued to use Naprosyn but was no longer taking a muscle relaxant. Dr. Broghammer recommended continued massage therapy and treatment with Dr. Hawkins.

26. On or about May 22, 2015, Claimant was driving in the general area of his MVA when he had to forcefully apply his brakes to avoid hitting a car on the highway that had stopped for a deer. Claimant was driving at approximately fifty miles per hour. Claimant did not seek immediate medical care.

27. On May 28, 2015, Claimant reported to Dr. Broghammer that he was 30% worse, attributing his worsening to the braking incident. Claimant reported increasing "spinal pain and tingling," and requested MRIs. Dr. Broghammer did not think MRIs were medically warranted based upon Claimant's then-current subjective complaints. Dr. Broghammer thought that "more likely than not, the MRI will show chronic changes

that have nothing to do with this recent increase in symptoms and would only give [Claimant] things to worry about." Dr. Broghammer noted that Claimant's new onset spine pain and tingling were likely due to a myofascial source. He noted that if Claimant sought treatment for his "spine pain and tingling," he should file another workers' compensation claim for "this new event."

28. On May 28, 2015, Dr. Broghammer discharged Claimant from his care. He noted that Claimant still had a "variety and plethora of complaints," but the objective findings were minimal. Dr. Broghammer reasoned that "more likely than not, the MRI will show chronic changes that have nothing to do with this recent increase in symptoms and would only give [Claimant] things to worry about." He noted that prior MRIs of Claimant's head and shoulder, which were conducted due to Claimant's subjective complaints, were negative. He noted that Claimant had no evidence of radiculopathy in any of his examinations. Dr. Broghammer did not report any finding of muscle spasm or positive straight leg raise testing. Dr. Broghammer once again noted Dr. Hawkins' concern for possible malingering, and Dr. Broghammer believed that Claimant's subjective symptoms had been "vastly overstated." Dr. Broghammer therefore placed Claimant at MMI with no permanent restrictions and no "permanent or ratable impairment" from his work injuries. With regard to medical maintenance treatment, Dr. Broghammer thought that massage therapy every one to two weeks for the next 2 to 3 months was reasonable. After that, "no other treatment will be medically necessary, recommended, or justified."

29. Based on Dr. Broghammer's May 28, 2015 report, Respondents filed a Final Admission of liability on October 22, 2015 for a MMI date of May 20, 2015, no permanent partial disability, and no medical maintenance benefits.

30. Claimant requested a Division Independent Medical Examination (DIME), which Dr. Caroline Gellrick conducted on October 8, 2015. Dr. Gellrick is board certified in family medicine and addiction medicine.

31. Dr. Gellrick diagnosed Claimant with cervical strain, lumbar strain, right shoulder strain, symptoms of cognitive dysfunction with reactive adjustment disorder and depression, and cepahlalgia (headache) that was cervocogenic in nature. While Claimant required no more treatment for his right shoulder or psychological status, Dr. Gellrick concluded that Claimant had not reached MMI for his cervical and lumbar spine complaints.

32. Dr. Gellrick found Claimant was not at MMI for his cervical spine and lumbar spine complaints for two reasons: 1) Claimant had demonstrated "spasm persistently in the cervical and lumbar spine and this has been documented even in the notes of Bruce Leibbrandt, the massage therapist"; and 2) Claimant demonstrated a positive straight-leg raise for tenderness in the lumbar spine. Based on these two factors, Dr. Gellrick stated that Claimant needed MRIs of the cervical and lumbar spine, and a review of the MRIs by a physiatrist, before Claimant could be placed at MMI. Additionally, Dr. Gellrick testified that she wanted the MRIs because they might identify facet arthropathy which might be amenable to injections or other treatment.

33. Dr. Gellrick assigned 6% whole person (WP) cervical impairment rating; 10% WP lumbar impairment rating, and 1% for the shoulder. Her combined impairment rating was 16 % WP impairment.

34. Dr. Gellrick's statement that that Claimant demonstrated "persistent" spasm in his cervical and lumbar spine is not supported by Claimant's medical records. The medical records include few mentions of muscle spasm. For example, Dr. Broghammer's initial December 1, 2014 examination of Claimant's thoracic and lumbar spine (but not the cervical spine) mentions spasm, and Claimant's physical therapist on December 11, 2014 mentions a spasm but does not identify its location. Muscle spasms were not identified in any of the subsequent treatment records by Dr. Broghammer, the physical therapist, Dr. Brunworth, Dr. Burkhardt, or Dr. Primack. In fact, Dr. Broghammer documented "no evidence of spasm" in Claimant's lumbar spine on December 17, 2014, and on January 12, 2015, Dr. Brunworth was *unable to appreciate any muscle spasms*. Additionally, Dr. Gellrick's statement that Claimant had persistent spasm in his cervical and lumbar spine is not supported by Claimant's reports of testimony. Claimant reported spasm "*in his entire body* when he is in a relaxed state." Other than at his initial and DIME examinations, the records do not support him reporting cervical or lumbar spasms. Finally, Claimant reported to Dr. Gellrick that his had spasms in his cervical and lumbar spine as a result of the braking incident, but that his condition had returned to baseline after massage therapy and the passage of two week's time.

35. Even though Dr. Gellrick stated that the massage therapist, Bruce Leibbrandt, reported persistent muscle spasms, this is not correct. Mr. Leibbrandt's notes referred to hypertonicity, which is muscle tension, not spasms. (See Dr. Allison Fall's testimony in which she testified that hypertonicity is "increased tension in the muscles, a lot of us just have that normally at rest without having any symptoms." Rather, testing by Dr. Hawkins show that Claimant had a "moderately high level of Muscular Bracing (82nd percentile)" which suggested that stress-related physical reactivity may be contributing to Claimant's symptomatology. In other words, Claimant's psychological status may have caused muscle tension which caused him to perceive pain. In any event, Mr. Leibbrandt did not document muscle spasms, contrary to Dr. Gellrick's statement.

36. The only spasm Dr. Gellrick identified in her examination was "mild spasm on the left trapezius." Despite her statement that Claimant had "persistent spasm in his cervical and lumbar spine," her own findings were minimal. She did not report a finding of spasms anywhere other than the left trapezius, and found no spasm herself in Claimant's lumbar spine. She also did not differentiate whether the spasm was attributable to the claimed injury or to the braking incident.

37. Dr. Allison Fall, a physiatrist who conducted an independent medical examination on behalf of Claimant, doubted that Dr. Gellrick had even detected spasms in Claimant's left trapezius. Dr. Fall indicated that a with visible muscle spasm, an observer can see a "quivering back and forth." It was likely that all Dr. Gellrick saw was muscle tightness. In any event, Dr. Fall testified that there was no evidence in her

examination of Claimant or in the medical records that Claimant had persistent spasm in the cervical spine. Even if Dr. Gellrick had actually observed Claimant having a spasm during her examination, Dr. Fall said, "there would be no way to attribute that back to the remote… initial car accident."

38. Dr. Gellrick's statement that Claimant demonstrated a positive straight-leg raise for tenderness in the lumbar spine is likewise incorrect. There were only two comments in the medical records about straight leg raise testing: 1) Dr. Broghammer's December 17, 2014 report that "seated straight *leg raising was negative* for radicular symptoms bilaterally," and 2) Dr. Brunworth's January 12, 2015 report that Claimant's straight leg raise was negative bilaterally in both a seated and a supine position.

39. Although Dr. Gellrick stated that Claimant's straight leg raise test was positive on the left for low back pain, Dr. Fall testified that the characterization of the straight leg raise test as positive was incorrect. When a straight leg raise test elicits low back pain rather than radicular pain that radiates beyond the knee, the test is negative. That is because the test is designed to identify nerve root irritation. If something is irritating a lower lumber nerve, the patient will experience a sharp, shooting pain down the back of the leg during the test. A positive straight leg raise test, where radiculopathy and possible nerve involvement is present, would justify ordering a MRI. However, there is no medical support for the use of a MRI for a soft tissue injury, particularly in a case such as this where there is significant symptom magnification.

40. Dr. Gellrick testified that she wanted the MRIs not so much because she was concerned about radiculopathy or nerve involvement but to identify possible facet arthropathy. However, Dr. Fall testified, MRIs are not normally used to identify facet arthropathy. In any event, in Dr. Fall's review of the MRI scans, she saw no facet arthropathy or any other pathology that might be amenable to further medical treatment.

41. The three premises on which Dr. Gellrick based the need for cervical and lumbar spine MRIs, namely, "persistent cervical and lumbar spine spasms," a positive straight leg test, and possible facet arthropathy, are all unsupported by Claimant's medical records. The medical record does not support the existence of persistent spasms or a positive straight leg test. Rather, the record suggests the opposite. Furthermore, MRIs are not used to identify facet arthropathy. Thus, Dr. Gellrick's decision to delay a finding of MMI until the MRIs could be obtained was clearly erroneous.

42. In her report, Dr. Gellrick summarized Dr. Hawkins' findings regarding her neuropsychological assessment of Claimant. However, Dr. Gellrick did not address or even acknowledge what appeared to all of the treating providers to be significant symptom magnification by Claimant and possible psychological or functional overlay. Dr. Fall testified that it was a mistake not to consider those factors in recommending an MRI of the lumbar and cervical spine. It is necessary, Dr. Fall said, to look at psychological factors when dealing with a patient with chronic pain or pain that seems out of proportion to the injury or objective findings.

43. Dr. Fall did not diagnose Claimant with chronic pain syndrome in light of Dr. Hawkins' report that suggested the likelihood of a somatic symptom disorder, or possible malingering. Dr. Fall thought that Claimant did not have a chronic pain syndrome, "but rather, he has a whole other reason for complaints of pain . . . a psychiatric diagnosis." A somatic symptom disorder is a psychological disorder in which a patient basically manifests physical or somatic complaints based upon psychological stress. It would have pre-existed the injury.

44. Although Respondents challenged the need for MRIs of the lumbar and cervical spine, Respondents nevertheless authorized and the MRIs. They were conducted on April 21, 2016 while litigation on this matter was pending.

45. Dr. Fall reviewed the actual MRIs of Claimant's cervical and lumbar spine along with the radiologist's reports. She said there were "very mild findings of some disc bulges" but these were not significant, "not out of the realm of norm" and nothing that could be considered a pain generator or would suggest the need for treatment. The findings were "benign, unremarkable . . . normal." They would not explain the myriad of symptoms that Claimant was having.

46. The essentially negative results of both the lumbar and cervical spine MRIs confirmed Dr. Broghammer's and Dr. Fall's opinions that there was insufficient medical evidence to justify obtaining the MRIs in the first place.

47. Based on the lack of objective findings over time and all of the negative MRI results including the negative cervical and lumbar spine MRI results, Dr. Broghammer appropriately placed the claimant at maximum medical improvement on May 28, 2015.

48. Dr. Gellrick tentatively rated Claimant's permanent medical impairment as 6% whole person for the cervical spine, 10% whole person for the lumbar spine, and 1% of the right upper extremity for the right shoulder. There was no impairment, she said, for Claimant's headaches or psychological status.

49. Dr. Broghammer opined that Claimant had sustained zero permanent medical impairment because of the minimal objective findings despite Claimant's "variety and plethora of complaints." Dr. Broghammer noted the negative MRIs of the head and shoulder and no evidence of radiculopathy. He believed that Claimant's "subjective symptom complex has been vastly overstated," relying in part on Dr. Hawkins' psychological assessment.

50. Dr. Fall also opined Claimant sustained no permanent medical impairment due to a lack of objective findings consistent with permanent impairment. She noted that Claimant's examinations throughout time had been benign.

51. Dr. Gellrick diagnosed Claimant with cervical and lumbar spine strain. Dr. Fall testified that a strain is a nonspecific term that typically refers to a muscle sprain or a tendon that was strained or overstretched. This type of injury should resolve in six weeks without permanent impairment.

52. Moreover, the diagnosis of lumbar strain as a result of Claimant's rear-end MVA is suspect. A cervical spine whiplash injury occurs because the head can move forward and backward upon impact. However, Claimant's lumbar spine could not move any significant amount. Claimant had support behind his back and was restrained by a seatbelt and shoulder harness. Claimant testified that at the time of impact, he moved approximately ½ inch. Dr. Fall testified that unlike a whiplash injury, the forces are not sufficient to cause a lumbar spine injury.

53. According to the Level II training that physicians receive, Dr. Gellrick should not have provided an impairment rating under Table 53 of the *AMA Guides* or a rating for loss of range of motion because no objective findings support Claimant's subjective complaints. There must be objective findings to match subjective complaints. No specific pain generator has been determined other than the consensus from the treating providers that the pain generator is probably a pre-existing psychological condition. Complaints of pain alone for six months do not warrant a permanent medical impairment rating under Table 53 if there are no objective findings. Without a Table 53 rating, it is improper to measure loss of range of motion or assign any permanent impairment rating. Consequently, Claimant's permanent medical impairment in this case is zero.

54. The difference between the zero impairment ratings offered by Dr. Broghammer and Dr. Fall and the ratings offered by Dr. Gellrick amount to more than a difference of opinion among physicians. There are no objective findings to support a permanent medical impairment rating, but there is substantial evidence of symptom magnification. Dr. Fall concluded that Dr. Gellrick's opinion was clearly erroneous, testifying as follows: "[F]or her to say that this… 28-year-old… person has a permanently impaired lumbar spine from this doesn't make sense given the mechanism of injury and given the… physical examination findings, especially in light of the fact that I saw signs, what we call nonorganic signs, that there were other reasons for the complaints of back pain rather than some physical problem with the spine. So I do think it is obviously an error especially in discounting all the records that she had reviewed."

55. With regard to medical maintenance treatment, Dr. Broghammer stated on May 28, 2015 that "some maintenance treatment of formal massage therapy to occur every one to two weeks for the next two to three months with Bruce Leibbrandt (would be appropriate). After this, no other treatment will be medically necessary, recommended, or justified." Claimant did in fact receive the massage therapy from April 15, 2015 through August 24, 2015.

56. Dr. Fall testified that medical maintenance treatment was not required because there are no objective findings to treat.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

MMI exists at the point in time when “any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition.” § 8-40-201(11.5), C.R.S. A DIME physician’s findings of MMI and impairment are binding on the parties unless overcome by “clear and convincing evidence.” § 8-42- 107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). “Clear and convincing evidence” is evidence that demonstrates that it is “highly probable” the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician’s finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

A finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant’s condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management*, W.C. No. 4-356-512 (ICAO May 20, 2004); *Hatch v. John H. Garland Co*., W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician’s findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI.

Dr. Gellrick ordered MRIs of Claimant’s cervical and lumbar spine before placing Claimant at MMI despite the lack of any objective evidence of radiculopathy or other pathology that might be amenable to treatment. Dr. Gellrick ignored the diffuse and non-dermatomal pattern of Claimant’s symptoms, including the fact that he had symptoms not over just one or two discrete body parts but over most of his low back, thoracic spine, cervical spine, bilateral shoulders, and bilateral arms. She ignored Dr. Hawkins’ finding of possible somatic pain disorder based on multiple tests that showed complaints that greatly exceeded what would be expected on an objective basis. She ignored that fact that all other diagnostic testing, including MRIs of Claimant’s head and shoulders, EMG/nerve conduction studies which had ruled out cervical spine pathology, and a sonogram were negative. And, her understanding that Claimant had persistent spasms is not supported by Claimant’s medical records.

Dr. Gellrick acknowledged the lack of radiculopathy in Claimant’s cervical and lumbar spine but nevertheless suggested the MRIs might identify facet arthropathy that could be treated with injections. However, MRIs are not necessary to identify facet arthropathy and are not normally used for that purpose.

Thus, it is highly probable and free from serious doubt that Dr. Gellrick erred in delaying MMI so that Claimant could undergo MRIs of his cervical and lumbar spine.

Respondents have proven by clear and convincing evidence that the DIME opinion on permanent medical impairment is in error. With regard to permanent medical impairment, it is highly probable and free from serious doubt that Dr. Gellrick erred in assessing permanent medical impairment in this case. Claimant has a multitude of complaints and symptoms, but there is no persuasive objective evidence of any pathology or physical pain generator. Although Claimant has not been diagnosed with chronic pain syndrome, most likely, he has a psychological condition, or a somatic pain disorder, that causes him to perceive extreme pain despite the lack of pathology. Without persuasive objective evidence of an actual pathology or disorder, permanent medical impairment cannot be assessed.

Claimant has failed to prove by a preponderance of the evidence the he required medical maintenance care after MMI. The need for medical treatment may extend beyond the point of MMI where a claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his or her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). A claimant must prove entitlement to medical maintenance medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc*., 865 P.2d 915 (Colo. App. 1993).

In this case, based on the lack of any objective medical condition that can be treated, the claim for medical maintenance benefits must be denied. Claimant’s symptoms most likely are based on pre-existing psychological condition, thus treatment of his symptoms will not be effective and is not warranted.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have proven by clear and convincing evidence that Dr. Gellrick's opinion on MMI was in error.

2. Respondents have also proven by clear and convincing evidence that Dr. Gellrick's opinion on permanent medical impairment was in error.

3. Claimant has failed to prove by a preponderance of the evidence that he requires any medical maintenance treatment.

4. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 24, 2016

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-994-781-01

ISSUES

- Claimant's Average Weekly Wage (AWW).

- Claimant also raised the issue of penalties in her Hearing Application. Claimant then dismissed this issue admitting that penalties cannot be imposed over an alleged incorrect calculation of AWW. *See Reves v. McCormick Excavation & Paving, LLC,* W.C. No. 4-835-166-04 (July 19, 2012).

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is an employee of Employer. She works as a telephone questionnaire interviewer. Claimant worked for Employer approximately four to five years. Claimant testified that she sustained an injury while in the course and scope on July 8, 2015.

2. Claimant testified she earned minimum wage plus commissions. She testified that she typically worked four days per week, five hours per day. She believed that, depending upon the project, she would receive an hourly commission from $8.23 to $11.00, plus an hourly wage of $8.23. She believed her AWW should be $335.60 based upon her belief that in addition to the amounts shown in the payroll report attached to the General Admission (GA) dated November 20, 2015, she earned an additional hourly commission. (Exhibit A). Claimant provided no documentation to support her unfounded beliefs. Claimant's testimony is found neither credible nor persuasive.

3. Cari Selby testified that she is the Employer's office manager/supervisor. She credibly testified Claimant received an hourly wage which varied depending upon the work she was performing and the client. Ms. Selby explained that Claimant did not receive a commission, only a varied hourly wage. Ms. Selby testified regarding the Payroll Report which was attached to the GA. She explained the 'function code' which determined the preliminary pay rate and, depending upon if the required tasks were timely completed, the actual hourly wage paid to Claimant for the task(s) completed. Per Ms. Selby, the Payroll report reflected Claimant's total wages were $1,874.50 from April 9, 2015 to July 8, 2015, the day of injury.

4. The handwriting (a calculation of AWW) on the Payroll Report shows that in calculating AWW, the date of injury was removed (wages for July 8, 2015 of $42.75) leaving total wages of $1,831.75 from April 9, 2015 to July 6, 2015. The handwriting

also shows that Claimant's daily wage was $20.35 which equaled an AWW of $142.47. This was the AWW admitted to in the November 20, 2015 GA. (Exhibit A).

5. Claimant's paystubs show only regular pay and no commissions. Her pay from March 14, 2015 through July 3, 2015 totaled $2,315.62. Using Claimant's paystubs for this time frame, the AWW is $144.73. On April 14, 2016, Respondents filed a GA admitting for that AWW. (Exhibit B).

6. Based on the data from Respondent's Exhibits A and B, and the credible and persuasive testimony from Ms. Selby, the proper AWW in this matter was in the range of $142.47 to $144.73.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See Magnetic *Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

It is the ALJ's sole province to assess credibility of the witnesses. *Monfort Inc. v. Rangel*, 867 P.2d 122 (Colo. App. 1993).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1955).

Section 8-42-102(2), C.R.S., requires AWW be based on earnings "at the time of injury." Section 8-42-102(3), C.R.S., grants discretionary authority to alter the statutory formula if for any reason it will not fairly determine a Claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp.,* 867 P.2d 77 (Colo. App. 1993).

Based upon the credible and persuasive testimony of Ms. Selby and actual evidence in the form of wage records attached to the Gas as Exhibits A and B, Claimant's AWW is $144.73 as admitted in the GA dated April 14, 2016.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's average weekly wage (AWW) is $144.73 as admitted in the GA dated April 14, 2016.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 24, 2016

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that the medical treatment she received on June 18, 2015, November 2, 2015, December 23, 2015 and December 29, 2015 was authorized, reasonable and related to her August 18, 2014 lower back injury.

FINDINGS OF FACT

1. Claimant worked for Employer as a Meat Manager. On August 18, 2014 Claimant suffered an admitted industrial injury to her lumbar spine. While she was lifting a box of meat weighing approximately 50-55 pounds from a pallet she suffered a sharp pain and heard a "pop" in her lower back. Employer directed Claimant to the Banner Occupational Health Clinic for treatment. Claimant initially received care from Authorized Treating Physician (ATP) Laura Caton, M.D. She received medications and underwent massage therapy, pool therapy, physical therapy and injections for her lower back symptoms.

2. Claimant acknowledged that she has a previous history of DVTs or blood clots in her lower extremities. She specifically testified that she had suffered a DVT approximately four years earlier.

3. Claimant explained that on June 18, 2015 she was experiencing pain and swelling in her left leg as a result of decreased activity. Because she had concerns about a possible DVT, she contacted Dr. Caton for medical advice. Dr. Caton referred Claimant for a "STAT" ultrasound of the left lower extremity due to woody pitting edema, limited activity and a prior history of DVTs. Physicians at the Northern Colorado Medical Center conducted an ultrasound of her left leg. Respondent has challenged the June 18, 2015 ultrasound because it did not constitute reasonable, necessary or related medical treatment to cure or relieve the effects of Claimant's August 18, 2014 industrial injury.

4. On August 12, 2015 Allison M. Fall, M.D. provided an opinion about whether Claimant's June 18, 2015 ultrasound constituted reasonable, necessary and related medical treatment for her August 18, 2014 lower back injury. Dr. Fall recounted that she had previously conducted an independent medical examination of Claimant. She noted that she had reviewed a May 21, 2015 report from Dr. Caton in which Claimant exhibited left foot redness, swelling and pain to the touch. Notably, the left foot was red and warm. Claimant also had a history of DVTs. Dr. Caton observed "woody pitting edema with rubor and warmth, and there was a tenderness to palpation in the calf with rubor, swelling and warmth." Dr. Caton recommended an immediate

ultrasound of the left lower extremity “due to noted woody pitting edema, limited activity and history of DVT.”

5. Dr. Fall determined that the June 18, 2015 ultrasound of Claimant’s left lower extremity was not reasonable, necessary or related to Claimant’s August 18, 2014 industrial lower back injury. She reasoned that the swelling in the left lower leg was not related to Claimant’s work-related lumbar spine condition. Moreover, the ultrasound was ordered to rule out a DVT that Claimant had previously experienced. Dr. Fall acknowledged that she “[respect[ed]” Dr. Caton for her concern about Claimant based on a history of DVTs and swelling, but the ultrasound was nevertheless not related to Claimant’s August 18, 2014 industrial injury.

6. Claimant continued to receive treatment from Dr. Caton at Banner Occupational Health Clinic through September 17, 2015. However, following the September 17, 2015 appointment, Dr. Caton took a leave of absence as a result of military service and Claimant’s care was transferred to Cathy Smith, M.D. beginning on November 4, 2015.

7. Claimant remarked that on November 2, 2015 she was experiencing extreme left leg pain. She contacted Banner Occupational Health Clinic and learned that the facility lacked medication to adequately treat her symptoms. Claimant was thus directed to the Northern Colorado Medical Center for treatment. Claimant underwent three MRIs of her spinal cord and received medications. Claimant’s personal health insurance provider Cigna partially paid the bills for the November 2, 2015 diagnostic tests and medications. Respondent contends that it is not responsible for payment of the November 2, 2015 bills because there was no emergency and the treatment was not related to Claimant’s August 18, 2014 industrial injury.

8. Claimant explained that on December 23, 2015 she was again suffering from extreme left leg pain. She contacted Banner Occupational Health Clinic and learned that the facility lacked medications to adequately treat her pain. Claimant was thus directed to the Northern Colorado Medical Center for treatment. She received prescription drug medications for her pain. Claimant’s personal health insurance provider Cigna partially paid the bill for the December 23, 2015 treatment. Respondent contends that it is not responsible for payment of the bill because there was no emergency.

9. Claimant testified that on December 29, 2015 she was experiencing pain and swelling in her left leg. Because she had concerns about a possible DVT, she sought treatment with her primary care physician. Claimant underwent a left lower extremity study at Advanced Medical Imaging. Her personal health insurance provider Cigna partially paid the bill for the December 29, 2015 treatment. Respondent asserts that the care did not constitute authorized, reasonable and necessary medical treatment for Claimant’s August 18, 2014 industrial injury.

10. On May 18, 2016 Claimant’s counsel drafted a letter to Dr. Smith regarding referrals from her office for Claimant’s medical treatment on June 18, 2015,

November 2, 2015, December 23, 2015 and December 29, 2015. Dr. Smith responded that the referrals for treatment on June 18, 2015, November 2, 2015, and December 23, 2015 were from the Banner Occupational Health Clinic. Furthermore, she agreed that the ultrasound, prescriptions and testing constituted reasonable and necessary medical treatment for Claimant's August 18, 2014 industrial injury. However, Dr. Smith responded that the December 29, 2015 treatment at Advanced Medical Imaging was not authorized, reasonable or related to Claimant's work-related lower back injury. She specifically noted that neither she nor Dr. Caton referred Claimant for treatment of a DVT on December 29, 2015.

11. Claimant has demonstrated that it is more probably true than not that the medical treatment she received on June 18, 2015, November 2, 2015 and December 23, 2015 was authorized, reasonable and necessary to cure or relieve the effects of her industrial injury. Claimant credibly testified that on June 18, 2015 she was experiencing pain and swelling in her left leg as a result of decreased activity. Because she had concerns about a possible DVT, she contacted Dr. Caton for medical advice. Dr. Caton referred Claimant for a "STAT" ultrasound of the left lower extremity due to woody pitting edema, limited activity and a prior history of DVTs. Claimant visited the Northern Colorado Medical Center for an evaluation. Physicians conducted an ultrasound of her left leg. Dr. Smith persuasively agreed that the June 18, 2015 ultrasound constituted authorized, reasonable and necessary medical treatment for Claimant's August 18, 2014 industrial injury. In contrast, Dr. Fall concluded that the June 18, 2015 ultrasound of Claimant's left lower extremity was not reasonable, necessary or related to her August 18, 2014 industrial lower back injury. Dr. Fall specifically reasoned that the swelling in the left lower leg was not related to Claimant's work-related lumbar spine condition. Moreover, the ultrasound was ordered to rule out a DVT that Claimant had previously experienced. However, despite Dr. Fall's opinion, the medical records, persuasive opinion of Dr. Smith and credible testimony of Claimant reflect that the June 18, 2015 ultrasound constituted authorized, reasonable and necessary medical treatment to cure or relieve the effects of Claimant's August 18, 2014 industrial injury.

12. Claimant credibly testified that on November 2, 2015 she was experiencing extreme left leg pain. She contacted the Banner Occupational Health Clinic and learned that the office lacked medications to adequately treat her pain. Claimant was thus directed to the Northern Colorado Medical Center for treatment. She underwent three MRIs of her spinal cord and received medications. Claimant also credibly testified that on December 23, 2015 she was suffering extreme left leg pain. She again contacted the Banner Occupational Health Clinic and learned that the office lacked medication to adequately treat her symptoms. Claimant was thus directed to the Northern Colorado Medical Center for treatment. She received prescription drug medications for her pain. Dr. Smith confirmed that her office authorized the November 2, 2015 and December 23, 2015 emergency room visits. Furthermore, Dr. Smith agreed that the prescriptions and diagnostic testing constituted reasonable and necessary medical treatment for Claimant's August 18, 2014 industrial injury. Accordingly, the preceding visits to the Northern Colorado Medical Center constituted authorized, reasonable and necessary treatment to cure or relieve the effects of Claimant's industrial injury.

13. Claimant has failed to demonstrate that it is more probably true than not that the medical treatment she received on December 29, 2015 was authorized, reasonable and necessary to cure or relieve the effects of her industrial injury. Claimant explained that on December 29, 2015 she was experiencing pain and swelling in her left leg. Because she had concerns about a possible DVT, she sought an emergency evaluation. Claimant underwent a left lower extremity study at Advanced Medical Imaging. However, Dr. Smith explained that the December 29, 2015 treatment was not authorized, reasonable or related to Claimant's work-related lower back injury. She specifically noted that neither she nor Dr. Caton referred Claimant for treatment of a DVT on December 29, 2015. Accordingly, Claimant's request for Respondent to cover the costs associated with the December 29, 2015 visit to Advanced Medical Imaging is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment

modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the insurer will compensate the provider. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those to whom the employer directly refers the claimant and those to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Suetrack USA v. Industrial Claim Appeals Office,* 902 P.2d 854 (Colo. App. 1995).

6. Medical services provided in an emergency constitute an exception to the requirement for prior authorization. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). A medical emergency affords an injured worker the right to obtain immediate treatment without undergoing the delay inherent in notifying the employer and obtaining a referral or approval. *Gant v. Etcetra,* W.C. No. 4-586-030 (ICAP, Sept. 17, 2004). The "emergency doctrine" mandates the existence of an emergency requiring treatment. *Pope v. Willow Creek Care Center*, W.C. No. 4-779-335 (ICAP, Oct. 27, 2010). However, there is no precise legal test for determining the existence of a medical emergency. *Gant v. Etcetra,* W.C. No. 4-586-030 (ICAP, Sept. 17, 2004). The question of whether an emergency exists is one of fact and is dependent on the circumstances of the particular case. *Hoffman v. Wal-Mart Stores, Inc.*, W.C. No. 4-774-720 (ICAP, Jan. 12, 2010).

7. As found, Claimant has demonstrated by a preponderance of the evidence that the medical treatment she received on June 18, 2015, November 2, 2015 and December 23, 2015 was authorized, reasonable and necessary to cure or relieve the effects of her industrial injury. Claimant credibly testified that on June 18, 2015 she was experiencing pain and swelling in her left leg as a result of decreased activity. Because she had concerns about a possible DVT, she contacted Dr. Caton for medical advice. Dr. Caton referred Claimant for a "STAT" ultrasound of the left lower extremity due to noted woody pitting edema, limited activity and prior history of DVTs. Claimant visited the Northern Colorado Medical Center for an evaluation. Physicians conducted an ultrasound of her left leg. Dr. Smith persuasively agreed that the June 18, 2015 ultrasound constituted authorized, reasonable and necessary medical treatment for Claimant's August 18, 2014 industrial injury. In contrast, Dr. Fall concluded that the June 18, 2015 ultrasound of Claimant's left lower extremity was not reasonable, necessary or related to her August 18, 2014 industrial lower back injury. Dr. Fall specifically reasoned that the swelling in the left lower leg was not related to Claimant's work-related lumbar spine condition. Moreover, the ultrasound was ordered to rule out a DVT that Claimant had previously experienced. However, despite Dr. Fall's opinion, the medical records, persuasive opinion of Dr. Smith and credible testimony of Claimant

reflect that the June 18, 2015 ultrasound constituted authorized, reasonable and necessary medical treatment to cure or relieve the effects of Claimant’s August 18, 2014 industrial injury.

8. As found, Claimant credibly testified that on November 2, 2015 she was experiencing extreme left leg pain. She contacted the Banner Occupational Health Clinic and learned that the office lacked medications to adequately treat her pain. Claimant was thus directed to the Northern Colorado Medical Center for treatment. She underwent three MRIs of her spinal cord and received medications. Claimant also credibly testified that on December 23, 2015 she was suffering extreme left leg pain. She again contacted the Banner Occupational Health Clinic and learned that the office lacked medication to adequately treat her symptoms. Claimant was thus directed to the Northern Colorado Medical Center for treatment. She received prescription drug medications for her pain. Dr. Smith confirmed that her office authorized the November 2, 2015 and December 23, 2015 emergency room visits. Furthermore, Dr. Smith agreed that the prescriptions and diagnostic testing constituted reasonable and necessary medical treatment for Claimant’s August 18, 2014 industrial injury. Accordingly, the preceding visits to the Northern Colorado Medical Center constituted authorized, reasonable and necessary treatment to cure or relieve the effects of Claimant’s industrial injury.

9. As found, Claimant has failed to demonstrate by a preponderance of the evidence that the medical treatment she received on December 29, 2015 was authorized, reasonable and necessary to cure or relieve the effects of her industrial injury. Claimant explained that on December 29, 2015 she was experiencing pain and swelling in her left leg. Because she had concerns about a possible DVT, she sought an emergency evaluation. Claimant underwent a left lower extremity study at Advanced Medical Imaging. However, Dr. Smith explained that the December 29, 2015 treatment was not authorized, reasonable or related to Claimant’s work-related lower back injury. She specifically noted that neither she nor Dr. Caton referred Claimant for treatment of a DVT on December 29, 2015. Accordingly, Claimant’s request for Respondent to cover the costs associated with the December 29, 2015 visit to Advanced Medical Imaging is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondent is financially responsible for Claimant’s emergency medical treatment at the Northern Colorado Medical Center on June 18, 2015, November 2, 2015 and December 23, 2015.

2. Claimant’s request for Respondent to cover the costs associated with the December 29, 2015 visit to Advanced Medical Imaging is denied and dismissed.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

The issue to be determined by this decision is whether the claimant proved by a preponderance of the evidence that the surgery performed by Roger Sung, M.D. on October 26, 2015, was reasonable, necessary, and causally related to the industrial injury of March 4, 2015.

FINDINGS OF FACT

1. On March 4, 2015, the claimant was driving the respondent-employer's van when he was struck from behind by a truck as he slowed for a red light. The claimant unbuckled his seat belt and got out of the van to call 911.

2. An American Medical Response ambulance and medics responded to the accident scene and found the claimant walking around outside the van. The claimant reported that he had been traveling approximately 5 mph when he was hit from behind and that he was having right sided neck and shoulder pain. The claimant was asked by medics whether he had sustained any loss of consciousness or was having back pain and he denied these symptoms.

3. The claimant requested to be taken to the Emergency Department at St. Mary Corwin Hospital. Upon his arrival at St. Mary Corwin, the claimant told the attending medical personnel he had been rear-ended at a low rate of speed and that his van was still drivable. He denied hitting his head, losing consciousness or a change in his mental status. The claimant reported having neck pain, and chronic lumbosacral back pain with radiating right leg discomfort that was consistent with his longstanding lumbar radiculopathy. The claimant also reported having paresthesias of both feet that was consistent with his chronic back pain and lumbar radiculopathy.

4. A CT scan of the claimant's cervical and lumbosacral spine showed degenerative changes without acute pathology. The claimant was diagnosed with a cervical strain and an acute exacerbation of his chronic lumbar radiculopathy and discharged from the Emergency Department.

5. The claimant has a long history of low back pain and lumbar radiculopathy which began many years before his March 4, 2015 motor vehicle accident.

6. In April 2000, the claimant started treatment with Dr. Timothy Sandell for various symptoms which the claimant said were related to a July 22, 1999 motor vehicle accident. These symptoms included low back pain that radiated into his right lower extremity. After reviewing the claimant's MRI films, Dr. Sandell's impression was the claimant's low back pain was associated with a L5-S1 disc herniation and right S1 radiculopathy.

7. Dr. Sandell treated the claimant for persistent low back pain and right sided lumbar radiculopathy from April 2000 to July 2009. Dr. Sandell prescribed the claimant Celebrex to address his pain symptoms. During this period, the frequency of the claimant's treatments with Dr. Sandell varied from month-to-month to once per year, depending on the claimant's ability to tolerate his pain.

8. In August 2010, the claimant established a new primary care physician at Southern Colorado Family Medicine, and advised his doctor that he was still having pain from the motor vehicle accident in 1999. At his next visit in December 2010, the claimant clarified that he was having chronic low back pain from the motor vehicle accident and that he had been taking Celebrex to control those symptoms.

9. On July 9, 2012, the claimant was involved in a motor vehicle accident which was very similar to the accident in the present case. In that accident, the claimant was rear ended by a citizen in a personal pickup truck as he stopped for a red light while driving an employer's van. The claimant was taken to Parkview Medical Center Emergency Room, where he complained of neck, right shoulder, and upper and lower back pain. He was diagnosed with cervical, thoracic and lumbar strains and discharged.

10. The claimant did not seek additional medical treatment following the July 9, 2012 injury until October 3, 2012, when he presented to Dr. Douglas Bradley at Emergicare. Dr. Bradley was the authorized treating provider the claimant selected from the list of providers given to him by the respondent-employer following the July 9, 2012 motor vehicle accident. At this first visit with Dr. Bradley, the claimant advised he was having low back pain and that he initially had had pain down both legs but was currently only having pain down his right leg and into his toes.

11. The claimant's treatment with Dr. Bradley remained conservative and Dr. Bradley ultimately placed the claimant at maximum medical improvement (MMI) on December 13, 2012, with no permanent impairment and no restrictions. The records

from that closing visit contain a pain diagram in which the claimant indicated he had continued low back pain that radiated into his right foot.

12. In his December 13, 2012 MMI report, Dr. Bradley recommended the claimant continue taking Celebrex for one year and Methocarbamol for six months. However, his records were not clear regarding the work relatedness of those medications. The claim adjuster drafted a letter to Dr. Bradley and requested clarification as to whether the need for those medications was related to the July 9, 2012 work injury, given that the claimant had a long history of taking Celebrex prior to the injury. On May 31, 2013, Dr. Bradley responded to the adjuster's letter and indicated that the need for the medications was no longer related to the work injury.

13. The claimant objected to Dr. Bradley's MMI report and pursued a Division IME. Dr. Miguel Castrejon was ultimately selected to perform the DIME and did so on December 10, 2013. At the exam with Dr. Castrejon, the claimant complained of neck, low back and sacral pain, and also of pain and numbness extending down his right leg and into his foot. The claimant told Dr. Castrejon that at times his leg pain was worse than his back pain.

14. After reviewing the claimant's medical records and imaging studies, Dr. Castrejon opined the claimant had severe degenerative disc and joint disease that would follow a natural progressive course, and that in all medical probability, the claimant's symptoms were the result of a natural progression of this condition that would require medical care though not on a Work Comp basis.

15. Dr. Castrejon further opined it was medically reasonable to conclude the claimant, at the completion of care with Dr. Bradley, had reached a baseline preinjury status with symptoms thereafter being consistent with his pre-existing moderate-to-severe- degenerative spinal condition as well as the chronic back pain subsequent to the motor vehicle accident of 1999. Dr. Castrejon agreed with Dr. Bradley's December 13, 2012 MMI date and that the claimant required no impairment rating, no work restrictions and no maintenance care related to his work injury.

16. The respondents filed a Final Admission of Liability based on Dr. Castrejon's DIME report. The claimant did not object to the Final Admission of Liability and the claim was closed.

17. Following the closure of his 2012 Workers' Compensation claim, the claimant continued to treat with Southern Colorado Family Medicine for his low back pain and right sided lumbar radiculopathy. In August 2013, the claimant told his doctor

at Southern Colorado Family Medicine his low back pain was severe to his tailbone and he had sciatica running down his right leg and into his right foot.

18. In November 2013, the claimant was evaluated at Parkview Neurosurgical Services by neurosurgeon Dr. Raymond Lilly for neck and back pain, and right leg numbness and weakness. The claimant reported his symptoms began in July 2012, following a motor vehicle accident and continued to get worse. The claimant filled out a pain diagram and indicated pain in the middle of his low back that radiated down his right leg and into his foot. Dr. Lilly assessed claimant with lumbar stenosis and recommended surgery to resolve his symptoms

19. In May 2014, the claimant told his doctor at Southern Colorado Family Medicine that Dr. Lilly had recommended surgery from L4-L6 but he did not want surgery and wanted to pursue other pain relieving modalities.

20. In June 2014, the claimant's doctor noted the claimant had continued pain at L4-L5 and that the claimant had reported his legs would go numb, and his pain and numbness were progressing. Based on these complaints, the claimant was referred for an "URGENT" neurosurgery consult.

21. The claimant underwent a lumbar MRI on August 26, 2014. The radiologist's impression was that there were advanced age-related changes at every level, and most significant at L4-L5 where there was severe spinal canal stenosis and moderate foraminal stenosis. There was a mild broad posterior disc bulge at L3-L4 which combined with facet degeneration and resulted in mild spinal canal stenosis and moderate foraminal stenosis.

22. The claimant returned to Parkview Neurological Services in August 2014, and was evaluated by Dr. Lilly's Physician Assistant, Boyd Larson. The claimant filled out a new pain diagram and complained of bilateral low back pain that radiated down both legs and told PA Larson his pain had worsened over the last 5 months. The claimant also reported constant, severe, numbness in his lower legs and feet bilaterally. PA Boyd again discussed surgery with the claimant and the claimant advised he did not want to pursue surgery at that time. PA Boyd advised the claimant that a delay in surgery could result in permanent nerve damage. The claimant was referred for a lumbar epidural steroid injection with Dr. Douglas Hess.

23. In November 2014, the claimant changed his primary care to Centura Family Care Center. He told Dr. Wendy Richmond he had seen neurosurgeon Dr. Lilly and did not want surgery. The claimant also told Dr. Richmond he had had numerous

falls due to numbness in his bilateral lower extremities. Dr. Richmond assessed the claimant with spinal stenosis of lumbar spine with neurogenic claudication.

24. Dr. Hess administered L4-L5 epidural steroid injections in October, November and December, 2014.

25. The claimant was then involved in the March 4, 2015 accident, which is the subject of this claim. After leaving the Emergency Department, the claimant did not seek treatment for his low back and right side lumbar radiculopathy for a number of months. He eventually returned to Dr. Hess who administered additional L4-L5 epidural steroid injections in June and July, 2015. These injections were at the same level, L4-L5, as the injections administered by Dr. Hess prior to the March 4, 2015 injury.

26. The claimant returned to Dr. Sandell on July 14, 2015, and reported that since their last meeting in 2009 he had been in motor vehicle accidents in 2012 and 2015. He complained of continued low back pain with radiation and numbness into the right lower extremity. Dr. Sandell requested an updated lumbar MRI.

27. An MRI of the claimant's lumbar spine was taken on July 24, 2015 and compared to the August 26, 2014 lumbar MRI. The radiologist noted there was no significant change in the degree of advanced multilevel lumbar spondylitic disease.

28. The claimant returned to Dr. Sandell in August 2015 to review his updated lumbar MRI. Dr. Sandell opined that the new MRI showed severe spinal stenosis at L4-L5 as well as advanced foraminal stenosis on the right at L3-L4, bilateral L4-L5 and bilateral L5-S1. Dr. Sandell referred the claimant to Dr. Roger Sung for surgical evaluation.

29. The claimant presented to Dr. Sung for evaluation on September 24, 2015. In his paperwork, the claimant filled out a pain diagram which was virtually identical to the pain diagram he filled out for Dr. Lilly in August 2014. The claimant told Dr. Sung he had had a multi-year history of low back and right leg pain beginning with an automobile accident in July 2012. The claimant told Dr. Sung his pain from this accident had completely resolved by December 2014, but his symptoms came back after he was in another motor vehicle accident in March 2015. Dr. Sung recommended a L3-S1 decompression and fusion to address claimant's symptoms. Dr. Sung performed this surgery on October 26, 2015.

30. The claimant took the evidentiary deposition of Dr. Sung on March 2, 2016. At the deposition, Dr. Sung reviewed the MRI reports from the claimant's August 26, 2014 and July 24, 2015 lumbar MRIs. Dr. Sung testified the difference between the

two MRIs was the July 24, 2015 lumbar MRI showed a L3-L4 disc herniation that had not been present on the earlier MRI. Dr. Sung testified the most important finding on the July 24, 2015 MRI was the severe spinal stenosis at L4-L5.

31. Dr. Sung testified the claimant told him he had a motor vehicle accident in July 2012, but that his pain had completely resolved by December, 2014. Dr. Sung testified he did not review any medical records aside from the claimant's imaging studies and had limited knowledge of the claimant's medical history aside from what was provided by the claimant.

32. Dr. Sung opined the claimant's March 4, 2015 motor vehicle accident increased his symptoms and caused the need for surgery. Dr. Sung testified that in coming to this conclusion, he relied only on the medical history given by the claimant because his job as a surgeon was to fix the claimant's symptoms instead of questioning what caused them. Dr. Sung agreed the claimant's symptoms could be from the natural progression of a degenerative condition, but he ultimately made his decision based on medical history provided by the claimant.

33. The ALJ finds the persuasiveness of Dr. Sung's opinions are undermined by his limited review and understanding of the claimant's complex medical history. Dr. Sung's opinion regarding the relatedness of surgery was based on an incomplete medical history provided to Dr. Sung by the claimant. Dr. Sung was not aware the claimant's low back pain and lumbar radiculopathy dated back to a 1999 motor vehicle accident.

34. The claimant testified at hearing that he had immediate head, neck and low back pain following the March 4, 2015 accident and that he told the American Medical Response medics he was having these symptoms when they arrived at the scene of the motor vehicle accident.

35. The claimant testified at hearing that his low back pain and right sided lumbar radiculopathy from the 1999 motor vehicle accident had fully resolved, and he had been 85% improved from the July 2012 motor vehicle at the time of the March 4, 2015 motor vehicle accident.

36. The claimant testified that after being placed at MMI by Dr. Bradley in December 2013, he received no medical treatment until July 2014. On cross examination the claimant's extensive medical history between December 2013, and July 2014, was brought to his attention. The claimant testified that he had only been seeing

his primary care physician for low back pain and lumbar radiculopathy and did not consider this “treatment.”

37. The claimant testified that although the pain diagram he drew on August 12, 2014 for Dr. Lilly was virtually identical to the September 23, 2015 diagram he drew for Dr. Sung, they were actually different because he had been in extreme pain on September 23, 2015.

38. The claimant testified that although Dr. Lilly had recommended surgery in November 2013 to address his low back pain and right sided lumbar radiculopathy, the claimant did not think it was necessary and declined the surgery.

39. The ALJ finds that the claimant’s testimony is contradictory to the extensive medical record, is not credible or persuasive.

40. The respondents retained Dr. John McBride to review the claimant’s medical records, imaging studies, and deposition of Dr. Sung and then issue an opinion as to whether the surgery performed by Dr. Sung was reasonable, necessary and related to the March 4, 2015 motor vehicle accident. Dr. McBride conducted this records review and issued an initial report on March 26, 2016. Dr. McBride subsequently received discs containing the claimant’s imaging studies and issued an addendum report on April 6, 2016.

41. Dr. McBride testified it was clear that conservative treatment for the claimant’s stenosis and degenerative joint disease had failed prior to the March 4, 2015 motor vehicle accident. He testified to the significance that Dr. Hess’ numerous L4-L5 epidural steroid injections had failed to provide relief, the claimant was having numbness leading to falls, and that Dr. Lilly had recommended surgery, on two occasions, to relieve the claimant’s symptoms. Dr. McBride testified that it was factually significant the claimant’s August 12, 2014 and September 23, 2015 pain diagrams were identical and both showed 8 out of 10 pain, as it showed the claimant’s symptoms and pain level had remained the same.

42. Dr. McBride testified it was medically improbable the claimant would have been pain free from December 2014 until the time of his motor vehicle accident on March 4, 2015. In reaching this conclusion, Dr. McBride cited the claimant’s 15 year history of low back pain and lumbar radiculopathy. Dr. McBride testified he agreed with Dr. Castrejon that the progression of the claimant’s symptoms showed the advancement of the claimant’s degenerative disc and joint disease and it was predictable the claimant would require surgery to resolve his symptoms.

43. Dr. McBride testified it was important to review the claimant's full medical history showing low back pain and right side lumbar radiculopathy dating back to 1999, in reaching an accurate opinion regarding whether Dr. Sung's surgery was reasonable, necessary and related to the March 4, 2015 motor vehicle accident. Dr. McBride testified that in reviewing Dr. Sung's deposition it was evident Dr. Sung's opinion was based on a less than complete review of the claimant's medical history.

44. At hearing, Dr. McBride used two computer screens to view the claimant's August 25, 2014 and July 24, 2015 lumbar MRI images and conducted a side-by-side comparison for the parties and the ALJ. Dr. McBride testified that the MRI images showed the L3-L4 disc herniation from before, and after, the March 4, 2015 motor vehicle accident was virtually identical.

45. Dr. McBride testified the medical records and MRI images showed that the March 4, 2015 motor vehicle accident had not aggravated or accelerated the claimant's underlying condition.

46. Dr. McBride testified that while the surgery performed by Dr. Sung was reasonable and necessary it was not related to the March 4, 2015 motor vehicle accident. Instead, Dr. McBride testified that within a reasonable degree of medical probability the surgery was related to the claimant's failed treatment for the progression of spinal stenosis and degenerative joint disease.

47. The ALJ finds Dr. McBride's analyses and opinions to be credible and more persuasive than evidence to the contrary.

48. The ALJ finds that the claimant has established that it is more likely than not that the surgery performed by Dr. Sung on October 26, 2015 is reasonable and necessary in light of the claimant's medical condition.

49. The ALJ finds that the claimant has failed to establish that it is more likely than not that the surgery performed by Dr. Sung on October 26, 2015 is causally related to his industrial injury of March 4, 2015.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S.

2. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004).

3. The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A workers' compensation case is decided on its merits. § 8-43-201, C.R.S.

4. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claims Appeals Office,* 5 P.3d 385, 389 (Colo. App. 2000).

5. It is within the ALJ's purview as the finder of fact to determine the credibility of the witnesses and resolve conflicts in the evidence. *Metro Moving & Storage v. Gussert*, 914 P.2d 411 (Colo. App 1995).

6. When determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (1936).

7. In resolving inconsistencies the ALJ may credit all, part or none of an expert's testimony, and the ALJ's failure to cite an expert's opinion inherently reflects that the ALJ did not find it persuasive. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

8. Regardless of the filing of an admission for medical benefits or an order containing a general award of medical benefits, respondents retain the right to dispute liability for medical treatment on grounds that the treatment is not authorized or reasonably necessary. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Williams v. Indus. Comm'n*, 723 P.2d 749 (Colo. App. 1986). The filing of an admission does not prevent respondents from contesting whether a claimant is in need of any continued medical treatment as a result of the compensable injury. *Ford v. Regional Transp. Dist.*, W.C. No. 4-309-217 (I.C.A.O., Feb. 12, 2009). Respondents remain free to dispute the cause of the need for medical treatment, and respondents' election to do so does not shift the burden of proof away from the claimant. *See Snyder, supra*; *Velarde v. Sunland Construction*, W.C. No. 4-412-975 (I.C.A.O., Dec. 4, 2001).

This principle recognizes that even though an admission is filed, the claimant bears the burden of proof to establish the right to specific medical benefits, and the mere admission that an injury occurred and treatment is needed cannot be construed as a concession that all conditions and treatments which occur after the injury were caused by the injury. *Cf. HLJ Mgmt. Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990) (filing of admission does not vitiate respondents' right to litigate disputed issues on a prospective basis).

9. A claimant must prove a causal relationship between the work injury and the medical treatment for which he is seeking benefits. *Snyder,* 942 P.2d at 1339. Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1189 (Colo. App. 2002). The claimant shoulder this burden and must establish his entitlement to benefits by a preponderance of the evidence. *Snyder*, 942 P.2d at 1339. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is *more* probably true than not. *Page v. Clark*, 592 P.2d 792 (1979).

10. The ALJ concludes that Dr. McBride's analyses and opinions, concluding that the claimant's surgery of October 26, 2015 is not related to the industrial injury of March 4, 2015, are credible and more persuasive than evidence to the contrary.

11. As found, the claimant has failed to establish by a preponderance of the evidence that the need for the October 26, 2015, L3-S1 fusion performed by Dr. Roger Sung was causally related to the March 4, 2015 industrial injury.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

1. The claimant’s request for the authorization of, and payment for, the surgery conducted by Roger Sung, M.D. on October 26, 2015, is denied and dismissed.

2. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATE: June 27, 2016

Administrative Law Judge
Office of Administrative Courts
2864 S. Circle, Suite 810
Colorado Springs, CO 80906

PRELIMINARY MATTERS

1. This hearing was held based upon the respondent's Application for Hearing filed on December 21, 2015 requesting a hearing as follows:

> Respondent files this Application for Hearing to overcome the DIME report of Anjun {sic} Sharma M.D.'s opinion as to the permanent impairment rating of 16% {sic} scheduled impairment of the lower extremity. Dr. Sharma's opinion on this issue is clearly erroneous. See, 8-42-101(3.7), C.R.S.

2. The claimant filed a response to the Application for Hearing citing, *inter alia*, "Respondents {sic} attempt to overcome DIME as to impairment rating."

3. The claimant did not raise the issue of conversion of the scheduled rating to a whole person rating in the response to the Application for Hearing or at any time during or after the proceedings.

4. At the outset of the hearing the issues were framed such that it appeared that the respondent believed that the burden was their's to overcome the impairment rating of Dr. Sharma by clear and convincing evidence.

5. Subsequent to the proceedings, the ALJ discovered that the recording equipment had malfunctioned and there exists no discernible record of the hearing. The ALJ issued an Order on June 1, 2016 indicating that he would reproduce a substantial record of the hearing from his notes and submit that to the parties for comment and then subsequently would designate the substantial record of the proceedings.

6. On June 9, 2016 the ALJ issued an Order Transmitting Reconstruction of Hearing to the parties, providing the parties five working days to comment upon the reconstruction of the record.

7. On June 14, 2016 the claimant responded to the June 9, 2016 Order indicating that the claimant had no input concerning the reconstruction.

8. On June 15, 2016 the respondent filed their Notice Regarding Reconstruction of Hearing indicating that the respondent did not dispute the accuracy of the reconstructed hearing.

9. Additionally, in their Notice the respondent stated:

> Counsel would state that upon further review and legal research that it is the Claimant who has the burden of proof as to his entitlement to permanent partial disability benefits not awarded in the Final Admission of Liability dated July 31, 2015. Respondent does not bear the burden of proof to overcome the DIME as to the scheduled impairment rating.
>
> The increased burden of proof required by the DIME procedures is inapplicable to scheduled injuries. Section 8-42-107(8)(a), C.R.S. Therefore, the procedures which provide that the DIME findings must be overcome by clear and convincing evidence are applicable only to non-scheduled injuries.

10. In their post-hearing position statement filed on June 20, 2016 the claimant argues that the respondent has a clear and convincing burden of proof to establish that the 11% scheduled rating of Dr. Sharma is erroneous.

11. Consistent with their Notice the respondent argued in their post-hearing position statement that the claimant has the burden of establishing by a preponderance of the evidence that the 0% rating of the authorized treating physician, Dr. Merchant was incorrect and that the rating provided by Dr. Sharma was correct.

12. The ALJ finds and concludes that the truth lies somewhere in between.

13. After assessing the evidence and the arguments of counsel it is apparent to the ALJ that the respondent has the burden of establishing by a preponderance of the evidence that the rating of Dr. Sharma is incorrect and that the rating of Dr. Merchant is correct.

14. According to section 8-42-107.2(4)(c):

> Within twenty days after the date of the mailing of the division's notice that it has received the IME's report, the insurer or self-insured employer shall either file its admission of liability pursuant to section 8-43-203 or request a hearing before the division contesting one or more of the IME's findings or determinations contained in such report.

15. In the instant case the respondent chose to request a hearing to contest the IME's finding that the claimant suffered an 11% scheduled impairment. The ALJ agrees with the respondent's counsel that the heightened burden of proof of clear and convincing evidence is inapplicable to scheduled injuries; nonetheless, it is the respondent who is contesting the finding of the DIME and pursuant to section 8-42-

107.2(4)(c) they have the burden of proof. Thus, the burden is on the respondent to establish by a preponderance of the evidence that Dr. Sharma's impairment rating is incorrect and that the ATP's rating should prevail.

PRELIMINARY ORDER

Pursuant to the Order issued by the ALJ on June 9, 2016, after having received the input of counsel, the ALJ hereby designates the substantial record of proceedings as that found in the Reconstruction of Hearing transmitted to the parties on June 9, 2016.

ISSUES

Whether the respondent has overcome, by a preponderance of the evidence, the division independent medical examiner's opinion that the claimant has an 11% scheduled impairment.

FINDINGS OF FACT

1. The claimant works for the respondent-employer as a wildlife conservation biologist. He was a passenger in a motor vehicle involved in a T-bone accident on January 5, 2015. The vehicle in which he was riding was struck on the driver's side.

2. The claimant was treated that same day at emergency room at St. Mary Corwin Hospital for complaints of head pain, left-sided knee pain and pain in the back of his right shoulder. On physical exam it was noted claimant had a raised bump to the right side of his head. An examination of the extremities showed "no pitting edema noted, full ROM, no deformities, contender to palpation, peripheral pulses intact." The neurological examination showed claimant was alert and oriented x 3, cranial nerves grossly intact, normal gait, normal sensation, normal strength x4 extremities". The differential diagnosis was skull fracture, cervical strain, concussion. A CT of the head was negative. The primary impression was acute sprain or strain of cervical region, additional impression was contusion of face, scalp and neck. The claimant was released with Percocet, Robaxin and told to return if symptoms worsen.

3. X-rays of the left knee (4 views) were taken at St. Mary Corwin's on January 8, 2015. The results were normal. There were no fractures, no dislocations, no radiopaque foreign bodies and no significant arthritis.

4. The claimant underwent an MRI of the left knee on January 23, 2015. It showed bone contusion vs. micro-fracture, small joint effusion, mild tendinosis of the proximal patellar tendon without tear, strain of the ACL without tear, Grade 1 strain of the MCL and no meniscal tears.

5. The claimant came under the care of Paul Merchant, M.D who diagnosed him with a contusion of the knee with MCL strain per MRI.

6. Dr. Merchant prescribed physical therapy. The claimant's range of motion and strength improved with the therapy. By April 3, 2016 the claimant continued to complain of pain 4/10 30% of the time. On physical exam that day claimant's range of motion was full in flexion and extension. He was non-tender to palpation throughout the knee. He had normal strength in both extension and flexion. There is no ligamentous laxity in his knee. On that date Dr. Merchant advised the claimant to push himself to walk on uneven terrain to determine limitations.

7. The claimant reported to Dr. Merchant he continued to have pain as of April 27, 2016 20% of the time. The claimant reported he had decreased range of motion but the doctor reported that the claimant "is able to fully extend his knee." Dr. Merchant noted on physical examination that the left knee is "largely unremarkable". Based on the claimant's continued complaints of pain Dr. Merchant referred the claimant to Dr. Nakamura, an orthopedist, for evaluation.

8. The claimant was seen by Dr. Nakamura on June 11, 2015. Dr. Nakamura did not find it necessary to offer any treatment. He suggested that if the claimant didn't get better they could discuss various injections. None were offered at that time.

9. On June 16, 2015 the claimant saw Dr. Merchant who noted the claimant's pain was 1/10 approximately 10% of the pain. Examination of the knee showed the claimant's "range of motion is normal." The claimant was returned to full duty.

10. The claimant was seen by Dr. Nakamura on July 2, 2015. Dr. Nakamura stated that the claimant has a bone contusion and that he continues to get better and has "no major complaints." The claimant reported he continues to do better all the time. He has a little bit of pain on long walks and deep squatting but the rest of his everyday activities are essentially non-painful.

11. On physical examination Dr. Nakamura noted “he has intact flexion, extension, Lachman firm endpoint. Anterior and posterior drawer firm endpoint.”

12. The claimant was put at MMI by Dr. Merchant on July 8, 2015. At that time the claimant reported to Dr. Merchant that he has intermittent 2/10 pain “only with certain movements such as getting down on hands and knees. Otherwise he is able to perform his activities of daily living and work without difficulty.” Dr. Merchant reported that the claimant concurs that he has reached maximum medical improvement and desires to be discharged from further care at this time. Dr. Merchant performed a physical examination of the claimant. Dr. Merchant reported among other things that “pain on motion is not present. Pain to palpation is not present…. Swelling is not present. Range of motion is normal. Strength is normal.” Dr. Merchant also reported that the claimant is “able to move with no difficulty.” Dr. Merchant released the claimant to return to work with no restrictions and assigned no permanent impairment.

13. The respondent filed a Final Admission of Liability dated July 31, 2015 admitting to, *inter alia*, the 0% impairment rating from Dr. Merchant. The claimant objected to the FAL and requested a Division IME. Upon receipt of the DIME report, the respondent filed an Application for Hearing dated December 21, 2015 as to the issue of permanent partial disability benefits and the opinions of DIME Dr. Sharma. The claimant filed a Response to Application for Hearing raising the issues of permanent partial disability benefits, medical benefits and disfigurement. (The issues of medical benefits and disfigurement were withdrawn by the claimant prior to hearing).

14. Anjmun Sharma, M.D. performed the DIME on November 12, 2015. Dr. Sharma was provided the medical reports from St. Mary Corwin, Dr. Merchant and Dr. Nakamura.

15. Dr. Sharma performed a physical examination of the claimant. On physical examination the doctor checked claimant’s ACL, PCL, the medial lateral meniscus and the lateral and medial collateral ligaments, “which were all intact.” Dr. Sharma reported ‘the knee is quite stable. The injured worker reported he had no pain.”

16. Dr. Sharma measured the claimant’s range of motion of the left leg with a goniometer. He determined the claimant has 123 degrees of flexion. Dr. Sharma then assigned 11% range of motion impairment to the claimant.

17. Dr. Sharma testified in his deposition that the claimant’s injury was a contusion to the knee. After treatment the claimant could perform all of his activities of

daily living and was able to walk without difficulty Dr. Sharma testified the claimant's x-rays were normal.

18. Dr. Sharma stated in his report that the claimant's MRI was "completely clean." He also reported that the claimant "did not have any significant findings on his MRI that would account for his current ongoing symptoms."

19. Dr. Sharma testified in his deposition that the MRI did not show anything abnormal. Dr. Sharma testified that the claimant's diagnosis of knee contusion/knee sprain implies this is a relatively mild injury.

20. Upon physical examination by Dr. Sharma reported the claimant was "non-tender to palpation." The claimant had "excellent range of motion." Dr. Sharma confirmed these findings in his deposition.

21. Dr. Sharma reported that the claimant had no pain on physical examination.

22. Dr. Sharma found no atrophy of the quad muscle, thus, indicating the claimant is bending his knee and is using his knee. The lack of quad atrophy indicated to Dr. Sharma that the knee was being used and couldn't have been causing that much pain if it was being used.

23. There was also no evidence of swelling which told Dr. Sharma there were no lingering symptoms from the initial injury. The claimant's skin, hair reflexes and strength were all normal as well.

24. Dr. Sharma also tested the claimant's medial collateral, myocollateral ligaments, the ACL ligaments, the posterior drawer, and the lateral collateral ligament. He did not find any signs of internal derangement or pathology in the knee.

25. Dr. Sharma did not find any objective findings of injury to any of the knee ligaments on physical examination.

26. The claimant did not complain of pain during the physical examination. None of the provocative testing caused him pain.

27. According to Dr. Sharma the claimant's physical examination was completely normal. Dr. Sharma agreed there is no objective evidence of injury to the claimant's knee. Dr. Sharma agrees that the diagnostic tests showed no objective evidence of injury.

28. Dr. Sharma testified the claimant did not have an injury or evidence of injury which would entitle him to a rating under Table 40 of the AMA Guides Third Ed. Rev'd.

29. Even if claimant had complained of pain at the time of the examination, Dr. Sharma testified that "we don't rate pain in the State of Colorado." The claimant did not have a specific disorder of the knee at the time of Dr. Sharma's rating. Although Dr. Sharma found that the claimant had 123 degrees of motion in his left knee, he opined that it is possible that was the claimant's normal or baseline measurement.

30. The claimant did not have any specific disorder of the knee at the time of the DIME according to Dr. Sharma.

31. Dr. Sharma agrees that there is no anatomic or physiologic finding to explain the decreased range of motion. The claimant has no findings on physical examination which could explain the loss of range of motion.

32. Dr. Sharma admitted that can't relate the claimant's loss of range of motion on exam to the on the job injury. Dr. Sharma does not know why claimant has a decrease in range of motion. Since the claimant wasn't in any pain at the time of the exam, pain could not have been restricting his ability to give full range of motion.

33. Dr. Sharma testified that to a reasonable degree of medical probability he could not say that the claimant's loss of range of motion is related to his work injury.

34. Dr. Allison Fall performed a records review at the request of the respondent. Dr. Fall is a physician who specializes in the field of physical medicine and rehabilitation. This involves the diagnosis and treatment of musculoskeletal and neurological disorders with the focus on returning patients back to the highest level of function. Dr. Fall is an active practitioner who has been level II accredited for the past 18 years.

35. Dr. Fall explained that the claimant had a contusion and strain of the left knee. A strain is the overstretching of a ligament or tendon. With the mild type of strain the claimant had on MRI one would expect that that type of injury would heal with time, generally over the course of three or so months.

36. Dr. Fall opined that Dr. Sharma's assignment of 11% impairment is erroneous because he did not provide a specific diagnosis for an injury that would lead to impairment. The second reason the opinion is erroneous is that Dr. Sharma does not find the loss is related to the work injury. Dr. Sharma left out a step. It is not sufficient to

simply measure a body part. Dr. Sharma must measure only impairment that is directly a result of the work-related injury.

37. Dr. Fall opined that since Dr. Sharma testified in his deposition that he could not relate this loss of range of motion to the motor vehicle accident, it was clearly erroneous for him to assign an impairment rating. Because the rating must be related to the date of injury listed on the summary sheet so that is the impairment being calculated.

38. According to Dr. Fall, even if the claimant has ongoing pain as he testified to at the hearing, this would not justify a loss of range of motion impairment because pain is a subjective complaint and there has to be correlating medical objective findings to warrant a permanent impairment. There has to be objective findings, something that can be evaluated and measured.

39. Dr. Merchant did not assign any permanent work restrictions at the time of MMI. Dr. Sharma did not assign any permanent work restrictions. Dr. Nakamura did not assign any permanent work restrictions.

40. Dr. Fall testified the accurate impairment rating for the claimant is 0% impairment. This is consistent with Dr. Merchant's rating of 0%.

41. The ALJ finds the analyses and opinions of Dr. Merchant and Dr. Fall to be credible and more persuasive than that of Dr. Sharma.

42. The ALJ finds that it is more likely than not that the claimant's impairment rating is 0% as found by Dr. Merchant.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S.

2. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004).

3. The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A workers' compensation case is decided on its merits. § 8-43-201, C.R.S.

4. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claims Appeals Office,* 5 P.3d 385, 389 (Colo. App. 2000).

5. It is within the ALJ’s purview as the finder of fact to determine the credibility of the witnesses and resolve conflicts in the evidence. *Metro Moving & Storage v. Gussert*, 914 P.2d 411 (Colo. App 1995).

6. When determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (1936).

7. In resolving inconsistencies the ALJ may credit all, part or none of an expert's testimony, and the ALJ's failure to cite an expert's opinion inherently reflects that the ALJ did not find it persuasive. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

8. According to section 8-42-107.2(4)(c):

> Within twenty days after the date of the mailing of the division’s notice that it has received the IME’s report, the insurer or self-insured employer shall either file its admission of liability pursuant to section 8-43-203 or request a hearing before the division contesting one or more of the IME’s findings or determinations contained in such report.

9. Subsequent to the receipt of the DIME report the respondent chose to contest one of the DIME findings, that being the lower extremity impairment rating of 11%, which is found on the schedule of impairments under section 8-42-107(2).

10. The increased burden of proof required by the DIME procedures is inapplicable to scheduled injuries. Section 8-42-107(8)(a), C.R.S. states that "[w]hen an injury results in permanent medical impairment not set forth in the schedule in

subsection (2) of this section, the employee shall be limited to medical impairment benefits calculated as provided in this subsection (8)." Therefore, the procedures set forth in § 8-42-107(8)(c), C.R.S., which provide that the DIME findings must be overcome by clear and convincing evidence, are applicable only to non-scheduled injuries. The court of appeals has stated in this respect that: scheduled and non-scheduled impairments are treated differently under the Act for purposes of determining permanent disability benefits. In particular, the procedures of § 8-42-107(8)(c), which states that a DIME finding as to permanent impairment can be overcome only by clear and convincing evidence and that such finding is a prerequisite to a hearing on permanent impairment, have been recognized as applying only to non-scheduled impairments. See *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998). *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000).

11. When an impairment is subject to a scheduled award pursuant to Section 8-42-107(2), C.R.S. the clear and convincing burden of proof standard does not apply and the usual preponderance of the evidence burden of proof applies. *Burciaga v. AMB Janitorial Services, Inc*. W.C. No. 4-777-882(November 5, 2010) citing *Egan v. Industrial Claim Appeals Office*, 971 P. 3d. 691, (Colo. App. 2000).

12. In this case, the ALJ concludes that Dr. Merchant correctly assessed a 0% impairment rating based on a lack of ratable condition and no loss of range of motion. Dr. Merchant and Dr. Nakamura both found on numerous examinations that the claimant's range of motion was full and he had no objective or physiologic evidence of injury. Dr. Sharma also found the claimant's physical examination was normal and that there was no objective evidence of an injury at the time of the DIME examination. Therefore there is no ratable impairment for a specific disorder.

13. Dr. Sharma admitted that although he found a loss of range of movement in the knee, he could not attribute that loss to the work injury. Dr. Sharma agreed there was no physiologic correlation and no anatomic correlation to explain the claimant's purported loss of motion. Thus, Dr. Sharma's rating violates § 8-42-107(8) (c), C.R.S., which requires that a rating based on chronic pain must have an anatomic or physiologic correlation. Not only did Dr. Sharma admit there was no anatomic or physiologic correlation, he admitted there was no pain on examination. Therefore, there was not any basis to provide a rating at all since there was no underlying condition and no chronic pain.

14. Dr. Sharma could not say the loss was related to the injury nor could he say there was even a true loss of motion because he did not know what the claimant's baseline was.

15. The ALJ concludes that the analyses and opinions of Dr. Merchant and Dr. Fall are credible and more persuasive than that of Dr. Sharma.

16. The ALJ concludes that the respondent has established by a preponderance of the evidence that the claimant's lower extremity impairment rating is 0% as found by Dr. Merchant.

ORDER

It is therefore ordered that:

1. The respondent is not responsible for the payment of permanent partial disability payments to the claimant as the claimant has a 0% impairment.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATE: June 28, 2016

Donald E. Walsh
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle, Suite 810
Colorado Springs, CO 80906

ISSUES

The issues presented for determination involve compensability and Claimant's entitlement to medical and indemnity benefits. The questions to be answered are:

I. Whether Claimant established, by a preponderance of the evidence, that he sustained a compensable injury to his right shoulder on June 24, 2015.

II. If Claimant sustained a compensable right shoulder injury, whether he established, by a preponderance of the evidence that he is entitled to all reasonable, necessary and related medical treatment concerning the right shoulder, including treatment obtained through Concentra Medical Centers and their provider's referrals.

III. If Claimant sustained a compensable right shoulder injury, whether he is entitled to TTD benefits beginning June 27, 2015 and continuing through January 12, 2016.

IV. Whether Claimant's average weekly wage (AWW) is $1,215.85 or some other figure.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Employer operates a factory manufacturing clothing for the dance performance community. Claimant worked as a fabric cutter for Employer for approximately 13 years until he was laid off on June 24, 2015. He has worked in the industry cutting fabric for 31 years. He is 58 years old.

2. As a "cutter," Claimant retrieves specified rolls of fabric from the shelves of Employer's warehouse, transports it by push cart to a cutting table where he places the fabric roll horizontally on a "spreader" machine suspended above the cutting table. The fabric rolls vary in size and weight. According to Claimant, the rolls can be as wide as 60 inches and weigh upwards of 50 pounds.

3. Once the roll is on the spreader, Claimant pulls the end of the fabric from the roll down onto the cutting table and secures it with a weight. He then proceeds to lay down fabric in multiple layers on the cutting table by pushing the spreader from one end of the cutting table to the other and securing each pass with a similar weight. Once the fabric is laid out in layers, Claimant places a "marker" on the fabric, which contains an outline of the various pieces of a costume to be cut from the fabric and assembled into a complete outfit. As described, the "marker" acts as a pattern which Claimant traces with

a cutting machine to cut the pieces from the fabric to make the garment. He uses his right hand/arm for this task.

4. Claimant described the movements necessary to complete the job duties outlined above. According to Claimant, he repeatedly has to extend his arms above shoulder level to reach fabric on the upper shelves of the warehouse and while lifting fabric rolls onto the spreader machine. He also described the cutting table as being 14 yards long, requiring that he use his arms to push the fabric roll on the spreader back and forth to lay out the layers for eventual cutting. He also uses his right hand and arm to cut the fabric into various components which are later sewn together to make the outfit. Based upon the evidence presented, the ALJ finds that Claimant's job as a "cutter" requires substantial use of the upper extremities for lifting, pushing and pulling.

5. On June 24, 2015, while lifting a roll of fabric onto the spreader, Claimant suddenly developed pain in his right shoulder. In order to get a roll of fabric onto the spreader, a metal bar is placed into the end of a hollow tube around which the fabric is rolled. With the roll resting on his extended and locked right arm/elbow, Claimant than abducted and externally rotated his right arm while lifting upward to get the bar and fabric onto the spreader machine. He experienced sharp shoulder pain in the process of this movement.

6. Claimant's supervisor confirmed the accuracy of his testimony concerning the size and weight of the fabric rolls as well as the activities necessary to complete the job duties of a "cutter" for the company.

7. At the time of Claimant's injury, Employer was going through a mass lay off. Claimant was one of the employees to be laid off. Claimant admitted that he reported his injury after being told he was going to be laid off. In this regard, Claimant testified that he had no opportunity to report the injury before being informed that he was going to be laid off and further that the chance to report the injury after learning of his imminent layoff did not present itself until later during his shift. According to Claimant, he attempted to report his injury shortly after it happened but discovered his supervisor, Scott Mortensen talking to co-employees about being laid off when he attempted to do so. The ALJ understands from Claimant's testimony that after he learned he was going to be laid off, Claimant returned to work and that both he and Mr. Mortensen were busy throughout the balance of the work day precluding his contemporaneous report of injury. Nonetheless, when the occasion to report the injury presented itself later, Claimant reported his shoulder pain, albeit after he was informed of his pending lay off.

8. Mr. Mortensen testified that Claimant was told about his forthcoming lay off between 10:00 am and 12:00 pm the same day of his injury. Per Mr. Mortensen, Claimant did not say anything about being injured at the time he was told he was going to be laid off. Rather, Mr. Mortensen testified that Claimant came to him later in the day, after being informed that he was going to be laid off, to report that he had injured himself earlier during his shift. Mr. Mortensen testified that he was not sure how or when Claimant's injury occurred as there were no details provided by Claimant at the time he reported his injury. Given the circumstances and the timing surrounding the

report of injury in this case, Respondents suggest that Claimant fabricated his shoulder injury to secure a continued source of income under the worker's compensation system after being laid off.

9. Claimant was referred to Concentra Medical Centers following his report of injury. Claimant testified that he reported to the clinic and was told come back on June 26, 2015. Medical records submitted into evidence establish that Claimant was first evaluated by Physician's Assistant (PA) Jennifer Ziegler at Concentra on June 26, 2015, for a "sore right shoulder." According to PA Ziegler, Claimant reported that he had "right shoulder pain when he lifts." Claimant noted that he had "been lifting and doing the same thing for 25 years- states that he cuts fabric, lifts rolls of fabric- states they are about 45 pounds." Claimant further stated that his "pain is mostly when he lifts and has been going on for a while. Physical examination of the revealed "normal range of motion in the right shoulder, 4+/5 rotator cuff strength . . . normal grip strength." Claimant did not demonstrate tenderness upon palpation. There is no indication in PA Ziegler's note that she preformed diagnostic testing maneuvers during her physical examination of Claimant. Claimant was assessed with a strain of the shoulder, given a prescription for Ibuprofen 800 MG tablets and referred to physical therapy. He was also returned to work with restrictions of lifting 10 pounds constantly, up to 8 hours/day and pushing/pulling up to 20 pounds constantly, up to 8 hours/day. Claimant was precluded from overhead lifting.

10. After seeing PA Zeigler, Claimant proceeded to physical therapy where he was evaluated by Aaron Pieffer. Claimant reported a primary complaint of pain while lifting and externally rotating his arm. According to PT Pieffer's note, Claimant reported that his "shoulder has been getting worse after the last two weeks as he has been doing more lifting after a new company took over." Based upon the history provided by Claimant, PT Pieffer concluded that he presented with a "overuse injury of the right shoulder." Pt Pieffer preformed an infraspinatus muscle test and a test to assess the rotator cuff (empty can test), both tests were positive.

11. Claimant tendered the work restrictions imposed by PA Ziegler on June 26, 2015 to Employer. Employer did not extend a modified job to Claimant at that time. Rather, Claimant testified that he was laid off and that he applied for unemployment. Claimant was approved for unemployment insurance (UI) benefits; however, his benefits were held from July 7, 2015 through September 5, 2015 as he received severance pay which precluded his eligibility for UI benefits for the aforementioned time period. (Claimant's Hearing Exhibits, Tab 3, Bate Stamp page 70-71). Claimant received $7,500.00 in severance pay pursuant to a negotiated release and waiver agreement when he was laid off on June 24, 2015.[1] Consistent with the conclusion of the Unemployment Insurance Program, the ALJ finds that the $7,500.00 payment did not constitute remuneration for "wages." Claimant testified that he received $1050.00 in

[1] Although Claimant also received remuneration for his unused vacation time when he was laid off on June 24, 2015, it was determined that the "postponement for this payment would have been before the effective date of [the] claim" for UI benefits. Claimant actually received pay for his unused vacation time in his June 19, 2015 payroll check. Consequently the payment received for unused vacation did not "affect" Claimant's claim for unemployment benefits.

unemployment benefits every two weeks and that he received a final unemployment insurance benefit check in the amount of $500.00 in May 2016.

12. Approximately 3 months after his initial visit to Concentra, Claimant returned to Concentra for a follow-up on September 30, 2015. Claimant was evaluated by PA Shaun Lynch during this visit. PA Lynch noted that Claimant understood his case to be closed so there was a delay in follow-up care for the shoulder. During this visit, Claimant reported ongoing right shoulder pain when "picking up object" (sic). According to the report generated from Claimant's encounter on this visit, he complained of a "deep burning sensation" and feeling "needles" in the right shoulder when picking things up. Physical examination revealed crepitus and painful active right shoulder range of motion; however, special testing, including painful arc, Hawkins, Neer's and empty can testing were all negative. According to PA Lynch's note, Claimant's symptoms and examination were consistent with a "right shoulder strain" without impingement, rotator cuff tear or biceps tendonitis. Claimant was referred back to physical therapy and instructed to take Tylenol as needed.

13. Claimant periodically returned to Concentra and attended physical therapy for his right shoulder complaints between September 30, 2015 and January 13, 2016. During his visits to Concentra, Claimant contained to complain of pain and having "pins & needles sensations in the right shoulder.

14. Claimant also participated in physical therapy (PT) between October 7, 2015 and October 29, 2015. During his October 7, 2015 PT appointment, Claimant was once again evaluated by Aaron Pieffer who prepared a written report outlining the history of injury and his physical findings. During this visit, Claimant reported that "while at work [he] was lifting something heavy and heard a snap with pain in the right shoulder. Mr. Pieffer's note indicates that Claimant's "[w]ork involved a lot of heavy lifting and pushing continuously" and that "pain would come on about after a few hours of work and more often as time went on." Based upon the evidence presented, the ALJ is persuaded that Claimant reported work duties (lifting) which caused an acute onset of symptoms (trauma) to his right shoulder during his initial evaluation with PA Ziegler and later with PT Pieffer the same day. He likely reiterated this mechanism of injury to Mr. Pieffer on October 7, 2015, who documented it more closely to what Claimant reported on this date than on June 26, 2015. The evidence presented also persuades the ALJ that Claimant, in response to questioning by his providers, informed them of his repetitive job duties leading to confusion regarding the exact mechanism of injury and in the case of Mr. Pieffer, a conclusion that Claimant had suffered a "overuse injury" to the right shoulder.

15. On October 29, 2015, Claimant was evaluated by physical therapist Janine Rodriquez who documented a positive Hawkins-Kennedy test, a positive infraspinatus muscle test and a positive Lift off test. O'Brien's testing was negative.

16. On November 12, 2015, Claimant reported to Dr. David Hnida that PT was not helping. Consequently, Dr. Hnida ordered an MRI of the right shoulder.

17. MRI of the right shoulder was preformed November 25, 2015 for "acute posterolateral pain after lifting injury." Impressions based on the findings on the MRI included:

- Rotator cuff tendinopathy, particularly involving the supraspinatus, infraspinatus, and subscapularis, worse involving the supraspinatus.

- Tendinosis of the intra-articular portion of the long biceps with mild medial subluxation without evidence of partial- or full-thickness tearing.

- Moderate osteoarthritis of the acromioclavicular joint.

18. Claimant returned to Concentra on December 3, 2015. He was evaluated by PA Jocelyn Cavender who noted that Claimant's MRI had been performed, that Claimant wanted the results and that his right shoulder pain continued without change. PA Cavender discussed with Claimant the "possibility" of a steroid injection to "resolve" Claimant's tendonitis. Claimant deferred the injection, opting to "take some time to think about it and discuss with family."

19. Claimant was evaluated by Dr. Nicholas Kurz on January 13, 2016. During this encounter he complained of continued "intermittent positional discomfort with ER and abduction." From the evidence presented, the ALJ finds that "ER" likely means external rotation." Claimant described his pain as "dull and aching in nature." According to the note generated for this date of visit, Claimant's pain was 4/10 in intensity, non-radiating and positional. Exacerbating factors included: "shoulder movement and ER. Claimant was provided with a steroid injection and "reported good relief 15 minutes" afterwards. Claimant was returned to full, unrestricted duty on this date.

20. Insurer denied liability for the claim. Consequently, Dr. Kurz administratively closed Claimant's case, terminating further treatment on January 19, 2016.

21. Claimant was evaluated, at Respondents' request, by Dr. Jeffrey Wunder on April 29, 2016. Dr. Wunder found no signs of shoulder impingement upon examination. Following his independent medical examination (IME), Dr. Wunder opined that Claimant's pain was emanating from his right acromioclavicular (AC) joint, which MRI revealed was moderately arthritic. According to Dr. Wunder, the MRI also "showed some age-related thinning (i.e. tendinosis) of the rotator cuff" without other specific rotator cuff findings and without labral tearing, leading Dr. Wunder to conclude that Claimant did not sustain a work related injury. To the contrary, Dr. Wunder opined that Claimant's right shoulder symptoms were a consequence of degenerative age related changes that would have become symptomatic as a "result of any kind of physical activity."

22. Claimant sought an opinion from Dr. Timothy Hall who preformed an evaluation on May 12, 2016. Dr. Hall's physical examination revealed positive right shoulder impingement signs. Dr. Hall also noted that Claimant's right shoulder MRI

revealed moderate acromioclavicular osteoarthritis and tendinosis, in addition to tendinosis of the biceps tendon and degeneration of the glenoid labrum. Following his IME, Dr. Hall noted the following impressions: "1. Probable impingement syndrome, right shoulder; 2. AC joint osteoarthritis, likely symptomatic as well; 3. Bicipital tendinitis. Dr. Hall opined that Claimant's right shoulder symptoms were causally related to his work activities of June 24, 2015 and that while years of doing the type of work he was performing for Employer probably "set him up for the injury", there was a "particular maneuver that led to his present symptoms." The ALJ infers from Dr. Hall's written IME report that he attributes Claimant's current symptoms to lifting a roll of fabric onto the stretcher machine on June 24, 2015, as Claimant described.

23. Claimant has a history of prior injury to the right shoulder occurring 3-4 years ago. At that time, Claimant was getting a roll of fabric from a shelf in Employer's warehouse. Claimant had ascended a ladder to get the fabric when the ladder he was standing on slipped, causing him to reach for and hang from a shelf by his right arm until he was able to secure his footing on the ladder again. According to Claimant, he experienced pain in his right shoulder for approximately two months which pain resolved on its own without medical treatment other than over the counter medication.

24. Despite the changes noted on Claimant's right shoulder MRI, he testified that he had no right shoulder symptoms, other than those he experienced for two months, after hanging from a shelf as referenced above. According to Claimant, he did not know he had arthritis in his right shoulder because he "never felt anything" previously. Following careful inspection of the records submitted into evidence, the ALJ finds a dearth of evidence to suggest that Claimant's right shoulder ever required treatment prior to June 24, 2015.

25. Dr. Wunder testified consistently with his IME report reiterating his opinion that there were no acute findings on Claimant's MRI and that his pain was coming from his arthritic AC joint. Per Dr. Wunder, Claimant's AC joint arthritis was not caused by his work duties. To the contrary, Dr. Wunder testified that Claimant's arthritis was an age related condition characterized by changes caused by normal wear and tear over time. Citing that degenerative arthritis is progressive in nature, Dr. Wunder testified that Claimant would have developed pain in his AC joint whether he worked for Employer or not. Consequently, Dr. Wunder suggested that Claimant's work duties did not aggravate or accelerate his underlying arthritis to cause Claimant's symptoms of June 24, 2015. According to Dr. Wunder, pain associated with osteoarthritis can progress slowly or, as in Claimant's case, can come on suddenly.

26. Dr. Wunder testified that Claimant did not have bicipital tendonosis as opined by Dr. Hall based upon reports of pain only. According to Dr. Wunder, there is no support for a diagnosis of biceps tendonosis in the absence of objective physical testing, which Dr. Wunder testified Dr. Hall did not do. Per Dr. Wunder, outside of the degenerative changes documented in Claimant's AC joint, there was no other condition in the right shoulder likely to cause Claimant pain.

27. Dr. Wunder conceded that there were no medical records substantiating

treatment for the right shoulder prior to June 24, 2015 and that the post injection report from Dr. Kurz reflects that Claimant received relief from the steroid injection administered January 13, 2016.

28. The ALJ finds Claimant credible. His testimony that he had no symptoms in his right shoulder immediately prior to June 24, 2015 is borne out by the lack of medical records documenting any symptoms and/or treatment concerning the right shoulder in the days, weeks, months and years prior to June 24, 2015.

29. The ALJ credits the opinion of Dr. Hall's to find that lifting a roll of fabric from an abducted and externally rotated position with the right shoulder is likely to cause injury because the shoulder is in a compromised position at the outset of the maneuver. More probably than not, this awkward lifting pattern placed sufficient forces on the musculature and structural components of the arm and shoulder to cause Claimant's arthritic shoulder to become symptomatic. Simply put, the ALJ is convinced that lifting the fabric roll onto the spreader machine on June 24, 2015, probably aggravated a pre-existing, yet asymptomatic degenerative AC joint arthritis, causing Claimant's right shoulder pain. The contrary opinions of Dr. Wunder are unpursuasive.

30. Claimant has proven by a preponderance of the evidence that he sustained a compensable injury while lifting a roll of fabric onto a spreader machine on June 24, 2015.

31. Based upon the evidence presented, the ALJ finds Claimant's treatment through Concentra Health Centers between June 26, 2015 and January 13, 2016, including Claimant's physical therapy and steroid injection reasonably necessary to cure and relieve him from the effects of his compensable injury.

32. Wage records submitted into evidence extending from January 3, 2015, through the June 19, 2015 pay period establish that Claimant earned gross wages of $27,866.44 over 167 days.[2] Consequently, the ALJ calculates Claimant's average weekly wage to be $1,168.05 ($27,866.44 ÷ 167 days ×7 days/week= $1,168.05). The ALJ finds that this figure most closely approximates Claimant's wage loss and diminished earning capacity at the time of his June 24, 2015 compensable work related injury.

33. Although Claimant sought employment while collecting UI benefits, the ALJ Infers and finds from the evidence presented that he was unable to get work within his physical restrictions. As noted above, work restrictions were imposed on Claimant until January 13, 2016 when Dr. Kurz released him to "full work/activity." Consequently, Claimant asserts entitlement to temporary total disability from June 27, 2015, due to the

[2] Although Claimant received $7,500.00 in severance pay following the June 19, 2015 payroll period, the ALJ considers this a onetime payment for Claimant's separation from his employment due to his layoff. Consequently, the ALJ agrees with the conclusion of the Unemployment Insurance Program that such payment does not constitute wages. Accordingly, the undersigned ALJ has elected to calculate Claimant's average weekly wage based upon wages earned for the first full week in 2015 and extending through the last full week of work performed prior to Claimant's June 24, 2015 injury, a period of 167 days.

imposition of restrictions and the failure of Employer to extend modified duty, through January 12, 2016, as Claimant was released to full duty employment on January 13, 2016.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. The Claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-43-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo. App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo. App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, Dow Chemical Co. v. Industrial Claim Appeals Office, 843 P.2d 122 (Colo. App. 1992)(ALJ may credit one medical opinion to the exclusion of a contrary opinion). As found in this case, Claimant's testimony is credible and convincing. Moreover, the expert medical opinions of Dr. Hall regarding the cause of Claimant's symptoms are more persuasive than the contrary opinions of Drs. Wunder when the evidentiary record is considered in its totality.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific

Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

D. Under the Workers' Compensation Act, an employee is entitled to compensation where the injury is proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment. *Section 8-41-301(1), C.R.S.; Horodyskyj v. Karanian* 32 P.3d 470 (Colo. 2001). The phrases "arising out of "and "in the course of" are not synonymous and a claimant must meet both requirements. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). Thus, an injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). In this case, there is sufficient evidence to establish that Claimant's alleged injury occurred within the time and place limitation of his work as a cutter for Employer and during an activity connected with that position, namely lifting a roll of fabric onto the spreader machine. Consequently, the ALJ concludes that Claimant has met his burden to prove that his alleged injury occurred in the course and scope of his employment. Nonetheless, Claimant must still establish that his injury arose out of his employment related duties.

E. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. In this regard, there is no presumption that an injury which occurs in the course of a worker's employment also arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968); *see also, Industrial Commission v. London & Lancashire Indemnity Co.,* 135 Colo. 372, 311 P.2d 705 (1957) (*mere fact that the decedent fell to his death on the employer's premises did not give rise to presumption that the fall arose out of and in course of employment*). Rather, it is the Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. § 8-43-201, C.R.S. 2006; *Ramsdell v, Horn,* 781 P.2d 150 (Colo. App. 1989).

F. The determination of whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury is one of fact which the

ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). As found here, Claimant's work duties require almost constant use of the upper extremities to obtain and lift material on a spreader machine so as to lay out the fabric on a cutting table for eventual cutting and assembly into dance garments. Per the credible and convincing opinion of Dr. Hall, Claimant's job duties require him to engage the musculature and structures of the upper arm and shoulder to lift from a compromised position placing the shoulder at a heightened risk for injury. More probably than not, the awkward lifting patterns employed by Claimant to lift the fabric roll and spreader bar onto the spreader machine on June 24, 2015, aggravated his underlying, asymptomatic AC arthritis giving rise to his symptoms and need for treatment. Consequently, the ALJ concludes that a logical causal connection exists between Claimant's work duties and his current shoulder symptoms and need for treatment.

G. A pre-existing condition "does not disqualify a claimant from receiving worker's compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). To the contrary, a claimant may be compensated if his or her employment "aggravates, accelerates, or "combines with" a pre-existing infirmity or disease "to produce the disability and/or the need for treatment for which workers' compensation is sought". *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo. App. 1981). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities and not the underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940). Here, the persuasive evidence demonstrates that Claimant sought treatment for his shoulder pain and other symptoms caused by a specific activity, i.e. lifting the fabric roll and spreader bar to the spreader machine from abducted and externally rotated position. Although Claimant has significant pre-existing degenerative changes in the right shoulder, confirmed by MRI, the ALJ finds no evidence to establish that Claimant's pre-existing condition was symptomatic or disabling immediately prior to June 24, 2015. Moreover the persuasive opinion of Dr. Hall establishes that the awkward lifting pattern required to get the fabric roll onto the spreader machine likely placed Claimant's diseased shoulder in a compromised position aggravating his pre-existing osteoarthritis giving rise to his symptoms and his subsequent need for treatment. Accordingly, the ALJ concludes that Claimant has proven, by a preponderance of the evidence that his injury is compensable.

Medical Benefits

H. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797

P.2d 777 (Colo. App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970)*;* § 8-41-301(1)(c), C.R.S. Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, *supra*. Contending that Claimant's current symptoms represent the natural progression of a preexisting, non-industrial condition that would have become symptomatic, whether Claimant worked for Employer or not, Respondents urge the ALJ to conclude that Claimant's treatment at Concentra is unrelated to his work duties for Employer. As found, Respondents' implication is not compelling. The suggestion that Claimant's diseased shoulder coincidentally became symptomatic on the very day that he happened to be lifting a roll of fabric in an awkward fashion, without any contribution from that activity strains credulity.

I. Nonetheless, where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). As found here, Claimant has proven by a preponderance of the evidence that he sustained a compensable aggravation of his previously asymptomatic right shoulder osteoarthritis. The evidence presented persuades the ALJ that this compensable "injury" is the proximate cause of Claimant's need for medical treatment, including his need for physical therapy and the injection provided by Dr. Kurz. Taken in its entirety, the ALJ finds the evidentiary record to contain substantial evidence to support a conclusion that Claimant's work duties and not a pre-existing condition is responsible for his current symptoms and need for treatment, including PT and injection therapy. Consequently, the ALJ concludes that Claimant has established that Claimant's need for right shoulder treatment is causally related to his work-related lifting on June 24, 2015. Moreover, the totality of the evidence presented establishes that the care, including physical therapy and a corticosteroid injection were reasonable and necessary given Claimant's continued pain and functional decline. Consequently, the ALJ concludes that Respondents are liable for Claimant's care at Concentra. As Claimant has not been placed at maximum medical improvement (MMI), Respondents remain liable for all future reasonable, necessary and related care.

Temporary Disability Benefits

J. To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts; that he left work as a result of the disability, and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the Claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). In this case, Claimant credibly testified and the medical records support that he was suffering from a painful shoulder which resulted in the imposition of physical restrictions precluding his ability to perform his usual job from June 27, 2015 and continuing through January 12, 2016 based upon Claimant's release to full duty on January 13, 2016. Moreover, the persuasive evidence establishes that Respondents did not offer Claimant modified duty, likely because Employer had elected to lay Claimant off. Consequently, Claimant is "disabled" within the meaning of section 8-42-105, C.R.S. and has established a wage loss. Thus he is entitled to TTD benefits. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999); *Hendricks v. Keebler Company*, W.C. No. 4-373-392 (Industrial Claim Appeals Office, June 11, 1999). Because the period of disability lasted longer than two weeks from the day Claimant left work as a consequence of the injury, Claimant is entitled to recover disability benefits from the day he left work in this case. Section 8-42-103(1)(b), C.R.S. Having worked the entire day on June 24, 2015, Claimant effectively left work on June 25, 2015. Consequently, the ALJ concludes that Claimant is entitled to TTD benefits from June 25, 2015 through January 12, 2016.

Offsets/Credits

K. Section 8-42-103(f), C.R.S. provides in pertinent part:

> In cases where it is determined that unemployment insurance benefits are payable to an employee, compensation for temporary disability shall be reduced, but not below zero, by the amount of unemployment insurance benefits received, unless the unemployment insurance amount has already been reduced by the temporary disability benefit amount and except that temporary total disability shall not be reduced by unemployment Insurance benefits received pursuant to section 8-73-112."

L. As temporary disability benefits have not been paid, the ALJ concludes that those portions of the above referenced statute concerning reduction in unemployment insurance benefits and citation to C.R.S. § 8-73-112 do not apply to the facts of this case. Here, the evidence presented establishes that Claimant began receiving unemployment insurance benefits in the amount of $1050.00 every two weeks starting after September 5, 2015 and continuing through May 2016. As noted above, Claimant is entitled to TTD benefits for the time period June 27, 2015 through January 12, 2016, after which Claimant's entitlement to TTD terminated by virtue of his release to full duty work per the medical report of Dr. Kurz dated January 13, 2016. Based upon the evidence presented, the ALJ concludes that Respondents are entitled to reduce any temporary disability benefits, dollar-for-dollar, but not below zero, by the amount of unemployment insurance benefits received by Claimant for the time period beginning September 6, 2015 and extending through January 12, 2016, when Claimant's entitlement to TTD ended. *See Pace Membership Warehouse v. Axelson, 938 P.2d 504 (Colo. 1997), reversing Axelson v. Pace Membership Warehouse, 923 P.2d 322 (Colo. App. 1996).*

M. Respondents assert that they are entitled to a $7,500.00 credit against any TTD benefits ordered to be paid since the $7,500.00 payment is tantamount to payment of wages despite Claimant being laid off. The ALJ is not persuaded. In *Gallardo v. Sentner Goldfarb and Rice*, W.C. 4-296-754 (June 17, 1997), the Panel held that the Workers' Compensation Act does not contain a provision for the reduction of TTD benefits on account of a claimant's receipt of severance pay. Citing *Kraus v. Aircraft Sign Co*., 710 P.2d 480 (Colo. 1985), holding that the court may not create a remedy not provided for by statute, the Panel expressly declined to create an offset for a claimant's receipt of severance pay where § 8-42-124(2)(a), C.R.S. did not, declining to do so as engaging in judicial legislation. As the ALJ is persuaded that the $7,500.00 payment constituted severance pay and because there is no statutory provision for the reduction of TTD benefits on account of the Claimant's receipt of severance pay, the undersigned concludes permitting such credit would constitute reversible error. Accordingly, Respondents' request for a credit in the amount of $7,500.00 against Claimant's TTD benefits is denied.

Average Weekly Wage

N. The overall purpose of the average weekly wage (AWW) statute is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity resulting from the industrial injury. *See Campbell v. IBM Corp., 867 P.2d 77 (Colo. App. 1993); National Fruit Prod. v. Crespin, 952 P.2d 1207 (Colo. App. 1997).*

O. Sections 8-42-102 (3) and (5) (b), C.R.S. (2013), give the ALJ discretion to determine an AWW that will fairly reflect loss of earning capacity. An AWW calculation is designed to compensate for total temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. The best evidence of Claimant's actual wage loss and therefore a fair approximation of his diminished earning capacity at the time of his industrial injury comes from the wage records submitted into evidence. As found, in the 167 days prior to the injury in this case, Claimant earned a total of $27,866.44 for an average weekly wage of $1,168.05 ($27,866.44 ÷ 167 days × 7 days/week = $1,168.05). The ALJ finds that this figure most closely approximates Claimant's wage loss and diminished earning capacity at the time of his June 24, 2015, compensable work related injury. Accordingly, for purposes of this claim, Claimant's AWW is $1,168.05.

ORDER

It is therefore ordered that:

1. Claimant has proven, by a preponderance of the evidence, that he suffered a compensable injury to his right shoulder as a consequence of lifting a roll of fabric onto a spreader machine on June 24, 2015.

2. Respondents shall pay for all medical expenses, pursuant to the Workers' Compensation medical benefits fee schedule, to cure and relieve Claimant from the effects of his right shoulder injury, including the care provided at Concentra Medical Centers and that care provided as a consequence of any referrals from Concentra providers.

3. Respondents shall pay temporary disability benefits in accordance with section 8-42-103(1)(b), C.R.S. at a rate of sixty-six and two-thirds percent of Claimant's AWW, but not to exceed a maximum of ninety-one percent of the state average weekly wage per week. As Claimant's disability lasted longer than two weeks from the day that he left work as a result of his injury TTD benefits shall be paid from June 25, 2015 through January 12, 2016, in accordance with Section 8-42-103(1)(b), C.R.S.

4. Pursuant to C.R.S. § 8-42-103(f), Respondents are entitled to reduce any temporary disability benefits, but not below zero, by the amount of unemployment insurance benefits received by Claimant for the time period extending from September 6, 2015 through January 12, 2016, when Claimant's entitlement to TTD benefits terminated given his full duty work release.

5. Respondents' request for a $7,500.00 credit against TTD is denied and dismissed as the ALJ concludes that the $7,500.00 payment constituted severance pay for which there is no statutory offset remedy.

6. Claimant's AWW for purposes of paying TTD associated with this claim is $1,168.05.

7. The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

8. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-002-450-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/ Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on June 23, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 6/23/16, Courtroom 3, beginning at 8:30 AM, and ending at 11:45 AM).

Claimant's Exhibits 1 through 14 were admitted into evidence, without objection, with the exception of exhibit 12, in which case the Respondents' objection was overruled and the exhibit was admitted. Respondents' Exhibits A through H were admitted into evidence, without objection. The evidentiary deposition of Stewart Weinerman, M.D., taken on May 10, 2016, was admitted into evidence.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant. The proposed decision was filed, electronically, on June 27, 2016. No timely objections were filed. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern whether the Claimant suffered a compensable injury to both his left and right knee as a result of slipping on ice while stepping over a hose in the course and scope of his employment as a truck driver/grocery deliverer for the Employer on December 18, 2015; if so, whether the medical benefits rendered by HealthOne Occupational Medicine and Rehabilitation, which is the Employer's designated provider, and Colorado Orthopedic Consultants, which is a referral from the Employer's designated provider, as well as their referrals, are reasonably necessary and causally related to the Claimant's injury of December 18, 2015.

The Respondents raised the affirmative defense, pursuant to § 8-42-112 (1)(a) & (b), C.R.S., of a willful failure by the Claimant to obey a reasonable rule adopted by Employer for the safety of the employee.

The Claimant bears the burden of proof, by a preponderance of the evidence on all issues with the exception of "safety violation," in which case the Respondents bear the burden of proof by preponderant evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The parties stipulated, and the ALJ finds as fact, that if the Claimant's injury is found compensable:

a) the Claimant's average weekly wage (AWW) at the time of injury was $987.97;

b) the Claimant would be entitled to temporary partial disability (TPD) benefits from December 19, 2015 until March 23, 2016;

c) the Claimant would be entitled to temporary total disability (TTD) benefits from March 24, 2016 through June 10, 2016; and,

d) that all medical care rendered by HealthOne Occupational Medicine and Rehabilitation, as well as its referrals including that to Colorado Orthopedic Consultants were authorized.

2. The Claimant testified and it is undisputed that he earned $20.50 an hour, based on a 40-hour week, for a total of $820.00 per week. Thus, he sustained a temporary wage loss of $167.97 per week, yielding a TPD rate of $111.98 per week, or $16.00 per day.

Compensability

3. Prior to December 18, 2015, the Claimant had no ongoing symptoms or functional limitations in either his right or left knee and had worked at full-duty since his date of hire on March 17, 2015.

4. On December 18, 2015, the Claimant sustained an injury to his left and right knees in his employment as a driver/grocery deliverer for the Employer while walking around his truck, which he was refueling, stepping over a hose and slipping on the ice, when he felt a pop and severe pain in this right knee.

5. On December 18, 2015 the Respondents' filed a First Report of Injury.

6. The Claimant worked modified-duty following the assignment of restrictions from the Employer's designated provider between December 19, 2015 and March 23, 2016, earning $20.50 an hour for a 40 hour week, which equates to $820 a week, yielding a temporary wage loss of $167.97 per week.

7. On and after March 24, 2016, the Claimant was totally off of work for two surgeries performed by Stewart Weinerman, M.D., an orthopedic surgeon, at Colorado Orthopedic Consultants and did not return to work until June 11, 2016.

Medical

8. Shortly after the injury, which the Claimant reluctantly reported to his supervisor, the Claimant was directed to the Employer's designated medical provider, HealthOne Occupational Medicine and Rehabilitation (HealthOne), where he was evaluated on December 18, 2015 by authorized treating physician ("ATP") Katherine Drapeau, D.O., who diagnosed the Claimant as having "bilateral knee sprain, right worse than left" and who dictated a discussion section stating:

> Patient states that earlier today, as he was walking around his truck, he slipped on the ice. He caught himself but wrenched his right knee. Felt a pop and severe pain. He is currently having difficulty bearing weight. He did notice, after the drive over here and sitting in the waiting room, that his

> left knee is starting to stiffen up and has some pain medially. The pain in the right knee is primarily medial.

See Claimant's Exhibit 6, Bate Stamp ("BS") 9.

9. Following ATP Dr. Drapeau's evaluation, she placed the Claimant on restrictions of "unable to work," from December 18, 2015 through December 22, 2015, and rendered the opinion that the Claimant's objective findings were consistent with a work-related mechanism of injury (*See* Claimant's Exhibit 6, BS 11).

10. On December 22, 2015, Nurse Practitioner ("NP") Deana Halat put a request in for an MRI (magnetic resonance imaging) of the Claimant's right knee, which MRI occurred on January 2, 2016, reflecting a "complex tear of the body and posterior horn of the medial meniscus, and placed the Claimant on temporary work restrictions of "no lifting . . . more than 10 lbs." (*See* Claimant's Exhibit 6, BS 13 and Tab 8, BS 42).

11. The Claimant has remained on temporary work restrictions since his original evaluation with NP Halat on December 22, 2015 until his release to full-duty and his return to full-duty work on July 11, 2016.

12. On January 6, 2016, ATP Matthew Lugliani, M.D., at HealthOne put in a request for an MRI of the Claimant's left knee, which MRI was performed on January 7, 2016, with a finding of a "large horizontal tear of the body and posterior horn of the medial meniscus with peripheral parameniscal cysts, and gave the opinion that the Claimant's objective findings were consistent with a work-related mechanism of injury" (*See* Claimant's Submission Exhibit 6, BS 18-19 and Exhibit 9, BS 45).

13. On January 6, 2016, ATP Dr. Lugliani also made a referral for the Claimant to be evaluated by Stewart Weinerman, M.D., at Colorado Orthopedics (*See* Claimant's Exhibit 6, BS 18).

14. While the Claimant was receiving treating at HealthOne, he was instructed to undergo physical therapy with Patricia "Patty" Dockter, between the dates of December 31, 2015 and February 24, 2016 (*See* Claimant's Exhibit 7, BS 31-41).

15. Prior to ATP Dr. Weinerman's evaluation of the Claimant, the Respondents wrote Dr. Weinerman requesting as follows:

> You are scheduled to see the patient above on 1/26/16. Enclosed is a CD with the video footage from the fueling station at which the injury took place. The video footage was sent to me from the employer, the patient is aware that the accident was captured on video. The incident was on 12/18/15 around 10:52 a.m. and 10:53 a.m. [sic 11:52 a.m. – 11:53 a.m.] when the claimant steps over the fuel hose twice. He appears to visibly have a limp after he steps over the hose for the second time. . . Also enclosed for your review are the medical reports and MRI reports complete

> thus far. Please outline your opinions on diagnosis, causation, and treatment plan in your dictation.

(See Claimant's Exhibit 10, BS 47).

16. ATP Dr. Weinerman evaluated the Claimant on January 26, 2016 where his report notes:

> I have been asked to consult on [Claimant] who presents to my office today as a very pleasant 50-year-old gentleman who is a trucker and has sustained injuries to both knees and has bilateral torn menisci in both knees. Apparently, he has come in for evaluation, causation and possible treatment of his bilateral knee pain. He has been seeing Dr. Lugliani over HealthONE Occupational Medicine. . . . Apparently there is some concern as to whether these are new acute injuries or if they are chronic because he has a past history of bilateral knee scopes. The right knee was scoped 10 years ago. The left knee was scoped about 20 years ago. He did very well after both surgical procedures and had no complaints related to either knee.
>
> * * *
>
> At this time, after reviewing my extensive exam, my review of the MRI scan and the video footage that you sent to me from his employer dated 12/18/2015 and the second video also both just show basically him limping and working under very icy conditions, I believe at this time that his torn menisci are a direct result of a more acute injury due to his twisting and slipping on the ice.
>
> I believe that there is some minor pre-existing condition which involves chondrocalcinosis at a previous surgery but I think this is irrelevant to the current diagnosis of lateral torn medial meniscus.

(*See* Claimant's Exhibit 11, BS 48 and 49).

17. Following the Claimant's evaluation with ATP Dr. Weinerman, the Claimant returned to ATP Dr. Lugliani who noted on February 17, 2016 that the orthopedic consultant "had recommended surgery" (*See* Claimant's Exhibit 6, BS 28).

18. The Claimant underwent surgery on his left knee with ATP Dr. Weinerman on March 25, 2016 (*see* Respondents' Exhibit G, BS 32-33; and, on his right knee on April 29, 2016 (*see* Claimant's Exhibit 14, BS 69).

19. The Claimant credibly testified the pain in his knees that was present following his injury on December 18, 2015 has been resolved by the surgeries and he has now returned to work in a full-duty capacity.

20. The medical records from the Claimant's medical providers at HealthOne all indicate that it is their opinion that the **objective findings are consistent with a history or work related-mechanism of injury.** *See,* for example, Claimant's Exhibit 6, BS 11 (Katherine L. Drapeau, D.O.), BS 14 (Deana Halat FNP-BC), and BS 19 (Matthew R. Lugliani, M.D.).

21. In addition to his written report, Dr. Weinerman was deposed by the Respondents' prior to hearing, and gave an opinion consistent with his medical report of January 26, 2016 that the Claimant's right knee injury and left knee injury were from a work-related event (*See* Claimant's Exhibit 4, BS 108, ll. 17-25 and BS 109, ll. 1-12).

Independent Medical Examiner (IME) Jorge J. Klajnbart, D.O.

22. The Respondents retained the services of Dr. Klajnbart, who was of the opinion that the Claimant's symptoms were degenerative in nature, disagreed with the reasonableness of the surgeries performed by ATP Weinerman, and testified consistently with his report of February 22, 2016 that the Claimant's right and left knee complaints were from a "pre-existing determination" (*See* Claimant's Exhibit 13, BS 60).

23. ATP Dr. Weinerman in his deposition was questioned about Dr. Klajnbart's opinion and gave the following answer:

> I don't feel that these types of tears that we found arthroscopically, which is in evidence in my records and in the pictures that we took, could possibly – you could possibly have a guy living with that and not complain about it before this injury.
>
> So, my feeling is that he probably did have a little bit of degeneration; I agree with that, by the way. But it got a lot worse after the injury.
>
> Q. Okay. Number 2, he provides his opinion about this being a preexisting condition "in that it is more likely than not" – I'm reading the second-to-the-last sentence in that paragraph, "due to previous knee arthroscopy that occurred 15 to 20 years ago."

> A. No, I don’t really think that any reasonable orthopedic surgeon would feel that way. . .

* * *

> -- surgery, you can understand the guy feeling that there’s some degeneration to the knee. But again, the findings that I have from my surgery and form the photos I took that prove it, there’s no way this is all because of something that happened 15 to 20 years ago

(*See* Claimant’s Exhibit 14, BS 110 ll. 1-25).

Safety Rule Violation

24. The Respondents maintain that the Claimant violated a general safety rule by stepping over a hose in icy conditions while performing the job responsibility of refueling his truck. The Respondents relied upon the testimony of Walter Lee Wilson, Jr., the fleet safety and compliance officer for the Employer. Wilson testified that there was no policy or safety rule that forbade the Claimant from stepping over a fueling hose while fueling his truck. Wilson testified, however, that there was a general rule not to act in a negligent fashion and in his opinion the Claimant stepping over a hose instead of turning with the hose on the outside of his body when there were snowy conditions was a safety rule violation. In fact, Wilson, in his unfettered discretion, determined what was negligent and what was not negligent. This is not a knowable or reasonable safety rule.

25. The Claimant credibly testified he was stepping over the hose, he did not hop over it, that he is 270 pounds, 6 feet tall, and individuals his height and weight “do not hop.” He indicated he hopped after he slid on the ice. The ALJ finds the Claimant’s description of the event persuasive and cr4edible.

Credibility

26. The ALJ finds that the opinions of ATP Dr. Drapeau, ATP Dr. Lugliani and ATP Dr. Weinerman are more persuasive and credible than the opinion of Dr. Klajnbart, because the opinions of ATP Dr. Drapeau, ATP Dr. Lugliani and ATP Dr. Weinerman are based on a more thorough analysis of the Claimant’s medical situation. ATP Dr. Drapeau, ATP Dr. Lugliani and ATP Dr. Weinerman connect the mechanics of the Claimant’s injury to the objective medical evidence, thus, their opinions outweigh the opinion of Dr. Klajnbart. The mechanics of injury or inappropriateness thereof, is a critical ingredient of the above injury. ATP Dr. Drapeau, ATP Dr. Lugliani and Dr.

Weinerman were of the opinion that the Claimant's mechanism of injury was consistent with an injury to the Claimant's right knee, which caused the Claimant to place additional weight on the left knee causing he left knee to also become symptomatic, a phenomenon commonly known as "over-compensation."

27. The Respondents' medical evaluator ,Dr. Klajnbart, leaves open the possibility that the Claimant's bilateral knee injuries "may have exacerbated pre-existing conditions," but Dr. Klajnbart maintains that the need for care was from a degenerative process. R. Klajnbart also questions the appropriateness of the surgeries performed by ATP Weinerman. For the reasons articulated herein above, the ALJ does **not** find Dr. Klajnbart's opinions credible.

28. At the time of the December 18, 2015 injury, the Claimant was 6 foot tall and he weighed 270 pounds. There are no medical records or testimony from the Claimant or any other individual of Claimant having knee symptoms or limitations prior to December 18, 2015. Additionally Dr. Klajnbart testified that humans are bipedal individuals and that each lower extremity holds an entire person's body weight when walking.

29. The ALJ finds that the Claimant's testimony is consistent with the medical records; is credible; and, the Claimant presented in a straight-forward and credible manner.

Ultimate Findings

30. The ALJ makes a rational choice, based on substantial evidence, to accept the opinions of ATP Dr. Drapeau, ATP Dr. Lugliani, and ATP Dr. Wienerman, and to reject the opinions of IME Dr. Klajnbart.

31. The Claimant has proven by a preponderance of the evidence that he sustained an aggravation of an asymptomatic preexisting right and left knee condition to his right and left knee on December 18, 2015, arising out of the course and scope of his employment for the Employer.

32. The Claimant has proven, by a preponderant evidence that he was working limited duty following the assignment of restrictions on December 18, 2015 until March 23, 2016 and is entitle to TPD benefits of

33. The Claimant has proven by a preponderance of the evidence that he had not worked from March 24, 2016 through June 10, 2016, returning to work on June 11, 2016. He has not earned any wages during that period of time.

34. The Claimant has not been declared at maximum medical improvement (MMI) and he remained on restrictions until he returned to work in a full-duty capacity on June 11, 2016.

35. The Claimant has proven by a preponderance of the evidence that HealthOne is an authorized medical provider and its referrals for physical therapy with Patty Dockter, MRI's at Health Images, and the two surgeries performed (one on each knee), by ATP Dr. Weinerman were reasonably necessary to cure and relieve the effects of the Claimant's compensable injury, and causally related to the compensable bilateral lower extremity injuries the Claimant suffered in the course and scope of his employment on December 18, 2015.

36. The ALJ finds that the Claimant's AWW is $987.97 and for the period of December 19, 2015 through March 23, 2016 the Claimant missed 96 days of work, suffering a wage loss each week of $167.97, for a temporary partial disability payment of $111.98, which equals $16 a day. For the period of time between December 19, 2015 and March 23, 2016 the Claimant is entitled to $1,536.

37. For the period of time the Claimant was not working between March 24, 2016 and June 10, 2016 the Claimant is entitled to a TTD weekly rate of $658.64, or a daily rate of $94.09. Claimant was out of work for 79 days and, thus, he is entitled to TTD benefits in the amount of $7,433.22.

38. The Respondents have failed to satisfy their burden to establish by a preponderance of the evidence that the Claimant willfully violated a safety rule. The safety rule the Respondents rely on is vague and unknowable, at the discretion of Safety and Compliance Officer Walter Lee Wilson.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254

(1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of ATP Dr. Drapeau, ATP Dr. Lugliani and ATP Dr. Weinerman are more persuasive and credible than the opinions of Dr. Klajnbart, because the opinions of ATP Dr. Drapeau, ATP Dr. Lugliani and ATP Dr. Weinerman are based on a more thorough analysis of the Claimant's medical situation. ATP Dr. Drapeau, ATP Dr. Lugliani and ATP Dr. Weinerman connect the mechanics of the Claimant's injury to the objective medical evidence, thus, their opinions outweigh the opinion of Dr. Klajnbart. The mechanics of injury or inappropriateness thereof, is a critical ingredient of the above injury. ATP Dr. Drape, ATP Dr. Lugliani and Dr. Weinerman were of the opinion that the Claimant's mechanism of injury was consistent with an injury to the Claimant's right knee, which caused the Claimant to place additional weight on the left knee causing he left knee to also become symptomatic, a phenomenon commonly known as "over-compensation." Also, Dr. Klajnbart, leaves open the possibility that the Claimant's bilateral knee injuries "may have exacerbated pre-existing conditions," but Dr. Klajnbart maintains that the need for care was from a degenerative process. For the reasons articulated herein above, the ALJ does **not** find Dr. Klajnbart's opinions credible. Additionally, the Claimant's testimony was consistent with the medical records; was credible; and, the Claimant presented in a straight-forward and credible manner.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985).

It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of ATP Dr. Drapeau, ATP Dr. Lugliani, and ATP Dr. Wienerman, and to reject the opinions of IME Dr. Klajnbart.

Medical

c. As stipulated and found, all of the medical providers reflected in the evidence were authorized and within the chain of authorized referrals. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to the aggravation of his bilateral knee condition on December 18, 2015. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment, as reflected in the evidence, was and is reasonably necessary to cure and relieve the effects of his compensable injury.

Temporary Disability

d. To establish entitlement to temporary disability benefits, a claimant must prove that the industrial injury has caused a "disability," and that he has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair his opportunity to work at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 (ICAO, December 18, 2000). There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish her physical disability. See *Lymburn v. Symbois Logic*, 952 P.2d 831 (Colo. App. 1997). Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Id*. Nonetheless, the Claimant's testimony was corroborated by substantial and credible medical evidence. As found, the Claimant was temporarily and partially and temporarily and totally disabled for the periods specified herein below.

e. Once the prerequisites for TPD and/or TTD are met (*e.g.,* no release to return to full duty, MMI has not been reached, a temporary wage loss is occurring in modified employment or modified employment is no longer made available, and there is no actual return to work), TPD and TTD benefits are designed to compensate for temporary wage loss. TTD benefits are designed to compensate for a 100% temporary wage loss. *See Eastman Kodak Co. v. Industrial Commission,* 725 P. 2d 107 (Colo. App. 1986); *City of Aurora v. Dortch,* 799 P. 2d 461 (Colo. App. 1990). As found, the Claimant was temporarily and partially disabled from December 19, 2015 through March 23, 2016. He missed 96 days of work, suffering a wage loss each week of $167.97, for a TPD benefit of $111.98 per week, which equals $16 a day. For the period between December 19, 2015 and March 23, 2016 the Claimant is entitled to aggregate TPD benefits of $1,536. For the period of time the Claimant was not working between March 24, 2016 and June 10, 2016 the Claimant is entitled to a TTD weekly rate of $658.64, or a daily rate of $94.09. Claimant was out of work for 79 days and, thus, he is entitled to TTD benefits in the aggregate subtotal amount of $7,433.22.

Safety Violation

f. Sections 8-42-112(1)(a) & (b) C.R.S. authorize a 50% reduction in compensation for an employee's "willful failure" to use a safety device or "willful failure to obey any reasonable rule adopted by employer for the safety of the employee." A safety rule does not have to be either formally adopted or in writing to be effective. *Lori's Family Dining v. Industrial Claims Appeals Office*, 907 P. 2d 715, 719 (Colo. App. 1995). To establish that a violation of §§ 8-42-112(1)(a) & (b) has been willful, the Respondents must prove by a preponderance of the evidence that a claimant acted with "deliberate intent." *In re Alverado*, W.C. No. 4-559-275 [Indus. Claim Appeals Office (ICAO), Dec. 10, 2003]. Willful conduct may be proven by circumstantial evidence including evidence of frequent warnings, and the extent of deliberation evidenced by a claimant's conduct. *Id.* There was no persuasive evidence presented at hearing that the Claimant willfully violated a safety rule. As found, the Claimant was stepping over the hose, he did not hop over it, he weighs 270 pounds and is 6 feet tall, and individuals his height and weight "do not hop." He indicated he hopped after he slid on the ice.

g. The Respondents' theory of the safety violation case is that the Claimant violated a safety rule to "not act in a negligent fashion". The Respondents' opinion of whether the Claimant acted in a negligent fashion relies upon the opinion and unfettered discretion of the Safety and Compliance Manager Wilson, which opinion is too vague and tenuous to be consistent with due process and fundamental fairness concepts. The Respondents cited no written rule, regulation or other document other than the general direction "not to work unsafe," to support their assertion. As further found, there was no persuasive or credible evidence that the Claimant violated a safety rule when stepping over a hose while fueling a cab and trailer.

h. "Willfulness" is not established if the conduct is the result of thoughtlessness or negligence. *In re Bauer*, W.C. No. 4-495-198 (ICAO, Oct. 20, 2003). "Willfulness" also does not encompass "the negligent deviation from safe conduct dictated by common sense." *In re Gutierrez*, W.C. No. 4-561-352 (ICAP Apr. 29, 2004).

Rather the term “willful” in §8-42-112(1)(b), C.R.S., “connotes deliberate intent and carelessness, [and] negligence, forgetfulness, remissness or oversight do not satisfy that statutory standard.” *Miller v. City and County of Denver*, W.C. # 4-658-496 (ICAO 8/31/06); see *Bennet Properties v. Industrial Claim Appeals Office*, 437 P .2d 548 (Colo. 1968). Whether an employee has deliberately violated a safety rule is a question of fact to be determined by the ALJ. *Lori’s Family Dining, Inc*. v. *Industrial Claim Appeals Office, supra* at 719. As found, t0he evidence established that the Claimant did not willfully violate any Employer’s safety rule because the Respondents did not satisfy their burden of establishing what that rule was or how the Claimant violated it. The Claimant credibly testified he has never been written up for any alleged violation in employment with the Employer.

Burden of Proof

i. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A “preponderance of the evidence” is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). “Preponderance” means “the existence of a contested fact is more probable than its nonexistence.” *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant satisfied his burden on all issues. The Respondents failed to satisfy their burden on “safety violation.”

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The respondents shall pay the costs of all medical care rendered by the Respondents’ designated medical provider HealthOne Occupational Medicine and Rehabilitation, as well as its referrals to physical therapy with Patty Dockter, MRIs at Health Images, and surgery with authorized treating physician, Stewart Weinerman, M.D., at Colorado Orthopedic Consultants, including the surgeries performed by Dr. Weinerman on March 25, 2016 to Claimant’s left knee and the surgery of April 29, 2016 to Claimant's right knee, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. The Claimant's average weekly wage of $987.97.

C. The Respondents shall pay the Claimant temporary partial disability benefits for the period between December 19, 2015 and March 23, 2016 in the subtotal amount of $1,536; and, temporary total disability benefits for the period of time between March 24, 2016 and June 10, 2016 in the subtotal amount of $7,433.22, for a grand total of $8,969.22, which is payable retroactively and forthwith.

D. Any and all claims for safety violation are hereby denied and dismissed.

E. The respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

F. Any and all matters not determined herein are reserved for future decision.

DATED this______day of June 2016.

____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

WORKERS' COMPENSATION NO. WC 4-957-059-02

ISSUE

Whether Claimant has produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Douglas C. Scott, M.D. that he suffered a 10% whole person impairment for his May 21, 2014 occupational exposure to chemicals that resulted in asthma.

FINDINGS OF FACT

1. Claimant worked for Employer as a Foreman. His job duties included applying waterproofing materials to structures. On May 21, 2014 Claimant was painting in an electrical room. After inhaling vapors he suffered breathing difficulties and eye irritation.

2. Claimant initially received medical treatment at Midtown Occupational Health Services. He was evaluated by Lon Noel, M.D. and Lawrence Cedillo, M.D. Physicians referred Claimant to National Jewish Hospital for a respiratory evaluation.

3. After pulmonary function testing, Claimant visited Pulmonologist Karin Pacheco, M.D. of National Jewish Hospital. Dr. Pacheco diagnosed Claimant with asthma that was caused by a direct or indirect workplace exposure to a two-part caulking and weather stripping compound containing isocyanates.

4. On July 9, 2014 Dr. Cedillo released Claimant from care at Midtown Occupational Health Services. He determined that Claimant had reached Maximum Medical Improvement (MMI) with no permanent impairment or restrictions.

5. On June 8, 2015 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Cedillo's MMI and permanent impairment determinations. Claimant challenged the FAL and sought a Division Independent Medical Examination (DIME).

6. On September 28, 2015 Claimant underwent a DIME with Douglas C. Scott, M.D. Claimant reported that on May 21, 2014 he inhaled toxins, suffered breathing difficulties and experienced eye irritation. Dr. Scott reviewed pulmonary function testing and conducted a physical examination. Claimant presented without shortness of breath, with good lung sounds to both bases and without evidence of wheezing, rhonchi or rales. He reported that he was feeling well and his breathing had become better after work modifications. Dr. Scott determined that Claimant's medical condition of occupationally related asthma had improved since his last spirometry testing on March 30, 2015. Relying on the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides)*, Dr. Scott concluded that

Claimant had reached Maximum Medical Improvement (MMI) on September 28, 2015 with a 10% whole person respiratory impairment rating.

7. In calculating Claimant's impairment Dr. Scott relied on Table 8 of Chapter 5 of the *AMA Guides* regarding the Respiratory System. He specifically noted that the pulmonary function testing of March 30, 2015 reflected an FEV1 of 2.02 L or 55% of the predicted value, an FVC of 4.38 L or 83% of the predicted value and an FEV1/FVC of 67% of the predicted value. Class 2 of Table 8 in Chapter 5 of the *AMA Guides* specifies that a 10%-25% mild impairment is appropriate when an individual has an FVC between 60% and 79% of the predicted value or an FEV1 between 60% and 79% of the predicted value or an FEV1/FVC of 60%-69% of the predicted value. Dr. Scott thus placed Claimant into the Class 2 category of pulmonary impairment. Based on the pulmonary function results and Claimant's improvement, Dr. Scott assigned a rating in the lower part of the Class 2 impairment rating range. He therefore determined that Claimant warranted a 10% whole person rating for respiratory impairment.

8. On January 14, 2016 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Scott's MMI and impairment ratings. The FAL also noted that Claimant was entitled to receive medical maintenance benefits.

9. On January 26, 2016 Dr. Pacheco issued a report regarding Claimant's permanent impairment. Dr. Pacheco summarized her analysis using the following reasoning:

> In order to provide an impairment rating, I first consulted the American Thoracic Society Guidelines for the Evaluation of Impairment/Disability in patients with Asthma, published in 1993. This provides the guidelines for evaluating asthma impairment and is incorporated in later editions of the AMA Guides to the Evaluation of Permanent Impairment. In the AMA Guides to the Evaluation of Permanent Impairment, Third Edition, Revised, as used in the State of Colorado, the AMA Guides are indirectly referenced and then translated into classes of respiratory impairment.

In determining Claimant's permanent impairment Dr. Pacheco utilized various tables in the *American Thoracic Society Guidelines* (*ATS Guidelines*) that included Claimant's Post-Bronchodilator FEV1, degree of airwaves hyperresponsiveness and minimum medication needs. She then assigned numerical values in each of the preceding three categories. After totaling Claimant's scores, Dr. Pacheco determined that Claimant warranted an impairment rating in Class 3 of Table 8 of the AMA Guides. Noting that Class 3 permits a 30%-45% moderate whole person impairment, Dr. Pacheco then converted her values from the *ATS Guidelines* to a 40% whole person impairment. She based the rating on "the severity of [Claimant's] bronchial hyperresponsiveness and the limited improvement in airflow on adequate treatment and removal from exposure."

10. On February 7, 2016 Pulmonologist Jeffrey Schwartz, M.D. reviewed Dr. Scott's impairment rating. In considering Claimant's described level of function, ability to perform work and spirometry testing from March 30, 2015, Dr. Schwartz concluded

that Dr. Scott properly assigned Claimant a 10% whole person respiratory impairment rating pursuant to Table 8 of Chapter 5 of the *AMA Guides*. He explained that Claimant's respiratory impairment was properly calculated by spirometry and pulmonology testing as opposed to the *ATS Guidelines*. After applying the *AMA Guides* to Claimant's March 30, 2015 spirometry testing he remarked that Claimant's level of impairment clearly fell within the Class 2 range. Dr. Schwartz further commented that the example provided on page 124 of the *AMA Guides* placing the individual in the Class 2 category was remarkably similar to Claimant's testing results.

11. Dr. Pacheco testified at the hearing in this matter. She maintained that she relied on the *ATS Guidelines* in assigning Claimant a 40% whole person impairment. Dr. Pacheco specifically considered Claimant's Post-Bronchodilator FEV1, degree of airwaves hyperresponsiveness and minimum medication needs to determine an appropriate impairment rating. She remarked that Dr. Scott's sole reliance on Claimant's pulmonary function testing in assigning an impairment rating was erroneous.

12. Dr. Pacheco acknowledged that the *AMA Guides* do not specifically delineate factors including Post-Bronchodilator FEV1, degree of airwaves hyperresponsiveness and minimum medication needs in determining an appropriate impairment rating. However, she explained that the *AMA Guides* provided her with discretion to consider factors in addition to the outlined impairment methodology pursuant to language contained in Table 9. She further commented that certain respiratory conditions may cause impairment that is not readily quantifiable from pulmonology tests as utilized under Table 8 of the *AMA Guides*. Because Claimant suffered from a condition that was not adequately captured by Table 8 of the *AMA Guides* she was permitted to utilize an impairment strategy devised by a physician with expertise in lung disease.

13. Dr. Schwartz testified at the hearing in this matter. He maintained that Dr. Scott properly assigned Claimant a 10% whole person respiratory impairment rating pursuant to Table 8 of Chapter 5 of the *AMA Guides*. He explained that Claimant's respiratory impairment was properly calculated by spirometry and pulmonology testing as opposed to the *ATS Guidelines*. He specifically remarked that medication use is not contemplated by Table 8 of the *AMA Guides*. After applying the *AMA Guides* to the March 30, 2015 spirometry testing he remarked that Claimant's level of impairment clearly fell within the Class 2 range.

14. Dr. Schwartz explained that Dr. Scott correctly used Table 8 of the *AMA Guides* and any reliance on Table 9 is inappropriate. He specifically noted that the second paragraph of Table 9 of the *AMA Guides* allows for discretionary impairment in situations where spirometry and pulmonology testing may be inaccurate in the medical office or where a claimant suffers asthma or reduced lung capacity while exposed to various chemical agents on the job. However, Dr. Schwartz noted that Claimant had been doing well since he had been back to work for approximately six months. Any utilization of Table 9 to assign a discretionary impairment rating for Claimant's condition would thus be inappropriate.

15. Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Scott that he suffered a 10% whole person impairment for his May 21, 2014 occupational exposure to chemicals that resulted in asthma. Relying on the *AMA Guides*, Dr. Scott concluded that Claimant had reached MMI on September 28, 2015 with a 10% whole person respiratory impairment rating. In calculating Claimant's impairment Dr. Scott relied on Table 8 of Chapter 5 of the *AMA Guides* regarding the Respiratory System. He specifically noted that the pulmonary function testing of March 30, 2015 reflected an FEV1 of 2.02 L or 55% of the predicted value, an FVC of 4.38 L or 83% of the predicted value and an FEV1/FVC of 67% of the predicted value. Class 2 of Table 8 in Chapter 5 of the *AMA Guides* specifies that a 10%-25% mild impairment is appropriate when an individual has an FVC between 60% and 79% of the predicted value or an FEV1 between 60% and 79% of the predicted value or FEV1/FVC of 60%-69% of the predicted value. Dr. Scott thus placed Claimant into the Class 2 category of pulmonary impairment. He noted that Claimant's condition had improved since the March 30, 2015 pulmonary function testing. Based on the pulmonary function results and Claimant's improvement, Dr. Scott assigned a rating in the lower part of the Class 2 impairment rating range. He therefore determined that Claimant warranted a 10% whole person rating for respiratory impairment.

16. Dr. Schwartz agreed with Dr. Scott's MMI and impairment determinations. In considering Claimant's described level of function, ability to perform work and spirometry testing from March 30, 2015, Dr. Schwartz concluded that Dr. Scott properly assigned Claimant a 10% whole person respiratory impairment rating pursuant to Table 8 of Chapter 5 of the *AMA Guides*. He explained that Claimant's respiratory impairment is properly calculated by spirometry and pulmonology testing as opposed to the *ATS Guidelines*. After applying the *AMA Guides* to Claimant's March 30, 2015 spirometry testing he remarked that Claimant's level of impairment clearly fell within the Class 2 range. Dr. Schwartz further commented that the example provided on page 124 of the *AMA Guides* placing the individual in the Class 2 category was remarkably similar to Claimant's testing results.

17. In contrast, Dr. Pacheco maintained that she relied on the *ATS Guidelines* in assigning Claimant a 40% whole person impairment. Dr. Pacheco specifically considered Claimant's Post-Bronchodilator FEV1, degree of airwaves hyperresponsiveness and minimum medication needs to determine an appropriate impairment rating. She then assigned numerical values in each of the preceding three categories. After totaling Claimant's scores, Dr. Pacheco translated the values to Class 3 of Table 8 in the *AMA Guides.* Noting that Class 3 permits a 30%-45% moderate whole person impairment, Dr. Pacheco then converted her values from the *ATS Guidelines* to a 40% whole person impairment. She remarked that Dr. Scott's sole reliance on Claimant's pulmonary function testing in assigning an impairment rating was erroneous. Dr. Pacheco explained that the *AMA Guides* provided her with discretion to consider factors in addition to the outlined impairment methodology pursuant to language contained in Table 9. She further commented that certain respiratory conditions may cause impairment that is not readily quantifiable from pulmonology tests as utilized under Table 8 of the *AMA Guides*. Because Claimant suffered from a condition that was not adequately captured by Table 8 of the *AMA Guides* she was

permitted to utilize an impairment strategy devised by a physician with expertise in lung disease.

18. However, Dr. Pacheco acknowledged that the *AMA Guides* do not specifically delineate factors including Post-Bronchodilator FEV1, degree of airwaves hyperresponsiveness and minimum medication needs in determining an appropriate impairment rating. Moreover, Dr. Schwartz specifically noted that the second paragraph of Table 9 of the *AMA Guides* allows for discretionary impairment in situations where spirometry and pulmonology testing may be inaccurate in the medical office or where a claimant suffers asthma or reduced lung capacity while exposed to various chemical agents on the job. However, Dr. Schwartz noted that Claimant had been doing well since he had been back to work for approximately six months. Any utilization of Table 9 to assign a discretionary impairment rating for Claimant's condition would thus be inappropriate. Although Dr. Pacheco emphasized that her reliance on the *ATS Guidelines* constituted a better method for determining Claimant's proper impairment rating, she has not demonstrated that Dr. Scott's use of the *AMA Guides* was clearly erroneous. The opinion of Dr. Pacheco thus merely constitutes a disagreement with Dr. Scott regarding Claimant's level of permanent impairment. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Scott's 10% whole person impairment determination was incorrect.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

. 6. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

7. As found, Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Scott that he suffered a 10% whole person impairment for his May 21, 2014 occupational exposure to chemicals that resulted in asthma. Relying on the *AMA Guides*, Dr. Scott concluded that Claimant had reached MMI on September 28, 2015 with a 10% whole person respiratory impairment rating. In calculating Claimant's impairment Dr. Scott relied on Table 8 of Chapter 5 of the *AMA Guides* regarding the Respiratory System. He specifically noted that the pulmonary function testing of March 30, 2015 reflected an FEV1 of 2.02 L or 55% of the predicted value, an FVC of 4.38 L or 83% of the predicted value and an FEV1/FVC of 67% of the predicted value. Class 2 of Table 8 in Chapter 5 of the *AMA Guides* specifies that a 10%-25% mild impairment is appropriate when an individual has an FVC between 60% and 79% of the predicted value or an FEV1 between 60% and 79% of the predicted value or FEV1/FVC of 60%-69% of the predicted value. Dr. Scott thus placed Claimant into the Class 2 category of pulmonary impairment. He noted that Claimant's condition had improved since the March 30, 2015 pulmonary function testing. Based on the pulmonary function results and Claimant's improvement, Dr. Scott assigned a rating in

the lower part of the Class 2 impairment rating range. He therefore determined that Claimant warranted a 10% whole person rating for respiratory impairment.

8. As found, Dr. Schwartz agreed with Dr. Scott's MMI and impairment determinations. In considering Claimant's described level of function, ability to perform work and spirometry testing from March 30, 2015, Dr. Schwartz concluded that Dr. Scott properly assigned Claimant a 10% whole person respiratory impairment rating pursuant to Table 8 of Chapter 5 of the *AMA Guides*. He explained that Claimant's respiratory impairment is properly calculated by spirometry and pulmonology testing as opposed to the *ATS Guidelines*. After applying the *AMA Guides* to Claimant's March 30, 2015 spirometry testing he remarked that Claimant's level of impairment clearly fell within the Class 2 range. Dr. Schwartz further commented that the example provided on page 124 of the *AMA Guides* placing the individual in the Class 2 category was remarkably similar to Claimant's testing results.

9. As found, in contrast, Dr. Pacheco maintained that she relied on the *ATS Guidelines* in assigning Claimant a 40% whole person impairment. Dr. Pacheco specifically considered Claimant's Post-Bronchodilator FEV1, degree of airwaves hyperresponsiveness and minimum medication needs to determine an appropriate impairment rating. She then assigned numerical values in each of the preceding three categories. After totaling Claimant's scores, Dr. Pacheco translated the values to Class 3 of Table 8 in the *AMA Guides.* Noting that Class 3 permits a 30%-45% moderate whole person impairment, Dr. Pacheco then converted her values from the *ATS Guidelines* to a 40% whole person impairment. She remarked that Dr. Scott's sole reliance on Claimant's pulmonary function testing in assigning an impairment rating was erroneous. Dr. Pacheco explained that the *AMA Guides* provided her with discretion to consider factors in addition to the outlined impairment methodology pursuant to language contained in Table 9. She further commented that certain respiratory conditions may cause impairment that is not readily quantifiable from pulmonology tests as utilized under Table 8 of the *AMA Guides*. Because Claimant suffered from a condition that was not adequately captured by Table 8 of the *AMA Guides* she was permitted to utilize an impairment strategy devised by a physician with expertise in lung disease.

10. As found, however, Dr. Pacheco acknowledged that the *AMA Guides* do not specifically delineate factors including Post-Bronchodilator FEV1, degree of airwaves hyperresponsiveness and minimum medication needs in determining an appropriate impairment rating. Moreover, Dr. Schwartz specifically noted that the second paragraph of Table 9 of the *AMA Guides* allows for discretionary impairment in situations where spirometry and pulmonology testing may be inaccurate in the medical office or where a claimant suffers asthma or reduced lung capacity while exposed to various chemical agents on the job. However, Dr. Schwartz noted that Claimant had been doing well since he had been back to work for approximately six months. Any utilization of Table 9 to assign a discretionary impairment rating for Claimant's condition would thus be inappropriate. Although Dr. Pacheco emphasized that her reliance on the *ATS Guidelines* constituted a better method for determining Claimant's proper

impairment rating, she has not demonstrated that Dr. Scott's use of the *AMA Guides* was clearly erroneous. The opinion of Dr. Pacheco thus merely constitutes a disagreement with Dr. Scott regarding Claimant's level of permanent impairment. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Scott's 10% whole person impairment determination was incorrect.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a 10% whole person impairment for his May 21, 2014 occupational exposure to chemicals that resulted in asthma.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

In the Matter of the Workers' Compensation Claim of: **MITCH SALGADO,** Claimant, vs.	▲ **COURT USE ONLY** ▲
THE HOME DEPOT U.S.A., Employer, and **SELF-INSURED, C/O HELMSMAN MANAGEMENT SERVICES,** Insurer, Respondents.	**CASE NUMBER:** **WC 4-975-288-02**

SUPPLEMENTAL FINDINGS OF FACT, CONCLUSIONS OF LAW, AND ORDER

A hearing in this matter was held on December 17, 2015 before Kimberly A. Allegretti, Administrative Law Judge. The Claimant was present in the courtroom and represented by Matt Molinaro, Esq., and David Lichtenstein, Esq. Respondent was represented by Sheila Toborg, Esq. The matter was digitally recorded in Courtroom 1 in Denver, Colorado from 1:30 PM to 4:00 PM.

In this order, Mitch Salgado will be referred to as "Claimant," The Home Depot, U.S.A. will be referred to as "Employer," and as it is self-insured, Employer may also be referred to as "Insurer" or "Respondent."

Also in this order, "ALJ" or "Judge" refers to the Administrative Law Judge; "C.R.S" refers to Colorado Revised Statutes (2013); "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1; and "WCRP" refers to the Workers' Compensation Rules of Procedure, 7 CCR 1101-3.

At the commencement of the hearing, Claimant's Exhibits 1-14 were admitted with no objections and Respondent's Exhibits A-D were admitted with no objections.

The parties were permitted to file proposed Findings of Fact, Conclusions of Law and Orders which were received on January 15, 2016.

The Claimant filed a Petition to Review on May 16, 2016 and the parties provided briefs supporting their positions. After reviewing the briefs, the record and the prior Order, the ALJ has determined that a Supplemental Order is necessary and appropriate.

CERTIFICATE OF SERVICE

I hereby certify that I have sent true and correct copies of the foregoing **Full Findings of Fact, Conclusions of Law and Order** on this_____day of June 2016, electronically in PDF format, addressed to:

AAA WATERPROOFING, INC. Employer, and **PINNACOL ASSURANCE** Insurer, Respondents.	**CASE NUMBER:** **WC 4-957-059-02**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

Administrative Law Judge Peter J. Cannici presided at the hearing in this matter on June 7, 2016 at the Office of Administrative Courts in Denver, Colorado. Matthew C. Gizzi, Esq. represented Claimant Esteban Casillas. H. Andrew Rzepiennik, Esq. represented Respondents AAA Waterproofing, Inc. and Pinnacol Assurance. The Judge digitally recorded the proceedings in Courtroom 3 from approximately 1:35 p.m. until 3:45 p.m. The Judge admitted Exhibits 1-11 for Claimant into evidence. He also admitted Exhibits A-I for Respondents. The Judge held the record open until June 21, 2016 so that the parties could submit position statements.

In this order, Esteban Casillas will be referred to as "Claimant," AAA Waterproofing, Inc. will be referred to as "Employer" and Pinnacol Assurance will be referred to as "Insurer." Employer and Insurer will be referred to collectively as "Respondents."

Also in this order, "Judge" refers to the Administrative Law Judge, "C.R.S." refers to Colorado Revised Statutes (2015); "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1, and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3.

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable back injury arising out of and in the course of his employment with Employer on January 4, 2015.

2. If Claimant has proven a compensable injury, whether Claimant has proven by a preponderance of the evidence that he is entitled to temporary partial disability ("TPD) and temporary total disability ("TTD") benefits in this claim from March 19, 2015 ongoing.

3. If Claimant has proven that he is entitled to temporary disability benefits, whether Respondent has proven by a preponderance of the evidence that Claimant was responsible for his termination.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. The Claimant was hired by Employer on June 18, 2014 as a lumber material specialist. His job duties involved sawing lumber for customers, loading up products including lumber, concrete, and mortar mixes, doing special cuts for plywood brought in by customers and handling the returns for the lumber department. The Claimant's supervisors included Joe and Victor who were managers and a lead named Reggie. The Claimant's starting pay rate was $10.50 per hour and that did not change over the course of his employment. The Claimant testified that when he was first hired he was working about 27 hours per week but then by late October or early November, he was working full time which continued until his employment was terminated. The Claimant's testimony regarding the above was uncontroverted, credible and is found as fact.

2. The Employer has an Attendance and Punctuality Policy. Hourly employees are expected to report for work at the assigned time, adhere to the work schedule, work through scheduled shifts, perform assigned duties and take meal periods as scheduled (Respondents' Exhibit D, p. 32). The Employer's Progressive Disciplinary Process policy is that "the discipline process will begin when an associate receives the third unexcused occurrence in a six-month period. Each absence or tardy is considered one occurrence. If there are 3 occurrences in a 6 month period, the managers are to provide a "coaching." After a "coaching" has occurred, if there are 3 additional occurrences, the managers are required to issue a "counseling." After an employee receives a "counseling," if there is 1 additional occurrence, the managers are

required to issue a “final warning.” After an active Final Counseling, and there is 1 additional occurrence, managers are required to administer a “termination” (Respondents’ Exhibit D, p. 33). There are certain absences and tardiness that are considered “excused.” These “excused” absences and tardies include “State-law protected time off.” In this section, the policy refers the reader to “State Exceptions” in the LOA HR SOP and Time-Off Benefits HR SOP for additional details, but this was not offered or admitted into evidence. In reference to the Employer’s disciplinary policy, the term “active” refers to a disciplinary action that is within six (6) months from the date when the action was administered. In tracking “active” disciplinary notices, “a notice remains visible for six months” and “at the end of the six-month period, the notice rolls off and is no longer “active” (Respondents’ Exhibit D, p. 36). When an employee has been employed for fewer than 120 days, then he or she should receive a “final warning” if there are 3 occurrences in the first 120 day period and then proceed to immediate termination for 1 additional occurrence that occurs in the first 120 days. However, if no further occurrence occurs in the first 120 days, then the “final warning” issued during that probationary period is treated as a “coaching” notice (Respondent’s Exhibit D, p. 35).

3. On September 20, 2014, the Claimant received a Progressive Disciplinary Notice for being unexcused absent on 8/24 and tardy on 7/4 and 9/16. He was advised that he should refrain from further violations of the Employer’s Attendance Policy and that further violations will result in additional disciplinary action up to and including termination. All of these attendance occurrences happened prior to the Claimant’s injury and, thus, were unrelated to the Claimant’s work injury. This notice was entitled a “final warning” in the records under the Employer’s Progressive Disciplinary Process as it occurred in the first 120 days of employment. As there were no further occurrences in the first 120 days of employment, this notice was treated as a “coaching” notice per the Employer’s policy.

4. On November 29, 2014, the Claimant received a Progressive Disciplinary Notice for arriving over 3 hours late on 10/6/2014, arriving 13 minutes late on 11/21/2014 and arriving 31 minutes late on 11/23/2014. The Claimant was advised to refrain from further violations of the Employer’s Attendance Policy and that further violations will result in additional disciplinary action up to and including termination. All of these attendance occurrences happened prior to the Claimant’s injury and, thus, were unrelated to the Claimant’s work injury. This notice would be a “counseling” under the Employer’s Progressive Disciplinary Process since the “final warning” issued in the Claimant’s first 120 probationary period had converted to a “coaching” notice. That “coaching” notice would have been less than 6 months prior to the November 29, 2014 notice, so the September 20, 2014 notice would still be “active.”

5. On December 23, 2014, the Claimant received a Progressive Disciplinary Notice for being absent on December 15, 2014 with insufficient sick time to cover his scheduled hours. The notice stated that this violation progressed the Claimant to “final warning. The Claimant was advised to refrain from further violations of the Employer’s Attendance Policy and that further violations will result in additional disciplinary action

up to and including termination. This attendance occurrence happened before the Claimant's injury and is unrelated to the work injury.

6. The Claimant testified that he was injured while at work for Employer when he was called to get his returns. He grabbed a bucket of mortar out of a regular shopping cart and was moving it to a lumber cart. The bucket of mortar weighed approximately 50-60 pounds. The Claimant testified that his arms were about chest high when he was lifting and he turned to place the mortar mix onto the lumber cart. The Claimant testified he felt the onset of pain immediately as he was bent over the cart. He testified that he turned to one of the other employees and stated that he thought he hurt his back. He pushed his cart of returns back to the lumber department and felt pain in his lower back and legs the whole way. After he returned to the department, he left the cart there and told his coworkers that he hurt his back and was going to take it easy with no more lifting for the rest of the day. He told them he would do tags, which involves using the scanner to scan lumber that has no price tags and print out and tag the lumber where the price tag should be. The Claimant testified he continued to experience low back pain while doing tags when he had to reach over his head and as he brought his arms back down he felt more pressure on his back. The Claimant testified that at this point he told his coworkers he was going to take his lunch break and rest his back. As he took a few steps, the Claimant coughed and felt more pain in his buttocks, back and legs. After this he went to the assistant store manager Richard and reported the injury and he clocked out of work. The Claimant was advised by the assistant store manager to fill out an incident report. The Claimant testified that after completing the incident report he was not offered medical treatment and he left work. The Claimant testified that he did not tell his manager that he "reinjured" his back and he did not write down in his incident report that he "reinjured" his back. The Claimant testified that he has not had prior low back injuries or low back pain.

7. On January 4, 2015, the Claimant completed an Incident Witness Statement. The Claimant stated as follows:

> I was picking up returns and I picked up a 5 gal. bucket of flooring mortar when I felt a tweek [sic] in by back. I was taking it easy making signs and I had to strech [sic] and I felt the pain increase. I took it easier but when I was walking to lunch I coughed and my back went out on me. And that's when I told Richard about it.
>
> (Respondents' Exhibit D, p. 24).

8. Also on January 4, 2014, the Claimant's supervisor, Richard Reyes, made an Incident Witness Statement. He stated as follows:

> [The Claimant] came to me around 12:30 saying that he reinjured his back. [The Claimant] had previously injured his back while working. He had been working since his last injury and never went to see a doctor other than a chiropractor. [The Claimant] reinjured his back while lifting a

> 5-gallon bucket of paint. He said that it was a slight tweak & kept working & the pain got progressively worse as the day went on.

(Respondents' Exhibit D, p. 26).

9. In spite of some conflicting evidence, the ALJ finds the Claimant's testimony regarding his mechanism of injury was credible and consistent with medical records in this case and is found as fact. It is further found that the Claimant did not tell his manager that he "reinjured" his back when he reported his injury.

10. The Claimant testified that on January 5, 2015, the day following his injury, he went to see Dr. Wilner for chiropractic treatment. Dr. Wilner's medical records indicate that the Claimant saw Dr. Wilner for treatment on January 5, 2015. The Claimant reported that he injured his back at work while lifting a 5 gallon bucket of mortar mix away from his body when he felt instant pain in his low back. The Claimant reported leaving work after lunch due to pain and stated he used a combination of ice and rest the remainder of the day. The Claimant reported a pain level of 8-9 out of 10 in the lumbar/lumbosacral region. The pain radiated to the gluteal region but did not travel into the hamstrings. The Claimant reported noticeable temporary relief after Dr. Wilner's treatment, taking the pain level report down to 4-5 out of 10 (Claimant's Exhibit 14).

11. Employer's First Report of Injury was completed by the Employer's Risk Manager, Richard Reyes, on January 6, 2016. The report noted the Claimant's injury occurred on January 4, 2016 and that Employer was notified that same day. The nature of the injury listed was a strain to the low back. The description of how the injury occurred states, "[Claimant] was assisting another associate and reinjured a previous injury. He is not seeking medical attention and was offer [sic]" (Claimant's Exhibit 1; Respondents' Exhibit D, p. 25). To the extent that this statement conflicts with the Claimant's testimony and other evidence, the ALJ finds that the Claimant's testimony is credible and the Claimant did not "reinjure" a previous injury.

12. The Claimant's next scheduled work day after his injury was on January 7, 2015. He called in to speak with his supervisor Victor and the Claimant told him he wanted to take the day off, but Victor asked him to come in. The Claimant attempted to come in to work on January 7, 2015 and had someone drive him, but getting out of the car the Claimant realized the pain was too much for him to be able to work. The Claimant told Victor that he would not be able to work and he went home. The Claimant testified that he told Victor the reason he couldn't work was due to back pain from the injury at work. The Claimant testified that after this he had more absences from work due to back pain from his work injury. He testified that he always told them when he called in to miss work that it was due to this. The Claimant testified that he never received any special instructions for calling off work after his work injury. He testified that he was told to give his managers a heads up about upcoming doctor or physical therapy appointments and he offered to provide the papers he received from the medical providers, but his supervisors never collected those papers. The Claimant testified that he missed work or was late to work or had to leave work early because of

his appointments. The Claimant testified that there were also occasions that he was late punching in to work because he had to speak with his managers about his work restrictions. With respect to the testimony related to absences or tardiness occurring after his work injury for the dates prior to March 17, 2015, the Claimant's testimony as to the reasons he was late or missed work or had to leave early subsequent to his work injury is credible and was not contradicted by the testimony of any other witnesses and is found as fact.

13. The Claimant saw Dr. Wilner again on January 8, 2015 for additional treatment. After adjustment, the Claimant reported that he was definitely better. The Claimant returned to see Dr. Wilner again on January 9, 2015 and he reported slight improvement. Dr. Wilner noted the Claimant still had to be driven to the appointment due to pain when sitting and hitting bumps. The Claimant reported his pain level as 6-7 out of 10 and Dr. Wilner noted that forward lumbar flexion increased his pain. At this visit, the pain was radiating into the upper hamstring region. On January 10, 2015, when the Claimant saw Dr. Wilner, he reported he was feeling better and rated his pain level at 5 out of 10. Dr. Wilner noted the Claimant was walking with greater ease. After treatment, the Claimant indicated that he planned on working the following day and he would continue with home care. Dr. Wilner noted that the Claimant called and cancelled his January 14, 2015 appointment and reported he was doing much better overall and the pain was mild. On January 17, 2015, the Claimant returned to treat with Dr. Wilner again reporting he had much more pain the previous 2 days. The Claimant reported he had been working and he exacerbated his condition by lifting materials. After treatment on that same day, the Claimant reported he felt better and his pain level decreased to 3-4 out of 10. The Claimant saw Dr. Wilner again on January 19, 2015 reporting that he hadn't been to work yet and his pain started that day at 2 out of 10 but the pain level was increased to 4 out of 10 after driving over to the appointment (Claimant's Exhibit 14).

14. On January 22, 2015, the Claimant saw Dr. Mark Foster for initial evaluation. The Claimant reported no prior low back pain but stated that he does see a chiropractor for chronic upper back and neck pain. The Claimant described a mechanism of injury to Dr. Foster generally consistent with his testimony at hearing and throughout the medical reports. Dr. Foster noted that the Claimant stated,

> On 1/4/15, [the Claimant] was lifting a bucket of mortar mix for a customer. He had his arms outstretched and twisted, and he felt a pull in his back. He continued to work, and within 15 minutes had severe tightening of the back. He went to tell his manager, and asked to go home for the day. No work comp claim was filed.

The Claimant expressed frustration to Dr. Foster at this visit with his Employer, namely, he stated that "they have discussed terminating him over this incident." He was also asked to mop at work which caused a worsening of his pain. The Claimant reported that he spoke with his manager again and they decided to file a work comp claim. The Claimant reported severe low back pain radiating down to both buttocks but not down to his feet. Yet, Dr. Foster did note a calf cramp during the exam. Dr. Foster noted that the work relatedness of the injury was not yet determined and he wanted to see records from the Claimant's chiropractor. At this point, Dr. Foster felt that the Claimant experienced a lumbar strain that should resolve with conservative care. Dr. Foster provided temporary work restrictions of no lifting, repetitive lifting, carrying over 25 pounds and no reaching over the head or away from the body. The Claimant was scheduled for follow up visit in a week with Dr. Miller (Claimant's Exhibit 10, Respondents' Exhibit C, p. 15).

15. The Claimant saw Dr. William Miller for treatment on January 28, 2015. He reported the same mechanism of injury to Dr. Miller as he had to Dr. Foster. The Claimant reported that he began seeing his private chiropractor Dr. Wilner beginning on January 5, 2015 and was having a good response to the treatment. He had tried to work his next scheduled shift at work but left early secondary to increased symptoms. Dr. Miller noted he reviewed the chiropractic records from Dr. Wilner from January 5, 2015 to January 19, 2015. He noted that he requested prior records for the Claimant's chiropractic treatment. The Claimant was currently complaining of pain and tightness across the central lumbosacral spine that was worse with sitting or prolonged standing or walking. The prior shooting pain to his left gluteal region and posterior thigh was not present as of this visit. The Claimant reported that his sleep was improved with Flexeril. Dr. Miller continued the same temporary work restrictions as Dr. Foster and referred the Claimant for physical therapy (Claimant's Exhibit 11; Respondents' Exhibit C, p. 16).

16. The Claimant saw Dr. Wilner again on January 31, 2015 reporting that he was in a lot of pain and the pain had gradually increased over the previous 2 days. He reported a strong ache in the low back that radiated out to the sides (Claimant's Exhibit 14).

17. On February 4, 2015, the Claimant saw Dr. Miller out of cycle for his normally scheduled appointment for an interim evaluation. The Claimant now reported having pain shooting into both legs. He reported having conflict with his Employer over his work restrictions. The Claimant advised Dr. Miller that his supervisor told him to request "medical leave" and Dr. Miller advised the Claimant to follow up with HR to clarify roles and responsibilities. Dr. Miller advised that it is "ultimately his job to follow the restrictions provided. His employer should be attempting to accommodate him." On examination of the Claimant, Dr. Miller noted a "reduction of motion of the lumbar spine in all planes of movement with associated guarding" and noted "he is diffusely tender overlying the lumbosacral segment." The Claimant's same work restrictions from the prior visit were continued (Claimant's Exhibit 11; Respondents' Exhibit C, p. 17).

18. On February 5, 2015, the Claimant saw Dr. Graves for an initial evaluation. The Claimant's chief complaints were left greater than right lumbar spinal/lumbosacral junction pain, limited range of motion and muscle spasms. The Claimant reported that he did not initially identify this injury as a workers compensation injury and went to his private chiropractor for 7-8 times. The Claimant reported to Dr. Graves that the chiropractic treatment has helped reduce his pain and improve levels of

functions. Since filing a workers' compensation claim and being managed by Dr. Miller, the Claimant reported attending Select Physical Therapy which is helping him make some improvement functionally but he reported stabilization was difficult to obtain. On physical examination, Dr. Graves noted moderate limitations in all planes of motion with pain and stiffness present on end range. He also noted pain and muscle spasms on palpation. The Claimant exhibited a positive Patrick/FABRE test, positive Nachlas test , positive Gaenslen's test, positive Ely's test, positive Yeoman's test, positive Sulty test and positive Milram's test. Dr. Graves impression was a bilateral, left greater than right, lumbosacral sprain/strain, compensatory mechanical dysfunction in the lower lumbar spinal facets, primarily at L4/5 and L5/S1, pelvic unleveling and mild concerns of discogenic disease. Dr. Graves recommended chiropractic/myofascial release treatment, core strength rehabilitation, continued physical therapy and follow up treatment with Dr. Miller (Claimant's Exhibit 12).

19. The Claimant saw Dr. Miller again on February 13, 2015. The Claimant had attended physical therapy and 3 chiropractic sessions with Dr. Graves since his last visit with Dr. Miller. The Claimant reported feeling improved overall. Dr. Miller noted that an MRI of the Claimant's lumbar spine had been ordered but not yet approved. Dr. Miller noted that he personally spoke with Dr. Wilner about obtaining records of the Claimant's care prior to the work injury and Dr. Wilner assured him that the records would be received that day. The Claimant continued to report pain and tightness across the central lumbosacral spine, worse with sitting or prolonged standing/walking. The Claimant reported he was working within his restrictions with less conflict at work. He also reported he missed part of a shift on February 10, 2015 due to discomfort following a treatment session. Dr. Miller continued the Claimant on physical therapy and chiropractic with Dr. Graves. The Claimant was also continued on modified duty with temporary restrictions of no lifting, repetitive lifting, carrying over 25 pounds and change positions frequently (Claimant's Exhibit 11; Respondents' Exhibit C, p. 18).

20. On February 25, 2015, the Respondents filed a Notice of Contest. The reason given for the Notice of Contest was further investigation for prior medical records. There was no other reason checked on the Notice of Contest (Claimant's Exhibit 2).

21. On February 26, 2015, the Claimant saw Dr. Graves who noted he had treated the Claimant 5 times since the initial evaluation and the Claimant was minimally responding to treatment. Dr. Graves noted the Claimant experiences a significant reduction in pain following treatments, however upon returning to work and performing labor intensive activities, the Claimant's "symptom profile returns." Dr. Graves noted that the Claimant reported his job duties had recently changed and he was made a "store greeter" and since then he has not had any significant flare-ups with his symptoms. Dr. Graves continued to assess the Claimant with bilateral, left greater than right, lumbosacral junction strain/sprain, compensatory mechanical dysfunction, and pelvic unleveling, but noted that these conditions were responding to conservative treatment, but not stabilizing. Dr. Graves also noted a mild circumferential disc bulging at L3/L4

and L4/L5 without significant effect on the spinal canal (as evidenced on the February 20, 2015 MRI) (Claimant's Exhibit 12).

22. On February 27, 2015, the Claimant saw Dr. Miller again. The Claimant reported continued pain and tightness across the central lumbosacral spine and described his legs and hips as getting 'tired' easily and as 'dead weight.' As of this visit, Dr. Miller had reviewed the full medical records from Dr. Phil Wilner and he noted there were some visits for low back pain in March – April of 2014. Based on this, Dr. Miller determined that the injury was work related. On reviewing the MRI of the Claimant's lumbar spine, Dr. Miller noted mild disk bulging, but no significant pathology. In the treatment plan under no. 2, Dr. Miller noted to "continue work restrictions." However, on the form, the boxes listing the specific restrictions were not populated and the restrictions were not written out. However, Dr. Miller did indicate the Claimant was on modified duty and that restrictions were continued on the form. Consistent with Dr. Miller's testimony at the hearing and based on reasonable inferences from the form, the ALJ finds as fact that the Claimant's temporary work restrictions through March 18, 2015 were the same as they were at the Claimant's last visit with Dr. Miller, namely, no lifting, repetitive lifting, carrying over 25 pounds and change positions frequently (Claimant's Exhibit 11; Respondents' Exhibit C, p. 18).

23. The Claimant testified that he was about 10-25 minutes late on March 17, 2015 due to car trouble and his car would not start. He worked a full day on that date. Then, the Claimant testified, on March 18, 2015, he clocked in and he was asked if he would like to take the day off because it wasn't expected to be busy. The Claimant testified that he stated that he needed as many hours as possible. Before the Claimant clocked out at lunch time, he was told to go to the office and when he arrived, Victor and Richard advised the Claimant his employment was being terminated due to attendance.

24. On March 18, 2015, the Claimant received a Progressive Disciplinary Notice for tardiness on February 4, 2015, February 18, 2015, February 19, 2015, February 25, 2015, February 26, 2015, February 27, 2015, March 4, 2015 and March 17, 2015 and for work absences on January 7, 2015, January 17, 2015, January 31, 2015, February 3, 2015 and February 5, 2015. The Notice provided that these were violations of the Company's attendance and punctuality standards and the Claimant's employment was terminated (Respondents' Exhibit B, p. 11). The ALJ finds that for the dates prior to March 17, 2015, the reasons the Claimant was absent or tardy or otherwise had an attendance occurrence were related to the Claimant's work injury. However, per the Claimant's prior statements and his testimony at the hearing, the reason the Claimant had an attendance occurrence on March 17, 2015 was due to his car malfunctioning and not related to his work injury. As of March 17, 2015, the Claimant's previous "final warning" disciplinary notice administered on December 23, 2014 for a December 15, 2014 absence would have been considered an "active" notice as it was less than six (6) months prior to March 17, 2015. Per the Employer's policy (see Exhibit D and paragraph 2 above), if there is a one (1) additional attendance occurrence after an active final counseling/warning, then managers are required to administer a termination.

25. The Claimant saw Dr. Graves on March 19, 2015 and Dr. Graves noted the Claimant had seen him 2 times since February 26, 2015 and was making some additional improvement in functional levels but still had a degree of lumbosacral junction tightness/pain. Dr. Graves noted that the Claimant reported that he was fired from his job this week and he was upset about this and felt he was wrongfully terminated. Dr. Graves noted that "apparently, there [sic] some discrepancy with his work restrictions on his WC 164 form, which led towards his termination. Additionally, during the initial stages of his workers compensation injury, he missed work due to increased pain, which was apparently not documented through Exempla Occupational Medicine." The Claimant reported that he was compliant with his independent exercise routine and that it brought him temporary reductions in pain and increases in function, but that the benefit was not lasting. Dr. Graves recommended continued chiropractic care and structured physical therapy (Claimant's Exhibit 12).

26. The Claimant saw Dr. Miller on March 23, 2015 and reported that he was terminated by his employer for cause at the end of the prior week due to the fact his car wouldn't start and he was late for work. Dr. Miller continued to assess the Claimant with lumbar strain and the treatment plan was to continue the work restrictions, physical therapy, chiropractic with Dr. Graves and to consult with a physiatrist if the Claimant made no progress (Claimant's Exhibit 11).

27. The Claimant saw Dr. Miller on March 30, 2015 and he reported a flare of symptoms on March 28, 2015 "after fairly innocuous activity" which included spasm and pain down the left leg. Given the interim flare of symptoms and minimal progress in therapy, Dr. Miller referred the Claimant for a consult for physiatry (Claimant's Exhibit 11).

28. The Claimant saw Dr. Robert Kawasaki on April 20, 2015. Dr. Kawasaki noted that the Claimant's treatment was managed by Dr. Miller and the Claimant had undergone physical therapy two times a week, received chiropractic care from Dr. Graves, received acupuncture and has been engaged in an independent exercise program. The Claimant reported that he felt he was improving overall. The Claimant reported pain decreased when lying on his back and increased with walking, standing, sitting or driving more than 15-20 minutes and with forward flexion. The Claimant reported that he was terminated from his employment for poor attendance. Dr. Kawasaki noted the Claimant's effect was somewhat flattened and his mood appeared somewhat depressed. After examination, Dr. Kawasaki's impression was lumbar strain with primarily muscular strain and no significant disc pathology noted. Dr. Kawasaki noted that some facet arthropathy may be contributory to the Claimant's pain. Dr. Kawasaki discussed treatment options which included facet joint injections but the Claimant advised that he wanted to hold off on any type of injections. Dr. Kawasaki noted "some red flags for delayed recovery potential" and suggested a pain psychologist (Claimant's Exhibit 13).

29. The Claimant saw Dr. Kawasaki again on May 11, 2015 and the Claimant reported overall improvement with physical therapy, chiropractic treatments, and massage. The Claimant reported he had decreased his Flexeril use and felt he was 75-85% better. Dr. Kawasaki diagnosed lumbar strain and sacroiliac joint strain but noted that with the improvements made the Claimant would likely avoid interventional procedures such as facet joint injections and sacroiliac injections (Claimant's Exhibit 13).

30. The Claimant saw Dr. Miller on May 18, 2015. Dr. Miller noted that the Claimant reported improvement since the last visit with him and that Dr. Kawasaki was considering injections but that the Claimant preferred not to undergo injections at that time (Claimant's Exhibit 11).

31. The Claimant saw Dr. Kawasaki again on June 8, 2015 and reported "overall, he is doing much better and feels like he is almost back to normal." Dr. Kawasaki noted the Claimant was doing quite well at this point and was very close to maximum medical improvement. Dr. Kawasaki opined that he did not feel he needed to see the Claimant again, but would follow up if requested, per Dr. Miller's discretion (Claimant's Exhibit 13).

32. The Claimant saw Dr. Miller on June 12, 2015 reporting some improvement, but that physical therapy seems to be making him worse. Dr. Miller noted that the Claimant would finish with physical therapy and continue with chiropractic with Dr. Graves but be "weaning off" (Claimant's Exhibit 11).

33. The Claimant saw Dr. Graves on July 9, 2015. Dr. Graves reported that in addition to the previous chiropractic care, the Claimant was provided with trigger point dry needling and biomedical acupuncture and there was a greater focus on independent core strengthening/rehabilitative protocols. The Claimant reported that he has no significant flare-ups since May 14, 2015. Dr. Graves noted that the Claimant's physical examination changed minimally since that time as well. Dr. Graves recommended release from active chiropractic treatment but continuation of a prescribed TENS unit, the independent core strengthening/rehabilitative protocols and follow up with Dr. Kawasaki for pain management if necessary (Claimant's Exhibit 12).

34. The Claimant saw Dr. Miller on July 10, 2015. Dr. Miller noted that the Claimant finished up with his 30th session of physical therapy and continued maintenance chiropractic with Dr. Graves. Based on a review of the latest physical therapy notes, Dr. Miller recommended extending the physical therapy and he also continued maintenance chiropractic care with Dr. Graves (Claimant's Exhibit 11).

35. On July 30, 2015 the Claimant saw Dr. Lawrence Lesnack for an independent medical examination. Dr. Lesnack authored a written report also dated July 30, 2015. The Claimant described a mechanism of injury on January 4, 2015 to Dr. Lesnack as follows:

> As he was attempting to lift a five-gallon of mortar mix weighing approximately 50-60 pounds out of a shopping care, he developed acute low back /buttock pains. Approximately 20 minutes later, he states that while reaching overhead he ‘stretched’ to apply a tag onto a piece of lumber. His low back and buttock pains seemed to worsen significantly. He states that soon afterward, he was merely standing and suddenly coughed. He states that he then developed ‘horrible pain’ and could hardly move. (Respondents’ Exhibit A, p. 2).

Dr. Lesnack reviewed the Claimant’s course of conservative treatment with the Claimant. Dr. Lesnack notes that the Claimant advised him that as early as January 12, 2015, he was informed that he might be terminated from his employment because of excessive absences without accrued sick leave and that he saw his assistant manager and hr and demanded that a work injury claim be filed on his behalf. After this, the Claimant reported that he treated through the worker’s compensation system including chiropractic treatment and massage per Dr. Graves and physiatry evaluation with Dr. Kawasaki (Respondents’ Exhibit A, p. 2-3). The Claimant reported that on a pain scale rating of 0 to 100, his best pain level is 0 and he was currently at a 10. The Claimant advised Dr. Lesnack that he had received chiropractic care from Dr. Wilner prior to his January 4, 2015 injury for his upper back and neck as well as his low back. The Claimant’s current medications when he met with Dr. Lesnack were 800 mg of ibuprofen and 10mg of Flexeril as needed for muscle spasms (Respondents’ Exhibit A, p. 3). Dr. Lesnack reviewed and summarized medical records dating from January 22, 2015 to June 25, 2015. The report does not indicate that Dr. Lesnack reviewed the chiropractic records of Dr. Wilner from prior to the January 4, 2015 work injury at that point (Respondents’ Exhibit A, pp. 4-7). On examination, Dr. Lesnack noted that the Claimant ambulated with no signs of an antalgic gait and was able to perform lumbar spine range of motion activities. Dr. Lesnack noted the Claimant was able to forward flex to 90 degrees with no symptoms but upon returning to an upright position, the Claimant complained of some mild low back aching sensations. The Claimant was able to perform sitting, supine and reversed straight leg raising maneuvers and Dr. Lesnack noted he had full range of motion in his thoracic spine in all planes without reproduction of symptoms. Dr. Lesnack noted that the Claimant reported, “minimal tenderness to palpation over his left greater than right superior sacrum at its midline” with no tenderness to palpation over either superior sacral sulcus or either greater trochanter or either sciatic notch. Dr. Lesnack found no evidence of specific trigger points or muscle spasm (Respondents’ Exhibit A, pp. 7-8). Based on his review of medical records and the physical examination, Dr. Lesnack opined that, “the patient exhibits pain behaviors and nonphysiologic findings and is very dramatic at times” which Dr. Lesnack found “would suggest that his subjective complaints are unreliable at best.” Based on this opinion, Dr. Lesnack went on to state that, “one must rely solely on reproducible objective findings rather than his subjective complaints.” Because Dr. Lesnack opines that there were “no significant objective findings” to support any type of acute injury to his lumbar spine as a result of occupational activities on January 4, 2015, Dr. Lesnack concludes that the Claimant did not sustain any acute work related injury on that date (Respondents’ Exhibit A, p.9). Dr. Lesnack further opined, that regardless of causality, the Claimant continued to have frequent subjective complaints without objective findings to support them, so he required no further diagnostic testing or interventional treatments. Rather, the Claimant should continue to focus on lumbar spine stabilization and core strengthening. Finally, Dr. Lesnack opined that the Claimant required "no functional limitations or work restrictions whatsoever, regardless of the causality of his current subjective complaints" (Respondents' Exhibit A, pp. 9-10).

36. On August 5, 2015, the Claimant saw Dr. Miller who noted that the Claimant had 3 remaining physical therapy sessions, was discharged from chiropractic care effective earlier this same day and was previously advised to follow up "as needed" with the physiatrist Dr. Kawasaki. The Claimant reported that he is sore and stiff but has had no interim leg symptoms. The Claimant also reported his sleep was well controlled with medications but that he had a sense of anxiety and concerns about his ability to return to work. Dr. Miller referred the Claimant to Dr. Vandorsten for cognitive behavioral therapy regarding the chronicity of his symptoms and return to work issues (Claimant's Exhibit 11).

37. On September 11, 2015, the Claimant saw Dr. Miller reporting that he continued to improve with occasional flares such as a spasm in the middle of the night for which he takes cyclobenaprine. Dr. Miller noted that the Claimant had seen Dr. Vandorsten for psychology twice and that Dr. Vandorsten would like to continue to follow the Claimant. The Claimant reported that he was stiff but had no more leg symptoms. The Claimant reported that he was not comfortable lifting because he did not know his limits (Claimant's Exhibit 11). In the Physician's Report of Workman's Compensation Injury form dated September 11, 2015, Dr. Miller reported that the Claimant was still on modified duty with temporary restrictions of no lifting, carrying, pushing or pulling over 40 pound. He reported the Claimant was discharged from physical therapy after 36+ sessions and discharged from chiropractic with Dr. Graves effective August 5, 2015 and continuing to see Dr. Vandorsten for psychology (Claimant's Exhibit 11 and 12, last page of exhibit 12).

38. The Claimant saw Dr. Miller on October 7, 2015. Dr. Miller noted that the Claimant reported that he continued to improve with occasional flares in symptoms including one spasm episode in the middle of the night since the last visit. The Claimant reported that he was walking and stretching and he just started working at a local golf course. Dr. Miller noted that "MMI will follow on subsequent visits" pending the status of psychology visits with Dr. Vandorsten and the status of a requested gym pass with 6 personal trainer sessions. The Claimant's work restrictions were continued and Dr. Miller noted that he anticipated impairment (Claimant's Exhibit 11).

39. The Claimant testified at the hearing that he provided Dr. Miller's work restrictions to his managers but he often had to do work in his department that did not follow his working restrictions. The Claimant testified that his pain would worsen when he had to complete job duties outside of his work restrictions. The Claimant testified that when he would complain to his supervisors about having to perform work outside of his restrictions that they would just tell him to just do the best he could or to do what he

could. He also testified that he was verbally harassed by his supervisors and called lazy and a sissy and they laughed and said he couldn't do anything after he provided his work restrictions to them.

40. The Claimant testified that he was hired by Broken Tee golf course in late September of 2015 and he works between 10-15 hours per week at a pay rate of $8.50 per hour.

41. Dr. William Miller testified at the hearing. Dr. Miller was an authorized treating physician for the Claimant's worker's compensation injury. Dr. Miller testified that the Claimant was first seen by Dr. Foster in his office on January 22, 2015. Dr. Miller began treating the Claimant at the next visit to the same office on January 28, 2015. Dr. Miller testified that the Claimant told him that his mechanism of injury involved lifting a five gallon bucket of mortar that weighs approximately 50-60 pounds when he experienced the immediate onset of low back pain. The Claimant mentioned that he was leaning forward with his arms outstretched, with a twisting motion. Dr. Miller also testified that he was familiar with the Claimant stating that shortly after the lifting, he developed further pain reaching upward while tagging lumber and then still additional pain when he coughed afterward. Dr. Miller's assessment of the Claimant as of January 28, 2015 was that the Claimant had a lumbar strain and he referred him for physical therapy. Dr. Miller discussed some other considerations in the event the Claimant's condition didn't improve. Dr. Miller testified that the prior chiropractic care that the Claimant received was principally for his neck and upper back. Dr. Foster has initially imposed lifting restrictions of 25 pounds for lifting, carrying, pushing and pulling and Dr. Miller continued more or less the same restrictions and added the ability to change positions frequently. Dr. Mill also testified about the restriction on overhead lifting or reaching away from the body. Dr. Miller testified that by February 4, 2011, the Claimant had continued symptoms so he requested an MRI. At that point, the diagnosis was the same so there was no change to the Claimant's restrictions. As of February 27, 2015, Dr. Miller had the results of the MRI and the prior records from the Claimant's chiropractor. Dr. Miller testified that with respect to the chiropractic notes, the Claimant treated for about a month for his neck, upper back and lower back from March to April of 2014. Then after April 2014 onward, the Claimant had no additional lumbar treatments. Based on those notes, Dr. Miller testified that it was his opinion that the Claimant had no prior back pain problems that were independently disabling as of the date of his January 4, 2015 injury. Once Dr. Miller had those records, Dr. Miller was able to determine that the Claimant's condition resulted from his work-related mechanism of injury. Dr. Miller also testified that although there is some confusion in the February 27, 2015 report about the Claimant's work restrictions, this was an error and the Claimant should have had actual listed restrictions on the form, but the restrictions didn't populate into the form. However, he did check the box that the Claimant was under modified duty and he intended to keep the Claimant on the same restrictions that he had been on previously.

42. Dr. Miller further testified that between March 23, 2015 and October of 2015, the Claimant saw Dr. Miller on a roughly monthly basis. He was referred to Dr. Graves, a chiropractor and for physical therapy at Select PT. He was also referred to

Dr. Kawasaki who recommended some facet based injections. Over this time period, the Claimant reported variable symptoms, sometimes he would have leg symptoms and sometimes he wouldn't and the Claimant would improve for a time then have interim flares. In June, Dr. Kawasaki had discharged the Claimant from his care because the Claimant was not interested in injections and he had been improving. Later, Dr. Miller referred the Claimant to Dr. Van Dorston, a pain psychologist, for a couple of visits. By the Claimant's October 2015 visit with Dr. Miller, Dr. Miller felt that the Claimant was approaching MMI and he was planning on placing him at MMI with an impairment rating and possibly recommending a gym pass and one more visit with Dr. Van Dorston. Dr. Miller ultimately opined that the Claimant did suffer a work related injury on January 4, 2015 and he anticipated that the Claimant would have permanent impairment as a result. Dr. Miller testified that based on table 53 of the AMA Guidelines for Evaluation on Impairment, the Claimant would meet the criteria specific to low back pain with continuous symptoms for greater than six months even without significant findings on the MRI. On cross-examination, Dr. Miller did agree that there would need to be objective findings, but that these could be objective findings on examination such as variable lower extremity symptoms, reduction in motion snd a lack of progression with therapy interventions. Dr. Miller also agreed that the degenerative pathology noted on the MRI report would not be attributed to the Claimant's work injury, but he did attribute the development of symptoms to the work injury. Dr. Miller testified that due to legal proceedings, the Claimant's next visit after October 2015 was delayed, but that his plan had been to place the Claimant at MMI whenever the next visit occurred.

43. Dr. Lawrence Lesnack also testified at the hearing as an expert in the areas of physical medicine and as to Level II accreditation matters. Dr. Lesnack testified that he performed an IME of the Claimant on July 30, 2015. As part of his IME, he reviewed medical records after the evaluation, including the chiropractic records of Dr. Wilner and the Exempla records from Dr. Foster and Dr. Miller. Dr. Lesnack also testified that he was present for Dr. Miller's testimony at the hearing. Dr. Lesnack also obtained a history from the Claimant and conducted a physical examination. Based on all of this, Dr. Lesnack reached the medical opinions contained in his written IME report. Dr. Lesnack testified that for the most part he found the Claimant's physical examination to be normal. He testified that the Claimant complained of some aching sensations after bending forward and then returning to an upright position but found the Claimant's strength and sensation reflexes normal. Dr. Lesnack also found that maneuvers to look at the SI joints and hips were normal. Dr. Lesnack testified that he noted minimal tenderness with palpation. Dr. Lesnack disagreed, in part, with Dr. Miller's previous discussion of the Table 53 rating. Dr. Lesnack opined that Table 53 would require reproducible, objective findings to provide a diagnosis so that you could give a Table 53 rating. Dr. Lesnack opined that there were no objective findings on exam that would qualify for a diagnosis in this case as the Claimant had minimal structural abnormalities on an MRI which are normal findings in a man of the Claimant's age. Dr. Lesnack further testified that there is a section that requires six months of pain and rigidity which also requires objective findings on examination, such as a positive straight leg raise test, a reflex finding or a true neurologic strength deficit. Dr. Lesnack opined that none of this was found. Rather, Dr. Lesnack stated that Dr. Miller talked about subjective

complaints such as tenderness on palpation which Dr. Lesnack argues is not an objective finding. As for the MRI, Dr. Lesnack opines that the Claimant's mild degenerative disk changes are a normal finding for a 33 year old man. Dr. Lesnack testified that on examination, the Claimant was pleasant but "very dramatic" which is not an issue when taken alone, but when considered in the context of the medical records and non-physiologic findings, Dr. Lesnack opines that the reported mechanism of injury doesn't make sense. He opined that the described mechanism of lifting a 50-60 pond bucket of mortar from waist level, even with a twisting motion, doesn't load the lumbar spine. Dr. Lesnack opined that to load the lumbar spine you have to be bent forward at the waist at least 70-90 degrees and leaning over slightly would put the Claimant at 10-20 degrees. Dr. Lesnack further opined that twisting in an upright position, without having that lumbar flexion to it, is not going to load the lumbar spine. Dr. Lesnack also finds that reaching up and tagging something would not load the lumbar spine. The only action described by the Claimant that Dr. Lesnack opines could have possibly loaded the lumbar spine was a forceful cough and that is not work-related. Based on the dramatic presentation of symptoms combined with a normal MRI and non-physiologic findings initially, and a history of being treated for spine pain within the past year, Dr. Lesnack finds that there are no objective findings that the Claimant suffered a specific injury to his lumbar spine on January 4, 2015.

44. On cross-examination, Dr. Lesnack testified that even if the same place is palpated and the same result is reached every time, this is still subjective. Dr. Lesnack did agree that you can feel acute spasms, but a report of "tightness" still refers to subjective patient reporting. In Dr. Lesnack's report, he referred to "minimal tenderness" upon palpation. Dr. Lesnack testified that this means that the Claimant complained of the tenderness, not that Dr. Lesnack could feel the tenderness. Upon reviewing Dr. Wilner's chiropractic records at the hearing, Dr. Lesnack agreed that there was a reference in April 2014 which says that the Claimant's low back symptoms were under control. He further agreed that there were no further references in Dr. Wilner's records after April 2014 regarding low back complaints or treatment until after January 4, 2015 although Dr. Lesnack's written report referenced "frequent symptoms in his low back" just prior to January 4, 2015.

45. Having reviewed and considered all of the medical records in evidence as well as the testimony of the Claimant, Dr. Miller and Dr. Lesnack at the hearing, the ALJ finds the opinions of the Claimant's treating physician, Dr. Miller, which are in part based on, and supported by, the medical records of Dr. Graves, Dr. Kawasaki, and Dr. Wilner, to be more credible and persuasive than the opinions of Dr. Lesnack. The opinions of Dr. Miller as to the work-relatedness of the Claimant's January 4, 2015 injury, the progression of the Claimant's symptoms during treatment and the Claimant's condition are found to be more reliable and persuasive than those of Dr. Lesnack and are found as fact.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1), the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. Respondent bears the burden of establishing any affirmative defenses. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201 (2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Compensability

A claimant's right to compensation initially hinges upon a determination that the claimant suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. C.R.S. § 8-41-301. Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009). It is the burden of the claimant to establish causation by a preponderance of the evidence. *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial*

Commission of Colorado v. Jones, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado, 717 P.2d 1000 (Colo. App. 1986).* The weight and credibility to be assigned expert testimony on the issue of causation is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

Compensable injuries are those which require medical treatment or cause disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970). In order to prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001); *H and H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986). However, where an industrial injury merely causes the discovery of the underlying disease to happen sooner, but does not accelerate the need for the surgery for the underlying disease, treatment for the preexisting condition is not compensable. *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

There is sufficient evidence in the record that the Claimant suffered an injury to his lower back on January 4, 2015 and the Claimant's testimony regarding his mechanism of injury was credible and no persuasive evidence was presented to contradict his testimony. Although Respondents have argued that the condition was pre-existing, the medical reports in evidence do not support this theory. The Claimant had received some chiropractic treatment prior to the injury, but it was primarily focused on his upper back and neck. The last record of low back chiropractic treatment before the work injury was treatment that Dr. Miller noted had ended in April of 2014. Once the Claimant's authorized treating physician, Dr. Miller, had the opportunity to review the older chiropractic records predating the January 4, 2015 incident, Dr. Miller determined that the injury was work related and that any prior medical history was non-contributory. Dr. Graves and Dr. Kawasaki also provided continuing treatment for the Claimant and noted symptoms and diagnoses similar to Dr. Miller over the course of the Claimant's treatment for the January 4, 2015 work injury.

The ALJ, having reviewed and considered all of the medical records in evidence as well as the testimony of the Claimant, Dr. Miller and Dr. Lesnack at the hearing, found the opinions of the Claimant's treating physician, Dr. Miller, which are in part based on, and supported by, the medical records of Dr. Graves, Dr. Kawasaki, and Dr. Wilner, to be more credible and persuasive than the opinions of Dr. Lesnack. The opinions of Dr. Miller as to the work-relatedness of the Claimant's January 4, 2015 injury, the progression of the Claimant's symptoms during treatment and the Claimant's condition were found to be more reliable and persuasive than those of Dr. Lesnack.

As of the date of the hearing, there was also evidence to establish that the Claimant continued to have symptoms, but that he was approaching MMI and Dr. Miller had anticipated putting the Claimant at MMI soon.

Based on the foregoing, the ALJ determines that the Claimant has proven by a preponderance of the evidence that his work activities on January 5, 2015 caused or permanently aggravated, accelerated or combined with a preexisting condition producing the need for medical treatment. Thus, the Claimant suffered a compensable injury on that date.

Medical Benefits – Authorized, Reasonable and Necessary

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990).

Treatment is compensable under the Act where it is provided by an "authorized treating physician." *Kilwein v. Industrial Claim Appeals Office*, 198 P.3d 1274 (Colo. App. 2008); *Popke v. Industrial Claim Appeals Office,* 944 P.2d 677 (Colo. App. 1997). Authorization to provide medical treatment refers to a medical provider's legal authority to provide medical treatment to a claimant with the expectation that the provider will be compensated by the insurer for providing treatment. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Under C.R.S. § 8-43-404(5)(a), the Employer or Insurer is afforded the right in the first instance to select a physician to treat the injury. The employer's duty to provide designated medical providers is triggered once the employer or insurer has some knowledge of facts that would lead a reasonably conscientious manager to believe the case may involve a claim for compensation. *Bunch v. Industrial Claim Appeals Office of State of Colorado*, 148 P.3d 381 (Colo. App. 2006); *Jones v. Adolph Coors Co*., 689 P.2d 681 (Colo. App. 1984). Once an ATP has been designated the claimant may not ordinarily change physicians or employ additional physicians without obtaining permission from the insurer or an ALJ. If the claimant does so, the respondents are not liable for the unauthorized treatment. *Yeck v. Industrial Claim Appeals Office,* 996 P.2d 228 (Colo. App. 1999).

Here the Claimant began treating with Dr. Miller and Kawasaki and was also referred to Dr. Graves for chiropractic care. As of the date of the hearing, his treating physicians continued to offer treatment recommendations.

As set forth above, there is evidence to establish that the Claimant continues to have symptoms resulting from injury he suffered on January 4, 2015. Although, Dr. Miller opined that the Claimant was still actively treating for the January 4, 2015 work injury and was still subject to temporary work restrictions, as of the date of the hearing, the Claimant had not been placed at MMI. Thus, the conditions related to the initial injury were still present and may require treatment. To the extent that Dr. Miller has since placed the Claimant at MMI, that may affect medical benefits going forward from that point.

However, prior to being placed at MMI by Dr. Miller, the Respondents shall be liable for the continued medical treatment recommended by Dr. Miller and his authorized referrals which is reasonably necessary to cure and relieve the Claimant from the effects of his January 4, 2015 work injury.

Temporary Disability Benefits

To prove entitlement to temporary disability benefits, the Claimant must prove: that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). C.R.S. § 8-42-103(1)(a), requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain temporary disability benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

In this case, the Claimant established that he suffered a compensable work injury on January 4, 2015, but he failed to prove that he suffered a wage loss as a result of that injury. Prior to the termination of his employment, the Claimant was working under lifting, pushing and pulling restrictions imposed by Dr. Miller (and Dr. Foster prior to that) as of January 22, 2015. However, there was not substantial evidence that the Claimant suffered any wage loss until March 18, 2015, the day following the termination of the Claimant’s employment with Employer.

In this case, it was found that the Employer has an Attendance and Punctuality Policy which was communicated to the Claimant and which the Claimant received in writing. Essentially, hourly employees are expected to report for work at the assigned time, adhere to the work schedule, work through scheduled shifts, perform assigned duties and take meal periods as scheduled. Failure to adhere to the attendance and punctuality policy will result in discipline. The Employer's Progressive Disciplinary Process policy is that "the discipline process will begin when an associate receives the third unexcused occurrence in a six-month period. Each absence or tardy is considered one occurrence. If there are 3 occurrences in a 6 month period, the managers are to provide a "coaching." After a "coaching" has occurred, if there are 3 additional occurrences, the managers are required to issue a "counseling." After an employee receives a "counseling," if there is 1 additional occurrence, the managers are required to issue a "final warning." After an active Final Counseling, and there is 1 additional occurrence, managers are required to administer a "termination." There are certain absences and tardiness that is considered "excused." These "excused" absences and tardies include "State-law protected time off." In this section, the policy refers the reader to "State Exceptions" in the LOA HR SOP and Time-Off Benefits HR SOP for additional details, but this was not offered or admitted into evidence. In reference to the Employer's disciplinary policy, the term "active" refers to a disciplinary action that is within six (6) months from the date when the action was administered. In tracking "active" disciplinary notices, "a notice remains visible for six months" and "at the end of the six-month period, the notice rolls off and is no longer "active." When an employee has been employed for fewer than 120 days, then he or she should receive a "final warning" if there are 3 occurrences in the first 120 day period and then proceed to immediate termination for 1 additional occurrence that occurs in the first 120 days. However, if no further occurrence occurs in the first 120 days, then the "final warning" issued during that probationary period is treated as a "coaching" notice. 35).

On September 20, 2014, the Claimant received a Progressive Disciplinary Notice for being unexcused absent on 8/24 and tardy on 7/4 and 9/16. He was advised that he should refrain from further violations of the Employer's Attendance Policy and that further violations will result in additional disciplinary action up to and including termination. All of these attendance occurrences happened prior to the Claimant's injury and, thus, were unrelated to the Claimant's work injury. This notice was entitled a "final warning" in the records under the Employer's Progressive Disciplinary Process as it occurred in the first 120 days of employment. As there were no further occurrences in the first 120 days of employment, this notice was treated as a "coaching" notice per the Employer's policy.

On November 29, 2014, the Claimant received a Progressive Disciplinary Notice for arriving over 3 hours late on 10/6/2014, arriving 13 minutes late on 11/21/2014 and arriving 31 minutes late on 11/23/2014. The Claimant was advised to refrain from further violations of the Employer's Attendance Policy and that further violations will result in additional disciplinary action up to and including termination. All of these attendance occurrences happened prior to the Claimant's injury and, thus, were unrelated to the Claimant's work injury. This notice would be considered a "counseling" under the

Employer's Progressive Disciplinary Process since the "final warning" issued in the Claimant's first 120 probationary period had converted to a "coaching" notice. That "coaching" notice would have been less than 6 months prior to the November 29, 2014 notice, so the September 20, 2014 notice would still be "active."

On December 23, 2014, the Claimant received a Progressive Disciplinary Notice for being absent on December 15, 2014 with insufficient sick time to cover his scheduled hours. The notice stated that this violation progressed the Claimant to "final warning." The Claimant was advised to refrain from further violations of the Employer's Attendance Policy and that further violations will result in additional disciplinary action up to and including termination. This attendance occurrence happened before the Claimant's injury and is unrelated to the work injury.

Subsequent to the Claimant's work injury, the Claimant was absent or tardy on multiple occasions.[1] However, the ALJ found that with respect those absences or tardiness occurring after his work injury but prior to March 17, 2015, the Claimant's testimony as to the reasons he was late or missed work or had to leave early subsequent to his work injury was found as fact and that for the dates prior to March 17, 2015, the reasons the Claimant was absent or tardy or otherwise had an attendance occurrence were related to the Claimant's work injury. However, the Claimant's employment was not terminated for any of these absences or tardies. Until March 17, 2015, none of the injury-related absences resulted in termination. It was not until a non-injury related tardiness on March 17, 2015 that a violation of the Attendance Policy, in connection with prior but still active violation notices, resulted in the Claimant's employment being terminated.

The Claimant himself testified that he was about 10-25 minutes late on March 17, 2015 due to car trouble and his car would not start. He worked a full day on that date. Then, the Claimant testified, on March 18, 2015, he clocked in and he was asked if he would like to take the day off because it wasn't expected to be busy. The Claimant testified that he stated that he needed as many hours as possible. Before the Claimant clocked out at lunch time, he was told to go to the office and when he arrived, Victor and Richard advised the Claimant his employment was being terminated due to attendance.

As of March 17, 2015, the Claimant's previous "final warning" disciplinary notice administered on December 23, 2014 for a December 15, 2014 absence would have been considered an "active" notice as it was less than six (6) months prior to March 17, 2015. Per the Employer's policy, if there is a one (1) additional attendance occurrence after an active final counseling/warning, then managers are required to administer a termination.

[1] On March 18, 2015, the Claimant received a Progressive Disciplinary Notice for tardiness on February 4, 2015, February 18, 2015, February 19, 2015, February 25, 2015, February 26, 2015, February 27, 2015, March 4, 2015 and March 17, 2015 and for work absences on January 7, 2015, January 17, 2015, January 31, 2015, February 3, 2015 and February 5, 2015. The Notice provided that these were violations of the Company's attendance and punctuality standards and the Claimant's employment was terminated.

While the Claimant's counsel argued that the Claimant's attendance issues were related to his injury-producing activity, the weight of the evidence establishes that with respect to the Claimant's termination from employment with Employer, the Claimant violated known and well-communicated attendance policies for reasons other than his work injury. The Claimant's employment was terminated as a result of these violations and he is not entitled to temporary disability benefits since the Claimant failed to prove his wage loss was due to disability resulting from the work injury. Because the Claimant failed to establish that he is entitled to temporary total and temporary partial disability benefits, the remaining issue of responsible for termination is moot.

ORDER

It is therefore ordered that:

1. The Claimant suffered a compensable industrial injury during the scope and course of his employment with Employer on January 4, 2015.

2. The Respondents are liable for medical treatment recommended by Dr. Miller, or by his referrals, which is reasonably necessary to cure and relieve the Claimant from the effects of his January 4, 2015 work injury.

3. The Claimant failed to prove his wage loss was due to disability resulting from the work injury and thus, failed to prove he is entitled to temporary total disability benefits or temporary partial disability benefits and this claim is denied and dismissed.

4. Insurer shall pay the Claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's supplemental order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after the certificate of mailing in the supplemental order, as indicated on the certificate of mailing or service; otherwise, the Judge's supplemental order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the supplemental order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. The petition shall be in writing, shall set forth in detail the particular errors and objections relied upon, and shall be accompanied by a brief in support thereof. For statutory reference, *see* § 8-43-301(6), C.R.S. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 28, 2016

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-944-295-01

ISSUES

- Did Claimant prove by a preponderance of the evidence that the industrial injury of February 19, 2014 proximately caused injury to her left medial meniscus and/or aggravated pre-existing chondromalacia so as to warrant surgery to treat these conditions?

- Did Claimant prove that surgery proposed by Dr. Jones constitutes reasonable and necessary medical treatment to cure and relieve the effects of the February 19, 2014 industrial injury?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. At hearing Claimant's Exhibits 1 though 19 were admitted into evidence. Respondents Exhibits A through S were admitted into evidence. The post-hearing deposition of Dr. Christopher Jones was received into evidence.

2. On February 19, 2014 Claimant sustained an admitted injury to her left knee.

CLAIMANT'S TESTIMONY

3. Claimant testified as follows. On February 19, 2014 she was the retail director of four bookstores and four coffee shops. She had recently undergone surgery to one of her left toes. As a result Claimant was using a "scooter" to keep her left lower extremity elevated when walking. Claimant was using the scooter while crossing one of the Employer's parking lots. The scooter hit a "divot" in the parking lot causing the scooter to fall over. Claimant fell on both knees and both hands. She explained that her left knee was the "first to go down." Claimant felt as though she had hit a "brick wall" and her knee was bleeding badly. She was taken to the emergency room (ER) where the knee was "sewed" up and she was told "there was nothing they could do."

4. Claimant testified as follows concerning the events of February 20, 2014. She woke up and was in so much pain she "couldn't even walk." She went to her family doctor who gave Claimant antibiotics and referred her to Brad Dresher, M.D., the surgeon who operated on the left toe. She went to Dr, Dresher who sent her home.

5. Claimant testified that on February 21, 2014 her knee was "really red" and she could not walk on it. She returned to Dr. Dresher's office and was seen by the doctor's physician's assistant (PA). The PA drew a line around the redness and

advised Claimant that if the redness “streaked” she had cellulitis. Claimant explained that the redness did streak and as a result she underwent surgery “the next day” to “clean out the whole wound.”

6. Claimant testified as follows concerning her medical treatment after surgery. She came under the care of George Johnson, M.D. Claimant received physical therapy (PT), pain management services, an injection to block the saphenous nerve and an injection “in the kneecap.” Claimant testified that none of these treatments really helped her. Eventually Dr. Johnson placed Claimant at maximum medical improvement (MMI). Claimant testified that when Dr. Johnson placed her at MMI she was still experiencing symptoms in the left knee. These symptoms included pain, numbness, burning, popping and locking.

7. Claimant underwent a Division-sponsored independent medical examination (DIME) performed by William Watson, M.D. Claimant testified that Dr. Watson found she was not at MMI because she needed more PT, an MRI, an additional saphenous nerve block, a “PRP injection” and further examination by Dr. Dresher.

8. Claimant explained that after the DIME she returned to Dr. Dresher who arranged for an MRI of the knee, another saphenous nerve block and additional PT. According to Claimant the second saphenous nerve block did not relieve her symptoms. Claimant stated that the request for a “PRP injection” was denied by the Insurer. Claimant testified that Dr. Dresher also referred her to Christopher Jones, M.D.

9. Claimant explained that she went to Dr. Jones who recommended she undergo surgery to repair a torn meniscus. Claimant testified that she would like to undergo this surgery but the request for surgery was denied by the Insurer.

10. Claimant testified that her current symptoms include pain around the kneecap, numbness, burning, popping and locking. Claimant stated that these symptoms prevent her from performing some of her pre-injury activities such as hiking and biking.

11. Claimant testified that in 2008 she sustained a left knee injury while working a Ford Motor Credit. According to Claimant she underwent an MRI as a result of this injury. However, Claimant stated that she fully recovered from the 2008 injury and did not seek “ongoing” treatment.

12. Claimant stated that she suffered another left knee injury when she was in a bicycle accident approximately three years prior to February 19, 2014. Claimant stated that she underwent about six PT sessions but did not seek “ongoing” treatment as a result of this injury. Claimant testified that within a year she fully recovered from this injury.

MEDICAL EVIDENCE PRIOR TO FEBRUARY 19, 2014 DATE OF INJURY

13. On November 14, 2008 Claimant underwent an MRI of the left knee. The purpose of the MRI was to assess a contusion of the patella and a medial collateral

ligament sprain. The radiologist reported there was “less than 50% loss of hyaline cartilage thickness, without exposure of the subchondral bone of the medial femorotibial compartment (Grade II Outerbridge classification). There was hypertrophy of the superficial tibial collateral ligament consistent with a remote MCL sprain. The medial meniscus lateral meniscus were reportedly normal.

14. From October 1, 2012 through August 7, 2013 Claimant underwent approximately 40 sessions of PT at Cornerstone Physical Therapy, P.C. (Cornerstone). The Cornerstone records reflect that Claimant was referred to Cornerstone by her primary care physician (PCP), Frank Barry, M.D.

15. When Claimant first went to Cornerstone on October 1, 2012 she gave a history that she fell off of her bike in July 2012. The physical therapist noted Claimant fell off the bike “in the supinated position onto her left ankle.” Claimant complained of pain on the top of her left foot that radiated into the lateral malleolus when ascending or descending stairs.

16. The Cornerstone notes reflect that during PT sessions in October and November 2012 Claimant reported numbness in the left knee and a “dull ache” in the left knee. (Respondents’ Exhibit D, pp. 13, 14, 17). The physical therapist opined these symptoms were mostly likely caused by muscle tension in the left lower extremity. The Cornerstone notes from June 14, 2013 indicate that Claimant reported left knee pain when walking. (Respondents’ Exhibit D; Respondents’ Exhibit R pp. 321-322).

17. In December 2012 the Cornerstone physical therapist noted Claimant’s diagnoses included left ankle sprain, left leg paresthesias, low back pain and left neck pain and stiffness. The physical therapist opined that some of the “left lower extremity issues” were caused by “sacro-illiac joint dysfunction with associated muscle imbalances as well as Iliotibial band pain.”

18. In January 2013 Claimant reported to the physical therapist that in addition to her other symptoms she was “having bone pain in her big toe.”

19. On March 25, 2013 Dr. Dresher of Colorado Springs Orthopaedic Group (CSOG) examined Claimant on referral from Dr. Barry. Claimant gave a history of a bicycle accident in July 2012. Claimant reported she was experiencing pain in the “left forefoot.” On PE Dr. Dresher noted a “Tinel’s sign over the superficial peroneal nerve midway through the leg that shoots paresthesias into the dorsum of her foot.” Dr. Dresher assessed joint pain in the ankle and foot and left 1st MTP post-traumatic chondral injury. Dr. Dresher injected the toe joint and recommended claimant wear a short cast boot and exercise to prevent ankle stiffness.

20. In April 2013 Dr. Dresher performed a cheilectomy on the Claimant’s great left toe.

21. On August 7, 2013 Dr. Dresher noted Claimant still had an “inflamed 1st MTP with a fair amount of pain” despite undergoing a left “cheilectomy.” On this occasion Dr. Dresher discussed with Claimant the possibility of a 1st MTP fusion.” On

September 10, 2013 Dr. Dresher recommended that Claimant undergo a 1st MTP fusion.

22. On December 30, 2013 PA-C Robert Valdez noted that claimant was "almost one year status-post cheilectomy of her left first metatarsal phalangeal joint." However Claimant reported little or no relief and presented for "fusion of the first status metatarsal phalangeal joint." PA-C Valdes assessed "Hallux-rigidus" and status-post cheilectomy. PA-C Valdez discussed fusion surgery with Claimant and Claimant expressed her desire to undergo the procedure.

23. Medical records indicate that Dr. Dresher performed the MTP fusion surgery on January 10, 2014.

MEDICAL EVIDENCE CONCERNING FEBRUARY 19, 2014 DATE OF INJURY

24. Claimant was seen at St. Francis Medical Center on February 19, 2014. She underwent x-rays of the left foot, left knee and left wrist. No fractures or dislocations were seen by the radiologist.

25. On February 20, 2014 Richard Vu, M.D., examined Claimant. Claimant gave a history that she fell and hurt her left knee and was evaluated at the ER. Claimant reported that since the fall her left knee had become warm and would swell quickly. On physical examination (PE) Dr. Vu noted there was erythema to the left anterior knee and induration of the mid and inferior knee. Dr. Vu did not observe any "obvious intra-articular joint effusion." Dr. Vu expressed concern that Claimant had septic bursitis and prescribed antibiotic medication. Dr. Vu also referred Claimant to CSOG for an orthopedic evaluation.

26. On February 20, 2014 PA Mark Stafford examined Claimant at CSOG. PE PA Stafford noted Claimant was ambulating with crutches and that there was a "laceration over the anterior knee with some skin missing." PA Stafford also observed some erythema about the wound. PA Stafford stated the patellar tendons were intact and Claimant was able to fully extend her knee. Claimant did not complain of any "joint pain." However, extension and flexion of the knee produced pain over the "anterior knee where the laceration was." PA Stafford spoke to Dr. Dresher who wanted operate on Claimant.

27. On February 21, 2014 Dr. Dresher performed surgical procedures described as a left knee debridement, irrigation of the prepatellar bursa and closure of laceration. The pre and post-operative diagnoses were left knee laceration and left knee infection of the prepatellar bursa. The operative report indicates that there "was an abrasion noted on the anterior knee as well as the laceration of 4 cm."

28. On February 25, 2014 occupational medicine physician George Johnson, M.D., examined Claimant at CCOM. Claimant gave a history that 6 days previously she fell in a parking lot and experienced left wrist, left foot and left knee pain. Dr. Johnson noted the left knee wound had been opened, cleaned and sutured by Dr. Dresher. Claimant denied any prior injuries to her left knee. Dr. Johnson noted Claimant

underwent foot surgery 6 weeks previously. On PE of the left knee Dr. Johnson noted a 10 cm laceration over the top of the knee, inflammation around the knee, decreased ROM and tenderness to palpation. There was an abrasion of the right knee. Claimant's gait and stance were normal. Dr. Johnson assessed bilateral knee contusions and a laceration and infection of the left knee. Dr. Johnson prescribed Motrin, Keflex and ice.

29. On April 16, 2014 Dr. Dresher examined Claimant with respect to her left foot and left knee. Claimant reported she was "doing quite well and seeing some nice improvement." On PE of the left knee Dr. Dresher noted the incision was healed and Claimant had great range of motion (ROM). Dr. Dresher did not observe any swelling or erythema. Dr. Dresher assessed Hallux rigidus, left 1st MTP fusion and laceration of the left knee "healed."

30. Dr. Johnson examined Claimant on April 17, 2014. Claimant reported that she was "feeling much better" although she still experienced "moderate pain" that was "relatively frequent." Claimant rated her pain as "7." On PE of the left knee Dr. Johnson noted there was no inflammation, no erythema, no swelling and "pain on motion" was not present. Claimant's ROM was "full with flexion to 140" degrees. Dr. Johnson opined Claimant was "improving nicely with treatment." Dr. Johnson continued PT, continued Motrin and prescribed compression hose.

31. Dr. Johnson examined Claimant on May 5, 2014. Claimant reported that was continuing to have problems with the left knee and was concerned that the knee was not improving. Claimant rated her pain as a "5." Dr. Johnson noted that Claimant had "left knee pain around the patella on the lateral surface and referred her for an "MRI to rule out [a] meniscal tear." Dr. Johnson assessed a strain of the left knee and laceration of the left knee.

32. On May 14, 2014 Claimant underwent an MRI of the left knee. This was a high-field multisequence MRI. The radiologist reported a finding of prepatellar soft-tissue edema or other fluid representing a "possible soft-tissue contusion," bursitis or hematoma. In the medial knee compartment "no meniscal tear or focal chondral defect [was] identified." In the lateral knee compartment "no meniscal tear or focal chondral defect [was] identified." The patellofemoral articular cartilage was "unremarkable."

33. Claimant returned to Dr. Johnson on May 19, 2019. Claimant reported she continued to have "moderate intermittent pain." Dr. Johnson noted the MRI showed "prepatellar soft tissue edema but no meniscal tear or internal injury." He opined the MRI "showed a condition that will probably not need surgery.' Dr. Johnson prescribed home exercise and Motrin.

34. On June 18, 2014 Dr. Dresher examined Claimant for follow-up of her left knee and left 1st MTP fusion. Claimant reported continued discomfort in the left knee. Dr. Dresher noted the MRI ordered by Dr. Johnson "came back with a small amount of bursitis and inflammation." On PE Claimant had "pain to palpation in the medial and lateral joint line, less so over the healed laceration." Claimant also exhibited a "painful McMurray's maneuver." Dr. Dresher noted a small amount of inflammation in the

prepatellar bursa. Dr. Dresher assessed “left knee pain after laceration.” Dr. Dresher performed an injection in the suprapatellar pouch.

35. Dr. Johnson examined Claimant on June 23, 2014. Claimant rated her knee pain as a “3” and felt she was improving. Claimant stated that the pain was “intermittent.” Dr. Johnson noted that Dr. Dresher performed a “steroid injection” in the knee. Dr. Johnson opined that Claimant appeared to be improving and would follow-up with Dr. Dresher for treatment of the knee.

36. On August 18, 2014 Dr. Dresher examined Claimant for follow-up of her left knee and left 1st MTP fusion. Dr. Dresher noted Claimant was having “new symptoms” on the left medial ankle and pain at the base of the great toe. Claimant continued “to have pain at the medial and lateral joint line” of the left knee. On PE Dr. Dresher noted a positive Tinel’s sign “over the medial ankle where the saphenous nerve nears the ankle joint.” Dr. Dresher prescribed a “compounding cream” to “calm down the saphenous nerve” and referred Claimant for an EMG and nerve conduction studies.

37. On September 29, 2014 Kenneth Finn, M.D., examined Claimant and conducted EMG and nerve conduction studies of the left lower extremity. Claimant told Dr. Finn that she had noticed “increasing shocky sensations in the medial aspect of the ankle with occasional numbness and tingling in the medial ankle.” Dr. Finn wrote that based on nerve conduction testing “there is evidence of left saphenous neuropathy.”

38. Dr. Johnson examined Claimant on September 30, 2014. Claimant reported she was experiencing moderate but intermittent knee pain. Dr. Johnson noted that the electrodiagnostic testing showed a saphenous neuropathy. On PE of the left knee Dr. Johnson noted that the laceration was “healing well.” Dr. Johnson did not observe any abrasion, rash or swelling. However, erythema was “present.” Claimant exhibited full ROM with flexion to 140 degrees and there was no pain with motion. Dr. Johnson wrote that Claimant was “describing lateral patellar pain and tenderness that is moderate, and radiates distally.” Dr. Johnson stated that the saphenous neuropathy appeared to “have been caused by [Claimant’s] injury” and prescribed gabapentin. Dr. Johnson also stated that he would refer Claimant to “pain psychology.”

39. Dr. Johnson examined Claimant on October 14, 2014. Claimant reported she was experiencing moderate but intermittent knee pain. Claimant stated that she did not start gabapentin because it was denied. She also reported that she had not been called by “pain psychology.” Consequently Claimant had not undergone psychological evaluation or treatment. The PE of the left knee was essentially identical to that performed on September 30, 2014. Claimant complained of “burning pain” radiating from the lateral knee to the medial ankle. Dr. Johnson stated that he considered gabapentin and pain psychology to be “indicated” and wrote that he would discuss these treatments with “case management.”

40. On October 29, 2014 William Lippert III, M.D., examined Claimant for consideration of a saphenous nerve block. Dr. Lippert diagnosed saphenous neuropathy and “intrinsic left knee injury.” Dr. Lippert also noted “exquisite tenderness”

in the lumbar spine and stated that the differential diagnoses “may also include the possibility of radiculopathy.” Dr. Lippert performed a saphenous nerve block.

41. On November 7, 2014 Claimant underwent an evaluation by clinical psychologist Philip Mann, PhD. Dr. Mann interviewed Claimant, reviewed her history and administered psychological tests. Dr. Mann opined Claimant was “experiencing mild anxiety, mild depression, moderately high somatic distress, and moderately high functional distress.” Dr. Mann recommended Claimant undergo psychological intervention, biofeedback therapy and possibly a chronic pain coping group.

42. Dr. Dresher examined Claimant on November 12, 2014. Claimant continued to “have some burning type pain around the knee.” Claimant stated that she had stopped using “neuormodulator” medications because they “made her feel a bit symptomatic systemically.” On PE of the knee there was “very little swelling” and no erythema. The Claimant was “ligamentously stable.” However, Dr. Dresher noted there was “a little discomfort with patellofemoral manipulation.” Dr. Dresher reviewed the MRI of the left knee and stated that it “showed no meniscal injury or chondral injury.” However, Dr. Dresher noted that Claimant demonstrated a brief but “positive response” to the injection performed in June 2014. Dr. Dresher and Claimant discussed Synvisc versus platelet rich plasma (PRP) injections and Claimant indicated that she would “like to explore” the PRP injections. Dr. Dresher wrote he would “reach out” to Dr. Johnson to see if PRP injections could be “cleared.”

43. Dr. Johnson examined Claimant on November 20, 2014. Dr. Johnson noted Claimant had tried to treat the neuropathy with Neurontin and Lyrica but these drugs were “not helpful.” Dr. Johnson also stated that the PRP injections recommended by Dr. Dresher were “pending approval.” The PE of the left knee was essentially identical to those recorded on September 30, 2014 and October 14, 2014. With regard to the left ankle Dr. Johnson noted Claimant complained of “burning pain radiating from [the] lateral knee to [the] medial ankle.” On PE of the ankle Dr. Johnson noted mild tenderness of the malleolus without swelling, bruising or deformity. The ankle was “stable.” Dr. Johnson recommended continuation of psychological treatment and opined that PRP injections “may also be helpful.” Dr. Johnson prescribed continued PT and use of Motrin when necessary.

44. Dr. Dresher examined Claimant on December 10, 2014. Claimant reported continued “burning type pain around the knee.” Claimant advised Dr. Dresher that she had “maximized her improvement” with PT and there had been no improvement in the last month. On PE of the left knee Dr. Dresher observed no swelling, erythema or signs of infection. He noted the laceration was “healed nicely.” Claimant reported “mild burning pain to palpation on the medial and lateral joint line with patellofemoral manipulation.” Dr. Dresher reiterated that Claimant had a “nice improvement” with the June 2014 steroid injection and again stated he would contact Dr. Johnson for consideration of the PRP injections.

45. On December 15, 2014 orthopedic surgeon Christopher Isaacs, D.O., performed a records review at the request of the Insurer. The purpose of the review

was to evaluate Dr. Dresher's request to perform PRP injections. Dr. Isaacs noted that Dr. Dresher's diagnosis was "simply knee pain" and that the May 2014 MRI was "completely normal" except for soft tissue swelling. Dr. Isaacs noted that it had been 10 months since the date of injury "with really no knee diagnosis." Dr. Isaacs further stated that PRP injections have "only been approved for treatment of epicondylitis." Dr. Isaacs recommended that "any further diagnostic or treatment of the left knee be denied."

46. On December 17, 2014 Floyd Ring, M.D., a specialist interventional pain management and anesthesiology, performed a records review at the request of the Insurer. The purpose of the review was to evaluate requests for further treatment of Claimant's left lower extremity. Dr. Ring noted that medical records showed Claimant had "ongoing pain complaints in the left lower extremity, particularly over the foot and ankle, since 10/01/12." Dr. Ring recommended that further treatment be denied pending "a minimum record review by a specialist in rehabilitation medicine to determine whether these are preexisting pain complaints or are related at all to the work-related injury of 02/19/14."

47. Dr. Johnson examined Claimant on January 12, 2015. Claimant reported her pain level was a "4." She advised Dr. Johnson that PT was "no help" and she was no longer doing it. Claimant also reported that no medication except ibuprofen provided any relief. Dr. Johnson noted that the PRP injections had been denied by the Insurer. On PE of the left knee Claimant reported tenderness along the medial meniscus. Claimant exhibited 125 degrees of knee flexion and 150 degrees of extension. There was no pain on motion and there was not any swelling or crepitus. On examination of the left ankle Claimant complained of burning pain radiating from the lateral knee to the medial ankle and mild medial tenderness of the malleolus. Dr. Johnson assessed a strain of the left knee, laceration of the left knee and saphenous neuropathy of the left leg. Dr. Johnson opined the Claimant was at MMI without any permanent restrictions of need for ongoing medical treatment.

48. On January 20, 2015 Dr. Johnson assigned a 4% lower extremity impairment rating for Claimant's saphenous nerve neuropathy. Dr. Johnson stated there was "no structural injury to the knee joint" and therefore there was "no structural rating or impairment." Dr. Johnson also stated that Claimant had decreased ROM in the knee. However, because the MRI was "negative" and did not show internal derangement Dr. Johnson declined to give an impairment rating for the decreased ROM.

49. On March 3, 2015, Timothy Hall, M.D., performed an Independent Medical Evaluation (IME) of Claimant. The IME was performed at Claimant's request. Dr. Hall reviewed various medical records and performed a PE. On PE Dr. Hall noted that Claimant's mood was stable and her affect "appropriate." Claimant reported "abnormal sensation" in the saphenous nerve. Claimant's left knee ROM was "limited compared to the other side." Dr. Hall assessed the following: (1) Blunt trauma laceration of the left knee with local infection of the bursa; (2) Injury to the saphenous nerve with neuropathic pain; (3) ongoing knee pain related to blunt trauma and possible chondromalacia patellae; (4) Mood issues related to ongoing pain and functional deficits. Dr. Hall opined

that Claimant was not at MMI. He opined Claimant's treatment was "moving along nicely" until Dr. Ring argued that the treatment should be stopped. Dr. Hall opined that Claimant had previous "issues" with her left leg but those symptoms were "nothing like what she is dealing with presently." Dr. Hall thought that might explain Dr. Johnson's "abrupt" closure of the claim. Dr. Hall opined Claimant requires treatment "particularly from the psychological perspective" and also with a pain specialist to reduce ongoing symptoms. Dr. Hall recommended Claimant continue treatment with Dr. Dresher in hopes that he find an intervention to help with her knee pain. Dr. Hall wrote that "just because MRI is normal-appearing does not mean there is nothing wrong with her knee. She obviously has considerable trauma to the knee."

50. On April 9, 2015 orthopedic surgeon Jon Erickson, M.D., performed a records review at Respondents' request. Dr. Erickson is level II accredited. Dr. Erickson agreed with Dr. Johnson that Claimant reached MMI on January 12, 2015. Dr. Erickson disagreed with Dr. Hall's opinions because Claimant's examination did not support the existence of a "significant knee injury" beyond the laceration and because the May 14, 2014 MRI was essentially normal. Dr. Erickson opined the saphenous nerve condition is not related to the industrial injury because the symptoms did not appear until six months after the date of injury.

51. On May 21, 2015 William Watson, M.D., performed a Division-sponsored independent medical examination (DIME). Dr. Watson noted that Claimant's chief complaint was left knee pain that she believed was "emanating from underneath the knee cap." On PE of the left knee Dr. Watson noted that Claimant was tender over the lateral facet of the patella. He also noted tenderness over the lateral and medial joint lines. Claimant displayed a positive Tinel's sign over the infrapatellar branch of the saphenous nerve. Dr. Watson assessed saphenous nerve neuropathy of the left leg and "patellofemoral syndrome." Dr. Watson opined that Claimant was not at MMI for these diagnoses. He recommended Claimant undergo another MRI of the left knee to assess the possible progression of chondromalacia of the patella and should return to Dr. Dresher to be "reevaluated." Dr. Watson further opined that visco supplementation of PRP "may be the best solution" but stated Claimant should undergo additional PT to work on quadriceps strength. With regard to saphenous nerve neuropathy Dr. Watson opined Claimant should have PT for "nerve glides" and possibly nerve blocks.

52. Dr. Johnson again examined Claimant on August 3, 2015. Claimant reported moderate burning left knee pain which radiates down to the inside of the left ankle. She rated her pain at 6/10 and stated that it was not improving. On PE of the left knee Dr. Johnson observed no joint effusion, full ROM in extension and slightly decreased ROM in flexion and tenderness to palpation of the saphenous nerve. Dr. Johnson recorded that McMurray's test was negative. Dr. Johnson diagnosed "sprains and strains of unspecified site of knee and leg," laceration of the left knee and saphenous neuropathy of the left leg. In accordance with the recommendation of Dr. Watson Dr. Johnson ordered a repeat MRI of the left knee and referred Claimant back to Dr. Dresher for consideration of PRP injections or visco supplementation.

53. On August 10, 2015 Claimant underwent another MRI of the left knee. With respect to the menisci the radiologist noted “increased signal intensity in the soft tissues around the meniscocapsular junction of the posterior medial aspect of the medial meniscus.” However, there was no “distinct fluid collection between the meniscus and capsule nor subluxation of the meniscus on the articular cartilage.” The radiologist opined these findings suggested “tear of the posterior oblique ligament.” Otherwise the menisci were “normal size, shape and signal intensity.” The radiologist further opined there was “edema or fluid anterior to the patella and the medial aspect of the patellar tendon.” Miscellaneous findings included “new thickening and intermediate increased signal in the distal semimembranosus tendon,” a “small amount of fluid in the subgastronemius bursa and fluid deep to the Sartorius, gracilis, and semitendinosus tendons.” The radiologist’s impressions were as follows: (1) A posteromedial corner injury includes edema in the posterior oblique ligament, disruption of the posterior aspect of the medial meniscotibial ligament distal semimembranosus tendinopathy without a high-grade tear; (2) Persistent but improved edema anterior to the patella and medial to the patellar tendon, but no drainable fluid collection.

54. On August 19, 2015 Dr. Dresher examined Claimant. Dr. Dresher noted the August 10, 2015 MRI showed a “posteromedial corner injury” involving the oblique tendon, the posterior aspect of the medial meniscotibial ligament and semimembranous tendinopathy. He also opined there was fluid “deep to the pes anserine tendons favor the adjacent fluid is related to the posteromedial corner injury” and improved edema anterior to the patella and medial to the patellar tendon. On PE he noted there was no pain or crepitation at patella femoral articulation, ROM was full on extension and flexion was 120 degrees and painless. Dr. Dresher assessed the following: (1) Chondromalacia of the patella; (2) Left knee pain with posteromedial corner injury and chondromalacia. Dr. Dresher referred Claimant to PT for strengthening of the left knee and to Dr. Lippert for evaluation of the saphenous nerve neuropathy and consideration of nerve blocks. Dr. Dresher also referred Claimant to Christopher Jones, M.D., for evaluation of the posteromedial corner injury. Dr. Dresher noted that Dr. Watson had recommended going forward with PRP or visco supplementation but did so before the August 10 MRI.

55. On October 1, 2015 Dr. Jones performed an orthopedic evaluation Dr. Jones is affiliated with CSOG. Dr. Jones assessed the following: (1) Complex tear of medial meniscus of left knee as current injury; (2) Acute pain of the left knee; (3) Sprain of the medial collateral ligament of the left knee. Dr. Jones requested authorization to perform surgery described as a “medial meniscal repair.”

56. On October 5, 2015 Dr. Johnson examined Claimant. Claimant complained of “moderate burning left knee pain which radiates down to the inside of the left ankle.” Claimant rated the pain 6/10. Dr. Johnson wrote that he “agreed” with Dr. Jones’ recommendation for surgery “to repair the knee.”

57. On October 26, 2015 Dr. Erickson issued a report concerning Dr. Jones’ request to perform surgery. Dr. Erickson stated that the August 10, 2015 showed a “hint of abnormality.” Dr. Erickson stated that he did not believe the August 10 MRI

"clearly" showed a meniscus tear and recommended that the request for surgery be denied until an independent radiologist reviewed both the May 14, 2014 MRI and the August 10 MRI to see if there has been a "substantial change."

58. On October 29, 2015 Dr. Lippert performed a saphenous nerve block.

59. On November 10, 2015 Dr. Erickson authored a letter to the Insurer. Dr. Erickson wrote that he reviewed the August 10, 2015 MRI with an unidentified "MSK expert radiologist." The ALJ infers that the letters "MSK" refer to a musculoskeletal radiologist. According to Dr. Erickson the MRI showed "some mild degenerative signal in the medial meniscus," but no tear and the meniscocapsular junction was intact. Dr. Erickson also stated that the only difference between the May 2014 MRI and the August 2015 MRI was "perhaps slightly more pes anserine bursal fluid in the second study." Dr. Erickson opined that there "is not evidence of a surgical lesion on this most recent MRI" and recommended denial of the request for surgery. He suggested that Claimant's "minor symptoms" are "possibly amenable to a steroid injection to the soft tissues at the posteromedial corner."

60. On November 11, 2015 Dr. Dresher examined Claimant for follow-up of the left knee. Claimant reported she had experienced no improvement in her symptoms. Dr. Dresher noted that Dr. Jones had recommended a "diagnostic arthroscopy with consideration for medial meniscus repair if necessary" and exploration of the posteromedial corner for ligament repair. Dr. Dresher stated that the request for surgery had "been denied and they are now sending the image out for a second opinion." Dr. Dresher opined there "certainly could very well be a medial meniscus repair done if that is found intraoperatively." Dr. Dresher further stated that: "We are not challenging the reading on the MRI that this was missed which is currently what other Worker's Compensation physicians are pursuing."

61. On November 19, 2015 Dr. Johnson noted that Claimant reported the saphenous nerve block performed on October 29, 2015 "did not help." Instead Claimant reported the block caused hip pain. On December 17, 2015 Claimant advised Dr. Johnson that she had completed PT and It "was not helpful."

62. Medical records reflect that from August 3, 2015 through December 17, 2015 Dr. Johnson examined Claimant on eight occasions. On every one of these examinations Dr. Johnson documented that McMurray's test was negative.

63. On January 14, 2016 Dr. Johnson examined Claimant. Claimant reported she had undergone psychological counseling and pain management and these treatments had been "somewhat helpful." Claimant reported moderate burning left knee pain which radiated down to the inside of the left ankle. Claimant rated her pain at 6/10 and also reported "pins and needles in her ankle." On PE Dr. Johnson noted that McMurray's test was "positive over the medial meniscus." Dr. Johnson's diagnoses included the following; (1) Other meniscal derangements, unspecified medial meniscus, left knee; (2) Laceration without foreign body, left knee, subsequent encounter; (3) Unspecified mononeuropathy of left lower limb.

64. On December 17, 2015 Dr. Hall issued another report. It is apparent from this report that Dr. Hall had reviewed some medical records generated after his March 3, 2015 report. The additional records include but are not necessarily limited to Dr. Watson's DIME report, the August 10, 2015 MRI report, a note from Dr. Dresher dated August 28, 2015 and Dr. Jones' recommendation for surgery. Dr. Hall does not mention Dr. Erickson's letter to the insurer dated November 10, 2015 and the ALJ infers he had not seen it at the time he issued the December 17 report. It is unclear whether Dr. Hall actually examined Claimant on December 17. Although the December 17 report does not document any formal examination findings Dr. Hall wrote that Claimant was "still quite symptomatic" and that it is clear from Claimant's "presentation and examination that there is something abnormal in the knee creating local symptoms."

65. In the December 17, 2015 report Dr. Hall wrote that the August 10, 2015 MRI of the left knee was a "slightly different study" that was "more specific and more defined" than the May 2014 MRI. Dr. Hall opined that the August 10 MRI revealed "local pathology potentially amiable to surgical correction." Dr. Hall opined that the August 10 MRI findings "are not new" and there is no reason to believe they are the result of some event that occurred after February 19, 2014. He stated that merely because a patient "has a study that does not unearth specific pathology does not mean there is not pathology." Dr. Hall commented the August 10 MRI findings represent "an improved imaging event, which has unearthed the pathology that has likely been present all along." He opined Claimant "should be allowed to continue her work with Dr. Dresher and Dr. Jones."

66. At Respondents' request Douglas Scott, M.D., performed an IME of the Claimant. Dr. Scott is board certified in occupational medicine and is level II accredited. Dr. Scott estimates that 5% of his practice involves the treatment of knee injuries.

67. Dr. Scott issued a written report on February 10, 2016. On the date of the examination, January 19, 2016, Claimant reported that her symptoms included pain over the left knee cap, clicking in the left knee cap, a sensation of instability over the left knee cap, pain in the back of the left knee and locking of the left knee. Claimant also reported tingling over the left shin. Dr. Scott opined that Claimant's work-related diagnoses included the following: (1) Contusion of both knees; (2) Laceration/abrasion of the left knee followed by infection and antibiotic treatment, "surgical I & D, with resolution and healing by April 16, 2014 when Dr. Dresher noted the wound was healed and there was no swelling; (3) Possible traumatic bursa of the left prepatellar bursa with questionable bursitis by MRI scan and Dr. Dresher's examination on June 18, 2014, probably resolving by November 12, 2014 when Dr. Dresher noted little swelling or discomfort with patellofemoral manipulation.

68. Relying on the opinions of Dr. Erickson and the review of the August 2015 MRI by the "expert radiologist," Dr. Scott opined there "is no injury to the posteromedial meniscus and no tear to repair." Therefore, Dr. Scott opined that the arthroscopic surgery recommended by Dr. Jones is "neither reasonable, necessary or indicated to treat the effects" of Claimant's February 2014 industrial injury.

69. Dr. Scott noted Claimant reported left knee numbness and paresthesias when receiving PT in 2012. Dr. Scott also opined that the left saphenous neuropathy detected by electrodiagnostic testing in September 2014 was “probably the same diagnosis” as Dr. Dresher’s diagnosis of left superficial peroneal nerve paresthesias on March 25, 2013. Dr. Scott further assessed “patellofemoral syndrome” and opined this condition preexisted the February 19, 2014 injury. In support of this opinion Dr. Scott cited the PT records showing that Claimant reported left knee pain on June 14, 2013.

70. On February 26, 2016 Dr. Jones again examined Claimant. On PE of the left knee Dr. Jones noted “no deformity” and “moderate effusion.” He also noted “diffuse medial tenderness” and “mild crepitus of the patellofemoral joint.” Dr. Jones assessed chondromalacia of the left patella and a complex tear of the left medial meniscus as “current injury.” Dr. Jones wrote that he went back through all of Claimant’s studies. Dr. Jones opined that it is “pretty clear on her MRI that she has this posteromedial capsular injury and possibly some mild patellofemoral disease.” Dr. Jones stated that his plan was to “scope” the knee and “be prepared for an inside out meniscus repair or all inside meniscus repair as well as chondroplasty, and just careful examination of her entire knee.” Dr. Jones stated he was “a little baffled why [Respondents] fought this so hard.”

71. Dr. Scott testified at the hearing. Dr. Scott stated that the surgery proposed by Dr. Jones would not address any of the diagnoses that Dr. Scott considers to be related to the February 19, 2014 industrial injury. (See Finding of Fact 67).

72. Dr. Scott testified that he does not know the meaning of the term “posteromedial corner injury” and opined “it is very questionable whether [Claimant] has that diagnosis.” Dr. Scott stated that he relied on Dr. Erickson and the “musculoskeletal radiological expert” who agreed that the August 2015 MRI does not depict “any evidence whatsoever of a posteromedial corner injury and/or a meniscus tear.”

73. Dr. Scott testified he is experienced in treating patients with acute meniscal tears. Dr. Scott opined that a torn meniscus is usually occurs when the foot is planted and the femur twists so as to cause shearing of the medial meniscus. Dr. Scott explained that the common symptoms of a medial meniscus include pain in the medial joint and swelling in the medial joint. Dr. Scott also noted that “a little bit later on” the physician may note a positive McMurray sign. Dr. Scott explained that a positive McMurray’s sign occurs when the physician feels “a snap or click” in the medial joint line while extending the patient’s knee and rotating the foot.

74. Dr. Scott noted that no physician diagnosed a torn meniscus until Dr. Jones made the diagnosis on October 1, 2015, approximately 18 months after the February 2014 injury.

75. On May 5, 2016 Dr. Jones gave a post-hearing deposition. Dr. Jones is board certified in orthopedic surgery and approximately 50% of his medical practice involves the performance of knee surgery. Dr. Jones is not level II accredited.

76. Dr. Jones testified as follows. On October 1, 2015 Dr. Jones examined Claimant's left knee on referral from his "partner," Dr. Dresher. In connection with the examination Dr. Jones reviewed the August 10, 2015 MRI report as well as the actual MRI films. Dr. Jones also had Dr. Dresher's notes. However, Dr. Jones did not have Dr. Watson's DIME report, Dr. Johnson's notes or any information concerning the May 14, 2014 MRI. Dr. Jones' understanding was that the Claimant "fell directly on her knee" and was managed "conservatively." However, the conservative treatment was not successful. At the October 1 examination Claimant's main complaint "was not just anterior pain, but she also had a lot of medial joint-line paint, posterior medial knee."

77. Dr. Jones testified that the MRI conducted in August 2015 "showed a lot of fluid" along the "posterior medial joint" and this caused him to be concerned that Claimant had an "occult meniscal injury." Dr. Jones explained that the presence of "fluid" on the MRI indicates that tissue had been injured. Dr. Jones also explained that an "occult" injury means that "it's kind of hiding" and "you can't see it on the study, but it's still there." Dr. Jones assessed a "likely meniscus tear or just an acute pain of her left knee, possibly a strain of her medial collateral ligament." He recommended arthroscopic surgery to assess the knee with a camera and determine if there was any type of meniscus tear. Dr. Jones opined that considering the consistency of Claimant's symptoms and the failure of conservative treatment he considered surgery to "explore" the knee a "reasonable next step."

78. Dr. Jones opined that it is "medically probable" that Claimant sustained meniscus tear when she fell on her knee in the parking lot. Dr. Jones opined that it is "not common" for a person to suffer a meniscus tear when the fall directly onto a knee. He also opined that it is common for "someone to have a meniscus tear with a mechanism of injury other than planting the foot and pivoting."

79. Dr. Jones testified that the "common initial signs" of a meniscus tear include pain with weight bearing or twisting and turning, pain with flexion, swelling of the knee and sometimes catching and popping. Dr. Jones opined it is "medically probable" that those signs could have been "overshadowed" by the laceration of Claimant's knee and the subsequent infection.

80. On cross-examination Dr. Jones testified that he is "not a work-comp-certified physician" and is "not exactly" familiar with the Medical Treatment Guidelines (MTG). Dr. Jones testified that he disagrees with the MTG if they state that a positive McMurray's test is one of the "indications" one would expect to find with a meniscal tear. Dr. Jones explained that a positive McMurray's test is not common and is a very "nonsensitive test." Dr. Jones testified that if Claimant's McMurray's test went from negative to positive 18 months after the injury the change would be consistent with a "degenerative" meniscal tear. Dr. Jones also stated that such a change in the McMurray's test could also be consistent with an asymptomatic injury to the corner of the meniscus that later "displaces" and becomes symptomatic. Dr. Jones stated that if Claimant had a normal MRI in May 2014 and then the August 2015 MRI showed fluid the circumstances would support the "conclusion that she developed the meniscus tear after the initial MRI in May 2014."

81. Dr. Jones testified that in his February 2016 report he assessed Claimant as suffering from chondromalacia. Dr. Jones explained that chondromalacia is degenerative change of cartilage, and that joint line pain can be consistent with chondromalacia. Dr. Jones opined that if Claimant fell hard enough in February 2014 to "split her skin open" then she "probably aggravated the chondromalacia" in the fall. Dr. Jones admitted on cross-examination that he did not know Claimant had an MRI in 2008 that showed the presence of Grade II chondromalacia. Dr. Jones admitted he did not know Claimant complained of knee pain prior to February 19, 2014 and stated that this information could definitely affect his opinion as to whether the chondromalacia was work-related.

FINDINGS REGARDING CAUSE OF ALLEGED MENISCAL INJURY

82. Claimant failed to prove it is more probably true than not that need for the surgical procedure proposed by Dr. Jones, if any, was proximately caused by the admitted industrial injury of February 19, 2019. Specifically, Claimant failed to prove it is more probably true than not that she has a meniscal injury. Further, even if Claimant has a meniscal injury she failed to prove it was probably caused by the industrial injury of February 19, 2019.

83. Dr. Jones opined that Claimant probably has an "occult meniscal injury" to the left medial meniscus. Dr. Jones explained that this injury is not seen on the August 10, 2015 MRI but he infers its existence from the presence of fluid. (Findings of Fact 70, 77, 78, 81). Dr. Jones desires to "explore" the knee with a camera and repair the inferred meniscal tear when it is discovered during surgery. Dr. Jones' opinion that Claimant probably has an "occult meniscal injury" that requires surgical exploration is not persuasive.

84. Dr. Jones' opinion that the industrial injury "probably" caused a meniscal tear is contradicted by the results of the left knee MRI studies performed on May 14, 2014 and August 10, 2015. No radiologist or other physician has credibly or persuasively opined that the May 14, 2014 MRI depicts a meniscal tear or pathology from which a meniscal tear could be inferred. The radiologist that interpreted the May 2014 MRI expressly found that there was no meniscal tear or focal chondral defect. Dr. Watson, the DIME physician, suggested that Claimant undergo an MRI not to look for a meniscal tear but to check for "progression" of chondromalacia of the patella. Even Dr. Hall conceded that the May 2014 MRI was "normal."

85. No radiologist who has reviewed the August 10, 2015 MRI credibly or persuasively opined that it depicts a meniscal tear or pathology from which a meniscal tear could be inferred. The first radiologist to review the images noted "increased signal intensity in the soft tissues around the meniscocapsular junction of the posterior medial aspect of the medial meniscus." However, that radiologist did not assess a meniscal injury. Rather he interpreted the August 10 images to represent a "posteromedial corner injury include edema in the posterior oblique ligament" and commented the menisci were of "normal size, shape and signal intensity." (Finding of Fact 53). The August 10 MRI was also reviewed by an "expert radiologist" in consultation with Dr.

Erickson. The ALJ infers that the radiologist did not detect any specific or acute injury to the medial meniscus but indentified only “degenerative changes.” (Finding of Fact 59).

86. Dr. Erickson, a level II accredited orthopedic surgeon, credibly and persuasively opined that the August 10, 2015 MRI does not depict a meniscal tear or other surgical “lesion.” (Finding of Fact 59). Dr. Erickson’s opinion is corroborated by the opinions of the radiologists and by the credible opinion of Dr. Scott.

87. Dr. Jones’ opinion that the February 19, 2014 injury probably caused a torn meniscus is undermined by evidence that the Claimant’s reported mechanism of injury is not a probable cause of a meniscal tear. (Finding of Fact 76) Dr. Jones himself admitted that falling forward on the knee is not a “common” cause of a meniscal tear. (Finding of Fact 78). Dr. Scott persuasively testified that a torn meniscus usually occurs when the foot is planted and the knee twists. (Finding of Fact 73). The ALJ finds Claimant did not experience a mechanism of injury that is commonly associated with a torn meniscus.

88. Dr. Jones’ opinion that the February 19, 2009 industrial injury caused a torn meniscus is not consistent with the medical evidence concerning the progress of Claimant’s symptoms. Dr. Scott accurately and persuasively argued that no treating or examining physician diagnosed a torn meniscus until a year and a half after the date of injury (when Dr. Jones made the diagnosis in October 2015).

89. Dr. Scott persuasively testified that that the common symptoms of a medial meniscus tear include swelling in the medial joint, pain in the medial joint line, and a “a little bit later on” a positive McMurray sign (snap or click in the medial joint line when extending the patient’s knee).

90. The initial medical records do not contain any credible or persuasive mention of swelling in the medial joint line. When Dr. Vu examined Claimant on February 20, 2019 he did not observe any “obvious intra-articular joint effusion.” When Dr. Dresher examined Claimant on April 16, 2014 he did not observe any swelling. When Dr. Johnson examined Claimant on April 17, 2014 he did not observe any swelling.

91. The medical records do not reflect any credible or persuasive mention of “medial joint line pain” until Dr. Dresher noted that finding on June 18, 2014, approximately four months after the date of injury. When PA Stafford examined Claimant on February 20, 2014 Claimant did not report joint pain. When Dr. Johnson sent Claimant for an MRI on May 5, 2014 it was because of “pain around the patella on the lateral surface,” not medial joint line pain.

92. The medical records do not reflect any credible or persuasive report of a positive McMurray’s test until Dr. Johnson reported a positive McMurray’s test on January 14, 2016, nearly two years after the date of injury. The January 2016 test occurred after Dr. Johnson documented eight consecutive negative McMurray’s tests

between August 3, 2015 and December 17, 2015. The ALJ recognizes that on June 18, 2014 Dr. Dresher reported that Claimant had “pain” with McMurray’s test. However, Dr. Dresher did not state that this constituted a “positive” McMurray’s test. Indeed, a positive McMurray’s test is evidenced by a palpable click or pop when rotating the foot with the knee in extension, not a report of pain when performing this maneuver. (Finding of Fact 73).

93. Dr. Jones admitted that if Claimant’s McMurray’s test went from negative to positive 18 months after the date of injury that could be consistent with a “degenerative” tear of the meniscus. Dr. Jones admitted that if Claimant had a negative MRI in May 2014 and then an MRI positive for fluid in August 2015 the circumstances would support the inference that the meniscus was torn after May 2014. (Finding of Fact 80). Taken together, the ALJ finds that these admissions undermine the credibility of Dr. Jones’ opinion that the Claimant sustained a meniscal tear caused by the February 19, 2014 industrial injury.

94. To the extent Dr. Jones opined that McMurray’s test is not a reliable diagnostic test for a torn meniscus his testimony is not credible and persuasive. The ALJ takes administrative notice of WCRP 17, Exhibit 6, Lower Extremity Injury Treatment Guidelines, p. 90 (Lower Extremity MTG), concerning “specific physical exam findings” for meniscus injuries. This section specifically identifies a “Positive McMurray’s test” as diagnostic of tears of the medial or lateral meniscus tissues. The ALJ finds that this provision of the Lower Extremity MTG is very persuasive in establishing that McMurray’s test is diagnostic of meniscal tears.

95. For many of the reasons stated in Findings of Fact 83 through 93 the ALJ is not persuaded by Dr. Hall’s opinion that the August 2015 MRI findings represent “an improved imaging event, which has unearthed the pathology that has likely been present all along.” Rather, as found, the 2015 MRI findings do not display credible and persuasive evidence that Claimant has a meniscal tear, or that any such tear was caused by the February 2014 injury rather than natural degenerative change.

FINDINGS REGARDING CAUSE OR AGGRAVATION OF CHONDROMALACIA

96. Claimant failed to prove it is more probably true than not that that the injury of February 19, 2014 caused or aggravated chondromalacia of the patella so as to warrant the chondroplasty recommended by Dr. Jones. To the contrary, the credible and persuasive evidence establishes that to the extent Claimant has chondromalacia of the patella that condition predated the February 2014 injury and was not “aggravated” by the injury.

97. Claimant did not prove that the February 19, 2014 industrial injury caused chondromalacia of the patella. The November 2008 MRI establishes that Claimant had grade II chondromalacia of the patella prior to the February 2014 injury. The Cornerstone PT notes from 2012 and 2013 reflect Claimant complained of knee pain with exercise and numbness in the knee. Dr. Scott credibly opined that Claimant

suffered from “patellofemoral syndrome” prior to February 2014 as documented by the Cornerstone PT records.

98. Dr. Jones testified that even if the February 19, 2014 injury did not cause Claimant’s chondromalacia, it is his opinion that the industrial injury “aggravated” this condition.

99. Dr. Jones’ admitted that he did not know Claimant had a left knee MRI in 2008 that showed the presence of Grade II chondromalacia. Dr. Jones admitted he did not know Claimant complained of knee pain and numbness with activity prior to February 19, 2014. Dr. Jones admitted that if he had known these facts this information could definitely affect his opinion that the chondromalacia is work-related. These admissions undermine the persuasiveness of Dr. Jones’ opinion that there was an “aggravation” of pre-existing chondromalacia.

100. At the time of the injury there is no indication that any physician or provider diagnosed an “aggravation” of pre-existing chondromalacia. Rather, the radiologist read the May 14, 2014 MRI as evidencing prepatellar soft-tissue edema or other fluid representing a “possible soft-tissue contusion,” bursitis or hematoma. The radiologist further opined that the patellofemoral articular cartilage was “unremarkable.” After the May 2014 MRI Dr. Johnson assessed prepatellar soft tissue edema but no meniscal tear or “internal injury.” On June 18, 2014 Dr. Dresher noted the MRI showed a “small amount of bursitis and inflammation.” On April 9, 2015 Dr. Erickson credibly opined that the Claimant’s examination did not support any the existence of a “significant knee injury” and the May MRI was “essentially normal.”

101. The radiologist that reviewed the August 2010 MRI did not report any impression that there had been an “aggravation” of Claimant’s pre-existing chondromalacia. Rather the radiologist noted “improved edema anterior to the patella and medial to the patellar tendon, but no drainable fluid collection.”

102. When Dr. Jones first examined Claimant in October 2015 there is no credible or persuasive evidence that he diagnosed an “aggravation” of pre-existing chondromalacia. Rather at that time Dr. Jones assessed a meniscus tear, acute “pain of the left knee” and a sprain of the MCL. Dr. Jones recommended a “medial meniscal repair” but did not mention any need for a chondroplasty.

103. On November 10, 2015 Dr. Erickson credibly and persuasively opined that the May 2014 and August 2015 MRI studies were not different except for “perhaps slightly more pes anserine bursal fluid in the second study.” Dr. Erickson credibly opined that the August 2015 MRI did not depict any “surgical lesion.”

104. Dr. Scott credibly and persuasively opined that Claimant’s “patellofemoral syndrome” pre-dated the industrial injury of February 19, 2014. He persuasively argued that as late as June 14, 2013 Claimant was complaining of knee pain with exercise.

105. Findings and inferences inconsistent with these Findings of Fact are not credible and persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201(1). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions.

CAUSE OF ALLEGED MENISCAL TEAR

Claimant contends that a preponderance of the evidence establishes that the February 19, 2014 industrial injury caused a torn left medial meniscus and the consequent need for arthroscopic left knee surgery. Claimant relies heavily on the opinions of Dr. Jones as support for this proposition. However, the ALJ concludes that Claimant failed to prove it is more probably true than not that she has a torn meniscus. Moreover, the ALJ concludes Claimant failed to prove it is more probably true than not that if she has a torn meniscus that the tear was proximately caused by the May 2014 industrial injury.

Claimant was required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether Claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ.

City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

When determining whether the need for proposed medical treatment is causally related to an industrial injury the ALJ may consider the MTG. However, the ALJ is not required to use the MTG as the "sole basis for such determination." Section 8-43-201(3), C.R.S.

The ALJ concludes Claimant failed to prove it is more probably true than not that she has an injury to her left medial meniscus. As found, the ALJ is not persuaded by the opinion of Dr. Jones that the Claimant sustained any injury to the left medial meniscus when she fell on February 19, 2014. Rather, the credible and persuasive medical evidence demonstrates that there is no tear of the meniscus. As determined in Findings of Fact 84 through 86, the credible and persuasive evidence establishes that neither of the MRI studies is consistent with an injury to the medial meniscus. As determined in Finding of Fact 87, the Claimant's reported mechanism of injury in not likely to have caused an injury to the meniscus. As determined in Findings of Fact 88 through 92, the temporal evolution of Claimant's symptoms and examination findings is not consistent with an injury to the medial meniscus on February 19, 2014.

The ALJ also concludes that even if Claimant has an injury to left medial meniscus she failed to prove it is more probably true than not that the injury was caused by the February 19, 2014 industrial injury. As determined in Finding of Fact 93, Dr. Jones admitted that if Claimant had a negative MRI in May 2014 and developed a positive McMurray's test 18 months after the February 2014 date of injury the evidence would be consistent with a "degenerative tear" of the meniscus that occurred after May 2014. As found, these admissions undermine the credibility of Dr. Jones' opinion that the February 2014 accident caused a traumatic injury to Claimant's left medial meniscus.

CAUSE OF ALLEGED AGGRAVATION OF CHONDROMALACIA

Claimant relies on the opinions of Dr. Jones for the proposition that the industrial injury of February 19, 2014 "aggravated" pre-existing chondromalacia so as to cause the need for surgery including a chondroplasty. However, the ALJ disagrees with this argument.

The ALJ concludes that Claimant failed to prove it is more probably true than not the February 2014 injury "aggravated" chondromalacia so as to warrant the surgery proposed by Dr. Jones. As determined in Findings of Fact 97 and 104, the credible and persuasive evidence establishes that Claimant had symptomatic chondromalacia of the patella before the February 2014 injury. As determined in Findings of Fact 100 through 103, the 2014 and 2015 MRI studies do not indicate that Claimant sustained any "aggravation" of chondromalacia as a result of the February 2014 injury. These studies, as well as the contemporaneous medical records, suggest that Claimant sustained a prepatellar soft tissue injury that had improved by August 2015. Dr. Erickson credibly opined that the August 2015 MRI does not depict any type of surgical lesion. Even Dr.

Jones admitted that his opinion concerning the alleged aggravation of pre-existing chondromalacia could change if had known that Claimant had pre-existing chondromalacia and had complained of knee pain prior to February 2014.

In light of the determination that Claimant failed to prove that the industrial injury of February 19, 2014 caused a meniscal injury and/or an aggravation of pre-existing chondromalacia it is unnecessary to determine whether it is now reasonable and necessary to perform surgery to treat these conditions.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the ALJ enters the following order:

1. Claimant's request for an order requiring Insurer to pay for the surgery proposed by Dr. Jones is denied.

2. Issues not resolved by this order are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 29, 2016.

ISSUES

The issues presented for hearing are:

1. Whether the issues of causation and relatedness are barred from relitigation by the application of issue preclusion.

2. Whether or not the DIME physician's opinion on causation and the date of MMI is ambiguous, and if so, determination of the DIME physician's true opinion.

3. If the ALJ finds the DIME physician opined that the Claimant's lumbar spine condition is work-related with a permanent impairment, then, (a) whether the Respondent has overcome the DIME opinion by clear and convincing evidence and (b) whether the Claimant has overcome the DIME opinion that the Claimant's migraines and labral tear are related and also deserving of an impairment rating.

OR

4. If the ALJ finds the DIME physician opined that the Claimant's lumbar condition is not work-related or is not entitled to a permanent impairment rating, then whether the Claimant has overcome the DIME opinion by clear and convincing evidence that the lumbar condition is related and deserving of an impairment rating and further that the Claimant's migraines and labral tear are related and deserving of an impairment rating.

5. Whether the Claimant has proven that she is entitled to medical maintenance treatment by a preponderance of the evidence.

FINDINGS OF FACT

1. This case involves an admitted claim for a slip and fall on a wet floor that occurred at one of Employer's retail stores on March 17, 2013. The Claimant testified at the hearing by telephone as she was not able to appear in person at the hearing. On March 17, 2013 and currently, the Claimant is a sales associate. She testified that her job requires her to bend and twist all day long as she helps customers find sleep solutions. She testified that before her March 17, 2013 work injury she typically worked full time plus overtime for the Employer. She testified that more recently she was working regular shifts but sometimes has to leave early.

2. The Claimant has a significant history of preexisting conditions. She suffered a workplace injury on November 15, 1998 while working for a retail department store. As a result of that injury, the Claimant complained of neck pain, numbness in her arms, dizziness, fatigue, and frequent low back pain. (Respondents' Exhibit R, p. 286). The Claimant ultimately underwent cervical laminectomy, discectomy and fusion for a ruptured cervical disc (Respondents' Exhibit R, p. 288). The Claimant continued to report low back pain at a June 21, 2000 visit with her physician, Dr. Bethany Wallace. Dr. Wallace also noted that the Claimant had been in a motor vehicle accident on June 15, 2000 (Respondents' Exhibit R, p. 291).

3. The Claimant was also injured as a result of a March 10, 2004 motor vehicle accident. The medical records evidence that the Claimant had extensive medical treatment from multiple providers for her complaints of pain and/or numbness in her low back, neck, head, vision, left arm, right arm, right leg, right hip, right SI joint and headaches (Respondents' Exhibits M, N, P, S, V, W, X, Y). The Claimant also had regular chiropractic treatments between March 18, and November 30, 2004. The chiropractor treating her for multiple symptoms over 67 visits found her to be at maximum medical improvement on December 1, 2004 but opined that she will continue to have "a permanent injury to her neck and low back" and would require further treatment (Respondents' Exhibit T and U, p. 368). The Claimant also saw Dr. Christopher Pierce, a neuropsychologist and he referred the Claimant for cognitive rehabilitations and opined she was suffering from postconcussive syndrome Respondents' Exhibit Z).

4. The Claimant began receiving treatment from Dr. Adam Wolff of the Denver Neurological Clinic on September 19, 2012. At an initial evaluation, Dr. Wolff summarized the Claimant's medical history as follows,

> [The Claimant] is a 52 year old woman with a complicated history. About 12 years ago, she had a fall with traumatic herniated cervical disc, and she is status post fusion at C5-6. She had a motor vehicle accident about 8 years ago and states that she had a stroke in her right eye related to the trauma, and she has visual loss in the right eye as a result. It seems as though over the last year, she has been having issues with vertigo, which is episodic but worsening. It seems to be related to position. She has increasing pressure in her head and neck with fairly regular headaches. She has memory loss, which is short term, and it does seem to be associated with her vertigo and headache phenomena. She had one episode of right hand numbness. She has chronic low back pain issues and balance issues. She gets regular chiropractic adjustments, and these do help with her headaches and neck pain.
>
> (Claimant's Exhibit 1, pp. 7-8; Respondents' Exhibit G, pp. 210-211)

Dr. Wolff continued to treat the Claimant with Botox injections for cervical dystonia through January 9, 2013. The Claimant reported improvement in her neck pain, neck spasm and headaches (Claimant's Exhibit 1, pp. 9-11; Respondents' Exhibit G, pp. 212-214).

5. With respect to her March 17, 2013 work injury, the Claimant did not seek immediate medical attention, but went to the emergency department at Sky Ridge Medical Center on March 21, 2013 complaining of nausea, back pain and a headache. The Claimant reported vomiting two days prior, but none since and occasional left leg numbness. On physical exam, the ER examiner found: "No decreased ROM [range of motion] in the neck. Painless ROM. Non-tender. No vertebral tenderness." Similarly, claimant had full range of motion in her right and left hips. The examiner found: "Oriented X 3. No alteration in mental status. No cranial nerve deficit. No motor deficit. No sensory deficit." Claimant's cervical spine x-ray showed a previous cervical spine fusion, with spondylosis and osteophytes at the C4-5 and C6-7 levels. No acute changes were seen. Claimant's lumbar spine x-ray showed no acute injury, but did show degenerative changes at the L4-5 and L5-S1 levels. A head CT was negative for brain injury. The Claimant was discharged in stable condition with "no seriously abnormal test results." The Claimant was assessed with a head injury, back strain, right hip strain left shoulder strain, right hip strain and contusions (Claimant's Exhibit 5; Respondents' Exhibit C).

6. An Employer's First Report of Injury was completed by the Claimant on March 26, 2013 stating that "her left hip, left shoulder, head and back" were injured when the Claimant fell on a wet floor that another employee had just mopped (Respondents' Exhibit CC).

7. The Claimant selected Elizabeth Bisgard, M.D., as her authorized treating physician. Dr. Bisgard performed an initial evaluation of the Claimant on March 22, 2013. The Claimant told Dr. Bisgard that initially after her fall she felt no immediate pain and she was able to finish work. Over the next couple of days, the Claimant was nauseous and throwing up and was seen at Sky Ridge. The Claimant did not report or complain of any neck pain to Dr. Bisgard. The Claimant reported pain in both hips, both shoulders, pressure around her right eye and ear, photophobia, headaches, numbness in her left arm and difficulty concentrating. The Claimant reported that, in 1999, she underwent a cervical fusion procedure at the C5-6 level of her cervical spine. The Claimant also reported a prior history of treatment for a traumatic brain injury (TBI) with loss of memory and optic nerve stroke due to a motor vehicle accident (MVA) in 2004. Dr. Bisgard diagnosed head contusion, headache, lumbar strain, and cervical strain. Dr. Bisgard referred the Claimant to Dr. Mason because of her prior history of concussions. Dr. Bisgard took the Claimant off work pending reevaluation and referred her for physical therapy (Respondents' Exhibit D, pp. 69-70).

8. When Dr. Bisgard reevaluated the Claimant on March 28, 2013. Dr. Bisgard noted that both she and the physical therapist who had treated the Claimant found positive Waddell signs with excessive pain reaction to light superficial palpation and pain in pseudorotation. Dr. Bisgard noted that the Claimant's pain reaction and high pain levels reported of 9/10-10/10 were in contrast with the Claimant's appearance at

the visit as the Claimant came in “neatly dressed with her hair and makeup done nicely, not indicative of somebody who typically has such high pain levels” (Respondents’ Exhibit D, pp. 73-74). At a follow up evaluation on April 10, 2013, Dr. Bisgard stated, “I remain very concerned regarding her inconsistent presentation and her nonphysiologic findings (Respondents’ Exhibit D, p. 77).

9. On referral from Dr. Bisgard, Dr. Mason first evaluated the Claimant on April 16, 3013, when the Claimant reported the following mechanism of injury:

> There was a wet floor that … was unmarked. [Claimant] slipped and fell. She was holding four bags of trash. She feels that her feet went off to the right of her. Her left knee, hip and shoulder struck the ground. She thinks she may have hit her head. She indicates she jumped up quickly and then noticed she felt somewhat dazed and pain started in her neck and back.

The Claimant’s report to Dr. Mason of pain symptoms at the time of the slip and fall incident is inconsistent with history the Claimant provided to Dr. Bisgard that she did not feel immediate pain but symptoms developed later. Dr. Mason discussed her impressions with Dr. Bisgard and recommended a neuropsychological evaluation in light of the Claimant’s past history of TBI. Dr. Mason noted that the Claimant’s primary complaint was headaches. The Claimant also complained of low back pain in the bilateral sacroiliac area. Dr. Mason assessed the Claimant with probable postconcussive syndrome with prior history of significant TBI, cervical sprain/strain, and lumbar strain that is primarily sacroiliac mediated (Claimant’s Exhibit 2, pp. 20-23; Respondents’ Exhibit E, pp. 86-89).

10. Dr. Bisgard referred the Claimant to Dr. Brent VanDorsten, Ph.D., for neuropsychological testing conducted on May 21, 2013. Dr. VanDorsten reevaluated the Claimant on June 3, 2013. Dr. VanDorsten reported little evidence on psychological testing to support any cognitive deficit. Claimant’s testing results instead suggested her cognitive abilities were “grossly representative of her pre-morbid capacities” and not expected to adversely affect her daily functioning in any meaningful way. Dr. VanDorsten opined that the Claimant did not require supervision or additional intervention (Respondents’ Exhibit L, pp. 261-266).

11. On May 15, 2013, the Claimant saw Dr. Bisgard for follow up. Dr. Bisgard noted the Claimant had a lumbar MRI which showed only minimal degenerative changes although the Claimant was still complaining of significant back pain. The Claimant was also still reporting headaches. Dr. Bisgard informed the Claimant that she was reducing her practice as she was starting to work part-time and Dr. Mason agreed to assume primary care of the Claimant.

12. When the Claimant saw Dr. Mason on June 4, 2013, she reported feeling better and tolerated her return to work. On physical examination, the Claimant was less tender across the SI areas. The Claimant’s pain levels came down from 6-7/10 at the last visit to 3/10 at this visit and the Claimant reported physical therapy and massage

therapy have been helpful (Respondents' Exhibit E, pp. 103-104). By June 18, 2013, the Claimant's pain level was worse at 4/10 and the Claimant reported a headache as well as increased back pain (Respondents' Exhibit E, pp. 107-108). Due to continued pain in the left SI area, Dr. Mason referred the Claimant for a left SI injection on July 23, 2013 (Respondents' Exhibit E, p. 114).

13. On August 12, 2013, the Claimant was referred to Dr. Floyd Ring for bilateral sacroiliac joint injections which he performed that day (Respondents' Exhibit H, pp. 223-224).

14. When the Claimant saw Dr. Mason on August 13, 2013, Dr. Mason noted the SI injection with Dr. Ring the previous day went well and the Claimant reported that the pain in that area was down to 2/10. The Claimant reported that she continued to struggle with headaches. Dr. Mason noted that the Claimant had less tenderness over the SI area and she looked more comfortable (Respondents' Exhibit E, p. 118).

15. Also on August 13, 2013, the Claimant saw Dr. Kathleen D'Angelo for an independent medical evaluation and the Claimant completed a lengthy questionnaire reporting current complaints of headaches in the top and back of her head 2-4 times per week, pain in the low back, hips and buttocks and intermittent pain going down her right leg and buttock (Claimant's Exhibit 3, p. 64; Respondents' Exhibit B; p. 33). Dr. D'Angelo reports that the Claimant provided the following mechanism of injury:

> [She] was the last person left at her worksite and when she left the store she took out a small trash bag. [The Claimant] states that the cleaning crew had just mopped the floor but did not put up a sign. The patient states that she remembers slipping and her feet going up into the air. She remembers hitting her left knee, hip and shoulder but she does not know if she hit her head. [The Claimant] states that she jumped up really fast because she was embarrassed. She continued to put out the trash and then went back into the store to confront the cleaner who had still not put up a sign indicating the floor was wet.
>
> (Claimant's Exhibit 3, p. 65; Respondents' Exhibit B; p. 34).

The Claimant related that she called her supervisor and provided notice that she had fallen and she went home. The Claimant told Dr. D'Angelo that she felt worse and tried to call in sick but couldn't reach anyone so she went in to work but developed a severe migraine and went home and was vomiting the entire day. The Claimant advised Dr. D'Angelo that she had a history of migraines prior to the injury, but they were not in the same place. Her preexisting migraines were in the occipital region following her prior cervical fusion. Since the slip and fall, the migraines are in the frontal and vortex region of her head (Claimant's Exhibit 3, p. 65; Respondents' Exhibit B; p. 34). Dr. D'Angelo prepared a detailed summary of the medical records she reviewed from Dr. Bisgard, Sky Ridge Hospital, Dr. Van Dorsten, and Dr. Mason (Claimant's Exhibit 3, pp. 66-72 and 78-83; Respondents' Exhibit B; pp. 36-42 and 49-54). After physical examination and review of the Claimant’s history and select medical records, Dr. D’Angelo opined that the Claimant’s headaches were entirely preexisting as was her degenerative disc disease, facet joint arthropathy, prior rotator cuff tears and repairs, osteoarthritis of the shoulders and hips and cervical pain with surgical intervention for radiculopathy. Dr. D’Angelo attributed only the following conditions to her work injury: myofascial back pain for which she was at MMI, hip contusion for which she was at MMI and shoulder contusion for which she was at MMI (Claimant’s Exhibit 3, p. 73-74; Respondents’ Exhibit B; p. 44). Dr. D’Angelo opined that the Claimant was at MMI for her work related fall based on her determination that “the patient did not originally have symptoms” and that “she went home and went to bed without trouble” only having worsening symptoms when she woke up the next day and over the next 48 hours (Claimant’s Exhibit 3, p. 74; Respondents’ Exhibit B; p. 44). Dr. D’Angelo expressed concern with the fact that the Claimant has informed treatment providers, as well as Dr. D’Angelo, that she has a history of a traumatic brain injury which affected her memory and ability to write and speak correct words although Dr. Van Dorsten’s neuropsychological testing revealed no evidence of cognitive deficits (Claimant’s Exhibit 3, p. 76; Respondents’ Exhibit B; p. 46). Dr. D’Angelo also expressed concern over “the complete disconnect between the patient’s physical presentation and her complaints” along with the “timeline of symptom development displayed by [the Claimant] (Claimant’s Exhibit 3, p. 76; Respondents’ Exhibit B; p. 46). Ultimately, Dr. D’Angelo opined that the Claimant did not aggravate any preexisting condition, including headaches or cervical radiculopathy, that she suffered no permanent impairment as a result of her fall, and that she requires no further medical treatment related for any work-related condition (Claimant’s Exhibit 3, pp. 77-78; Respondents’ Exhibit B; pp. 47-48).

16. On September 3, 2013 Dr. Mason noted that the Claimant was having a severe migraine, was severely photophobic and was in significant pain and appeared to be in acute distress, which Dr. Mason had not seen before. Dr. Mason referred the Claimant to see a neurologist for potential Botox treatment as the Claimant has not tolerated any prophylactic medication for the headaches (Respondents’ Exhibit E, p. 122).

17. On September 18, 2013, Dr. Mason responded to interrogatories from the Claim Specialist in this case after review of Dr. D’Angelo’s August 13, 2013 IME. Dr. Mason noted that she partially agreed with Dr. D’Angelo’s diagnoses but felt that Dr. D’Angelo reached conclusions about the Claimant’s headaches without the benefit of medical records for the preexisting condition. Dr. Mason specifically disagreed with Dr. D’Angelo’s characterization of the Claimant’s back pain as “myofascial in character.” Dr. Mason opined that the back pain “is caused by sacroiliac dysfunction as she did respond quite well to diagnostic/therapeutic SI injections.” Dr. Mason did not agree that the Claimant had reached MMI at that point. Dr. Mason stated that she would like to have more information before concluding one way or another that the Claimant’s headaches were completely preexisting versus exacerbated by her fall. Dr. Mason also felt that the SI injections may require a repeat and felt the Claimant should complete her physical therapy. Dr. Mason anticipated that the Claimant would reach MMI in approximately three months. Dr. Mason felt it premature to make a determination as to

permanent impairment at this point. Dr. Mason did agree that “the patient is a difficult historian and has had some inconsistencies in her presentation” but suspected that “a large portion of that is just her personality style” (Claimant’s Exhibit 14, pp. 179-180; Respondents’ Exhibit E, pp. 126-127).

18. The Claimant saw PA-C Jordan Mast at Dr. Wolff’s office on September 24, 2013 after last being seen in the office on January 9, 2013. The Claimant reported improvement with botox treatments for cervical dystonia. She had a repeat injection scheduled for February/March but the Claimant canceled the injection as she reported that her neck pain had improved considerably. However, the Claimant reported that since a March 2013 slip and fall at work, when she believes she might have hit the back of her head, that she has worsening migraine with occipital pain moving up to the top of her head with associated light sensitivity, sound sensitivity, nausea and vomiting. PA-C Mast noted that the Claimant is now suffering from chronic migraines which did not happen before the fall, per the Claimant. He recommended Botox injections for this condition (Respondents’ Exhibit G, p. 215). The Claimant received a botox injection for her chronic migraines on October 7, 2013 (Respondents’ Exhibit G, p. 217).

19. After she saw Dr. Wolff, the Claimant saw Dr. Mason on September 24, 2013. Dr. Mason noted the Claimant was “somewhat agitated” about Dr. D’Angelo’s IME report. The Claimant reported her headache was currently at a 4/10 and her back pain was a dull ache (Claimant’s Exhibit 2, pp. 26-27; Respondents’ Exhibit E, pp. 128-129).

20. On October 10, 2013, the Claimant reported that she had a Botox injection done under her primary medical insurance with Dr. Wolff but that the benefit had not really kicked in yet. Dr. Mason noted that the Claimant reported her back was feeling well “and she desires to retain her job very strongly” and requested that she be permitted to return to work full duty. Dr. Mason cleared her for a trial of full duty (Claimant’s Exhibit 2, p. 29; Respondents’ Exhibit E, p. 131).

21. On October 22, 2013, Dr. Paul Stanton, an orthopedic spine surgeon, responded to interrogatories from Claimant’s counsel. He noted that the Claimant reported that she did not have her spine related symptoms prior to her fall in terms of the right sided sacroiliac pain and right lower extremity radiculopathy. Dr. Stanton opined that the treatments of sacroiliac injections, epidural steroid injections and spine evaluation were all related to her work fall. Dr. Stanton stated that he could not estimate MMI for all conditions as “we have not finished with our evaluation and treatment phase” (Claimant’s Exhibit 15, pp. 185-186).

22. On November 5, 2013, the Claimant saw PA-C Mast at Dr. Wolff’s office for follow up after the botox injections to treat chronic migraines. The Claimant reported no major side effects and she noticed some improvement although she was still taking Frova/Relpax nearly every day. The Claimant reported that the day before this appointment was the first time she did not have a headache in a very long time. The Claimant was diagnosed with post-concussive syndrome and medication overuse. PA-

C Mast noted that a significant problem is the Claimant's overuse of Frova and Relpax and he requested she discontinue use of these medications and start taking Verapamil at night instead (Respondents' Exhibit G, p. 219).

23. The Claimant also saw Dr. Mason on November 5, 2013 after she had been back at work full duty, which the Claimant reported was hard. The Claimant was continuing to treat with Dr. Wolff for the headaches reporting the Botox worked well for one-two weeks. The Claimant also reported that her back was bothering her again and Dr. Mason noted tenderness over the SI areas, left more than right. She noted decreased range of motion with forward flexion. Dr. Mason referred the Claimant back to Dr. Ring for possible repeat SI injections (Claimant's Exhibit 2, pp. 32-33; Respondents' Exhibit E, pp. 135-136).

24. The Claimant saw Dr. Scott Hompland on November 27, 2013 for evaluation on referral from Dr. Mason. Dr. Hompland noted left low back pain isolated over the sacroiliac joints, left more than right. Dr. Hompland recommended manipulation, chiropractic treatment, a sacroiliac joint injection or a left sacroiliac ligament trigger point injection. Dr. Hompland noted that the sacroiliac joint injection would probably take care of her pain but would likely be short term. He recommended combining this with a core stabilization exercise program to stabilize the area of the sacroiliac joint and possibly short-term use of a sacroiliac belt (Claimant's Exhibit 2, pp. 35-38; Respondents' Exhibit I).

25. On December 10, 2013, the Claimant saw Dr. Mason for follow up. The Claimant reported that care was currently not authorized under Workers' Compensation and the Claimant was concerned about job loss and reluctant to use her private insurance. Dr. Mason noted the left SI was tender and the left iliac crest was elevated. Dr. Mason agreed with Dr. Hompland that the Claimant would benefit from further PT or manipulation, but the Claimant was reluctant to pursue this due to uncertainty with payment (Claimant's Exhibit 2, p. 39; Respondents' Exhibit E, p. 139).

26. After a SAMMS Conference held on December 18, 2013, Dr. Mason advised the Claimant on January 10, 2014 that Insurer was willing to authorize further injections and physical therapy. However, because the Claimant already had three total episodes of steroid use, Dr. Mason agreed the Claimant may need to wait until March for an additional steroid injection. On physical examination, Dr. Mason noted that the Claimant has decreased movement in the right sacroiliac area but reported more tenderness on the left (Claimant's Exhibit 2, pp. 41-43; Respondents' Exhibit E, pp.141-142).

27. When the Claimant saw PA-C Mast at Dr. Wolff's office again on January 7, 2014, she reported mild-moderate improvement in her headaches. She reported that she continues to have headaches around 2-3 times a week but there is some improvement. The Claimant also reported right hip and low back pain. PA-C Mast commented that he believes the Claimant "suffers from a postconcussive headache which is a result from her fall last year. He recommended starting Gabapentin to treat

neuropathic pain as well as her headache and titrating off the Verapamil. He also recommended a follow up Botox injection (Respondents' Exhibit G, p. 221).

28. Dr. Wolff completed a medical checkbox report which is undated but appears to have been faxed out on January 30, 2014. Dr. Wolff opined that the Claimant's March 17, 2013 work injury caused her to need Botox injections and that she will likely need continuing treatment for a chronic condition. He opined that these headaches are of a different character and frequency since her accident. He noted that while she had headaches prior to her fall, they were much less severe and the Claimant was doing well. He opined that the accident caused "a more chronic, severe, new type of headache in this case as well as exacerbating her chronic head and neck pain issues. He recommended chiropractic care and injection therapy (Claimant's Exhibit 12, pp. 172-173).

29. On February 7, 2014, the Claimant saw Dr. Mason who noted that the Claimant was fitted for an SI belt and she was wearing it at work. On physical examination, Dr. Mason noted the Claimant's right SI was moving and that the Claimant was hypertonic in her paraspinals on both sides with some decree of spasm. The Claimant requested a disabled parking placard, but Dr. Mason declined as she did not feel the Claimant met the requirements. Dr. Mason recommended continued physical therapy, use of the SI belt and reserved the possibility of further injections until March (Claimant's Exhibit 2, pp. 45-46; Respondents' Exhibit E, pp. 144-145).

30. On February 20, 2014, Dr. Kristin Mason testified by deposition prior to a May 8, 2014 hearing before ALJ Michael Harr. Dr. Mason testified that the Claimant first came to her as a consult and then primary care was transferred from Dr. Bisgard shortly after (Depo. Tr., Dr. Kristin Mason, February 20, 2014, p. 7). With respect to how the Claimant's pre-injury headaches compared to her headaches after the March 17, 2013 fall, Dr. Mason deferred to Dr. Wolff who treated her before and after the incident (Depo. Tr., Dr. Kristin Mason, February 20, 2014, p. 13). Regarding the Claimant's back pain, Dr. Mason "felt like her pain was more mechanical relevant to sacroiliac joint dysfunction, and multiple other examiners have agreed with me on that. And partly because she responded extremely well to sacroiliac interarticular joint injections" experiencing "both a diagnostic and a therapeutic response" (Depo. Tr., Dr. Kristin Mason, February 20, 2014, pp. 14-15). Dr. Mason specifically opined that the pain the Claimant refers to as hip pain is actually pain in her SI area and that it's related to the sacroiliac joint dysfunction which is from her work-related fall (Depo. Tr., Dr. Kristin Mason, February 20, 2014, pp. 15-16). With respect to the Claimant's SI joint dysfunction condition, Dr. Mason testified that the Claimant was still undergoing treatment, including consideration of repeat SI injections. She anticipated that the Claimant would be at MMI about eight weeks after those repeat injections. Dr. Mason noted the Claimant was continuing to improve with treatment (Depo. Tr., Dr. Kristin Mason, February 20, 2014, p. 19). On cross-examination, Dr. Mason was questioned if the Claimant was maximizing her subjective complaints and disability or if she was trying to get back to full functioning level as quickly as possible. Dr. Mason noted that "she's not typical of some of my chronic pain patients who report being worse at every

visit no matter what." Dr. Mason reported that the Claimant does report improvement in her symptoms, just that there has also been fluctuation (Depo. Tr., Dr. Kristin Mason, February 20, 2014, p. 32).

31. The Claimant saw Dr. Mason on February 25, 2014 reporting that she was experiencing increased pain as she has worked six days in a row without a day off. The Claimant described that "her hip bones feel like they have been hit by a hammer, also her tailbone." The Claimant wanted to proceed with injections with Dr. Ring which Dr. Mason found reasonable and recommended. The Claimant's left SI was tender and the Claimant was not wearing her SI belt that day (Claimant's Exhibit 2, p. 50; Respondents' Exhibit E, p. 147).

32. On February 26, 2014, Dr. Adam Wolff testified by deposition prior to a May 8, 2014 hearing before ALJ Michael Harr. Dr. Wolff testified as an expert in the fields of neurology and neurophysiology (Depo. Tr., Dr. Adam Wolff, February 26, 2014, p. 6). Dr. Wolff treated the Claimant both prior to and after her March 2013 accident neurophysiology (Depo. Tr., Dr. Adam Wolff, February 26, 2014, pp. 6-7). Comparing the pain symptoms the Claimant had prior to the March 2013 to the pain she was describing after the fall, Dr. Wolff testified that the pain was in a different region. Before it was more from the occipital region down into the mid-neck region. After the fall, it was more vertex or top of her head related (Depo. Tr., Dr. Adam Wolff, February 26, 2014, p. 17). Dr. Wolff further described that the Claimant has more of a head pain now rather than the neck-centric pain she experienced before (Depo. Tr., Dr. Adam Wolff, February 26, 2014, p. 19). Dr. Wolff later opined that "the accident caused a more chronic, severe, new type of headache in this case. And then there is always the possibility that the trauma exacerbated her chronic issues as well, which seemed to be doing well, at least reportedly prior to this fall (Depo. Tr., Dr. Adam Wolff, February 26, 2014, p. 27). In response to Dr. D'Angelo's August 13, 2013 report and her opinion that there were no objective findings to support a determination that the Claimant was suffering new and different headaches and that her head and neck symptoms worsened, Dr. Wolff opined that the difficulty with migraine and postconcussive syndrome cases is that most of the time there are not objective findings (Depo. Tr., Dr. Adam Wolff, February 26, 2014, p. 28). On cross-examination, when questioned about other causes besides postconcussive syndrome for the Claimant's headaches, Dr. Wolff agreed that there are many causes for headaches besides falling, but in this case, he did not think it was possible (Depo. Tr., Dr. Adam Wolff, February 26, 2014, pp. 33-34). Although, Dr. Wolff did concede that he is dependent on the Claimant being an accurate historian in terms of her accurately portraying her symptoms and conditions (Depo. Tr., Dr. Adam Wolff, February 26, 2014, p. 37).

33. On March 4, 2014, the Claimant was referred to Dr. Floyd Ring for repeat bilateral sacroiliac joint injections which he performed that day (Respondents' Exhibit H, pp. 225-6).

34. By March 18, 2014, the Claimant reported to Dr. Mason that she felt about 50% better after getting the bilateral SI injections. The Claimant continued with physical

therapy and using the SI belt. In PT, the focus was on core stability and the Claimant felt her back and hip were better. The Claimant was having difficulties tolerating medication prescribed by Dr. Wolff and was having trouble sleeping even with a maximum dose of Lunesta. Dr. Mason noted the Claimant appeared fatigued but that her SI joints were moving well with less tenderness. Dr. Mason recommended biofeedback as a nonpharmacologic technique to moderate symptoms (Claimant's Exhibit 2, pp. 57-58; Respondents' Exhibit E, pp. 150-151).

35. On April 15, 2014, Dr. Mason noted that the Claimant had Botox for her headaches the day before and was using the SI belt but was out of PT visits. Dr. Mason commented that "she is suddenly focused on her cognitive issues indicating problems with that. That had been a focus early on but has not really been a prominent complaint for some time." The Claimant complained of "clicking" in the SI joint, but Dr. Mason was not able to discern that on physical examination (Claimant's Exhibit 2, pp. 59-60; Respondents' Exhibit E, pp. 152-153).

36. On May 8, 2014, Dr. Kathleen D'Angelo testified as an expert in occupational medicine and general medicine and as to Level II accreditation matters (Tr. of May 8, 2014 Hrg., p. 5). Dr. D'Angelo testified that she performed an IME of the Claimant at Respondents' request on August 13, 2013 (Tr. of May 8, 2014 Hrg., p. 6). As a result of the Claimant's presentation at the IME, Dr. D'Angelo testified that, "there was a noticeable disconnect between the complaints being presented by the patient and her activity at the time. She would describe an activity that she wasn't able to do and perform that very activity with no apparent distress" (Tr. of May 8, 2014 Hrg., p. 8). Dr. D'Angelo also testified regarding several "very striking" areas of disconnect between the medical records that she reviewed and what the Claimant was telling her. First, Dr. D'Angelo testified that while the Claimant's neuropsychological evaluations were normal, the Claimant continued to reiterate that she was having cognitive issues, and specifically memory issues (Tr. of May 8, 2014 Hrg., p. 9). The next area Dr. D'Angelo discussed was that Dr. Bennett, the ophthalmologist who examined the Claimant noted a "shallow optic disc" from which he concluded the Claimant had an ophthalmological stroke. However, Dr. Bennett did not record "any vision loss secondary to trauma" even though Dr. D'Angelo found that the Claimant perseverated on this issue (Tr. of May 8, 2014 Hrg., p. 10). Based on these sorts of "disconnects," Dr. D'Angelo notes that the Claimant has a number of features of somatic symptom disorder or SSD, meaning that the Claimant internalizes outward stress as physiological symptoms (Tr. of May 8, 2014 Hrg., pp. 10-11). Dr. D'Angelo testified that "nonspecific, vague complaints" such as headaches, atypical memory loss, dizziness, abdominal pain and nausea, without objective evidence of disease, are the types of complaints typical of patients with SSD (Tr. of May 8, 2014 Hrg., p. 11). Dr. D'Angelo testified that this is further demonstrated by "symptom swapping" which is characterized by the Claimant exhibiting persistent but changing symptoms rather than getting better after an injury (Tr. of May 8, 2014 Hrg., p. 13 and p. 31). Dr. D'Angelo finds Dr. Bisgard's medical note on the second visit particularly relevant as Dr. Bisgard states that the Claimant filled in her entire pain diagram as being painful or showing symptoms diffusely throughout her body. Dr. D'Angelo opines that this is classic for

SSD (Tr. of May 8, 2014 Hrg., pp. 13-14). Dr. D'Angelo testified that she believes the Claimant did, in fact, have a fall and suffer contusions. However, by the time Dr. D'Angelo examined the Claimant, she had a normal examination and her myofascial pain, contusions and bruising had resolved by that time. Dr. D'Angelo noted no objective evidence for neurological compromise (Tr. of May 8, 2014 Hrg., p. 15). Dr. D'Angelo finds further support for her SSD diagnosis in the lack of symptom resolution in spite of the treatment the Claimant received between March 2013 and May 2014 (Tr. of May 8, 2014 Hrg., p. 16). Dr. D'Angelo also testified that she found significance in the Claimant's report of her mechanism of injury and the immediate aftermath. In Dr. D'Angelo's opinion, "patients with severe damage after a fall, be it neurological or muscle, do not jump up, do not walk back and confront cleaners who didn't put up a sign. They don't go driving home by themselves…Symptoms of headaches with pos-concussive syndrome are much worse at the time of injury. We see evidence of post-concussive complications decrease with time, not increase (Tr. of May 8, 2014 Hrg., p. 18). In addition to the foregoing, Dr. D'Angelo further disputes that the Claimant had a concussion due to her normal neuro-cognitive test, normal CAT scan and normal examinations (Tr. of May 8, 2014 Hrg., p. 19). Dr. D'Angelo testified that the Claimant simply reporting that her headaches after her work injury were entirely different from the headaches she had before is not evidence to establish a link between the accident and the headaches the Claimant reported after her fall (Tr. of May 8, 2014 Hrg., pp. 20-21). Dr. D'Angelo later opined that the Claimant would have had the same symptoms she had prior to the fall, headache, cognitive difficulties, low back pain, numbness in her right arm, numbness in her legs, that were present before the fall. And that they are going to be present long after the fall (Tr. of May 8, 2014 Hrg., p. 33). Dr. D'Angelo finds that none of the care provided, recommended and prescribed by Dr. Mason, Dr. Ring and Dr. Wolff since August 13, 2013 was reasonable and necessary to treat the effects of the Claimant's March 17, 2013 fall (Tr. of May 8, 2014 Hrg., pp. 33-35).

37. On cross-examination, Dr. D'Angelo testified that Dr. Wolff has had the "misfortune" of not having all of the Claimant's records and based on this lack of access to the records has erred in his opinions and diagnosis of the Claimant (Tr. of May 8, 2014 Hrg., pp. 40-41). Dr. D'Angelo also opined that she does not defer to Dr. Wolff's opinion and finds it to be a disadvantage that he treated her both before and after the work injury as she thinks that this may have predisposed him to a "certain, specific diagnosis and a certain, specific intervention, and he performed them multiple times" (Tr. of May 8, 2014 Hrg., p. 41 and 43). Dr. D'Angelo also testified that she does not agree with the diagnosis by Dr. Wolff and Dr. Mason that the Claimant has SI joint dysfunction (Tr. of May 8, 2014 Hrg., pp. 44-45). Dr. D'Angelo also testified that the headaches the Claimant describes are characterized as "stress headaches" rather than a migraine. Dr. D'Angelo testified that the location of the symptoms is not important, rather it is the constellation of symptoms that characterizes a classic migraine presentations. She also expressed concern that the Claimant has been treated with medications that are contraindicated for patients with a prior ophthamological stroke (Tr. of May 8, 2014 Hrg., pp. 48-49). Dr. D'Angelo also opined that there is no objective evidence that the Claimant's fall exacerbated her headache condition and she believes the medical records show consistent symptoms before and after the injury (Tr. of May

8, 2014 Hrg., p. 51). With respect to the Claimant's SI joint complaints, Dr. D'Angelo opines that she thinks, "they were present before this fall. They will be present long after this fall" in disagreement with Dr. Mason's opinion (Tr. of May 8, 2014 Hrg., p. 53).

38. On May 28, 2014, Dr. Mason provided a Medical Record Review report after being provided with pre-injury medical records identified in her report. These included records of treatment subsequent to her 2004 motor vehicle accident and records for medical treatment subsequent to the Claimant's 1998 work injury. In comparing the recently reviewed medical records to her initial April 16, 2013 evaluation, Dr. Mason notes that,

> the patient specifically denied any history of low back pain. It seems impossible that she would not remember her very prolonged treatment for the 2004 motor vehicle accident. She was able to report a previous work-related injury to the cervical spine and the right optic artery abnormality from 2004. This does seem to be consistent with her pattern of under reporting her prior medical problems and potentially over reporting her current symptoms. Concern regarding over somatization is something that came up with her prior treatment and is consistent with how she has presented for this injury as well.
>
> (Respondents' Exhibit E, pp. 159-163)

39. On June 10, 2014, Dr. Mason confronted the Claimant with the medical record of fairly prolonged treatment for low back pain, neck pain and headaches following her 2004 MVA. Dr. Mason reported that the Claimant stated that it was so long ago and she could not remember. The Claimant reported that she was feeling better overall and the Claimant was scheduled for SI injections on June 15, 2014. Dr. Mason noted that she advised the Claimant that she was approaching MMI. Dr. Mason anticipated referring the Claimant for an FCE following the next round of SI injections (Respondents' Exhibit E, pp. 164-165).

40. The Claimant received bilateral SI joint injections performed by Dr. Hompland on June 16, 2014 (Respondents' Exhibit I, pp. 231-232).

41. The Claimant saw Dr. Mason again on July 1, 2014 after the SI injections performed by Dr. Hompland on June 15, 2014. The Claimant stated to Dr. Mason that "Dr. Hompland unequivocally thinks all of her back problems are secondary to this injury" and the Claimant continued to be concerned that Dr. Mason had confronted her with prior medical records. For her part, Dr. Mason noted that Dr. Hompland is not usually in the habit of making such emphatic conclusions. The Claimant reported to Dr. Mason that she experienced 100% relief from the left SI joint injection and 50-60% on the right. Dr. Mason noted that the SI joint injections were successful and she referred the Claimant for further physical therapy to work on stabilization. Dr. Mason also referred the Claimant for an FCE and opined that she expected to place the Claimant at MMI in one to two months.

42. On July 10, 2014, the Claimant saw Dr. Hompland for follow up after the bilateral SI joint injections. The Claimant reported that “she did not derive the same level of relief with this injection that she had had previously with Dr. Ring’s injections.” Upon reviewing Dr. Ring’s notes, Dr. Hompland noted that Dr. Ring had performed the injections up into the ligamentous structures as well as the SI joint. The Claimant stated that she wanted the additional injections into the ligamentous structures and Dr. Hompland noted that he would seek authorization. Dr. Hompland specifically noted that he “did not define whether or not this is work related” and deferred this to Dr. Mason (Respondents’ Exhibit I, pp. 233-234).

43. On July 15, 2015, the Claimant was seen by PA-C Martha Schantz on referral from Dr. Stanton to establish care with “Dr. Alex” regarding bilateral labrum tears. The note indicates the Claimant stated that she has pain through the gluteus and groin, an inability to abduct legs, and a sensation of the legs ‘popping like rubber bands’ and ‘catching’ when she walks. The Claimant related this to her work injury in the note. Rather confusingly, the note states that the Claimant reports that “she won a lawsuit regarding care and no longer uses work comp. She now uses her own insurance” (Claimant’s Exhibit 9, p. 130). Two days later on July 17, 2015, the Claimant was evaluated by Dr. Alex Constantinides. After physical examination and evaluation, Dr. Constantinides noted he strongly suspects that the Claimant has an underlying anxiety disorder/somatic dysfunction and that chronic pain has caused increased myofascial pain. He nevertheless opined that if the Claimant did not improve significantly very shortly, he would suggest spinal surgery (Claimant’s Exhibit 9, pp. 134-135).

44. The Claimant followed up with Dr. Mason on July 22, 2014 and in the interim, the physical therapy and FCE recommended at the previous visit were denied by a peer reviewer. On examination, Dr. Mason noted hypertonicity in the right-sided paraspinal muscles and some tenderness over the right SI joint and upper buttock. Dr. Mason also noted that the Claimant is perseverating that her ligaments are torn and that she doesn’t want to settle her claim until her ligaments are fixed. Dr. Mason indicated that she was not sure of the status of Dr. Hompland’s recommendation for an injection. She noted that the FCE that was previously recommended would have helped to complete care for the Claimant and determine the need for permanent restrictions Dr. Mason opined that MMI was pending completion of care requests (Respondents’ Exhibit E, pp. 168-169).

45. Crediting Dr. D’Angelo’s opinion as persuasive in his July 25, 2014 Order, ALJ Harr found that Dr. Wolff’s diagnosis of post-concussive headaches was unsupported by the mechanism of injury. ALJ Harr determined that Dr. Wolff speculated that the slip and fall incident might have aggravated the Claimant’s pre-existing headache condition, but only if she sustained head or neck trauma. He found that, based on Dr. Mason’s testimony, neck pain was not prominent in the Claimant’s claim or complaints. ALJ Harr found that the Claimant did not complain of neck pain so Dr. Mason did not diagnose the Claimant with a concussion, or closed head injury. Therefore, without any neck injury due to this claim, and no concussion, ALJ Harr found that Dr. Wolff’s theory that the Claimant’s headaches are related to the slip and fall

incident because they are post-concussive headaches, or because they are from neck trauma, is medically improbable (Respondents' Exhibit DD).

46. Also in his July 25, 2014 Order, ALJ Harr also credited Dr. D'Angelo's opinion as persuasive support for his determination that the Claimant failed to show it more probably true that she requires treatment after August 13, 2013, to cure and relieve the effects of her slip and fall incident. Citing the medical opinion of Dr. D'Angelo, ALJ Harr also found that treatment of the Claimant's headache and cognitive complaints by Dr. Wolff, treatment of her lower back and SI joint complaints by Drs. Mason and Ring, and ongoing physical therapy are unrelated to the slip and fall incident and are not reasonably necessary to cure and relieve the effects of the slip and fall incident. ALJ Harr found it unlikely that treatment of the Claimant's ongoing headache, cognitive, lower back, and SI joint complaints is related or reasonably necessary to cure and relieve the effects of injuries from the slip and fall incident (Respondents' Exhibit DD).

47. On September 9, 2014, the Claimant saw Dr. Mason for her impairment rating (Respondents' Exhibit I, pp. 170-173). For the Claimant's history, Dr. Mason reports,

> [the Claimant] had a fall at work on 3/21/13 and reported she was taking the trash out, there was an unmarked wet floor and she slipped and fell while holding bags. Her feet went off to the right of her and her left knee, hip and shoulder struck the ground. She jumped up quickly but then she felt dazed and started having pain in her neck and back. She yelled at the person who was mopping. She went on to develop nausea, vomiting and a severe headache. She went to the emergency room approximately four days later.

Somewhat at variance with ALJ Harr's incorporation of her testimony in his order, in this report, Dr. Mason notes that "at the time I saw her, she was complaining of headaches associated with nausea. She was also complaining of low back pain. My impression was probable postconcussive syndrome in patent with prior history of significant TBI with residual short-term memory loss, cervical sprain, strain in patient with history of multilevel degenerative disc disease, lumbar sprain, primarily SI mediated, with pain seemingly emanating from the left SI joint." Dr. Mason managed care for the Claimant's headaches and low back/SI joint pain. She noted that the Claimant tried multiple medications for the headaches until they were more controlled on TopaMax and Frova. Later, the Claimant underwent Botox injections for the headaches with Dr. Wolff under her primary medical insurance. For the low back and SI joint condition, the Claimant underwent physical therapy, biofeedback and injections with Drs. Ring and Hompland. Dr. Mason noted that during this time, through April of 2014, the Claimant was tolerating working full duty using and SI belt, but remained very focused on her pain complaints. In May of 2014, Dr. Mason received pre-injury medical records, mostly related to a 2004 MVA and she confronted the Claimant about these records. Dr. Mason noted that the Claimant had prolonged symptomatology involving the neck, head, TMJ and low back and some somatization type issues with her presentation. Dr. Mason noted that, at that same time, there was a pending recommendation from Dr. Hompland for repeat SI injections. Dr. Mason had recommended an FCE and physical therapy which were denied by a peer reviewer. Subsequent to this, Dr. Mason was forwarded paperwork including ALJ Harr's order finding that the Claimant reached MMI in August of 2013. Dr. Mason was subsequently requested to perform an impairment rating for the Claimant. During range of motion measurements, Dr. Mason noted that the Claimant initially gave invalid range of motion, but after Dr. Mason explained that she would have to throw the measurements out if they were not valid, the Claimant made better effort. The Claimant reports that the most recent injections from Dr. Hompland "didn't take," but she has been doing somewhat better. Although, Dr. Mason noted that the Claimant "continues to perseverate on her torn ligaments." Dr. Mason ultimately found that the second set of range of motion measurements were valid and similar to prior casual observation with the Claimant. Dr. Mason assigned a 5% lumber impairment rating for a category II-B specific disorder and range of motion deficits totaling 4% (2% for flexion and 2% for extension) for a 9% total impairment rating. The final assessment was: headaches preexisting and sacroiliac pain with inconsistent response to conservative treatment.

48. Dr. Beatty performed a Division IME of the Claimant and authored a DIME report dated March 5, 2015 (Claimant's Exhibit 10; Respondents' Exhibit A). The history of the injury summarized by Dr. Beatty was a slip on a wet floor with the Claimant falling and hitting her left knee, left hip and left shoulder. The Claimant reported a concussion and vomiting and developed migraines (Claimant's Exhibit 10, p. 146; Respondents' Exhibit A, p. 4). Dr. Beatty conducted an extensive review of the Claimant's medical records, with preexisting records going back to 1982 going up to a February 21, 2013 hip x-ray (Claimant's Exhibit 10, pp. 146-155; Respondents' Exhibit A, pp. 4-13). Dr. Beatty next reviewed and summarized a substantial amount of records from after the date of the work incident on March 17, 2013. The medical records reviewed start on March 21, 2013 and continue through September 9, 2014 (Claimant's Exhibit 10, pp. 155-165; Respondents' Exhibit A, pp. 13-23). The Claimant reported that her pain is primarily in her hip with radiation of pain down into her bilateral legs and occasionally numbness and tingling in her lower legs. Dr. Beatty noted the Claimant's activities are chronically restricted due to her symptoms (Claimant's Exhibit 10, p. 165; Respondents' Exhibit A, p. 23). After consideration of the foregoing and a physical examination, Dr. Beatty diagnosed the Claimant with left sacroiliac strain and left sacroiliitis. He agreed with Dr. Mason's original opinion that the Claimant was at maximum medical improvement as of September 9, 2014 and provided a 13% whole person impairment rating for a specific lumbar spine disorder and loss of range of motion. He did not find any other areas of impairment associated with the Claimant's work injury. Dr. Beatty also noted that apportionment was not appropriate due to the fact the Claimant was functioning without restriction at the time of her injury. He also recommended maintenance care of up to 3 SI joint injections over the next year provided the Claimant has a positive response (Claimant's Exhibit 10, p. 167; Respondents' Exhibit A, p. 25).

49. On October 14, 2014, Dr. Mason prepared a "SAMMS CONFERENCE/IMPAIRMENT REPORT ADDENDUM." She noted that if the judicially determined MMI date of August 13, 2013 is applied, the Claimant would not meet the requirements for a category II-B diagnosis as it places her medically documented post-injury pain at less than six months. Therefore she would not be entitled to a lumbar impairment rating (Respondents' Exhibit E, p. 177).

50. On October 22, 2015, Dr. Paul Stanton responded to questions from the Claimant's attorney. He noted that the Claimant was a current patient of his and that he is treating her for spinal complaints including right sided sacroiliac pain and right lower extremity radiculopathy. Dr. Stanton opines that these conditions are related to her work-related fall on March 17, 2013. The Claimant's treatment with Dr. Stanton is ongoing. Dr. Stanton stated that at the time of the letter, he was awaiting the results of injection therapy to "fully delineate her pain generator." Dr. Stanton attributes the conditions for which he is treating the Claimant to her work injury, in part, due to the Claimant's representation that she was not having difficulties in these areas before. Dr. Stanton opined that the Claimant may eventually require surgical intervention (Claimant's Exhibit 15).

51. On November 19, 2015, Dr. D'Angelo prepared a written Addendum to her IME report after reviewing the impairment ratings provided by Dr. Mason and Dr. Beatty. She noted her disagreement with Dr. Beatty's impairment rating assignment. Dr. D'Angelo pointed out that Dr. Mason opined that since the Claimant did not have greater than 6 months of lumbar pain, the Claimant was not entitled to a rating for lumbar spine complaints. Dr. D'Angelo further opined that, regardless of the duration of the Claimant's complaints, she would not be entitled to an impairment rating (Claimant's Exhibit 3, p. 62; Respondents' Exhibit B, p. 32-A). More specifically, Dr. D'Angelo opined that the Claimant does not have a medically probable claim-related diagnosis, in part, because her minor degenerative MRI findings are consistent with any patient her age and she did not sustain a work related spine injury due to acute, chronic or cumulative trauma. Dr. D'Angelo further finds no need for maintenance care (Claimant's Exhibit 3, p. 63; Respondents' Exhibit B, p. 32-B).

52. Dr. Beatty testified at the hearing on December 10, 2015 as a board certified physician in the area of occupational medicine. Dr. Beatty has been Level II certified since the initiation of the certification process and has continually maintained his certification. Dr. Beatty was the DIME physician in this case. He testified that he performs approximately 75-100 Division independent medical examinations per year and 100% of the patients that he treats are workers' compensation cases. Dr. Beatty testified that he performed a Division IME of the Claimant on March 5, 2015. He had received medical records and reviewed those after his appointment with the Claimant. Dr. Beatty testified that the Claimant appeared uncomfortable in her chair and she moved around a bit. He testified that she was a thin woman and she had concerns about her ability to stay active. Dr. Beatty testified that the Claimant told him about her prior 2004 injury to her neck and low back and advised him that she had no real ongoing problems from that injury and was basically unrestricted in her work activities.

With respect to her 2012 injury, the Claimant advised that the location of her symptoms was (1) in the inguinal area in front where the leg meets the body; (2) in her back across to her hips/buttocks; and (3) along her calves. Dr. Beatty testified that his understanding of the Claimant's injury is that she went down on a fall with her feet in front of her but she rotated and only fell on her left side. Although the Claimant advised Dr. Beatty that she had bilateral hip pain, because Dr. Beatty determined the injury only impacted her left side, he discounted the right sided pain for the purposes of impairment rating. When asked if it was important for Dr. Beatty to know the Claimant had a lumbar injury in her 2004 motor vehicle accident, he testified that it would be important only if there was some indication of SI joint injury in that prior MVA because there is generally not confusion between low back and SI symptomatology. In referring to page 5 of his DIME report (Respondents' Exhibit A, p. 8), Dr. Beatty notes that a May 5, 2004 lumbosacral X-ray that he had reviewed indicated that "the sacroiliac joints were unremarkable."

53. At the time of his DIME examination and report, Dr. Beatty testified that he was not aware of the prior ruling from ALJ Harr dated July 25, 2014, based in large part on the testimony and opinions of Dr. D'Angelo, that the Claimant's condition that was causally related to the Claimant's March 17, 2013 injury had fully resolved without residual or ongoing symptoms on August 13, 2013. Although Dr. Beatty did review Dr. D'Angelo's IME report as part of his medical record review and was, therefore, aware that she had placed the Claimant at MMI for her work related conditions as of August 13, 2013 (Claimant's Exhibit 10, pp. 160-161; Respondent's Exhibit A, pp. 18-19). However, in opining that the Claimant was at MMI in his summary, Dr. Beatty noted Dr. Mason placed the Claimant at MMI on September 9, 2014 (Claimant's Exhibit 10, p. 167; Respondents' Exhibit A, p. 26). Further, on his Division summary sheet, Dr. Beatty handwrote an MMI date of 9/9/14 indicating that he concurred with Dr. Mason's initial opinion that the Claimant was at MMI on September 9, 2014 (Claimant's Exhibit 10, p. 143; Respondents' Exhibit A, p. 1)

54. Dr. Beatty testified that he provided the Claimant with an impairment rating for her SI impairment which combines a Table 53(II)(B) rating and a rating for loss of spinal range of motion. A Table 53 (II)(b) impairment rating under the AMA Guides and the Division Impairment Rating Tips requires six months of documented pain and rigidity for this specific disorder rating. He further testified that ***if*** the Claimant's symptoms had resolved less than 6 months after her injury, then the impairment rating for the SI joint condition and the spinal range of motion impairment would be 0% and he would agree with Dr. Mason and amend his DIME report. However, Dr. Beatty did not testify that, from a medical standpoint, he opined the Claimant's symptoms ***had*** actually resolved less than 6 months after her injury. This testimony came about in reference to Exhibit E, p. 177 which is an Impairment Rating Addendum prepared by Dr. Mason that stated if the judicially determined MMI date of August 13, 2013 was applied, the Claimant would have less than 6 months of medically documented pain and she would not have a category II-B diagnosis and no lumbar impairment rating.

55. On cross-examination, Dr. Beatty testified that a DIME physician is not bound by the authorized treating physician in any way and can have a different opinion

than the ATP. Dr. Beatty also testified that the best objective testing for an SI joint condition is (1) x-ray/MRI and (2) positive response to an injection of anesthesia into the SI joint.

56. The Claimant testified at the hearing on December 10, 2015 that she very recently underwent back surgery performed by Dr. Stanton because her L4-5 nerve was pressing on her leg and she was having bad cramps, like charlie horses. Dr. Stanton has been providing treatment for her low back condition. She testified that her other symptoms were getting worse and her left hip locked up. She testified that bending and twisting affects her. Following her surgery, the Claimant is currently on bed rest and anticipates starting physical therapy. The Claimant testified that treatment for her current hip symptoms is on hold because of her more urgent need for back surgery. She was receiving physical therapy for the hip condition and through physical therapy, her right hip was unlocked and now the left hip gives her more trouble than the right one. She anticipates that the issue of whether or not she requires hip surgery will be addressed after some level of healing from the back surgery. She treats with Dr. Wong for her hip/labrum condition. The Claimant testified that she is also currently receiving treatment for her migraines.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. §8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Issue Preclusion

Respondents have argued that the issues of causation and relatedness and MMI were fully and finally adjudicated by ALJ Harr in his July 25, 2014 Findings of Fact, Conclusions of Law and Order. It is undisputed that this order was not appealed and became a Final Order. Therefore, Respondents argue, these issues are barred.

Collateral estoppel, or issue preclusion, is a judicially created, equitable doctrine that operates to bar relitigation of an issue that has been finally decided by a court in a prior action. *Bebo Constr. Co. v. Mattox & O'Brien, P.C.*, 990 P.2d 78, 84 (Colo. 1999); 18 Charles Alan Wright, Arthur R. Miller & Edward H. Cooper, *Federal Practice & Procedure: Jurisdiction* § 4403 (1981). The doctrine serves to relieve parties of multiple lawsuits, conserve judicial resources, and promote reliance on the judicial system by preventing inconsistent decisions. *Bebo Constr*., 990 P.2d at 84. Although originally developed in the context of judicial proceedings, issue preclusion is just as viable in administrative proceedings and may bind parties to an administrative agency's findings of fact or conclusions of law. *Id*. at 85; *Indus. Comm'n v. Moffat County Sch. Dist. RE No. 1*, 732 P.2d 616, 620 (Colo. 1987).

Issue preclusion bars relitigation of an issue if: (1) the issue sought to be precluded is identical to an issue actually determined in the prior proceeding; (2) the party against whom estoppel is asserted has been a party to or is in privity with a party to the prior proceeding; (3) there is a final judgment on the merits in the prior proceeding; and (4) the party against whom the doctrine is asserted had a full and fair opportunity to litigate the issue in the prior proceeding. Only when each of these elements has been satisfied are the equitable purposes of the doctrine furthered by issue preclusion. *Sunny Acres Villa, Inc. v. Cooper*, 25 P.3d 44 (Colo. 2001).

It is settled law that a full and fair opportunity to litigate an issue requires not only the availability of procedures in the earlier proceeding commensurate with those in the subsequent proceeding, *Maryland Cas. Ins. Co. v. Messina*, 874 P.2d 1058, 1062 (Colo. 1994), but also that the party against whom collateral estoppel is asserted have had the same incentive to vigorously defend itself in the previous action, *Salida Sch. Dist. R-32-J v. Morrison*, 732 P.2d at 1166-67; Restatement (Second) of Judgments § 28(5)(c) & cmt. j (1982). These considerations apply equally to the adjudication of workers' compensation benefits. *Sunny Acres Villa, Inc. v. Cooper, supra*.

Moreover, on multiple occasions, panels of the Industrial Claim Appeals Office have specifically found that a decision in a prior workers' compensation proceeding determined under a 'preponderance of the evidence' standard will not serve as issue preclusion in the context of a subsequent case where the standard is 'clear and convincing evidence.' The differing standards of proof prevent a finding that the issue sought to be precluded is identical. Furthermore, if issue preclusion were permitted in these cases it would allow for prelitigation of the MMI and impairment rating issues prior to the application of the DIME process, providing a means for parties to obtain a tactical advantage, which would encourage additional litigation in contradiction with the stated statutory purpose of avoiding it. *Vigil v. J.E. Dunn Construction Co.,* W.C. No. 4-773-619-01 (ICAO, May 28, 2014); *Madrid v. Trinet Group, Inc.,* W.C. No. 4-851-315-03 (ICAO, April 1, 2014); *Ortega v. JBS USA, LLC,* W.C. No. 4-804-825 (ICAO, June 27, 2013); *Bekkouche v. Riviera Electric,* W.C. No. 4-514-998 (ICAO, December 30, 2008).

Issues endorsed in this case include the issue of overcoming a DIME opinion regarding impairment that turns on whether the Claimant's low back/SI condition was causally related to the Claimant's work injury. In the first hearing before ALJ Harr, the Claimant had to establish entitlement to medical benefits and temporary disability benefits by a preponderance of the evidence. In the current hearing, the DIME opinion on causation and relatedness must be overcome by clear and convincing evidence. Therefore, the issues were not identical. Moreover, this would render the DIME process without the effect intended by the statute. As a result, ALJ Harr's July 25, 2014 order does not bar litigation of the issues of causation, relatedness, MMI, and impairment in the context of the DIME process. ALJ Harr's order predated the DIME evaluation of Dr. Beatty and per the Workers' Compensation Act and the requirements for the application of issue preclusion, neither Dr. Beatty nor this ALJ is bound by the prior order on the issues of causation or relatedness or MMI.

ALJ Clarification of Conflicting Opinions Issued by the DIME Physician and Burden of Proof to Overcome the Opinion of a DIME Physician

The DIME physician's findings include his or her subsequent opinions, as well as his or her initial report. *Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328, 330 (Colo. App. 2005). If a Division IME physician issues conflicting or ambiguous opinions concerning whether the claimant's condition is work-related or there is an impairment rating, it is the ALJ's province to determine the Division IME's true opinion as a matter of fact. Once the ALJ clarifies the ambiguous opinion regarding these issues, the party seeking to overcome that opinion bears the burden of proof by clear and convincing evidence. The Division IME's opinions, therefore, must be overcome by clear and convincing evidence even if the opinion is arguably initially ambiguous. Section 8-42-107(8)(b)(III); *Clark v. Hudick Excavating*, W.C. No. 4-524-162 (November 5, 2004); *MGM Supply Co. v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002); *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). Clear and convincing evidence is that which is "highly probable and free from serious or substantial doubt." Thus, the party challenging the DIME physician's finding must produce evidence contradicting the DIME which is unmistakable and free from serious or substantial doubt showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015 (Colo. App. 2002).

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. C.R.S. § 8-42-101(3.7); C.R.S. §8-42-107(8)(c). Ultimately, the questions of whether the DIME physician properly applied the AMA Guides, and whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000). Not every deviation from the rating protocols of the AMA Guides requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Adams v. Manpower, supra*. Moreover, a mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

As found, Dr. Beatty provided the Claimant with a rating for her SI impairment which combines a Table 53(II)(B) rating and a rating for loss of spinal range of motion. A Table 53 (II)(b) impairment rating under the AMA Guides and the Division Impairment Rating Tips requires six months of documented pain and rigidity for this specific disorder rating. At the December 10, 2015 hearing, Dr. Beatty further testified that ***if*** the Claimant's symptoms had resolved less than 6 months after her injury, then the impairment rating for the SI joint condition and the spinal range of motion impairment would be 0%. However, Dr. Beatty did not testify that the Claimant's symptoms ***had*** resolved less than 6 months after her injury. He responded to a hypothetical, but was not asked, and did not testify, that his opinion had actually changed. The DIME physician is not bound by a prior legal determination of MMI arising out of a medical benefits claim. Since Dr. Beatty did not change his opinion in the current hearing, his opinion, as expressed in the March 5, 2015 DIME report, will stand as it is not ambiguous, nor did Dr. Beatty's subsequent testimony contradict his earlier opinion. Therefore, the Respondent will have the burden to overcome the DIME on causation and impairment on the issue of the lumbar/SI impairment rating.

Challenging a DIME Physician Opinion on Causation and Impairment

As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury, including whether the various components of the Claimant's medical condition are causally related to the industrial injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Martinez v. Industrial Claim Appeals Office, 176 P.3d 826*. Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). Clear and convincing evidence is that which is "highly probable and free from serious or substantial doubt." Thus, the party challenging the DIME physician's finding must produce evidence contradicting the DIME which is unmistakable and free from serious or substantial doubt showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015 (Colo. App. 2002). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of an impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*.

Challenging a DIME Physician Opinion on the Determination of MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." C.R.S. §8-40-201(11.5), C.R.S. Under the statute, MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). Therefore, a DIME physician's finding that a party has or has not reached MMI is binding unless overcome by clear and convincing evidence. Whether a party has overcome the Division IME's opinion as to MMI is a question of fact for the ALJ as the sole arbiter of conflicting medical evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

A finding that the claimant needs additional medical treatment (including surgery) to improve his condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1080 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures which offer a reasonable prospect for defining the claimant's condition or suggesting further treatment are warranted would be consistent with a finding that a Claimant was not at MMI. *Hatch v. John H. Harland Co.,* W.C. No. 4-368-712 (I.C.A.O. August 11, 2000). However, the requirement for future medical maintenance which will not significantly improve the condition or the possibility of improvement or deterioration resulting from the passage of time shall not affect a finding of MMI per C.R.S. § 8-40-201(11.5), nor does the need for recommended diagnostic testing solely to assist in the maintenance of a claimant's condition. *Brownson-Rausin v. Industrial Claim Appeals Office*, 131 P.3d 1172 (Colo. App. 2005).

The Respondents' Challenge to the DIME Physician's Impairment Rating which Included a Rating for a Lumbar/SI Condition

The opinions expressed in Dr. Beatty's comprehensive DIME report dated March 5, 2015 are his true opinion, including a determination of MMI as of September 9, 2014 and a whole person impairment rating of 13% based on a AMA Guides, Table 53(II)(B) rating for a specific lumbar disorder and a rating for loss of range of motion. This opinion is supported by Dr. Mason's initial impairment rating prior to her application of an earlier MMI date based on a judicial determination. This rating is also supported by the medical records in evidence and those summarized by Dr. Beatty in his DIME report as the medical records document greater than six months of pain subsequent to the injury as required by the Impairment Rating Tips (Exhibit HH, p. 3). From the outset, the Claimant reported left hip and low back injuries and she consistently reported having these symptoms, although the symptoms would improve and then worsen, alternatively, over the course of her treatment. Although Respondents have argued that these left sided symptoms are preexisting, the right leg, hip and SI joint were the focus of treatment related to a prior 2004 MVA, not the left side. Dr. Beatty specifically discounted the right-sided symptoms in reaching his impairment rating. With respect to her SI joint symptoms, the Claimant experienced a positive diagnostic and therapeutic response to repeat SI joint injections, with Dr. Ring's injections being more effective than those performed by Dr. Hompland.

Dr. D'Angelo's opinions are in stark contrast. In an Addendum to her original IME report, she specifically opined that she disagrees with Dr. Beatty. She opined that the Claimant did not have greater than 6 months of post-injury lumbar pain and therefore the Claimant is not entitled to a rating for her lumbar spine complaints. In her initial August 13, 2013 report, and in testimony presented in a prior hearing regarding medical benefits, Dr. D'Angelo opined that the Claimant was at MMI as of August 13, 2013 for her work related symptoms which had resolved. Further, she has opined that, regardless of the date the Claimant reached MMI, Dr. D'Angelo does not believe that the Claimant is entitled to an impairment rating. She opined that any current symptoms or conditions the Claimant has were either entirely preexisting or were manifesting as a result of the Claimant exhibiting features of somatic symptom disorder (SSD).

Whether or not Dr. Beatty was in error for providing a 13% lumbar impairment rating to the Claimant turns, in part, on the date the Claimant was at MMI for work related conditions. Dr. Mason initially opined that the Claimant was at MMI as of September 9, 2014. Based on this she provided a 9% whole person impairment rating based on a AMA Guides, Table 53(II)(B) rating for a specific lumbar disorder and a rating for loss of range of motion. Only later at a SAMMS conference when she was asked to apply Dr. D'Angelo's MMI date of August 13, 2013 did Dr. Mason state the impairment rating was 0% because the earlier MMI date meant that there was not more than 6 months of medically documented post-injury pain.

Dr. Beatty did not have the Order from the OAC ALJ when he made his MMI determination of September 9, 2014, but he had reviewed Dr. D'Angelo's report which argued for the August 13, 2013 MMI date. After reviewing this, along with all of the other medical reports, Dr. Beatty placed the Claimant at MMI on September 9, 2014. He also provided his impairment rating after determining, with record support, that there was more than six months of documented pain. Dr. Beatty also made a causation determination and has found that the Claimant's left SI joint condition was caused by, or permanently aggravated by, her slip and fall on March 17, 2013. Dr. D'Angelo's opinion is inconsistent, but represents a difference of opinion, based in large part on an opinion that the Claimant exhibits SSD. This does not rise to the level of establishing that the DIME opinion is in error. The conflicting, and even changing, opinions in this case are not sufficient to overcome, by clear and convincing evidence, Dr. Beatty's true DIME opinion that the Claimant is entitled to a 13% whole person impairment rating. The Respondents have failed to overcome the DIME opinion of Dr. Beatty on the issue of impairment.

The Claimant's Challenge to the DIME Physician's Impairment Rating which Failed to Include Ratings for the Claimant's Migraines and Labral Tear and for his Determination of MMI

The Claimant also seeks to overcome the DIME opinion of Dr. Beatty. The Claimant disagrees that the only condition for which the Claimant is entitled to an impairment rating is her lumbar / Table 53(II)(B) condition. The Claimant has argued that the Claimant's migraines and labral tears are related to her claim. The Claimant offers the opinion of Dr. Wolff with respect to the Claimant's migraines and the opinions of Dr. Stanton and medical records from Dr. Alex Constantinides regarding the relatedness of the Claimant's labral tears.

Dr. Wolff opined that the Claimant's headache symptoms prior to the fall and after the fall were in a different region. Per Dr. Wolff, prior to the fall, the Claimant's pain was more neck-centric and now she experiences more chronic and severe headaches. While there are not objective findings to establish this post-injury differentiation in the type and severity of her symptoms, Dr. Wolff testified that most of the time there are not objective findings with migraine and postconcussive syndrome cases. Dr. Mason did view the Claimant reportedly experiencing a migraine on one of her office visits and Dr. Mason noted a markedly different presentation than on other visits. Dr. Mason was more willing to defer to Dr. Wolff who had treated the Claimant both prior to her work injury and afterwards. However, Dr. D'Angelo discounted any new injury or exacerbation for the headache condition related to the Claimant's March 17, 2013 fall. Dr. D'Angelo found that the Claimant's initial presentation after the injury was not consistent with postconcussive syndrome as she opined that symptoms for this condition are worse at the outset and then they improve. She opined this was not a condition where symptoms develop and worsen over time.

Dr. Beatty had access to the medical records from Dr. Wolff's office before and after the Claimant's work injury, the medical records from the worker's compensation physicians and Dr. D'Angelo's opinion. He reviewed and summarized these records and noted that the Claimant reported a concussion. Nevertheless, Dr. Beatty opined that he found no other area of impairment associated with her work injury except for the lumbar impairment. While differing opinions were presented, none rose to the level of establishing by clear and convincing evidence that Dr. Beatty was in error.

Even less evidence was presented by Claimant with respect to the Claimant's labral tear condition. Again, Dr. Beatty was presented with, and reviewed, a significant amount of medical records from before and after the Claimant's injury. He specifically opined that the Claimant’s fall impacted her left side and discounted right-sided symptoms and conditions for the purposes of establishing a permanent impairment rating for the work injury. While Dr. Stanton noted that the Claimant reported that she did not have her spine related symptoms prior to her fall in terms of the right sided sacroiliac pain and right lower extremity radiculopathy, this is not consistent with the older medical records. The July 2015 medical records from Dr. Constantinides’ office likewise do not sufficiently establish a causal link between the Claimant’s fall and labral tears. The Claimant related a bilateral labral tear condition to her work injury, but Dr. Constantinides did not perform any persuasive causation analysis.

Ultimately, while the Claimant presented some records discussing a labral tear condition, the Claimant did not prove by clear and convincing evidence that there is a causal relationship to her work injury. The Claimant has failed to overcome the DIME opinion of Dr. Beatty on the issue of impairment.

Medical Maintenance Treatment after MMI

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. The need for medical treatment may extend beyond the point of maximum medical improvement where a claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). An award for Grover medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999). The claimant must prove entitlement to Grover medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915 (Colo. App. 1993).

The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. HLJ *Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990). Factual determinations related to this issue must be supported by substantial evidence in the record. Section 8-43-301(8), C.R.S. Substantial evidence is that quantum of probative evidence which a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411, 415 (Colo. App. 1995).

Based on positive diagnostic and therapeutic responses to SI joint injections, the DIME physician recommended maintenance care of up to 3 SI joint injections over the next year, provided she continues to have a positive response. At the time that Dr.

Mason performed her impairment rating on September 9, 2014, she noted that there was a pending recommendation for repeat SI injections. Overall in the medical records, the Claimant experienced positive responses to repeat SI injections and this helped reduce her pain and maintain her level of function so that she was able to return to work on a full time basis. Based on testimony from Dr. Beatty, Dr. Mason and the Claimant, along with support in the medical records, the Claimant has proven by a preponderance of the evidence that the post-MMI medical treatment recommended by Dr. Beatty is reasonably necessary to maintain the Claimant's level of function and prevent further deterioration of her condition.

ORDER

It is therefore ordered that:

1. The true opinion of the DIME physician based on review of all of her reports, testimony and opinions is that the Claimant's lumbar condition is related to the Claimant's work injury and that she was entitled to a 5% impairment rating for the specific disorder and an 8% loss of range of motion rating for a combined 13% whole person impairment rating.

2. The Respondents failed to overcome the DIME opinion by clear and convincing evidence that the Claimant's lumbar condition was not work related and not ratable. Per the opinion of the DIME, the Claimant did suffer permanent impairment as a result of her March 17, 2013 work injury and is entitled to a 13% whole person impairment rating.

3. The Claimant failed to overcome the DIME opinion by clear and convincing evidence that her migraines and labral tear were caused by or permanently aggravated or accelerated by her work injury and deserving of additional impairment rating

4. The Claimant proved that she is entitled to *Grover* medical benefits as recommended by the DIME physician and her ATP Dr. Mason.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 633 17th Street, Suite 1300, Denver, Colorado, 80202. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see

Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-994-436

ISSUES

The issues raised for consideration at hearing were compensability, medical benefits and temporary total disability benefits from December 4, 2015 through March 11, 2016.

FINDINGS OF FACT

Having considered the evidence presented at hearing, the following Findings of Fact are entered.

1. Claimant is a now 58-year old male who alleges two work injuries. One on September 4, 2015, when he allegedly knelt on a broken wheel. Second, Claimant claims a work injury over the course of his 16 plus years of employment as a ramp service worker for United Airlines.

2. Claimant specifically claims that "due to my work on the ramp, I have an occupational disease causing my need to have both knees replaced." Claimant also contends that: "on September 4, 2015, I sustained an additional injury to my right knee that caused the pain in my right knee to become worse."

3. The parties each submitted a 6-page job description with photographs for a United "Hub Station Ramp" employee. Claimant testified that the description depicted his job where he had to engage in frequent and repetitive bending, kneeling, crawling, lifting in order to load and unload luggage from an airplane. Claimant contends that these job duties over the course of 16 years caused or aggravated his underlying end stage degenerative bilateral knee arthritis, causing the need for at least one, but potentially two, total knee replacements.

4. On cross-examination, Claimant acknowledged that the job description does not accurately depict his job duties. Claimant admitted that he rarely performed the job tasks in the first four photos in the job description. There are eight photos on the second page of the job description that were numbered in consecutive order from right to left as Nos. 1-8. Claimant testified that he only performed the tasks depicted in photo Nos. 1 and 5. Claimant did not perform any of the tasks shown in

photos No. 2, 3, 4, 6, 7 or 8. Claimant testified that he performed none of those job duties in the photos that were again marked Nos. 1 – 8 on the third page of the job description.

5. Claimant was engaged in repetitive or frequent bending, kneeling, crawling and lifting when loading and unloading bags. However, Claimant admitted that it took him approximately 10 to 15 minutes to load or unload airplane luggage and that he worked on approximately 6 planes per day. This would equate to 90 minutes per shift where Claimant engaged in the tasks of loading and unloading baggage. Claimant also admitted that these job tasks involve alternating walking to get luggage, then lifting it, loading it, sometimes kneeling, sometimes standing, and sometimes bending.

6. The remainder of Claimant's 8 or more hour shift consists of varied job tasks, including use of a computer, telephone, radios, microphone system; walking to the break room or rest room; checking assignments; walking to gates; and a lot of time waiting for air planes. Claimant admitted that his job duties, including loading and unloading planes, were "varied" and do not consist of sustained, repetitive activity such as those of an individual working an assembly line.

7. Claimant testified his only activities outside of work included walking for exercise and watching television. Claimant denied working out in a gym. But in signed discovery responses, Claimant stated under oath that before the alleged work injury, "I was working out at the gym at my apartment building. I can no longer do this" since the work injury. It appeared to the ALJ that Claimant did not consider the work out area in his apartment to be a "gym," and this seeming inconsistency does not reflect any dishonesty by Claimant.

8. Claimant was first seen at Employer designated medical provider, Scott Richardson, M.D., at Concentra, on September 4, 2015. Dr. Richardson reported that Claimant "presents today with both knees hurting." The physician took a history from Claimant as follows: "Both knees hurting for the past one year, worse in past week. He has worked in the pit of aircraft on his knees moving luggage x 16 years. He denies other injuries to the knees." Dr. Richardson diagnosed bilateral chronic knee pain. While Dr. Richardson's records do not mention that Claimant reported kneeling on a broken wheel; Claimant testified that he did tell the doctor about the incident. On September 11, 2015, Dr. Richardson reported that: Patient

states: “when I was kneeling down by the plane, both of my knees felt pain.” Again, no mention of the alleged wheel incident is made. On September 27, 2015, Claimant was seen again at Concentra and diagnosed with arthritis of the knee with no mention the alleged wheel incident. By October 10, 2015, Dr. Richardson reported that both of Claimant’s knees had been hurting him for the “past one year” prior to the initial September 4, 2015 visit and that Claimant “had been using Aleve until the week before he presented – afraid to keep using it. States has been limping one year.” Claimant was diagnosed with bilateral chronic knee pain and arthritis of the knee. By December 7, 2015, Dr. Richardson noted that exacerbating factors to Claimant’s pain level included jumping, kneeling and walking. The diagnosis of chondromalacia of the knee was added to Claimant’s assessment of bilateral chronic knee pain and arthritis. None of the records from Concentra document a work-related injury or even an allegation by Claimant of a work injury, from kneeling on a broken wheel.

9. Claimant underwent an IME by John Douthit, M.D., on September 29, 2015. Dr. Douthit reviewed X-rays from April 21, 2005, that showed a significant loss of joint space in both lateral compartments from an injury Claimant had on March 5, 2005 (at Employer) in which he hit his knees on the dashboard of a cart during a head on with another baggage cart. Claimant’s right knee was painful at the time and an April 7, 2005, right knee MRI showed significant degenerative changes in the medial lateral compartments with no anterior cruciate ligament (ACL). Dr. Douthit was aware that Claimant was seen on June 21, 2005 by knee surgeon, Michael Hewitt, M.D., for the 2005 injury. Dr. Hewitt opined that Claimant had osteoarthritis which pre-existed the March 2005 work injury and it would have been symptomatic in 2015 “regardless of the work he was doing.” Dr. Douthit also noted that Claimant had a serious condition with ACL tears and meniscus damage prior to the 2005 injury, and that Claimant’s degenerative knees were due to traumatic arthritis and not to the duties at Employer. Dr. Douthit identified the “trauma” as whatever pre-2005 event caused Claimant’s ACL tear and meniscus damage that were identified in 2005. The March 2005 work injury was a temporary aggravation or a flare-up of Claimant’s pre-existing condition. Since this condition pre-existed the 2005 work injury, Claimant would have had the diagnosis before the year 2005, when he was in his 40s and had worked loading plane baggage, for only 4 to 5 years. Dr. Douthit noted further that Claimant himself told his treating physician, Dr. Richardson, that he had

been having knee pain for the past year and on the date of the alleged injury he was doing nothing that would have injured his knee in ordinary activities at work; squatting and kneeling with no particular twisting or trauma that would have caused an "injury.'" Indeed, Dr. Douthit noted that Claimant "himself reports that the knee began hurting as he was squatting in the airplane doing nothing unusual."

10. Dr. Douthit noted that "Claimant concealed severe prior injuries of the knees and had a progressive pernicious deterioration and cascading progression regardless of his activities or whatever job he held, and it was inevitable that he would have end-stage arthritis and require the knee replacements." Claimant's need for a right total knee arthroplasty is, according to Dr. Douthit, "imminent and inevitable. The proximate cause was the long standing traumatic arthritis, not cumulative trauma and aggravation related to his work. Dr. Douthit credibly explained that Claimant's knee pain in September 2015, was "simply a continuum of the problems he has had with the knee and he was undoubtedly having knee pain on and off the job."

11. Claimant was evaluated by knee surgeon John Papillion, M.D., on one occasion, September 17, 2015. Dr. Papillion documented that Claimant presented for evaluation of bilateral knee pain, right greater than left. Claimant "states he has been employed on the ramp service for [Employer] for 16 years. He developed progress[ive] pain in both knees with various deformity. He has some pain at rest, difficulty going up and down stairs." According to Claimant, he was kneeling in the belly of the plane on September 4, 2015, when he felt pain in "both knees." Dr. Papillion went on to state that Claimant "had had no recent injury."

12. Dr. Papillion's diagnosis was "end-stage degenerative osteoarthritis, bilateral knees, right greater than left." Dr. Papillion opined that Claimant "clearly has extensive degenerative arthritis in both knees." Dr. Papillion opined "It is my medical opinion that his work related activities for the last 16 years which involve lots of kneeling, squatting, heavy lifting and crawling on the bellies of the planes has caused him to develop progressive degenerative arthritis." Dr. Papillion based his opinion on causation after he reviewed Claimant's job description and "agreed" that the type of work described involves frequent bending, kneeling, crawling in the bellies of airplanes over the years to stack luggage and this job aggravated Claimant's arthritis if it did not cause it.

13. Dr. Papillion's opinion is not persuasive for several reasons. First, Dr. Papillion incorrectly concluded that the job description accurately defined Claimant's job duties and that Claimant engaged in repetitive bending and kneeling hour after hour and completed all kinds of job tasks depicted in photos that claimant never or rarely performed. Claimant, however, admitted that his job duties varied and he spent at most 90 minutes per day loading and loading planes. Even these job tasks involved alternating positions. Dr. Papillion's opinion does not reflect that he correctly understood Claimant's accurate job tasks on a day-to-day basis.

14. Second, Dr. Papillion's opinion is based upon the false notion that prior to September 4, 2015, Claimant never had any problems with his knees or knee pain, because Claimant told Dr. Papillion that he had not experienced any previous problems with his knees and had no prior knee injuries. Dr. Papillion did not know that Claimant had a right knee MRI in 2005 that revealed significant osteoarthritis that pre-dated a March 2005 work injury, and Dr. Papillion was unaware of the March 2005 work injury. Dr. Papillion was also unaware that Claimant was admittedly symptomatic for one year prior to the alleged September 2015 work injury, that Claimant was limping and taking over the counter pain medication for a year prior to seeing Dr. Papillion. Dr. Papillion was unable to provide a complete and credible opinion because he was unaware of Claimant's bilateral knee condition and symptoms prior to September 2015.

15. Third, Dr. Papillion was unaware that Claimant has suffered from Gout for up to-20 years and had been taking prescription pain and anti-inflammatory medication, Indomethacin. At least since 2006, Claimant was on twice the normal dose of Indomethacin. Claimant acknowledged that this medication helped him with his chronic bilateral knee pain. There is no persuasive evidence that Dr. Papillion reviewed any records concerning Claimant's pre-existing knee conditions, including diagnostic tests or medical records from Dr. Hewitt or Dr. Kawasaki, who also treated Claimant for the March 2005 work injury. Nor did Papillion review reports by Drs. Douthit and Lindberg. Rather, he accepted Claimant's inaccurate report of no knee pain and no knee injuries prior to the alleged September 2015 work injury.

16. On January 19, 2016, Claimant underwent an IME at Respondents' request by knee surgeon James P. Lindberg, M.D. In addition to reviewing the job description, Dr. Lindberg has previously participated in job evaluations at Employer and has observed ramp

workers, like Claimant. Dr. Lindberg has a more realistic understanding of Claimant's actual job duties than Dr. Papillion or Claimant's other medical providers.

17. Dr. Lindberg took Claimant's history that on September 4, 2015, Claimant was on his knees wearing knee pads when he knelt down on a broken wheel and felt pain. Claimant denied any knee problems prior to September 2015. Claimant told Dr. Lindberg that prior to that incident kneeling on the wheel, he "never had any pain." However, Dr. Lindberg reviewed Claimant's medical records and became aware of Claimant's pre-existing knee conditions.

18. Dr. Lindberg concluded that Claimant has significant, severe pre-existing bilateral osteoarthritis, right worse than left. In layperson's terms, Claimant has the knees of a 90 year old, even though he is only in his 50s. The Gout that Claimant has suffered from for the past up to 20 years, is a cause of degenerative arthritis. The condition is also genetic and it occurs with aging and time. We know that prior to the 2005 work injury at Employer, Claimant had "no ACL" in his right knee. This is documented by Dr. Hewitt who treated Claimant for the 2005 work injury and it is documented as a pre-existing diagnosis. Thus, more than ten years ago when Claimant was only 47 years old and after working as a ramp employee for only about 4 years, he already had no right ACL. Dr. Hewitt opined that Claimant's 2005 work injury caused a temporary aggravation of a pre-existing, advanced and non-work related arthritic condition.

19. Dr. Lindberg agreed with Dr. Hewitt's assessment that Claimant had pre-existing osteoarthritis which pre-dated the March 2005 work injury, and which would have been symptomatic regardless of the work he was doing. Dr. Lindberg persuasively explained that a person with end-stage arthritis, like Claimant, experiences constant arthritic pain. Claimant's end-stage arthritis would be symptomatic no matter what he was doing. Claimant's Gout medication would mask Claimant's bilateral knee pain. And, despite the medication, within the one year prior to the alleged work injury, Claimant walked with a limp and took over the counter pain medication. While kneeling can cause "pain" kneeling does not cause any damage to the knee. Kneeling did not cause Claimant's pre-existing, severe condition to worsen or progress. The natural progression of degenerative arthritis is to worsen over time, irrespective of activity. In the past ten years, Claimant's bilateral arthritic condition has gone from "bad"

to “really bad.” Claimant’s arthritis would have progressed regardless of where Claimant worked or whether he did not work. And certainly, kneeling on a broken wheel, especially while wearing knee pads, would not aggravate the underlying condition or render Claimant permanently symptomatic. By Claimant’s own testimony, he was already symptomatic one year prior to this alleged incident with the wheel. The wheel incident, if it occurred, changed nothing. Claimant’s job duties as a ramp worker, changed nothing. Claimant would have the same bone on bone bilateral knee arthritis even if he never worked for Employer.

20. Dr. Lindberg also agreed with Dr. Douthit’s opinion that this was not an aggravation of his arthritis, but was indeed a manifestation of his underlying osteoarthritis. Drs. Douthit and Lindberg agreed that no persuasive studies support the contention that bone on bone arthritis is caused by working on one’s knees as a baggage handler, or that such work would predispose a person to the severe and chronic condition. Dr. Lindberg also testified that there is no persuasive scientific or medical evidence to support Claimant’s claim that his job duties as a ramp employee caused or aggravated his underlying bilateral knee arthritis. Dr. Lindberg testified that nothing in the Colorado Medical Treatment Guidelines supports Claimant’s contention that his bilateral knee arthritis was caused by his job duties. Dr. Lindberg was shown what Claimant represented to be an “epidemiological study” of 1157 patients. Dr. Lindberg testified that he was familiar with the article but it has little credibility as the physicians, including surgeons, who sit on the Colorado Medical Treatment Guidelines Board, chose not to accept or follow the so-called findings because the article did not meet its criteria for reliability.

21. The ALJ finds that Claimant suffered from bilateral knee arthritis that was symptomatic for at least one year before the alleged September 4, 2015 work injury. The ALJ rejects Dr. Papillion’s opinion because it is based upon his misunderstanding that Claimant had no prior knee injuries, pain, or symptoms and in other part on a misunderstanding of Claimant’s job duties.

22. The ALJ credits the opinion of ATP Dr. Robinson who did not note that Claimant complained of increased symptoms after he allegedly kneeled on a broken wheel while wearing knee pads or that such event, if it occurred, caused the need for medical treatment. The ALJ also credits the opinions of Drs. Lindberg and Douthit that Claimant’s bone-on-bone

arthritis was not caused by Claimant's employment and did not become permanently symptomatic because of Claimant's employment.

CONCLUSIONS OF LAW

A workers' compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ need not address every piece of evidence or every inference that might lead to conflicting conclusions. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P. 3d 385 (Colo. App. 2000).

For a claim to be compensable under the Act, a Claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the judge. *Faulkner,* 12 P.3d at 846.

A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan* v. *Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a Claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re COs,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

An incident, whether traumatic event or simple overuse, which merely elicits pain symptoms does not compel a finding that the Claimant sustained a compensable aggravation or new injury. The increase in pain or increase in symptoms associated with a prior injury does not compel the finding of a new injury or aggravation. *F.R. Orr Construction v. Rinta*, 717 P.2d 965, (Colo. App. 1985). Rather, to receive medical benefits the Claimant must establish that the need for additional medical treatment is proximately caused by the aggravation, and is not simply a direct and natural consequence of the pre-existing condition. *Merriman v. Indus.*

Comm, 210 P.2d 448, 450 (Colo. 1949); *Rockwell International v. Turnbull,* 802 P.2d 1182 (Colo. App. 1990)). The ALJ must examine the totality of the circumstances to determine whether there is a sufficient nexus between the employment and the injury such that the accident may be said to have occurred in the scope of the Claimant's employment. *City and County of Denver School District No. 1 v. Industrial Commission*, 196 Colo. 131, 581 P.2d 1162 (1978).

Claimant has not persuaded the ALJ of a nexus between his need for right or bilateral total knee replacements. The ALJ is likewise not persuaded that a traumatic event or repetitive activity at work over time caused Claimant's bilateral knee arthritis or cause Claimant's underlying, degenerative condition to become permanently symptomatic. Rather, the ALJ concludes that it is more likely true than not that occurrence of Claimant's symptoms is the result of or natural progression of his pre-existing arthritic condition that is unrelated to his employment. *See Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002); *.F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995). Whether a claimant's condition is due to the natural progression of a pre-existing condition or a new industrial accident is a question of fact for resolution by the ALJ. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). Here, the ALJ relies on the persuasive opinions of Drs. Douthit and Lindberg.

As found, there is no temporal relationship between any of Claimant's specific job duties working the hub station ramp duties and Claimant's need for bilateral total knee replacements. Dr. Papillion's opinion on occupational disease or aggravation of underlying condition is not supported by credible evidence or a thorough causation analysis. He did not apprehend Claimant's actual job duties and could not identify the nature of Claimant's kneeling, the lack of sustained or repetitive kneeling, or Claimant's varied job duties. Dr. Papillion was misinformed regarding Claimant's true job exposure when he reached his opinions. Contrary to the causation assessment recommendations in the Cumulative Treatment Guidelines, he did not obtain accurate and complete exposure information, he did not consider other non-work exposures, and he did not consider possible genetic causes. Rather he relied on a job title and photographs which Claimant himself testified were not accurate. His opinion on exposure is not persuasive. It is also based upon his incorrect belief that Claimant had no knee pain before the alleged September 2015 injury and his lack of knowledge concerning Claimant's 10-20 years of taking a pain medication and anti-inflammatory for gout, a condition which causes arthritis. Thus, Dr. Papillion's opinion on exposure is not a persuasive basis to relate Claimant's bilateral knee conditions and his need for total right or bilateral knee replacements back to the work he did or varying exposures over time.

As found, Dr. Lindberg took into account Claimant's actual job duties and work exposures when reaching his opinion on causation. Dr. Lindberg specifically attended job site evaluations for ramp workers for Employer and testified that he was familiar with Claimant's actual job duties and the nature of the exposures. Claimant's testimony about his actual exposures on the job, agreeing that his job duties were varied and he did not engage in sustained, repetitive kneeling, was credible and persuasive. Although Dr. Papillion focused on the job title, Dr. Lindberg took into consideration the true exposures documented by his own experiences attending actual job evaluations at Employer and confirmed by Claimant at hearing.

ORDER

It is therefore ordered that the worker's compensation claim is hereby

denied and dismissed.

This decision of the Judge is final, unless a Petition to Review this decision is filed within twenty (20) days from the date this decision is served. Section 8-43-301(2), C.R.S. Pursuant to the June 15, 2007, delegation of the Director of the Division of Workers' Compensation, the Petition to Review shall be filed with the Office of Administrative Courts, 2864 S. Circle Drive, Ste. 810, Colorado Springs, CO 80906. See Rule 26, OACRP for further information regarding the procedure to be followed when filing a Petition to Review.

WORKERS' COMPENSATION NO. WC 4-956-668-05

ISSUES

➢ Whether Claimant has established by a preponderance of the evidence that a right total hip arthroplasty is reasonably needed and causally related to his July 11, 2014 work injury?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is 55 years old, and has worked for Employer for eighteen years as a pick-up and delivery driver.

2. Claimant credibly testified that his job duties included driving freight from the warehouse to locations for delivery and unloading the freight, using either a pallet jack or manually delivering the freight to its new location.

3. At the time of Claimant's admitted industrial injury, Claimant also worked a part-time position as a ramp man for United Airlines, approximately eight to twelve hours a week, moving bags.

4. Claimant credibly testified that he was able to physically perform both his job as a pick-up and delivery driver for Employer and as a ramp man for United Airlines, without limitation, prior to July 11, 2014.

5. Claimant credibly testified that before July 11, 2014, he was an active outdoorsman and enjoyed hiking, hunting and fishing.

6. On July 11, 2014, after delivering a windshield, Claimant returned to his trailer to pull down the trailer door. As he pulled the door down, the strap he was holding onto broke. He fell backwards, twisting to the right and landing on his right side and right hip. Claimant fell a distance of approximately 4 to 6 feet.

7. On July 16, 2014, Claimant filled out an "Employee Notice of Injury," indicating that he had injured his hip, as well as other body parts.

8. On July 16, 2014, Employer filed an "Employer's First Report of Injury" indicating that Claimant had lost his balance due to a door strap breaking and fell to the ground landing on his right side.

9. On July 16, 2014, at Claimant's first evaluation with authorized treating provider ("ATP") Annu Ramaswamy, M.D., Claimant informed Dr. Ramaswamy that he had injured his hip. Claimant also filled out a pain diagram circling his right hip and

indicating that his right hip pain was 5/10. Claimant's testimony and other marks on the pain diagram establish that Claimant's hip complaint involved his right hip.

10. Although Dr. Ramaswamy's two medical records after July 16, 2014, and prior to August 13, 2014 do not reflect "hip pain," on August 13, 2014 Dr. Ramaswamy noted: "Pt states he noticed right sided groin pain a few days after his injury," and that Claimant had "discomfort with abduction of the hip."

11. On September 4, 2014 Claimant continued to be diagnosed by Dr. Ramaswamy with "some discomfort with abduction of the hip," and Dr. Ramaswamy added "hip" under work related medical diagnosis.

12. Between September 4, 2014 and December 16, 2015, all of the WC164 forms filled out by Dr. Ramaswamy contain a "work related medical diagnosis" of "right hip."

13. On September 24, 2014 Dr. Ramaswamy noted that of the multiple diagnoses Claimant had following his fall off the back of the trailer, by September 24, 2014 the "main issue now is the right shoulder discomfort along with the right hip and groin discomfort." Dr. Ramaswamy referred Claimant to Philip Stull, M.D., "to evaluate the right hip for potential labral tear."

14. On September 30, 2014, at Dr. Ramaswamy's direction, Dr. Stull evaluated Claimant for right hip pain. Dr. Stull's impression and recommendations included:

> The patient is a very pleasant 54-year-old male with a right hip problem. Symptoms began after he fell out of a trailer, the back of her trailer, at work. This occurred July 11, 2014. He works as a truck driver and a baggage handler and he came down onto the right hip and shoulder area in the fall. He had immediate onset of right hip and thigh pain. Since that time he's had persistent symptoms in the right hip area which include activity related pain in the hip grinding, and pain with motion. He has no reported previous problems with the.
>
> * * *
>
> Impression: Symptoms related to osteoarthritis, right hip, with recent impact injury to hip joint; rule out labral tear.
>
> Plan: I recommend a contrast MRI to fully work him up.

15. On October 8, 2014, Claimant underwent an MRI which reflected "mild to moderate osteoarthritis of the right hip joint, likely on the basis of chronic femoroacetabular impingement, associated with a diffuse tear of the right acetabular labrum."

16. Claimant returned to Dr. Stull who transferred the case to his colleague, Nathan D. Faulkner, M.D. Dr. Faulkner reviewed the October 8, 2014 MRI noting that:

> Reviewed the right hip MRI which shows a diffuse tear of the right acetabular labrum and mild degenerative changes within the right hip joint. There is evidence of femoral acetabular impingement.
>
> There are similar but less traumatic symptoms seen in the left hip joint.
>
> * * *
>
> Impression: Right hip acetabular labral tear, mild arthritis, FAI. The patient was without symptoms prior to the work related injury/fall.

17. On April 12, 2015, Dr. Faulkner recommended Claimant proceed with a "right hip arthroscopy with CAM/pincer debridement and labral repair, but awaiting clearance from his cardiologist [Dr. Reusch]."

18. Before clearance could be obtained from Claimant's private cardiologist, Claimant discussed with Dr. Ramaswamy his concern with a relatively inexperienced physician operating on his hip. Dr. Ramaswamy then referred Claimant to Brian J. White, M.D., at Western Orthopaedics.

19. On April 29, 2015, at the initial patient evaluation, Dr. White opined that Claimant "would no longer be a good candidate for hip arthroscopy surgery and would be a better candidate for total hip replacement in the future if and when he is ready for this; however, due to his age, would hold off on doing this as long as possible."

20. At Claimant's next visit with Dr. White on October 21, 2015, Dr. White opined:

> PLANS & RECOMMENDATIONS:
>
> 1. I do not think he is a great candidate for hip arthroscopy.
>
> 2. I discussed this with him again.
>
> 3. I think at this point, probably a total hip replacement would be a more predictable long-term fit for him and allow him to work a little bit better at what he does, driving trucks.
>
> 4. At this point, he would like to schedule.
>
> 5. I have encouraged him to get his crown work done for his hip replacement.

21. On November 16, 2015 ATP White's request for a right total hip arthroplasty was denied by Respondents. *See* Claimant's Submission Tab 9, BS 160.

22. Respondents retained two physicians to evaluate Claimant's condition.

23. On July 9, 2015, Claimant was first examined and evaluated by Respondents' retained physician John D. Hutcherson, M.D. Dr. Hutcherson noted at the time of his evaluation that Claimant was complaining of right hip pain and that the history of illness included injuries to the right hip, knee, and possibly lower back. After his evaluation Dr. Hutcherson issued a report, where in his "assessment" portion he opined:

> Injuries to the right shoulder with subsequent repair and left shoulder injury which is milder. Also, right hip injury and knee injury and possible injury to the lower spine.

24. On November 15, 2015, Respondents retained a second expert, Wallace K. Larsen, M.D., to perform a records review. It was Dr. Larsen's opinion that Claimant was an "appropriate candidate for right total hip arthroplasty." It was Dr. Larsen's opinion, however, that the need for surgery was not related because "there is no specific indication of trauma to the hip." He also opined that Claimant's labral tear was most likely degenerative.

25. Dr. Ramaswamy's deposition was taken on January 14, 2016. He agreed that his records after the first visit of June 16, 2014 until the visit of August 13, 2014 do not reference tthe hip and, therefore, he testified at points in his deposition that the recommended hip surgery could be work related and at other times in his deposition that the need for surgery was not work related.

26. Claimant credibly testified that he had no hip problems prior to July 11, 2014, was an active outdoorsman, and worked two jobs.

27. Medical records were submitted from Kaiser Permanente. Those records reference two occasions of hip pain, including one on June 13, 2012, and left hip pain on December 5, 2012. No persuasive medical evidence of treatment, symptoms, or functional limitations were presented.

28. Based on the totality of the evidence, the ALJ finds and concludes that Claimant has established by a preponderance of the evidence that he did not have daily or constant hip pain or hip symptoms prior to his July 11, 2014 work injury. Although Claimant had two references to hip pain in his medical records, he had no functional limitations and was working two jobs at full duty prior to his injury. Claimant remained active before his injury and those activities included hiking and hunting. Since July 11, 2014, Claimant's activities have not returned to their prior levels.

29. The opinions of Dr. Larsen, and to the extent it can be read as conflicting, a portion of the deposition testimony of ATP Ramaswamy, have been considered and rejected. Respondents' first expert, who actually examined Claimant, opined that Claimant's hip injury was work related. The medical records reflect Claimant complaining of hip pain in his initial report and pain diagram, and his continuing reports of right hip pain thereafter. Dr. Larsen's opinion, based on his medical record review, is

rejected because he opines that Claimant had no specific indication of trauma to the hip, and this opinion is not supported by the great weight of persuasive evidence to the contrary.

30. The opinions of Drs. Stull, Faulkner, White and Hutcherson are found persuasive. The ALJ agrees and the medical records support that Claimant experienced no right hip symptoms and/or pain prior to his work injury, and the injury caused immediate and significant limitations and pain in Claimant's right hip that were not present before the work injury. The injury aggravated Claimant's underlying and preexisting mild to moderate osteoarthritis, and accelerated the Claimant's need for a right total hip replacement.

31. Any determination concerning other issues is premature at this time, as a matter of fact.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers Compensation Act of Colorado" (Act), Title 8, Articles 40 to 47, C.R.S., is to ensure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to the employers without the necessity of any litigation. C.R.S. § 8-40-102(1). A Claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Therefore a claimant must prove by a preponderance of the evidence that his injury arose out of and in the course and scope of his employment. C.R.S. § 8-43-201*; City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985). A preponderance of the evidence is that which leads the trier of fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). *Industrial Commission v. Jones*, 688 P.2d 1116, 1119 (Colo. 1984). Proof that something happened at work, without more, is insufficient to carry burden of proof. *Finn v. Industrial Commission*, 165 Colo. 106 (1968). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp*., 961 P.2d 571, 574 (Colo. App. 1998). Moreover, if an incident is not a significant event resulting in an injury, a claimant is not entitled to benefits. *Wherry v. City and County of Denver*, W.C. No. 4-475-181 (March 7, 2002). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, 12P.3d at 846. A Workers' Compensation case is decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ does not address every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). Where relatedness, and/or reasonableness, or necessity of medical treatment is disputed, the claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.*, W.C. No. 4-117-758 (ICAO, April 7, 2003). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has met his burden to show, more likely than not, that the right total hip replacement is reasonable and necessary and causally related to his work injury. Although the MRI reflects that Claimant had pre-existing mild to moderate osteoarthritis of his right hip, the work injury on July 11, 2014 aggravated Claimant's underlying osteoarthritis and accelerated his need for a right total hip replacement. Prior to July 11, 2014 Claimant was able to work full duty without restrictions, at his full time job and at his part-time job. He had no pain complaints specific to the right hip, and had not sought any medical treatment specific to his right hip. Claimant also was able to maintain a fairly high activity level outside of work prior to July 11, 2014. Although the records reflect at two medical appointments approximately three years ago that Claimant had pain with flexion in his hip, Claimant has met his burden to show, more likely than not, that he did not have significant limitations or pain in his right hip prior to July 11, 2014. The records show that Claimant did not seek any medical treatment for right hip pain complaints prior to his work-related injury. This supports Claimant's credible testimony that prior to his work injury he was not suffering from right hip pain.

Claimant is also credible in explaining the mechanism of injury involved in falling from the back of his trailer and landing on his right hip. Dr. Larsen's opinion that Claimant "had no specific indication of trauma to the hip," is not supported by either Employer's or Claimant's First Report of Injury, the diagram Claimant filled out at his first evaluation with ATP Ramaswamy, or the conclusions or findings of orthopedic specialists Drs. Stull, Faulkner, and White.

The ALJ concludes that the need for the right total hip replacement is due to Claimant's mild osteoarthritis and labral tear, which were diagnosed following his fall from the trailer, which significantly aggravated his asymptomatic underlying mild arthritis and accelerated his need for treatment. No persuasive medical evidence suggests that Claimant would need a total right hip replacement in the future, based upon mild osteoarthritis and, therefore, Claimant has established that he was asymptomatic in his right hip until his work injury of July 11, 2014. Therefore, the ALJ concludes that Claimant has met his burden to show, more likely than not, that the need for the right total hip replacement was aggravated and accelerated by his work injury and the treatment is causally related.

As a matter of law, any determinations concerning other issues are premature.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has established by a preponderance of the evidence that the right total hip arthroplasty is reasonably needed and causally related to his July 11, 2014 workplace injury.

2. Any issues not determined in this decision are reserved for future determination.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 3, 2016

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-825-331-05

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on April 5, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 4/6/16, Courtroom 3, beginning at 1:30 PM, and ending at 3:30 PM).

Claimant's Exhibits 1 through 23 were admitted into evidence, without objection, Respondents' Exhibits A through MM were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule. The Claimant's opening brief was filed on April 18, 2016. The Respondents' answer brief was filed on April 29, 2016. The Claimant was given 2 working days within which to file a reply brief. The reply brief was filed on____,at which time the matter was deemed submitted for decision.

ISSUES

The issues to be determined by this decision concern the Claimant's request to overcome the Division Independent Medical Examination (DIME) opinion of Neil L.

Pitzer, M.D., and post maximum medical improvement (MMI) medical benefits (*Grover* medical benefits).

On overcoming the DIME, the Claimant bears the burden of proof by clear and convincing evidence. On *Grover* medical benefits, the Claimant bears the burden by preponderant evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Procedural Posture

1. Ultimately, the respondents filed a Final Admission of Liability (FAL), mailed September 19, 2013, admitting liability for temporary disability benefits through September 12, 2013, an MMI date of September 13, 2013, permanent partial disability (PPD) of 10% as a working unit, and admitting for reasonably necessary and causally related post-MMI medical benefits. The Claimant filed a timely objection to the FAL.

2. The Respondents applied for DIME, and Neil Pitzer, M.D., was selected as the DIME physician. As a result of Dr. Pitzer's follow up DIME of September 18, 2014, Dr. Pitzer expressed the opinion that the Claimant was at MMI as of September 18, 2014. He re-affirmed his previous rating of 10% whole person, attributable to cognitive dysfunction. He stated the opinion that the cervical spine was **not** causally related to the admitted injury; and, he was of the opinion that maintenance care was not indicated for the work injury.

3. Subsequent to Dr. Pitzer's ultimate opinions, the Claimant applied for hearing on the issues of overcoming Dr. Pitzer's DIME opinions; and, to prove that the Claimant should receive post-MMI (*Grover*) medical maintenance benefits.

Preliminary Findings

4. The Claimant's date of birth is April 2, 1956. She resides in Gypsum, Colorado.

5. The Claimant was employed as a paraprofessional and translator with the Employer.

6. On May 20, 2010, the Claimant was traveling with a group of students to a field trip in Denver. She lost her balance and backwards on the bus. She fell backward down a couple of stairs by the door at the front of the bus, and hit the closed door.

She thinks she may have blacked out.

7. After returning home from the field trip on the evening of May 20, 2010, The Claimant went to the emergency room at Vail Valley Hospital in Glenwood Springs. The CT scan of the head revealed bilateral subarachnoid bleeds. A CT of the cervical spine showed degenerative disc disease and osteoarthritic changes. There was no acute injury to the cervical spine. Due to the subarachnoid bleeds, the Claimant was transported to St. Mary's Hospital in Grand Junction for a neurosurgical consult.

8. The Claimant was evaluated by Brian P. Witwer, M.D. (neurosurgeon) at St. Mary's Hospital [Respondents' Exhibit P, pp. 225, 228] The Claimant was reporting a moderately severe headache, 8 out of 10 in intensity. The records reflect that the Claimant denied neck or back pain, and her neck was reported to be nontender on physical exam. A CT angiogram of the brain showed: "1. Stable small bilateral subarachnoid hemorrhage. No evidence of intracranial aneurysm." Surgical intervention was not recommended. The Claimant was placed on medication and discharged on May 22, 2010. She was instructed to follow-up with Dr. Witwer in a month. The Claimant returned to Dr. Witwer on July 19, 2010 and August 19, 2010. [Respondents' Exhibit S] Dr. Witwer noted that a CT of the Claimant's head showed complete resolution of the subarachnoid blood that was secondary to the injury. He noted that the Claimant's post-concussive symptoms should resolve slowly with time.

9. The Claimant began treatment with Edward Dent, M.D., at Colorado Mountain Medical on May 28, 2010 [Respondents' Exhibit Q]. Dr. Dent commented: "She continues to have some headache but is improving…She denied any other injuries. She did not have any neck pain…" [Exhibit Q, p. 235] During the course of the physical exam, Dr. Dent noted that the Claimant had good range of motion in her neck and was nontender to palpation [p. 236]. On September 14, 2010, Dr. Dent reported: "…She has been doing some part-time work. She states that she feels very fatigued and continues to have a headache. She has tried to cut down on her Vicodin use with limited success. She reports no new symptoms. She continues to use oxygen intermittently…I really want her to decrease her Vicodin intake and told her I want her to use no more than two tablets per day."

10. Dr. Dent referred Claimant to J. Bradley Gibson, M.D., for a neurology consult [Respondents' Exhibit W]. Dr. Gibson noted that the Claimant had initially been placed on oxygen by her primary care physician, Angela Ammon, M.D. Dr. Gibson performed trigger point injections and bilateral occipital nerve blocks. He referred the Claimant for physical therapy, therapeutic massage, and chiropractic treatment. Dr. Gibson performed EMG and nerve conduction studies on October 26, 2010, which suggested mild bilateral carpal tunnel syndrome. There was no evidence of cervical radiculopathy [Respondents' Exhibit W, p. 458].

11. On December 3, 2010, Dr. Dent discussed the results of a recent repeat

cervical MRI (magnetic resonance imaging): "The scan is normal for her age. There are some multilevel degenerative changes…" [Respondents' Exhibit W, p. 466].

12. The Claimant subsequently began treating with J. Carlos Cebrian, M.D., and Susan Lan, D.O., at Avon Medical Center / Vail Valley Medical Center [Respondents' Exhibit R]. In a report dated November 10, 2011, Dr. Cebrian recommended against further trigger point injections since the Claimant had indicated that the injections only provided improvement for 1-2 hours. He referred the Claimant to Gregory Thwaites, Ph.D., for neuropsychological testing. Dr. Cebrian indicated that he would like to get the Claimant off of narcotics, since the medication could be negatively impacting her headaches and her overall cognitive function.

13. Dr. Thwaites performed neuropsychological testing in March 2012 Respondents' Exhibit U]. Dr. Thwaites noted that the test results were somewhat confusing. Dr. Thwaites indicated that the Claimant's long-standing (pre-morbid) cognitive baseline was difficult to ascertain, but that he suspected it was in the low average range. Dr. Thwaites noted that around Thanksgiving of 2010, the Claimant had sudden onset of dysnomia and fasciculations and was worried about a stroke**.** She experienced some chronic hypoxia and required nasal oxygen. Dr. Thwaites noted that the Claimant had pre-accident diabetes, which is a risk factor for stroke and small vessel disease. The Claimant was also noted to have body habitus for sleep apnea. Dr. Thwaites voiced concerns that there may be an extraneous neurologic process going on, such as small vessel disease or sleep apnea. He recommended 8-10 sessions of cognitive therapy for the work injury. Dr. Thwaites went on to state: "Outside the scope of the workers' compensation system, I strongly recommend that she pursue a polysomnogram to rule out the possibility of sleep apnea … Additionally, she would benefit from getting a MRI of the brain and a full neurologic work-up (including reversible dementia labs) to rule out the possibility of any extraneous neurologic process in her case) [Respondents' Exhibit U, p. 381].

14. An MRI was performed of the Claimant's brain on June 25, 2012 [Respondents' Exhibit V, p. 422]. The following findings were noted: "Multiple white matter lesions. These areas are consistent with regions of demyelization/gliosis. There is an extensive differential, chronic ischemic changes, MS, among others. This would be an atypical finding following head trauma."

15. The Claimant was seen by Dr. Lan at Avon Medical Center Occupational Health on August 9, 2012. She continued to follow-up with Dr. Lan, who placed her at MMI on September 13, 2013 [Respondents' Exhibit R, pp. 275-316]. Dr. Lan referred the Claimant to David Reinhard, M.D., for an impairment rating of the head injury [Respondents' Exhibit CC].

16. Dr. Reinhard assigned the Claimant a 10% rating for cognitive dysfunction related to what he described as a mild traumatic brain injury with bilateral subarachnoid

hemorrhage. Dr. Reinhard commented: "As per the discussion and Dr. Thwaites' report, the severity of her cognitive dysfunction specific to her brain injury is difficult to ascertain. Her cognitive complaints are likely multifactorial and there is a potential influence from non-injury related issues such as obstructive sleep apnea" [Respondents' Exhibit CC, p. 595]. Dr. Reinhard remarked that musculoskeletal impairment would be addressed by Dr. Lan.

17. Dr. Lan initially assigned an impairment rating to the neck on October 3, 2010 [Respondents' Exhibit R, pp. 318-319].

Division Independent Medical Examination (DIME) of Neil Pitzer, M.D.

18. The Respondents applied for a DIME, which was performed by Dr. Pitzer on January 22, 2014 [respondents' Exhibit GG, pp. 608-620]. On the Application for DIME, the Respondents specifically asked that the question of relatedness of the cervical spine be addressed. In his January 22, 2014 report, Dr. Pitzer noted: "…On evaluation today, [the Claimant] has significant memory deficit and feels her memory is getting worse. She did have testing by Dr. Thwaites almost 2 years ago and I'm concerned that the patient may have some ongoing memory issues or a progressive problem based on her evaluation today and her MRI which showed multifocal demyelination or gliosis…I' m also concerned that the patient may have another problem causing worsening of her memory and at this time I would recommend that she be reevaluated by Dr. Thwaites for followup neuropsychological testing to see if there is a worsening of her condition. There may be very well be another cause of her progressive loss of memory and dysfunction since she did have essentially a normal neurologic exam on 5-28-10 by Dr. Dent but now has significant abnormalities on her peripheral examination such as her facial droop and other findings that could not be explained by her subarachnoid hemorrhage…If the patient shows worsening of her condition I think she needs to be evaluated by neurology for non-work related issues for progressive cognitive dysfunction and other probable central nervous system dysfunction and/or disease…" [p. 619]. Dr. Pitzer indicated that the Claimant was likely at MMI for her injuries of May 20, 2010 but he would be more comfortable placing her at MMI and assigning a rating once the additional issues regarding her cognitive decline had been clarified.

19. In his initial January 22, 2014 DIME report, Dr. Pitzer specifically addressed the question of relatedness of the neck. In reaching his opinion that the cervical spine was not related to the work injury, Dr. Pitzer explained: **"She has degenerative changes of the cervical spine which are not related to the work accident and are likely the cause of her range of motion dysfunction…I think it is unlikely she sustained a significant neck injury at this time** (emphasis supplied) and her injections have been primarily aimed at treating her headaches and not her neck pain. There is also evidence of a intervening disc protrusion at C6-7 which was seen on the second cervical MRI and is clearly not from the work injury and likely the

patient has some other problem causing ongoing cervical spine problems…I do not feel she warrants a cervical spine impairment rating given degenerative changes and only minimal improvement with extensive interventions…I do not feel the patient warrants a cervical spine rating since there is documentation that she did not have neck pain on 5-28-10 and primarily has had headaches of an occipital origin. I think it is likely that her headaches may be causing some cervical myofascial pain but this is not a specific spine disorder related to the work injury…" [Exhibit GG, p. 620].

20. Dr. Pitzer recommended that the Claimant stop taking Vicodin: "I would strongly recommend to Dr. Lan that the Vicodin be discontinued. She clearly has headaches all of the time and the Vicodin is no longer helpful and likely impeding her headache resolution" [Respondents' Exhibit GG, p. 620].

Neuropsychological

21. The Claimant returned to Dr. Thwaites for repeat neuropsychological testing on April 21, 2014 [Respondents' Exhibit U, pp. 387-394] Dr. Thwaites noted that the Claimant had interval diagnoses of hypertension and hypercholesterolemia in addition to the diabetes. He discussed his review of additional records, including the DIME report which referenced the brain MRI from June 2012 which showed multiple white matter lesions. The Claimant told Dr. Thwaites that she had a one year history of left facial twitching, intermittent left facial weakness, and left sided ptosis. The Claimant reported that she was having a gradual worsening of her memory over time, and was also having some episodes of either syncope or going to sleep. Dr. Thwaites discussed the Claimant's extraneous risk factors for cognitive dysfunction, including the following risk factors for small vessel ischemic disease: hypertension, dyslipidemia, and poorly controlled diabetes. He noted that the acute onset of sensorimotor symptoms over time also raised the possibility of cerebrovascular disease. Dr. Thwaites further discussed that the Claimant may have sleep apnea, which can cause headaches, fatigue, mood disturbances, cognitive dysfunction, and hypoxemia.

22. In terms of the work injury, Dr. Thwaites suggested that the Claimant undergo 8 to 10 sessions of cognitive therapy, which would be performed as maintenance care [Respondents'Exhibit GG, p. 393]. He noted that the Claimant had elected not to proceed with such sessions in the past. With regard to impairment, Dr. Thwaites commented: "…I suspect that she does have mild to moderate cognitive deficits related to the brain injury itself and should receive a rating for that. Her neurologic examination has worsened across time, she now has an abnormal MRI and has new neurologic complaints that are, in my opinion, outside the scope of the workers' compensation system. Her neuropsychological test scores have declined over time and that would not be related to this work-related injury."

23. In a report dated May 13, 2014, Dr. Lan stated: "I agree with Dr. Thwaites that recent cognitive decline is not related to the initial injury, and workup should be

undergone outside of the worker's compensation system" [Respondents' Exhibit R, p. 338].

24. Another MRI of the brain was completed on July 15, 2014 [Respondents' Exhibit V, p. 429]. The indication noted for this MRI was "stroke like symptoms." Findings included small vessel ischemic changes.

DIME Dr. Pitzer

25. The Claimant returned to Dr. Pitzer for a follow-up DIME on September 18, 2014 [Respondents' Exhibit GG, pp. 622-626]. Dr. Pitzer reported: "… 58-year-old female with ongoing cognitive problems which she states continues to get worse and worse and she cannot remember things. …I would agree that further neurologic workup outside the workers' compensation system is needed for this patient. She is also now diagnosed with baseline hypoxia by her report and there is no specific etiology as to her hypoxia as well as what appears to be sleep apnea. Further workup for this is likely indicated but again not related to the Worker's Compensation issue…Dr. Thwaites did recommend a psychological assessment for adjustment issues but I think given the patient's extremely poor memory, recall and other issues I think she would be an extremely poor candidate for psychological assessment and treatment such as cognitive behavioral therapy. With all due respect to Dr. Thwaites, I think at this time the patient is not a candidate for psychological intervention due to her extremely poor cognitive functioning…" Dr. Pitzer was of the opinion that the Claimant was at MMI as of the date of the follow-up DIME, and felt that the previously assigned 10% cognitive rating was appropriate. Dr. Pitzer reiterated his opinion that the Claimant's neck problems were not related to the work-injury.

26. The insurance carrier sent a copy of Dr. Pitzer's follow-up DIME report to Dr. Lan. After reviewing it, Dr. Lan handwrote a response dated October 24, 2016 – reflecting that she agreed with Dr. Pitzer that the Claimant would not require maintenance care under this worker's compensation claim [Respondents'Exhibit R, p. 356].

Melissa Henston, Psy.D.

27. The Claimant was evaluated by Melissa Henston, PsyD., in March 2015 at the request of Claimant's counsel for further neuropsychological examination [Respondents' Exhibit HH]. Dr. Henston was of the opinion that the Claimant's pre-morbid intelligence was likely in the low average to borderline impaired range. Dr. Henston stated: "At the present time her scores are in fact reflective of a person with no significant issues of dementia, **and no significant residuals of her fall from May 20, 2010** (emphasis supplied)**.** Her intelligence scores for the most part were consistent with her estimated premorbid intelligence" [Respondents' Exhibit HH, p. 635]. Dr. Henston recommended some therapy to address the Claimant's "perception of her

altered self since the accident" [Respondents' Exhibit HH, p. 637]. The ALJ infers and finds that this therapy is recommended to address the Claimant's perception of her altered self since the admitted injury and causally ties into the Respondents admission of 10% cognitive dysfunction, as well as DIME Dr. Pitzer's impairment rating. Dr. Henston recommended that Claimant continue to follow up with her primary care physician for non-work related conditions such as diabetes and high blood pressure.

Claimant's Independent Medical Examination (IME) BY John S. Hughes, M.D.

28. The Claimant was referred to Dr. Hughes for purposes of an IME. Dr. Hughes evaluated the Claimant on June 15, 2015 [Respondents' Exhibit II]. In his report, Dr. Hughes discussed what records were available to him, and noted that the Claimant "offers a quite impoverished medical history..." The Claimant denied any prior head injuries or neck problems [Respondents' Exhibit II, pp. 638-641]. Regarding physical symptoms, the Claimant reported constant right-sided headaches, and that sometimes the right side of her head "gets hot." She indicated that she had been having problems with balance and sometimes her arms ached. She mentioned some symptoms in her legs and that when she walks, "I stumble like I'm drunk…" The Claimant could not recall any of the names of her medications. On physical exam, Dr. Hughes observed unusual neurological symptoms: "Finger-nose testing findings were bizarre bilaterally, with her seemingly not able to find her nose with her finger for 5-10 seconds each time" [Respondents' Exhibit II, p. 642]. Dr. Hughes stated: "I agree with Dr. Thwaites' opinion that post-traumatic disturbances of complex integrated cerebral function generally stabilize or improve over time. It is clear that [Claimant] has sustained deterioration…" [Respondents' Exhibit II, p. 643]. Dr. Hughes noted that the Claimant was on oxygen and he could find no medical record documentation of a diagnosis that would require this treatment [Respondents' Exhibit II, p. 644].

29. Dr. Hughes did not believe that the Claimant should be taken off of MMI status [Respondents' Exhibit II, p. 643]. He felt that a permanent impairment rating to the cervical spine was warranted, based upon the information available to him at the time of the IME. With respect to cervical range of motion measurements, Dr. Hughes cautioned: "She has range of motion impairment but reports to me that she is acutely worse today. On this basis, I believe today's findings of reduced range of motion should be used for comparison purposes only" [Respondents' Exhibit II, p. 644]

30. During his evidentiary deposition on March 17, 2016, Dr. Hughes acknowledged that he had been aware that the Claimant had a prior worker's compensation claim in 1992 involving her neck. He was unaware that the Claimant had previously received an impairment rating for her cervical spine [Hughes Depo. Tr., p. 27]. Dr. Hughes had not been provided with a copy of a DIME report issued by Frederick Coville, M.D., in that prior claim [Respondents' Exhibit LL]. Had he been aware of the prior claim and rating, Dr. Hughes testified it would have affected his

opinion. At a minimum, he would have addressed apportionment of the prior cervical rating [Hughes Depo. Tr., p. 27].

31. In fact, the Claimant had undergone extensive treatment and diagnostics of her neck following a work-related injury with Western Slope Laundry in 1992. [Respondents' Exhibit KK]. Bruce Lippman, M.D., had diagnosed the Claimant with "cervical root syndrome" and myofascial syndrome. After receiving trigger point injections and physical therapy in 1992, the Claimant believed she was getting worse. [Respondents' Exhibit K, pp. 690-694]. She reported pain in her neck, into her left shoulder, and into the arm. Dr. Lippman referred the Claimant to S. Walker, M.D., (orthopedist), who noted that the Claimant's cervical spine was "painful in all motions, including flexion, extension, lateral rotation, lateral bend with about a 50% limitation in motion in all directions." During a follow-up appointment on June 25, 1992, Dr. Walker noted that Toradol was being prescribed to the Claimant for headaches. He commented on a cervical MRI that had been done recently: "We reviewed the MRI and do find that she does have a slight bulging of the C5-6 intervertebral disc, which undoubtedly is the cause of the pain even though it doesn't look like much on the MRI." In a letter to the adjuster dated August 11, 1992, Dr. Lippman stated: "At this point her symptoms are so chronic in spite of analgesics, anti-inflammatories, physical therapy, orthopedic consultation and even a TENS unit that I am afraid the patient is probably going to remain like this for the foreseeable future…"

The Claimant and Dr. Hughes

32. The Claimant testified at hearing that she did not recall having any prior treatment for her neck before the May 20, 2010 incident. She did not recall having any symptoms in her neck prior to May 20th. At the time of hearing, the Claimant did not recall what medications she was taking.

33. Dr. Hughes agreed that the findings reported on the November 29, 2010 cervical MRI were fairly consistent with what one could expect to see in a 59 year old individual. He agreed that the findings were degenerative in nature [Hughes Depo. Tr., pp. 23-25]. Dr. Hughes had no reason to believe that the new onset of a disc herniation at C6-7 that was present on a follow up MRI in 2012 was related to the May 20, 2010 work injury [Hughes Depo. Tr., pp. 25-26]. .

34. Dr. Hughes stated twice during his deposition testimony that although he disagreed with the rating by Dr. Pitzer, he did not find evidence of clear error in his assessment or impairment determination [Hughes Depo. Tr, pp. 12-13; 35]. Indeed, Dr. Hughes, to his credit, conceded that he had a "difference of opinion" with Dr. Pitzer. The ALJ finds that such a difference is not sufficient to make it highly probable, unmistakable and free from serious and substantial doubt that Dr. Pitzer's DIME opinions were in error.

Respondents' IME by Nicolas Olsen, D.O.

35. Dr. Olsen evaluated the Claimant on August 3, 2015 at the request of Respondents [Respondents' Exhibit JJ, pp. 646-672]. Dr. Olsen concluded: "It is my opinion, within a reasonable degree of medical probability, that [Claimant] remains at maximum medical improvement as assigned by Dr.Pitzer on 09/18/14. It is also my opinion, within a reasonable degree of medical probability, that Dr. Pitzer was correct when he did not assign an impairment rating of the cervical spine, trigger thumbs or left shoulder pain and dysfunction. To the degree that [Claimant] continues to suffer some residuals from her subarachnoid bleed, it is my medical opinion, within a reasonable degree of probability, that no further treatment is necessary or related to the work injury occurring on 05/20/10" [Respondents' Exhibit JJ, p. 672]

36. In discussing the cervical spine, Dr. Olsen commented: "…A CT of the cervical spine was negative. Specifically, there was no fracture. Degenerative disc disease and osteoarthritic changes were noted…Dr. Dent's physical examination on 5/28/10 noted the neck demonstrated good range of motion and was nontender to palpation… Congruent with Dr. Dent's notes are serial evaluations from Brian Witwer, M.D., neurosurgeon, who did not make a diagnosis of a cervical spine disorder" [Respondents' Exhibit KK, p. 669].

37. Dr. Olsen issued an addendum report on March 1, 2016, after reviewing additional records [Respondents' Exhibit KK, pp. 673-676], and he testified at hearing. He was accepted as an expert witness in Physical Medicine & Rehabilitation, electrodiagnostics, and the evaluation of work-related phenomena. Dr. Olsen confirmed that he had previously been provided with a copy of Respondents' hearing exhibit packet, and had a copy of that packet with him for reference. He also confirmed that he had reviewed the transcripts from the depositions of Dr. Henston and Dr. Hughes. Dr. Olsen testified in further detail regarding the basis for his medical opinions set forth in his reports. The ALJ finds the testimony of Der. Olsen highly persuasive and credible.

Maximum Medical Improvement (MMI).

38. No physician is saying that the Claimant is **not** at MMI- including authorized treating physicians (ATPs) such as Dr. Lan; the Claimant's IME physicians Dr. Hughes, Dr. Henston; and Respondents' IME physician Dr. Olsen.

39. No physician is saying that Dr. Pitzer clearly erred in assessing the Claimant's permanent impairment, and his decision not to assign an impairment rating to the cervical spine related to the May 20, 2010 work injury.

Ultimate Findings

40. The ALJ finds all of the ATPs, psychologists and DIME Dr. Pitzer credible and persuasive with respect to MMI. The ALJ finds DIME Dr. Pitzer more credible on the issues of lack of causal relatedness of the cervical spine and degree of permanent impairment than opinions to the contrary. Insofar as the Claimant relates her present physical condition to the admitted injury, the ALJ finds her opinion insufficiently grounded in fact, contrary to the weight of the medical evidence and, therefore, lacking in credibility.

41. The ALJ makes a rational choice, based on substantial evidence, to accept the DIME opinion of Dr. Pitzer, and the corroboration thereof by Dr. Olsen, and to reject all opinions to the contrary.

42. The Claimant has failed to demonstrate that it is highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. Pitzer's DIME opinions with respect to degree of impairment, MMI, and causal relatedness of the cervical spine are in error. Therefore, the Claimant has failed to prove, by clear and convincing evidence, that Dr. Pitzer's DIME opinions were erroneous with the exception of his opinion that post-MMI maintenance care is unwarranted. The ALJ finds the opinions of the psychologists more compelling, especially in light of Dr. Pitzer's 10% working unit rating for the Claimant's cognitive impairment.

43. As found herein above, the psychological therapy is recommended to address the Claimant's perception of her altered self since the admitted injury and causally ties into the Respondents' admission of 10% cognitive dysfunction, as well as DIME Dr. Pitzer's impairment rating. The Claimant has proven, by a preponderance of the evidence that post-MMI maintenance care, consisting of cognitive therapy for her admitted 10% working unit cognitive impairment, is warranted to address the work-related aspects of her cognitive impairment.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, all of the ATPs, psychologists and DIME Dr. Pitzer were credible and persuasive with respect to MMI. As further found, was DIME Dr. Pitzer more credible on the issues of lack of causal relatedness of the cervical spine and degree of permanent impairment than opinions to the contrary. Insofar as the Claimant related her present physical condition to the admitted injury, the ALJ found her opinion insufficiently grounded in fact, contrary to the weight of the medical evidence and, therefore, lacking in credibility.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice, based on substantial evidence, to accept the DIME opinion of Dr. Pitzer, and the corroboration thereof by Dr. Olsen, and to reject all opinions to the contrary.

Overcoming the DIME

c. Under Colorado law, a party disputing a DIME physician's opinion must meet the burden of proof by a showing of clear and convincing evidence*.* *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 38 (Colo. App. 2000). "The finding regarding MMI and permanent impairment of a DIME examiner in a dispute arising under subparagraph (II) of paragraph (b) may be overcome only by clear and convincing evidence. § 8-42-107)8)(III), C.R.S. Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005); *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 400 (Colo. App. 2009). As found, DIME Dr. Pitzer's opinions concerning MMI, degree of permanent impairment, and lack of causal relatedness of the Claimant's cervical spine to the admitted injury must be given presumptive effect, which can only be overcome by clear and convincing evidence.

d. "Clear and convincing evidence" is defined as, "[T]hat evidence which is stronger than a 'preponderance of the evidence,' and which is unmistakable and free from serious or substantial doubt." *People v. Lane*, 581 P.2d 719, 722 (Colo. 1978); *Metro Moving and Storage Co. v. Gussert; Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002). A DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade*, 905 P.2d 21 (Colo. App 1995). As found, the Claimant failed to demonstrate that it is highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. Pitzer's DIME opinions with respect to degree of impairment, MMI, and lack of causal relatedness of the cervical spine are in error. Therefore, the Claimant failed to prove, by clear and convincing evidence, that Dr. Pitzer's DIME opinions were erroneous-- with the exception of his opinion that post-MMI maintenance care is unwarranted. The ALJ finds the opinions of the psychologists more compelling, especially in light of Dr. Pitzer's 10% working unit rating for the Claimant's cognitive impairment.

Post-MMI Medical Maintenance Care

e. An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Grover v. Indus. Comm'n, supra*. Such evidence may take the form of a prescription or recommendation for a course of medical treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer v. Indus. Claim Appeals Office, supra*. An injured worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity. *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). Treatment to **improve** a claimant's condition does **not** fall under the purview of *Grover* benefits. *Shalinbarger v. Colorado Kenworth, Inc.,* W.C. No. 4-364-466 [Indus. Claim Appeals Office (ICAO), March 12, 2001]. As found, Claimant is entitled to maintenance medical care for her cognitive impairment, which is reasonably necessary to address the injury, in the discretion of the treating psychologist (s).

Burden of Proof

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has proven entitlement to post-MMI medical benefits for the work related aspects of her cognitive dysfunction.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Any and all claims to overcome the Division Independent Medical Examination of Neil L. Pitzer, M.D., are hereby denied and dismissed.

B. The latest Final Admission of Liability is incorporated herein by reference as if fully restated.

C. The Respondents shall pay the costs of post maximum medical improvement medical maintenance care for the Claimant's work-related psychological dysfunction, subject to the Division of Workers' Compensation Medical Fee Schedule.

DATED this______day of May 2016.

____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUE

Whether the Division Independent Medical Examination (DIME) opinion of Albert Hattem, M.D. should be stricken because Respondents failed to comply with §8-42-107(8)(b)(II)(A)-(D), C.R.S. in proceeding with a 24-month DIME and Dr. Hattem initiated communication with Authorized Treating Physician (ATP) J. Scott Bainbridge, M.D.

STIPULATIONS

The parties agreed to the following:

1. Dr. Bainbridge was Claimant's ATP.

2. Dr. Bainbridge's January 28, 2014 medical report was not released by his office until November 24, 2014.

FINDINGS OF FACT

1. Claimant worked as a Cosmetic Counter Sales Manager for Employer. On March 5, 2010 he was bending over to move boxes and retrieve products. When Claimant stood up he experienced lower back pain and a burning sensation down his right leg.

2. Claimant was initially diagnosed with lower back pain and a radiculopathy that was most likely caused by a bulging disc. An April 2, 2010 lumbar MRI revealed a broad-based right foraminal/lateral L4-L5 disc protrusion that impacted the exiting right L4 nerve root. The MRI also reflected mild degenerative changes.

3. On July 16, 2010 Claimant underwent a right L4-L5 far lateral discectomy. He subsequently received physical therapy and epidural steroid injections but continued to exhibit right lower extremity radicular symptoms.

4. On December 11, 2013 Claimant underwent an independent medical examination with Neil Pitzer, M.D. Dr. Pitzer noted that Claimant had undergone lumbar surgery three years earlier with no improvement. Claimant had no response to treatment and remained on chronic opioid medication. Dr. Pitzer suspected that Claimant's continuing symptoms were psychologically based. He concluded that Claimant had reached Maximum Medical Improvement (MMI) and assigned a 10% whole person impairment rating.

5. On January 28, 2014 Dr. Bainbridge determined that Claimant had reached MMI. Relying on Table 53 of the *AMA Guides for the Evaluation of Permanent*

Impairment Third Edition (Revised) (AMA Guides), Dr. Bainbridge assigned Claimant a 10% whole person impairment rating for a specific disorder of the lumbar spine. He also assigned Claimant a 24% right lower extremity rating for strength and sensory deficits. The 24% right lower extremity impairment converted to a 10% whole person rating. Combining the lumbar spine and right leg impairments yields a total 19% whole person rating. However, Dr. Bainbridge's medical report was not released by his office until November 24, 2014.

6. On February 13, 2014 Insurer's Claim Specialist Valerie Burke authored a letter to Dr. Bainbridge inquiring whether he had placed Claimant at MMI. Ms. Burke sought clarification because Insurer had received correspondence from Claimant's counsel suggesting that Dr. Bainbridge may have placed Claimant at MMI. She also inquired about Claimant's permanent impairment rating. Ms. Burke requested a response from Dr. Bainbridge by February 27, 2014 so arrangements could be made if a DIME was required.

7. Dr. Bainbridge failed to respond to Ms. Burke's letter. On July 7, 2014 Respondents filed an application for a DIME.

8. On October 1, 2014 Claimant underwent a Division Independent Medical Examination (DIME) with Albert Hattem, M.D. After reviewing Claimant's medical records and performing a physical examination, Dr. Hattem noted that Claimant had undergone a far right L4-L5 lateral discectomy and suffered from post laminectomy syndrome. He also remarked that Claimant had exhibited nonphysiologic behaviors.

9. Dr. Hattem agreed with Dr. Bainbridge that Claimant reached MMI on January 28, 2014. He remarked that Claimant had undergone a relatively minor operative procedure and received significant conservative treatment but continued to experience pain. Relying on Table 53 of the *AMA Guides,* Dr. Hattem assigned Claimant a 10% whole person impairment for a "surgically repaired disk lesion with residual medically documented pain and rigidity." He also assigned Claimant a 14% lower extremity impairment for a right L4 radiculopathy. The 14% lower extremity impairment converted to a 5% whole person rating. Combining the 10% specific disorder rating with the 5% radiculopathy rating yields a 15% whole person impairment for Claimant's March 5, 2010 industrial injuries.

10. Dr. Hattem commented that Claimant suffered from non-work-related hypertension and a five month history of enuresis. He specifically commented that, because it was unlikely that the conditions were related to Claimant's March 5, 2010 industrial incident, he should address the conditions with his personal physician. Dr. Hattem noted in an October 8, 2014 Addendum to his DIME report that he had telephoned Dr. Bainbridge to advice him of Claimant's enuresis complaints. Although Dr. Bainbridge agreed that it was "highly unlikely" that Claimant's enuresis was related to the industrial incident, he recommended an "urgent lumbar MRI to rule out cauda equina." If the MRI did not document any significant pathology, Dr. Bainbridge agreed that Claimant remained at MMI.

11. The record reveals that at least 24 months had passed between Claimant's date of injury and Respondents' request for a DIME. Moreover, on February 13, 2014 Insurer authored a letter to Dr. Bainbridge inquiring about whether Claimant had reached MMI. However, Dr. Bainbridge failed to respond. Finally, Dr. Pitzer performed an independent medical examination and concluded that Claimant had reached MMI.

12. The central dispute regarding the propriety of the 24-month DIME involves whether Respondents have established that Dr. Bainbridge did not determine whether Claimant reached MMI pursuant to §8-42-107(8)(b)(II)(C), C.R.S. Initially, it is undisputed that Dr. Bainbridge concluded Claimant had reached MMI on January 28, 2014. However, the parties were unaware of his determination until they received his report on November 24, 2014. Based on correspondence from Claimant's counsel Insurer sought clarification on February 13, 2014 about whether Dr. Bainbridge had placed Claimant at MMI in order to determine whether to pursue a DIME. However, Dr. Bainbridge failed to respond to the letter. Absent an affirmative determination that Claimant had reached MMI, Respondents reasonably believed that Claimant had not reached MMI and sought a 24-month DIME. The failure of Dr. Bainbridge to respond to Respondents' February 13, 2014 letter prejudiced Respondents and delayed the DIME process. Respondents attempted to comply with the criteria enumerated in §8-42-107(8)(b)(II)(A)-(D), C.R.S. but were unsuccessful. Accordingly, Respondents substantially complied with §8-42-107(8)(b)(II)(A)-(D), C.R.S. in requesting a 24-month DIME. Based on Dr. Hattem's determinations, Claimant reached MMI on January 28, 2014 and sustained a 15% whole person impairment for his March 5, 2010 industrial injuries.

13. Dr. Hattem's report reveals that he completed his examination and reached his conclusions prior to communicating with Dr. Bainbridge. Dr. Hattem concluded that Claimant reached MMI on January 28, 2014 and completed range of motion worksheets. The Addendum referencing the communication with Dr. Bainbridge appears after Dr. Hattem's signature block and is dated one week after the completion of the DIME. There is no suggestion that Dr. Hattem changed his opinions based on communication with Dr. Bainbridge. Furthermore, a review of Dr. Hattem's report reflects that he contacted Dr. Bainbridge to advise him of Claimant's enuresis complaints. Although Dr. Bainbridge agreed that it was "highly unlikely" that Claimant's enuresis was related to the industrial incident, he recommended an "urgent lumbar MRI to rule out cauda equine." If the MRI did not document any significant pathology, Dr. Bainbridge agreed that Claimant remained at MMI. The discussion did not focus on Claimant's date of MMI or impairment rating, but involved treatment for a non-work-related condition. Accordingly, the communication between Dr. Hattem and Dr. Bainbridge does not warrant striking Dr. Hattem's October 1, 2014 DIME report.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-

40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Propriety of 24-month DIME

4. Claimant seeks to strike Dr. Hattem's October 1, 2014 report because Respondents failed to comply with §8-42-107(8)(b)(II)(A)-(D), C.R.S. in proceeding with a 24-month DIME. Section 8-42-107(8)(b)(II)(A)-(D), C.R.S. provides that, if an ATP has not determined that a claimant has reached MMI, an insurer may request a DIME if the following criteria have been satisfied:

> (A) At least twenty-four months have passed since the date of injury;
>
> (B) A party has requested in writing that an authorized treating physician determine whether the employee has reached maximum medical improvement;
>
> (C) Such authorized treating physician has not determined that the employee has reached maximum medical improvement; and
>
> (D) A physician other than such authorized treating physician has determined that the employee has reached maximum medical improvement.

5. As found, the record reveals that at least 24 months had passed between Claimant's date of injury and Respondents' request for a DIME. Moreover, on February 13, 2014 Insurer authored a letter to Dr. Bainbridge inquiring about whether Claimant had reached MMI. However, Dr. Bainbridge failed to respond. Finally, Dr. Pitzer performed an independent medical examination and concluded that Claimant had reached MMI.

6. As found, the central dispute regarding the propriety of the 24-month DIME involves whether Respondents have established that Dr. Bainbridge did not determine whether Claimant reached MMI pursuant to §8-42-107(8)(b)(II)(C), C.R.S. Initially, it is undisputed that Dr. Bainbridge concluded Claimant had reached MMI on January 28, 2014. However, the parties were unaware of his determination until they received his report on November 24, 2014. Based on correspondence from Claimant's counsel Insurer sought clarification on February 13, 2014 about whether Dr. Bainbridge had placed Claimant at MMI in order to determine whether to pursue a DIME. However, Dr. Bainbridge failed to respond to the letter. Absent an affirmative determination that Claimant had reached MMI, Respondents reasonably believed that Claimant had not reached MMI and sought a 24-month DIME. The failure of Dr. Bainbridge to respond to Respondents' February 13, 2014 letter prejudiced Respondents and delayed the DIME process. Respondents attempted to comply with the criteria enumerated in §8-42-107(8)(b)(II)(A)-(D), C.R.S. but were unsuccessful. Accordingly, Respondents substantially complied with §8-42-107(8)(b)(II)(A)-(D), C.R.S. in requesting a 24-month DIME. Based on Dr. Hattem's determinations, Claimant reached MMI on January 28, 2014 and sustained a 15% whole person impairment for his March 5, 2010 industrial injuries.

Communication with ATP

7. Claimant also seeks to strike Dr. Hattem's October 1, 2014 DIME opinion because he initiated communication with Dr. Bainbridge. Section 8-42-107.2(d)(I), C.R.S. prohibits the DIME from contacting any of the authorized treating physicians. However, the statute does not provide a remedy for any violation.

8. As found, Dr. Hattem's report reveals that he completed his examination and reached his conclusions prior to communicating with Dr. Bainbridge. Dr. Hattem concluded that Claimant reached MMI on January 28, 2014 and completed range of motion worksheets. The Addendum referencing the communication with Dr. Bainbridge appears after Dr. Hattem's signature block and is dated one week after the completion of the DIME. There is no suggestion that Dr. Hattem changed his opinions based on communication with Dr. Bainbridge. Furthermore, a review of Dr. Hattem's report reflects that he contacted Dr. Bainbridge to advise him of Claimant's enuresis complaints. Although Dr. Bainbridge agreed that it was "highly unlikely" that Claimant's enuresis was related to the industrial incident, he recommended an "urgent lumbar MRI to rule out cauda equine." If the MRI did not document any significant pathology, Dr. Bainbridge agreed that Claimant remained at MMI. The discussion did not focus on Claimant's date of MMI or impairment rating, but involved treatment for a non-work-related condition. Accordingly, the communication between Dr. Hattem and Dr. Bainbridge does not warrant striking Dr. Hattem's October 1, 2014 DIME report.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to demonstrate that the October 1, 2014 DIME report of Dr. Hattem should be stricken.

2. Any issues not resolved by this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: May 3, 2016.

STIPULATIONS

The parties entered into the following stipulations at the January 26, 2015 hearing:

- Respondents authorized the medical treatment from Dr. Prall, including the surgery that Dr. Prall performed on July 3, 2013.

- Claimant's average weekly wage as of April 11, 2013, is $1,060.00.

- Claimant has received $36,903.63 in temporary total disability benefits and $35,195.56 in permanent partial disability benefits under this claim.

ISSUES

The issues presented for determination are as follows:

- Whether Claimant is permanently and totally disabled;

- Whether Claimant has overcome the DIME determination by clear and convincing evidence that she is not entitled to any medical impairment;

- Whether Claimant is entitled to ongoing maintenance medical treatment; and

- Whether Respondents entitled to an overpayment of $72,099.19 in indemnity benefits.

FINDINGS OF FACT

1. Claimant is a 53 year old female who presently resides in Franktown, Colorado.

2. The Employer hired Claimant on January 1, 2005. Claimant worked as an auto broker which involved working with clients who wanted to purchase a vehicle. Claimant's responsibilities included locating the vehicle, evaluating the vehicle, negotiating deals with car dealerships, pulling credit information for her client, and completing financial paperwork. Claimant described the job as involving primarily sitting, with no significant lifting, 20 minutes of walking at a time, driving for as long as 3 hours at a time, and standing up to 30 minutes at a time.

3. On December 19, 2007, Claimant suffered an injury while she was showing a customer a vehicle. Claimant slipped and fell on ice.

4. Claimant immediately reported the injury to the Employer, and chose HealthOne as the authorized provider. Approximately two hours after her injury, Thanh Chau, PA-C evaluated the Claimant. The medical record states that as Claimant was opening a vehicle door, she slipped on ice, both feet slipped out from under her, and she landed on the left side of her body, on her tailbone, and left arm. Claimant denied numbness, tingling or pain radiating down her legs. Claimant reported a prior left shoulder surgery, and she indicated a second surgery had been planned, but she decided to hold off on surgery to try alternative treatment options. Claimant filled out a pain diagram on which she identified issues at her left shoulder, neck, under her tailbone, and at her left wrist. On examination, PA Chau documented decreased range of motion in Claimant's low back into the coccyx area; pain with flexion at 60 degrees; no pain with extension; good lateral flexion with stiffness to the left; and a mild antalgic gait. PA Chau diagnosed a sacral contusion, a left wrist contusion, a left shoulder strain, and a cervical strain.

5. Claimant then underwent medical treatment for the next 19 months.

6. Prior to her work injury, Claimant received regular massages from Donna Allgood, including one less than three weeks before her work accident. Claimant continued to receive massages after her work injury, specifically for symptoms related to the work injury.

7. On December 21, 2007, Claimant returned to HealthOne where Dr. Elizabeth Bisgard evaluated her. Claimant's pain diagram identified issues at her left shoulder, and in the middle of her buttocks, with no indication of right low back or right leg pain. Dr. Bisgard recommended physical therapy using an e-stimulator unit, noting that if Claimant received relief in her shoulder and sacrum with the e-stimulator unit, she could get a home e-stimulator unit.

8. On January 4, 2008, Claimant notified PA Chau she was having left shoulder pain, she planned on having therapy for her shoulder, and she had been receiving alternative treatments for her rotator cuff tear. Claimant's January 4, 2008 pain diagram identified pain in her right hip region. PA Chau noted that Claimant would get started with physical therapy for her shoulder and low back.

9. On January 30, 2008, Claimant was evaluated by Keith Graves, a chiropractor. Dr. Graves reported that most of Claimant's pain was in the right sacroiliac joint, with referred pain to the buttock and right lower extremity. Claimant complained of achiness, soreness and parasthesias in her right leg.

10. On February 19, 2008, Dr. Graves documented that Claimant's chief complaint was in her right buttock/lateral pelvic areas, noting her right lower extremity symptoms had completely resolved. On March 11, 2008, Dr. Graves documented that Claimant's right lower extremity symptoms were no longer present and that Claimant had responded well to his conservative treatment. Dr. Graves noted that it appeared Claimant had moderate neural irritation of the sciatic nerve as it exits out of the sciatic

notch which was secondary to her myofascial guarding response in her right gluteal musculature.

11. On March 14, 2008, Claimant's pain diagram identified her pain as being in the right buttock region. Claimant indicated she was "still having electric pain through my glutes and a ball of pain in my glute." PA Tranh noted that Claimant's pain was mostly in her right buttock with occasional sharp shooting pain down into the right lower extremity. She told PA Tranh that Dr. Graves' treatment of her gluteal muscles was not benefitting her. He referred Claimant for a lumbar MRI, and referred Claimant to Dr. Barton Goldman for a physiatry evaluation and further treatment recommendations.

12. On March 21, 2008, Claimant had a lumbar MRI which was interpreted as showing L4-5 stenosis. Claimant's medical providers, including Dr. Bisgard and Dr. Goldman all agree that the lumbar stenosis was a pre-existing condition.

13. On March 28, 2008, Dr. Bisgard's report states that even though Claimant's primary symptoms were located in her buttocks and hip, Dr. Bisgard had concerns about the level of foraminal stenosis which might be contributing to Claimant's symptoms.

14. On April 1, 2008, Dr. Barton Goldman examined the Claimant. Claimant reported that her pain "has always been more in the right sacrum, ischium and buttock regions, as well as in the hip with occasional groin pain." Dr. Goldman noted that on Claimant's pain diagram, she documented stabbing pain across the right sacrum with throbbing pain across the mid buttocks and pain radiating down into the posterior thigh with some parasthesias across the plantar foot. He also noted buttock and low back pain varying from 3-9 out of 10. Dr. Goldman noted that Claimant has difficulty lifting her right leg in terms of dressing herself.

15. Claimant reported increased pain with bending forward, but not with extension. Dr. Goldman indicated "I explained to the patient that her MRI scan most likely represents [a] long standing pre-existing condition that probably explains her limited extension range of motion, but does not correlate with her pain, which is more in flexion and seems to more involve the buttock and hip structures." Dr. Goldman diagnosed chronic sacroiliac joint dysfunction with left piriformis syndrome and lumbosacral myofascial pain, left hip strain with greater trochanteric bursitis secondary to her work-related fall in December 2007. Dr. Goldman referred Claimant for an MR arthrogram of her right hip.

16. On April 9, 2008, Claimant's right hip MRI was read as showing bilateral hamstring tendinopathy, with marrow edema in the ischial tuberosities.

17. On April 11, 2008, Claimant's pain diagram identified her painful areas as being at her right lower and upper buttocks.

18. On April 17, 2008, Dr. Goldman reviewed the right hip MRI, and a bone scan, noting that Claimant had a contusion type of injury to the right more than left ischium, with subsequent bursitis and hamstrings tendinosis, and clear myofascial pain

involving the piriformis and glutei. Claimant continued to complain of pain in the right buttock, sacral and thigh region with parasthesias in her right foot.

19. Claimant then went through a conservative medical course directed at her right hip region, her piriformis myofascial area, and her ischial bursa region. This care included a second MRI, which identified a very small, partial thickness tear in her right hip. Claimant then underwent a right hip injection.

20. On April 25, 2008, Dr. Goldman noted Claimant continued to have pain primarily in the right buttock and sit bone area with some radiation toward the iliac crest. Claimant had an active trigger point in her glute, and a less significant piriformis trigger point. Dr. Goldman noted in his record that although he did not believe that the small right hip labral tear was symptomatic, Claimant may wish to have a second opinion. Dr. Goldman suggested that Claimant see Dr. Gary Hess for an orthopedic hip evaluation. Claimant indicated she would make a decision concerning this referral at her next visit with Dr. Bisgard which was scheduled for April 29, 2008.

21. On April 29, 2008, Claimant completed a pain diagram during her visit with Dr. Bisgard that identified her pain as being in her right lower buttock and right hip areas. Dr. Bisgard concurred with Dr. Goldman's referral to Dr. Hess.

22. On May 8, 2008, Dr. Hess noted that Claimant's symptoms centered in the right groin region with radiation from the groin into the buttock area. Dr. Hess examined Claimant, finding "no tenderness noted over the lumbosacral". Dr. Hess's impression was early degeneration of the hip joint, with persistent synovitis.

23. On May 15, 2008, Claimant's pain diagram identified her pain area as her right buttock region.

24. On June 12, 2008, PA Chau examined Claimant, noting her affect was bright, she did not have an antalgic gait, she sat comfortably through her exam, and she could cross her right leg without discomfort. Claimant reported to PA Chau that the frequency of her lower back pain and right hip pain had decreased. PA Chau noted that Claimant responded well to the injection performed by Dr. Hess on May 23, 2008, and the plan included trigger point injections to help with the remaining pain.

25. On June 16, 2008, Dr. Goldman noted that Claimant received a right hip injection from Dr. Hess on May 23, 2008, which helped with her zingers. Dr. Goldman noted Claimant's pain was predominantly in the right buttock region. Dr. Goldman also noted that Claimant had an entirely normal neurologic examination, and that "it does seem unlikely at this point in time that most of her pain, at least from a work related perspective, is due to intra articular or joint issues per se. It now appears to be more of a soft tissue injury." Dr. Goldman recommended additional injections for her buttock and hip pain, and he referred her to physical therapy for treatment in those regions.

26. On June 18, 2008, Claimant started in a course of therapy with Joseph Patton, PT, at Lone Tree Physical Therapy. Mr. Patton noted mild right SI joint dysfunction, tenderness at the ischial tuberosity, greater trochanter and piriformis;

decreased hip mobility into external rotation; and tightness in the piriformis, hamstrings and psoas. Claimant had seven sessions of therapy between June 18, 2008 and July 9, 2008.

27. On June 24, 2008, Dr. Goldman provided a right piriformis injection, a right greater trochanteric bursa injection, and a right ischial injection. Dr. Goldman noted that Claimant's neurological exam of her lower extremities remained normal. Dr. Goldman's impressions included chronic right sacroiliac joint dysfunction with right piriformis syndrome, hamstrings tendinosis, ischial bursitis and greater trochanteric bursitis.

28. On July 1, 2008, Dr. Goldman noted Clamant was delighted with the results of those injections, and while she still had mild buttock pain, the pain across her sit bone was better than she could remember. Dr. Goldman again injected Claimant's right piriformis, and he recommended continued therapy. On July 7, 2008, Mr. Patton reported that Claimant's trochanteric pain and piriformis pain had both improved, but her ischial tuberosity was inflamed.

29. On July 8, 2008, Dr. Bisgard placed Claimant at MMI with no permanent impairment. Claimant's pain diagram identified her pain area as being in her right buttock. Claimant also indicated on that form "no more zingers across my butt or down my butt". Claimant did not identify any right low back or leg pain Claimant told Dr. Bisgard that she would like to wrap things up with her care. She reported significant pain in her right buttock which she said was not interfering with her work. Claimant stated that making it to all of her appointments is causing her too much stress. Dr. Bisgard noted that Claimant was "significantly" better with the injections. Dr. Bisgard also noted that Claimant "reports no neurologic symptoms and no numbness, tingling, or weakness in her legs." On exam, Dr. Bisgard confirmed Claimant was neurologically intact, and her reflexes, strength, sensory and vascular exams were all normal. Finally, Dr. Bisgard indicated Claimant could finish up with Mr. Patton in therapy, and she scheduled Claimant for an October 2008 maintenance visit.

30. Claimant had her last PT visit on July 9, 2008. She still was experiencing pain in the ischial tuberosity although her GT and piriformis had improved.

31. The medical records contain no specific documentation of right lower extremity issues after April 17, 2008 through MMI. At hearing, Dr. Bisgard admitted that she was aware of no medical records between those dates that would support her opinion that Claimant had symptomatic lumbar stenosis during that period. As Dr. Bisgard pointed out, Claimant's complaints, and all of her care, were focused on her buttock and hip regions.

32. Claimant testified that she felt like she had done everything her medical providers had asked her to do, and that much of the treatment gave her only temporary relief. She felt stressed about missing work because her compensation was commission-based. Missing work caused her to lose income. Claimant hoped her symptoms would resolve with time, but they did not. She explained that her symptoms were mainly in her buttock and low back, and did not go all the way down her leg.

33. The Respondents filed a Final Admission of Liability on August 26, 2008. The FAL indicated that the Respondents denied liability for maintenance medical care. The Claimant's claim closed at that time.

34. Claimant returned to HealthOne on October 28, 2008 for the maintenance care visit. There is no indication that Respondents failed to authorize the visit or pay for it. Claimant reported that she had significant improvement and normal range of motion. She denied radiculopathy or radicular symptoms. Either Dr. Bisgard or her PA discharged Claimant from care at that time.

35. Claimant resumed treatment, which the Insurer approved and paid for, under this claim on August 20, 2009 when she saw PA Chau for a one-time visit. She complained of a flare up in her right low back pain. The note specifically states, "Four days ago, she noticed "increased" pain in her right lower back with leg soreness and pain that extends down into the right later foot." The Claimant reported that the symptoms were similar to those she experienced due to her work injury. The Claimant reported that the pain had worsened over the past four days rising to a level 9 out of 10. PA Chau prescribed medications and recommended temporary work restrictions. Dr. Bisgard agreed to the treatment recommendations.

36. On September 22, 2009, Dr. Bisgard evaluated Claimant, noting that she was referring Claimant back to Dr. Hess for a hip injection to get Claimant back to baseline. Dr. Bisgard also recommended additional treatment with Dr. Graves. Claimant's pain diagram that day showed pain going down her right leg.

37. On October 9, 2009, Claimant saw Dr. Hess, who noted that "over the past few weeks, [Claimant] developed significant pain in the right buttock region with radiation down the posterior aspect of the right leg towards the right low foot."

38. On October 13, 2009, Dr. Bisgard noted that Dr. Hess felt they were no longer dealing with a hip issue. She noted that Dr. Hess was concerned about sciatica, and he referred Clamant for a repeat lumbar MRI. Claimant's pain diagram that day again documented pain shooting down Claimant's right leg. On October 13, 2009, a lumbar MRI was obtained that showed central and lateral canal stenosis at L4-5 level caused by a combination of disc protrusion, ligamentum flavum hypertrophy, and facet arthropathy changes.

39. On October 23, 2009, Dr. Goldman evaluated the Claimant. Dr. Goldman noted that Claimant presented to Dr. Bisgard in August 2009 with highly accelerated pain levels. Dr. Goldman noted that Claimant's MRI showed some progression of the L4-5 stenosis. Dr. Goldman's assessment was lumbosacral spondylosis, and stenosis pre-existing and "possibly" aggravated by work related injury; secondary right piriformis syndrome, sciatica and greater trochanteric bursitis, right S1 radiculitis; degenerative joint disease right hip, anxiety, deconditioning, and diabetes. Dr. Goldman recommended staged variable duration epidural steroid injections.

40. On November 10, 2009, Dr. Bisgard stated:

> I understand there may be some concerns about causaility. However, in careful review of her medical records, I have pointed out previously that we thought the symptoms were coming from the hip, but as the hip symptoms resolved, her clinical picture become more suggestive of diskogenic pain and radicular symptoms. In review of her history, it is my opinion based on a reasonable degree of medical probability and certainty that her current symptoms are indeed attributable to a work injury, as there has been no intervening event, and it is likely that symptoms she was experiencing did have some diskogenic/radicular component, but we were focused on the hip portion of his as opposed to the lumbar component.

41. Dr. Bisgard supported Dr. Goldman's recommendations for epidural steroid injections and an EMG. Dr. Bisgard noted that Claimant is highly motivated and did not want to be restricted from working.

42. On December 17, 2009, Dr. Floyd Ring evaluated the Claimant. His impressions included chronic low back pain with radicular symptoms, right; work-related injury; and MRI evidence of degenerative disc changes noted increased at L4-5. He performed a translaminar epidural steroid injection at L4-5.

43. On December 31, 2009, Claimant saw Dr. Goldman again. She reported continued aching and throbbing in the right buttock and piriformis region, down the right posterior and lateral leg. Dr. Goldman performed a lower extremity EMG/NCV test, which he interpreted as being most consistent with a moderately severe sensory motor peripheral polyneuropathy with axonopathy. Dr. Goldman saw no evidence for discreet lumbosacral radiculopathy or plexopathy. Dr. Goldman's diagnoses at that time included lumbosacral spondylosis, and stenosis, not work related; moderate to severe sensory motor peripheral polyneuropathy and axonopathy related to diabetes mellitus type I, not work related; and secondary right piriformis syndrome with sciatica and greater trochanteric bursitis with delayed healing associated with the previous two diagnoses.

44. Dr. Goldman indicated that Claimant's work up and chronicity of pain over the past two years suggested that a combination of the diabetes, peripheral neuropathy, age and lifestyle may be contributing to a fairly significant soft tissue chronic pain and delayed recovery scenario. Dr. Goldman noted it was doubtful Claimant would require surgery for her back, at least from a work related context.

45. Claimant embarked on a course of facet related treatment with Dr. Floyd Ring and Dr. Goldman that included a bilateral L4-5 and L5-S1 facet injections (1/28/10), bilateral L3, L4 and L5 medial branch blocks (2/15/10), bilateral L3, L4 and L5 rhizotomies (3/4/10), three sets of trigger point injections, as well as additional therapy and chiropractic care.

46. On March 15, 2010, the Respondents filed a General Admission of Liability admitting for medical benefits only noting that Claimant continues to treat thus the claim was reopened with MMI and PPD to be determined.

47. On April 29, 2010, Dr. Goldman opined that Claimant's lumbosacral spondylosis and stenosis was aggravated by the work related injury. Dr. Goldman performed trigger point injections.

48. On May 6, 2010, Dr. Goldman noted Claimant had worsened over the previous two days, so he decided to repeat the injections. On May 13, 2010, Dr. Goldman repeated the injections a third time given that Claimant reported good relief with the first two injections.

49. Claimant returned to see Dr. Bisgard on June 16, 2010. She told Dr. Bisgard that on May 14, 2010 she had a significant flare in her back and leg pain. Claimant stated that the pain was so severe that she needed to use a cane for ambulation. The pain lasted three weeks. Dr. Bisgard concluded that Claimant likely had sciatica due to muscle spasms following the injections.

50. On July 6, 2010, the Claimant returned to Dr. Goldman's office. Dr. Goldman referred Claimant for another MRI of her lumbosacral area and pelvis.

51. On August 6, 2010, Claimant's lumbar MRI was read as showing persistent moderate to severe central canal stenosis on a degenerative basis at L4-5, a cyst, and facet degenerative changes at L5-S1.

52. On August 12, 2010, Claimant returned to Dr. Goldman. Claimant reported some improvement in her symptoms, including waxing and waning. Dr. Goldman noted that he spoke to Dr. Lazano, who read the MRI directly to Dr. Goldman. Dr. Goldman stated "Per Dr. Lazano, the lumbosacral MRI is stable compared to April of 2008 with the exception that there appears to be an increase in the size of the left L4-5 synovial cyst impinging on the left L5 nerve root, but this, of course, does not correlate at all with the patient's symptoms". Dr. Goldman's impressions included, "lumbosacral spondylosis and stenosis pre-existing her work related injury December 19, 2007 with L4-S1 facet dysfunction relieved at this time via radio frequency rhizotomy (L4-5 stenosis was stable per Dr. Lazano and most likely not work related)." Dr. Goldman felt that Claimant's increased blood sugars may be to blame for Claimant's increased symptoms. Dr. Goldman indicated that he was hesitant to consider additional injections because the Claimant was "going to be a delayed healer-diabetics often have delayed healing of tendons and strains, and I think this is what is going on here, at least to some degree." Dr. Goldman did not believe surgery was indicated and he felt Claimant was at or near MMI.

53. On August 13, 2010, Dr. Bisgard wrote a letter to Insurer, noting the findings on the recent lumbar MRI. Dr. Bisgard noted that the new MRI findings showed very mild progression, which did not correlate with her clinical findings, and most likely due to her underlying medical condition. She noted that both her and Dr. Goldman

believed Claimant was rapidly approaching MMI. Dr. Bisgard concurred with Dr. Goldman regarding surgery.

54. Over the next several months, Claimant's pain increased, and Dr. Bisgard sent Claimant through another round of care with Bruce Leibrandt, CMT, Dr. Graves, and Dr. Ring. On November 16, 2010, Dr. Ring performed repeat bilateral L3, L4 and L5 medial branch rhizotomies.

55. On October 19, 2010, the Insurer sent Claimant's available medical records to Dr. Henry Roth for a medical record review to address causation. Dr. Roth documented the medical records he reviewed from the workers' compensation providers. Dr. Roth's opinion, following his review of records up to August 20, 2009, indicated:

> "On 12/19/07, [Claimant] slips and falls on ice. She has discomfort low back, right gluteal and right hip. [Claimant] is then treated conservatively with exercise, stretching, diagnostic study, therapy and medication. Modalities specifically applied include but were not necessarily limited to physical therapy modalities, chiropractic adjustments, acupuncture, trigger point injections, right trochanteric injection and right hip injection. Diagnostic studies include MRI of the low back and hip revealed no associated lumbar pathology. There is moderate stenosis seen at L3-4. This is preexisting degenerative change and does not correlate with symptom presentation. Likewise, there was no radiculopathy.
>
> The right hip reveals degenerative change as evidence by decreased motion, osteophytes, subchondral bone change, joint space narrowing. [Claimant's] symptom presentation is that of right lumbopelvic myofascial pain. Her positive examination treatment response and clinical course point only to involvement of gluteal, piriformis, ischial tuberosity and trochanter. [Claimant] has a regional myofascial enthesiopathy presentation.
>
> [Claimant] is placed at maximum medical improvement on 7/8/08 by Dr. Bisgard. At that time there are confounding psychological features identified but the condition for which treatment was pursued has resolved. At closing examination condition appeared to have been resolved.
>
> At Claimant's maintenance follow up exam on 10/28/08 there was no tenderness or swelling in the back. There was full lumbar range of motion with no discomfort. Lower extremities neurological exam was normal. Dr. Bisgard issued a final discharge with no impairment and no maintenance.

> As of 10/28/08, there is no future to [Claimant's] claim. [Claimant] does not have an ongoing condition as a result of injuries sustained on 12/19/07 is limited to the notion of sprain/strain and contusion. As of [10/18/08] any sprain/strain or contusion that may been sustained is resolved. Sprain/strains and contusions are not sustained biological processes. They don't lie dormant and reappear. They don't spread. They don't metastasize. Once healed the condition is resolved.

56. Dr. Bisgard subsequently wrote Insurer, taking issue with Dr. Roth's opinions. Dr. Bisgard noted Dr. Roth did not evaluate Claimant, she found Claimant to be forthright, all care done to that date had been authorized, and it was "not fair" to retroactively say these symptoms were not work related.

57. On January 5, 2011, Dr. Bisgard evaluated the Claimant for an impairment rating. Her final medical assessment was "lumbar strain with underlying stenosis, hip strain." Dr. Bisgard also noted, "[i]n October 2008, [Claimant] returned for a maintenance visit and reported that she had been doing well. She remained at MMI. [Claimant] returned in August 2009 for reevaluation. She had a flare of her low back pain. The soreness that she had previously had in her back had resolved with a home program but in mid-August she had increased pain in her lower back, which extended down into her right foot." Dr. Bisgard then provided an 11% whole person rating related to Claimant's rhizotomies and decreased lumbar range of motion.

58. Rather than applying for a DIME at that time to challenge Dr. Bisgard's opinions concerning MMI and permanent impairment, on January 14, 2011, Insurer filed a final admission consistent with Dr. Bisgard's opinions on MMI and impairment. The Insurer paid Claimant in full for this rating.

59. The Claimant did not object to the January 14, 2011 Final Admission and the claim closed as to all issues admitted.

60. Between January 15, 2011, and December 5, 2012, Claimant continued to work full time, while receiving medical care through Kaiser. During this 23 month period, Claimant also received ongoing care for her shoulder (osteoarthritis), right wrist (carpal tunnel syndrome ultimately requiring a carpal tunnel release), rheumatoid arthritis, feet, migraines, eyes, neck, right foot (diabetic wounds), and fatigue, as well as other diabetes related issues.

61. Also during this almost two year period, Claimant regularly received maintenance pain medications (Nucynta) through Kaiser, and she apparently received maintenance chiropractic care with Dr. Graves. With this care, Claimant was able to manage her condition until approximately four months prior to December 5, 2012, when Claimant's pain increased, and she started having significant difficulty walking. Claimant was never 100% since being discharged by Dr. Bisgard on January 5, 2011, she always had some level of pain, but as of December 2012, that pain was increasing.

62. On December 5, 2012, Claimant returned to Dr. Bisgard for the first time in almost two years. Dr. Bisgard documented that in the interim, Claimant had been diagnosed with rheumatoid arthritis, and was now taking steroids (leflunomide) for that condition. Claimant reported that over the last three to four months, her pain gradually increased to the point where she was having difficulty walking. Claimant reported walking in a forward flexed position. She stated that she has always had some level of pain since being discharged from care and that it has been increasing. Claimant indicated that she had cut back on her hours at Employer, she and her husband had purchased a tanning salon, and she was working there part time.

63. On January 11, 2013, Claimant reported to Dr. Goldman that her back pain has waxed and waned and is very similar and consistent with the symptoms she presented with in 2008. Dr. Goldman documented those symptoms as pain in the right low back and sacral region with radiation into the posterior leg. Claimant confirmed that she received massages after Dr. Bisgard discharged her from care. Claimant reported feeling stable from 2010 to 2011, but she was now deteriorating feeling unable to walk longer than two blocks. Dr. Goldman documented that Claimant's pain diagram on January 11, 2013 was similar to past pain diagrams, but had advanced somewhat.

64. Dr. Goldman indicated, "right now based on the patient's history as given without any intervening events, it would appear that this is the occasional and rare, but nevertheless documented accelerated degenerative disc disease type of condition that precipitated apparently by the work related injury."

65. Dr. Goldman admitted that he and Dr. Bisgard could not be sure that the current presentation was due to the work injury from five years ago until they looked at records from Kaiser, Dr. Graves, and the massage therapist. Dr. Goldman commented that if there have been no intervening injuries, and if there has been a fairly consistent presentation of the exact same symptoms, but slowly getting worse and then recently getting much worse, then it probably is a progression of the work injury.

66. On January 15, 2013, Dr. Bisgard determined Claimant had spondylolisthesis with progressive stenosis that was causing neuroclaudication. Dr. Bisgard indicated that she and Dr. Goldman were trying to sort out how much impact the work injury had on the increased back pain. Dr. Bisgard concluded that Claimant never reported resolution of her symptoms throughout her maintenance care with Dr. Graves. Dr. Bisgard reiterated her opinions that Claimant's work injury precipitated the need for medical treatment to Claimant's low back.

67. Dr. Graves did not see Claimant at all between March 2008 and September 2009.

68. Claimant's January 21, 2013 lumbar MRI showed significant foraminal stenosis at the L4-5 level affecting the L5 nerve root, with bilateral pathology.

69. On February 1, 2013, Dr. Goldman indicated that Dr. Bisgard reviewed the Kaiser and chiropractic records, and those records comported with Claimant's history.

Dr. Goldman indicated that the January 21, 2013 MRI showed a progression of bulge at L4-5, and clearly accelerated hypertrophy and inflammation at L4-5 facets is causing moderate to severe canal and foraminal stenosis. He recommended additional epidural steroid injections. Dr. Goldman also indicated that the issue of causation is debatable but he ultimately concluded that the need for medical treatment is substantially due to the 2007 work injury assuming Claimant's symptoms have never resolved.

70. On February 8, 2013 Claimant saw Dr. Bisgard who noted that Claimant was still able to work full duty and still wanted to work full duty. Claimant's symptoms had not changed, and she decided to pursue the injections recommended by Dr. Goldman.

71. Claimant returned to see Dr. Bisgard on March 14, 2013, following the injections performed by Dr. Ring. Claimant reported feeling better for several days following the injections but then her symptoms returned back to pre-injection baseline. Dr. Bisgard referred the Claimant to Dr. John Prall.

72. Claimant was referred to John Prall, M.D., a neurosurgeon, who evaluated Claimant on April 4, 2013. Dr. Prall noted that Claimant had a 5-year history of lumbar degenerative symptoms since a slip and fall accident at work. Dr. Prall opined that Claimant had progressive and refractory spinal claudication related to stenosis at L4-5 which was seen in association with spondylolisthesis. Dr. Prall recommended surgery consisting of a one level decompression and stabilization at L4-5. Claimant wanted to proceed with surgery because she felt she had no other options given her pain levels.

73. On April 10, 2013, Insurer physician advisor, Andrew Castro, M.D., an orthopedic surgeon, issued a report in which he addressed Dr. Prall's surgery recommendation. Dr. Castro noted that over the past year Claimant had developed progressively severe claudication symptoms, which were a new set of symptoms, and a change from her prior symptoms. Dr. Castro indicated the surgery was theoretically indicated, but he questioned the causal relation between these new symptoms and the claim. He recommended denying the surgery from a causality standpoint. He recommended an independent medical examination to address the issue of causality.

74. On April 17, 2013, Dr. Bisgard questioned whether Dr. Castro had complete records, noting medical records "clearly" showed Claimant had ongoing back pain since her date of injury that never resolved. Dr. Bisgard opined that Claimant's condition is "not a natural progression of an underlying disorder but in fact permanent aggravation of a preexisting condition as a result of her fall."

75. On April 15, 2013, Rebecca Hawkins, Ph.D. evaluated the Claimant for a psychological opinion concerning Claimant's psychological readiness for surgery. Claimant told Dr. Hawkins that for years she had never had to take time off of work, she could work from home as needed, she could schedule around her medical appointments, she could sit down as needed, and pace her activities. However, three weeks earlier she realized she could not walk the distance required to do her auto broker position, and thus was placed on TTD benefits. Claimant reported the inability to

perform household tasks. Claimant reported that she and her significant other owned a tanning salon. Dr. Hawkins cleared Claimant for surgery.

76. The Respondents referred the Claimant to Deborah Saint-Phard, M.D, for an independent medical examination, which occurred on May 24, 2013, for the purpose of determining whether the surgery recommended by Dr. Prall was related to the Claimant's work injury. Dr. Saint-Phard reviewed Claimant's medical records and examined the Claimant. Dr. Saint-Phard's physical examination showed that Claimant's feet are clawed, no evidence of a normal heel strike with a grossly abnormal gait. Dr. Saint-Phard also observed the skin on Claimant's feet was shiny and she had diminished sensation to light touch on her lower extremities bilaterally.

77. Dr. Saint-Phard's assessments included possible arterial insufficiency of the limbs, sensory motor neuropathy related to diabetes which had significantly impeded Claimant's gait ability, high steppage gait, significant atrophy and sensory loss of the lower extremities, and loss of dorsal pedis pulses and the appearance of arterio-insufficient lower limbs especially in the feet.

78. Dr. Saint-Phard indicated there were a myriad of confounding factors, including a diagnosis of rheumatoid arthritis in 2009 for which Claimant took prednisone and Leflunomide for pain control, which could not be ignored as accelerating Claimant's lumbar stenosis.

79. Dr. Saint-Phard opined that the main thrust of Claimant's complaints were due to neuropathic pain from the likely exacerbation of her underlying diabetic condition induced sensorimotor axonal peripheral neuropathy, now with superimposed L4-5 instability causing neurogenic claudication, which was at most minimally related to the work injury. Dr. Saint-Phard opined that Claimant's neuropathic pain was not claim related.

80. Dr. Saint-Phard indicated that Claimant clearly has lumbar spondylolisthesis that is unstable and she would benefit from the stabilization/fusion and decompression Dr. Prall recommended.

81. With regard to Claimant's history, Dr. Saint-Phard noted that Claimant "insists that she continued to actively treat herself for the back pain after she achieved MMI and to the present day." Dr. Saint-Phard pointed out that "this presentation is at odds with the documentation per the medical record review as documented by Dr. Bisgard noting that when she placed her at MMI her symptoms had resolved with the treatment that she had gotten at that time." Dr. Saint-Phard noted Claimant's issues were multi-factorial, but based on Claimant's subjective history, the work injury contributed 20% of the need for the fusion.

82. On May 31, 2013, Dr. Bisgard noted that Claimant met with Dr. Saint-Phard, and that she felt Claimant needed surgery. Dr. Saint-Phard also made recommendations concerning a foot drop Claimant was experiencing, another EMG and a vascular consultation. Dr. Bisgard indicated that the AFO or vascular consultation

would not be claim related. Finally, Dr. Bisgard noted that Claimant was unable to work for Employer because her job required her to be out and about and on her feet. However, Dr. Bisgard noted that Claimant was assisting her significant other with setting up computers at home.

83. On June 19, 2013, Dr. Bisgard noted that based upon Dr. Saint-Phard's report and opinions, Insurer had authorized the surgery.

84. On June 25, 2013, the Respondents again filed a General Admission of Liability which admitted for medical benefits and temporary total disability benefits. The Respondents voluntarily reopened Claimant's claim and authorized the surgery recommended by Dr. Prall.

85. On July 3, 2013, Claimant underwent surgery by Dr. Prall, which included a partial laminectomy, medial facetectomy, and foraminotomy bilaterally at L4 and L5, posterior spinal instrumentation at L4-5, interbody cage fusion at L4-5, and posterior lateral fusion at L4-5.

86. Claimant had temporary good results from the surgery, but eight days after the surgery, she developed significant pain in her left buttock and left knee, for which she went to the emergency room on July 15, 2013. A July 15, 2013 MRI was then obtained. Claimant received an ESI at L3-4 and L4-5.

87. On July 22, 2013, Claimant returned to the emergency department with severe left-sided radicular pain issues. Claimant was sent back to surgery with Dr. Prall, which included a removal of the posterior lumbar hardware, re-exploration of the partial laminectomy and discectomy at L4-5, with removal of a far lateral disc herniation on the left, and posterior instrumentation and fusion at L4-5.

88. On July 29, 2013, Dr. Prall documented Claimant's post July 22, 2013 surgical course, noting her pain had returned in a pre-operative distribution. On August 8, 2013, Dr. Prall again noted Claimant's pain had returned to the severe level it was at prior to the second surgery. On August 15, 2013, Dr. Prall noted that Claimant had been improving over the past week, she was walking without difficulty, and was fairly comfortable, but with pain radiating from the left buttock down the thigh to the knee and shin.

89. Claimant returned to see Dr. Goldman on August 15, 2013. Claimant reported feeling better and Dr. Goldman observed improved posture. Claimant, however, was taking a significant amount of opioids. Dr. Goldman stated that he was, "certain that the extruded disc on the left was an unfortunate, but unavoidable post operative event is contributing to the patient's radiculitis on the left . . ."

90. On September 4, 2013, Dr. Bisgard noted that Claimant had a selective nerve root block from Dr. Ring on August 26, 2013, and the following morning she could not lift her right foot, but her left leg was starting to feel better. Claimant was anxious about these new problems.

91. On September 17, 2013, Dr. Prall noted Claimant had a new right foot drop, but her left leg pain had essentially resolved. He also noted a new lumbar MRI did not show any new findings.

92. Dr. Goldman saw Claimant on September 12, 2013, noting that her symptoms were unusual for the presentation, it was perplexing, and did not make sense. Claimant indicated her pain levels overall were substantially better and her only real complaint was increased pain in her right leg and the foot drop. Claimant was distressed and fixated on her opinion that her recent epidural steroid injection caused her new symptoms. She felt like she could at least walk prior to the injection. Dr. Goldman noted that the foot drop may be related to her diabetes, as "diabetic mediated or autoimmune inflammatory neuropathies or plexopathies do not always correlate with blood sugar control." Dr. Goldman reiterated to the Claimant that her pain is multi-factorial and unlikely due to the epidural steroid injection.

93. On September 20, 2013 Dr. Bisgard noted that Claimant continued to have right lower extremity symptoms and pain, and she was seen by her primary care physician who noted that she had some evidence of small vessel disease in her lower extremities. Dr. Bisgard indicated Claimant had right foot drop of unclear etiology; spinal stenosis L4-5 and spondylolisthesis status post fusion; and recurrent disk herniation L4-5, left sided. Dr. Bisgard released Claimant to work with restrictions.

94. On September 27, 2013, Claimant returned to Dr. Goldman who again noted that Claimant's presentation was perplexing. Claimant's right lower extremity pain had resolved for unknown reasons, her foot drop improved, but suddenly her left lower extremity sciatica became severe. Dr. Goldman indicated Claimant presented with a less than typical type of peripheral poly neuropathic finding.

95. On October 24, 2013, Dr. Goldman indicated that after talking with Dr. Prall, he suspected that Claimant has some underlying L5 radiculopathy probably of a biochemical or inflammatory etiology in the presence of underlying evolving peripheral neuropathic conditions or an auto-immune condition because the Claimant has juvenile diabetes and a history of rheumatoid arthritis. Claimant admitted to Dr. Goldman that she did not take care of her diabetes many years ago. Dr. Goldman noted that if sugars are highly uncontrolled in juvenile diabetics it predisposes the patient to more degenerative or inflammatory neuropathic conditions 10-20 years later. Dr. Goldman prescribed a rolling walker for the Claimant.

96. On November 6, 2013, Claimant saw Dr. Bisgard. Claimant reported significant ongoing issues with her back and legs noting that the left leg symptoms are worse than the right leg. She reported four falls due to the left leg, use of a cane, and recent purchase of a wheelchair device that allows her to walk but also sit and be pushed when she cannot handle standing or walking. Dr. Bisgard noted that Claimant was working hard in physical therapy and continuing to follow up with Dr. Hawkins. Dr. Bisgard and Dr. Goldman agreed to keep Claimant off work due to her fall risk.

97. On November 27, 2013 Claimant was seen by Dr. Marc Treihaft who specializes in neurology, neuromuscular disorders and electromyography. Dr. Treihaft's focus was Claimant's post-surgery issues. Dr. Treihaft noted that Dr. Prall performed surgery on July 3, 2013 and seven days later the Claimant developed severe left lower extremity sciatica and had a second procedure two weeks later to remove disk and bony fragments. Claimant developed a right foot drop subsequent to nerve blocks performed on August 28, 2013. Dr. Treihaft noted Claimant had developed bilateral foot drop issues, in a person who had been Type 1 diabetic for more than 40 years with mild numbness in her feet for several years. Dr. Treihaft noted the major issue in this complex case would be differentiating L5 root disorders, structural or metabolic, versus diabetic peripheral neuropathy. Dr. Treihaft's impressions were lumbosacral spondylosis and stenosis, status post surgery on July 3, 2013, repeat surgery on July 23, 2013 with residual left lower extremity sciatica and bilateral foot drop; right greater than left foot drop without impingement on MRI; L4-5 fusion, unresponsive to selective nerve root blocks and epidural steroids; MRI on September 10, 2013 shows residual right foraminal and recess stenosis at L4-5. Dr. Treihaft recommended Claimant undergo EMG/nerve conduction studies.

98. On December 18, 2013, Dr. Treihaft obtained those studies, which showed severe sensorimotor polyneuropathy with axonal features possibly related to Claimant's diabetes. He also documented bilateral L4-5 radicular changes. He stated it may be from residual scarring.

99. On December 27, 2013, Claimant returned to see Dr. Goldman. Her symptoms remained essentially unchanged with pain primarily down the left leg. Dr. Goldman indicated that he reviewed Dr. Treihaft's notes, and he repeated Dr. Treihaft's findings and opinions as follows: Dr. Treihaft stated that the EMG/NCV studies showed further neuropathic damage associated with Claimant's diabetes or some other non-accident related neuropathic etiology; Dr. Treihaft indicated that there may be residual L4-5 radiculopathic pain superimposed on the diabetic neuropathy what would have been of a chronic nature (which Dr. Goldman noted was consistent with his own interpretation of Claimant's symptoms); and Dr. Treihaft believes that Claimant's foot drop is due to a combination of Claimant's L5 chronic radiculopathy and diabetic neuropathy which is consistent with what both Drs. Goldman and Prall believed.

100. Dr. Goldman discharged Claimant from his practice, and strongly recommended she get with a pain specialist. She was also referred to Dr. Moe for a psychiatric evaluation.

101. On January 3, 2014 Dr. Bisgard noted that Claimant's symptoms continued to alternate between her left and right leg. Dr. Bisgard concluded that they were now dealing with a chronic pain issue, and she referred Claimant to Dr. Joseph Fillmore for pain management.

102. On February 24, 2014, Claimant underwent an IME with neurologist Eric Hammerberg, M.D., on February 24, 2014. As part of his IME, Dr. Hammerberg performed an extensive record review. Dr. Hammerberg's impression was chronic pain

syndrome, lumbar disc disease, status post L4-5. Dr. Hammerberg concluded that Claimant's lower extremity symptoms are "characterized by referred pain from her lower back and weakness due to diabetic neuropathy." Dr. Hammerberg indicated that the electrodiagnostic studies Dr. Treihaft performed showed slightly greater chronic partial denervation in the L5 myotome, such findings were more likely the result of diabetic lumbosacral plexopathy, or bilateral peroneal neuropathy due to compression at the head of the fibula. Dr. Hammerberg opined that Claimant had not reached MMI for the December 19, 2007 work injury, and that Claimant needed chronic pain management in order to reach MMI. Dr. Hammerberg suggested work restrictions. In response to the question, "Are the restrictions solely related to the 12/19/07 injury or do her other conditions impact the restrictions?" Dr. Hammerberg replied that they were primarily related to the diabetic neuropathy.

103. On March 7, 2014, Claimant reported to Dr. Bisgard that she was not doing better. Dr. Bisgard opined Claimant would not be able to go back to her normal duties with Employer, and she recommended that Claimant have a Functional Capacity Evaluation ("FCE").

104. On April 7, 2014, Claimant underwent a FCE evaluation from Mary Horacek, OTR, at HealthOne. As a result of her testing, Ms. Horacek concluded that Claimant was functioning in the sedentary work category, with frequent postural weight shifting to include short periods of standing. Ms. Horacek further opined that Claimant had the strength to move towards the light work category if her pain levels were better controlled. The FCE was interpreted as being valid.

105. On April 16, 2014, Dr. Bisgard noted her disagreement with Dr. Hammerberg's opinion that Claimant's need for work restrictions was due primarily to her diabetic neuropathy. Dr. Bisgard noted that Claimant's FCE put her in a sedentary position. Dr. Bisgard noted that Claimant had been doing some bookkeeping work for the tanning salon business, which Claimant tolerated at a limited basis.

106. On May 7, 2014, Dr. Bisgard placed Claimant at MMI, with a 20% whole person rating related to her specific disorders of the lumbar spine, including surgeries, a 19% whole person related to lumbar range of motion deficits, and an 11% whole person rating related to neurological disorders. Dr. Bisgard apportioned out the January 5, 2011 rating, but she otherwise related all of the permanent impairment to the work injury.

107. Dr. Bisgard imposed work restrictions as follows: Claimant's carrying was limited to 5 pounds, walking and standing were limited to 10 minutes, sitting no more than 90 minutes, and at times she needed to take breaks to lie down or change positions. Dr. Bisgard also indicated Claimant was restricted to no kneeling, crawling, squatting, or climbing, and her bending was limited to occasional only. Dr. Bisgard had spoken to the therapist who performed the FCE who apparently reported that Claimant was unable to complete a large portion of the FCE due to pain. Dr. Bisgard related all of the work restrictions to the work injury.

108. Dr. Bisgard's final diagnoses were: lumbar spondylosis and stenosis, pre-existing but permanently aggravated by work-related injury in 2007. Status post L4-5 fusion with revision and disk excision; diabetic polyneuropathy, not claim related; residual L5 radiculopathy with foot drop; chronic narcotic use. Dr. Bisgard continued to recommend pain management with Dr. Fillmore as maintenance care.

109. On June 2, 2014, Insurer filed a Notice and Proposal for a DIME. Dr. Robert Kawasaki was selected as the DIME physician for this claim.

110. On August 13, 2014, Dr. Kawasaki issued a comprehensive DIME report, which included a detailed medical record review, and was over 45 pages long. Dr. Kawasaki noted that as part of the DIME he reviewed several pages of Claimant's notes that Claimant included in her paperwork, and he obtained an oral history directly from Claimant. Dr. Kawasaki also performed a physical examination.

111. Dr. Kawasaki noted in his report that Claimant told him following her injury she was never back to baseline, and she continued with pain in her low back over the years that continued to increase. Claimant expressed concern about her back when her case closed in 2011. Dr. Kawasaki documented that Claimant reported increased and worsening pain in October 2012.

112. Dr. Kawasaki opined that Claimant was appropriately treated through MMI on July 8, 2008 for symptomatology related to the work injury, and he agreed with Dr. Bisgard's decision to place Claimant at MMI on that date with no impairment.

113. Dr. Kawasaki noted that while Claimant's lumbar MRI showed underlying L4-5 stenosis, "the patient had no signs or symptoms or neurologic findings for claudication or radiculopathy." Dr. Kawasaki explained his opinion that Claimant's post MMI conditions were not relatable to the work injury. He opined that Claimant had an abrupt onset of symptomatology 13 months post-MMI, and that such four-day onset of pain prior to August 20, 2009 would not be related to her work injury. He opined that the stenotic symptomatology related to the progression of the lumbar stenosis and having underlying risk factors including severe diabetes mellitus with complications including polyneuropathy and arterial insufficiency but also hypertension. He concluded that the symptomatology that presented in August 2009 and progression of the lumbar stenosis would have developed in this patient regardless of the work injury.

114. Dr. Kawasaki stated that Claimant's medical treatment between August 20, 2008 and January 11, 2011 focused on facetogenic pain which is part of spondylosis. He noted that Claimant did not have evidence of facetogenic pain up to the date of MMI, July 8, 2008. Dr. Kawasaki opined that Claimant was essentially symptom free at MMI. Dr. Kawasaki apparently did not credit Claimant's subjective reports to the contrary.

115. Dr. Kawasaki opined that the treatment Claimant received was appropriate for her now symptomatic lumbar spondylosis and stenosis with therapies, chiropractic treatments, injections, even rhizotomy procedures. However, the need for these

treatments within medical probability is not related to the original December 19, 2007 workers' compensation injury.

116. Dr. Kawasaki noted that in December 2012, Claimant presented again to Dr. Bisgard's office with clearly progressive stenosis, spondylolisthesis, neural claudication, and progressive polyneuropathy. He indicated that "the progression of stenosis, development of spondylolisthesis, development of neural claudication, and worsening of diabetes mellitus/polyneuropathy with medical probability cannot be attributed to the patient's original 2007 injury, which is a different complex of symptomatology at the time of the 07/08/2008 maximum medical improvement with no impairment."

117. Dr. Kawasaki acknowledged that this is a very difficult case, and he is sympathetic to Claimant, but he had a duty as a DIME provider to first assess causation, and the causation of Claimant's symptoms resulting in treatment which started on August 20, 2009, within a reasonable degree of medical probability, was unrelated to the work injury.

118. Dr. Kawasaki opined that the work injury is a sacral contusion, left wrist contusion, lumbar strain, and left shoulder strain, which was properly treated and brought to MMI on July 8, 2008, and that Claimant's L4-5 spondylosis, stenosis, spondylolisthesis, and neural claudication, are not relatable to the December 19, 2007 injury. Dr. Kawasaki ultimately concluded Claimant reached MMI July 8, 2008, with no impairment, and that Claimant's impairment ratings as documented by Dr. Bisgard were for a progression of Claimant's spinal disorder, and not relatable to her work injury or claim.

119. Dr. Kawasaki noted Claimant's "current restrictions and need for medical care related to her non-work-related lumbar stenosis, neurogenic claudication, radiculopathy, and polyneuropathy are not relatable to the original injury."

120. On September 17, 2014, Insurer filed a FAL consistent with the opinions of Dr. Kawasaki. Respondents admitted for a retroactive MMI date of July 8, 2008. As a result, Respondents claimed an overpayment in the amount of $72,099.19 which represented temporary and permanent partial disability benefits paid after July 8, 2008.

121. Claimant testified that since the September 17, 2014 FAL was filed, she has had to receive her prescription pain medications related to her injury from KP. She testified that she has had out-of-pocket expenses related to her prescription drugs and that she would like to be reimbursed.

122. Throughout the Claimant's workers' compensation claim, she pursued medical treatment with her primary care physician for treatment of her non-work related medical conditions. Between May 2009 and August 2009, Claimant had several visits at Kaiser Permanente (KP). These medical records do not document reports of low back or right leg pain. The ALJ gives this lack of documentation little weight for the following reasons:

- Claimant saw Dr. Alijani for her shoulder on February 13, 2008 and did not report buttocks or back pain yet on February 1 and 22, she reported back and buttocks pain to HealthOne providers and completed pain diagrams documenting such complaints. Again on March 12, 2008, Claimant saw Dr. Alijani and there no documented reports of back or buttocks pain despite the fact she was simultaneously receiving treatment for those problems at HealthOne.

- On May 11, 2009, Claimant had a preventative physical examination at KP. KP documented her "Active Problem List" as premenstrual tension syndrome, arthritis, hypertension, DM1 with diabetic neuropathy, depression, osteoarthritis of the hand, anxiety, asthma, retinal drusen, rhinitis, shoulder impingement syndrome, shoulder osteoarthritis, and a rotator cuff tear.

- At her August 17, 2009 KP visit, Claimant did not report any symptoms other than eye symptoms because that was the apparent reason for the visit.

- During her August 3, 2009 KP visit, Claimant reported as the reason for her visit "foot injury." There is no mention of any symptoms related to her other alleged active problem list noted above.

- On August 14, 2009, Claimant had a KP visit with OB/GYN. There is no mention of the eye problem she presented with just three days later.

- When Claimant returned to HealthOne on August 20, 2009, she did not report all of the symptoms for which she had just received treatment at KP.

- On May 2, 20008, Dr. Elder documented Claimant's low back pain, but on subsequent visits he did not.

- On May 24, 2008, while still receiving treatment for low back and buttock pain, Claimant presents at HealthOne with complaints of chest pain. There is no mention of the buttocks symptoms.

123. Between July 2008 and August 2009, Claimant also had physical therapy for a diagnosis of "Right C7 cervical radiculopathy" made by Dr. Elder. There is no mention of low back or right leg pain in the physical therapy records. Again, the ALJ gives such absence of documentation in the records little weight for the reasons set forth above. Based on the records in evidence, the ALJ cannot infer that because a medical record is silent about any of Claimant's conditions that Claimant is not experiencing symptoms related to those conditions.

124. On September 24, 2014, Claimant applied for hearing. Within her hearing application, Claimant stated: "Claimant will attempt to overcome the DIME impairment rating". Claimant also endorsed the issue of PTD.

125. During the hearing, Dr. Bisgard explained that Claimant appeared stoic during her medical examinations. At times, the Claimant minimized her symptoms

when Dr. Bisgard would ask the Claimant how she was doing. Dr. Bisgard testified that she believed Claimant's symptoms never fully resolved following the first time she placed Claimant at MMI in July 2008.

126. Dr. Bisgard explained that initially all of Claimant's treatment providers directed treatment at Claimant's hip when it was actually her lumbar spine causing Claimant's symptoms. Dr. Bisgard credibly opined that Claimant's work injury aggravated her pre-existing underlying spinal stenosis.

127. Dr. Bisgard also commented on Claimant's left lower extremity symptoms. She explained that Claimant had no previous left lower extremity symptoms until after the surgery Dr. Prall performed on July 3, 2013. Dr. Bisgard testified that that the surgery caused sudden disc extrusion on the left side, and that this problem is not at all related to Claimant's pre-existing diabetes.

128. Dr. Roth testified during the hearing. He reiterated the opinions he set forth in his November 15, 2010 report. Dr. Roth also testified that he reviewed new information and records obtained since November 2010 and reassessed causation. He opined that as a result of the December 19, 2007 work injury, the Claimant sustained a right gluteal contusion. Dr. Roth testified that Claimant's improvement in her symptoms by July 8, 2008 supports the diagnosis of a sprain/strain or contusion.

129. Dr. Roth agreed with Dr. Kawasaki's opinions that Claimant received appropriate treatment for her work-related fall and with the July 8, 2008 MMI determination with no permanent impairment.

130. Dr. Roth agreed with Dr. Kawasaki that Claimant's onset of symptoms in August 2009 was not related to her work injury, but was due to progression of diabetic polyneuropathy, lumbar spondylosis and symptomatic spinal stenosis, and that those conditions are not work-related. Dr. Roth further opined that Claimant met many of the risk factors for development of L4-5 spinal stenosis, and that she would have become symptomatic regardless of the work injury. Dr. Roth stated that Claimant did not suffer a direct spinal trauma that changed Claimant's anatomy nor did her fall aggravate or accelerate the degenerative process.

131. Dr. Roth concurred with Dr. Kawasaki's opinions that all of the treatment Claimant received subsequent to October 2008 was unrelated to the December 2007 work injury.

132. Dr. Roth admittedly never examined or talked to the Claimant.

133. Dr. Roth also testified that based on Claimant's initial response to the July 3, 2013 surgery it was probable that the pathology at L4-5 was the pain generator for Claimant's low back and right leg symptoms. He also agreed that Claimant did not have "excruciating left leg pain" prior to the July 3, 2013 surgery, and the surgery resulted in a disc fragment in the left side at L4-5 which caused the onset of the left lower extremity symptoms. He agreed that Claimant's diabetes did not cause development of her left lower extremity symptoms.

134. The Claimant credibly testified, and the ALJ finds that her symptoms never fully resolved after MMI in 2008 or after MMI in 2011.

135. The credible and persuasive evidence demonstrates that Dr. Kawasaki's opinion that Claimant sustained zero impairment is incorrect. From a legal perspective, the ALJ cannot credit Dr. Kawasaki's opinions concerning causation or permanent impairment related to any treatment prior to January 5, 2011. The FAL filed on January 5, 2011 closed the issue of causation of Claimant's low back symptoms, including L4-5 stenosis, facetogenic pain, and reduced lumbar range of motion. With respect to Dr. Kawasaki's opinions regarding the cause of Claimant's conditions once the claim was reopened on June 25, 2013, clear and convincing evidence demonstrates that he was incorrect regarding his causation analysis. Both Drs. Bisgard and Goldman related the Claimant's need for surgery to her work injury, and even Dr. Saint-Phard attributed the need for the surgery, in part, to the work injury. Regardless, the July 3, 2013 surgery was a procedure authorized by the Insurer and it worsened Claimant's condition by bringing on brand new symptoms. From a legal perspective, the worsening due to the authorized surgery represents a compensable causally-related component of Claimant's injury which Dr. Kawasaki understandably did not consider.

136. The ALJ adopts the permanent restrictions imposed by Dr. Bisgard. Dr. Bisgard's restrictions are based upon the FCE findings and Claimant's subjective reports of pain and limitations which the ALJ finds credible, and the most accurate representation of her functional abilities.

137. Claimant, a high school graduate, completed two additional years of college. Claimant's work history is significant for skilled, and semi-skilled sedentary work, including work in the following occupations: cashier, retail sales, bank teller, bank teller supervisor, telephone collections representative; manager, supervisor and trainer of a 150 person call center; and employment staffing agency manager.

138. Claimant's duties included a full array of administrative tasks, including supervising, managing, hiring, firing, and auditing, and through these jobs Claimant developed exceptional customer relation skills, computer skills, and phone skills. Claimant also worked two home-based sales positions, one in cosmetics, and one in jewelry. Claimant often worked autonomously.

139. In 2012, Claimant and her significant other, Patrick Kelley, purchased a tanning salon business in Parker, Colorado. Claimant is identified as an owner of that tanning salon in her medical records, on the company website, and in a testimonial she provided for a training company. Claimant testified that she is no longer an owner of the salon, and she is not deriving any income from the business.

140. Various medical records, all of which pre-date Claimant's 2013 surgery, indicate that Claimant reported working in the tanning salon part time, managing the salon, performing bookkeeping for the salon, performing management, sales, and software upgrades for the salon, performing computer related work for the salon, and marketing for the salon. Mr. Kelley testified that Claimant occasionally assists him with

the salon, but he does not characterize her work as management. Mr. Kelley admitted that neither he, nor Claimant, take a paycheck, or derive a profit, from the salon at this point.

141. Claimant testified that every time she stands up or walks, she has shooting pain down her left leg and in her low back. She explained that at times, her low back pain “grips [her] so bad it can drop [her] to the ground.” Claimant described her pain as 8 out of 10 during the hearing because of the excessive sitting. She explained she would normally never sit for that long. Normally, the Claimant would lie down flat once her pain levels started increasing. Claimant testified that she can sit for about 15-20 minutes at one time then she needs to shift or adjust her body by standing, walking or lying down. She believes she can walk about 15 to 20 steps without her walker and for approximately 10 minutes with her walker. Claimant only drives a car about six times per month for no longer than approximately 20 minutes. Claimant described her sleep patterns as “horrible.” She explained that she sleeps on average three to four hours per night.

142. Claimant cannot clean or cook, but she does attempt some limited household chores such as folding clean clothes and emptying the dishwasher, both of which she does in a seated position. She explained that she can only stack up the dishes on the counter because she cannot put them away.

143. Claimant testified that on bad days she cannot engage in any activities, including reading or watching television, because she focuses on how to alleviate her pain and she needs quiet. She has two or three bad days each week.

144. Katie Montoya performed a vocational evaluation of the Claimant at Claimant’s request. Ms. Montoya interviewed the Claimant and reviewed medical records. Ms. Montoya evaluated Claimant’s work history and concluded that based on the work restrictions imposed by Dr. Bisgard, and the Claimant’s reported limitations, the Claimant would not be able to return to work in any kind of marketable capacity. Ms. Montoya noted that if she relied upon Dr. Kawasaki’s opinions then Claimant’s inability to work would be would be unrelated to her work injury.

145. Cynthia Bartmann, a rehabilitation counselor, preformed a vocational evaluation at Respondents’ request and issued a report. Ms. Bartmann met the Claimant and obtained a work history and discussed Claimant’s physical limitations. Ms. Bartmann also reviewed Claimant’s medical records. Ms. Bartmann noted that Claimant attributes her physical limitations to her work injury but that the “medical documentation indicates overwhelmingly that these symptoms are related to her other medical conditions.”

146. Ms. Bartmann completed market research in customer service (based on Claimant’s transferable skills) and in the sedentary work category. Ms. Bartmann concluded that Claimant has marketable transferable skills and that there are jobs available to the Claimant using the most restrictive work restrictions imposed by Dr. Bisgard. Ms. Bartmann identified several jobs she believed fell within Claimant’s work

restrictions. Ms. Bartmann also commented that Claimant should have no work restrictions for her work injury and that her injury is not a significant factor in her ability to work.

147. Ms. Montoya testified by deposition. She reiterated her opinions that although Claimant has a good strong skill base, she would be unable to maintain a job if she needed to take too many breaks or miss work. She disagreed that Claimant could maintain any of the jobs identified by Ms. Bartmann. Ms. Montoya opined the employers would not tolerate lack of productivity due to frequent breaks which would render her unable to maintain a job even a job Claimant can work from home.

148. When Ms. Montoya met with the Claimant, Ms. Montoya observed that Claimant had lost her composure over having to retrieve her cell phone from her car and the physical pain that resulted from the roundtrip walk to her car.

149. Ms. Montoya admitted that Claimant's transferable skills, work experience, age, education, and the labor market would not prevent the Claimant from obtaining or maintaining employment. Ms. Montoya, however, considered whether Claimant could maintain employment based on Claimant's subjective reports that her pain levels require her to lie down, take breaks or walk around. No medical doctor specifically limited the hours Claimant could work, but Ms. Montoya indicated that Claimant attempted to work for the tanning salon but experienced difficulty with even the limited tasks she performed for the salon.

150. Ms. Bartmann testified by deposition. She reiterated her opinion that Claimant is capable of earning a wage whether based on the FCE results or Dr. Bisgard's restrictions. Ms. Bartmann observed that when Dr. Bisgard issued restrictions at the time of MMI, Dr. Bisgard did not specify for how long the Claimant would need to take breaks to change positions or lie down nor did Dr. Bisgard specifically state that Claimant may miss time from work. Ms. Bartmann indicated that it is standard for an employee to be off task for 10 to 15 percent of the work day and that if Claimant's breaks were short, intermittent breaks, Claimant would be able to maintain employment.

151. Ms. Bartmann disagreed with Ms. Montoya's opinions that Dr. Bisgard's restrictions would preclude Claimant from maintaining employment. Ms. Bartmann explained that she only considered the permanent work restrictions imposed at the time of MMI, and not the additional restrictions Claimant or Dr. Bisgard identified at hearing. Ms. Bartmann agreed that if Claimant called in sick two or three times per week she would not be able to maintain employment.

152. Claimant has a pre work injury medical history significant for diabetes mellitus 1 with neuropathy, diabetic retinopathy, hypertension, hyperlipidemia, high blood pressure, asthma, arthritis, depression, anxiety, sciatica, and a left shoulder injury requiring surgery.

153. Despite any pre-existing conditions, the Claimant was working full duty full time, taking spinning classes, walking and doing Pilates before her work injury. There

are no medical records documenting pre-existing low back or leg symptoms. Claimant enjoyed a normal active life prior to the work injury.

154. The ALJ finds that the work injury, and subsequent authorized medical treatment, substantially impacted the Claimant's life, and represents a significant causative factor in her inability to earn a wage.

CONCLUSIONS OF LAW

General

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

Claim Status

This is a highly complex case spanning over eight years of medical treatment with numerous intertwined legal issues, which will be addressed in turn starting with the legal status of this claim. Respondents admitted liability for Claimant's December 19, 2007 work-related slip and fall. Respondents filed a final admission of liability on August 26, 2008. Claimant did not object and the claim closed as to all issues admitted. The Respondents then voluntarily reopened the claim on March 15, 2010 by filing a general admission of liability. The Claimant received medical treatment and the Respondents filed their second final admission of liability on January 14, 2011. The Respondents admitted for medical treatment directed at symptoms in Claimant's low back and leg, which included treatment directed at Claimant's L4-5 stenosis and facet problems. The Respondents also admitted for permanent impairment related to decreased lumbar range of motion and rhizotomy procedures. The Claimant did not object and the claim closed as to all issues admitted.

Section 8-43-203(2)(b)(II), C.R.S., provides that when a final admission of liability is filed, the claim is "closed as to the issues admitted" if the claimant does not contest the final admission. Section 8-43-203(2)(d), C.R.S., provides that when a claim is "closed pursuant to this subsection (2), the issues closed may only be reopened pursuant to section 8-43-303" which includes, among other bases, a change in the claimant's condition.

After a case is reopened based on a change in condition, the causation issue is limited to whether there is a change in the claimant's physical condition that is causally connected to the original compensable injury. The original finding of causation cannot be challenged in post-reopening proceedings. *See City and County of Denver v. ICAO*, 58 P.3d 1162 (Colo. App. 2002); *Stevens v. Express Personnel Services*, 4-301-502 (ICAO 2001).

But for the March 15, 2010 general admission of liability, in order for the Claimant to reopen her claim, Claimant would have been required to prove by a preponderance of the evidence that her condition had changed since July 8, 2008, and that such change in condition was causally related to the initial industrial injury. Claimant was relieved of that obligation when the Respondents voluntarily reopened, paid benefits, then issued a final admission of liability admitting for treatment and impairment causally related to the industrial injury.

Under § 8-42-107(8)(b) and (c), a treating physician's determination as to MMI and medical impairment cannot be disputed in the absence of an independent medical evaluation. In this case the issues of MMI and medical impairment were resolved by the uncontested final admission of liability filed by the Respondents based upon Dr. Bisgard's findings. Consequently, these matters were closed and not subject to further litigation. Section 8-43-203(2)(b)(II), (d), C.R.S. 2001; *Cibola Constr. v. Indus. Claim Appeals Office*, 971 P.2d 666 (Colo.App.1998). Thus the DIME physician's opinions concerning causation of conditions treated prior to January 14, 2011 are not given any special weight because those issues have been conclusively resolved by the January 5, 2011 FAL, and Claimant would not be required to prove by clear and convincing evidence that his opinions are clearly wrong in order to avoid a reduction in the permanent impairment assigned by Dr. Bisgard on January 5, 2011. The Respondents are bound by that final admission.

Quasi-Course and Scope of Employment

The Respondents again voluntarily reopened the Claimant's claim, and filed a general admission of liability on June 25, 2013, admitting for medical benefits and temporary total disability benefits. Claimant then went on to receive additional medical treatment authorized by the Insurer, including a surgery that actually worsened the Claimant's overall medical condition.

Under the quasi-course of employment doctrine, an injury occurring during authorized medical treatment for an industrial injury is compensable. An employer is required to provide medical treatment, and an injured employee is required to submit to it. *Excel Corp. v. Indus. Claim Appeals Office*, 860 P.2d 1393 (Colo. App.1993). The doctrine holds the employer and insurer liable for injuries caused by authorized medical treatment provided for the original work injury. *Price Mine Service v. Industrial Claim Appeals Office,* 64 P.3d 936 (Colo. App. 2003); *Excel Corp. v. Industrial Claim Appeals* Office, 860 P.2d 1393 (Colo. App. 1993*); Ferrenburg v. Best Western Landmark Hotel*, W.C. Nos. 4-357-688, 4-386-527, 4-390-936, & 4-410-543 (ICAO 2000).

As found above, the authorized surgery Dr. Prall performed on July 3, 2013 resulted in development of left lower extremity symptoms, which Claimant had never before experienced. Dr. Goldman stated that he was certain the extruded disc caused by the surgery contributed to radiculitis in Claimant's left lower extremity. Dr. Roth agreed that Claimant had no left leg symptoms before the surgery, and that the surgery caused development of the left sided symptoms. Dr. Prall even performed a corrective surgery which did little to alleviate Claimant's symptoms. Dr. Bisgard concurred that the surgery brought on new left lower extremity symptoms. The ALJ acknowledges that Claimant's pre-existing diabetes is contributing to her symptom complex, but the opinions of Drs. Bisgard, Goldman and Roth agree that the new left lower extremity symptoms are not related to Claimant's diabetes. Rather, they are directly due to the authorized surgery.

To the extent Respondents assert that the need for the July 3, 2013 surgery was not related to the Claimant's initial injury, the ALJ is not persuaded. As found above, the Claimant's credible testimony concerning her ongoing symptoms after July 2008 combined with the opinions of Drs. Bisgard and Goldman persuasively establish that the Claimant's need for ongoing treatment after January 2011 was causally related to her industrial injury. Both physicians opined, and the ALJ agrees, that the work injury caused an aggravation of Claimant's underlying stenosis and spondylolisthesis, which was the reason for the surgery. However, the Claimant need not even prove that the need for her surgery was related to the injury. She must merely prove the surgery was authorized, which, in this case, is undisputed. In *Tanner v. Synthes USA*, W.C. 4-714-037 and 4-717-509 (ICAO 2008,), the Industrial Clams Appeals Panel upheld an ALJ's decision that an injury resulting from authorized treatment is compensable even if the body part being treated was not a compensable component of the claim. The ALJ concludes that the injuries Claimant suffered as a result of the July 3, 2013 surgery are the liability of the Insurer pursuant to the "quasi-course of employment doctrine."

Permanent Total Disability

In order to prove permanent total disability, claimant must show by a preponderance of the evidence that he is incapable of earning any wages in the same or other employment. Section 8-40-201(16.5)(a), C.R.S. A claimant therefore cannot receive PTD benefits if he or she is capable of earning wages in any amount. *Weld County School Dist. RE-12 v. Bymer*, 955 P.2d 550, 556 (Colo. 1998). The term "any wages" means more than zero wages. See, *Lobb v. ICAO,* 948 P.2d 115 (Colo. App.

1997); *McKinney v. ICAO*, 894 P.2d 42 (Colo. App. 1995). In weighing whether claimant is able to earn any wages, the ALJ may consider various human factors, including claimant's physical condition, mental ability, age, employment history, education, and availability of work that the claimant could perform. *Weld County School Dist. R.E. 12 v. Bymer*, at 550, 556, 557. The critical test is whether employment exists that is reasonably available to a claimant under his particular circumstances. *Id.*

The claimant is not required to establish that an industrial injury is the sole cause of his inability to earn wages. Rather the claimant must demonstrate that the industrial injury is a "significant causative factor" in her permanent total disability. *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986). Under this standard, it is not sufficient that an industrial injury create some disability which ultimately contributes to permanent total disability. Rather, *Seifried* requires the claimant to prove a direct causal relationship between the precipitating event and the disability for which the claimant seeks benefits. *Lindner Chevrolet v. Industrial Claim Appeals Office,* 914 P.2d 496 (Colo. App. 1995), *rev'd on other grounds*, *Askew v. Industrial Claim* Appeals Office, 927 P.2d 1333 (Colo. 1996).

The opinion of a DIME physician carries no extraordinary weight in regard to issues not assigned by statute to a DIME determination. Those determinations are limited to MMI and the permanent impairment rating. Section 8-42-107(8)(b)(II) & (c), C.R.S. The opinions of a DIME physician have only been given presumptive effect when expressly required by the statute. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 190 (Colo. App. 2002), (DIME opinion not given deference regarding the right to reopen), *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). (DIME opinion concerning causation need not be overcome by clear and convincing evidence where dispute involved the "threshold requirement" that the claimant establish a compensable injury); *Story v. Indus. Claim Appeals Office*, 910 P.2d 80 (Colo.App.1995)(DIME determination of MMI did not preclude change of physician order where only "Grover" medical benefits sought). The determination then, by the ALJ that the claimant is entitled to PT benefits, is to be made by considering the preponderance of the evidence. The determination of the DIME physician as to which body parts and resulting work restrictions were related to the work injury can be considered, but they are not entitled to additional weight by the statute. The ALJ may consider them on the same basis as other expert opinions regarding work limitations. There is no procedural reason that a hearing cannot feature simultaneous arguments over both the DIME physician determinations and eligibility for PT benefits.

The Claimant has proven that she is unable to earn a wage, and that her work injury is a significant causative factor in her inability to earn a wage. As found, the work restrictions imposed by Dr. Bisgard most accurately reflect Claimant's physical limitations and abilities. The ALJ credits the opinions of Dr. Bisgard that the restrictions are all attributable to Claimant's industrial injury. The Claimant also credibly testified that she experiences extreme pain most of the time requiring her to lie flat to alleviate the pain. She also has difficulty with household chores and activities of daily living. The ALJ appreciates that Claimant has a pre-existing history of diabetes, and other health conditions, that are likely contributing to Claimant's chronic problems, but prior to the admitted work injury and authorized surgery, the Claimant was working full time at full duty, exercising regularly and living a normal and productive life.

Although the Claimant has gained significant transferrable job skills, Ms. Montoya credibly and persuasively opined that the work restrictions and her physical condition would hinder Claimant's ability to maintain employment. Ms. Montoya admittedly did not research the availability of specific jobs the Claimant could perform because after meeting the Claimant and evaluating the medical records, Ms. Montoya concluded that Claimant would have serious difficulty maintaining a job rendering it meaningless to research specific jobs.

Ms. Bartmann relied only on the work restrictions imposed by Dr. Bisgard at the time of MMI and refused to consider Claimant's subjective complaints. Ms. Bartmann also had the opinion that Claimant's physical limitations were unrelated to the work injury, an opinion shared by Drs. Kawasaki and Roth. However, the ALJ has considered all of the medical opinions in this case and concludes that both Drs. Kawasaki and Roth are incorrect for the reasons set forth herein. As such, Ms. Bartmann's opinions are not as persuasive as those of Ms. Montoya. Claimant has proven that she is permanently and totally disabled as a result of her work-related injuries.

Overcoming the DIME

To the extent that it is necessary to determine whether Claimant overcame the DIME opinions of Dr. Kawasaki, the ALJ concludes that the Claimant has met her burden. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probably the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Id.* A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000).

The Respondents assert that Claimant failed to properly endorse the issue of overcoming the DIME opinions regarding maximum medical improvement, making Dr. Kawasaki's opinion as to MMI binding. As stated above, Dr. Kawasaki's opinion regarding MMI cannot be legally binding in light of the uncontested January 14, 2011 FAL. At the earliest, Claimant reached MMI on January 5, 2011.

Regarding Dr. Kawasaki's opinions on permanent impairment, the credible and persuasive evidence demonstrates that Dr. Kawasaki's opinion that Claimant sustained zero impairment is incorrect. Dr. Kawasaki's opinions concerning causation or permanent impairment related to any treatment prior to January 14, 2011 are not credited. The FAL filed on January 14, 2011 closed the issue of causation of Claimant's low back symptoms, including L4-5 stenosis, facetogenic pain, and reduced lumbar range of motion. With respect to Dr. Kawasaki's opinions regarding the cause of Claimant's conditions once the claim was reopened on June 25, 2013, clear and convincing evidence demonstrates that he was incorrect regarding his causation analysis. Both Drs. Bisgard and Goldman related the Claimant's need for surgery to her work injury, and even Dr. Saint-Phard attributed the need for the surgery, in part, to the work injury. Regardless, the July 3, 2013 surgery was a procedure authorized by the Insurer and it worsened Claimant's condition by bringing on brand new symptoms. From a legal perspective, the worsening due to the authorized surgery represents a compensable causally-related component of Claimant's initial injury which Dr. Kawasaki understandably did not consider. As such, Dr. Kawasaki clearly erred when assigning a zero percent impairment.

Maintenance Medical Treatment

To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of the condition. *Grover v. Industrial Commission,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a Claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a Claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

The Claimant has proven entitlement to ongoing maintenance medical care. As credibly opined by Dr. Bisgard, Claimant needs chronic pain management to maintain her condition or prevent further deterioration. The opinions of Drs. Roth and Kawasaki to the contrary are not persuasive because they have erroneously concluded that all treatment after July 8, 2008 was unrelated to the work injury.

Claimant has also been receiving pain medications through her private health insurer. She stated in her testimony that she would like to be reimbursed for out-of-pocket expenses related to the maintenance prescription medications but this issue was not identified at the commencement of hearing, and there was no specific evidence as to the amounts. As such, the ALJ declines, at this time, to order the Respondents to reimburse her for any out-of-pocket expenses associated with maintenance medications.

Overpayment

The issue of overpayment is rendered moot. The Respondents cannot prove an overpayment because they were liable for all of the TTD and PPD paid to the Claimant thus far.

ORDER

It is therefore ordered that:

1. The Claimant is permanently and totally disabled as a result of her work injury.

2. The Claimant is entitled to maintenance medical care.

3. The Claimant is entitled to an increased award of TTD based on the recent stipulated AWW.

4. Respondents are entitled to all applicable offsets and credits.

5. Respondents' claim for overpayment is denied.

6. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove by a preponderance of the evidence that he sustained an injury arising out of and in the course of his employment?

- Did Claimant prove by a preponderance of the evidence that he is entitled to an award of temporary total disability benefits from August 12, 2015 thought October 29, 2015?

- Did Claimant prove by a preponderance of the evidence that he is entitled to an award of reasonable, necessary and related medical benefits?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. At hearing the parties stipulated that if the claim is found to be compensable the Respondents will pay temporary total disability benefits at the maximum rate from August 12, 2015 through October 29, 2015. The parties also stipulated if the claim is found to be compensable the Respondents will pay reasonable, necessary and related medical expenses including the cost of treatment provided by Swedish Hospital, Seattle, Washington Fire Department and Dr. Alan Ng.

2. On August 10, 2015 Claimant was employed as a co-pilot in the Employer's airline business.

3. Claimant credibly testified as follows. On August 10, 2015 he was co-piloting an aircraft that landed in Seattle, Washington. Claimant was scheduled to spend the night in Seattle and fly to Denver, Colorado the following day. After arriving at the hotel where he was scheduled to stay overnight Claimant made arrangements with the captain to meet for dinner. The captain suggested meeting at 4:00 p.m. but Claimant wanted to exercise so the dinner was "pushed back" to 5:00 p.m. Claimant left the hotel at approximately 4:00 p.m. and jogged to Seattle's "harbor steps" located approximately one-half mile from the hotel. Claimant explained that when he went to the harbor steps he was "mainly exercising" but also "sightseeing." As Claimant was running up the harbor steps he slipped and heard a "pop" in his left lower extremity and was immediately unable to walk. Later that day Claimant was diagnosed with a ruptured Achilles tendon.

4. Claimant credibly testified as follows concerning the policies and procedures governing overnight layovers. After an aircraft lands and the parking and "termination" procedures are complete, pilots are transported to a hotel for the overnight

stay. Pilots do not receive “flight time pay” during the layover. Pilots receive flight time pay only from the moment they release an aircraft’s brakes until they reset the brakes at the point of destination. However, pilots do receive a per diem for overnight stays.

5. Claimant credibly testified as follows concerning a pilot’s status and responsibilities while on layover. During the time a pilot is at the hotel on layover the pilot is not considered to be “on duty.” In fact, federal regulations require that pilots be off duty after completing a certain number of hours in flight. The Employer does not mandate, and in fact cannot mandate, that pilots perform exercise when they are “off duty” during a layover. Pilots are free to choose how they spend layover time and decide for themselves whether and when to exercise, see a movie, sightsee, rest or perform some other activity.

6. Claimant credibly testified that there is a contract between the pilot’s union and the Employer that requires layover hotels to maintain exercise facilities for use by pilots. Claimant stated that the majority of pilots exercise but admitted some do not. Claimant stated that when he reports for duty he must certify that he is physically and mentally fit to fly. Claimant explained that this certification includes the assurance that he is rested and healthy enough to operate the aircraft.

7. Claimant credibly testified that when he is at home in Littleton, Colorado he works out. Claimant stated that when he is at home he usually runs 1 to 2 “vigorous miles” per day.

8. Mr. Robert Early (Early) testified on behalf of Respondents. Mr. Early is the Employer’s “assistant chief pilot” in Denver, Colorado. He has supervisory authority over the Claimant and is familiar with layover procedures for pilots.

9. Early credibly testified that a pilot is considered to be “on duty” from the time the pilot arrives at the airport until 15 minutes after the flight is over. However, a pilot is not considered to be “on duty” while at a hotel during a layover. Early agreed with Claimant that pilots receive “flight time” pay from “brake to brake” and for 15 minutes after the end of the flight.

10. Early credibly testified that the Employer does not require pilots to exercise while on layover and that pilots are “free to do what they want” when they are not on duty. Early opined that a pilot who exercises during a layover does so voluntarily. Early explained that the Employer does not “mandate” that layover hotels have exercise facilities. Rather, the requirement that layover hotels have exercise facilities is a product of the negotiated contract between the pilots’ union and the Employer.

11. Claimant failed to prove it is more probably true than not that he sustained an injury arising out of and in the course of his employment. Rather, the credible and persuasive evidence establishes that it is more probably true than not that while running the harbor steps claimant was voluntarily performing a recreational activity that fell outside the scope of his employment. The credible and persuasive evidence also

establishes it is more probably true than not that when Claimant was injured he was engaged in a “substantial deviation” from the scope of his employment.

12. The credible and persuasive evidence establishes that at the time Claimant injured his Achilles tendon he was engaged in a “recreational activity.” Specifically, the Claimant was primarily engaged in exercise, and to a lesser degree sightseeing, intended to refresh his mind and body.

13. The credible and persuasive evidence establishes that Claimant’s action in running the stairs did not occur during regular work hours. Rather, Claimant credibly testified that he was not “on duty” while staying at the hotel and was not being paid wages while he was at the hotel. Claimant’s testimony is corroborated by Early’s credible testimony that a pilot is “off duty” while staying at the hotel on layover.

14. The credible and persuasive evidence establishes that Claimant’s exercise and consequent injury did not occur on the Employer’s premises. However, the ALJ does not assign much weight to this factor since the very nature of Claimant’s job causes him to be away from the Employer’s premises for long periods of time.

15. The credible and persuasive evidence establishes that the Employer did not “initiate” Claimant’s exercise on August 10, 2015. Claimant admitted that he usually exercises, even when he is at home. Claimant admitted that the Employer does not mandate, and in fact cannot mandate, that a pilot perform exercise while on a layover. Claimant and Early agreed that after a flight has ended and a pilot is on layover the pilot is free to choose what activities he or she will or will not perform, including exercise.

16. There is no credible or persuasive evidence that the Employer exercised any control or direction over Claimant’s decision to exercise on August 10, 2015, or that the Employer exercised control over the method of Claimant’s exercise. To the contrary, Claimant testified that he wanted to exercise when he arrived at the hotel and even “pushed back” dinner plans with his captain in order to have time to run. Early credibly testified that the Employer does not “mandate” any type of exercise program. The ALJ is not persuaded that the contract provision requiring that hotels have exercise facilities demonstrates that the Employer exercised direction and control over Claimant’s exercise. Rather, Early credibly and persuasively testified that the contract requiring that layover hotels maintain exercise facilities is the product of a negotiated contract between the union and the Employer.

17. The credible and persuasive evidence establishes that the Employer probably receives some benefit from the Claimant’s decision to maintain an exercise program. The Claimant’s exercise probably makes it more likely Claimant will be available to fly on assigned dates. However, this fact is not given much weight. The Claimant admitted that it is his responsibility to certify before every flight that he is physically and mentally able to fly. Claimant also testified that he knows that health risks, including the risk of heart attack, increase if a person does not exercise. Indeed, Claimant stated that pilots risk their livelihoods if they do not exercise. The ALJ infers from this evidence that Claimant’s decision to exercise on August 10, 2015 resulted

much more from Claimant's personal desire to stay healthy than it did from any Employer compulsion or influence.

18. The credible and persuasive evidence establishes that Claimant's action in the running the harbor steps was "voluntary." In reaching this determination the ALJ recites Findings of Fact 13 through 17 as if fully set forth. Considering these factors together the ALJ finds that Claimant's decision to run the harbor stairs on August 10, 2015 was a product of and motivated by his own free will. Claimant's decision to run the steps was in no way mandated by the Employer, and was in no was initiated, organized sponsored or financially supported the Employer.

19. At hearing Claimant's Exhibits 1 through 8 were received in evidence. Respondents Exhibits A through F were received in evidence.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201(1). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions.

COMPENSABILITY OF ACHILLES TENDON INJURY

Claimant contends that a preponderance of the evidence establishes that the injury to his Achilles tendon sustained during the layover in Seattle, Washington arose out of and in the course of his employment as an airline co-pilot. Claimant reasons that the injury is compensable because he was in "travel status" on August 10, 2015 at the time the injury occurred. He further argues that running up the harbor steps was reasonably incidental to his travel because he was "ministering to personal needs." In contrast the Respondents argue the Claimant's injury did not arise out of and in the course of his employment. Respondents argue the Claimant was not performing "employment" "at the time of injury because running up the harbor steps constituted "voluntary" participation in a "recreational activity." Respondents further argue that Claimant's injury did not occur within the scope of his employment because the act of running up the stairs constituted a "personal errand" that substantially deviated from the employment relationship. The ALJ agrees with Respondents.

In order to recover benefits Claimant must prove by a preponderance of the evidence that his injury was proximately caused by an injury arising out of and in the course of his "employment." Section 8-41-301(1)(b) & (c), C.R.S*.; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where the claimant demonstrates the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See Triad Painting Co. v. Blair*, *supra.*

An injury sustained during travel initiated at the direct or implied request of the employer is sufficient to satisfy the arising out of and in the course of employment test because such travel is contemplated by the employment contract. *Madden v. Mountain West Fabricators,* 977 P.2d 861 (Colo. 1999). An employee traveling at the direction of the employer is in "travel status" and is considered to be within the course of the employment continuously during the trip. *Phillips Contracting, Inc. v. Hirst*, 905 P.2d 9 (Colo. App. 1995); *Tatum-Reese Development Corp. v. Industrial Commission*, 30 Colo. App. 149, 490 P.2d 94 (1971). The travel status doctrine holds that during employer-directed travel the "risks associated with the necessity of eating, sleeping and ministering to personal needs away from home are considered incidental to and within the scope of the traveling employee's employment." *Phillips Contracting, Inc. v. Hirst*, 905 P.2d at 12.

However, an employee in travel status can engage in some types of "personal errands" that so deviate from employment that the activity falls outside the scope of the employment. The test is whether the activity giving rise to the injury constituted a deviation from the employment so substantial that the activity was removed from the employment relationship. *Silver Engineering Works, Inc. v. Simmons*, 180 Colo. 309, 505 P.2d 966 (1973); *Phillips Contracting, Inc. v. Hirst*, *supra.*

Section 8-40-201(8), C.R.S., provides that when the term "employment" is used in the Act it "shall not include the employee's participation in a voluntary recreational activity or program, regardless of whether the employer promoted, sponsored, or supported the recreational activity or program." Similarly, § 8-40-301(1), C.R.S., provides that when the term "employee" appears in the Act it "excludes" any person "while participating in recreational activity, who at such time is relieved of and is not performing any duties of employment…"

In *McLachlan v. Center for Spinal Disorders, P.C.,* WC 4-780-747 (ICAO July 2, 2010) the claimant was in "travel status," but was injured during his voluntary participation in a recreational street hockey game. The ALJ found the injury was not compensable because participation in the hockey game constituted a substantial deviation from the employment, and because the Claimant's participation in the game was "excluded" from his "employment activity" pursuant to § 8-40-201(8). On appeal the claimant did not dispute the ALJ's determination that his participation in the hockey game involved voluntary participation in a recreational activity. Rather, the claimant argued that he remained in travel status "in the broader sense" and the injury should be found compensable. The ICAO affirmed the ALJ's order. The ICAO reasoned that the clear legislative intent of § 8-40-201(8) and § 8-40-301(1) is "to remove the participation in a voluntary recreational activity from the employment relationship." In order to give effect to the legislative intent of these statutes the ICAO stated that the case presented the "type of injury incurred during a deviation from employment so substantial as to remove it from the employment relationship."

The ALJ is persuaded by the ICAO's reasoning in *McLachlan*. As the ICAO observed, § 8-40-201(8) and § 8-40-301(1) define the terms "employment" and "employee" to exclude voluntary participation in recreational activities. Because the legislature has chosen to define voluntary participation in recreational activities as outside the scope of covered "employment," it would make no sense to conclude the legislature intended a different definition if the injured worker happened to be in "travel status" while participating in the recreational activity. It makes far more sense to hold that the legislature has determined that the risks associated with voluntary participation in recreational activities fall outside the risks associated with employer mandated travel. Therefore, as determined in *McLachlan*, voluntary participation in a recreational activities represents a deviation from travel status that is substantial enough to remove the participation from the scope of employment.

It follows from this discussion that if Claimant's action in running up the harbor steps constituted "voluntary participation" in a "recreational activity" for the purposes of § 8-40-201(8) and § 8-40-301(1), the tendon injury is not compensable. The statutory term "recreational activity" has been defined as an activity that "has a refreshing effect on either the mind or the body." *White v. Industrial Claim Appeals Office,* 8 P.3d 621, 624 (Colo. App. 2000). Participation in physical exercise may be a "recreational activity" depending on the circumstances. When determining whether exercise is a recreational activity the ALJ may consider various factors including the following: (1) Whether the injury occurred during working hours; (2) Whether the injury occurred on the employer's premises; (3) whether the employer initiated the employee's exercise program; (4) Whether the employer exerted any control or direction over the employee's exercise program; and (5) Whether the employer stood to benefit from the employee's exercise program. *Id.* at 623, 624.

The question of whether participation in a recreational activity was "voluntary" for purposes of § 8-40-201(8) requires the ALJ to determine the claimant's "motive" for participating in the recreational activity. The ALJ may consider various factors including the following: (1) Whether the activity occurred during working hours; (2) Whether the activity occurred on or off the employer's premises; (3) Whether the employer required the employee to participate in the activity; (4) Whether the employer initiated, organized, sponsored or financially supported the activity; (5) Whether the employer derived a benefit from the activity. *Dover Elevator Co. v. Industrial Claim Appeals Office*, 961 P.2d 1141 (Colo. App. 1998).

The ALJ notes that § 8-40-301(1) does not state that a person's participation in a recreational activity must be "voluntary" in order to exclude the person from being considered an "employee." However, § 8-40-301(1) does provide that in order for the exclusion to apply the person must be "relieved of" and "not performing any duties of employment." Thus, § 8-40-301(1), like § 8-40-201(8), invites consideration of the injured worker's reasons for participating in the recreational activity. This in turn requires consideration of the degree to which the worker's participation was "voluntary" rather than a product of the employer's compulsion. Thus, the ALJ infers that the five factors described in the *Dover Elevator* case are relevant to and may be considered when determining if the injured employee was relieved of and not performing duties of employment while participating in the recreational activity. *Cf. Dunavin v. Monarch Recreation Corp.,* 812 P.2d 719 (Colo. App. 1991) (decided under predecessor to § 8-40-301(1)).

As determined in Findings of Fact 11 through 18 the credible and persuasive evidence demonstrates that when Claimant was running the harbor steps in Seattle, Washington on the afternoon of August 10, 2015 he was not performing any service arising out of and in the course of his employment. Rather, after considering the relevant legal factors as set forth in Findings of Fact 13 through 18, the ALJ concludes that Claimant was voluntarily participating in a recreational activity within the meaning of § 8-40-201(8), and that he was relieved of and not performing any duties of employment within the meaning of § 8-40-301(1). Consequently, the Claimant by definition was not within the scope of his "employment" at the time he was injured and he was not legally an "employee" for purposes of workers' compensation. Moreover, running the steps constituted a "substantial deviation" from the Claimant's employment so as to render the resulting injuries not compensable. *McLachlan v. Center for Spinal Disorders, P.C., supra.* The claim for workers' compensation benefits must be denied.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the ALJ enters the following order:

1. The claim for workers' compensation benefits in WC 4-991-007-01 is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

1. Whether Claimant proved by a preponderance of the evidence that he suffered a functional impairment contained off the schedule of injuries set forth at C.R.S. § 8-42-107(2), C.R.S. and is entitled to permanent partial disability benefits based upon a whole person conversion of the upper extremity rating.

FINDINGS OF FACT

1. The Claimant is currently employed as a paramedic lieutenant with Employer and is in his 5th year in this position. The Claimant's job is very physically demanding and requires periodic testing to ensure the Claimant meets the physical requirements of the job. The Claimant suffered an admitted injury to his right shoulder in the course of a horse rescue. The horse was trapped in a retention pond at the bottom of a ravine. The Claimant was sent down to cut and clear brush. On the way down into the ravine and he slipped. The Claimant arrested his fall by using his right arm.

2. The Claimant was taken to the Emergency Department at Littleton Adventist Hospital on October 16, 2014. The Claimant reported that he was on a horse rescue in a muddy ravine. While climbing down into the ravine, the Claimant slipped in the mud. The Claimant reported he extended his arm and jammed his right shoulder. The Claimant reported right shoulder pain that was worse with palpation and movement. The Claimant had very limited range of motion of his shoulder and he was sent for an MRI. The right shoulder MRI showed (1) supraspinatus tendon tear; (2) small joint effusion and moderate bursal fluid; (3) fraying and heterogeneity of the superior and anterosuperior glenoid labrum (Claimant's Exhibit 4; Respondents' Exhibit B).

3. The Claimant testified that he treated with his authorized treating physician Sharon Walker. He was initially evaluated by Dr. Walker on October 17, 2014. Dr. Walker reviewed the MRI images and agreed with the findings. She anticipated that the Claimant would undergo surgery for his torn supraspinatus (Respondent's Exhibit C, pp. 10-13). The Claimant underwent surgery performed by Dr. Michael Hewitt on October 28, 2014. The procedures performed included: (1) right shoulder arthroscopic rotator cuff repair; (2) arthroscopic subacromial decompression; (3) distal clavicle co-planing; and (4) examination under anesthesia (Claimant's Exhibit 6; Respondents' Exhibit D).

4. Dr. Walker provided an impairment rating on June 17, 2015. The Claimant reported to Dr. Walker that he was doing good and he had completed physical therapy, finding it helpful. The Claimant reported he was still doing his home exercise program which also helped. He reported that "he still gets discomfort with some overhead activity" such as when he used a chainsaw over head, when was welding overhead and

when he had to pull ceiling tiles during a fire. The Claimant also reported occasional sharp pain if he does something unusual and occasionally he wakes up in the morning with his entire right arm numb. (Claimant's Exhibit 2, p. 4; Respondents' Exhibit C, p. 15). Dr. Walker obtained range of motion measurements and noted a 2% UE impairment for flexion and a 2% UE impairment for abduction and a 1% impairment for external rotation. His range of motion impairments resulting in a 5% UE rating. She also assigned 10% rating for the specific disorder of the distal clavicle excision. Dr. Walker combined these ratings for a 15% upper extremity impairment rating, which, if converted, would be a whole person impairment rating of 9% (Claimant's Exhibit 2, pp. 5-6; Respondents' Exhibit C, pp. 15-16).

5. The Claimant testified that his pain is currently located in his right shoulder, throughout the trapezius and throughout the lower back. The Claimant testified that the pain affects his ability to sleep. The Claimant also testified that other activities of his daily life are also affected including "thinning" or "lemming" activities at his family logging/forest property in Wisconsin. The Claimant testified that now he fatigues more easily and uses a chainsaw slower than before. He estimates that because of this he loses 1 day out of 10 due to his slowness with the chainsaw. The Claimant testified that his activities with the fire department are also impacted. As an example he pointed to instances when he in involved in assisting in out-of-state non-structural wild land fires. He testified that he tires more easily now and has to swap out. The specific fire-fighting activities where the Claimant testified he is impacted due to his include: pulling hose lines, advancing hose lines, pulling ceilings and chainsaw use (such as in the ventilation of roofs – opening soffits). The Claimant testified that although he still meets the standards for his annual physical ability test, his performance is decreased from before the injury. His push-up and pull-up score is lower and his time is slower. His pre-injury time was 2:45 and his post-injury time is around 3:30-3:40. Before the injury, the Claimant was able to do 45 push-ups and after the injury he can do 32. Before the injury, he could do 18 pull-ups and after the injury, only 12 pull-ups.

6. On July 21, 2015 a Final Admission of Liability was filed by Respondents admitting for a 9% scheduled impairment (Respondents' Exhibit A).

7. On August 24, 2015, a Final Admission of Liability was filed by Respondents admitting for a 15% scheduled impairment

8. At the hearing, Dr. Swarsen testified as an expert in the areas of occupational medicine and as to Level II accreditation matters. Dr. Swarsen has not physically examined the Claimant but has reviewed the Claimant's medical records that are admitted exhibits in this case. Dr. Swarsen testified that the shoulder is the scaffolding with which the arm articulates with the rest of the body and it is distinctly different from the arm, although the arm does not function properly without the shoulder. However, the shoulder does have function without the arm as it can have function in terms of scaffolding the body. Dr. Swarsen, referenced the Claimant's operative report at Claimant's Exhibit 6 (Respondents' Exhibit D), while simultaneously referencing illustrations of the anatomy of the shoulder (which was admitted as Claimant's Exhibit

10, including color-coded marks made by Dr. Swarsen during testimony). First, Dr. Swarsen marked the glenohumeral joint on the illustration with a green marker. Then, turning to the operative report, he noted that there was a tear to the supraspinatus tendon which was debrided as part of the procedure. Dr. Swarsen drew a box shape with an orange marker showing the approximate location of the tear and the repair to the supraspinatus. He noted that this repair is located above the glenohumeral joint and within the area of the shoulder complex. Turning back to the operative report, Dr. Swarsen noted that a subacromial decompression (subtotal bursectomy, resection of the coracoacromial ligament, with resection of 5-mm of anterior acromial spur) was also a part of the procedure. Dr. Swarsen colored the location of this repair in blue marker on the illustration and noted that this is in an area above the arm in the shoulder complex. Finally, Dr. Swarsen noted that a distal clavicle co-planing was a part of the procedure. Dr. Swarsen used a red marker to show on the illustration where this took place. He noted that this is above the glenohumeral joint. As a result of the procedures that the Claimant underwent to repair the damage from his work injury, Dr. Swarsen opined that it is typical to experience trapezius muscle problems as a result of the injury, repair and rehabilitation of the rotator cuff with residual loss to the shoulder girdle. Dr. Swarsen testified that conversion from 15% upper extremity rating would result in a 9% whole person impairment rating. Dr. Swarsen opined that the impairment in the Claimant's case should be a whole person rating as opposed to a scheduled loss because it is a loss at the shoulder.

9. On cross-examination, Dr. Swarsen agreed that as he did not physically examine the Claimant, he has not measured any loss of range of motion in this case. Dr. Swarsen also testified that the purpose of the shoulder is really to move the arm and if an arm is not attached to the shoulder, he is not sure if the shoulder has any function.

10. Dr. Allison Fall testified at the hearing as an expert in the areas of physical medicine and rehabilitation and as to Level II accreditation matters. Dr. Fall performed an IME of the Claimant on December 15, 2015 and prepared a written report based on that IME. Dr. Fall testified that in her opinion, the Claimant had a successful rotator cuff repair with some minimal ongoing symptoms. Dr. Fall testified that the Claimant's neurological examination was normal with no pain or crepitus present during provocative maneuvers. On palpation, Dr. Fall did note some tenderness of the trapezius. The Claimant described some ongoing right shoulder pain and limited range of motion without pain. Based on the activities that the Claimant has described that he is able to do, he has a high level of function. Dr. Fall testified that she was not surprised that the Claimant's physical testing scores declined due to the injury, recovery and aging process which can all impact this. However, Dr. Fall opined that it is expected that over time the Claimant can improve strength and conditioning. Dr. Fall opined that, to the extent that the Claimant is experiencing any loss of function, it is at the arm. She opined that the loss of function she observed and measured for the Claimant was related to flexion, extension and abduction of the arm and overall use and function of the arm. With reference to Claimant's Exhibit 10, Dr. Fall testified that the glenohumeral joint and parts described and noted by Dr. Swarsen are all part of the shoulder girdle and the purpose of the shoulder girdle is articulation of the upper extremity. The

purpose of the glenohumeral joint is to allow for articulation of the humerus so the arm can be used and it is not just hanging at the side. Dr. Fall opined that the supraspinatus tendon attaches muscle to bone and is used in rotation of the arm. She opined the acromion is the bony bump at the top of the shoulder that connects the clavicle with the AC joint. Here the Claimant had bone spur from the acromion which was shaved off to give more room for the humeral head which allows for more room in the shoulder to move the arm and avoid impingement.

11. On cross-examination, Dr. Fall agreed that the measurement of abduction, flexion and extension is performed by the shoulder and the trapezius and the point of origin of the trapezius is on the neck and insertion is on the scapula. She agreed that this is on the trunk and not the arm. On re-direct examination, when questioned if the Claimant exhibited any loss of function on the neck or trapezius, Dr. Fall testified that there was a slight registration of pain, but this doesn't equate with a loss of function.

12. The Claimant's credible testimony of pain in his right shoulder, trapezius, and throughout the lower back, along with evidence of impairment, including supporting medical records, and the opinion of Dr. Swarsen, which is persuasive on this issue, is consistent with functional impairment of the Claimant's right upper extremity as well as functional impairment extending past the arm. The functional impairment is evident in the Claimant's range of motion deficits and limitations with overhead work. Specifically, Dr. Walker obtained range of motion measurements and noted a 2% UE impairment for flexion and a 2% UE impairment for abduction and a 1% impairment for external rotation, resulting in a 5% UE impairment rating. His impairments require him to make adaptations in the performance of work duties affect his ability to perform his activities of daily living. Although the Claimant is still at a high level of physical fitness, he has suffered functional impairment as compared to his abilities prior to his injury. Therefore, it is found as fact that, as a result of his October 16, 2015 work injury, the Claimant has a whole person medical impairment compensable under § 8-42-107(8)(c), C.R.S.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Disability Compensation Based on Scheduled Injury vs. Whole Person Impairment

The claimant bears the burden of establishing functional impairment beyond the arm at the shoulder and the consequent right to permanent partial disability benefits under§ 8-42-107(8)(c), C.R.S., by a preponderance of the evidence. *Maestas v. American Furniture Warehouse,* W.C. No. 4- 662-3 69 (June 5, 2007); *Johnson-Wood v. City of Colorado Springs,* W. C. No. 4-536-198 (ICAO June 20, 2005).

The question of whether a claimant sustained a "loss of an arm at the shoulder" within the meaning of § 8-42-107(2)(a), C.R.S. or a whole person medical impairment compensable under § 8-42-107(8)(c), C.R.S. is one of fact for determination by the ALJ. In resolving this question, the ALJ must determine the situs of the claimant's "functional impairment," and the site of the functional impairment is not necessarily the site of the injury itself. *Langton v. Rocky Mountain Health Care Corp.,* 937 P.2d 883 (Colo. App. 1996); *Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo. App. 1996); *Warthen v. Industrial Claim Appeals Office,* 100 P.3d 581 (Colo. App. 2004).

There is no requirement that functional impairment take any particular form in order to be compensable under § 8-42-107(8)(c), C.R.S. Evidence of pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered impairment for this purpose*.* Aligaze *v. Colorado Cab Co. / Veolio Transportation*; W.C. No. 4-705-940 (ICAO April 29, 2009); *Chacon v. Nichols Aluminum Golden, Inc.,* W.C. No. 4-521-005 (ICAO November 29, 2004); *Guillotte v. Pinnacle Glass Company*, W.C. No. 4-443-878 (ICAO November 20, 2001), aff'd., *Pinnacle Glass Co. v. Industrial Claim Appeals Office*, (Colo. App. No. 01CA2386, August 22, 2002) (not selected for publication). The courts have held that damage to structures of the "shoulders" may or may not reflect a "functional impairment" enumerated on the schedule of disabilities. *See Walker v. Jim Fouco Motor Company,* supra*; Strauch v. PSL Swedish Healthcare System,* supra, *Langton v. Rocky Mountain Health Care Corp.,* supra*; Price v. United Airlines,* W.C. No. 4-441-206 (ICAO January 28, 2002); *Johnson-Wood v. City of Colorado Springs,* supra.

In this case, the Claimant’s testimony, substantiated by the medical records, and the opinion of Dr. Swarsen, establish that the Claimant is entitled to a whole person medical impairment compensable under § 8-42-107(8)(c), C.R.S. because he has suffered a functional impairment to a part of the body that is not contained on the schedule. The Claimant has proven by a preponderance of the evidence that the situs of his functional impairment extends beyond the arm at the shoulder. Work activities and other activities of daily living cause pain in his shoulders, trapezius, and throughout the low back such that the Claimant is limited in his ability to engage in actions requiring overhead movement. His impairment requires him to make adaptations in the performance of work duties and in his activities of daily living. Therefore, the Claimant suffered a functional impairment contained off the schedule of injuries set forth at Section 8-42-107(2), C.R.S. and is entitled to permanent partial disability benefits based upon a whole person conversion of the upper extremity rating.

ORDER

It is therefore ordered that:

1. The Claimant suffered a functional impairment contained off the schedule of injuries set forth at C.R.S. § 8-42-107(2), and is entitled to permanent partial disability benefits based upon a whole person conversion of the upper extremity rating.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 633 17th Street, Suite 1300, Denver, Colorado, 80202. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 4, 2016

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Did Claimant prove by a preponderance of the evidence that he sustained an injury or occupational disease proximately caused by the performance of service arising out of and in the course of his employment?

- Did Claimant prove by a preponderance of the evidence that he is entitled to an award of temporary total disability benefits from July 9, 2015 through November 8, 2015?

- Did Claimant prove by a preponderance of the evidence that he is entitled to an award of reasonable, necessary and authorized medical benefits?

- Did Claimant prove by a preponderance of the evidence that he is entitled to an award of disfigurement benefits?

- What is Claimant's correct average weekly wage?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. At hearing Claimant's Exhibits 1 though 3 were admitted into evidence. Respondents' Exhibits A though C were admitted into evidence.

2. Claimant contends he sustained a C6-7 disc herniation proximately caused by the performance of service arising out of and in the course of his employment.

3. Claimant was hired by the Employer on May 18, 2015 to perform the job of Senior Systems Engineer II.

4. On June 6, 2015 the Employer dispatched Claimant to Abu Dhabi to perform services connected to the installation of a computer system. Claimant credibly testified that this job involved "tracing" and "pulling" computer cables. Claimant explained that the cables ran along a rack located approximately 8 feet above the ground. He explained that in order to handle the cables he had to stand on the "back of the rack" and reach overhead with his dominant right hand while "twisting" and "turning" and "looking down." Because the installation project was on a deadline to be completed by July 4, 2015 Claimant was working 10 to 12 hours per day.

5. Claimant testified as follows concerning the events of July 2, 2015. He was at the job site tracing cables and reaching above his head when he felt a "pinch, or a pop or something like that" in his right upper extremity. This incident resulted in "instant pain." He "put [his] shoulder down" and it relaxed. Claimant "didn't think twice about it" and continued working. After work Claimant returned to his hotel and went to bed.

6. Claimant testified as follows concerning the events of July 3, 2015. He woke up at the hotel and experienced pain that radiated from the base of his neck all the way to his elbow. He went to the job site and informed the manager that he was experiencing "intense pain" and "there was something going on." Claimant was referred to a local hospital where he saw an orthopedic surgeon who performed an x-ray the shoulder. According to Claimant the orthopedic surgeon saw "osteoarthritis" and prescribed Naproxen.

7. Claimant testified that the next day (July 4, 2016) the pain was all the way down to his fingers and he "knew something was wrong." Claimant called Virginia and spoke to the Employer's chief medical officer. Claimant stated that he told the chief medical officer what the local orthopedic surgeon had said. However, the chief medical officer didn't think the problem was Claimant's shoulder but was "something different." Claimant was authorized to fly back to fly back to Colorado for treatment. However, the Employer did not refer him to any specific physician.

8. Prior to the alleged incident of July 2, 2015 Claimant had a significant medical history of treatment for his right upper extremity. Claimant testified that in the early 1980's he injured his right shoulder during military training. As a result Claimant was assessed with a "ten percent disability rating" by the VA. Claimant testified that over the "last couple of years" the VA has treated his right shoulder with "arthritic medicine" and injections.

9. Medical records from November 7, 2008 reflect that in November 2007 Claimant re-injured his right shoulder in a motor vehicle accident (MVA). Following the MVA Claimant reportedly experienced "right shoulder pain after activities." (Dr. Fall's medical records review, Respondents' Exhibit A p. 8).

10. A primary care provider (PCP) note from April 21, 2014 reflects that Claimant was seen for a complaint of right shoulder pain. The physical examination (PE) was consistent with a rotator cuff disorder. (Dr. Fall's medical records review, Respondents' Exhibit A p. 8).

11. On January 20, 2015 Claimant underwent an MRI of the right shoulder that revealed subacromial/subdeltoid bursitis, mild hypertrophic degenerative arthritis of the right AC joint, synovial hypertrophy, mild impingement and mild tendinopathy. (Dr. Fall's medical records review, Respondents' Exhibit A p. 8).

12. On March 11, 2015 Claimant was seen at the VA orthopedic Clinic for evaluation of chronic right shoulder pain and decreased function "following a MVA in

1983 with a few months of symptoms and then return of symptoms over the past 18 months." Claimant was given an injection, presumably to the shoulder. (Dr. Fall's medical records review, Respondents' Exhibit A p. 7).

13. On April 22, 2015 Claimant was examined (presumably at the VA) for a complaint of a "flare up" of right shoulder pain "since 10 days." Claimant's pain level was reportedly 9 on a scale of 10 (9/10). (Dr. Fall's medical records review, Respondents' Exhibit A p. 8).

14. On May 8, 2015 an orthopedic surgeon evaluated Claimant at the VA. Claimant had reportedly experienced right shoulder pain for over one year. The pain "came on gradually after starting to lift weights." The physician noted a "positive Spurling's test with pain shooting into [Claimant's] right trapezius." The physician noted it was too soon for another injection and ordered cervical radiographs because the PE was "concerning for right-sided radic." (Dr. Fall's medical records review, Respondents' Exhibit A p. 8).

15. On May 8, 2015 Claimant underwent x-rays of the cervical spine for an "indication" of "right cervical radiculopathy." The x-rays reportedly showed mild degenerative changes at multiple levels. (Dr. Fall's medical records review, Respondents' Exhibit A p. 3).

16. Claimant testified that when he returned to the United States from Abu Dhabi he went to the VA medical facility for treatment. Claimant explained that he went to the VA because he thought his symptoms had "something to do with the shoulder impingement."

17. VA medical records indicate that on July 9, 2015 Claimant was seen at the emergency department (ED) for a complaint of "worsening right shoulder pain." Claimant did not report any "specific injury." Claimant's pain reportedly radiated "to the upper arm and right-sided neck." It was noted that Claimant had a history of right shoulder pain secondary to AC degenerative joint disease and impingement. On examination there was tenderness "over the right SCM and trapezius." X-rays of the shoulder were taken and "showed no change." (Dr. Fall's medical records review, Respondents' Exhibit A p. 8).

18. On July 11, 2015, Claimant sought treatment at Sky Ridge Medical Center emergency ED with a chief complaint of right shoulder pain. The pain ranged from Claimant's neck to his lateral shoulder. The ED report indicates Claimant presented to the ED with "atraumatic right shoulder pain for the past several days." Claimant also reported that he "initially felt a pop or click while overseas and exerting himself." A "diagnosis of radicular pain from a nerve impingement was favored." The radicular pain was thought to result from a "disc protrusion sustained during [Claimant's] exertional work overseas." (Dr. Fall's medical records review, Respondents' Exhibit A p. 2-3).

19. On July 13, 2015, Claimant sought treatment at the Medical Center of Aurora ED for complaints "arm pain and swelling." It was noted that Claimant had been

seen at the VA, Kaiser Permanente (KP) and Sky Ridge Medical Center. Claimant reported he had been given narcotics, muscle relaxants and steroids without relief. Claimant underwent a CT scan that revealed mild facet arthropathy, most significant at C4-5, right apical curvature and mild reversal of the cervical lordosis. There was no evidence of a "traumatic injury." (Dr. Fall's medical records review, Respondents' Exhibit A p. 2, 6).

20. On July 14, 2015 Claimant went to KP where he was seen by his PCP, Kevin Gordon, M.D. Dr. Gordon assessed severe right cervical radiculopathy and referred Claimant for a cervical MRI.

21. On July 17, 2015 Claimant underwent a cervical MRI. The radiologist's impressions included the following: (1) Severe right-sided foraminal stenosis at C6-7 from disk; (2) Mild spinal stenosis seen at C6-7 and C4-5 from disk osteophyte complex.

22. On July 19, 2015 Dr. Gordon advised Claimant that the MRI detected severe nerve root compression that might require surgery. Dr. Gordon referred Claimant for a neurosurgical consultation.

23. On July 23, 2015 Claimant was evaluated by neurosurgeon, Saul Schwarz, M.D., and PA Julie Berk. Claimant gave a history that on July 3, 2015 he "woke up with pain in R shoulder." Claimant did not recall a "specific injury." Claimant reported he was experiencing neck pain down the right arm to his hand with numbness in the arm and all fingers. No treatments reduced Claimant's symptoms. Dr. Schwarz noted the MRI revealed a "focal acute disc rupture R C6-7 with impaction on R C7 root." Dr. Schwarz prescribed physical therapy (PT) with traction and offered an epidural steroid injection (ESI). Dr. Schwarz noted that if these therapies failed claimant would consider an anterior cervical microdiscectomy fusion at C6-7.

24. Claimant underwent a course of PT and acupuncture but these treatments did not relieve his symptoms.

25. On August 21, 2015 Dr. Schwarz performed surgery described as a C6-7 anterior microdiscectomy, instrumented interbody fusion.

26. On August 31, 2015 Dr. Schwarz noted Claimant would need to be off work for approximately 6 weeks to recover from surgery.

27. Claimant credibly testified the surgery has provided good relief of his symptoms.

28. On October 13, 2015 Allison Fall, M.D., performed a medical records review. Dr. Fall is board certified in occupational medicine and rehabilitation and is level II accredited. Dr. Fall reviewed medical records through August 31, 2015, but apparently not Dr. Schwarz's operative report of August 21, 2015. Dr. Fall opined the C6-7 disc protrusion resulting in cervical radiculopathy was a condition that pre-dated Claimant's travel overseas. In support of this opinion Dr. Fall noted that cervical radiculopathy "was even questioned at the visit prior" to Claimant leaving on June 1,

2015. Dr. Fall further opined there was “no specific traumatic injury” that occurred while Claimant was overseas and that the need for a cervical discectomy “would not be due to [Claimant’s] job duties.”

29. On October 20, 2015 Dr. Gordon authored a letter to Claimant’s counsel. Dr. Gordon wrote that Claimant gave a history of an old right shoulder injury while in the service but “did not relate any neck injury history.” Dr. Gordon specifically noted that Claimant did not “report [the] 7/3/15 injury” and that no such report was found during Dr. Gordon’s chart review. However, Dr. Gordon allowed that such a report “could be hidden in there somewhere.” Dr. Gordon wrote that Claimant’s diagnosis was right “cervical radiculopathy due to severe right-sided foraminal stenosis at C6-7 from disk protrusion.” Dr. Gordon stated that Claimant did not report any “mechanism of injury” that would explain his symptoms.

30. On November 5, 2015 Dr. Schwarz released Claimant to return to work with restrictions of no steady or repetitive work above shoulder height, no lifting of more than 30 pounds occasionally, and freedom to stand or walk from a sitting position every 20 minutes as needed. Dr. Schwarz stated these restrictions would be in effect for 12 weeks and then Claimant could return to “unrestricted work activities.”

31. Claimant testified he returned to work on November 9, 2015 and as of the date of hearing was waiting for a security clearance to begin his next assignment.

32. On January 7, 2016 Dr. Fall performed an independent medical examination (IME) of the Claimant. Dr Fall took a history, reviewed additional medical records and performed a PE. Claimant gave a history that he had been in Abu Dhabi for “approximately one month” when his right shoulder symptoms began. Claimant reportedly felt “burning” in the shoulder and thought the symptoms were caused by arthritis. Claimant stated there was nothing “traumatic like a fall” but “after working with his arms overhead” he “felt a slight pinch.” Claimant also reported that after experiencing these symptoms he slept at a hotel and “the next morning his neck to upper arm was burning.” On PE Dr. Fall noted cervical range of motion was restricted consistent with a one-level fusion and that there were no radicular signs. Claimant reported diminished sensation over the tip of the right index finger. Dr. Fall assessed the following: (1) C6-7 disc protrusion with right C6-7 radiculopathy status post anterior cervical discectomy and fusion; (2) Right shoulder AC joint degenerative joint disease.

33. In the IME report Dr. Fall stated that there was “no specific acute traumatic event that occurred while Claimant was in Abu Dhabi.” Rather, Claimant “woke up one morning with burning in his shoulder and lateral neck area.” Dr. Fall also recognized that before the alleged injury Claimant had “chronic” right shoulder symptoms that were treated by the VA. In May 2015 Claimant returned to the VA with “increasing right shoulder symptoms.” Dr. Fall observed that in May 2015 the VA physician recorded a positive “Spurling’s sign.” Dr. Fall explained that a Spurling’s sign results from movement of the neck so as to cause “referred symptoms into the right upper trapezius.” She further noted that Claimant was referred for cervical x-rays “with a notation of radiculopathy.” In these circumstances Dr. Fall opined that Claimant’s C6-7

disc protrusion was a “pre-existing problem” not attributable to Claimant’s work in Abu Dhabi.

34. Dr. Fall testified at the hearing on behalf of Respondents. Dr. Fall opined to a reasonable degree of medical probability that Claimant did not suffer any injury or occupational disease involving his cervical spine or right upper extremity as a result of his employment in Abu Dhabi. Dr. Fall reiterated her opinion that the symptoms Claimant experienced in Abu Dhabi were the same symptoms for which he sought treatment at the VA in May 2015. Dr. Fall explained that the Spurling’s maneuver that the VA physician performed in May 2015 was designed to elicit symptoms indicative of cervical radiculopathy. Dr. Fall opined that the symptoms Claimant experienced in Abu Dhabi were consistent with the natural progression of the pre-existing degenerative spinal process that resulted in herniation of the C6-7 disc. Dr. Fall emphasized that there was no record of any “acute injury” while Claimant was in Abu Dhabi and stated that a disc may herniate as part of degenerative process without any mechanism of injury. Dr. Fall also explained that while Claimant was in Abu Dhabi performing work he may have placed his neck in a position that would elicit the symptoms of cervical radiculopathy, but that does not mean Claimant made the disease process worse or changed the underlying anatomy of the cervical spine.

35. On cross-examination Dr. Fall stated that she had been paid for preparing her reports and for attending and testifying at the hearing. Dr. Fall also stated that she had “testified fairly frequently” for Respondents’ attorneys.

36. Claimant failed to prove it is more probably true than not that he sustained an injury or occupational disease proximately caused by the performance of service arising out of and in the course of his employment. The credible and persuasive evidence establishes it is more probably true than not that Claimant’s herniated disc and consequent disability and need for treatment were proximately caused by the natural progression of Claimant’s degenerative spinal condition that pre-dated the alleged injury/occupational disease. Further, the credible and persuasive evidence establishes that the progression of Claimant’s symptoms was not aggravated or accelerated by any on-the-job injury or the by the conditions of Claimant’s employment in Abu Dhabi.

37. Dr. Fall credibly and persuasively testified to a reasonable degree of medical probability that the C6-7 disc herniation was the result of a degenerative condition that existed before Claimant went to Abu Dhabi, and that the herniation was not caused or aggravated by Claimant’s working conditions in Abu Dhabi. Dr. Fall persuasively opined that Claimant was already experiencing cervical radiculopathy before he was dispatched to Abu Dhabi. Dr. Fall’s opinion is corroborated by the May 8, 2015 VA medical records. The VA medical records document that on May 8, 2015 Claimant reported gradually increasing shoulder pain for more than a year. The May 8 VA records also document the Claimant exhibited a positive Spurling’s test and that his PE was suspicious for cervical radiculopathy. Dr. Fall credibly explained that the Spurling’s test is designed to elicit symptoms of cervical radiculopathy.

38. Dr. Fall also credibly and persuasively argued that the symptoms Claimant experienced in Abu Dhabi were consistent with the natural progression of the pre-existing spinal disease and not the result of an acute injury or exposure to some hazard of employment. Dr. Fall credibly explained that there was no documentation of any acute injury or event that would explain the development of Claimant's symptoms. Indeed, Claimant himself admitted to Dr. Fall that there was no traumatic event associated with the occurrence of his shoulder pain on July 2, 2015. The absence of an acute injury is also supported by the history Claimant provided to the VA on July 9, 2015, to Sky Ridge Medical Center on July 11, 2015, to Medical Center of Aurora on July 13, 2015 and to Dr. Gordon.

39. Dr. Fall's opinion that Claimant did not suffer any acute injury or aggravation of his condition while working in Abu Dhabi is corroborated by credible opinion of Claimant's PCP, Dr. Gordon. Dr. Gordon persuasively stated that Claimant did not report any "mechanism of injury" that could explain the development of the symptoms.

40. Dr. Fall credibly and persuasively opined that the symptoms Claimant experienced at work on July 2, 2015 do not prove that the duties of his employment caused or aggravated claimant's cervical spine disease. Dr. Fall credibly opined the symptoms occurred when Claimant placed his neck in a position that elicited radicular symptoms, just as a physician can elicit such symptoms by performing the Spurling's test. Claimant's testimony that on July 2, 2015 he experienced a "pop or pinch" that faded when he put his arm down is consistent with Dr. Fall's opinion. Indeed, Claimant testified that he continued to work after the incident and did not give it a "second thought."

41. The ALJ credits Dr. Fall's opinions despite the facts that she was paid for her testimony and has appeared on behalf of Respondents' attorneys in other cases. Dr. Fall is found to be credible because she based her analysis on rational conclusions and inferences drawn from the medical records and her examination of Claimant. Moreover, Claimant did not produce any credible or persuasive expert opinion to refute Dr. Fall's opinions. While Claimant need not introduce any expert medical opinion to prove causation, the absence of such evidence in this case is a significant factor in the ALJ's decision to assign weight to Dr. Fall's opinions.

42. The ALJ recognizes that on July 11, 2015 someone at Sky Ridge Medical Center opined that Claimant's radicular symptoms are probably the result of a disc protrusion sustained during "exertional work overseas." The qualifications and identity the author of this opinion are not made clear by the evidence. Moreover, there is no indication that whoever expressed this opinion studied Claimant's medical records, particularly those from the May 8, 2015 VA visit. For these reasons the Sky Ridge Medical Center opinion is not credible and persuasive insofar as it addresses causation.

43. Evidence and inferences inconsistent with these findings are not credible and persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201(1). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions.

PROXIMATE CAUSE OF ALLEGED INJURY/OCCUPATIONAL DISEASE

Claimant alleges that the C6-7 disc herniation and consequent radicular symptoms were proximately caused by an injury or occupational disease arising out of and in the course of his employment in Abu Dhabi. Respondents argue Claimant failed to prove that the disc herniation and symptoms were proximately caused by the performance of his duties. Rather, Respondents argue the credible and persuasive evidence demonstrates that the Claimant's symptoms are the result of the natural progression of a pre-existing condition uninfluenced by the Claimant's duties in Abu Dhabi. The ALJ agrees with Respondents.

Claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment and disability benefits was proximately caused by an injury or occupational disease arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S.

With respect to an alleged industrial injury a claimant must prove a causal nexus between the claimed disability and need for treatment and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

Similarly, in order to prove a compensable occupational disease a claimant must prove the disease was proximately caused, aggravated or accelerated by the employment or working conditions. Section 8-40-201(14), C.R.S.; *Wal-Mart Stores, Inc. v. Industrial Claim Office,* 989 P.2d 251 (Colo. App. 1999); *Patton v. K and C RV Camping World,* WC 4-615-226 and 4-788-086 (ICAO July 5, 2011).

However, the mere occurrence of symptoms at work does not require the ALJ to find that the conditions or duties of employment caused a claimant's symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005).

The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Office, supra*. Causation need not be proven by expert medical opinion. However, where expert medical opinion is presented it is for the ALJ to assess the weight and credibility of such evidence. *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990); *Maestas v. O'Reilly Auto Parts*, WC 4-856-563-01 (ICAO August 31, 2012).

As determined in Findings of Fact 36 through 42 Claimant failed to prove it is more probably true than not that he sustained an accidental injury that proximately caused or aggravated his pre-existing spinal disease so as to result in disability and the need for treatment. Further, Claimant failed to prove that the conditions of employment proximately caused, aggravated or accelerated his pre-existing cervical disease process so as to result in disability and the need for medical treatment.

As found, the ALJ is persuaded by the opinions and testimony of Dr. Fall that Claimant had a degenerative condition of the cervical spine that caused radicular symptoms before the Employer sent Claimant to Abu Dhabi. Dr. Fall's opinion is corroborated by the May 8, 2015 VA medical records. Further, the ALJ is persuaded by Dr. Fall's opinion that the medical records and other evidence do not document a work-related accidental injury sufficient to have caused Claimant's C6-7 disc herniation and consequent symptoms. As explained in Findings of Fact 38 and 39 Dr. Fall's opinion is corroborated by the medical records. Similarly, Dr. Fall credibly opined that the evidence does not support the conclusion that the conditions of Claimant's employment in Abu Dhabi caused or aggravated Claimant's spinal condition. Rather, Dr. Fall credibly opined that Claimant's disc herniation and consequent symptoms are the result of the natural progression of the pre-existing disease process. Moreover, as determined in Finding of Fact 41, the ALJ is persuaded to give substantial weight to Dr.

Fall’s opinions because Claimant did not present any expert medical opinion to refute Dr. Fall’s opinions.

At hearing Claimant’s counsel argued that Claimant was in “travel status, to the extent that makes any difference.” The ALJ concludes that whether or not Claimant was in “travel status” is of no legal significance to the outcome of this case.

In order to prove compensability a claimant must prove both that the injury arose out of the employment and that it occurred in the course of employment. Section 8-41-301(c); *City of Brighton v. Rodriguez,* 318 P.3d 496, 502 (Colo. 2014). The “arising out of” and “in the course of” employment elements are not synonymous. *Younger v. City and County of Denver,* 810 P.2d 647 (Colo. 1991). An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of the employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *Triad Painting Co. v. Blair*, *supra.*

Generally the “travel status” doctrine is concerned with the “course of employment” requirement. The doctrine contemplates that where the employment requires the employee to travel away from the employer’s place of business the employee is continuously within the “course of the employment” during the trip. *See Phillips Contracting, Inc. v. Hirst,* 905 P.2d 9 (Colo. App. 1999).

In contrast, the “arising out of” requirement concerns itself with the origin of the risk that causes injury to the claimant. Where injury results from a risk that is entirely “personal” to the claimant the injury does not arise out of employment. Included within the “personal risk” category are injuries caused by an “employee’s preexisting idiopathic illness or medical condition that is completely unrelated to his or her employment, such as fainting spells, heart disease, or epilepsy.” *City of Brighton v. Rodriguez,* 318 P.3d at 503.

Here, the ALJ has found that the “risk” which caused Claimant’s “injury” was caused by a preexisting disease process that was personal to Claimant and not in any way related to or aggravated by his employment. Thus, the ALJ has found Claimant’s injury did not “arise out of” his employment as contemplated by the statute. In these circumstances it does not matter for the purpose of compensability that Claimant may have experienced symptoms of his personal disease process while “in the course of” his employment. *Cf. Lobato v. Warning Lites and Equipment, Inc.*, WC 4-438-262 (ICAO March 2, 2001) (where ALJ found that claimant was not in “travel status” at the time she was assaulted the injury did not occur in the “course of” her employment and it was unnecessary to determine whether the assault arose out of a compensable “neutral risk”).

In light of the determination that Claimant did not sustain a compensable injury the ALJ need not address the issues of medical benefits, temporary disability benefits, average weekly wage and disfigurement.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the ALJ enters the following order:

1. The claim for workers' compensation benefits in WC 4-989-362-01 is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. WC 4-788-738-03

ISSUES

Whether the respondents have established by a preponderance of the evidence that the claimant no longer requires any form of post-MMI (maximum medical improvement) maintenance medical care for her admitted industrial injury of February 9, 2009.

FINDINGS OF FACT

1. The claimant is a 32-year old woman with an April 30, 1983 date of birth.

2. The claimant was injured in an admitted injury February 9, 2009 accident in the course and scope of her employment with the respondent-employer, when she was lifting a 25-pound box of books and felt a "tweak" in her back.

3. The claimant underwent comprehensive treatment for the February 9, 2009, injury, including pain medications, physical therapy and epidural steroid injections. The claimant did not improve with any of the conservative care provided.

4. Eventually, the claimant was referred to orthopedic surgeon, Dr. Eric Jamrich. Dr. Jamrich recommended a microdiscectomy at L4-5, L5-S1. Dr. Jamrich performed the surgery on December 21, 2009. The claimant reported no improvement from the surgery, instead reporting progress of discomfort with increasing back and leg pain.

5. Dr. Barton Goldman evaluated the claimant on June 3, 2010, for purposes of an independent medical examination. Dr. Goldman noted multiple Waddell's signs. He recommended core strengthening, walking, swimming and weight loss. Dr. Goldman also suggested the claimant be seen by a psychiatrist to manage her psychiatric medications. He opined the claimant was not a good surgical candidate.

6. The claimant continued with chronic complaints of "innumerable kinds and locations of pain."

7. In June 2010, the claimant underwent a discogram, which according to Dr. Jamrich was not positive for spinal instability. Nonetheless, Dr. Jamrich opined that a fusion operation would be a “last resort.” He recommended weight loss and exercise.

8. Dr. Barry Ogin performed an IME on September 13, 2010. In connection with his IME, Dr. Ogin had the claimant complete a Battery for Health Improvement-II Test. Dr. Ogin indicated this test is designed to assess whether biopsychosocial complications may be affecting the patient’s medical condition. In responding to the test, the claimant disclosed an extremely high level of psychological and life problems. The claimant’s self-disclosure score was higher than that seen in 99% of patients and even higher than levels reported by 96% of patients who were asked to “fake bad.” In Dr. Ogin’s opinion, the claimant presented with what she described as ongoing debilitating back pain. However, the claimant had multiple non-physiologic pain behaviors on examination. The claimant had failed to improve with any treatments, including a microdiscectomy. Further, her condition was complicated by her morbid obesity and muscle deconditioning. Dr. Ogin opined that the claimant was extremely depressed and demonstrated extremely high levels of somatic complaints, pain and functional complaints consistent with the somatoform disorder. According to Dr. Ogin, the claimant’s primary problem was depression, which was feeding the claimant’s back pain and not the other way around. The claimant is a young female with mildly degenerative discs. She has diffuse leg pain, which cannot be explained on the basis of her MRIs. Notably, the claimant has failed to get any relief from any treatments.

9. On September 20, 2010, Dr. McFarland noted the claimant had been taking more medications than she was supposed to and had problems with opioid dependence. She had treatment at an inpatient program, but reported not being able to work because of increased pain. The claimant reported a traumatic brain injury from a head injury on February 3, 2010 that injury occurred at her apartment. The claimant reported a history of bipolar disorder and was being treated with Abilify, Klonopin, Ativan and trazodone. Dr. McFarland took the claimant off work temporarily until he could determine how to control her pain better.

10. On October 14, 2010, Dr. McFarland indicated it was difficult to evaluate the severity of the claimant’s pain or quantify her restrictions because of the claimant’s background of cognitive and psychiatric problems.

11. Following a Division independent medical evaluation (DIME), the claimant was placed at maximum medical improvement (MMI) on August 30, 2011, with 20% whole person impairment. The respondent-insurer filed an August 16, 2012, Final Admission of Liability (FAL) admitting liability consistent with the Division Examiner’s

opinions on MMI and permanent physical impairment. The respondents stipulated the claimant was entitled to medical treatment by, or at the direction of an authorized treating physician, which is reasonable, necessary and related to the February 9, 2009 accident to maintain the claimant's condition at MMI.

12. The claimant was seen at Southeast Colorado hospital between April 28, 2014 and June 27, 2014 with depression, visual and auditory hallucinations and suicidal ideation.

13. Dr. Robert Kleinman performed a psychiatric Independent Medical Evaluation on September 17, 2014. At the time of his evaluation, the claimant's complaints included back pain to the point that she could "hardly walk". Dr. Kleinman reviewed the claimant's medical records, took a history from her and performed a mental status evaluation and administered an MMPI-2. The claimant responded to the MMPI-2 in an exaggerated manner, endorsing a wide variety of symptoms and attitudes. According to Dr. Kleinman, the results stem from a number of factors, including indiscriminately claiming extreme psychological problems, low reading level, a "plea for help" or severe psychological deterioration or psychosis. Dr. Kleinman stated that the claimant's responses were probably not random because she was consistent in her item responses. Based on his evaluation Dr. Kleinman diagnose the claimant with schizoaffective disorder, psychological factors affecting medical condition, multiple medical problems with ongoing pest injuries, wrist/back injury, past concussion, GERD, asthma, pituitary adenoma. Dr. Kleinman indicated that none of the claimant psychiatric diagnosis were related to her work injuries. Dr. Kleinman credibly opined, the claimant's psychiatric and psychological condition is causing her impairment and dysfunction. The claimant views herself as disabled. This was identified early on at the mental health center, which saw long-term employability is a problem. Now the claimant attributes her disability to her physical complaints. The secondary gain she receives is motivating her to continue and to enhance her complaints. The secondary gain from her multiple illnesses and injuries leads to dependency and the gratification she gets from dependency fosters more illness and injury related behaviors. According to Dr. Kleinman, that secondary gain refers to the benefits that are derived by being a patient. Dr. Kleinman credibly opined the claimant is manipulating her physical complaints in order to appear more physically impaired than she is.

14. Dr. Brian Reiss evaluated the claimant on October 1, 2014. During his evaluation of the claimant, she complained of extreme pain and yet displayed no pain behaviors. The claimant's psychological screening indicated a definite possibility of depression and somatic disorder. Dr. Reiss noted the claimant is not doing any significant exercise. She is doing a minimal amount of walking but absolutely no core

strengthening, substantial aerobic conditioning or stretching. According to Dr. Reiss, the simple exercises are the only treatment that the claimant needs. If she were cooperative these exercises would be beneficial to the claimant. They could be performed as an independent program. Dr. Reiss noted the medical records document the fact that the claimant has multiple subjective complaints unsubstantiated by any objective findings. At his exam, the claimant complained of a lot of pain and yet appeared to be comfortable and functional. Prior to being placed at maximum medical improvement, the claimant had multiple forms of treatment, including physical therapy, injections and even the surgical intervention. Despite treatment, the claimant's subjective complaints were essentially unchanged. Dr. Reiss opined it makes no sense to suggest repeating any of these treatments in the future if they have been ineffective in the past. Finally, Dr. Reiss noted the claimant's imaging studies do not identify a good reason for the claimant to have lower extremity pain. The degeneration of the lower two discs of the claimant's lumbar spine would not account for her upper lumbar or thoracic pain. Her non-physiologic physical examination would further make it difficult to substantiate the claim that the claimant has discogenic pain. The fact that the claimant had prior surgery on her lumbar spine without a positive response would also tend to point away from the lower two discs being responsible for her pain. According to Dr. Reiss, all-in-all, the claimant has widespread subjective complaints without good objective findings to substantiate her symptomatology.

15. Dr. Jerald Flynn evaluated the claimant on June 9, 2015. On that date the claimant reported worsening symptoms. Dr. Flynn noted an MRI was declined. However, he also indicated he did not "think pursuing this is worthwhile".

16. On July 30, 2015, Dr. Flynn recommended the claimant "follow up with her attorney as this case should really be closed by now (she is otherwise disabled at any rate and will never be able to go to work because of mild mental retardation combined with psychiatric disease". While Dr. Flynn referred the claimant to follow up with Dr. Wisman in six weeks the referral was for "this and her other issues".

17. Dr. Carlos Cebrian evaluated the claimant on September 3, 2015, for purposes of an Independent Medical Examination. Dr. Cebrian also testified at hearing. At the time of his examination, the claimant reported her back "hurts a lot with pain that goes up her back and down her back to her hips and legs." The claimant stated when she gets up in the morning she is stiff and "cannot move her back and is unable to walk" the claimant stated it "kills her back" to walk. However, the claimant was able to walk briskly without any difficulty and get up and off the exam table without difficulty. Dr. Cebrian documented, and credibly testified to, the claimant's non-physiologic findings on physical exam, including, diffuse and superficial tenderness to light touch,

hypersensitive pain response, positive axial compression, give-way weakness on motor testing of the legs and self-limited range of motion of the lumbar spine.

18. Dr. Cebrian credibly testified, consistent with the opinions of Dr. Goldman, Dr. Ogin, Dr. Van Dorsten, Dr. McFarland, and Dr. Kleinman, the claimant suffers from a non-work-related somatoform disorder. Dr. Cebrian credibly opined that there is no future medical treatment, which is reasonable, necessary and related to the February 9, 2009 injury. Dr. Cebrian credibly testified the claimant's presentation of the last few years has been the result of her pre-existing and non-claim related psychiatric disorders. There is no mechanical lesion that correlates with the claimant's current symptoms and non-physiological presentation. Dr. Cebrian credibly testified that no amount of further medical evaluation, diagnosis, therapy, medications or interventions will have any effect on the claimant's condition other than to reinforce her maladaptive and non-physiological/organic behavior.

19. The claimant reported taking the medications tramadol, Flexeril and gabapentin in connection with the February 9, 2009 work injury. The records of the claimant's primary care provider suggest she takes an additional 20 medications for non-work-related conditions. Dr. Cebrian credibly testified the ongoing provision of the medications tramadol, Flexeril and gabapentin under the February 9, 2009, worker's compensation claim is not reasonable and necessary. Dr. said bring credibly testified there are dangerous interactions between the claimant's medications and the medication she is being prescribed for her psychiatric conditions, in particular with tramadol and gabapentin Dr. Cebrian explained that both tramadol and gabapentin can interact with the medications being prescribed for the claimant psychiatric conditions and cause a condition known as "serotonin syndrome", which can in some instances be fatal. The interaction of these medications can also decrease a patient seizure threshold, cause cognitive issues and or dizziness. Dr. Cebrian credibly testified it is not reasonable and necessary to continue to prescribe these medications in conjunction with the medications being prescribed for the claimant psychiatric conditions, particularly given the lack of any functional improvement.

20. Dr. Cebrian testified as a Level II accredited physician. He explained that Colorado's Medical Treatment Guidelines, Rule 17, WCRP, Exhibit 1, recommend against prescribing medications for pain control, without demonstrable functional improvement. Dr. Cebrian opined there is no reason in this case to deviate from the Guidelines. Dr. Cebrian also testified that the medical records document the claimant's extensive history of mental health problems with multiple suicide attempts. Colorado's Medical Treatment Guidelines address, and recommend against, the prescription of

habituating medications, such as tramadol, Flexeril and gabapentin, to patients with a history of psychiatric problems and suicide attempts.

21. Dr. Cebrian outlined a reasonable schedule to wean the claimant off of the Flexeril, Tramadol and Gabapentin currently being prescribed to her in connection with the February 9, 2009 work injury.

22. As found, the opinions expressed by Dr. Brent Van Dorsten, Dr. Brian Reiss, Dr. Robert Kleinman and Dr. Carlos Cebrian are credible and persuasive.

23. The claimant's somatoform disorder is the current cause of her symptoms, dysfunction and need for medical treatment. The secondary gain she receives is motivating her to continue and to enhance her complaints. The secondary gain from her multiple illnesses and injuries leads to dependency and the gratification she gets from dependency fosters more illness and injury related behaviors.

24. The respondents' have established that it is more likely than not that the claimant's need for future medical treatment is not related to the February 9, 2009 industrial injury.

25. The respondents' request to withdraw their stipulation that the claimant remains entitled to medical treatment by, or at the direction of an authorized treating physician, which is reasonable, necessary and related to the February 9, 2009 accident to maintain the claimant's condition at MMI, is granted.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102 (1), C.R.S.

2. It is well settled that where the respondents file a final admission admitting for maintenance medical benefits pursuant to *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988), the respondents are not precluded from later contesting their liability for a particular treatment. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Moreover, when the respondents contest liability for a particular medical benefit, the claimant must prove that such contested treatment is reasonably necessary to treat the industrial injury and is related to that injury. *See Grover v. Industrial Commission, supra; Snyder v. Industrial Claim Appeals Office, supra*. Where, as here, however, the respondents attempt to modify an issue that previously has been determined by an admission, they bear the burden of proof for such modification.

Section 8-43-201(1), C.R.S.; *see also Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (June 5, 2012); *Barker v. Poudre School District*, W.C. No. 4-750-735 (July 8, 2011). Section 8-43-201(1), C.R.S. was added to the statute in 2009 and provides, in pertinent part:

> ... a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification.

3. A preponderance of the evidence is that which leads the trier of fact, after considering all of the evidence, to find that a fact is probably more true than not. *Page v. Clark,* 197 Colo. 306, 591 P.2d 792 (1979).

4. The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S.

5. The judge's factual findings concern only evidence that is dispositive of the issues involved; the judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

6. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936).

7. The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). Section 8-42-101(3)(b), C.R.S. provides that the Medical Treatment Guides (MTG) "shall be used by health care providers for compliance with this section."

8. Rule 17 of the Workers' Compensation Rules of Procedure contains the Low Back Pain Medical Treatment Guidelines. The Introduction to Rule 17, at subsection A provides, as relevant:

> This document has been prepared by the Colorado Department of Labor and Employment, Division of Workers' Compensation (Division) . . .
>
> . . . . [T]hese guidelines are enforceable under the Workers' Compensation Rules of Procedure, 7 CCR 1101-3.

9. The stated purpose of the Guidelines is:

> 17-1. STATEMENT OF PURPOSE
> In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the Director of the Division has promulgated these "Medical Treatment Guidelines." This rule provides a system of evaluation and treatment guidelines for high cost or high frequency categories of occupational injury or disease to assure appropriate medical care at a reasonable cost.

10. Per Rule 17-2(A), W.C.R.C.P., all health care providers shall use the medical treatment guidelines adopted by the Division. Per Rule 17-2(B), W.C.R.C.P., all payers shall routinely and regularly review claims to ensure that care is consistent with the Division's medical treatment guidelines.

11. Section 8-43-201(3) C.R.S., provides that it is “appropriate” for an ALJ to consider the MTG “in determining whether certain medical treatment is reasonable, necessary, and related to an industrial injury.” However, the statute further provides that the ALJ “is not required to utilize the medical treatment guidelines as the sole basis for such determinations.”

12. As demonstrated by WCRP 17-5 (C) the MTG themselves recognize that deviations from the guidelines are reasonable in individual cases. *Madrid v. TRTNET Group, Inc*., WC 4-851-315-03 (ICAO April 1, 2014). Consequently, evidence of compliance or non-compliance with the treatment protocols of the MTG has not been considered dispositive when determining whether medical treatment is reasonable and necessary. *Madrid v. TRTNET Group, Inc*., *supra*. The ALJ may weigh evidence of compliance or non-compliance with the MTG and assign such evidence an appropriate weight considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC*., WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008).

13. As found, the respondents have proved, it is more probably true than not, the ongoing provision of medical treatment is not related to the claimant’s February 9, 2009 work injury, but is instead related to her somatization disorder, as opined by multiple physicians, including a psychiatrist, with insufficient opinion to the contrary presented.

14. The ALJ concludes that the respondents have established by a preponderance of the evidence the claimant’s current need for medical treatment is not reasonable, necessary or related to the February 9, 2009 work injury.

15. The ALJ concludes that the claimant should be appropriately weaned from the Tramadol, Flexeril, and Gabapentin now being prescribed in connection with the February 9, 2009 industrial injury.

ORDER

It is therefore ordered that:

1. The respondent-insurer shall be permitted to withdraw its stipulation admitting to medical treatment by, or at the direction of, the authorized treating physician, which is reasonable, necessary, and related to the admitted February 9, 2009, work injury.

2. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-947-921-01

ISSUES

Whether the claimant has established by a preponderance of the evidence that he is entitled to treatment for Complex Regional Pain Syndrome (CRPS), to include, but not limited to, a repeat sympathetic block.

FINDINGS OF FACT

1. On April 4, 2014, the claimant was delivering food to a house that had potholes in the driveway leading up to the house. While walking down the driveway, he slipped on mud and fell in a pothole, twisting his right knee, right hip and shoulder. Eventually his hip and shoulder issues resolved, but his right knee pain has persisted.

2. The claimant had three previous Workers' Compensation injuries involving the right knee, including one in 1985, one in 2004 and one in 2008.

3. The 2008 injury resulted in excision of 30% of the meniscus and a 15% permanent impairment rating, including 10% allocated for chondromalacia due to crepitus and locking.

4. The impairment rating report referenced an MRI documenting chondromalacia and also noted the claimant's surgical history, which included chondroplasty of the right medial femoral condyle.

5. The claimant's treating physician requesting the medical treatment at issue, Gretchen Brunworth, M.D., was unaware of the claimant's prior ratings, chondromalacia and permanent impairment.

6. The medical records from the date of injury to present show substantially similar symptoms and complaints of pain and lack of improvement, with periods of catching and locking.

7. During the claimant's initial examination with Jack England, D.O. on the date of injury, there is evidence that the claimant felt like his right knee was popping and locking.

8. On June 13, 2014, David M. Oster, M.D. continued to document "catching sensation as he extends his knee."

9. During the claimant's initial consultation with Gretchen Brunworth, M.D., on April 20, 2015, the claimant reported having persistent pain with no improvement. The claimant reported locking and popping.

10. Since the date of injury, the claimant's right knee mobility has been restricted due to use of crutches and a brace.

11. At an April 9, 2014 office visit with Dr. England, the claimant was not able to bear weight on his right side.

12. The claimant was prescribed a knee brace April 23, 2014.

13. According to a May 13, 2014 addendum from Dr. England, the claimant was using a knee brace and crutches.

14. During the claimant's final visit with Dr. Wente, March 25, 2015, the claimant was still wearing his knee brace and using crutches.

15. As of his most recent available note on February 18, 2016, Dr. England continued to note the claimant's use of crutches and chronic pain.

16. On December 10, 2014, Dr. Wente noted the claimant had evidence of "moderate disuse atrophy noted of quadriceps and calf musculature."

17. During her initial examination on April 20, 2015, Dr. Brunworth reviewed the claimant's treatment history, complaints and symptoms. She noted the claimant reported no improvement despite surgery and injections. It appeared the claimant was approaching maximum medical improvement; however, an additional MRI was ordered "just to make sure we are not missing anything before his case is closed. If the MRI is negative, we will most likely be proceeding with a functional capacity test and case closure." She also noted she would like to get him off crutches before case closure, despite the fact he had been using them for over a year.

18. At the follow-up appointment on May 21, 2015, Dr. Brunworth referred the claimant for a functional capacity test in order to work towards case closure.

19. Five days later, Dr. Brunworth recommended a QSART and thermogram to evaluate for CRPS or sympathetically mediated pain.

20. However, at the examination less than a week earlier, she noted "[t]emperature of the knees is symmetric bilaterally. He has no sensitivity to touch."

21. The Colorado Treatment Guidelines require the following to properly diagnose CRPS:

> Continuing pain, which is disproportionate to any inciting event.
>
> At least one symptom in three of the four following categories:
>
> - Sensory (reports of allodynia);
> - Vasomotor (reports of temperature asymmetry and/or skin color changes and/or skin color asymmetry);
> - Sudomotor/edema (reports of edema and/or sweating changes and/or sweating asymmetry);
> - Motor/trophic (reports of decreased range of motion and/or motor dysfunction such as weakness, tremor, dystonia or trophic changes of the hair, nail and skin)
>
> At least two positive confirmatory tests from the following list:
>
> - Trophic tests (comparative x-rays of both extremities and/or a triple phase bone scan);
> - Vasomotor (infrared stress thermogram);
> - Sudomotor test (QSART testing);
> - Sensory/Sympathetic Testing (response to sympathetic blocks)
>
> No other diagnosis that better explains the signs and symptoms.

22. The claimant had two reportedly positive confirmatory tests, but did not have a positive response to a sympathetic block. He is also lacking evidence of objective symptoms and there is an explanation of his signs and symptoms.

23. Dr. Brunworth opined that CRPS in proximal joints "don't show like it shows distally in the hand or foot." However, she does not clarify or explain why there would be a discrepancy in the presentation.

24. In fact, Dr. Brunworth confirmed she is not aware of any studies that outline a knee should be treated differently, or would have different signs or symptoms than an upper extremity, with regard to CRPS.

25. Rule 17, Exhibit 7, does not differentiate between diagnosing CRPS distally or proximally.

26. A diagnosis of CRPS in the knee is essentially the same under the guidelines of Rule 17.

27. As Rule 17 alludes to, these guidelines are in place to protect the claimant. "Significant harm can be done to individuals by over-diagnosing CRPS and subjecting patients to side effects and potential morbidity of multiple sympathetic blocks, invasive procedures or chronic medication, as well as psychological effects from the diagnosis."

28. An April 14, 2014 x-ray revealed degenerative changes, consistent with chronic arthritis.

29. David Oster, M.D. interpreted the claimant's April 21, 2014 MRI and noted there was "thinning of the articular surface over the central portion of the patella."

30. Dr. Brunworth refused to acknowledge the presence of chondromalacia, but contradictorily conceded that chondromalacia, if previously present, would not resolve. She also conceded that it is generally a progressive and degenerative condition.

31. Dr. Oster was also perplexed by the claimant's ongoing pain complaints, and like Dr. Steinmetz, he attributed this to likely chondromalacia or fat pad impingement. Dr. Oster commented "He seems to have significant pain along the medial retinaculum and along the anterior medial fat pad. This could be secondary to some chondromalacia in the femoral trochlea which may not appear on the MRI. It also could be due to some fat pad impingement."

32. Dr. Wente reiterated the other physicians' concerns that the claimant's symptoms were not related to CRPS. In a December 10, 2014 report, he commented that "most of his pain is probably patellofemoral-related and this fits with his advanced and marked atrophy of the lower extremity, particularly the quadriceps. The exam suggests that the nerve supply is intact…" The claimant's fat pad impingement test was also noted to be markedly positive.

33. In a note from August 8, 2014, Dr. Oster related the claimant's pain to "some impingement of the synovium. He has a long tongue of synovium along the medial facet of the patella which certainly could be getting impinged. The fact that it seems to hurt more with extension as well as flexion of the knee would go along with

this."

34. Dr. Wente attributed periodic inflammation to "a combination of gait pattern, lack of normal ROM, and the continued atrophy."

35. Dr. Steinmetz opined that there are chronic changes on the x-ray and MRI, with minimal degenerative changes and edema around the kneecap, patellar tendon and the MRI shows some patellar tendonitis. This is consistent with the claimant's swelling.

36. The evidence shows that the claimant does not have "mysterious nerve swelling." He has pain from the kneecap inflammation, attributable to chondromalacia.

37. During Dr. Wente's initial examination on December 10, 2014, he noted "[t]he knee itself shows no redness, erythema…no significant effusion…neurologically intact distally. Nerve function to quads and calf appears in tact as well."

38. During a May 21, 2015 examination, Dr. Brunworth noted, "[t]emperature of the knees is symmetric bilaterally. He has no sensitivity to touch."

39. The claimant's own IME, Timothy Hall, M.D., conceded "there is really little that would point you in the direction [of a diagnosis of CRPS], other than the fact that he has pain out of proportion to local pathology."

40. Dr. Brunworth ultimately agreed that visually, the claimant's knee does not have any unusual presentation. There was neither redness nor temperature change observed on her examinations.

41. She also conceded there were no vasomotor changes, no effusion, no sweating changes or asymmetry, no tremor not dystonia and no trophic changes.

42. Dr. Brunworth also confirmed the claimant does not have hyperalgesia to pinprick.

43. On physical examination and diagnostic testing, there was an absence of findings consistent with CRPS.

44. The QSART test showed no evidence of sweating changes.

45. There are no muscle abnormalities or trophic changes.

46. The claimant's weakness is attributable to disuse/atrophy and the

decreased range of motion is consistent with patellar inflammation, synovial inflammation and inflammation around the fat pad.

47. Dr. Steinmetz, like Dr. Brunworth, also confirmed that there was no motor dysfunction with tremor or dystonia and no trophic changes.

48. Dr. Brunworth stated that the claimant had allodynia, which is pain due to a non-noxious stimulus. However, during the hearing, Dr. Brunworth examined the claimant's knee, touching, poking and prodding it. During this time, the claimant did not present with any pain response.

49. This examination at trial showed that the claimant is not sensitive to touch.

50. The claimant has been using crutches and bracing since the initial injury. He was advised by Dr. Oster that the straight leg brace he was given October 31, 2014 "may cause some quadriceps atrophy…"

51. Dr. Wente also documented "advanced and marked atrophy of the lower extremity, particularly the quadriceps."

52. The Guidelines recognize that "resting temperature asymmetry differences may be due to a variety of reasons other than CRPS."

53. Dr. Steinmetz advised that temperature changes, such as coolness on the affected side, can be attributed to disuse and atrophy.

54. If the claimant had CRPS, there would be abnormal findings in the distal foot. Hair, nails and skin would be abnormal with obvious swelling and discoloration. There would be stiffness extending beyond the area of the kneecap, sensitivity to touch and a diagnostic functional response to the sympathetic block.

55. Pursuant to Rule 17, "For a positive response, pain relief should be 50% or greater for the duration of the local anesthetic and pain relief should be associated with demonstrated functional improvement."

56. The claimant did not have the appropriate pain relief following the injection. Usama Ghazi, D.O. administered the injection and noted the claimant "still reports that he had some 7/10 pain that was unchanged deep within the knee, which is more of a bony arthritic and pressure like sensation…"

57. Dr. Brunworth also documented "pain persisted" and "improvement was not long lasting" following the injection.

58. The claimant did not have appropriate pain relief and increase in functionality, which is the basis for determining whether the claimant had a diagnostic response.

59. It is evident from the records that the claimant did not have a diagnostic response to the injection.

60. Dr. Brunworth was equivocal regarding the need for a second sympathetic block. She stated "I think it's at least worth a try…We don't have a lot of options…I think one more block…might be an option. I think second blocks sometimes are better…I think it's possible that it would help."

61. However, the claimant did not have a positive response to the first injection.

62. Dr. Steinmetz noted that even if the claimant had CRPS, he would not recommend another injection.

63. The ALJ finds that the analyses and opinions of Dr. Steinmetz are credible and more persuasive than medical analyses and opinions to the contrary.

64. The ALJ finds that the claimant has failed to establish that it is more likely than not that he suffers from CRPS.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102 (1), C.R.S.

2. It is well settled that where the respondents file a final admission admitting for maintenance medical benefits pursuant to *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988), the respondents are not precluded from later contesting their liability for a particular treatment. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Moreover, when the respondents contest liability for a particular medical benefit, the claimant must prove that such contested treatment is reasonably necessary to treat the industrial injury and is related to that injury. *See Grover v. Industrial Commission, supra; Snyder v. Industrial Claim Appeals Office, supra*.

3. A preponderance of the evidence is that which leads the trier of fact, after considering all of the evidence, to find that a fact is probably more true than not. *Page v. Clark,* 197 Colo. 306, 591 P.2d 792 (1979).

4. The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S.

5. The judge's factual findings concern only evidence that is dispositive of the issues involved; the judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

6. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936).

7. The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). Section 8-42-101(3)(b), C.R.S. provides that the Medical Treatment Guides (MTG) "shall be used by health care providers for compliance with this section."

8. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000). The ALJ must assess the credibility of the witnesses and the probative value of the evidence. *Dover Elevator Co. v. ICAO*, 961 P.2d 1141 (Colo. App. 1998).

9. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the motives of the witness; whether testimony has been contradicted; and bias, prejudice, or interest. *See, Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

10. It is within an ALJ's purview to assess the relative weight and credibility of various opinions. *See, Kraft v. Medlogic Global Corp. et al.*, W.C. No. 4-412-711 (ICAO, March 15, 2001) (citing *Rockwell Internat'l v. Turnbull*, 802 P.2d 1182 (Colo. App.

1990)). Additionally, if an individual expert's opinion contains contradictions or is subject to multiple interpretations, the ALJ may resolve the conflict by crediting only a portion of the opinion, or discrediting the opinion in its entirety. *See Kraft*, W.C. No. 4-412-711; *Johnson v. ICAO*, 973 P.2d 624 (Colo. App. 1997). Finally, it is the prerogative of the ALJ to credit one medical opinion to the exclusion of a contrary medical opinion. *Dow Chemical Co. v. ICAO*, 843 P.2d 122 (Colo. App. 1992).

11. The claimant bears the burden of proving, by a preponderance of the evidence that the current and ongoing need for medical treatment or disability is proximately caused by an injury arising out of and in the course of the employment. *See Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997).

12. The claimant is no longer entitled to benefits where the medical condition at issue is no longer related to or caused by the compensable work injury. *Id.* (*see also Cooper v. Industrial Claim Appeals Office*, 1999 WL 976657 (Colo. App. 1999); *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986) (a claimant is entitled to compensation only for the disability caused by the industrial injury).

13. A diagnosis of CRPS is governed by Rule 17, Exhibit 7, of the Medical Treatment Guidelines. These Guidelines are applicable regardless of the alleged inflicted extremity. There is no distinction in the Guidelines for a CRPS diagnosis involving the knee, which would warrant abandoning the proffered requirements.

14. The claimant has failed to establish, by a preponderance of the evidence that he suffers from CRPS. Specifically, claimant has not exhibited at least one symptom in three of the four following categories:

- Sensory (reports of allodynia);
- Vasomotor (reports of temperature asymmetry and/or skin color changes and/or skin color asymmetry);
- Sudomotor/edema (reports of edema and/or sweating changes and/or sweating asymmetry);
- Motor/trophic (reports of decreased range of motion and/or motor dysfunction such as weakness, tremor, dystonia or trophic changes of the hair, nail and skin)

15. Dr. Brunworth conceded there is no exception for diagnosing CRPS of the knee when applying Rule 17, Exhibit 7.

16. Dr. Brunworth also conceded claimant does not present with at least one symptom from three of the above four categories, which is a prerequisite for diagnosing CRPS.

17. Although the claimant appeared to have two positive confirmatory tests, Dr. Steinmetz credibly explained why the tests should not have been completed in the first instance, and the probability of a false positive given the claimant's overall presentation.

18. The claimant did not have a diagnostic response to the sympathetic block, and in fact the medical records indicate the claimant's pain increased following the initial injection.

19. Dr. Steinmetz and the majority of the claimant's treating physicians have credibly outlined potential causes of the claimant's ongoing complaints of pain, in the absence of significant objective findings.

20. During the hearing, the claimant did not exhibit tenderness to touch, despite Dr. Brunworth's great reliance in this reported symptom in her diagnosis.

21. An employer must provide an injured employee with reasonable and necessary medical treatment to "cure and relieve the employee from the effects of the injury." C.R.S. § 8-42-101(1)(a) (2013). The employee must prove a causal relationship between the injury and the medical treatment for which he is seeking benefits. *Snyder v. ICAO*, 942 P.2d 1337, 1339 (Colo. App. 1997).

22. Claimant has failed to prove he suffers from CRPS. The medical records do not support this diagnosis, and any further treatment for CRPS is not appropriate.

23. The Guidelines expressly warn against over diagnosing CRPS because of the potential side effects and potential morbidity of multiple sympathetic blocks and chronic pain medications.

24. Dr. Brunworth was neither credible nor persuasive in her basis for requesting an additional injection or the compound cream. Simply because there are not a lot of options for treatment, or a modality is not likely to cause harm to a claimant, is not an appropriate reason to make treatment recommendations or authorize treatment.

25. Dr. Steinmetz credibly testified that the claimant did not have a positive response to the initial sympathetic block, and given the potential for adverse side effects, an additional injection is not warranted, nor is it being approved.

26. Further treatment for CRPS would be in vain as it is evident claimant does not suffer from the diagnosis.

27. The evidence shows the claimant's ongoing complaints of pain and symptoms are related to his underlying conditions which have been examined by his treating physicians and Dr. Steinmetz.

28. The ALJ concludes that the analyses and opinions of Dr. Steinmetz are credible and more persuasive than medical analyses and opinions to the contrary.

29. The ALJ concludes that the claimant has failed to establish by a preponderance of the evidence that he suffers from CRPS.

ORDER

It is therefore ordered that:

1. The claimant's request for treatment for a diagnosis of CRPS is denied and dismissed.

2. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, CO 80906

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that the C6-C7 cervical fusion surgery recommended by Dr. Castro is reasonable, necessary, and related to his February 11, 2014 work injury.

FINDINGS OF FACT

1. Claimant works for Employer as a Baker/Lead Mixer and has been so employed for approximately 3.5 years.

2. On February 11, 2014 Claimant was at work mixing batter when he pulled a paddle from a large mixing bowl and felt a pop and pain in his mid back that shot up to his head. Claimant reported the injury to Employer and was referred for treatment.

3. On February 11, 2014 Claimant was evaluated at Arbor Occupational Medicine by Lori Long, M.D. Claimant filled out a diagram indicating pain in his lower back, central back, and numbness in his left arm. Claimant reported he was pulling out large mixing paddles from the dough in the mixer which required a lot of force when he felt a pop in his mid back that shot up to his head like a lightning bolt. Claimant reported he then developed pain below his left shoulder blade and in his left lower back with some pain radiating into his left posterior shoulder and left posterior arm with numbness. Claimant reported a prior history of cervical radiculopathy that resolved with epidural steroid injections. Dr. Long opined that the injury was work related from lifting the heavy mixer blades and assessed: thoracolumbar strain with left arm symptoms, most likely related to trigger point/muscular injury and not radicular. *See* Exhibit 1.

4. Claimant was evaluated at Arbor Occupational Medicine on February 19, 2014, February 24, 2014, February 27, 2014, and March 19, 2014 where his pain complaints were centered on his thoracic and lumbar pain. The assessment at each of these evaluations was thoracic and/or lumbar strains. *See* Exhibit 1.

5. On April 2, 2014 Claimant was evaluated at Arbor Occupational Medicine by Lorraine Scott, PA-C. Claimant reported symptoms primarily in the left shoulder region as well as in the left low lumbar region. PA Scott opined that after reviewing the initial mechanism of injury, the pain affecting all of the areas Claimant reported would be inconsistent. PA Scott opined that she could attribute the left low back pain and the left shoulder pain to his injury. PA Scott noted that Claimant had marked exacerbation of left shoulder symptoms with overhead activity or with lifting anything which was inconsistent with even with a rotator cuff tear as generally the symptoms of rotator cuff tear would be more exacerbated with overhead activities, or activities to the side or reaching forward. Claimant reported pain in the left shoulder affecting the scapular

region primarily but also on top of the shoulder when performing overhead activities. PA Scott assessed low back pain and left shoulder strain query rotator cuff tear versus tendinitis. PA Scott recommended an MRI of the left shoulder and of the lumbar spine. *See* Exhibit 1.

6. On April 10, 2014 Claimant was evaluated by Dr. Long. Claimant reported pain around the left shoulder blade and the entire length of the left side of his back. Claimant reported no benefit from physical therapy, dry needling, or massage therapy or from his medication. Dr. Long noted that the left shoulder MRI showed a full-thickness tear of the supraspinatus tendon and that the lumbar spine MRI showed mild degenerative changes throughout with no disc herniation or central canal narrowing. Dr. Long opined that the lumbar spine MRI did not explain Claimant's lateral left back pain and opined that it was unclear how Claimant sustained a supraspinatus tendon tear of the shoulder with no specific complains of anterior shoulder pain. Dr. Long opined that Claimant possibly could have an atypical presentation and referred Claimant for a second opinion on work relatedness of the shoulder as well as for case review and treatment recommendations. *See* Exhibit 1.

7. On May 9, 2014 Claimant was evaluated by Dr. Long. Dr. Long noted that Claimant's EMG studies and thoracic MRI showed no electrodiagnostic evidence of ongoing left lower extremity radiculopathy, lexopathy, or nomoneuropathy and no evidence to support any left thoracic radiculopathy with the thoracic MRI showing mild degenerative changes. Dr. Long noted there was nothing to explain Claimant's thoracic pain and that the results confirmed that there was no additional cause for Claimant's back pain. In light of the normal studies, Dr. Long recommended going ahead with a rotator cuff repair scheduled with Dr. Hsin. *See* Exhibit 1.

8. On May 22, 2014 Claimant underwent surgical repair of his left shoulder rotator cuff performed by Dr. Hsin.

9. Following his surgery, Claimant continued to have follow up appointments at Arbor Occupational Medicine with Dr. Long. On June 12, 2014, June 26, 2014, and July 10, 2014 Claimant reported continued left sided back pain and was assessed with: status post left shoulder arthroscopic surgery on May 22, 2014 and with left thoracic pain.

10. On July 31, 2014 Claimant was evaluated by Dr. Long. Claimant reported having an impacted infected molar and that he was having left ear and neck pain as well as lymph node enlargement due to the tooth pain. Dr. Long assessed left shoulder rotator cuff repair, acromioplasty and bursectomy May 22, 2014, and left thoracic back pain, improving. *See* Exhibit 1.

11. On August 15, 2014 Claimant was evaluated by Dr. Long. Claimant reported having some lateral neck pain as well as ongoing dental pain. Dr. Long noted that the pain did not seem to be radicular but musculature and noted that Claimant had

radiculopathy in the left cervical area in 2009 and had epidural steroid injections. *See* Exhibit 1.

12. On August 29, 2014 Claimant was evaluated by Dr. Long. Claimant reported that his thoracic back pain was essentially gone. Dr. Long noted that Claimant had a history of cervical radiculopathy and that there was some concern as to whether there was a recurrence of the radicular symptoms on the left that may be inhibiting Claimant's shoulder abduction. Dr. Long opined that the neck radiculopathy was not related to the work injury, but that they may need to pursue a cervical MRI to define whether or not the cervical radiculopathy was the reason that Claimant had a loss of shoulder abduction. *See* Exhibit 1.

13. On September 12, 2014 Claimant was evaluated by Dr. Long. Dr. Long noted that Dr. Hsin was generally pleased with Claimant's recovery from the left shoulder rotator cuff repair surgery but that Dr. Hsin had no explanation as to why Claimant was stuck in abduction of 90-100 degrees. Dr. Long opined that it was not clear whether this was from poor muscle activation on the left or whether it was from a flare up of a prior cervical problem that Claimant had in 2010. Dr. Long suspected that the range of motion deficit was due to cervical radiculopathy based on Claimant's weak wrist extensor. Dr. Long recommended a cervical MRI to see what was inhibiting Claimant's recovery. *See* Exhibit 1.

14. On September 18, 2014 Claimant was evaluated by Dr. Long. Claimant reported neck pain of 10/10 that was impairing his physical therapy. Dr. Long noted that the causality was unclear as they did not MRI his neck with his February 2014 injury and that he had a pre-existing cervical disc herniation several years ago. Dr. Long noted that it appeared Claimant's recovery was being inhibited from cervical radicular type symptoms, but not at all clear that it was related to Claimant's original injury. *See* Exhibit 1.

15. On September 20, 2014 Claimant underwent an MRI of his cervical spine that was interpreted by Tanya Tivorsak, M.D. Dr. Tivorsak noted at C6-C7 moderate to severe degenerative disc disease with a broad annular bulge and prominent disc osteophytes as well as severe left and moderate to severe right neural foraminal narrowing. *See* Exhibit 3.

16. On September 22, 2014 Claimant was evaluated by Dr. Long. Dr. Long noted that Claimant's cervical MRI showed moderate to severe degenerative disc disease at C6-C7 with a broad based annular bulge and prominent disc osteophytes causing severe left foraminal narrowing and moderate to severe right foraminal narrowing. Dr. Long opined that this pinpointed the cause of Claimant's wrist extensor weakness which was specific to C6. Dr. Long noted that Claimant's shoulder and back pain was so severe post injury that they never investigated Claimant's neck. Dr. Long said she could not clearly say that the neck problem was not caused or flared by Claimant's injury and noted it was possible that the neck problem was flared by being in a shoulder immobilizer postoperatively and by performing physical therapy. Dr. Long

noted that she thought the neck issue was related to the injury and that Claimant should pursue epidural steroid injections and that if they did not resolve Claimant's symptoms, that Claimant should proceed with surgical evaluation. Dr. Long opined that the cervical issues appeared to be limiting Claimant's recovery of shoulder abduction. *See* Exhibit 1.

17. On October 17, 2014 Claimant was evaluated by Dr. Long. Dr. Long noted that Claimant had not yet been approved to have the epidural steroid injection. Dr. Long noted that Claimant had a preexisting cervical problem at the C6 level for which injection resulted in resolution of symptoms. Dr. Long opined that Claimant's original injury may have caused a flare up, that his physical therapy and recovery could have caused a flare up, that possibly his positioning in surgery could have caused a flare up, and that there were many reasons that the current flare up was related to the current injury. *See* Exhibit 1.

18. On November 14, 2014 Claimant was evaluated by Dr. Long. Dr. Long noted that Claimant still had not been approved for epidural steroid injections despite the September 22, 2014 request and opined that Claimant's symptoms were progressing and included worse range of motion in the shoulder. Dr. Long opined that Claimant needed to see a surgeon and that she was doubtful that an epidural steroid injection would be of benefit. *See* Exhibit 1.

19. On November 26, 2014 Claimant was evaluated by Sander Orent, M.D. Dr. Orent noted that Claimant felt an electrical sensation from his neck down into his arm in February of 2014. Dr. Orent noted that it appeared there were two injuries that occurred, the first being a tear of the rotator cuff and the second being the electrical shooting pain down into the arm from the neck. Dr. Orent opined that the neck was involved in the initial injury and opined that the combination of the actual injury along with the prolonged immobilization that Claimant underwent following his rotator cuff repair surgery were good explanations for the neck involvement. Dr. Orent opined that Claimant had a history of cervical radiculopathy but obviously was doing fine up until this event. *See* Exhibit 1.

20. On January 12, 2015 Claimant was evaluated by Dr. Long. Claimant reported no benefit from the epidural steroid injection. Dr. Long noted that Claimant would see Dr. Castro for surgical evaluation. Dr. Long noted that it was unclear whether Claimant would have recovery of strength as his C6 disc herniation has been present for a long time and that it was possible Claimant had permanent denervation. Dr. Long noted Claimant's shoulder was getting progressive loss of range of motion and that no one was clear as to why Claimant was having the progressive loss of range of motion. *See* Exhibit 1.

21. On January 14, 2015 Claimant was evaluated by Bryan Castro, M.D. Claimant reported that on February 12, 2014 he was pulling some mixing equipment when he felt the sudden onset of a popping in his neck and had a shock sensation in his left face, arm, neck, and shoulder. Claimant reported he was diagnosed with a rotator

cuff tear which was repaired and that he had ongoing weakness in the arm as well as numbness and tingling down the left upper extremity. Claimant reported increasing pain in his left arm, circumferential numbness, tingling, and pain all the way around his arm shoulder blade and neck. Claimant reported an epidural injection in December of 2014 gave him no relief. Claimant reported a vigorous activity level that included skiing, golf, frisbee golf, mountain biking, and hockey. Dr. Castro noted that Claimant had ongoing neck and arm symptoms that were not getting better with some weakness to lifting his arm up that did not seem to be physiologic in presentation. Dr. Castro noted a very confusing clinical picture. Dr. Castro opined that Claimant should undergo a transforaminal C6-C7 injection for diagnostic purposed. Dr. Castro noted that Claimant was a heavy smoker and surgical intervention of ACDF would not be a consideration if Claimant is smoking but that it would be in the reasonable treatment parameters if Claimant had findings suggestive of C6-C7 radiculopathy. *See* Exhibit 2.

22. On January 20, 2015 Claimant was evaluated by Dr. Long. Dr. Long noted that Claimant's left upper extremity EMG studies were normal indicating lack of denervation but that she still could not explain Claimant's left upper extremity weakness. Dr. Long opined that a repeat shoulder MRI would be a good idea. Dr. Long noted Claimant's progressive range of motion loss after surgery could indicate scar tissue and she worried Claimant had developed a frozen shoulder. *See* Exhibit 1.

23. On February 3, 2015 Claimant was evaluated by Dr. Long. Dr. Long noted that Claimant had been evaluated by Dr. McCarty who noted postsurgical changes in the left shoulder, a possible focal high grade partial tear, and scar tissue in the shoulder. Dr. Long noted that Dr. McCarty was not sure why Claimant could not abduct the left shoulder and questioned whether it was related to Claimant's neck or whether it was psychological. Dr. Long noted that Claimant was found to have good range of motion except with abduction. Dr. Long also noted that Dr. Castro opined that Claimant had good upper extremity strength with weakness in abduction but nothing that would correlate with C6 radicular symptoms. Dr. Long noted that Dr. Castro thought it was a very confusing clinical picture as did the rest of the providers. Dr. Long noted that Dr. Castro recommended a repeat C6-7 transforaminal epidural steroid injection for diagnostic purposes and an EMG/nerve conduction study. Dr. Long noted they already had performed an EMG/nerve conduction study that was normal and recommended proceeding with an epidural steroid injection. *See* Exhibit 1.

24. On February 20, 2015 Claimant was evaluated by Dr. Long. Claimant reported no benefit from the epidural steroid injection. Dr. Long noted that Claimant had made no gains in physical therapy and that the physical therapist was as confused as the rest of them were. Dr. Long noted that Dr. McCarty's report was received and that Dr. McCarty was as confused as the rest of them. Dr. Long noted the question of whether this could be psychological. Dr. Long noted that Dr. Castro did not advise surgery and that Claimant wanted to see Dr. Villavicencio. *See* Exhibit 1.

25. On March 11, 2015 Claimant was evaluated by Dr. Castro. Claimant reported an inability to extend his arm above 45 degrees from the floor with essentially

no active elevation or abduction. Dr. Castro noted that the EMG performed showed a normal nerve conduction study of the upper extremity. Dr. Castro opined that Claimant's exam revealed inconsistent weakness to shoulder abduction and external rotation. Dr. Castro opined that he was at a loss in explaining Claimant's symptoms but that certainly the symptoms and level of weakness were not from Claimant's cervical spine. Dr. Castro opined that Claimant would not benefit from cervical spine surgery. *See* Exhibit 2.

26. On March 27, 2015 Claimant was evaluated by Dr. Long. Dr. Long noted that Dr. Castro did not recommend cervical spine surgery and did not find a cause for the lack of motion of Claimant's left shoulder with abduction. Dr. Long noted that Claimant saw Dr. Villavicencio's PA who recommended physical therapy, and neck x-rays that were pending results. Claimant reported continued left sided neck pain and pain radiating into the arm but Dr. Long noted that the EMG/nerve conduction studies were normal. Claimant reported that Dr. Primack felt Claimant probably had a repeat rotator cuff tear and that Claimant might require surgery for the scar tissue and lack of range of motion. See Exhibit 1.

27. On April 27, 2015 Claimant was evaluated by Eric McCarty, M.D. Claimant reported continued difficulty raising his arm. Dr. McCarty noted that Claimant continued to have some symptoms of some kind of nerve issue as Claimant described tingling with different neck motions. Dr. McCarty noted that Claimant's biggest issue was abduction to the side. Dr. McCarty opined that it appeared to be a neuromuscular issue and not an issue with the rotator cuff and did not recommend shoulder surgery. *See* Exhibit 4.

28. On May 6, 2015 Claimant was evaluated by Eric Bush, PA-C to Dr. Villavicencio. PA Bush noted that Claimant was unable to lift his arm laterally since having his rotator cuff fixed. PA Bush noted that Claimant had pathology at C6-C7 which could be contributing to Claimant's neck pain and sensory changes in the arms. PA Bush noted that Dr. Villavicencio did not feel that Claimant's left arm weakness was related to the cervical spine issues but was related to the prior rotator cuff surgery. PA Bush opined that Claimant was a candidate for C6-C7 ACDF due to the severe degenerative joint disease and bilateral foraminal stenosis with worsening neck pain and right arm parasthesias and noted that Claimant understood this would not address Claimant's pre-existing left arm weakness related to the rotator cuff surgeries. PA Bush opined that the surgery was medically necessary in part due to significant functional impairment for greater than two years. *See* Exhibit 5.

29. On May 8, 2015 Claimant was evaluated by Dr. Long. Dr. Long noted that two shoulder surgeons felt that shoulder surgery was not indicated. Clamant advised Dr. Long that he had cervical surgery scheduled with Dr. Villavicencio.

30. On May 18, 2015 Insurer issued a denial of the request for authorization of a C6-7 ACDF procedure as not being related to the February 11, 2014 injury. Donald Cally, M.D. provided an opinion that the request for C6-7 ACDF was not related to the

February 11, 2014 injury but that Claimant had not reached MMI yet as he had continued left shoulder abduction weakness after the rotator cuff repair. Dr. Cally opined that Claimant should continue to see his shoulder surgeon. Dr. Cally agreed with Dr. McCarthy that there may be a psychological component and suggested a neurological evaluation and noted that there was no etiology for Claimant's problem that had been identified. *See* Exhibit D.

31. On June 8, 2015 Claimant was evaluated by Dr. Long. Dr. Long noted that Claimant had been denied the C6-7 ACDF after a medical records review for the C6 radiculopathy with weakness being unrelated to the February 2014 injury. Dr. Long noted that the Claimant was found to have a rotator cuff tear which was repaired surgically and that after surgery Claimant began to develop clear C6 radicular symptoms and weakness. Dr. Long noted Claimant's history of prior neck problems that had resolved with epidural steroid injections in 2009 and 2010. Dr. Long opined that she did not know if Claimant's radicular symptoms were worsened by the injury in February of 2014, but that it was likely that Claimant not only suffered the rotator cuff tear, but also easily could have caused injury and irritation to his neck. Dr. Long noted that Claimant at present had progressive loss of left shoulder range of motion, but that both shoulder surgeons did not want to do a repeat procedure and Dr. Long noted the question of whether the C6 radiculopathy could possibly be contributing to Claimant's symptoms. Dr. Long opined that the cervical radicular symptoms were most likely related to Claimant's injury. *See* Exhibit 1.

32. On June 12, 2015 Claimant was evaluated by Dr. Orent. Dr. Orent opined that he was not confident cervical surgery would fix Claimant's issues and opined that further diagnostic testing was needed. Dr. Orent opined that there were probably both cervical and shoulder structures involved. Dr. Orent opined that Claimant needed an MRI of his shoulder, MRI of his neck, and an EMG/nerve conduction study. *See* Exhibit 1.

33. On June 19, 2015 Claimant underwent an MRI of his cervical spine that was interpreted by Tanya Tivorsak, M.D. Dr. Tivorsak noted at C6-C7 broad annular bulge and prominent disc osteophytes with mild central canal narrowing as well as severe left and moderate right neural foraminal narrowing. See Exhibit 3.

34. On August 3, 2015 Claimant was evaluated by Dr. Long. Dr. Long noted that the repeat shoulder MRI showed post rotator cuff repair with slight progression of the tear from the prior study with a focal full thickness tear and that the repeat cervical MRI was unchanged. Dr. Long opined that Claimant needed cervical surgery on the left. Dr. Long opined that the left sided radicular symptoms were related to the February 2014 injury. Dr. Long also opined that there seemed to be progression of the rotator cuff repair on the left and that Claimant needed to be reevaluated by Dr. McCarty. *See* Exhibit 1.

35. On August 19, 2015 Claimant was evaluated by Dr. Orent. Dr. Orent noted that Claimant's cervical surgery was denied. Dr. Orent noted that Claimant had

clear evidence of cervical radiculopathy. Dr. Orent noted that the peer review needed to be invalidated because the provider was not licensed in Colorado. Dr. Orent felt strongly that they needed to move forward and opined that Claimant was very straightforward with surging pain levels. *See* Exhibit 1.

36. On August 20, 2015 Claimant was evaluated by Dr. McCarty. Dr. McCarty noted that after his last visit, Claimant had undergone another MRI of the left shoulder and of the cervical spine. Dr. McCarty noted that the MRI of the cervical spine showed significant changes at the lower cervical levels and that Claimant had seen a neurosurgeon who recommended surgery. Dr. McCarty noted that the repeat shoulder MRI demonstrated a full-thickness tear of the rotator cuff. Dr. McCarty opined that it was clear now that Claimant had two problems: one with regard to the neck, the other with the shoulder. Dr. McCarty recommended that Claimant get his neck taken care of and that subsequent to that, the shoulder. Dr. McCarty opined that the cogwheel rigidity Claimant had could not be explained except by the combination of both and Dr. McCarty hoped that the two surgeries would take care of the issue. Dr. McCarty noted the plan would be to do an arthroscopy, fix the rotator cuff, likely a subacromial decompression and evaluate the biceps after Claimant got his neck taken care of. *See* Exhibit 4.

37. On August 26, 2015 Claimant was evaluated by Dr. Castro. Dr. Castro noted that Claimant had an inability to extend his arm from a lateral abduction or forward extension. Dr. Castro noted that Claimant had an odd neurologic exam. Dr. Castro noted Claimant's cervicalgia disease with an onset in February of 2010 where he had neroforaminal stenosis causing radiculopathy. Dr. Castro opined that Claimant had failed to respond to conservative management and that surgical intervention could be considered. Dr. Castro opined that Claimant's lateral arm motions in abduction and forward flexion were not related to Claimant's C7 radiculopathy. Dr. Castro noted that Claimant was an active smoker and needed to cease smoking before considering a cervical fusion. *See* Exhibit 2.

38. On September 30, 2015 Claimant was evaluated by Dr. Orent. Dr. Orent noted that Claimant needed two surgical procedures. The first being a repair of the rotator cuff due to severe impingement in the shoulder. The second being a cervical fusion. Dr. Orent noted that Claimant's medical issues of chest pain, smoking, and hypertension needed to be resolved before undertaking the two surgeries.

39. On November 25, 2015 Claimant was evaluated by Dr. Castro. Dr. Castro noted on examination that Claimant had profound weakness to abduction of the arm on command, but that Claimant was able to talk with his hands and move his elbow while touching the top of his head and scratching his face with no deltoid weakness. Dr. Castro opined that Claimant's current weakness pattern could not be explained. Dr. Castro noted that Claimant had cervicalgia status post an injury at work in February of 2010 with neuroforaminal stenosis causing radiculopathy and that Claimant had been seen in the past by Dr. Tobey for epidural injections as well as by neurosurgery. Dr. Castro assessed cervical radiculopathy and noted that any surgical intervention would be to consider the cervical radiculopathy as the present weakness Claimant displayed

could not be attributed to the C6-C7 level. Dr. Castro noted that the weakness was somewhat of a question as it did not seem to be dermatomal or myotomal in nature or related to any single nerve root. Dr. Castro opined that the ACDF surgery at C6-C7 could be considered because of Claimant's advanced degenerative changes and because of Claimant's cervical radiculopathy. Dr. Castro opined that surgery would only correct the radicular type complaints due to the significant foraminal narrowing. Dr. Castro opined that it was reasonable to consider surgical intervention. *See* Exhibit 2.

40. On December 9, 2015 Claimant underwent an MRI of the cervical spine interpreted by Frank Crnkovich, M.D. Dr. Crnkovich noted at C6-C7 that Claimant had uncovertebral and disc osteophytic ridging causing moderate to severe bilateral foraminal stenosis, left greater than right with more severe changes on the left where the left neural foramen was near completely obliterated. Dr. Crnkovich noted correlation with Claimant's clinical exam along the left C7 nerve root distribution. *See* Exhibit 3.

41. On December 16, 2015 Claimant was evaluated by Dr. Orent. Dr. Orent opined that perhaps a foraminotomy might be a procedure that would be less aggressive than an arthrodesis but that if Dr. Castro felt arthrodesis was necessary than they should proceed because the longer they waited the more possibility there was for permanent nerve damage. Dr. Orent opined that the shoulder joint was functional and that it was not a structural issue they were dealing with but was a neurologic issue and that he believed the nerve was not adequately innervating the left arm. Dr. Orent opined that Claimant had worsening cervical radiculopathy and that the longer treatment was delayed the more likely it was that permanent nerve damage could occur. Dr. Orent opined that it was also possible that some of the residual they were seeing was due to the rotator cuff surgery but that he thought it was really the cervical radiculopathy. Dr. Orent noted that Dr. McCarty had opined that Claimant needed an additional surgical procedure on his shoulder and that Dr. McCarty recommended that Claimant do the neck first and then address the shoulder. Dr. Orent noted that Dr. McCarty and he both found that the type of rigidity and loss of function Claimant had was consistent with both a rotator cuff and a neurologic issue in the neck. *See* Exhibit 1.

42. On December 29, 2015 Claimant was evaluated by Dr. Long. Claimant reported that his attorney did not want him to follow up with Dr. Castro. Dr. Long noted that Claimant would need to follow up with Dr. Orent to discuss another spine surgeon referral. *See* Exhibit 1.

43. On December 30, 2015 Claimant was evaluated by Dr. Orent. Dr. Orent noted that Claimant was still having a good deal of pain in the arm and the neck. Dr. Orent opined that Claimant's problems were almost certainly neurologic, in combination with the rotator cuff tear. Dr. Orent opined that Claimant had a structural problem in the left shoulder and a substantial cervical radiculopathy presenting neurologic problems into the left arm. Dr. Orent noted there were substantial delays in the case that were harming Claimant who had been completely straightforward throughout his presentation. Dr. Orent opined that Claimant needed surgery as soon as possible and

that they needed to address his neck and then move right into his shoulder. *See* Exhibit 1.

44. On January 22, 2016 Brian Reiss, M.D. performed a medical records review. Dr. Reiss noted that Claimant had ongoing cervical symptoms in June of 2010 with a noted two year prior history of cervical problems. Dr. Reiss noted that after June of 2010 it was unclear what happened with regard to Claimant's treatment of symptoms but that his MRI from that time was essentially the same as his MRI findings currently. Dr. Reiss opined that Claimant's cervical complaints and request for surgical surgery at C6-C7 was not related to his work injury. Dr. Reiss opined that the request may be reasonable, but also opined that treatment of Claimant's shoulder might obviate the need for any treatment for the cervical spine. Dr. Reiss opined that ongoing treatment for Claimant's shoulder was probably appropriate and that Claimant was not at maximum medical improvement for his work injury since he still had a shoulder issue. *See* Exhibit A.

45. On February 17, 2016 Dr. Orent authored an IME rebuttal. Dr. Orent noted he reviewed the IME by Dr. Reiss and that he disagreed. Dr. Orent opined that in the initial injury Claimant felt a pop in his mid back that shot up into his head like a lightning bolt with pain below the left shoulder blade and Dr. Orent opined that neck pain with radiculopathy can indeed radiate to this area so why Dr. Reiss felt it was not consistent with the mechanism of injury escaped him. Dr. Orent opined that Claimant had clear C6 radiculopathy and for Dr. Reiss to say otherwise was to naysay the physical examination and MRI findings. Dr. Orent noted that Claimant had a prior history of cervical radiculopathy that was successfully treated. Dr. Orent opined that Dr. Reiss was completely inaccurate in his assessment and did not adequately evaluate Claimant. Dr. Orent opined that there were significant radicular complaints on the first visit with radiation of pain into the inferior aspect of the shoulder. Dr. Orent opined that he did not think the shoulder surgery would fix Claimant's neck. Dr. Orent noted that Dr. Reiss believed the shoulder to be the primary problem and he disagreed and opined that the primary problem was cervical radiculopathy. *See* Exhibit 1.

46. On February 24, 2016 Claimant was evaluated by Dr. Orent. Dr. Orent noted he had written an extensive rebuttal to Dr. Reiss' IME and considered Dr. Reiss to be in error in virtually all the statements he made. Dr. Orent opined that Claimant was getting worse. Dr. Orent opined that Claimant urgently needed cervical and shoulder surgery and that both were occupationally related. *See* Exhibit 1.

47. Claimant testified at hearing. Claimant reported that he had one prior injury to his cervical area in 2010 when a case fell onto his shoulder blade area. Claimant reported that after injections and approximately 8 weeks of treatment he was fine and had no ongoing symptoms or pain thereafter. This testimony is not credible or persuasive and is inconsistent with prior medical records and reports.

PRIOR CERVICAL TREATMENT:

48. On July 19, 2009 Claimant was evaluated by Andrew Bridget, PA. PA Bridget noted that Claimant complained of a history of left lateral neck and arm pain with radiculopathy radiating down his left shoulder, and from the arm to wrist for the past year with an onset in May of 2008. Claimant reported no history of trauma. Claimant reported difficulty sleeping due to the pain and that his left arm sometimes felt weaker than his right arm. PA Bridget noted that Claimant had an MRI performed in July of 2009 that showed at C6-C7 moderate degenerative joint disease and severe left neural foraminal stenosis. PA Bridget noted that Claimant was open to specialty referral or consultation with neurosurgery or neurology. *See* Exhibit O.

49. On August 3, 2009 Claimant underwent an MRI of his cervical spine interpreted by Gustavo Isuani, M.D. Dr. Isuani noted Claimant's history of neck pain and left upper extremity pain. Dr. Isuani provided an impression of C6-C7 moderate degenerative disk disease with left uncovertebral osteophytes and bilateral facet arthropathy resulting in severe left neural foraminal stenosis, moderate right neural foraminal stenosis, and mild central canal stenosis. *See* Exhibit N.

50. On September 11, 2009 Claimant was evaluated by Alan Villavicencio, M.D. Claimant reported neck pain and left upper extremity radiculopathy symptoms. Claimant reported approximately 1.5 years of neck pain radiating down into his mid back as well as into his left upper extremity which began without any precipitating event. Claimant reported more recently that his pain had been worsening and that his primary care provider ordered an MRI of his cervical spine and referred him for neurosurgical consultation. Claimant reported being unable to ride his mountain bike as it exacerbated his symptoms. Claimant reported while lying down, the pain shoots down his left lateral upper arm and into his posterior forearm. Claimant reported that while sitting, he develops paresthesias in his left upper extremity. Claimant reported neck pain radiating to his left trapezius muscle and clavicle as well as subscapularly. Claimant rated his pain at 6/10 in his neck and 5/10 in his arm. Dr. Villavicencio discussed with Claimant the goal of relieving Claimant's symptoms non-surgically with the options of undergoing a possible left C7 transforaminal epidural steroid injection, beginning a course of physical therapy 2-3 times per week for 6-8 weeks, and beginning a Medrol Dosepack prior to any possible injection. Dr. Villavicencio prescribed Percocet for pain management. *See* Exhibit L.

51. On September 24, 2009 Claimant was evaluated by John Tobey, M.D. Dr. Tobey noted that Claimant had been referred to him for consultation for evaluation of his left neck and upper back pain with left arm radiations ongoing since May of 2008 and for consideration of an epidural steroid injection. Claimant reported to Dr. Tobey that he had pain in the left side of his neck and upper back with left arm radiation that began in May of 2008 when he was hit by a car while biking. Claimant reported that he flew over his handle bars and hit his head on the curb. Claimant reported that he was not wearing a helmet and was knocked out. *See* Exhibit M.

52. Dr. Tobey noted that Claimant underwent MRIs of the cervical spine in both August of 2009 and in August of 2008 and that he had the films and reports

available for review. Dr. Tobey noted that Claimant had tried physical therapy, ice, head, and medications. Claimant reported constant pain worse in the evening with radiations in the left trapezius, scapula and left upper arm and tingling/numbness in the left arm. Dr. Tobey assessed cervical radiculopathy and cervical disc degeneration and noted that Claimant had chronic left C7 radiculopathy with mild weakness and neural tension. Dr. Tobey noted that Claimant had tried conservative management options and was an appropriate candidate for a left C7 transforaminal injection. Dr. Tobey noted that future considerations included repeating the injection if Claimant obtained good but short-lasting benefit and opined that if Claimant did not improve, Claimant might require surgical intervention. Dr. Tobey performed a left C7 cervical transforaminal epidural steroid injection and noted that Claimant tolerated the procedure well. *See* Exhibit M.

53. In February of 2010 Claimant had a work related injury where a case fell on his shoulder blade area. *See* Exhibit B.

54. On June 1, 2010 Claimant was evaluated by Anjoli Dixit, M.D. Dr. Dixit noted that Claimant was there requesting a Percocet prescription refill for Claimant's cervicalgia. Dr. Dixit noted that Claimant had an abnormal MRI of his cervical spine in August of 2009 that showed at C6-C7 moderate degenerative disk disease with left uncovertebral osteophytes and bilateral facet arthropathy as well as severe left neural foraminal stenosis, moderate right neural foraminal stenosis, and mild central canal stenosis. Dr. Dixit assessed chronic cervicalgia due to Claimant's cervical disc disease with recent re-injury as well as neuroforaminal stenosis and radiculopathy. Dr. Dixit referred Claimant to physical therapy and neurosurgery and refilled Claimant's pain medications and muscle relaxants. *See* Exhibit O.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder

should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000).

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).). Claimant bears the burden of proof of showing that medical benefits are causally related to his work-related injury or condition, by a preponderance of the evidence. *Ashburn v. La Plata School District 9R,* W.C. No. 3-062-779 (ICAO May 4, 2007); C.R.S. §8-43-201, *HLJ Management Group, Inc. v. Kim,* 804 P. 2d 250(Colo. App. 1990).; *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915, 918 (Colo. App. 1993).

Respondents have been required to provide ancillary “pre-operative treatment” for non-industrial conditions if the evidence establishes that such ancillary care is a reasonably necessary prerequisite to surgery and must be given to achieve optimum treatment of the compensable injury. *Public Service Co. v. Industrial Claim Appeals Office,* 979 P.2d 584 (Colo. App. 1999). The question of whether the claimant has established that the need for ancillary treatment is a reasonably necessary prerequisite to achieve optimal treatment is one of fact for the ALJ. *Public Service Co. v. Industrial Claim Appeals Office, supra*.

Claimant has failed to establish by a preponderance of the evidence that the C6-C7 surgery recommended by Dr. Castro is causally related to his work injury. The medical records establish that Claimant suffered a significant injury to his cervical spine in a bicycle accident in May of 2008. The medical records also demonstrate that in February of 2010 Claimant suffered a second injury to his cervical spine when a box fell onto his shoulder blade area. From 2008 to 2010 Claimant received significant treatment for his cervical spine and for the two separate injuries that included physical therapy, MRI scans, and an epidural steroid injection. Despite this significant treatment and after an injection that Claimant reported not to be helpful, Claimant continued to have significant ongoing pain in his cervical spine in June of 2010 and was at that time referred back to physical therapy and referred to neurosurgery for an evaluation. The medical records during this period of time show that Claimant had severe left foraminal stenosis at C6-C7.

Claimant did not report two separate injuries to his cervical spine to the medical providers in this case who evaluated him for the February 11, 2014 injury. Claimant testified that he only suffered one prior injury when a box fell onto his shoulder blade. This is inconsistent with prior medical records. Further, Claimant's testimony that after his single injury he was pain free and had no ongoing symptoms after 8 weeks of treatment, physical therapy, and epidural steroid injections is also inconsistent with the prior medical records. Here, the records establish that Claimant's second cervical injury occurred in February of 2010. Claimant was evaluated four months later in June of 2010 after undergoing an epidural steroid injection and reported continued pain and symptoms. At the June 2010 evaluation Claimant requested a refill of pain medications and his pain and symptoms were severe enough that his prescription was refilled and he was referred back to physical therapy and was referred to neurosurgery for an evaluation. His symptoms at that time had not resolved completely and Claimant was not completely pain free. Rather, in June of 2010 his symptoms were severe enough to prompt a referral for neurosurgical evaluation.

Additionally, both Dr. Castro and Dr. Villavicencio opine that the ACDF surgery at C6-C7 would be due to the cervical radiculopathy and advanced degenerative changes and that the surgery would only be to address or fix the radicular complaints that are due to the severe left foraminal narrowing at that level. Claimant has had severe left foraminal narrowing dating back to 2008 that remains unchanged. The hope is that the surgery will address the symptoms caused by the severe left foraminal narrowing at C6-C7 and Claimant's symptoms in this area date back to 2008 and are unrelated to the February 11, 2014 work injury. Although the surgery may be a reasonable option, the surgery is aimed at treating a pre-existing condition not caused, aggravated, or exacerbated by the February 11, 2014 work injury.

For unclear reasons, Claimant did not seek further treatment following his June, 2010 evaluation where he reported significant ongoing pain and where he was referred to neurosurgery. Although no further treatment records exist after this date and until his February 2014 injury, Claimant's contention that he was pain free and symptom free shortly after his February 2010 injury is not logically credible or persuasive. It is logically incredible to conclude that in 2010 and after 2 years and 1 month of reported consistent and constant cervical pain with radiculopathy into his left upper extremity that was not improved that Claimant suddenly became symptom free. Rather, Claimant appeared to have significant ongoing symptoms in June, 2010 that caused a referral to neurosurgery and that did not go away after the injection that was performed.

Claimant's testimony overall is not credible or persuasive. Further, the medical providers that opine that Claimant's current C6-C7 symptoms and need for treatment are related to the February 11, 2014 work injury are based on inaccurate information that Claimant was fine and was asymptomatic from 2010 until the February 11, 2014 work injury. These opinions are based on incomplete medical records and inaccurate statements/reports made by Claimant. The opinions provided by Dr. Orent and Dr. Long are based on Claimant's incredible reports that he was asymptomatic in his cervical spine from 2010 until the February 11, 2014 work incident. Therefore, the opinions by Dr. Orent and Dr. Long that find a causal relationship between the February 11, 2014 work injury and Claimant's current cervical symptoms cannot be relied upon and are rejected.

Claimant has failed to establish, more likely than not, that his ongoing symptoms in the C6-C7 area and his need for surgery is related to his work injury. The findings on his current MRI are almost identical to his findings on past MRIs prior to the February 11, 2014 injury. Further, his current C6-C7 symptoms are consistent with symptoms he complained of dating back to May of 2008 following a significant bicycle injury and are consistent with symptoms noted still in June of 2010 when Claimant, for unknown reasons, stopped treatment. Claimant's work injury did not aggravate or accelerate his symptoms or imaging which remains the same now as it did several years prior to this new work injury. It is clear that C6-C7 surgery was contemplated back in 2010 as an option for Claimant. The surgery is still an option to treat Claimant's continued symptoms that have been ongoing since 2008 and it may be a reasonable option for him at this time. However, the need for surgery is not related to his February 11, 2014 work injury and his severe left foraminal stenosis at C6-C7, radiculopathy, and constant pain has been ongoing since 2008. Dr. Reiss' opinion that the surgery is not work related is found credible and persuasive.

Although Claimant does not directly argue that the C6-C7 surgery should be approved as ancillary treatment for Claimant's February 11, 2014 work injury, the ALJ notes that it has been recommended that the C6-C7 surgery be performed prior to a repeat left rotator cuff repair surgery by Dr. McCarty. As found above, Claimant's C6-C7 condition is not work related. However, the need for surgery could still be found the responsibility of Respondents if Claimant establishes that the surgery is a reasonably necessary prerequisite to his shoulder repair surgery and that it must be performed to achieve optimum treatment of his compensable shoulder injury. Here, Claimant has failed to establish that the C6-C7 surgery is a reasonably necessary prerequisite to achieve optimal treatment of his left shoulder. It has not been established, more likely than not, that the cervical surgery needs to be performed prior to any surgery to repair Claimant's rotator cuff in order for Claimant to achieve optimal treatment of his shoulder. Rather, the opinion of Dr. Reiss is persuasive that there are no contraindications to performing the shoulder surgery prior to the cervical surgery and that nothing in Claimant's cervical spine would preclude the safety of a shoulder surgery. Although Dr. McCarty recommended the cervical surgery go first, Dr. McCarty did not provide a detailed or persuasive analysis showing that the cervical surgery is a reasonably necessary prerequisite to the repeat shoulder surgery.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish that the C6-C7 cervical fusion surgery recommended by Dr. Castro is reasonable, necessary, and related to his February 11, 2014 work injury. His request for surgery is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 9, 2016

ISSUES

The issues presented involve compensability and Claimant's entitlement to medical and indemnity benefits. The questions to be answered are:

I. Whether Claimant established, by a preponderance of the evidence, that he sustained a compensable injury to his left knee on February 27, 2015.

II. If Claimant sustained a compensable left knee injury, whether he established, by a preponderance of the evidence, that his medical appointment at Premier Orthopedics on February 27, 2015 should be covered by workers' compensation under the "emergency doctrine."

III. If Claimant sustained a compensable left knee injury, whether he is entitled to TTD benefits beginning May 7, 2015 and continuing to May 29, 2015.

IV. Whether Claimant's Average weekly wage is $399.60, $397.18 or some other figure.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

The February 27, 2015 Incident

1. Claimant is a long time employee of Respondent-Employer having worked for the school District for approximately 22 years. He is currently employed in the capacity of a school security guard.

2. Claimant's primary responsibility as a security guard is to ensure the safety of staff and students alike. To that end, Claimants' duties include monitoring the movement of buses, cars and students in and around the parking lots, streets and student drop off zones prior to the start of the school day.

3. On February 27, 2015, Claimant was holding a group of students at a crosswalk in order to clear the walkway of traffic when a fight erupted between a couple of male students.

4. Claimant intervened and while attempting to separate the combatants, he slipped on ice, twisted his left knee and fell, with one of the young men to the ground. According to Claimant, he was pulling the two fighters apart when he slipped. Claimant

testified that as he fell he pulled one of students down with him and the boy fell on his left knee. Claimant testified that he normally completes his outside duties and returns to the building by 9:00 AM. The ALJ infers from this testimony that Claimant's slip and fall occurred sometime prior to 9:00 AM.

5. Claimant was able to get to his feet[1] and escort the two young men to the school office where he reported the incident to "Ms. Squires", prompting completion of an "Employee Accident or Illness Report" (hereinafter the "incident report"). The incident report provides that Claimant was "trying to separate 2 boys from fighting", which caused him to [injure] a (sic) already injured knee." There is a section on the incident report questioning: "Do you feel you need medical treatment?" The "Yes" box is checked and a statement follows indicating: "Lacy already had appointment before reinjuring knee." The incident report is dated February 27, 2015 and is signed by both Clamant and his supervisor, Sherry L. Kalbach.

Claimant's Pre-Existing Medical History

6. Claimant has a considerable history of right knee pain. Medical records admitted into evidence document complaints of right knee pain, secondary to degenerative joint disease, as far back as February 25, 2010. Claimant has tried "exercise, physical therapy, nonsteroidal anti-inflammatory medications and corticosteroid injections" in an effort to ameliorate his persistent right knee symptoms. The aforementioned treatment modalities failed to produce lasting benefit. Consequently, Claimant's treatment for the past several years has been limited to providing pain relief while avoiding or delaying surgical intervention by administering visco-supplementation injections.

7. Claimant's began to experience pain in his left knee left sometime prior to his February 27, 2015 slip and fall. According to a report authored by Physician Assistant (PA), Kimberly Shenuk dated January 9, 2015, Claimant presented with complaints of left knee pain which had "been going on for quite a long time." Although Claimant's left knee had become symptomatic, he had "not tried any treatment for it", according to PA Shenuk. Consequently, X-rays of the left knee were obtained. X-rays demonstrated degenerative changes throughout the joint. Consequently, a corticosteroid injection was recommended and administered by PA Shenuk. Based upon the evidence presented, the ALJ finds that Claimant's degenerative arthritis pre-existed his February 27, 2015 slip and fall and was the likely source of his symptoms.

8. During the January 9, 2015 appointment, PA Shenuk noted that visco-supplementation, similar to that provided for Claimant's right knee pain, may be necessary if his left knee symptoms persisted.

9. Claimant's left knee pain continued despite the corticosteroid shot

[1] Claimant testified that adrenaline helped him get into the office where he carried out his duties for an additional 20 minutes after his slip and fall.

administered January 9, 2015. Therefore, on February 20, 2015, Claimant returned to PA Shenuk where he was provided with his first visco-supplementation injection to the left knee. Claimant was scheduled to return for his second injection in one week, i.e. February 27, 2015, the same day he slipped and fell.

Claimant's February 27, 2015 Appointment with PA Shenuk

10. As noted above, Claimant had been scheduled to see PA Shenuk for his second visco injection to the left knee the same day he slipped and fell. According to Claimant, he presented for his scheduled February 27, 2015 appointment between 10:00 and 10:30 AM, after he fell. Claimant testified that after he fell and reported the incident to his supervisor, he drove his pickup truck equipped with a manual transmission home where he picked up his wife and swapped the truck for his automatic transmission car.[2] He then proceeded to his scheduled appointment. Claimant testified that he was seen by PA Shenuk at his scheduled appointment.

11. Claimant testified further that he informed PA Shenuk that he slipped and fell before arriving for his appointment and that he had increased pain in his left knee as a consequence. He testified that he was worried about having the second visco injection because of his fall and his increased pain. Claimant accepted the injection nonetheless.

12. Diane McDonald (Claimant's wife) testified that she generally accompanies Claimant to all of his medical appointments and she went with him to his February 27, 2015 appointment with PA Shenuk. According to Ms. McDonald, Claimant told PA Shenuk about his fall and that his knee was swollen. She testified further that PA Shenuk did not take notes during the appointment and that she has a history of not taking notes during her appointments with Claimant.

13. A medical report from Claimant's February 27, 2015 appointment with PA Shenuk notes that Claimant presented in the "office today for his 2nd visco injection." PA Shenuk preformed a physical examination documenting the following concerning Claimant's knees bilaterally: "No abnormalities or deformities. No rashes, erthyema, warmth, or skin breakdown. Neurovascularly intact." The record is devoid of any mention of a new injury reported by Claimant or his wife.

14. Claimant testified that had he not have already had a scheduled appointment at Premier Orthopedics, he would have proceeded to the emergency room for medical attention after his February 27, 2015 slip and fall.

Claimant's Subsequent Medical Treatment

15. A third visco injection was administered by PA Shenuk on March 6, 2015.

[2] Claimant testified that he was able to depress the clutch in his truck for the short drive from his work place to his house despite the increased pain it caused.

Claimant's physical examination during this appointment was unchanged from the previous visit. In fact, PA Shenuk documented exactly the same observations she had during Claimant's February 27, 2015 visit.

16. Claimant returned to Premiere Orthopedics for follow-up on April 15, 2015 after completing his visco-supplementation injection series. He was evaluated by PA Shenuk on this occasion and complained of continued pain. For the first time since Claimant was seen initially on February 27, 2015, PA Shenuk documented that Claimant "did have a fall about two months ago and sustained a twisting injury to his knee." PA Shenuk completed a comprehensive physical examination noting "significant medial joint line tenderness" and "[p]ain with McMurray's" testing. Concerned that Claimant may have a medial meniscus tear, PA Shenuk ordered a MRI.

17. Claimant underwent MRI of the left knee on April 22, 2015. In addition to findings consistent with moderate osteoarthritis, Claimant's MRI demonstrated "[a]ttenuation, degeneration, and free edge fraying of the medical meniscus which may reflect the sequel of remote meniscal tear." No acute meniscal tear or meniscal flap was identified.

18. Claimant continued to experience unrelenting left knee pain. Consequently, he was taken to surgery by Dr. Michael Simpson on May 7, 2015. Dr. Simpson performed a pre-surgical history and physical noting that Claimant sustained a twisting injury to his left knee at work and that an MRI failed to show evidence of a discrete tear. Nonetheless, Dr. Simpson noted that Claimant's failure to improve with conservative treatment warranted a recommendation for surgical intervention.

19. Surgical intervention revealed a "tear to the posterior horn of the medial meniscus with a displaced flap fragment underneath the articular surface." The flap fragment was pulled out from the articular surface and a partial medial meniscectomy and arthroscopic synovectomy preformed.

20. Claimant returned Premier Orthopedics on May 8, 2015 following surgery at which time he was referred to post-surgical physical therapy (PT). Claimant presented for his initial PT evaluation on May 18, 2015 at which time he reported that he had "injured his left knee while breaking up a fight at work, when he fell and a student fell on top of it."

21. Although the report of PA Shenuk from May 8, 2015 and subsequent notes from Premier Orthopedics dated June 24, July 29, August 24, October 16, October 23 and October 30, 2015 do not impose specific work restrictions, Claimant testified he was unable to work for 2 ½ months following his May 7, 2015 surgery. The ALJ credits Claimant's testimony and the testimony of PA Shenuk to find that Claimant was unable to engage in his usual occupation as a security guard for the School District as a direct consequence of his left knee injury and subsequent surgery beginning May 7, 2015.

The Deposition Testimony of Physician Assistant Kimberly Shenuk and Dr. Michael Simpson

22. PA Shenuk testified by deposition on November 30, 2015. PA Shenuk testified that there was no way to determine the cause of the fraying demonstrated on Claimant's left knee April 22, 2015 MRI. She testified further that there was no way to establish the age of the pathology Dr. Simpson discovered during Claimant's May 7, 2015 surgery. Regarding specific restrictions imposed following surgery, PA Shenuk testified that standard protocol following meniscectomy is to "just limit running and jumping" for a period of six weeks. PA Shenuk testified that "[o]n May 4, 2015, . . . [Claimant] was given work restrictions because that was his preoperative appointment" and he was "undergoing surgery on the 7th." According to PA Shenuk Claimant was "formally given a release without restrictions on August 13th."

23. Based upon the evidence presented, the ALJ finds that Claimant, more probably than not, returned to work without restriction on August 13, 2015. Nonetheless, Claimant's claim for lost wage benefits extends only to May 29, 2015, probably because this date reflects the end of the 2014-2015 academic year. As found at paragraph 21 above, Claimant was disabled from engaging in his usual occupation as a security guard on May 7, 2015. Crediting Claimant's testimony, the ALJ finds that Claimant's disability continued though May 29, 2015.

24. Despite returning to work , Claimant continued to have symptoms associated with his pre-existing, non-work related osteoarthritis bilaterally. He received additional bilateral visco-supplementation injections through October 2015. Based upon the evidence presented, the ALJ finds this treatment unrelated to the February 27, 2015 slip and fall.

25. Dr. Simpson testified by deposition on November 30, 2015. Consistent with the testimony of PA Shenuk, Dr. Simpson testified that there was no way to determine the age or the cause of the meniscal tear he discovered during Claimant's May 7, 2015 surgery. Nevertheless, Dr. Simpson testified that the meniscal pathology found during surgery on May 7, 2015 would be consistent with a twisting mechanism and that "most people who slip on ice twist their knee as they do it." Consequently, Dr. Simpson testified that the "torn meniscus could have occurred as a result of the fall and slipping on the ice."

The Independent Medical Examination of Dr. Michael Sparr

26. Claimant was evaluated by Dr. Michael C. Sparr on January 26, 2016 at the request of Respondent. Since there were inconsistencies between Claimant's described mechanism of injury (MOI) and Claimant's report that he fell onto his knee as provided for in his Workers Claim for Compensation form, Dr. Sparr was tasked with evaluating "whether Claimant's meniscal tear was caused directly by the work related fall or it was the result of normal wear and tear in a mild to moderately arthritic knee." In order to address this question, Dr. Sparr took a history and reviewed records, including employer claim notes and deposition transcripts. He also performed a physical

examination. Following his independent medical examination (IME), Dr. Sparr noted that Claimant had been receiving visco-supplementation injections into the right knee for years with benefit. He opined that there would have been "no reason to believe that the patient would not have a similar benefit from the same injections in an arthritic left knee." Because Claimant did not respond to visco-supplementation, Dr. Sparr noted that consideration was given over to another cause of Claimant's ongoing symtomatology, including meniscal tearing which was ultimately confirmed though surgical intervention. The ALJ infers from the totality of Dr. Sparr's IME report that the he concluded that Claimant's left medial meniscal tear was caused by his work related fall and not the natural progression of his non-work related osteoarthritis. Consequently, if became necessary for Dr. Sparr to address a secondary question, specifically "whether falling and landing on one's knee [was] a reasonable explanation for the cause of a partially torn medial meniscus."

27. While Dr. Sparr noted that a moderately arthritic knee predisposes the meniscus to tearing, he credited the history provided to him by Claimant during the IME, specifically that Claimant "did not fall forward directly onto his knee but rather backwards in the course of pulling a fighting child away from the fight and slipping on the ice, to conclude that the described MOI was a "reasonable cause of a partial medial meniscal tear." Based upon a complete and careful analysis of Dr. Sparr's IME report, the ALJ finds that Dr. Sparr concludes that Claimant's torn meniscus was caused by the February 27, 2015 incident. The ALJ finds the opinions of Dr. Sparr regarding the cause of Claimant's left medial meniscus tear to be consistent with the opinion expressed by Dr. Simpson and supported by the record evidence presented. Dr. Sparr's opinions concerning the likely cause of Claimant's left medical meniscal tear and his subsequent need for surgery are credible and convincing.

The Testimony of Melissa Denoo

28. Melissa Denoo testified at hearing. Ms. Denoo is the Claims Adjuster for Respondent-Employer. She has worked for Respondent-Employer for approximately 4 years.

29. Ms. Denoo testified that she called Claimant the same day he slipped and fell. She did not make contact with Claimant so she left a message for Claimant, requesting that he call her. As she did not receive a return call, Ms. Denoo testified that she called Claimant a second time and again left a message the following week. According to Ms. Denoo, she made ultimately made contact with Claimant on March 5, 2015. Ms. Denoo testified that during her conversation with Claimant on March 5, 2015, Claimant declined treatment.

30. Ms. Denoo testified that 11 days later (March 16, 2015) she spoke with Claimant during which time, he requested treatment under Workers' Compensation. According to Ms. Denoo's testimony, she then explained to Claimant that he would need to complete a medical records release form so that medical records surrounding the care of his knees could be sent to the workers' compensation doctor. Ms. Denoo requested the release because the notation in the Employee Accident or Illness Report

form reflected that Claimant had "injured an already injured knee." Ms. Denoo testified that following this exchange, Claimant again declined treatment.

31. Claimant denied that he ever declined treatment. Rather, Claimant testified that he was told that it would take two weeks before he could get an appointment with the workers' compensation doctor. Claimant could not recall the name of the person who told him it would take two weeks to see a workers' compensation provider and there is no written notation in the evidentiary record that anyone told him that it would take two weeks to see a worker's compensation provider. Claimant testified that he told the party to whom he was speaking that he already had an appointment with his doctor so he was going to keep it.[3]

32. Ms. Denoo testified that she did not tell Claimant it would take two weeks to see a workers' compensation doctor and has no idea who would have informed Claimant of the same. According to Ms. Denoo appointments with the Employer's designated providers can be scheduled the day of the injury on a walk in basis.

33. Ms. Denoo testified that on May 1, 2015 she received a call from Premier Orthopedics notifying her that Claimant was scheduled to proceed to surgery on May 7, 2015 and that Claimant had provided their office a worker's compensation claim number. Ms. Denoo informed the staff at Premier that Claimant did not have an open worker's compensation claim. Claimant proceeded with surgery under his health insurance.[4]

34. On May 5, 2015, Ms. Denoo spoke with Claimant regarding his scheduled surgery. The claim notes submitted into evidence reflect that May 5, 2015 is the first documented instance where Ms. Denoo actually obtained a statement from Claimant regarding the circumstances surrounding his left knee injury. On cross examination, Ms. Denoo admitted that she was aware that Claimant was injured on February 27, 2015, that she did not know how or even whether Claimant's left knee had been injured previously and that she made no attempt to interview any one about the incident nor did she obtain a recorded statement from Claimant prior to May 5, 2015.

35. Based upon the evidence presented, the ALJ finds inconsistencies between the testimony of Claimant and Ms. Denoo surrounding the claim, including the suggestion that Claimant was told it would take two weeks to see a worker's compensation provider. Nonetheless, the ALJ credits Claimant's testimony and the

[3] When asked why he did not pursue treatment with a workers' compensation providers for the School District during his IME with Dr. Sparr, Claimant reported that "he was already treating at Premier and was told he would have to wait two weeks for an appointment with a Worker's Compensation doctor and already had an appointment with Dr. Simpson, so he kept it.

[4] Claimant admits that he was provided with a designated provider list on February 27, 2015. Thus, he concedes that all treatment obtained after February 27, 2015 was unauthorized and properly not covered under worker's compensation. Consequently, Claimant is not seeking that the surgery performed May 7, 2015 be covered by worker's compensation.

record evidence to find that he, more probably than not, slipped, twisted his left knee and then fell with a student while trying to break up a fight in furtherance of his duties as a school security guard on February 27, 2015.

36. The ALJ credits the opinions of Dr. Simpson and Dr. Sparr to find that Claimant, more probably than not, tore his left medial meniscus when he slipped and twisted his knee while breaking up a fight between two students on February 27, 2015. The evidence presented persuades the ALJ that Claimant has proven, by a preponderance of the evidence, that he sustained a compensable injury to his left knee on February 27, 2015 and that this injury directly resulted in his need for treatment, including the surgery performed by Dr. Simpson on May 7, 2015.

Claimant's Wage Loss and Average Weekly Wage

37. Claimant is paid according to a 12 month contract with Employer. He is paid monthly and his pay varies depending on the hours he works. In addition to pay for hours worked, Respondent-Employer allows their employees to accrue and utilize "comp time." Claimant testified that he accrues "comp time" for irregular overtime work associated with extracurricular activities held on school grounds. As explained by Claimant, the ALJ finds that "comp time" is paid time off from work given to Claimant, in lieu of paying overtime, for the extra hours he works during school sponsored events. Claimant testified that he "trades" comp time for overtime pay because it is hard to secure overtime pay. According to Claimant he can elect to use comp time accrued for regular hours that he otherwise would have worked if he needed to be away from work attending to other business, i.e. attending to his sick mother, attending his or his wife's medical appointments and the like.

38. Claimant testified that following his surgery on May 7, 2015 and through May 29, 2015, he told "Jamie" that he was going to use his comp time for his injury so his pay would not be "docked." Consequently, Claimant testified that while he was paid for the time period of his disability extending from May 7, 2015 through May 29, 2015, his available comp time hours were reduced. Based upon the evidence presented, the ALJ finds that Claimant was required to use his accrued comp time in lieu of being paid temporary total disability (TTD) benefits. As such, the ALJ determines that Claimant suffered an actual wage loss, since his comp time is an earned benefit he "trades" for overtime pay and without this benefit Claimant would not have been paid during the time period of May 7, 2015 through May 29, 2015. The ALJ finds Claimant's situation regarding his payment of "comp time wages" akin to those injured workers who's sick or vacation time is docked instead of being paid TTD.

39. Respondents presented persuasive evidence which establishes an average weekly wage of $397.18. Documentation entered into evidence regarding this issue consists of the wage records demonstrating Claimant's gross wages for the twelve month period extending from February 28, 2014 through January 31, 2015. The injury in this case occurred on February 27, 2015. The wage records submitted establish that Claimant earned $20,653.17 leading up to the date of injury. Completing the necessary calculation yields an average weekly wage of $397.18 at the time of Claimant's injury

($20,653.17 / 52 (weeks) = $397.18. The ALJ finds and concludes that this figure most closely approximates Claimant's wage loss and diminished earning capacity at the time of his February 27, 2015 compensable work related injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). As found, the opinions of Dr. Sparr regarding the cause of Claimant's torn meniscus are credible and persuasive. Dr. Sparr clarified the record regarding how Claimant fell and likely injured his left knee. Based upon Dr. Sparr's IME report, the ALJ concludes that Claimant's notation that he "fell onto left knee" as reflected in his Worker's Claim for Compensation does not support the entry of a finding that Claimant is incredible merely because this report is inconsistent with his more fully described MOI given to Dr. Sparr. Here, Respondent, based upon their interpretation of Claimant's Worker's Claim for Compensation, suggests that Claimant reported that he fell forward landing directly onto the front of his knee. This interpretation injects material not included in the simple statement that Claimant "fell onto left knee." Indeed this statement does not indicate what part of the knee Claimant fell "onto." With additional questioning (by an unbiased medical examiner), Dr. Sparr was able to clearly ascertain the exact nature of the MOI. Moreover, the fact that the described MOI does not appear in the medical record of PA Shenuk from February 27, 2015 does not compel a finding that Claimant is incredible and/or that he did not sustain a torn meniscus as a consequence of the February 27, 2015 incident. Rather, the ALJ finds and concludes that PA Shenuk likely did not document that Claimant slipped and fell on February 27, 2015. Her note from April 15, 2015 indicating that Claimant "did have a fall about two months ago and sustained a twisting injury to his knee" supports this conclusion and the opinion of Dr. Sparr that Claimant's torn meniscus was caused by this slip and fall. As found above, Claimant's testimony regarding the MOI is credible and persuasive.

Compensability

E. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment*. Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

F. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Here, there is little question that Claimant's alleged injury occurred within the time and place limits of his employment relationship with Employer and during an activity, specifically breaking up a fight between two students which is connected to his duties and position as a security guard for Employer. Nonetheless, the question of whether the alleged injury "arose out of" Claimant's employment must be resolved before the injury is deemed compensable.

G. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). The fact that Claimant may have experienced an onset of pain while performing job duties, does not mean that she sustained a work-related injury. An incident which merely elicits pain symptoms without a causal connection to the industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988)*; Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989). The determination of whether there is a sufficient "nexus" or causal relationship between a claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). Here, the evidence presented persuasively establishes that Claimant intervened in an effort to stop a fight between two students while in the course of his employment. In the process of pulling one student off of the other, Claimant slipped on the ice, twisted his knee and fell with the young man onto his left knee. Claimant's report of injury was documented contemporaneously with the incident. Although reported as a new injury, the incident report form references that Claimant had "injured and already injured knee" raising the question of whether Claimant's torn meniscus is a consequence of his slip and fall sustained while Claimant was carrying out his duties as a security guard or whether the torn meniscus represents a natural progression of Claimant's pre-existing, non-work related left knee osteoarthritis. In this case, the ALJ concludes that the totality of the objective medical evidence presented supports a reasonable inference that the torn meniscus, including the displaced flap visualized during surgery on May 7, 2015, is the likely aftermath of an acute tear suffered when Claimant slipped, twisted his knee and fell with the weight of one of the combatants to the fight on him on February 27, 2015. More probably than not, the tear was caused by Claimant's slip, twist and fall, as supported by the opinion of Dr. Sparr, rather than the natural progression of his pre-existing, non-work-related osteoarthritis as suggested by Respondent's. Claimant's left medial meniscus tear is compensable.

Medical Benefits

H. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). However, respondents are only liable for authorized or emergency medical treatment. See § 8-42-101(1), C.R.S.; *Pickett v. Colorado State Hospital*, 32 Colo. App. 282, 513 P.2d 228 (1973). As indicated above, Claimant concedes that all treatment after February 27, 2015 is unauthorized. Regarding the February 27, 2015 treatment provided by PA Shenuk, Claimant asserts that the evidence presented supports a conclusion that this care is covered under the "emergency doctrine" articulated in *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990).

I. As correctly noted by Claimant, medical services provided during a bona fide emergency are an exception to the normal requirement that a claimant obtain authorization for all treatment of the industrial injury. Larson's Workers' Compensation Law, § 94.02[6] (1999); *Sims v. Industrial Claim Appeals Office, 797 P.2d 777* (Colo. App. 1990). There is no precise legal test for determining the existence of a medical emergency.[5] Rather, the question of whether a claimant has proven a bona fide emergency is dependent on the particular facts and circumstances of the claim. *Timko v. Cub Foods,* W. C. No. 3969-031 (June 29, 2005). In this case, Claimant asserts that his treatment with Premier Orthopedics on February 27, 2015 should be considered a bona fide emergency because his pain was so severe that he would have gone to the emergency room had he not been scheduled to see PA Shenuk previously. The ALJ is not persuaded. Here, Claimant's actions following his slip and fall belie his assertion that his pain was so bad as to constitute the need for emergent care. Rather the evidence presented establishes that Claimant worked for sometime after his slip and fall. Moreover, when the opportunity to drive directly to the ER to obtain treatment for "severe pain" arose, Claimant did not take it. Nor did Claimant call anyone for transportation to the ER. Instead, Claimant chose to drive his manual transmission truck home to get his wife (who attends all scheduled medical appointments with him) and swap vehicles for the subsequent drive to his scheduled appointment. Even giving Claimant the benefit of the doubt that he wanted to get home to advise his wife what was happening, one cannot reconcile the fact that he did not proceed to the ER thereafter with his claim of pain so severe that a trip to the ER would have been warranted had he not have had a scheduled appointment. Moreover, when he arrived at his scheduled appointment there is no record evidence that Claimant informed PA Shenuk or anyone else that he needed emergent care. Simply put, the ALJ is not convinced that a pre-scheduled doctor's appointment would prevent someone from proceeding to the ER if they had pain so severe that a trip to the ER was necessary.

Claimant's Entitlement to Temporary Total Disability Benefits

J. To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts; that he left work as a result of the disability, and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by

[5] The exception is not limited to situations where life is threatened. *Bunch v. Industrial Claim Appeals Office of State of Colorado,* 148 P.3d 381 (Colo.App.2006).

restrictions which impair the Claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). As found here, Claimant has proven that was unable to work as a direct consequence of his compensable work related injury beginning May 7, 2015 and continuing through May 29, 2015 and that he suffered an actual wage loss as a result. Consequently, Claimant is "disabled" within the meaning of section 8-42-105, C.R.S. and is entitled to TTD benefits for the time period extending from May 7, 2015 through May 29, 2015. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999); *Hendricks v. Keebler Company*, W.C. No. 4-373-392 (Industrial Claim Appeals Office, June 11, 1999).

K. In keeping with the holding announced in *Public Service Co. of Colorado v. Johnson*, 789 P.2d, 487 (Colo. App. 1990) the ALJ concludes that Claimant is entitled to receive full TTD for the aforementioned period of time even though he received payment of his "comp time." As noted in the *Public Service Co.* decision, such payment does not constitute double compensation because vacation, sick and other similar benefits, i.e. "comp time" are earned by past services unrelated to the occupational injury. The Court concluded that the legislative determination of § 8-42-124(4) "reflects a legislative determination that an injured employee should not be required to sacrifice earned benefits in order to obtain statutorily mandated workmen's compensation benefits." *Public Service Co., supra.* Thus, just as the employer in *Public Service Co.* was required to pay both the claimant's sick and vacation time and full TTD, Respondent-Employer in the instant case is obligated to pay Claimant for the required comp time he depleted from his account in addition to his full TTD.

Claimant's Average Weekly Wage

L. The overall purpose of the average weekly wage (AWW) statute is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity resulting from the industrial injury. *See Campbell v. IBM Corp., 867 P.2d 77 (Colo. App. 1993); National Fruit Prod. v. Crespin, 952 P.2d 1207 (Colo. App. 1997).*

M. Sections 8-42-102 (3) and (5) (b), C.R.S. (2013), give the ALJ discretion to determine an AWW that will fairly reflect loss of earning capacity. An AWW calculation is designed to compensate for total temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. The best evidence of Claimant's actual wage loss and therefore a fair approximation of his diminished earning capacity comes from the wage records submitted into evidence. The ALJ adopts Respondent's calculation of Claimant's average Weekly Wage (AWW) as that figure represents his average weekly earnings for 12 months prior to the February 27, 2015 injury. Accordingly, the ALJ determines that Claimant's average weekly wage is $397.18. The ALJ concludes that this figure most closely approximates Claimant's wage loss and diminished earning capacity at the time of his February 27, 2015 compensable work related injury.

ORDER

It is therefore ordered that:

1. Claimant's February 27, 2015 left medial meniscus injury is compensable.

2. Claimant's request for medical benefits, specifically his claim for coverage of and reimbursement for the February 27, 2015 appointment at Premier Orthopedics is denied and dismissed.

3. Claimant's AWW is $397.18.

4. Claimant's request for reimbursement of "comp time" used is denied and dismissed. Rather, Respondent-Employer shall pay temporary total disability benefits (TTD) in accordance with C.R.S. § 8-42-103(1)(b), beginning May 7, 2015 and continuing through May 29, 2015 at a rate of sixty-six and two-thirds percent of the above ordered AWW.

5. Respondent-Employer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether Claimant established by a preponderance of the evidence that psychological treatment, including prescription medications, are reasonably necessary and related to her workplace injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant did not appear at the hearing. She testified by telephone, but did not otherwise participate in the hearing.

2. Prior to her admitted April 24, 2015 work injury, Claimant had been receiving psychological treatment for depression and anxiety from Mr. James Newman, a licensed social worker. Her psychiatric records show that she was depressed and anxious as early as her teenage years. Claimant's treatment with Mr. Newman began in the late 1980s or early 1990s. At that time, she began taking psychotropic prescription medications prescribed by her primary care physician, Dr. Thumin. At the time of her injury she was taking citalopram for anxiety and depression. Claimant testified that Dr. Thumin prescribed the citalopram at 40 mg a day "because he knew [her] financial situation," but that she took the drug at 20 mg per day. She also testified inconsistently that she took the citalopram at 40 mg a day. On October 10, 2015, Dr. Thumin refilled Claimant's prescription for citalopram at the dosage of 40 mg per day.

3. Claimant was working as a store manager for Employer at the time of her accident which occurred before the store opened. She described her accident as occurring when she fell from a stepladder while putting away stock, hitting her head on a display riser behind her. Claimant did not seek immediate care, but presented to NextCare Urgent Care before noon.

4. Claimant was initially seen by a physician's assistant, and later by Erick Gomer, M.D. She was diagnosed with a closed head injury based on her subjective reports of symptoms. She was eventually referred to Dr. Reinhardt, an occupational medicine doctor, for symptoms of a head injury, with a negative MRI of her brain. Claimant was evaluated and cleared by an ear doctor and an eye doctor for subjective symptoms she reported. Dr. Reinhardt placed her at MMI for the head injury on August 24, 2015, assigning no impairment, and concluding that her psychiatric medications should be prescribed outside of workers' compensation.

5. Claimant was later referred to Dr. William Boyd. Dr. Boyd performed neuropsychological testing for a neuropsychological evaluation and began providing eight treatment visits for cognitive behavioral therapy.

6. Dr. Boyd performed neuropsychological testing for cognition and found that Claimant did not have a cognitive disorder. He also did psychological testing which indicated that Claimant exaggerated her complaints. Dr. Boyd diagnosed Claimant with somatoform disorder, a condition where a person's psychological conditions become manifest physically.

7. Claimant reported having a panic attack after her fourth visit with Dr. Boyd which took place two days after her step-father's burial. Claimant testified that Dr. Boyd was "abusive," and that she would not subject herself to that, so she stopped treating with him. She reported that she became suicidal as a result of the appointment. Immediately after that appointment, Claimant went to a previously scheduled appointment with Dr. Joshua Krembs who was treating her by providing osteopathic manipulation. She additionally saw Mr. Newman in September 2015, "because of the trauma [she] experienced after seeing Dr. Boyd."

8. Dr. Robert Kleinman testified as an expert in the field of psychiatric medicine. Having reviewed Dr. Boyd's records and based on his familiarity with Dr. Boyd, and with the testing and treatment Dr. Boyd was providing Claimant, Dr. Kleinman opined that most likely, Claimant perceived Dr. Boyd's explanation of her test results, which diagnosed Claimant with a somatoform disorder, as confrontational. Dr. Kleinman testified that when Claimant was explaining to him what happened at the appointment with Dr. Boyd, she reported that Dr. Boyd had been critical of her response that her son made her happy, because he wanted her to say that sunrises made her happy. Because of that conversation, she reported that she no longer liked Dr. Boyd. Dr. Kleinman explained:

> I would summarize by saying that in the course of her treatment with Dr. Boyd, she got anxious. The anxiety was likely over his confronting her on some issue. And then she didn't want to go back anymore. To have anxiety in psychotherapy is not --- is not inappropriate. It's almost expected.

9. Claimant earned a master's degree in psychology, summa cum laude. Her work experience includes teaching classes at the college level from 2007 through January 2015. However, she testified that she does not know what somatoform disorder is. Given her education, that fact that she was diagnosed with somatoform disorder, and Dr. Boyd's discussion of her diagnosis with her, the ALJ finds Claimant's testimony incredible.

10. Dr. Kleinman testified that Claimant had been abused by her biological father leaving her prone to feeling traumatized. She had a close relationship with her stepfather who had just passed. Dr. Kleinman testified that it was more likely that

Claimant's panic attack was a delayed expression of emotions she felt about her step father's burial two days earlier, which was a much more significant event than a reaction to Dr. Boyd's discussion of what made Claimant happy.

11. Claimant's medical records refer to other anxiety attacks Claimant had reported. These included an attack while she was working at the Waldorf School which was triggered by someone throwing a pencil in her direction; an attack in 2011 or 20112 which Claimant described as the worst anxiety attack of her life which occurred when she was fired from a job; and a past history of an alleged brain injury in about 2011 when she fell off of a doctor's examining table.

12. Dr. Kleinman described Claimant as being "no worse now than she was before," the injury. He attributed her need for current treatment and medication to stressors outside the scope of the occupational injury.

13. In his report, Dr. Kleinman noted that Claimant was worried and anxious about money, the possibility of losing her home, and "not being sure where she stood" with Employer. Claimant's counsel attempted to establish that this anxiety was related to Claimant's claim and was sequelae of her injury. The report also noted that Claimant was not returning to work because she could not figure out the process, not because she was medically unable to return to work. Claimant's counsel attempted to establish that Claimant's anxiety about work for the Employer was a result of her injury.

14. Claimant reported to Dr. Kleinman that she was attempting to file bankruptcy. She had six figure student loan debts, and had been unemployed for approximately one year before her injury. She was receiving Medicaid and food stamps, her mother was paying her mortgage, and her son was paying most of her other expenses.

15. Claimant reported to Dr. Kleinman that she experienced panic attacks once a month, lasting thirty to sixty minutes. Claimant's primary care physician prescribed Xanax for anxiety, but Claimant rarely if ever used it. On January 27, 2016, Dr. Gomer prescribed bupropion, 75 mg, half tablet twice a day, through Workers' Compensation. No persuasive evidence was presented to support a finding that Claimant actually took the bupropion, as Claimant reported to Dr. Kleinman that she had not taken the medication, and that she was waiting for Dr. Gomer to consult with a Dr. Disorbio, whom she had recently seen for a psychological assessment outside of workers' compensation, on her attorney's referral.

16. Dr. Kleinman performed a Respondents' sponsored independent psychiatric evaluation of Claimant on February 17, 2016. The evaluation consisted of a medical record review, an interview, a mental status evaluation, and some further cognitive testing. He formed his opinions based on Claimant's medical records and his evaluation of her. Dr. Kleinman opined that Claimant's need for psychological treatment and medication, specifically citalopram, Xanax, and bupropion, is not related to her work injury.

17. Dr. Kleinman diagnosed Claimant with recurrent major depressive disorder. He explained that over the course of Claimant's thirty plus year treatment, it was not unusual that her medication would be adjusted, such as by the addition of bupropion. It was also not unusual for someone suffering from anxiety to have a tranquilizer, like Xanax, and that he was surprised given her history of panic attacks that it had not been prescribed earlier. Further, Claimant would not have been as resilient as one would expect at the time of her injury because she was only taking half of her prescribed dose of citalopram.

18. The ALJ credits Dr. Kleinman's opinions as credible and persuasive.

19. The ALJ finds that Claimant failed to establish by a preponderance of the evidence that her need for continued psychological treatment is related to her work injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Insurer is liable for medical care that is reasonably needed to cure and relieve the claimant from the effects of the compensable injury. Section 8-42-101(1), C.R.S. The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999).

Claimant has failed to establish that psychological treatment is related to a compensable injury. There is not substantial, reliable medical evidence in the record to support Claimant's claim for additional medical benefits. Dr. Kleinman, Dr. Gomer, and Dr. Boyd were unable to link Claimant's current depression and anxiety with the compensable injury. Mere speculation in conjure is not enough to support Claimant's entitlement to medical treatment in this case. There is not substantial evidence to support an award of medical benefits. To the contrary, here the substantial evidence supports a denial of psychological treatment.

The mere occurrence of a compensable injury does not require an ALJ to find that the need for subsequent medical treatment was caused by the industrial injury. The range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970); § 8-41-301(1)(c), C.R.S. 2013. Respondents may challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care in a case. *See Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Claimant has an extensive history of anxiety and depression. Therefore, the psychological treatment is not authorized, and the condition does not relate to the industrial injury.

Claimant argues that while she had preexisting psychological issues, her current anxiety and depression are worse due to her treatment with Dr. Boyd. Claimant also will point out that she has increased anxiety from her injury as she is worried about money and her job.

Dr. Kleinman credibly and persuasively testified that Claimant's panic attack at Dr. Boyd's office was more likely related to the death of her stepfather two days prior. Dr. Kleinman testified that Claimant had an anxiety attack over questions Dr. Boyd was asking her regarding what made her happy. Dr. Boyd also informed Claimant that she had no neurological issues from the injury and diagnosed her with somatoform disorder. Dr. Kleinman credibly testified that while the session with Dr. Boyd may have caused the panic attack it is more likely that the attack was related to the passing of her stepfather.

Claimant's increased anxiety over money issues and litigation stress are not compensable. In *Jarosinski v. Industrial Claim Appeals Office*, 62 P.3d 1082 (Colo. App. 2002), a division of the the court held that problems resulting from a claimant's negative psychological reaction to the litigation process are not compensable. The ALJ also finds and concludes that Claimant's anxiety regarding money is related to her student loan debt and her recent history of unemployment. Claimant's psychological issues must be directly related to the industrial injury and not to her emotional reaction to treatment. In *Malloy v. Lincoln Community Hospital*, W.C. No. 4-148-045 (March 2, 2005), an ALJ found that the aggravation of a Claimant's stress was not caused directly by the industrial injury but rather, by the claimant's emotional reaction to the respondents' adversarial actions in adjusting the claim. Claimant's current psychological issues are not directly related to her fall injury at work.

Claimant was not a credible witness. The medical records indicate that Claimant failed to inform her workers' compensation providers of her complete psychological history. Claimant testified that Dr. Boyd was abusive. While the testimony of Dr. Kleinman and the medical records indicate that Dr. Boyd was simply asking Claimant what made her happy or discussing her diagnoses.

It is more logical and more likely that Claimant's current psychological issues are related to the death of her stepfather and her preexisting depression and anxiety for which she has been receiving treatment since the late 1980s or early 1990s than it is from her work injury.

The credible evidence and testimony presented at the hearing in this matter lead to the conclusion that Claimant has not established by the preponderance of the evidence that psychological treatment and medications are related to the workplace injury.

Respondents are not liable for Claimant's psychological treatment.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to prove the psychological treatment is reasonable, necessary, and related to her work place injury. Claimant's request for psychological treatment is denied and dismissed.

2. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 633 17th Street, Suite 1300, Denver, Colorado, 80202. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUE

Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period December 4, 2015 until terminated by statute.

FINDINGS OF FACT

1. Claimant worked for Employer as a Journeyman Electrician. On September 2, 2015 Employer was working as an electrical subcontractor at a water treatment plant. The general contractor of the project was conducting high pressure testing of the water system. While Claimant was standing on a ladder wiring a motor there was a sudden, extremely loud noise. A flange and cap had blown off a high pressure water source approximately six feet away from Claimant. Claimant suffered admitted industrial injuries to the left side of his face and left ear.

2. On September 3, 2015 Claimant visited Authorized Treating Physician (ATP) Frank D. Polanco, M.D. for an examination. Claimant reported that while he was working on September 2, 2015 a pipe exploded approximately eight feet away from him and he felt the blast on the left side of his face. Because his left ear began to hurt, he visited an urgent care center but they were unsure whether he had punctured his eardrum. After reviewing Claimant's medical records and performing a physical examination Dr. Polanco concluded that Claimant did not require any additional diagnostic testing or treatment. He determined that Claimant had reached Maximum Medical Improvement (MMI) with no impairment or restrictions. Dr. Polanco authorized 10 days of medical maintenance care in the form of follow-up treatment.

3. Claimant testified that he returned to work for Employer and performed his regular job duties. However, he expressed safety concerns because of the September 2, 2015 incident. Employer's Safety Manager Bill Vaughan acknowledged that the general contractor on the project failed to follow proper safety procedures in conducting the high pressure water testing on September 2, 2015. However, he explained that he offered to transfer Claimant to a position in another part of the water treatment project that was overseen by a different general contractor. However, Claimant declined the transfer.

4. Claimant explained that on September 16, 2015 the general contractor conducted another high pressure water test without evacuating any of the workers in the building. The testing blew off an improperly installed pressure gauge. Because of the episode Claimant continued to express safety concerns about the job site.

5. On September 17, 2015 Claimant resigned from his position with Employer. He remarked that his sole reason for resigning was safety concerns. Claimant's Termination Notice specifically provided that he "quit because of safety concerns."

6. Claimant subsequently continued to suffer symptoms in the form of hearing loss and debilitating headaches as a result of the September 2, 2015 incident. On October 28, 2015 Claimant returned to Dr. Polanco for an examination. In a patient questionnaire Claimant remarked that "I don't think I could do my job with my current headaches." He also noted continuing tinnitus and ringing. Claimant mentioned that noise, bright lights and working increase his pain. Dr. Polanco commented that Claimant's MMI date was unknown because he "remain[ed] symptomatic." He then referred Claimant for a neurological evaluation.

7. In early December 2015 Claimant requested a change of physician and Respondents agreed. On December 4, 2015 Claimant visited ATP Miguel Castrejon, M.D. for an evaluation. Claimant reported that on September 2, 2015 he was working for Employer when a pipe flange and cap blew off as a result of pressure testing. Claimant noted that the "tremendous explosion" primarily impacted the left side of his face and head. He remarked that testing revealed that his eardrum was not damaged but he suffered left-sided hearing loss. He continued to experience ringing in his left ear and headaches. Dr. Castrejon determined that Claimant's symptoms were directly related to the September 2, 2015 industrial incident. He expressed concerns that Claimant was suffering from "extreme hypersensitivity" overlying the area of the left temple and was thus concerned about temporal arthritis. Dr. Castrejon diagnosed Claimant with the following: (1) post-concussive syndrome; (2) possible temporal arthritis or trigeminal neuralgia; (3) left ear post-trauma tinnitus; and (4) an abnormal left ear audiogram. He prescribed new medications including Cymbalta, Predisone and Nortriptyline to alleviate Claimant's symptoms. Dr. Castrejon assigned restrictions providing that Claimant should not be exposed to high sounds and recommended light duty employment.

8. Mr. Vaughan acknowledged that Claimant resigned from Employer because of safety concerns. He noted that Claimant simply did not feel safe working on the project. Mr. Vaughan explained that he offered to accommodate Claimant's restrictions with modified employment in the form of office or warehouse work that did not involve loud noises. However, Claimant declined. Notably, Employer did not provide Claimant with any written offer of modified employment.

9. On February 9, 2016 Claimant visited Lawrence J. Adams, M.D. for a neurological evaluation. Dr. Adams diagnosed Claimant with the following: (1) occipital neuralgia; (2) tinnitus and left ear hearing loss. He explained that "I suspect that this is primarily an occipital neuralgia. He also has hearing loss. I [will] inject his left occipital nerves today."

10. On February 19, 2016 Dr. Adams authored a letter stating that Claimant's "working diagnosis, I believe, is occipital neuralgia, traumatically induced, with

migrainous features." He remarked that "this type of pain can be quite significantly severe and difficult to work with."

11. During the Winter of 2016 Claimant continued to visit Dr. Castrejon. On March 28, 2016 Dr. Castrejon again diagnosed Claimant with the following: (1) post-concussive syndrome; (2) possible temporal arthritis or trigeminal neuralgia; (3) left ear post-trauma tinnitus and (4) an abnormal left ear audiogram. He remarked that Claimant did not receive any benefits from occipital nerve blocks and was unable to sleep because of headaches. Dr. Castrejon recommended facet joint injections to decrease Claimant's headaches. He reiterated that Claimant should not be exposed to high sounds and authorized light duty employment.

12. Claimant testified at the hearing in this matter. He explained that it would be impossible to work in his trade and avoid loud noises. Claimant noted that his current symptoms include hearing loss, inability to sleep, dizziness and ringing in both ears. He maintained that the combination of work restrictions and continuing symptoms has prevented him from earning wages. Claimant noted that he has not been employed since the date of his resignation because of his continuing symptoms, medications and work restrictions.

13. Claimant has proven that it is more probably true than not that he is entitled to receive TTD benefits for the period December 4, 2015 until terminated by statute. On September 2, 2015 Claimant suffered admitted industrial injuries to the left side of his face and left ear when a flange and cap were blown off a high pressure water source during testing. Claimant initially received medical treatment from ATP Dr. Polanco. He determined that Claimant had reached MMI with no impairment or restrictions and authorized 10 days of medical maintenance care in the form of follow-up treatment. On September 17, 2015 Claimant voluntarily resigned his position with Employer because of safety concerns. By October 28, 2015 Dr. Polanco noted that Claimant's MMI date was unknown because he "remain[ed] symptomatic." He then referred Claimant for a neurological evaluation.

14. Claimant subsequently continued to suffer symptoms in the form of hearing loss and debilitating headaches as a result of the September 2, 2015 incident. On December 4, 2015 ATP Dr. Castrejon diagnosed Claimant with the following: (1) post-concussive syndrome; (2) possible temporal arthritis or trigeminal neuralgia; (3) left ear post-trauma tinnitus; and (4) an abnormal left ear audiogram. He stated that Claimant should not be exposed to high sounds and recommended light duty employment. On February 19, 2016 Dr. Adams authored a letter stating that Claimant's "working diagnosis, I believe, is occipital neuralgia, traumatically induced, with migrainous features." He remarked that "this type of pain can be quite significantly severe and difficult to work with." By March 28, 2016 Dr. Castrejon commented that Claimant had not received any benefits from occipital nerve blocks and was unable to sleep because of headaches. Dr. Castrejon recommended facet joint injections to decrease Claimant's headaches. Claimant's continuing symptoms and work restrictions thus prevented him from returning to regular employment.

15. Claimant credibly testified that his current symptoms include hearing loss, inability to sleep, dizziness and ringing in both ears. He maintained that the combination of work restrictions and continuing symptoms has prevented him from earning wages. Claimant has been unable to perform his regular employment, has not reached MMI and has not been released to work without restrictions. He has thus suffered a 100% wage loss since December 4, 2015. Although Claimant voluntarily resigned on September 17, 2015 his continuing symptoms and work restrictions reflect that he suffered a worsening of condition that reestablished the causal connection between his industrial injury and wage loss. He sustained a wage loss because the worsening of his condition resulted in physical restrictions that did not exist at the time of his resignation and limited his temporary earning capacity. Accordingly, Claimant is entitled to receive TTD benefits for the period December 4, 2015 until terminated by statute.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual

wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by the claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

5. Respondents assert that Claimant is precluded from receiving TTD benefits because he was responsible for his termination from employment pursuant to §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. (collectively "termination statutes") when he voluntarily resigned from employment on September 17, 2015. Under the termination statutes a claimant who is responsible for his termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *In re of George,* W.C. No. 4-690-400 (ICAP July 20, 2006). A wage loss is caused by a worsened condition if the worsening results in physical limitations or restrictions that did not exist at the time of the termination and the restrictions cause a limitation on the claimant's temporary earning capacity that did not exist when the claimant caused the termination. *Martinez v. Denver Health,* W.C. No. 4-527-415 (ICAP, Aug. 8, 2005). Whether such a worsening caused the claimant's wage loss is a factual determination for the ALJ. *Fantin v. King Soopers,* W.C. No. 4-465-221 (ICAP, Feb. 15, 2007).

6. In *Anderson v. Longmont Toyota, Inc.,* 102 P.3d 323 (Colo. 2004) the Colorado Supreme Court concluded that the termination statutes are not a permanent bar to temporary disability benefits when the worsening of a prior work-related injury causes the claimant's wage loss. The claimant in *Anderson* returned to modified light duty after having sustained a compensable back injury. After returning to work he resigned his position due to a dispute with the employer and began work with a subsequent employer under the same physical restrictions. However, his condition worsened and he received more severe restrictions that required him to resign his subsequent job. The respondents denied temporary total disability benefits because the termination from employment was a permanent bar to the receipt of benefits. However, relying on the legislative history of the termination statutes, the remedial policies underlying the Workers' Compensation Act and the procedure for reopening claims where there has been a change of condition, the Supreme Court in *Anderson* determined that the bar to receipt of temporary disability benefits is not permanent. The Court remarked that the bar was intended only to weed out wage loss claims

subsequent to voluntary or for-cause terminations of modified employment that do not involve a worsened condition. The Court summarized that "section 8-42-105(4) bars TTD wage loss claims when the voluntary or for-cause termination of the modified employment causes the wage loss, but not when the worsening of a prior work-related injury incurred during that employment causes the wage loss." *Anderson*, 102 P.3d at 326; *see Zorayma Gutierrez-Delgado v. North Star Foods, LLC.* W.C. No. 4-857-384-03 (ICAP, Dec, 19, 2012); *see also Grisbaum v. Industrial Claim Appeals Office,* 109 P.3d 1054 (Colo. App. 2005) (claimant was entitled to an award of TTD benefits even though his resignation was voluntary because his condition worsened after his termination from employment).

7. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive TTD benefits for the period December 4, 2015 until terminated by statute. On September 2, 2015 Claimant suffered admitted industrial injuries to the left side of his face and left ear when a flange and cap were blown off a high pressure water source during testing. Claimant initially received medical treatment from ATP Dr. Polanco. He determined that Claimant had reached MMI with no impairment or restrictions and authorized 10 days of medical maintenance care in the form of follow-up treatment. On September 17, 2015 Claimant voluntarily resigned his position with Employer because of safety concerns. By October 28, 2015 Dr. Polanco noted that Claimant's MMI date was unknown because he "remain[ed] symptomatic." He then referred Claimant for a neurological evaluation.

8. As found, Claimant subsequently continued to suffer symptoms in the form of hearing loss and debilitating headaches as a result of the September 2, 2015 incident. On December 4, 2015 ATP Dr. Castrejon diagnosed Claimant with the following: (1) post-concussive syndrome; (2) possible temporal arthritis or trigeminal neuralgia; (3) left ear post-trauma tinnitus; and (4) an abnormal left ear audiogram. He stated that Claimant should not be exposed to high sounds and recommended light duty employment. On February 19, 2016 Dr. Adams authored a letter stating that Claimant's "working diagnosis, I believe, is occipital neuralgia, traumatically induced, with migrainous features." He remarked that "this type of pain can be quite significantly severe and difficult to work with." By March 28, 2016 Dr. Castrejon commented that Claimant had not received any benefits from occipital nerve blocks and was unable to sleep because of headaches. Dr. Castrejon recommended facet joint injections to decrease Claimant's headaches. Claimant's continuing symptoms and work restrictions thus prevented him from returning to regular employment.

9. As found, Claimant credibly testified that his current symptoms include hearing loss, inability to sleep, dizziness and ringing in both ears. He maintained that the combination of work restrictions and continuing symptoms has prevented him from earning wages. Claimant has been unable to perform his regular employment, has not reached MMI and has not been released to work without restrictions. He has thus suffered a 100% wage loss since December 4, 2015. Although Claimant voluntarily resigned on September 17, 2015 his continuing symptoms and work restrictions reflect that he suffered a worsening of condition that reestablished the causal connection

between his industrial injury and wage loss. He sustained a wage loss because the worsening of his condition resulted in physical restrictions that did not exist at the time of his resignation and limited his temporary earning capacity. Accordingly, Claimant is entitled to receive TTD benefits for the period December 4, 2015 until terminated by statute.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant shall receive TTD benefits for the period December 4, 2015 until terminated by statute.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: May 11, 2016.

WORKERS' COMPENSATION NO. 4-943-342-01

ISSUES

- Is the ALJ prohibited from considering the reasonableness, necessity and cause of the need for left shoulder surgery because maximum medical improvement is at issue and Claimant has not yet undergone a requested Division-sponsored independent medical examination?

- If the ALJ is not prohibited from considering the issue of medical benefits did the Claimant prove by a preponderance of the evidence that left shoulder surgery is reasonable, necessary and causally-related to the industrial injury?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. At hearing Claimant's Exhibits 1 through 4 were admitted into evidence. Respondents' Exhibits A through L were admitted into evidence.

2. Claimant sustained an admitted injury on February 14, 2014.

3. On February 17, 2014 Alan Ruff, M.D., evaluated Claimant. Claimant gave a history of "injury to left shoulder which happened Fri morning pushing up trailer tracking system which jammed." Claimant reported that he "felt immediate pain" and thought he might have pinched a nerve. Claimant also explained that he had previously experienced a "similar injury on the right side" while using the trailer tracking system. On physical examination (PE) Dr. Ruff noted tenderness of the C5-6 spinous process with some associated paracervical tenderness. He also noted tenderness with palpation of the supraspinatus into the area of the deltoid. Dr. Ruff recorded that abduction of the shoulder caused discomfort in the deltoid area and that there was decreased sensation to light touch and cold down the lateral aspect of the left arm. Dr. Ruff diagnosed a sprained shoulder, cervical radiculitis and disturbance of skin sensation. Claimant did not want to use pain medications. Oral steroids were prescribed and Claimant was taken off work through February 21, 2014 with instructions to follow up with Dr. Ruff or with "work comp" on February 24, 2014.

4. On February 27, 2014 Sharon O'Connor, M.D., examined Claimant at Concentra. Claimant's "chief complaints" were left-sided neck, scapular and arm pain and weakness. Claimant reported that the "incident on the 14th was what seemed to make his pain very severe, but he has indeed had pain in the same location and similar pain over the last 2 years." Claimant reported that he received some initial relief of the numbness in his left arm from the steroids prescribed by his primary care physician. However, when Claimant stopped the steroids the numbness started to "come back,

especially in the thumb and the radial aspects of his of his forearm." On PE Dr. O'Connor noted there was "no point tenderness over the cervical spine with good range of motion" (ROM). On PE of the left shoulder Dr. O'Connor noted Claimant had pain with ROM and was unable to abduct past 120 degrees without significant pain. Dr. O'Connor also recorded that internal and external shoulder rotation were painful. Dr. O'Connor opined that Claimant "possibly" had "two things going on and they may be of a more acute-on-chronic nature than originally thought." Specifically Dr. O'Connor opined that Claimant had signs and symptoms of "significant radiculopathy in the left arm" and "some primary shoulder pathology" that needed to be addressed. Dr. O'Connor's plan was to start Claimant on Medrol and refill Percocet and Robaxin. Dr. O'Connor ordered urgent MRI studies of the cervical spine and the left shoulder.

5. On March 27, 2014 Claimant was examined by physiatrist Robert Kawasaki, M.D. Dr. Kawasaki recorded that Claimant had a history of smoking "eight packs of cigarettes per week." On PE Dr. Kawasaki noted "cervical tenderness in the musculature with some restrictive" ROM. Dr. Kawasaki also noted "restricted left shoulder" ROM with tenderness in the trapezius and intrascapular region. Dr. Kawasaki assessed a "left shoulder strain with probable intraarticular pathology, potential rotator cuff tear, cervical and shoulder girdle strain with myofascial irritation." Dr. Kawasaki referred Claimant for an open MRI of the shoulder. (Respondents' Exhibit A, pp. 8-9).

6. Dr. Kawasaki examined Claimant on May 8, 2014. Dr. Kawasaki wrote that Claimant had undergone a left shoulder MRI. Dr. Kawasaki stated the shoulder MRI evidenced moderate supraspinatus and infraspinatus tendinopathy with some small "partial thickness tears" and that the humeral head was "minimally subluxed." Dr. Kawasaki further noted Claimant had undergone a cervical MRI that showed the following: (1) C4-5 left-sided disc osteophyte complex with severe left foraminal narrowing; (2) C5-6 disc osteophyte complex and left-sided disc protrusion with moderate spinal canal and foraminal narrowing; (3) C6-7 posterior disc bulge with moderate spinal canal narrowing and moderate bilateral foraminal narrowing. Dr. Kawasaki also stated that he performed a left upper extremity EMG that evidenced "some acute finings in a left C6 distribution with cervical radiculopathy." Dr. Kawasaki opined that the cervical spine "may be more of the culprit as far as the pain as well as the paresthesias in the left upper extremity." He further opined that the cervical spine "may also be the main nidus for the shoulder and shoulder girdle pain." Dr. Kawasaki recommended an epidural steroid injection (ESI) and stated that if Claimant demonstrated an "excellent result" then "the focus would be more on cervical spine treatment."

7. May 16, 2014 a medical records review was completed by John Raschberger, M.D. Dr. Raschberger agreed with Dr. Kawasaki that the medical records supported "a likely diagnosis of left C6 radiculitis" and that it was "appropriate" for Claimant to undergo a C6 ESI. Dr. Raschberger further opined Claimant had not yet reached maximum medical improvement (MMI) and the date of MMI depended on Claimant's response to the ESI. Dr. Raschberger opined it was reasonable to impose physical activity restrictions including a 30 pound weight lifting restriction, limiting the

use of narcotics to bedtime only and the avoidance repetitive or strenuous use or “yanking” or similar ballistic activity with the left arm.

8. On May 20, 2014, orthopedic surgeon Cary R. Motz, M.D., evaluated Claimant for a “left shoulder injury.” Dr. Motz noted that Claimant experienced left shoulder pain on the date of injury but his pain was “mainly in the neck at this point.” Dr. Motz reviewed the cervical MRI. The left shoulder MRI images were not available for review, but Dr. Motz considered the MRI report. On PE Dr. Motz noted that Claimant had good ROM of the neck with “some discomfort.” Dr. Motz also noted limited ROM of the left shoulder with “some discomfort with an impingement test.” Dr. Motz observed that Claimant’s rotator cuff strength was 5/5. Subjectively Claimant reported decreased sensation over the entire left hand. Dr. Motz recorded his impressions as left shoulder rotator cuff tendinopathy and cervical radiculopathy. Dr. Motz opined that Claimant’s symptoms seemed “to be more related to his cervical radiculopathy than his shoulder” and that it was “unlikely” the shoulder was a significant cause of the symptoms. Dr. Motz recommended that the neck be “taken care of before we even consider surgical intervention on the shoulder.” Nevertheless, Dr. Motz performed a steroid injection into the subacromial space. The injection reportedly improved Claimant’s symptoms “a little.”

9. On June 6, 2014, Dr. Kawasaki performed a left “C5-6 transforaminal epidural steroid injection/C6 spinal nerve root block.” Dr. Kawasaki recorded that Claimant’s “pre-injection VAS pain score of 5/10 was reduced to 0-1/10 in recovery indicating reduction of neck and left arm pain.” Claimant was instructed to follow up with Dr. Kawasaki in one to two weeks.

10. On June 17, 2014, returned to Dr. Motz for a follow-up examination. Dr. Motz noted that Claimant continued to complain of shoulder pain. Claimant reported that the steroid injection performed by Dr. Motz had not improved his symptoms to any extent. Claimant also reported that the cervical ESI performed by Dr. Kawasaki had not improved his symptoms. Dr. Motz wrote that he still did not have the shoulder MRI disc and was therefore was unable to review it to determine the extent of tearing in Claimant’s rotator cuff. Dr. Motz assessed a left shoulder partial-thickness rotator cuff tear with tendinopathy and cervical radiculopathy. Dr. Motz stated he was “not sure” whether Claimant’s persistent shoulder discomfort was “related to his neck or the shoulder.” Dr. Motz discussed with Claimant that he “may need a shoulder arthroscopy to evaluate the rotator cuff and possibly repair this.” However, Dr. Motz recorded that Claimant smoked two packs of cigarettes per day. Dr. Motz advised Claimant that he would have to stop smoking prior to consideration of surgery to repair the rotator cuff. Claimant replied there was “no chance” he would stop smoking and that was “not interested in quitting.” In these circumstances Dr. Motz wrote there was no point in treating Claimant’s shoulder surgically “if he was not willing to give himself the best chance of improvement.” Dr. Motz explained to Claimant that no further treatment was recommended and discharged Claimant from care.

11. On June 26, 2014 Dr. Kawasaki reevaluated Claimant. Claimant gave a history that the shoulder injection performed by Dr. Motz seemed to help. However, Dr. Motz had advised Claimant that shoulder surgery would not be an option unless he

stopped smoking. Claimant told Dr. Motz that he could not stop smoking and Dr. Motz discharged Claimant from care. Claimant also reported that his pain had improved since the ESI performed by Dr, Kawasaki on June 6, 2014. Dr. Kawasaki advised Claimant that unless he stopped smoking a surgeon probably would not operate on his cervical spine. Because Claimant reported improvement in his symptoms Dr. Kawasaki prescribed physical therapy (PT) for four weeks. Dr. Kawasaki wrote that Claimant might be “closing in on” MMI after four weeks.

12. On August 28, 2014 Dr. Kawasaki again examined Claimant. Dr. Kawasaki assessed the following: (1) Left C6 radiculopathy that “would be rated as part of the injury;” (2) Left shoulder strain with rotator cuff tendinopathy; (3) Heavy smoker with COPD. Dr. Kawasaki wrote that “with poor oxygenation and likely COPD” Claimant was not a candidate for surgery “of his shoulder or neck.” Dr. Kawasaki placed Claimant at MMI. Dr. Kawasaki assessed 12% whole person impairment based on a specific disorder of the cervical spine and lost ROM in the cervical spine. Dr. Kawasaki also assigned 7 percent impairment of the left upper extremity based on reduced ROM in the left shoulder and left C6 distribution sensory loss. Dr. Kawasaki stated that the 12% upper extremity impairment rating converted to 4% whole person impairment. The Claimant’s overall whole person impairment rating was 16%. Dr. Kawasaki stated Claimant would be seen and Concentra “for final case closure and MMI.”

13. After Dr. Kawasaki’s August 28, 2014 MMI report Claimant continued to obtain treatment from Concentra and Dr. Ruff. On October 27, 2014 Claimant underwent a Functional Capacity Evaluation (FCE) that showed he was working at “the heavy work level.”

14. On April 13, 2015 Claimant was evaluated at Concentra by Kirk Holmboe, D.O. Claimant complained of “cracking in his neck and shoulder and pain in his neck and with radiation into his upper arms.” Claimant reported that “when he was first released from care” he was able to work five days a week but over time his tolerance for activities decreased to the point where he was frequently working only 3 days per week because of pain. On PE Claimant demonstrated “relatively full” cervical ROM with “pain and some crepitus in the neck at end range.” There was some tenderness to palpation in the lower paracervical musculature. Claimant’s shoulder ROM was “good” but there was pain. Dr. Holmboe assessed a cervical strain with a history of cervical radiculopathy and left shoulder pain. He opined that Claimant might need a repeat cervical MRI and a second ESI and recommended that Claimant return to Dr. Kawasaki for reevaluation. Dr. Holmboe further opined that Claimant appeared to “have some difficulty with the shoulder itself” but PE did “not bear out a significant rotator cuff injury.” Dr. Holmboe wrote that he recommended some “activity limits” but returned Claimant to work at full duty.

15. On April 27, 2015 Claimant returned to Dr. Kawasaki for “follow-up post MMI.” Dr. Kawasaki noted that he placed Claimant at MMI on August 28, 2014. Claimant reported that he eventually returned to work but later his pain gradually increased. The pain increased “in [Claimant’s] neck into his bilateral upper extremities into his left shoulder into the left arm but also some radicular symptoms into the right

arm." Claimant advised that he had been trying to get healthier by losing weight and cutting back on smoking from two packs per day to one pack per day. On PE of the cervical spine Claimant demonstrated diffuse tenderness. He also demonstrated a "positive Spurling's test towards the left but also towards the right." On PE of the left upper extremity Claimant demonstrated some limitation of left shoulder ROM and "some weakness with shoulder strength" left greater than right. He also evidenced decreased sensation in the C6 distribution left greater than right. Dr. Kawasaki opined that Claimant's condition remained stable with no change in impairment. However, considering the return of Claimant's symptoms, particularly the radicular symptoms, Dr. Kawasaki recommended Claimant undergo a bilateral C5-6 ESI.

16. On June 18, 2015 Claimant returned to Dr. Kawasaki. Dr. Kawasaki noted that on June 5, 2015 Claimant underwent bilateral C5-6 transforaminal epidural blocks. Claimant's pain level reportedly improved after the blocks. Claimant reported that his smoking had increased but he "was not very interested in surgery anyway."

17. On June 22, 2015 Dr. Holmboe saw Claimant for a neck and shoulder "recheck." Dr. Holmboe noted Dr. Kawasaki "was looking into surgery" but Claimant was required to stop smoking before surgery. Claimant reportedly was "working on" the smoking issue. Claimant had both neck and left shoulder pain and found driving especially bothersome. Dr. Holmboe assessed "cervical radiculopathy" and noted that Dr. Kawasaki was managing treatment "under maintenance care." Dr. Holmboe opined that Claimant had reached MMI for his "injury (ies)." Dr. Holmboe assigned no permanent impairment for the February 2014 injury and stated that "activity status" was to be at Dr. Kawasaki's discretion.

18. On August 6, 2015 Respondents filed a Final Admission of Liability (FAL). Relying on Dr. Holmboe's June 22, 2015 report, the FAL admitted Claimant reached MMI on June 22 with zero permanent impairment. The FAL also admitted for reasonable, necessary and related medical benefits after MMI.

19. At hearing Respondents conceded that Claimant filed a timely objection to the FAL and filed a timely Notice and Proposal (N&P) to select a Division-sponsored independent medical examination (DIME) physician. Respondents also conceded that they are not arguing that the claim was "closed" by Claimant's failure timely to object to the FAL or failure timely to file an N&P to select the DIME.

20. On July 30, 2015 Dr. Kawasaki again examined Claimant. Claimant reported continuing left shoulder pain and pain radiating into the left upper extremity. Claimant reported he had reduced his smoking from two packs per day to one pack per day but he was unable to cut back further. Claimant questioned whether "Work Comp would pay for smoking cessation." Dr. Kawasaki prescribed Chantix, refilled Oxycodone and recommended medium work with a 50 pound lifting restriction. (Respondents' Exhibit A, p.12).

21. Dr. Kawasaki referred Claimant to orthopedic surgeon Michael Hewitt, M.D., for an evaluation of the left shoulder. Dr. Hewitt examined Claimant on October

19, 2015. Claimant reported “pain with certain reaching positions felt in the lateral aspect of the shoulder” with “intermittent numbness in the extremity.” Dr. Hewitt noted Claimant injured his left shoulder on February 14, 2014 and had been diagnosed with a “partial-thickness rotator cuff tear.” Dr. Hewitt recorded that shoulder surgery had been discussed but postponed “secondary to [Claimant’s] smoking status.” The Claimant advised that he “recently quit smoking in August.” Dr. Hewitt performed a PE and reviewed the April 23, 2014 MRI of the left shoulder. Dr. Hewitt assessed left shoulder rotator cuff tendinopathy with low-grade partial-thickness subscapularis tear.” Dr. Hewitt noted that it had been 18 months since Claimant’s injury and he was still experiencing “persistent symptoms.” Dr. Hewitt stated Claimant’s shoulder had been treated appropriately with physical therapy, medications and a cortisone injection. Dr. Hewitt opined that given the duration of Claimant’s left shoulder symptoms, the physical examination and MRI findings surgery was the appropriate treatment. Dr. Hewitt stated surgery would proceed “once authorized.”

22. On October 29, 2015 Dr. Hewitt requested Insurer to authorize surgery described as a shoulder scope with “subscapularis and rotator cuff repair with related procedures.”

23. On November 4, 2015 Respondents filed an Application for Hearing listing the issues as “medical benefits” and “reasonably necessary.” The application also listed the issues that the claim was “closed by Final Admission of Liability” and whether the “surgery recommended by Dr. Hewitt is reasonable, necessary and related to the industrial injury.”

24. On November 6, 2015 Prehearing Administrative Law Judge DeMarino (PALJ) conducted a prehearing conference at the Respondents’ request. On November 12, 2013, nunc pro tunc November 6, 2015, the PALJ issued a Prehearing Conference Order. The order stated that the issue for determination was “Respondents written motion to Hold DIME in Abeyance.” In this order the PALJ noted that on October 29, 2015 Respondents received “a request for surgery from Dr. Hewitt.” The PALJ further noted that Respondents were seeking an independent medical examination (IME) “concerning the reasonableness, necessity and relationship of the surgery and an Application for Hearing was filed November 4, 2015.” The PALJ accepted Respondents’ representation that they did not receive a medical release from Claimant’s counsel until November 5, 2015, despite the fact that the industrial injury occurred “nearly two years ago.” The PALJ concluded that Respondents are “entitled to have their day in Court, which includes getting a medical opinion on the issue of whether the proposed surgery is reasonable, necessary and related” to the February 2014 industrial injury. Consequently, the PALJ granted Respondents’ “CONTESTED MOTION TO HOLD DIME IN ABEYANCE.”

25. On November 12, 2015 Kawasaki examined Claimant. Dr. Kawasaki wrote that when Claimant was placed at MMI “it was felt that he had some surgical indications both in the cervical spine with left C6 radiculopathy as well as the left shoulder rotator cuff.” Dr. Kawasaki stated that he advised Claimant at the “time of MMI” that surgery for the shoulder and neck might be considered if Claimant “would

come off his cigarettes." Dr. Kawasaki noted Claimant "held up his end of the bargain" and had been "off cigarettes for a couple of months." Dr. Kawasaki reviewed Dr. Hewitt's recommendation for surgery and opined it was "very reasonable." He also noted Claimant was to be seen by Dr. Castro the following week. Dr. Kawasaki wrote the insurer had denied authorization for the recommended shoulder surgery and he was unsure why. Dr. Kawasaki explained that shoulder surgery was "part of the plan all along, even since MMI," but the surgery "was on hold" until Claimant quit smoking.

26. On November 13, 2015 Respondents filed an Amended Application for Hearing listing the same issues contained in the original application. On November 19, 2015 Claimant filed a Response to 11/4/15 Application for Hearing. The response listed the issues of "compensability," medical benefits, reasonably necessary, MMI, need for surgery and "termination of benefits."

27. On November 18, 2015 orthopedic surgeon Bryan Castro, M.D., examined Claimant. Claimant reported ongoing pain in the left shoulder and intermittent pain, numbness and tingling in the lateral arm, dorsal forearm, and first, second and third digits. Dr. Castro reviewed Claimant's cervical MRI and stated that it showed "degenerative changes and perhaps foraminal disc bulging at C4-5, C5-6 on the left side greater than right." However, Dr. Castro stated the MRI was "extremely limited by artifact" and that it was "very difficult to actually see whether there [was] any neurological encroachment." Dr. Castro assessed cervicalgia and cervical neuropathy and suggested Claimant undergo another MRI prior to making further recommendations for treatment.

28. On December 8, 2015 Brian Lambden, M.D., performed an IME at Respondents' request. Dr. Lambden is board certified in physical medicine and rehabilitation and is level II accredited. In connection with the IME Dr. Lambden took a history from Claimant, reviewed medical records and performed a PE. Based on this information Dr. Lambden wrote that in his opinion the need for the shoulder surgery proposed by Dr. Hewitt is not causally related to the industrial injury of February 14, 2014. Dr. Lambden explained that Claimant has "underlying bilateral shoulder tendinitis" and that there was "no specific injury as it relates to" Claimant's shoulders. Dr. Lambden further opined that it is "more likely than not that [Claimant's] cervical problems are related to his work incident or at least exacerbated by them." However, Dr. Lambden expressed concern regarding cervical surgery because Claimant did not present "with radiculopathy at this time."

29. On January 6, 2016 Claimant underwent another cervical MRI. The radiologist's impressions were as follows: "Multilevel degenerative changes, with mild to moderate spinal canal stenosis from C3-4 through C6-7 moderate left foraminal stenosis at C3-4 and C4-5, and mild to moderate bilateral foraminal stenosis at C5-6."

30. Claimant returned to Dr. Castro on January 20, 2016. Dr. Castro reviewed the January 2016 MRI. Dr. Castro also noted that Claimant's predominant complaint was "neck pain" and the left upper extremity pain was "now intermittent and largely just some numbness and tingling in his index, long and ring fingers." Dr. Castro informed

Claimant that surgical intervention was "not a great idea for neck pain." Dr. Castro also noted that on the recent MRI the C4-5 level evidenced the "predominant foraminal stenosis." Dr. Castro recommended Claimant undergo a C4-5 transforaminal injection. Dr. Castro stated that if the injection was not helpful in "removing" Claimant's symptoms then Dr. Castro would not consider surgical intervention to be an option.

31. On January 27, 2016 Dr. Lambden issued a second report after reviewing Dr. Castro's report recommending that Claimant undergo a C4-5 transforaminal injection. Dr. Lambden opined this procedure would not be reasonable and necessary because Claimant's upper extremity symptoms had "largely resolved" and the tingling in Claimant's first three fingers is "not a C4 or C5 root distribution."

32. On February 16, 2016 Dr. Lambden testified by deposition. Dr. Lambden stated that he agreed with Dr. Motz's May 20, 2014 opinion that Claimant's post-injury symptoms were caused by injury to the cervical spine and not to any separate shoulder injury. Dr. Lambden explained that although Claimant had left shoulder pain after the injury, shoulder pathology would not cause the type of radiating pain described by Claimant. Dr. Lambden also opined that Claimant's symptoms are explained by the cervical MRI and the C6 ESI performed by Dr. Kawasaki. Finally, Dr. Lambden stated that Claimant currently exhibits intermittent numbness in the first three digits which is within the C6 nerve root distribution.

33. Dr. Lambden reiterated the opinion that on February 14, 2014 Claimant aggravated a preexisting degenerative cervical condition. Dr. Lambden opined Claimant received appropriate treatment for this injury and is not a surgical candidate as a result of the cervical injury. Dr. Lambden further opined that Claimant "remains" at MMI for the February 2014 injury and that the proposed shoulder surgery is not reasonable, necessary and related to the injury.

34. At hearing Respondents argued that Claimant has the burden of proof to establish by a preponderance of the evidence that the need for the shoulder surgery is reasonable, necessary and causally-related to the industrial injury of February 14, 2014. Claimant argued that he timely contested the FAL by requesting a DIME and that a hearing to determine the reasonableness, necessity and relatedness of the proposed surgery cannot go forward until the requested DIME occurs and the DIME physician addresses MMI and impairment. The ALJ elected to proceed with the hearing but added the issue of whether any ruling on the reasonableness, necessity and relatedness of the shoulder surgery is premature until the DIME is completed.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Except as noted below, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201(1). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions.

WHETHER DETERMINATIONOF REASONABLENESS, NECESSITY AND RELATEDNESS OF SHOULDER SURGERY MUST AWAIT COMPLETION OF THE DIME

As an initial matter the ALJ must decide whether determination of the reasonableness, necessity and relatedness of the shoulder surgery proposed by Dr. Hewitt must await completion of the DIME requested by Claimant. Claimant, citing *Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003), argues that the DIME procedure is the only method for challenging an authorized treating physician’s (ATP) determination that a claimant has reached MMI. Claimant further argues that inherent in the MMI determination is the requirement that the DIME physician evaluate the cause of the various components of the Claimant’s medical condition. Claimant reasons that if the ALJ determines the cause of the need for the proposed shoulder surgery he would “usurp” the function of the DIME physician.

Respondents concede that § 8-42-107(8)(b), C.R.S., “requires a DIME prior to any hearing disputing the validity of the authorized treating physician’s finding of MMI,” and that absent a DIME “the ALJ has no jurisdiction to resolve such a dispute.” However, the Respondents argue the in this case the ALJ is “not being asked to determine the validity of the ATP’s finding of MMI.” The Respondents assert that at “the time of MMI in this case, the claimant had not been seen by Dr. Hewitt, and had not been diagnosed with a new shoulder pathology and no surgery had been recommended.” In these circumstances the Respondents contend that the issues of the reasonableness, necessity and relatedness of the shoulder surgery are not issues that were “before the DIME doctor at the time the DIME was requested.” Respondents also argue that it is “not the role of a Division independent medical examiner to determine in the first instance whether an injury is compensable and whether surgery is reasonable and necessary medical care.”

Section 8-42-107(8)(b)(I), C.R.S., provides that an ATP "shall make a determination as to when the injured employee reaches maximum medical improvement as defined in section 8-40-201(11.5)." Section 8-42-107(8)(b)(II), C.R.S., provides that if either party disputes a determination by an ATP "on the question of whether the injured worker has or has not reached maximum medical improvement, an independent medical examiner may be selected in accordance with section 8-42-107.2." Section 8-42-107(8)(b)(III), C.R.S., provides that the independent medical examiner's finding regarding MMI "may be overcome only by clear and convincing evidence," and that a "hearing on this matter shall not take place until the finding of the independent medical examiner had been filed with the division."

Section 8-42-107.2(2)(a)(I)(A), C.R.S., provides that the time for selecting a DIME to dispute a determination of MMI by an ATP "commences with the date of mailing of a final admission of liability by the insurer or self-insured employer that includes an impairment rating issued in accordance with section 8-42-107." Section 8-42-107.2(2)(b), C.R.S., provides that unless a N&P "are given within thirty days after the date of mailing of the" FAL the ATP's "findings and determinations shall be binding on the parties." A party's failure timely to request a DIME to contest an ATP's finding of MMI causes the ATP's finding to become binding and deprives the ALJ of jurisdiction to adjudicate MMI. *Eller v. Industrial Claim Appeals Office,* 224 P.3d 397 (Colo. App. 2009); *Story v. Industrial Claim Appeals Office,* 910 P.2d 80 (Colo. App. 1995).

Here, Respondents agree that Claimant timely objected to the August 6, 2015 FAL, and that Claimant timely filed the N&P to dispute Dr. Holmboe's finding that Claimant reached MMI on June 22, 2015. However, the Respondents appear to contend that because shoulder surgery had not yet been recommended at the time Claimant filed the N&P the issues of reasonableness, necessity and relatedness of the surgery fell outside the purview of the DIME procedure for determining MMI. The ALJ disagrees with this argument.

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S.

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (ICAO March 2, 2000). Thus, an ATP's findings concerning the diagnosis of the claimant's medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the ATP's findings concerning these issues become binding unless challenged in accordance with the stuatuory DIME procedure. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

The ALJ disagrees with Respondents' assertion that the issues of the cause of Claimant's shoulder condition and the reasonableness and necessity of surgery to treat the shoulder fall outside the purview of the DIME process and may now be decided by the ALJ under the preponderance of the evidence standard. When the question submitted to the ALJ is whether a claimant proved a compensable injury "in the first instance," the issue involves a "threshold" question of compensability that the ALJ must resolve under the preponderance of the evidence standard. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). However, where a compensable injury has already been proven or admitted and the ATP is considering the question of MMI, the underlying issues of whether a particular component of the Claimant's medical condition is causally-related to the injury and whether that component requires additional treatment are matters for the ATP to determine subject to the DIME procedure. *Eller v. Industrial Claim Appeals Office, supra*; *Gianzero v. Wal-Mart Stores, Inc.,* WC 4-669-749 (ICAO May 5, 2010).

The Respondents' arguments notwithstanding, when Dr. Holmboe placed Claimant at MMI on June 22, 2015 Dr. Holmboe necessarily found that the Claimant did not have any injury-related shoulder condition, or that any injury-related shoulder condition was stable and did not need require further treatment in order to reach MMI, or both. When Claimant timely objected to the FAL and filed the N&P to select a DIME he clearly sought to invoke the DIME process to challenge Dr. Holmboe's MMI determination including the underlying factual issues of causation and the need for further treatment. In these circumstances the ALJ currently lacks jurisdiction to consider whether or not the Claimant has an injury-related shoulder condition, and if so whether surgery is a reasonable and necessary treatment for that condition. Section 8-42-107(8)(b)(III); *Eller v. Industrial Claim Appeals Office, supra; Story v. Industrial Claim Appeals Office, supra.*

The mere fact that Dr. Hewitt had not yet recommended shoulder surgery at the time Dr. Holmboe placed Claimant at MMI does not change the result. The filing of the FAL triggered Claimant's duty to seek a DIME or accept the finality of Dr. Holmboe's finding of MMI. However, Dr. Holmboe's finding of MMI did not freeze the evidence or foreclose the Claimant from obtaining additional medical evidence, such as Dr. Hewitt's opinion, to show that he was not at MMI. To the contrary, the DIME process remains "open" and litigation to overcome the DIME physician's ultimate finding regarding MMI remains a substantial possibility. *See Williams v. Kunau*, 147 P.3d 33 (Colo. 2006).

The ALJ concludes that Claimant must undergo a DIME prior to the ALJ's consideration of the general issue of MMI and the underlying issues of the reasonableness, necessity and cause of the proposed shoulder surgery. The

Respondents' Application for Hearing is dismissed without prejudice. In light of this conclusion the ALJ need not address the other arguments raised by the parties.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the ALJ enters the following order:

1. Respondents' Application for Hearing is dismissed without prejudice because the ALJ currently lacks jurisdiction to consider the requested relief.

2. Issues not resolved by this order are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-734-795-02

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that Respondent failed to comply with Administrative Law Judge Margot Jones' February 9, 2015 Findings of Fact, Conclusions of Law, and Order.

2. If so, whether penalties pursuant to 8-43-304(1), C.R.S. are appropriate and what amount of penalties are appropriate based on Respondents' failure to comply.

PROCEDURAL

This matter was consolidated for purposes of hearing with the case of John Ferrara vs. Lags Exploration, d/b/a/ Waterboyz International, L.L.C., non-insured, by an Order dated March 24, 2016. Mr. Ring represented both Claimants simultaneously at hearing. A separate order addresses the consolidated case.

FINDINGS OF FACT

1. On August 31, 2006 Claimant sustained a compensable injury to his lumbar spine and left lower leg while working for Employer. Claimant ultimately underwent a below the knee amputation. *See* Exhibit 6.

2. At the time of Claimant's injury, Employer was non-insured for Workers' Compensation in the state of Colorado.

3. On July 7, 2009 ALJ Margot Jones issued a Final Order determining Employer was liable for all reasonably necessary medical expenses for the work related injury. ALJ Jones also ordered Employer to pay temporary total disability benefits with an added 50% penalty pursuant to 8-43-408(1) for Employer's failure to carry workers' compensation insurance. ALJ Jones required Employer to either pay the compensation directly to Claimant, to deposit the sum with the Division of Workers' Compensation as trustee, or to file a bond with the Division of Workers' Compensation. *See* Exhibit 8.

4. On March 15, 2011 ALJ Michael Harr issued Findings of Fact, Conclusions of Law, and an Order that determined Claimant had met his burden of proof to establish that Respondent should pay a penalty pursuant to 8-43-408(4) for a failure to comply with ALJ Jones' July 7, 2009 Order. *See* Exhibit 6.

5. On December 30, 2011 ALJ Harr issued Findings of Fact, Conclusions of Law, and an Order that determined Claimant had met his burden to show that Respondent was liable for medical care, temporary total disability and permanent partial disability benefits, permanent mental impairment benefits, and penalties. ALJ Harr ordered that Respondent pay all amounts due under the order, pay a deposit, or file a bond as required by 8-43-408, C.R.S. *See* Exhibit 5.

6. On February 9, 2015 ALJ Margot Jones issued Findings of Fact, Conclusions of Law, and an Order that determined that Claimant had met his burden to show that Respondent failed to comply with ALJ Harr's March 15, 2011 Order. ALJ Jones ordered penalties under 8-43-304, C.R.S. in the amount of $67,400 for the failure to comply from April 5, 2011 through December 12, 2014. ALJ Jones ordered that Respondent pay 25% of the penalty to the subsequent injury fund and ordered that Respondent pay 75% of the penalty to the Claimant. *See* Exhibit 3.

7. Respondent did not appear or participate in the March 6, 2016 hearing despite proper notice of the proceeding. A Notice of Hearing for this matter was served on Larry Willis, manager of Respondent Corporation, by a Deputy with the Lee County Sheriff's Office in Lee County, Florida on April 19, 2016. In addition, the Order consolidating this claim with the claim of John Ferrara for hearing purposes that also noted the hearing date and time was sent to Respondent by Certified Mail on March 28, 2016. *See* Exhibits 1, 2.

8. Other than a statement of the case/argument made by Claimant's counsel, Claimant presented no evidence as to whether or not the February 9, 2015 Order of ALJ Jones was violated. There was no testimony from Claimant regarding lack of payment of penalties and no evidence from the subsequent injury fund as to lack of funds paid.

9. Although it appears from the evidence that Respondent has previously ignored orders of this court and has failed to participate in multiple proceedings, Claimant has not presented sufficient evidence for the undersigned to determine whether or not the February 9, 2015 Order was violated and whether or not penalties are appropriate for a failure to comply with that specific order.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and ***sufficiency of evidence*** in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Penalties

Section 8-43-304(1), C.R.S. authorizes the imposition of penalties of not more than $1000 per day if an employer or insurer "fails, neglects, or refuses to obey any lawful order made by the director or panel or any judgment or decree made by any court as provided by said articles." This provision has been construed as applying to violation of an order issued by an ALJ. *Giddings v. Industrial Claim Appeals Office,* 39 P.3d 1211 (Colo. App. 2001). An order is defined as including "any decision, finding and award, direction, rule, regulation, or other determination arrived at by the director or an administrative law judge." *See* § 8-40-201(15), C.R.S. The fine shall be apportioned in whole or part at the discretion of the director or administrative law judge between the aggrieved party and the workers' compensation cash fund created in § 8-44-112, C.R.S. with the amount apportioned to the aggrieved party being a minimum of fifty percent of any penalty assessed. *See* § 8-43-304, C.R.S.

Statements of counsel may not substitute for that which must appear of record. *Subsequent Injury Fund v. Gallegos*, 746 P.2d 71 (Colo. App. 1987). The reason for this rule is that due process considerations require that parties be notified of the evidence to be considered, and they must be afforded an opportunity to confront and rebut adverse evidence. *Hendricks v. Industrial Claim Appeals Office*, 809 P.2d 1076 (Colo. App. 1990).

Here, there is evidence that ALJ Margot Jones entered an order on February 9, 2015 requiring that Respondent pay penalties. Other than statements of counsel there is no further evidence as to what happened (or what did not happen) in response to ALJ Jones' order. Statements of counsel are not evidence and cannot constitute a sufficient record for this ALJ to base findings of fact. No evidence, testimonial or documentary, was entered in the record in this matter to establish that a violation of the February 9, 2015 Order occurred. Therefore, the evidence is insufficient for this ALJ to find a violation of the February 9, 2015 order or to order penalties for such a violation as requested by Claimant under § 8-43-304, C.R.S.

ORDER

It is therefore ordered that:

1. Claimant failed to present evidence establishing that the February 9, 2015 Order of ALJ Margot Jones was violated.

2. Claimant's request for penalties for a failure to comply with the February 9, 2015 Order is thus denied and dismissed without prejudice.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 12, 2016

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

PROCEDURAL HISTORY and ISSUES

On September 1, 2015, the Claimant filed an application for hearing on the issues of compensability, medical benefits, average weekly wage, temporary total and temporary partial disability, payment of related medical bills and mileage, and change of physician. Respondents filed a response to the application for hearing endorsing a number of defenses. Later, Respondents' sought a pre-hearing conference to add the issue of attorney fees pursuant to §8-43-211(3), C.R.S., based on Claimant's endorsement of medical benefits. Pre-hearing ALJ Goldstein granted the Respondents' motion and struck the issue of medical benefits from the application for hearing. He also ordered that the issue of attorney fees and costs be bifurcated. Thus, the only issue remaining for determination is whether Claimant suffered a compensable injury to his cervical spine on March 18, 2015.

FINDINGS OF FACT

1. Claimant is a 35-year old male who has worked for the Employer since January 11, 2013. He has worked as welder doing pipe fitting and at the time of the hearing, he was working in the plumbing department.

2. On March 18, 2015, Claimant was attempting to tighten a chain vice onto a portable rotator. The rotator weighs approximately 800 pounds. Claimant testified that as he was "jerking" back on the bar to tighten the chain vice, the portable rotator moved or slipped and he felt a pop and a burning pain in his neck.

3. Claimant testified that the injury occurred towards the end of his shift and he did not immediately report it. He believed his symptoms would go away and felt he could "tough it out." Claimant testified that he finished his shift but that his neck continued to hurt through the remainder of his shift and through the night.

4. On March 19, 2015, Claimant still felt neck pain. Once he arrived at work on March 19, 2015, he reported the injury to his foreman, Ron Hudson.

5. Claimant recalled that the Employer asked him if he wanted to see a doctor but he declined. Claimant indicated that although his neck continued to be symptomatic, he thought it was going to get better and wanted to continue working.

6. The Claimant signed a Designated Medical Provider form on March 19, 2015. He circled "Midtown Occupational Health Services."

7. Claimant took March 20, 2015 (a Friday) off from work in the hopes he would feel better by Monday. He did not feel better on Monday and the Employer

allowed him to work light duty. Claimant continued to decline medical treatment thinking if he took it easy for a couple of weeks, his symptoms would go away.

8. After two weeks of light duty, Claimant attempted to return to regular duty on April 8, 2015. Claimant was unable to return to full duty because of his neck pain so he requested medical care.

9. On April 8, 2015, the Employer filed a First Report of Injury indicating that Claimant injured his neck on the portable rotator while welding pipe.

10. On April 8, 2015, Claimant went to Midtown Occupational Health Services where Dr. Lawrence Cedillo, evaluated him. Kirk Schoech, the Employer's Safety Superintendent, drove the Claimant to the medical appointment and sat in on the medical evaluation.

11. Dr. Cedillo took a history from Claimant that he has "neck problems secondary to trying to secure a chain vice onto non-fixed rotator weighing approximately 700-800 pounds, using a [sic] manual tools, and in the process, the rotator moved, and he experienced pain in regard to the neck at that time." Dr. Cedillo documented some range of motion limitations in Claimant's neck. Dr. Cedillo opined that Claimant likely had myofascial discomfort, mechanical in nature, and "more likely than not related to date of injury occurring above as described above through his present employer and thus work related." Dr. Cedillo completed an M-164 form and indicated that the injury was work-related.

12. Dr. Cedillo also released Claimant to work with no restrictions. Dr. Cedillo testified at the hearing that the Employer has a light duty work program and he trusts the Employer will provide light duty so he does not issue formal restrictions in any claim involving this Employer.

13. On April 15, 2015, Claimant had an MRI at Denver Integrated Injury South. The MRI revealed mild spondylostenosis most notable at C3-4 level due to leftward disc osteophyte complex and moderate left foraminal stenosis and rightward stenosis most notable also at the C3-4 level.

14. Claimant continued to receive medical treatment managed by Dr. Cedillo. The treatment included Advil, Biofreeze, home exercises, massage therapy and self massage using a Theracane. Dr. Cedillo continued to diagnose Claimant as having a cervical strain with some involvement of the cervicothoracic junction that appeared myofascial and mechanical in nature.

15. Dr. Lawrence Lesnak evaluated the Claimant on May 20, 2015. Dr. Lesnak documented Claimant's complaints of constant distal neck pain, and intermittent tingling sensations throughout his left arm. Dr. Lesnak noted that Claimant exhibited no pain behaviors or non-physiologic findings. Dr. Lesnak also performed an EMG on May 20. His overall impressions were that Claimant had a probable cervical strain/sprain that occurred during work hours reportedly on March 19, 2015; clinical evidence of left cervical radiculitis most likely involving the left-sided C6-7 nerve roots; no clear

evidence of cervical radiculopathy or myelopathy, but he could not exclude an occult abnormality; and probable cervical and left scapular myalgias. The EMG was essentially normal. Dr. Lesnak recommended medications and physical therapy.

16. On June 4, 2015, Dr. Lesnak evaluated the Claimant. His report indicates that Claimant exhibited occasional pain behaviors and that he appeared to be in moderate distress due to his progressive symptoms. Claimant reported that his symptoms on the left side of his neck had been progressing. Dr. Lesnak expressed concerns over the progressive symptoms despite treatment and minimal findings and recent diagnostic testing. Dr. Lesnak suggested facet injections but Claimant stated he was fearful of needles so Dr. Lesnak recommended chiropractic treatment. Dr. Lesnak also wanted Claimant to undergo a formal psychological evaluation.

17. On July 23, 2015, Dr. Cedillo stated that all of Claimant problems appear myofascial in nature with lack of objective correlation to his subjective complaints. He had reviewed the video reenactment of Claimant's mechanism of injury. Dr. Cedillo released Claimant at maximum medical improvement with no restrictions and no impairment. Dr. Cedillo "directed patient to follow-up outside W.C. system for further care as deemed necessary."

18. On August 26, 2015, Claimant followed up with his private physician, Anton Zaryanov, D.O. Dr. Zaryanov documented pain at the base of the neck with pain radiating to the left upper extremity. Dr. Zaryanov recommended physical therapy and dry needling and set Claimant up for a transforaminal injection.

19. On October 1, 2015, Claimant saw Dr. Peter Ruesswig outside of the workers' compensation system. Dr. Reusswig's report indicated a long history of low back pain, but no pre-existing cervical problems. Dr. Reusswig notes a positive MRI and physical findings. Dr. Reusswig assessed cervical radiculopathy, cervical disc disorder with radiculopathy, and lumbar radiculopathy.

20. The Employer created a video reenactment of the injury which shows the forces and power needed to tighten the chain vice onto the portable rotator.

21. The ALJ viewed the Employer's video reenactment of Claimant's mechanism of injury during the hearing. Claimant testified that the video was "for the most part" an accurate depiction of the job task he was performing when he injured his neck.

22. Claimant explained that he held the cheater bar with both hands while cranking on the bar to properly tighten the chain vice. Claimant simulated his body position in the reenactment video. The video shows Claimant's right hand on top and his left hand is on the bottom of the cheater bar and the Claimant is standing with his left leg back and his right leg bent in almost a lunge position while he simulated the act of pulling on the bar with all of his body weight. Claimant testified that the machine slipped as he pulled on the cheater bar.

23. Rick Gurley is a superintendent for the Employer. He was one of the employees performing the reenactment. Gurley attempted to force the machine to move while cranking on a cheater bar but was unable to make it move. The Claimant appears physically larger than Gurley although no one questioned Gurley about his body weight. The Claimant is also younger than Gurley.

24. It is apparent from his behavior (both body language and verbal comments) in the video that Gurley does not believe the Claimant's version of the events. One employee was able to make the machine move by pulling it from the chain vice. Thus, the ALJ is not persuaded by the suggestion that it is impossible to move the 800-pound rotator.

25. Gurley also explained that although the 800-pound rotator was portable for at least the past five years, the Employer has bolted down the rotator since Claimant's injury. He admitted that bolting down the machine was a corrective action in direct response to Claimant's workers' compensation claim although he does not believe the rotator can move.

26. Claimant admitted that he worked on this very same portable rotator prior to the alleged injury at least "25 times" but it never moved or shifted on him prior to March 19, 2015.

27. Claimant testified that prior to March 18, 2015 he has never had neck problems. No medical records exist showing a history of prior cervical spine complaints.

28. Claimant testified at hearing that he had lower back problems in the past which he was actively treating for with his private physician. Claimant takes narcotic medications to treat his lower back pain. Claimant is not alleging his low back is related to his work injury on March 18, 2015.

29. Dr. Cedillo testified at the hearing that he was unable to determine the source of Claimant's symptoms through the date of MMI. None of the diagnostic studies revealed the pain generator and no treatment improved his symptoms. Dr. Cedillo reiterated his opinion that Claimant reached MMI on July 23, 2015 because there is no objective evidence to support a work injury. He explained that the MRI findings are difficult to correlate to Claimant's subjective symptoms. Dr. Cedillo essentially opined that if Claimant sustained a strain on March 19, 2015, he should have improved over the ensuing four months, and because Claimant did not improve, he did not sustain a work-related injury.

30. Dr. Cedillo also testified that based on the force shown in the video re-enactment and the description of the injury provide by the Claimant, that such mechanism of injury did not cause Claimant's problems.

31. Dr. Cedillo admitted that Claimant's MRI findings might be causing his symptoms and that a person might be more susceptible to injury if they have an underlying condition. He opined that the MRI findings show degenerative disc disease, and not an injury. Dr. Cedillo did not specifically comment on whether the mechanism

of injury may have aggravated or accelerated Claimant's underlying degenerative disc disease.

32. Dr. Cedillo admitted that he verbally relays work restrictions to the Employer then indicates "no restrictions" on the M-164 and in his report because he trusts the Employer to comply with his verbal instruction on restrictions.

33. Dr. John Hughes, Claimant's independent medical examiner, viewed the reenactment video and rendered an opinion as to whether this work activity could cause injury. On December 1, 2015, Dr. Hughes opined that, "The activity that I reviewed on the video involves an injurious physical activity in the process of tightening the chuck using a 2-foot breaker bar. The individual was seen to be tugging hard on the breaker bar, and I feel that this type of tugging force could cause a superimposed sprain/strain injury with development of facet joint arthropathy." Dr. Hughes further opined that the MRI showed that Claimant has a significant degenerative preexisting condition which made Claimant "exceptionally prone to a cervical spine injury sustained in the course and scope of tugging and using a breaker bar."

34. Dr. Hughes did not perform a physical examination of the Claimant. Dr. Hughes was asked to render an opinion as to whether the forces exerted by the individual in the video reenactment were significant enough to injure Claimant's neck. Dr. Hughes testified at hearing that tugging on the breaker bar while tightening the chain vice onto the portable rotator puts stress on the shoulder and neck.

35. On December 15, 2015, Dr. Carlos Cebrian performed an independent medical examination of the Claimant at Respondents' request. Dr. Cebrian issued a report dated January 14, 2016. He examined the Claimant, reviewed his medical records and viewed the video reenactment of the mechanism of injury. He concluded that Claimant's multi-level cervical spine, congenital stenosis, and cervical degenerative disc disease, current symptoms and need for treatment are unrelated to any work activities Claimant performed for the Employer.

36. Dr. Cebrian testified during the hearing consistent with his December 15, 2015 report. He explained that the activity Claimant performed on March 18, 2015 could not have caused injury to the cervical spine. Dr. Cebrian opined that Claimant's ongoing problems are not work related. Dr. Cebrian opined that the spontaneous onset of symptoms that Claimant is experiencing is ordinary. Most pain from cervical disc disease presents spontaneously, and most commonly begins upon waking in the morning without any precipitating event.

37. Dr. Cebrian opined that just like his lumbar spine, Claimant has pre-existing "widespread multi-level degenerative disk disease." This anatomy is revealed by Claimant's cervical MRI and "is not a reflection of anything that did or did not happen on March 18, 2015." He opined that Claimant suffers from chronic lumbar spine pain, chronic opioid dependence, multi-level cervical spine stenosis and degenerative disc disease.

38. Dr. Cebrian also testified that Claimant's neck condition was asymptomatic due to his use of opioids for his low back for the past five years.

39. According to Dr. Cebrian, it is medically probable that Claimant woke up on March 19, 2015, and had neck pain. He stated that when a person wakes up in pain, that person logically will think back to what could have caused that pain. Claimant most likely thought back to using the rotator at work the day before and believed that it must have been the rotator that caused his symptoms because his neck never hurt before like it did when he woke up on March 19th. So in looking for an explanation, like most people do when they awake with unexplained pain, Claimant attributed his neck pain to using the rotator at work the day before. The ALJ is not persuaded by Dr. Cebrian's opinions in this regard.

40. Dr. Cebrian agreed with Dr. Cedillo's ultimate conclusion that with the benefit of hindsight and being able to identify the cause of Claimant's symptoms, Claimant's cervical condition is not work-related. Instead, Claimant's symptomatic multi-level cervical spine congenital stenosis and cervical degenerative disc disease and the need for medical treatment is independent, unrelated and incidental to work activities on March 19, 2015.

41. Dr. Cebrian testified that finding Claimant at MMI on July 23, 2015 was appropriate, but that Claimant suffered no work injury or an aggravation of a pre-existing condition.

42. Claimant has proven that on March 18, 2015, he aggravated his pre-existing cervical spine condition while in the course and scope of his employment. The ALJ credits the testimony of Claimant and the opinions of Dr. Hughes as more credible and persuasive than those of Drs. Cebrian or Cedillo.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

4. A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with employer. Section 8-41-301(1)(b), C.R.S*.; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury "arises out of and in the course of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions to be considered part of the employee's services to the employer. *General Cable Co. v. Industrial Claim Appeals Office,* 878 P.2d 118 (Colo. App. 1994).

5. Claimant has proven that on March 18, 2015, he aggravated his pre-existing cervical spine condition while in the course and scope of his employment. The Claimant has consistently reported that as he was "jerking" back on the cheater bar to tighten the chain vice, the portable rotator moved or slipped and he felt a pop and a burning pain in his neck. The video reenactment shows Gurley forcefully jerking on the bar to tighten the chain vice. The Respondents placed great significance on the fact that Gurley could not get the portable rotator to move in the video; however, the Claimant is physically larger, younger and may have pulled on it harder than Gurley. In addition, there is no persuasive evidence that it was the movement of the rotator itself that produced Claimant's neck pain. The credible evidence shows that Claimant was jerking on the cheater bar, the rotator happened to move and he felt pain.

6. In addition to Claimant's credible testimony, the ALJ credits the opinions of Dr. Hughes. Dr. Hughes opined that the type of force exhibited on the video reenactment could cause injury to Claimant's neck, particularly in light of the pre-existing degenerative pathologies described by the radiologist. Dr. Hughes' opinion that the preexisting condition made the Claimant more susceptible to cervical injury is credible and persuasive.

7. Dr. Cedillo also initially related Claimant's neck symptoms to the mechanism of injury Claimant had described. Dr. Cedillo initially opined that Claimant suffered a cervical strain. He later changed that opinion stating that because he could not find a pain generator and because Claimant failed to improve, he did not sustain a work-related injury. Dr. Cedillo's reasoning is flawed. The ALJ is not persuaded that a lack of improvement or the inability to determine a pain generator suggest that symptoms are

automatically not work-related. Dr. Cedillo presented no reasonable explanation as to his changed opinion regarding the work relatedness of Claimant's symptoms.

8. Finally, the ALJ is not persuaded by Dr. Cebrian's opinions that the mechanism of injury could not have produced the neck symptoms or the need for medical treatment. As found above, the mechanism of injury was sufficient to aggravate or combine with Claimant's pre-existing asymptomatic condition to produce the need for medical treatment. The Claimant's testimony in that regard was credible. Thus Dr. Cebrian's opinion that Claimant awoke with pain on March 19 then sought out an explanation is not credited. The ALJ agrees with Dr. Cebrian that Claimant suffers from pre-existing cervical degenerative disc disease, but the ALJ is not persuaded that he may have been symptomatic but for the opioid use. That opinion is speculative and not reliable. As such, the Claimant has proven that the work activities on March 18, 2015 aggravated or combined with his pre-existing condition to produce the need for medical treatment.

ORDER

It is therefore ordered that:

1. The Claimant's claim for workers' compensation benefits is GRANTED.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether the claimant sustained a compensable left knee injury on December 5, 2015;

2. If so, whether the claimant is entitled to a general award of any and all reasonable and necessary medical benefits for her compensable left knee injury; and,

3. If so, whether the surgical procedure recommended by Dr. Alex Romero is reasonable and necessary medical care for the compensable left knee injury.

Based upon the findings and conclusions below that the claim is not compensable, the ALJ does not reach a decision on the remaining issues.

FINDINGS OF FACT

1. The claimant is a 53-year-old female who has 15 years of service with the respondent-employer. The claimant was and is employed by the respondent-employer as a correctional officer.

2. In late 2009, the claimant sustained a non-occupational left knee injury. The claimant initially injured her left knee while riding her horse and this was then aggravated by her children while they were rough housing.

3. On March 5, 2010, the claimant underwent surgery. The surgical report was entered into evidence and shows that the 2010 left knee procedure was an arthroscopy of the left knee with debridement of articular cartilage and lateral retinacular release. MRI imaging indicated there was a meniscal tear and loose bodies in the knee joint; however, the surgical report establishes that there was no meniscal tear at that time and no loose bodies in the joint. The surgeon cleaned up some areas of degeneration. The claimant recovered from this procedure and she had no additional trouble with her left knee prior to the date of injury that forms the basis of this claim.

4. On December 5, 2015, the claimant was in the course and scope of her employment when she sustained an acute left knee injury. She was walking with a coworker, Sgt Allen, doing rounds, when she exited the gym building. After leaving

through the doors from that part of the gym building there is a cement sidewalk with a transition from a flat surface to a gently sloping ramp. As the claimant was walking over this transition point, the claimant states, “My knee went backwards, I said a few choice words, which I don’t do, which was a cussword.”

5. At that time Sgt Allen turned around and asked the claimant if she was OK. The claimant told her that she had buckled her knee. Sgt Allen stated, “Well what do you think?” To which, the claimant indicated to Sgt Allen that she was going to try to walk it out. The claimant indicated that she buckled her knee, that it popped, and that it hurt, but that she was going to try to continue the rounds.

6. When the claimant stepped wrong she agreed with her counsel that the left knee hyperextended and she experienced an immediate onset of pain.

7. As the day went on, she experienced increasing swelling, stiffness, and pain.

8. The claimant reported the injury to the proper supervisory personnel. She was immediately sent for treatment at St. Mary Corwin Hospital. She reported that she “stepped and my knee buckled backwards.” The claimant was treated, released, and referred to Centura Centers for Occupational Medicine (CCOM) for additional treatment. CCOM is the respondent-employer’s designated health care provider for purposes of Workers’ Compensation.

9. On December 7, 2015, the claimant was seen at CCOM. She stated the mechanism of injury to be “walking out of gym doing rounds stepped wrong on the flat to ramp area.”

10. On December 18, 2015, a left knee MRI showed a MCL strain, an ACL strain, a meniscus tear, and possible loose bodies in the knee. On the same day, the claimant returned to CCOM. The MRI was reviewed and based upon the objective findings and the claimant’s clinical presentation, the claimant was referred to Alex Romero, MD of the St. Mary Corwin, Physician Partners – Orthopedics.

11. On January 13, 2016 the respondents filed a Notice of Contest asserting that the injury/illness is not work-related.

12. On January 18, 2016, Dr. Romero examined the claimant for the first time. With respect to the mechanism of injury she informed Dr. Romero that she was about to walk down a ramp where there is about a 45 degree angle when her knee hyperextended and gave way on her.

13. The ALJ finds that the angle was much less than 45 degrees based upon the photographic evidence admitted.

14. Dr. Romero visualized the MRI and x-rays and performed a physical evaluation of the left knee. Dr. Romero recommended conservative treatment initially which consisted of a steroid injection and physical therapy. The claimant participated in the recommended therapy.

15. On February 24, 2016 the respondent sent the claimant to an independent medical exam, which was performed by Dr. Timothy O'Brien. Dr. O'Brien issued a written report in which he opined that the claimant did not sustain a work-related injury because "[w]alking is not an injury mechanism."

16. Dr. O'Brien further opines that the claimant's symptoms in 2015 are simply a progression of her underlying degenerative condition.

17. The ALJ finds that the claimant had significant osteoarthritis that predated December 5, 2015. This is demonstrated by the prior X-rays, MRI films, Surgical Report and photographs taken of the 2010 surgery. Dr. O'Brien opined that the claimant has fairly severe osteoarthritis in 2 out of the 3 compartments of the patella femoral joint. Dr. O'Brien opined that this is an incurable condition that progresses as long as a person lives. Dr. O'Brien testified that the osteoarthritis is actually worse now that it was in 2010 and that is completey expected.

18. Dr. O'Brien also testified that osteoarthritis causes symptoms such as pain, stiffness, giving way, catching, and feelings of hyper-extension. These are the same symptoms that the claimant reported when getting treatment in early 2010 and these are identical symptoms that claimant currently reports. Dr. O'Brien testified that the claimant's sensation that "my knee doesn't hold me" is simply osteoarthritis acting the way you would have expected. It is not an injury from a misplaced foot.

19. Dr. O'Brien further testified that there was no work related aggravation of pre-existing arthritis. The claimant's osteoarthritis is simply flaring up, as he would expect with any person who has osteoarthritis like the claimant. It is "just the disease." Sometimes people experience a flare while walking or even while sleeping or standing too long in one place. Just because this happened while the claimant is at work, does not mean anything at work caused a flare up.

20. The ALJ finds that the sidewalk outside the gym where the claimant experienced her flare up of symptoms is ubiquitous and does not constitute a special hazard of the workplace.

21. The ALJ finds that the claimant is credible.

22. The ALJ finds that the claimant's credible statement of the incident in question does not, as a matter of law, establish a compensable injury.

23. The ALJ finds that the claimant was engaged in walking while conducting her rounds.

24. The ALJ finds that the analyses and opinions of Dr. O'Brien are credible and persuasive.

25. The ALJ finds that the claimant has failed to establish that it is more likely than not that she sustained an injury arising out of and in the course of her employment with the respondent-employer.

CONCLUSIONS OF LAW

1. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592, P .2d 792 (1979); *People v. M.A.,* 104 P .3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A workers' compensation case is decided on its merits. §8-43-201, C.R.S.

2. In deciding whether Claimant has met her burden of proof, the ALJ is empowered to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002).

3. To prove compensability, a claimant must demonstrate both an “Accident” and Resulting “Injury.” There is a distinction between the terms “accident” and “injury”. The term accident refers to an “unexpected, unusual or undesigned occurrence.” Colo. Rev. Stat. § 8-40-201(1) (2015). In contrast, an “injury” refers to the physical trauma caused by the accident. In other words, an “accident” is the cause of and an “injury” is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). No benefits flow to the victim of an industrial accident unless an “accident” results in a compensable “injury.”

4. In order to recover benefits Claimant must prove that she sustained a compensable injury arising out of and in the course of her employment. §8-41-301(1)(b), C.R.S. “In the course of” employment refers to the time, place, and circumstances of the injury. *Id.* The “arises out of” test is one of causation. It requires that the injury have its origins in an employee’s work-related functions. *Schepker v. Daewoo North*, W.C. No.: 4-528-434 (ICAO April 22, 2003). There is no presumption that an injury which occurs in the course of employment arises out of the employment. *Finn v. Indus. Comm’n,* 165 Colo. 106, 437 P.2d 542 (1968).

5. A pre-existing condition “does not disqualify a claimant from receiving workers' compensation benefits.” *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). A claimant may be compensated if his or her employment “aggravates, accelerates, or combines with” a worker's pre-existing infirmity or disease “to produce the disability for which workers' compensation is sought.” *H&H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). An industrial accident is the proximate cause of a claimant’s disability if it is the necessary precondition or trigger of the need for medical treatment. *Sarvestani v. Dale A. Wall, DDS*, W.C. Nos. 4-206-040; 4-464-407 (ICAO October 16, 2001).

6. There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of Denver,* 810 P.2d 647 (Colo. 1991). The mere fact the claimant experiences symptoms while performing work does not require the inference there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO August 18, 2005). Rather, such symptoms could represent the “logical and recurrent consequence” of the preexisting condition. *See Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO April 10, 2008); *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO October 27, 2008), simply because claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation between the claimant’s

work and her symptoms exists, it does not mean there is a causal connection between claimant's injury and her work. *Id.*; *Gomez v. SMG Denver Convention Complex*, W.C. Nos. 4-237-047 and 4-423-132 (October 23, 2001).

7. In this case, claimant experienced the sensation of pain while walking. This is not an "accident" for purposes of the Workers' Compensation Act. Furthermore, walking in these circumstances did not create enough force to cause a physical or anatomical injury to the claimant. Claimant's sensation of pain was simply a manifestation or symptom of her pre-existing injury. As such, there is no "injury."

8. Claimant's left knee condition is not causally related to any of her work activities. *See Horne v. St. Mary-Corwin Hospital*, W.C. No. 4-205-014 (April 14, 1995); *Crass v. Cobe Laboratories,* W.C. No. 3-960-622 (October 10, 1991); *Gutierrez v. Wal-Mart Stores, Inc.*, W.C. No. 4-432-838 (November 30, 2000). The origin and cause of Claimant's sensation of hyper-extension while walking on December 5, 2015 was not due to her employment or her employment duties. Rather, the origin and cause of her symptoms and complaints was her significant preexisting arthritis. The opinions of Dr. O'Brien in this regard are credible and persuasive.

9. In *City of Brighton*, the Colorado Supreme Court identified three categories of risk that cause injuries to employees: (1) employment risks directly tied to the work itself; (2) personal risks, which are inherently personal; and (3) neutral risks, which are neither employment related nor personal. 318 P.3d 496 (Colo. 2014). The precipitating cause of the onset of pain was claimant's pre-existing condition (i.e. her Grade II osteoarthritis in 2 out of 3 compartments of the knee). Dr. O'Brien's opinion that the cause of the feeling of hyper-extension of the knee was a result of claimant's pre-existing osteoarthritis is credible and persuasive. As such, under *City of Brighton*, this is a purely personal injury which is not compensable unless an exception applies. *Id.; See also Miles v. City and County of Denver*, W.C. No. 4-961-742 (December 15, 2015).

10. The third risk category only applies if the application of a but-for test reveals that any employee would have been injured if they were in the course and scope of employment. *Id.* The most common example is if an employee is struck by lightning- i.e. any employee performing the job duties at that time would have been struck by lightning. Nor can walking be considered an employment risk directly tied to the work itself, especially in light of the determination that the claimant's pre-existing condition was the precipitating factor for the sensation that claimant's

11. When an injury is precipitated by a pre-existing condition brought by the claimant to the workplace, the injury is not compensable unless a “special hazard” of the employment combines with the pre-existing condition to cause or increase the degree of injury. *See National Health Laboratories v. Industrial Claim Appeals Office*, 844 P.2d 1259 (Colo. App. 1992); *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989). To be considered an employment hazard, the employment condition must not be a ubiquitous one. It must be a special hazard not generally encountered. *Id.; see also, Gates Rubber Co. v. Industrial Commission*, 705 P.2d 6 (Colo. App. 1985). Unless a special hazard of employment increases the risk or extent of injury, an injury due to a pre-existing condition does not bear sufficient causal relationship to the employment to “arise out of” the employment. *Id.; Gaskins v. Golden Automotive Group, LLC,* W.C. No. 4-374-591 (August 6, 1999); *Alexander v. Emergency Courier Services*, W.C. No. 4-917-156 (October 14, 2014). Claimant did not testify that any particular flaw in the sidewalk caused her left knee injury and the medical records do not support any such mechanism of injury. Although claimant did report that she stepped wrong when the sidewalk transitioned from the flat surface to the decline, she failed to testify that there was anything special or unusual with regard to this transition. This is supported by photographs submitted into evidence. This decline or ramp is not a special hazard of employment but a ubiquitous condition which Claimant could have encountered off the job. *See Horne v. St. Mary-Corwin* Hospital, W.C. No. 4-205-014 (April 14, 1995) and *Crass v. Cobe Laboratories*, W.C. No. 3-960-622 (October 10, 1991).

12. Claimant has failed to establish by a preponderance of the evidence that she sustained a compensable injury to her left knee arising out of and in the course and scope of her employment with Employer. The persuasive evidence establishes that Claimant’s left knee surgery was not reasonable, necessary or related to the work injury.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

The claimant’s claim for benefits under the Workers’ Compensation Act of Colorado is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

Whether the stool from which the claimant fell subsequent to his asthma attack was a special hazard of employment, thus establishing a compensable claim as the claimant's injury would have arisen out of his employment.

FINDINGS OF FACT

1. The claimant was employed by the respondent-employer as a high school teacher in the Science Department.

2. On October 21, 2014, the claimant was attending a Science Department meeting after school in the classroom of the Science Department Chair, Claire Bueno-Rael. During the meeting, the claimant suffered an asthmatic coughing fit which caused him to lose consciousness and fall from the stool on which he was seated to the floor, resulting in an injury to his right shoulder.

3. The claimant suffers from a preexisting condition of asthma. The parties stipulated that the asthma attack/coughing fit was due to the claimant's preexisting, idiopathic condition, and that it did not arise from the claimant's employment. The respondent does not contest that the claimant suffered an injury to his right shoulder; the parties agree that the issue regarding compensability of this claim is whether the stool on which the claimant was seated rises to the level of a special hazard of the claimant's employment.

4. The claimant presented a photograph of a stool that he testified is a fair and accurate depiction of the type of stool he was sitting on.

5. The claimant testified to his belief that the stool on which he sat was 30" high.

6. The claimant offered no testimony or other evidence that the stool in question was defective or in any way tended to precipitate or aggravate the asthma/coughing fit and loss of consciousness.

7. Claire Bueno-Rael was the Science Department Chair at the high school on October 21, 2014 and remains in that position today.

8. On October 21, 2014, teachers in the science department at the high school presented to Ms. Bueno-Rael's classroom for a Department meeting.

9. Ms. Bueno-Rael observed that on October 21, 2014, during the Department meeting she observed the claimant seated on a stool situated at one of the lab tables in her classroom. She believes that the stool on which the claimant sat was not 30" high but was set at a lower height.

10. Dale Johnson is the respondent-employer's Environmental Health and Safety Officer. He has been employed in this position with the District for 22 years.

11. At hearing, both Mr. Johnson and Ms. Claire Bueno-Rael both testified that the stool on which the claimant was seated on October 21, 2014 could not have been 30" high. Specifically, both testified that the stools are used for the lab tables in the classroom. The bottom of the lab tables measured 30" from the ground. Thus, if a stool was set at 30" high, no one sitting on the stool would be able to put their legs under the lab table.

12. Mr. Johnson further testified that in the course of his job duties, he is regularly inside the classrooms, including the science classroom in question at the high school, and that he has regularly observed the stools used in the classroom in question. In his experience, the stools in the science classrooms, including the stools in the classroom in question, are set at 24" so that the students can comfortably sit at the lab tables and fit their legs underneath while doing their class work.

13. Ms. Bueno-Rael similarly testified that the stools in her classroom were set lower than 30" in order that the students could sit on the stools and comfortably put their legs under the lab tables; a stool set at 30" would not allow the students or anyone else, to put their legs under the lab tables.

14. The ALJ finds that the stool in question is a standard stool encountered regularly in the school setting and that the use of the stool does not constitute a special hazard in the work place of the high school. This is true whether the stool is 24" in height or 30" inches in height.

15. The ALJ finds that the claimant has failed to establish that it is more likely than not that he suffered an injury arising out of and in the course of his employment with the respondent-employer.

CONCLUSIONS OF LAW

1. The claimant bears the burden to prove by a preponderance of the evidence that he sustained an injury arising out of and within the course of his employment and that he is entitled to benefits under the Act. §§ 8-43-201(1) and 8-41-301(1), C.R.S.; *see City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000); *Kieckhafer v. Indus. Claim Appeals Office*, 284 P.3d 202 (Colo. App. 2012).

2. A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark*, 197 Colo. 306, 492 P.2d 792 (1979); *People v. M.A.,* 104 P.3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 (Indus. Claim Appeals Office, March 20, 2002). *Also see Ortiz v. Principi*, 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984).

3. The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A workers' compensation case is decided on its merits. §8-43-201, C.R.S.

4. In deciding whether the claimant has met his burden of proof, the ALJ is empowered to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002).

5. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002).

6. In order to recover benefits the claimant must prove that he sustained a compensable injury arising out of and in the course of his employment. §8-41-301(1)(b), C.R.S. “In the course of” employment refers to the time, place, and circumstances of the injury. *Id.* The “arises out of” test is one of causation. It requires that the injury have its origins in an employee’s work-related functions. *Schepker v. Daewoo North*, W.C. No.: 4-528-434 (ICAO April 22, 2003). There is no presumption that an injury which occurs in the course of employment arises out of the employment. *Finn v. Indus. Comm’n,* 165 Colo. 106, 437 P.2d 542 (1968).

7. Where the precipitating cause of an injury is a pre-existing condition which the claimant brings to the workplace, the injury is not compensable unless a "special hazard" of the employment combines with the pre-existing condition to cause or increase the degree of injury. *See National Health Laboratories v. Industrial Claim Appeals Office*, 844 P.2d 763 (Colo. App. 1992). This principle is known as the "special hazard" rule. *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989). The rationale for this rule is that unless a special hazard of employment increases the risk or extent of injury, an injury due to the claimant's pre-existing condition does not bear sufficient causal relationship to the employment to "arise out of" the employment. *Gates v. Rubber Co. v. Industrial Commission*, 705 P.2d 6 (Colo. App. 1985); *Gaskins v. Golden Automotive Group, L.L.C.,* W.C. No. 4-374- 591 (August 6, 1999) (injury when pre-existing condition caused the claimant to stumble on concrete stairs not compensable because stairs were ubiquitous condition). A condition does not constitute a “special hazard” if it is ’ubiquitous’ in the sense that it is found generally outside of the employment.” *In Re Booker,* W.C. No. 4-661-649 (ICAP, May 23, 2007).

8. A ubiquitous condition is one that is found in all places, on the job as well as off the job. *See Gates Rubber v. Industrial Commission*, 705 P.2d 6 (Colo. App. 1985) (concrete floor is a ubiquitous condition encountered on sidewalks, parking lots, streets and homes); *Geist v. Liberty Mutual Group,* W.C. No. 4-839-225 (October 11, 2011); *Kidwell v. City of Denver*, W.C. No. 4-601-057 (December 15, 2004). If a condition is ubiquitous, it usually is not considered to be a special hazard of employment since it generally is found outside of the employment. *Gaskins v. Golden Automotive Group, L.L.C.,* W.C. No. 4-374-591 (August 6, 1999) (injury when pre-existing condition caused the claimant to stumble on concrete stairs not compensable because stairs were ubiquitous condition). For example, in *Crass v. Cobe Laboratories*, W.C. No. 3-960-662 (October 10, 1991), the claimant suffered a knee injury while getting out of a chair when at work. The claimant's claim was held to be not compensable. The ALJ found that the chair did not precipitate the claimant's injury, and disbelieved the only evidence that was offered to show that the conditions of

employment combined with or aggravated the claimant's condition so as to cause the injury. The ALJ instead concluded that the chair was a ubiquitous condition. In a similar matter, *Horne v. St. Mary-Corwin Hospital*, W.C. No. 4-205-014 (April 14, 1995), the claimant was seated on a stool during the course of her employment. When she stood from the stool she felt her knee pop. Noting that the claimant suffered from a preexisting weakened knee that she brought in to the workplace, the ALJ found that the stool was not a special hazard but rather a ubiquitous condition which the claimant could have encountered off the job as well as on the job. Thus, the ALJ determined claimant's claim was not compensable as it did not arise out of her employment.

9. In the present matter, the claimant has failed to prove by a preponderance of the evidence that he sustained an injury that arose out of his employment. The stool on which the claimant was seated when he experienced the idiopathic asthma attack is not a special hazard of his employment at the high school.

10. The claimant testified, and the parties stipulated, that the claimant's asthma is an idiopathic condition which he brought into the workplace. The asthmatic coughing fit that resulted in the claimant's brief loss of consciousness is what caused claimant to fall to the floor. The stool, whether 30" high, 24" high, or somewhere in between, did not precipitate, cause or in any way aggravate or accelerate the asthmatic coughing fit the claimant suffered, nor was there any defect in the stool that contributed to the claimant's coughing fit or fall to the floor.

11. The ALJ concludes that regardless of whether the height of the stool was 24" or 30", the stool on which the claimant was seated is ubiquitous and not a special hazard of the claimant's employment. Neither did the stool precipitate, contribute to, or aggravate the claimant's idiopathic asthmatic condition. Accordingly, the injury the claimant sustained did not arise out of the claimant's employment.

12. The ALJ concludes that the claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with respondent-employer.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

The claimant's claim for benefits under the Workers' Compensation Act of Colorado is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-974-965-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 5, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 5/5/16, Courtroom 4, beginning at 8:30 AM, and ending at 10:10 AM).

Respondents' Exhibits A through J were admitted into evidence, without objection. Respondents' Exhibit K (surveillance films were not offered). Claimant's Exhibits 1 through 15 were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant. The proposed decision was filed, electronically, on May 12, 2016. No timely objections were filed. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern the Respondents' request to overcome the Division Independent medical Examination (DIME) of Kristin Mason, M.D., which determined that the Claimant was not at maximum medical improvement

(MMI); and, medical benefits, either pre or post-MMI medical benefits depending on whether or not the Respondents overcome the DIME.

On overcoming the DIME, the respondents bear the burden of proof by clear and convincing evidence. On medical benefits, the Claimant bears the burden by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant was employed as a produce clerk for the Employer on February 3, 2015. She was taking two pots of coffee and walking to the counter when she slipped on a greasy tile floor. Her feet went out from under her, and she landed on her back with both hands outstretched on the ground (Claimant's Exhibit 7, p.25). Hiep Ritzer, M.D. became an authorized treating physician (ATP). Dr. Ritzer noted in her assessment on February 3, 2015 that the Claimant had a cervical strain, right shoulder strain, lumbosacral strain, bilateral buttock contusion, right greater than left, and bilateral hip contusion, right greater than left (Claimant's Exhibit.7, p.26). Dr. Ritzer was of the opinion that the Claimant's objective findings on examination were consistent with a work-related mechanism of injury (Claimant's Exhibit 7, p.26).

2. The Respondents filed a General Admission of Liability (GAL) for the injury on February 23, 2015, and began paying temporary total disability (TTD) benefits (Claimant's Exhibit.2, p.2).

3. The Claimant continued to be treated by Dr. Ritzer, who in turn referred the Claimant to Samuel Y. Chan, M.D., and to Sean Griggs, M.D., for further evaluation and treatment.

4. An MRI (magnetic resonance imaging) of the Claimant's right shoulder, taken February 5, 2015, showed rotator cuff tendinopathy, a shallow articular surface partial thick tear distally and a Type IV SLAP lesion (Claimant's Exhibit 5, p.13).

5. Dr. Griggs examined the Claimant on February 19, 2015. He stated that the Claimant had positive impingement as well as pain to biceps provocative maneuvers in her right shoulder. He diagnosed a right shoulder injury with partial thickness rotator cuff tear and a SLAP type IV lesion and referred the Claimant to physical therapy for range-of-motion (ROM) exercises (Claimant's Exhibit 6, pp.15-24). Dr. Griggs felt that right shoulder surgery might be necessary if the Claimant continued to have pain (Claimant's Exhibit 6, p.17).

6. The Claimant also was seen again by Dr. Chan. Although the right shoulder MRI showed objective findings of a SLAP lesion, among other problems, Dr. Chan discounted it, without explanation, saying only “imaging studies fail to reveal any significant pathology” (Respondents’ Exhibit E, p.23). Under the circumstances, the ALJ finds Dr. Chan’s “observation” lacking in credibility.

The Video Surveillance Films

7. Respondents conducted video surveillance of the Claimant on April 9, 2015, April 10, 2015, May 11, 2015 and May 12, 2015 and provided a film of Claimant’s activities to Dr. Chan. On June 14, 2015, Dr. Chan wrote a report entitled “Video Surveillance” (Respondents’ Exhibit E, pp.32-33). Dr. Chan stated, “One can conclude that there is an attempt for misrepresentation of her symptoms, *i.e.* malingering.” Without further exposition of Dr. Chan’s credentials, the ALJ finds Dr. Chan’s moral/credibility judgments of marginal credibility.

8. On June 25, 2015, Dr. Chan discussed with the Claimant that he had seen videos of her helping a medium-sized dog out of her car and carrying “what appeared to be a file cabinet” with another person. Dr. Chan termed this “an unsophisticated attempt to misrepresent her symptoms.” He stated that because “we are treating pain and there is no credibility on patient’s part, I do not feel that further treatment will alter any kind of outcome.” Dr. Chan put the Claimant at MMI with no work restrictions. He provided a zero percent medical impairment rating (Respondents’ Exhibit E, p.35).

9. The Claimant plausibly explained that she was simply guiding her son’s black dog, and she was handling an empty box that weighed very little. The ALJ infers and finds that Dr. Chan’s characterization of the videos made things seem far worse than they really were and for whatever reason, Dr. Chan developed a strong reaction to and bias against the Claimant. For this reason, the ALJ infers and finds that Dr. Chan’s medical objectivity whereby he essentially “blew off” real MRI findings.

10. The Respondents filed a Final Admission of Liability (FAL) on July 9, 2015, admitting for a maximum medical improvement (MMI) date of June 25, 2015 and a zero percent impairment rating (Respondents’ Exhibit A, p.1; Claimant’s Exhibit 3, p.3]. The ALJ infers and finds that the “hasty” FAL, was based, in great part, upon Dr. Chan’s rush to judgment after seeing the videos.

Allison Fall, M.D.

11. At the Respondents’ request, the Claimant was examined by Dr. Fall on September 30, 2015. Dr. Fall reported that the Claimant had diffuse degenerative changes in her cervical, lumbar, shoulder and wrists. She said Dr. Chan had “appropriately indicated that her presentation in the clinic was inconsistent with what he

saw in the video surveillance," even though, at that time, Dr. Fall had not reviewed the video herself. The ALJ finds that this observation by Dr. Fall is based on un-mitigated hearsay, without any objective analysis by Dr. Fall. Dr Fall also categorically agreed that the Claimant had reached MMI, had no permanent impairment, needed no work restrictions and required no further medical care (Respondents'.Exhibit.D, pp.11-16).

12. Dr. Fall issued a second report, "Surveillance Video Review and Report," on October 12, 2015. She found the Claimant's filmed activities "quite concerning," and contended that Claimant was presenting herself differently at medical appointments than she did in other places (Respondents' Exhibit D, pp.9-10). The ALJ is not exactly sure to which "other places" Dr. Fall was referring,

Division Independent Medical Examination (DIME) BY Kristin Mason, M.D.

13. The Claimant saw Dr. Mason as part of a DIME on November 16, 2015. In her examination, Dr. Mason found positive impingement signs in the right shoulder. She elicited "a big posterior pop or clunk to passive abduction at about 90 degrees" in Claimant's right shoulder. Dr. Mason also noted the MRI findings of rotator cuff tendinopathy, shallow articular surface partial-thickness tear distally and a type IV SLAP lesion (Claimant's Exhibit 4; Respondents' Exhibit F).

14. Dr. Mason also reviewed the video surveillance of Claimant and stated:

> "The patient has a type IV SLAP tear which is generally speaking a surgical lesion. Her physical exam is quite consistent with that diagnosis. I did not see anything on her surveillance video that was inconsistent with a type IV SLAP tear. She certainly seemed to avoid flexion and abduction. . . [H]ow she presented to me today is somebody with an unstable shoulder due to a SLAP tear."
>
> (Claimant's Exhibit .2, p.9; Respondents' Exhibit F, p.42).

15. Dr. Mason found Dr. Chan's evaluation of the Claimant to be lacking. She took note of Dr. Chan's failure to examine the Claimant's shoulder thoroughly and not to comment on the SLAP tear other to reference it in his report. Dr. Mason pointed out that despite demonstrated abnormalities on MRI, Dr. Chan claimed there were no abnormalities. It also was clear that Dr. Chan failed to pay attention to the Claimant's pain diagram that consistently indicated posterior shoulder pain, neck pain and right buttock pain, erroneously calling her complaints "nonfocal."

16. The ALJ finds Dr. Mason's analysis and observations considerably more compelling, persuasive and credible than Dr. Chan's and Dr. Fall's analyses. Indeed,

Dr. Mason confirms what the ALJ already observed concerning Dr. Chan's inadequate evaluation of the Claimant.

Dr. Fall Redux

17. Dr. Fall issued a third report, "Medical Record Review and Addendum," on March 18, 2016, and in an adversarial mode, criticized Dr. Mason's DIME report as having discounted and "downplayed" the activities of the Claimant in the surveillance video. Again, the ALJ infers and finds that Dr. Fall, like Dr. Chan, has blown the video observations out of proportion, without regard to the Claimant's plausible explanations. Such an observation on Dr. Fall's part barely rises to the level of a difference of opinion concerning the import of the videos, much less does it support a proposition of clear error on Dr. Mason's part.

18. Dr. Fall testified in person at the hearing. At hearing, she agreed that the surveillance video showed the Claimant protectively guarding her right upper extremity by holding the arm in front of her body as she walked. This does not show up in any of her written reports, thus, undermining her credibility even more. Dr. Fall found it difficult to examine the Claimant's right shoulder because of pain. Dr. Fall testified that she believed there was no acute injury to the Claimant's shoulder and that the MRI findings **"could be"** (emphasis supplied) consistent with degenerative changes. Dr. Fall conceded, however, that she had reviewed no medical records or MRIs of the Claimant's right shoulder taken before this occupational injury. She agreed that she knew of no work restrictions for Claimant during her 28-year employment at Safeway nor during her seven-year employment with the Employer herein. The ALJ finds the opinions of Dr. Fall neither persuasive nor credible.

19. Dr. Fall testified that her primary disagreement with the DIME report was that she felt Dr. Mason did not consider Dr. Chan's opinion as to the Claimant's alleged malingering (the ALJ infers and finds that "malingering" is more of a moral/psychological judgment than an objective medical finding and Dr. Chan has failed to demonstrate appropriate credentials in either field –such as a doctorate in Divinity or a board certification in psychiatry). On cross-examination, however, Dr. Fall agreed that Dr. Mason in her report indeed had considered, but rejected, Dr. Chan's opinion.

The Claimant, Surgical Recommendation and Ultimate Opinion of DIME Dr. Mason

20. The Claimant was a credible and persuasive witness. The ALJ finds that she is able to use her right arm if she keeps it straight down at her side with the elbow bent. She was advised by Dr. Griggs not to wear the sling if she was having increased pain in her right shoulder. She has not used her right arm overhead, nor is there any reference in the reports of Dr. Fall or Dr. Chan that the surveillance videos show Claimant performing any overhead movements. There was no credible or persuasive evidence that Claimant has returned to work.

21. Dr. Griggs, an ATP, has recommended surgery for the Claimant's SLAP IV lesion. Dr. Mason, the DIME physician, determined that the Claimant is not at MMI. She recommended consideration of surgery after an orthopedic evaluation, reimaging of the right shoulder, preferably with an arthrogram and a psychological consultation.

22. Dr. Chan failed to adequately evaluate the Claimant's right shoulder injury as a treating physician, and he ignored the MRI findings that documented the Type IV SLAP tear resulting from this occupational injury. His moral characterization of the Claimant as "malingering" and misrepresenting her symptoms is rejected as not credible or persuasive. Because Dr. Chan misapprehended the Claimant's activities on video surveillance and failed to provide medical treatment that relieved the Claimant from the effects of the SLAP tear, his opinion that Claimant could work without any work restrictions is rejected as not credible or persuasive.

23. The Claimant remained under work restrictions given by ATP Dr. Ritzer of no use of the upper right extremity through at least June 16, 2015 (Claimant's Exhibit 8, pp.28-44), when she released Claimant to lifting and carrying no more than 5 pounds and no use of her right arm to reach overhead, away from her body or for repetitive motion (Claimant's Exhibit 8, p.44). The full work release given by Dr. Ritzer on June 25, 2015 (Claimant's Exhibit 8, p.45) was based solely on Dr. Chan's opinion and, thereby, is also rejected as not credible or persuasive evidence as to the Claimant's work abilities prior to MMI.

Ultimate Findings

24. For the reasons articulated herein above, the ALJ finds the opinions of Dr. Chan and Dr. Fall lacking in credibility. On the other hand, the ALJ finds the opinions of DIME Dr. Mason well articulated, with an underlying thorough and persuasive medical analysis of the Claimant's case. Therefore, the ALJ finds DIME Dr. Mason's opinions highly persuasive and credible. Also, the ALJ finds the Claimant's explanation of what is depicted on the videos plausible, persuasive and credible. The Claimant presented in a straight-forward and honest manner. For this reason, the ALJ finds her testimony highly credible.

25. The ALJ makes a rational choice, based on substantial evidence, to accept the testimony of the Claimant and the opinions of DIME Dr. Mason, and to reject the opinions of Dr. Chan and Dr. Fall.

26. The Respondents have failed to demonstrate that it is highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. Mason's opinion that he Claimant is **not** at MMI is erroneous. Therefore, the Respondents have failed to overcome DIME Dr. Mason's opinion that the Claimant is **not** at MMI by clear and convincing evidence.

27. The Claimant has proven, by a preponderance of the evidence that the surgery recommended by ATP Dr. Griggs is causally related to the admitted injury and reasonably necessary to cure and relieve the effects thereof.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Chan and Dr. Fall lacked credibility. On the other hand, the opinions of DIME Dr. Mason were well articulated, with an underlying thorough and persuasive medical analysis of the Claimant's case. Therefore, as found, Dr. Mason's opinions were highly persuasive and credible. Also, as found, the Claimant's explanation of what is depicted on the videos was plausible, persuasive and credible. The Claimant presented in a straight-forward and honest manner. For this reason, the ALJ found her testimony highly credible.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice, based on substantial evidence, to accept the testimony of the Claimant and the opinions of DIME Dr. Mason, and to reject the opinions of Dr. Chan and Dr. Fall.

Overcoming the DIME –"Not at MMI"

c. Section 8-42-107 (8) (b) (III), C.R.S., requires that the opinion of MMI, or lack thereof, given by a DIME physician selected by the Division of Workers' Compensation must be overcome only by clear and convincing evidence. "Clear and convincing evidence" is an evidentiary standard of proof that is established by showing that the truth of a contention is highly probable, unmistakable and free from serious or substantial doubt. *Askew v. Sears, Roebuck & Co.*, 914 P.2d 416 (Colo.App. 1995); *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo.App. 1995). The party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office***,** 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's determination of MMI is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert, supra*; *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office, supra*; *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 400 (Colo. App. 2009). A DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P. 2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. A mere difference of medical opinion does not constitute "clear and convincing evidence" to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Bush, Inc.,* W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). The question of whether a party meets the "clear and convincing" burden of proof is a question of fact for the ALJ. *McLane Western, Inc. v. Indus. Claim Appeals Office*, 996 P.2d 263 (Colo.App. 1999). As found, the Respondents have failed to overcome the DIME opinion of Dr. Mason that the Claimant is **not** at MMI. The ALJ concludes that the key dispute Dr. Fall has with the DIME opinion is a matter of personal opinion - - that Dr. Mason failed to defer to Dr. Chan's conclusions concerning Claimant's presentation to him versus what she is shown doing on video. This mere difference of opinion does not rise to the standard of clear and convincing evidence required by statute. Dr. Mason found the Claimant to be credible in her complaints, which in turn were documented objectively by the MRI results.

Burden of Proof on Recommended Surgery

d. The injured worker has a continuing burden of proof, by a preponderance of the evidence, of establishing entitlement to medical benefits, when challenged. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has proven, by a preponderance of the evidence that the surgery recommended by ATP Dr.

Griggs is causally related to the admitted injury and reasonably necessary to cure and relieve the effects thereof.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant is **not** at maximum medical improvement.

B. The respondents shall pay the costs of all causally related and reasonably necessary medical expenses to cure and relieve the effects of her admitted injury, including the surgery recommended by Sean Griggs, M.D., subject to the Division of Workers' Compensation Medical Fee Schedule.

C. Any and all issues not determined herein are reserved for future decision.

DATED this______day of May 2016.

____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Did Claimant prove by clear and convincing evidence that he needs additional medical treatment to reach maximum medical improvement?

- Did Claimant prove by a preponderance of the evidence that he is entitled to an award of ongoing medical benefits after maximum medical improvement?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. At hearing Claimant's Exhibits 1, 2 and 8 were admitted into evidence. Respondents' Exhibits A through C were admitted into evidence.

2. Claimant sustained an admitted industrial injury on May 27, 2014. The injury occurred when Claimant was operating a mechanical lift and pushed the "wrong" button. Claimant testified that he injured his back when the lift pinned him against a bridge.

3. On May 28, 2014 Claimant was examined at Midtown Occupational Health Services. Claimant gave a history that he injured the posterior mid and lower rib cage when a machine pushed him against a concrete beam. Thoracic range of motion (ROM) was reduced by "localized left posteroinferior rib pain." The lumbar spine and muscles were not tender. Claimant was diagnosed with a "posterior rib cage contusion." (Respondents' Exhibit A p. 4).

4. Claimant began massage therapy on June 9, 2014. At that time he completed a pain diagram indicating that he had pain in the thoracic and lumbar spine. (Respondents' Exhibit A p. 4).

5. On June 25, 2014 Craig Anderson, M.D., examined Claimant. Dr. Anderson noted Claimant's pain was no longer centered in the left posterolateral rib cage but was instead extended into the left perithoracic area and on into the left part of the neck. There is no credible or persuasive evidence that Claimant reported lumbar pain on this occasion. Palpatory examination showed diffuse perithoracic muscle tension. Cervical x-rays showed mild degenerative disc disease (DDD) and thoracic x-rays showed kyphosis. Dr. Anderson believed Claimant had aggravated some pre-existing degenerative changes. (Respondents' Exhibit A p. 4).

6. On July 9, 2014 Claimant reported he was about "50% better" and that he experienced some improvement with massage therapy. His primary area of pain was "was less perithoracic, posterolateral." Pain radiated to the neck only.

7. On July 23, 2014 Claimant gave a history that at work he had been pressured to perform "heavier lifting than he was comfortable with." Claimant was now "localizing his area of discomfort to the left low back." Claimant was referred to Dr. Lesnak.

8. Dr. Lesnak examined Claimant on August 7, 2014. Claimant primarily complained of low back pain which Dr. Lesnak attributed to left SI joint dysfunction. Dr. Lesnak scheduled an EMG and an MRI. Dr. Lesnak prescribed tramadol for pain.

9. Claimant underwent a lumbar MRI that revealed mild DDD, facet hypertrophy contributing to mild multilevel foraminal narrowing and no disc herniation or nerve impingement. Dr. Lesnak performed an EMG that reportedly showed no pathology. (Respondents' Exhibit A p. 5).

10. On August 18, 2014 Dr. Lesnak noted Claimant "had a great many issues with his employer and a multitude of subjective complaints." Claimant had not improved despite extensive treatment. Dr. Lesnak recommended a one-time diagnostic/therapeutic bilateral SI joint injection. (Respondents' Exhibit A p. 5).

11. Claimant underwent the SI joint injection on September 19, 2014. On October 6, 2014 Claimant reported that the injection did not provide any relief, not even temporarily. (Respondents' Exhibit A p. 5).

12. On October 16, 2014 Claimant underwent a bone scan of the lower thoracic and lumbar spine. The bone scan revealed a probable fracture of the mid posterior left eleventh rib. Dr. Lesnak believed this fracture might be the cause of Claimant's report of ongoing pain. (Respondents' Exhibit A p. 5).

13. Claimant underwent a functional capacity evaluation (FCE). On the Oswestry Low Back Pain Disability Index Claimant scored himself as "crippled." The FCE indicated that Claimant was limited to lifting 30 pounds occasionally and 10 pounds frequently. The FCE further indicated Claimant was limited to occasionally lifting 20 pounds from waist to shoulder and frequently lifting 10 pounds from waist to shoulder. Claimant's "bilateral carry" was limited to 10 pounds for 50 feet. (Respondents' Exhibit A p. 5).

14. On November 20, 2014 Dr. Lesnak noted that Claimant felt he was being discriminated against at work and that his primary low back pain was progressing. Dr. Lesnak observed that Claimant was exhibiting "pain behaviors." Dr. Lesnak opined that psychosocial and financial stresses were playing a large role in Claimant's symptoms. Dr. Lesnak placed Claimant at maximum medical improvement (MMI) and stated Claimant could continue medications for 6 months. (Respondents' Exhibit A p. 6).

15. Dr. Anderson also examined Claimant on November 20, 2014. Dr. Anderson assessed an eleventh rib fracture by bone scan imaging. He opined that the FCE results did not reflect Claimant's actual capabilities. Dr. Anderson placed Claimant at MMI with no permanent impairment. Dr. Anderson also indicated that Claimant did not require any maintenance care after MMI. (Respondents' Exhibit C).

16. On February 9, 2015 Kristin Mason, M.D., performed a Division-sponsored independent medical examination (DIME). Dr. Mason took a history, reviewed pertinent medical records and performed a physical examination (PE). Claimant reported that he was experiencing midline lumbar pain, left-sided to midline thoracic pain and "stabbing pain from the occiput to the lumbosacral junction." Claimant also described "scattered areas of tingling" and "pins and needles down the inside of his thighs and calves and inside of his arms."

17. Dr. Mason opined that Claimant "appeared to give very poor effort" during lumbar ROM testing. Dr. Mason assessed the following: (1) Status post thoracic sprain/strain with isolated left eleventh rib fracture; (2) Later development of lumbar complaints with no objective evidence to indicate a lumbar injury either at the time of injury or on any of the diagnostic workup; (3) Probable pain disorder with both psychological factors and a general medical condition; (4) No evidence of any impairment to the bilateral lower extremities, neck or chest.

18. In the DIME report Dr. Mason agreed with Dr. Lesnak and Dr. Anderson that Claimant reached MMI on November 20, 2014. Dr. Mason declined to assign an impairment rating for the lumbar spine. She explained there was "no mechanism of injury for [Claimant's] lumbar spine and the complaints did not appear until later." However Dr. Mason assessed 7% impairment of the thoracic spine. Dr. Mason stated that she did not believe Claimant presented in a "straightforward fashion." Nevertheless, Dr. Mason gave the Claimant the "benefit of the doubt" and assessed the thoracic impairment rating because Claimant experienced "enough trauma to have a rib fracture." Dr. Mason agreed with Dr. Anderson that the FCE "severely" underestimated Claimant's physical capabilities. Dr. Mason opined Claimant did not need any "further directed medical care."

19. On April 9, 2015 Dr. Mason issued an addendum to her DIME report. Dr. Mason wrote that pursuant to a court order she reviewed surveillance video of Claimant taken on three occasions in September 2014. Dr. Mason noted that the video depicted Claimant performing numerous activities including bending in a crouch, forcefully utilizing a wrench while on his knees, twisting repeatedly from his knees and squatting through his thoracic and lumbar spine. Based on the video Dr. Mason stated that Claimant's "functional deficits" were "much less that what he demonstrated" on Dr. Mason's PE. Dr. Mason reiterated that she did not believe Claimant presented in a straightforward and honest fashion and rescinded the impairment rating for the thoracic spine. Dr. Mason opined that Claimant had fully recovered from his injury at the time of the video and that Claimant's activities on the video "would not be consistent with how he was presenting to his providers at that time."

20. At hearing Claimant testified that he feels pain in the center of his back approximately one inch above the belt line. Claimant also testified that he experiences numbness and tingling in his hands and feet and numbness in his legs.

21. Claimant testified that doctors have told him that he has “inflamed discs” because of the accident and because of “arthritis.” Claimant testified that he wants to receive additional medical treatment to relieve his back pain.

22. Claimant admitted that after the injury he continued to work until he was fired on February 11, 2015. Claimant stated that he currently receives treatment under Medicare and takes the drugs Tramadol and Meloxicam.

23. Claimant’s wife Lucilla Coronado testified at hearing. Ms. Coronado testified that Claimant has been a carpenter all of his life and has never been hurt before. She testified that since May 2014 she has observed that Claimant’s pain has gotten worse and worse.

24. At the conclusion of the hearing the parties were permitted to make closing arguments. During closing arguments Claimant did not clarify the legal theory or theories under which he seeks to obtain additional medical treatment. However, the ALJ infers Claimant is arguing either that he has overcome the DIME physician’s opinion that he has reached MMI, or that he is entitled to an award of ongoing medical benefits after MMI. The ALJ concludes that Claimant has not met his burden of proof under either theory.

25. Claimant failed to prove it is highly probable and free from serious doubt that Dr. Mason erred in finding he reached MMI on November 20, 2014. Specifically, Claimant failed to prove it is highly probable and free from serious doubt that he needs additional medical treatment to reach MMI from the effects of the May 27, 2014 industrial injury.

26. Dr. Mason, the DIME physician, credibly and persuasively opined Claimant reached MMI on November 20, 2014. In so doing Dr. Mason reviewed the Claimant’s medical history detailing the workup and treatment of his various complaints. Specifically Dr. Mason noted that Claimant had undergone cervical and thoracic x-rays, EMG studies, a lumbar MRI, a bilateral SI joint injection, massage therapy and treatment by Dr. Anderson and Dr. Lesnak. Ultimately Dr. Mason found Claimant did not sustain any injury to the lumbar spine and that he “recovered” from his other injuries such that additional treatment is not necessary for him to reach MMI. Dr. Mason also credibly opined that “further directed medical care” is not likely to assist Claimant given his presentation.

27. Dr. Mason’s opinions are supported by Claimant’s medical records and corroborated by the opinions of Dr. Lesnak and Dr. Anderson. Both Dr. Lesnak and Dr. Anderson agreed Claimant reached MMI on November 20, 2014.

28. Claimant did not present credible or persuasive medical evidence or testimony to refute the opinions of Dr. Mason, Dr. Lesnak and Dr Anderson.

29. Insofar as Claimant testified that he needs additional medical treatment for the effects of the May 2014 industrial injury his testimony is not credible and persuasive. Claimant's credibility is undermined by Dr. Mason's credible and persuasive observation that Claimant's activities depicted in the surveillance video conflicted with his presentation to the treating physicians. Claimant's credibility is further undermined by Dr. Mason's observations that at the DIME Claimant did not present in a straightforward manner and failed to give full effort on lumbar ROM testing.

30. To the extent that Ms. Coronado's testimony would support the contention that Claimant needs additional medical treatment to reach MMI Coronado's testimony is not credible and persuasive. Her testimony is contradicted and refuted by the credible and persuasive testimony of Claimant's treating physicians and Dr. Mason.

31. Claimant failed to prove it is more probably true than not that he will need future medical treatment to relieve the effects of or prevent deterioration of any condition causally-related to the industrial injury of May 27, 2014.

32. Dr. Mason credibly and persuasively opined Claimant does not need and is unlikely to benefit from further medical treatment. Dr. Mason credibly opined Claimant has "recovered fully" from the effects of the May 27, 2014 injury. Dr. Mason's opinion is corroborated by Dr. Anderson's opinion.

33. The ALJ notes that Dr. Lesnak found Claimant reached MMI on November 20, 2014, but recommended that Claimant continue medications for 6 months. Insofar as Dr. Lesnak's recommendation can be considered evidence of a need for ongoing medical treatment after MMI it is not persuasive. In the April 2015 "addendum" to the DIME report Dr. Mason persuasively opined that the surveillance video taken in September 2014 shows Claimant performing activities that were not consistent with "how he was presenting to his providers at that time." Because Dr. Lesnak was one of Claimant's providers in September 2014 the ALJ infers that Dr. Lesnak's recommendation for ongoing medications was based on an invalid presentation by Claimant. Moreover, Dr. Mason credibly and persuasively opined that Claimant did not present in a "straightforward and honest" manner at the DIME. Dr. Lesnak's recommendation for 6 months of post-MMI medication is not sufficiently persuasive to prove by a preponderance of the evidence that Claimant is entitled to an award of ongoing medical benefits after MMI

34. Insofar as Claimant's testimony and Ms. Coronado's testimony would support an award of ongoing medical treatment to relieve or prevent deterioration of Claimant's condition after MMI their testimony is not credible and persuasive. Their testimony is refuted by the credible and persuasive opinions of Dr. Mason.

35. Evidence and inferences contrary to or inconsistent with these findings of fact are not credible and persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Except as noted below, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201(1). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions.

ADDITONAL MEDICAL TREATMENT TO REACH MMI

To the extent Claimant contends that he needs additional medical treatment to reach MMI, the ALJ concludes he failed to meet his burden of proof.

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra.*

Under § 8-40-201(11.5) MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that a claimant needs additional medical treatment to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (ICAO March 2, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

As determined in Findings of Fact 25 through 30, Claimant failed to prove by clear and convincing evidence that Dr. Mason was incorrect in finding that he reached MMI on November 20, 2014. Specifically, Claimant failed to prove it is highly probable and free from serious doubt that he needs additional medical treatment to cure and relieve the effects of the May 27, 2014 industrial injury. As found, Dr. Mason credibly and persuasively opined that Claimant did not suffer any lumbar injury as a result of the May 2014 injury and that Claimant does not need additional medical treatment for any injury-related condition in order to reach MMI. Dr. Mason's opinions in this regard are corroborated by the opinions of Dr. Lesnak and Dr. Anderson. Claimant failed to present any credible and persuasive medical evidence tending to refute Dr. Mason's opinion. Insofar as the testimonies of Claimant and Ms. Coronado are relevant to this issue their testimony is not credible for the reasons stated in Findings of Fact 29 and 30.

MAINTENANCE MEDICAL TREATMENT

Claimant failed to prove it is more probably true than not that he needs or will probably need medical treatment to relieve the ongoing effects of the industrial injury after MMI or to prevent deterioration of his condition.

The need for medical treatment may extend beyond the point of MMI where a claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). An award for *Grover* medical benefits is not contingent upon a finding that a specific course of treatment has been recommended. Neither is such an award dependant on a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003).

For the reasons stated in Findings of Fact 31 through 34, Claimant failed to prove it is more probably true than not that he needs or will ever need medical treatment to relieve or prevent deterioration of any condition that is causally-related to the industrial injury of May 27, 2014. Rather, the ALJ credits the opinions of Dr. Mason that Claimant has “recovered fully” from the effects of the May 2014 injury and is not likely to need any future medical treatment that is causally-related to the injury. To the extent that Dr. Lesnak’s opinions could be construed as support for the proposition that Claimant needs or probably will need additional treatment after MMI, those opinions are not credible and persuasive for the reasons stated in Finding of Fact 33.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the ALJ enters the following order:

1. The Claimant’s request for additional medical treatment on account of the May 27, 2014 industrial injury is denied and dismissed.

2. Issues not resolved by this order are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Jade Dillon, M.D. that Claimant has not reached Maximum Medical Improvement (MMI) for his January 3, 2013 lumbar spine injury.

FINDINGS OF FACT

1. Claimant worked as a Warehouse Chemist at Employer's cement mixing operation. His job duties involved moving hoses and lifting heavy bags of cement weighing between 50-75 pounds. On January 3, 2013 Claimant injured his left wrist, lower back and right knee when he slipped on a wet floor.

2. Claimant underwent conservative treatment for his industrial injuries that included medications, physical therapy, diagnostic testing and injections. The medical records and diagnostic testing revealed that Claimant suffered significant symptoms in his knees and lower back prior to the January 3, 2013 accident.

3. On September 25, 2013 Claimant underwent a total left knee replacement. Claimant acknowledged that the surgery was not related to his January 3, 2013 industrial injuries.

4. On October 16, 2013 Claimant underwent an independent medical examination with J. Carlos Cebrian, M.D. Dr. Cebrian determined that, as a result of the January 3, 2013 fall, Claimant sustained "contusion/sprain/strain" related "aggravations" to his left wrist, lumbar spine and right knee. He commented that the injuries were of "limited duration" and Claimant reached MMI on April 18, 2013. Dr. Cebrian explained that the anatomy of Claimant's right knee, lumbar spine and left wrist as reflected on MRI's constituted a "preexisting and genetically proscribed degenerative change." He noted that the MRI's did not reveal any cumulative or acute effects related to Claimant's work activities.

5. Dr. Cebrian explained that the January 3, 2013 incident did not change Claimant's underlying and pre-existing degenerative spine disease. He noted that, although Claimant had initial complaints of back pain following the accident, his spinal examinations were essentially normal after a few weeks. Dr. Cebrian further commented that Claimant did not develop any "prominent" spinal symptoms until April 2013. He concluded that the "lumbar spine complaints that occurred three months after the fall [we]re due to the underlying lumbar degenerative disc disease" and not caused or aggravated by the work accident.

6. On October 29, 2014 the parties participated in a hearing before ALJ David P. Cain at the Office of Administrative Courts. The issues involved whether Claimant's need for a total right knee replacement and all medical treatment was caused by the January 3, 2013 accident. In a March 6, 2015 Findings of Fact, Conclusions of Law and Order ALJ Cain denied Claimant's request for a right total knee replacement. ALJ Cain also rejected Respondents' attempt to terminate additional medical treatment for Claimant's left wrist, lower back and right knee.

7. On December 16, 2014 Dr. Cebrian issued a Supplemental Report. He maintained that Claimant did not sustain any permanent impairment as a result of his January 3, 2013 fall. Dr. Cebrian summarized that Claimant's injuries were of "limited duration which did nothing to change the underlying disease process of his pre-existing osteoarthritis of his right knee, osteoarthritis of his left wrist or degenerative disc disease of his lumbar spine."

8. Claimant subsequently received additional conservative treatment for his industrial injuries. Because he did not reach MMI Respondents sought a 24-month DIME.

9. On July 16, 2015 Claimant underwent a 24-month DIME with Jade Dillon, M.D. Dr. Dillon reviewed Claimant's medical history and conducted a physical examination. She initially noted that no treating physician had determined that Claimant reached MMI. Dr. Dillon also remarked that Claimant had a history of multiple, significant right knee injuries. She commented that as far back as 2006 Claimant exhibited a "virtually complete erosion" of the articular cartilage and physicians recommended bilateral knee replacements. Dr. Dillon explained that Claimant suffered a contusion and possible right knee strain on January 3, 2013 but there was no anatomical disruption of the knee structures. She detailed that there was no evidence that the January 3, 2013 incident "caused any significant long-term worsening of his significant underlying degenerative condition." Instead, Claimant's symptoms were consistent with progressive, degenerative changes in someone who had already reached right knee end-stage osteoarthritis. Accordingly, Dr. Dillon concluded that the January 3, 2013 industrial incident did not cause or exacerbate Claimant's degenerative right knee condition.

10. Dr. Dillon also concluded that Claimant's left wrist symptoms were not related to the January 3, 2013 industrial incident. She explained that Claimant's symptoms were likely caused by significant osteoarthritis throughout his left wrist. Furthermore, the timeframe between Claimant's industrial injury and the documentation of significant osteoarthritis suggested that his symptoms were not caused by the January 3, 2013 accident. The incident would likely only have caused transient left wrist symptoms that would have resolved. Accordingly, Dr. Dillon concluded that the January 3, 2013 industrial incident did not cause or exacerbate Claimant's degenerative left wrist condition.

11. Dr. Dillon determined that Claimant suffered a "significant exacerbation" of his underlying lower back condition on January 3, 2013. She noted that Claimant had

not reached MMI because he required additional conservative treatment in the form of physical therapy. Moreover, authorized medical providers had recommended additional treatment. Relying on Table 53 of the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides)*, Dr. Dillon assigned Claimant a 7% whole person impairment rating for a specific disorder of the lumbar spine and a 26% whole person impairment for range of motion deficits. Combining the ratings yields a 31% whole person impairment.

12. On December 15, 2015 Dr. Dillon testified through a pre-hearing evidentiary deposition in this matter. She maintained that Claimant's left wrist and right knee symptoms constituted degenerative conditions that were not causally related to the January 3, 2013 industrial incident. However, she explained that on January 3, 2013 Claimant suffered a lumbar strain with the exacerbation of a disc herniation. After reviewing a lumbar MRI Dr. Dillon specifically noted that Claimant suffered a "significant exacerbation" of his lumbar spine condition that was likely acute based on his symptoms. Dr. Dillon recommended physical therapy, epidural steroid injections and a surgical consultation.

13. On February 25, 2016 John T. McBride Jr., M.D. performed an independent medical examination. After considering Claimant's medical history and conducting a physical examination Dr. McBride diagnosed Claimant with a mild L5 left-sided radiculopathy, left wrist osteoarthritis and right knee osteoarthritis. He concluded that Claimant's right knee arthritis, left wrist arthritis, radiculopathy, lower back degenerative disc disease and foraminal stenosis were not caused by the January 3, 2013 industrial incident. Therefore, Claimant had reached MMI. Relying on Table 53 of the *AMA Guides*, Dr. McBride commented that Claimant would have a 5% whole person impairment for a specific disorder of the lumbar spine. However, considering Claimant's medical records from 2006 and lack of lower back symptoms immediately after the January 3, 2013 incident, Dr. McBride determined that Claimant did not have a "ratable" Workers' Compensation injury.

14. Dr. McBride testified at the hearing in this matter. He maintained that Claimant's right knee arthritis, left wrist arthritis, radiculopathy, lower back degenerative disc disease and foraminal stenosis were not caused by the January 3, 2013 industrial incident. Dr. McBride noted that Claimant did not exhibit evidence of a radiculopathy because his left leg did not reveal any atrophy. In addressing his disagreement with Dr. Dillon regarding Claimant's lumbar spine, Dr. McBride remarked that Claimant suffered chronic degenerative disc disease in his lower back that preceded the January 3, 2013 incident. He explained that Claimant's lumbar MRI did not reveal any evidence of an acute lower back injury but was instead consistent with the degenerative process in the form of bilateral foraminal narrowing.

15. Dr. McBride specifically disagreed with Dr. Dillon's conclusion that Claimant suffered an exacerbation of his underlying lower back condition for the following reasons: (1) Dr. Dillon did not note anywhere in her DIME report that Claimant had no spinal tenderness the day after his industrial injury; (2) a soft tissue injury, such as a muscle strain, would have resolved; (3) the degenerative changes in Claimant's

lumbar spine would not resolve in six weeks; (4) physical therapy would not remedy the underlying arthritis or degenerative disc disease; and (5) Claimant's lower back pain had been well-documented dating back to 2006. Dr. McBride remarked that, if Claimant had suffered a work-related lower back injury, it would have resolved approximately six weeks after the incident. Dr. McBride summarized that Dr. Dillon appeared to base her opinions on Claimant's subjective report of complaints instead of the records and objective findings. Furthermore, Dr. McBride commented that Claimant did not require any additional physical therapy because he had undergone numerous physical therapy visits during 2013 and 2014 without improvement. He specifically noted that Dr. Dillon was incorrect in her assessment that Claimant had received inadequate conservative treatment. Finally, Dr. McBride stated that a repeat lumbar MRI would not be related to Claimant's January 3, 2013 industrial injury. Accordingly, Dr. McBride determined that Claimant had reached MMI in February or March 2013 with no permanent impairment.

16. Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Dillon that Claimant has not reached MMI for his January 3, 2013 lumbar spine injury. After reviewing Claimant's medical records and performing a physical examination Dr. Dillon determined that the January 3, 2013 industrial incident did not cause or exacerbate Claimant's degenerative right knee or left wrist conditions. However, Dr. Dillon explained that Claimant suffered a "significant exacerbation" of his underlying lower back condition on January 3, 2013. After reviewing a lumbar MRI Dr. Dillon specifically noted that Claimant suffered a "significant exacerbation" of his lumbar spine condition that was likely acute based on his symptoms. She noted that Claimant had not reached MMI because he required additional conservative treatment in the form of physical therapy, epidural steroid injections and a surgical consultation. Relying on Table 53 of the *AMA* Guides, Dr. Dillon assigned Claimant a 31% whole person impairment.

17. Drs. Cebrian and McBride agreed with Dr. Dillon that the January 3, 2013 industrial incident did not cause or exacerbate Claimant's degenerative right knee or left wrist conditions. However, in addressing Claimant's lumbar spine, Dr. Cebrian explained that the January 3, 2013 incident did not change Claimant's underlying and pre-existing degenerative spine disease. Dr. Cebrian noted that, although Claimant had initial complaints of back pain following the January 3, 2013 incident, his spinal examinations were essentially normal after a few weeks. He further commented that Claimant did not develop any "prominent" spinal symptoms until April 2013. Dr. Cebrian concluded that the "lumbar spine complaints that occurred three months after the fall [were] due to the underlying lumbar degenerative disc disease" and not caused or aggravated by Claimant's fall.

18. Dr. McBride commented that Claimant suffered chronic degenerative disc disease in his lower back that preceded the January 3, 2013 incident. He explained that Claimant's lumbar MRI did not reveal any evidence of an acute lower back injury but was instead consistent with the degenerative process in the form of bilateral foraminal narrowing. Dr. McBride specifically disagreed with Dr. Dillon's conclusion that Claimant suffered an exacerbation of his underlying lower back condition for the following reasons: (1) Dr. Dillon did not note anywhere in her DIME report that Claimant had no

spinal tenderness the day after his industrial injury; (2) a soft tissue injury, such as a muscle strain, would have resolved; (3) the degenerative changes in Claimant's lumbar spine would not resolve in six weeks; (4) physical therapy would not remedy the underlying arthritis or degenerative disc disease; and (5) Claimant's lower back pain had been well-documented dating back to 2006. Dr. McBride remarked that, if Claimant had suffered a work-related lower back injury, it would have resolved approximately six weeks after the incident. Furthermore, Dr. McBride commented that Claimant did not require any additional physical therapy because he had undergone numerous physical therapy visits during 2013 and 2014 without improvement. He specifically noted that Dr. Dillon was incorrect in her assessment that Claimant had received inadequate conservative treatment. Accordingly, Dr. McBride determined that Claimant had reached MMI in February or March 2013 with no permanent impairment.

19. Although Drs. Cebrian and McBride attributed Claimant's lumbar spine condition to a degenerative process, they failed to explain how Dr. Dillon's determination that the January 3, 2013 incident caused a "significant exacerbation" of his underlying lower back condition was clearly erroneous. The opinions of Drs. Cebrian and McBride merely constitute disagreements with Dr. Dillon regarding the cause of Claimant's lumbar spine symptoms. Accordingly, Respondents have failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Dillon's MMI determination was incorrect.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002); *In Re Clickner* W.C. No. 4-798-331 (ICAP, Apr. 30, 2015). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

6. As found, Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Dillon that Claimant has not reached MMI for his January 3, 2013 lumbar spine injury. After reviewing Claimant's medical records and performing a physical examination Dr. Dillon determined that the January 3, 2013 industrial incident did not cause or exacerbate Claimant's degenerative right knee or left wrist conditions. However, Dr. Dillon explained that Claimant suffered a "significant exacerbation" of his underlying lower back condition on January 3, 2013. After reviewing a lumbar MRI Dr. Dillon specifically noted that Claimant suffered a "significant exacerbation" of his lumbar spine condition that was likely acute based on his symptoms. She noted that Claimant had not reached MMI because he required additional conservative treatment in the form of physical therapy, epidural steroid injections and a surgical consultation. Relying on Table 53 of the *AMA* Guides, Dr. Dillon assigned Claimant a 31% whole person impairment.

7. As found, Drs. Cebrian and McBride agreed with Dr. Dillon that the January 3, 2013 industrial incident did not cause or exacerbate Claimant's degenerative right knee or left wrist conditions. However, in addressing Claimant's lumbar spine, Dr. Cebrian explained that the January 3, 2013 incident did not change Claimant's underlying and pre-existing degenerative spine disease. Dr. Cebrian noted that, although Claimant had initial complaints of back pain following the January 3, 2013 incident, his spinal examinations were essentially normal after a few weeks. He further commented that Claimant did not develop any "prominent" spinal symptoms until April

2013. Dr. Cebrian concluded that the “lumbar spine complaints that occurred three months after the fall [were] due to the underlying lumbar degenerative disc disease” and not caused or aggravated by Claimant’s fall.

8. As found, Dr. McBride commented that Claimant suffered chronic degenerative disc disease in his lower back that preceded the January 3, 2013 incident. He explained that Claimant’s lumbar MRI did not reveal any evidence of an acute lower back injury but was instead consistent with the degenerative process in the form of bilateral foraminal narrowing. Dr. McBride specifically disagreed with Dr. Dillon’s conclusion that Claimant suffered an exacerbation of his underlying lower back condition for the following reasons: (1) Dr. Dillon did not note anywhere in her DIME report that Claimant had no spinal tenderness the day after his industrial injury; (2) a soft tissue injury, such as a muscle strain, would have resolved; (3) the degenerative changes in Claimant’s lumbar spine would not resolve in six weeks; (4) physical therapy would not remedy the underlying arthritis or degenerative disc disease; and (5) Claimant’s lower back pain had been well-documented dating back to 2006. Dr. McBride remarked that, if Claimant had suffered a work-related lower back injury, it would have resolved approximately six weeks after the incident. Furthermore, Dr. McBride commented that Claimant did not require any additional physical therapy because he had undergone numerous physical therapy visits during 2013 and 2014 without improvement. He specifically noted that Dr. Dillon was incorrect in her assessment that Claimant had received inadequate conservative treatment. Accordingly, Dr. McBride determined that Claimant had reached MMI in February or March 2013 with no permanent impairment.

9. As found, although Drs. Cebrian and McBride attributed Claimant’s lumbar spine condition to a degenerative process, they failed to explain how Dr. Dillon’s determination that the January 3, 2013 incident caused a “significant exacerbation” of his underlying lower back condition was clearly erroneous. The opinions of Drs. Cebrian and McBride merely constitute disagreements with Dr. Dillon regarding the cause of Claimant’s lumbar spine symptoms. Accordingly, Respondents have failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Dillon’s MMI determination was incorrect. *See In Re Patterson,* W.C. No. 4-874-745 (ICAP, Feb. 14, 2014) (reasoning that respondents had failed to overcome DIME physician’s conclusion that claimant had not reached MMI because contrary determinations that claimant had reached MMI constituted mere differences of opinion); *In Re Arszman*, W.C. No. 4-798-406 (ICAP, May 18, 2011) (concluding that, where medical evidence tending to challenge DIME opinion constituted mere difference of opinion, respondents had failed to produce clear and convincing evidence to overcome DIME determination that claimant had not reached MMI).

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has not reached MMI for his January 3, 2013 lumbar spine injury.

2. Any issues not resolved by this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

STIPULATIONS

1. The parties stipulate that the Claimant's Average Weekly Wage (AWW) is $665.27

2. The parties stipulate that an issue regarding potential adjustments to TTD may exist with regard to COBRA and due to offsets for short term disability and long term disability payments. The parties stipulate that this issue is reserved.

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable injury to low back arising out of and in the course of his employment with Employer on October 11, 2014.

2. If Claimant has proven a compensable injury, whether Claimant has proven by a preponderance of the evidence that he is entitled to medical benefits and that treatment he received was authorized, reasonable and necessary to cure and relieve Claimant from the effects of the work injury.

3. If Claimant has proven a compensable injury, whether Claimant has proven by a preponderance of the evidence that he is entitled to temporary disability benefits from November 6, 2014 ongoing.

FINDINGS OF FACT

1. The Claimant was employed at VI Highlands Ranch as a Certified Nurse's Aide (CNA) for 5 years as of October 11, 2014.

2. The Claimant's job was physically demanding and he was responsible for many aspects of patient care. The Claimant credibly testified that his job duties included getting residents out of their beds in the morning, grooming the residents, assisting them to use the restroom, assisting them with showers, taking them to the dining hall, usually in wheelchairs, tidying and cleaning the residents' rooms while they were dining, taking the soiled laundry to the utility room, cleaning up the trash and assisting some residents to the salon. When lifting residents, the Claimant testified their weight would range from 90 to 275 pounds. Sometimes he would lift residents by himself, and other time he would get assistance from other aides and sometimes assistive lift devices were employed.

3. Once the residents were back in their rooms, the Claimant testified he would perform charting. The charting work involved keeping track of the patients' activities of daily living through notes and later data entry at a computer station.

4. The Claimant testified that in the evening shift he would gather the laundry into a cart and push the laundry. He would then open it, take the bag out and walk it to the laundry room, where there was a special bin. The Claimant testified that on average the laundry would weigh 100 to 120 pounds. He testified that after moving the laundry, he would sit and chart again.

5. The Claimant first presented for low back treatment at East West Health Centers with on May 9, 2013. The form notes that the Claimant was referred by "Dr. Michael B," who is likely Dr. Michael Bathke, a chiropractor who is also affiliated with East West Health Centers. In the Initial Patient History form, the reason for the Claimant's visit was listed as "chronic" and "severe lower back pain." The form states that sharp pain in the lower back that radiates across the low back and limbs started on April 4, 2013. The Claimant reported that the pain was sharp and "very severe" when he sat for a very long time (Respondents' Exhibit E, p. 38). On the "Consultation / History Review" page of the initial intake documents, it is noted that the Claimant had been experiencing "pain in lower back" for 4 weeks and that he had seen a chiropractor for this. The pain was noted as "sharp" and "throbbing" and worse when sitting down (Respondents' Exhibit E, p. 42).

6. The Claimant also had a previous admitted back injury on May 14, 2013 while working for Respondent/Employer. He was helping lift a patient when he had acute back pain. He was treated for three months and released with no permanent impairment or work restrictions.

7. On September 22, 2014, the Claimant received chiropractic care at East West Health Centers. On that day, the Claimant reported moderate-severe bilateral lower back pain with bilateral leg pain. On a scale of 1-10, the Claimant described his pain as an 8-9. The treatment provider noted objective findings including nerve pressure, muscle spasm, edema and ROM at the lumbar and SI regions (Respondents' Exhibit E, p. 37).

8. On September 25, 2014, the Claimant received chiropractic care at East West Health Centers. On that day, the Claimant reported severe bilateral lower back pain with bilateral leg pain. On a scale of 1-10, the Claimant described his pain as a 7-9. The treatment provider noted objective findings including nerve pressure, muscle spasm, edema and ROM at the lumbar and SI regions (Respondents' Exhibit E, p. 36).

9. On October 2, 2014, the Claimant received chiropractic care at East West Health Centers. On that day, the Claimant reported bilateral lower back pain, moderate right sided hip pain and bilateral leg pain. The treatment provider noted objective findings including nerve pressure, muscle spasm, edema, tenderness to palpation and ROM at the lumbar and SI regions (Respondents' Exhibit E, p. 35).

10. Pursuant to the Claimant's time card, he worked a double shift on October 11, 2014, starting at 6:11 a.m. and ending at 2:30 p.m. and restarting a second shift at 2:30 p.m. clocking out at 10:30 p.m. (Claimant's Exhibit 9, p. 85). The Claimant testified credibly that the Employer was not fully staffed on October 11, 2014.

11. The Claimant testified that the laundry on October 11, 2014 was heavier than usual. All of the soiled laundry was gathered from the patients' rooms. It was placed in a bin that was then pushed to the laundry area. He was required to lift the laundry out of the bin. While doing this, the Claimant felt a sharp pain in his low back upon lifting the laundry out of the bin. The pain subsided fairly quickly. He did not report the incident that night to his Employer because it was at the end of his shift and the pain had subsided so quickly. The Claimant testified that he specifically remembered the incident of lifting the laundry because it was "an unusual pain."

12. The Claimant did not work the following day on October 12, 2014. (Claimant's Exhibit 9 p. 85).

13. Claimant was concurrently employed at Wind Crest in October of 2014. The Claimant testified that he did not know whether he worked at Windcrest on October 10, 2014, or October 12, 2014. His main duties at this second job consisted of dispensing medications, light cooking and visiting with patients. He usually did not lift more than 10 pounds at that job.

14. The Claimant reported to work as normal on October 13, 2014. He began his day performing his normal duties of patient care. The Claimant had his notes regarding the "activities of daily living" that he needed to enter into the computer. He went to sit down at the computer to enter his notes and he testified that he had immediate and debilitating pain in his low back. He testified that the pain was so intense that it brought him down to the floor. The Claimant was found lying on the floor in pain by another employee who helped him up.

15. The Claimant's supervisor, Lisa Nolan, also arrived at the scene and found the Claimant lying on the floor moaning in pain reporting lower back pain and numbness in his left leg as well (Claimant's Exhibit 9 pp. 83-84; Respondents' Exhibit J, pp. 94-95). Ms. Nolan stated that the Claimant was unable to attribute any particular incident/event to the onset of the lower back pain that was radiating to his leg, but made note of the fact that the Claimant reported that the pain was "first noticed" on October 11, 2014. Ms. Nolan also makes note of the Claimant working with soiled laundry on October 13, 2014 (Claimant's Exhibit 9 p. 84; Respondents' Exhibit J, p. 95). The laundry activity is consistent with the Claimant's testimony. However, the Claimant testified that he was doing the laundry on October 11, 2014 and "charting" on October 13, 2014, so the dates in Ms. Nolan's statement are different than those provided by the Claimant.

16. Suzanne McFarland also prepared an Employee Incident Report on October 13, 2014. She testified at hearing that she took a statement from the Claimant on October 13, 2014. She was not exactly sure where she was at the time she received the statement but was certain she got the information directly from the Claimant. Ms. McFarland's incident report noted that the date of injury was October 11, 2014. The "Exact Location of Occurrence" was noted to be "A.L. Activity Room—sitting and charting." Under the "Employee's Statement of Incident," Ms. McFarland noted: "Pain started Saturday as a mild pain around noon. When pain first came on—sitting in activity room trying to chart, AL" (Respondents' Exhibit J, p. 96). Ms. McFarland testified that the Claimant did not tell her about any incident lifting laundry as the cause of his pain.

17. The Claimant testified credibly that a driver took him to Concentra on October 13, 2014 for medical treatment and then back to his place of work afterwards. The Claimant testified that after this, he worked with work restrictions.

18. The Claimant was seen at Concentra in Highlands Ranch on October 13, 2014 by Hanna Bodkin, PA-C. The medical report from that date notes under "Chief Complaint": "DOI: 10/11/14; patient was sitting at a table charting and felt a sharp pain in left leg, buttock and lower back." Further in the report under "History of Present Illness," the Claimant described the location of his pain as the left low back and in the left SI region. He reported "onset was sudden" and "the pain is constant" at a pain level of 10/10. The Claimant reported that he "sat down to do computer charting ADLS on residents and left lower back became painful, he had sharp pain, now pain is going from right lower back into buttock and right leg" (Claimant's Exhibit 5, p. 43; Respondents' Exhibit A, p. 1). Nowhere in the report on October 13, 2014, is it noted that the Claimant injured his back while lifting laundry (Claimant's Exhibit 5, pp. 43-45; Respondents' Exhibit A, p. 1). Additionally, the injury date is noted as 10/4/2014 (Claimant's Exhibit 5, p. 43; Respondents' Exhibit A, p. 1).

19. On October 15, 2014, the Claimant presented to Concentra in Littleton and was seen by Luisa Long for his initial physical therapy appointment. Ms. Long noted that the Claimant reported that he was "sitting at a table, charting, when felt sharp pain in L LE, buttock and lower L/s. Severity of pain and locations of pain far different from last year's injury." Ms. Long noted that the Claimant's restrictions limited lifting, pushing and pulling to 10 lbs. and limiting bending with no bending 2/3 of the time and limiting standing and sitting each to 50% of his shift. The Claimant reported that he had a low back injury about a year prior with occasional lasting pain that comes and goes. Ms. Long noted that therapy was indicated for the Claimant and that he was a good candidate for therapy with a good prognosis for improvement (Respondents' Exhibit A, pp. 4-6).

20. On October 16, 2014, the Claimant returned for a recheck of his lumbar back strain following his initial physical therapy assessment and appointment the previous day. The Claimant reported taking ibuprofen every 4 hours and Flexeril multiple times per day. He reported continued pain in his lower back into the buttock

and left leg. The Claimant advised Hanna Bodkin, PA-C that he would like an MRI to assess his lower back. Ms. Bodkin noted that the Claimant was to continue with physical therapy and that an MRI would be considered at the next visit if the Claimant's symptoms were not improving (Claimant's Exhibit 5, pp. 10-11; Respondents' Exhibit A, pp. 7-8).

21. The Claimant also saw Dr. Bathke for chiropractic care at East West Health Centers on October 16, 2014. He reported bilateral moderate-severe lower back pain. The treatment provider noted objective findings including nerve pressure, muscle spasm, edema, tenderness to palpation and ROM at the lumbar and SI regions (Respondents' Exhibit E, p. 34).

22. The Claimant returned to Concentra as a walk-in on October 17, 2014 complaining of severe 10/10 pain and difficulty walking and sitting. The Claimant was seen by Dr. Mark Monano who referred the Claimant to physiatry and for an MRI and prescribed Percocet (Claimant's Exhibit 5, pp. 13-14; Respondents' Exhibit A, pp. 10-12).

23. The Claimant was examined and treated by Concentra until October 22, 2014 when his claim was determined not work related and he was referred to his primary care physician (Claimant's Exhibit 5, p. 53).

24. On October 23, 2014, The Claimant saw Dr. Bathke for chiropractic care at East West Health Centers. He reported bilateral moderate-severe lower back pain and moderate right hip pain. The treatment provider noted objective findings including nerve pressure, muscle spasm, edema, tenderness to palpation and ROM at the lumbar and SI regions (Respondents' Exhibit E, p. 33).

25. On October 24, 2014, the Claimant underwent an MRI of the lumbar spine without contrast. The radiologist, Dr. Phillip Gunther noted pathology at the L4-5 level and the L2-3 level. At L4-5, a left paracentral broad-based disc protrusion with an annular fissure was noted, as was Mild to moderate encroachment on the spinal canal, left lateral recess and left neural foramen. Dr. Gunther noted probable impingement on the left L5 nerve root within the lateral recess. At L2-3, Dr. Gunther noted a mild disc bulge, facet degenerative change and ligamentum flavum hypertrophy. He also noted a signal at L2-3 which suggested a subdural collection of fluid resulting in displacement and compression of the nerve roots posteriorly and to the left (Claimant's Exhibit 6, pp. 57-58; Respondents' Exhibit B, pp. 13-14).

26. On October 27, 2014, The Claimant saw Dr. Bathke for chiropractic care at East West Health Centers. He reported bilateral moderate-severe lower back pain and mild right hip pain. The treatment provider noted objective findings including nerve pressure, muscle spasm, edema, tenderness to palpation and ROM at the lumbar and SI regions (Respondents' Exhibit E, p. 32).

27. Also on October 27, 2014, the Claimant was evaluated by Sarah Neguse at the recommendation of Dr. Bathke. Ms. Neguse noted that the Claimant has been having “acute low back pain for the past two weeks that has not gotten better. Prior to this, he was not having any pain and has no history of LBP.” Ms. Neguse noted that the Claimant went to the ER at SkyRidge after his wife called 911 because he could not walk or sand due to severe back pain. Ms. Neguse reports that “he was given IV pain medication and advised to see a spine specialist because this was probably a ‘disc problem.’ He also had another visit to a Concentra ER (he thinks about a week ago but can’t remember if it was actually prior to the other ER visit to SkyRidge) because while sitting down at work he felt a very sharp pain going down the left leg.” The Claimant advised that he decided not to see a spine specialist but instead decided to start therapy with Dr. Bathke, but he is not seeing any improvement in his pain (Claimant’s Exhibit 7, p. 62; Respondents’ Exhibit E, p. 29). Ms. Neguse reviewed the October 24, 2014 MRI with the Claimant and noted that there was disc protrusion with annular fissure at L4-5 that was probably impinging upon the left L5 nerve root. She also noted that there was “a well circumscribed focus in the L3-4 region that was still unclear what this is but could be epidural collection compressing thecal sac.” Due to the latter finding, Ms. Neguse recommended an MRI with contrast. Ms. Neguse contacted Spine One to determine if the Claimant could be urgently evaluated this same day by a spine specialist (Claimant’s Exhibit 7, p. 63; Respondents’ Exhibit E, p. 30).

28. The Claimant went to Spine One on October 27, 2014. He completed a “Patient Questionnaire” with Spine One, reporting the date symptoms appeared began for his back pain with a date that was scratched out and rewritten as October 11, 2014. When asked in a question the “date of event/activity,” the Claimant wrote “10/25/14.” He also wrote “last year I injured my back on the job – not sure if this experience is directly related to that injury (Respondents’ Exhibit H, p. 75). The Claimant was evaluated by Dr. Hashim Kahn and PA-C Jadon Redington. Under “History of Present Illness,” the report notes “His pain began on October 11, 2014, with back pain, which has progressed particularly in the last few days. He does not recall any specific event or activity that occurred recently to cause his back pain, although approximately 1 year ago he did hurt his back on the job, and he is unsure if this is related to that or if it is a separate issue.” It is noted that the original report noted that the pain began on October 13, 2014, but was then crossed out and handwritten in as 11 October 2014. The Claimant reported a pain level of 3-4 out of 10. However, the Claimant described a pain that can become so severe at times that he has to crawl up the stairs and to the bathroom. The Claimant reported that 4 sessions of chiropractic care provided some symptom relief but he continued to have significant pain (Claimant’s Exhibit 8, p. 78; Respondents’ Exhibit H, p. 71). On examination, it was noted that the Claimant reported tenderness from L2-L5 in the midline and to a lesser degree over the sacroiliac joints. Moderate paraspinal muscle spasm was noted in the lumbar spine with tender points in the piriformis muscles bilaterally. After also reviewing the October 24, 2014 MRI, the Claimant was assessed with being in the subacute stages of lumbar IVD, lumbago, facet syndrome, sciatica, erectile dysfunction and muscle spasm. An MRI with contrast was ordered (Claimant’s Exhibit 8, p. 80; Respondents’ Exhibit H, p. 73).

29. On October 28, 2014, the Claimant underwent an MRI with contrast which showed multilevel degenerative disc disease and congenital stenosis. There was also a finding at L2-3 of “right ventral paramedian extradural lesion with rim enhancement” that was “most consistent with a fluid collection. Epidural abscess must be considered, although the adjacent disc shows relatively minimal degenerative changes. Hematoma also might be considered. The appearance is not typical of an extruded fragment given the signal characteristics” (Claimant’s Exhibit 6, pp. 55-56; Respondents’ Exhibit C, pp. 15-16).

30. The Claimant was referred to Dr. Mariel Szapiel, and the record of Dr. Szapiel dated October 31, 2014, notes that the Claimant “presents with three-week history of severe low back pain. He states his symptoms first presented while he was sitting at work.” The Claimant reported that about two weeks prior, the Claimant started developing severe low back pain and now bilateral lower extremity pain. Dr. Szapiel’s report makes no reference to the Claimant injuring his back while lifting laundry. (Claimant’s Exhibit 3, p. 34; Respondent’s Exhibit G, p. 60). Dr. Szapiel noted that based on the October 28, 2014 MRI he was referred by Spine One to see her “emergently” and he was started on Toradol yesterday. The Claimant reported that his pain improved significantly since starting the Toradol and is now averaging a 2/10. Dr. Szapiel noted concern over infection in the form of abscess and opined that the Claimant’s low back pain and bilateral lower extremity pain was “most likely secondary to the L2-3 level where he has what appears to be an epidural collections versus atypical disc right ventral aspect which is probably complicated by the disc herniation at L4-5 on the left” Claimant’s Exhibit 3, p. 35; Respondents’ Exhibit G, p. 61).

31. The Claimant saw Dr. Szapiel again on November 3, 2014 to discuss lab results and surgery for the L2-3 lesion and L4-5 disc. Dr. Szapiel noted that “the laboratory studies do not point to a grossly infected patient but yet they are still not completely normal.” She noted that clinically, the Claimant’s symptoms have not improved beyond some improvements due to oxycodone. Dr. Szapiel opined that,

> because of the length of the symptoms and the findings on the MRI and the continued weakness, I think the most prudent course of action would be to explore the L2-3 space and see what this lesion is. It would be an L2-3 hemilaminotomy on the right side. Because we also know that he has possible disc herniation at L4-5 on the left side and he does have also some weakness on that leg and other muscle groups, I think also it would be advisable to just go ahead and perform the discectomy at L4-5 while he is under general anesthesia (Claimant’s Exhibit 3, pp. 31-32; Respondents’ Exhibit G, pp. 58-59).

32. Dr. Szapiel performed an L2-L3 hemilaminectomy with excision of lesion on November 6, 2014 (Claimant’s Exhibit 3, pp. 22-24; Respondents’ Exhibit F, pp. 47-49). At the time of surgery, Dr. Szapiel was concerned about infection at the L2-3 level and therefore did not do surgery on the L4-L5 disc herniation. The pathology report

following surgery showed there was no infection and there was no bacteria. Rather, the report "showed disc degeneration, no acute inflammation. It did show focal reactive changes. All together these findings tell he had an ongoing process causing irritation/inflammation at this level. There was no acute inflammation on pathology but he also had bony overgrowth at fact joint, what appeared to by a synovial cyst which burst in surgery and large amounts of granulation tissues. These constellation of findings again point towards a longer acting inflammatory process (Claimant's Exhibit 1).

33. The Claimant reported to Dr. Szapiel on December 22, 2014 that his leg symptoms had improved but he was still experiencing issues with back discomfort (Claimant's Exhibit 3, p. 21; Respondents' Exhibit G, p. 57).

34. On February 12, 2015, Dr. Szapiel noted that the Claimant was still complaining of low back pain closer to the L4-5 region which ranges from 0/10 to 5-6/10 and had been flaring up more recently. The Claimant wanted to proceed with further interventions. Dr. Szapiel recommended a Medrol dose pack and referral for an injection at Spine One at the L4-5 level (Claimant's Exhibit 3, p. 15; Respondents' Exhibit G, p. 54).

35. The Claimant received a lumbar epidural steroid injection at L4-5, L5-S1 bilaterally at Spine One on February 23, 2015. As of March 9, 2015, the Claimant reported that all of his radicular symptoms have resolved but there is continuing low back pain at a 5/10 pain level. Due to the ongoing symptoms, Dr. Salahuddin and PA-C Schneider recommended lumbar facet injections (Claimant's Exhibit 8, p. 71; Respondents' Exhibit H, p. 67).

36. On March 31, 2015, the Claimant saw Dr. Franklin Shih for an independent medical evaluation. The Claimant reported to Dr. Shih that "he had no problems prior to May of 2013" with low back complaints. The Claimant reported that he was lifting a resident on May 14, 2013 when he had acute pain complaints in the low back and he treated for these from May to July when he was discharged. The Claimant reported that his symptoms improved but would flare up a few times per week. The Claimant reported that on October 11, 2014 "he was going to sit down and noted acute pain into the left lower extremity." The Claimant reported that he underwent surgery with Dr. Szapiel at the L2-3 level. His lower extremity complaints improved significantly, but his low back symptoms have been consistent (Claimant's Exhibit 2, p. 5; Respondents' Exhibit D, p. 19). After taking a history and conducting a physical examination, Dr. Shih opined that the Claimant, "had an initial work injury on May 4, 2013 with localized back pain. Per his history there was ongoing intermittent back pain. On 10/11/2014 [the Claimant] reports onset of acute radicular pain. The symptoms of 10/11/2014 are possibly but not probably related to the injury of 5/4/2013." Dr. Shih noted that "whether or not this is considered to be a work injury is more of a legal question than medical. The onset of complaints occurred in the scope of [the Claimant's] regular work activities although not associated with a specific injury or supra-physiologic load" (Claimant's Exhibit 2, p. 7; Respondents' Exhibit D, p. 21).

Dr. Shih felt that given the increase of right leg complaints, there was concern that the Claimant re-herniated at the operative site (Claimant's Exhibit 2, p. 8; Respondents' Exhibit D, p. 22).

37. The Claimant returned to Spine One on May 13, 2015 reporting that although his left leg feels good, he has low back pain and buttock pain and a numb feeling traveling down his right leg. Dr. Salahuddin and PA-C Schneider recommended epidural steroid injections and indicated those would be scheduled, but they did not rule out the possibility of a surgical intervention (Claimant's Exhibit 8, pp. 69-70; Respondents' Exhibit H, pp. 65-66).

38. Dr. Szapiel reevaluated the Claimant on May 14, 2015 and stated that although the February 23, 2015 injection gave the Claimant very limited relief from his symptoms, she was not opposed to the Claimant proceeding with conservative treatment and the ESIs at the L4-5 level. She noted that the Claimant may still require further intervention if he does not have improvement with the conservative therapies (Claimants' Exhibit 3, p. 14). On June 8, 2015, Dr. Szapiel noted the Claimant continued to have issues with his low back and was failing conservative management. She opined it would not be unreasonable to have one more attempt at a steroid injection and possibly a new MRI. She opined that the Claimant "may require decompression at the L4-5 level (Claimant's Exhibit 3, p. 13).

39. On June 2, 2015, the Claimant saw Dr. Rachel Basse for an independent medical examination. The Claimant reported "two recent work-related low back injuries, the first occurring 05/14/2013 and the most recent occurring 10/11/2014. Dr. Basse noted that the Claimant reported an injury on 05/14/2013 that occurred when he was at work as a CAN and was assisting another person lift a client that was sitting on the floor. Dr. Basse noted that the Claimant reported, "it was his first low back pain event ever." The Claimant reported that he was treated and placed at MMI with no impairment and released to full duty work on July 1, 2013. The Claimant reported that he would have intermittent flare ups of back pain with muscle spasms. The Claimant reported that he never missed work because of this and received no additional treatment, although he did see a chiropractor through his PCP's office on one or two occasions (Respondents' Exhibit M, p. 104). With respect to the second on the job pain event, the Claimant reported to Dr. Basse that

> "on the prior day, 10/10/2014, he had worked two shifts for a total of 16 hours in the skilled area of the retirement community care center where it was the most physically demanding of the three floors and he did not notice any significant difference in his symptoms at that time, maybe just some small aches. He got up at 5:00 AM the next morning and left for work by 5:30 AM and started work at 6:00 AM. He again at that time noted no significant difference in his symptoms, just the usual lower grade ache. On this day, 10/11/2014, he did all his usual full work. On this day, he was working in the independent living area of the retirement community care center. He notes it is usually higher functioning patients,

> but that they had been declining. She was in a sitting walker and had to step down. He wheeled her back to her room and did all his usual duties, getting people up, assisting with personal care, making their beds, filling oxygen tanks, getting patients to and from breakfast. Toward the end of his shift he walked into the room to do charting, reached back for a chair, had not yet sat down but was in the process of when he developed severe sudden sharp pain in his low back going down his right leg that dropped him to the floor (Respondents' Exhibit M, p. 105).

The Claimant described his current pain as primarily low back pain at the L4-5 level. He advised Dr. Basse that it is present any time he is not lying down on his back or walking. The Claimant reported that he had no left leg symptoms since his surgery, other than residual weakness, but symptoms in the right leg. Dr. Basse also provided a summary of the Claimant's medical records through the IME report of Dr. Shih dated March 31, 2015 (Respondents' Exhibit M, pp. 106-112). She also performed a physical examination in which she noted some range of motion limitation with flexion but not extension and tenderness to what she described as "very light palpation." She noted, "some nonorganic findings" (Respondents' Exhibit M, pp. 113-114). In addressing the issue of causation, Dr. Basse noted the Claimant "currently has two levels of involvement in the lumbosacral spine: The L2-3 level where he has had surgery and the L4-5 level with question of left L5 nerve root impingement and where he is anticipating a second surgery." She felt that more information was needed to determine causality where the reports from the employer, the Claimant and the medical records are "confusing" as to the date of the onset of the symptoms and the activity in which the Claimant may have been engaged when the symptoms arose. Specifically, Dr. Basse felt it was important to have chiropractic records and the first MRI ordered by Dr. Bathke, prior treatment records from the Claimant's PCP to determine the Claimant's baseline condition, and the pathology report from the surgery related to the potential underlying infection (Respondents' Exhibit M, pp. 115-116). Dr. Basse opined that the Claimant "had what seems to be an extensive underlying infection at the L2-3 level that has involved the L5 and S1 nerve roots as well as the right L3 nerve root." Dr. Basse further opined that it was unlikely that he had a separate mechanical lesion at L4-5, however, she noted that the additional medical records she requested were necessary for any more definitive finding with respect to causation (Respondents' Exhibit M, pp. 116-117).

40. On July 1, 2015, Dr. Shih reviewed the medical evaluation of Dr. Basse and provided a supplemental opinion to address this. Dr. Shih noted that, although Dr. Szapiel had suspected the presence of an infection and the MRI report of 10/28/2014 indicated that an epidural abscess must be considered, the final pathology report did not bear this out and the Claimant was not treated post-operatively for an active infection. Thus, Dr. Shih states that, Dr. Basse's report notwithstanding, "the opinions expressed in my original report are unchanged" Respondents' Exhibit D, p. 18).

41. On July 20, 2015, the Claimant reported that after the June 17, 2015 epidural steroid injection at L4-5, he feels like he has had good results and now he has

more good days than bad days. In reviewing an MRI performed on July 15, 2015, Dr. Szapiel noted, “it is without evidence of congenital narrowing of the lumbar canal from L1 through L304. There was some evidence of disc degeneration at L2-3 and L4-5 and some facet degeneration at these levels too. However, Dr. Szapiel did recommend additional neurosurgical intervention at this point. She opined that, “it is possible that later in the future he may require further interventions but as long as he keeps himself relatively healthy he may be able to avoid any other surgical interventions for at least the next two to five years” (Claimant’s Exhibit 3, p. 12).

42. On October 14, 2015, Dr. Szapiel was asked to answer several questions. When asked what she found at the time of surgery, Dr. Szapiel explained, “large amounts of tissue which appeared reactive inflammatory process (the granulation described in the OP report). There was also what looked like a synovial cyst on the adjacent facet joint. The joint itself appeared overgrown. The disc itself was much degenerated.” Dr. Szapiel further responded that the pathology report came back negative, so there was no infection. However, she also noted that “the posterior longitudinal ligament (back wall of disc space) did show a defect in surgery. There was also a large amount of granulation tissue over this region.” Therefore, based on the surgery findings and the pathology, this pointed to “a process that has been prolonged in nature.” Later in her report, Dr. Szapiel noted that, “there was disc degeneration, no acute inflammation” and “what appeared to be a synovial cyst which burst in surgery and large amounts of granulation tissues.” Taken altogether, Dr. Szapiel saw a “constellation of findings” which “point towards a longer acting inflammatory process.” While Dr. Szapiel stated that it was possible that the Claimant had a mechanical injury over the last few months that could have caused the L4/5 disc herniation, she stopped short of stating this was the probable cause. She noted that possible etiologies could include: heavy lifting or twisting forces, trauma or plain degenerative process. The mechanical injury possibility would be more reasonable “if [the Claimant] did not experience significant problems with his back prior to being employed in this job” (Claimant’s Exhibit 1).

43. The Claimant’s leg symptoms improved following surgery. However, he has continued to have back pain at the L4-L5 level. He has been receiving conservative care for his back at the L4-L5 level consisting of medications, physical therapy and steroid injections. The Claimant may ultimately require further surgical repair. The Claimant worked modified duty for Respondent/Employer until he underwent surgery on November 6, 2014. The Claimant was unable to return to his employment at Respondent/Employer following surgery. Claimant continues on work restrictions.

44. In reviewing the medical records and the surgical findings of Dr. Szapiel, it is more likely than not that the Claimant had a history of severe lower back pain that was most severe when the Claimant was required to sit for a long period of time and that existed long before any pain experience on October 11, 2014 or October 13, 2014. Based on her operative findings and the pathology, Dr. Szapiel opined that the constellation of findings pointed toward a longer acting inflammatory process. Even

predating the Claimant's May 2013 work injury, the Claimant was obtaining treatment for sharp low back pain that radiated across his low back and limbs that was described as "chronic" in nature as of May 9, 2013 and which Claimant reported starting on April 2, 2013. After his reported May 14, 2013 low back injury, the Claimant received treatment until being placed at MMI with no restrictions. However, from September 22, 2014 through October 2, 2014 (all prior to the current alleged work injury with an onset of symptoms reported on October 11, 2014 and October 13, 2013), the Claimant was reporting moderate to severe low back pain and bilateral leg pain. Although the Claimant has inconsistently reported an onset of pain while performing laundry duties on October 11, 2014, he admitted that he did not report any incident until October 13, 2014 and he testified that pain from the October 11, 2014 event subsided quickly. It was not until a pain event occurred as he sat down to perform charting duties on October 13, 2014 that the Claimant reported an injury at work. There is no indication that sitting down to complete charting involved heavy lifting or twisting forces or any type of trauma. Rather, pain occurring while sitting is the type of chronic pain that the Claimant had reported in medical records even prior to his May 14, 2013 work injury. Based on a review of all of the medical records and employment records in evidence in this case, the weight of the evidence establishes that the Claimant did not suffer an acute mechanical injury on either October 11, 2014 or October 13, 2014. Nor did the activity of sitting down to chart on October 13, 2014 aggravate, accelerate or combine with a preexisting condition resulting in a need for medical treatment that did not already exist to the same extent it would have existed without the work related activities described by the Claimant.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents, and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Ctr. v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. Div. 5 2009). The Claimant’s right to compensation initially hinges upon a determination that “at the time of the injury, the employee is performing service arising out of and in the course of the employee’s employment.” C.R.S. § 8-41-301(1)(b). The “arising out of” test is one of causation which requires that the injury have its origins in an employee’s work-related functions. There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951).

Compensable injuries are those which require medical treatment or cause disability. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970). In order to prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001); *H and H Warehouse v. Vicory,* supra; *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986). However, where an industrial injury merely causes the discovery of the underlying disease to happen sooner, but does not accelerate the need for the surgery for the underlying disease, treatment for the preexisting condition is not compensable. *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

The totality of the evidence does not support that the Claimant suffered a compensable injury on either October 11, 2014 while lifting laundry or October 13, 2014 while sitting down to perform charting duties. Although there was some confusion about when the Claimant performed the laundry duties, he testified that he didn't even report an incident since any pain he felt at the time of the laundry lifting incident subsided quickly. He did not report a low back incident until engaged in work activities on October 13, 2014 when he sat down to perform charting. Yet, as the records in evidence showed, the Claimant had been treating for moderate to severe low back pain in the days and weeks prior to October 11, 2014, and indeed, had sought treatment for low back pain radiating into his limbs even prior to a previously admitted work injury on May 14, 2013 where the low back pain was most severe when the Claimant was sitting.

The Claimant's surgeon, Dr. Szapiel, stated that taken all together, she saw a "constellation of findings" which "point towards a longer acting inflammatory process." While Dr. Szapiel stated that it was possible that the Claimant had a mechanical injury over the last few months that could have caused the L4/5 disc herniation, she stopped short of stating this was the probable cause. She noted that possible etiologies could include: heavy lifting or twisting forces, trauma or plain degenerative process. The mechanical injury possibility would be more reasonable "if [the Claimant] did not experience significant problems with his back prior to being employed in this job." In fact, the Claimant did report low back pain prior to his May 2013 admitted injury and his pain events in October of 2014. Records date his low back pain radiating into his limbs as far as April 2013. Based on this and the findings on the Claimant's MRIs, the operative report, and the medical records, it is more likely than not that the Claimant had a low back condition at both the L2-3 and L4-5 levels that required medical treatment prior to any incidents in October of 2014.

Although the Claimant has inconsistently reported an onset of pain while performing laundry duties on October 11, 2014, he admitted that he did not report any incident until October 13, 2014 and he testified that pain from the October 11, 2014 event subsided quickly. It was not until a pain event occurred as he sat down to perform charting duties on October 13, 2014 that the Claimant reported an injury at work. There is no indication that sitting down to complete charting involved heavy lifting or twisting forces or any type of trauma. Rather, pain occurring while sitting is the type of chronic pain that the Claimant had reported in medical records even prior to his May 14, 2013 work injury. The weight of the evidence in this case establishes that the Claimant did not suffer an acute mechanical injury on either October 11, 2014 or October 13, 2014. Nor did the activity of sitting down to chart on October 13, 2014 aggravate, accelerate or combine with a preexisting condition resulting in a need for medical treatment that did not already exist to the same extent it would have existed without the work related activities described by the Claimant.

The Claimant has failed to meet his burden of proving that he suffered a compensable injury while performing services arising out of and in the course of his employment in this case. The work duties performed by the Claimant on either October 11, 2014 or October 13, 2014 did not cause, aggravate, accelerate, or combine with a preexisting disease or infirmity to produce the need for treatment.

Remaining Issues

Because the injury is not compensable, the remaining issues regarding medical benefits and disability benefits are moot.

ORDER

Based on the above factual findings and legal conclusions, it is therefore ORDERED that:

1. The Claimant has failed to meet his burden of proving a compensable injury by a preponderance of the evidence by establishing that his lower back condition was caused by a work injury occurring on October 11, 2014 or October 13, 2014

2. The Claimant's claim for benefits under the Workers' Compensation Act of Colorado is therefore denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 16, 2016

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NOS. WC 4-726-134-07 & WC 4-712-263

ISSUES

The following issues were raised for consideration on remand:

1. What does the Industrial Claims Appeal Panel (ICAP) Order of Remand dated September 8, 2015, direct the Judge to do in regards to Claimant's claims in cases numbered W.C. 4-726-134-07 and W.C. 4-712-263; and

2. Whether Claimant proved by preponderance of the evidence that he is entitled to an order awarding penalties under Section 8-43-304, C.R.S.

FINDINGS OF FACT

Having considered the evidence presented at hearing, the Judge enters the following Findings of Fact.

1. On September 8, 2015, ICAP entered a Remand Order in consolidated cases number WC 4-726-134-07 and 4-712-263. ICAP remanded this matter to the ALJ to conduct a hearing and determine whether Claimant is entitled to an order awarding penalties under Section 8-43-304, C.R.S., in WC 4-726-134-07.

2. On December 11, 2015, at Respondents' request, a prehearing conference was held before Prehearing Administrative Law Judge (Prehearing ALJ) Michael Harr. PALJ Harr ruled that on remand Claimant could proceed to hearing in WC 4-726-134-07 on the limited issue of penalties under Section 8-43-304, C.R.S.

3. In WC 4-726-134-07, Claimant alleged a work related injury to his left hip. A penalties hearing was held on February 17 and April 15, 2016, to determine whether Claimant proved by a preponderance of the evidence that he is entitled to an award of penalties against Respondents for their alleged failure to respond to a previous order issued by the Division of Workers' Compensation dated March 29, 2007.

4. In WC 4-712-263, Claimant alleged an injury to his right shoulder. In regards to WC 4-712-263 and WC 4-726-134-07, the Remand Order addressed the issue of Claimant's right to file and pursue a claim for workers' compensation benefits without legal representation. ICAP stated in the Remand Order that Prehearing ALJs and hearing ALJs are not judges of general jurisdiction and, therefore, the authority to enjoin Claimant from participating in an administrative proceeding without legal counsel is not a power allocated to them. While ICAP's discussion of this

topic was detailed in the Remand Order, ICAP did not direct the Judge to take any particular action in regards to WC 4-712-263.

5. At the February 17, 2016, hearing the ALJ had a file containing the December 11, 2015, Order of the Prehearing ALJ and Claimant's "case information sheet." A "case information sheet" is a docket management tool used by OAC to manage that office's resources. It is not considered a pleading. However, attached to Claimant's "case information sheet" was a letter dated March 29, 2007, regarding case number WC 4-712-263 from the Claims Management Unit of the Division of Workers' Compensation, Department of Labor and Employment, a Final Admission of Liability dated March 20, 2007, regarding case number WC 4-712-263 and a MRI report dated November 1, 2006, regarding Claimant's right shoulder.

6. At hearing, Claimant represented that he would present no evidence and that the only relevant document was the September 8, 2015, Remand Order. Claimant argued that, on the basis of the Remand Order, the ALJ must award penalties under Section 8-43-304, C.R.S., in claim number WC 4-726-134-07 for Respondents' alleged failure to respond to an order of the Director of the Division of Workers' Compensation dated March 29, 2007. Claimant offered the Court a copy of the September 8, 2015, Remand Order.

7. At the February 17, 2016, hearing, Respondent did not move documents into evidence, but offered an array of certified documents pertaining to these consolidated cases for the judges' perusal. These documents included: a December 3, 2014, Application for Expedited Hearing in WC 4-726-134-07; the September 8, 2015, Remand Order in WC 4-726-134-07 and 4-712-263; an April 1, 2015, Director's Order in WC 4-726-134-07 and WC 4-712-263; and Prehearing Conference Orders dated November 5, 2009, January 8, 2015, February 4, 2015, March 13, 2015, and December 11, 2015, in WC 4-726-134-07 and WC 4-712-263.

8. At the February 17, 2016, hearing, the ALJ ruled from the bench granting Respondents' Motion for Directed Verdict concluding that Claimant failed to sustain his burden of proof in consolidated cases number WC 4-726-134-07 and WC 4-712-263 and judgment was entered for Respondents.

9. The following day, on February 18, 2016, the ALJ vacated the bench order entered the previous day on the grounds that Claimant's case required further consideration. The parties were directed to reappear for a hearing on April 15, 2016, at which the parties could endorse documentary evidence for consideration at hearing in support of their respective positions on the issues addressed in the Remand Order. The ALJ ruled that in WC 4-712-263 involving the Claimant's alleged right shoulder injury, the matter was before the ALJ pursuant to the September 8, 2015,

Remand Order and the ALJ would entertain argument regarding the parties' respective positions on this claim.

10. At the April 15, 2016, hearing, where Claimant appeared via telephone, the Court prompted Claimant to offer Exhibit 1 into evidence in support of his claims in WC 4-726-134-07 and WC 4-712-263. Claimant's Exhibit 1 is the above described "case information sheet" with attachments regarding the right shoulder claim in WC 4-712-263: a letter dated March 29, 2007, regarding case number WC 4-712-263 from the Claims Management Unit of the Division of Workers' Compensation, Department of Labor and Employment, a Final Admission of Liability dated March 20, 2007, regarding case number WC 4-712-263 and a MRI report dated November 1, 2006, regarding Claimant's right shoulder. These documents were admitted into evidence.

11. On April 15, 2016, Claimant reiterated accusations regarding his mistreatment by OAC and Division of Workers' Compensation personnel, his entitlement to penalties based solely upon the September 8, 2015, Remand Order, his lack of documentary evidence in support of his claims being due to the fact that he deposited the evidence with the numerous Prehearing ALJs he appeared before and they did not return the documents to Claimant and Claimant's pursuit of justice.

12. On April 15, 2016, Respondents moved for a directed verdict at the conclusion of Claimant's case. Respondents relied on a packet of documents attached to a March 3, 2016, Motion for Reconsideration of the February 18, 2016, Order. The packet of documents were marked and admitted as Respondents' exhibits A through Q. Respondents' motion for a directed verdict was taken under advisement. Respondents rested their case on the Exhibits marked A through Q.

13. In WC 4-726-134-07, Claimant did not present evidence and rested upon the September 8, 2015, Remand Order. Claimant contended that the Remand Order, without more evidence, required the Court to impose penalties. It is found that Claimant failed to sustain his burden of proof to establish that he was entitled to penalties under Section 8-43-304, C.R.S. Claimant presented no evidence that there was a violation of the Act or director's order justifying a penalty under Section 8-43-304, C.R.S. Therefore, the claim for penalties in WC 4-726-134-07 is denied.

14. The documents in Exhibit 1 refer to the Claimant's alleged right shoulder injury in WC 4-712-263 and do not have relevance to Claimant's alleged left hip injury or the claim for penalties in WC 4-726-134-07. Claimant did not offer testimony or make argument regarding the right shoulder claim in WC 4-712-263. Claimant took no position with regard to the right shoulder injury and focused his attention on his claim for penalties in the left hip claim.

15. Respondents contended that the September 8, 2015, Remand Order only ordered the ALJ to consider the Claimant's claim for penalties in WC 4-726-134-07. Respondents maintained that no order was entered regarding the right shoulder injury.

16. The Court agrees and finds that in the Remand Order of September 8, 2015, in WC 4-712-263, ICAP did not direct the Court to consider the claim. Further, the ALJ finds that if WC 4-712-263 is a claim before the Court no credible or persuasive evidence was presented to support a claim for workers' compensation benefits for Claimant's right shoulder or an award of penalties, if a penalties claim exist. Accordingly, it is found that the claim in WC 4-712-263 is denied and dismissed.

CONCLUSIONS OF LAW

Having entered the foregoing Findings of Fact, the following Conclusions of Law are entered.

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

3. In this case, the Judge has been ordered on remand from ICAP to consider the question of whether Claimant is entitled to award of penalties under

Section 8-34-304, C.R.S. for the left hip injury in WC 4-726-134-07. Claimant contends that ICAP has found that Respondents failed to comply with an order of the director and, without more evidence, this judge should enter an order awarding penalties. Whether statutory penalties may be imposed under Section 8-43-304(1), C.R.S., involves a two-step analysis. The statute provides for the imposition of penalties of up to $1000 per day where the insurer "violates any provision of article 40 to 47 of [title 8], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or the panel, for which no penalty has been specifically provided, or fails, neglects or refuses to obey any lawful order made by the director or panel…" Thus, the ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule, or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* W.C. No. 4-187-261 (I.C.A.O. August 2, 2006), *but see, Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005) (standard is less rigorous standard of "unreasonableness"). However, there is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

4. The question of whether the insurer's conduct was objectively reasonable ordinarily presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005). A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a rule of procedure. If the claimant makes such a prima facie showing the burden of persuasion shifts to the respondents to show their conduct was reasonable under the circumstances. *Pioneers Hospital v. Industrial Claim Appeals Office, supra, Human Resource Co. v. Industrial Claim Appeals Office,* 984 P.2d 1194 (Colo. App. 1999).

5. In WC 4-726-134-07, Claimant failed to make a prima facie showing that the insurer violated an order made by the director. There is reference made in the September 8, 2015, ICAP Remand Order to a March 29, 2007, order of the Director that is alleged to be violated. And, Exhibit 1 does contain a copy of a letter dated March 29, 2007, from the Claims Management Unit in WC 4-712-263. However, Claimant did not present evidence of an order of the director in the left hip injury case in WC 4-726-134-07 or evidence that such an order was violated by Respondents. Furthermore, it is noted that the letter from the Claims Management Unit dated March 29, 2007, does not constitute an order of the director. It is a letter on Department of Labor and Employment, Division of Workers' Compensation, Compensation Services stationary which is unsigned by the "Claims Management Unit, TERM6." There is no credible or persuasive evidence here that the "director" issued an order in this case that was not complied with by Respondents. In the absence of such evidence, Claimant has failed to sustain his burden of proof.

ORDER

It is therefore ordered that:

Claimant's claim for an award of penalties in WC 4-726-134-07 is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that the artificial disc replacement surgery recommended by Michael Janssen, D.O. is reasonable, necessary, and casually related for the treatment of Claimant's admitted industrial injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On December 12, 2013, Claimant Steven Morgan, Jr. was employed with Swift Transportation. Claimant was a local driver, which required him to retrieve loads of goods using his tractor trailer and transport the load to its designated delivery location.

2. In the early evening on December 12, 2013, Claimant was stopped in eastbound traffic on Interstate 70 near the Golden, Colorado in his fully loaded tractor trailer. Just prior to resuming forward movement as traffic began to proceed, another fully loaded tractor trailer rear-ended Claimant's vehicle with great force.

3. The collision between the two vehicles was forceful enough to jolt Claimant forward, to cause the vehicle's gear shifter to dislodge from the vehicle's transmission, and to cause a computer to fall from the dash of Claimant's vehicle.

4. Claimant immediately began to experience sever spasms in his back that made it extremely difficult to move and breathe.

5. After removing his vehicle from the roadway and securing it, Claimant was transported to the hospital by ambulance.

6. Michael E. Jannsen D.O., performed two earlier surgeries on Claimant's back related to unrelated motor vehicle accidents in 1999 and 2006. Claimant's low back was asymptomatic since undergoing a decompression surgery for the L4-5 and L5-S1 levels in 2008.

7. Dr. Janssen became one of Claimant's authorized treating physicians in the instant matter. Dr. Janssen has opined that the artificial disc replacement surgery he is recommending at the L5-S1 level is necessary and reasonable to alleviate Claimant's symptoms. He has also opined that the recommended surgery is causally related to Claimant's December 12, 2013, industrial injury because he had been asymptomatic since 2008. Respondents challenge those opinions.

8. Brian Reiss, M.D. performed a Respondents' IME on December 2, 2015. Dr. Reiss performed a physical examination of claimant. Claimant stated that he had central lower back pain from 4-7/10. Claimant also complained of bilateral buttock burning/pain left more than right. Claimant had some symptoms to the posterior thigh, which included tingling and burning, with the left side constant and the right side intermittent. Claimant described his lower extremity symptoms at 3-4/10. Dr. Reiss diagnosed Claimant with low back pain and degenerative change. Dr. Reiss opined that Claimant needed to complete additional physical therapy. Dr. Reiss opined that claimant had some physical therapy, but Claimant did not have a significant amount of core strengthening or aerobic conditioning. Dr. Reiss noted that the Colorado Division of Workers' Compensation Treatment Guidelines ("Guidelines") require identification of the pain generator prior to proceeding with the surgical intervention. Dr. Reiss opined that, in this particular case, the pain generator could be the L5-S1 disc, the L4-L5 disc, or that Claimant's pain may not even be from any of the low back discs. Dr. Reiss opined that the pain generator has not been identified. Dr. Reiss opined that the Guidelines require that surgery have a greater likelihood of improving Claimant's condition then continuing with nonsurgical intervention. Dr. Reiss testified that the surgery, at this point, was not reasonable and necessary.

9. Claimant has undergone diagnostic procedures, including, but not limited to, multiple MRIs of his cervical and lumbar spine and an EMG nerve study.

10. Claimant participated in chiropractic treatment from approximately December 14, 2013, through the end of January 2014.

11. Claimant also completed physical therapy for more than two months following the December 12, 2013, industrial injury. During physical therapy, Claimant participated in a variety of exercises he believed were designed to improve his core strength. These exercises included, but were not limited to, resistance training with an abdominal machine, utilizing elastic bands, stretching, and leg lifts. Claimant's physicians discontinued his physical therapy shortly after it began due to Claimant's reports of increased pain. While Claimant's treatment providers may have intended that Claimant resume physical therapy once his symptoms/condition improved; no further therapy was provided.

    - Dr. Janssen opined that Claimant's disc at the L5-S1 level is collapsed and has no structural integrity, an anatomical change causing Claimant's symptoms. He thus opined that fixing the anatomical change will provide Claimant with the most relief, whereas additional physical therapy to strengthen his core will do nothing to fix the anatomical change.

    - Dr. Reiss opined that Claimant's complaints of back pain without significant decompression would be best treated with physical therapy , including core strengthening, stretching, and aerobic conditioning.

12. On October 1, 2015, Dr. Janssen noted vertical instability at L5-S1. However, no instability was noted on Claimant's September 28, 2015 lumbar MRI, which specified that the findings at L4-L5-S1 all are "stable," with the impression being, "Stable multilevel disc bulging and slight nerve root abutment." Also, the January 2, 2014 MRI indicated normal lumbosacral height.

13. Claimant asserts (1) that the Guidelines mandate that patients reflecting clear pathology "should be definitively treated within six months because . . . their chances of returning to work and getting the best functional outcome is interven[tion] in less than six months;" and (2) that Claimant has been with symptoms for over two years.

14. Claimant's pain generator has not been conclusively identified – a requirement for treatment. Claimant had a positive response to transforaminal epidural steroid injections at right L5-S1, and S1. He also had a positive response to November 11, 2014 facet injections for "painful facet arthropathy" at right L4-L5 and right L5-S1; reporting that his pain decreased from 6/10 pre injection, to 0/10 post injection. Similarly, PA-C Brasfield noted that Claimant likely had facetogenic pain on the right at L5-S1 and L4-L5. She also noted possible SI joint dysfunction on the right. Dr. Wunder also assessed "probable bilateral sacroiliac joint dysfunction."

15. Dr. Reiss testified that there were multiple possible pain generators, and that the true pain generator had not been identified. Dr. Reiss testified that Claimant had degenerative change at L4-L5 and L5-S1 and that some people would look at the L4-L5 level and note that Claimant had a high intensity zone and that could be the cause of the pain. Dr. Reiss testified that high intensity zones are possibly associated with pain. He also testified that Claimant had degenerative change at L3-L4. Dr. Reiss testified that Claimant could have myofascial pain, SI joint pain, and/ or multiple possible pain generators.

16. Dr. Reiss further testified that Claimant had epidural steroid injections which temporarily relieved his pain, and that epidural injections are not designed to identify discogenic pain. They are designed to help with nerve pain. Dr. Reiss also testified that Claimant had facet blocks, which also temporarily relieved his pain. Dr. Reiss testified that Claimant had two different tests, the facet and the epidurals, that took away his pain. However, that would negate the findings as far as how can they both, the facet or the nerve pain, be a pain generator. Dr. Reiss also testified that the positive response to the facet blocks was a contraindication for doing a disc replacement because the disc replacement does not take into account the movement through the joint. Dr. Reiss testified that if claimant had facet mediated pain and then there is a disc replacement, it would be a contraindication because the facet would still move and cause pain.

17. Dr. Reiss testified that Claimant did not have one level of involvement in his lower spine, but has at least two and perhaps other levels of lesser degree of degeneration, and two levels that he had previous surgery. Dr. Reiss testified

that Dr. Janssen is choosing one level arbitrarily, and that is illogical given Claimant's multiple levels of degeneration, with two levels being particularly bad, and other that are less bad. Dr. Reiss testified that the degree of degenerative change does not indicate whether one level versus another is the source of pain. Dr. Reiss testified that a disc with no degeneration might be painful; a disc with a little degeneration may or may not be painful; and a disc with a lot of degeneration may or may not be painful. Dr. Reiss testified that none of Claimant's discs may be the source of his pain. The pain generator was not clearly identified. Dr. Reiss testified that if Dr. Janssen were stating that because Claimant had previous surgery at L5-S1, that that level is now the source of the pain; the same argument would apply to L4-L5, and there would be a 50-50 chance that one of those discs was the pain generator. Dr. Reiss testified that Dr. Janssen has not explained or documented why the pain generator is at L5-S1, and that Dr. Janssen has not established a foundation why the pain generator is at L5-S1.

18. Dr. Reiss testified that the disc replacement in the lumbar spine is not a good surgery. Dr. Reiss testified that a disc replacement in the lumbar spine is an alternative to performing a fusion, but that both procedures have limited success at treating axial, or non-nerve root pain, in the low back. Dr. Reiss testified that a disc replacement in the low back is not generally used for radiculopathy into the extremities. Dr. Reiss further testified that he does not believe Claimant will have a successful outcome with the artificial disc replacement surgery because lumbar fusions and lumbar artificial disc replacements do not work particularly well.

19. Dr. Janssen did not address how or whether he had Claimant's disc at L5-S1 as Claimant's only pain generator. He did not discuss how Claimant's responses indicated that facet generated pain were ruled out. He also testified that numbness or tingling in Claimant's scrotum would be findings that did not match L5-S1 pathology. But he did not explain how Claimant's testimony and numerous medical records documented that he felt like his testicles were constantly being squeezed were consistent with pathology at that level.

20. Dr. Janssen testified that disc replacement at Claimant's L5-S1 level is more advantageous for Claimant than undergoing a fusion at that level for the following reasons:

- replacing the disc will preserve movement in Claimant's spine, resulting in fewer future problems at the L4-5 level that has a small annular tear;

- the recommended disc replacement surgery would be performed by entering through the Claimant's abdomen rather than through his back. As a result, there is no chance of adding additional scars because the surgery will not be on the spinal canal itself, like a fusion;

- Claimant’s expected recovery time is between two and three months for the recommended disc replacement surgery, as opposed to a fusion surgery’s recovery time of between nine and twelve months; and

- patients who undergo disc fusion surgery are two to three times more likely to require a future fusion surgery at an adjacent level than those that undergo a disc replacement surgery. As a result, the disc replacement surgery being recommended for Claimant will likely lead to less surgery over all.

21. The ALJ credits Dr. Reiss’s testimony and reports and the Rule 17 Treatment Guidelines to find that the L5-S1 total disc replacement is not reasonable and necessary. Dr. Reiss credibly testified that Claimant could have multiple pain generators, which should be identified before the L5-S1 artificial disc replacement could occur. Dr. Reiss testified that the pain generator could be the L5-S1 disc, could be the L4-L5 disc, could be the facets, could be myofascial pain, or it might not even be pain from any of the discs in claimant’s low back. Clamant testified that he had pain and tingling going down into his right lower extremity, which could be nerve pain. Additionally, Dr. Reiss testified that Claimant had two different sets of injections, epidural steroid injections and facet injections, in which both injections temporarily relieved Claimant’s pain. The epidural steroid injection was to treat nerve pain and the facet injection was to treat facet pain. Given that Claimant had a positive response to both types of injections is a contraindication that the artificial disc replacement at L5-S1 should be performed because the pain generator could be nerve pain or could be facet pain. It would not be disc pain. Nonetheless, if Claimant’s nerve pain and/or facets are the pain generators that would negate the reasoning for an L5-S1 artificial disc replacement because an artificial disc replacement does not help nerve pain or facet pain. Moreover, Claimant also had two facet injections on November 11, 2014 at the L4-L5 and L5-S1 level. By undergoing injections at two different levels, there is the possibility of at least two different pain generators. Artificial disc replacements are used to only replace one level in the spine, not two.

22. The ALJ does not find Dr. Janssen’s testimony to be persuasive. Dr. Janssen did not follow the Treatment Guidelines in identifying a pain generator or explain why he believes that L5-S1 is the pain generator. Dr. Janssen did not rule out nerve pain or facet pain, which should be completed pursuant to the Treatment Guidelines.

23. The ALJ credits the August 11, 2008 medical record in which Dr. Janssen opined that Claimant would likely need a fusion surgery at some point in time in the future. Although there was some testimony that related the need for the L5-S1 total disc replacement to the December 12, 2013 work related accident, Dr. Janssen already thought -- as far back as August 11, 2008 -- that Claimant would need a fusion surgery. Dr. Janssen noted that Claimant would need some sort of back surgery in the future, regardless of whether claimant was involved in an

accident. If there is a need for the L5-S1 artificial disc replacement, it is not causally related to the December 12, 2013 work accident because low back surgery was already being contemplated as of August 11, 2008.

24. Claimant has not met his burden of establishing that the recommended L5-S1 artificial total disc replacement is reasonable, necessary, and related to his December 12, 2013 work related motor vehicle accident. Claimant's claim for medical benefits is denied.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2015. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). However, the employee must prove a causal relationship between the injury and the medical treatment for which she is seeking benefits. *Snyder v. Indus. Claims Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997). Treatments for a condition not caused by employment are not compensable. *Owens v. ICAO*, 49 P.3d 1187, 1189 (Colo. App. 2002).

W.C.R.P. Rule 17, Exhibit 1 sets forth the treatment guidelines for low back conditions. Rule 17 sets forth care that is generally considered reasonable for most injured workers. Further, while an ALJ is not required to utilize Rule 17 as the sole basis for making determinations as to whether medical treatment is reasonable, necessary and related to an industrial injury, it is appropriate for the ALJ to consider Rule 17 in making such determinations. § 8-43-201(3), C.R.S.

W.C.R.P. Rule 17, Exhibit 1, Section G 11 states the requirements for proceeding with an artificial disc replacement, which include:

- symptomatic one-level degenerative disc disease established by objective testing (CT or MRI scan followed by [positive provocation discogram]);
- symptoms unrelieved after six months of active non-surgical treatment;
- all pain generators are adequately defined and treated;
- all physical medicine and manual therapy interventions are completed;
- spine pathology limited to one level; and
- psychosocial evaluation with confounding issues addressed.

Some of the contraindications for the artificial disc replacement pursuant to the Guidelines are symptomatic facet joint arthrosis-if imaging findings and physical exam of pain on extension and lateral bending are present, exploration of facet originated pain should be completed prior to disc replacement; evidence of nerve root compression, multiple-level degenerative disc disease; and morbid obesity.

Rule 17 also provides that all health care providers shall use the guidelines. In this case, Dr. Janssen did not follow the Guidelines in recommending artificial disc replacement. Dr. Janssen did not identify and treat the pain generator. There are multiple pain generators that could be the cause of claimant's pain. The pain generator could be the L5-S1 level; however, the pain generator could also be the L4-L5 disc, facet pain, myofascial pain, or nerve pain, given that claimant is complaining of tingling and pain down his lower extremity. In this instance, there is the possibility of symptomatic multi-level degenerative disc disease, not the symptomatic one-level degenerative disc disease required by the Guidelines. The degenerative disc disease was confirmed through MRIs. Additionally, given that there was a positive MRI, Dr. Janssen was required to perform a discogram, which was not performed. The spine pathology has not been limited to one level. There is the possibility of spine pathology at L4-L5 and even at L3-L4. Dr. Janssen did not follow the Rule 17 Guidelines in recommending the artificial disc replacement at L5-S1.

Moreover, pursuant to Rule 17 Guidelines, Dr. Janssen has not ruled out facet joint arthrosis. Claimant underwent facet injections, which relieved his pain. This is an indication of facet mediated pain, which would not be relieved by the L5-S1 artificial joint replacement. Additionally, a contraindication for the artificial disc replacement is multilevel degenerative disc disease, which has been diagnosed by Dr. Reiss and Dr. Janssen. The multilevel degenerative disc disease is also pronounced on the MRI evaluations. Claimant is also obese, which is a contraindication. Dr. Janssen failed to look at the contraindications when recommending and asking for prior approval of the L5-S1 artificial disc replacement surgery.

As found, the totality of the evidence is that the pain generator has not been clearly identified pursuant to the Rule 17 Guidelines. Additionally, claimant's spine pathology has not been limited to one level. Claimant also has multilevel degenerative disc disease, which can preclude the L5-S1 artificial disc replacement. As such the ALJ determines and finds that claimant has not met his burden of proof in establishing the reasonableness and necessity of the L5-S1 total disc replacement. Claimant has also not met his burden in proving that the alleged need for the L5-S1 total disc replacement is causally related to the December 12, 2013 motor vehicle accident.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for medical benefits in the form of L5-S1 total disc replacement is denied and dismissed.

2. Issues not expressly decided herein are reserved to the parties for future determination.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 16, 2016

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-958-125-02

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on May 10, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 5/10/16, Courtroom 4, beginning at 2:30 PM, and ending at 4:15 PM).

Claimant's Exhibits1 through 3 were admitted into evidence, without objection. Respondents' Exhibits A through K were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondents. The proposed decision was filed, electronically, on May 17, 2016. No timely objections were filed. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern the Claimant's entitlement to temporary total (TTD) and/or temporary partial disability (TPD) benefits from October 19, 2015 through November 15, 2015; and, medical benefits, specifically, whether the bone graft surgery recommended by William Sterett, M.D., is reasonably necessary, absent an indication that the Claimant has stopped smoking for a reasonably acceptable period of time prior to the recommended surgery.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The parties stipulated and the ALJ finds that Claimant is entitled to a closed period of TTD benefits between October 19, 2015, when his employment with the Employer was terminated, and November 15, 2015 when he returned to work full time with a new employer. The parties further stipulated, and the ALJ finds that Claimant is not entitled to TPD benefits to date.

2. The Respondents filed a General Admission of liability (GAL), dated October 26, 2015, admitting for reasonably necessary and causally related medical benefits; an average weekly wage (AWW) of $1,422.44; and, TTD benefits of $881.65 per week (the maximum rate, from August 12, 2014 through July 5, 2015. The GAL is currently in effect.

3. The Claimant is a forty-one-year-old man formerly employed by the Employer as a journeyman plumber.

4. The medical records reveal that the Claimant smoked over a pack of cigarettes per day since 1998. The Claimant also admitted that he chews tobacco as well.

The Injury

5. On August 11, 2014, the Claimant set up his ladder too close to a hole in the floor. The ladder tipped into the hole causing Claimant to fall approximately 10 feet. He experienced immediate symptoms in his left lower extremity (LLE). He was taken by ambulance to the emergency room (ER) where he was diagnosed with a displaced tibial and fibular fracture. He underwent surgery for open reduction and internal fixation of the fractures.

6. The Claimant was warned by Dr. Sterett at the time of his initial surgery that his smoking created a risk of non-union of the fractures, but the Claimant declined assistance to stop smoking.

Aftermath

7. The Claimant followed up with the surgeon, Dr. Sterett, on August 20, 2014. The Claimant was still having a great deal of pain and had developed fracture blisters. Dr. Sterett again encouraged the Claimant to stop smoking. Dr. Sterett recommended a smoking cessation program. The Claimant continued to smoke and did not request the smoking cessation program.

8. The Claimant had another appointment with Dr. Sterett on September 22, 2014. Dr. Sterett again urged the Claimant to stop smoking immediately.

9. At his Concentra appointment on October 7, 2014, the Claimant stated that he had stopped smoking two weeks previously.

10. The Claimant had a second orthopedic opinion with David B. Hahn, M.D., on December 3, 2014. The x-rays did not show much evidence of healing of the tibial fracture. The Claimant resumed smoking at some point following this appointment.

11. The Claimant had an appointment with Dr. Sterett, on July 13, 2015. The Claimant was still having pain in his leg with mild complaints of instability. It was noted that the Claimant was very slow to heal. A CT scan from December was reviewed and showed 60%-70% healing of the fracture.

12. The Claimant was evaluated by Samuel Y. Chan, M.D., on July 28, 2015. Dr. Chan noted in the social history that Claimant smokes a pack per day.

13. On January 18, 2016, the Claimant was re-evaluated by Dr. Sterett. The Claimant continued to have anterior shin pain. X-rays showed persistent non-union of the proximal tibia. Dr. Sterett recommended a second surgery for bone grafting and placement of a bone stimulator. He counseled the Claimant that he would need to give up smoking before any additional surgery could be performed.

Independent Medical Examination (IME) by Timothy O’Brien, M.D.

14. Dr. O’Brien performed an IME on February 15, 2016. The Claimant admitted he was still smoking a pack or more of cigarettes a day, but he was willing to stop if it meant he could get his leg fixed. It was Dr. O’Brien’s opinion that the Claimant was not a candidate for another surgery until he discontinued smoking. Dr. O’Brien testified consistently with his report. He stated the opinion that nicotine in any form (smoking or chewing) interfered with the healing process. Dr. O’Brien was of the opinion that a second surgery was not reasonably necessary if the Claimant continued to smoke or use chew. Dr. O’Brien stated that the Claimant should demonstrate he has stopped smoking and chewing for a minimum of three months prior to any additional

surgery. It was Dr. O'Brien's recommendation that the Claimant submit to nicotine testing every two weeks. Surgery could be performed if the nicotine testing was negative for three months. The ALJ finds Dr. O'Brien's opinions in this regard highly persuasive and credible.

15. Dr. O'Brien made it clear that the Claimant had to be off nicotine for three months before surgery could help the Claimant's condition (and the procedure would most likely fail again if the Claimant was using nicotine).

The Claimant

16. The Claimant adamantly testified initially that he stopped smoking several months before the hearing. He later admitted that he continued to smoke occasional cigarettes after he was confronted with surveillance showing him smoking on May 6, 2016 (four days before the hearing). The Claimant also admitted that he was still chewing tobacco.

Ultimate Findings

17. Dr. O' Brien's testimony that a second surgery is not reasonably necessary unless the Claimant stops smoking for a minimum of three months prior to surgery is highly credible and persuasive. Dr. O'Brien's testimony is supported by the medical records of Dr. Sterett which indicate that the Claimant would have to give up smoking before he would perform any additional surgery. The Claimant's testimony that he had stopped smoking is not credible because he admitted he is still smoking after being confronted with recent surveillance. Additionally, the Claimant admitted that he is continuing to chew tobacco.

18. The Claimant has failed to sustain his burden of proof, by preponderant evidence, to show the bone graft surgery recommended by Dr. Sterret is reasonably necessary unless the Claimant stops smoking for a minimum of three months prior to surgery.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684

(Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Sterett and IME Dr. O'Brien are highly credible and persuasive and, therefore, dispositive of the issue at hand at this time.

Reasonable Necessity of Recommended Surgery

b. Section 8-42-101 (1) (a), C.R.S., makes the Respondents liable for reasonably necessary medical procedures necessary to cure and relieve the effects of the industrial injury. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the surgery recommended by Dr. Sterett is **not** reasonably necessary **to cure and relieve the effects of the injury** until the Claimant has stopped smoking for at least three months prior to the surgery.

Burden of Proof

c. The injured worker has a continuing burden of proof, by a preponderance of the evidence, to establish entitlement to medical benefits challenged by the Employer. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has failed to sustain his burden, at this time, with respect to the surgery recommended by Dr. Sterett.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The request for the surgery recommended by William Sterett, M.D., is hereby denied and dismissed at this time.

B. If the Claimant desires the recommended surgery at a future time, he must demonstrate that he has stopped smoking for at least three months, by testing for nicotine every two weeks and coming out negative for nicotine each time.

C. Any and all issues not determined herein are reserved for future decision.

DATED this______day of May 2016.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

Whether Claimant has proven by a preponderance of the evidence that the artificial disc replacement recommended by Dr. Bhatti is reasonable, necessary, and casually related to the treatment of Claimant's admitted industrial injury.

FINDINGS OF FACT

1. On September 18, 2013 while working for respondent-employer, the claimant was putting away hangers when a table and ladder fell and struck her from behind, landing on her neck. The claimant was transported to St. Mary-Corwin Emergency Room where she complained of posterior neck pain that went into her left arm. The claimant underwent a CT scan, which was negative. The claimant was diagnosed with a closed head injury, concussion, and cervical spine contusion.

2. The respondent-insurer admitted liability for the incident.

3. The claimant continued to seek treatment through workers' compensation. Throughout her claim, the claimant received extensive conservative treatment including physical therapy, medications, chiropractic care, pain management, massage therapy, acupuncture and injections, all of which did not reportedly provide the claimant with any relief.

4. On November 7, 2014 the claimant was evaluated by Dr. David Wong, a spine surgeon. After examination, Dr. Wong opined, that the claimant was not a surgical candidate, should continue conservative treatment, and undergo injections.

5. On March 5, 2015 Dr. Kathleen D'Angelo performed an independent medical evaluation (IME) of the claimant. After examination, Dr. D'Angelo opined that the claimant's preexisting diagnoses were myofascial syndrome, degenerative disc disease, and impingement syndrome of the shoulder. The claimant's work-related diagnoses were a contusion of the cervical and thoracic region that had resolved. Dr. D'Angelo opined the claimant was at maximum medical improvement (MMI) and did not sustain permanent physical impairment.

6. On June 3, 2015 the claimant attended a follow-up exam with her authorized treating physician (ATP), Dr. Daniel Olson. Dr. Olson noted, “I personally have not recommended surgery in her case due to the diffuse nature of her degenerative discs. Also, the EMG did not show radiculopathy.”

7. On August 10, 2015 the claimant was evaluated by a second spine surgeon, Dr. Stephen Johnson. Upon examination, Dr. Johnson noted that he did not see a clear focal neurological deficit on the MRI and degenerative changes were noted at C5-6. Dr. Johnson opined that he was not optimistic that surgical intervention directed at the C5-6 disc would significantly improve her symptoms.

8. After the claimant’s evaluation with Dr. Johnson, the claimant was evaluated by Dr. Sana Bhatti on October 1, 2015. Dr. Bhatti opined the claimant presented with neck and left arm pain with numbness and paresthesias. Dr. Bhatti opined that the claimant had a left radiculopathy and recommended the claimant undergo either a fusion or receive an artificial disc replacement at C5-6.

9. Dr. Bhatti’s diagnosis of left radiculopathy was not substantiated by the claimant’s EMG or any other diagnostic testing.

10. The claimant underwent an IME with Dr. Michael Rauzzino on December 19, 2015 at the request of respondents. After reviewing the claimant’s medical records and performing an examination, Dr. Rauzzino opined, “Based on my examination and the documentation from the other treating physicians including Dr. Johnson and Dr. Wong, [the claimant] does not have a C6 radiculopathy; she has primarily axial neck pain with a 10% radicular symptom which are not necessarily in the C6 dermatome. She has degenerative changes at C5-6. She does not have a left sided C5-6 disc herniation on current imaging. She is not a surgical candidate…EMG is negative. I would add that based on her scores with COMT testing, one would have to be concerned about psychological overlay or somatization given her severe subjective complaints, which do not necessarily correlate with her radiographic findings and the prolonged nature of her complaints since the injury over two years ago.”

11. Dr. Olson testified via deposition for the claimant on March 11, 2016. At his deposition, Dr. Olson was admitted as a level II accredited physician and an expert in occupational medicine. Dr. Olson is not an orthopedic specialist and does not perform orthopedic surgery.

12. Dr. Olson initially testified that he agreed with Dr. Bhatti’s recommendation for surgery, however his testimony was not strongly in favor of the surgery nor did he

provide any independent rationale for his agreement with Dr. Bhatti over the opinions of the three other orthopedic surgeons who have evaluated the claimant. When Dr. Olson was then asked to review his report dated June 3, 2015 which agreed the claimant was not a surgical candidate, he testified, “I think the – the – I guess the wrench that throws things off is that when she did see Dr. Bhatti, he was so positive that that was her problem that she feels like that he can fix it and that will solve the problem. I just wish the other surgeons were at least close to that.”

13. Dr. Olson was asked if he was “a little on the fence” regarding Dr. Bhatti’s surgical recommendation, Dr. Olson replied, “Yes.” Dr. Olson acknowledged Dr. Wong and Dr. Johnson, the two orthopedic surgeons he originally selected for referral and evaluation of the cervical condition, did not recommend surgery. Dr. Olson testified that he had referred the claimant to both of these surgeons, and that he had confidence in their skills and opinions.

14. Dr. Rauzzino testified via deposition for respondents on March 8, 2016. Dr. Rauzzino was admitted as a level II accredited physician and an expert in medicine and neurosurgery. Dr. Rauzzino testified that he had performed a number of artificial cervical disc replacement surgeries.

15. When asked about Dr. Olson’s assessment of the EMG and nerve conduction testing, he testified, “The EMG did not confirm a C6 radiculopathy. So it would be -- would state that the proposed surgery would not likely relieve her symptoms. The EMG only showed some mild carpal tunnel disease, but no evidence of a cervical radiculopathy.”

16. Dr. Rauzzino reviewed both Dr. Wong’s and Dr. Johnson’s surgical consultations regarding the claimant’s diagnosis and testified that neither surgeon had diagnosed a cervical lesion at C5-6 or a disc herniation. He further testified that neither Dr. Wong nor Dr. Johnson had recommended surgery at C5-6.

17. With regards to Dr. Bhatti’s diagnosis of the claimant, Dr. Rauzzino testified, “When I look at the pictures myself, I don’t really think that there’s a soft disc herniation. I think she has osteophytic disease and not an acute soft disc herniation. And it’s not to the left side, with all due respect to Dr. Bhatti.” There are substantial differences between Dr. Rauzzino’s interpretation of the MRIs of the claimant’s spine and Dr. Bhatti’s. Drs. Wong and Johnson, by their opinions that the claimant was not a surgical candidate, support Dr. Rauzzino’s interpretation of the MRI films.

18. Dr. Rauzzino disagreed with Dr. Bhatti's diagnosis and request for surgery and testified, "I don't think she has a left-sided disc herniation…she has some bone spurring on the left side; but she doesn't have a soft disc herniation that would require a decompression…She also doesn't have a C6 radiculopathy. So with all due respect to Dr. Bhatti, I don't agree that he's identified the C5-6 level as the root cause for her pain or symptoms.

19. In determining whether the claimant was a candidate for an artificial cervical disc replacement at C5-6 Dr. Rauzzino testified, "At C5-6 you'd expect to have a diminishment in sensation in a specific part of the hand. You might find weakness of specific muscles which are innervated by the C6 nerve root. On my examination, I didn't find any evidence of any specific nerve that was being impinged upon, let alone the nerve at C5-6 on the left."

20. Dr. Rauzzino then testified that the claimant did not meet the criteria for surgery. When asked to explain his opinion he testified, "In order to have a fusion of C5-6 through workmen's compensation, the guidelines would suggest that you have to appropriately identify there's a pain generator. And the fact that she has neck pain and has degenerative changes at that level, that's not sufficient…And in order for her to have surgery through workers' compensation or really any other system, you have to identify that level which would be surgically treated as the root cause for pain, and that's not been accomplished." Dr. Rauzzino highlights the significant concerns regarding approval of a surgery as substantial as an artificial disc replacement where the pain generator has not been identified through objective diagnostic testing.

21. Surgeons, Dr. Wong, Dr. Johnson, and Dr. Rauzzino have all reviewed the claimant's diagnostic tests, physically evaluated the claimant, and have all determined that she is not a surgical candidate. Dr. Bhatti is the sole surgeon that believes the claimant has a condition that requires surgical intervention.

22. Dr. Rauzzino credibly testified that the C5-6 artificial cervical disc replacement surgery was not a reasonable, related, or necessary procedure. The ALJ finds Dr. Rauzzino's analyses and opinions to be credible and more persuasive than medical analyses and opinions to the contrary.

23. The claimant has failed to establish that it is more likely than not that the need for the artificial cervical disc replacement surgery as recommended by Dr. Bhatti is reasonable, necessary, or related to the September 18, 2013 industrial accident.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S.

2. A claimant in a worker's compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

3. The facts in a worker's compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A worker's compensation case is decided on its merits. Section 8-43-201, C.R.S.

4. The respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). The question of whether a particular medical treatment is reasonable, necessary, and causally related is one of fact for determination by the ALJ. *Kroupa v. Indus. Claim Appeals Office, supra; Wal-Mart Stores, Inc. v. Indus. Claims Office*, 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990).

5. Determining the reasonableness and necessity for treatment may involve various considerations including assessment of the risks associated with the procedure, the cost of the treatment when compared to expected benefit, and the duration of expected symptomatic relief. *Kroupa v. Mercy Medical Center*, W.C. No. 3-113-588 (ICAO January 7, 2002) citing *City of Durango v. Dunagan,* 939 P.2d 436 (Colo. App. 1997).

6. In determining whether treatment is reasonable the Treatment Guidelines are, "regarded as accepted professional standards for care under the Workers' Compensation Act." *Rook v. ICAO,* 111 P.3d 549 (Colo. App. 2005). The Treatment

Guidelines are also to be used by physicians when furnishing treatment under the Workers' Compensation Act and should be relied on by a claimant's authorized treating physician. *Hernandez v. ICAO,* Colo. App. No. 08CA0211 (August 28, 2008 (unpublished)).

7. The claimant is not entitled to medical care that is not causally related to her work-related injury or condition. As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 10, 2007), "A showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary." Where the relatedness, reasonableness or necessity of medical treatment is disputed, the claimant has the burden to prove that the disputed treatment is causally related to the injury and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.*, W.C. No. 4-117-758 (ICAO April 7, 2003).

8. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

9. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

10. As found, the ALJ concludes that Dr. Rauzzino, Dr. Wong and Dr. Johnson's analyses and opinions are credible and more persuasive than the medical analyses and opinions of Dr. Bhatti.

11. The ALJ concludes that the requested surgery is not reasonably necessary as the risks associated with the procedure outweigh any potential relief for the claimant; the cost of the treatment outweighs any potential expected benefit, as three surgeons have determined that the claimant is not a surgical candidate; and claimant would not receive any relief from her symptoms if she were to undergo surgery.

12. The ALJ concludes that the requested surgery is not reasonable per the Treatment Guidelines as Dr. Rauzzino credibly testified that in order to proceed with a

surgery of this magnitude, a pain generator has to be identified. Throughout claimant’s treatment, including various diagnostics, a pain generator has failed to be identified.

13. Based on the preceding findings of fact, the ALJ concludes that the claimant has failed to demonstrate by a preponderance of the evidence that the artificial cervical disc replacement surgery is reasonable, necessary, or related to the September 18, 2013 industrial accident.

ORDER

It is therefore ordered that:

1. The claimant’s request for authorization of artificial cervical disc replacement surgery as recommended by Dr. Bhatti is denied and dismissed.

2. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that the left shoulder surgery recommended by Dr. Parker is reasonable, necessary, and causally related to her April 13, 2015 work injury.

2. Determination of Claimant's average weekly wage (AWW).

FINDINGS OF FACT

1. Claimant is currently employed by Employer as an Assistant Principal. Claimant has been employed by Employer since August of 1986 in various capacities.

2. Claimant had gross earnings of $93,495.28 in 2014. Claimant continued in 2015 to earn the same gross salary as she did in 2014 and was earning that salary at the time of her injury.

3. On April 13, 2015 while so employed, Claimant sustained a work related injury. The school that Claimant was working at had an unplanned and unexpected fire alarm go off. Claimant assisted in evacuating the building. As the fire alarm was not a pre-planned drill, Claimant was in a hurry to evacuate the building.

4. While going from the third floor of the school to the second floor of the school, Claimant went through a heavy door with a bar. When pushing the bar of the door, Claimant felt pain in her left pinky, left hand, and up into her left shoulder.

5. Claimant continued to evacuate the building and went outside. After waiting approximately twenty minutes, the school was cleared for re-entry. Claimant went inside and told the school secretary and principal about her injury. Claimant filled out an incident report and went to Health One to be evaluated.

6. On April 13, 2015 Claimant was evaluated at Health One by Deana Halat, NP. Claimant reported jamming her left pinky finger into a door during a fire drill. Claimant reported pain and lack of motion in the pinky finger that radiated into her wrist. NP Halat noted bruising on the left small finger and that the left small finger was swollen and tender, particularly on the tip. NP Halat also noted on examination that Claimant's left shoulder was achy but had good range of motion. NP Halat diagnosed pain in limb and recommended no use of the left hand or arm for one week. NP Halat opined that there was a greater than 51% probability that the injury was work related. *See* Exhibits A, 5.

7. On April 21, 2015 Claimant was evaluated at Health One by Paul Raford, M.D. Claimant reported little improvement with pain from the ulnar aspect over the palmar aspect of the forearm and even up to the lateral aspect of the upper arm. Dr. Raford assessed left 5th finger sprain, suspicion for ligament disruption. Dr. Raford noted restrictions that included no use of the left upper extremity. *See* Exhibits A, 5.

8. On April 28, 2015 Claimant underwent an initial evaluation for occupational therapy (OT). Claimant reported achiness in her left small finger with pain in the under arm of the left elbow as well as some left shoulder pain. *See* Exhibit 8.

9. On May 5, 2015 Claimant was evaluated by NP Halat. Claimant reported continued left pinky pain and dorsal hand and thumb pain that radiated up the posterior arm to the shoulder. NP Halat planned to refer Claimant to a hand specialist for further evaluation and planned to add Claimant's shoulder and upper arm to the therapy schedule. *See* Exhibits A, 5.

10. On May 8, 2015 Claimant underwent OT. On examination it was noted that Claimant had pain in the left shoulder with resisted external rotation at the insertion of the external rotators. *See* Exhibit 8.

11. On May 19, 2015 Claimant was evaluated by Tracy Wolf, M.D. Claimant reported small finger and hand to elbow pain that was going into her left shoulder. Dr. Wolf assessed left small finger pain, probable sprain of DIP joint with no obvious fracture and left medial epicondylitis and musculature pain into the shoulder. Dr. Wolf provided Claimant with a splint and recommended Claimant try not to use her left side/extremity. *See* Exhibit 6.

12. On May 19, 2015 Claimant underwent OT. Claimant again reported left shoulder pain. Claimant continued to go to OT appointments for several months. Claimant reported shoulder pain and received shoulder treatment at her OT appointments. *See* Exhibit 8.

13. On May 27, 2016 Claimant was evaluated at Health One by Katherine Drapeau, D.O. Dr. Drapeau noted that Claimant was in for follow up of her left 5th finger, arm, and shoulder pain. Claimant reported her main complaint was the left shoulder and triceps area. Claimant reported that the fire drill at work happened very quickly and that she did not remember if when she struck the door with her hand her entire arm was jarred. Dr. Drapeau noted some tenderness on examination of Claimant's left shoulder distal to the acromion and AC joint and noted a positive impingement sign of the left upper arm. Dr. Drapeau assessed right 5th finger strain and right upper arm and shoulder strain, possible bursitis. Dr. Drapeau noted Claimant was scheduled to be on vacation from June 12, 2015 through July 20, 2015 and noted that they would hold off on any orthopedic referral for the shoulder until Claimant returned. *See* Exhibits A, 5.

14. On June 9, 2015 Claimant was evaluated again by Dr. Wolf. Dr. Wolf noted that Claimant's small finger was mostly better, that Claimant's elbow was better, but that Claimant's left shoulder was still bothering her some. Dr. Wolf noted some pain with shoulder motion. Dr. Wolf emphasized that Claimant should continue with stretches and exercises. *See* Exhibit 6.

15. On June 10, 2015 Claimant was evaluated by Dr. Raford. Claimant continued to report left shoulder pain that Dr. Raford noted was located in the anterior AC area on the left and occurred with any elevation of the shoulder above chest level. Dr. Raford noted on examination that Claimant could only flex to 90 degrees and abduct to 85 degrees before having pain in the anterior AC area. Dr. Raford assessed left 5th finger crush, nearly resolved and left shoulder pain of uncertain etiology but lacking support for occupational association. Dr. Raford noted that Claimant would be gone for almost 5 weeks and would recheck when she returned. Dr. Raford noted that if Claimant had persistent shoulder problems, because of the reported mechanism of injury, he would consider referring Claimant for private physician follow-up as the work etiology was not clearly established. *See* Exhibits A, 5.

16. On July 27, 2015 Claimant was evaluated by NP Halat. Claimant reported that her left shoulder continued to be extremely painful and that she had difficulty with limited range of motion. NP Halat noted that originally the shoulder pain was thought to be from Claimant's elbow radiating into her shoulder but now that it appeared to be centrally located in Claimant's shoulder. NP Halat noted that Claimant's left shoulder had minimal range of motion and decreased flexion as well as a limited lift-off test. NP Halat noted that Claimant had a positive cross-arm test and a slight drift with her left shoulder as compared to her right. NP Halat assessed left shoulder pain, left elbow pain, and left 5th finger pain. NP Halat referred Claimant for an MRI of the left shoulder. NP Halat noted that Claimant's left shoulder appeared to be bothering Claimant more than the left elbow and that the left elbow could have been reasonably injured when Claimant jammed her finger during the fire drill. NP Halat noted it was unclear as to the exact etiology of the left shoulder. *See* Exhibits A, 5.

17. On August 3, 2015 Claimant underwent an MRI of her left shoulder interpreted by Mark McGehee, M.D. Dr. McGehee's conclusion was impingement with tendinopathy and small undersurface supraspinatus tear, and longitudinal split tear biceps tendon. *See* Exhibit 4.

18. On August 10, 2015 Claimant was evaluated by NP Halat. NP Halat noted that the MRI of Claimant's left shoulder showed impingement with tendinopathy and small undersurface supraspinatus tear as well as longitudinal split tear of the biceps tendon. Claimant reported her shoulder felt better with pain rated at 2-3/10 and sometimes shooting down the middle of her upper arm. NP Halat noted mild tenderness in the left biceps insertion and mid-left upper arm as well as good range of motion of the left upper arm with mild pin in full extension and lift-off. NP Halat assessed left shoulder pain, left elbow pain improving, and left 5th finger pain improving.

NP Halat noted that Claimant would be evaluated by orthopedics for the left shoulder. *See* Exhibits A, 5.

19. On August 18, 2015 Claimant was evaluated at Orthopedic Associates by Andrew Parker, M.D. and Keith Stoetzer, PA-C. Claimant reported that she caught her pinky and initially felt pain radiating from the pinky into the lateral and anterior aspect of the shoulder and that she was having ongoing difficulty with pain in the shoulder. Claimant reported no history of prior shoulder problems. Dr. Parker reviewed the MRI of Claimant's left shoulder and noted it showed some thinning and fairly significant partial undersurface tearing of the cuff. Dr. Parker provided the impression of: significant partial thickness cuff tear, left shoulder; biceps tendinitis, left shoulder, with a split tear of the biceps; and component of early adhesive capsulitis. Dr. Parker opined that Claimant warranted operative treatment but recommended that Claimant start with an injection and physical therapy. Dr. Parker injected Claimant's left shoulder subacromial space. *See* Exhibit C.

20. On August 24, 2015 Claimant was evaluated by NP Halat. Claimant reported that the shoulder injection was helpful but that she had aching pain in the left shoulder that she rated as 3/10. NP Halat noted that Claimant had tenderness over the AC and trapezius area in the left shoulder. NP Halat assessed pain in limb, left arm, shoulder, elbow, and little finger. NP Halat noted that Claimant had the possibility of surgery in the future. *See* Exhibits A, 5.

21. On October 12, 2015 Claimant was evaluated by Dr. Parker. Claimant reported relief from the subacromial injection but that it only helped for about one week. Dr. Parker recommended left shoulder scope, decompression, cuff repair, and biceps release. Dr. Parker noted Claimant would be scheduled accordingly for surgery. Dr. Parker requested authorization for surgery. *See* Exhibit C.

22. On October 14, 2015 Dr. Raford issued a letter regarding causality. Dr. Raford opined that Claimant's left shoulder pain was not related to her left 5th finger crush work injury based on his review of records and the mechanism of injury. Dr. Raford opined that the reported force and mechanism of injury of opening a door with both hands affecting the left finger would not cause either problems in her elbow, and much less her shoulder findings. Dr. Raford also opined that the shoulder condition noted on Claimant's MRI would not take weeks to months for Claimant to register and mark on pain drawings. Dr. Raford opined that the initial exam in April found no shoulder complaints, no pain drawing markings, no patient report of shoulder issues, and no positive exam findings. Dr. Raford opined that the proximal shoulder issues that apparently developed after the injury could not be reasonably described as caused by the reported mechanism of injury. Dr. Raford recommended that Claimant seek left shoulder treatment from her private insurance. *See* Exhibit A.

23. On October 20, 2015 John Aschberger, M.D. issued a letter noting that he had reviewed records forwarded to him by Respondent including notes from Dr. Raford and from Dr. Parker. Dr. Aschberger reviewed Dr. Raford's note that there were no

initial complaints of pain at the shoulder verified through physical exam, pain drawings, or complaints. Dr. Aschberger also reviewed Dr. Parker's note that there was an onset of irritation in the left shoulder early in the course of the injury. Dr. Aschberger noted that Dr. Raford and Dr. Parker had inconsistent reports of the onset and noted that he did not have the early treatment notes/records to verify. Dr. Aschberger noted he had no reason to doubt Dr. Raford's accuracy and thus opined that surgery for Claimant's left shoulder did not appear to be warranted under workers' compensation. *See* Exhibit B.

24. On October 27, 2015 Respondent denied the request for surgery as not related to the workers' compensation claim based on the reports of authorized treating provider Dr. Raford. *See* Exhibit C.

25. On October 30, 2015 Claimant was evaluated by Dr. Drapeau. Dr. Drapeau noted that on Claimant's first visit with Health One Claimant did not mention the shoulder pain on the pain diagram but that on the next visit on April 21, 2015 Claimant did mention the shoulder and entire bottom of her arm being achy and that Claimant continued to mention that on every visit since then. Claimant reported to Dr. Drapeau that she had never had any prior injuries of pain in her left shoulder. Dr. Drapeau noted that Dr. Parker had recommended surgery that was pending authorization. Dr. Drapeau assessed left shoulder injury and left finger sprain. *See* Exhibits A, 5.

26. On November 11, 2015 Claimant was evaluated by Sadie Sanchez, M.D. Dr. Sanchez noted that Claimant had a history of a symptomatic partial thickness rotator cuff tear and biceps tendonitis of the left shoulder. Dr. Sanchez noted that Claimant reported pain in the left 5th finger radiating into the arm and that on the second visit for the injury Claimant reported left shoulder pain as well. Dr. Sanchez noted that Dr. Parker recommended left shoulder surgical decompression, tear repair, and biceps release. Dr. Sanchez noted that the surgery was denied by the insurance company and that Claimant denied pain in the left elbow or shoulder prior to the incident. Dr. Sanchez diagnosed: incomplete rotator cuff tear or rupture of the left shoulder, not specified as traumatic; strain of muscle, fascia, and tendon of the long head of the biceps in the left arm, and pain in the left finger. Dr. Sanchez opined that surgery was indicated for Claimant's left shoulder but noted that workers compensation was not accepting the surgery. Dr. Sanchez opined based on the history and examination that it was greater than 51% probable that the injury was a work related injury. *See* Exhibits A, 5.

27. Claimant was evaluated by Dr. Sanchez on November 30, 2015, December 14, 2015, and January 4, 2016 where Dr. Sanchez continued to express the same opinions. *See* Exhibit 5.

28. On February 9, 2016 Claimant underwent an independent medical evaluation performed by Rachel Basse, M.D. Claimant reported heading out doors when she pushed a door quickly and had the immediate onset of left fifth finger discomfort, swelling, and pain radiating up her arm into her elbow and within the next

one to two days her shoulder also started to hurt. Claimant reported having no pain before the incident in her shoulder. Dr. Basse noted that Claimant guarded her left arm against her chest and did not use it spontaneously as much as her right arm. Dr. Basse provided the impression of on the job injury with a sprain/strain of the left fifth DIP, resolved and sprain/strain of the left shoulder with probable infraspinatus and/or teres minor involvement, improved, but ongoing. *See* Exhibit D.

29. Dr. Basse noted that Claimant was straight-forward with a consistent history throughout the medical records. Dr. Basse noted that an MRI of the left shoulder showed mild arthritis and tendinosis with a small supraspinatus tear and biceps tendon tear and noted the recommendation for surgery by Dr. Parker. Dr. Basse opined that the degenerative changes on the MRI were not the cause of Claimant's clinical pain and opined that surgery would not be beneficial and would make any myofascial pain components and the sprain/strain worse. Dr. Basse recommended reassuring Claimant of the normalcy of the MRI findings in a woman of her age and reassuring Claimant that the generally low-level of symptoms she had with her strength and range of motion did not necessitate surgical intervention. Dr. Basse also opined that the mechanism of injury was not one that would be expected to cause a supraspinatus tear or aggravate an underlying supraspinatus tear. Dr. Basse opined that the infraspinatus tendinitis may have been aggravated. Dr. Basse opined that if a partial rotator cuff had occurred or had been acutely aggravated on April 13, 2015, Claimant would have had immediate, significant, and localized shoulder pain. Dr. Basse opined that it was unclear as to why a sprain/strain or tendinitis of the rotator cuff muscle had not resolved. Dr. Basse opined that Claimant flared tendinitis in her shoulder in the work incident. *See* Exhibit D.

30. Claimant's testimony at hearing is found credible and persuasive. Claimant had never suffered a prior left shoulder injury and never had any left shoulder medical treatment prior to this work related injury. Claimant had immediate soreness and developed pain in her left shoulder shortly after the work related injury. Claimant continues to experience pain and problems with her left shoulder including difficulties performing activities of daily living.

31. The opinions of Dr. Sanchez are found credible and persuasive. Dr. Sanchez's opinion that the left shoulder is related to the April 13, 2015 work injury is consistent with the medical records which note left shoulder symptoms immediately and continually throughout the claim. The surgeon, Dr. Parker also requested authorization for surgery through workers' compensation and thus believed the need for surgery to be work related. Additionally, Dr. Drapeau pointed out that Claimant did mention her left shoulder early on in the claim and mentioned it consistently throughout. The medical records overall support Dr. Sanchez's opinions.

32. The opinions of Dr. Raford and Dr. Aschberger are not found credible or persuasive. Dr. Raford based his opinion that the left shoulder is not related to the April 13, 2015 work injury on mostly the belief that Claimant's shoulder pain developed later, was not reported initially, and would not take weeks or months to recognize and report.

However, his conclusions are inconsistent with the medical records which show at the first appointment on the date of injury, Claimant's shoulder was noted to be achy and that at subsequent appointments shortly thereafter, Claimant reported shoulder pain consistently. Dr. Aschberger noted that Dr. Raford and Dr. Parker had inconsistent reports of when Claimant's shoulder pain started, but for unknown reasons, Dr. Aschberger decided to follow the report of Dr. Raford in coming to his conclusion that the left shoulder was not related. Dr. Aschberger does not explain why he chose to follow the report of Dr. Raford over the report of Dr. Parker. The report of Dr. Raford, however, is inaccurate as to when the onset of left shoulder symptoms began and the report of Dr. Parker is more persuasive and consistent with the medical records history. As Dr. Aschberger based his opinion on Dr. Raford's inaccurate report, Dr. Aschberger's opinion cannot be relied upon.

33. The opinions of Dr. Basse are also not found credible or persuasive. Dr. Basse disagrees that the surgery is reasonable and necessary and opines that Claimant simply needs to be reassured that her MRI findings are normal for her age. This is inconsistent with the surgical opinion of Dr. Parker and is not persuasive. Further, Dr. Basse also opined that the surgery is not related to the work injury and concludes that if Claimant suffered a rotator cuff tear, Claimant would have had immediate pain in her left shoulder. However, despite believing that Claimant did not report immediate pain in her left shoulder, Dr. Basse opined that Claimant suffered either flared tendinitis of her rotator cuff on the date of injury or that she suffered a sprain of the rotator cuff on the date of injury. These opinions, overall, are not consistent with the medical records and Claimant's credible testimony showing she did have immediate pain.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or

improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000).

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Claimant has established by a preponderance of the evidence that the left shoulder surgery recommended by Dr. Parker is reasonable, necessary, and related to her April 13, 2015 work injury. At the time of her injury, Claimant had immediate pain up into her left shoulder. On examination the day of her injury, NP Halat noted that Claimant’s left shoulder was achy. At OT on April 28, 2015 it was noted that Claimant had pain in her left shoulder. On May 5, 2015 NP Halat added Claimant’s left shoulder to the OT schedule. It has been shown, more likely than not, that Claimant had immediate left shoulder symptoms that continued throughout her claim. The opinion of Dr. Raford is not credible or persuasive and is based mostly on his incorrect belief that Claimant’s shoulder symptoms developed later in the claim, were not reported immediately, and would not take weeks to months to develop. As pointed out by Dr. Drapeau and Dr. Parker, this is not the case. Claimant had shoulder symptoms very shortly after her injury that were consistently reported. Further, the opinions of Dr. Basse have been considered and rejected. Dr. Basse opined that the surgery was not reasonable and necessary and that Claimant’s minimal degenerative findings on MRI were normal for her age and with Claimant’s function, surgery would not be recommended. This is inconsistent with the more credible opinion of the surgeon, Dr. Parker that surgery is reasonable and necessary and will relieve Claimant’s symptoms. Further, Dr. Basse also opined that if Claimant had suffered a tear in the left shoulder on April 13, 2015 then Claimant would have had immediate pain in the shoulder. Here, it is found credible that Claimant had immediate pain and symptoms in her shoulder.

Dr. Basse's opinion also appears to be inconsistent in opining that Claimant did not have immediate pain in the shoulder but nonetheless opining that Claimant suffered either a strain/sprain of her rotator cuff or flared tendinitis in her left shoulder on April 13, 2015. The opinions of Dr. Sanchez are found credible and persuasive in this matter. Dr. Sanchez's opinions are consistent with the medical records and Claimant's credible testimony.

Average Weekly Wage

Wages are the money rate at which the services rendered are recompensed under the contract of hire in force at the time of the injury, either express or implied. The objective of wage calculation is to arrive at a fair approximation of the Claimant's wage loss determined from the employee's wage at the time of injury. *See* § 8-42-102(3); *Campbell v. IBM Corporation, supra; see Williams Brother, Incorporated v. Grimm,* 88 Colo. 416, 197 P.1003 (1931); *Vigil v. Industrial Claim Appeals Office,* 841 P.2d 335 (Colo. App. 1992). Section 8-42-102(3), C.R.S. states that "Where the foregoing methods of computing the average weekly wage of the employee…will not fairly compute the average weekly wage, the division, in each particular case, may compute the average weekly wage of said employee in such other manner and by such other method as will, in the opinion of the director based upon the facts presented, fairly determine such employee's average weekly wage." According to *Washburn v. Academy School District No.20*, W.C. No. 4-491-308 [Industrial Claim Appeals Office (ICAO), September 16, 2002], § 8-4-102(3) "grants the ALJ authority to use discretion in calculating that average weekly wage when the prescribed methods will not, for any reason, fairly compute the claimant's wage."

Here, Claimant has established that her average weekly wage at the time of her injury was $1,797.99. Claimant was paid gross wages of $93,495.28 in the year 2014. Although her injury occurred in April of 2015, Claimant has established that her salary in 2015 and rate of pay was consistent with her 2014 earnings. Therefore, taking her gross wages from 2014 and dividing them by 52 weeks yields an average weekly wage of $1,797.99 and Claimant has established that this is a fair approximation of her pay at the time of her injury.

ORDER

1. Claimant has established by a preponderance of the evidence that the left shoulder surgery recommended by Dr. Parker is reasonable, necessary, and causally related to her April 13, 2015 injury. Respondents shall authorize and pay for the surgery.

2. Claimant has established that her average weekly wage at the time of her injury was $1,797.99.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 20, 2016,

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUE

Did Claimant prove by a preponderance of the evidence that the surgery proposed by Dr. Janssen is reasonable and necessary, as well as related to her injury of September 15, 2010.

FINDINGS OF FACT

1. Claimant's medical history was significant in that she previously sustained a low back injury on March 19, 2010. On April 9, 2010, x-rays were taken of Claimant's lumbar spine. Randy Mound, M.D. noted spondylolisthesis at L5-S1, but otherwise the alignment of Claimant's spine was normal.

2. Claimant was evaluated by Hugh McPherson, M.D. on April 12, 2010. At that time, she reported low back pain after lifting cases of water and boxes at work. Dr. McPherson found Claimant could forward flex and extend without difficulty. His assessment was acute low back pain, normal disc morphology on x-ray. He ordered physical therapy ("PT"), but did not think an MRI was necessary.

3. Claimant was seen in follow-up by Dr. McPherson on April 30, 2010. Her pain complaints had improved and in the absence of radicular symptoms, no MRI was warranted. Dr. McPherson noted Claimant could continue with PT and he would see her in follow-up, if necessary. The ALJ notes there was no evidence in the record which showed Claimant had further treatment for the 3/19/10 injury before September 2010.

4. Claimant suffered an admitted industrial injury on September 5, 2010 while working for Employer. She was helping students tear down a homecoming float and pulled on wood with a hammer while squatting down. She felt a sharp pull in her low back.

5. There record did not contain evidence documenting what treatment, if any, Claimant received for September 5, 2010 through January 9, 2011.

6. On January 10, 2011, x-rays were taken of Claimant's lumbar spine. The films were read by Bradford Robinson, M.D., who noted likely pars defects at L5, but no spondylolisthesis was seen.

7. Claimant was initially evaluated by Ruth Beckham, R.N., M.S.N., A.N.P.-C. ("NP") at Dr. Janssen's office (Center for Spinal Disorders) on January 18, 2011. She presented with low back pain, but denied any numbness. On examination, NP Beckham found significantly decreased range of motion in the lumbar spine in flexion, extension, and side bending. Full range of motion was found in Claimant's hips and

lower extremities. No neurological or sensory abnormalities were noted. An MRI was ordered because of continued pain in the left lower extremity and hip.

8. An MRI was performed on Claimant's lumbar spine on January 20, 2011. The films were read by Craig Stewart, M.D. Dr. Stewart's impression was bilateral pars interarticularis defects at the L5 level. There was no current evidence of spondylolisthesis; no significant disc herniation, canal stenosis, or neural foraminal narrowing within the lumbar spine; a 4 cm. cystic structure was present in the region of the right adnexa, likely a simple ovarian cyst.

9. Dr. Janssen evaluated Claimant on January 20, 2011, at which time the MRI scan was reviewed. Dr. Janssen stated Claimant had a bilateral osteolysis with a bilateral pars fracture at the L5-S1 level. Dr. Janssen stated Claimant also needed a further diagnostic workup, including a CT scan, as well as a bone scan.

10. On February 7, 2011, a nuclear medicine bone scan of Claimant's lumbar spine was performed. There was no evidence of a pars defect. Very mild uptake at the disc levels suggested mild degenerative disc change, as found by Stephen George, M.D.

11. A CT scan was done on Claimant's lumbar spine on February 8, 2011 and read by Dr. Stewart. Dr. Stewart's impression was bilateral L5 pars interarticularis defects. Mild bony hypertrophy surrounding the left L5 pars interarticularis defect was noted, which contributed to a relatively mild left-sided neural foraminal narrowing. A small broad-based posterior disc protrusion was suspected at L5/S1. Claimant's facet joints were unremarkable.

12. Claimant returned to Dr. Janssen on February 8, 2011. Dr. Janssen stated the CT scan documented a bilateral pars fracture at L5-S1. Claimant reported her symptoms were altering her quality of life and activities of daily living. Dr. Janssen opined Claimant could live with the level of symptoms, she could continue to treat the symptoms with injections, medications, braces, yoga etc., or treat the structural pathology with osteosynthesis or surgery. Dr. Janssen recommended an anterior interbody fusion at L5-S1.

13. Andrew Castro, M.D. reviewed Claimant's treatment course on February 9, 2011 as a physician advisor for Insurer. Dr. Castro noted x-rays did not initially reveal problems, however, an MRI highlighted a pars defect at L5 bilaterally. Dr. Castro said pars defects commonly occurred in anywhere from 2-6% of the population and very rarely resulted from acute traumas. He opined it was very unlikely that a lifting, bending injury caused the pars defect and felt it predated the injury.

14. On April 7, 2011, Claimant was evaluated by Alicia McCown, PA-C at Dr. Janssen's office. Claimant complained of severe low back pain, noting her symptoms were progressively worsening. She had a feeling of instability, as well as radiating pain into her right lower extremity. PA McCown noted limitations in the lumbar range of motion due to pain. Normal sensation was present in her bilateral lower extremities,

including no gross sensory deficits in all major muscle groups. There was no evidence of neuralgia. PA McCown's assessment was: occupational-related injury with vertical instability pathology at L5-S1; continued axial low back pain; new right lower extremity radiculitis. PA McCown expressed her belief (along with Dr. Janssen's) that an anterior lumbar interbody fusion would be the Claimant's best alternative.

15. On July 13, 2011, Claimant underwent an independent medical evaluation at the request of Respondents, which was performed by Brian Reiss, M.D. Claimant was reporting lower back and right buttock pain, with intermittent spasms. Her pain level was described at a 7/10 level, which increased to 9 or 10/10 level at night or in the morning. Dr. Reiss noted x-rays showed spondylolyses, with a small listhesis at L5-S1. The MRI showed fairly well preserved discs and no major nerve compression. On examination, she had normal alignment of the spine, was tender bilaterally at the SI joint and right sciatic area. Dr. Reiss noted there was a distinct lack of documentation of any real physical therapy or attempts by the patient to do a core strengthening program and therefore the suggestion for surgery was premature. He recommended a far more intensive rehabilitation program, including eight weeks of course strengthening.

16. Claimant was next evaluated by Dr. Janssen on August 16, 2011. Dr. Janssen noted it was his professional opinion Claimant had a bilateral pars fracture and required surgery. Dr. Janssen stated Claimant was seen by an orthopedic surgeon, who found she was deconditioned and required an intensive rehabilitation program. He concurred generalized conditioning could help with postoperative care, but felt it was not going to alter the natural history of her underlying occupational-related injury and need for surgery.

17. A review of the proposed surgical procedure was done on August 19, 2011 on behalf of Insurer by William Ogsbury, M.D., who also agreed Claimant did not have much non-surgical treatment, although he sympathized with her wish to go forward with the surgery. Dr. Ogsbury recommended a psychosocial evaluation and authorization of the surgery, as well as additional PT. He opined the surgery was medically necessary and causally related to the second work-related injury.

18. On September 16, 2011, a bone scan was done, which was read by Brian Burke, M.D. Dr. Burke stated it was a normal bone density study.

19. Claimant was seen by NP Beckham on October 4, 2011. At that time she had continuing low back pain, provoked with activity. On a chronic level, her pain was described as 7-8/10 and on an acute level her pain was 10/10. NP Beckham noted plain radiographs showed "significant" degenerative disc disease along with a pars defect of L5. The plan was to do an anterior spine fusion of L5 to the sacrum.

20. After what was described as “failed” conservative treatment[1], Claimant underwent an anterior L5-S1 discectomy, decompression and fusion on October 18, 2011. The surgery was performed by Dr. Janssen. The preoperative diagnoses were:

[1] Although there were references to PT evaluations and some treatment, the record was unclear regarding the amount of treatment Claimant received prior to the fusion surgery.

bilateral pars fracture-L5; instability-L5; translational instability; degenerative disc disease; and low back pain.

21. Claimant returned to Dr. Janssen's office on November 29, 2011 and was evaluated by NP Beckham. She was described as "miserable" and was having incapacitating back pain and spasms. A pars injection at L-5 was scheduled with Dr. Leimbach and a request for authorization for posterior spinal fusion was going to be made to Insurer.

22. Claimant underwent a repeat CT scan of her lumbar spine on December 6, 2011, following her anterior fusion at L5-S1. Dr. Stewart read the CT films and his impression was: interval anterior fusion at L5-S1, without evidence of immediate postoperative complication; findings consistent with bilateral sacroiliitis.

23. On December 6, 2011, George Leimbach, M.D. saw Claimant for the first time and performed bilateral L5 pars interarticularis injections. Claimant had a pre-procedural pain level of 6-7/10, post procedural pain level of 3/10.

24. On December 14, 2011, Claimant was evaluated by NP Beckham, at which time she was noted to have incapacitating back pain. The plan was to do an L5-S1 posterior spinal fusion (with allograft) and the risks of the procedure were reviewed.

25. A posterior L5-S1 fusion and discectomy was performed by Dr. Janssen on December 26, 2011. The preoperative diagnoses were: previous attempted anterior fusion; occupational injury; delayed healing of the anterior fusion; bilateral pars fracture; need for posterior tension band and fusion. The surgical procedures performed included microscopic dissection of spine; intraoperative fluoroscopy; bone graft harvest; open treatment of bilateral pars fracture with instability; posterior segmental instrumentation spanning L5-S1; posterior foraminotomy with bilateral foraminal decompression underneath the spur of the bilateral pars interarticularis defect of L5; bilateral S1 foraminotomy; and posterior and posterolateral arthrodesis.

26. Claimant's post-surgical course was followed by Dr. Janssen's office. On January 2, 2012, Claimant reported unrelenting back pain and NP Beckham changed her medications.

27. A General Admission of Liability (“GAL”) was filed on January 30, 2012 for wage and medical benefits.

28. On March 15, 2012, Claimant was examined by NP Beckham, who noted restricted range of motion on flexion, decreased range of motion on extension and restricted range of motion on side bending/rotation. The assessment was status post anterior-posterior spinal fusion with consolidated fusion with probable painful implants. Claimant was to be seen in six months.

29. NP Beckham's evaluation on July 26, 2012 was similar to the one on 3/15/12 (including the range of motion testing) and Claimant was reporting difficulty

sleeping secondary to back pain. Consideration of a hardware block was given at that time.

30. On August 28, 2012, Dr. Leimbach performed bilateral hardware blocks at L5 and S1. His diagnoses were: status post lumbar fusion; possible painful retained hardware; and lumbar spondylosis. Claimant had a pre-procedural pain level of 3/10, post-procedural pain level of 3/10.

31. Claimant returned to NP Beckham at the Center for Spinal Disorders on October 17, 2012, after the hardware block. She reported a 24 hour period of relief, but wanted to have the implants out. NP Beckham noted a CT would be ordered and they would proceed with removal of the hardware at L5-S1. A request for authorization was made on 10/24/12.

32. Another CT scan of Claimant’s lumbar spine was done on October 25, 2012 and read by Kurt Husum, M.D. Dr. Husum's impressions were: interval posterior fusion at L5-S1; anterior and posterior spinal fusion at that level appeared intact with good incorporation of the bone graft anteriorly; incomplete incorporation of the bone graft noted posteriorly at that level; stable bilateral sacroiliitis.

33. On February 12, 2013, a CT scan of Claimant's lumbar spine was performed. The films were read by Jeffrey Guay, M.D., whose impression was stable anterior and posterior surgical fixation at L5-S1; stable osseous integration of the interbody fusion graft at L5-S1, with incomplete incorporation of bone graft material seen posteriorly at the L5-S1 level; stable bilateral sacroiliitis.

34. Because of continued back pain localized over the hardware, hardware removal surgery was performed on February 27, 2013 by Dr. Janssen. The surgical procedures performed included microscopic dissection of spine for decompression of L5 nerve roots; intraoperative fluoroscopy; removal of segmental hardware, including the nuts, the collars, the rods, the screws at the bilateral L5 and S1 levels from the USS pedicle screw system; detailed exploration of the fusion; bilateral L5 foraminotomy; bilateral S1 foraminotomy.

35. Claimant returned for an evaluation on April 12, 2013 with NP Beckham, who reported Claimant had increasing back pain and fullness in her dorsal lumbar spine. A CT scan was ordered, as well as massage therapy. Claimant was seen by Dr. Janssen on July 23, 2013, who reported Claimant was “miserable” and had severe back pain. Dr. Janssen recommended facet blocks in L4-5.

36. On July 5, 2013, a CT was done on Claimant's lumbar spine. David Weiland, M.D. read the films and noted interval removal of posterior fusion hardware from L5-S1; stable anterior fusion L5-S1; apparent bilateral foraminotomies at L5-S1 with probable granulation/scar tissue partially filling the right neural foramen; mild degenerative arthritis and degenerative disc disease at L4-5 resulting in at most mild foraminal narrowing; stable bilateral sacroiliitis.

37. Dr. Leimbach performed bilateral L4-5 intraarticular facet injections on August 7, 2013. The pre-and post-procedural diagnoses were: postlaminectomy syndrome; painful facet arthropathy, L4-5. Claimant had a pre-procedural pain level of 8/10, post-procedural pain level of 4/10. The ALJ infers that the improvement in Claimant's pain supports the L4-5 facet joints as possible pain generators.

38. A handwritten note on August 23, 2013 from NP Beckham documented Claimant had no relief with facet block and reported severe back pain. On August 27, 2013, NP Beckham documented bilateral sacroiliitis, with some radicular symptoms on the right. She set Claimant up for bilateral SI joint injections and then a right L5-S1 nerve root block.

39. Claimant returned to NP Beckham at the Center for Spinal Disorders on October 22, 2013 having bilateral SI joint pain. On examination, Claimant's lumbar spine had restricted range of motion in flexion, side bending and rotation. She had full range of motion in the hips and lower extremities, with no SI joint restriction. Claimant had no gross sensory deficit and no evidence of neuralgia. NP Beckham's assessment was bilateral sacroiliitis, positive Faber, and SI joint pain.

40. On November 6, 2013, Dr. Leimbach performed bilateral SI joint injections/sacral branch blocks at levels S2, 3, 4. Claimant had a pre-procedural pain level of 4-5/10, post-procedural pain level of 4/10.

41. On December 3, 2013, Claimant returned to NP Beckham, who noted Claimant was "miserable" and not sleeping. She had bilateral lower extremity pain and did not benefit from the SI joint injection. Some adjacent level disease at L4-5 was noted. Claimant was set up for a facet block of L4-5 to see if this would alleviate her symptoms.

42. Dr. Leimbach continued to follow Claimant and examined her on January 2, 2014. Claimant had persistent low back pain with pain in the hip girdle and buttock region. Tenderness was noted over the lumbosacral junction area. Dr. Leimbach's impression was: status post L5-S1 fusion; status post hardware removal; and possible adjacent level disc disease at L4-5. He recommended an MRI scan of the lumbar spine.

43. An MRI was done on Claimant's lumbar spine on February 8, 2014 and read by Dr. Weiland. Dr. Weiland's impression was: interval anterior fusion at L5-S1,with new bilateral pedicle screw tracks at L5 and S1; new L5-S1 laminectomy; mild degenerative arthritis and degenerative disease at L4-5 progressing since the prior study and resulting in mild foraminal narrowing. There was no significant central canal stenosis or nerve root compression.

44. On February 17, 2014, Claimant was re-evaluated by Dr. Leimbach. She was complaining of low back pain with extension into the proximal leg and hip girdle area. Dr. Leimbach's impression was the same as 1/2/14, with the addition of lumbar radiculitis. Dr. Leimbach recommended a bilateral transforaminal epidural steroid

injection at L4-5, which was performed on February 25, 2014. Claimant's pre-procedural pain level was 4/10, her post-procedural pain level was 3/10. Claimant returned to Dr. Leimbach on March 13, 2014, at which time he noted she received only nominal relief from the transforaminal injection. He recommended physical therapy and altered her medications.

45. On April 22, 2014, Claimant was seen by Mary Brassfield, PA-C, who documented she had no relief with physical therapy. Her low back pain was 6/10 and she was not interested in receiving steroid injections. PA Brassfield's impression was status post L5-S1 lumbar fusion; status post hardware removal; adjacent level disc disease at L4-5; and lumbar radiculitis. A discogram was to be scheduled.

46. Claimant returned to Dr. Janssen on May 1, 2014, who noted that she continued to deteriorate and was “miserable”. She had interior column disease, vertical instability, and pathology at the L4-L5 level. Dr. Janssen stated Claimant’s MRI demonstrated pathologic changes and what appeared to be adjacent segment disease. Dr. Janssen recommended an L3-4 and L4-5 discogram and post-discographic CT scan.

47. Dr. Leimbach also saw Claimant on May 21, 2014, at which time lumbar discography at L3- 4 and L4-5 was performed. Claimant had no provocation of pain at L3-4. Claimant had provocation of pain at L4-5, which was concordant with her normal distribution of pain across the lower back and into the hip girdle area. Dr. Leimbach concluded there was no evidence of disc disruption or annular tear at L3-4. There was a mildly disrupted disc at L4-5, but no evidence of an annular tear.

48. NP Beckham evaluated Claimant on May 27, 2014, at which time Claimant reported incapacitating back pain, which was even worse than before. NP Beckham's assessment was degenerative disc disease at L4-5 with an increase in symptoms since discogram. The plan was to set Claimant up for an artificial disc replacement at that level.

49. A request for authorization of the disc replacement surgery was made by Dr. Janssen’s office on June 2, 2014.

50. Dr. Leimbach evaluated Claimant on July 25, 2014, at which time she reported severe, unrelenting back pain symptoms. Tenderness was noted above the incision at the L4-5 motion segment, with pain on flexion and extension. Dr. Leimbach's impression was: status post lumbar L5-S1 lumbar fusion; status post hardware removal; adjacent level disc disease at L4-5; and lumbar radiculitis. Dr. Leimbach noted Claimant had positive discography at L4-5 with significant disc disruption syndrome. Claimant's medications were adjusted at that time. Claimant returned to Dr. Leimbach on September 29, 2014, who made similar findings at the evaluation. He recommended consideration of a fusion or disc replacement.

51. Dr. Castro performed an independent medical examination on behalf of Respondents on August 22, 2014. At that time, Claimant described her pain as 10/10

and she reported aching, sharp throbbing pain. The pain was aggravated by activity. Dr. Castro found Claimant had good lumbar range of motion with forward bending, extension, lateral bending, and rotation. Claimant's deep tendon reflex was within normal limits and Hoffman sign was negative. Dr. Castro noted the diagnostic studies showed the previous anterior spinal fusion L5-S1, with anterior plate instrumentation. Mild disc desiccation at L4-L5 just above this was noted, but there was no severe central or foraminal encroachment noted. No instability patterns were appreciated. There was mild facet arthritis at L4-L5, but fairly well maintained disc space height.

52. Dr. Castro's impression was 36-year-old female who had undergone multiple surgical interventions for treatment of back pain. He noted her symptoms were quite severe and that it was difficult to fully assess her chronic, significant pain. Dr. Castro felt it was unclear whether Claimant would have appropriate outcomes with any further surgical intervention, as she had significantly bad outcomes with the initial surgical interventions. Dr. Castro did not believe this patient would benefit from further surgical intervention and stated the proposed surgery was not reasonable, nor necessary. He did not believe Claimant required further diagnostic studies. Dr. Castro deferred to Claimant's physiatry team to see if there were other non-surgical treatments that would be available to her.

53. A lumbar spine CT was done on May 21, 2014. An anterior fusion and solid osseous union at L5-S1 was noted. At L3-L4, contrast material remained confined to the nucleus, consistent with a grade 0 annulus. At L4-L5, contrast extended to the posterior margin of the outer third of the annulus and also spread concentrically along the posterior margin of the disc, consistent with a grade four tear. The other disc spaces had normal height and no evidence of stenosis.

54. On January 30, 2015, Ron Carbaugh, Psy.D. examined Ms. Oliver for pre-surgical psychological screening. Dr. Carbaugh stated Claimant’s behavioral presentation argued against any acute anxiety or depressive symptomatology. Her psychiatric testing was similar to what was seen in 2011. Dr. Carbaugh’s diagnostic impressions were: probable psychological factors affecting medical condition; other diagnoses deferred. Dr. Carbaugh determined Claimant was a reasonable candidate for the disc replacement surgery strictly from a psychological standpoint.

55. Dr. Leimbach reevaluated Claimant on April 16, 2015 and noted she had severe, limiting axial back pain symptoms. Dr. Leimbach noted tenderness at the L4-5 motion segment and opined the only beneficial treatment would be an L4-5 disc arthroplasty or a fusion procedure. He doubted whether further injections would be helpful. Claimant's follow-up appointment with Dr. Leimbach on April 23, 2015 had many of the same findings, including Dr. Leimbach’s impressions/diagnoses. Dr. Leimbach described Claimant as “miserable”, as she had a flare-up of back pain, with pain down the right leg. Dr. Leimbach recommended an MRI and a course of steroids.

56. Dr. Leimbach testified by way of evidentiary deposition on April 30, 2015. He was qualified as an expert in physical medicine and rehabilitation and was Level II accredited pursuant to the W.C.R.P. Dr. Leimbach reviewed the proposed disc

replacement and/or a fusion at the L4-5 level. He testified the idea was to maintain her motion at the L4-5 level, as it would be less likely that she would subsequently develop stresses in the disc above that and have the disc deteriorate over time. Dr. Leimbach opined the proposed disc replacement surgery was reasonable and necessary, as well as related to the 9/15/10 injury. It was his opinion the procedure would be successful, as Claimant was a motivated patient. He disagreed Claimant's pain was related to her facet joints, as she got very nominal relief when facet injections were done. Dr. Leimbach testified Claimant's pain generator was at the L4-5 level and agreed there were degenerative changes at that level. Dr. Leimbach testified he would defer to the opinions of the surgeons in this case.

57. On May 4, 2015, a lumbar spine MRI was done and the films were read by Craig Jonas, M.D. Dr. Jonas' impression was: stable post operative fusion at L5-S1, without significant change compared to 2/8/14; stable shallow protrusion at L4-L5, without significant change; hypertrophic facet arthrosis at L4-L5 causing mild bilateral neural foraminal stenosis without significant change; no neural foraminal stenosis was present at any other level and no central canal stenosis at any level; no adverse change compared to 2/8/14 detected. The ALJ infers this study confirmed there were no significant changes at the L4-5 and L5-S1 level between 2014-2015, as reflected in the MRI-s.

58. Dr. Castro testified as an expert in orthopedic surgery, a specialty in which he is board-certified. He is Level II accredited pursuant to the W.C.R.P. In his first deposition, which was taken on May 8, 2015, Dr. Castro testified there was not a significant change from the most recent MRI when comparing it to the previous MRI. He stated there did not appear to be any findings of nerve compression at any level and there was a solid fusion at L5-S1. Dr. Castro opined Claimant would not receive additional benefit from the proposed disc replacement surgery. She did not receive benefit from any of the surgery up to this point and the disc replacement surgery was contraindicated by the facet arthritis, as shown by the MRI. Dr. Castro noted the only positive test was the discogram, which is somewhat subjective in nature. Dr. Castro testified it was an "educated guess" that the L4-5 level was going to be improved by the proposed surgery and he did not believe that would be the case. While Dr. Castro thinks Dr. Janssen is an excellent surgeon, he did not believe Claimant would get significant relief from a pain or functional standpoint from the surgery.

59. On June 23, 2015, Dr. Leimbach performed a bilateral L4 medial branch block and bilateral L5 medial branch block. Claimant's pre-procedural pain level was 7/10, post-procedural pain level of 8/10. Dr. Leimbach opined Claimant's anesthetic response strongly pointed away from facetogenic pain.

60. Claimant was evaluated by Dr. Leimbach on July 9, 2015, who described her as functionally impaired by her back pain. Dr. Leimbach noted she had an equivocal response to intraarticular facet injections and no relief from medial branch blocks. He concluded the pain generator was at L4-5 where the annular tear[2] was

[2] This was a change from his opinion expressed on May 21, 2014. [Exhibit E, p. 132].

present. Claimant returned to Dr. Leimbach on August 31, 2015, at which time she reported her pain symptoms had significantly worsened. Dr. Leimbach concluded the only treatment that would benefit Claimant was surgery.

61. Dr. Janssen issued a report dated September 10, 2015, which outlined Claimant's treatment to date. It stated: "She [Claimant] has done well, but unfortunately now has progression of adjacent level symptomotology that appears to be correlated clearly with the initial work related injury and the subsequent need for treatment. Over a year ago it was my professional opinion that this patient had adjacent level symptomatology, vertical instability affecting the L4-5 disc and was really a candidate for consideration of additional surgery since this was altering her quality of life and activities of daily living. Treatment was going to consist of a disc arthroplasty and/or a second fusion at L4-5 level. She has gotten the complete run around from her insurance company who sent her to an orthopedic surgeon (Dr. Castro), who has been trying to come up with a variety of different ways to continue to delay her getting definitive and an ultimate treatment." Dr. Janssen also referred to 'an insurance "bad faith" issue' in this letter. The ALJ infers Dr. Janssen was expressing frustration at the delays in securing approval of the proposed disc replacement surgery, however, the reference to insurance bad faith is troubling as this is not within the ambit of his role as an ATP.

62. Dr. Castro issued a supplemental report on September 28, 2015. As part of the report, he reviewed the various surgical procedures Claimant had undergone and made the observation that none of the surgeries significantly improved her pain and function. Dr. Castro noted Claimant had mild disc desiccation at L4-L5, but no instability at this level. He stated the term vertical instability was utilized, but there was no biomechanical data or prognostication for any objective values. Dr. Castro noted Claimant's providers felt they were acting on her behalf, but this did not change his opinion that further surgical intervention was not likely to alter her present scenario. Dr. Castro noted further intervention could result in complications and other risks, including degenerative levels at another adjacent segment. The ALJ credited Dr. Castro's opinions regarding the lack of improvement on the part of Claimant.

63. Dr. Janssen testified as an expert in an evidentiary deposition taken on January 19, 2016. Dr. Janssen was accepted as an expert in orthopedic spine surgery. The ALJ notes he is Level II accredited pursuant to the W.C.R.P. Dr. Janssen testified that Claimant was originally going to have an L5-S1 disc replacement, but it was determined she also had a stress fracture in the back of her spine called a spondylosis. He therefore stabilized the front of the spine with the fusion and then stabilized the back of the spine with a posterior fusion two months later. Subsequent to that, Claimant underwent a hardware removal.

64. Dr. Janssen recommended the disc replacement surgery over a fusion, as the former procedure had a longer rehabilitation and also it decreased the motion at that segment. Dr. Janssen ran the FDA clinical trials for the U.S. government over 10 years

ago for disc replacement surgery. Dr. Janssen testified Claimant had L4-5[3] pathology and it was associated with her previous injury and treatment at the L5-S1 level and met the criteria for disc replacement surgery. He opined that the pathology was affecting her function. Dr. Janssen thought Claimant injured the L4-5 level at the time she injured the L5-S1 level and it took longer for the symptoms to manifest. Dr. Janssen testified the proposed artificial disc replacement surgery was reasonable and necessary.

65. A second deposition of Dr. Castro was taken on January 29, 2016. He had reviewed additional imaging and medical records, as well as the deposition of Dr. Janssen, taken 10 days before. Dr. Castro testified when considering whether a patient is a candidate for surgery, you have to consider what their pathology is and if it is surgically treatable. Next the patient's symptoms need to comport with the pathology. Dr. Castro testified he did not see a dramatic difference in the L4-5 disc space, which would necessitate surgery. Dr. Ramos noted spondylosis or stress fracture was present on x-ray. He noted the discogram called for a subjective response from Claimant with regard to pain. This was distinguished from an MRI or CT scan which demonstrated the presence of pathology. Also, there was a question whether it was performed under the proper protocols. Dr. Castro reviewed the records related to the discogram and noted there didn't seem to be a clear annular tear, nor was there clear travelization of the disc material. There was not a clear indication that L4-5 was the problem. He noted there were minimal degenerative changes. Dr. Castro described these as very small, very minimally positive findings, which did not support the decision to perform disc replacement surgery. Dr. Castro testified the Oswestry Disability Index was used to evaluate improvement after a procedure. Dr. Castro did not question Dr. Janssen's technical expertise performing the artificial disc replacement surgery.

66. No testimony was offered by Claimant.

67. The ALJ finds Dr. Castro's opinions regarding the proposed surgery were credible and more persuasive than the other medical opinions offered. More particularly, Dr. Castro's testimony elucidated the difference between subjective and objective findings in this case. The ALJ also credited Dr. Castro's opinion that Claimant did not have pathology which warranted the proposed surgery. Finally, the ALJ credited Dr. Castro's opinion that the potential risks of the surgery outweighed the potential benefits.

68. The ALJ credited Dr. Jonas' opinion that the 5/4/15 MRI showed no adverse change compared to 2/8/14 MRI.

69. As found, Claimant failed to establish the proposed disc replacement surgery was reasonable and necessary.

70. Evidence and inferences contrary to these findings were not credible or persuasive.

[3] In his deposition, Dr. Janssen initially identified L5-S1 pathology (which appears to be an error), then referred to L4-5 pathology as Claimant's pain generator.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. Section 8-43-201(1),C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). The instant case requires a credibility determination between various medical experts, who have offered diametrically opposed views on whether the proposed surgery is reasonable and necessary.

Medical Benefits-Artificial Disc Replacement

Claimant argued that she established the proposed artificial disc replacement at L4-5 was reasonable and necessary, as well as related to the industrial injury. She relied primarily on the testimony of Dr. Janssen, who requested authorization for said procedure. In this regard, Dr. Janssen opined Claimant's pain generator was at the aforementioned level and testified the proposed treatment was within the Medical Treatment Guidelines ("Treatment Guidelines"). Claimant also cited the opinions of Dr. Leimbach in support of her request for medical benefits. Claimant asserted Drs. Janssen and Leimbach, as her primary authorized treating physicians, were in the best position to make treatment recommendations.

Respondents argued Claimant failed to meet her burden of proof with regard to the proposed surgery. Respondents averred Claimant's previous surgical procedures had not been successful and the evidence was unclear regarding the source of

Claimant's pain complaints. To support their contentions, Respondents relied upon the testimony of Dr. Castro and his analysis of Claimant's course of treatment.

In the instant case, Claimant has the burden of proof to establish that the treatment proposed by Dr. Janssen is reasonable and necessary, as well as related to her industrial injury. Section 8-42-101(1)(a), C.R.S.; *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The question of whether the Claimant proved the proposed treatment was reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

In *Kroupa,* the ALJ denied Claimant's request for additional knee surgery, which would have been her third procedure. The ALJ found the surgery was not reasonable and necessary, based upon the opinion of Respondents' expert. That decision was affirmed first by the Industrial Claims Appeals Office, then the Colorado Court of Appeals, which noted the fact there was contrary opinion did not compel the ALJ to reach a different conclusion. The Court of Appeals noted the ALJ was required to make specific findings only as to evidence found persuasive and determinative. *Kroupa v. Industrial Claim Appeals Office, supra,* 53 P.3d at 1197. In this regard, the ALJ is free to credit one medical opinion to the exclusion of contrary opinion. *Dow Chemical v. Industrial Claim Appeals Office,* 843 P.2d 122, 125 (Colo. App. 1992). In the instant case, the ALJ determined Claimant failed to meet her burden of proof and credited the opinions of Dr. Castro over those expressed by Dr. Janssen.

The determination of whether the proposed artificial disc replacement surgery was reasonable and necessary was based on a review of the treatment Claimant received and an analysis of whether the proposed procedure has a reasonable chance of success. As evidenced in the voluminous medical records admitted into evidence, Claimant has had extensive treatment for her low back injury, including a posterior/anterior fusion at L5-S1, which included implantation of hardware. The hardware was subsequently removed in 2013, as Claimant alleged she was suffering intractable pain. Since that time, Claimant received multiple injections, facet and medial branch blocks, treatment with steroids and non-steroidal medications, as well as PT and massage therapy.

The ALJ determined, on balance, Claimant failed to prove the proposed surgical procedure is reasonable and necessary. First, insufficient evidence was adduced to prove the proposed surgery was reasonable and necessary. The ALJ concluded there was not sufficient objective evidence of pathology or a lesion which required surgery. In this regard, the following findings were confirmed by CT/MRI scans:

- No stenosis or nerve root compression. [MRI-2/8/14; CT scan-5/21/14[4]]

- No severe foraminal encroachment. [CT scan-7/5/13; MRI-5/8/15]

[4] In this study, the radiologist opined there was an annular tear, however, Dr. Castro did not concur there was an annular tear. Also, Dr. Leimbach's opinions were equivocal on this issue.

- Mild facet/degenerative arthritis. [CT scan-7/5/13; MRI-2/8/14; MRI-5/8/15]

These objective tests raised the question whether there was specific pathology which required surgery. Dr. Castro's opinion that Claimant did not have a surgical lesion or pathology requiring surgery was persuasive to the ALJ. (Finding of Fact 62, 65). The objective medical evidence before the Court led the ALJ to conclude the degenerative changes at L4-5 were minimal. (Finding of Fact 68). As found, there was not a significant difference between the MRI scans done in 2013 and 2014. (Finding of Fact 57). Accordingly, Claimant failed to demonstrate by the objective medical evidence admitted at hearing that the artificial disc replacement surgery was reasonable and necessary.

Second, the ALJ found the surgery recommendation was based more on Claimant's subjective reports of pain, as opposed to objective tests. The ALJ found the Medical Treatment Guidelines-Low Back Pain, W.C.R.P. 17, Exhibit 1 ("Treatment Guidelines") have application to the proposed disc replacement surgery. The Treatment Guidelines are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). It is appropriate for an ALJ to consider the Guidelines in deciding whether a certain medical treatment is reasonable and necessary for the Claimant's condition. *Deets v. Multimedia Audio Visual*, W. C. No. 4-327-591 (March 18, 2005); see *Eldi v. Montgomery Ward*, W. C. No. 3-757-021 (October 30, 1998) (medical treatment guidelines are a reasonable source for identifying the diagnostic criteria).

However, an ALJ is not required to award or deny medical benefits based on the Treatment Guidelines. In fact, there is generally a lack of authority as to whether the Treatment Guidelines require an ALJ to award of deny benefits in certain situations. Thus, the ALJ has discretion to approve medical treatment even if it deviates from the Guidelines*. Madrid v.Trtnet Group, Inc.*, W.C.4-851-315 (April 1, 2014).

W.C.R.P. 17-5(C) provides in relevant part:

> "The treatment guidelines set forth care that is generally considered reasonable for most injured workers. However the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate. For cases in which the provider requests care outside the guidelines the provider should follow the procedure for prior authorization in Rule 16-9."

In the case at bench, the Treatment Guidelines provided parameters for the ALJ to consider when evaluating the proposed surgery, starting with the General Guideline Principles found in W.C.R.P., Rule 17, Exhibit 1. As noted on page 3:

B. GENERAL GUIDELINE PRINCIPLES

…

"**9. Surgical Interventions:** Surgery should be contemplated within the context of expected functional outcome and not purely for the purpose of pain relief. The concept of "cure" with respect to surgical treatment by itself is generally a misnomer. Clinical findings, clinical course, and diagnostic tests must be consistent in order to justify operative interventions. A comprehensive assimilation of these factors must lead to a specific diagnosis with positive identification of pathologic conditions."

As found, Claimant's continued pain complaints were a significant factor in the surgery recommendation. Both Dr. Leimbach's and Dr. Janssen's records are replete with references to Claimant's description of being "miserable", with no relief reported after she received various treatment modalities. More particularly, Claimant reported unrelenting pain that was minimally reduced by any of the treatment modalities tried. (Finding of Fact 35, 38, 40-41, 44-46, 48, 50, 55 and 60). In support of the surgical recommendation, Drs. Leimbach and Janssen also relied heavily on the results of the discogram, which were subjective in nature. Although both physicians found Claimant did not exaggerate her complaints and both believed the surgery would probably resolve her pain. The ALJ was not persuaded that the surgery would receive these pain complaints, however, given the lack of results with both the surgical and non-surgical treatment Claimant received.

The ALJ was persuaded by Dr. Castro's testimony on this subject and finds that the proposed surgery was recommended to resolve Claimant's continued pain. This is an insufficient reason to perform surgery, particularly given the lack of correlation between the pathology and pain complaints.

Third, the potential contraindications for the proposed surgery were not addressed in any detail by Drs. Leimbach and Janssen. The Treatment Guidelines have application related to this issue, as well.

Section G. THEREPEUTIC PROCEDURES-OPERATIVE applies to the case at bench, as noted *infra:*

11. Artificial Lumbar Disc Replacement:

"**a. Description:** This involves the insertion of a prosthetic device into an intervertebral space from which a degenerated disc has been removed, sparing only the peripheral annulus…

…

"General selection criteria for lumbar disc replacement includes symptomatic one-level degenerative disc disease. The patient must also meet fusion surgery

> criteria, and if the patient is not a candidate for fusion, a disc replacement procedure should not be considered. Additionally, the patient should be able to comply with the pre-and post-surgery protocol."
>
> **Contraindications** for the disc replacement surgery include:
>
> - Symptomatic facet joint arthrosis-if imaging findings and physical exam of pain on extension and lateral bending are present, exploration of facet originated pain should be completed prior to disc replacement.
>
>   …
>
> - Spinal instability at the pathologic or adjacent level requiring fusion.
> - Any contraindications to an anterior abdominal approach (including multiple prior abdominal procedures).
>
>   …
>
> - Multiple-level degenerative disc disease (DDD).
>
>   …
>
> - Spondylolysis
>
>   …
>
> - Generalized chronic pain.

The potential contraindications of the proposed disc replacement surgery were not fully reviewed. Given Claimant's extensive treatment and the fact she has had unremitting pain complaints since 2014, she is properly characterized as a chronic pain patient. As found, Drs. Leimbach and Janssen did not fully consider this issue. Rather, both of the ATPs were of the opinion that Claimant was a motivated patient and therefore she should have good result from the surgery. However, Dr. Castro's opinion that the risks of a surgical procedure outweighed the potential benefit of such a procedure was persuasive to the ALJ.

On balance, the ALJ was not persuaded that a further surgical procedure would ameliorate Claimant's substantial pain complaints. As found, Claimant failed to meet her burden of proof on the request for authorization of disc replacement surgery at L4-5.

ORDER

It is therefore ordered that:

1. Claimant’s request for authorization of lumbar disc replacement surgery is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

Whether Claimant has established by a preponderance of the evidence that the left hip arthroscopy recommended by Dr. Johnson is reasonable, necessary, and related to his April 16, 2015 work injury.

FINDINGS OF FACT

1. On April 16, 2015 Claimant sustained an admitted work related injury while working for employer installing sheetrock. On this date, Claimant had been working for employer as a carpenter for approximately one year and one month. Claimant was carrying a ladder down a ramp, slipped on snow, and both of his feet came out from under him. Claimant landed hard on his buttocks.

2. Claimant had been working in construction type jobs for approximately 14 years prior to this incident and had job duties that included using ladders and regular lifting of heavy items.

3. After the fall, Claimant had pain in his back and right hip and his left hip was sore.

4. On April 21, 2015 Claimant was evaluated by Lawrence Cedillo, D.O. Claimant reported back pain and discomfort in his right hip. Dr. Cedillo assessed slip and fall with a contusion of the coccyx with questionable contusion of the sacrum and strain/sprain to the thoracolumbosacral spinal region. Dr. Cedillo noted no signs of bony compromise per x-rays taken on April 16, 2015 but noted that Claimant was subjectively worse since his initial visit on April 16, 2015. Dr. Cedillo recommended Claimant continue with a lumbar support belt, home exercises, and also provided a physical therapy and massage therapy referral. *See* Exhibit J.

5. On April 23, 2015 Claimant was evaluated by Dr. Cedillo. Claimant reported back pain and right leg symptoms with pain and tingling down the right lower extremity to the foot. *See* Exhibit J.

6. On April 23, 2015 Claimant underwent an MRI of his lumbar spine interpreted by Todd Greenberg, M.D. due to his reported pain from the upper back to the buttocks as well as right lower extremity pain. Dr. Greenberg concluded that Claimant had a L5-S1 subtle rightward protrusion crowding the right lateral recess without overt neural compression. *See* Exhibit 2.

7. On April 29, 2015 Claimant was evaluated by massage therapist Anne Shiramizu. Claimant reported that his lower back was very sore and that his left leg was

sore. Ms. Shiramizu noted that Claimant was unable to tolerate massage. *See* Exhibit 3.

8. On April 30, 2015 Claimant was evaluated by Dr. Cedillo. Claimant reported persistent discomfort in the back area, occasional symptoms down the right lower extremity and sometimes the left lower extremity. Dr. Cedillo assessed slip and fall with contusion of the coccyx and questionable contusion of the sacrum and subsequent sprain/strain of the thoracolumbosacral spinal regions. Dr. Cedillo recommended Claimant continue with home exercise, physical therapy, and massage and referred for acupuncture chiropractic care. *See* Exhibit 4.

9. On May 7, 2015 Claimant was evaluated by Jason Gridley, D.C. Claimant reported back pain with numbness extending down the right leg into the foot as well as achiness extending from the lumbosacral spine up into the occiput and back of the head. Dr. Gridley noted pain behaviors that made some maneuvers difficult to perform on examination. Dr. Gridley also noted full motional guarding and inhibitory pain behaviors with light to moderate palpation in the thoracic region. Dr. Gridley noted that Claimant was observed slowly forward bending with fingertips to the shins and had diffuse nonfocal lower back pain extending from the lower thoracic spine to the upper gluteals and laterally to the hips. Dr. Gridley noted that lumbar extension was self limited just beyond neutral with diffuse pain in a similar pattern. Dr. Gridley assessed lumbosacral strain, thoracic myofascial strain, sacral region somatic dysfunction, and myalgia and myositis. Dr. Gridley opined that there was a guarded prognosis moving forward with Claimant based on Claimant's continued pain levels, significant pain behaviors that appeared out of proportion with objective findings, and conflicting examination findings. *See* Exhibit K.

10. On May 8, 2015 Claimant was evaluated by Dr. Cedillo. Claimant reported constant pain worst in regard to his back, but pain and paresthesias down his right lower extremity. Dr. Cedillo referred Claimant to Dr. Lesnak for evaluation and treatment. *See* Exhibit 4.

11. On June 19, 2015 Claimant underwent an MRI of his right hip interpreted by Eduardo Seda, M.D. Dr. Seda found that a survey view of the pelvis showed a normal bony pelvis, SI joints, and pubic symphysis. Dr. Seda found that the intrapelvic soft tissues appeared normal and that the left hip appeared normal. Dr. Seda noted that views of the right hip showed a normal femoral head and acetabulum with rounded contour. Dr. Seda found that the labrum showed a subtle tear at the chondral labral junction at the anterior superior quadrant. His impression was right hip small superior lateral quadrant labral tear. *See* Exhibit G.

12. On July 2, 2015 Claimant was evaluated by Scott Resig, M.D. Claimant reported right hip pain localized to the groin region of the joint. Dr. Resig noted an MRI revealed a labral tear of the right hip and that on examination Claimant's right hip had limited range of motion due to pain. Dr. Resig also examined the left hip and noted full and painless range of motion and no abnormalities. Dr. Resig opined that Claimant had

a labral tear of the right hip and that Claimant may benefit from steroid injection or may need a hip arthroscopy if the injection failed to give him long term relief. *See* Exhibit F.

13. On August 4, 2015 Claimant was evaluated by Dr. Resig. Dr. Resig noted Claimant's continued right hip complaints and noted that an injection performed provided slight help for one hour and only short term relief. Dr. Resig opined that Claimant may benefit from a hip scope and referred him to a hip scope specialist. *See* Exhibit F.

14. On August 6, 2015 Claimant was evaluated by Derek Johnson, M.D. Claimant was noted on examination to have limited range of motion in his right hip and normal range of motion in the left hip. Claimant reported pain in the groin on the right hip. Dr. Johnson assessed hip pain, labral tear of hip, and pincer type femoroacetabular impingement. Dr. Johnson ordered arthroscopy of the hip with femoroplasty (treatment of cam lesion), acetabuloplasty (treatment of pincer lesion), and labral repair. Dr. Johnson opined that Claimant was a candidate for arthroscopic hip surgery for femoral acetabular impingement. *See* Exhibit F.

15. On August 28, 2015 Claimant underwent right hip surgery for labral repair, femoral osteoplasty, and acetabuloplasty performed by Dr. Johnson. Dr. Johnson noted that the MRI was consistent with labral repair and combined cam and pincer femoroacetabular impingement. *See* Exhibit 7.

16. On September 10, 2015 Claimant was evaluated by Dr. Johnson's PA, Mandy Petry for a two week follow up following right hip arthroscopy with labral repair, osteoplasty, and acetabuloplasty. PA Petry noted that Claimant's pain was well controlled, Claimant had painless range of motion, and that the portal sights were benign. *See* Exhibit F.

17. On October 13, 2015 Claimant was evaluated by Dr. Johnson for a six week follow up for the right hip arthroscopy. Dr. Johnson noted that Claimant's pain was moderately controlled but that Claimant had mild pain with range of motion and had not been able to advance to weight bearing without one or both crutches. Claimant reported to Dr. Johnson that his left hip started hurting about two weeks after surgery and felt similar to the way his right hip felt before surgery. Dr. Johnson instructed Claimant to begin more aggressive strengthening to increase range of motion with physical therapy and that in two months time he would like to see Claimant walking without ambulatory aids. Dr. Johnson opined that Claimant's symptoms were much more severe than anticipated for someone six weeks post-op. Dr. Johnson also noted that Claimant was hypersensitive to light touch which was concerning. Dr. Johnson noted that if Claimant's left hip symptoms persisted they would re-assess as the left hip pain may be due to altered gait and recovery of right hip surgery. *See* Exhibit F.

18. On November 10, 2015 Claimant was evaluated by Dr. Johnson. Dr. Johnson noted exquisite localized tenderness present over the hip flexors on the right hip examination and significant pain and guarding with flexion and internal rotation on

the left hip examination. Dr. Johnson ordered an MRI of the left hip for evaluation of labral pathology. *See* Exhibit F.

19. On November 20, 2015 Claimant underwent an MRI of the left hip interpreted by Scott Lowe, M.D. Dr. Lowe found a prominent bony protuberance at the lateral femoral head neck junction which likely pre-disposes to a cam-type of femoral acetabular impingement. Dr. Lowe found abnormal signal traversing the anterosuperior labrum suggestive of a labral tear, mild thinning of articular cartilage overlying the superolateral femoral head and acetabulum. His impression was a mild cam type of femoral acetabular impingement with evidence for tearing of the anterosuperior labrum, and mild chondral degeneration within the weight bearing portion of the left hip. *See* Exhibit G.

20. On December 3, 2016 Claimant was evaluated by PA Petry. PA Petry assessed labral tear of left hip and left femoroacetabular impingement. PA Petry ordered arthroscopy of the hip joint with labral repair, acetabuloplasty (treatment of pincer lesion), and femoroplasty (treatment of cam lesion). PA Petry opined that Claimant was a candidate for arthroscopic hip surgery for femoral acetabular impingement and noted that they would begin the authorization process for surgery with workers' compensation. *See* Exhibit F.

21. On December 30, 2015 Allison Fall, M.D. performed an independent medical evaluation. Dr. Fall reviewed medical records, spoke with Claimant, and performed a physical examination of Claimant. Claimant reported low back pain, pain as well as cramps and a pins and needles sensation in the right hip, and left hip pain. Dr. Fall noted that examination was difficult due to significant pain behaviors. Dr. Fall noted positive Waddell's signs with pain to very light touch in the lower lumbar area and pain in the low back that reportedly limited Claimant's bilateral shoulder range of motion which Dr. Fall opined was non-physiologic. Dr. Fall noted inconsistencies in Claimant's self-limitations on exam. Dr. Fall assessed: fall leading to lumbosacral contusion and right hip injury; complaints of low back pain without correlating objective findings and with subjective complaints greatly out of proportion; and complaints of left hip pain with MRI revealing findings consistent with femoroacetabular impingement and possible associated labral tear and mild chondral degeneration. *See* Exhibit D.

22. Dr. Fall opined that Claimant's left hip condition was the result of a non-work related underlying condition. Dr. Fall opined that overcompensation and using the left leg while on crutches for the right hip surgery would not lead to intrinsic hip pathology and that compensation does not result in increased wear and tear of the contra lateral joint. Dr. Fall noted that typically there is less activity and stress on the uninvolved extremity as overall general activity is decreased following surgery. *See* Exhibit D.

23. On January 14, 2016 Claimant was evaluated by Dr. Johnson. Claimant reported the pain in his left hip was getting worse and was primarily in the groin region with a pain rating of 9-10/10. Dr. Johnson assessed left hip pain and left labral tear of

hip with femoroacetabular impingement – cam. Dr. Johnson noted that Claimant was a candidate for hip arthroscopy for the left hip and that they were working with workers' compensation for authorization. *See* Exhibit 7.

24. On February 26, 2016 Claimant underwent an independent medical evaluation performed by Edwin Healey, M.D. Dr. Healey reviewed medical records, spoke with Claimant, and performed an examination. Claimant reported continued chronic disabling pain involving both his low back and right hip as well as left hip pain that started two weeks after the right hip surgery that gradually increased in intensity and was now greater than his right hip pain. Claimant attributed his left hip pain to the fact that he was on crutches with minimal weight bearing on his right lower extremity from the surgery in late August until mid December, then on one crutch until mid January. Claimant reported that by this favoring, he developed pain in his left hip almost identical to the similar pain in his right hip and groin that resulted in his need for surgery. Dr. Healey noted pain behaviors on examination, and opined that Claimant appeared to be mildly depressed and anxious. *See* Exhibit 9.

25. Dr. Healey opined that Claimant's left hip pain and the abnormal MRI demonstrating mild cam type femoroacetabular impingement with evidence of tearing of the anterior superior labrum was causally and directly related to Claimant's April 16, 2015 work injury. Dr. Healey noted that Claimant had no history of pre-existing hip pain and opined that the requirement for left hip arthroscopy and surgery was reasonable, necessary, and causally and directly related to the April 16, 2015 injury. Dr. Healey opined that although Claimant has a congenital abnormality of both hips that predisposes him to developing chronic hip pain and degenerative arthritis and labral tears of the hip, the slip and fall injury resulted in permanent aggravation of the underlying asymptomatic right hip congenital abnormality and the fact that Claimant had to compensate by bearing most of his weight on the left lower extremity for four months after the right hip surgery resulted in permanent aggravation of the left hip pre existing cam femoroacetabular impingement and the labral tear of the left hip. Dr. Healey opined that Claimant probably would have eventually required the surgical procedures recommended by Dr. Johnson even if he had not sustained the April 16, 2015 injury but that the injury resulted in requiring the surgical procedures prematurely. *See* Exhibit 9.

26. On March 14, 2016 Michael Ladwig, M.D. and Hector Brignoni, M.D. authored a letter to Respondent's counsel. The doctors opined that an MRI of the left hip cannot determine the age of a tear. The doctors opined that it was possible based on Claimant's mechanism of injury that a tear occurred in the left hip on April 16, 2015 and that the symptoms did not manifest until the right hip began to improve after the right hip surgery. *See* Exhibit 8.

27. Claimant's testimony is found credible and persuasive. Claimant had been working in construction type jobs for 14 years prior to this injury without any prior problems in his back or hips. After the fall on April 16, 2015 Claimant had immediate soreness in his left hip and reported symptoms consistent with that to Dr. Cedillo and to massage therapist Shiramizu. Claimant also developed significant left hip pain shortly

after his right hip surgery which he reported to Dr. Johnson. Following his right hip surgery, Claimant had to bear his entire weight on his left hip and leg. Claimant was using crutches, one crutch, and a cane for several months where he was bearing most all his weight on his left leg and hip. Claimant's left hip was asymptomatic prior to his work injury, was slightly sore and had some pain following his April 16, 2015 injury, and developed into significant pain a few weeks after bearing his entire weight on it following his right hip surgery. This pain and the left hip symptoms would not have existed but for his work related injury.

28. The opinions of Dr. Healey and Dr. Johnson are found credible and persuasive. As a result of Claimant's April 16, 2015 injury, Claimant's left hip became symptomatic. Although Claimant was predisposed to developing left hip symptoms due to his underlying and asymptomatic femoroacetabular impingement, Claimant did not develop pain or symptoms requiring treatment until he bore full weight on his left hip and leg for several months following his right hip surgery. The overcompensation and use of his left hip during this time caused his left hip to become symptomatic.

29. The opinion of Dr. Fall is not found as persuasive. Although Dr. Fall disagrees that Claimant's left hip symptoms could be due to overcompensation or overuse, the studies and literature referenced by her do not pertain to someone who has a pre-existing femoroacetabular impingement in the hip. Here, Claimant's underlying and non work related condition would make him more susceptible to labral tears from increased weight bearing or overuse. The opinions of Dr. Healey and Dr. Johnson are more credible that Claimant aggravated his underlying asymptomatic condition in the left hip by overuse following his right hip surgery.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or

improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000).

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).). Where relatedness, and/or reasonableness, or necessity of medical treatment is disputed, the claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.*, W.C. No. 4-117-758 (ICAO, April 7, 2003). A pre-existing condition does not disqualify a Claimant from receiving workers' compensation benefits. *Duncan v. ICAO*, 107 P.3d 999 (Colo.App. 2004). Further, if a pre-existing condition is stable but is aggravated by an occupational injury the resulting occupational injury is still compensable because the incident caused the dormant condition to become disabling. *Siefried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986). Thus, if an industrial injury aggravates, accelerates, or combines with a pre-existing condition so as to produce disability and need for treatment, the claim is compensable. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Indus. Comm'n v. Newton Lumber & Mfg. Co.,* 314 P.2d 297 (Colo. 1957).

Although Claimant had a pre-existing congenital condition of his left hip, femoroacetabular impingement, which predisposed Claimant to developing hip pain, Claimant did not have hip pain and was asymptomatic in his left hip until his work related injury. His pre-disposition to developing left hip symptoms or tears due to his congenital condition was exacerbated when he spent several months following his right hip surgery bearing weight primarily on his left leg and hip which had the congenital abnormality. Several months placing all of his weight onto his congenitally abnormal left hip led Claimant to developing left hip symptoms and pain which are found, more likely than not, to be related to his work injury. Claimant reported the left hip pain within a few weeks of his right hip surgery and within a few weeks of having to bear all of his weight onto his congenitally abnormal left hip due to his work injury. Although Claimant overall was less active following his right hip surgery, all of his activity and movement required him to bear his entire weight onto his left leg and left hip. This aggravated his underlying left hip congenital abnormality, caused him pain, and caused his current need for left hip treatment including surgery.

The opinions of Dr. Johnson and Dr. Healey are found credible and persuasive in this regard. The opinion of Dr. Fall is not found as credible or persuasive. Dr. Fall's opinion on overcompensation following Claimant's right hip surgery did not take into account the full weight bearing that Claimant had to place on his left hip which had an underlying congenital abnormality. Although Dr. Fall opined that Claimant would be less active overall following his right hip surgery, the requirement of placing his full body weight onto his left hip is found significant. Further the literature cited by Dr. Fall discrediting an overcompensation injury to the contra lateral side was not based on studies where a person had a congenital abnormality on the contra lateral side that would pre-dispose them to developing an injury on the contra lateral side. Here, Claimant did have an underlying congenital abnormality that predisposed him to developing an injury on his left hip when he was required to bear his full weight on that hip for several months. The ALJ does not find persuasive that Claimant's left hip condition was the same prior to his April 16, 2015 injury as it is now. Rather, the ALJ finds persuasive the opinion of Dr. Healey that Claimant's right hip surgery and work injury caused an injury to and aggravation of Claimant's underlying asymptomatic left hip condition and is the reason for Claimant's current need for left hip treatment.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that treatment of his left hip is causally related to the April 16, 2015 work injury.

2. Respondents are liable to provide medical treatment reasonably necessary to cure and relieve Claimant from the effects of the left hip labral tear and aggravation of his pre-existing femoroacetabular impingement, including the left hip surgery recommended by Dr. Johnson.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 19, 2016

/s/ Michelle E. Jones

Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-975-235-03

ISSUES

➢ Whether Claimant has proven by a preponderance of the evidence that he suffered a compensable injury arising out of and in the course of his employment with Employer on November 18, 2014?

STIPULATIONS

✓ The parties have agreed to hold in abeyance the issues of temporary total and temporary partial disability benefits.

✓ The parties have agreed that should the claim be found compensable, Claimant's average weekly wage is $1,198.57.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Employer hired Claimant on March 31, 2014, as a material handler, to work the 6:00 a.m. to 6:00 p.m. shift.

2. Claimant's job duties included transferring chemicals from incoming railroad tank cars and tanker trucks into mobile storage tanks. Claimant used hoses to perform the transfers which could involve climbing up onto the railroad cars to connect and disconnect the hoses.

3. On November 17, 2014, Claimant was reprimanded by William Bell, his immediate supervisor, for drinking a beverage in the "solvent fill area" in violation of Employer's policy. Claimant did so in front of a new employee. When Mr. Bell asked Claimant why he was drinking in that area, Claimant reportedly shrugged his shoulders and said, "Go ahead and write me up," and continued drinking his beverage. Mr. Bell wrote up the incident as a verbal warning which Claimant refused to sign at the beginning of his shift on November 18, 2014.

4. Claimant testified that during the middle of his shift on November 18, 2014, he was on a ladder on the side of a railroad tank car removing a hose he had disconnected. As he climbed down from the top of the car, he slipped off of the ladder and fell approximately six to eight feet to the ground, landing on his buttocks. Claimant did not seek immediate medical treatment, but rather finished working the remainder of his shift. Claimant's fall was not witnessed. Claimant testified that when he awoke the next morning, he "could hardly move." Again, he did not seek medical treatment. He testified that he told his "lead" about the fall the following day, and did not mention it to anyone else. Claimant continued

to work until February 8, 2015, when he reported to Employer that he had injured multiple areas of his trunk.

5. Claimant testified that before the alleged November 18, 2014, incident, he had no injuries to his back. This testimony is inconsistent with the medical records of Stephanie Canada, DC. Claimant initially saw Dr. Canada on June 21, 2014, for low back pain which he described as constant and greater than 5/10 on a pain scale. Her records dated July 21, 2014, document an extensive examination of Claimant based on his reports of low back pain beginning in mid-June, 2014; bilateral hip pain; bilateral shoulder pain; and neck pain. Dr. Canada diagnosed Claimant with Lumbar/Lumbosacral segmental dysfunction and cervical segmental dysfunction. Claimant returned to Dr. Canada on August 1, 2014, for continued treatment. Dr. Canada's objective findings included joint restrictions in the spine and aberrant mobility in the lumbar spine. Claimant continued to complain of soreness in his low back, tenderness in his upper-mid back, aching in his hips, and stiffness in his neck. Claimant reported that each of his complaints was worsened by his work activities. Claimant experienced a flare of symptoms on July 25, 2014, and sought additional treatment. Despite these medical records, Claimant argues that in retrospect, his alleged fall on November 18, 2014, was the beginning of all of his back problems.

6. Claimant testified that sometime between December 5, 2014 and December 12, 2014, he spoke to his supervisor, Matt Cubbison, telling him that he had "messed up [my] back at work." According to Claimant, Mr. Cubbison advised him to use short term disability for his time off work rather than file a Workers' Compensation claim.

7. On December 12, 2014, Claimant's primary care physician, Dr. Erin Shore, referred Claimant for an MRI of his lumbar spine. The MRI showed at L4-5 mild disc narrowing with a left lateral disc bulge extending into the left foramen with mild foraminal narrowing but no deformity to the nerve root. There were no abnormal findings at any other level.

8. On December 28, 2014, Claimant sent a text to his supervisor at work saying he would be unable to work that night as he had thrown his back out shoveling his driveway.

9. On January 28, 2015, Claimant sought treatment with a spine specialist, Dr. Barker. Claimant reported to Dr. Barker that his low back and right leg pain had come on gradually but had become more severe. He reported that the pain began about 6 months earlier – which would be June 2014 – and that he treated with a chiropractor and took over the counter pain medication and the muscle relaxant Flexeril. Dr. Barker read the lumbar spine MRI, noting a large facet cyst on the right at L5-S1 which was causing compression on the right L5 nerve root in the foramen. Dr. Barker believed Claimant's right leg pain was caused by the foraminal stenosis he saw at the level on the MRI, and attributed Claimant's back pain to degenerative disc disease and severe facet arthropathy at L4-L5, L5-S1.

10. On February 4, 2015, Claimant was again disciplined by his supervisor with a written warning for reporting to Matt Cubbison that he had :buttoned everything up" at the end of his shift, when in fact he had left a dome lid open and had not secured a bottom cap on a half-full tank car in violation of FRA rules. Employer put Claimant in a Performance Improvement Plan which notified him that

    - Immediate improvement was required in his work performance;

    - Employer required him to make immediate and significant progress toward improving his work performance; and

    - Failure to meet Employer's expectations would result in additional corrective action up to and including termination of his employment.

11. Claimant testified that in February 2015, he consulted with an attorney to determine whether he should file a claim for workers' compensation or for short term disability. He decided to pursue a workers' compensation claim.

12. The first notice to management of an alleged injury was on February 8, 2015.

13. On February 8, 2015, Claimant sought additional medical care, reporting an incident in early January 2015 in which he "missed two basement steps" with low back pain worsening to 8/10. He also reported that his back pain worsened that morning when his left leg gave out as he got out of bed.

14. Claimant underwent physical therapy on Dr. Barker's prescription beginning on February 6, 2015 for approximately eight sessions. At his first appointment, Claimant reported that his back pain had had a gradual onset over the past four months. On February 12, 2015, Claimant told his physical therapist that his back pain had begun to interfere with his ability to work on January 1, 2015 and had been a problem every day since then. Dr. Ashworth, a physical therapist, recommended that Claimant not work "at this time." The letter is undated and addressed "to whom it may concern."

15. On February 17, 2015, the third party adjuster of this claim filed an Employer's First Report of Injury. The date of injury provided was November 18, 2014. The First Report did not identify a fall at work, but rather indicated the cause of injury was "work related duties."

16. On March 2, 2015, Insurer filed a Notice of Contest stating that the claim required further investigation.

17. On April 6, 2015, Claimant was again evaluated by Dr. Barker. Claimant stated that he had back pain since the summer of 2014. Claimant added that he was injured at work in November 2014 when he slipped and fell while he was on a rail car and that his pain had worsened since then.

18. On August 5, 2015, Claimant received an epidural steroid injection at L-5 area from Dr. Dobrow. Claimant reported pain of 8/10 both pre- and post-injection.

19. From the beginning of his evaluation and treatment of Claimant, Dr. Barker noted lumbar stenosis, lumbar spondylosis and lumbar degenerative disease. After physical therapy was essentially ineffectual, Dr. Barker stated that if the steroid injection failed that Claimant would be unable to return to work and would likely need an L4-S1 decompression and fusion operation.

20. Claimant testified that he has continued to suffer low back and leg pain of sufficient strength that he has been unable to continue to work and was placed on SSDI in January 2016.

21. The ALJ finds that Claimant is not a credible or persuasive witness. He variously reported when his back pain started, and medical records support that he sought treatment for lumbar back pain prior to the alleged date of injury. Claimant variously reported that his back pain came on gradually and that he attributes all of his back pain to an alleged, unwitnessed fall. The ALJ finds it highly unlikely that Claimant, who consistently sought treatment for his health problems, did not seek treatment after falling six to eight feet and landing on his back. The ALJ also finds the timing of Claimant's alleged fall and the timing of the filing of his claim to be suspiciously coincidental with his verbal reprimand and his performance improvement plan.

22. Claimant has not proven by a preponderance of the evidence that any of his back pathology is related to his alleged fall or other work duties.

23. Nor has Claimant established by a preponderance of the evidence that any of his work duties or his alleged fall aggravated, exacerbated, or accelerated his pre existing back symptoms and caused the need for additional medical treatment.

24. Claimant has not proven by a preponderance of the evidence that he suffered a compensable injury arising out of and in the course of his employment with Employer on November 18, 2014.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The injured worker has the burden of proof by a preponderance of evidence of establishing entitlement to benefits. C.R.S. § 8-43-201 and 8-43-210; *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). A "preponderance of evidence" is a quantum of evidence that makes a fact, or facts, more reasonably probable or improbable, than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). The ALJ determines the credibility of a witness. *Arenas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). The fact finder should consider among other things the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony, and actions; the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil, 3:16 (2005).

The ALJ has found Claimant not to be a credible witness. He variously reported when his back pain started, and medical records support that he sought treatment for lumbar back pain prior to the alleged date of injury. Claimant variously reported that his back pain came on gradually and that he attributes all of his back pain to an alleged, un-witnessed fall. The ALJ finds it highly unlikely that Claimant, who consistently sought treatment for his health problems, did not seek treatment after falling six to eight feet and landing on his back. The ALJ also finds the timing of Claimant's alleged fall and the timing of the filing of his claim to be suspiciously coincidental with his verbal reprimand and his written reprimand and performance improvement plan.

For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. § 8-41-301(1)(c) C.R.S.; *Faulkner v. Industrial Claim Appeals Office,*12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Faulkner*, 12 P.3d at 846. A claimant is required to prove by a preponderance of the evidence that the alleged injury was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999).

Claimant provided no persuasive evidence that his back pathology was related either to his work or to a specific work injury. His testimony was not credible.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim is denied and dismissed.

2. Issues not expressly decided herein are reserved to the parties for future determination.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. DATED: May 18, 2016

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUE

This is a fully contested disfigurement hearing wherein the respondent asserts there is no disfigurement.

FINDINGS OF FACT

1. On September 22, 2014, the claimant was getting close to the end of the work day when she slipped and fell with one leg ending up under the other leg like a 'pretzel.'

2. The claim was admitted and the claimant underwent treatment for her injury.

3. On November 30, 2015 Dr. Dwight Leggett, the authorized treating physician (ATP), released the claimant at maximum medical improvement (MMI), with a work-related diagnosis of left hip contusion and left knee contusion, per the WC 164. The claimant's date of MMI was June 12, 2015 (although the WC 164 states the date of MMI as June 12, 2014, this date predates the date of injury and the ALJ finds this to be a typographical error; additionally the body of the report dated October 30, 2015 identifies the date of MMI as June 12, 2015).

4. The claimant underwent a functional capacity evaluation (FCE) on June 2, 2015. The claimant was found to exert poor effort resulting in borderline FCE results.

5. The claimant was released on June 12, 2105 with no impairment and with permanent restrictions of no lifting greater than 20 pounds, no ladder use, and limited kneeling and crawling.

6. The claimant was captured on video surveillance on June 2 and June 3, 2015. The ALJ finds that the claimant was walking with a normal gait for the vast majority of the video; although on occasion it appears that there is a slightly perceptible altered gait.

7. The claimant demonstrated her gait at the hearing. The ALJ observed at the hearing that the claimant had a very slight alteration of gait favoring the left leg.

8. The ALJ finds that the video surveillance is more credible and persuasive than the in-court demonstration.

9. In addition to the gait the ALJ observed that the claimant's left knee had a swollen appearance when compared to the right knee.

10. The ALJ finds that the claimant has failed to establish that it is more likely than not that she sustained a permanent alteration of gait.

11. The ALJ finds that the claimant has established that it is more likely than not that, as a result of her September 22, 2014 work injury, the claimant has a visible disfigurement to the body consisting of a left knee that is permanently swollen in appearance when compared to the right knee. Thus, the claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles the claimant to additional compensation. Section 8-42-108 (1), C.R.S.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102 (1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592, P .2d 792 (1979); *People v. M.A.,* 104 P .3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A workers' compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P .3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and

actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. The respondent is liable for payment to the claimant for serious permanent disfigurement to areas of the body normally exposed to public view. Section 8-42-108 (1), C.R.S.

5. As found above, the ALJ concludes that the claimant has failed to establish by a preponderance of the evidence that she sustained a permanent alteration of gait.

6. As found above, the ALJ concludes that the claimant has established by a preponderance of the evidence that she sustained a permanent swelling of the left knee which entitles the claimant to additional compensation. Section 8-42-108 (1), C.R.S.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

1. The claimant’s claim for disfigurement benefits for an altered gait is denied and dismissed.

2. The respondent shall pay the claimant $800.00 for disfigurement to the left knee for its swollen appearance.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

5. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

Whether the claimant has established, by a preponderance of the evidence, that the surgery recommended by Dr. Fitzpatrick is reasonable and necessary.

FINDINGS OF FACT

1. The claimant was injured on March 9, 2014. He suffered an injury to his right shoulder and right knee.

2. The claimant underwent a surgery to his right shoulder on May 8, 2014. That surgery was performed by Dr. Jennifer Fitzpatrick.

3. That surgery was successful and the claimant was well on the way to recovering from the industrial injury when his shoulder worsened. The claimant believes the shoulder worsened as a result of the repetitive nature of the light duty work he was placed on after the surgery.

4. The claimant returned to Dr. Fitzpatrick for additional treatment after his condition worsened. The claimant complained of increased pain in the shoulder.

5. Dr. Fitzpatrick determined that the claimant suffered from increased pain as well as tendinitis with associated bursitis. Dr. Fitzpatrick recommended another surgery to repair the claimant's right shoulder.

6. Dr. Fitzpatrick believes that the surgery she recommended was reasonable and necessary and would relieve the effects of the industrial injury. Dr. Fitzpatrick also observed that the claimant underwent a diagnostic injection and that the injection indicated that an additional surgery would be helpful to relieve the effects of the industrial injury. Dr. Fitzpatrick had seen the claimant at all stages of his recovery.

7. Dr. Failinger testified by deposition. Dr. Failinger has misgivings about the nature and extent of the proposed surgery, indicating that he believes the intended surgery would have a low medical probability of success. He acknowledges, however, that the longer the time lapse without improvement the less likely it is that the pain would subside in the future.

8. The ALJ finds Dr. Fitzpatrick's testimony and analyses to be credible and more persuasive than medical opinions and analyses to the contrary.

9. The ALJ finds that the claimant has established that it is more likely than not that the surgery recommended by Dr. Fitzpatrick is reasonable and necessary to relieve the claimant from the effects of the industrial injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102 (1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592, P .2d 792 (1979); *People v. M.A.,* 104 P .3d 273, 275 (Colo. App. 2004).

2. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A workers' compensation case is decided on its merits. §8-43-201, C.R.S.

3. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P .3d 385, 389 (Colo. App. 2000).

4. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

5. In deciding whether claimants have met their burden of proof, the ALJ is empowered, "To resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from

the evidence." *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002).

6. The question of whether the claimant met his burden of proof is one of fact for determination by the ALJ. *See Jefferson County Public Schools v. Dragoo*, 765 P.2d 636 (Colo. App. 1988)

7. The claimant is entitled to medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury. *See* § 8-42-101(1), C.R.S. 2003; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.*, W.C. No. 4-117-758 (ICAO April 7, 2003).

8. As found, the ALJ concludes that Dr. Fitzpatrick's analyses and opinions are credible and more persuasive than medical analyses and opinions to the contrary.

9. The ALJ concludes that the claimant has established by a preponderance of the evidence that the surgery recommended by Dr. Fitzpatrick is reasonable and necessary to cure or relieve the claimant from the effects of his industrial injury.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

1. The respondent shall authorize and pay for the surgery as recommended by Dr. Fitzpatrick.

2. The respondent shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

The issue to be determined is whether the claimant has established by a preponderance of the evidence that the request for 12 additional acupuncture sessions is reasonable and necessary treatment to cure or relieve the claimant from the effects of his industrial injury.

FINDINGS OF FACT

1. The claimant was a patient representative for the respondent-employer who incurred a compensable work-related injury on March 6, 2006. The claimant was putting away x-ray jackets that weighed about 20 to 40 pounds, when he felt a pull in his groin.

2. The claimant suffered a right sided hernia for which he has a surgical repair.

3. The claimant then suffered from back pain. He went through physical therapy and it was ultimately determined that the back pain also emanated from the work-related injury. The claimant underwent back surgery in 2008.

4. The claimant's symptoms have included right sided low back pain; aching; pain; throbbing, as well as right leg numbness; pain; and tingling, with aching on the inner thigh down to the toes.

5. The claimant had been prescribed Vicodin, muscle relaxers, and nerve medications.

6. The claimant was placed at maximum medical improvement in June 2009.

7. The claimant continued to suffer pain in his leg subsequent to his back surgery. The claimant recommended to Dr. Olson, the authorized treating physician, that he undergo a regimen of acupuncture. While initially not inclined to do so, Dr. Olson ultimately prescribed such treatment for the claimant as post-MMI maintenance treatment.

8. The claimant eventually had over 100 sessions of acupuncture from March 4, 2010 through September 5, 2015.

9. On January 26, 2011 the claimant underwent an independent medical evaluation (IME) with Dr. David Richman.

10. Dr. Richman noted the claimant’s work injury from lifting in March 2006.

11. The claimant has experienced low back pain radiating to the right root.

12. Over the intervening years the claimant has had physical therapy, injections, medications (including narcotics), discectomy back surgery, and a rhizotomy.

13. These treatments have offered occasional relief. However, claimant continues to experience chronic pain. As of 2009 no treatment had completely relieved the claimant’s pain condition.

14. Starting in March 2010 the claimant began a regimen of acupuncture prescribed by ATP Daniel Olson.

15. Dr. Richman found that the acupuncture treatments had allowed the claimant to work and had eliminated the need for pain medication.

16. Dr. Richman concluded his IME report by saying, “I think it is reasonable to continue with the medical acupuncture because of its apparent clinical effect on reduction of pain and his continued high level of functional status in continuing to work full time.”

17. In August 2013 the respondents again challenged claimant’s acupuncture treatment. The respondents obtained an IME from L. Barton Goldman.

18. Dr. Goldman conducted an IME of the claimant. He ultimately opined that he would recommend continuing acupuncture sessions if they were used in conjunction with other modalities of treatment.

19. In Dr. Goldman’s August 12, 2013 IME report he references the previous IME reports of Dr. Richman and Dr. Pitzer (who both recommended continued acupuncture). Additionally, ATP Dr. Olson continues to recommend ongoing acupuncture.

20. Dr. Goldman concluded his IME report by saying, “Consistent with the above discussion, this examiner does not find that there is absolutely no rationale for further acupuncture from a maintenance perspective in [the claimant’s] case as it relates to his work related injury of 2006, ...”

21. Subsequent to Dr. Goldman’s recommendation, Dr. Olson continued to prescribe

acupuncture but without the adjunct therapies.

22. Dr. Olson opined in a letter dated November 3, 2015 that the claimant was benefiting from ongoing acupuncture as it was reducing his pain and decreased his need for pain medications.

23. The ALJ finds Dr. Olson's analyses and opinions to be credible and persuasive and they are supported by other medical practitioners as found above.

24. The ALJ finds that the claimant has established that it is more likely than not that the acupuncture treatments as recommended by Dr. Olson are reasonable and necessary treatment related to the claimant's work-related injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S.

2. A claimant in a worker's compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

3. The facts in a worker's compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A worker's compensation case is decided on its merits. Section 8-43-201, C.R.S.

4. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

5. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

6. The respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). The question of whether a particular medical treatment is reasonable, necessary, and causally related is one of fact for determination by the ALJ. *Kroupa v. Indus. Claim Appeals Office, supra; Wal-Mart Stores, Inc. v. Indus. Claims Office*, 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990).

7. Medical benefits after MMI may be ordered when they are necessary to cure or relieve the employee from the effects of the injury. *§ 8-42-101, C.R.S.; Grover v. Industrial Commission, 759 P.2d 705 (Colo. 1988)*. Before an Order for Grover medical benefits may be entered, there must be substantial evidence in the record to support a determination that future medical treatment will be reasonably necessary to relieve the injured worker from the effects of the work-related injury or occupational disease*. Grover Id.*

8. Determining the reasonableness and necessity for treatment may involve various considerations including assessment of the risks associated with the procedure, the cost of the treatment when compared to expected benefit, and the duration of expected symptomatic relief. *Kroupa v. Mercy Medical Center*, W.C. No. 3-113-588 (ICAO January 7, 2002) citing *City of Durango v. Dunagan,* 939 P.2d 436 (Colo. App. 1997).

9. The claimant is not entitled to medical care that is not causally related to her work-related injury or condition. As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 10, 2007), "A showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary." Where the relatedness, reasonableness or necessity of medical treatment is disputed, the claimant has the burden to prove that the disputed treatment is causally related to the injury and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.*, W.C. No. 4-117-758 (ICAO April 7, 2003).

10. As found, the ALJ concludes that Dr. Olson’s analyses and opinions are credible and more persuasive than medical analyses and opinions to the contrary.

11. The ALJ concludes that the requested regimen of acupuncture is reasonably necessary to cure or relive the claimant from the effects of his industrial injury.

12. The ALJ concludes that the claimant has established by a preponderance of the evidence that the acupuncture treatments as recommended by Dr. Olson are reasonable and necessary treatment related to the claimant’s work-related injury.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

1. The respondent-insurer shall authorize and pay for the acupuncture treatment as recommended by Dr. Olson.

2. The respondent-insurer shall pay statutory interest at the rate of eight percent (8%) per annum on all amounts due and not paid when due.

3. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. Colorado Springs, CO 80906

ISSUE

Whether the claimant proved, by a preponderance of the evidence, that the spinal cord stimulator trial, for which Dr. Robert Kawasaki has requested prior authorization, is reasonable and necessary.

FINDINGS OF FACT

The ALJ finds and concludes the spinal cord stimulator trial should be denied for the following reasons.

1. The claimant's testimony that she does not want the procedure, and even if the procedure were authorized, she would not proceed is credible and persuasive, especially in light of Dr. Shih's credible and persuasive testimony that a patient's feelings about a procedure affect the outcome of the procedure by up to approximately 30 percent according to recent literature.

2. Dr. Shih testified as an expert in physical medicine and rehabilitation. His testimony was credible and persuasive that a Chronic Regional Pain Syndrome (CRPS) diagnosis is based on three criteria. First, the pain is generally greater than expected based on the mechanism of injury. Two, nonspecific pain findings are present. Three, there are dystrophic changes in the skin, hair and nails, together with asymmetries in the sweat patterns and discoloration of the skin.

3. Dr. Shih performed an April 6, 2016 IME of the claimant. While other medical providers found dystrophic changes present on their examinations of the claimant, he did not note them during his examination.

4. A spinal cord stimulator trial involves surgically placing wires near the claimant's spinal cord, implanting a battery and receiver. A spinal cord stimulator works by creating a stimulus that may create a perception in the patient of decreased pain. The procedure of implanting a spinal cord stimulator has some risks, although infrequent, of life-threatening consequences. It also bears the risks associated with surgery next to the spinal cord. The ALJ finds the risks outweigh the likely outcome of potentially having no effect and that the risk, given the claimant's history, of greatly worsening her symptoms.

5. Colorado's Medical Treatment Guidelines require two positive diagnostic tests to diagnose CRPS. The claimant had one positive test, which was a thermogram performed by Dr. Tashof Bernton. Another diagnostic test was

the stellate ganglion block, which is usually the “gold standard”, and was performed on the claimant, but the results were non-diagnostic. In addition, the claimant reported a dramatic increase in her symptoms following the stellate ganglion block. Dr. Shih does not recommend a spinal cord stimulator trial whether or not the claimant were diagnosed with CRPS, one because of the low success rate of the procedure and two because of the claimant’s negative response to the stellate ganglion block. These same factors reinforce the claimant’s position that she would not receive the procedure even if it were approved

CONCLUSIONS OF LAW

Given the above Findings of Fact, and the pertinent case law, the ALJ finds and concludes the claimant has not met her burden of proving, by a preponderance of the evidence, that the request for authorization of a spinal cord stimulator trial is reasonable and necessary.

ORDER

It is therefore ordered that:

1. The request for prior authorization of a spinal cord stimulator trial is denied.

2. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 633 17th Street, Suite 1300, Denver, Colorado, 80202. (Please note the new address for the Denver Office, effective November 12, 2013, is: 1525 Sherman Street, 4th Floor, Denver, CO 80203). You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATE:

/s/ Kimberly Turnbow:

Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, Fourth Floor
Denver, CO 80203

ISSUES

The issues to be determined by this decision are the following:

I. Whether Claimant has proven, by a preponderance of the evidence, that he sustained a compensable work injury to his left shoulder on June 25, 2015.

II. Whether Claimant has proven, by a preponderance of the evidence, his entitlement to reasonable, necessary and related medical benefits, including surgery recommended by Dr. Geoffrey Doner.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant is a long time employee of Employer, having worked for the company for approximately 20 years. Claimant works as a machine operator and materials handler. Claimant's duties consist, in part, of moving products on and off various machines in order to process and package inventory. In performing his job, Claimant is frequently required to pick up and move wooden pallets.

2. On June 25, 2015, Claimant was lifting a 3 x 5 foot pallet[1] up off the floor to put it on a waist high table. In doing so, Claimant gripped the pallet from the top with his hands on opposite sides of the pallet and picked it up. Once the pallet was a little above waist level, Claimant twisted his body and extended, i.e. flexed and abducted his arms to the left while at the same time crossing his right arm across the front of his torso in an attempt to set the pallet down on the table. Claimant's elbows were slightly flexed as the pallet was too heavy to hold with his arms fully extended out from his body. While attempting this maneuver, Claimant felt a pop in his shoulder and experienced immediate pain in the center of his biceps extending up into his left shoulder. The pain was severe enough that he dropped the pallet onto the table. A co-worker turned around when he heard the pallet drop onto the table.

3. Claimant notified his supervisor, Marco Rivera within "minutes" that he was injured. Mr. Rivera then transported Claimant to Centura Centers for Occupational Medicine (CCOM) for evaluation.

[1] The pallet frame was constructed of several 2x4's and had 1x3 inch top plates. According to Claimant, the pallet weighed approximately 20 to 30 pounds.

4. At CCOM, Claimant was seen by the physician's assistant (PA) Joseph Mullen. Claimant gave PA Mullen a history of "[lifting] a pallet in front of his body and [feeling] a sudden pop and pain in the left upper arm." Claimant described the pain as dull, becoming "sharp if he moved wrong, specifically lifting his arm forward or to the side." Claimant denied previous injury to his left shoulder or arm but advised the doctor of a previous right rotor cuff repair. Physical examination revealed "[tenderness] to direct palpation over the proximal biceps." No ecchymosis was observed, although "resisted elbow flexion [caused] proximal biceps pain." Speed's Test was negative. PA Mullen also noted "internal rotation to T10 with a positive lift off test." External rotation was limited to "45 degrees with anterior shoulder pain." Abduction was limited to "75 degrees with anterior shoulder pain." "Empty can test was negative", and "O'Brien's testing caused "some pain" in both the "thumb up" and "thumb down" positions. PA Mullen diagnosed an upper left arm and shoulder strain, along with left biceps tendonitis. PA Mullen opined that Claimants diagnoses were related to the work incident, noting specifically that the "cause of this problem is related to work activities." Claimant was instructed to ice the area and initiate pendulum exercises.

5. On July 1, 2015, Claimant returned to CCOM for follow-up. Claimant advised PA Mullen that his pain had "gotten worse with constant aching, and sharp pain with reaching overhead or away from the body" despite the recommended treatment, including home exercises. PA Mullen referred Claimant for an MRI.

6. An MRI of the left shoulder was done on July 14, 2015. The MRI revealed the following findings: a biceps pulley mechanism dysfunction with medial subluxation of the long head of the biceps tendon from the bicipital groove into a longitudinal split tear of the subscapularis tendon; moderate to severe subscapularis tendinosis; partial tear of the supraspinatus tendon centered at the greater tuberosity; 27 mm intramuscular cyst within the supraspinatus likely dissecting through articular surface tendon perforations; moderate infraspinatus tendinosis with articular surface tendon fraying, no tear; moderate to severe acromioclavicular joint osteoarthritis; mild atrophy to the lateral deltoid muscle.

7. Claimant returned to CCOM on July 15, 2015. During this appointment, Claimant continued to complain of pain in his proximal biceps into the sub deltoid area and over the scapula posteriorly. Physical exam revealed tenderness to direct palpation over the proximal biceps a positive Speed's test, and proximal biceps pain with restricted elbow flexion. External rotation was 50 degrees with anterior shoulder pain, abduction was 70 degrees with shoulder pain, and the empty can test was positive for pain. PA Mullen noted the findings on Claimant's left shoulder MRI and diagnosed Claimant with a "left biceps strain with biceps tear, and subluxation in addition to a left shoulder and upper arm strain. Because Claimant's symptoms had failed to resolve and because of the left arm/shoulder MRI findings, PA Mullen referred Claimant to orthopedic surgeon Dr. Geoffrey Doner for evaluation and treatment.

8. On July 23, 2015, Claimant presented to Dr. Doner with pain in his left shoulder and arm. The office note of July 23, 2015 reveals a history of a work related injury to Claimant's left shoulder occurring on June 25, 2015. According to this note, Claimant heard a "pop" and has had "moderate pain ever since." The context of

Claimant's injury was listed as a "lifting work injury." Factors aggravating Claimant's pain included: "lifting; pushing/pulling; ROM; and weight bearing." Physical examination of the left arm/shoulder revealed the following findings: "tenderness of the acromioclavicular joint, the greater tuberosity, and the bicipital groove upon bony palpation; soft tissue palpation on the left revealed tenderness of the supraspinatus, the infraspinatus, the glenohumeral region, and lateral cuff insertion; passive range of motion of the left shoulder was limited, i.e. 90 degrees of forward flexion as compared to the right which was noted to be normal; Hawkin's test, Neer's test, and O'Brien's test were all positive. After reviewing the X-rays and MRI images, Dr. Doner documented the following diagnoses: shoulder pain, disorder of tendon of the biceps, and partial thickness tear of the rotator cuff. Dr. Doner recommended Claimant undergo a course of physical therapy and consider an intra-articular injection.

9. Claimant returned to Dr. Doner on September 3, 2015, after having gone to physical therapy several times. On this date, Claimant was experiencing the same symptoms as documented during his prior office visit. Dr. Doner's examination findings during this visit were essentially unchanged from the July 15, 2015 examination. Following Claimant's consent, Dr. Doner administered a corticosteroid injection into the left shoulder.

10. Claimant returned to Dr. Doner on October 2, 2015 with continued complaints of left shoulder pain. Claimant informed Dr. Doner that the injection gave him short term relief. Because Claimant failed to improve with physical therapy and the injection, Dr. Doner noted as follows: "I believe he has exhausted his nonoperative options and it is prudent to proceed with left shoulder arthroscopy with a subacromial decompression, distal clavicle resection, extensive debridement, and biceps tenodesis to help decrease pain and improve function."

11. Based upon the evidence presented, the ALJ finds that Claimant has not returned to his baseline level of functioning since the June 25, 2015 incident despite substantial conservative care. The record evidence presented, including Claimant's failure of conservative care combined with Claimant's continued need for modified duty persuades the ALJ that the surgery recommended by Dr. Doner is reasonable and necessary.

12. Claimant was scheduled for surgery on October 23, 2015; however, Claimant's surgery was cancelled. According to the Exhibits submitted into evidence at hearing, Claimant received a call from the adjuster assigned to the file, during which time, Claimant reported that his surgery was cancelled and "as it [was] being investigated due to too many work comp claims." The claim notes reflect that Claimant was called by Karen Claussen, Sr. Claims Adjuster for Insured on October 23, 2015, during which Ms. Claussen "asked [Claimant] about all his comp claims in the past and the auto claims in the past and he got really defensive as to why I am bring (sic) up the past." According to this note, Ms. Claussen then told Claimant that his previous claims/injuries were "history and [she] needed to investigate further."

13. On October 26, 2015, Ms. Claussen forwarded an e-mail message to Nina

M. Stupeck, a representative of Employer, informing her that she had concerns about this “Douglas Brown” given that he had “at least 14 hits to the index either with auto claims or work comps (sic) claims.” Of these claims, Ms. Claussen noted that there were “6 auto claims and one injury was a rotator cuff tear unknown which arm” and “8 work comp claims back, neck shoulder.” Ms. Claussen then recommended “denial for further investigation” and to “get [Claimant’s] prior medical records as this guy appears to make a claim every year or so, since 2002.” Ms. Claussen then forwarded correspondence to Dr. Doner notifying him that his “request for authorization for repair of the left shoulder received on October 21, 2015 [was] being denied for the following reasons, but not limited to, not reasonable and necessary and may not be related to the admitted injury.” The letter went on to indicated that the “claim [was] denied for further investigation and until compensability and related (sic) is determined the claim is denied.” The ALJ finds Claimant’s assumption that his left shoulder claim/surgery was being investigated/denied for having “too many” work comp claims reasonable given the content of the claims file notes authored by Ms. Claussen. Prior to the denial, Claimant’s medical care had been covered by Insurer on a medical only claims basis.

14. Claimant testified regarding his pre-existing medical conditions and the injuries he sustained in prior workers compensation and motor vehicle accidents. Claimant testified that prior to the June 25, 2015 work incident he had no problems with his left arm and shoulder. Claimant acknowledged that he had numerous auto accidents prior to the June 25, 2015 work injury. Nonetheless, Claimant maintained that the injuries he sustained in his auto accidents were mainly to his back and neck. Citing the substance of Claimant’s prior chiropractic records, Respondents dispute Claimant’s contention. As support for the assertion that Claimant had prior left shoulder “problems,” Respondents note that Claimant complained of bilateral shoulder pain on November 12, 2005, after a motor vehicle accident (MVA) and again on December 8, 2007, after a second MVA. Claimant sought chiropractic treatment with Dr. Dee. Elliott following his car accidents. Careful review of Claimant’s chiropractic records fails to persuade the ALJ that Claimant had any left shoulder condition requiring treatment on the aforementioned date. Indeed, inspection of Dr. Elliott’s records from July 2, 2004 to June 11, 2010, fails to reveal mention of any specific left shoulder problems requiring treatment.

15. Dr. Elliot’s record of April 9, 2008 reveals that Claimant was having pain in his neck that radiated to his right shoulder. There is no mention of left shoulder pain in this record. According to Dr. Elliot's records, Claimant complained of waxing and waning right shoulder pain from April 2, 2008 through September 29, 2008 but again, there is no mention of any left shoulder symptoms/conditions. Dr. Elliot's office notes of June 22, 2009 reflect Claimant was involved in another automobile accident and was now experiencing pain in his right shoulder region. There was no mention of any problems with Claimants left shoulder in this note. Dr. Elliot’s notes from June 22, 2009 through June 11, 2010 reflect problems with increased pain in the shoulder “area,” which the ALJ finds were associated with Claimant’s right rather than the left shoulder. Based upon the chiropractic materials submitted into evidence, the ALJ is not persuaded by Respondents suggestion that Claimant’s chiropractic records support a

finding/conclusion that he had left shoulder "problems" prior to June 25, 2015. Rather the ALJ finds that Claimant's chiropractic records demonstrate extensive treatment directed to Claimant's spine and occasional referred pain into the shoulder(s) from the neck.

16. Regarding Claimant's prior worker's compensation injuries, the medical records from CCOM dated June 23, 2005, reflect that Claimant slipped and fell working for Employer injuring his low back, right ankle, and sustaining a bruise to his left shoulder. According to this record, Claimant was released at maximum medical improvement (MMI) on this date with no impairment, work restrictions, or need for further care. The next record from CCOM is dated March 2, 2012 and reflects an instance where Claimant sustained a work injury to his right shoulder. The CCOM record from March 2, 2012 reveals no problems with Claimant's left shoulder.

17. On May 24, 2005 Claimant was seen at Penrose Hospital for an acute onset sharp shoulder pain radiating to the neck. Claimant told the doctor on this date he was standing at a machine while at work when he had a sudden onset of sharp pain located right under his left clavicle which radiated into his left neck and jaw. A physical examination was done, including an EKG. Claimant was diagnosed with "pain- non-traumatic body pain", treated, and released.

18. Claimant testified that he had a prior right shoulder injury while on-the-job with Employer. Claimant testified that the mechanism of injury (MOI) to his right shoulder was essentially the same as the MOI in the instant claim in that it occurred while lifting a pallet and trying to put it on a waist high table. Claimant went on to testify that he ended up having a shoulder surgery, after which he obtained significant relief of his right shoulder symptoms. Claimant was placed at MMI for his right shoulder injury on December 4, 2012 and returned to unrestricted work.

19. On November 8, 2014, Claimant developed pain in his right forearm, which he described as feeling like a "bug bite" (spider). He developed swelling and pain and was diagnosed with cellulitis from an abscess on the right forearm. The abscess was lanced, drained and cleaned. Claimant was placed at MMI for this injury without impairment and no lost time from work on November 20, 2014.

20. Medical records from Claimant's primary care physician (PCP) Dr. Steven Barrick from October 27, 2011 through July 28, 2015 reflect Claimant was being seen for various medical problems including poorly controlled hypertension, gout, asthma and diabetes[2] during the pendency of his right shoulder claim. Review of Dr. Barrick's records fails to reveal mention of problems concerning Claimant's left shoulder.

21. As noted above, Claimant's work for Employer requires lifting pallets on a regular basis. Claimant testified that prior to the June 25, 2015 work injury; he was able to perform all of his job duties without limitation. After the June 25, 2015 work injury Claimant has continued to work for Employer, however, in a modified capacity. Claimant's testimony in this regard is corroborated by the medical records. Claimant

[2] Claimant testified that he has had Type II diabetes for approximately 10 years.

also testified that he had no injuries to his left shoulder between 2012 and his June 25, 2015 work injury. The medical record evidence presented fails to establish that Claimant required any left shoulder treatment during these same years, i.e. 2012 and 2015. As Claimant's testimony is buttressed by the documentary evidence as a whole, the ALJ finds Claimant credible and persuasive.

22. At the request of Respondents, Claimant was examined by Lawrence Lesnak, M.D, on February 23, 2016. Dr. Lesnak's report reveals a history of Claimant sustaining a work injury on June 25, 2015. According to this record, Claimant lifted an empty wooden pallet (approximately 3X5 feet) off the floor, and attempted to place it onto the left table at waist level when he felt an acute "pop" in his left upper arm in the area of his left mid biceps brachia region. Claimant told Dr. Lesnak that he developed acute pain in his left upper arm that seemed to radiate proximally into his left anterior shoulder. On this date, Claimant was having constant left upper arm (at its mid portion) aching, pain, and pulsing sensations. Claimant advised Dr. Lesnak that the symptoms worsened with any type of lifting activities involving his left upper extremity, reaching away from his body with his left arm, and any internal rotation activities such as reaching behind his back. In addition, Claimant told Dr. Lesnak that he has some mild achy and pulling sensations involving his left shoulder with abduction on forward flexion when performing overhead activities. Claimant denied having prior left arm or shoulder injuries, similar symptoms, or having had any treatment for these body parts in the past.

23. As part of his independent medical examination (IME), Dr. Lesnak reviewed medical records from the physicians who evaluated and/or treated Claimant since the June 25, 2015 date of injury, including the MRI of the left shoulder. Dr. Lesnak also completed a physical examination during which he noted full passive range of motion in all planes without specific symptom reproduction. Claimant's active range of motion was limited because of increased pain in his right upper arm area in the region of his right biceps brachia muscle/tendon complex. Rotator cuff impingement signs were negative as were Hawkin's sign, Neer's sign, and crossed shoulder adduction maneuvers. Speed's signs reproduced some increased pain in the left mid upper arm region in the area of the left biceps brachia muscle/tendon complex. There was also tenderness to palpation in the area of Claimant's left mid upper arm, specifically the left biceps brachia muscle. Dr. Lesnak documented an absence of tenderness to palpation involving Claimants left glenohumeral joint, the acromioclavicular (AC) joint, and the left shoulder girdle. Dr. Lesnak's impressions were "probable left bicep muscle/ tendon strain/ sprain injury that occurred during work hours on June 25, 2015", post incident left shoulder MRI done on July 14, 2015 which noted chronic degenerative changes of the left shoulder with a small partial tear of the supraspinatus tendon and a disruption/dysfunction of the biceps pulley mechanism with medial subluxation of the long head of the biceps tendon with associated severe biceps tendinosis and no current clinical evidence of symptomatic left shoulder/ rotator cuff pathology including left impingement signs, clinical evidence of probable persistent tendonitis involving the left biceps brachia muscle/ tendon complex , with a non-diagnostic left shoulder steroid injection. Dr. Lesnak opined that the mechanism of injury, as he understood it, would not put any significant stressors on the left shoulder and that most of Claimant's left

shoulder problems, other than the noted left biceps sprain/strain, were not related to the June 25, 2015 work incident. Dr. Lesnak felt that the surgery recommended by Dr. Doner was not reasonable or necessary as it relates to the June 25, 2015 work injury and that Claimant is at maximum medical improvement without impairment, work restrictions, or need for further care.

24. As noted above, Dr. Doner testified by deposition on April 5, 2016. Dr. Doner is a fellowship trained, board certified orthopedic surgeon specializing in treatment of disorders of the knees, hips, and shoulders. Dr. Doner was provided with a history of how Claimant injured his left shoulder specifically, that Claimant was lifting a 3x5 pallet weighing from 20 to 30 pounds up to waist height and twisted his upper body slightly to the left while extending his left arm out at an angle over the table and in doing so felt a pop in his arm.

25. Dr. Doner testified that Claimant's present shoulder problems and need for surgery are related to the June 25, 2015 work incident. Dr. Doner explained that while Claimant had significant osteoarthritis and other evidence of degeneration in his left shoulder as shown by the MRI, Claimant's left shoulder was asymptomatic and that the work incident made it symptomatic[3].

26. Dr. Doner explained that many people, as they age, develop degenerative changes in their shoulder without any pain symptoms or problems. Dr. Donner testified that lifting like Claimant described likely caused a strain in the biceps tendon which tore the pulley system, which then caused the bicep muscle to move. Insofar as the rotator cuff tendonitis, tendonosis, and the chronic tear of the rotator cuff and arthritis, is concerned, Dr. Donor testified that these were exacerbated by the work injury because in lifting something and swinging it to your side, you are not just using the biceps muscle, you are also using the muscles comprising the rotator cuff which helps move the shoulder. Challenging the opinion of Dr. Lesnak that the MOI, as described, would not put any significant stressors on the left shoulder, Dr. Doner testified that lifting weight with the arm extended puts stress on the rotator cuff muscles and that is probably what happened to cause Claimant's shoulder symptoms.

27. Dr. Doner also testified that the degenerative changes in Claimants shoulder and arm weakened it such that it took less force to injure it. Dr. Doner opined that it is not uncommon for someone who is Claimant's age to have asymptomatic degenerative changes in their shoulder that require no treatment at all. Dr. Doner opined further that the absence of any pain or left shoulder problems, prior to the work incident, in conjunction with the above mentioned facts, lead him to the conclusion that Claimant's left arm and shoulder problems as well as his need for surgery are related to his June 25, 2015 work injury. Dr. Donor felt that history is important in determining causation.

[3] Dr. Doner specifically testified that Claimant had an "acute injury when he was lifting that box, and once he felt a pop and pain, he states prior to that he did not have symptoms in that upper shoulder and biceps region, and then after that he did have pain and the findings as stated on MRI and physical exam I found on him." He went on to testify that the June 25, 2015 incident could have "exacerbated" Claimant's pre-existing osteoarthritis causing his symptoms.

Specifically, it is important to determine when symptoms first appeared and what the patient was doing when they appeared. To that end, Dr. Doner discounted the causative role of Claimant's development of symptoms to his having diabetes and moderate obsesity.

28. Dr. Doner opined that the surgery he is recommending is reasonable and necessary because Claimant did not receive any lasting relief from the physical therapy and the injection. Dr. Doner testified that the reason for such an extensive surgery was to correct the various problems in Claimant's shoulder, including the preexisting degenerative changes, so as to maximize Claimant's chances of recovering from his injuries.

29. Dr. Lawrence Lesnak was qualified as an expert in physical medicine and rehabilitation (PM&R). Dr. Lesnak testified consistently with the opinions expressed in his IME report of February 23, 2016. Dr. Lesnak testifies that there is nothing on the MRI scan of Claimant's left shoulder that appears to be acute. Rather it shows all chronic changes that are fairly typical for someone who is 60 years old. Dr. Lesnak explained, when referring to Claimant's bicep issue, that if something were acute, you would find blood or some sort of acute edema, which is not seen at all in claimant's MRI.

30. Dr. Lesnak opined that the mechanism of injury as described by Claimant did not cause his shoulder problems. Rather, Dr. Lesnak testified that Claimant's left shoulder condition/symptoms are a consequence of the natural progression of his pre-existing degenerative osteoarthritis and that lifting a weighted object with a fully extended arm and pivoting to the side would not put any stress on the musculature or other structures of the shoulder. According to Dr. Lesnak, the injection that was performed by Dr. Doner was a non-diagnostic and non-therapeutic injection confirming that the symptoms were not coming from inside the shoulder joint. Because Claimant's shoulder symptoms are not causally related to the June 25, 2015, incident, Dr. Lesnak testified that his need the surgery recommended by Dr. Doner is also not causally related to the June 25, 2015 incident, but rather his chronic degenerative changes.

31. Dr. Lesnak testified that Claimant's actions in lifting the pallet as described would put stress on the biceps muscle. Consequently, he did admit that Claimant could have sustained injury to the bicep as opposed the shoulder, but there is no indication on the MRI that there was an acute injury or sub-acute injury to the biceps either. Nonetheless, Dr. Lesnak testified that if Claimant's MOI happened the way he described, then he could have irritated an already degenerative condition in his biceps.

32. Dr. Lesnak explained that if Claimant did sustain a temporary injury to his biceps tendon that it would be healed by now and there would be nothing to do about it. Dr. Lesnak explained that once all the unrelated degenerative changes in the shoulder joint are excluded from a causality standpoint, the only remaining condition related to the June 25, 2015 incident is chronic biceps tendinosis with chronic medial subluxed tendon with biceps tendonesis which he opined, standing alone, is not treated with

surgery. Consequently, surgical treatment of the one condition that Dr. Lesnak agrees is arguably related to the June 25, 2015, work incident is, according to Dr. Lesnak, neither reasonable nor necessary.

33. The ALJ finds the opinions of Dr. Doner that lifting the pallets in the fashion described by Claimant likely placed sufficient forces on the musculature and structural components of the arm and shoulder to tear the biceps pulley mechanism (resulting in medial subluxation of the tendon) and otherwise aggravate the pre-existing degenerative changes revealed on MRI, causing the left shoulder to become symptomatic credible and more persuasive than the contrary opinions of Dr. Lesnak..

34. Based upon the evidence presented, the ALJ finds that Claimant had pre-existing degenerative changes in the left shoulder prior to June 25, 2015. Nonetheless, after careful review of the medical record evidence, the ALJ finds no evidence to suggest that Claimant's left shoulder was symptomatic, that he was actively engaged in ongoing treatment for his left shoulder or that his left shoulder was functionally limiting in the weeks and months prior to June 25, 2015. Consequently, the evidence presented persuades the ALJ that Claimant's pre-existing left shoulder osteoarthritis was, more probably than not, asymptomatic and non-limiting until he aggravated it when he lifted a pallet in furtherance of his work duties on June 25, 2015. The evidence presented also persuades the ALJ that in addition to aggravating his underlying left shoulder osteoarthritis, Claimant likely sustained an acute injury to his left biceps on June 25, 2015. Finally, the evidence presented convincingly establishes that conservative care has failed to return Claimant to his previous baseline level of function. Consequently, Claimant has proven by a preponderance of the evidence that he suffered a compensable aggravation of a pre-existing condition and an acute injury to his biceps arising out of and in the course and scope of his work for which additional treatment is warranted.

35. Crediting the opinions of Dr. Doner, the ALJ finds that, in addition to a finding that the proposed left shoulder surgery is reasonable and necessary, the record evidence supports a finding that the need for the left shoulder/arm (biceps) surgery is a direct consequence of his June 25, 2015 work related injury rather than the natural progression of any pre-existing condition. Accordingly, the ALJ finds that Claimant has proven by a preponderance of the evidence that his need for left shoulder/arm surgery is reasonable, necessary and related to his June 25, 2015 work injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). As found, Claimant's testimony regarding the condition of his left shoulder, pre and post injury is supported by the record evidence of his treating providers. Consequently, the ALJ finds Claimant's testimony credible and persuasive.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this case, the ALJ concludes that the opinions of Dr. Doner regarding the cause of Claimant's shoulder/biceps condition and need for surgery are credible and more persuasive than the contrary opinions of Dr. Lesnak.

Compensability

E. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment*.* *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(l)(b), C.R.S.*

F. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Here, there is little question that Claimant's alleged injury occurred within the time and place limits of his employment relationship with Employer and during an activity, specifically lifting a pallet, which is connected to his duties as a machine operator/material handler for Employer. Rather, based on the testimony presented and the records submitted, the undersigned ALJ understands Respondents contention to be that Claimant's asserted injury did not "arise out" of his employment, i.e. Claimant's left arm/shoulder condition was not caused by his work related functions.

G. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). The determination of whether there is a sufficient "nexus" or causal relationship between a claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). Based primarily on the testimony of Dr. Lesnak, Respondents contend that Claimant's left shoulder, and to a lesser degree his left biceps symptoms[4] are a consequence of the natural progression of pre-existing degenerative conditions of the left shoulder and arm.

H. A pre-existing condition "does not disqualify a claimant from receiving workers

[4] Regarding the compensable nature of Claimant's left biceps condition; Respondents argue that because the MRI failed to establish pooling blood or edema, there is no evidence of "acute" injury other than Claimant's "word" that he was injured in the fashion he claims, which according to Dr. Lesnak could have caused a traumatic injury to the biceps. Nonetheless, without addressing Respondent's argument concerning the reasonableness and necessity of biceps surgery, Respondents assert that because Claimant's is not credible, his "word" regarding the mechanism of injury is not believable. Consequently, in addition to dismissing the claim for injuries to the left shoulder, Respondents urge the ALJ to similarly dismiss the claim for benefits based upon an acute injury to the left biceps.

compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). To the contrary, a claimant may be compensated if his or her employment "aggravates, accelerates, or combines with" a pre-existing infirmity or disease to produce disability or the need for treatment for which workers' compensation is sought. *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo. App. 1981). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by employment related activities and not an underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940).

I. While pain may represent a symptom from the aggravation of a pre-existing condition, the fact that Claimant may have experienced an onset of pain while performing job duties does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, as asserted here, the occurrence of symptoms at work may represent the result of the natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (August 18, 2005). In this case, the ALJ credits the opinions of Dr. Doner to find and conclude that Claimant's left biceps/shoulder pain, more probably than not, arose from a traumatic tearing of the biceps pulley mechanism resulting in the medial subluxation of the biceps tendon from the bicepital groove as well as an aggravation of Claimant's left shoulder osteoarthritis. The evidence presented persuades the ALJ that these conditions/symptoms are a direct result of the duties associated with Claimant's work as a machine operator/material handler for Employer. It is undisputed that Claimant was called upon to frequently lift and manipulate 3x5 foot wooden pallets. While these pallets are not particularly heavy, the ALJ concludes that their size makes lifting them cumbersome, especially for Claimant who is 5' 3" tall. As found, the ALJ credits the opinions of Dr. Doner to conclude that lifting the pallets in the fashion described by Claimant likely placed sufficient forces on the musculature and structural components of the arm and shoulder to tear the biceps pulley mechanism (resulting in medial subluxation of the tendon) and otherwise aggravate the pre-existing degenerative changes revealed on MRI, causing the left shoulder to become symptomatic. Dr. Lesnak's opinions to the contrary, including the suggestion that Claimant's symptoms are a consequence of the natural progression of his pre-existing osteoarthritis are unconvincing. Based upon a totality of the evidence presented, the ALJ concludes that Claimant has established the requisite causal connection between his employment duties and his left arm/shoulder injuries. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988)(the determination of whether there is a sufficient "nexus" or causal relationship between a claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). Consequently, the injury is compensable.

Medical Benefits

J. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970)*;* § 8-41-301(1)(c), C.R.S. Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, *supra*.

K. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). As found here, Claimant has proven by a preponderance of the evidence that he sustained an acute injury to his left biceps pulley mechanism in addition to a compensable aggravation of his previously asymptomatic left shoulder osteoarthritis. The evidence presented persuades the ALJ that these compensable "injuries" are the proximate cause of Claimant's need for medical treatment, including his need for surgery as recommended by Dr. Doner. While it is true that Dr. Doner's medical reports do not specifically state that the recommended shoulder surgery is related to Claimant's June 25, 2015 lifting event, Dr. Doner testified convincingly that the June 25, 2015 incident likely caused the tear to the biceps pulley mechanism and "exacerbated" Claimant's left shoulder osteoarthritis. Taken in its entirety, the ALJ finds that the evidentiary record contains substantial evidence to support a conclusion that Claimant's work duties and not a pre-existing condition is responsible for his current symptoms and need for treatment, including surgery. Consequently, the ALJ concludes that Claimant has established that the recommended surgery is related to the June 25, 2015 lifting incident. Moreover, the totality of the evidence presented establishes that conservative care, including physical therapy, therapeutic exercise and a corticosteroid injection failed to yield long-term results leading Dr. Doner to recommend surgical intervention. The evidence presented persuades the ALJ that the recommended surgical procedure is reasonable and necessary given Claimant's continued pain and functional decline in the face of failed conservative care. Consequently, the ALJ concludes that Respondents are liable for the surgery recommended by Dr. Doner.

ORDER

It is therefore ordered that:

1. The June 25, 2015 injury to Claimant's left arm (biceps) and left shoulder is compensable.

2. Respondents shall pay for all medical expenses, pursuant to the Workers' Compensation medical benefits fee schedule, to cure and relieve Claimant from the effects of his left upper extremity conditions, including, but not limited to the surgery proposed by Dr. Doner.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. WC 4-979-168-02

ISSUES

- Did Claimant prove by a preponderance of the evidence that she sustained an injury proximately caused by the performance of service arising out of and in the course of her employment?

- Did Claimant prove by a preponderance of the evidence that she is entitled to an award of authorized, reasonable and necessary medical benefits?

- Did Claimant prove by a preponderance of the evidence that she is entitled to an award of temporary total disability benefits?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. At hearing Claimant's Exhibits 1 through 8 were admitted into evidence. Respondents' Exhibits A through M were admitted into evidence. The parties stipulated that if the claim is found to be compensable that the Claimant's average weekly wage is $ 588.50.

2. Claimant began work for Employer on February 9, 2015. Claimant was hired as a salesperson to perform duties that included cleaning areas of the store, walking the sales floor and selling furniture to customers.

3. Claimant testified as follows concerning the events of March 8, 2015. Claimant began her shift at approximately 11:00 a.m. Sometime between 2:00 p.m. and 3:00 p.m. she was assisting a customer that was interested in purchasing a dining set and chairs. Claimant explained that the dining set was located on the upper level of the store and that the chairs were located on the lower level of the store. While on the lower level of the store the customer found some chairs that he wanted to see next to the dining set on the upper level. The customer picked up a chair and started up the stairs to the second level of the store. Claimant picked up a second chair and followed the customer up the stairs. As Claimant was ascending the stairs her foot slipped off the stair and her heel struck the stair immediately behind and beneath her. At the same time she dropped the chair, leaned or tipped to the left, hyperextended the left knee and then "landed" on the left knee and hip. Claimant then picked up the chair and went slowly up the stairs. Claimant found another sales person to assist with checking out the customer. Claimant does not recall the name of this person.

4. Claimant testified as follows concerning the events immediately after the alleged incident. As Claimant was returning to the checkout or "horseshoe area" she

passed the office door of the assistant manager, Ms. Jessica Schuetz (Schuetz). Schuetz saw Claimant limping and asked if she was okay. Claimant replied that "it hurts like hell, but I'm going to help my customer and I'll talk to you in a minute." Claimant checked out the customer. Claimant then told Schuetz about the injury on the stairs and requested to sit down for awhile because she was hurt. Schuetz agreed to allow the Claimant to sit down.

5. Claimant testified that on March 8, 2015 she also told sales manger Mr. Douglas Dietel (Dietel) about her injury. Claimant testified that Dietel asked her what happened and she replied that she hurt her foot and banged her leg on the stairs while helping a customer. Claimant told Dietel that she wanted to "take it easy" and Dietel agreed that would be okay. Claimant also testified that she asked Dietel if she needed to "fill anything out." Dietel replied "no, not unless it gets worse."

6. Claimant testified that she took a half-hour break after the incident but worked most of the remainder of the shift that ended at 7:00 p.m. However, Claimant left a "little early" and did not help close the store.

7. Claimant testified that she worked her scheduled shift on March 9, 2015. Claimant testified that she could not perform her full duties and that an unidentified manager told her to "take it easy." Claimant explained that she tried to stay in areas where she could stand on one foot and lean on something or in areas where she could sit with her foot up. Claimant also testified that she worked on March 10, 2015 and was limited in the same way she was on March 9.

8. Schuetz testified as follows. She is an assistant manager at the Employer's furniture store. She worked with Claimant on March 8, 9 and 10, 2015. At no time did Claimant ever tell Schuetz anything about injuring herself at work. If Claimant had reported an injury to Schuetz then Schuetz would have immediately completed paperwork regarding the alleged injury. Schuetz passed by Claimant many times on March 8, 9 and 10. Schuetz never observed the Claimant limping and Schuetz believes she would have noticed if Claimant had been limping.

9. Dietel testified as follows. He is a sales manager at the Employer's furniture store. He estimated that employees working in sales probably walk 5 miles per day. Dietel worked with Claimant on March 8 and 9, 2015. Dietel did not speak with Claimant on March 8 or 9 and Claimant never reported any work-related injury to Dietel. Dietel saw the Claimant "dozens to hundreds of times" on March 8 and March 9. Dietel did not notice that Claimant had any physical limitations on either day and believes he would have noticed. It is the Employer's policy that a report must be completed within minutes of the time an employee reports a work-related injury.

10. Wednesday, March 11, 2015 was Claimant's scheduled day off work.

11. Claimant was scheduled to work on Thursday, March 12, 2015, but did not do so. Claimant testified that she called Doug Major (Major), then the store manager, and told him "what was going on." According to Claimant Major responded that he had

been told Claimant wasn’t feeling well and that something happened. Major then asked Claimant what happened and how she was feeling. Claimant testified that she explained “everything” to Major and that she was doing poorly and needed “to be seen.” Claimant further testified that she asked Major for human resources’ (HR) number “just in case it was a work comp incident.”

12. Claimant did not work on Friday March 13, 2015 because she was scheduled to be off on that day.

13. Claimant was scheduled to work on Saturday, March 14, 2015, but did not do so. Claimant explained that Major had not yet provided her with HRs’ number. Claimant further testified that she called Major on March 14 and told him she had not been able to see her regular doctor and was going to the emergency room (ER) for treatment. Claimant also told Major she would keep him posted regarding the results of the ER visit.

14. Claimant testified that her ankle was swollen and became black and blue after the incident on the stairs. She explained the ankle was still swollen and bruised when she went to the ER on March 14, 2015, although the “color” was not as bad as it had been.

15. Claimant arrived at the Sky Ridge Medical Center (Sky Ridge) ER at 11:21 a.m. on March 14, 2015. The Sky Ridge ER records indicate that Claimant complained of pain in the left foot. The history of present illness reflects that Claimant reported she was at work and “stepped down on her left foot wrong approx 1 week ago and hit heel on step above.” According to these records Claimant reported that there was “no fall.” Claimant underwent an x-ray of the left foot that was “negative for acute bony abnormality.” On Physical examination (PE) of the left foot Claimant was “tender” to the posterior aspect of the left heel at the attachment of the Achilles tendon. However, the Achilles tendon was intact. There was no “swelling, erythema or open wounds.” Examination of the ankle was “normal.” The Claimant’s calf was supple and “nontender.” The examining physician’s assistant’s primary impression was “contusion of heel” and a secondary impression of possible tendonitis. There is no indication in this note that Claimant reported left knee pain or that the left knee was examined. Claimant was discharged with instructions to follow up with her “pcp and or work comp in 3-5 days.” The records indicate Claimant departed the ER at 12:08.

16. Claimant testified that the “nurse” who performed the x-ray at Sky Ridge told her that the x-ray showed a “bone spur” on the heel.

17. Claimant testified that after she was treated at the ER she again called Major on the evening of March 14, 2015. Claimant recalled that she told Major the ER was “not sure” about the nature of her problem but she needed an appointment to see a workers’ compensation doctor or Kaiser or someone. According to Claimant, Major replied that the following Monday he would contact Becky Lambert (f/k/a Becky Rouse) in Human Resources (HR) regarding Claimant’s need for medical treatment. Claimant

also stated that she advised Major she would need to be off work for at least another week.

18. On March 19, 2015 Claimant sought treatment from her private health care provider, Kaiser Permanente (Kaiser). At Kaiser Claimant was examined by NP Joann Sorrentino. NP Sorrentino recorded that Claimant complained of "continued pain" in the "back of her heel." Claimant gave a history that she was going up the stairs at work "and had the ball of her foot placed on the step but it slipped and she came down hard on the step below landing on her heel." Claimant reported that the employer was "aware" of the injury. On PE NP Sorrentino noted point tenderness over the Achilles tendon and pain with flexion at the ankle joint. Claimant's heel was "minimally tender" and the ankle joint was "intact." NP Sorrentino assessed Achilles tendon tendonitis. She prescribed a "CAM boot with heel cup" to take pressure off the Achilles tendon. NP Sorrentino also recommended that Claimant apply ice to the "back of the leg" when not wearing the boot, to take ibuprofen for pain and follow up with a "Work Comp doctor before returning to work." There is no indication in this note that Claimant reported left knee pain or that NP Sorrentino examined the left knee.

19. Major testified as follows. On March 8, 2015 Major was the Employer's store manager at the site where Claimant worked. However, Major did not work on March 8 and 9, 2015. Major worked on March 10, 2015. Major recalled that he saw Claimant at the March 10 morning sales meeting and probably three or four more times during the day. On March 10 Major did not recall observing the Claimant standing in one place on one foot and did not recall that Claimant was limping.

20. Mr. Major testified that on Thursday, March 12, 2015 Claimant called him around 11:00 a.m. and stated that her ankle was swollen and that she needed to stay off of it. Claimant also advised that she would probably have her doctor check the ankle. Major testified that he asked Claimant "what happened?" Major recalled that Claimant stated she "didn't know" what had happened. Major stated that on this occasion Claimant did not tell him that she had sustained a work-related injury.

21. Major testified that Claimant called him on Saturday, March 14, 2015 and stated she was unable to work. Major recalled that Claimant said her doctor had diagnosed a "heel spur" and restricted her from returning to work until Friday, March 20, 2015. Major testified that Claimant then asked whether she could return to "light duty" work as a cashier. Major stated that he told Claimant she was a salesperson and that she needed to be able to do her job before she could come back to work. Consequently, Major told Claimant to follow her doctor's instruction and return to work on Friday, March 20, 2015. Major stated that on this occasion Claimant did not tell him she had sustained a work-related injury.

22. Major testified that his next contact with Claimant occurred on Thursday, March 19, 2015. Major stated that he called Claimant to "check in" because he expected Claimant to return to work Friday, March 20, 2015. However, Major did not reach Claimant and left a message. Major recalled that on the evening of March 19 Claimant returned his call and stated that she had seen a doctor and her foot was now

in a boot. Claimant further stated that the doctor recommended she see an Employer doctor. Major testified that he was a little confused and surprised because this was the first time Claimant mentioned that she injured herself at work. He stated that he emailed Becky Lambert (Lambert), Employer's HR manager, the next day (Friday, March 20) regarding this issue.

23. Claimant testified that she finally was able to speak with Lambert. Claimant recalled that Lambert said the injury was "not workers' comp" and that Claimant would need to see her own doctor. Claimant stated that Lambert offered to write a "denial letter" so that Claimant could receive treatment at Kaiser. However, Claimant insisted that Lambert make a referral to a workers' compensation doctor. Lambert then referred Claimant to Concentra Medical Centers (Concentra).

24. Lambert testified by deposition on March 25, 2016. Lambert testified that she is the Employer's "HR director" and "risk manager."

25. Lambert testified as follows concerning a conversation with Claimant. On March 23, 2015 Lambert called Claimant in order to obtain information to complete a first report of injury form. Lambert went through the form and asked Claimant questions regarding dates, times and other details concerning Claimant's alleged injury. According to Lambert, Claimant reported that on March 8, 2015 she sustained a "left foot Achilles tendon injury" when she miss-stepped "going up the stairs from the lower level to the upper level of the shore she works at." Lambert stated that Claimant did not report any knee injury or that she had fallen or tipped to the side landing on her left knee. Lambert testified that during the conversation she did not tell Claimant that the claim would be denied or that a "denial letter" would be sent. Lambert explained that she does not decide whether to accept or deny claims. According to Lambert the decision to admit or deny is made by the Employer's third-party administrator.

26. Lambert testified that Claimant told her that two store managers, Schuetz and Dietel, knew about her claim. Ms. Lambert testified she then contacted Schuetz and Dietel and both denied having any knowledge that Claimant was injured at work. Schuetz and Dietel told Lambert that Claimant had been "calling off" due to "some personal injury."

27. On March 27, 2015 Carrie Burns, M.D., examined Claimant at Concentra. Dr. Burns recorded a history that Claimant was "running up the stairs from the basement when she hyperextended her knee and hyperdorsiflexed at the ankle." Claimant explained that she was able to complete her shift "but her pain increased to the point where she had tremendous pain when walking." Claimant also related that her "work felt she did not have an OJI and wanted her to see her PCP," but the "PCP felt this was an OJI and wouldn't see her." Claimant advised that her knee hurt more than the "foot/ankle." On PE Dr. Burns noted Claimant's left leg was tender "on posterior aspect entire length of gastrocnemius." Claimant's left knee appeared normal and there was diffuse tenderness of the posterior knee and medial tibial plateau. There was no crepitus and Claimant exhibited a full ROM. Claimant's left ankle appeared normal. There was tenderness at the Achilles tendon insertion. The ankle ROM was "full" but

dorsiflexion was "painful." Dr. Burns assessed Achilles tendinitis, a gastrocnemius strain and a knee sprain. Dr. Burns imposed restrictions of seated duty 90% of the time, no walking on uneven terrain, no climbing stairs and no climbing ladders. Claimant could walk and stand "occasionally." Dr. Burns referred Claimant for physical therapy (PT) and for an MRI of the left knee. Dr. Burns also prescribed Norco and Naproxen.

28. On cross-examination Claimant testified that she experienced a "fall" when she was on the stairs at work. Claimant testified that when she went to Sky Ridge, Kaiser and Concentra she advised each of them of what happened to her ankle and that she "tipped left" and landed on her knee. Claimant stated that if none of these records mentions a "fall" on the stairs then the issue is one of "semantics."

29. On March 27, 2015 Claimant gave a recorded statement to the insurance adjuster assigned to the claim. Claimant told the adjuster that she was going up the stairs with a chair when "she caught [her] foot on the step and overextended my leg." Claimant stated that she "was only able to put one hand down to not fall, cause I had the chair in the other hand." Claimant stated that after the incident her ankle hurt right away and the knee hurt but she didn't think anything of it. Claimant explained that it "wasn't until I got off of it and was able to sit for a bit that my knee stared to hurt the most." Claimant stated she could not remember who she told about the incident, but she commented to "Doug or Jessica" that she hurt herself on the stairs. Claimant also stated that when she went to Sky Ridge she was asked "what was the most sore." Claimant replied: "Well, my foot and my knee."

30. On April 9, 2015 Insurer issued a Notice of Contest on the ground that the alleged injury was not work-related. Claimant testified she has not received treatment for her left lower extremity since the Notice of Contest was filed. She further stated that no physician has released her to return to work since Dr. Burns imposed restrictions

31. Claimant testified that she still experiences symptoms of the March 8, 2015 injury. She explained that climbing stairs aggravates the ankle and the knee, and that the knee becomes swollen and painful if she sits in a car for too long. Claimant stated that she believes the Achilles injury is 70 to 80% better than it was at the time of the injury but the knee is "a lot worse."

32. On September 14, 2015 Robert Messenbaugh, M.D., performed an independent medical examination (IME) of Claimant at the request of Respondents. Dr. Messenbaugh is board certified in orthopedic surgery and level II accredited. Dr. Messenbaugh issued a written report on January 16, 2016. In connection with the IME Dr. Messenbaugh took a history from Claimant, reviewed medical records and "various legal documents" and performed a PE. Dr. Messenbaugh noted that in answers to interrogatories Claimant stated that her injury occurred when she "caught the step wrong" and overextended her ankle and "hyperextended the leg and knee." On PE Dr. Messenbaugh recorded Claimant exhibited full ROM of the left knee but some "posterior and anterior discomfort" with full extension. Dr. Messenbaugh also noted "some tenderness" around Claimant's distal quadriceps and proximal patellar tendons. No ligamentous instability was observed. Claimant reported tenderness about the lateral

posterior aspect of he left calf but Dr. Messenbaugh did not observe any swelling. Dr. Messenbaugh noted the Achilles tendon was intact but recorded that there was tenderness around the distal Achilles tendon and at its insertion into the heel. Claimant exhibited "somewhat guarded but full" ROM of the left ankle. However, Claimant complained of pain in the posterior calcaneal region, the distal Achilles tendon region and the posterolateral calf region on "maximum dorsiflexion and plantarflexion."

33. In the written IME report Dr. Messenbaugh opined to a reasonable degree of medical probability, that Claimant's diagnoses include Achilles tendinitis and "to some degree" a strain of the "left gastrocnemius and posterior knee." Dr. Messenbaugh further opined that it is "plausible" the Achilles tendinitis and gastrocnemius strain "could have been caused by [Claimant] having experienced a direct blow and hyperextension positioning to the back of her left calcaneus and Achilles tendon *if events happened as described by [Claimant]*." (Emphasis added). Dr. Messenbaugh also opined that it was "improbable" that Claimant could have worked several days after the injury "with no known complaint." However, Dr. Messenbaugh noted Claimant said she complained from the "moment of her accident and thereafter."

34. Dr. Messenbaugh opined Claimant's condition had not yet resolved and required further evaluation and treatment. He also stated that Claimant's recovery had been "prolonged and difficult to totally explain." However, Dr. Messenbaugh stated that Claimant did not undergo a "consistent treatment program" after the injury and this could partially explain her failure to recover more promptly.

35. On January 29, 2016 Edwin Healey, M.D., performed an IME at Claimant's request. Dr. Healey is board certified in occupational medicine and neurology and is level II accredited. In connection with the IME Dr. Healey took a history from Claimant, reviewed medical records and performed a PE. Dr. Healey wrote that Claimant gave a history that she "tripped as she was stepping up on a step." Claimant reported that she "initially hyperextended her left knee and strained her left Achilles tendon fell backwards and hyperextended her left knee and sprained her ankle and then fell on her left side." Claimant also advised Dr. Healey that she was "unable after slipping to regain her balance or prevent her fall because she was carrying a dining room chair in both hand [sic] as she walked up the stairs." Claimant told Dr. Healey that after the injury she "immediately had some pain and swelling over particularly her left ankle and left Achilles." Claimant also stated she had "some bruising and swelling of both her ankle and left knee." Claimant told Dr. Healey that she had "mild knee pain initially" but had increasing knee pain particularly after wearing the CAM boot.

36. Dr. Healey opined that Claimant's "diagnoses causally and directly related to the slip-and-fall injury of March 8, 2015 include the following: (1) Left Achilles tendon strain with acute Achilles tendinitis; improved but still mildly symptomatic; (2) Hyperextension of the left knee and calf; caused by injury but significantly aggravated while wearing the walking boot for the Achilles tendinitis; (3) Left quadriceps strain, with evidence of myofascial pain over the distal quadriceps. Dr. Healey recommended that Claimant undergo additional treatment to include an MRI of the left knee and distal

quadriceps to rule out internal derangement or evidence of chondromalacia or inflammation of the quadriceps tendon. Dr. Healey also recommended additional PT for the quadriceps, left knee, calf and Achilles tendon.

37. In the IME report Dr. Healey wrote that it is "his experience from evaluating injured workers from" the Employer that "the company is extremely reluctant to take responsibility for work related injuries and will go to great lengths to deny work injuries that employees have incurred while working" for the Employer.

38. Dr. Healey testified at the hearing. On direct examination Dr. Healey testified that as an occupational medicine physician he took a very detailed history from Claimant concerning the injury of March 8, 2015. Dr. Healey stated that Claimant told him she was going up the stairs with a chair in her hands when she stepped "wrong" causing her left foot to "go down" and her knee to "go back." This misstep caused the left foot to "hyperflex." Claimant further related that because she had the chair she fell "over on the side" on her left knee. Dr. Healey stated that Claimant did not report that she fell "down the stairs." Instead Claimant reported that she "fell over." Dr. Healey testified that Claimant reported a similar history to Dr. Burns.

39. Dr. Healy testified that ordinarily he would have expected Claimant's symptoms to have resolved by the time he examined her. However, in Dr. Healey's opinion the symptoms had not resolved because Claimant did not receive consistent treatment for the injury, she was overweight and she was diabetic. Dr. Healey also opined that wearing the boot for her Achilles injury aggravated the knee injury she sustained on March 8, 2015. Dr. Healey further opined that the injury to Claimant's ankle caused an "altered gait" that ultimately produced a left quadriceps strain.

40. Dr. Healey testified that he agreed with Dr. Messenbaugh's diagnoses of Achilles tendonitis and left gastrocnemius strain, although Dr. Messenbaugh did not mention Claimant's left knee. Dr. Healey also stated that he agreed with Dr. Messenbaugh that Claimant's reported "mechanism of injury" was consistent with the injuries Claimant ultimately sustained.

41. On cross-examination Dr. Healey testified that he believes the Claimant is a credible historian concerning the alleged injury. However, Dr. Healey admitted that he did not interview the Employer witnesses who disputed much of Claimant's testimony concerning the injury and subsequent events.

42. On cross-examination Dr. Healey stated that he reviewed the March 14, 2015 Sky Ridge ER records. Dr. Healey admitted the ER records do not contain any "objective" evidence of pathology and that the PE was "benign." Dr. Healey agreed that if Claimant had hyperextended her knee and injured her ankle in the manner she described to him he would have expected the ER records to contain objective signs of pathology.

43. Dr. Healey testified on cross-examination that he was "initially" concerned that the history provided to him by Claimant described a fall but there was no mention of

a fall in the Sky Ridge ER records. At first Dr. Healey explained the discrepancy by stating that the ER is hectic and that ER providers trying to rule out serious and life threatening conditions often fail to take a complete history. However, Dr. Healey did not realize, until it was pointed out to him during cross-examination, that the ER records explicitly state that Claimant sustained "no fall." Dr. Healey then opined that the term "no fall" is "ambiguous" because the word fall can have multiple meanings. Dr. Healey then admitted that when Claimant filled out a questionnaire prior to the January 29, 2016 IME she wrote: "I fell on stairs @ work – hyper-extended ankle, heel & knee."

44. On cross-examination Dr. Healey admitted that contrary to his testimony on direct examination Dr. Burns' March 27, 2015 note does not mention any history that Claimant fell.

45. Dr. Healey testified that he reviewed surveillance video that was taken of Claimant on February 11 and 12, 2016. Dr. Healey stated that nothing he saw on the video was inconsistent with his examination of Claimant or called her veracity into question. Dr. Healey stated that the video showed no impairment at all.

46. Dr. Messenbaugh testified at the hearing. Dr. Messenbaugh agreed with Dr. Healey that ER providers are more concerned with triage and treatment of injury than obtaining and recording the exact details of how an injury occurred.

47. Dr. Messenbaugh also testified that in his experience people go to ER's because they have experienced some event and discomfort. Dr. Messenbaugh stated that normally there is some observable and objective finding that evidences the event and discomfort and none was recorded at the Sky Ridge ER on March 14, 2014.

48. Dr. Messenbaugh testified that he agreed with Dr. Healey that the word "fall" can have different meanings. Dr. Messenbaugh opined that there is some confusion in the medical records and reports as to whether Claimant fell down and "went boom" or merely tipped over on her left side. Dr. Messenbaugh opined the question of whether and how Claimant fell is not important to determining the real issues of whether Claimant sustained an injury at work, and if so what was the nature of the injury. Dr. Messenbaugh explained that based on his review of the records, including Dr. Healey's report, no one is asserting that Claimant sustained any injury from falling or tipping over. Rather, Claimant is alleging that she sustained injury by hyperdorsiflexion of the ankle and hyperextension of the knee.

49. Dr. Messenbaugh testified that he watched the surveillance video taken of Claimant on February 11 and 12, 2016. Dr. Messenbaugh stated that the video showed Claimant moving without evidence of a limp, hesitation, or evidence of any injury. He noted that Claimant reported to Dr. Healey that she had difficulty getting in and out of a car, but the video shows Claimant getting into a car with no detectable problem. Dr. Messenbaugh further stated that the video does not depict the Claimant performing any activity that is beyond the restrictions imposed by Dr. Burns.

50. Claimant failed to prove it is more probably true than not that she sustained any injury proximately caused by the performance of service arising out of and in the course of her employment with the Employer.

51. Claimant's testimony that on March 8, 2015 she miss-stepped while climbing the stairs at work and injured her left ankle, left calf and left knee is not credible and persuasive.

52. Claimant's alleged injury was not observed by any other witness who testified at the hearing. Therefore, the alleged incident was essentially un-witnessed.

53. Schuetz and Dietel credibly and persuasively refuted Claimant's testimony that on March 8, 2015 she reported the alleged injury shortly after it occurred. Schuetz and Dietel also credibly and persuasively contradicted Claimant's testimony that she suffered injury-related physical limitations when she worked on March 9 and 10, 2015. Contrary to Claimant's testimony, Schuetz credibly testified that Claimant never reported any work-related injury to her and that she did not observe Claimant limping on March 8, 9 or 10, 2015. Dietel credibly testified that Claimant never reported any work-related injury to him and that he did not observe Claimant having any physical difficulties at work on March 8 and 9, 2015. Claimant's testimony that she reported an injury to Schuetz and Dietel on March 8 is further undermined by Claimant's own statement to the insurance adjuster. Claimant told the adjuster on March 27, 2015, fifteen days after the alleged injury, that she could not recall who she told about the injury but said she described it to "Doug or Jessica."

54. Major credibly and persuasively refuted Claimant's testimony that on March 12 and 14, 2014 she reported a work-related injury. Major credibly testified that Claimant did not report any work-related injury until March 19, 2015, the day before Claimant was expected to return to work.

55. Claimant's testimony that on March 14, 2014 she called Major both before and after she visited the Sky Ridge ER is not credible and persuasive. Major credibly testified he received only one call from Claimant on March 14 in which Claimant stated that she would not be able to work, that she had been to the doctor and was diagnosed with a heel spur and told to stay off work until March 20, 2014. Major also credibly testified that during this phone call Claimant asked if she could do light duty work and he told her that she would have to be released to full duty as a sales person.

56. Based on the evidence, the ALJ finds that the most probable scenario is that on March 14, 2014 Claimant called Major only once and the call was placed *before* Claimant went to the Sky Ridge ER and reported the history of a work-related injury. The Claimant herself admitted that she placed at least one call to Major *before* she went to the ER on March 14. (Findings of Fact 13 and 17). Major credibly testified that during the single phone call Claimant stated that she had been diagnosed with a heel spur and that the doctor had taken her off work until March 20, 2015. However, the x-rays taken at Sky Ridge ER show that there was no bony abnormality in Claimant's ankle and that the actual diagnoses included a "contusion" of the heel and possible

tendonitis. Further, there is no indication in the Sky Ridge ER notes that Claimant was restricted from returning to work until March 20, 2015. Instead, the ER notes reflect that Claimant was given an “ace wrap” at the time of discharge and told to follow up with her PCP or a workers’ compensation doctor within 3 to 5 days.

57. The ALJ infers from the circumstances set forth in Findings of Fact 55 and 56 that that Claimant was strongly motivated to invent and report a work-related injury when she went to the Sky Ridge ER just before noon on March 14, 2014. By the time Claimant went to the Sky Ridge ER Major had already told Claimant that no light duty work, such as cashiering, was available and that she would have to be able to perform the sales job in order to return to work. The ALJ infers that Claimant probably reported the work-related injury to Sky Ridge either because she did not like working long hours on her feet, or because she had sustained a non-work-related injury or condition and did not feel able to continue performing the sales job. In either event, the ALJ infers from Claimant’s inquiry to Major about the availability of light duty work that Claimant desired financial compensation but did not want to continue performing the sales job. The ALJ infers that Claimant probably decided that the best way to obtain both of these objectives was to report a work-related injury.

58. The ALJ finds it improbable that Schuetz, Dietel and Major all gave false testimony about what Claimant did and did not tell them about the alleged injury. There is no credible or persuasive evidence that the Employer either directly or indirectly attempted to influence these witnesses to give false testimony. Neither does the ALJ find it plausible that all three of these witnesses decided to testify falsely out of a sense of loyalty or duty to the Employer.

59. Claimant’s testimony that she sustained a work-related injury is also incredible because it is significantly inconsistent with several aspects of the medical records. Claimant testified that when she went to the Sky Ridge ER her ankle was still swollen and bruised. (Finding of Fact 14). However, the Sky Ridge ER records reflect that the ankle examination was “normal” and there was no swelling.

60. Claimant testified that during the alleged incident of March 8, 2015 she hyperextended her left knee. On March 27, 2015 Claimant told Dr. Burns that her knee hurt more than the “foot/ankle,” and Claimant told the insurance adjuster that her knee “hurt the most.” (Findings of Fact 26 and 28). Claimant told Dr. Healey that the injury caused bruising and swelling of both her ankle and left knee. However, the March 14, 2015 Sky Ridge ER records and the March 19, 2015 Kaiser records do not mention any complaints of left knee pain, nor do they reflect any examination of the left knee. (Findings of Fact 15 and 18). The ALJ finds it is improbable that Claimant sustained a painful left knee injury on March 8, 2015, but failed to report it at Sky Ridge and Kaiser. The ALJ also finds it improbable that if Claimant had reported left knee symptoms to Sky Ridge and Kaiser that both failed to note the symptoms and failed to document any examination of the knee.

61. Dr. Healey and Dr. Messenbaugh agreed that the Sky Ridge ER records do not contain any objective evidence of pathology. Dr. Healey credibly testified that

the Sky Ridge ER examination was “benign.” Dr. Healey credibly opined that if Claimant had injured herself in the manner she described he would have expected the Sky Ridge ER records to contain objective signs of pathology.

62. Dr. Healey’s opinion that Claimant is a credible historian is not persuasive. For the reasons stated above the ALJ finds Claimant is not a credible historian. Because Dr. Healey’s opinions are largely dependent on the accuracy of the history Claimant reported to him, Dr. Healey’s opinions are given little weight except as described in Finding of Fact 61. Further, Dr. Messenbaugh’s opinion that Claimant sustained work-related injuries is expressly dependent on the assumption that Claimant accurately described the circumstances of the injury. (Finding of Fact 33). However, the ALJ finds that Claimant did not accurately describe the history of a work-related injury on March 8, 2015.

63. Evidence and inferences contrary to these findings are not credible and persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

The purpose of the Workers’ Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201(1). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions.

COMPENSABILITY OF INJURY

Claimant alleges that she proved by a preponderance of the evidence that on March 8, 2015 she sustained injuries to her left ankle, left calf and left knee that were proximately caused by an incident on the stairs at work. Respondents contend that the

Claimant's proof is largely dependent on the credibility of her testimony about the events that allegedly occurred on March 8. Respondents argue and that the weight of the credible evidence demonstrates that Claimant's testimony is not credible and that she failed to meet her burden of proof. The ALJ agrees with Respondents.

Claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of her employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of her employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See Triad Painting Co. v. Blair*, *supra.*

As determined in Findings of Fact 50 through 62, Claimant failed to prove it is more probably true than not that she sustained any injury proximately caused by the performance of service arising out of and in the course of her employment. As found, Claimant's testimony that she sustained an injury to her left knee and ankle while going up stairs at work is not credible and persuasive. No witness that appeared at the hearing, other than Claimant, testified that they observed the alleged incident of March 8, 2015. As determined in Findings of Fact 53 through 56, Claimant's testimony that she immediately and repeatedly reported a work-related injury to her Employer was credibly refuted by the testimony of Schuetz, Dietel and Major. For the reasons stated in Finding of Fact 57, the ALJ finds that Claimant's reporting of the alleged work-related injury is not credible because it was probably motivated by Claimant's desire to receive financial compensation without performing the rigorous walking and standing required by her sales job. Claimant's testimony is also incredible because it is significantly inconsistent with the medical records as described in Findings of Fact 59 though 61.

The Claim for workers' compensation benefits must be denied. In light of this determination the ALJ need not address the other issues raised by the parties.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the ALJ enters the following order:

1. The claim for workers' compensation benefits in WC 4-979-168-02 is denied.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. WC 4-988-098-01

ISSUES

Whether Claimant proved, by a preponderance of the evidence, that the spinal cord stimulator trial, for which Dr. Robert Kawasaki has requested prior authorization, is reasonable and necessary.

FINDINGS OF FACT

The ALJ finds and concludes the spinal cord stimulator trial should be denied for the following reasons.

1. Claimant's testimony that she does not want the procedure, and even if the procedure were authorized, she would not proceed is credible and persuasive. This is so especially in light of Dr. Shih's credible and persuasive testimony that a patient's feelings about a procedure affect the outcome of the procedure by up to approximately 30 percent according to recent literature.

2. Dr. Shih testified as an expert in physical medicine and rehabilitation. His testimony was credible and persuasive that a Chronic Regional Pain Syndrome (CRPS) diagnosis is based on three criteria. First, the pain is generally greater than expected based on the mechanism of injury. Two, nonspecific pain findings are present. Three, there are dystrophic changes in the skin, hair and nails, together with asymmetries in the sweat patterns and discoloration of the skin.

3. Dr. Shih performed an April 6, 2016 IME of Claimant. While other medical providers found dystrophic changes present on their examinations of Claimant, he did not note them during his examination.

4. A spinal cord stimulator trial involves surgically placing wires near the claimant's spinal cord, implanting a battery and receiver. A spinal cord stimulator works by creating a stimulus that may create a perception in the patient of decreased pain. The procedure of implanting a spinal cord stimulator has some risks, although infrequent, of life-threatening consequences. It also bears the risks associated with surgery next to the spinal cord. The ALJ finds the risks outweigh the likely outcome of potentially having no effect and that the risk, given Claimant's history, of greatly worsening her symptoms.

5. Colorado's Medical Treatment Guidelines require two positive diagnostic tests to diagnose CRPS. The claimant had one positive test, which was a thermogram performed by Dr. Tashof Bernton. Another diagnostic test was the stellate ganglion block, which is usually the "gold standard", and was performed on Claimant, but the results were non-diagnostic. In addition, Claimant reported a dramatic increase in her symptoms following the stellate ganglion block. Dr. Shih does not recommend a spinal

cord stimulator trial whether or not Claimant were diagnosed with CRPS, one because of the low success rate of the procedure and two because of Claimant's negative response to the stellate ganglion block. These same factors reinforce Claimant's position that she would not receive the procedure even if it were approved.

CONCLUSIONS OF LAW

Given the above Findings of Fact, and the pertinent case law, the ALJ finds and concludes the claimant has not met her burden of proving, by a preponderance of the evidence, that the request for authorization of a spinal cord stimulator trial is reasonable and necessary.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. The request for prior authorization of a spinal cord stimulator trial is denied.

2. Issues not expressly decided herein are reserved to the parties for future determination.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 24, 2016

ISSUES

1. Whether the claimant has established by clear and convincing evidence that the Division independent medical examiner (DIME), Dr. John M. Tyler, erred in finding that the claimant has reached maximum medical improvement (MMI);

2. Whether the claimant has established by clear and convincing evidence that the DIME, Dr. John M. Tyler, erred in calculating the claimant's impairment rating; and,

3. Whether the claimant has established by a preponderance of the evidence that she requires the surgery recommended by Dr. Timothy Hart.

Based upon the findings and conclusions below that the claimant is not at MMI, the ALJ does not render a decision on the impairment rating.

FINDINGS OF FACT

1. On December 7, 2013 the claimant suffered a compensable industrial injury while working for the respondent-employer.

2. On that date the claimant reached up to a get a 40lb tote off a 6 foot pallet as she was unloading stock. While bringing the tote down she injured her left arm, where she felt a sharp pain in the middle of the arm, from the wrist to the elbow. She noticed that her arm was sore about 15 minutes later. She experienced pain shooting up to her elbow.

3. The claimant was initially seen by Dr. Autumn Dean at EmergiCare on December 10, 2013 regarding her arm and elbow injury. She was provided with pain medications, work restrictions, and physical therapy.

4. An x-ray was ordered which indicated that there was a possible 1 mm loose joint body of the elbow and an enthesopathic at the common extensor tendon attachment of the lateral epicondyle. However, there were no acute findings.

5. On December 11, 2013 the claimant reported to Ashley Zimmerman to begin physical therapy. The claimant also attended physical therapy on 12/16/13, 12/20/13, 12/27/13, 12/31/13, 1/2/14, 1/6/14, 1/13/14, 1/17/14, 1/24/14, and 2/7/14. The claimant consistently reported that her elbow was still sore and physical therapy was not helping with the symptoms.

6. On December 17, 2013 the claimant saw Dr. Autumn Dean, reporting that her symptoms remained the same.

7. On December 31, 2013, the claimant continued to report that physical therapy was not working to Dr. Dean. Dr. Dean then ordered an MRI scan of the elbow.

8. On January 3, 2014 the claimant had an MRI performed on her left elbow. The impression from the MRI was that the claimant had mild medial epicondylitis and a "very small elbow effusion."

9. On January 20, 2014 the claimant had a follow-up with Dr. Dean, where she informed the doctor that despite physical therapy, she was not noticing much improvement with her elbow.

10. On January 28, 2014 the claimant saw Diane Johnson, OT, CHT, complaining of localized numbness and tingling at medial aspect of left elbow. She has left grip strength of 50%. Since the claimant was having minimal improvement with physical therapy, she was referred to orthopedics for further treatment.

11. On February 3, 2014 Dr. David Walden, an orthopedic surgeon, provided Dr. Dean with the recommendation of an EMG test "to evaluate the integrity of the ulnar nerve and the cubital tunnel" for the claimant. He believed that "the symptoms are likely coming from a cubital tunnel problem," and believed that the claimant should then be referred to orthopedic surgeon, "Dr. Hart for evaluation of cubital tunnel and/or medial epicondylar procedures."

12. On February 10, 2014 Dr. Dean ordered and EMG.

13. On February 20, 2014 the claimant underwent an EMG study with Dr. Stephen Scheper. His impression was that the EMG "failed to reveal any significant nerve dysfunction of the ulnar nerve across the wrist or elbow." He opined that the claimant was "suffering from medial epicondylitis which is rather severe and she is likely experiencing involvement of the adjacent ulnar nerve with inflammatory neuritis." The EMG was considered to be normal at the time.

14. On March 3, 2014 the claimant had a follow-up appointment with Dr. Dean, who noted that the claimant's EMG was unremarkable, and an injection was recommended.

15. After the epicondyle injection the claimant felt better for approximately six weeks.

16. On March 31, 2014 and April 21, 2014 the claimant had follow-up appointments with Dr. Dean.

17. At a follow-up appointment with Dr. Dean on May 12, 2014 the claimant was still doing better, but was experiencing a dull ache.

18. On a follow-up with Dr. Dean on June 3, 2014 Dr. Dean noted that the claimant "is performing all of her regular work duties without difficulties" and placed the claimant at maximum medical improvement (MMI) with potential maintenance care for further injections.

19. On August 5, 2014 the claimant saw Dr. Walden. In his report he notes that the claimant reports that her elbow still hurts. Dr. Walden notes that there "is pain over the medial epicondyle and over the common flexor tendons with decreased grip strength on that side." The claimant underwent another injection of 2cc lidocaine and 1 cc of dexamethasone.

20. The claimant's second injection did not help. She then had a follow-up appointment with Dr. Walden on August 19, 2014.

21. On that same day, Dr. Walden referred the claimant to Dr. Timothy Hart, an elbow specialist, to evaluate her for possible medial epicondylor debridement.

22. On August 25, 2014 Dr. Hart noted that the claimant's numbness and tingling symptoms persist with posterior medial left elbow pain. He opined that it was reasonable to repeat the EMG and referred her to Dr. Katherine Leppard.

23. On September 12, 2014 the claimant underwent testing with Dr. Leppard. Dr. Leppard found the study to be abnormal and that the claimant had a "left ulnar mononeuropathy at the elbow, moderate in severity" and "a left median mononeuropathy at the wrist, mild in severity."

24. On September 22, 2014, after the claimant's second EMG, Dr. Hart provided to Dr. Dean that the EMG showed moderate left cubital and mild left carpal. He noted that if the claimant "remains symptomatic in four weeks upon return we are

likely to “more seriously consider surgical management for left elbow ulnar nerve decompression subcutaneous transposition and the left wrist carpal tunnel release.”

25. On October 6, 2014 the claimant’s symptoms still persisted and had worsened. Dr. Hart put in for authorization to proceed with a left elbow ulnar decompression subcutaneous transposition and the left wrist carpal tunnel release.

26. On October 14, 2014 Dr. Thomas Mordick performed a record review of the claimant’s case. He opined from his review, that the claimant “had a non-specific, non-reproducible examination after her injury” and that he does not feel that “her recently diagnosed cubital and carpal tunnel can be attributed to her 12-07-13 injury.” He stated that the claimant remained at MMI even after requiring additional injections.

27. On October 16, 2014 Dr. Hart’s request for authorization of surgery for the claimant was denied due to Dr. Mordick’s record review.

28. The claimant underwent a DIME evaluation on January 22, 2015 with Dr. John Tyler. Dr. Tyler notes in his evaluation that the only abnormality he sees from Dr. Leppard’s EMG study is that “there is distinct slowing of the ulnar nerve through the ulnar groove but no other evidence of any type of ulnar neuropathy” and considers it to be only a “mild” ulnar neuropathy. Dr. Tyler gave the claimant a 0% permanent partial impairment rating. He then agreed that the claimant had reached MMI, but moved that date to August 5, 2014, the date of the claimant’s last injection procedure completed by Dr. Walden.

29. On March 27, 2015 the claimant had her third cortisone injection with Dr. Scheper.

30. On June 26, 2015 the claimant had an IME performed by Dr. Rook. Dr. Rook is board-certified in physical medicine and rehabilitation, electrodiagnostic medicine, pain management, and addiction medicine. Dr. Rook was admitted as an expert in the field of physical medicine and rehabilitation at the deposition. Dr. Rook is Level II Accredited. Dr. Rook has been Level II Accredited for 23 years.

31. Dr. Rook opined that the claimant is not at MMI and requires the surgery recommended by Dr. Hart. At the time of the IME, the claimant continued to suffer from symptoms regarding her left upper extremity and her condition continued to deteriorate since she was put on MMI.

32. Dr. Rook diagnosed the claimant as having left elbow pain, and the following:

Medial epicondylitis.

Forearm myofascial pain involving flexer musculature.

Ulnar neuropathy at the left elbow.

Range of motion loss left elbow.

Weakness of left-aided grip strength.

33. On October 23, 2015 the claimant was referred to Dr. Scott Primack for a second opinion. Dr. Primack is board-certified in electrophysiology.

34. The claimant met with Dr. Primack on November 18, 2015. According to Dr. Primack, the valgus and varus stress testing was positive on the left. Tinel's was positive on the left elbow compared to the right. Dr. Primack diagnosed the claimant as having documented medial epicondylitis and documented left ulnar neuropathy. He stated that "given her history, clinical examination, and review of the medical records, I do believe surgical intervention would be considered reasonable and appropriate" and added that he "believed she should get better quite easily" from the surgery.

35. Dr. Primack disagreed with the interpretation that the EMG performed in February 2014 was within normal limits. When asked if he agreed that the EMG was normal, Dr. Primack responded with:

> No, not really. I mean, in looking at this, and this being the first time I have done this, and also being board-certified in electrophysiology, it is interesting that the dorsal ulnar cutaneous nerve latency was prolonged with a decreased amplitude when compared – when in of itself --- and the dorsal ulnar cutaneous nerve is a marker for an ulnar nerve entrapment at the elbow. And it's got both a decrease in its prolongation or latency as well as its amplitude, which indicates there's an entrapment above that.

36. When asked if there was any change between the February 2014 EMG and the September 2014 EMG, Dr. Primack observed that both EMG's show slowing of the ulnar nerve; the ulnar nerve is not normal at the elbow. Dr. Primack explained that slowing of the ulnar nerve is "indicative of an entrapped nerve or nerve that is injured, at least for the ulnar nerve, in what's called the cubital tunnel or that area that sits the medial epicondyle."

37. Dr. Primack disagrees with Dr. Tyler's assessment that the February EMG results were "normal." Dr. Primack testified that "because it wasn't normal. I mean, I don't know if Dr. Tyler does EMGs, but all you've got to do it look at the raw data. But if

you-re not used to doing EMGs, you would never be able to look at the raw data. I mean, you can see how complicated it is."

38. When asked if he disagreed with Dr. Tyler's opinion that the claimant's EMG findings were mild, Dr. Primack explained his rationale for his opinion that the findings are moderate by stating:

> Yeah, I would. I mean, again, I'm - - I go strictly by the book, so I go with the American Academy of Neuromuscular and Electrodiagnostic Medicine, and that's how we classify it.

39. Dr. Primack testified that Dr. Tyler erred in finding that the claimant does not require surgery. According to Dr. Primack, this is more than a difference of opinion. Dr. Primack stated:

> Because you, you know, you don't treat the lab test. So you treat a person. So this data is not as good as the clinical examination. The data is only as good as the clinical examination, meaning that if you've got consistent findings and consistent clinical examination, a loss of function, the number doesn't indicate whether you operate or not. I guess if it was normal, it could be. But severity is not just based on an electrical number. It's based upon an exam and a person behind it.
>
> So if you've exhausted conservative measures, you have definable pathology, you have good psychosocial perception and expectations of the operation, that's an indication for the operation. I don't think anyone could say, well, the numbers aren't bad to indicate an operation.

40. Dr. Primack testified that the claimant was not at maximum medical improvement on August 5, 2014. He testified that based upon his review of the claimant's records and his recent examination of the claimant she is not at MMI. He testified that he disagrees with Dr. Tyler's assessment that the claimant is at MMI because you cannot place someone at MMI based upon an electrical number, which is what Dr. Tyler did in his DIME report.

41. At the deposition of Dr. Primack, he commented on Dr. Mordick's record review report. Dr. Mordick misinterpreted the February 2014 EMG results by relying on results from the median nerve and not the ulnar nerve in his assessment. According to Dr. Primack, Dr. Mordick was incorrect in reading Dr. Scheper's February 2014 EMG report. Dr. Primack testified that Dr. Mordick does not know how to read the tests.

42. Dr. Primack testified that the claimant has exhausted conservative measures and given the electrical data it's reasonable to perform surgery. Dr. Primack testified that Dr. Tyler erred in finding that the findings were mild. He testified that the claimant's symptoms were severe and her electrical findings were in the moderate category because she has loss of conjunction velocity. Dr. Primack testified that he based his opinion strictly by the American Academy of Neuromuscular and Electrodiagnostic Medicine to make his classifications.

43. Dr. Primack testified that "based upon the data I have, again, just seeing her in November and looking through all of the information, I don't think she was at MMI."

44. Dr. Rook testified that steroid injections sometimes get patients "over the hump" and they never have a problem again. On the other hand, sometimes the steroid injection only provides temporary relief, and when the patient goes back to using the muscles that insert to the tendon, which inserts on the bone, the inflammation comes back which aggravates it again. Dr. Rook testified that the steroid injection that the claimant received was like a "partial Band Aid." Dr. Rook explained that the steroid injection "didn't eliminate her condition, so it certainly didn't cure the condition, and the symptoms recurred even worse, so it was just a temporizing measure that provided her with partial pain relief.

45. Dr. Rook testified that the claimant was not at MMI on June 3, 2014. He explained that the claimant:

> continued to be very symptomatic. Her condition, after she returned to full-time duty, resulted in a deterioration in her clinical condition. And I think if you're at maximum medical improvement, you would like to at least maintain the improvement that you achieved at the best point in time, which was shortly after the steroid injection, but that was not the case. Her condition deteriorated and, as a result, further diagnostic workup was performed and further clinical studies were performed which showed a worsening condition that required further treatment.

46. Dr. Rook opined that the claimant was not at maximum medical improvement when she returned to Dr. Walden in August 2014. He opined that the claimant was not at MMI because Dr. Walden referred the claimant to see an elbow specialist, Dr. Hart, due to lack of improvement.

47. Dr. Rook agrees with Dr. Hart's recommendation that the claimant requires ulnar nerve decompression surgery.

48. Dr. Rook testified that he agrees with the opinions of Dr. Primack and commented that his opinions are very similar to Dr. Primack's opinions.

49. Dr. Rook testified that the February 20, 2014 EMG appeared abnormal to him. He testified that "There's slowing across the elbow on the motor study, and there's slowing of the sensory nerve action potential to the dorsal ulnar cutaneous nerve, and a decreased amplitude, so it seems to suggest ulnar nerve entrapment." Dr. Rook further testified that he agrees with Dr. Primack's statement that it would be difficult to say there was a worsening of condition on the second EMG. He opined that the EMGs were performed by two different people using two different machines and the standardization is going to be off. He noted that the two studies appeared to be abnormal.

50. The claimant continues to experience pain in her left arm from her wrist past her elbow. The claimant cannot use her left harm to lift things, or to push and pull objects.

51. Since being place on MMI, the claimant testified that she has not done anything that could have re-injured her arm or aggravated it.

52. The ALJ finds that the medical opinions and analyses of Dr. Primack, Dr. Rook, and Dr. Hart are credible and more persuasive than medical analyses and opinions to the contrary.

53. The ALJ finds that the persuasive evidence establishes that Dr. Tyler clearly erred in determining that the claimant had reached MMI as of August 5, 2014. Dr. Primack, Dr. Rook, and Dr. Hart collectively establish that Dr. Tyler clearly erred in his interpretation of the claimant's condition based upon his reading of the EMG of February 2014 as being a normal EMG.

54. The ALJ finds that the claimant has established that Dr. Tyler clearly erred in determining that the claimant was at MMI as of August 5, 2014.

55. The ALJ finds that the claimant has established that it is more likely than not that the claimant required the surgery as recommended by Dr. Hart and supported by Dr. Primack and Dr. Rook.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado in § 8-40-101, et. seq. C.R.S. (2015), is to assure the quick and efficient delivery of disability and

medical benefits to injured workers at a reasonable cost to employers without the necessity of litigation. § 8-40-102(1), C.R.S.

2. Facts in a workers' compensation case must be interpreted neutrally neither in favor of the rights of a claimant nor in favor of the rights of the respondents. § 8-43-201, C.R.S.

3. The Judges' factual findings concern only evidence that is dispositive of the issues involved: the Judge cannot address every piece of evidence that might lead to a conflicting result. See *Magnetic Engineering, Inc. v. ICAO*, 5. P.3d 285 (Colo. App. 2000).

4. When determining credibility the fact finder should consider among other things the consistency or any inconsistencies of the witnesses testimony or actions; the reasonableness or unreasonableness (probability or improbability) of the testimony or actions; the motive of the witness: and whether the testimony would have been contradicted and bias, prejudiced, or in any. See *Impure Prudential Insurance Co. v. Coin*, 57 P.2d 1205 (1936)

5. The findings of a Division Independent Medical Examiner (DIME) may be overcome only by clear and convincing evidence. § 8-42-107(8)(c), C.R.S. "Clear and convincing" evidence is stronger than a preponderance, is unmistakable, and is free from serious or substantial doubt. *Martinez v. Triangle Sheet Metal, Inc.*, W.C. 4-595-741 (ICAO October 8, 2008). A mere difference of medical opinions is insufficient. *Medina-Weber v. Denver Public Schools,* W.C. 4-782-625 (ICAO May 24, 2010).

6. The question whether a party has overcome the DIME by clear and convincing evidence is one of fact for the ALJ's determination. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). "[A] mere difference of medical opinion does not constitute clear and convincing evidence that the DIME physician's opinion is incorrect or in error." *Patterson v. Comfort Dental East Aurora*, W.C. No. 4-874-745-01 (ICAO February 14, 2014).

7. The claimant has demonstrated that Dr. Tyler unmistakably erred in finding that the claimant is not at maximum medical improvement. Dr. Tyler misinterpreted the EMG results to find that the claimant had mild electrodiagnostic findings. According to Dr. Rook and Dr. Primack who are both electrophysiologists, both of the claimant's EMGs were abnormal and showed signs of slowing at the elbow. The steroid injections that were performed acted only temporarily. When the injection wore off the symptoms returned and were more severe.

8. Dr. Tyler erred in finding that the claimant was at MMI on August 5, 2014. His finding is flawed by the fact that at that visit Dr. Walden performed a second steroid injection, a second temporary measure. That second injection failed to provide any relief and Dr. Walden referred the claimant to a specialist, Dr. Hart, just two weeks later. That referral ultimately resulted in Dr. Hart later recommending surgery.

9. The record clearly demonstrates that Dr. Tyler's opinions regarding the EMG results and need for surgery is clearly and convincingly erroneous. Dr. Mordick performed a records review. He did not perform a physical examination on the claimant. According to both Dr. Rook and Dr. Primack "you don't treat the electrical results, you treat the patient." Not only did Dr. Mordick misinterpret the February 2014 EMG results, he also did not actually examine the claimant. Therefore, his opinions on the need for surgery are diminished.

10. The ALJ concludes that the claimant has established by clear and convincing evidence that Dr. Tyler erred in finding that the claimant reached MMI on August 5, 2014. The claimant has not yet reached MMI for her December 7, 2013 injury.

11. For a compensable injury, an employer and its insurance company must provide all medical benefits which are reasonably necessary to cure and relieve the injury. C.R.S. 8-42-101 (2010). The respondents are liable for reasonable and necessary medical treatment by a physician to whom a claimant has been referred by an authorized treating provider. *Rogers v. Industrial Commission*, 746 P.2d 565 (Colo. App. 1987).

12. Dr. Hart, Dr. Primack and Dr. Rook all recommend that the claimant undergo ulnar nerve surgery. The record clearly establishes that the need for surgery is related to the December 7, 2013 injury. The claimant has had ongoing symptoms and was provided short temporary relief by a temporary injection. It is clear that the claimant has failed conservative treatment and requires surgery. The evidence has established that the claimant is a good candidate for surgery. There is nothing in the record to suggest otherwise.

13. The surgery was found reasonable and necessary by both, Dr. Primack and Dr. Rook. The DIME physician, Dr. Tyler, erred in interpreting the February 2014 EMG results. He also erred in finding that the claimant suffered from mild epicondylitis. There is clear evidence that both EMGs were abnormal. The claimant did not suffer a new injury at work which is the cause for the recommended surgery. Rather, the evidence establishes that the steroid injection wore off and the claimant has failed conservative treatment.

14. The ALJ concludes that the claimant has established by a preponderance of the evidence that the surgery recommended by Dr. Hart is reasonable, necessary, and related to treat the December 7, 2013 injury.

ORDER

It is therefore ordered that:

1. The claimant is not at maximum medical improvement and requires further medical treatment to cure or relieve her from the effects of her injury.

2. The respondent-insurer shall authorize and pay for the surgery recommended by Dr. Hart.

3. The respondent-insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-857-744-04

ISSUES

1. Whether the respondents have produced clear and convincing evidence to overcome Dr. Watson's Division IME opinion regarding MMI, causation, and relatedness of the claimant's right knee injury and left shoulder injury, to the work injury;

2. Whether the claimant has established by a preponderance of the evidence that the claimant's need for treatment of the right knee, and the left shoulder are reasonable, necessary and related to the claimant's industrial injury; and,

3. Whether the claimant is entitled to temporary total disability payments from November 10, 2014 and onward until MMI.

FINDINGS OF FACT

1. On June 3, 2011 the claimant was employed by the respondent-employer as a driver of a semi-tractor trailer truck. The claimant was driving on Highway 40 between Kremmling and Steamboat Springs. He was driving over Rabbit Ears Pass at about 50-60 miles per hour when a gust of wind hit his truck. The claimant lost control of the vehicle and it ran off the road and rolled over onto the right side of the truck. The claimant was belted into his seat at the time of the accident. When the truck stopped, he was hanging in his seatbelt. The claimant released his seatbelt in order to get out of the truck as he was fearful that the truck might catch fire. The claimant estimated that he fell between 4 and 5 feet across the cab of the truck, landing on his right side on the passenger side door of the truck.

2. The claimant had immediate severe right thigh pain and he could not walk. He was transported by ambulance to Kremmling Memorial Hospital. He had injuries to the right side of his body. The claimant had a cut and contusion on his occipital bone above the right eye. He had pain on his right side and doctors were concerned with possible rib fractures and/or liver damage. There were swelling and abrasions on his right wrist and hand. His right Femur was fractured with displacement below a previous ORIF. The Kremling records note that Flight for Life was called to transport the claimant to Swedish Hospital in Denver, and they did not have time to perform X-rays of his right

wrist or elbow. The claimant was still in a C-collar. He was released for transportation via Flight for Life in stable but guarded condition.

3. The claimant was admitted to Swedish Medical Center in Denver with the following diagnosis: Closed fracture of the right femur, open wound on forehead, sprain to hand, abrasion of forearm, contusion of elbow. It was noted that he had a "previous right femur fracture, treated with intermedullary rod about 15 years ago and then followed by hardware removal and then a right total hip replacement." X-ray was preformed of his right shoulder. The medical report notes "swelling to his right leg, it is extremely rotated and shortened. It additionally, notes an abrasion to his right knee, and also noted that "He is slightly tender over the superolateral patellar area." It was determined that the claimant was a good candidate for open reduction and internal fixation of the right femur, and that the surgery should be scheduled "expeditiously".

4. The claimant underwent surgery for his broken leg with Craig Davis, M.D. at Swedish Hospital. Dr. Davis performed open reduction internal fixation of the right periprosthetic femur fracture with allograft putty bone grafting along with a long side plate and cerclage wiring. The claimant then followed up with orthopedic surgeon Dr. Steven Myers, who had also performed his previous right leg surgery and his previous right hip replacement. Dr. Myers noted the chief complaint was "follow up right femur fracture."

5. The claimant remained hospitalized until June 11, 2011 and then was transferred to rehab care from June 11, 2011 to July 18, 2011. On July 9, 2011 the Physical Therapy Evaluation records note a "goal" as "< pain in R knee". On July 11, the claimant had an initial Occupational Therapy Evaluation performed. The therapist noted ambulation was unsteady and unsafe. The therapist assessed a need for strengthening of the right quads and hamstrings and a need for increased ROM in the right knee.

6. The claimant continued to receive physical therapy with the final physical therapy record, from July 29, 2011, noting lowering pain in the right knee as a goal.

7. On November 13, 2012, the claimant was seen by Dr. William Watson for a Division Independent Medical Examination (DIME). Dr. Watson noted the history of the accident stating, "The examinee told me that when the seatbelt was released he fell and he believes he may have broken his leg at that time but he is not sure." Medical records indicate that the claimant was still walking with crutches on January 6, 2012, which was 6 months after the accident. By June 4, 2012, when he saw Dr. Myers one year after the accident, he was "walking with a more level even gait." Dr. Watson was

concerned with possible loosening of the hip arthroplasty. He determined that the claimant was not at MMI. He recommended a three-phase bone scan and asked to review the MRI of the spine to evaluate whether his low back was contributing to the gait pattern. He noted that the AMA Guides Third Edition should be used for the rating.

8. On July 29, 2013, the claimant went to his personal physician's office for treatment after a fall at home, where he was seen by NP Christine Briggs. Records indicate, "Pt. fell in soft dirt and hurt left side X1 week." The notes say, "Patient ambulates with a prominent limp and frequent imbalance is noted." NP Briggs ordered an X-ray of the left shoulder. The Impression was of no derangement of the shoulder bones, but a "left seventh rib abnormality suggesting the possibility of a rib fracture."

9. Per agreement of the parties, the claimant was sent to treatment with Dr. Castrejon as his ATP. Dr. Castrejon first examined the claimant on September 10, 2013. He prepared an exhaustive report with a very detailed description of the accident and the mechanism of injury. He noted that the claimant released his seatbelt after the rollover and "dropped onto the opposite side of the interior of the cab." Dr. Castrejon reviewed the medical records and provided an analysis of the medical treatment. Under the discussion section, Dr. Castrejon noted, "Following the rollover the claimant has been provided with treatment primarily directed to the right femur fracture. There has been very limited treatment to the lower back and right knee. There has been no workup for the right lower limb weakness that has resulted in several falls."

10. Dr. Castrejon stated,

> With regard to his left shoulder and chest, these complaints and findings are related to the recent fall that occurred as a result of buckling to his right lower extremity. As a result of the weakness that is evident on examination today, the patient is experiencing buckling and giving way that has resulted in injury to the left shoulder and chest for which medical care is indicated on an industrial basis. The claimant will be referred for an MRI of the left shoulder based upon findings that are worrisome for a rotator cuff tear.

11. Dr. Castrejon recommended physical therapy for the deconditioning in the right lower leg, and also an MRI of the right knee, "given the length of presentation of symptoms which worsened following his recent fall." At the follow up appointment Dr. Castrejon noted that an MRI of the left shoulder had been performed showing, "a full thickness tear of the supraspinatus with retraction and partial thickness tear of the subscapularis. There is also a full thickness tear of the long biceps tendon with distal retraction and advanced degenerative changes of the AC joint." Dr. Castrejon made referrals to Dr. Michael Simpson for the left shoulder and right knee.

12. Dr. Simpson saw the claimant on October 21, 2013. He felt that "far and away his biggest problem right now is that of his massive rotator cuff tear…..this appears to be all acute from his recent fall. He has absolutely no atrophy which would suggest a chronic nature of his tear." Dr. Simpson recommended proceeding with arthroscopic rotator cuff repair with probable debridement of the shoulder. With regard to the right knee, Dr. Simpson stated that the MRI showed the claimant had a "degenerative meniscal tear which definitely can be causing some pain and causing his knee to buckle and get out on him", which he wanted to try to treat with physical therapy and injections.

13. Dr. J. Raschbacher, M.D. performed a records-review IME on the respondent's behalf on October 27, 2013. Dr. Raschbacher concluded that the claimant began to report new symptomatology after seeing doctors Myers and Leppard in 2012. He noted pre-existing pathology in medical records concerning the claimant's lower back, and determined that the lower back complaints were not related to the claim. Dr. Raschbacher recommended against any further treatment of any kind for the work injury and commented, "Certainly his shoulder surgery and treatment for the back would not be appropriate on the basis of his 2011 injury claim. Given the degree of preexisting nonwork-related pathology in the lumbar spine it may well be reasonable to treat it, but certainly there is no clear support in the medical record for this being done on a work-related basis. The same is true for the left shoulder. This is also true for the right knee."

14. In his deposition on March 13, 2014, Dr. Simpson was asked if his characterization of the medial meniscal tear in the claimant's knee was consistent with the mechanism of injury of the work comp injury. Dr. Simpson stated, "Yes, it's consistent with something that could occur from his work comp injury."

15. Dr. Castrejon was also asked in his deposition on February 21, 2014, about the relatedness of the right knee and the left shoulder injuries. He stated, "Well, the left shoulder is not directly related to the actual rollover that he experienced; it's related to the buckling of the knee, which is, in my opinion, an industrial-related condition given the fracture that he sustained, the weakness, the atrophy, the buckling. And as a result of that, he experienced a fall. As a result of the fall, he sustained rib fractures and he injured his shoulder." Dr. Castrejon testified that he believed that shoulder surgery by Dr. Simpson to repair the rotator cuff injury would be reasonable and necessary surgery related directly to the work comp case.

16. Dr. Castrejon also made a referral to orthopedic surgeon Dr. Rahill. Dr. Rahill examined the claimant on July 14, 2014 and prepared a report. Dr. Rahill

recommended arthroscopic partial medial meniscectomy for the claimant's right knee injury. He commented, "He walks with an antalgic gait utilizing a cane for ambulatory assist. I observed him walking out of the clinic and he almost fell down as his right knee gave way. He was using the cane which stabilized his fall."

17. On November 10, 2014, Dr. Raschbacher reviewed the follow up DIME by Dr. Watson and performed another records review. Once again, he opined that the claimant was at MMI and no further treatment should be considered in association with the work comp claim. He felt that the falls seemed to have developed at quite some time removed from the date of injury.

18. The claimant's medical records and testimony indicate that he had a long and slow recovery from the surgery for his broken femur, during which time he was on crutches for approximately the first six months until the end of 2011. It is not unusual that he was not suffering from falls or the knee "giving way" at that point, since he was on crutches. During this period, the medical treatment from Dr. Meyers was primarily directed at the broken femur. Dr. Meyers did not appear to address the knee symptoms, which are well documented in the records of the physical therapists and others, from the time the claimant was released from the hospital. Since the time he was off the crutches, the claimant has been using a cane, but he was also having issues with his right knee giving way.

19. The ALJ finds that the analyses and opinions of Dr. Castrejon, Dr. Simpson, and the DIME physician Dr. Watson that the injury to the claimant's right knee originated in the initial workers' compensation accident are credible and more persuasive than medical analyses and opinions to the contrary.

20. Significant medical evidence exists in the record in support of the DIME physician's opinion that the right knee injury occurred as a result of the truck accident. The claimant's testimony and statements to examiners indicate that he was able to successfully perform his job as a semi tractor trailer truck driver for 40 years prior to the injury. This job would require the claimant, who is five feet two inches tall, to be able to step up approximately 20 to 24 inches onto the step, and climb into the cab of the truck. The job also would require the claimant to be able to use his right leg to run the gas and brake pedal in the truck.

21. The claimant testified credibly that he was able to perform all these job duties without a problem, prior to the accident, but that since the accident he could no longer drive a truck. The claimant also testified that since the accident, he has not been able to walk over approximately 25 feet at a time without assistance of a cane.

22. The ALJ finds that Dr. Raschbacher's opinion regarding causation of the claimant's right knee and left shoulder injuries constitutes a difference of opinion from the DIME doctor, Dr. Watson. It does not establish that Dr. Watson erred in his causation analysis.

23. The respondents have failed to prove that the DIME physician Dr. Watson clearly erred in his opinions with regard to causation and relatedness of the claimant's right knee injury and left shoulder injury as being related to the work injury. Accordingly, the respondents have failed to overcome the DIME physician's opinion with regard to MMI, as the right knee treatment has not been completed.

24. The claimant has established that it is more likely than not that the claimant's left shoulder surgery was reasonable, necessary, and related to the industrial injury of June 3, 2011.

25. The claimant has established that it is more likely than not that the treatment for the claimant's right knee condition, as recommended by Dr. Simpson, is reasonable, necessary, and related to the industrial injury of June 3, 2011.

26. Determining the TTD benefits is not straightforward. The only general admission of liability admitted at hearing indicates that the respondent-insurer began paying TTD benefits on June 15, 2011, with no date of termination. Additionally, Dr. Castrejon indicated in his WC 164 dated October 22, 2014 that the claimant was returned to light duty. There is insufficient evidence to establish that the claimant was offered a modified duty position. Therefore, since the claimant is not at MMI and the claimant has not been offered modified duty, the claimant's wage loss is attributable to his industrial injury. Therefore, as requested by the claimant, temporary total disability payments should resume from November 10, 2014 and onward until the claimant reaches MMI.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado in § 8-40-101, et. seq. C.R.S. (2015), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers without the necessity of litigation. § 8-40-102(1), C.R.S.

2. A claimant in a worker's compensation claim generally has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101,

C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

3. The facts in a worker's compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A worker's compensation case is decided on its merits. Section 8-43-201, C.R.S.

4. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ does not address every piece of evidence that might lead to a conflicting conclusion. The ALJ may reject evidence contrary to the findings above as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

5. When determining credibility the fact finder should consider among other things the consistency or any inconsistencies of the witnesses testimony or actions; the reasonableness or unreasonableness (probability or improbability) of the testimony or actions; the motive of the witness: and whether the testimony would have been contradicted and bias, prejudiced, or in any. See *Impure Prudential Insurance Co. v. Coin*, 57 P.2d 1205 (1936)

6. The findings of a Division Independent Medical Examiner (DIME) may be overcome only by clear and convincing evidence. § 8-42-107(8)(c), C.R.S. "Clear and convincing" evidence is stronger than a preponderance, is unmistakable, and is free from serious or substantial doubt. *Martinez v. Triangle Sheet Metal, Inc.*, W.C. 4-595-741 (ICAO October 8, 2008). A mere difference of medical opinions is insufficient. *Medina-Weber v. Denver Public Schools,* W.C. 4-782-625 (ICAO May 24, 2010).

7. The question whether a party has overcome the DIME by clear and convincing evidence is one of fact for the ALJ's determination. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). "[A] mere difference of medical opinion does not constitute clear and convincing evidence that the DIME physician's opinion is incorrect or in error." *Patterson v. Comfort Dental East Aurora*, W.C. No. 4-874-745-01 (ICAO February 14, 2014).

8. The respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the

course of the employment. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). The question of whether a particular medical treatment is reasonable, necessary, and causally related is one of fact for determination by the ALJ. *Kroupa v. Indus. Claim Appeals Office, supra; Wal-Mart Stores, Inc. v. Indus. Claims Office*, 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990).

9. To recover workers' compensation benefits, the claimant must prove he suffered a compensable injury. A compensable injury is one which arises out of and in the course of employment. C.R.S. §841-301(1)(b).

10. The "arising out of" test is one of causation. It requires the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. In this regard, there is no presumption that an injury which occurs in the course of a worker's employment arises out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968).

11. It is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. C.R.S. §8-43-201. *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997).

12. The "threshold question" regarding compensability of an injury is one of fact for the ALJ to determine under the preponderance of the evidence standard as set forth in cases such as *Leprino Foods v. Industrial Claim Appeals Office,* 134 P.3d 475 (Colo. App. No. 04CA1379, Dec. 1, 2005); *Moore v. Cobb Mechanical Contractors and American Ins.*, W.C. No. 4-599-920 (April 12, 2006).

13. The determination of whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In re Question Submitted by the United States Court of Appeals*, 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle*, 934 P.2d 861 (Colo. App. 1996).

14. Temporary disability benefits are based on a worker's lost or impaired earning power and are designed to protect against actual loss of earnings as a result of an industrial injury. *Univ. Park Holiday Inn/Winegardner & Hammons, Inc. v. Brien*, 868 P.2c 1164 (Colo. App. 1994). To receive temporary disability benefits, a claimant must

establish a causal connection between the injury and the loss of wages. *See* § 8-43-103(1)(a), C.R.S. The claimant bears the burden to prove any entitlement to temporary disability benefits. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). When applying the preponderance of the evidence standard, the ALJ must decide whether the existence of a contested fact is more probable than its nonexistence. If a party has the burden of proof by a preponderance of the evidence, and the evidence presented weighs evenly on both sides, the finder of fact must resolve the question against the party having the burden of proof. *Town of Castle Rock v. ICAO*, 2013 COA 109 (Colo. Ct. App. 2013)

15. The respondents have the burden of proof to overcome the DIME by clear and convincing evidence. § 8-42-101(3)(a)(I), C.R.S.; *Metro Moving & Storage, Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

16. Whether a worsened condition caused the claimant's wage loss for purposes of determining entitlement to TTD benefits is a factual question to be determined by the ALJ. *Apex Transp., Inc. v. ICAO*, 2014 COA 25 (Colo. Ct. App. 2014). The weight to be assigned evidence of a worsening condition is a matter for the ALJ. *Id*.

17. The ALJ concludes that the respondents have failed to prove with clear and convincing evidence that the DIME physician Dr. Watson erred in his opinions with regard to causation and relatedness of the claimant's right knee injury and left shoulder injury as being related to the work injury. Accordingly, the respondents have failed to overcome the DIME physician's opinion with regard to MMI, as the right knee treatment has not been completed.

18. The ALJ concludes that the claimant has established by a preponderance of the evidence that the claimant’s left shoulder surgery was reasonable, necessary, and related to the industrial injury of June 3, 2011.

19. The ALJ concludes that the claimant has established by a preponderance of the evidence that the treatment for the claimant’s right knee condition, as recommended by Dr. Simpson, is reasonable, necessary, and related to the industrial injury of June 3, 2011.

20. Determining the TTD benefits is not straightforward. The only general admission of liability admitted at hearing indicates that the respondent-insurer began paying TTD benefits on June 15, 2011, with no date of termination. Additionally, Dr. Castrejon indicated in his WC 164 dated October 22, 2014 that the claimant was

returned to light duty. There is insufficient evidence to establish that the claimant was offered a modified duty position. The ALJ concludes, therefore, since the claimant is not at MMI and the claimant has not been offered modified duty, the claimant's wage loss is attributable to his industrial injury. Therefore, as requested by the claimant, temporary total disability payments should resume from November 10, 2014 and onward until the claimant reaches MMI.

[The Order continues on the following page.]

ORDER

It is therefore ordered that:

1. The respondents' request to overcome the DIME as to MMI is denied and dismissed.

2. The respondent-insurer shall pay for the medical treatment for the claimant's left shoulder including the surgery by Dr. Simpson.

3. The respondent-insurer shall pay for the medical treatment for the claimant's right knee including the treatment recommended by Dr. Simpson.

4. The respondent-insurer is ordered to resume TTD payments effective November 10, 2014 and to continue payment until terminated by operation of law.

5. The respondent-insurer shall pay statutory interest at the rate of eight percent (8%) per annum on all amounts due and not paid when due.

6. All matters not determined herein, and not closed by operation of law, are reserved for future decision.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-999-063-01

ISSUES

- Whether Claimant established by a preponderance of the evidence the compensability of a left knee injury on October 1, 2015 and, if found compensable, whether medical benefits are authorized and reasonably needed.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant began working as a freight handler for Employer, formerly Pinnacle, on September 15, 2015. Claimant's job duties included working with pallets and moving boxes of freight.

2. On October 1, 2015, Claimant reported to Robert Shufelt, Employer's site operations manager, that she began feeling symptoms in her left knee after bending down at work. Mr. Shufelt documented the report in the Employers First Report of Occupational Injury or Disease. The document, filled out by Mr. Shufelt on October 2, 2015, describets that the injury occurred when Claimant was bending down, without any products in her hands. The incident was described as occurring when "Jennifer was bending down to pick up a product to place on a different pallet, when she went up on knees her knee gave out and she almost fell to the floor. She was able to stand back up and began to try to work again when the dock lead stopped her and reported the incident. Jennifer was at the end of her shift and stated she would be fine. This other report was started in case it was needed."

3. Kedrick Washington was Claimant's supervisor at the time of the alleged incident. Mr. Washington filled out the Employee's Incident Report. Under Description of Incident, he provided, "Jennifer was working in the repack area and went to bend down when her knee went out and she fell to the floor. She thought she was okay reported this to the team lead on the dock. She completed her shift and went home. After she was at home she went to the Urgent Care and is pending follow up."

4. When Claimant returned to work on October 2 she brought documents to Mr. Shufelt including a release from regular work and a release to work with modified duty. Based upon this, and the fact that Claimant's knee was wrapped in an ace bandage, Mr. Shufelt watched the video of the area from the night before to ascertain what, if anything, had occurred. Mr. Shufelt testified, and his testimony is found credible, that what he observed on the video was not a pallet falling on

Claimant's knee as Claimant testified but, rather, Claimant bending down and then going to the floor.

5. Dr. Burris testified as a medical expert in occupational medicine, Level II accredited. Dr. Burris specifically testified that the actions documented by Employer and as testified to by Mr. Shufelt are activities of daily living which the Division of Workers' Compensation has specifically instructed Level II doctors are not "compensable." In addition, Dr. Burris testified that the documentation contained in Dr. Parker's note of September 9, 2015, coupled with the medical evidence on the MRI established that Claimant had preexisting issues with her left knee which were not aggravated, accelerated or exacerbated by what Employer documented as occurring on October 1, 2015. Dr. Burris specifically testified the meniscal tear pathology would not be caused by what Claimant alleges occurred nor by what Employer documented occurred but, rather, would be caused by a torsion or twisting injury. No persuasive evidence supports that such an injury occurred.

6. The ALJ credits the testimony of Mr. Shufelt and Dr. Burris to be more credible and persuasive that that of Claimant concerning what happened at work on October 1, 2015 to cause her injury.

7. Claimant failed to establish by a preponderance of the evidence that she injured her left knee when a falling pallet struck it.

8. The ALJ finds Claimant's knee problems, as documented in the healthcare records, were not a direct and proximate result of what Employer documented occurred on October 1, 2015. There was no "mechanism of injury" to cause the pathology documented by the MRI. In fact, Dr. Failinger even documented "lower chance of pain generators coming from the knee. There is not a high probability or possibility of a scope helping the situation."

9. Respondents are not liable for the healthcare Claimant availed herself from Medical Center of Aurora, HealthOne Occupational Medicine & Rehabilitation, Denver Integrated Imaging, and Denver Vail Orthopedics.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (ACT) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* Section 8-40-102(1), C.R.S. A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier of fact, after considering all of the evidence, to find that a fact is more probably true than not. *See Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. See §8-43-201(1), C.R.S. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A workers' compensation case is decided on its merits. Section 8-43-201, *supra*. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witnesses' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice or interest. See *Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936). A workers' compensation case is decided on its merits. See §8-43-201, C.R.S. The judge's factual findings concern only evidence and inferences found to be crucial of the issues involved; the judge has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and as rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. Industrial Claims Appeals Office, 5* P.3d 385 (Colo App) 2000.

In order to prove a compensable injury and entitlement to benefits, a claimant must show by a preponderance of the evidence that her injury was caused by activities that arose out of and in the course of her employment. *See* §8-43-201, C.R.S. and §8-41-301(1) (c) C.R.S. "Proof by a preponderance of the evidence requires claimant to establish that the evidence of a "contested fact" is more probable than its non existence." *See Matson v. CLP, Inc.*, W.C. No. 4-722-111 (ICAO August 13, 2009).

The claimant must prove by a preponderance of the evidence that the alleged injury was proximately caused by an injury arising out of and in the course of her employment with the employer. See §8-41-301(1)(b-c) C.R.S. See also *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The "arising out of" element requires claimant to show a casual connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. See *Triad Painting Co. v. Blair.*

The question of whether the claimant met her burden of proof to establish a compensable injury is one of fact for determination by the judge. See *Faulkner v. ICAO*, 12 P. 3d 844(Colo. App. 2000).

The Workers' Compensation Act creates a distinction between an "accident and an "injury." An "accident" is the cause and an "injury" is the result. No workers' compensation benefits are awarded to an employee unless he or she proves by a preponderance of evidence that the "accident" caused a compensable injury. A compensable injury is one that causes disability or the need for medical treatment. *See City of Boulder v. Payne* 162 Colo. 345, 426 P. 2d 194 (1967).

Merely feeling pain at work in and of itself is not "compensable." See Miranda v. Best Western Rio Grande Inn W.C. No. 4-663-169 (ICAO April 11, 2007) "An incident which merely elicits pain symptoms caused by a preexisting condition does not compel a finding that the claimant was sustained a compensable injury." See also F.R. Orr Construction v. Rinta, 717 P.2d 965 (Colo. App 1995).

Claimant has failed to meet her burden of proof and did not show it more probably true than not that a causal connection existed between her employment activities and her injury. Claimant failed to present credible evidence that her injury is compensable. The exact cause of the pain being based upon inconsistent information cannot be found to be credible and persuasive.

The ALJ concludes that Claimant failed to prove by a preponderance of the evidence that her injury was caused by her employment, that the accident caused a disability, or that the October 1, 2015 incident caused an "injury" requiring healthcare.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

2. Issues not expressly decided herein are reserved to the parties for future determination.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 26, 2016

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

PROCEDURAL MATTERS

Claimant had two workers' compensation claims. The first occurred on June 18, 2011 and was assigned case number, WC 4-859-517. The second injury occurred on February 19, 2014 and was assigned case number, WC 4-968-070. The claims were consolidated into WC 4-859-517.

ISSUES

The issues presented for determination are as follows:

- Respondents' attempt to overcome the Division Independent Medical Examination (DIME) performed by Dr. Joseph Fillmore on the issue of maximum medical improvement (MMI) and causation of Claimant's neck symptoms;

- Whether the Claimant should have neck surgery recommended by Dr. Choi; and

- Whether the Claimant is owed TTD benefits from February 13, 2015, and ongoing.

- The parties reserved the issue of Social Security disability offset.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 62-year old woman who worked for the Employer as a certified nurse assistant. Claimant began working for the Employer in April 1991.

2. On June 18, 2011, the Claimant suffered an admitted work injury to her right arm and shoulder. Claimant also complained of neck symptoms at that time.

3. The Claimant saw Dr. John Sacha on July 13, 2011, who diagnosed cervical radiculopathy and shoulder impingement. He recommended an MRI of the right shoulder and considered C-6 and C-7 transforaminal epidural injections/spinal nerve blocks staged to a right shoulder subacromial bursa injection.

4. Dr. John Davis evaluated the Claimant on July 28, 2011, for a surgical consultation. He noted the MRI showed a C-5/6 right femoral disc protrusion with a right-sided C-6 foraminal stenosis. He noted that the MRI of her right shoulder showed a tear of the rotator cuff and subluxation of her biceps tendon. He recommended a subacromial decompression, possible distal claviculectomy, repair of her rotator cuff, and tenodesis or release of her biceps tendon. He stated: "If this fails, she may be a candidate for a C5-6 discectomy." The Claimant then had a rotator cuff repair with Dr. Davis.

5. On August 29, 2011, Claimant reported to Dr. Davis that the numbness in her fingers had disappeared following the shoulder surgery.

6. Dr. Sacha ultimately determined that Claimant's right upper extremity symptoms were related to the shoulder condition. He opined that Claimant did not sustain a neck injury on June 18, 2011.

7. Dr. Sacha determined that Claimant reached maximum medical improvement (MMI) as of January 11, 2012. Dr. Sacha noted she had a rotator cuff tear with surgical intervention. She was released to full duty. On musculoskeletal examination, Dr. Sacha noted, "Negative Spurling test of the neck. No paraspinal spasm." He gave her a 14% upper extremity impairment for the shoulder but did not diagnose a neck problem or give a neck impairment.

8. By the time Dr. Sacha placed the Claimant at MMI for the June 18, 2011 injury, the medical records document improvement in her neck symptoms.

9. Claimant had a post-MMI visit with Dr. Sacha on September 26, 2012. Claimant complained of a flare in pain localized to the right anterior shoulder and right anterior arm with some intermittent numbness and tingling. He documented no pain with extension and flexion of the cervical spine but a positive thoracic outlet syndrome maneuver.

10. On October 10, 2012, Dr. Sacha documented a re-tear of Claimant's right rotator cuff as revealed by an MRI. Dr. Sacha referred the Claimant back to Dr. Davis for a surgical evaluation.

11. Dr. Davis performed a second right shoulder surgery on November 1, 2012.

12. Following the second surgery, Dr. Sacha found the Claimant reached MMI as of June 5, 2013. He assessed a 17% upper extremity impairment rating for the right shoulder. Claimant did report occasional tingling in the right hand and some stiffness around the shoulder blade. Dr. Sacha did not specifically document neck pain and did not assess permanent impairment for her neck. Dr. Sacha returned Claimant to full duty work.

13. Claimant suffered a second injury on February 19, 2014. The First Report of Injury indicates that Claimant reported feeling left sided neck pain after lifting an

obese patient. The Respondents admitted liability for this claim. As found above, the Claimant was still receiving treatment for her right shoulder.

14. The Claimant initiated medical treatment with Dr. Darrel Quick on February 19, 2014. Claimant reported acute onset of sharp left shoulder pain which spreads into the deltoid and biceps up into the left shoulder girdle and neck. Claimant reported some prior neck pain with the prior right shoulder injury and surgery. On examination, Claimant reported mild to moderate tenderness of the left cervical paraspinals with limited range of motion. Dr. Quick assessed acute left shoulder injury, and associated left shoulder girdle and cervical pain. Dr. Quick recommended that Claimant remain off of work.

15. Dr. Quick referred Claimant back to Dr. Davis. On March 6, 2014, Claimant complained that wearing a sling as a result of her left shoulder injury aggravated her neck symptoms. Dr. Davis recommended left shoulder surgery which he performed on April 11, 2014.

16. Following the left shoulder surgery, Claimant continued to complain of periscapular pain, and anterior chest pain which Dr. Davis attributed to Claimant's C4-5 disc disease. He noted on June 9, 2014, that Claimant's cervical spine problems were "markedly holding her back in terms of her rehabilitation." He further noted Claimant's MRI scan which showed advanced degenerative disc disease at C4-5. Dr. Davis stated that he thinks "she needs a spine evaluation."

17. On June 30, 2014, Dr. Sacha evaluated the Claimant. He noted Dr. Davis' opinion that Claimant's symptoms were originating in her neck. Dr. Sacha noted positive Waddell testing, and no diminished range of motion in the cervical spine. He documented mild trapezius spasm on the left greater than right side, and minimal pain with extension rotation bilaterally but no segmental dysfunction throughout the cervical spine. Dr. Sacha opined that Claimant's injury is related only to the left shoulder, and that "there is cervical complaint here." He also noted that Claimant's examinations have become more and more non-physiologic. Dr. Sacha recommended an EMG to rule out any neck issues. Dr. Sacha adamantly disagreed that there was a cervical component to Claimant's left shoulder injury.

18. The Claimant's EMG produced no evidence of acute or chronic denervation, and no evidence of acute or chronic radiculopathy or neuropathy.

19. Claimant initially saw Dr. William Choi on July 11, 2014. She reported a chief complaint of neck pain shooting into the left shoulder that radiates in the left hand with a burning sensation in the hand. Claimant stated it started about two years ago when she was lifting and moving a patient at work. Of note, no medical records document complaints of left-sided neck symptoms following the June 2011 work injury.

20. Dr. Choi's physical examination of the Claimant appears to be normal other than slightly diminished strength on the left side upon upper extremity motor

testing. Dr. Choi recommended a repeat MRI due to the age of the initial cervical spine MRI.

21. On July 21, 2014, Dr. Davis noted limited range of motion in Claimant's cervical spine.

22. The Claimant had a second MRI of her cervical spine on August 7, 2014. It showed moderate to severe bilateral neural foraminal stenosis at C6-7; moderate to severe bilateral neural foraminal stenosis at C5 and C6; and mild to moderate central canal stenosis at C5-6 and C6-7.

23. Claimant saw Dr. Choi on August 7, 2014. Dr. Choi noted Claimant had cervical radiculopathy, pain and burning in the left arm, and fingers. He noted slightly diminished grip strength on the left side, dull headache on the left side, right posterior cervical pain and limited range of motion. The new MRI showed C4-6 stenosis. Dr. Choi recommended "fixing, spinal cord is kinked." He recommended conservative treatment including physical therapy and injections, but stated "surgery will be needed."

24. Dr. Choi tentatively scheduled the Claimant to undergo a C5-7 anterior cervical discectomy and fusion for November 26, 2014.

25. Claimant returned to see Dr. Sacha on August 18, 2014. Dr. Sacha commented on Dr. Choi's cervical spine surgical recommendation. Dr. Sacha acknowledged Claimant's cervical MRI findings. He noted that Dr. Choi recommended a bilateral C4 to C6 transforaminal epidural steroid injection prior to the surgery. Dr. Sacha essentially concurred with the injection recommendation but changed it to the C5-6 and C6-7 levels of the spine. Dr. Sacha noted that Claimant had marked pain behaviors in the severe category.

26. Dr. Robert Dixon began treating the Claimant on September 8, 2014 for her left shoulder injury. In his report of September 8, he noted that Claimant has left sided neck pain, left shoulder pain and numbness in the left palm. He stated she was scheduled for neck surgery in November. He documented limited range of motion in her neck, and diffuse tenderness. Dr. Dixon commented that Claimant had an acute left shoulder injury with associated left shoulder girdle and cervical pain. He recommended Claimant remain off of work.

27. On September 18, 2014, Dr. Sacha performed the injections. Claimant reported less than 60% relief which indicated a non-diagnostic response. Dr. Sacha did note that Claimant had somewhat tight foramina and narrowing of the neural foramina at all four locations but that she did not necessarily have a diagnostic response to the injection.

28. Dr. Sacha evaluated the Claimant again on September 29, 2014. Claimant reported to him that she relates her cervical pain to her first injury to her right shoulder. Dr. Sacha opined that Claimant did not sustain a neck injury as a result of either shoulder injuries. He based his opinion on Claimant's demonstration of the first mechanism of injury and his review of her medical records pertaining to the second

work injury. He also indicated that during treatment for the first injury, Claimant did not have neck symptoms for the most part, and had no radicular symptoms. Dr. Sacha noted he was uncomfortable with Claimant's progressive non-physiologic presentation, and that he was "certainly not comfortable with this patient getting a multilevel anterior cervical discectomy and fusion, which was proposed." Dr. Sacha discharged the Claimant to the physicians at CCOM (Dr. Dixon's practice).

29. On November 7, 2014, Dr. Dixon indicated that there is now a question as to whether the Claimant's neck pain is related to her work injuries. He noted that Dr. Sacha opined that it was not related, and that a second opinion may be required.

30. Apparently, a note exists documenting a conversation between Dr. Dixon and Dr. Sacha dated November 21, 2014. According to Dr. Sacha, Claimant's did not start complaining of cervical spine issues until far into her care for the left shoulder injury. Dr. Sacha also noted Claimant's non-physiologic presentation. Both Drs. Sacha and Dixon agreed that Claimant should not have neck surgery under the workers' compensation claims.[1]

31. Claimant returned to Dr. Dixon on December 1, 2014. His report indicates that after he spoke to Dr. Sacha he would "be following her mainly for her shoulder injury. Dr. Sacha felt strongly that the neck pain is not related to this injury."

32. On February 6, 2015, Dr. Davis continued to diagnose "persistent degenerative disc disease, cervical spine with bilateral upper extremity radicular signs and symptoms, moderately severe." He stated that Claimant was at MMI for her shoulder rehabilitation but that she still had limitations in motion and strength. Dr. Davis attributed Claimant's lack of progress to her cervical spine issues.

33. On February 13, 2015, Dr. Dixon found that Claimant had reached MMI for the February 19, 2014 work injury. His final diagnoses included left biceps tendon tear, left rotator cuff tear and AC arthropathy with acromioplasty/postoperative repair. Dr. Dixon assigned permanent impairment of 23% for the left shoulder.

34. Dr. Dixon imposed permanent work restrictions of no lifting over ten pounds with the left arm. Claimant has never returned to work even with the restrictions.

35. The Respondents filed a Final Admission of Liability on March 30, 2015 and admitted for the permanent impairment rating assigned by Dr. Dixon with February 13, 2015 as the date of MMI. Respondents also admitted for TTD through the date of MMI based on the admitted average weekly wage of $671.14.

36. Claimant objected to the Final Admission and requested a DIME. Dr. Fillmore performed the DIME on August 6, 2015. Dr. Fillmore noted that he received 3.5 inches of medical records but because he did not receive additional payment for the

[1] This note was referenced in Dr. Fillmore's report but the original was not offered into evidence.

time required to review all of the records, he did not do so. He indicated that his inability to review all of Claimant's medical records may impact his opinions.

37. Dr. Fillmore reviewed medical records that document Claimant's neck symptoms after both the first and second injuries including the inaccurate note from Dr. Choi referenced in paragraph 19 above.

38. Dr. Fillmore examined the Claimant and noted her neck range of motion was notable for "clear cogwheeling" and Spurling's maneuver could not be tested due to guarding. Dr. Fillmore noted that Claimant displayed a significant amount of pain behavior such as moaning and overreaction to palpation. Claimant had tenderness to palpation on the left greater than right cervical paraspinal muscles, no occipital tenderness and significant pain to neck palpation in the paraspinals and scalenes. Dr. Fillmore measured Claimant's cervical range of motion and noted her limitations.

39. Dr. Fillmore's impressions, as relevant to these proceedings, were cervical radiculitis and non-physiologic findings. Dr. Fillmore noted that Dr. Sacha had referenced cervical radiculopathy in July 2011, and that Claimant had a cervical MRI within the first five weeks of the June 18, 2011 work injury. Dr. Fillmore agreed with Dr. Sacha that Claimant has non-physiologic findings and significant pain behaviors, both of which made him question whether further treatment, including neck surgery, would benefit the Claimant.

40. Dr. Fillmore acknowledged the normal EMG, but stated that Claimant could still have radiculitis with a normal EMG. He ultimately opined that Claimant is not at MMI for her cervical spine. Dr. Fillmore recommended a surgical re-evaluation and surgery if the surgeon deemed it appropriate. He indicated that Claimant may benefit from a surgical procedure but he expressed concern about the non-physiologic findings. As such, he recommended a psychological evaluation to rule out any factors that may prevent the Claimant from having a good surgical outcome prior to any surgical re-evaluation.

41. Respondents filed an application for hearing to overcome Dr. Fillmore's opinion that Claimant's neck symptoms are related to either of the work injuries. Respondents argue that Claimant remains at MMI for both injuries which they assert should be limited to her bilateral shoulders.

42. Claimant seeks approval for neck surgery but she has not been evaluated by a surgeon since August 2014 which is contrary to Dr. Fillmore's recommendations. He specifically recommended a re-evaluation with a surgeon.

43. Claimant received psychological treatment with Dr. John Disorbio, who is a licensed clinical psychologist. She had several visits with Dr. Disorbio and on January 15, 2016, he opined that Claimant was a good candidate to undergo the cervical spine surgery recommended by Dr. Choi.

44. Claimant retuned to see Dr. Dixon on February 16, 2016 for a one-time evaluation. Claimant complained of worsened neck pain, limited range of motion, and

pain and tingling in her left arm. Dr. Dixon noted that Claimant's neck was not covered under the left shoulder claim with "coverage of the neck to be determined by the courts." He opined that Claimant remained at MMI for her left shoulder injury.

45. Claimant testified that she continues to experience neck pain and symptoms in her arms. She had no neck symptoms prior to June 18, 2011. The Claimant feels she would benefit from surgery and hopes the surgery would allow her to return to work.

46. Dr. Dixon testified by deposition. He opined that after reviewing the medical records in his possession, after speaking with Dr. Sacha and the Claimant, "there is not a left neck injury that is related to this case that I was seeing her for." In support of his opinions concerning the neck, Dr. Dixon indicated that Claimant initially complained of right arm radicular-type symptoms after the 2011 injury then later started complaining of left arm symptoms. He also felt Claimant's non-physiologic findings were concerning, and that the EMG results and lack of a diagnostic response to the injection Dr. Sacha performed all supported his opinions that Claimant's neck symptoms are unrelated to the work injuries. The ALJ is not persuaded by Dr. Dixon's opinions as stated below.

47. Respondents have failed to overcome the DIME opinions concerning relatedness of Claimant's neck condition to the industrial injuries and her MMI status. The opinions of Drs. Dixon and Sacha do not constitute clear and convincing evidence that Dr. Fillmore was incorrect in his assessment of the causal relatedness of the neck to the admitted work injuries or that she has not reached MMI for that condition. Dr. Fillmore opined, and the ALJ finds, that Claimant's neck condition is related to her work-related injuries, and she is not at MMI for that condition. There is no persuasive evidence that Dr. Fillmore relied solely upon the inaccurate note produced by Dr. Choi. It is evident that he relied upon several medical records in addition to his examination of the Claimant. Further, his opinions are supported by the medical records. The Claimant complained of left-sided neck pain the day of the February 16, 2014 left shoulder injury rather than "far into the claim" as Dr. Sacha indicated. She continued to complain of neck pain throughout the claim. Dr. Dixon's opinions are not persuasive because he merely echoed Dr. Sacha. It does not appear from his records or his testimony that he rendered an independent judgment concerning causation of Claimant's neck condition to her work.

48. The Claimant has failed to prove entitlement to the surgery recommended by Dr. Choi approximately two years ago. Dr. Fillmore clearly stated that Claimant required a re-evaluation by a surgeon and clearance from a psychological perspective. Based on the evidence in the record, the Claimant has not proven that Respondents should authorize surgery now.

49. Claimant has proven entitlement to TTD. She has not returned to work, and she is not at MMI. Her work restrictions have impaired her ability to work.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

General Legal Principals

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

Overcoming the DIME

4. Sections 8-42-107(8)(b)(I) and (II), C.R.S., provide that an authorized treating physician shall determine when the injured employee reaches MMI and that, should either party dispute that finding, the disputing party shall request a DIME. Sections 8-42-107(8)(b)(III) and (c), C.R.S., provide that the finding of a DIME selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by “clear and convincing evidence.” Section 8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004).

5. Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been

proved by clear and convincing evidence if, considering all the evidence, the trier-of-fact finds it to be highly probable and free from serious or substantial doubt. *Id*. The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (Nov. 17, 2000).

6. The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). Since the DIME physician is required to identify and evaluate all losses and restrictions which result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Id.* The Division IME examiner's determination of MMI and permanent medical impairment inherently require the physician to assess, as a matter of diagnosis, whether the various components of the claimant's medical condition are causally related to the industrial injury. *Leprino Foods Co. v. ICAP*, 134 P.3d 475 (Colo. App. 2005).

7. As found above, the Respondents have failed to overcome the DIME opinions concerning relatedness of Claimant's neck condition to the industrial injuries and her MMI status. The opinions of Drs. Dixon and Sacha do not constitute clear and convincing evidence that Dr. Fillmore was incorrect in his assessment of the causal relatedness of the neck to the admitted work injuries or that he was incorrect concerning whether Claimant's neck condition is at MMI. Dr. Fillmore opined that Claimant's neck condition is related to her work-related injuries, and she is not at MMI for that condition. The ALJ rejects Respondents' arguments that Dr. Fillmore's failure to review the entire packet of medical records or his reliance on Dr. Choi's renders his opinions incorrect. There is no persuasive evidence that Dr. Fillmore relied solely upon the inaccurate note produced by Dr. Choi. It is evident that he relied upon several medical records in addition to his examination of the Claimant. Further, his opinions are supported by the medical records. The Claimant complained of left-sided neck pain the day of the February 16, 2014 left shoulder injury rather than "far into the claim" as Dr. Sacha indicated. She continued to complain of neck pain throughout the claim. Dr. Dixon's opinions are not persuasive because he merely echoed Dr. Sacha. It does not appear from his records or his testimony that he rendered an independent judgment concerning causation of Claimant's neck condition to her work. Based on the opinions of Dr. Fillmore, Claimant's neck condition is related to her industrial injuries, and she has not reached MMI for that condition.

Medical Benefits

8. Section 8-42-101(1)(a), C.R.S., provides:

> Every employer … shall furnish … such medical, hospital, and surgical supplies, crutches, and apparatus as may reasonably be needed at the time of the injury … and thereafter during the disability to cure and relieve the employee from the effects of the injury.

9. Respondents are obligated to provide medical benefits to cure or relieve the effects of the industrial injury. Section 8-42-101(1), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Respondents, however, retain the right to dispute liability for specific medical treatment on grounds the treatment is not authorized or reasonably necessary to cure or relieve the effects of the industrial injury. *Id.*

10. The Claimant has failed to prove she is entitled to undergo the surgery recommended by Dr. Choi. Dr. Fillmore recommended that Claimant be *re-evaluated* by a surgeon, and then have surgery if the surgeon deemed it appropriate. He did not state that Claimant should have surgery now. As such, the ALJ adopts the recommendations of Dr. Fillmore, and Claimant may be re-evaluated by a surgeon.

Temporary Total Disability

11. To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *Id*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

12. Claimant has proven entitlement to TTD since she is not at MMI and could not perform the essential functions of her job as a certified nurse assistant based on the restrictions imposed by Dr. Dixon. As found above, there was no evidence concerning modified duty job offers, and Claimant had been receiving TTD through February 12, 2015 (the date of MMI) implying that she had not returned to work.

ORDER

It is therefore ordered that:

1. The Claimant’s cervical spine condition is related to her industrial injuries per the opinions of Dr. Fillmore.

2. Claimant is entitled to a surgical re-evaluation.

3. Claimant’s request that the Respondents authorize the surgery recommended by Dr. Choi is denied without prejudice.

4. Claimant is entitled to TTD from February 13, 2015, and ongoing until terminated pursuant to law at the AWW of $671.14.

5. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that medical benefits for her left hip including, but not limited to, left hip labral surgery are reasonable, necessary, and causally related to a June 17, 2015 work related injury.

FINDINGS OF FACT

1. Claimant is employed by Employer as a nurse practitioner (NP) and has been an NP since approximately 2010. Claimant has been working for Employer in internal medicine since 2013. As part of her duties she works directly with patients, trains other medical associates, and mentors NP students.

2. Prior to June 17, 2015 Claimant commonly jogged for exercise and jogged 1.5 to 3 miles without problem. Claimant was continuing to jog in the months leading up to June of 2015.

3. Prior to June 17, 2015 Claimant had never received medical treatment for either of her hips and had no traumatic injuries to either of her hips. Claimant had no symptoms in her hips and no pain in her hips.

4. On June 17, 2015 Claimant was working for Employer and was scheduled to work the late shift, from approximately 9:30 a.m. to 6:15 p.m. At approximately 5:45 p.m. the clinic's doorbell rang. Claimant and a nurse went outside and observed a female patient (FP) and her husband. The FP was in a wheelchair, slumped over, with her eyes closed.

5. Claimant clapped her hands and got the FP to open her eyes and respond. The FP indicated she wanted to die and Claimant was able to gather information that the FP had been brought to the clinic straight from dialysis and that the FP had pain all over and was feeling fatigued. Claimant performed a quick examination of the FP in the wheelchair and noted that the FP had a chest portal that was not properly covered.

6. Claimant went into the office to call the FP's dialysis nurse for more information. Claimant gathered from the FP that she no longer wanted dialysis, had end stage renal disease, and was ready to die or switch to hospice care. Claimant recommended the FP go to the emergency room at the hospital.

7. A nurse at the clinic assisted in wheeling the FP out to the parking lot while the FP's husband went to get their car. Claimant became worried about the FP's

chest portal and the transfer into the car while protecting the chest portal. Claimant also wanted to get vitals on the FP before the FP departed. At this point, Claimant went from a walk to a run to get to the car to assist in the transfer and to get vitals before the FP left.

8. While transitioning from a walk to a run in order to quickly get to the FP, Claimant felt a vibrational tearing sensation in her left lateral hip. Claimant had immediate pain in her hip but continued outside to assist with the FP.

9. The FP advised Claimant and the nurse that she could stand. Claimant and the nurse assisted her in standing and after first supporting herself, the FP suddenly stated that she couldn't do this anymore and gave way. Claimant and the nurse both had their arms under the FP when this happened and bore the brunt of the FP's weight. Claimant and the nurse then lowered the FP to the ground by squatting. Claimant then had a medical assistant from the clinic call 911 to have an ambulance take the FP to the emergency room.

10. When the FP gave way and her weight was on the Claimant and nurse, and while lowering the FP to the ground, Claimant felt the pain in her left hip become even more severe. The pain was a searing pain. On the ride home from work shortly thereafter, Claimant felt swelling in her hip and had difficulty going up or down the stairs in her home. Claimant assumed the pain was from a soft tissue injury and she treated herself with ice, rest, and ibuprofen.

11. After the incident, Claimant was not scheduled to work again until June 23, 2015 as she had a trip planned to celebrate her father's birthday. Claimant went on the trip but experienced continued pain in her left hip. Claimant did not suffer any additional injury while traveling. On June 22, 2015 before returning to work, Claimant reported the injury to Employer and was referred for treatment.

12. On June 22, 2015 Claimant was evaluated at Concentra by Michael Noce, M.D. Claimant reported that while running to a situation, she pushed of the left leg and felt vibrational tears and felt intense pain in the left hip. Claimant reported some limping especially while walking through airports over the last 4 days. Dr. Noce noted that Claimant was very tender with palpation of the left trochanter and that left hip x-rays showed no fracture. Dr. Noce assessed left hip pain and trochanteric tendinitis and referred Claimant for physical therapy. *See* Exhibit 6.

13 On June 23, 2015 Claimant was underwent physical therapy at Concentra with Joshua Simon, PT. PT Simon noted that Claimant was tender to palpation of the left greater trochanter and over distal fibers of the gluteus med. PT Simon noted light bruising over the distal fibers of the gluteus med approximately 1.5 inches in diameter.

14. On June 25, 2015 Claimant was evaluated at Concentra by Hanna Bodkin, PA-C. Claimant reported that her hip pain had become more localized over the past week with more focal pain over the iliac crest with a small area of bruising.

Claimant reported attending physical therapy which she believed helped some. Claimant reported continued pain with abduction lying on the right hip, that she was okay when walking straight, and that at work she had been using the elevator instead of stairs. Claimant reported most of her pain was while going up stairs. PA Bodkin noted on examination that Claimant had full range of motion in the left hip without pain while standing, but pain with laying right side and with adduction and rotation of left hip. PA Bodkin assessed left hip pain and recommended that Claimant continue with physical therapy. *See* Exhibits D, 6.

15. On June 30, 2015 Claimant underwent physical therapy with PT Simon. It was noted that Claimant was feeling much better, was able to walk a lot over the weekend with minimal pain, and that Claimant was starting to do more stairs at work. It was noted that Claimant was able to perform stairs but with a 2/10 pain level and that the goal would be to ascend and descend stairs with no pain. PT Simon continued to assess left hip pain and trochanteric tendinitis. PT Simon noted that Claimant was demonstrating progress toward functional goals but required moderate cues for hip positioning and lacked muscular endurance. PT Simon noted that Claimant would benefit from more therapy to address her decreased muscle hip strength and increased pain during her workday. *See* Exhibit 6.

16. On July 7, 2015 Claimant underwent physical therapy with Candace Godwin, PT. Claimant reported that she went bike riding on July 3, 2015 and started to feel pain in her hip again. Claimant reported being frustrated because she was not able to return to her full level of recreational activity. It was noted that Claimant had soreness with ascending stairs but that she was able to negotiate stairs with no pain. It was noted that Claimant had improved strength in hip abduction. Claimant was advised to avoid long duration resisted activity like biking for the next 1-2 weeks to allow full healing of injured tissues. Claimant was noted to have reached therapy goals. *See* Exhibits D, 6.

17. On July 20, 2015 Claimant was evaluated by Nicole Leitch, PA-C. PA Leitch noted that Claimant had continued to improve, but slowly. Claimant reported she had not been able to return to full activities of daily living including running. PA Leitch noted that Claimant had full range of motion of the left hip without pain while standing but continued pain laying right side and with adduction and rotation of left hip felt to be the proximal portion of the hip. PA Leitch referred Claimant to an orthopedic specialist for evaluation due to Claimant's continued pain in the left hip/buttocks and due to her inability to return to full activities of daily living. *See* Exhibit 6.

18. On September 9, 2015 Claimant was evaluated by William Peace, M.D. at Panorama Orthopedics and Spine Center. Dr. Peace recommended an MRI of Claimant's left hip to evaluate for a gluteus medius tear based on the history, physical examination, radiographic studies, and failure of conservative treatment. Dr. Peace noted on exam that Claimant's left hip strength was decreased and that she was tender over the greater trochanter. *See* Exhibits B, 7.

19. On September 16, 2015 Claimant underwent an MRI of her left hip interpreted by Frank Crnkovich, M.D. Dr. Crnkovich provided the impression of: chondrolabral separation of the superior to posterosuperior labral margins, a thin linear cleft developing with intrasubstance degenerative change of the labrum as well, minimal condral degeneration grade I/grade II of the acetabular margin and femoral head noted far laterally, alpha angle of 58 to 60 degrees, small joint effusion; and gluteus medius muscle edema and myotendinous junction edema greater than the gluteus minimus with throcanteric bursal fluid present but no focal disruption of the gluteus medius or minimus noted. *See* Exhibit E.

20. On September 21, 2015 and because the left hip MRI revealed a left acetabular labrum tear, Dr. Peace referred Claimant to Brian White, M.D. Claimant was called and advised of the tear and that the MRI showed inflammation of the gluteus muscle, but not a muscle tear. Dr. White was noted to specialize in hip arthroscopy for labral tear which was the reason for referral. *See* Exhibit 7.

21. On November 4, 2015 Claimant was evaluated by Brian White, M.D. Claimant reported left hip pain since June 17, 2015 when she went to run to try to catch a patient and also tried to keep the patient from hitting the ground and tweaked her hip. Claimant reported that since the incident she had pain in the groin and deep o the lateral hip. Claimant reported being frustrated as she cannot be active at the level she wants or needs to be. Dr. White noted that Claimant used to run 3 times a week and now could not do that at all. Dr. White noted that Claimant had significant discomfort with the anterior impingement maneuver of her hip which recreated the pain Claimant typically feels. The rest of the physical examination was insignificant. Dr. White noted that Claimant had coxa profunda femoroacetabular type impingement and he noted that the MRI showed a labral tear. Dr. White assessed combined impingement with labral tear, acute on chronic injury. Dr. White opined that due to the chronicity of Claimant's symptoms and failure of conservative treatment, Claimant was a candidate for hip arthroscopy moving forward. *See* Exhibits C, 8.

22. Dr. White requested pre-authorization for left hip scope and labral repair reconstruction and femoral acetabular osteoplasty. *See* Exhibits 4, 5.

23. On November 20, 2015 Respondents denied the requested surgical treatment for non medical reasons. *See* Exhibits G, 5.

24. On February 11, 2016 Claimant underwent an independent medical examination performed by Brian Lambden, M.D. Dr. Lambden opined that Claimant would ultimately need arthroscopic surgery to repair the labral separation to resolve her deep hip aching symptoms and to prevent further degeneration. Dr. Lambden opined that this should be done through her regular health insurance and that he had a hard time relating this to any incident that occurred at work. Dr. Lambden opined that there was no occupational exposure that could explain the type of injury going from walking to a fast walk or jog and that it appeared to be an idiopathic worsening of the degeneration that was due to Claimant's underlying hip pathology that was previously asymptomatic.

25. Dr. Lambden noted that Claimant's reported history matched the medical records. Dr. Lambden noted that the incident on June 17, 2015 was likely consistent with an acute muscle tear on top of some underlying tendinopathy based on the MRI scan evidence for edema in the gluteus minimus, gluteus medius, and greater throchanteric insertion area as well as edema adjacent to the iliac crest in the gluteus medius. Dr. Lambden opined that the tear and tendinitis had resolved. Dr. Lambden opined that the labral tear was not due to the work injury. *See* Exhibit A.

26. On March 17, 2016 Claimant underwent an independent medical examination performed by John Hughes, M.D. Dr. Hughes opined that Claimant sustained an acute labral tear of her left hip on June 17, 2015 and endorsed the recommendations for surgical care made by Dr. White and Dr. Lambden. Claimant reported to Dr. Hughes that while starting to run on June 17, 2015 she felt the sudden onset of a searing quality pain in her left lateral hip and that it was a pain she had never felt before. Dr. Hughes noted that Claimant's history was consistent with medical records documentation beginning on June 22, 2015. Dr. Hughes assessed: occult impingement anatomy of the bilateral hips with no symptoms prior to June 17, 2015; left hip sprain/strain with development of a symptomatic labral tear of the hip; leg length discrepancy with a 2-cm shortening of the left lower extremity compared to the right; thoracolumbar scoliosis; and right Achilles tendinitis. *See* Exhibit 1.

27. Dr. Hughes reviewed the report of Dr. Lambden that concluded there was really no occupational exposure that could explain Claimant's type of injury and that the labral tear recommended an idiopathic worsening of degeneration due to underlying hip pathology that was previously asymptomatic. Dr. Hughes opined that while Claimant had impingement anatomy of her hips, that it was clear from her history that she sustained an acute left hip injury on June 17, 2015. Dr. Hughes disagreed with Dr. Lambden and opined that the labral tear could have occurred as a result of breaking into a run without a warm up period and that it constituted sufficient trauma to cause an acute labral tear. Dr. Hughes noted that the Division of Workers' Compensation Lower Extremity Injury Medical Treatment Guidelines note that while impingement abnormalities are usually congenital, that labral tears may be aggravated by repetitive rotational force or trauma. *See* Exhibit 1.

28. Dr. Hughes and Dr. Lambden both testified via deposition consistent with their written independent medical examination reports.

29. Dr. Hughes opined that Claimant has a slightly deep hip socket which predisposed her to impingement. Dr. Hughes noted that although Claimant was pre-disposed to injury in her hips, that Claimant had an injurious activity on June 17, 2015 and suffered an acute injury that day. Dr. Hughes opined that Claimant's acute tear and range of motion limitations following the injury were consistent with a labral tear. He continued to opine that the labral tear and the left hip injury was work related.

30. Dr. Lambden opined that Claimant had the congenital finding of femoroacetabular impingement which predisposed her to labral tears and that both the labral tear and femoroacetabular impingement were pre-existing and that the only acute injury suffered on June 17, 2015 was a gluteus medius muscle tear. Dr. Lambden opined that the acute muscle tear was consistent with Claimant's symptoms following the injury and was consistent with the findings of edema and swelling. Dr. Lambden opined that the muscle tear had resolved. Dr. Lambden continued to opine that the mechanism of injury did not support a labral tear and that there was no rotational force to the hip and no trauma to the hip during the June 17, 2015 incident.

31. The opinions of Dr. Hughes are found more credible and persuasive than the opinions of Dr. Lambden. The opinions of Dr. Hughes concerning causation are consistent with the mechanism of injury reported by Claimant and are consistent with her medical examinations and symptoms following the injury. Additionally, the opinion of Dr. White and his request for surgery indicate his belief as well that Claimant suffered an acute injury related to her employment on this date which is consistent with Dr. Hughes' opinion.

32. Claimant's testimony at hearing is found credible and persuasive. Claimant had never suffered a prior left hip injury and had no prior left hip symptoms or treatment prior to this work related injury. Claimant had immediate pain in her left hip when she went from a walk to a run and again when she was attempting to transfer the FP to the car. Claimant continues to experience pain in her left hip.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the

testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000).

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). The claimant is required to prove by a preponderance of the evidence that the condition for which she seeks medical treatment was proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has established by a preponderance of the evidence that she is entitled to reasonable and necessary medical treatment for her left hip, including but not limited to left hip labral repair surgery. Claimant has established, more likely than not, that she suffered an acute injury including a labral tear and a muscle tear on June 17, 2015 while assisting with a patient at and outside Employer's clinic. The opinion of Dr. Hughes that an acute injury occurred that was consistent with a labral tear is found credible and persuasive. Although Claimant had a pre-existing condition that pre-disposed her to developing labral tears, Claimants was asymptomatic prior to and leading up to the work injury and she has established more likely than not that her labral tear was suffered acutely on June 17, 2015. Immediately after her acute injury, Claimant had pain in her hip and limitations in her normal activities that has continued to date. The pain and limitations did not exist prior to June 17, 2015. Her symptoms, reported mechanism of injury, and limitations in range of motion on examination shortly after the injury are consistent with an acute tear having been suffered and Dr. Hughes is found credible in this regard. Claimant has established a causal connection between her work duties and the injury suffered as she was assisting a patient at the time she experienced the acute tear and acute pain. Respondents are liable for reasonable and necessary medical treatment including the labral repair surgery which has been opined by multiple providers to be reasonable and necessary treatment for the labral tear and Claimant's continued pain and limited function.

ORDER

1. Claimant has established by a preponderance of the evidence that medical benefits for her left hip including, but not limited to, left hip labral surgery are reasonable, necessary, and causally related to her June 17, 2015 work related injury.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 31, 2016 /s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-994-357-01

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable injury on September 18, 2015.

2. Whether Claimant has established by a preponderance of the evidence that she is entitled to temporary total disability (TTD) benefits from September 18, 2015 and ongoing until terminated by operation of law.

3. Whether Claimant has established by a preponderance of the evidence that she is entitled to reasonable and necessary medical benefits.

4. Determination of Claimant's average weekly wage (AWW).

FINDINGS OF FACT

1. Claimant was employed by Employer as a head cashier with duties that included cashiering, supervising the front end of the store, and closing the store. Claimant began employment with Employer in approximately September of 2013. Claimant earned approximately $300.00 to $350.00 per week depending on her schedule.

2. On September 18, 2015 Claimant went into the front end office to get a box of quarters for the cash registers. Claimant squatted down, opened the safe, and lifted the box of quarters. The box of quarters was approximately 10 inches by 5-6 inches and weighed approximately 25 to 35 pounds.

3. When Claimant lifted the box of quarters she felt a sliding/grinding sensation in her lower back and had the immediate onset of severe pain in her lower back. Claimant felt dizzy and decided to lie down on the floor of the office. Claimant had never felt a similar sensation in her lower back before. Claimant's co-worker called an ambulance and Claimant was taken by ambulance to the hospital.

4. Claimant was evaluated at St. Anthony North Hospital on September 18, 2015 by Eric Bryant, M.D. Dr. Bryant noted that Claimant developed a sudden onset of mid low back pain radiating into her mid buttocks. Claimant reported lifting a box of quarters when she felt a popping sensation, lowered herself to the floor, and had not been able to get up and bear weight since. Dr. Bryant obtained an MRI of Claimant's lumbar spine and noted that the results showed a L4-L5 disc herniation with placement of the right nerve root. Dr. Bryant provided a prescription for Norco and Flexeril and discharged Claimant home. Dr. Bryant noted that Claimant needed to follow up with the

workers' compensation provider designated by her employer and that she needed clearance from that provider before returning to work. *See* Exhibits 6, A.

5. On September 18, 2015 Claimant underwent an MRI of her lumbar spine that was interpreted by Robert Leibold, M.D. Dr. Leibold provided the impression of: mild to moderate L3-4 central stenosis; and mild to moderate L4-5 central stenosis with a disc herniation present mildly displacing the traversing right L5 nerve root posteriorly and to the right. *See* Exhibits 7, B, C.

6. On September 21, 2015 Employer filled out an Employer's First Report of Injury form indicating that Claimant was injured on September 18, 2015 at 2:30 p.m. The form indicates that Claimant was reaching in the safe when she picked up a box of quarters, turned with them, felt a pop in her back, and went to the floor. Employer referred Claimant for treatment. *See* Exhibits 1, E.

7. On September 22, 2015 Claimant was evaluated at OccMed Colorado by Monica Fanning, NP. Claimant reported squatting to grab a box of quarters from the safe at work when she felt a sliding sensation in her spine. Claimant reported when she got up she felt intense pain, dizziness, and muscle spasms and that she went to the emergency room at St. Anthony North. Claimant reported still having significant pain rated at 10/10 that went down into her butt. NP Fanning noted that Claimant had a tailbone fracture years ago. NP Fanning noted diffuse, left greater than right, myofascial trigger points in Claimant's lumbar spine and she was unable to perform range of motion due to Claimant's pain and guarding. NP Fanning noted that if Claimant did have an L4-5 herniation, Claimant could not be treated with epidural steroid injections and NP Fanning referred Claimant to Dr. Oeser for evaluation and treatment recommendations. NP Fanning kept Claimant off work and assessed low back strain and L4-5 disc displacement. NP Fanning opined that Claimant needed rest and recommended she start physical therapy for gentle range of motion and modalities. NP Fanning opined that the injury appeared work-related in causation. *See* Exhibits 6, F.

8. On September 26, 2015 and September 27, 2015 Claimant attended the Colorado Tattoo Convention. Claimant's boyfriend, with whom she has lived for approximately four years, owns a tattoo shop. Claimant attended the convention and assisted at her boyfriend's booth. During the convention, Claimant took Percocet every four hours.

9. Surveillance video of the Claimant taken on the two days of the convention show her walking slowly around the convention center, sitting at her boyfriend's booth, standing at the booth, leaning forward multiple times, and bending at the waist multiple times. Notably, in the video, Claimant bends forward almost to 90 degrees at 21:40, 25:12, 32:49, and 34:52. At 19:10 Claimant is observed lifting the hatch to the trunk of an SUV and places an item into the trunk. The item appears to be a small bag/box and Claimant did not lift it above her shoulder. At the end of the

convention, surveillance video also shows Claimant descending stairs with extremely slow and cautious movement. *See* Exhibits K, L.

10. On September 29, 2015 Claimant was evaluated by Roberta Anderson-Oeser, M.D. Claimant reported that as she was picking up a box of quarters from the safe she felt a sliding sensation and a pop in her lower lumbar region followed by severe pain. Claimant reported lying on the ground for approximately 20 minutes before her supervisor called 911 and that she was then taken by ambulance to St. Anthony's North Emergency Room. Claimant reported a stabbing and aching sensation in the lower lumbar region in addition to aching and numbness in her left lower leg. Claimant reported her pain at a 10/10 and that at best it was a 9/10. Claimant reported no lumbar back pain prior to this incident other than a prior history of a coccygeal fracture. Dr. Oeser provided the impression of: lumbar strain; left lumbar radiculitis; displacement of lumbar intervertebral disc without myelopathy; and muscle spasms. Dr. Oeser noted that Claimant was not a candidate for injection therapy due to Claimant's history of anaphylactic reaction to steroids. Dr. Oeser noted the importance of an active therapy program to avoid further problems with pain and muscle spasms and loss or range of motion and opined that Claimant could benefit from a trial of pool therapy. Dr. Oeser also advised Claimant that it was imperative that Claimant begin with a home stretching program. Dr. Oeser noted that Claimant was to remain on restricted work duty per NP Fanning. *See* Exhibit 10.

11. On September 30, 2015 Claimant was evaluated at OccMed Colorado by Gary Zuehlsdorff, D.O. Claimant reported squatting down in the store to pull quarters out of safe when she reached in, pulled them out, and stood up feeling a pop and immediate pain in the low back that she rated as 10/10. Dr. Zuehlsdorff noted to Claimant that 10/10 pain meant that the pain was so horrible that she would not be able to live for more than a few minutes, and Claimant agreed stating that the pain was a 10/10 and continued to be a 10/10. Claimant reported a prior injury when she fractured the tip of her coccyx. Claimant reported that the pain was in her low back and going down the back of her left leg. Dr. Zuehlsdorff noted on examination that when standing, Claimant could not bend even 5 degrees forward which did not make sense. Dr. Zuehlsdorff assessed: low back strain with left leg symptoms, question radiculopathy with supposed left L4-5 disc displacement; and supposed history of 10 years ago coccyx fracture with treatment for four to five months. Dr. Zuehlsdorff opined that the injury appeared work compensable but that Claimant's presentation was concerning. Dr. Zuehlsdorff opined that it was somewhat non-physiologic that Claimant could sit on the edge of the table but when standing could not bend more than 5 degrees. Dr. Zuehlsdorff also opined that Claimant had Wadell signs of positive pain with axial compression and truncal rotation even to a minimal degree which were not physiologic either. Dr. Zuehlsdorff noted Claimant would continue with physical therapy and pool therapy per Dr. Oeser. *See* Exhibits 9, I.

12. On October 1, 2015 Respondents filed a Notice of Contest indicating that liability for the claim was contested or denied as not work related. *See* Exhibit 3.

13. On November 17, 2015 Claimant was evaluated by Darbi Invergo, D.O. Claimant reported an acute onset of low back pain after lifting a box at Sprouts. Dr. Invergo noted that Claimant's lumbar MRI showed mild chronic degenerative disc disease throughout the lumbar spine that was worst at L3/4 and L4/5. Dr. Invergo opined that a majority of Claimant's low back pain was likely from the annular tear at L4/5 and may have lead to some mild gait abnormalities and that now Claimant had left SI joint pain. Dr. Invergo assessed: sacro ilial pain, left; lumbar degenerative disc disease; lumbar disc disease with disc bulging at L3/4 and L4/5 with an annular tear at L4/5; lumbar back pain, left leg pain with antalgic weakness; lumbar facet arthropathy throughout the lumbar spine; and annular tear of lumbar disc. Dr. Invergo referred Claimant to Bryan Wernick for consultation. *See* Exhibit 12.

14. On December 16, 2015 Claimant had radiographs of her lumbar spine that were ordered by Gary Wernick, M.D. It was noted that the films showed no evidence of fracture or dislocation. *See* Exhibit 13.

15. On December 23, 2015 Dr. Wernick referred Claimant to physical therapy 1 to 2 times per week for 4 to six weeks. *See* Exhibit 15.

16. On February 23, 2016 Dr. Wernick requested that Claimant undergo a medial branch block surgery at L3-L5 with a surgery date of March 1, 2016. *See* Exhibit 18.

17. On March 1, 2016 Claimant underwent bilateral medial branch blocks at L3, L4, and L5 performed by Dr. Wernick with fluoroscopic guidance performed by Ken Hirasaki, M.D. *See* Exhibits 19, 20.

18. Claimant testified credibly at the hearing in this matter. Claimant continues to have severe lower back pain, left leg numbness and tingling, and has limitations in her activities of daily living. Claimant did not have similar issues prior to her September 18, 2015 work injury.

19. Claimant had a prior injury to her tailbone/coccyx in approximately 2009 when she had a probable fracture with inflammation that was treated for 4-6 months and resolved. With her prior injury, Claimant missed approximately one day from work and was better with no ongoing symptoms after a few months of treatment. The pain from the coccyx fracture in 2009 was different from the pain Claimant is currently experiencing.

20. Claimant's boyfriend Gary Dressler testified at the hearing in this matter. Mr. Dressler has lived with Claimant for approximately 4 years. Mr. Dressler testified credibly that he has observed a big difference in Claimant's activity level since the September 18, 2015 injury. Mr. Dressler has observed that Claimant walks slower, can't do strenuous activities, and Mr. Dressler has had to take on many chores and activities of daily living that Claimant can no longer do. Mr. Dressler testified that Claimant assisted him at the tattoo convention in September and that she helped set

up/straighten business cards, stickers, and books. Mr. Dressler testified that Claimant walked around a little bit and was able to socialize but that she was physically limited that weekend. Mr. Dressler compared the convention to a convention a year prior in Phoenix, Arizona where Claimant was much more active.

21. Claimant's testimony, overall, is found credible and persuasive. Claimant suffered an acute injury at work while attempting to lift a box of quarters. Although Claimant reports to medical providers an extremely high level of pain inconsistent with surveillance, Claimant is credible that she is in pain and that she has limitations in her movement and abilities following the work injury. This is shown by her slow walking on surveillance and by her limitations in descending stairs shown on surveillance. Although Claimant is more capable than she reports to her medical providers, she is nonetheless in pain and limited in her normal function due to her September 18, 2015 injury. Further, the testimony of Mr. Dressler is found credible and persuasive in explain the differences in Claimant's abilities following the September 18, 2015 injury.

22. The opinions of NP Fanning and Dr. Zuehlsdorff that the injury is work related are found credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim*

Appeals Office, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of employment, and that the alleged injury was proximately caused by the performance of such service. *See* § 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has established by a preponderance of the evidence that she sustained a compensable injury to her lower back on September 18, 2015. On that date Claimant was working for Employer as a cashier and was performing her normal job duties when she was removing a box of quarters from the safe and when she suffered an acute injury to her lower back. Claimant felt a grinding/sliding sensation in her lower back when she attempted to lift the quarters and she had the sudden onset of severe pain. Prior to this injury, Claimant had been employed by Employer in the same position with no difficulty performing her normal job duties. The opinions of NP Fanning and Dr. Zuehlsdorff that the injury appeared to be work related after examining Claimant and reviewing the reported mechanism of injury are credible and persuasive. Claimant has established that she suffered an acute injury.

Temporary Total Disability

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

Claimant has established both through medical reports of several treating providers and through her lay testimony that she continues to suffer from medical incapacity and impairment of wage earning capacity. Claimant credibly testified that she is unable to return to her regular duties as cashier because she is incapable of bending, twisting, lifting, and standing for longer periods of time. Claimant's medical providers have documented her limitations and further placed Claimant on restricted duty and advised Claimant she could not return to manual labor. Due to her injury, Claimant has been unable to resume her prior duties as cashier and has suffered an impairment of wage earning capacity. Claimant has not reached maximum medical improvement, has not returned to regular or modified employment, and has not received a written release to return to regular employment. Therefore, Claimant has established an entitlement to ongoing temporary total disability benefits from September 18, 2015 and ongoing for the wage loss incurred as a direct result of her compensable injury.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). Here, Claimant has established by a preponderance of the evidence that the medical treatment she has received to date for her L4-L5 disc herniation and radiculopathy has been reasonable and necessary to cure and relieve the effects of her September 18, 2015 work injury. Respondents shall be liable for the medical treatment received to date and for continued reasonable and necessary medical treatment.

Average Weekly Wage

Wages are the money rate at which the services rendered are recompensed under the contract of hire in force at the time of the injury, either express or implied. The objective of wage calculation is to arrive at a fair approximation of the Claimant's wage loss determined from the employee's wage at the time of injury. *See* § 8-42-

102(3); *Campbell v. IBM Corporation, supra; see Williams Brother, Incorporated v. Grimm,* 88 Colo. 416, 197 P.1003 (1931); *Vigil v. Industrial Claim Appeals Office,* 841 P.2d 335 (Colo. App. 1992). Section 8-42-102(3), C.R.S. states that "Where the foregoing methods of computing the average weekly wage of the employee…will not fairly compute the average weekly wage, the division, in each particular case, may compute the average weekly wage of said employee in such other manner and by such other method as will, in the opinion of the director based upon the facts presented, fairly determine such employee's average weekly wage." According to *Washburn v. Academy School District No.20*, W.C. No. 4-491-308 [Industrial Claim Appeals Office (ICAO), September 16, 2002], § 8-4-102(3) "grants the ALJ authority to use discretion in calculating that average weekly wage when the prescribed methods will not, for any reason, fairly compute the claimant's wage."

Here, at the outset of hearing, average weekly wage was identified as an issue for hearing. However, other than Claimant's testimony that she earned between $300 and $350 per week, there was no evidence submitted for the ALJ to make a fair calculation of her average weekly wage at the time of her injury. There were no wage records, paystubs, detailed testimony, etc. that could allow the ALJ to fairly compute her average weekly wage or to determine whether it was closer to $300 or closer to $350 or somewhere in between. The ALJ finds there is insufficient evidence to make a determination as to Claimant's average weekly wage at the time of her injury. Therefore, the ALJ declines to make a finding or issue an order as to Claimant's average weekly wage.

ORDER

1. Claimant has established by a preponderance of the evidence that she sustained a compensable injury on September 18, 2015.

2. Claimant has established by a preponderance of the evidence that she is entitled to temporary total disability (TTD) benefits from September 18, 2015 and ongoing until terminated by operation of law.

3. Claimant has established by a preponderance of the evidence that she is entitled to reasonable and necessary medical treatment, including but not limited to the treatment received to date for her September 18, 2015 work related injury.

4. Claimant has failed to present sufficient evidence for the ALJ to make a determination of her average weekly wage.

5. Insurer shall pay Claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 31, 2016,

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-998-903-01

ISSUES

- Whether Respondents established by a preponderance of the evidence that Claimant did not sustain his injuries during the course and scope of his employment?
- Whether Claimant established by a preponderance of the evidence that his average weekly wage differed from that admitted to by Respondents in their general admission of liability?

FINDINGS OF FACT

Background

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant worked as a taxi cab driver under a lease agreement with Employer beginning June 25, 2015.

2. On Thursday, October 29, 2015, Claimant was involved in a motor vehicle accident.

3. Claimant filed his claim for compensation on November 5, 2015, alleging an average weekly wage (AWW) of $800.00.

4. Insurer admitted liability for medical and temporary total disability (TTD) benefits effective October 30, 2015 and continuing. Insurer admitted to an AWW of $316.27 based on Claimant's net income beginning on his first day of driving, June 25, 2015, though the day before his accident, October 28, 2015.

5. On December 16, 2015, Claimant filed a hearing application on the issues of AWW and additional TTD benefits based on a claimed higher AWW. On December 28, 2015, Respondents responded to Claimant's application seeking to withdraw their admission of liability, asserting that Claimant was not within the course and scope of his employment at the time of his injury.

Liability

6. Claimant testified he was driving his leased cab on the day of the motor vehicle accident, taking a fare from Denver International Airport (DIA) to a downtown hotel. He logged into Employer's dispatch system on the day of the accident. He reported the accident that day or the next day to "Jenny," Ms. Romero's assistant.

7. Employer does not dispute that Claimant was in a motor vehicle accident, incurred medical bills, and lost time from work due to injuries he sustained in the accident. Employer's insurance safety manager, Barbara Romero, testified that Claimant reported he was driving his cab at the time of the accident; that he had a paying passenger named "Johnny Black" in the cab at the time of the accident, and that the other driver was at fault.

8. Respondents contend that Claimant was not logged into Employer's dispatch system at the time of the accident. Employer further contends that a provision of the lease agreement required Claimant to be logged in to its dispatch system for Employer to consider Claimant to be acting within the course and scope of his employment for Employer to consider Claimant eligible for workers' compensation coverage.

9. The language at issue provides:

> C. SOME OF YOUR CONTRACTUAL OBLIGATIONS AND ACKNOWLEDGEMENTS.
>
> > 9. Workers' Compensation. Pursuant to Colorado Revised Statutes 40-11.5-102, YOU acknowledge that during the TERM of this Agreement, YOU agree to be covered by a workers' compensation policy arranged by [Employer] which provides workers' compensation coverage for YOU while operating the Leased Property as a taxicab (only). This policy provides no coverage for accidents, injuries or other events when the Leased Property is being used for other or personal purposes. Under Colorado Public Utilities Commission regulations, YOU are operating the Leased Property as a taxicab any time that YOU make the Leased Property available to the public as a taxicab. Any time that YOU are making the Leased Property available to the public for taxicab services, Colorado Public Utilities Commission regulations require that YOU be logged into [Employer's] computerized dispatch system, even if YOU are only intending to accept "hails" from passengers. YOUR failure to log into [Employer's] computerized dispatch system will be evidence that YOU were not operating the Leased Property as a taxicab (and thus not eligible for workers' compensation insurance) at the time of any accident or event for which YOU may make a workers' compensation claim. You acknowledge that YOU are responsible for all premiums and/or payments due under the workers' compensation policy arranged by [Employer].

10. Respondents presented no persuasive evidence that Claimant was not "operating the Leased Property as a taxicab," and no persuasive evidence that Claimant was using his leased taxicab "for other or personal purposes." While the language provides, "Any time that YOU are making the Leased Property available to the public for taxicab services, Colorado Public Utilities Commission regulations require that YOU be logged into [Employer's] computerized dispatch system," Respondents point to no such regulation, and the ALJ likewise finds none.

11. Rather, the PUC regulations regarding logging on to a dispatch system appear to apply to Employer and not Claimant. For example, 4 CCR 723-6-6255 (a)(III, IV, and V) all require carriers such as Employer to employ a dispatch system that tracks and records a driver's hours of service, logs a driver as "on duty" when within a certain distance from Denver International Airport, and locks out a driver who has exceeded on duty hours of service maximums. These regulations do not apply to drivers such as Claimant.

12. Further, 4 CCR 723-6-6103(c)(II)(D) requires Employer to:

> maintain and retain accurate and true time records, including all supporting documents verifying such time records, for a period of six months showing: (i) the time(s) the driver reports for duty each day; (ii) the time(s) the driver is released from duty each day; (iii) the total number of hours the driver is on duty each day; and (iv) for a driver who is off duty for an entire day, an indication to that effect.

The ALJ finds that given Claimant reported his injuries on or about October 29, 2015, and given Employer's duty to maintain and retain such records for six months, Employer should have had such records of Claimant's on duty times at the April 13, 2016 hearing. The ALJ draws a negative inference from Respondents' failure to produce such evidence at hearing.

13. Ms. Romero testified at hearing that she taught new drivers about Employer's position that drivers be logged into the dispatch system for Employer to consider them acting within the course and scope of the employment. Respondents' Exhibit G documents her training. The exhibit, which has a cartoon at the top of the page, provides:

> Workers' Compensation Insurance. Independent Contractors qualify for Worker's [sic] Compensation Insurance (WC). [Employer] offers and provides this coverage for its contracted drivers at a rate of $50 per week. Workers' Compensation covers medical expenses and lost time benefits as a result of an Occupational injury or disease.
>
> Please Note: The Independent contracted driver must be logged in (as per the requirement of the PUC, 4 Code of Colorado Regulations (CCR) 723-6… (Digital Dispatch System that tracks and records driver's hours of service) AND per WC requirement, the Independent contractor must be performing the duties within the course and scope of the contract agreement, when an Occupational Injury or Disease occurs.

14. The ALJ finds that the language used in the training materials is ambiguous in that

- It refers variously to “Independent Contractors,” “contracted drivers,” “Independent contracted driver,” and “driver.”

- It refers to an incomplete and unidentifiable section of the Code of Colorado Regulations.

- Its reference to “WC” in paragraph 2 seems to refer to the Workers’ Compensation statutes, rather than Worker’s Compensation Insurance as the abbreviation is defined in paragraph 1.

15. Ms. Romero testified at hearing that she understood the lease agreement to require that drivers had to be logged in to Employer’s dispatch system to be considered as operating within the course and scope of their employment. She further testified that she had run a report that indicated Claimant was not logged in on the day of his injury. However, Employer did not introduce any such report into evidence, even though the actual report would be the best evidence of what the report contained. Ms. Romero testified that she had an IT employee review the report, however that employee did not testify. Ms. Romero testified that her report showed that Claimant did not log in at all during the week of his accident. Again, Respondent offered no such report.

16. Ms. Romero testified that Employer does not set schedules, routes, or areas for drivers. She also testified that she thought Claimant had a special airport lease. However nothing in the lease agreement, which was introduced into evidence as Respondents’ exhibit E, identifies it as an airport lease.

17. Claimant testified that he worked three days a week: Tuesdays, Thursdays, and Fridays, because he was assigned by “Jose” in Employer’s operations department, to work at the airport on those days. Ms. Romero testified that Jose does not direct drivers where to work, but that rather he offers what runs are available on a particular day, which could possibly include airport runs.

18. Claimant testified that the process for airport drivers was to wait in a holding area at DIA until receiving a ticket and moving forward to collect passengers. The majority of passengers paid by credit card. Claimant testified that he was logged in to Employer’s dispatch system in the airport holding area, and that after a certain period of no activity, the system would automatically log drivers off. Once logged off, the system would not automatically log back on. Claimant was unsure whether the system had automatically logged him off and whether he re-logged into the system prior to his accident.

19. Ms. Romero testified that Employer’s requirement that drivers be logged into the dispatch system allowed Employer to accurately report drivers’ hours to the PUC and ensure that drivers were not exceeding the PUC’s hour limitations. She also testified that Drivers who were not logged in could pick up “flags,” passengers not referred through dispatch. Ms. Romero testified that a taxi cab’s meter worked even if a driver was not logged on.

20. A large majority of passengers paid by credit card. Claimant testified that he reported all of his credit card revenue to Employer. Respondents processed Claimant's credit card payments, charged Claimant the processing fees, and credited Claimant's account with the remainder of the payment. Respondents produced no persuasive evidence that they did not process credit card payments made to Claimant on or before the motor vehicle accident.

21. The ALJ credits Claimant's testimony as credible and persuasive. He spoke with precision about how he operated as a driver and the events which occurred on the day of the accident in which he sustained injuries.

22. Employer had access to evidence that, if produced, would have tended to support their case. However, Employer did not produce such evidence. The ALJ reasonably infers from Respondent's failure to produce such evidence as its reports of whether Claimant was logged in to its dispatch system at the time of the accident, its failure to produce testimony of the IT employee who checked that report, and its failure to produce reports of credit card processing on behalf of Claimant, that such evidence, if produced, would not have supported Respondents' position.

23. The ALJ finds that Respondent's have not met their burden of proving by a preponderance of the evidence that Claimant was not working within the course and scope of his employment at the time of the motor vehicle accident.

Average Weekly Wage

24. Claimant relies on Exhibit 5, a Form 1099-K form, to support his argument that his 2015 earnings from Employer for June 25, 2015 through October 29, 2015, were $12,917.09, for an average weekly wage of $723.36.

25. Attached to Respondents' general admission as Exhibit B, were summaries of driver tender or revenue and expenses. The revenue summary identifies credit card revenue of $12,917.09 (which was identical to the corresponding 2015 form 1099-K) and voucher income of $1,461.50 for a total of $14,378.59. The second page identifies expenses paid by Claimant in the amount of $8,685.64. A comparison of the two shows net earnings to Claimant in the amount of $5,692.99 of which $2,075.97 was paid by check and $3,617.02 in cash. Dividing Claimant's net earnings of $5,692.99 by 18, the number of weeks between June 25, 2015 and October 29, 2015, yields an average weekly wage of $316.28.

26. A cashier receipt dated August 26, 2015 reflects receipts from credit cards in the amount of $428.68 and vouchers in the amount of $65.75, a total of $494.43 between August 17 and August 25, 2015. His documented expenses during that same time period were $127.88, resulting in net income for that week of $366.55.

27. The ALJ finds Claimant's average weekly wage to be $366.55. This amount reflects Claimant's actual earnings at the time immediately before his injury. The amount is also reasonable in light of Claimant's average weekly wage calculated over the course of his employment.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

In re Pierce, 042616 COWC, 4-950-181-01.

Typically, a claimant is required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Here, because Respondents admitted liability, the burden shifts and Respondents are required to prove by a preponderance of the evidence that at the time of the injury Claimant was not performing service arising out of and in the course of the employment, and that the injury or occupational disease was not proximately caused by the performance of such service. This was a holding of the supreme court in City of Brighton v. Rodriguez, 318 P.3d 496 (Colo. 2014) ("Under section 8-43-201(1), a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order has the burden to prove by a preponderance of the evidence that such a modification should be made.").

Respondents contend that they should be allowed to withdraw their admission of liability because was acting outside of the scope of his employment as defined by the Lease Agreement.[1] As an initial matter, although the ALJ has found that a provision in the lease agreement defined Claimant only to be acting within the course and scope of his employment when he is logged onto Employer's dispatch system; such a finding is not determinative.

An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See Triad Painting Co. v. Blair*, *supra.*

[1] Respondents offered some evidence at hearing that could tend to support a finding that Claimant was an independent contractor, and Claimant did not object to the admission of such evidence. However, Respondents do not pursue the independent contractor issue in their proposed findings of fact and conclusions of law. Rather, Respondents framed the issue for consideration as "Whether Respondents have proven, by a preponderance of the evidence, that Claimant was not within the course and scope of his employment at the time of the October 29, 2015 accident?". Thus, the ALJ does not address an independent contractor issue.

In some cases the claimant's disobedience of the employer's instructions concerning *what* is to be done and *when* it is to be done negates the requisite causal relationship between the employment and the resulting injury. In such circumstances the employer's instructions are said to limit the "sphere" of the employment. However, some employer instructions are concerned with the employee's conduct of the work while acting within the "sphere" of the employment. The employee's violation of the employer's instructions governing the "sphere" of employment severs the causal relationship between the employment and the injury, rendering the injury non-compensable. In contrast, employee violation of the employer's instructions concerning the conduct of the work does not sever the causal relationship with the employment, and any resulting injury is compensable, although possibly subject to other action. *Industrial Commission v. Funk,* 68 Colo. 125, 191 P.2d 125 (Colo. 1920); *Ramsdell v. Horn,* 781 P.2d 150 (Colo. App. 1989).

Illustrative of this distinction is the court's holding in *Bill Lawley Ford v. Miller,* 672 P.2d 1031 (Colo. App. 1983). In *Bill Lawley Ford* the decedent-employee, who was intoxicated, was instructed by the employer to spend the night in Glenwood Springs, at the employer's expense, rather than attempt to recover a disabled truck and tow it to the employer's place of business in Meeker. The decedent disobeyed the employer's instruction and, while towing the disabled truck, was killed in a traffic accident the same night. The court cited with approval authority from a foreign jurisdiction stating that the employer has the "unqualified right to limit the scope of a servant's employment and activity and to determine what an employee shall or shall not do," and also "the unqualified right to determine *when* an employee shall do a certain thing." (Emphasis in original.) The *Bill Lawley Ford* court ruled, as a matter of law, that that "the employer's order limited the sphere of the [the decedent's] employment and that, in acting in violation of that order, [the decedent] was not acting within the course of his employment." *See also, Escobedo v. Midwest Drywall Co., Inc.,* W.C. No. 4-700-124 (ICAO July 13, 2007) (affirming denial of compensation to employee who was injured in fall from scaffold while violating employer's instruction not to work on scaffold until it was repaired).

In contrast, the supreme court reversed an order of a district court denying death benefits in the case of *Industrial Commission v. Funk, supra.* In *Funk*, the decedent was instructed not to perform mining activities beneath an overhanging silica bank until he caved off the top of the bank. The decedent disobeyed the instruction and the overhang collapsed killing him and his son. The court noted that the decedent was not entirely prohibited from working beneath the overhang. Consequently, the court reasoned that violation of the employer's instruction did not limit the sphere of the employment, but was instead concerned "only with the conduct of the workman within his sphere of employment." *See also, Ramsdell v. Horn, supra* (instruction not to work "up high" did not evidence intent to cause cessation of employment relationship even on a temporary basis).

Here, Respondents did not meet their burden of establishing by a preponderance of the evidence that Claimant was not within the course and scope of his employment at the time of his accident. Employer did not introduce evidence of Claimant's on duty time which it was required by the PUC to maintain and retain through the date of hearing. Additionally, while Employer's witness testified about a report she ran which she claimed showed that Claimant was not logged in on the day of the accident, the actual report was not produced, nor was a witness familiar with such report called on to testify. Claimant's testimony that he logged in on the date of the accident and was unsure whether the system automatically logged him out is persuasive. Based on the totality of the evidence, the ALJ concludes that Respondents did not establish by a preponderance of the evidence that Claimant was not logged in at the time of the accident.

Further, whether Claimant was or was not logged onto Employer's dispatch at the time of the accident is only *some* evidence of whether Claimant was operating in the course and scope of his employment. Here, the weight of credible evidence supports the conclusion that Claimant was operating within the course and scope of his employment and that Respondents did not prove otherwise.

Section 8-42-102(2), C.R.S., requires the ALJ to base the claimant's AWW on his earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, § 8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.* Here, the evidence supports a conclusion that at the time of his accident Claimant's average weekly wage was $366.55. This amount reflects Claimant's actual earnings at the time immediately before his injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents' request to withdraw their general admission of liability is denied.

2. Claimant's Average Weekly Wage is $366.55.

3. Issues not expressly decided herein are reserved to the parties for future determination.

4. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether the right shoulder arthroplasty proposed by Stewart Weinerman, M.D. is reasonable, necessary and related to Claimant's injury.

FINDINGS OF FACT

1. Claimant worked as baggage handler for Employer from approximately 1985-2006. He also worked as a supervisor. His job required heavy lifting, which he did on a daily basis.

2. Claimant's medical history was significant in that he previously suffered an industrial injury on October 8, 2002[1]. He injured his left shoulder while working for Employer and required surgery. Claimant testified he returned to work full duty after the surgery on his left shoulder.

3. Claimant sustained an admitted industrial injury to his right shoulder on July 7, 2005. The injury occurred while he was lifting a bag onto a plane. The bag should have been marked "heavy", but was not. Claimant heard a pop in his shoulder.

4. On July 7, 2005, Claimant was evaluated by Rick Artist, M.D. Dr. Artist's assessment was strain-right shoulder; question rotator cuff injury. Claimant was treated conservatively with medications and given work restrictions. The ALJ infers Claimant required treatment for the right shoulder after the injury, although specific reports relating to said treatment was not in the record.

5. An MRI arthrogram on July 27, 2005 revealed severe AC osteoarthritic changes, articular side tendinits, advanced osteoarthiritic changes at the glenohumeral joint and a probable small SLAP tear in Claimant's right shoulder[2]. JoAnne Halbrecht, M.D. reviewed the MRI arthrogram and stated Claimant's symptoms were more consistent with osteoarthritis, bursitis and impingement[3]. The ALJ infers the osteoarthritis in Claimant's right shoulder had been present for some time, as it was described as "advanced" in this note.

6. Dr. Halbrecht found Claimant to be at MMI on November 18, 2005. Dr. Halbrecht stated: "given that his osteoarthritis is bilateral, I discussed with him a genetic component for this".[4] Dr. Halbrecht stated Claimant would require bilateral shoulder replacements. There were no medical records admitted at hearing from August 2005

[1] That case was assigned W.C. case no. 4-584-139.
[2] The MRI arthrogram was referenced in Exhibit 1, p.3-Findings of Fact, Conclusions of Law and Order issued by ALJ Friend on April 3, 2008.
[3] Exhibit 1, p. 3.
[4] *Id.*

through February 2006 which showed what treatment Claimant received for his right shoulder from any of his ATP-s, including Drs. Artist and Halbrecht.

7. Claimant was initially evaluated by Peter Weingarten, M.D. on March 28, 2006. Claimant's injury was reviewed, including the arthroscopic surgery performed on his left shoulder, as well as visco-supplementation treatment, which was temporarily helpful. Claimant had moderate discomfort at the extremes of his range of motion ("ROM"). There was mild diffuse weakness on abduction. Dr. Weingarten noted x-rays of the shoulder demonstrated moderately advanced arthritis. His impression was degenerative arthritis of the shoulder, exacerbated by the accident in question. Dr. Weingarten recommended treatment to include change of work status, such that Claimant did not do repetitive heavy lifting. He felt Claimant would ultimately require total shoulder arthroplasty, but felt this should be delayed until the symptoms warranted the surgery. The ALJ notes this record related to treatment of the left shoulder and Dr. Weingarten did not offer any opinions regarding the right shoulder.

8. On March 30, 2006, Claimant was evaluated by Jon Erickson, M.D. Dr. Erickson noted Claimant had persistent, significant pain in the right shoulder and what was described as "horrible" range of motion on both sides. X-rays taken of both shoulders revealed essentially identical end-stage degenerative arthritic changes on both sides. Claimant had almost 45° of glenoid retroversion, which was described as a significant challenge at the time of a surgical procedure or total shoulder replacement, including potential grafting. The ALJ notes Dr. Erickson did not offer an opinion regarding the impact, if any, the glenoid retroversion had on Claimant's osteoarthritis.

9. On May 25, 2006, Dr. Erickson saw Claimant in follow-up for a consultation concerning the shoulder arthroplasty. At that time, the potential complications of the procedure, including eventual loosening of the glenoid was discussed. Dr. Erickson also discussed the lack of wear and tear phenomenon in the shoulder. Claimant was advised against doing luggage handling in the future.

10. Dr. Weinerman issued a report to Insurer, dated July 24, 2006. Dr. Weinerman noted he had been asked by Dr. Weingarten (his partner) to evaluate Claimant for purpose of giving him an impairment rating for the work-related injuries to his shoulders and back. Dr. Weinerman assigned a 25% extremity impairment to Claimant's left shoulder and 14% scheduled impairment to the right shoulder.

11. Dr. Erickson issued an addendum report on or about August 10, 2006. Dr. Erickson noted Claimant continued to have significant pain and limitation in his range of motion. He had end-stage degenerative arthritis in both glenohumeral joints, with approximately 45° of glenoid retroversion. Dr. Erickson noted he would not do both procedures in one sitting and would usually do the dominant side first.

12. On October 3, 2006, Dr. Weinerman issued a supplemental report to Insurer regarding Claimant's rating and the dates of MMI for his various injuries. Dr. Weinerman noted Claimant reached MMI as of July 20, 2006 for the right shoulder. Dr. Weinerman said he was in agreement with the diagnoses and conclusions made by Dr.

Halbrecht and Dr. Erickson. He offered his opinion that Claimant's previous arthritic condition was due to his employment as a baggage handler. He opined the first surgery on 12/20/02 and his eventual need for total shoulder replacement was due to his employment over 20 years as a baggage handler, which was described as "heavy work". Dr. Weinerman limited Claimant from doing any overhead lifting. He also stated Claimant would require medical maintenance, including medical monitoring.

13. Claimant testified he stopped working for Employer in 2006.

14. Claimant was evaluated by Rolf Kirby, M.D. on April 10, 2007. Claimant told Dr. Kirby that his left and right shoulders were deteriorating from lifting and stacking bags for 22 years. On examination, Dr. Kirby noted decreased range of motion in the lumbar spine and especially the shoulders. Dr. Kirby noted Claimant had no cartilage left in his shoulders, with degenerative arthritic changes on both sides. Claimant had almost 45° of glenoid retroversion. Dr. Kirby's diagnostic impression and functional assessment was: end stage significant degenerative arthritis in both shoulders. He considered Claimant’s shoulders to be actively inflamed, with decreased range of motion due to end stage degenerative arthritis. For restrictions, Dr. Kirby noted Claimant could carry up to 20 pounds, but nothing over 5 pounds anywhere above the waist and was completely impaired from any activity with the arms above his shoulders.

15. Claimant returned to Dr. Artist on October 29, 2007. He reported his symptoms were about the same, continuing to have pain in both shoulders and in his back. He also reported trouble staying in certain positions. Dr. Artist’s assessment was bilateral shoulder sprains and back strain. From these medical records, the ALJ infers Claimant had persistent bilateral shoulder pain.

16. Respondents filed a Final Admission of Liability (“FAL”) on April 9, 2008, admitting for a permanent medical impairment rating of 8% (whole person)[5], as well as maintenance medical benefits, provided these were reasonable, necessary and related to the injury. There were no records admitted at hearing which documented additional treatment Claimant received after 2008, other than follow-up evaluations.

17. Claimant returned to Dr. Artist on May 13, 2008, who noted poor range of motion of the shoulders, with obvious discomfort. Claimant’s back had poor range of motion in all parameters. Dr. Artist’s assessment was persistent bilateral shoulder and back pain. He referred Claimant to Dr. Weinerman.

18. Claimant was seen in consultation by Dr. Weingarten on May 21, 2008 for bilateral shoulder and low back pain. Claimant was able to elevate his arms a maximum of ninety-five degrees. Dr. Weingarten noted Claimant had undergone extensive physical therapy for both shoulders without improvement and he did not

[5] The whole person rating was paid pursuant to the Findings of Fact, Conclusions of Law and Order [4/3/08] issued by ALJ Friend-Exhibit 1. At that hearing, the issues of permanent total disability and permanent partial disability benefits were adjudicated. Although he noted bilateral shoulder replacements were recommended, ALJ Friend made no findings as to the relatedness of the proposed arthroplasty.

desire surgical intervention. Dr. Weingarten advised Claimant he should be re-checked on an annual basis.

19. Claimant returned to Dr. Weinerman on May 22, 2009. Dr. Weinerman stated he was suffering from “really” severe post traumatic osteoarthritis of the shoulders and had given up most activities. Claimant was also described as unemployable, as he had a real difficulty finding work. In the physical examination, Claimant could not raise his arms overhead. His forward flexion was to about 90° and abduction was to about 80°. Internal and external rotation were both markedly decreased bilaterally. Dr. Weinerman opined Claimant was an excellent candidate for total shoulder replacement surgery, if he wanted to consider it.

20. Dr. Weinerman also evaluated Claimant on August 26, 2010. Claimant had very limited range of motion and it was noted his situation had not changed much, but his range of motion was decreasing. Dr. Weinerman said Claimant may be a candidate for a bilateral shoulder arthroplasties and recommended an MRI.

21. Claimant was seen by Dr. Weinerman on April12, 2011, at which time they discussed total shoulder arthroplasty. Dr. Weinerman noted Claimant had forward flexion to 90° and abduction to 80°. Claimant had limited internal external rotation. Claimant wished to go forward with surgery and Dr. Weinerman felt the rotator cuff was intact. Dr. Weinerman indicated he would probably go forward with the left shoulder first.

22. On December 4, 2012, Dr. Weinerman examined Claimant for what was described as left shoulder pain. Limitation in Claimant’s ROM was noted. The x-ray of the shoulder showed a complete loss of glenohumeral joint space with peripheral osteophytes around joint-bilaterally. The diagnosis was osteoarthritis. Dr. Weinerman recommended Claimant undergo total right shoulder arthroplasty. Dr. Weinerman’s office requested authorization of the surgery by Insurer. On December 17, 2012, Insurer authorized Dr. Weinerman’s request for authorization for a right total shoulder arthroplasty. The approval had a limitation providing if the date of service exceeded thirty (30) days, a new review may be necessary.

23. Claimant did not undergo the proposed surgery, which was scheduled for January 28, 2013 because his diabetes was not controlled. Dr. Weinerman indicated Claimant was not to undergo surgery until the diabetes was well-controlled.

24. Claimant returned to Dr. Weinerman on September 10, 2013. At that time, it was noted his pain was greater on the left shoulder, as opposed to the right. Dr. Weinerman's findings were moderate glenohumeral joint space narrowing on right, complete loss of glenohumeral joint space with peripheral osteophytes around joint on the left. Claimant needed to get his diabetes under control and surgery was noted as pending PCP preoperative clearance.

25. Dr. Fall performed an IME on behalf of Respondents on January 23, 2014. At that time, Claimant described his pain level as 8/10 and noted he could not reach over his head. On examination, Claimant had flexion to 115°, abduction to 80° with scapular crepitus, extension 50° and internal and external rotation 40° each. Pain was noted while range of motion testing was done. Dr. Fall's impression was bilateral end stage glenohumeral arthritis; multilevel lumbar degenerative disc disease.

26. Dr. Fall noted Claimant had early onset osteoarthritis involving both shoulders and the arthritis was in the joint. She opined this condition was most likely was hereditary, as he had uncommon positioning of his glenoid. Dr. Fall disagreed with Dr. Weinerman that shoulder arthritis was an occupational disease. Dr. Fall observed the etiology of the arthritis was hereditary at Claimant's young age. The x-rays indicated long-standing degenerative processes, which were bilateral. This was also an indication that this was hereditary. Dr. Fall disagreed with Dr. Weinerman that the repetitive nature of his job over the years led to arthritis, as well as the surgery. Dr. Fall observed the surgery did not add to his arthritis, as merely a debridement was done. Dr. Fall observed arthritis can be post-traumatic; this was more commonly seen after severe injury such as a dislocation or fracture, which did not occur here. Dr. Fall concluded while bilateral shoulder arthoplasties may be appropriate, these were not work-related. Dr. Fall also recommended the total shoulder arthroplasties should not be undertaken without addressing Claimant's poorly-controlled diabetes.

27. Dr. Weinerman issued a report, which had a date stamp of April 7, 2014, and reviewed his history of treating Claimant as well as his findings in the case. He noted Claimant reached MMI for all three injuries on July 20, 2006. He stated Dr. Halbrecht, Dr. Erickson and he were in agreement that Claimant was in need of bilateral shoulder replacements as a consequence of his work related injuries. The ALJ notes the medical records admitted at hearing do not contain such a clear expression of opinion on the part of Drs. Halbrecht and Erickson. The ALJ infers Dr. Weinerman believed these other physicians were in agreement with his opinion. However, the record contained no evidence this was the case. In fact, there is evidence Dr. Halbrecht believed Claimant's shoulder condition was hereditary.

28. Dr. Weinerman reiterated his opinion that Claimant's symptoms and need for the surgery was a direct consequence of his work activities, specifically his work as a baggage handler for over 20 years and the heavy lifting involved in that job. He previously advised Claimant to wait as long as possible before pursuing bilateral shoulder replacements, but the time was now. Dr. Weinerman also documented the right shoulder replacement surgery was first approved by Insurer on 12/17/12, but they were forced to postpone the surgery due to Claimant's underlying diabetic condition. As soon as clearance was received from his PCP, he recommended proceeding with bilateral shoulder replacements. Dr. Weinerman concluded by stating it remained his medical opinion that the recommendation for bilateral shoulder replacements was reasonable, necessary and related to Claimant's work related condition and injuries. The ALJ notes Dr. Weinerman did not address the 45° of glenoid retroversion present in Claimant's right shoulder. The failure to do so made his opinion less persuasive.

29. On September 8, 2015, an MRI was done on Claimant’s right shoulder. The films were read by Bao Nguyen, M.D. Dr. Nguyen noted the presence of diffuse glenohumeral arthritis (with extensive cartilage loss) and an overlying anteriorly downsloping and curved acromion. This was “consistent with a chronic SLAP lesion and glenohumeral instability”. Dr. Nguyen's impression was advanced glenohumeral arthritis, with diffuse labral degeneration, probably a reflection of chronic glenohumeral instability; concurrent central cuff tendinosis but no partial/full thickness spinal tendon tear.

30. On September 14, 2015, Claimant was evaluated by Dr. Weinerman. Dr. Weinerman's impression was: problem number one-osteoarthritis. After that evaluation, Dr. Weinerman requested authorization for a right total shoulder replacement.

31. Dr. Fall performed a W.C.R.P. Rule 16 review on September 22, 2015 concerning the request for authorization of right shoulder arthroplasty. Dr. Fall opined the bilateral shoulder osteoarthritis was not work-related. She recommended that authorization for the procedure be denied.

32. On November 12, 2015, Claimant was evaluated by his family physician, James Yeash, M.D. Dr. Yeash’s assessment was type 2 diabetes mellitus, hyperlipidemia, hypertension and shoulder joint pain. Dr. Yeash noted Claimant was under consideration for bilateral shoulder surgery. Dr. Yeash opined Claimant's diabetes should be in “at least reasonable” control prior to proceeding with surgery. His diabetes was not in control, but had improved, as he had a hemoglobin A1C at 8.4%. Dr. Yeash described this as “not completely out of control” and “is not preclude him from having surgery” [sic]. His platelet count was stable at 106,000, which “would not necessarily preclude him from surgery”, but that would be at the discretion of the orthopedic surgeon. His lipids were not abnormal enough to preclude him from having surgery. Dr. Yeash opined Claimant's overall condition, labs and physical status should not preclude Claimant “from being considered” for surgery. The ALJ notes that Dr. Yeash did not clear Claimant for surgery; rather he noted these conditions did not preclude Claimant from being considered for surgery. Dr. Yeash deferred to the surgeon. Significantly, Dr. Yeash saw Claimant after the request for authorization of the surgery was made. There was no indication in the record that Claimant was seen by Dr. Yeash since the November 2015 evaluation.

33. Dr. Fall testified as a medical expert at the hearing. She is board-certified in physical medicine and rehabilitation and is Level II accredited, pursuant to the W.C.R.P. Dr. Fall opined the proposed surgical procedure was reasonable and necessary, however, it was not related to Claimant's industrial injury. Dr. Fall testified Claimant had previously been diagnosed with osteoarthritis. More particularly, he was diagnosed with severe early onset osteoarthritis and the diagnostic studies showed his glenohumeral joints had rare positioning of the ball going into the socket. This predisposed him to develop arthritis and end stage osteoarthritis was seen at the time of the injury. Dr. Fall noted Claimant’s need for surgery was because of the congenital

condition[6]. Dr. Fall opined the work injury did not alter or speed up the progression of the underlying arthritis. Even if Claimant had not suffered an injury on 7/7/05, Dr. Fall believed Claimant would require total shoulder replacement because of the osteoarthritis. Dr. Fall also expressed concerns regarding Claimant's complicating health issues (diabetes, low platelets) which led her to question whether surgery was in Claimant's best interest. The ALJ credited Dr. Fall's testimony regarding whether Claimant would have needed a total shoulder replacement for his right shoulder, even if he had not been injured on 7/7/05. The ALJ also credited Dr. Fall's opinions regarding Claimant's complicating health issues.

34. Claimant continued to treat with Dr. Weinerman as an ATP since he was placed at MMI. He testified Dr. Weinerman would recommend at various times that he have the total shoulder replacement. Claimant testified his right shoulder is stable, although he believed it has gotten worse over the last ten (10) years. Claimant said he received clearance and the ALJ infers he wishes to have the surgery.

35. The ALJ was not persuaded by Dr. Weinerman's opinion that Claimant's work as a baggage handler caused or accelerated the bilateral osteoarthritis present in his shoulders.

36. There was no evidence in the record which persuaded the ALJ that Claimant's diabetes was under control as of February 2016.

37. There was no opinion provided by Dr. Weinerman concerning Claimant's low platelet count.

38. The ALJ found Dr. Fall's opinions credible and persuasive. While the arthritis in Claimant's right shoulder required treatment in the acute phase of the injury, his need for a total shoulder arthroplasty is because of the end stage osteoarthritis, which was present at the time of the injury. The ALJ was persuaded the injury did not alter or speed up the progression of the underlying arthritis. The ALJ was persuaded Claimant would have required undergo a right shoulder arthroplasty, even if he had not been injured on July 7, 2005.

39. Evidence and inferences contrary to these findings were not credible or persuasive.

[6] Dr. Fall initially used the word "hereditary", which was also used by Dr. Halbrecht. On cross-examination, she explained her use of the words "hereditary and congenital". Dr. Fall stated Claimant was born with the condition.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. Section 8-43-201(1),C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). The instant case involves a credibility determination between the medical experts, Dr. Weinerman and Dr. Fall.

Medical Benefits

Claimant argued the osteoarthritis in his right shoulder became symptomatic after he sustained the injury on July 7, 2005. Claimant asserted his work as a baggage handler aggravated and/or accelerated the osteoarthritis in his shoulder, which necessitated medical treatment. He contended the treatment he now requires was caused by the industrial injury. To support this argument, Claimant relied upon the opinions of Dr. Weinerman and, to a lesser extent, Dr. Weingarten. Claimant also pointed to the fact that the surgery was previously approved by Insurer, but did not go forward because his diabetes was not under control. Now that his diabetes is stable, Claimant requested the arthroplasty be authorized.

Respondents argued Claimant failed to meet his burden of proof that a causal relationship existed between the July 7, 2005 admitted right shoulder injury and his advanced, end-stage osteoarthritis. Respondents also argued the fact that the surgery was previously approved several years before does not compel a finding that the surgery should have been approved a second time. Respondents argued they are entitled to challenge the reasonableness of current or newly requested treatment notwithstanding their position taken with regard to previous medical treatment. Respondents relied upon Dr. Fall's opinions that Claimant would have required the arthroplasty for his advanced osteoarthritis whether or not he had sustained an injury.

In the instant case, Claimant has the burden of proof to establish that the surgery proposed by Dr. Weinerman is reasonable and necessary, as well as related to his industrial injury. Section 8-42-101(1)(a), C.R.S.; *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The question of whether the Claimant proved the proposed treatment was reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

A pre-existing condition “does not disqualify a Claimant from receiving workers' compensation benefits". *Duncan v. Indus. Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). A Claimant may be compensated if the work-related injury "aggravates, accelerates, or combines with" a worker's pre-existing infirmity or disease “to produce the disability for which workers' compensation is sought". *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990).

As a starting point, there is no dispute that Claimant was diagnosed with bilateral end stage osteoarthritis in the glenohumeral joint in both shoulders, as early as 2005. As found, the osteoarthritis in Claimant's right shoulder was not caused by his industrial injury, although it was probably initially aggravated by the injury. Claimant required treatment and was placed at MMI for the right shoulder injury. (Finding of Fact 4, 6). As conceded by Respondents’ expert, Dr. Fall, the proposed total arthroplasty for the right shoulder was reasonable and necessary. However, the overriding question was whether the proposed surgery was related to Claimant’s admitted industrial injury. Dr. Fall also questioned whether the proposed arthroplasty was in Claimant’s best interest given some of his health conditions. Based upon the totality of the evidence, the ALJ determined Claimant failed to meet his burden of proof on the issue of relatedness. As found, Claimant requires the surgery because of the end stage arthritis in his right shoulder, as opposed to the work-related injury. (Finding of Fact 36). The medical evidence documented the presence of endstage osteoarthritis in the right shoulder joint, which arthritis was present at the time of the injury in 2005. The ALJ concluded this was not caused by the industrial injury.

As found, Dr. Fall's testimony was persuasive; first with regard to her opinion Claimant would have required the surgery, even if he had not suffered the industrial injury. The ALJ was not persuaded by Dr. Weinerman’s opinion that Claimant’s work activities over time caused the osteoarthritis. Rather, the ALJ credited Dr. Fall’s opinion that post-traumatic arthritis most often develops after a fracture or dislocation, which did not occur here. Inferentially, Dr. Erickson’s opinion regarding the lack of wear and tear in the shoulder also supported Dr. Fall’s opinion.

Second, Dr. Fall's explanation regarding the location and angle of Claimant's glenoid as a cause of osteoarthritis was persuasive to the ALJ. Dr. Fall’s opinion was supported by one of Claimant’s early treating physicians, Dr. Halbrecht. (Finding of

Fact 6). In this regard, Dr. Weinerman did not address this latter issue, although he disagreed with Dr. Fall's opinion regarding the cause of Claimant's osteoarthritis. Dr. Weinerman appeared to only believe Claimant's work activities as the cause of his need for surgery, excluding all other potential causes. However, his failure to address the 45° of glenoid retroversion made his opinion less persuasive.

In making this determination, the ALJ also considered what impact, if any, the prior authorization of the arthroplasty had on the issue before the Court. Implicit in this analysis is consideration of the question whether Insurer waived its right or should be estopped from contesting whether the proposed procedure was reasonable and necessary, as well as related to the injury by its prior approval. The equitable doctrines of waiver and estoppel have been applied to workers' compensation hearings. *Johnson v. Industrial Commision of the State of Colorado,* 761 P.2d 1140,1145-1146 (Colo. 1988).

No authority was proffered by either party on this issue, but under the specific circumstances, the ALJ concluded Respondents were within their rights to require additional approval if the surgery was not performed within 30 days. The prior authorization of the right shoulder arthroplasty had a specific condition; namely, if the procedure was performed beyond 30 days, further approval had to be secured. (Finding of Fact 22). Under the circumstances of this case, almost 3 years elapsed until the next request for authorization was made. Respondents were within their rights to deny the requested authorization. Accordingly, there was no evidence Respondents voluntarily and intentionally relinquished a known right, giving rise to a waiver of their right to contest to the proposed surgery. *Johnson v. Industrial Commision of the State of Colorado,* 761 P.2d at 1147.

In addition, the equitable doctrine of estoppel does not apply, as there were additional relevant facts (i.e. the opinions of Dr. Fall) that were not known at the time the surgery was initially approved. Moreover, there was no showing by Claimant that he detrimentally relied upon the original approval decision made by Insurer. Indeed, the arthroplasty did not go forward because of Claimant's diabetes, not anything that had to do with Respondent-Insurer.

Finally, the ALJ was not persuaded Claimant's diabetes was stable. As found, Dr. Yeash did not unequivocally clear Claimant for surgery. (Finding of Fact 30). Based upon the evidence, the ALJ was unable to conclude Claimant's diabetes was under control and therefore there remains a significant chance for complications.

In this regard, the ALJ considered the Workers' Compensation Medical Treatment Guidelines, Rule 17, Exhibit 4-Shoulder Injury [effective February 1, 2015] ("Treatment Guidelines") when evaluating the proposed shoulder arthroplasty. The Treatment Guidelines were established by the Director pursuant to an express grant of statutory authority. See § 8-42-101(3.5)(a)(II), C.R.S. (2008). In *Hall v. Industrial Claim Appeals Office*, 74 P.3d 459 (Colo. App. 2003) the Court noted that the Treatment Guidelines are to be used by health care practitioners when furnishing medical aid under the Workers' Compensation Act. See Section 8-42-101(3)(b), C.R.S. (2008).

The Guidelines are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). It is appropriate for an ALJ to consider the Guidelines in deciding whether a certain medical treatment is reasonable and necessary for the Claimant's condition. *Deets v. Multimedia Audio Visual*, W. C. No. 4-327-591 (March 18, 2005).

However, an ALJ is not required to award or deny medical benefits based on the Treatment Guidelines. In fact, there is generally a lack of authority as to whether the Guidelines require an ALJ to award or deny benefits in certain situations. Thus, the ALJ has discretion to approve medical treatment even if it deviates from the Treatment Guidelines*.* *Madrid v.Trtnet Group, Inc.*, W.C.4-851-315 (April 1, 2014).

In the case at bench, the ALJ considered the application of the Treatment Guidelines, specifically with respect to potential complications. The section entitled: "**General Guideline Principles**" addresses surgical interventions. In particular, the section provides in pertinent part:

> "Surgical Interventions should be contemplated within the context of expected functional outcome and not purely for the purpose of pain relief. The concept of "cure" with respect to surgical treatment by itself is generally a misnomer. All operative interventions must be based upon positive correlation of clinical findings, clinical course, and diagnostic tests. A comprehensive assimilation of these factors must lead to a specific diagnosis with positive identification of pathological conditions."

More particularly, Section G (6) addresses **Shoulder Replacement (Arthroplasty)**. Subsection (b) is concerned with the occupational relationship and provides that it is "Usually from post-traumatic arthritis, or from trauma resulting in severe humeral head fractures."

This was not present in the case at bench and comports with Dr. Fall's opinion that significant trauma is what generally causes post-traumatic arthritis. Given the facts of the case, the ALJ determined Claimant failed to establish a relationship between his occupation and the osteoarthritis. Absent such a showing, Claimant did not make a sufficient showing under the Treatment Guidelines.

In addition, at least one surgeon (Dr. Erickson) raised the possibility that Claimant would require grafting before implantation of the glenoid component. Nothing in the record indicated this issue was addressed by Dr. Weinerman. There were also potential complications which could arise related to Claimant's diabetes and the surgery may be contraindicated. As found, Claimant's diabetes may not be under control and surgery would be contraindicated if it was not. Pursuant to the Treatment Guidelines, operative interventions must be based upon a positive correlation of clinical findings, clinical course, and diagnostic tests; without such a correlation, Claimant failed to satisfy his burden of proof regarding the proposed surgery.

ORDER

It is therefore ordered that:

1. Claimant's request for authorization of the right shoulder arthroplasty is DENIED.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Was Claimant's right to seek additional medical benefits and temporary disability benefits foreclosed by the failure to appeal ALJ Harr's finding that the Division-independent medical examination physician placed Claimant at maximum medical improvement on February 28, 2013?

- Is the Claimant entitled to an award of medical benefits to treat her right knee symptoms?

- Is Claimant entitled to an award of temporary total disability benefits commencing February 28, 2013 and continuing?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. At hearing Claimant's Exhibits 1 though 13 were received in evidence. Respondents' Exhibits A through AA were received in evidence.

2. On November 1, 2007 Claimant sustained an admitted injury to her left knee. She slipped on a wet or greasy floor and twisted her left knee.

3. On December 1, 2008 Claimant underwent left knee surgery described as a plica resection of the medial compartment and a lateral retinacular release. On December 11, 2009 Claimant underwent a second left knee surgery described as a microfracture of the left medial femoral condyle chondral lesion.

4. On June 16, 2010 authorized treating physician John Hughes, M.D., placed the Claimant at maximum medical improvement (MMI). Dr. Hughes assessed left knee sprain, left knee arthrosis post microfracture and persistent postsurgical patellofemoral arthritis.

5. Claimant requested a Division-sponsored independent medical examination (DIME) to review Dr. Hughes's findings.

6. William Watson, M.D., performed the DIME on November 23, 2010. During the course of the DIME Dr. Watson noted that claimant walked with an "antalgic gait, quick on the left." In addition to examining Claimant's left knee Dr. Watson examined Claimant's *right* knee. With regard to the right knee Dr. Watson noted pain on patellar compression, grinding and crepitation with flexion/extension and tenderness over the lateral patella. Dr. Watson assessed the following: (1) Status post lateral

release and plica resection of the left knee; (2) Status post chondroplasty and microfracture of the medial femoral condyle; chondral lesion; (3) Chondromalacia patella of the right knee, rule out internal derangement. Dr. Watson opined Claimant was not at MMI. With regard to the left knee Dr. Watson recommended Claimant undergo a repeat MRI to assess the medial condylar cartilage defect. With regard to the right knee Dr. Watson noted Claimant had first complained of right knee pain to Dr. Robinson on February 10, 2010, to Dr. Hughes on May 5, 2010 and to Dr. Parry on August 10, 2010. Dr. Watson opined Claimant's right knee symptoms were attributable to her altered gait and excessive weight bearing that were caused by the November 1, 2007 accident. Dr. Watson opined Claimant should undergo x-rays and an MRI of the right knee and follow-up with her orthopedic surgeon.

7. Dr. Watson's November 2010 finding that Claimant had not reached MMI was not contested by either Claimant or Respondents.

8. On January 4, 2011 Claimant was seen by Dr. Hughes. Dr. Hughes wrote that Claimant's "emerging right knee symptoms" were consistent with degenerative chondromalacia patella and not attributable to the November 1, 2007 industrial injury.

9. On January 7, 2011 Claimant returned to her surgeon, Walter Robinson, M.D. Dr. Robinson recommended Claimant undergo bilateral MRI's of her knees to assess chondral defects.

10. In September 2012 Charles Gottlob performed a third surgery on Claimant's left knee. Dr. Gottlob had intended to perform a unicompartmental resurfacing arthroplasty but decided against the procedure upon detecting significant chondromalacia on the central weight bearing portion of the lateral femoral condyle.

11. On February 28, 2013 Dr. Gottlob noted Claimant had undergone an Orthovisc injection with minimal relief. Dr. Gottlob placed Claimant at MMI.

12. On May 28, 2013 Claimant returned to Dr. Watson for a follow-up DIME. Dr. Watson issued a written report in which he listed his impressions as: (1) Status post arthroscopy of the left knee times 3 with the most recent arthroscopy showing grade 4 chondromalacia of the lateral compartment and chondral defect in the medial compartment; (2) Chondromalacia of the patella of the right knee. Dr. Watson wrote that he agreed with Dr. Gottlob's finding that Claimant reached MMI on February 28, 2013. He further stated that his opinion was "unchanged on the right knee from my previous report." Dr. Watson assessed a 21% lower extremity rating for Claimant's left knee. On February 28, 2013 Dr. Watson also completed a Division IME Examiner's Summary Sheet on which he indicated Claimant reached MMI on February 28, 2013 with 21% lower extremity impairment.

13. On June 13, 2013 the Insurer filed a Final Admission of Liability (FAL). The FAL admitted for temporary total disability (TTD) benefits from December 1, 2008 through February 27, 2013. The FAL admitted Claimant reached MMI on February 28,

2013 and admitted for permanent partial disability (PPD) benefits, based on Dr. Watson's 21% lower extremity impairment rating, commencing February 28, 2013. The FAL also admitted for ongoing medical benefits "as related to the injury post MMI."

14. On June 18, 2013 Claimant filed an Application for Hearing listing the issues as medical benefits, TTD benefits commencing March 1, 2013, PPD benefits, and permanent total disability benefits. Claimant also endorsed "other issues" including whether she was at MMI, whether her right knee problems were related to the November 2007 injury and whether additional medical treatment was reasonable and necessary.

15. On October 23, 2013 ALJ Harr conducted a hearing concerning Claimant's application for hearing. ALJ Harr issued Findings of Fact, Conclusions of Law, And Order (FFCL) dated January 2, 2014. In the FFCL ALJ Harr listed the issues as follows: (1) Whether Dr. Watson determined that Claimant's right knee condition was a component of her admitted left knee injury; (2) Whether Claimant proved by clear and convincing evidence that her "altered gait or excessive weight bearing during treatment of the left knee injury aggravated the chondromalacia patella of the right knee; (3) Whether claimant proved by a preponderance of the evidence that she was entitled to an award of medical benefits, temporary disability benefits and PPD benefits related to the right knee condition.

16. In the January 2, 2014 FFCL ALJ Harr determined as fact that it is more probably true than not that Dr. Watson, the DIME physician, found Claimant's symptoms of right knee chondromalacia patella are not related to the left knee injury. In support of this determination ALJ Harr initially found that Dr. Watsons' reports "were equivocal regarding causation of [the] chondromalacia patella disease process in claimant's right knee." Specifically, ALJ Harr noted that in the November 23, 2010 DIME report Dr. Watson recommended diagnostic tests and an evaluation to rule out symptoms of (right knee) internal derangement. However, in the May 28, 2013 follow-up DIME report Dr. Watson no longer recommended evaluation of the right knee, placed the Claimant at MMI, rated the injury based only on left knee impairment and "did not condition MMI upon treatment of the right knee." ALJ Harr inferred from this evidence that Dr. Watson determined that the "chondromalacia patella disease affecting claimant's right knee is not a component of her left knee injury."

17. ALJ Harr next found that Claimant failed to prove it is highly probable that Dr. Watson "was incorrect in his determination that claimant reached MMI, with no permanent impairment of the right knee." In support of this determination ALJ Harr credited the opinion of Dr. Hughes that Claimant's "right knee symptoms are the result of a concurrent and unrelated degenerative condition that was not in any way accelerated or aggravated by the work related left knee injury." Having determined Claimant failed to overcome by clear and convincing evidence Dr. Watson's DIME finding that Claimant was at MMI, ALJ Harr denied the claim for medical benefits, temporary disability benefits and PPD "related to [Claimant's] right knee condition."

18. Claimant appealed ALJ Harr's FFCL to the ICAO. Claimant argued in her brief that, among other things, ALJ Harr misinterpreted the follow-up DIME report and that Dr. Watson's "ultimate opinion" was that the right knee symptoms were caused by the admitted left knee injury. In support of this assertion Claimant explicitly cited that portion of the follow-up DIME report in which Dr. Watson stated that his opinion concerning the right knee was unchanged from the November 29, 2010 DIME report. As a corollary to this argument Claimant reasoned that ALJ Harr mistakenly found she was at MMI because she never received any treatment for the injury-related right knee symptoms. In a Final Order dated June18, 2014 the ICAO affirmed ALJ Harr's FFCL and concluded that ALJ plausibly interpreted the evidence to mean that Dr. Watson found Claimant to be at MMI and her right knee symptoms were not related to the left knee injury.

19. Claimant appealed the ICAO's June 18, 2014 Final Order to the Court of Appeals.

20. On December 11, 2014 the Court of Appeals issued its opinion in *Samuels v. Industrial Claim Appeals Office,* Colo. App. No. 14 CA1281 (not selected for publication). On appeal Claimant argued that ALJ Harr "erred as a matter of law in determining that the follow-up DIME report was ambiguous and that the DIME physician had changed his opinion and no longer considered claimant's right knee problems to be related to the admitted lift knee injury." The court rejected this argument finding that "when viewed in the context of the surrounding circumstances" the follow-up DIME report (May 28, 2013 report) was "ambiguous." Specifically the court concluded that the follow-up DIME could be interpreted as "determining an impairment rating solely as to claimant's left knee, while reiterating that claimant's right knee was still to be evaluated and treated." Alternatively, the court stated that the report could be interpreted as "suggesting that the DIME physician had decided to exclude claimant's right knee symptoms as a component" of the left knee injury. Thus, the court concluded that resolution of the ambiguity presented in the follow-up DIME presented a question of fact for the ALJ.

21. The Court of Appeals next considered whether the record supported ALJ Harr's finding that "the DIME physician had ultimately excluded the right knee symptoms as a component of the left knee injury." In so doing the court noted that a DIME physician's "opinions concerning MMI and permanent impairment inherently require him or her to assess as a matter of diagnosis, whether the various components of the claimant's medical condition are causally related to the work injury." The court found "no evidence in the record to support [ALJ Harr's] finding that the DIME physician had ultimately excluded the right knee symptoms as a component of the left knee injury." The court explained that ALJ Harr's finding that in the follow-up DIME report Dr. Watson "changed" his opinion concerning the cause of the right knee symptoms was "directly at odds with [Dr. Watsons's] statement that his opinion was *un*changed from his previous report." (Emphasis in original). The court also concluded the record did not support ALJ Harr's "choice to adopt one possible interpretation of the follow-up DIME report over other possible interpretations." The court explained that the mere fact the follow-up DIME report was susceptible to more than one interpretation did not alone support

ALJ Harr's finding that "one possible interpretation versus any other reflected the DIME physician's true opinion."

22. In light of these conclusions the court set aside the ICAO's Final Order affirming ALJ Harr's January 2, 2014 FFCL. The court remanded the case with directions to "reconsider and make record-supported findings regarding the meaning of the follow-up DIME report" and "conduct such additional proceedings as may thereafter be necessary and appropriate." The court specifically authorized the taking of "such additional evidence as is necessary to carry out the requirements" of its order.

23. Subsequently the ICAO entered an Order of Remand setting aside ALJ Harr's January 2, 2014 order and remanding the matter for "further proceedings consistent with the opinion of the Court of Appeals."

24. By the time the matter was remanded to the OAC ALJ Harr had retired. Consequently the matter was reassigned to ALJ Cannici to carry out the instructions of the Court of Appeals.

25. On March 30, 2015 ALJ Cannici entered Findings of Fact, Conclusions of Law, and Order on Remand (Order on Remand). ALJ Cannici did not conduct any additional evidentiary proceedings prior to issuing the Order on Remand. ALJ Cannici described the issue to be determined as whether Dr. Watsons' May 28, 2013 follow-up DIME report "reflects that Claimant's right knee injury was a component of her admitted left knee injury."

26. In the Order of Remand ALJ Cannici found that Dr. Watson's May 28, 2013 follow-up DIME report was "ambiguous." In support ALJ Cannici found the May 28 follow-up DIME report placed Claimant at MMI on February 28, 2013, awarded only a "left knee impairment rating" and did not contain any language conditioning MMI on provision of further treatment for the right knee. PALJ Cannici also found that in the May 28 follow-up DIME report Dr. Watson wrote that his opinion concerning Claimant's right knee "was unchanged from his November 23, 2010 report." ALJ Cannici then resolved the "ambiguity" in the follow-up DIME report. He found that because Dr. Watson stated in the follow-up DIME report that his opinion concerning Claimant's right knee was "unchanged" from the November 2010 report Dr. Watson "maintained that Claimant's right knee symptoms were related to the altered gait and excessive weight-bearing that was caused by the November 1, 2007 left knee injury." Thus, ALJ Cannici concluded that Dr. Watson's "ultimate DIME opinion was that Claimant's right knee injury was component of her admitted left knee injury." However, ALJ Cannici's Order on Remand did not purport to award or deny any specific benefits.

27. On April 17, 2015 Claimant filed a Request for Corrected Order or Petition to Review Order on Remand. This pleading requested ALJ Cannici to issue a "corrected, revised or amended" order to reflect that "any issue not addressed by the [Order on Remand] is reserved for determination at a later date." Apparently ALJ Cannici declined to issue a corrected order and the matter was transmitted to the ICAO for consideration of Claimant's petition to review.

28. On May 29, 2015 Dr. Gottlob referred Claimant to Sheba Shah, M.D., for further treatment. Dr. Shah is located in Arizona and the ALJ infers that Dr. Gottlob made the referral because Claimant had moved to Arizona.

29. On September 29, 2015 the ICAO entered an Order concerning the Claimant's petition to review the Order on Remand. Citing § 8-43-301(2), C.R.S., the ICAO ruled that it lacked jurisdiction to review the Order on Remand because it "did not award or deny specific benefits." However, the ICAO went on to state that the parties were disputing "the effect of the [Order on Remand] on future litigation." The ICAO stated that this dispute was "hypothetical and speculative" and any order that it might issue would be "merely advisory." Finally, the ICAO concluded that ALJ Harr's January 2, 2014 FFCL and ALJ Cannici's Order on Remand did not constitute "awards" of benefits that would serve to close the claim in the absence of a "reservation clause." The ICAO reasoned that ALJ Harr's order had been set aside and therefore was not an "award." The ICAO also explained that the Order on Remand was not an "award" because it did not grant or deny any benefits.

30. On June 23, 2015, while the petition to review the Order on Remand was still pending, Claimant filed an application for hearing listing the issues as medical benefits, TTD benefits commencing February 28, 2013 and "entitlement to benefits in light of" ALJ Cannici's finding that the right knee symptoms are causally related to the left knee injury. On July 23, 2015 Respondents filed a response to the application for hearing listing additional issues that included the following: (1) The claim was closed; (2) Issue preclusion; (3) Claim preclusion; (4) The ALJ did not reserve any issues for future determination in the prior findings of fact conclusions of law and order which closed the claim; (5) Claimant was at MMI pursuant to DIME.

31. Dr. Shah examined Claimant on August 11, 2015. Dr. Shah opined that Claimant "developed compensatory pain in the right knee as a consequence of the left knee issues." Dr. Shah noted Claimant had relocated to Arizona to care for her parents and had not had "active care" since leaving Colorado. Dr. Shah recommended Claimant undergo an x-ray and MRI of the right knee. She also referred Claimant for an orthopedic evaluation for "further recommendations on surgical versus non-surgical care."

32. At the hearing held on November 5, 2015 Claimant's counsel stated that Respondents had authorized an MRI of the right knee and this study had been carried out. However, according to Claimant's counsel Claimant has not had an orthopedic evaluation since the MRI study was done.

33. At the hearing held on November 5, 2015 Claimant's counsel stated that the issues include Claimant's entitlement to TTD benefits and medical benefits for treatment of the right knee. Claimant's counsel explained that from Claimant's perspective PALJ Cannici had determined the Claimant's right knee symptoms are causally related to the left knee injury but did not address the issue of what benefits were owed as a result of the right knee condition. Respondents' counsel stated that from Respondents' perspective Claimant's request for additional benefits cannot be

granted because the claim is "closed." Respondents' counsel argued that in the follow-up DIME Dr. Watson found Claimant had reached MMI. Respondents' counsel interpreted ALJ Cannici's Order on Remand as finding that although the right knee symptoms are related to the left knee injury the Dr. Watson found that no additional treatment is necessary. Therefore, Respondents' counsel reasoned that is at MMI.

34. It is Dr. Watson's opinion as the DIME physician that Claimant has not reached MMI for all conditions causally related to the industrial injury of November 1, 2007 industrial injury. PALJ Cannici has determined that Dr. Watson's true opinion, as evidenced by the follow-up DIME report, is that Claimant's right knee symptoms are causally related to the underlying industrial injury.

35. It is Dr. Watson's opinion as the DIME physician that Claimant needs additional medical treatment for the right knee injury. In the November 23, 2010 report Dr. Watson opined Claimant needed treatment of the right knee to include x-rays, an MRI and follow-up with an orthopedic surgeon. In the follow-up DIME report Dr. Watson indicated his opinions concerning the right knee were unchanged from the November 2010 DIME report. The ALJ infers from the follow-up DIME report that Dr. Watson is still of the opinion that Claimant needs treatment for his right knee.

36. The ALJ understands from comments of Claimant's counsel that some of the right knee diagnostic studies recommended by Dr. Watson have been performed. However, the evidence establishes that Claimant has not undergone an orthopedic evaluation of the right knee. As late as August 2015 Dr. Shah credibly opined that Claimant still needs orthopedic evaluation of the right knee.

37. Taken together, Dr. Watson's opinions that Claimant's right knee symptoms are causally related to the November 2007 left injury and that Claimant needs additional treatment for the right knee constitute a DIME finding that Claimant *has not* reached MMI for the industrial injury. Specifically, Dr. Watson has found Claimant needs additional evaluation of the injury-related right knee condition. Respondents did not argue at the hearing nor do they argue in their position statement that the undersigned ALJ should alter ALJ Cannici's finding that Dr. Watson's true opinion is that Claimant's right knee condition is causally related to the industrial injury. Neither do Respondents assert that they have presented clear and convincing evidence to overcome Dr. Watson's opinion that the right knee symptoms are causally related to the industrial left knee injury. Respondents do not argue they have presented clear and convincing evidence to overcome Dr. Watson's DIME opinion that Claimant needs further treatment for the right knee. Consequently, the Respondents have not sought to overcome Dr. Watson's true opinion that Claimant is not at MMI.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Except as specifically noted below, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201(1). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions.

MMI AND RESPONDENTS' "CLOSURE" ARGUMENTS

Claimant contends that she is entitled to an award of TTD benefits commencing February 28, 2013 and an award of medical benefits for treatment of her right knee. Claimant reasons that the Court of Appeals decision effectively determined that the May 28, 2013 DIME report was "ambiguous" regarding the question of whether the right knee is a component of the 2007 left knee injury. Claimant construes the court's order to mean ALJ Harr's finding that Claimant reached MMI because the DIME found the right knee symptoms were not causally-related to the left knee injury has been set aside and is of no force and effect. Claimant reasons that neither ALJ Harr's FFCL nor the opinion of the Court of Appeals has "closed" the issues of MMI and Claimant's right to additional benefits. Moreover Claimant construes ALJ Cannici's Order on Remand as favorably resolving the question of the cause of the right knee symptoms. However, Claimant contends that the Order on Remand failed to resolve the underlying questions of MMI and her consequent right to additional benefits.

In contrast, Respondents contend that Claimant is not entitled to any additional medical or TTD benefits because these issues have been "closed" and Dr. Watson's DIME finding that Claimant reached MMI is binding on the ALJ and the parties. Respondents argue that ALJ Harr found Claimant is at MMI and Claimant "did not appeal that determination." Consequently Respondents assert that the opinion of the Court of Appeals "in no way impacted the MMI determination from the DIME physician or Judge Harr's order pertaining to MMI." According to Respondents the only real effect of the court's order and ALJ Cannici's Order on Remand was to render Respondents liable for post-MMI medical treatment of the right knee. (Respondents' Position Statement at p. 13).

As a corollary Respondents contend that Claimant mistakenly argues the "finding of causation regarding Claimant's right knee is a determination that Claimant's work-related injuries are not at MMI." Respondents reason that there is a distinction between determining that a condition is related to a compensable injury and a determination the condition is at MMI. Respondents assert that ALJ Cannici's Order on Remand merely determined the causation issue with regard to the right knee but did not alter ALJ Harr's finding that Claimant reached MMI.

Considering the facts and procedural posture of this case the ALJ agrees with Claimant's arguments and rejects Respondents' arguments. The ALJ concludes that ALJ Harr's determination that Dr. Watson found the right knee symptoms are not causally related to the left knee injury was integral to ALJ Harr's finding that Dr. Watson placed Claimant at MMI on February 28, 2013. Further, because the Court of Appeals set aside ALJ Harr's finding that the right knee is unrelated to the left knee injury the court necessarily set aside ALJ Harr's finding that Claimant reached MMI.

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). Hence, A DIME physician's finding concerning MMI is entitled to presumptive weight when the opinion is challenged by either party.

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Leprino Foods Co. v. Industrial Claim Appeals Office*, 134 P.3d 475, 482 (Colo. App. 2005). A finding that a claimant needs additional medical treatment to improve her injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining a claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Patterson v. Comfort Dental East Aurora,* WC 4-874-745-01 (ICAO February 14, 2014); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

When a DIME physician issues conflicting or ambiguous opinions concerning MMI, the ALJ may resolve the inconsistency as a matter of fact so as to determine the DIME physician's "true opinion" concerning MMI. *MGM Supply Co. v. Industrial Claim Appeals Office, supra*; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. An ALJ may consider all statements made by a DIME physician for the purpose of determining the DIME physician's true opinion concerning MMI. *Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005); *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998).

Respondents' assertions notwithstanding, Claimant has consistently appealed ALJ Harr's finding that the Dr. Watson placed her at MMI. As determined in Findings of Fact 15 through 17, the matter originally went to hearing before ALJ Harr concerning Claimant's request for additional medical and temporary disability benefits. ALJ Harr necessarily recognized that the question of MMI turned on a determination of Dr. Watson's true opinion concerning the cause of the right knee symptoms. Indeed, ALJ Harr wrote that the first issue for his determination was whether Dr. Watson found Claimant's right knee symptoms are a component of the admitted left knee injury. As determined in Finding of Fact 16 ALJ Harr found Dr. Watson's follow-up DIME report was "equivocal" concerning the cause of Claimant's right knee symptoms. ALJ Harr interpreted the follow-up DIME report to mean that Dr. Watson concluded Claimant's right knee symptoms are not related to the left knee injury, but instead to degenerative chondromalacia. That ALJ Harr based his order on the relationship between the cause of the right knee symptoms and MMI is evidenced by the fact that he placed the burden on Claimant to prove by clear and convincing evidence that her "altered gait or excessive weight bearing during treatment for her left knee aggravated the chondromalacia patella condition of her right knee."

As determined in Findings of Fact 20 through 22, the Court of Appeals ultimately agreed with ALJ Harr that the Dr. Watson's follow-up DIME report was "ambiguous" concerning whether or not Claimant's right knee symptoms are causally related to the industrial injury. However, the Court found that ALJ Harr's "choice to adopt one possible interpretation of the follow-up DIME report over other possible interpretations" was not supported by the record. Consequently the court set aside the ICAO's order affirming ALJ Harr's FFCL and remanded the matter to "reconsider and make record-supported findings regarding the meaning of the follow-up DIME report" and to conduct "such additional proceedings as may thereafter be necessary" including the taking of additional evidence.

It is clear from the Court's opinion that it considers the cause of Claimant's right knee symptoms to be a matter for initial determination by the DIME physician as part of the statutorily mandated process for determining MMI. Indeed, the court explicitly noted that MMI determinations require the DIME physician to determine whether various components of the claimant's medical condition are causally related to the work injury and that the DIME physician's causation findings can be overcome only by clear and convincing evidence. Moreover the court emphasized that resolution of the MMI issue in this case depends on "record-supported findings" resolving the ambiguity in the May 28, 2013 follow-up DIME report. As the court explained the "ambiguity" in the follow-up DIME arises because the follow-up DIME can be read in two ways concerning whether or not the right knee symptoms are related to the left knee injury. Because the court recognized that the causation issue is at the very core of the DIME physician's ultimate opinion concerning MMI it necessarily set aside ALJ Harr's finding that the DIME physician placed the Claimant at MMI.

It follows that the Respondents' incorrectly argue that the issues of additional TTD and medical benefits have been been "closed" by Claimant's alleged failure to appeal ALJ Harr's determination that she reached MMI. To the contrary, Claimant contended all the way through the Court of Appeals that ALJ Harr incorrectly found the DIME physician placed her at MMI for all injury-related conditions. The basis of Claimant's argument was that the DIME physician's true opinion was that she was not at MMI because the right knee symptoms are causally related to the left knee injury and she needs additional treatment for the right knee. The court agreed with Claimant to the extent it concluded ALJ Harr's determination that Dr. Watson placed Claimant at MMI for all injury-related conditions is not supported by ALJ Harr's findings of fact

To the extent that Respondents argue that ALJ Harr's order is of any current legal significance on the issue of MMI, the ALJ disagrees. The Court of Appeals explicitly set aside the ICAO's order affirming ALJ Harr's order and remanded for new findings of fact on the issue of MMI and for additional proceedings, including the taking of additional evidence. The court's order constitutes a "general remand" that authorizes entirely new findings and conclusions with respect to MMI so long as they do not conflict with the court's order. *See Musgrave v. Industrial Claim Appeals Office*, 762 P.2d 686 (Colo. App. 1988).

EFFECT OF ALJ CANNICI'S ORDER ON REMAND

Respondents also contend that in the Order of Remand ALJ Cannici found Claimant reached MMI. Therefore, Respondents reason Claimant is not entitled to an award of additional benefits. As support for this argument Respondents cite that portion of the Order on Remand in which ALJ Cannici found that the follow-up DIME report contained no recommendation for treatment for the right knee, did not condition MMI on further treatment for the right knee, placed Claimant at MMI and provided a rating for the left knee only. The ALJ disagrees with this argument.

Respondents' argument misconstrues ALJ Cannici's findings. Consistent with the opinion of the Court of Appeals, ALJ Cannici found the follow-up DIME report was "ambiguous" with regard to the cause of the right knee symptoms. In support of this finding ALJ Cannici noted that the follow-up DIME report did not expressly recommend any treatment for the right knee, did not condition MMI on treatment of the right knee and appeared to place Claimant at MMI for the left knee. Conversely ALJ Cannici also found that in the follow-up DIME report Dr. Watson wrote that his opinions concerning the right knee were unchanged from the opinions expressed in the November 23, 2010 DIME report. Of course, in the November 2010 DIME report Dr. Watson had opined the right knee symptoms were causally-related to the left knee injury and that Claimant needed treatment for the right knee. Thus, ALJ Cannici recognized, as did the Court of Appeals, that the follow-up DIME report was ambiguous because it is subject to conflicting inferences concerning whether or not the DIME physician found the Claimant's right knee symptoms are related to the left knee injury. ALJ Cannici resolved this conflict and found as a matter of fact that "Dr. Watson's ultimate DIME opinion was that Claimant's right knee injury was a component of her admitted left knee injury."

Further, ALJ Cannici's Order on Remand does not contain any *explicit* finding purporting to determine whether or not Claimant has reached MMI. Rather ALJ Cannici limited the Order on Remand to resolving the "ambiguity" in the follow-up DIME report.

MMI DETERMINATION AND CLAIM FOR MEDICAL BENEFITS TO TREAT RIGHT KNEE

Claimant contends she is entitled to an award of additional medical benefits to treat the right knee condition. Claimant contends that her entitlement to additional medical treatment (other than maintenance treatment) is dependent on a finding that she is not at MMI. The Claimant contends that authority to determine she has not reached MMI is inherent in the remand order issued by the Court of Appeals. The ALJ agrees with Claimant's arguments.

As set forth above, Claimant has always maintained that she has not reached MMI because the right knee symptoms are causally related to the industrial injury and because she needs additional treatment for the right knee to cure and relieve the effects of the 2007 industrial injury. ALJ Harr denied the request for medical treatment of the right knee because he found that the DIME physician opined the right knee symptoms were not causally related to the injury and Claimant failed to overcome that determination by clear and convincing evidence. Claimant ultimately appealed to the Court of Appeals ALJ Harr's conclusion that the DIME physician "changed" his November 2010 opinion concerning the cause of the right knee symptoms. The court remanded the case for new "record-supported findings" to resolve the ambiguity in the follow-up DIME report and for such additional proceedings as might prove necessary and appropriate.

As determined above, a DIME physician's finding concerning whether or not a claimant has reached MMI is binding unless overcome by clear and convincing evidence. A DIME physician's finding concerning MMI necessarily includes determinations of whether the claimant's medical conditions were caused by the industrial injury and whether additional treatment is likely to improve the claimant's condition.

Here, ALJ Cannici has already determined, pursuant to the instructions of the Court of Appeals, that it is Dr. Watson's DIME opinion that Claimant's right knee symptoms are causally related to the industrial injury. As determined in Finding of Fact 37, Respondents do not argue that the undersigned ALJ should interfere with ALJ Cannici's determination. Neither do Respondents argue that they have overcome Dr. Watson's causation finding by clear and convincing evidence. Similarly Respondents do not argue they presented clear and convincing evidence to overcome Dr. Watson's opinion that Claimant needs additional treatment for the right knee including an orthopedic evaluation.

As determined in Finding of Fact 37, Dr. Watson's findings that the right knee symptoms are causally related to the November 2007 industrial injury and that Claimant requires additional treatment are tantamount to a finding Claimant has not reached MMI. Because Respondents do not contend that they have presented clear and convincing evidence to overcome Dr. Watson's finding that Claimant has not reached MMI that finding is binding on the parties and the ALJ. *Cordova v. Industrial Claim Appeals Office, supra.*

In these circumstances Claimant is entitled to an award of additional medical benefits to treat the right knee symptoms including referral to and treatment by an orthopedic specialist.

CLAIM FOR ADDITOINAL TTD BENEFITS

Claimant contends she is entitled to an award of TTD benefits commencing February 28, 2013 until she is determined to have reached MMI. The ALJ agrees with this argument.

Where respondents file an admission of liability admitting for TTD benefits they are bound by that admission and must pay accordingly. Section 8-43-203(2)(d), C.R.S. The filing of an admission for TTD benefits amounts to an admission that Claimant has sustained the initial burden of proof to establish a right to TTD benefits. *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office,* 18 P.3d 790 (Colo. App. 2000). Once admitted TTD benefits must ordinarily continue until the occurrence of one of the events listed in § 8-42-105(3), C.R.S., including the occurrence of MMI. *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997).

Here, Respondents filed an FAL admitting Claimant was entitled to TTD benefits commencing December 1, 2008. The FAL terminated the TTD benefits on February 28, 2013, the date Claimant reached MMI according to Respondents' interpretation of Dr. Watson's follow-up DIME report. However, as determined above, Dr. Watson's true opinion was that Claimant did not reach MMI on February 28, 2013, and Respondents have not overcome that opinion by clear and convincing evidence. Consequently, Respondents have not shown any legal basis for terminating Claimant's TTD benefits on February 28, 2013. Consequently, Claimant is entitled to an award of TTD benefits commencing February 28, 2013 and continuing until terminated in accordance with law or order. TTD benefits shall be paid at the statutory rate based on the admitted average weekly wage.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the ALJ enters the following order:

1. Insurer shall pay claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

2. Insurer shall provide reasonable and necessary medical benefits for treatment of Claimant's right knee condition including the provision of an orthopedic evaluation.

3. Insurer shall pay temporary total disability benefit at the statutory rate and based on the admitted average weekly wage commencing February 28, 2013 and continuing until terminated in accordance with law or order.

4. Issues not determined by this order are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he is entitled to a general award of post-MMI, medical maintenance benefits for his right elbow/ hand condition.

II. Whether the Claimant has sustained disfigurement as a result of his work injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant is currently employed by Respondent-Employer as a welding instructor for the Colorado Department of Corrections. He was promoted from welder to a welding teacher in February 2015.

2. Claimant sustained a compensable injury to his right elbow on July 22, 2010, which was ultimately diagnosed as right cubital tunnel syndrome, or right ulnar neuropathy.

3. The claim is complicated by the fact that Claimant sustained a separate and distinct compensable injury to his right shoulder, during the pendency of his elbow claim. Although the shoulder claim is separate from the right elbow injury, Claimant treated concurrently for both injuries by Dr. Richard Nanes, Respondent-Employer's authorized treating physician (ATP). Consequently, both injuries are frequently addressed in the medical records. While the condition of Claimant's right shoulder is mentioned frequently throughout the medical records, this order addresses Claimant's entitlement to maintenance medical treatment benefits for his right elbow claim only.

4. Following his right elbow injury, an electrodiagnostic study of the right elbow was ordered. The EMG was performed October 1, 2010 by Dr. Scott Ross and revealed mild ulnar neuropathy of the right elbow (right cubital syndrome). By the time of this EMG study, Claimant had been evaluated by Dr. Richard Idler on the referral of Dr. Nanes.

5. On October 29, 2010, Dr. Idler opined that Claimant was a candidate for decompression of the right ulnar nerve at the elbow.

6. Claimant underwent an in situ surgical decompression of the ulnar nerve at the right elbow on November 16, 2010 with Dr. Idler.

7. Subsequent to the surgery, Claimant continued to experience symptoms associated with entrapment/compression of the ulnar nerve at the elbow. As of January 11, 2011, Claimant continued to report numbness in the right fourth and fifth fingers, and he had some concerns about incomplete recovery.

8. In December 2011 Claimant still had paresthesias of the right fourth and fifth fingers and pain in the right hand. Claimant saw Dr. Idler on February 24, 2012 for right ulnar sided wrist pain. The etiology was uncertain. Dr. Idler recommended an MRI.

9. A March 22, 2012 MRI suggested a small metallic foreign body in the soft tissues in the wrist, and a ganglion cyst. Dr. Idler administered an injection for the ulnar carpal ganglion cyst.

10. Claimant saw Dr. Donald Luebke on July 2, 2012. Dr. Luebke noted despite Dr. Idler's injection for a ganglion cyst, Claimant continued to have right wrist symptoms. Dr. Luebke saw no clinical evidence of a ganglion cyst by the time he saw Claimant. Dr. Luebke released Claimant from his care without restrictions.

11. As noted above, Claimant injured his right shoulder while working when he slipped off of the bumper of a truck on March 25, 2013. In an effort to keep from falling, Claimant caught himself with his outstretched arm injuring the shoulder in the process. The focus of Claimant's treatment switched from the right elbow to the right shoulder at this time. Nonetheless, Claimant continued to experience right elbow/hand symptoms.

12. On August 1, 2013, a repeat EMG evaluation performed by Dr. Katherine Leppard revealed a right mononeuropathy at the elbow. Claimant returned to Dr. Nanes who referred him to Dr. Karl Larsen for further evaluation.

13. Dr. Larsen evaluated Claimant on September 9, 2013. At this appointment, Claimant reported that the numbness and tingling in his right ring and small fingers did not improve following his November 16, 2010 surgery with Dr. Idler. Dr. Larsen reviewed the results of the electrodiagnostic study performed by Dr. Leppard. He noted the EMG to be "consistent with severe ulnar neuropathy at the elbow isolated to the level of the medial epicondyle." Dr. Larsen recommended a right "revision ulnar neuroylsis at the elbow" with transpositioning and "collagen wrapping" if the nerve was heavily invested with scar tissue.

14. On April 19, 2014, Dr. Wallace Larson conducted an independent medical examination (IME) at Respondents request to address the reasonableness of repeat elbow surgery as proposed by Dr. Larsen. In his IME report, Dr. Larson opined as follows: "[r]epeat neurolysis with anterior transposition of the ulnar nerve does appear to be a reasonable opinion as long as the patient understands that the likelihood . . . of having a completely normal result is relatively low."

15. On August 5, 2014, Claimant underwent surgery by Dr. Larsen for a right recurrent ulnar neuropathy.

16. On September 22, 2014, Dr. Larsen reported that Claimant had complete resolution of his numbness and tingling. According to the clinic note from this date, Claimant had no pain, and was "doing very, very well" and was "very pleased." The clinical examination revealed negative findings in all respects.

17. On September 30, 2014, Dr. Nanes stated that Claimant was "doing extremely well."

18. Claimant returned to work after the surgery around October 1, 2014. (Resp. Exh B-1; Claimant's testimony). Approximately two months later, on December 3, 2014, Claimant returned to Dr. Nanes' office for further evaluation. At this appointment, Claimant reported "swelling of his right elbow" the night before. He also reported a pain level of 3. Outside of his swelling and pain, Claimant was noted to be "doing extremely well." In the report generated from this encounter, Dr. Nanes noted that Claimant had full range of motion in the right elbow and did not have any paresthesias of the right fourth and fifth fingers. Dr. Nanes noted: "The patient has really had a nice response to his right cubital tunnel release surgery." Dr. Nanes placed Claimant at maximum medical improvement and released him from medical care. As part of the WC164 form completed December 3, 2014, Dr. Nanes stated that maintenance care after MMI was not required. (Resp. Exh. C-0).

19. Claimant underwent a Division Independent Medical Examination (DIME) by Dr. William Watson on July 7, 2015.

20. Dr. Watson documented Claimant's report of weakness in the right hand with intermittent numbness in the fourth and fifth fingers. Dr. Watson also documented that Claimant had "full range of motion of the right elbow with normal two-point sensation and strength." Consequently, Dr. Watson did not feel there was any medical impairment associated with Claimant's right elbow injury. Furthermore, Dr. Watson said that no restrictions or maintenance care was indicated, despite Claimant's report of persistent "weakness and numbness in the fourth and fifth fingers of the right hand."

21. Based on the DIME report, Respondents filed a final admission of liability (FAL) on September 17, 2015 for zero permanent partial disability benefits. Liability for medical maintenance treatment was denied.

22. On November 17, 2015, Respondents requested an opinion from Dr. Wallace Larson regarding Claimant's need for maintenance medical treatment.

23. On December 9, 2015, Dr. Wallace Larson wrote the following with regard to the elbow injury:

> Mr. Normandin does not require medical maintenance treatment. Recommendation of medical maintenance treatment would imply the need for intervention or some type of treatment program to

> retain benefit which was achieved from his initial surgical treatment and subsequent rehabilitation. He was seen for right elbow cubital tunnel syndrome and had subsequent surgical treatment. There is no medical standard of care that suggests any type of intervention or treatment is needed to preserve benefits achieved by surgical decompression and subsequent therapy. Physiologically his condition is stable and will not be affected by any type of treatment or intervention. Medical literature does not support the need for any type of active follow-up care to maintain the benefits of ulnar nerve decompression. Additionally, the surgeon who treated this disorder has not recommended any type of medical maintenance plan.

24. Claimant testified that his right hand/elbow felt better at the time he was placed at MMI, because he had not returned to work yet. Claimant testified that once he returned to work around October 1, 2014, the pain in his elbow and tingling in his fingers returned. He testified to electric shock like sensations in the right arm extending into the right shoulder. Citing Dr. Nanes December 3, 2014 MMI report, Respondent-Employer contends that Claimant's complaints of recurring pain, numbness and tingling of the right elbow/ring and small fingers are not credible. As noted on December 3, 2014, two months after Claimant returned to work as a welder, Dr. Nanes placed Claimant at MMI noting that he was "doing extremely well." However, at the time Claimant was placed at MMI he had not been promoted to his current position as a welding instructor which subsequently required considerable hand writing.

25. As a welding instructor, Claimant spends 2 ½ - 3 hours of the day hand writing reports and completing paperwork. He is right hand dominate and works five days a week. Consequently, the ALJ finds that Claimant uses his right hand to write reports and/or complete paperwork between 12 ½ - 15 hours per week. Claimant testified that there was no writing associated with his job prior to being promoted to a welding instructor in February 2015.

26. Claimant testified that his right hand/elbow pain has been worsening secondary to the amount of writing he has to do and he has missed time from work as a consequence. Respondent-Employer challenges Claimant's assertion that his current elbow/hand symptoms could be caused by hand writing on the grounds that writing is less strenuous than the welding Claimant performed prior to his promotion in February 2015. Respondent-Employer also disputes Claimant's contention that he writes upwards of three hours per day citing common access to word processors and computers in the current work place.

27. Claimant admitted during cross examination that he has not reported increased pain and recurring numbness and tingling in his right elbow/fingers due to writing to his employer since being placed at MMI. He also admitted that he has not sought medical treatment for the recurring symptoms that he now alleges. This is in stark contrast to the continued symptoms Claimant reliably reported subsequent to his first surgery in

2010, prompting a reopening of his case for additional surgery which was performed on a maintenance basis. Consequently, Respondents argue that Claimant's failure to report his recurring worsening symptoms since being placed at MMI the second time implies that Claimant is not credible regarding his purported symptoms and/or that his symptoms are not significant enough to warrant additional medical attention.

28. Based upon the evidence presented, the ALJ finds Claimant's report of increasing pain in the right hand/elbow secondary to extensive writing duties credible and convincing. While the ALJ finds the physical demands associated with welding significant, Respondent's argument that writing is not as strenuous as welding and therefore not causative of Claimant's recurring elbow/hand pain is unpursuasive. The evidence presented persuades the ALJ that the constant handling and gripping of a writing instrument for prolonged periods of time associated with Claimant's position as a welding instructor are likely aggravating the condition of his right hand/elbow causing increased pain and dysfunction, i.e. a deterioration of Claimant's condition subsequent to MMI. Consequently, the ALJ finds Claimant's current right upper extremity and hand symptoms are, more probably than not, related to his July 22, 2010 industrial injury. Moreover, the medical history presented persuades the ALJ that Claimant's request for additional medical treatment to determine the etiology of and treat his ongoing pain, numbness and tingling is reasonable and necessary. Simply put, the ALJ finds substantial evidence in the record to show the reasonable necessity for future medical treatment "designed to relieve the effects of the injury and to prevent further deterioration of the claimant's present condition.

29. Claimant has established by a preponderance of the evidence that he is entitled to maintenance treatment for his right elbow/hand as a consequence of his July 22, 2010 industrial injury.

30. Claimant has a visible disfigurement to the body consisting of a seven (7) inch long by ⅛ inch wide, rough appearing, pink surgical scar located on the flexor surface of the right forearm/elbow.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. As found above, Claimant's testimony regarding his current symptoms is credible and convincing.
