ISSUES

The issues addressed in this decision concern the opinion of the DIME regarding maximum medical improvement (MMI) and permanent impairment. The specific questions addressed are:

I. Whether Respondents have produced clear and convincing evidence to overcome Dr. Timothy Hall's DIME opinion that Claimant is not at MMI for his November 2, 2015 admitted injury.

II. If Claimant is found to be at MMI, the question becomes whether Respondents have produced clear and convincing evidence to overcome Dr. Hall's Division IME opinion that Claimant has a 14% whole person permanent impairment rating of the lumbar spine as a result of the November 2, 2015 admitted injury.

III. As raised by the parties, the issue surrounding Claimant's impairment rating revolves around proper application of the AMA *Guides to the Evaluation of Permanent Impairment* ("AMA Guides"), Third Edition (*Revised*). Consequently, the ALJ takes judicial notice of the AMA Guides, particularly Chapter 3.3a, and Table 53.

FINDINGS OF FACT

Based on the testimony and evidence presented at hearing, the undersigned ALJ enters the following findings of fact:

1. Claimant was hired by Employer on April 27, 2015 as a laborer. (Claimant's Ex. 4, p. 12). Claimant's job as a laborer for the landscaping company included performing strenuous physical activities such as planting trees, moving dirt, moving rock, etc. (Tr. 36:10-15).

2. Claimant sustained an injury to his lower back while moving flagstone rocks for Employer on November 2, 2015. Claimant described lowering a rock to the ground when he felt a crack in his back along with immediate lower back pain. (Tr. 36:20 – 37:17). A first report of injury was completed on November 3, 2015. (Claimant's Ex. 4). A general admission of liability was filed by Respondents on December 18, 2015. (Resp. Ex. H).

3. Claimant sought treatment on the date of the injury at Concentra Medical Centers. (Claimant's Ex. 5, p. 14). Jocelyn Cavendar, PA-C examined Claimant and found tenderness in the lumbar spine along with bilateral muscle spasms on palpation. *Id.* at 15. Claimant reported having a deep ache in his mid and lower back, especially

when bending and sitting. *Id.* She diagnosed Claimant with a lumbar strain and spasm of the lumbar paraspinous muscles. *Id.* Ms. Cavendar referred Claimant for physical therapy to begin that same day. *Id.* at 16. Claimant reported no decrease in symptoms at his follow up visit at Concentra on November 17, 2015. *Id.* at 41.

4. At his first appointment at Concentra, the examining PA-C noted, under *Discussion/Summary* "findings suggestive of symptom magnification" (Respondent's Ex A, p. 3). However, this comment is not noted with regularity in Claimant's follow up appointments with Concentra.

5. Claimant returned to Concentra on November 10, 2015, and was evaluated by Dr. John Ronning, M.D. Dr. Ronning noted at that time, that Claimant's range of motion appeared to be within normal limits, and recommended at that time that Claimant continue with physical therapy. (Respondent's Exhibit A, pp 7-9).

6. Claimant, apparently unsatisfied with his treatment plan with Concentra, was also seen by Dr. Frank Polanco, beginning on November 19, 2015. At this time, Claimant continued complaining of lower back pain aggravated by bending and rotation. (Claimant's Ex. 6, p. 127). Dr. Polanco also recommended Claimant undergo physical therapy in conjunction with a home exercise program. *Id.* at 129. Claimant was only seen by Dr. Polanco one more time—on November 24, 2015—before Claimant returned to Concentra for treatment. *Id.* at 137.

7. Dr. Polanco noted that, despite the fact that Claimant's reported symptoms were suggestive of radiculopathy, there were "no clinical findings of sensory or motor or neural tension signs" (Respondent's Ex. C, p. 70). The office notes indicate that Claimant was "moving about freely" in the exam room in no acute distress (Respondent's Ex. C, p. 68).

8. Dr. Polanco testified that Claimant's symptoms were disproportionate to his clinical findings, and that Claimant showed "very, very strong pain behaviors that were not consistent with his …physical findings." (Hearing Transcript 12:1-3).

9. Claimant did not follow up with this physical therapy with Dr. Polanco. Claimant, however, did continue his physical therapy at Concentra, and was seen by Dr. Cheryl Meyers-Saffold at Concentra on January 6, 2016. (Claimant's Ex. 5, p. 90). He complained of ongoing back pain and bilateral muscle spasms were again documented on palpation. *Id.* at 91. Dr. Meyers-Saffold recommended additional physical therapy and a consult with a physiatrist for consideration of injections. *Id.* at 92. Claimant had completed at least 17 physical therapy visits by January 28, 2016 with no improvement. *Id.* at 116.

10. Claimant returned to Concentra on February 15, 2016, this time being examined by Dr. Nicholas Kurz. (Claimant's Ex. 5, p. 120). Claimant reported ongoing bilateral lower back pain to Dr. Kurz with some radiation of pain from the lower back to the right anterior thigh. *Id.* Dr. Kurz noted in his report that Claimant was "getting better

but slowly." *Id.* at 122. Despite acknowledging that Claimant was showing slow but continued improvement, Dr. Kurz placed Claimant at MMI with no restrictions and no permanent impairment. *Id.* Dr. Kurz felt that Claimant has returned to his pre-injury baseline and to follow up with his primary care physician for his non-work related, pre-existing, degenerative lumbar condition. *Id.* The ALJ finds that Claimant's degenerative lumber disc condition is non-work related. The ALJ further finds that this lumbar disc degeneration is not the source of Claimant's pain.

11. Claimant disagreed with the MMI determination by Dr. Kurz and sought a Division Independent Medical Examination with Dr. Timothy Hall. Dr. Hall examined Claimant on June 8, 2016. (Claimant's Ex. 9). Claimant reported ongoing lower back pain with some right leg numbness and weakness. *Id.* at 157. Dr. Hall's physical exam documents tightness throughout the thoracolumbar paraspinals with very tender fibrotic nodules at the midline at L5. *Id.* at 158. SI maneuvers created low back pain and straight leg raises were positive for back pain but no leg symptoms. *Id.*

12. Dr. Hall diagnosed Claimant with a lumbar strain and possible SI joint strain, myofascial pain with active trigger points in the lumbosacral area, and probably piriformis syndrome. (Claimant's Ex. 9, p. 159). Dr. Hall notes that nothing beyond physical therapy had been provided to Claimant and suggested Claimant receive additional treatment before being placed at MMI. *Id.* Dr. Hall recommended dry needling and trigger point injections along with a trial of chiropractic work and a strengthening program for the lumbar area. *Id.*

13. Dr. Hall points out in his report that there was no discussion in Dr. Kurz's MMI report as to why he felt Claimant was at MMI. (Claimant's Ex. 9, p. 159). Dr. Kurz indicated that Claimant has returned to his pre-injury baseline, though Claimant did not have *any* pain or functional loss prior to the injury per his report, and lack of medical records suggesting otherwise. *Id.*

14. Dr. Hall provided a provisional impairment rating of 14% whole person for the lumbar spine. (Claimant's Ex. 9, p. 159). He provided 5% for the Table 53 category II-B rating and 9% for the range of motion loss. *Id.*

15. Claimant returned to Dr. Polanco for evaluation subsequent to the DIME on July 28, 2016. (Claimant's Ex. 6, p. 141). There were continued reports of pain in the low back and right leg. *Id.* at 142. It was Dr. Polanco's opinion that Claimant's presentation was self-restricting and that he was magnifying his symptoms. *Id.* at 144-45. He did not believe Claimant required any additional treatment nor was entitled to an impairment rating for his condition. *Id.* at 145.

16. Dr. Polanco testified at hearing on behalf of Respondents. It was his opinion that Claimant exhibited Waddell's signs during his clinical examination, suggesting psychological involvement in regards to the symptomatology. He further felt that the symptoms were disproportionate to the clinical findings. (Tr. 11:2-24). Dr. Polanco reasoned that because Claimant did not participate in physical therapy, this

was a sign that he was demonstrating psychological of overlay. (Tr. 18:10-24). The medical records show that Claimant did not obtain ongoing physical therapy through Dr. Polanco's clinic, though he did receive 17 sessions of physical therapy through Concentra. (*See* Claimant's Exs. 5, 8).

17. Dr. Polanco testified that he did not feel that Claimant was entitled to an impairment rating for his condition. It was his opinion that there were no clinical findings to substantiate a Table 53 diagnosis. Per Dr. Polanco, six months of pain and rigidity are needed to qualify for a Table 53 diagnosis and that Claimant did not meet that requirement. (Tr. 15:2 – 16:6). Dr. Polanco also felt that Dr. Hall should have used the maximum range of motion measurements documented in the medical records as opposed to using his own measurements. (Tr. 15:11-17).

18. Dr. Polanco testified on cross-examination that he is not aware of any medical records suggesting that Claimant had any pre-existing symptoms for his lower back or any past treatment for his lower back. (Tr. 27:3-9).

19. Claimant testified credibly at hearing (and the ALJ so finds) that he had never had any lower back conditions or treatment for lower back conditions prior to the November 2, 2015 work injury. (Tr. 37:23 – 38:5). Claimant testified at hearing (and the ALJ so finds) that he has not sustained any new injury since November 2, 2015. (Tr. 38:6-9). Claimant testified at hearing (and the ALJ so finds) that he continues to have ongoing lower back symptoms that cause some functional loss. (Tr. 38:10-24).

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of the Respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). The ALJ finds Claimant to be credible, insofar as his description of the injuries originally received. The ALJ further finds that Claimant continues to experience at least some symptoms from this workplace injury. It is not necessary, as the date of this Order, to determine the degree to which Claimant might be exaggerating his symptoms.

Overcoming the DIME Regarding MMI

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding permanency or the cause of a particular component of a claimant's medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.* A mere difference of medical opinions is insufficient. *Medina-Weber v. Denver Public Schools* W.C. No. 4-782-625 (ICAO, May 24, 2010).

E. The ALJ concludes that the evidence presented demonstrates a mere difference of opinion between physicians and does not amount to evidence that leads the ALJ to believe that it is highly probable that Dr. Hall erred in his assessment of

Claimant's MMI status. The evidence reflects that Claimant was undergoing continued physical therapy with an authorized treating provider prior to being placed at MMI. One of Claimant's providers at Concentra, Dr. Meyers-Saffold, recommended ongoing physical therapy and a consultation with a physiatrist for treatment. At Claimant's next appointment with Dr. Kurz, Claimant was placed at MMI despite Dr. Kurz acknowledging that Claimant continued to have ongoing lower back symptoms and that Claimant was slowly getting better. Dr. Kurz indicated that Claimant had returned to his pre-work injury baseline. The ALJ is not persuaded that Claimant was ever at MMI. The record is void of any indication that Claimant had any degree of a pre-work injury or functional limitations associated with his lower back. Claimant is only twenty-four years old with no documented lower back injury and no evidence contradicting his testimony that he never had any lower back condition that required treatment prior to November 2, 2015. The ALJ determines that Claimant continues to have ongoing back pain that requires treatment and that there is not clear and convincing evidence that his ongoing need for treatment is related to anything other than the November 2, 2015 industrial accident.

F. Dr. Polanco testified at hearing that he felt Claimant's presentation indicated there was psychological involvement with regards to Claimant's symptomatology and that he felt Claimant was malingering due to pain being out of proportion to the clinical findings. Regardless of whether there may be some psychological overlay or malingering, the ALJ concludes that Claimant remains symptomatic as a direct result of the November 2, 2015 injury and there is not clear and convincing evidence to support a decision to the contrary. The ALJ notes that part of Dr. Polanco's rationale included that Claimant did not attend the prescribed physical therapy that was offered; however, Claimant did actively and consistently undergo physical therapy through Concentra. Dr. Polanco himself concedes that there are no records to suggest Claimant had any symptomatic lower back condition prior to November 2, 2015.

G. The ALJ concludes that Claimant is not at MMI and Respondents shall be liable for all reasonable, necessary, and related treatment to bring Claimant's condition to MMI.

Overcoming the DIME Regarding Impairment Rating[1]

H. The question now turns to whether Respondents have proven by clear and convincing evidence that Dr. Hall erred in his assignment of a 14% whole person rating.

I. As the AMA Guides 3.3a states:

> "Impairment evaluation should be performed when the individual's condition has become static and well stabilized *following completion of **all** necessary medical, surgical, **and** rehabilitative treatment.* This precludes performing measurements when acute illness is present." (emphasis added).

[1] Only applicable if the ALJ determines that Claimant is at MMI.

J. The ALJ concludes that, because Claimant is not yet at MMI, the DIME ratings by Dr. Hall are advisory only. They were, at most, valid on the date when taken, and are of no assistance to the fact finder as of the date of this Order.

ORDER

It is therefore ordered that:

1. Claimant is not at maximum medical improvement. Respondents are liable for all reasonable, necessary, and related treatment to bring Claimant to maximum medical improvement.

2. Once Claimant does reach MMI, Impairment Ratings are to be determined by the assigned DIME physician.

3. All matters not determined herein are reserved for future determination.

The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

Whether Claimant has produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Linda Mitchell, M.D. that he reached Maximum Medical Improvement (MMI) on April 17, 2015 with a 0% permanent impairment rating for his October 14, 2014 admitted industrial injuries.

FINDINGS OF FACT

1. Claimant worked for Employer driving and unloading trucks. On October 14, 2014 he was unloading a truck with a pallet jack. While he was pulling a pallet jack weighing about 1200 pounds he heard "popping" in his neck and lower back areas. Claimant immediately experienced neck, back and shoulder discomfort. After Claimant reported his injuries, Employer referred him to Concentra Medical Centers for treatment.

2. On October 15, 2014 Claimant visited Concentra for an examination. He reported back and shoulder pain as a result of the October 14, 2014 work incident. After a physical examination Claimant was diagnosed with a lower back strain, a trapezius strain and muscle spasms. Physicians prescribed physical therapy and medications.

3. On November 10, 2014 Claimant underwent a lumbar MRI. The study revealed an L5-S1 minor disc bulge but was otherwise negative.

4. On February 10, 2015 Claimant visited John T. Sacha, M.D. for an evaluation. Claimant reported that he was suffering constant localized lower back pain that radiated into the right leg. He also experienced intermittent numbness and tingling into his right foot. Dr. Sacha remarked that Claimant had some discogenic pain based on imaging studies and a physical examination. However, Dr. Sacha explained "[Claimant] has such a nonphysiologic and somatic presentation that it makes it difficult to know for sure what his current pathology is. He certainly has only modest findings on the MRI and I would not expect significance of the symptoms this gentleman is having with his mild findings. So I do recommend a one-time EMG test."

5. On March 12, 2015 Claimant underwent an electrodiagnostic evaluation with Robert I. Kawasaki, M.D. Dr. Kawasaki noted that Claimant had lower back pain that radiated down his right lower extremity. An MRI had revealed a minimal disc bulge at L5-S1 without nerve root impingement. Furthermore, an EMG/nerve conduction study was normal. Dr. Kawasaki remarked that Claimant had presented with significant pain behaviors, diffuse tenderness, limited motion with guarding and an inconsistent examination. He detailed that "[e]ven with the sensory stimulation at low voltage, the patient was verbalizing pain, and particularly with upper testing and needle examination

electromyographically, the patient had significant pain behaviors with some screaming and verbalization of pain… When I asked him to relax his musculature as I was testing for spontaneous activity, he actually tensed up the muscles, indicating this was involuntary."

6. On March 16, 2015 Claimant returned to Dr. Sacha for an examination. Dr. Sacha remarked that "I am struggling to find any pathology for this gentleman." He explained that Claimant exhibited a "nonmedical appearance with respect to his complaints." Dr. Sacha anticipated that Claimant would reach Maximum Medical Improvement (MMI) and his case would be closed within two to three weeks.

7. On April 17, 2015 Claimant visited John Burris, M.D. for an examination. After considering the mechanism of injury and conducting a physical examination, Dr. Burris concluded that Claimant had reached MMI with no permanent impairment. He noted that Claimant's lumbar MRI was normal and revealed only a minor disc bulge at L5-S1 with no evidence of neural impingement. Furthermore, electrodiagnostic testing was normal. Dr. Burris diagnosed Claimant with non-physiologic pain. He remarked that Claimant's diffuse pain complaints did not follow a neuroanatomical pattern and were inconsistent with the original mechanism of injury. Dr. Burris commented that Claimant had not responded to conservative treatment but instead experienced expanding and worsening pain complaints. He agreed with Drs. Sacha and Kawasaki that Claimant did not exhibit any objective findings warranting an impairment rating or permanent work restrictions.

8. Claimant challenged Dr. Burris' MMI and impairment determinations and sought a Division Independent Medical Examination (DIME). On October 2, 2015 Claimant underwent a DIME with Linda Mitchell, M.D. After reviewing Claimant's medical records and conducting a physical examination, Dr. Mitchell agreed with Dr. Burris that Claimant reached MMI on April 17, 2015 with a 0% permanent impairment rating. Dr. Mitchell specifically examined Claimant's lumbar spine, cervical spine, bilateral shoulders, bilateral arms, bilateral hands, bilateral upper extremities, left foot, bilateral lower extremities, chest and torso. She noted "numerous inconsistencies, non-anatomical and non-physiologic findings" and diagnosed malingering. Dr. Mitchell remarked "I find it somewhat unusual that both the cervical and lumbar spines would pop and be injured at the same time…. He had a very thorough course of evaluation and treatment with escalating complaints, atypical of the usual medical history." She summarized "I am in complete agreement with Dr. Burris that his complaints at this time are totally nonphysiologic and nonanatomic… There are no restrictions on his activities."

9. On December 9, 2015 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Mitchell's MMI and impairment determinations. Respondents acknowledged that Claimant reached MMI on April 17, 2015 with a 0% permanent impairment rating.

10. Claimant testified at the hearing in this matter. He explained that he received conservative medical treatment including physical therapy, pool therapy, chiropractic care and medications. However, none of the treatment relieved his symptoms. Claimant asserted that Dr. Mitchell incorrectly determined that he was

malingering because he suffers pain but wants to improve and return to work. He did not present any medical evidence to challenge Dr. Mitchell's determination that he reached MMI on April 17, 2015 with a 0% permanent impairment rating.

11. Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Mitchell that he reached MMI on April 17, 2015 with a 0% permanent impairment rating for his October 14, 2014 admitted industrial injuries. Dr. Mitchell specifically examined Claimant's lumbar spine, cervical spine, bilateral shoulders, bilateral arms, bilateral hands, bilateral upper extremities, left foot, bilateral lower extremities, chest and torso. She noted "numerous inconsistencies, non-anatomical and non-physiologic findings" and diagnosed malingering. Dr. Mitchell remarked that, although Claimant had undergone a very thorough course of evaluation and treatment, his symptoms had escalated over time.

12. Dr. Mitchell's conclusions are supported by Claimant's treating physicians. Drs. Sacha, Burris, and Kawasaki all noted on multiple occasions that Claimant exhibited numerous inconsistencies and non-physiologic findings. Drs. Sacha and Burris agreed with Dr. Mitchell that Claimant reached MMI on April 17, 2015 with a 0% permanent impairment rating. Dr. Burris specifically noted that Claimant's lumbar MRI was normal and revealed only a minor disc bulge at L5-S1 with no evidence of neural impingement. Furthermore, electrodiagnostic testing was normal. Dr. Burris also commented that Claimant had not responded to conservative treatment but instead experienced expanding and worsening pain complaints. The persuasive medical records thus corroborate Dr. Mitchell's MMI and permanent impairment determinations. In contrast, Claimant has not produced any medical evidence contradicting the opinions of his treating physicians or Dr. Mitchell's DIME determination. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Mitchell's MMI and impairment determinations were incorrect.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings

as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*). §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

. 6. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

7. The Colorado Division of Workers' Compensation *Impairment Rating Tips* (*Impairment Rating Tips*) provide that permanent impairment ratings are only warranted when a specific diagnosis and objective pathology can be identified. *See Desk Aid #11, General Principles* 1. In specifically addressing spinal impairment ratings the *Impairment Rating Tips* note that "[p]hysicians should be aware that in the

asymptomatic population, disk bulges, annular tears or high intensity zone areas, and disk height loss are commonly reported in the lumbar spine from 40 – 60% of the time depending on the condition and study. In the cervical spine, the prevalence of disc degeneration or loss of signal intensity on MRI is greater than 50% in the 50 years and older asymptomatic population." *See Desk Aid #11, Spinal Rating 7.* The *Impairment Rating Tips* summarize that

> the existence of [the preceding] anatomic findings cannot be considered pathological unless there are clear physiologic ties and correlation with clinical findings in an individual patient. The mere presence of these changes is not a sufficient justification to attribute correlation to a non-specific spinal complaint**.** The physician should not rate findings by diagnostic imaging which have not been clearly defined as contributing significantly to the patient's condition. . . . Due to discrepancies between x-ray findings and pathological conditions, it is incumbent on physicians to carefully examine and apply other diagnostic tests as appropriate to identify the true pain generators in a patient and plan their treatment and impairment rating accordingly.

See Desk Aid #11, Spinal Rating 7.

8. As found, Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Mitchell that he reached MMI on April 17, 2015 with a 0% permanent impairment rating for his October 14, 2014 admitted industrial injuries. Dr. Mitchell specifically examined Claimant's lumbar spine, cervical spine, bilateral shoulders, bilateral arms, bilateral hands, bilateral upper extremities, left foot, bilateral lower extremities, chest and torso. She noted "numerous inconsistencies, non-anatomical and non-physiologic findings" and diagnosed malingering. Dr. Mitchell remarked that, although Claimant had undergone a very thorough course of evaluation and treatment, his symptoms had escalated over time.

9. As found, Dr. Mitchell's conclusions are supported by Claimant's treating physicians. Drs. Sacha, Burris, and Kawasaki all noted on multiple occasions that Claimant exhibited numerous inconsistencies and non-physiologic findings. Drs. Sacha and Burris agreed with Dr. Mitchell that Claimant reached MMI on April 17, 2015 with a 0% permanent impairment rating. Dr. Burris specifically noted that Claimant's lumbar MRI was normal and revealed only a minor disc bulge at L5-S1 with no evidence of neural impingement. Furthermore, electrodiagnostic testing was normal. Dr. Burris also commented that Claimant had not responded to conservative treatment but instead experienced expanding and worsening pain complaints. The persuasive medical records thus corroborate Dr. Mitchell's MMI and permanent impairment determinations. In contrast, Claimant has not produced any medical evidence contradicting the opinions of his treating physicians or Dr. Mitchell's DIME determination. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Mitchell's MMI and impairment determinations were incorrect.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant reached MMI on April 17, 2015 with a 0% permanent impairment rating for his October 14, 2014 industrial injuries.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-983-791-04

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on October 26, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 10/26/16, Courtroom 3, beginning at 1:30 PM, and ending at 3:00 PM).

Claimant's Exhibits 1 through 8 were admitted into evidence, without objection, Respondents' Exhibits A through K were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule. The Claimant's opening brief was filed on November 1, 2016. The Respondents' answer brief, incorrectly labeled as "Findings of Fact, Conclusions of Law and Order" was filed on November 8, 2016. The ALJ does not accept proposed decisions prior to actually deciding a case, because it would project an appearance of an abdication of the ALJ's decision-making function. On November 8, 2016, counsel for the Claimant advised the Office of Administrative Courts (OAC) that the Claimant would not be filing a reply brief, at which time the matter was deemed submitted for decision.

ISSUES

The issues for decision concern whether the Claimant's low back condition and need for surgery is causally related to the admitted compensable injury of May 7, 2015; and, are the Respondents liable for the low back surgery performed at the University Hospital?

The Claimant bears the burden of proof, by a preponderance of the evidence on both of the above issues.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. Claimant worked for the Employer as a Superintendent who operated heavy equipment. On May 17, 2015, he suffered an admitted industrial injury to his head, neck, right shoulder and back. While operating a mini-excavator, the Claimant was struck by a dump truck that had rolled downhill. Upon impact, the Claimant was thrown from the mini-excavator.

2. The Claimant complained of neck pain at the time of the injury. He testified at hearing that he also had low back pain but that the neck pain was severe enough that it was his primary focus.

3. The Respondents filed a General Admission of Liability (GAL), dated August 26, 2015, admitting for authorized, causally related and reasonably necessary medical benefits; an average weekly wage (AWW) of $857.25; and, temporary total disability (TTD) benefits of $571.50 per week from August 17, 2015 and continuing.

Medical Chronology

4. Claimant saw Sanjay Jatana, M.D., for treatment of his neck injury. The Claimant stated that he complained about his neck to Dr. Jatana, but that he was told by Dr. Jatana's physician's assistant (PA) that they would not discuss or treat the low back because the carrier had not admitted liability for that injury. Whether or not the Claimant was so told or he misunderstood, the ALJ finds the Claimant credible concerning his understanding.

5. The Claimant also stated that he told his primary care physician, Kenneth R. Atkinson, M.D., about the low back injury. There is nothing in Dr. Atkinson's medical records indicating that he was told of a problem in the low back. In light of the fact that Dr. Atkinson is no longer available, the ALJ places no weight on that the Claimant says he told Dr. Atkinson, or on Dr. Atkinson's notes.

6. Dr. Atkinson was killed on April 4, 2016. After his death, the Claimant went without a treating physician for approximately one month. The parties stipulated at hearing that the insurance carrier tried to send the Claimant to Kristin Mason, M.D., and it was agreed that he would go there for treatment but Dr. Mason refused to accept the case.

7. During the time that the Claimant did not have an authorized treating physician (ATP), he saw Fredric M. Sonstein, M.D., at SpineOne, on his own self-referral. In his May 2, 2016 report, Dr. Sonstein stated that the Claimant had a large disc herniation at L3-4 with bilateral pain and weakness. He referred the Claimant for surgical intervention although Dr. Sonstein did not specify where he was referring the Claimant (Claimant's Exhibit 2, bates stamp 17). Dr. Sonstein did state the surgery was the best option for the treatment of the back injury.

8. During the time that the Claimant did not have a treating physician, he went to CU Health Sciences Center (UCHSC) for treatment of his low back. According to the Claimant, he was in terrible pain and it was an emergency situation. According to the Claimant, a Dr. Witt at UCHSC performed surgery on his low back.

9. The Claimant had a prior back fusion at L4-5 and L5-S1 several years prior to the recent injury. He stated that he was working his job without difficulty from this prior condition and had no symptoms up until May 17, 2015 when the truck collided with his back hoe.

10. Scott Monheit, D.O., eventually became the Claimant's ATP. Dr. Monheit received a questionnaire from the Respondents, dated July 22, 2016 (Claimant's Exhibit 1, bates stamp. 4). In his answers, Dr. Monheit stated, "It appears he has had preexisting lumbar disease, though it significantly worsened after the accident. My opinion is it was exacerbated by the accident and worsened over the next year." The ALJ finds that Dr. Monheit rendered an opinion, to a reasonable degree of medical probability, that the Claimant's pre-existing back condition was aggravated and accelerated by the admitted injury of May 7, 2015.

11. Other than the opinion of Dr. Monheit, no other persuasive medical evidence from a treating physician was presented at hearing.

Respondents' Independent Medical Examination (IME) by John Raschbacher , M.D.

12. Dr. Raschbacher performed an IME for the Respondents. He devoted his March 26, 2016 report exclusively to the Claimant's cervical injury, except for the last line which stated that he didn't think the back injury had a clear relationship to his workers compensation claim.

Ultimate Findings

13. The ALJ finds the opinion of Dr. Monheit, the Claimant's present ATP highly persuasive and credible. ATP Dr. Monheit's opinion is more consistent with the totality of the evidence. Dr. Monheit has rendered an affirmative opinion of the causal relatedness of an aggravation and acceleration of the Claimant's low back condition to the admitted May 7, 2015, injury. The ALJ finds that the Claimant was credible in his efforts to tell early treating physicians of his back condition, but they either told him that it was not admitted by the insurance carrier and they could not discuss it, or the Claimant misunderstood. Further, the Claimant was credible in stating that he focused on the neck injury because it was more bothersome at first. Further, the Respondents theory is based on the absence of notations in early medical reports, and not on any affirmative opinions contrary to ATP Dr. Monhiet's opinion.

14. Between conflicting medical opinions on the issue of causal relatedness of the Claimant's back condition, the ALJ accepts the opinions of ATP Dr. Monheit and rejects all opinions to the contrary.

15. The Claimant has proven, by a preponderance of the evidence that his present back condition is the result of an aggravation and acceleration of his pre-existing back condition; and, that it is causally related to the admitted injury of May 7, 2015.

16. The Claimant has proven, by preponderant evidence, that because Dr. Mason refused to take the Claimant's case, the Claimant was forced to go the UCHSC on an emergent basis and emergency surgery that was reasonably necessary to cure and relieve the effects of the admitted May 7, 2015 injury was required and performed.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinion of Dr. Monheit, the Claimant's present ATP was highly persuasive and credible. ATP Dr. Monheit's opinion was more consistent with the totality of the evidence. Dr. Monheit rendered an affirmative opinion of the causal relatedness of an aggravation and acceleration of the Claimant's low back condition to the admitted May 7, 2015, injury. Also, as found, the Claimant was credible in his efforts to tell early treating physicians of his back condition, but they either told him that it was not admitted by the insurance carrier and they could not discuss it, or the Claimant misunderstood. Further, as found, the Claimant was credible in stating that he focused on the neck injury because it was more bothersome at first. As found, the Respondents theory was based on the absence of notations in early medical reports, and not on any affirmative opinions contrary to ATP Dr. Monhiet's opinion.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions on the issue of causal relatedness of the Claimant's back condition, the ALJ accepted the opinions of ATP Dr. Monheit and rejected all opinions to the contrary.

Aggravation and Acceleration of pre-Existing Condition

c. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's pre-existing disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the Claimant's back condition is the result of an acceleration and aggravation of his pre-existing back condition.

Reasonably Necessary and Causally Related Medical Care

d. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to the aggravation of his back condition on May 7, 2015. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary to cure and relieve the effects of the compensable aggravation and acceleration of the Claimant's low back condition.

Emergent Care

e. While Respondents are only liable for treatment by ATPs, an exception exists when the treatment is the result of a medical emergency. See § 8-42-101(1), C.R.S.; *Pickett v. Colorado State Hospital*, 32 Colo. App. 282, 513 P.2d 228 (1973); *Sims v. Indus. Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). As found, the Claimant in this case had no ATP and according to his own un-rebutted testimony, he was in intense pain and went to UCHSC for emergency treatment, whereupon the surgery was performed von an emergent basis.

Burden of Proof

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden on all issues.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondents shall pay all the costs of medical care and treatment for the Claimant's compensable low back injury of May 7, 2015, including the costs of emergent surgery already performed, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Any and all issues not determined herein are reserved for future decision.

DATED this______day of December 2016.

____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

1. Did Claimant prove by a preponderance of the evidence that he sustained a functional impairment not listed on the schedule?

2. Did Claimant prove by a preponderance of the evidence that "normalization" of his right knee range of motion is inappropriate?

3. Disfigurement.

FINDINGS OF FACT

1. Claimant was formerly employed by Employer as a "healthcare tech." On June 6, 2013, he injured his right knee when he slipped on a dryer sheet on the floor, causing him to hyperextend his knee.

2. Employer referred Claimant to Dr. Terrence Lakin of the Southern Colorado Clinic, who became the primary ATP. Claimant initially underwent conservative treatment including physical therapy, rest, and medication.

3. On August 13, 2013, Claimant underwent an MRI, which showed findings consistent with a hyperextension injury, including bone bruising and at least a partial ACL tear. Additionally, there was a tear of the medial meniscus.

4. Claimant was evaluated by Dr. Roger Davis, an orthopedic surgeon, on August 22, 2013. Claimant reported pain and episodic instability. Following physical examination and review of MRI films, Dr. Davis assessed a partial ACL tear, bone bruise, and meniscus tear, and recommended physical therapy. Dr. Davis indicated surgery might be necessary if Claimant had ongoing instability with activities.

5. Dr. Lakin placed Claimant at maximum medical improvement (MMI) on November 22, 2013, without permanent impairment. In his MMI report, Dr. Lakin noted Claimant had full range of motion of both knees.

6. Claimant saw Dr. Higginbotham on February 12, 2014 for a Division IME (DIME). Dr. Higginbotham agreed that Claimant was at MMI but assigned a 13% lower extremity impairment rating. Dr. Higginbotham noted that Claimant's left knee had 145° of flexion, which was "felt to the full and normal."

7. Respondents filed a Final Admission of Liability (FAL) based on Dr. Higginbotham's report.

8. On June 4, 2014, Dr. John Hughes performed an Independent Medical Examination (IME) at Respondent's request. Dr. Hughes agreed that Claimant was at MMI, and calculated a 9% lower extremity impairment. Dr. Hughes disagreed with certain maintenance medical treatments suggested by Dr. Higginbotham. Dr. Hughes took ROM measurements of both knees, which showed 140° of flexion on the right, and 148° of flexion on the left.

9. On August 28, 2014, Claimant presented to PA-C Terry Schwartz with a report of low to mid back pain. Claimant reported he was transferring a patient from a tub to a wheelchair. Physical examination revealed tenderness from T10 to L3. PA-C Schwartz diagnosed a lumbar strain.

10. Claimant filed a separate workers' compensation claim for benefits concerning the low back strain. He was placed at MMI on December 4, 2014 without impairment.

11. After MMI, Claimant continued to experience pain, swelling and instability in his right knee.

12. On April 28, 2015, Claimant saw Dr. James Duffey, an orthopedic surgeon, for reevaluation of his knee. Dr. Duffey assessed ACL deficiency and recommended ACL reconstructive surgery.

13. At a follow-up appointment with Dr. Duffey on July 7, 2015, Claimant continued to report right knee pain and instability. Dr. Duffey documented that "he is starting to have symptoms on his opposite knee because of favoring the right knee."

14. On July 16, 2015, Dr. William Ciccone performed an IME at Respondent's request. Dr. Ciccone opined that the surgery proposed by Dr. Duffey was reasonable, necessary, and causally related to the June 2013 injury.

15. Claimant underwent a right ACL reconstruction and partial medial meniscectomy with Dr. Duffey on August 20, 2015.

16. Claimant participated in extensive postoperative physical therapy. Medical records reflect slow but steady improvement in his condition.

17. Dr. Lakin placed Claimant at MMI on March 3, 2016. In a report dated March 30, 2016, Dr. Lakin assigned a 16% right lower extremity impairment rating. Dr. Lakin reduced the ROM component of the rating by reference to ROM measurements of Claimant's left knee. The DOWC refers to this process as "normalization." Without normalization, Claimant's right lower extremity impairment was 22%.

18. Claimant's left knee ROM has been measured several times throughout his course of treatment. The ALJ found at least eight instances of documented left knee ROM in the record:

	L Knee Flexion	**Provider**
11/5/2013	140 degrees	Lakin (MMI #1)
2/12/2014	“Full”	Higginbotham (DIME)
6/4/2014	148 degrees	Hughes (IME)
7/16/2015	130 degrees	Ciccone (IME)
2/9/2016	140 degrees	PT
3/1/2016	140 degrees	PT
3/3/2016	130+ degrees	Lakin (MMI #2)
3/30/2016	125 degrees	Lakin (IR)
8/25/2016	139 degrees	Wunder (IME)

19. The left knee flexion measurements Dr. Lakin used to “normalize” Claimant’s impairment rating are lower than Claimant’s documented ROM at any other time during his treatment.

20. Dr. Wunder performed an IME at Respondent’s request on August 25, 2016. Dr. Wunder opined that it was appropriate for Dr. Lakin to utilize Claimant’s contralateral knee ROM when calculating the impairment rating. Dr. Wunder opined that medical literature does not support a causal connection between knee pain and development of symptoms in the contralateral knee. Dr. Wunder further opined that medical literature shows no relationship between limping and development of low back or hip pain.

21. Dr. Wunder testified in a deposition on behalf of Respondent on October 18, 2016. Dr. Wunder testified Claimant did not report any low back symptoms at the time of his IME evaluation. Dr. Wunder opined there are no objective findings to substantiate any low back pathology. Dr. Wunder testified that Claimant reported left knee symptoms, but his physical examination of Claimant’s left knee was normal. Dr. Wunder reiterated his opinion that it was appropriate for Dr. Lakin to utilize the left knee ROM when evaluating the right knee impairment. But Dr. Wunder testified that “the opposite joint that you are measuring should not be, ***in any way***, pathologic, meaning ***it shouldn’t be symptomatic***.” (Emphasis added).

22. Claimant’s testimony that he has developed progressive symptoms in the left knee since the original date of injury is consistent with and supported by information in his medical records. For example, Claimant reported left knee pain due to favoring the right knee on July 2015. On February 25, 2016, Claimant’s physical therapy session was terminated early due to “severe fatigue in L knee, to the point of nearly falling down during walking lunges. Patient reported a ‘weird’ feeling in L knee which caused him to be unable to complete today’s session.”

23. Claimant’s testimony that he has developed progressive low back pain as a result of altered gait mechanics is not substantiated by the other evidence of record.

24. Claimant has failed to prove by a preponderance of the evidence he suffered functional impairment not listed on the schedule.

25. Claimant has proven by a preponderance of the evidence that the ROM “normalization” performed by Dr. Lakin is incorrect. Consequently, Claimant has proven by a preponderance of the evidence that he sustained a 22% scheduled right lower extremity impairment.

26. Claimant has four surgical scars on the right leg: a ½ inch diameter scar on the lateral aspect of the thigh, two ½ inch long by ¼ inch wide scars on the front of the knee below the patella, and a 3 inch long by ½ inch wide raised scar on the medial aspect of the shin. All of the scars are discolored compared to the surrounding skin. The scars are in areas normally exposed to public view. The ALJ finds that the claimant should be awarded $1,500 for this disfigurement.

CONCLUSIONS OF LAW

Claimant has raised two issues regarding permanent impairment. First, Claimant alleges he has sustained functional impairment in areas of his body not listed on the schedule of disabilities. Second, Claimant argues that he is entitled to PPD benefits based on Dr. Lakin’s 22% extremity rating, without “normalization” based on comparison to the contralateral knee.

The issues must be evaluated in that order. The ALJ must first determine whether Claimant has suffered a scheduled or whole person impairment. If Claimant has suffered a whole person impairment, Dr. Lakin’s 9% whole person rating is binding, because neither party requested a DIME. Section 8-42-107(8)(c); *Whiteside v. Smith*, 67 P.3d 1240, 1244 (Colo. 2003) (a DIME is a “jurisdictional prerequisite” to challenging the ATP’s findings regarding the “degree of non-scheduled impairments”).

On the other hand, if Claimant has sustained only a scheduled impairment, he may challenge the ATP’s impairment rating under the preponderance of the evidence standard. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998).

A. Whole Person Impairment

Whether a claimant has sustained a scheduled injury or a whole person impairment is a question of fact for determination by the ALJ. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). In resolving this question, the ALJ must determine “the situs of the functional impairment,” which is not necessarily the site of the injury itself. *Id*. The schedule of disabilities refers to the loss of “a leg.” Section 8-42-107(2)(a). If the claimant has a functional impairment to part(s) of his body other than the “leg,” he has sustained a whole person impairment and must be compensated under § 8-42-107(8).

Although the opinions of physicians can be considered when determining this issue, the ALJ can also consider lay evidence such as the claimant’s testimony regarding pain and reduced function. *Olson v. Foley's*, W.C. No. 4-326-898 (ICAO, September 12, 2000).

There is no requirement that functional impairment take any particular form, and "pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered 'impairment' for purposes of assigning a whole person impairment rating." *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (ICAO, June 30, 2008). Referred pain from the primary situs of the initial injury may establish proof of functional impairment to the whole person. *E.g., Latshaw v. Baker Hughes, Inc*., W.C. No. 4-842-705 (ICAO, December 17, 2013); *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (ICAO, August 9, 1996).

As found, Claimant has failed to prove by a preponderance of the evidence that he suffers functional impairment in parts of his body not listed on the schedule. Rather, the ALJ concludes that Claimant's functional impairment is limited to his right leg.

Claimant's primary argument to support whole person impairment is that he developed symptoms and associated limitations in his low back as a result of altered gait mechanics. The ALJ finds no persuasive corroborating evidence in Claimant's medical records to substantiate this argument. Claimant did not note back pain on any of the numerous pain diagrams he completed at Dr. Lakin's office. Nor did he report back symptoms to any of the IME physicians, including the DIME. Although Claimant testified that Dr. Lakin told him not to reference any body parts other than his right knee, that does not explain why he did not mention his back symptoms to other physicians. Although the Claimant may experience transient low back pain, the ALJ is not persuaded that any such symptoms give rise to functional impairment that would justify a finding of whole person impairment.

Furthermore, to the extent Claimant may suffer from episodic low back symptoms, he did not prove that any such symptoms relate to the June 2013 industrial injury. Dr. Wunder opined the medical literature does not show a causal relationship between altered gait and the onset of low back or hip pain. Claimant introduced no persuasive evidence that disputes Dr. Wunder's opinions in that regard.

After considering the totality of the evidence, the ALJ concludes that Claimant has suffered a purely scheduled impairment to his right lower leg.

B. Impairment Rating – "Normalization"

Section 8-42-101(3.7) provides that all physical impairment ratings must be calculated by reference to the American Medical Association's *Guides to the Evaluation of Permanent Impairment*, 3d Edition, Revised, ("AMA Guides"). Section 8-42-101(3.5)(a)(II) requires the Director of the Division of Workers' Compensation ("Director") to establish impairment rating guidelines "based on" the AMA Guides.

Pursuant to that directive, the Director has promulgated numerous rating guidelines, many of which are contained in Desk Aid #11 – Impairment Rating Tips (the "Tips").[1]

The section of the Tips addressing the so-called "normalization" procedure provides:

> **Rating of Extremities Using Contralateral Joint/"Normalization":** In some cases, the contralateral joint is a better representation of the patient's pre-injury state than the AMA Guides population norms. The 3rd Revised Edition has little commentary on this procedure, however, the 5th Edition and the Division consider it reasonable to compare both extremities when there are specific conditions which would make the opposite, non-injured extremity serve as a better individual baseline. (This procedure is not an apportionment procedure as it does not reflect a prior pathologic condition with impairment; therefore, avoid using the term "apportionment" when referring to this process. This process can be termed "normalization.") Therefore, when deemed appropriate, the physician may subtract the contralateral joint ROM measurement from the injured joint's ROM impairment. (An example would be a patient with limited knee flexion due to obesity.) However, this subtraction should not be done if the contralateral joint has a known previous injury because that joint may not reflect the "normal" ROM for that individual. Make sure that you explain your methodology and your rationale in your report.

The ALJ concludes that the normalization applied by Dr. Lakin was inappropriate for several reasons. First, the Tips indicate that normalization should be the exception rather than the rule. The Tips state that normalization applies "***in some cases*** . . . ***when*** there are ***specific conditions*** which would make the opposite, non-injured extremity serve as a better individual baseline." (Emphasis added). The Tips give the example of a claimant with obesity. The record does not show that Claimant suffers from any condition that would reasonably be expected to limit his ROM irrespective of injury.

Second, the Tips instruct the rating physician to "make sure that you explain your methodology and your rationale in your report," but Dr. Lakin did not explain why normalization should be applied in Claimant's case. Without that explanation, the ALJ does not know what "specific conditions" warrant normalization in Claimant's case.

Third, the ostensible purpose of normalization is to provide a "better representation of the patient's ***pre-injury state.***" (Emphasis added). In Claimant's case, measurements of Claimant's left knee taken in 2014 showed essentially normal ROM. If the goal is to estimate Claimant's "pre-injury" ROM, it makes the most sense to use the measurements which were closest to the date of injury. Based on the ROM

[1] There have been at least five iterations of the Impairment Rating Tips since 2006. The most recent revision took effect in July 2016. With the exception of notations of emphasis, the text of the current section relating to "normalization" of impairment ratings is identical to the text of the prior version in effect at the time of Claimant's impairment rating.

measurements taken in 2014, the ALJ concludes it is most likely that Claimant had no deficits of left knee flexion before his industrial injury.

Fourth, Claimant persuasively testified that he developed symptoms in the left knee before reaching MMI in March 2016. That testimony is corroborated by the medical records. Dr. Wunder testified that normalization should not be applied if the contralateral joint is symptomatic. Claimant's testimony is also supported by the decrease in measured left knee ROM over the course of his claim.

Finally, the 125° of left knee flexion Dr. Lakin utilized to "normalize" Claimant's ROM impairment does not appear reliable in light of other measurements in the medical records. Claimant's left knee flexion was measured on multiple occasions before MMI as 140° or greater. Similarly, Dr. Wunder measured 139° of left knee flexion in August 2016. Therefore, the ALJ is not persuaded that the 125° measurement accurately reflects Claimant's ROM at the time of his rating, much less his "pre-injury" baseline.

Based on the totality of evidence presented, the ALJ concludes that Claimant's right knee impairment rating should not be reduced by reference to his left knee measurements. Accordingly, Claimant has proven by a preponderance of the evidence he suffered a 22% scheduled lower extremity impairment.

C. Disfigurement

Section 8-42-108(1) provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." As found, Claimant has surgical scars as a result of his compensable injury. The ALJ concludes that Claimant should be awarded $1,500 for this disfigurement.

ORDER

It is therefore ordered that:

1. Claimant's claim for whole person impairment benefits is denied and dismissed.

2. Respondents shall pay PPD benefits based on a 22% scheduled lower extremity impairment. Respondent make take a credit for any PPD benefits previously paid to Claimant.

3. Respondent shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. Respondent shall pay Claimant $1,500 for disfigurement. Respondent may take a credit for any disfigurement benefits previously paid to Claimant.

5. All matters not determined herein, or otherwise closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 7, 2016

s/Patrick C.H. Spencer II

Colorado Springs, CO 80906

ISSUES

➢ Whether claimant has proven by a preponderance of the evidence that she sustained an injury arising out of and in the course and scope of her employment with employer on April 27, 2016.

➢ If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment she received, including treatment provided by Dr. Jesus Ochoa and the magnetic resonance imaging ("MRI"), was reasonable and necessary to cure and relieve her from the effects of the work injury.

➢ If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment she received, including treatment provided by Dr. Jesus Ochoa and the MRI, was authorized medical treatment under the Colorado Workers' Compensation Act.

➢ If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that she is entitled to temporary total disability ("TTD") benefits.

➢ If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that she is entitled to temporary partial disability ("TPD") benefits.

➢ At hearing, the parties stipulated that if claimant's injury is found compensable, her average weekly wage ("AWW") is $650.12.

➢ The parties stipulated that if claimant is found to be entitled to TTD benefits, the dates for TTD benefits will be for the period of May 2, 2016 through June 12, 2016.

➢ The parties stipulated that if claimant is found to be entitled to TPD benefits, the dates of TPD will be for the period of June 13, 2016 through June 19, 2016.

FINDINGS OF FACT

1. Claimant is 55 years old and has worked for employer since December 2013 as a 911 dispatcher. Due to the sedentary nature of the position, employer has provided employees with standing work stations. In addition, a treadmill is available to allow employees to walk at their work stations. Claimant has utilized the employer provided treadmill during her employment.

2. As indicated by the medical records, claimant has a 20 year history of back and neck issues and she has sought chiropractic treatment for these symptoms. Claimant testified that prior to April 2016 she did not miss work for prior back and neck issues.

3. Claimant testified that while she was at work on April 23, 2016 she squatted down to pick up her purse and her back "caught". This made it difficult for claimant to stand back up. Claimant testified that her coworker, Amy Sullivan, assisted her by carrying her bags to her car on that date.

4. On April 24, 2016, claimant sent a text message to her coworker Sharon Grotrian stating "I squatted down to pick up my bags to leave work yesterday and couldn't hardly get up …I think my disk has slipped and will need to go to the chiro tomorrow." At times Ms. Grotrian acts in a supervisory capacity and approved claimant's request for time off for April 24, 2016.

5. Claimant testified that on April 25, 2016 she received treatment from her chiropractor Dr. Gregory Lane because she was feeling "achy". According to the medical records, Dr. Lane indicates that claimant reported she had been experiencing these symptoms for approximately one week. Dr. Lane's report does not mention any incident regarding lifting a purse or her workplace.

6. Claimant testified that on April 27, 2016 she opted to use the treadmill that is available to employees. The treadmill has wheels, which claimant used to move it for use at her work station. Claimant testified that she felt a pull in her lower back when she attempted to roll the treadmill under her work station and it did not easily roll over the mat under her desk. Claimant continued to attempt to roll the treadmill a second time and was able to roll it under her desk successfully.

7. Claimant testified that she then walked on the treadmill for approximately thirty minutes. When she finished walking on the treadmill claimant asked a coworker, Amy Sullivan, to return the treadmill to the wall where it is kept when not in use. Claimant testified that she made this request of Ms. Sullivan because she felt that she could not lift the treadmill. Claimant did not report a work injury to employer on April 27, 2016.

8. Claimant testified that she worked her scheduled shift on April 28, 2016 and informed her coworkers that she had low back pain. Claimant did not report a work related injury to employer on that date.

9. Claimant testified that at approximately 1:00 a.m. on April 29, 2016 she was experiencing pain in her back and contacted her personal physician, Dr. Jesus Ochoa. Claimant testified that she did not seek care at the emergency room because she did not feel that emergency treatment was necessary.

10. As indicated by the medical records, claimant was able to see Dr. Ochoa on April 29, 2016 and reported to him that she had pain in her low back and into her left hip. Claimant informed Dr. Ochoa that the pain began the Saturday prior when she bent

down to pick up her purse. Claimant did not report a treadmill related incident to Dr. Ochoa on April 29, 2016.

11. On April 29, 2016, Dr. Ochoa administered a ketorolac injection in claimant's right buttock. Dr. Ochoa also ordered an MRI of claimant's lumbar spine. The MRI was conducted on April 29, 2016 and showed a lateral disc protrusion at the L4-L5 level.

12. Claimant was not scheduled to work on April 30, 2016 and May 1, 2016. Claimant called the employer and notified them that she would not be at work on May 2, 2016 because Dr. Ochoa had advised her not to work. During that time claimant sought additional chiropractic treatment from Dr. Douglas Chapman. On May 4, 2016, Dr. Chapman referred claimant "to medical for evaluation and treatment of a disc injury". Dr. Chapman's notes on that date do not mention the cause of the "disc injury", nor does he record any information related to moving a treadmill.

13. Claimant testified that she returned to work as scheduled on May 4, 2016. On that date, claimant reported to employer that she was injured on April 27, 2016 while moving the treadmill at work.

14. Based upon claimant's report of the April 27, 2016 treadmill incident, employer referred claimant to Surface Creek Family Practice for treatment and claimant began treating with Dr. Kevin Pulsipher on May 6, 2016. Claimant reported to Dr. Pulsipher that she injured her back while moving a treadmill at work on April 27, 2016. The ALJ finds that this is the first medical record that describes the treadmill incident as the mechanism of claimant's injury.

15. Dr. Pulsipher recommended claimant receive injections, pain medications, physical therapy, and referred her to Dr. Kenneth Lewis, a pain specialist.

16. At the claimant's request, on June 3, 2016, Dr. Ochoa amended his April 29, 2016 medical notes to reflect that the event that caused claimant's back and hip pain occurred two days prior on April 27, 2016.

17. On June 13, 2016, Dr. Pulsipher released claimant to return to work on a part-time basis. Claimant returned to full-time work on June 20, 2016. On July 5, 2016, Dr. Pulsipher placed the claimant at maximum medical improvement ("MMI").

18. Connie Johnson is the Communications Supervisor for 911 Dispatchers with employer and is claimant's supervisor. Ms. Johnson testified that she was aware of claimant's prior back issues as it was a general topic of conversation at work. On April 25, 2016, Ms. Johnson learned from another employee that claimant had taken time off to see her chiropractor on April 24, 2016.

19. Ms. Johnson also testified that claimant did not report any issue or work related injury to her on April 27, 2016. Although claimant and Ms. Johnson interacted on April 28, 2016 and discussed finding claimant a chiropractor, claimant did not mention any incident regarding the treadmill to Ms. Johnson on that date.

20. Ms. Johnson testified that claimant contacted her by telephone on April 29, 2016 to report that she was going to have an MRI of her back. During that telephone call, claimant informed Ms. Johnson that she hurt her back while lifting her purse on April 28, 2016. On April 29, 2016, claimant did not make any statement to Ms. Johnson regarding the treadmill. Ms. Johnson testified that May 4, 2016 was the first time she learned that claimant believed she injured her back on April 27, 2016 while moving the treadmill.

21. Ms. Johnson completed an incident report on May 6, 2016 regarding her understanding of claimant's injury. The employer completed a first report of injury on that same date. On May 16, 2016, employer issued a notice of contest of claimant's workers' compensation claim.

22. Claimant's coworker Sharon Grotrian testified that she received the April 24, 2016 text from claimant regarding her "need to go to the chiro". Ms. Grotrian also testified that she observed that claimant appeared to be in pain while at work on April 25, 2016.

23. Claimant's coworker Amy Sullivan testified that on April 23, 2016 she observed claimant having difficulty standing after bending to pick up her bags. Ms. Sullivan also testified that she assisted claimant with carrying these bags to claimant's car. Ms. Sullivan testified that on April 27, 2016 she moved the office treadmill for claimant, but she could not recall why she assisted claimant with the treadmill that day.

24. Respondent referred claimant for an independent medical examination ("IME") with Dr. Douglas Scott on August 12, 2016. Dr. Scott reviewed claimant's medical records, reviewed other non-medical documentation, obtained a history from claimant, and performed a physical examination in connection with the IME. Dr. Scott issued a medical report that summarized his findings and opined that the disc protrusion at claimant's L4-L5 level likely existed prior to April 2016 and that this condition is an age related degenerative disease.

25. Dr. Scott also opined that claimant did not injure her back at work on April 27, 2016, nor did she injure her back while moving a treadmill. Dr. Scott points to the discrepancies in claimant's reports to medical providers, her coworkers, and the information she reported to employer and opines that claimant was injured on either April 18, 2016 or April 23, 2016. Dr. Scott's testimony was consistent with his IME report.

26. The ALJ credits the medical records over claimant's testimony at hearing and finds that claimant has failed to demonstrate that it is more likely than not that she injured her back while moving a treadmill at work on April 27, 2016. The ALJ finds the claimant's testimony related to the alleged treadmill incident to be neither credible nor persuasive. The ALJ notes that claimant made no reference to a treadmill related incident until May 4, 2016, despite obtaining treatment from both Dr. Ochoa and Dr. Chapman.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., (2015). A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it “aggravates accelerates or combines with “a preexisting disease or infirmity to produce disability or need for treatment.” *See H & H Warehouse v. Vicory, supra.*

4. As found, claimant has failed to demonstrate, by a preponderance of the evidence, that she sustained a work related injury to her low back on April 27, 2016. As found, the medical records are more persuasive and credible than claimant’s testimony at hearing.

ORDER

It is therefore ordered that:

1. Claimant’s claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 7, 2016

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

The issue addressed by this decision involves Claimant's entitlement to additional medical benefits. The specific question answered is:

I. Whether Claimant established by a preponderance of the evidence presented that the L5-S1 discectomy with fusion procedure recommended by Dr. Bhatti is reasonable, necessary and related to his admitted industrial injury.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Dr. Markus, the ALJ enters the following findings of fact:

1. Claimant is a 43 year old male who was employed as an Assistant Manager for Employer when he was injured on October 11, 2013. According to Claimant, he was assisting co-employees in unloading a truck when he slipped and fell, injuring his left shoulder, neck and low back. Claimant testified that it was snowing and the loading dock was wet. He lost his footing on the wet floor and fell forward onto his left side while attempting to pick up a box from a conveyor belt.

2. Claimant reported his injuries and initiated treatment with Dr. Douglas McFarland. Treatment for Claimant's injuries has been extensive, involving both conservative measures and surgical intervention. Claimant has had one surgery to the left shoulder as performed by Dr. David Weinstein. As detailed below, Claimant has also undergone two back surgeries performed by Dr. Roger Sung.

3. As the current dispute involves Claimant's request for authorization of additional low back surgery, this order does not address all prior treatment directed to Claimant's neck and left shoulder.

4. As noted above, Dr. Sung has performed surgery in an attempt to address Claimant's leg and low back pain which was reportedly made worse by "bending, lifting, walking and standing." A surgery, consisting of a right L5-S1 microdiscectomy was performed on July 14, 2015. During this procedure, Dr. Sung performed a hemilaminotomy and after taking down the ligamentum flavum was able to visualize the S1 nerve root. He then retracted the nerve root medially discovering a "calcified disk herniation" which he removed.

5. During the week following his July 14, 2015 surgery, Claimant developed "increasing pain, numbness and dysfunction" in his right leg. He reportedly developed a fever on July 20, 2015 and presented to the local emergency room where concern was

expressed for infection. He was transferred to the emergency room at Parkview Hospital and subsequently to Memorial Hospital where he was re-evaluated by Dr. Sung. After assessing Claimant with right leg pain, numbness and weakness and recurrent disc herniation, Dr. Sung returned Claimant to the operating room for a "revision L5-S1 right, microdiscectomy" and "right S1 epidural steroid injection" where he discovered a "small recurrent disc herniation which he removed without difficulty." He also treated Claimant for potential infection by debriding the wound and thoroughly irrigating it and the disc space.

6. Claimant's leg pain improved following his second surgery; however, he continued to have weakness and what he described alternatively in the record as a "funny" or "fuzzy" feeling in his right foot and leg. Dr. Sung noted some weakness and encouraged Claimant to continue with strengthening exercise for his core and leg. Dr. Sung also noted that he wanted to give Claimant "up to a year to recover."

7. Post operatively, Claimant was followed both by Dr. Douglas McFarland and Dr. Dwight Caughfield. On September 10, 2015, Claimant reported to Dr. Caughfield that he had increased foot numbness since undergoing surgery. He complained of a persistently cold foot which he had to wrap in a blanket along with cramping in his right calf. Dr. Caughfield recommended physical therapy (PT) per Dr. Sung's recommendation and continued Lyrica.

8. On September 24, 2015, Claimant returned to Dr. Caughfield with complaints of continued back and leg pain and increasing depression and anxiety. After noted that he back pain was unchanged, Dr. Caughfield recommended "core strengthening and ROM with lumbar stabilization" exercises. He also noted that Claimant's mood had deteriorated, recommending a change in medication from Zoloft (which Claimant had run out of) to Lexapro. He referred Claimant to a psychiatrist "given [Claimant's] worsening mood."[1]

9. Dr. Caughfield's referral to a "psychiatrist for more specialized management of [Claimant's] depression and anxiety medication" was denied by Insurer. Consequently, Dr. Caughfield increased Claimant's anti-depressant to 20 mg.

10. Claimant was seen in follow-up by Dr. McFarland on January 7, 2016. During this visit discussion was had regarding Claimant's continued leg and back pain. Dr. McFarland noted that he agreed with Dr. Caughfield that Claimant likely needed an electrogdiagnostic study of his legs given his complaints of paresthesias in the lower extremities. Also discussed was Claimant's request to see another provider for his ongoing back pain. Based upon Dr. McFarland's January 7, 2016 note the ALJ finds

[1] Claimant had been previously referred to and was evaluated by psychologist Dr. David Hopkins, Ph.D. on June 2, 2014. At the time of his evaluation it was felt that Claimant was suffering from a moderate degree of anxiety and mild depression related to the disability connected to his industrial injury. Dr. Hopkins assessed Claimant with an "adjustment disorder with anxiety" and a "pain disorder with physical and psychological factors." Dr. Hopkins recommended biofeedback, adjustment counseling and continued antidepressant medication. Claimant's psychological care would later be transferred to Dr. Herman Staudenmayer based upon Dr. Hopkins retirement from practice.

that Claimant had discussed his desire to see another provider for his back with Dr. Caughfield prior to January 7, 2016. The inference is supported by Dr. McFarland's documentation that that Dr. Caughfield wanted Dr. McFarland to recommend another "back specialist." Finally, Dr. McFarland noted that there had been "recent concerns about fecal and urinary incontinence and possible cauda equine syndrome"; however, an MRI "did not show any signs of compression of the cauda equine."[2]

11. During a repeat examination with Dr. Caughfield on January 27, 2016, Claimant reported continued back and leg pain. Dr. Caughfield documented Claimant's report of "episodes of bowel and bladder incontinence noting that Claimant was scheduled for a colonoscopy. Dr. Caughfield noted that Claimant was continuing to struggle with "depression and anxiety." Dr. Caughfield recommended and preformed an EMG to "evaluate for any acute axonal loss. Regarding the anticipated study, Dr. Caughfield noted if it was "negative I would not recommend a repeat lumbar surgery since I believe the lack of prior improvement and is (sic) continued pain with functional limitation without correlation on MRI makes him a poor repeat surgery candidate and is not likely to have functional gains with further surgery. Once completed, the EMG demonstrated evidence consistent with a right S1 radiculopathy.

12. On February 10, 2016, Dr. Caughfield documented the following concerning Claimants' back and leg pain and the results of his EMG: "Chronic low back and leg pain with evidence of right S1radiculopathy on EDX study with axonal loss." Dr. Caughfield went on to note that the results of Claimant's study were "very limited by patient effort/pain on needle examination. Dr. Caughfield recommended an opinion, with MRI correlation, with Dr. Sana Bhatti in an effort to determine whether the results of Claimant's EMG were due to "continued compression or incomplete reinervation."

13. Dr. Bhatti evaluated Claimant on March 17, 2016. Regarding his back/leg, Claimant reported "numbness and paresthesias in both feet but much more severe on the right with right lateral foot numbness." He reported that it felt like he had "rocks on the bottom of his right foot" and "muscle spasms in his feet." He complained of "difficulty with ambulation" and noted that he was "unable to walk very far." He also complained of continued "urinary urgency and stress incontinence." He reported functional decline with activities of daily living, including showering. Physical examination revealed 4/5 strength in the right leg primarily with regard to plantar flexion and mild weakness in the left lower extremity. Claimant was unable to tandem walk, and unable to get onto his toes and heel with the right foot. Sensation was decreased in the lateral aspect of the right foot and while Claimant's lower extremity reflexes were symmetrical, they were diminished. Straight leg raise testing was also positive bilaterally. Dr. Bhatti opined that the etiology of Claimant's symptoms was unclear. He noted that the 12/11/15 MRI demonstrated a right L5-S1 disc herniation but did not have Claimant's pre-operative MRI, so could not compare the two. He recommended a lumbar myelogram and CT scan.

[2] An MRI of the lumbar spine had been completed on December 11, 2015 which demonstrated right-sided perineural and peridural enhancing fibrosis at the L5-S1 level. No recurrent disc protrusion was noted.

14. Claimant was evaluated by Dr. Timothy O'Brien at Respondents' request on May 31, 2016. Dr. O'Brien obtained a history from Claimant, reviewed medical records and completed a physical evaluation. At the conclusion of his independent medical examination (IME), Dr. O'Brien opined that Claimant sustained an isolated and minor injury to his left shoulder only. He opined further that this injury was "not substantial enough or energetic enough to result in a rotator cuff tear, acromioclavicular joint separation, or progression of pre-existing and underlying rotator cuff tendinitis. Although he did not specifically address Claimant's low back pathology and the findings on MRI and CT myelogram in the "impression" section of his report, Dr. O'Brien unquestionably attributes Claimant's low back and leg pain to "multilevel spondylosis" which he opined is normal for his age. Furthermore, Dr. O'Brien opined that the "degenerative changes" in Claimant's back was "not generating pain." Rather, Dr. O'Brien opined that Claimant's pain was "nonorganic which is why it could not be expected to respond to traditional treatment modalities . . ."

15. In opining that Claimant's pain was non-organic in origin, Dr. O'Brien suggests that Claimant's treatment providers have not served him properly. Per Dr. O'Brien, those providers would have been able to serve Claimant more effectively if they had "just told him that his pain could not be explained by their exam findings and could not be explained by their experience with similar patients." According to Dr. O'Brien, Claimant continues to report back and leg pain despite "receiving care with merely every medical and surgical modality available in western medicine" because his pain complaints are nonorganic in nature.

16. A careful read of Dr. O'Brien's report persuades the ALJ that Dr. O'Brien does not believe that Claimant sustained any injury to the low back that is related to his October, 11, 2013 slip and fall. Moreover, the ALJ finds from his report that Dr. O'Brien does not believe that Claimant's subjective complaints of back and leg pain have an objective basis. Indeed, Dr. O'Brien admitted as much when he noted that he ". . . would have told [Claimant] that ongoing care [would] not help him and in all likelihood [would] inappropriately validate his complaints which have no objective basis . . ."

17. The myelogram recommended by Dr. Bhatti was performed May 20, 2016. Testing revealed the following at the L5-S1 segment:

> L5-S1 level demonstrates right-sided posterior lateral, lateral recess and neural foraminal encroachment of moderate degree. There appears to be a far right lateral disc present. Additionally, there appears to be right-sided ligamentum flavum prominence at this level. The S2 nerve root sheath on the right is encroached upon and displayed posteriorly.

18. During a follow-up appointment with Claimant on June 14, 2016, Dr. Bhatti reviewed the findings of Claimant's myelogram and opined that the myelogram "shows a right-sided disc herniation at L5-S1 with a right S1 nerve root cut off." Dr. Bhatti recommended a "redo L5-S1 discectomy with fusion and instrumentation."

19. Dr. Bhatti requested surgical authorization on June 15, 2016. The request was denied and the matter set for hearing.

20. Respondents obtained surveillance video tape of Claimant on August 12th and 13th, 2016. They forwarded the surveillance video along with Claimant's answers to interrogatories to Dr. O'Brien for comment. On October 10, 2016, Dr. O'Brien authored a supplemental report after review of Claimant's interrogatory answers and the video surveillance tape. As part of his report, Dr. O'Brien noted that Claimant indicated in his responses to interrogatories that he "cannot lift any item of any weight" and that he could not stand or walk for prolonged periods of time. It was noted that Claimant reported that he had numbness from the waist down to the three toes on the right side" as well as "numbness in the left leg."

21. Dr. O'Brien viewed the surveillance video tape in the context of Claimant's interrogatory responses. After reviewing the video surveillance tape, Dr. O'Brien opined that Claimant's activities as depicted supported a conclusion that Claimant had misrepresented his "true level of pain and function." In this regard Dr. O'Brien notes:

> On the video tape, Mr. Madrid was using both upper extremities symmetrically without dysfunction. He was demonstrating normal lumbrosacral spine function and range of motion. He had no apparent pain on the video surveillance tape and yet at the time of my IME reported and postured as if his pain was disabling. He indicated that the pain was so severe he could not stand for a prolonged period of time and he could not use his upper extremities; in fact, was posturing as if his left upper extremity was so painful he could not move it away from his abdomen and yet at the time of the video evaluation, Mr. Madrid had normal function.

22. Following review of the surveillance video, Dr. O'Brien reiterated his opinion that Claimant's pain complaints were non-organic in nature and concluded as follows: "Ongoing care in the presence of nonorganic pain will always serve to inappropriately validate the subjective complaints which have no objective foundation, and in so doing, create or enhanced the specter of disability which in fact does not exist. Mr. Madrid is misrepresenting his true level of pain and function and medical attention should be discontinued immediately."

23. Upon careful review of the video surveillance tape submitted, the ALJ finds that the surveillance video tape demonstrates Claimant to be engaged in light functional activity, including sweeping, picking up dog waste with a small shovel and lifting the deck and loading the trunk of his car without apparent pain. Claimant is also seen visiting with another person and carrying a small dog with his right hand raised to the level of his shoulder. During these activities, the ALJ observed Claimant to repeatedly bend at the waist, sometimes as far as 90 degrees, to pick objects up from the ground. Claimant was noted to place his right hand on his right thigh for support and assistance when bending over and rising up again. Claimant was also observed to walk on a variety of surfaces, either barefoot or in sandals. He was on his feet for a prolonged

period of time but was noted to lean on a car for much of the time while visiting with another person. Finally, Claimant was noted to ambulate with a guarded and somewhat shuffling gait at times; however, he did not display an overt limp.

24. Dr. O'Brien testified by deposition on September 12, 2016. Dr. O'Brien testified that neither of Claimant's low back surgeries as performed July 14, 2015 and July 21, 2015 was reasonable or necessary for two reasons. First, because there was a "lack of concordance of the factual information in the case" and second, because the treatment (surgery), as a traditional operative modality, was directed to non-physiologic nonobjective, i.e. nonorganic pain which would "never" be relieved. In support of this opinion, Dr. O'Brien testified that Claimant did not have "objective weakness" in the right leg. Rather, Dr. O'Brien testified that Claimant's weakness was due to subjective complaints of pain and a volitional lack of effort.

25. As support for his conclusion that there was a lack of physical findings to have justified the July 14, 2015 surgery, Dr. O'Brien testified that Dr. Sung does not "[look] real hard into the patient database for nonorganic findings and that as a consequence many of his patients are "operated upon who have nonorganic physical findings."

26. Dr. O'Brien also testified that he did not believe that Claimant's imaging studies demonstrated "true disc herniation." Rather, he believed that there was desiccation and a "normal-for-age bulge of the disc.[3] When presented with Claimant's CT myelogram for the first time at his deposition, Dr. O'Brien testified that it referenced a "far right lateral disc protrusion" which the interpreting radiologist felt arose postoperatively. Dr. O'Brien considered this a "new finding." Nonetheless, he testified that this new finding was not a surgical indication for Claimant since the veracity of the finding had not been demonstrated. According to Dr. O'Brien, while a CT scan was a "very good study" the finding could represent scar tissue and not recurrent disc herniation. Dr. O'Brien characterized the CT post myelogram "inconclusive of factual information", suggesting that a dye enhanced MRI would be more sensitive in discerning the presence of recurrent disc herniation.

27. Dr. O'Brien testified further that even if a dye enhanced MRI demonstrated the presence of right sided disc herniation, his opinion regarding the reasonableness and necessity of performing the surgery recommended by Dr. Bhatti would not change because Claimant's pain is nonorganic and using "traditional modalities to treat pain that does not have a definable source, . . . will fail every time."

28. During cross examination, Dr. O'Brien testified that the first low back surgery performed July 14, 2015 consisted of a discectomy. Dr. O'Brien explained that in situations where a disc mechanically irritates a nerve, that irritation can manifest as "pain, numbness or tingling, and even weakness. In these circumstances, mechanically removing the disc to decompress the nerve should alleviate the symptoms.

[3] Dr. O'Brien admitted during cross examination that he had not reviewed any of the multiple MRIs of the lumbar spine.

29. Based upon the evidence presented, the ALJ finds that Claimant has consistently complained of pain, numbness, tingling and weakness in the right leg. The evidence presented persuades the undersigned that Claimant's slip and fall likely resulted in a disc herniation which mechanically irritated his L5-S1 nerve root giving rise to his back and leg pain and other associated symptoms. The MRI imaging identified this disc disruption with reasonable reliability and the herniation was confirmed during the July 14, 2015 surgery. Consequently, the ALJ finds the July 14, 2015 low back surgery reasonable, necessary and related to Claimant's October 11, 2013 work related slip and fall.

30. As noted above, Claimant developed recurrent disc herniation and post surgical infection which was subsequently treated by Dr. Sung on July 21, 2015. Based upon the evidence presented, the ALJ rejects Dr. O'Brien's suggestion that the need for this follow-up surgery was not reasonable or necessary. To the contrary, the ALJ finds the July 21, 2015 surgery was a reasonable and necessary treatment modality to address an infection which, more probably than not, developed as a direct consequence of the July 14, 2015 surgery. Moreover, the ALJ finds this surgery a reasonable and necessary procedure to cure and relieve Claimant of ongoing "right leg pain, numbness and weakness" likely caused by the recurrent herniation of disc material as discovered during the procedure.

31. Claimant testified that the July 14, 2015 surgery helped with his pre-surgical symptoms until his abscess necessitating his second surgery. Following that surgery, Claimant testified that he experienced increased weakness and numbness in his right foot. According to Claimant, it feels as though he has stuff in his shoes when he walks. He explained that he cannot get up on his toes and that toes 3-5 on his right foot are numb. Claimant testified further that he continues to experience incontinence of both his bowel and bladder 3-4 times a week which represents a worsening of this phenomenon over time.

32. Although Claimant testified to continuing pain which he reported fluctuates between a 7-9/10 since his July 21, 2015 surgery, he reported that he retained some functional capacity. The ALJ finds Claimant's activities as demonstrated on video tape to be consistent with his testimony that he retains "some" functional capacity. The activity demonstrated on video tape is not physically or aerobically demanding and there are multiple occasions where taping ceases only to start minutes later, suggesting that the video tape has been edited or that Claimant retreated out of view during which Claimant's activities and behavior are unknown. Consequently, the ALJ finds the video tape of limited value in determining whether Claimant is a candidate for additional low back surgery. That limited value extends to the light functional abilities clearly observed, i.e. sweeping, bending to pick up dog waste, visiting with another person and light lifting.

33. Claimant testified that his prescribed medications help with his pain levels and his functionality. Claimant testified that he takes the following medications for the following symptoms: Ibuprofen 800 mg for pain, Lexapro for depression, Lidocain for

pain, Lyrica for nerve pain/damage, Propananol for migraine headaches and Valium for anxiety.

34. Despite Dr. O'Brien's statements/opinions that Claimant does not have an objective basis for his pain, the medical records, including the MRIs, the post myelogram CT scan and the nerve conduction study performed January 27, 2016 objectively demonstrate that Claimant has changes at the L5-S1 spinal level that are consistent with disc pathology, an absent left gastroc (calf) h-reflex and an S1 radiculopathy. Moreover, the physical examinations of Dr. Caughfield and Dr. Bhatti that document weakness in the right ankle for dorsi flexion (DF) and plantar flexion (PF) along with Claimant's subjective complaints of pain, tingling and numbness in the leg and foot adequately correlate these symptoms to the objective diagnostic testing and his original October 11, 2013 work related slip and fall. Consequently, the ALJ finds Dr. O'Brien's testimony that Claimant's pain is purely nonorganic unconvincing.

35. Based on a totality of the evidence presented, the ALJ finds that Claimant has proven that the surgery recommended by Dr. Bhatti is reasonable, necessary and related to Claimant's October 11, 2013 slip and fall injury involving Claimant's low back. As found, the opinions expressed by Dr. O'Brien are largely contradicted by the balance of the competing evidence, particularly the imaging studies, the January 27, 2016 EMG and the physical examinations of Dr. Caughfield and Dr. Bhatti.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* Claimant must prove that she is a covered employee who suffered an injury arising out of and in the course of employment. *Section 8-41-301(1), C.R.S.; See, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought, including medical treatment *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and

demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. In this case, Claimant's testimony regarding his functional abilities is generally consistent with his demonstrated capability captured on surveillance video tape. Moreover, his testimony concerning his symptoms has been consistent throughout the pendency of the case. Even Dr. O'Brien testified that in situations where a disc mechanically irritates a nerve, that irritation can manifest as "pain, numbness or tingling, and even weakness. These are the symptoms that Claimant has consistently and credibly complained are worsening since undergoing his July 21, 2015 surgery.

C. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968). Here, the evidence presented persuades the ALJ that there is a demonstrated anatomical correlation regarding the objective weakness found by Dr. Caughfield and Dr. Bhatti on physical examination and the MRI, CT scan and EMG study findings. Consequently, the ALJ concludes that Dr. O'Brien's opinion/testimony that Claimant's ongoing pain is nonorganic and without an objective basis is incredible and unpursuasive. The ALJ also rejects the opinion of Dr. O'Brien that Claimant has had nearly every medical and surgical modality available in western medicine. To the contrary, Claimant has undergone traditional conservative care and a decompression procedure, i.e. a discectomy. Additional operative treatments, as provided for in the Medical Treatment Guidelines remain available to the Claimant should he otherwise meet the qualifications for the same.

D. In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Medical Benefits
The Proposed L5-S1 Spinal Surgery Recommended by Dr. Bhatti

E. A claimant is entitled to medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury. *See* § 8-42-101(1), C.R.S. 2003; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office, supra*. Similarly, the question of whether medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). Based upon the evidence presented, the ALJ concludes that Claimant has proven that L5-S1 fusion surgery recommended by Dr. Bhatti is reasonable and necessary. Contrary to Dr. O'Brien's testimony, the medical reports outline persistent pain, numbness and weakness which likely correlates with the findings on EMG testing as well as MRI and CT imaging. Furthermore, the video surveillance is consistent with limited functional capacity in the face of a failed operative procedure. Consequently, the ALJ concludes that the recommendation for a fusion with instrumentation is reasonable and necessary.

F. The Medical Treatment Guidelines (Guidelines) are regarded as the accepted professional standards for care under the Workers' Compensation Act. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); see also *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The Medical Treatment Guidelines, Rule 17-2(A), W.C.R.P. provide: All health care providers shall use the Guidelines adopted by the Division. In spite of this direction, it is generally acknowledged that the Guidelines are not sacrosanct and may be deviated from under appropriate circumstances. *See*, Section 8-43-201(3) (C.R.S. 2014). Nonetheless, they carry substantial weight.

G. The Guidelines have been accepted in the assessment of low back pain. While the Guidelines provide that "surgery should be contemplated within the context of expected functional outcome and not purely for the purpose of pain relief", the evidence presented in this case persuades the ALJ that the surgical recommendation was not made solely to relieve Claimant's pain. The totality of the record evidence including Claimant's clinical course, physical examination findings and the results of diagnostic testing (MRI, CT scan and EMG study) persuade the ALJ that the recommendation for surgery was contemplated to both correct identified pathology to reduce Claimant's ongoing pain and improve his limited functional capacity. As provided for in the Guidelines, there has been a "comprehensive assimilation" of the aforementioned factors (clinical course, clinical findings and diagnostic testing results) leading to a specific diagnosis and a "positive identification of pathological conditions." The ALJ finds and concludes from evidence presented that the additional lumbar decompression and stabilization contemplated here is reasonably anticipated to result in significant functional gain above Claimant's limited capacity as demonstrated on video surveillance tape. As provided for under § 8-43-201(3), the ALJ has "[considered] the medical treatment guidelines adopted under section 8-42-101(3) in determining whether certain medical treatment is reasonable, necessary, and related to an industrial injury or occupational disease." In keeping with the Guidelines, the ALJ concludes that Dr.

Bhatti's recommendation for additional low back surgery has been contemplated within the context of expected functional outcome and not merely for the purposes of pain relief.

ORDER

It is therefore ordered that:

1. Respondent shall pay for all reasonable and necessary treatment medical treatment, resulting from the Claimants October 11, 2013 work related slip and fall, including but not limited to the L5-S1 spinal surgery recommended by Dr. Bhatti.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 8, 2016

Colorado Springs, CO 80920

ISSUES

➢ Whether claimant has proven by a preponderance of the evidence that the surgery recommended by Dr. James Gebhard and performed on February 3, 2016 was reasonable and necessary to cure and relieve claimant from the effects of the admitted September 21, 2015 work injury.

➢ Whether claimant has proven by a preponderance of the evidence that she is entitled to an award of temporary total disability ("TTD") benefits.

➢ If claimant has proven by a preponderance of the evidence that she is entitled to TTD benefits, what is claimant's average weekly wage ("AWW")?

➢ The parties stipulated that respondents are entitled to an offset for Social Security Disability Insurance ("SSDI") payments received by claimant. However, claimant has reserved the issue of the actual amount of any SSDI offset.

FINDINGS OF FACT

1. Employer operates a farm and produce stand. Claimant has worked for employer since 2003 on a seasonal basis. Typically she begins working for the employer in late March or early April and continues working until late October. In 2015, claimant was paid $10.00 per hour when paid in cash and $10.50 per hour when she was paid by check.

2. Claimant has an extensive prior history of low back issues, including five prior back surgeries. Prior to the September 21, 2015 work injury, claimant's most recent surgery was performed on October 29, 2014 by Dr. James Gebhard. This surgery included an osteotomy and revision posterior fusion from T-11 to S-1. Rods were placed along claimant's spine as part of this surgery. Claimant recovered from that 2014 surgery and returned to work without restrictions. On April 30, 2015, an x-ray of claimant's spine showed "consolidation of the bone fusion".

3. Claimant sustained an admitted injury to her low back on September 21, 2015. The injury occurred when claimant was sorting tomatoes and a table holding approximately 600 pounds of tomatoes fell on her back and pinned her to a second table.

4. Claimant testified that in the days following the September 21, 2015 injury she had pain in her low back and could feel and hear a "grinding" in her back. Claimant reported this pain and grinding sensation to her authorized treating physician ("ATP"), Dr. Stacia Baker. Dr. Baker referred claimant for a consultation with Dr. Gebhard.

5. On September 30, 2015 an x-ray was taken of claimant's back and showed a break in the rod on the left side of her spine. Claimant underwent a computerized tomography ("CT") scan on October 28, 2015 that showed a solid fusion. Dr. Gebhard recommended surgery to replace the broken rod. Respondents denied the surgery. However, claimant underwent the recommended surgery on February 3, 2016.

6. On February 25, 2016, Dr. Gebhard noted that claimant did not have any symptoms prior to the September 21, 2015 work injury. Dr. Gebhard further opined that it is within medical probability that the rod in claimant's back fractured at the time of claimant's work injury. On June 2, 2016, Dr. Gebhard further opined that the "high-energy injury" claimant sustained on September 21, 2015 was the cause of the rod breakage.

7. On December 5, 2015 and May 14, 2016 Dr. Michael Janssen issued written reports summarizing two reviews he performed of claimant's medical records. Dr. Janssen opined that the rod in claimant's back may have broken prior to the September 21, 2015 injury. Although Dr. Janssen noted that claimant achieved successful fusion following the 2014 surgery, he opined that the rod breakage occurred "a long time ago and the fusion went on to consolidate". Dr. Janssen's testimony was consistent with his written reports.

8. After the incident on September 21, 2015 claimant continued working for employer. Claimant's job duties were limited to answering phones and running the cash register. Claimant's employment with employer ended on October 31, 2015 because employer's season ended. Claimant has not returned to work.

9. On August 2, 2016, Dr. Gebhard determined that claimant had not yet reached maximum medical improvement ("MMI"), but that she would likely reach MMI by February 3, 2017, one year from the surgery. Dr. Gebhard also assigned claimant a lifting restriction of 25 pounds.

10. Claimant's 2015 W-2 Form indicates that she earned a total of $5,137.13 during that year. Claimant testified that this amount was for wages paid to her by employer for the months of August, September, and October 2015. Claimant also testified that employer paid her in cash for the period of April 2015 through July 2015.

11. The ALJ credits the claimant's testimony regarding the September 21, 2015 injury. The ALJ also credits the February 25, 2016 and June 2, 2016 opinions of Dr. Gebhard regarding the cause of the broken rod in claimant's back over the conflicting opinion of Dr. Janssen and finds that it is more likely than not that the rod in the claimant's back was broken when a table hit her in the back while she was at work on September 21, 2015.

12. The ALJ credits claimant's testimony and the medical records and finds that it is more likely than not that the February 3, 2016 surgery performed by Dr. Gebhard was reasonable and necessary to cure and relieve claimant from the effects of the September 21, 2015 work injury.

13. The ALJ credits claimant's testimony related to her inability to work after the February 3, 2016 surgery and finds that it is more likely than not that she experienced a wage loss as a result of the February 3, 2016 surgery. The ALJ also finds that claimant has failed to demonstrate that is more likely than not that she experienced a loss in wages between November 1, 2016 and February 3, 2016, because any wage loss during that period was the result of the conclusion of the employer's season and not the result of the work injury. Wage loss began on February 3, 2016 by virtue of the surgery, which the ALJ finds is related to the September 21, 2015 work injury.

14. The ALJ credits the claimant's testimony regarding her earnings as indicated by the 2015 W-2 Form and finds that it is more likely than not that these earnings were for the months of August, September, and October 2015. The ALJ takes judicial notice that August 1, 2015 through October 31, 2015 was a 13 week period. When the total of $5,137.13 is divided by 13 it is equal to an average of $395.16 per week.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2013. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S., *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. “Authorization” refers to the physician’s legal authority to treat, and is distinct from whether treatment is “reasonable and necessary” within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008). Section 8-43-404(5)(a) specifically states: “In all cases of injury, the employer or insurer has the right in the first instance to select the physician who attends said injured employee. If the services of a physician are not tendered at the time of the injury, the employee shall have the right to select a physician or chiropractor.” “[A]n employee may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion….” *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985), *citing*, 2 A. Larson, *Workers’ Compensation Law* § 61.12(g)(1983).

5. As found, the surgery performed by Dr. Gebhard on February 3, 2016 was reasonable and necessary to cure and relieve claimant from the effects of the September 21, 2015 work injury. As found, the claimant’s testimony and the opinion of Dr. Gebhard are credible and persuasive.

6. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

7. As found, the compensable injury resulted in a period of time in which claimant was unable to earn wages beginning February 3, 2016 when she underwent surgery. Respondents shall pay TTD benefits to the claimant for the period of February 3, 2016 until terminated by law.

8. The ALJ must determine an employee’s AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

9. As found, claimant earned $5,137.13 over a 13 week period between August 1, 2015 and October 31, 2015. As found, claimant's "AWW" is $395.16; ($5,137.13 divided by 13 weeks). The ALJ credits claimant's testimony that she was paid in cash for the period of April 2015 through July 31, 2015. The ALJ finds that the credible evidence entered at hearing is represented by claimant's 2015 W-2 and claimant's testimony that the W-2 represents wages for the period of August 1, 2015 through October 31, 2015. The ALJ credits these records in calculating claimant's AWW.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the cost of claimant's February 3, 2016 surgery because it was reasonable and necessary to cure and relieve claimant from the effects of the September 21, 2015 work injury.

2. Respondents shall pay TTD benefits to the claimant for the period of February 3, 2016 until terminated by law. Claimant's TTD benefits shall be paid based upon an AWW of $395.16.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Has Claimant met his burden of overcoming the DIME findings of Dr. Aschberger by clear and convincing evidence?

II. Has Claimant sustained his burden on proving that he suffered an injury to his neck in the course of his employment?

III. Has Claimant reached Maximum Medical Improvement?

IV. If Clamant has reached MMI, is he entitled to Permanent Partial Disability benefits for loss of range of motion in his neck and back?

V. If Claimant has not reached MMI, is he currently entitled to Temporary Total Disability Benefits?

VI. Is the cervical surgery recommended by Claimant's ATPs reasonable, necessary and causally related to Claimant's industrial injury?

FINDINGS OF FACT

1. Claimant, Gentry Penny, was born on March 4, 1970. Claimant testified that he had worked for the Respondent-employer for over a year doing very heavy labor. Claimant testified that he had no pain in his neck, shoulder or low back before his work related incident on September 25, 2012. Claimant testified that he was injured on 9/25/12 while trying to push a cart weighing over one thousand pounds. Claimant went to the Emergency Department at St. Mary Corwin Hospital on 9/25/12 for pain in right shoulder & abdomen.

2. Claimant testified that he was taken to the CCOM industrial clinic by his employer on 9/26/12, and records note that on that visit, Claimant was now complaining of low back pain. (Exhibit 6 at 58). Claimant returned to CCOM on 9/28/12, 3 days after his injury, and was also then mentioning neck pain as well. The physician assistant who saw Claimant on that date diagnosed cervical, thoracic and lumbar strains. (Exhibit 6 at 59). Claimant has had neck and low back complaints since. (Exhibits 6 & 7).

3. Claimant had an MRI of his right shoulder which was positive for a rotator cuff tear. Claimant underwent surgery for the rotator cuff tear but it failed to improve his right upper extremity symptoms. Doctors felt part of his arm symptoms might be coming from a problem with his neck. Claimant underwent a cervical spine MRI on 1/16/13, which was positive for C4-5 & C5-6 disc herniations with significant canal stenosis (Exhibit 7 at 122-123). A low back MRI was also done 1/16/13 and was positive for a L5-S1 disc herniation. (Exhibit 7 at 124). Claimant also had an EMG study done on

6/10/15 which was positive for a C6 radiculopathy on the left side. (Exhibit 7 at 134). Claimant underwent extensive non-surgical treatment through his authorized treating physician (ATP), Dr. Daniel Olson, M.D.

4. Claimant received treatment for his shoulder injury and hernia condition. He underwent a lipoma excision and a shoulder surgery. These issues have resolved and the Parties agree that Claimant is at MMI for his shoulder and for the hernia condition.

5. Respondents also obtained an Independent Medical Evaluation from Dr. William Watson, M.D. Dr. Watson evaluated Claimant in person on May 6, 2014. Dr. Watson noted that Claimant had marked pain behavior throughout the examination, including diffuse tenderness and pain throughout the cervical spine. However, distracted palpitation was negative for pain. The Spurling's test revealed pain but no evidence of radicular symptoms. Regarding the lumbar spine, Dr. Watson noted on his physical evaluation that Claimant had "intense" pain on both light touch and deep palpitation. Dr. Watson noted that Claimant gave way on all muscle testing and that Claimant's symptoms seemed to change throughout the examination.

6. Dr. Watson further opined that Claimant showed positive Waddell's testing throughout the examination for both the cervical and lumbar spine. After reviewing the imaging studies Dr. Watson found no objective basis for Claimant's extreme pain complaints and subjectively reported symptoms. Thus, he felt that all active care should be terminated, that Claimant should be encouraged to do his home exercise program, and that no further surgical intervention was appropriate.

7. The Respondents eventually requested a 24-month DIME evaluation and Dr. William Griffis was selected as the DIME physician. The Respondent's requested that Dr. Griffis examine the Claimant for a right shoulder injury and hernia injury on their application and did not mention Claimant's neck and low back injuries. (Exhibit 2 at Bates stamp 9). Dr. Griffis noted the mistake and testified at his deposition that he contacted the Division about the failure to include the neck and low back conditions on the request for examination. He testified he was told just to examine the conditions listed on the application. (Exhibit 8 at page 147).

8. Dr. Griffis rendered a DIME report, dated 2/24/15, stating Claimant was at maximum medical improvement as far as his right shoulder and abdominal injuries were concerned as of August 12, 2013. The Respondents used this report to support a Final Admission of Liability, filed on March 16, 2015, which terminated Claimant's TTD benefits and listed a large overpayment. However, the Respondents continued to pay for the medical treatment rendered to Claimant's neck and low back. Claimant has had numerous non-surgical treatments for his neck injury, including an injection and physical therapy. A C3, C4, C5 Rhizotomy was performed on 6/4/15. None of the treatment modalities to date have led to sustained reduction of the Claimant's severe neck pain and have not relieved the numbness in his hands and arms.

9. Claimant was sent to surgeons for evaluation as to the need for surgery on his neck. Although Dr. Watson, Dr. Griffis, and a spine surgeon, Dr. Sceats, questioned whether surgery would help the Claimant's neck problems, Claimant was sent to another surgeon for a second opinion, Dr. Sana Bhatti, M.D. Dr. Bhatti ordered further tests on the Claimant, and, after receiving the test results, indicated that he felt that a cervical fusion surgery had a good chance of reducing the severe pain that Claimant is currently suffering in his neck. Dr. Bhatti testified that the most recent MRI of the Claimant's neck demonstrates a herniated disc and a recent EMG was positive for a cervical radiculopathy. (Exhibit 7 at Bates stamp page 134).

10. Claimant filed for a hearing on whether he was, in fact, at MMI and whether he was entitled to TTD benefits and the recommended neck surgery. The case went to hearing before Judge Walsh on 12/3/15. At the hearing, the Respondent's attorney admitted that the Claimant suffered injuries to his neck and low back in the work incident and the compensability of those injuries was not being contested. (CD1 at 11:34, 11:38 & 11:49). After the hearing, ALJ Walsh found that Dr. Griffis' DIME was not controlling since it didn't involve all Claimant's injuries. ALJ Walsh concluded that Claimant was not at MMI because no treating physician and no DIME had placed Claimant at MMI at the time. ALJ Walsh held that Claimant was entitled to TTD benefits, but that neck surgery was not appropriate at that time. (See Exhibit 10).

11. The denial of the neck surgery appears to be based largely on the fact the EMG study was positive on the left, but Claimant's major complaints were on his right side. ALJ Walsh's decision was not appealed by either party.

12. Since that time, Dr. Olson referred Claimant to another surgeon, Dr. David Wong, M.D. for another opinion. Dr. Wong ordered an updated EMG study which was found to be positive for a *bilateral* C6 radiculopathy, a clear *worsening* since prior findings. As a result, Dr. Wong opined that Dr. Bhatti was correct that Claimant is an appropriate candidate for a cervical fusion surgery. In light of the worsened condition, Dr. Olson recently testified that he now agrees that the cervical surgery is appropriate.

13. In the meantime, a new 24 month DIME was performed by Dr. Aschberger since Dr. Griffis has retired. Dr. Aschberger did his exam and issued a report on 5/2/16 in which he stated that Claimant was at MMI back on 2/24/15 when Dr. Griffis saw him. However, at the initial DIME evaluation by Dr. Griffis, he was only assessing the MMI date of 2/24/15 for the shoulder and abdomen. Further, Dr. Griffis testified at a deposition on 9/8/15 that Claimant was not at MMI for his neck, due to diagnostic and treatment modalities on his neck which had yet to occur.

14. Additionally, Dr. Aschberger appears to have ignored cervical treatments that were rendered *after* his MMI date of 2/24/15, including a rhizotomy performed on 6/14/15. Dr. Olson opined that Claimant would not have been at MMI on that date, since that procedure was intended to improve his condition.

15. Dr. Aschberger also opined that Claimant's neck problem was not related to the work injury on the grounds that the Claimant did not report complaints of neck

problems within a reasonable time after the injury. Despite that opinion, he gave Claimant an impairment rating for the cervical rhizotomy which had been performed in June 2015. He also opined that Claimant is not an appropriate candidate for a cervical fusion surgery. Further, he refused to give Claimant a rating for loss of range of motion in his neck and back, even though his measurements were repeated three times, and appeared to meet validation criteria.

16. The DIME Unit sent a letter to Dr. Aschberger stating that the rules required that he repeat the measurements again. Dr. Aschberger then declined to do so, saying he could rely on measurements previously done by Dr. Watson and Dr. Sparr. (Exhibit 13 at 240).

17. The longtime ATP, Dr. Daniel Olson, M.D. was deposed and has testified that he does not feel that Claimant is at MMI yet and that the worsening of his findings on the EMG study now makes the fusion surgery an appropriate consideration. He testified that he had serious disagreements with Dr. Aschberger's opinions on MMI, causality, and the need for surgery.

18. The ALJ finds Dr. Olson's opinions to be credible and persuasive.

19. The ALJ finds the medical opinions of Dr. Olson, the opinion of the original DIME physician Dr. Griffis (as updated in his deposition), coupled with the opinions of Drs. Bhatti and Wong, to be more credible and persuasive than the DIME opinion supplied by Dr. Aschberger.

20. The ALJ further finds that the methodology used, and conclusions drawn, by Dr. Aschberger in his DIME opinion as to causation, MMI, and impairment ratings are highly probably incorrect.

21. Claimant has overcome Dr. Aschberger's determination regarding MMI by clear and convincing evidence. Claimant has not reached MMI.

22. The ALJ further finds the live testimony of Claimant, and his wife, to be credible and persuasive regarding the symptoms he has experienced, and continues to experience.

23. Claimant's cervical condition is causally related to his industrial injury.

24. Claimant's cervical condition has worsened since the prior hearing before ALJ Walsh.

25. As a result of his worsened condition, the cervical surgery proposed by Dr. Bhatti and Dr. Wong is reasonable, necessary and causally related to Claimant's industrial injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principles

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this case, the medical record evidence, coupled with Claimant's credible testimony, support a finding that Claimant is not yet at MMI. For these reasons, the ALJ concludes that the opinions of Drs. Olson and Bhatti are more persuasive than those of Drs. Aschberger in his DIME report.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME Opinion of Dr. Aschberger Regarding MMI, Causation, & Impairment

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-

107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI, permanency or the cause of a particular component of a claimant's medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

E. "Maximum medical improvement" is defined in Section 8-40-201(11.5), C.R.S. as:

> A point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. The requirement for future medical maintenance which will not significantly improve the condition or the possibility of improvement or deterioration resulting from the passage of time shall not affect a finding of maximum medical improvement. The possibility of improvement or deterioration resulting from the passage of time alone shall not affect a finding of maximum medical improvement.

F. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998).

G. There are several serious problems with the underlying manner in which Dr. Aschberger formed his opinions, which lead the ALJ to conclude his findings have been overcome: 1. Dr. Aschberger found Claimant was at MMI at that the time of Dr. Griffis' exam, (contrary to the opinions of Dr. Griffis himself), simply based on his *current* knowledge that none of treatments performed since 2/24/15 have significantly improved Claimant's condition. The effect of this analysis is to create, without further foundation, a *retroactive* MMI date, for the sole reason that treatment modalities employed (and approved) up to that time were ineffective. Dr. Olson persuasively opined that this is an inappropriate method of determining MMI. Moreover, it ignores the very real possibility that his condition could indeed be improved with the cervical fusion recommended by

Dr. Bhatti and Dr. Wong. 2. Claimant underwent significant medical treatment after 2/24/15 -- including a cervical rhizotomy on 6/14/15 -- which was reasonably expected to improve Claimant's condition *at the time the treatment was provided*. The substantial medical treatment Claimant received after 2/24/15 aimed at improving his condition supports a finding that he was not at MMI. 3. Dr. Aschberger's opinion that Claimant is not an appropriate candidate for cervical surgery is outweighed by the persuasive opinions of Dr. Olson, Dr. Bhatti and Dr. Wong. 4. Dr. Aschberger gave Claimant an impairment rating for a cervical rhizotomy, which was performed *after* 2/24/15. The fact that Claimant underwent a procedure in June 2015 which affected his degree of permanent impairment supports a finding that he was not at MMI as of 2/24/15. 5. Despite including a rating for the cervical rhizotomy, Dr. Aschberger then stated that Claimant's neck problem is not related to his work trauma, because no neck complaints were voiced within a short time after trauma. In fact, the medical records available to Dr. Aschberger show that Claimant reported neck pain, and was assessed a cervical strain by his ATP within three days of the date of injury. This reported neck pain persists in the medical records moving forward. 6. Dr. Aschberger refused to give Claimant a rating for restricted range of motion even though his measurements were appeared to meet validation criteria. He then refused to comply with the Division's request to repeat the measurements. Although the ALJ's finding that Claimant is not at MMI effectively moots Dr. Aschberger's rating, the flaws in his rating methodology further undermine the reliability and persuasiveness of his opinions.

H. Based on the totality of evidence presented, the ALJ finds and concludes that Dr. Aschberger's determination that Claimant reached MMI on 2/24/15 is highly probably incorrect. Therefore, Claimant has overcome Dr. Aschberger's finding of MMI by clear and convincing evidence.

I. Because the ALJ concludes that the DIME report of Dr. Aschberger has been overcome by clear and convincing evidence as to MMI, there is no need to address Claimant's position that the DIME need be overcome by clear and convincing evidence as to the issue of MMI alone.

Temporary Total Disability Payments

J. The next issue is whether Claimant is entitled to Temporary Total Disability benefits. Once commenced, TTD benefits continue until the occurrence of one of the events enumerated in § 8-42-105(3). *Bellon v. Grand Junction Diner*, W.C. No. 4-404-024 (ICAO, September 27, 2004). Respondents terminated Claimant's TTD benefits effective 2/24/2015 based on Dr. Aschberger's determination of MMI. In light of the ALJ's finding that Claimant has overcome the DIME on the issue of MMI, Respondents are required to reinstate Claimant's TTD benefits. Further, there is no persuasive evidence in the record indicating that Claimant is able to return to work, with or without restrictions.

Necessity of Neck Surgery

K. Claimant requests approval of a cervical surgery recommended by Dr. Bhatti and Dr. Wong. Respondents argue that the request for surgery should be dismissed on the basis of issue preclusion because ALJ Walsh previously denied the surgery in a final order.

L. Issue preclusion (*i.e.,* collateral estoppel), is an equitable doctrine that bars relitigation of an issue that has been finally decided by a court in a prior action. *Bebo Construction Co. v. Mattox & O'Brien*, 990 P.2d 78, 84 (Colo. 1999). The doctrine's purpose is to relieve parties of the burdens of multiple lawsuits, to conserve judicial resources, and to promote reliance on and confidence in the judicial system by preventing inconsistent decisions. *Id*. Although issue preclusion was conceived as a judicial doctrine, it has been extended to administrative proceedings, where it "may bind parties to an administrative agency's findings of fact or conclusions of law." *Sunny Acres Villa, Inc. v. Cooper*, 25 P.3d 44, 47 (Colo. 2001). In *Sunny Acres*, the Supreme Court held that:

> Issue preclusion bars relitigation of an issue if: (1) the issue sought to be precluded is identical to an issue already determined in the prior proceeding; (2) the party against whom estoppel is asserted has been a party to or is in privity with a party to the prior proceeding; (3) there is a final judgment on the merits in the prior proceeding; and (4) the party against whom the doctrine is asserted had a full and fair opportunity to litigate the issue in the prior proceeding. Id. at 47.

M. Even where issue preclusion would otherwise apply, a party has the right to revisit a previously decided issue under the reopening provisions of the Act. The Court of Appeals has held that "in the context of workers' compensation matters, a 'final' award means only that the matter has been concluded subject to later reopening under the applicable statutory criteria." *Renz v. Larimer County School Dist. Poudre R-1*, 924 P.2d 1177, 1180 (Colo. App. 1996). The court further noted that authority to reopen reflects "a strong legislative policy that, in workers' compensation matters, the goal of achieving a fair and just result overrides the interests of litigants in obtaining a final resolution of their dispute."

N. Section 8-43-303 authorizes an ALJ to reopen any award on the grounds of "an error, a mistake, or *a change of condition."* (emphasis added). It is Claimant's burden to prove the existence of facts that would warrant a reopening of the surgery issue. Section 8-43-201(1).

O. The issues in the present proceeding are not "identical" to the issues heard by ALJ Walsh, because Claimant is alleging his condition has worsened since the prior decision. Therefore, ALJ Walsh's order does not preclude the ALJ from considering Claimant's current request for surgery.

P. The medical evidence on this case makes it clear that Claimant's condition has worsened since the time of his last hearing. Originally, Claimant's worst complaints were on his right side, and the EMG studies were abnormal for cervical radiculopathy on the left. A recent EMG performed at the request of a new surgeon on the case, Dr. Wong, is now positive for bilateral cervical radiculopathy. This abnormality is consistent with the findings of disc herniation and foraminal narrowing seen on a cervical MRI performed on January 16, 2013, the report of which states:

> IMPRESSION:
> C5-6 disc bulge with broad-based, **right central disc herniation and mild-to-moderate canal stenosis without cord compression with bilateral foraminal narrowing, worse towards the right, moderate-to-marked in severity**.
> C4-5 disc bulge with mild canal stenosis and foraminal narrowing, bilaterally, worse towards the left, moderate-to-marked in severity. There is superimposed, left central disc herniation extending to the left of midline.
> **C3-4 right, central disc herniation** and disc bulge without canal stenosis with mild foraminal narrowing present. (See Exhibit 7 at page122; emphasis added)

Q. The results of the recent EMG are set forth in the recent report Dr. David Wong, M.D., dated May 12, 2016, which states in part:

> New EMG and nerve conduction study 3/24/16 shows mild right carpal tunnel changes which are new from the EMGS's in June **2015. He now has some chronic bilateral C6 changes.** The left side is about the same and **right side changes are new.**
> ***
> He is potentially a candidate for the ACD&F that Dr. Bhatti discussed with him previously. From my perspective it might be a consideration to include C4-5 which is also degenerate and has some stenosis. (See Exhibit 11 at page 209; emphasis added)

R. Both Dr. Bhatti and Dr. Wong now recommend a fusion surgery to stabilize the Claimant's cervical spine. Dr. Bhatti testified at his deposition that he feels that the surgery is Claimant's only hope at this point since all other treatment modalities available have been tried and failed. The doctor's deposition testimony was clear on this point.

> Q All right. Now, I've attached the
> report, which I think is found in Exhibit 7, of
> the MRI done of the cervical spine on August 4,

2015 from the radiologist. Did you review the actual films from that MRI yourself?

A Yes, sir.

Q And what did you note when you reviewed those findings? In your opinion, what did the MRI show?

A So my note from 09/08/15 has a report of the MRI scan as cervical MRI, shows a right-sided disc herniation at C5-6. (Deposition of Dr Bhatti at pages 14 & 15)

***

Q What is there about this gentleman's situation, his complaints, then, that you feel that makes this surgery reasonable and medically necessary for him?

A So here is the patient who's had very miserable neck and right arm pain. As I said already, the pain is debilitating. Multiple efforts have been tried to fix his pain, extensive nonsurgical treatment, nothing has helped.

We have done an MRI scan, actually two now, both of them showing right-sided disc herniation at C5-6. I think that the disc herniation at C5-6, there is a reasonable chance that that is the cause of his symptoms. That's why I proposed the surgery. (Deposition of Dr Bhatti at pages 19 & 20)

***

Q And taking into account the risks and benefits, in your medical opinion, is this surgery still reasonable for this individual in light of everything that he's gone through up to this point?

A Exactly. And the same reason meaning that nothing short of surgery has helped him. – (Deposition of Dr Bhatti at page 20)

***

Q. Doctor, if I understand your testimony correctly, you're basing this surgery recommendation not only on the examination that you did and the abnormalities noted on the MRI, but on the fact that this gentleman has had these symptoms going on for a long period of time, and that all reasonable nonsurgical options have basically been exhausted?

> A Yes. I think that if this patient had
> these symptoms for even three months, I don't
> think the surgery should be entertained.
> Unfortunately, he has had a very long period of
> treatment and still complains of very significant
> pain, debilitating pain.
> In that light, when we are repeating
> MRI scans to see if there's anything to treat and
> we find a disc herniation at C5-6, that that may
> be worth treating. (deposition of Dr. Bhatti at Page 32)

S. Dr. Olson, who previously was against surgery, now says it is appropriate, and that the condition is related to the work injury:

> A. I think the initial injury was probably the tipping point of taking an asymptomatic condition and turning it into a symptomatic condition. It's – his first MRI scan showed fairly significant findings, and my opinion is that he did aggravate that, and it has just not – instead of getting better with all the treatment, it's gradually worsened now, to now where we're seeing nerve findings on our EMGs.
>
> Q. So isn't progressive worsening with treatment, isn't that typically a recommendation against further intervention, at least according to the medical treatment guidelines?
>
> **A. Worsening – you can also make an argument that he worsening condition means they need to do the surgery.**
>
> Q. So is it your opinion that he would have needed surgery immediately after the injury?
>
> A. At that time when the EMGs were negative, we try not to do surgery on those folks.
>
> Q. But after the third EMG, then that's when your recommendation changed?
>
> **A. By the time the third EMG is showing the findings on both sides, the epidural steroids are no longer working, surgery is certainly an option.** (Olson Dep at 44 & 45; emphasis added)

T. As Dr. Olson pointed out above, all non-surgical treatments for Claimant's cervical problems have been tried and have failed. The weight of current medical opinion is that the surgery is now appropriate, and the doctors' opinions relied on by the Respondents are not based on the most current information. Dr. Aschberger's opinion regarding the appropriateness of cervical surgery is not entitled to any statutory presumption. Dr. Aschberger, is neither an orthopedic surgeon nor a neurosurgeon, and only saw the Claimant on one occasion. Dr. Bhatti is a Board Certified Neurosurgeon and Dr. Wong is a Board Certified Orthopedic Surgeon. Dr. Olson, a Board Certified Internal Medicine Specialist with a subspecialty in occupational medicine, is the authorized treating physician and has had the benefit of treating the Claimant on a regular basis for over four years. The opinions of these health care providers that cervical surgery is now appropriate are more persuasive, and are given more weight than that of Dr. Aschberger and other physicians who did not have the current EMG results.

U. Both the Claimant and his wife testified that they are aware of the risks involved in the surgery and that they wish to have it performed anyway. The Compensation Act makes it clear that the Respondent insurer is liable for all reasonable and necessary medical care required to alleviate the effects of the work injury. In light of the worsening of Claimant's condition since the hearing originally held before Judge Walsh, it is now reasonable that he undergo the cervical fusion surgery.

ORDER

It is therefore ordered that:

1. Claimant's request to set aside Dr. Aschberger's determination that Claimant reached MMI on February 24, 2015, is GRANTED. Claimant is not at MMI.

2. Respondents shall reinstate Claimant's TTD benefits retroactive to February 25, 2015. Respondents may take credit for any TTD benefits previously paid to Claimant.

3. Respondent's claim for overpayment of TTD payments is denied and dismissed.

4. Respondents shall pay for Claimant's cervical fusion surgery, as recommended by his ATPs.

5. All matters not determined herein are reserved for future determination.

The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 12, 2016

/s/ William G Edie
William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

The following issues were raised for consideration at hearing:

1) Whether Claimant proved by a preponderance of the evidence that she has experienced an occupational disease in the form of bilateral carpal tunnel syndrome in the course and scope of her employment with an onset of disability date of November 13, 2015; and

2) Whether Claimant proved by a preponderance of the evidence that she is entitled to reasonably necessary and related medical benefits, specifically, left-sided carpal tunnel release surgery.

STIPULATIONS

The parties stipulated to:

1. Claimant's average weekly wage is $697.86; and

2. Claimant's onset of disability date is November 13, 2015.

FINDINGS OF FACT

Having considered the evidence presented at hearing, and the post hearing deposition of Dr. Thomas Mordick, the ALJ makes the following Findings of Fact:

1. Claimant is a 52 year old manager and hairdresser for Employer. Claimant alleges the she is suffering from bilateral carpal tunnel, which she alleges is a cumulative trauma condition caused by her work. The stipulated date of onset of disability in this matter is November 13, 2015.

2. Claimant began to feel symptoms in her arms in approximately December 2014. On November 17, 2015, she sought treatment from Dr. Andrew Plotkin for bilateral upper extremity pain and paresthesia. Consistent with Claimant's report of her work history to Dr. Plotkin, it is found that Claimant worked as a hair stylist for 33 years, working for the Employer over the prior 15 years, performing 15-25 haircuts per day. Claimant had symptoms in her left arm for approximately the prior one and one half years, but the symptoms became "intolerable" in April 2015. Claimant could identify no

precipitating event causing her worsened symptoms. Dr. Plotkin opined that at least some of Claimant's symptoms were work related. Dr. Plotkin rendered this opinion without reference to specific job duties, nor was there an evaluation of the cumulative trauma causation pursuant to the CTCMTG.

3. Claimant was treated and eventually seen by Dr. Kavi Sachar of Hand Surgery Associates. On December 4, 2015, Dr. Sachar provided a diagnosis of bilateral carpal tunnel syndrome and right volar wrist mass. He recommended a left carpal tunnel release, an MRI for the right wrist volar mass and noted that Claimant would ultimately require a right carpal tunnel release.

4. Claimant testified at hearing that she felt that the cause of both her ganglion cyst and her bilateral wrist and arm symptoms was repetitive use of her clippers, trimmer and blow dryer during haircuts in the course and scope of her employment for Employer.

5. A job analysis was done on December 23, 2015. The ultimate finding of this job task analysis was that there were no primary and no secondary risk factors present to support an occupational disease claim, according to the thresholds provided by the CTCMTG.

6. Claimant alleges that the job analysis done in her case was inaccurate. However, the credible and persuasive evidence presented at hearing proves otherwise. The evaluator observed Claimant performing three haircuts, including a cut using clippers. The Salon Performance Reports reflect that Claimant cut an average of 2.5 to 2.8 haircuts per hour. The evidence further established that Claimant's equipment did not exceed a 2 lbs. weight. Claimant's clippers weigh 1 pound, 10 ounces, her blow dryer weighs 1 pound 13.8 ounces and her trimmers weigh 13.5 ounces.

7. Claimant established through her own testimony that every moment of a haircut, however, does not include the use of equipment and much of the time documented by Employer's records as the haircut includes greeting the customer, walking to Claimant's chair, placing a cape on the customer, discussing the cut and wetting the hair with a spray bottle. Eighty five percent of Claimant's haircuts were men's cuts. Claimant performs these cuts using her tools in her right hand, and holding her comb in her left. Men's haircuts require that Claimant use clippers. Claimant cuts the hair by rocking the clippers from the nape of the neck moving up the head. Claimant cuts the top of the hair with scissors, thinning shears or sometimes a razor. Claimant finishes the haircut with trimmers to get loose hairs off the neck, ears, and eyebrows. Claimant uses the blow dryer to remove stray hairs and wipes off the neck. Claimant wets the client's hair again, clips the top, and again uses the blow dryer to blow away hairs, finishing with trimmers and blow dryer. Claimant puts product in the hair, dries the hair and gives the client a hand mirror. Claimant walks the customer out at which point the haircut is deemed concluded.

8. The Employer data showed Claimant consistently performed 2.5 and 2.8 haircuts per hour. Each haircut lasted between 15 to 17 minutes on average per month. There is wait time between customers and tasks other than cutting hair done by Claimant daily.

9. Claimant is clinically obese, as of her November 17, 2015, evaluation with Dr. Plotkin. Claimant's BMI is 39, and she gained 20-30 pounds in the year prior to her worsening complaints*.*

10. Dr. Jonathan Sollender conducted a paper review regarding causation in this matter pursuant to the CTCMTG. He credibly concluded that there was no occupational risk factor present. He credibly opined that Claimant did not have a job which was repetitive within the meaning of the CTCMTG, and there were no tasks to establish work as a causative factor for Claimant's condition. It is found that Claimant did not experience a work related cumulative trauma condition. Respondents relied on Dr. Sollender's opinion to timely deny Dr. Sachar's request for prior authorization for surgery.

11. Claimant was evaluated by Dr. Thomas Mordick on May 17, 2016. Dr. Mordick did not agree with the diagnosis of carpal tunnel syndrome for Claimant. He explained that Claimant's diffuse, nonspecific complaints contradicted a carpal tunnel diagnosis. Dr. Mordick did not appreciate a ganglion cyst during his examination, and Claimant did not complain of one. As a Level II accredited physician, Dr. Mordick bases his opinions upon the CTCMTG. According to the CTCMTG, the physician must determine the diagnosis before further evaluation of the alleged cumulative trauma is undertaken. Dr. Mordick credibly opined that it was not reasonable to provide a carpal tunnel diagnosis in this case, and any ganglion cyst appeared resolved. Without a diagnosis known to be related to cumulative trauma, Dr. Mordick opined that under the CTCMTG, the analysis stops, and Claimant's condition is not likely work related.

12. Claimant's work did not meet the threshold of primary risk factor under the CTCMTG. Assuming a medically recognized diagnosis under the CTCMTG existed in this case, Dr. Mordick opined that Claimant's job duties had no primary risk factors as defined by the CTCMTG Primary Risk Factor Definition Table. Use of tools, according to the CTCMTG, is a primary risk factor if there are 6 hours of hand held tools in use weighing 2 pounds or greater. Claimant's tools were not 2 pounds or greater in this matter. And, Claimant's tool usage was in her right hand, not her left hand. The current recommendation for surgery is to the left carpal tunnel. Dr. Mordick credibly opined that there is no exposure to any factor that would be considered cumulative trauma nor was there vibration exposure that would pertain in this case.

13. Dr. Mordick further credibly opined that there are no secondary risk factors present under the CTCMTG. Claimant's alleged work exposure did not meet the threshold of 4 hours use of hand held tools weighing 2 pounds or greater for a

secondary risk factor. No tools were 2 pounds or greater in this matter. It is found that the totality of the Claimant's testimony, the job analysis, and the Employer's data, Claimant's work did not meet the threshold of one or more secondary risk factor under the CTCMTG.

14. It is concluded, using the Algorithmic Steps for Causation Assessment of the CTCMTG, Claimant's symptoms and condition are probably not job related. The proposed left sided carpal tunnel release would not be reasonably expected to cure and relieve Claimant's condition, because her findings do not correlate with carpal tunnel syndrome.

CONCLUSIONS OF LAW

Having entered the foregoing Findings of Fact, the following Conclusions of Law are entered.

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201, C.R.S. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

3. For a claim to be compensable under the Act, a claimant has the burden of proving that he or she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. Section 8-41-301(1) (c), C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation

is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp*., 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for the determination of the Judge. *Faulkner*, 12 P.3d. at 846.

4. The Act creates a distinction between the terms "accident" and "injury." The term "accident" refers to an "unexpected, unusual or undesigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. *City of Boulder v. Payne,* 162 Colo. 345, 426 P.2d 194 (1967); see also Section 8-40-20l(2), C.R.S. (injury includes disability resulting from accident). A "compensable" injury is one which is disabling and entitles the claimant to compensation in the form of disability benefits. *Id; Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981). Conversely, no benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Id.*; Section 8-41-301, C.R.S. Under the Workers' Compensation Act, disability and medical benefits do not flow simply because an accident occurred while the claimant was in the course and scope of her employment. Rather, the Act requires that an "injury" occur which is proximately caused by the performance of work. *Loofbourrow v. Industrial Claim Appeals Office*, 320 P.3d 327 (Colo. 2014).

5. A claimant seeking benefits for an occupational disease must establish the existence of the disease and that it was directly and proximately caused by the claimant’s employment or working conditions. *See, Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992). The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77, 81 (Colo. App. 1993). “Occupational disease” is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

6. This section of the Act imposes additional proof requirements beyond that required for an accidental injury by adding the “peculiar risk” test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the condition for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to

the disability. *Id.* "The mere presence of a diagnosis that may be associated with cumulative trauma does not presume work-relatedness unless the appropriate work exposure is present." *CTCMTG Page 5.*

7. In this case, Dr. Sollender and Dr. Mordick reviewed the data provided by the job analysis and found that Claimant's condition is not work related. Dr. Mordick went further, and reviewed Claimant's statements and the detailed data showing the amount of time Claimant was doing the tasks she claims caused her condition. It is found that Claimant has not met her burden to prove that she experienced a compensable occupational disease.

8. Claimant has not met her burden to prove a compensable occupational disease. Two physicians have evaluated the claim using the criteria reflected in the CTCMTG and taught in the Level II accreditations classes and found that Claimant does not suffer from an occupational disease. There is no evidence that the job demands analysis is inaccurate, and even if there were some changes made based upon Claimant's testimony, it would not change the outcome of the report in regard to primary and secondary risk factor thresholds. There is no credible evidence that would justify deviating from the CTCMTG. There has been no credible evidence presented from a provider or expert declaring claimant's condition to be work related who has conducted any causation evaluation. Claimant's private doctors evaluated Claimant's reported injury without reference to the CTCMTG.

9. An analysis of Claimant's occupational disease claim based upon the principles underlying the occupational disease definition, Section 8-40-201(14), C.R.S, and the CTCMTG supports the conclusion that there is no credible or persuasive evidence that Claimant's work at Employer's caused, aggravated or accelerated the development of Claimant's condition, regardless of the diagnosis used.

ORDER

IT IS, THEREFORE, ORDERED THAT:

1. Claimant's claim for compensation is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 9, 2016_____

Denver, CO 80203

ISSUE

Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Lynn Parry, M.D. that Claimant has not reached Maximum Medical Improvement (MMI).

FINDINGS OF FACT

1. Claimant worked for Employer as a General Laborer. On December 8, 2015 Claimant sustained admitted industrial injuries during the course and scope of his employment with Employer. A gust of wind blew over a piece of plywood that had been resting against a retaining wall and struck Claimant on top of his hardhat.

2. On December 23, 2015 Claimant visited Authorized Treating Physician (ATP) Gary Zuehlsdorf, M.D. at OccMed Colorado for an evaluation. Claimant recounted that on December 8, 2015 he was performing underground utility work for Employer. While he was sitting on a curb, a gust of wind blew over a piece of plywood. The plywood struck Claimant on to the "front of his head with a downward motion into his spine." He did not lose consciousness and experienced little pain. Dr. Zuehlsdorf diagnosed Claimant with a work-related head contusion and possible traumatic brain injury. He noted that Claimant was still suffering lightheadedness, dizziness and headaches.

3. After the December 23, 2015 appointment Dr. Zuehlsdorf learned from Employer that Claimant had a history of neck, back and head injuries. Furthermore, Claimant never reported significant discomfort to Employer after the incident. Dr. Zuehlsdorf explained that the additional information was very different from the history that Claimant had provided. He reasoned that Claimant's dishonesty made it difficult to determine the validity of his current complaints.

4. On January 11, 2016 Claimant returned to Dr. Zuehlsdorf for an examination. Claimant reported neck, lower back, mid-back and posterior leg pain. He acknowledged that he had been involved in two prior motor vehicle accidents. Claimant noted that the 2000 and 2005 car accidents caused neck, back, left shoulder and head injuries. However, he failed to disclose head and neck injuries as a result of a 2012 work incident that resulted in a 9% whole person impairment rating. Moreover, Claimant did not mention that he had been previously diagnosed with chronic lower back pain and migraine headaches. The record thus reveals that Claimant had a long history of neck, lower back, mid-back and migraines prior to the December 8, 2015 industrial injuries.

5. Dr. Zuehlsdorf reported that he could not rely on Claimant's subjective reports because of a lack of objective findings, MRI's that revealed only mild and insignificant spondylitic changes, an inconsistent presentation and a lack of candor about his prior medical history. Dr. Zuehlsdorf concluded that Claimant reached Maximum Medical Improvement (MMI) on January 11, 2016 with no permanent impairment, work restrictions or medical maintenance treatment.

6. On February 12, 2016 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Zuehlsdorf's MMI and impairment determinations. Respondents acknowledged that Claimant reached MMI on January 11, 2016 with a 0% permanent impairment rating. Claimant challenged the FAL and sought a Division Independent Medical Examination (DIME).

7. On March 2, 2016 Claimant underwent an independent medical examination with John S. Hughes, M.D. Claimant reported that on December 8, 2015 he was struck on the head by a piece of plywood that "knocked [him] out" while working for Employer. Dr. Hughes reviewed Claimant's medical history and conducted a physical examination. He determined that Claimant had a "somewhat perplexing medical history." Dr. Hughes agreed with Dr. Zuehlsdorf that Claimant "has sustained substantial degrees of globalization of his symptoms and that there is a paucity of clinical pathology that I can identify on examination." However, he remarked that Claimant's medical history was plausible and additional evaluation was warranted. Dr. Hughes thus concluded that Claimant had not reached MMI for his December 8, 2015 industrial injuries. He recommended a brain MRI and a consultation with a neurologist "to assess neurological residuals of a closed head injury."

8. On June 3, 2016 Claimant underwent a DIME with Lynn Parry, M.D. Dr. Parry explained that on December 8, 2015 a strong gust of wind picked up a large piece of plywood. The plywood struck Claimant, broke his hardhat and threw him backwards. Claimant suffered a transient loss of consciousness, jaw tightness, a bifrontal headache, nausea and blurred vision after the incident.

9. Dr. Parry noted that Claimant experienced 2-3 headaches each week. However, he had previously been diagnosed with migraines and had been taking Sumatriptan since 2014 for his condition. Dr. Parry commented that Claimant's migraines were now more frequent because he had only suffered 1-2 migraines per month prior to the industrial incident. She concluded that the December 8, 2015 incident caused an aggravation of Claimant's pre-existing migraine headaches, a TMJ dysfunction, a cochlear contusion, post-concussive mood disorder and a cervical strain. Dr. Parry determined that Claimant did not exhibit evidence of a traumatic brain injury and she found that his lower back and lower extremity issues were not related to the industrial incident. She also recommended that Claimant pursue treatment for his mood disorder outside of the Workers' Compensation system because the issue was multifactorial.

10. Dr. Parry concluded that Claimant had not reached MMI and required additional treatment. She specifically recommended an evaluation with an

otolaryngologist for hearing loss and tinnitus, a thoracic spine CT scan, evaluation for TMJ dysfunction, physical therapy and a gym membership. Dr. Parry also provided an advisory 15% whole person permanent impairment rating. The rating included 4% for a Table 53 cervical spine diagnosis, 7% for loss of cervical spine range of motion and 5% for migraines.

11. On August 5, 2016 Claimant underwent an independent medical examination with Lawrence A. Lesnak, D.O. Claimant recounted that on December 8, 2015 a strong gust of wind blew over a piece of plywood and struck him on top of his hardhat. He briefly lost consciousness. Although Claimant did not immediately experience any symptoms, he subsequently developed diffuse neck stiffness, lower back pain and a headache. Claimant's current symptoms included right thigh numbness, left buttock numbness, mid-back pressure, frequent lower back pain, right medial scapular pressure, mild neck pain and bilateral temporal headaches 1-3 times per week.

12. Dr. Lesnak concluded that Claimant sustained a very mild closed head injury on December 8, 2015 and his current symptoms were not related to the incident. He agreed with Dr. Zuehlsdorf that Claimant reached MMI on January 11, 2016 with no permanent impairment. He determined that the objective physical exam and radiographic findings suggested Claimant did not suffer any acute injuries or abnormalities. Dr. Lesnak remarked that, although Claimant's subjective pain complaints remained, Dr. Zuehlsdorf had found them to be unreliable. He noted that Claimant's subjective complaints were inconsistent with the objective findings and could not be trusted because of Claimant's prior history of dishonesty and exaggeration. Dr. Lesnak commented that there was no evidence that Claimant required further diagnostic testing or interventional treatment related to the December 8, 2016 work incident. He thus concluded that Dr. Parry incorrectly determined that Claimant had not reached MMI. Dr. Lesnak determined that Dr. Parry also erred in her advisory impairment rating and agreed with the 0% permanent impairment rating provided by Dr. Zuehlsdorf.

13. Dr. Parry testified at the hearing in this matter. She maintained that Claimant had not reached MMI and warranted a 15% whole person impairment rating as a result of his December 8, 2015 industrial injuries. Dr. Parry concluded that the December 8, 2015 incident caused an aggravation of Claimant's pre-existing migraine headaches, a TMJ dysfunction, a cochlear contusion, post-concussive mood disorder and a cervical strain.

14. Dr. Lesnak also testified at the hearing in this matter. He maintained that Claimant had reached MMI on January 11, 2016 with no permanent impairment. He commented that Claimant's main complaint was lower back pain with lower extremity symptoms. Dr. Lesnak remarked that the complaints were different from what Claimant had reported to Dr. Parry at the DIME. Claimant did not report hearing loss, ringing in his ears, jaw issues or concentration concerns at the independent medical examination.

15. Dr. Lesnak recounted that Claimant suffered a very minor closed head injury on December 8, 2015. He commented that patients with head injuries typically improve over time. In contrast, Claimant initially reported no symptoms but mentioned some neck stiffness, back pain and headaches on the following day. He subsequently reported more severe symptoms and additional injured body parts at the DIME. Dr. Lesnak testified that it is very unlikely for a patient to have minimal initial symptoms but develop symptoms six months later. He determined that Claimant's symptoms would likely have occurred within the first few hours or days if they were the result of a specific trauma. Finally, Dr. Lesnak disagreed with Dr. Parry's diagnoses of a TMJ dysfunction and cochlear contusion because Claimant never reported these symptoms to any of the other providers.

16. Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Parry that Claimant has not reached MMI. Dr. Parry concluded that Claimant had not reached MMI and required additional evaluation. She specifically recommended an evaluation with an otolaryngologist for hearing loss and tinnitus, a thoracic spine CT scan, evaluation for TMJ dysfunction, physical therapy and a gym membership. Dr. Parry also provided an advisory 15% whole person permanent impairment rating. The rating included 4% for a Table 53 cervical spine diagnosis, 7% for cervical spine range of motion loss and 5% for migraines.

17. In contrast, ATP Dr. Zuehlsdorf noted that he could not rely on Claimant's reports because of a lack of objective findings, MRI's that revealed only mild and insignificant spondylitic changes, an inconsistent presentation and a lack of candor about his prior medical history. Dr. Zuehlsdorf concluded that Claimant reached MMI on January 11, 2016 with no permanent impairment. Moreover, Dr. Lesnak determined that Claimant sustained a very mild closed head injury and there was no evidence that ongoing symptoms were related to the December 8, 2015 incident. Dr. Lesnak agreed with Dr. Zuehlsdorf that Claimant reached MMI on January 11, 2016 with no permanent impairment. He specifically commented that the objective physical exam and radiographic findings suggested that Claimant did not suffer any acute injuries or abnormalities. Dr. Lesnak also noted that Claimant's subjective complaints were inconsistent with the objective findings and could not be trusted because of a prior history of dishonesty and exaggeration. He commented that there was no evidence that Claimant required further diagnostic testing or interventional treatment related to the December 8, 2015 work incident. He thus concluded that Dr. Parry incorrectly determined that Claimant had not reached MMI.

18. Although Drs. Zuehlsdorf and Lesnak disagreed with Dr. Parry's MMI determination, the persuasive testimony of Dr. Hughes supports Dr. Parry's conclusion. Dr. Hughes agreed with Dr. Zuehlsdorf that Claimant "has sustained substantial degrees of globalization of his symptoms and that there is a paucity of clinical pathology that I can identify on examination." However, he remarked that Claimant's medical history was plausible and additional evaluation was warranted. Dr. Hughes thus concluded that Claimant had not reached MMI for his December 8, 2015 industrial injuries. He recommended a brain MRI and a consultation with a neurologist "to assess neurological residuals of a closed head injury." Based on Dr. Parry's proper exercise of

medical discretion and the persuasive support of Dr. Hughes, the record reveals that Drs. Zuehlsdorf and Lesnak simply disagreed with Dr. Parry's impairment determinations. Respondents have not specifically identified any flaws that suggest it is highly probable that Dr. Parry's determination is erroneous. Accordingly, Respondents have failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Parry's determination that Claimant has not reached MMI was incorrect.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*). §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may

consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

. 6. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

7. As found, Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Parry that Claimant has not reached MMI. Dr. Parry concluded that Claimant had not reached MMI and required additional evaluation. She specifically recommended an evaluation with an otolaryngologist for hearing loss and tinnitus, a thoracic spine CT scan, evaluation for TMJ dysfunction, physical therapy and a gym membership. Dr. Parry also provided an advisory 15% whole person permanent impairment rating. The rating included 4% for a Table 53 cervical spine diagnosis, 7% for cervical spine range of motion loss and 5% for migraines.

8. As found, in contrast, ATP Dr. Zuehlsdorf noted that he could not rely on Claimant's reports because of a lack of objective findings, MRI's that revealed only mild and insignificant spondylitic changes, an inconsistent presentation and a lack of candor about his prior medical history. Dr. Zuehlsdorf concluded that Claimant reached MMI on January 11, 2016 with no permanent impairment. Moreover, Dr. Lesnak determined that Claimant sustained a very mild closed head injury and there was no evidence that ongoing symptoms were related to the December 8, 2015 incident. Dr. Lesnak agreed with Dr. Zuehlsdorf that Claimant reached MMI on January 11, 2016 with no permanent impairment. He specifically commented that the objective physical exam and radiographic findings suggested that Claimant did not suffer any acute injuries or abnormalities. Dr. Lesnak also noted that Claimant's subjective complaints were inconsistent with the objective findings and could not be trusted because of a prior history of dishonesty and exaggeration. He commented that there was no evidence that Claimant required further diagnostic testing or interventional treatment related to the December 8, 2015 work incident. He thus concluded that Dr. Parry incorrectly determined that Claimant had not reached MMI.

9. As found, although Drs. Zuehlsdorf and Lesnak disagreed with Dr. Parry's MMI determination, the persuasive testimony of Dr. Hughes supports Dr. Parry's conclusion. Dr. Hughes agreed with Dr. Zuehlsdorf that Claimant "has sustained substantial degrees of globalization of his symptoms and that there is a paucity of clinical pathology that I can identify on examination." However, he remarked that Claimant's medical history was plausible and additional evaluation was warranted. Dr. Hughes thus concluded that Claimant had not reached MMI for his December 8, 2015 industrial injuries. He recommended a brain MRI and a consultation with a neurologist "to assess neurological residuals of a closed head injury." Based on Dr. Parry's proper exercise of medical discretion and the persuasive support of Dr. Hughes, the record reveals that Drs. Zuehlsdorf and Lesnak simply disagreed with Dr. Parry's impairment determinations. Respondents have not specifically identified any flaws that suggest it is highly probable that Dr. Parry's determination is erroneous. Accordingly, Respondents have failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Parry's determination that Claimant has not reached MMI was incorrect.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has not reached MMI for his December 8, 2015 industrial injuries.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: December 8, 2016.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-958-125-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on November 16, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 11/16/16, Courtroom 1, beginning at 1:30 PM, and ending at 4:00 PM). The Spanish/English Interpreter was Annabel Cuadros Yeiser.

Claimant's Exhibits 1 through 7 were admitted into evidence, without objection. Respondents' Exhibits A through J were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondents. The proposed decision was filed, electronically, on November 17, 2016. No timely objections were filed. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern compensability; if compensable, medical benefits, average weekly wage (AWW); and temporary total (TTD) and/or temporary partial disability (TPD) benefits from January 15, 2016 and continuing. The Claimant has the burden of proof, by a preponderance of the evidence on these issues.

The Respondents raised the affirmative defense of “responsibility for termination for which they have the burden by preponderant evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant is a 39 year old woman formerly employed by Lazy Days Mile High RV (Employer) as a cleaner. Her job duties consisted of cleaning the interiors and exteriors of the RV’s.

2. The Claimant had a previous Worker’s Compensation claim involving her low back in 2011. She injured her back while lifting boxes.

3. Prior to the date of the present alleged injury, the Claimant’s manager, Kyle Ferguson, observed her limping. He asked her what was wrong and the Claimant stated that she had leg pain. Ferguson then asked the Claimant whether her condition was related to a work injury, and her response was “no.” Ferguson informed the Claimant that if her condition was work related, she needed to fill out the appropriate paperwork, but the Claimant refused to do so. Ferguson does not recall the specific date of this conversation, but it was before the company changed ownership in November of 2015.

4. Ferguson recalls the Claimant limping intermittently and complaining of leg pain both before and after the change of ownership in November of 2015. He asked the Claimant on several occasions whether her condition was work-related, and her answer was always” no.”

5. Ferguson presented as straightforward, knowledgeable, and credible. He does not have any interest in the outcome of the claim or any plausible and realistic

reason to testify untruthfully. There is no persuasive evidence of any bias on the part of Ferguson.

The Alleged Compensable Event of January 5, 2016

6. The Claimant alleges that she sustained a work-related low back injury of January 5, 2016. The Respondents filed a timely Notice of Contest.

7. The Claimant had an initial evaluation at the Clinica Colorado on February 4, 2016. She complained of right buttock pain radiating down the back of her leg. There is no mention of any work injury. On the contrary, the medical record states that the Claimant "denies injury."

8. The Claimant resigned her employment on February 22, 2016. She did not report any work-related injury prior to or at the time of her resignation.

9. The Claimant was evaluated at another facility, Clinica Family Health, on March 2, 2016. This record also indicates there was "no injury" reported.

10. The Claimant was evaluated at Denver Integrated Spine on April 11, 2016 for leg and thigh pain. As part of the intake process, she filled out a questionnaire. The questionnaire asked whether the reason for her visit was related to a work accident, and she circled "no." The Claimant nonetheless told the chiropractor that she injured herself at work.

First Reporting of Alleged Work Injury

11. The Claimant notified her Employer of the alleged work related injury on or about June 3, 2016, almost ½ year after the alleged accident. This was the first time the Employer was notified of the claim.

Ultimate Findings

12. The ALJ infers and finds that the Claimant's actions are not consistent with a work-related injury. It makes no sense that she failed to report the injury at the time of the incident/injury, but almost five months later. Additionally, it makes no sense that she did not report an alleged work-related injury at the time of her resignation. Furthermore, the initial medical records from Clinica Colorado and Clinica Family Health work injury make no mention of an alleged work-related injury. Overall, the Claimant's version of events does not add up. Therefore, the ALJ finds that her testimony is not credible.

13. The ALJ has considered the opinions regarding causation submitted by the providers at Denver Integrated Health and Claimant's IME, Dr. Hughes. These opinions, purporting to support a work-related injury, are based entirely on the Claimant's statements (made later in time) regarding the mechanism of injury. Because Claimant's version of events is not credible, the medical opinions, like a house of cards, fall apart and are not credible.

14. The Claimant has failed to meet her burden of proof, by preponderant evidence, of showing that she suffered an injury in the course and scope of her employment. Consequently the other designated issues are moot.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour*

Cleaners v. Indus. Claim Appeals Office, 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's actions are not consistent with a work-related injury. It makes no sense that she failed to report the injury at the time of the incident/injury, but almost five months later. Additionally, it makes no sense that she did not report an alleged work-related injury at the time of her resignation. Furthermore, the initial medical records from Clinica Colorado and Clinica Family Health work injury make no mention of an alleged work-related injury. Overall, the Claimant's version of events does not add up. Therefore, the ALJ finds that her testimony is not credible. Indeed, as found, all of the medical opinions, including the opinions of Dr. Hughes, are based exclusively on the Claimant's later histories. Therefore, the opinions purporting to support a work-related injury, like a house of cards, fall apart and are not credible.

Compensability

b. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7 (**presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment unless an outside cause is shown). Thereupon, it is incumbent to show that non-work related factors caused the injury. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1)(c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, because the Claimant's version of events is not credible for the reasons heretofore articulated, the Claimant did not sustain a compensable injury as alleged.

Burden of Proof

c. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld*

County Bi-Products, Inc., W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). “Preponderance” means “the existence of a contested fact is more probable than its nonexistence.” *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to meet her burden of proof. Consequently the other designated issues are moot.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for workers’ compensation benefits are hereby denied and dismissed.

DATED this______day of December 2016.

____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge’s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge’s order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

1. Has Claimant proven by a preponderance of the evidence she sustained an injury to her right ankle and right knee on July 6, 2015 in the course and scope of her employment?

2. Has Claimant established a basis to reopen W.C. No. 4-890-373?

3. Is Claimant entitled to medical benefits?

STIPULATIONS/JUDICIAL ADMISSIONS

At the commencement of the hearing, the parties agreed that, if the claim is deemed compensable, the medical treatment provided by Southern Colorado Clinic, Dr. Weinstein, and Dr. Shank was reasonable and necessary.

FINDINGS OF FACT

1. Claimant works as an LPN for the Colorado Mental Health Institute at Pueblo.

2. Claimant suffered an injury to her right ankle in 2011, which forms the basis for her claim in W.C. No. 4-890-373. Claimant was treated by Dr. Shank, who performed a Brostrom-Gould surgical procedure on her right ankle. Claimant underwent post-surgical rehabilitation and was placed at MMI on August 23, 2013 with a 16% scheduled impairment rating. Claimant returned to work without restrictions, and the claim was closed by a Final Admission of Liability dated October 17, 2013.

3. On June 19, 2015, Claimant was involved in an accidental fall at home. Claimant was carrying her daughter when she stepped on a toy at the top of her stairs. Claimant's right ankle rolled, and she fell down approximately ten stairs.

4. The next day Claimant sought treatment at the Parkview Medical Center emergency room. Claimant complained of "left elbow pain, right ankle, and right knee pain after a trip and fall down approximately 10 stairs yesterday." Claimant's worst pain was in her left elbow. Claimant also reported "bruises all over her body. She has been able to bear weight on her ankle and knee with some pain." On examination, right ankle range of motion was normal. The ER physician noted "soft tissue edema of the right ankle and left elbow." X-rays showed "soft tissue edema" of the right ankle and "small effusion of the right knee."

5. Claimant was given Percocet in the ER and her pain improved. She was released with instructions to rest, apply ice and compression, and elevate her leg.

6. Following the ER visit, Claimant returned to work and resumed her full duties without restriction or limitation. Claimant was able to participate in a dance/exercise class and do yoga with her patients without any limitations due to her right ankle or right knee.

7. The Claimant did not seek further treatment for right ankle or knee pain after being seen at the ER, until after a July 6, 2015 accident at work.

8. On the evening of July 6, 2015, the Claimant dispensed medications to patients as part of her job duties. The patients lined up outside the “med room” in which Claimant stood. The door to the med room is split in half so the top half can be opened separately from the bottom half. The bottom half of the door remains closed and creates a small counter where Claimant can stand to dispense the medications.

9. The patients are given cups and water to assist them in swallowing their medication. Occasionally patients will spill water while pouring water or taking their medications.

10. After Claimant had dispensed the medications, she left the med room. When she stepped outside the room, Claimant’s right foot slipped on some liquid on the floor, and she fell to the ground. This was most likely water spilled by a patient taking their medication.

11. Immediately after the fall, Claimant felt pain in her right ankle and right knee. Claimant “hobbled” to the nurse’s station and reported the incident to a supervisor. Claimant subsequently finished her shift. Her knee and ankle were painful during the remainder of her shift, so she applied ice to try to relieve the pain.

12. When Claimant got home after her shift, she took Tylenol, iced her knee and ankle, and sat in a recliner chair with her leg elevated.

13. The next morning, Claimant called another supervisor, Joe Galliant, to discuss the injury. Mr. Galliant directed Claimant to Employer’s designated provider, Southern Colorado Clinic.

14. Claimant was evaluated by Terry Schwartz, PA-C at Southern Colorado Clinic on July 7, 2015. The report documents “patient states on July 6, 2015 after she finished passing out meds, she walked out the door and slipped on the wet floor. Patient states she injured her R ankle, R knee and strained low back on Rt.” She reported pain at a level of 7. Physical examination revealed “tenderness” in the paraspinal musculature of the right lateral lumbar spine. Her right knee was “tender medially with testing.” She reported “hurts to bear weight” and “feels unstable to walk.” Her right ankle demonstrated “tenderness lateral malleolus,” with no erythema, ecchymosis or swelling. She reported it “hurts to walk.” PA-C Schwartz diagnosed a right ankle sprain, right knee sprain, and acute low back pain. He put Claimant in an ankle support sleeve and a

hinged right knee brace. He advised Claimant to use crutches “with progress of weight bearing as tolerated.” She was instructed to ice and elevate her leg and use OTC analgesics for pain relief. PA-C Schwartz gave Claimant work restrictions including “allow patient to stretch and change positions frequently for comfort, wear brace as directed, crutches with progressive weight bearing.”

15. Claimant returned to Southern Colorado Clinic on July 23, 2015, and saw Dr. Lakin. Her low back pain had resolved, but she reported ongoing right knee and right ankle symptoms. She reported a “strong sensation” of her right knee giving out. She was walking slowly, and her gait was “very antalgic.” Dr. Lakin ordered an MRI of the right knee, prescribed ibuprofen, and recommended that Claimant continued using the knee brace. She was released to return to work with the same restrictions.

16. Claimant underwent a right knee MRI on July 30, 2015. The MRI showed a medial meniscus tear and grade IV patellar chondromalacia.

17. After reviewing the results of the MRI, Dr. Lakin referred Claimant to Dr. Weinstein and Dr. Shank’s orthopedic practice for evaluation and treatment.

18. Claimant was evaluated by a physical therapist on August 7, 2015. She reported that since the July 6 accident, she had experienced “pain and instability with walking and stair climbing activities sometimes even requiring crutches.” Claimant ambulated “with a severely antalgic gait” despite wearing a hinged knee brace. She had decreased strength and range of motion deficits in the right knee and right ankle. The therapist recommended that Claimant participate in PT for approximately 10-12 weeks.

19. Claimant saw Dr. Weinstein regarding her right knee on September 21, 2015. She reported that when she slipped on the water, she “heard a pop . . . and had immediate swelling” in the right knee. She was continuing to experience moderate to severe aching and burning pain in her knee. She also reported periodic swelling and the sensation of her knee “giving away.” After performing a physical examination and reviewing the knee MRI, Dr. Weinstein opined that “the patient appears to have a combination of both aggravation of pre-existing patellofemoral arthritis as well as a tear of the medial meniscus.” Dr. Weinstein administered a cortisone injection, prescribed physical therapy and gave Claimant a patellar stabilizing brace. He asked her to return in six weeks, at which time surgery would be considered if she was not improved.

20. Claimant saw Dr. Shank for evaluation of her ankle on September 29, 2015. She told Dr. Shank about the fall at home and at work. She reported that her symptoms were exacerbated and she was experiencing “lateral-sided ankle pain and inversion instability with mistrust of her ankle.” Dr. Shank requested an MRI of the right ankle and placed Claimant in an ankle brace.

21. Claimant returned to see Dr. Shank on October 20, 2015. In light of Claimant’s persistent instability and pain, Dr. Shank recommended a revision ankle surgery. He indicated “I think the patient likely had a re-injury to her lateral ligaments

complex which has continued to be an instability problem for her following her recurrent injury."

22. Claimant underwent surgery on her right knee and right ankle on December 28, 2015. Dr. Weinstein performed the knee surgery and Dr. Shank did the ankle surgery.

23. Regarding the right knee, Dr. Weinstein performed an arthroscopic partial medial meniscectomy. For the right ankle, Dr. Shank performed an arthroscopic microfracture with revision modified Brostrom-Gould procedure.

24. After surgery, Claimant's condition gradually improved. The parties did not submit any medical records indicating whether Claimant has been placed at MMI.

25. Dr. Larson performed an Independent Medical Examination (IME) at the Respondent's request on February 25, 2016. Dr. Larson opined that the knee and ankle problems were more likely caused by Claimant's fall at home on June 19, 2015.

26. Dr. Larson testified in a deposition on September 28, 2016, wherein he reiterated and expounded upon the opinions expressed in his IME report.

27. Dr. Shank testified in depositions conducted on February 11 and November 8, 2016. Dr. Shank testified the June 19, 2015 fall and the July 6, 2015 fall were both capable of producing the Claimant's right ankle and right knee pathology. Therefore, Dr. Shank could not determine causation simply by reference to the description of each incident. Dr. Shank opined that if Claimant's pain was more severe after the July 6, 2015 accident, that incident was the more likely cause of her pathology.

28. Claimant's testimony is credible.

29. There is no persuasive evidence to contradict Claimant's testimony that she was able to perform regular work duties without limitation between June 21, 2015 and July 6, 2015.

30. Claimant has proven by a preponderance of the evidence that she sustained compensable injuries to her right ankle and right knee on July 6, 2015 as a result of her employment.

31. Dr. Weinstein and Dr. Shank are authorized providers.

32. The right knee surgery performed by Dr. Weinstein on December 28, 2015 was reasonable, necessary, and causally related to Claimant's compensable injury.

33. The right ankle surgery performed by Dr. Shank on December 28, 2015 was reasonable, necessary, and causally related to Claimant's compensable injury.

34. There is no basis to reopen the claim in W.C. No. 4-890-373.

CONCLUSIONS OF LAW

Compensability and medical benefits in W.C. No. 4-987-898

To receive compensation or medical benefits, Claimant must prove that she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S.; *see, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. § 8-42-101 (1)(a), C.R.S. (2009); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Where a claimant's entitlement to medical benefits is disputed, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997*.* Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S.

As found, Claimant has proven by a preponderance of the evidence that she injured her right knee and right ankle as a result of a fall at work on July 6, 2015. Based on the totality of evidence presented, the ALJ is not persuaded by Respondent's argument that the right knee and ankle conditions are primarily attributable to the June 19, 2015 fall at home. Although Claimant sustained trauma to her right knee and ankle on June 19, she was able to return to work and perform her regular duties without restriction or limitation. Claimant even participated in dance/exercise class and yoga with her patients without any limitations due to her right ankle or right knee. Respondent did not introduce any persuasive evidence to refute Claimant's testimony that she was fully functional at work with no gait abnormality between June 21, 2015 and July 5, 2015.

By contrast, Claimant has been continuously limited since the July 6, 2015 injury. Moreover, she was placed in a hinged knee brace and needed a right ankle brace after the July 6 accident. The ALJ is persuaded that the July 6 accident is the most likely cause of Claimant's right knee and right ankle pathology, which ultimately required surgery.

At the commencement of the hearing, the parties agreed that, if the claim is deemed compensable, the medical treatment provided by Southern Colorado Clinic, Dr. Weinstein, and Dr. Shank was reasonable and necessary.

Reopening W.C. No. 4-890-373

Given the finding that the Claimant suffered a compensable injury on July 6, 2015, which ultimately resulted in two surgeries on December 28, 2015, there is no basis to reopen the claim in W.C. No. 4-890-373.

ORDER

It is therefore ordered that:

1. Claimant’s claim in W.C. No. 4-987-898 is compensable.

2. Respondent shall pay for reasonable and necessary medical treatment related to the July 6, 2015 injury, including, but not limited to, bills from Southern Colorado Clinic, Dr. Weinstein and Dr. Shank, and the December 28, 2015 surgery.

3. Claimant’s petition to reopen W.C. No. 4-890-373 is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, CO 80906

ISSUES

➢ Whether claimant has proven by a preponderance of the evidence that she is entitled to maintenance medical treatment after being placed at maximum medical improvement ("MMI").

FINDINGS OF FACT

1. Claimant sustained an admitted injury to her head and thoracic spine on February 24, 2015. The injury occurred when a coworker dropped a box that struck claimant in the back of the head and neck.

2. Dr. Gregory Reicks began treating claimant on February 26, 2015 as her authorized treating physician ("ATP"). Claimant received various modes of treatment including physical therapy, chiropractic treatment, and psychotherapy.

3. On February 1, 2016, Dr. Reicks placed claimant at MMI and opined that claimant did not have any permanent impairment and did not need maintenance medical treatment. Claimant has not seen Dr. Reicks since he placed her at MMI on February 1, 2016.

4. Based upon Dr. Reicks' report, respondents filed a Final Admission of Liability ("FAL") on February 2, 2016 admitting the MMI date of February 1, 2016 and denying liability for any maintenance medical treatment post-MMI.

5. Claimant objected to the February 2, 2016 FAL and requested a Division-sponsored independent medical examination ("DIME"). A DIME was performed by Dr. Robert McLaughlin on May 26, 2016.

6. Dr. McLaughlin reviewed claimant's medical records, obtained a history from claimant and performed a physical examination in connection with his DIME. Dr. McLaughlin issued a medical report that summarized his findings and opined that claimant reached MMI on February 1, 2016 and assigned a permanent impairment rating of 4% whole person for claimant's thoracic spine. Dr. McLaughlin specifically opined that claimant did not need post-MMI maintenance medical treatment.

7. Based upon Dr. McLaughlin's DIME report, respondents filed a second FAL on June 21, 2016 admitting the MMI date of February 1, 2016 and the permanent impairment rating of 4% whole person. In the June 21, 2016 FAL, respondents again

denied liability for maintenance medical treatment. Claimant applied for hearing on the issue of *Grover* maintenance medical benefits on June 30, 2016.

8. Respondents filed a third FAL on July 14, 2016 which recalculated claimant's permanent partial disability ("PPD") award based on the 4% whole person impairment rating and denied maintenance medical treatment. The hearing in this matter proceeded on claimant's June 30, 2016 application for hearing and the ALJ finds claimant was not required to file a new application for hearing in response to the July 14, 2016 FAL.

9. Claimant testified that she continues to have pain in her head, neck, and right shoulder. Beginning on July 13, 2016 claimant sought treatment from Dr. J. Dale Utt for these head, neck, and shoulder symptoms. According to the medical records, Dr. Utt opined on July 13, 2016 that claimant's head, neck, and shoulder pain was not related to her work injury.

10. Dr. Utt is in the same practice with Dr. Reicks. However, the medical records document that Dr. Utt is claimant's primary care physician with whom claimant received medical treatment from before her work injury.

11. Claimant has continued to see Dr. Utt regarding her head, neck, and right shoulder symptoms. Dr. Utt has prescribed Vicodin and Gabapentin to treat claimant's pain symptoms. In addition, Dr. Utt has recommended physical therapy and a consultation with an orthopedic surgeon. Claimant testified that it is her understanding that the referral to the orthopedic surgeon is to obtain additional injections for her right shoulder. Claimant argues that these treatments demonstrate her need for maintenance medical treatment related to her February 24, 2015 work injury.

12. The ALJ finds that claimant had failed to demonstrate that it is more likely than not that she needs post-MMI medical maintenance treatment. The ALJ credits the medical records and the opinions of Dr. Reicks and Dr. McLaughlin that claimant does not need post-MMI maintenance medical treatment related to the February 24, 2015 injury. The ALJ also credits the July 13, 2016 opinion of Dr. Utt that the recommendation for physical therapy is not related to claimant's work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo.

306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., (2015). A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission*, *supra.*

4. As found, claimant has failed to demonstrate by a preponderance of the evidence that she is entitled to post-MMI maintenance medical treatment. As found, the opinions of Dr. Reicks and Dr. McLaughlin are credible and persuasive.

ORDER

It is therefore ordered that:

1. Claimant's claim for post-MMI maintenance medical treatment is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed

it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 14, 2016

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

I) Whether claimant willfully misled her employer about her physical ability to perform essential job functions when she willfully failed to disclose her prior work injuries and restrictions and was subsequently injured while pushing an individual outside of her permanent restriction.

II) Whether claimant alleged a penalty with such specificity as to put Respondent's on notice, as required by 8-43-304(4).

III) Whether Respondent's are subject to penalty under 8-43-304(1) for failure to pay full temporary benefits when due, and utilizing a groundless invocation of 8-42-112(1)(d).

FINDINGS OF FACT

1. Claimant is a 41-year-old certified nursing assistant who submitted her application for employment to Shadow Mountain Management Corporation on or about June 10, 2013. Claimants' Exhibit 1, 1-6. In her application for employment, Claimant noted that she had left a CNA job in December 2012 due to a back injury. Claimants' Exhibit 1, 2.

2. On June 20, 2013, Claimant filled out a "Conditional Job Offer & Medical Review" for the employer. Respondents' Exhibit H, 34.

3. The conditional job offer indicated Claimant was offered the position *conditional* upon her *accurately* filling out the paperwork which inquired about previous injuries or accommodations needed. (emphasis added).

4. Claimant acknowledged that the job was important to her and her family for financial and scheduling reasons.

5. Claimant admitted that she knew her job depended on the answers that she gave on the conditional job offer.

6. Claimant signed the document affirming that the information she provided was true and correct, and that there were no omissions. Respondents' Exhibit H, at 35.

7. Claimant testified that it was her signature found on the document.

8. Claimant indicated on this document that she had no circumstances or medical needs that the employer needed to be aware of, that she had never suffered from an injury on the job, that she had never missed time from work due to an injury, and that she was only taking medications for her thyroid. Respondents' Exhibit H.

9. However, Claimant had injured her lumbar spine in 2009 during a pushing incident while claimant was a CNA for a different employer. Respondents' Exhibit F, 16.

10. Claimant received substantial treatment which included imaging, physical therapy, injections and medications for almost 1 year.

11. At the conclusion of her treatment, Claimant underwent a functional capacity examination (FCE) by Dr. Venegas to determine her physical abilities. Claimant was assigned a 15% whole person impairment rating and was given permanent restrictions of no pushing more than 70 pounds.

12. Claimant testified that she had been a CNA in the medical field for 23 years, but that she had no idea or concern about anything that was going on in her claim or with her medical condition.

13. Claimant testified that she was represented by Patrick Spencer, now ALJ Spencer, and received $27,720.30. She admitted was more money than she made in a year, but she had no idea what the money was intended to compensate her for.

14. Claimant testified that she was in a hurry when she filled out the "Conditional Job Offer". Even though she knew it was important and that her job depended on her answers, she simply forgot to mention she was significantly injured in 2009 and received a 15% permanent impairment and permanent restrictions on her ability to push.

15. Claimant, however, acknowledged that she remembered her back injury when filling out the application for employment.

16. Claimant also admitted that she was well aware of her back condition when she went to apply at Hildebrand Care Center because she was specifically working at a job that would allow her back to heal.

17. On January 7, 2016, Claimant allegedly slipped on a "wet bus lift" and hurt her back and right leg. Claimants' Exhibit 1, 7. After x-ray results on claimant's right hip were negative, claimant was treated conservatively and placed at maximum medical improvement with zero impairment on January 22, 2016.

18. On January 27, 2016, Claimant was pushing a 400 lb. man in a wheelchair at work when she developed instant pain in her right lower back with radicular pain down her right leg and into her foot. Respondents' Exhibit G, 24. Claimant was diagnosed with a lumbar strain due to this pushing incident.

19. Chris Abraas, director of human resources for Hildebrand Care Center, testified that it was important for her to know about any restrictions or accommodations that her employees needed in order to ensure *the **safety** of the residents, claimant's co-employees, and the employees themselves*. (emphasis added). Ms. Abraas also testified that she attempts to accommodate all restrictions anyone may need, should they disclose such information.

20. Chris Abraas testified credibly that had she known about Claimant's restrictions on pushing, she would have never put Claimant in a position where she was solely responsible for pushing 400-plus pounds, and that she would have been able to accommodate Claimant's restrictions, had she known about them.

21. Ms. Abraas testified that the purpose of the conditional job offer and medical information sheet was specifically to avoid situations Claimant found herself in.

STATEMENT OF APPLICABLE LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102 (1), C.R.S. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. The compensation provided for in articles 40 to 47 of this title shall be reduced fifty percent where the employee willfully misleads an employer concerning the employee's physical ability to perform the job, and the employee is subsequently injured on the job as a result of the physical ability about which the employee willfully misled the employer. C.R.S. 8-42-112(1)(d).

4. Section 8-42-112(1) does not create a "defense" for employers, but instead establishes a penalty based on misconduct of the claimant. *Wild West Radio, Inc. v. Industrial Claim Appeals Office,* 886 P.2d 304 (Colo. App. 1994). As such, Respondents bear the burden to prove by a preponderance of the evidence that claimant engaged in an act of misconduct justifying the reduction. *See Id.*

5. "The cardinal canon of statutory interpretation is that" a court "look[s] first to the text of the statute." *United States v. All Funds on Deposit with R.J. O'Brien & Assocs.*, 783 F.3d 607, 622 (7th Cir.2015) (quoting *Conn. Nat'l Bank v. Germain*, 503 U.S. 249, 253, 112 S.Ct. 1146, 117 L.Ed.2d 391 (1992)). "Statutory construction must begin with the language employed by Congress and the assumption that the ordinary meaning of that language accurately expresses the legislative purpose." *Turley v. Gaetz*, 625 F.3d 1005, 1008 (7th Cir.2010) (quoting *Park 'N Fly, Inc. v. Dollar Park & Fly, Inc.*, 469 U.S. 189, 194, 105 S.Ct. 658, 83 L.Ed.2d 582 (1985)) (internal quotation marks omitted); *see also United States v. Titan Int'l, Inc.*, 811 F.3d 950, 952 (7th

Cir.2016). “In the absence of statutory definitions,” the court “accord[s] words and phrases their ordinary and natural meaning and avoid[s] rendering them meaningless, redundant, or superfluous.” *CFTC v. Worth Bullion Grp., Inc.*, 717 F.3d 545, 550 (7th Cir.2013) (internal quotation marks omitted). “Statutory interpretation is guided not just by a single sentence or sentence fragment, but by the language of the whole law, and its object and policy.” *Ibid.* (internal quotation marks omitted). “Indeed, statutory interpretation is a holistic endeavor and, at a minimum, must account for the statute's full text, language as well as punctuation, structure, and subject matter.” *Trs. of Chi. Truck Drivers, Helpers & Warehouse Workers Union (Indep.) Pension Fund v. Leaseway Transp. Corp.*, 76 F.3d 824, 828 (7th Cir.1996); *see also Estate of Moreland v. Dieter*, 576 F.3d 691, 699 (7th Cir.2009).

6. The term “willful” means with “deliberate intent” as opposed to mere thoughtlessness, forgetfulness, or negligence. *Bennett Properties Co. v. Industrial Commission*, 165 Colo. 135, 437 P.2d 548 (1968); *Johnson v. Denver Tramway Corp.,* 115 Colo. 214, 171 P.2d 410 (1946).

7. The phrase “physical ability” is described in terms of the ability to do some physical action. *See Generally In the Matter of Scott Notz v. Notz Masonry, Inc,.* 1996 WL 344267 (Colo.Ind.Cl.App.Off).

8. The question of whether the respondents proved willfulness was one of fact for determination by the ALJ. *See Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995).

CONCLUSIONS OF LAW

I. Claimant willfully misled her employer on her conditional job offer by not notifying her employer of her previous work injury and significant permanent restrictions on her ability to push.

1. Claimant testified that she forgot to mention the incident, and that she didn’t do so intentionally. Claimant's assertion is not credible.

2. Claimant admitted that she knew that the paperwork she was filling out was a conditional job offer and that it was important that she fill it out correctly.

3. As an experienced CNA, claimant knew full well that part of the physical requirements of the job would include pushing individuals that may weigh more than her 70-pound restriction.

4. Likewise, claimant claims ignorance when it comes to her prior injury and her medical status, however, it is simply not believable that claimant would have no idea about her prior injury, or the permanent restrictions put on her during the FCE with Dr.

Venegas.

5. Although claimant had been a CNA for over 20 years at the time, she expressed no concerns and asked no questions of her providers or her attorney about the effect this injury, impairment rating and restrictions would have on her ability to perform essential job functions.

6. Claimant claims that she received a check for over $20,000 and did not inquire of her attorney as to what the money was for.

7. Claimant admitted that she remembered the incident when filing out the application on June 3, 2014, as she noted that the reason she left her job of 4 years was due to her back injury, and that she was working a job specifically to relieve her back pain.

8. Claimant argues that she hurried through the document, but admits she took the time to write down her thyroid medication and contact information for medical emergencies. Claimant even took the time to change her check mark from "No" to "Yes" for the column for prescribed medications to accurately reflect her answers. The ALJ finds this to be further evidence that she read and understood the document in its entirety before signing it.

9. Likewise, the conditional job offer had a bold heading and specifically asked her about prior work injuries and any accommodations that claimant might need as a result. Claimant signed the document affirming that the information she had provided was true, correct, and without any omissions.

10. Claimant further argues that Respondent Employer was already placed on notice of her preexisting back injury, based upon a notation in her original job application that she had left a previous employer due to "Back Injury". Such reliance is misplaced. One cannot tell from this answer if the injury was incurred on the job at all, the severity of it, any time missed from work, nor if any permanent restrictions were placed into effect as a result thereof. In no way did this relieve Claimant of her obligation to accurately disclose her prior history, so that her employer could decide when, and how, to accommodate any work restrictions.

11. Claimant willfully misled her employer into believing that claimant had no restrictions on her ability to push, which resulted in Claimant being injured while pushing someone outside of her permanent restriction. Had Claimant been forthcoming about her inability to push more than 70 pounds, she might not have been injured. Ironically, credible testimony elicited from Chris Abraas indicated that Claimant would have been hired anyway, but with restrictions which would actually have made her job easier and safer. Claimant's apparent mistrust in the hiring process does not serve as an excuse for a willful failure to disclose.

12. Claimant argues that 8-42-112(1)(d) applies to the specific body part that was injured and argues that claimant injured her back in 2009 and injured her hip in 2016. Thus, she contends that 8-42-112(1)(d) does not apply. However, the statute is

clear on its face that it is her *physical ability and not the situs* of the injury or body part, which is dispositive. If the statute was meant to address the injured body part or situs of the injury, legislature would have done so as it has in numerous other statutes when speaking to the specific body part affected. *See* C.R.S. 8-42-107(8)(c.5); C.R.S. 8-42-104(5)(a) & (b).

13. As such, the statute speaks to claimant's *physical ability* to perform tasks such as standing, squatting sitting or pushing.

14. Claimant's physical ability to push was restricted to 70 pounds due to her previous work-related injury sustained while pushing. Claimant was pushing 400-plus pounds, clearly outside of her permanent restriction, and was injured as a result. Had claimant been forthcoming with her permanent restriction of 70 pounds, her employer would have never placed her in position where she was responsible for pushing over 400 pounds. However, Claimant willfully misled to her employer for what she perceived as a potential financial gain, and as such, was placed in a position where she was injured due to her physical inability to safely push more than 70 pounds.

15. Claimant argues that she had pushed this individual numerous times before and was never injured, as a defense. However, nowhere in the statue or supporting case law does it indicate that claimant has to be injured the first time she engages in the physical activity what she failed to disclose. The statute, again clear on its face, indicates that the Claimant only needs to be injured as a result of the physical ability about which she willfully mislead her employer.

II. Since Claimant acted willfully in her failure to disclose her prior injury, Employer was justified in imposing the 50% reduction in her benefits. Employer is therefore not subject to any penalties for wrongful withholding of benefits. There is no need to address herein Respondent's assertion that Claimant failed to allege her claim for penalties with sufficient specificity, as required by 8-43-304(4).

ORDER

It is therefore ordered that:

1. Claimant willfully misled her employer about her physical ability to perform essential job functions, and was subsequently injured on the job as a result. As such, Claimant is subject to a 50% reduction in her indemnity benefits pursuant to 8-42-112(1)(d).

2. Claimant's application for penalties, pursuant to 8-43-304 is denied and dismissed.

The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-955-901-02

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/ Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on November 23, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 11/23/16, Courtroom 1, beginning at 8:30 AM, and ending at 10:30 AM).

Claimant's Exhibits 1 through 8 were admitted into evidence, without objection, with the exception of Claimant's Exhibit 3, whereby Respondents' objection thereto was overruled and the exhibit was admitted into evidence. Respondents' Exhibits A through F were admitted into evidence, without objection. Respondents; Exhibits G and H were withdrawn.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant , which was filed, electronically, on November 30, 2016. On December 2, 2016, the Respondents filed their "Objection to Claimant's Full Findings of Fact, Conclusions of Law and Order," which essentially amount to a counter proposed decision. After a consideration of the proposed decision and the counter proposed decision, the ALJ has modified the proposal submitted by the Claimant and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern whether the April 13, 2016 Division Independent Medical Examination (DIME) report of Kathy McCranie, M.D. was in error insofar as it did not address and independently assess the Claimant's left foot injury to determine that the Claimant was at maximum medical improvement (MMI) with regard to such injury and all injuries sustained in the admitted injury of July 3, 2014; if not at MMI, whether the Claimant is likely in need of further diagnostic testing and treatment with regard to his left foot injury; and, ultimately whether the Claimant was properly assessed to be at MMI. Alternatively, the issue exists as to whether Claimant is entitled to post-MMI medical maintenance benefits pursuant to *Grover v. Indus. Comm.*, 759 P.2d 705, 710 (Colo. 1988). If the DIME opinion concerning MMI is overcome, the Claimant also designated the issue of temporary total disability benefits (TTD) from September 28, 2015 and continuing.

The Claimant bears the burden of proof, by clear and convincing evidence on overcoming Dr. McCranie's DIME opinions. On all other issues, the Claimant's burden is by preponderant evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant suffered an admitted industrial injury on July 3, 2014 while working for the Employer, when his left foot was run over by a small track hoe. He underwent a course of treatment for such injury (See Claimant's Exhibit. 7).

2. Ultimately, the Respondents filed an Amended Final Admission of Liability (FAL), dated April 22, 2016, admitting for an average weekly wage (AWW) OF $720.00; an MMI date of September 28, 2015; 10% of the left lower extremity (LLE); and, reasonably necessary post-MMI medical maintenance care and treatment. The Amended FAL was filed, based on DIME Dr. McCranie's opinions.

3. The Claimant was placed at MMI by his authorized treating physician (ATP), Gary Zuehlsdorff, D.O., a physiatrist, pursuant to Dr. Zuehlsdorff's report of September 28, 2015 .Dr. Zuehlsdorff had been one of the Claimant's authorized ATPs. At no time did Dr. Zuehlsdorff refer the Claimant to a podiatrist. Dr. Zuehlsdorff rated the Claimant at 10% of the LLE and placed the Claimant at MMI on September 28, 2015. DIME Dr. McCranie's opinions mirror the opinions of Dr. ,Zuehlsdorff.

4. James D. Davis, D.P.M. apparently last saw the Claimant on July 9, 2015, before Dr. Zuehlsdorff placed the Claimant at MMI. He indicated that the Claimant should be seen thereafter as needed.

5. Brett D. Sachs, D.P.M., evaluated the Claimant on June 6, 2016,and issued a report dated July 12, 2016 (Claimant's Exhibit 8). Dr. Sachs was of the opinion that "the Claimant's current symptoms are related to the previous injury and post-traumatic arthritis. At this point, I have recommended a CT scan to further evaluate the extent of the arthritis. [The Claimant] will require further treatment for the foot injury and may ultimately require additional surgery…." The ALJ infers and finds that Dr. Sachs has significantly more expertise than Dr. Zuehlsdorff and/or DIME Dr. McCranie concerning matters related to the feet, and his opinions are accorded more weight than those of Dr. Zuehlsdorff and Dr. McCranie. Indeed, based on Dr. Sachs' opinions, the ALJ infers and finds that it is highly probable, unmistakable and free from serious and substantial doubt that Dr. McCranie was in error by placing the Claimant at MMI.

6. By an email chain of October 4, 2016 (Claimant's Exhibit 3), at 11:20 AM, the insurance adjuster, Llimoni Moten, advised Claimant's counsel: "I've contacted his treating provider, James Davis, DPM, to authorize an initial evaluation. They will contact [the Claimant] for scheduling." On the same date at 11:30 AM, the adjuster advised Claimant's counsel: "…please disregard the below. {the Claimant's] treating doctor is Dr. Gary Zuehlsdorff…." Subsequently, at 11:37 AM, counsel for the Respondents advised Claimant's counsel: "Yes. The ATP will make the referral back to a specialist if he deems appropriate. The ATP makes the decisions w/regard to future medical care. The adjuster is following the law." The ALJ infers and finds that Dr. Davis was **not** within the chain of authorized referrals and, therefore, not authorized.

The Division Independent Medical Examination (DIME) by Kathy McCranie, M.D.

7. Kathy McCranie, M.D., a physiatrist, was selected as the DIME examiner. The Claimant contends that he would have preferred a podiatrist, but no podiatrists were on the Division of Workers' Compensation (DOWC) list of DIME examiners. Dr. McCranie issued her DIME report on April 13, 2016 (Claimant's Exhibit. 6). The Claimant asserts that Dr. McCranie made no independent assessment of his left foot injury, or the need for further treatment for the left foot injury.

8. The ALJ infers and finds that the DIME report of Dr. McCranie, in fact, makes no reference to a persuasive independent evaluation of the Claimant's left foot injury, but instead is entirely deferential to Dr. Zuehlsdorff's opinions in his report, and in fact merely adopts, without a persuasive independent assessment, Dr. Zuehsldorff's conclusions.

9. In the reports, Dr. Sachs is of the opinion that the Claimant "has developed persistent pain and post-traumatic arthritis of the tarsometatarsal joints," and [u]pon further review of his medical records, [Dr. Sachs] suspect[s] that the current symptoms are related to the previous injury and post-traumatic arthritis." The trauma Dr. Sachs refers to is Claimant's industrial injury. Thus, this is a work-related injury and condition. Based upon this, Dr. Sachs has "recommended a CT scan to further evaluate the extent of the arthritis (post-traumatic)," and that Claimant "will require further treatment for the foot injury and may ultimately require additional surgery." The ALJ infers and finds that Dr. Sachs is recommending the additional test to ascertain whether there is a reasonable prospect that will reveal a course of treatment which may cure and relieve the effects of the admitted injury.

10. According to the Claimant, he desires such an assessment and would undergo any recommended treatment. The Claimant continues to have significant problems with the foot and he believes these injuries are preventing him from working full time. The Claimant's testimony, in this regard, is credible and convincing. Indeed, it is highly probable, unmistakable and free from serious and substantial doubt that the post-traumatic arthritis resulting from the July 3, 2014 "crush-like" injury is the sole cause of the Claimant's continuing LLE problems.

11. Since the originally determined MMI date of September 25, 2015, the Claimant has only been able to engage in part time light duty work, earning on average, $250-300 per week. His inability to engage in full time work is attributable to his ongoing problems from his admitted, compensable foot injury.

Ultimate Findings

12. The ALJ finds the opinions of Dr. Sachs, D.P.M., significantly more persuasive and credible than the opinions of DIME Dr. McCranie and ATP Dr. Zuehlsdorff because Dr. Sach's possesses more specific expertise concerning feet than the DIME doctor and the ATP; because Dr. Sachs articulates the condition of the Claimant's left foot in a more specific and relevant manner than the DIME and ATP. Further, since the DIME opinion mirrors the ATP opinion, the ALJ finds that it has been undermined by lack of a specific attention to the details of the Claimant's left foot condition. The same is true of Dr. Zuelsdorff's opinions.

13. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Dr. Sachs and to reject all opinions to the contrary.

14. The Claimant has demonstrated that it is highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. McCranie erroneously placed the Claimant at MMI. Consequently, the Claimant has sustained his burden by clear and convincing evidence.

15. Based on the pendency of a CT scan test, recommended by Podiatrist Dr. Sachs, to determine if there is a reasonable prospect that a course of treatment can cure and relieve the effects of the admitted injury, the Claimant's condition has not become stable whereby "no further treatment is reasonably expected to improve the condition (of the left foot)." Consequently, the Claimant is not at MMI. If the test reveals that the Claimant was at MMI as of September 28, 2015, then, it would be premature to make any determinations concerning TTD benefits.

Respondents' Arguments

Citing Industrial Clam Appeals Office (ICAO) decisions in their Counter-Findings, the Respondents argue that the recommendation for an additional test is not enough to overcome an MMI finding by a DIME. While this may be true in a vacuum, if the additional test reveals a reasonable prospect of a course of treatment to cure and relieve the effects of an injury, then, opinions of the Court of Appeals trump ICAO decisions. Otherwise, the Respondents' Counter-Findings take issue with the Claimant's proposed Findings, which the ALJ has substantially modified but, nonetheless, rejects most of the counter proposals.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Sachs, D.P.M., were significantly more persuasive and credible than the opinions of DIME Dr. McCranie and ATP Dr. Zuehlsdorff because Dr. Sach's possesses more specific expertise concerning feet than the DIME doctor and the ATP; and, because Dr. Sachs articulates the condition of the Claimant's left foot in a more specific and relevant manner than the DIME and ATP. Further, since the DIME opinion mirrors the ATP opinion, the ALJ finds that it has been undermined by lack of a specific attention to the details of the Claimant's left foot condition. The same is true of Dr. Zuehlsdorff's opinions.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. Sachs and to reject all opinions to the contrary.

Overcoming the DIME

c. The party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office***,** 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v.*

Indus. Claim Appeals Office, 134 P.3d 475 (Colo. App. 2005). The DIME physician's determination of MMI is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005); *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 400 (Colo. App. 2009). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). In other words, a DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P. 2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. A mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Bush, Inc.,* W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). As found, the Claimant has demonstrated that it is highly probable, unmistakable and free from serious and substantial doubt that DIME Dr. McCranie erroneously placed the Claimant at MMI. Consequently, the Claimant sustained his burden by clear and convincing evidence.

MMI

d. MMI is defined as the point in time when any medically determinable physical or medical impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. § 8-40-201(11.5), C.R.S. *Donald B. Murphy Contractors, Inc. V. Indus. Claim Appeals Office*, 916 P.2d 611 (Colo. App. 1995). Diagnostic procedures that constitute a compensable medical benefit must be provided prior to MMI if such procedures have a reasonable prospect of diagnosing or defining a claimant's condition so as to suggest a course of further treatment *See In the Matter of the Claim of William Soto, Claimant,* W.C. No. 4-813-582 [Indus. Claim Appeals Office (ICAO), October 27, 2011]. As found, based on the pendency of a CT scan test, recommended by Podiatrist Dr. Sachs, to determine if there is a reasonable prospect that a course of treatment can cure and relieve the effects of the admitted injury, the Claimant's condition has not become stable whereby "no further treatment is reasonably expected to improve the condition (of the left foot)." Consequently, the Claimant is **not** at MMI.

TTD

e. If the test reveals that the Claimant was at MMI as of September 28, 2015, then, it would be premature to make any determinations concerning TTD benefits.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant has overcome the Division Independent Medical Examiner's (Kathy McCranie, M.D.) opinion by clear and convincing evidence. Therefore, the Claimant is not at maximum medical improvement.

B. The Respondents shall pay the costs of authorized, causally-related and reasonably necessary medical care and treatment for the admitted left lower extremity injury of July 3, 2014, subject to the Division of Workers' Compensation Medical Fee Schedule.

C. Any and all issues, including temporary total disability benefits from September 28, 2015 and continuing, are reserved for future decision.

DATED this______day of December 2016.

ISSUES

Claimant raised only one contention on appeal. Specifically, Claimant asserted that the ALJ "incorrectly placed the burden of proof on her to overcome the DIME physician's opinion regarding the cause of her left shoulder injury." Consequently, this order on remand addresses that limited issue only.

On appeal, Claimant argued that the DIME physician (Dr. Tyler) related Claimant's left shoulder injury to a November 12, 2014 fall which was caused by dizziness she experiences as a consequence of her compensable November 4, 2014. Claimant asserted that it was Respondents burden to prove that Dr. Tyler's determination regarding the cause of her left shoulder condition by clear and convincing evidence. The ICAO agreed, concluding that "in his DIME report, Dr. Tyler clearly attributed the Claimant's left shoulder injury to be a natural consequence of the dizziness she experiences from her November 4, 2014 admitted fall." The ICAO concluded that the "ALJ erred in his interpretation of the DIME report" and further "in placing the burden of proof on the claimant to overcome 'the [DIME physician's] opinion that the November 12, 2014 and not the November 4, 2014 injury is the cause of her need for treatment to the left shoulder." According to the Panel, it was "respondents' burden to overcome the DIME physician's opinion that the claimant's left shoulder injury is causally and proximately related to her original compensable fall on November 4, 2014."

In light of the above, the ICAO remanded the case to the ALJ who was ordered to "place the burden of proof on the respondents to overcome the November 4, 2014, causality opinion of the DIME physician with regard to the left shoulder, and then issue further factual findings and a new order." Succinctly stated, the issue on remand is whether Respondents produced clear and convincing evidence to overcome the causality opinion of Dr. Tyler that Claimant's left shoulder condition is related to her November 4, 2014 work related injury in as much as that injury caused her to experience dizziness and allegedly fall on November 12, 2014.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Jessica Lopez, Shannon Lemons, Rebecca Manuszak, and Aaron Griffen, Ph.D., the ALJ enters the following findings of fact:

Claimant's November 4, 2014 Work Related Incident and Her Prior Medical History

1. Claimant worked for Employer from August of 2013 to June 26 of 2015 as an assistant principal.

2. Claimant testified and the persuasive documentary evidence supports that on November 4, 2014, she responded to an altercation involving some students and a security guard on the Employer's educational campus. While attempting to separate the combatants, Claimant was hit from behind and knocked to the floor along with one of the students, who fell on Claimant's ankle. According to the security guard on scene, Claimant struck her head on the floor and lost consciousness for approximately thirty seconds. There is a lack of persuasive or credible evidence that Claimant injured her left shoulder as a direct result of the altercation.

3. Emergency medical technicians (EMT) were summoned to the scene and contacted Claimant who was, by the time EMT's arrived, sitting in a wheelchair. Claimant reported right ankle pain and a worsening headache. She specifically denied "dizziness, blurred vision, diplopia, chest pain, back pain, abdominal pain, pain in her right leg, left lower extremity, or bilateral upper extremities. Claimant was noted to have a Glasgow Coma Scale score of 15 and was alert and oriented to person, place, time and event. There is a lack of persuasive evidence that Claimant complained of or reported a left shoulder injury or symptoms to the EMT's responding on November 4, 2014. While Claimant alleged she injured her left shoulder in the November 4, 2014 scuffle, her testimony in this regard is not credible or persuasive.

4. After the scuffle on November 4, 2014, Claimant was transported to Penrose-St. Francis Hospital where she was evaluated in the Emergency Room (ER) by Dr. Christopher Johnson. Claimant's loss of consciousness was noted and it was documented further that she was "amnesic to the event." Claimant reported pain in the right eye, the head, right hip, right ankle and right foot. She specifically denied any vomiting, diarrhea, altered mentation, numbness, tingling or weakness. Claimant was provided with an aircast for a "potential sprained ankle." It was specifically noted that it was "okay" for Claimant to bear weight on her leg. There is a lack of credible or persuasive evidence that Claimant complained of or reported a left shoulder injury or symptoms as a result of the November 4, 2014 scuffle while in the ER.

5. Following her discharge from the ER on November 4, 2014, Claimant followed-up at Integrity Urgent Care (Integrity), Employer's designated provider, on November 5, 2014. At Integrity, Claimant was evaluated by Edwin Baca, M.D. Dr. Baca testified at hearing. He credibly testified he performed an "extensive" evaluation during Claimant's first visit on November 5, 2014. He reviewed Claimant's past medical history, evaluated all of her current bodily systems, obtained a history concerning the mechanism of injury (MOI) and performed a formal examination with treatment recommendations. Dr. Baca reported he had no difficulty speaking and communicating with Claimant at this appointment. During this visit, Claimant reported head, neck right hip, right knee, right foot and right ankle pain. Claimant told Dr. Baca she had a "moderate" headache and "intermittent" vision changes. She also reported "mild" nausea and one episode of vomiting prior to her appointment; however, she denied "current dizziness, nausea, vision changes memory loss or confusion." She had moderate ankle pain, difficulty weight bearing and walking. Claimant was given a prescription for medications and

provided with a “lace up” ankle brace and crutches which, according to a November 5, 2014 “Physicians Report of Workers’ Compensation Injury”, she was to use 100% of the time as she was instructed to engage in no weight bearing with the right leg. Dr. Baca testified throughout his care of Claimant, that he continued to evaluate and monitor her complaints/symptoms. Claimant had no complaints of left shoulder pain on November 5, 2014.

6. Dr. Baca testified that following his general examination of Claimant, he treated Claimant with a focus on the areas where she reported problems during his examination. Dr. Baca testified that he performed an examination of Claimant’s head for any signs of abrasions, lacerations or trauma. Dr. Baca noted that he performed a “complete” neurological examination to determine whether Claimant had any signs or symptoms of concussion or post-concussive injury. Dr. Baca’s findings on November 5, 2014 and on subsequent examinations were negative for closed trauma to the head and there were no signs of concussion or post-concussive symptoms according to Dr. Baca.

7. On November 13, 2014, Claimant returned to Integrity on a “walk-in” basis. She was evaluated by Dr. Autumn Dean for complaints of intermittent dizziness and forgetfulness and well as shoulder pain, which Claimant associated with nine days of crutch use. Contrary to the earlier reports of paramedics, emergency room providers and Dr. Baca, Claimant testified that she told Dr. Dean that she injured both shoulders during the November 4, 2014 incident. Claimant completed a pain diagram on this date depicting burning and aching pain in the left shoulder. According to Dr. Dean’s report from this date of encounter, Claimant reported that she thought her “concussion symptoms were improving, but a day or so after her last visit, she started noticing intermittent dizziness and forgetfulness again.” Claimant also specifically reported that the “crutches she is using hurt her left shoulder, which had been injured in a previous accident.”[1] Claimant was then provided with a walker to use for ambulation which took the place of the crutches that she had used for the past nine days. Dr. Dean’s report from this appointment is devoid of any indication that Claimant injured her shoulder after falling in Employer’s parking lot as a consequence of becoming dizzy.

8. Claimant has a pre-existing history of injury to the left shoulder resulting in a prior rotator cuff surgery. According to records from Claimant’s primary care physician (PCP), Dr. Michael Yoesel, Claimant had a prior 1979 left rotator cuff surgery.

9. Claimant testified that since the November 4, 2014 incident, she has had difficulty with balance, dizziness, and her short-term memory. Claimant’s testimony in this regard is inconsistent with the records and testimony of Dr. Baca. Dr. Baca testified he continued to evaluate claimant for any problems associated with a head injury after the November 4, 2014 fall, including signs of post-concussive syndrome and found none.

[1] Based upon Claimant’s specific pain complaints and history of left shoulder injury/surgery, the ALJ finds Claimant’s reference to “previous accident,” more probably than not, meant her remote car accident occurring around 1980 wherein she injured her left shoulder and not the November 4, 2014 incident.

Claimant's Alleged November 12, 2014 Slip and Fall and Continued Treatment at Integrity Urgent Care for the November 4, 2014 Work-Related Incident

10. At hearing regarding W.C. 4-974-447-02, Claimant testified that she fell in the parking lot of the school on November 12, 2014 after lunch as a result of her balance and dizziness issues. According to Claimant she injured her left shoulder in this fall. The ALJ finds this testimony inconsistent with Claimant's earlier statements to Dr. Dean on November 13, 2014 that her shoulder was hurting as a consequence of using crutches. Moreover, the ALJ finds this testimony at odds with Dr. Baca's examinations and testimony wherein he reported that he evaluated Claimant multiple times and found no objective evidence of impaired balance. Claimant also testified that she told Dr. Dean that she injured both shoulders during the November 4, 2014 incident, yet the records from the paramedics and ER personnel near the time of her injury fail to document any reports of injury to either shoulder. Claimant testified further that told Dr. Dean during her November 13, 2014 appointment that she fell on November 12, 2014. As noted, Claimant was seen by Dr. Dean on November 13, 2014 in follow-up for injuries sustained during the November 4, 2014 incident. During this visit, Dr. Dean documented that Claimant reported left shoulder pain as a consequence of using crutches secondary to her right ankle injury. As indicated above, the report of Dr. Dean is devoid of any discussion/reference to a left shoulder injury occurring during the November 4, 2014 incident or as a consequence of a fall occurring in Employer's parking lot on November 12, 2014.

11. Claimant detailed the mechanism of her alleged left shoulder injury testifying that she hit her shoulder against a vehicle in the parking lot on November 12, 2014 when she fell. According to Claimant, she landed on the parking lot surface on her outstretched arm. Claimant testified that she could not remember whether she had scrapes or bruises on her left shoulder, arm, elbow, wrist or hand as a consequence of falling on the pavement with her outstretched left hand, but she recall that the entire left arm hurt. Following physical examination on November 13, 2014, Dr. Dean reported the entire left upper extremity had normal appearance. Examination and testing of the entire left upper extremity revealed normal function. As both to the alleged fall and the crutch use allegedly causing problems, objective evaluations do not support any left shoulder injury. Conceivably, Claimant could have experienced pain from crutch use, but there is a lack of persuasive objective evidence supporting a conclusion that she sustained an aggravation or acceleration of a pre-existing left shoulder condition as a result of crutch use for nine days or that she fell in the parking lot as she claimed at hearing.

12. In addition to seeing Dr. Dean on November 13, 2014, Claimant was evaluated the same day by a physical therapist. Similar to Dr. Dean's report, the initial physical therapy note fails to mention that Claimant fell in the parking lot injuring her left shoulder on November 12, 2014, despite the fact that this appointment was one day after the alleged fall. There is lack of objective evidence to support a conclusion that Claimant fell onto a parking lot surface in the physical therapist's note from this date. Specifically, there is no documentation of objective evidence of cuts, scrapes, bruising or other skin changes one would expect to see on a person who fell and landed on her

outstretched arm as testified to by Claimant. Furthermore, the note from this date of visit reflects that Claimant did subjectively complain that her crutches caused her discomfort and that she had a prior history of a rotator cuff tear. Regardless, there is no mention of falling, there is no report of a new injury the day before, and there are no examination findings consistent with Claimant's allegation that she fell injuring her left shoulder on November 12, 2014.

13. On November 21, 2014, Claimant returned to Integrity for follow-up for what she reported was "severe pain from injury received at work when I fell on crutches." Dr. Baca noted that Claimant was "using a cane now b/c she is having a great deal of pain in her left shoulder and it was worse when using the walker." According to Dr. Baca's note, Claimant was "reporting pain in her shoulder secondary to her fall. She fell onto her left shoulder she believes and had immediate pain the day of the injury." Mention is made of Claimant's prior left shoulder surgery from 1980 with indication that Claimant reported no "problems with the shoulder" following that surgery until she fell "again." At face value, Claimant alleges the pain in the shoulder was secondary to a fall occurring on November 12, 2014; however, the report is devoid of any reference to the date of Claimant's alleged fall while using crutches.

14. Claimant completed a pain diagram dated November 20, 2014 depicting pain in the left shoulder caused by what is reported on the diagram as an "injury [occurring] at school when [Claimant] fell on crutches last week." The ALJ finds the date referenced on the pain diagram likely a documentation error as Claimant did not have a medical appointment on November 20, 2014. Rather, Claimant was evaluated on November 21, 2014. During her November 21, 2014 appointment, Claimant reported pain from a fall in the parking lot, not the experience of continued pain from using crutches or a walker.

15. On December 3, 2014, Claimant was seen in the offices of her PCP for a productive cough of one month duration. She was diagnosed with bronchitis and exacerbation of her asthma. Claimant also complained of left shoulder pain during this appointment, although discussion regarding a specific cause for her left shoulder pain is not included in the record.

16. Review of the evidence presented persuades the ALJ that Dr. Baca acted on Claimant's subjective complaints, regardless of whether Claimant's allegation of a fall on November 12, 2014 is inconsistent the medical history. His treatment of Claimant reflects thoroughness and an earnest effort to aid Claimant.

17. On December 4, 2014, Claimant was re-evaluated by Dr. Baca who ordered an MRI of the left shoulder for "possible RCT" (rotator cuff tear). Dr. Baca noted that Claimant was to continue use of the cane and "may engage in sedentary activities only. No reaching with L (left) shoulder or arm. Regarding causation, Dr. Baca noted: " >50% probability for causation."

18. MRI of the left shoulder was preformed December 8, 2014. The MRI demonstrated what Dr. Baca described as "moderate to severe degenerative changes

and rotator cuff tendonopathy, with associated labral fraying and tears.

19. On December 11, 2014, Dr. Baca reviewed the findings of the December 8, 2014, MRI with Claimant. After reviewing the MRI findings, Dr. Baca opined that there was a less than a 50% chance of Claimant's left shoulder injury being caused by her accident. Nevertheless, Dr. Baca referred Claimant to Dr. Christopher Jones for orthopedic consult.

20. As Claimant's treatment with Dr. Baca progressed he clarified his opinion concerning the cause of Claimant's left shoulder condition. On January 1, 2015, Dr. Baca, based upon Claimant's reported history, noted that Claimant sustained a "secondary injury" as a consequence of falling while using crutches. Consequently he noted the following regarding causation for Claimant's left shoulder condition: ">50% probability for causation; however, L (left) shoulder injury is <50% probability for causation for initial injury; however, PT (patient) fell using crutches and landed directly onto L (left) shoulder exacerbating chronic deg (degenerative) changes and causing labral tear." The ALJ infers from this causality statement that Dr. Baca does not ascribe any left shoulder injury to the November 4, 2014 incident, i.e. "initial injury." Rather, Dr. Baca concluded that Claimant's left shoulder injury was caused by an alleged secondary fall in Employer's parking lot which she said occurred while using crutches and that this fall aggravated chronic pre-existing degenerative changes in the shoulder and a labral tear.

Dr. Jones' Treatment

21. As noted above, Claimant was referred to Dr. Christopher Jones for orthopedic consult. Dr. Jones first evaluated Claimant on December 29, 2014. During this visit, Dr. Jones documented what he understood to be the events surrounding Claimant's injuries sustained on November 4, 2014. Regarding those events, Dr. Jones noted that Claimant had been "pushed into a door and struck her shoulder." He does not indicate which shoulder was struck however. Assuming Dr. Jones is referencing the left shoulder, the ALJ finds no record support, outside of Claimant's contention, for such conclusion. Nonetheless, Dr. Jones also documents that following the November 4, 2014 incident, Claimant was using crutches when she fell at "work on 11/10/14, and that is when she really feels like she re-hurt her shoulder." The reference to a date of injury of November 10, 2014 is inconsistent with the balance of the record evidence suggesting that Claimant allegedly fell and injured her left shoulder on November 12, 2014.

22. Dr. Jones also commented on the findings of Claimant's December 8, 2014 MRI, noting that the MRI demonstrated "a lot of intra-articular debris consistent with possible loose chondral debris and some synovitis associated with that" along with "some tendinopathy of [the] rotator cuff and possibly a partial tear, but . . . not a full-thickness defect."

23. Regarding the cause of Claimant's left shoulder symptoms', Dr. Jones noted:

“Given the mechanism of injury, this could certainly be a traumatic injury with impaction of the humeral head onto the glenoid. However, it could also be all chronic with some exacerbation of her previously existing injury.” Dr. Jones elected to proceed conservatively by injecting the shoulder with a 2:2:1 solution of Marcaine, Lidocaine and Depo-Medrol.

24. By January 19, 2015, it was evident Claimant had failed conservative treatments such as physical therapy and injections. Dr. Jones requested surgical authorization from Respondents on January 30, 2015. Respondents denied the request on February 11, 2015.

25. Claimant testified to having two surgeries on her left shoulder following her November fall while using crutches. The first surgery took place on February 11, 2015, and the second occurred in March of that year. The second surgery was necessary to correct a “popeye” deformity in Claimant’s left biceps caused by the first surgery. During Claimant’s February 11, 2015 procedure it was discovered that she had pseudo gout. Claimant’s surgery was covered by her private health insurance although she had out-of-pocket costs for the surgery and subsequent physical therapy.

Maximum Medical Improvement, Dr. Lindberg’s Evaluation, Dr. Hall’s Evaluation and Dr. Tyler’s Division Independent Medical Evaluation (DIME)

26. Dr. Baca placed Claimant at maximum medical improvement (MMI) without permanent impairment on March 3, 2015. At the time he placed Claimant at MMI, Dr. Baca noted she was not working secondary to her left shoulder condition. Claimant testified she missed work from February 11, 2015 through March 20, 2015, as a result of her left shoulder surgery. Dr. Baca’s opinion concerning causality of Claimant’s left shoulder condition/injury is unchanged from his January 1, 2015 opinion.

27. Respondents sought an opinion from Dr. James Lindberg regarding the cause of Claimant’s left shoulder condition. Dr. Lindberg examined Claimant on May 5, 2015 after which he opined that he did not believe Claimant had suffered an injury to her left shoulder as a result of the November 4, 2014 incident. He also concluded that there were multiple inconsistencies surrounding Claimant’s second injury stemming from a fall allegedly occurring on or about November 12, 2014.

28. Claimant sought an opinion from Dr. Timothy Hall. Dr. Hall evaluated Claimant on June 19, 2015. Dr. Hall concluded that while Claimant had pre-existing degenerative changes in the left shoulder, the two events in November, i.e. the original incident of November 4, 2014 and particularly the November 12, 2014 fall caused those changes to become symptomatic. Similar to Dr. Tyler’s opinion, Dr. Hall found that “but for” the November 12, 2014 fall, Claimant “would not have gone to surgery.” Consequently, he opined that Claimant’s left shoulder condition/injury was a direct result of the alleged work-related fall on November 12, 2014. Dr. Hall also felt that Claimant needed additional work-up for ongoing symptoms related to a concussion. According to Dr. Hall’s independent medical examination (IME) report, Claimant needed referral to a

neuro ophthalmologist and testing/treatment for ongoing cognitive complaints.

29. Dr. Hall provides multiple opinions regarding the condition of Claimant's left shoulder – that Claimant injured it on November 4, 2014 (an opinion the ALJ finds inconsistent with the medical records on or about that date of injury), that she fell on November 12, 2014 while getting out of her car (again, an opinion the ALJ finds inconsistent the totality of the evidence presented, including the medical records from Dr. Dean and the physical therapist from November 13, 2014). Dr. Hall fails to find any preexisting problem with the left shoulder, even though the MRI supports a conclusion of pre-existing degenerative change leading Dr. Jones to opine that Claimant's current symptoms may be emanating from an aggravation of this pre-existing degeneration. Dr. Hall found that Claimant had some left shoulder symptoms following the November 4, 2014 fall (a fall where he opines claimant hit her left shoulder, but such conclusion is unsupported by the record). He then concluded that Claimant was "markedly worse" after a fall in the parking lot on November 12, 2014. Dr. Hall's opinion relies on two pieces of evidence (a left shoulder injury occurring on November 4, 2014 and a significantly more severe left shoulder injury occurring on November 12, 2014) that are inconsistent with the credible and convincing evidence in this case, including the testimony of Claimant's co-workers regarding the alleged November 12, 2014 fall. Consequently, the ALJ rejects Dr. Hall's opinions regarding the cause of Claimant's left shoulder symptoms as unpursuasive.

30. Claimant requested a Division Independent Medical Examination (DIME) with Dr. John Tyler for the November 4, 2014 work injury only. Dr. Tyler completed the requested DIME on July 24, 2015. As concluded by the ICAO, Dr. Tyler relates Claimant's left shoulder complaints to a fall caused by the dizziness she has experienced since her November 4, 2014 work injury. As noted, this second fall allegedly occurred on November 12, 2014. As part of his opinion concerning the cause of Claimant's left shoulder symptoms and need for surgery, Dr. Tyler opines: "Claimant was only on crutches because of her work injury. While she may have had an underlying shoulder condition, this fall exacerbated that condition and created a need for surgery. "Whether or not this patient had previous trauma to the shoulder, that trauma went back nearly 34 years ago and was asymptomatic until this event."

Dr. Lindberg's Testimony

31. Dr. Lindberg testified that there was no initial injury to the left shoulder from the November 4 fall. He testified further that there was no objective medical evidence to support the occurrence of a fall on November 12, 2014.

32. Dr. Lindberg testified that Claimant has gout or other crystalline disorder that is unrelated to work. According to Dr. Lindberg, Claimant's left shoulder condition/symptoms and need for treatment is unrelated to any work related accident occurring November 4 or 12, 2014 and should be cared for under her health insurance.

The Testimony of Claimant's Co-Workers

33. Aaron Griffen, Ph.D. testified Claimant did not report a left shoulder injury as a consequence of a fall in the parking lot to him on November 12, 2014, the date Claimant asserts it occurred. This contradicts Claimant's report that she immediately told Dr. Griffen of the injury. Had Claimant reported an injury, Dr. Griffen testified he would have followed standard protocol, i.e. provide the employee with medical aide, contact Risk Management, and complete an accident report. Dr. Griffen testified that he did not learn about the alleged November 12, 2014 fall injury until February of 2015 when Claimant finally reported it.

34. Claimant's report of injury dated February 10, 2015 for the alleged November 12, 2014 fall came after Dr. Griffen counseled her in December 2014 and January 2015 regarding her need to improve her work performance. Claimant was working under restricted duty when Dr. Griffen spoke with her regarding her work. Claimant was missing crucial deadlines necessary and important to employer and those it served. She was also missing meetings necessary to conduct the business of the school district.

35. Dr. Griffen documented the problems associated with Claimant's job performance in a running memorandum. He removed some of Claimant's duties in January of 2015 because of her failure to meet mandatory deadlines which resulted in compliance issues for critical testing. Claimant was also counseled on her failure to respond appropriately to a subordinate challenging her authority. Finally, Claimant was warned to cease gossiping; she was a leader in the employer's organization and it was important to not undermine the authority structure given the nature of the work (education). On January 15, 2015, Claimant was told she would be put on a corrective action plan to bring her into compliance with the ten standards set by the state for administrators like her.

36. Dr. Griffen met with Claimant to finalize her corrective action plan on February 6, 2015 (four days before Claimant reported the November 12, 2014 alleged fall at work). The corrective action plan was signed on February 9, 2015, one day before Claimant filed her report of a November 12, 2014 work injury. In the corrective action plan, Claimant is put on notice that "Failure to meet the corrective actions mentioned above will result in further disciplinary actions that may lead to termination of your contract."

37. At hearing, Claimant amended her statement that Jessica Lopez witnessed the fall, testifying that she told her about it. She also testified that she could not remember whether her statement about reporting a November 12, 2014 injury to Dr. Griffen was correct.

38. Jessica Lopez testified that she did not witness the fall. Rather, Ms. Lopez testified that Claimant told her about the November 12, 2014 fall the day after (November 13, 2014) it allegedly occurred. According to Ms. Lopez, Claimant reported to her that she fell and everything was alright. In response to Ms. Lopez' inquiry as to

whether she needed to report an injury, Claimant replied “no”, that she was fine a little bumped and bruised, but nothing more than that. As noted above, no physical indications of injury, such as bruises, contusions or scrapes are documented in the physical therapy record or Dr. Dean’s notes from November 13, 2014.

39. Shannon Lemons testified that sometime in November 2014when Claimant returned to work after the November 4, 2014 incident, a student came into her office early in the morning (between 8:00 a.m. and 8:30 a.m.) asking for a wheelchair. Ms. Lemons asked the student why he needed the chair and he replied he needed it for Claimant. Ms. Lemons responded with the student to Claimant’s location. Ms. Lemons found Claimant in a doorway hunched over her crutches. Ms. Lemons knew Claimant had trouble with her lungs and Claimant was breathing heavily as she leaned over her crutches.[2]

40. Ms. Lemons testified that she had Claimant sit in the wheelchair and that she wheeled Claimant to her (Claimant’s) office. Claimant disputes Ms. Lemons’ account. Rather, Claimant testified that she needed the wheelchair after lunch on November 12, 2014 because she fell in the parking lot on her way back into the building. Ms. Lemons testified that she responded with the wheelchair first thing in the morning as Claimant arrived at work. According to Ms. Lemons she responded with a wheelchair before lunch and offered to help her the rest of the day. Ms. Lemons testified that Claimant used the wheelchair prior to lunch because Claimant called her and asked to be wheeled out to her vehicle for lunch. Per Ms. Lemons, when Claimant returned from lunch, she used her cell phone to call Ms. Lemons asking to meet at Claimant’s car so she could be wheeled from the parking lot back into the school. Ms. Lemons testified there was no fall in the parking lot at lunch time, as she wheeled Claimant to her car, helped her get into the vehicle and helped her get her seatbelt on. Ms. Lemons also testified that Claimant did not fall in the parking lot after lunch because when Claimant returned from lunch (the time which Claimant reports she fell in the parking lot), she met Claimant at her car. According to Ms. Lemons, Claimant was still in her vehicle when she arrived with the wheelchair. MS. Lemons reported that she rolled Claimant into the building. Ms. Lemons witnessed her arrival after lunch and testified there was no fall in the parking lot after lunch as Claimant asserts.

41. During her deposition, Ms. Lemons was asked whether Claimant reported a fall in the parking lot when she arrived at school on November 12, 2014. Ms. Lemons testified Claimant never reported a fall in the parking lot to her. Ms. Lemons, a health worker for Employer, testified Claimant was having trouble breathing when she responded with a wheelchair to Claimant’s location in the morning hours as noted above. According to Ms. Lemons, Claimant is an asthmatic and she helped Claimant with her nebulizer due to her labored breathing on the morning she responded to her location with a wheelchair. Ms. Lemons believed Claimant’s need for wheelchair assistance upon arrival to school that morning was due to trouble breathing, as there no report or signs of an injury consistent with a fall. At the end of the school day, Ms.

[2] The medical records from the office of Claimant’s PCP support a conclusion that Claimant was struggling with respiratory conditions and an unspecified exacerbation of her pre-existing asthma.

Lemons testified she wheeled Claimant out to her car around 3:15 p.m.

42. After Claimant reported the November 12, 2014 injury to Employer on February 10, 2015, Claimant approached Ms. Lemons and complained about the Insurer's denial of her left shoulder claim. Ms. Lemons responded she was unaware of Claimant hurting her left shoulder. Later, Claimant went to Ms. Lemons again about her denied claim. Claimant told Ms. Lemons she had reported a second injury to her. Claimant stated to Ms. Lemons, "I hope you don't get in trouble for this." Ms. Lemons was concerned about Claimant's statement, so she reported it to her supervisor, Rebecca Manuszak. Ms. Manuszak was the District Nurse for Employer at the time.

43. Both Ms. Lemons and Ms. Manuszak no longer work for Employer and were not employed by the school district when they testified. Like Ms. Lemons, Ms. Manuszak was present when Claimant was injured on November 4, 2014. She stayed with Claimant until paramedics arrived.

44. Ms. Manuszak was also aware of Claimant returning to work after the November 4, 2014 admitted work injury. Ms. Manuszak was aware that Ms. Lemons provided wheelchair assistance to Claimant when she returned to work. According to Ms. Manuszak, Ms. Lemons told her that Claimant had a difficult time ambulating on her crutches due to her asthma. Ms. Lemons reported to Manuszak that a student saw Claimant in distress and that Ms. Lemons brought a wheelchair to Claimant and wheeled Claimant around because of Claimant's asthma. Ms. Manuszak saw Claimant later on the day of her alleged fall in the parking lot. According to Ms. Manuszak, Claimant reported to her that it was too difficult to use the crutches because of her asthma. Ms. Manuszak believes the student notified Ms. Lemons of Claimant's distress as Claimant arrived to work, not after lunch as maintained by Claimant.

45. Ms. Manuszak testified that Ms. Lemons told her about Claimant coming to her office and asking her to support Claimant's allegation that she (Claimant) reported a second injury to Ms. Lemons in November of 2014. Ms. Manuszak characterized Claimant's actions as a threat to Ms. Lemons to "change her story" or "her job would be in jeopardy." Ms. Manuszak testified Ms. Lemons was very upset about Claimant's statements. Ms. Manuszak noted neither she nor Ms. Lemons were aware of a second fall. According to Ms. Manuszak, Claimant did not report a second fall to her and did not report a second fall to Ms. Lemons. Ms. Manuszak testified Ms. Lemons was upset because Claimant suggested that she (Ms. Lemons) would be in trouble because she failed to report Claimant's second injury at the time it allegedly occurred as required by Employer policy. Ms. Manuszak reported Claimant's statements to Claimant's supervisor's assistant and to the Risk Manager for Employer. She also went to Claimant's supervisor directly and indicated she would not tolerate an employee threatening Ms. Lemons. Ms. Manuszak testified she did not believe there was a second fall; she remembers Claimant coming into the clinic and reporting her shoulder began hurting when she was dressing at home one day. Claimant reported a "dislocation" of the left shoulder while "getting dressed for school" on January 21, 2015 according to records from Integrity. According to Dr. Baca's report from this date,

Claimant’s report of dislocation was the second time her shoulder had dislocated. Claimant testified she reduced the dislocation herself based on what she had seen on television.

46. Claimant testified that she believed Ms. Lemons knew about her injury in the parking lot when she mentioned to Ms. Lemons that she (Ms. Lemons) may get in trouble for not handling things right away. Based upon the evidence presented, the ALJ finds Claimant’s explanation regarding the verbal exchange between her and Ms. Lemons unconvincing. The totality of the evidence presented concerning this issue persuades the ALJ that Claimant’s decision to repeatedly approach Ms. Lemons about the denial of the alleged November 12, 2014 fall coupled with the statement suggesting that she (Ms. Lemons) may be in trouble for failing to report the claim constituted a veiled threat to intimidate Ms. Lemons into reporting that Claimant had actually fallen in an attempt to bolster the claim.

47. Based upon the totality of the evidence presented, the ALJ finds Claimant’s assertion that she fell in the parking lot on November 12, 2014 unreliable and unconvincing. When Claimant finally does report a November 12, 2014 injury on February 10, 2015, she provides details that are inconsistent with the testimony of her co-workers and her own later testimony. At hearing, Claimant reported she fell after getting dizzy while trying to use her crutches to get from the parking lot to the school. Claimant told Dr. Lindberg she slipped on ice. Clamant told the Division IME, she became dizzy as she got out of her car in the parking lot and fell. In her initial report of injury on February 10, 2015, Claimant asserts an employee (Ms. Lopez) witnessed the fall and that she reported the fall to her supervisor (Dr. Griffen) on the date of alleged injury, November 12, 2014. These reports were contradicted by the testimony of both Ms. Lopez and Dr. Griffen prompting Claimant to change her testimony regarding the same at hearing. Finally, the ALJ is convinced that Claimant did not report an injury to the left shoulder as a consequence of a fall and there is no objective evidence of injury to the left arm one day after the fall allegedly occurred in either the PT record or the report of Dr. Dean, despite Claimant’s report to Ms. Lopez that she was “bumped and bruised.”

48. Based upon the evidence presented, it appears that Dr. Tyler did not have the benefit of reviewing the depositions of Ms. Lemons, Ms. Manuszak, and Dr. Griffen when he performed his DIME. Consequently, the ALJ finds that he was unaware of the inconsistencies surrounding Claimant’s reporting of the alleged fall in addition to the lack of contemporary evidence supporting that a fall actually took place on November 12, 2014. To the contrary, the ALJ finds that Dr. Tyler relied solely on Claimant’s history and accepted, as fact that she fell on her outstretched arm on November 12, 2014, after experiencing an episode of dizziness while getting out of her car. While he mentions that Claimant was “suffering from dizziness and forgetfulness” when she was evaluated by Dr. Dean, he fails to address that the examination of Dr. Dean and or the physical therapist is devoid of any objective evidence of injury (bruising, contusions or scrapes) consistent with falling in a parking lot.

49. The ALJ credits the opinions of Dr. Lindberg to find that Claimant's left shoulder symptoms and need for treatment, including the surgeries performed by Dr. Jones, are/were causally related to her gout and the natural and probable progression of the pre-existing degenerative change present in the shoulder.

50. Based upon the evidence presented, the ALJ finds that Dr. Tyler erred in concluding that Claimant's left shoulder condition was causally related to a fall occurring on November 12, 2014. While there is evidence to support that Claimant suffers from dizziness as a consequence of her November 4, 2014 head injury, there is a dearth of persuasive evidence to support a finding/conclusion that Claimant actually fell as a consequence of that dizziness on November 12, 2014 as she maintains. As found, Claimant's testimony concerning the occurrence of this alleged fall is inconsistent, unreliable and contradicted by the more persuasive testimony of her co-workers. When the evidence regarding Claimant's alleged fall is considered as a whole, it overwhelming supports a conclusion that she did not fall and her shoulder symptoms/need for treatment are related to the natural progression of both a pre-existing condition and a non-work related gout. While Dr. Tyler has strong feelings about the cause of Claimant's left shoulder symptoms and need for treatment, the foundation for his opinions rests exclusively upon Claimant's reported history that she fell. As noted, the persuasive evidence contradicts Claimant's account of falling. Consequently, the ALJ finds Dr. Tyler's causation opinion that Claimant's left shoulder symptoms and need for treatment are related to a November 12, 2014 fall which was occasioned by residual dizziness from her November 4, 2014 injury, mistaken and highly probably incorrect.

51. Respondents have produced clear and convincing evidence that Dr. Tyler erred when he opined that Claimant's left shoulder symptoms arose from a fall occurring on November 12, 2014. Consequently, the ALJ finds that this causality opinion has been overcome.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

B. In determining credibility, the ALJ should consider the witness' manner and

demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. As found in this case, Claimant's testimony regarding her alleged November 12, 2014 fall is inconsistent and substantially contradicted by the more persuasive testimony of Ms. Lemons, Ms. Manuszak and Dr. Griffen. Consequently, the ALJ finds Claimant's testimony to be both unreliable and unconvincing.

C. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968). Based upon the evidence presented, the ALJ finds/concludes that Dr. Tyler had limited information at his disposal when he completed his DIME. Moreover, he concluded that this limited information established as a matter of fact that Claimant fell as she contended. For the reasons outlined above, is not persuaded that Claimant actually fell. Accordingly, the ALJ concludes that the opinions of Dr. Lindberg regarding the cause of Claimant's left shoulder symptoms and need for treatment are more credible and persuasive than the contrary opinions of Dr. Tyler.

Overcoming Dr. Tyler's Opinion Regarding the Cause of Claimant's Left Shoulder Symptoms

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI, permanency or the cause of a particular component of a claimant's medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

E. In this case, Dr. Tyler expressed an opinion concerning the cause of

Claimant's left shoulder condition and her need for treatment when he completed the requested DIME for the admitted November 4, 2014 injury. As concluded by the ICAO, Dr. Tyler "expressly opined that the claimant became dizzy as a result of her fall from November 4, and she fell on November 12 because of the dizziness." In this case, the undersigned ALJ agrees with Respondents that the DIME report of Dr. Tyler reflects that he conflated the claim he was appointed to review (the November 4, 2014 claim) with a claim that was contested from November 12, 2014. Nonetheless, Dr. Tyler's opinion that the cause of Claimant's left shoulder symptoms and need for treatment resulted from a fall on November 12, 2014, caused by the lingering effects (dizziness) of her November 4, 2014 work injury is a determination of causation that falls squarely on the DIME doctor to decide. Since Dr. Tyler opined that Claimant's left shoulder symptoms and need for treatment were attributable to and a "natural consequence of the dizziness she experiences from her November 4, 2014, admitted fall", the burden to overcome this opinion rests with Respondents.

F. In order to effectively challenge Dr. Tyler's determination that the left shoulder injury is causally and proximately related to Claimant's November 4, 2014 fall there must be evidence that his determination is highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). The instant case involves complex medico-legal questions concerning the cause of Claimant's left shoulder condition and her need additional treatment in the context of two separate injuries, the second allegedly occurring eight days after the first. Here, the DIME report of Dr. Tyler reflects that he reviewed medical records from the various providers who evaluated and/or treated Claimant. Although he reviewed medical records documenting that Claimant suffers from persistent dizziness, which could have caused a fall on November 12, 2014, the ALJ concludes that Dr. Tyler's DIME report reflects that he simply accepted, at face value, Claimant's assertion that she did fall on November 12, 2014. In fact, Dr. Tyler found the suggestion that Claimant was ever thought not to have an injury brought on by a compensable workers' compensation injury to her left shoulder "insulting." Rather, he concluded that Claimant "suffered trauma to the left shoulder and the left shoulder was asymptomatic prior to the fall that occurred on November 12." (emphasis added).

G. While the ALJ finds and concludes that dizziness can cause falls, there is scant evidence, outside of Claimant's unpursuasive testimony that she actually did fall on November 12, 2014 as she claims. Here, Claimant's testimony regarding her alleged November 12, 2014 fall is inconsistent, unreliable and substantially contradicted by the more persuasive testimony of Ms. Lemons, Ms. Manuszak and Dr.

Griffen. Although Claimant alleges she sustained an injury in the parking lot on November 12, 2014, when she fell and injured her left shoulder, she was evaluated by Dr. Dean on November 13, 2014 – one day after this fall allegedly occurred. In that November 13, 2014 visit, Claimant makes no mention of a fall in a parking lot and there were no outward signs of injury to her left shoulder despite Claimant's report to Jessica Lopez that she was "bumped and bruised." Claimant also visited with a physical therapist on November 13, 2014 who makes no mention of a November 12, 2014 work injury to Claimant's left shoulder. This evidence coupled with the testimony of Ms. Lemons persuades the ALJ that Claimant did not fall in the parking lot on November 12, 2014. As found, Dr. Tyler did not have the benefit of this evidence when he completed his DIME. Consequently, the ALJ concludes that his causation opinions are based on incomplete information, are mistaken and highly probably incorrect. Accordingly, Respondents have presented clear and convincing evidence overcome the DIME opinions regarding the cause of Claimant's left shoulder symptoms and need for treatment.

ORDER

It is therefore ordered that:

1. Dr. Tyler's causation opinions regarding the left shoulder have been overcome. It is specifically concluded that Claimant's left shoulder symptoms and need for treatment are causally related to the natural progression of pre-existing degenerative change in the shoulder and gout as opined by Dr. Lindberg.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive reasonable, necessary and related medical maintenance benefits in the form of lumbosacral injection procedures designed to relieve the effects of his July 24, 2013 industrial injury or prevent further deterioration of his condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

2. Whether Respondents have established by a preponderance of the evidence that they are entitled to recover an overpayment in the amount of $12,841.25.

FINDINGS OF FACT

1. Claimant worked for Employer as an Irrigation Technician. On July 24, 2013 Claimant suffered admitted industrial injuries during the course and scope of his employment when he was involved in a motor vehicle accident. Claimant was the restrained driver of a small truck stopped in a construction zone when he was struck from behind by a Ford Expedition driving approximately 40 miles per hour. He was then rear-ended a second time when a Cadillac Escalade SUV struck the Ford Expedition and pushed it into his truck.

2. On July 25, 2013 Claimant began receiving Temporary Total Disability (TTD) benefits as a result of his industrial injuries. He continued to receive TTD benefits at varying rates through November 11, 2015.

3. On July 26, 2013 Claimant visited Darla Draper, M.D. at Concentra Medical Centers for an examination. Claimant reported that he was rear-ended twice in a motor vehicle accident and lost consciousness. He recounted that his current symptoms included pain in his shoulders, neck, upper back and the left side of his head. Claimant also noted that he suffered vertigo. Dr. Draper diagnosed Claimant with a concussion involving loss of consciousness, a cervical strain, a cervical contusion, a back contusion, back pain, cephalgia and vertigo. She prescribed Flexeril and ice packs. Dr. Draper restricted Claimant from all work activities.

4. On August 7, 2013 Claimant returned to Concentra and underwent an evaluation with Carrie Burns, M.D. Claimant reported persistent pain in his upper back region. He also experienced "rare" headaches that he described as throbbing. Dr. Burns released him to return to work four hours per day with restrictions that included no lifting over 10 pounds, no pushing or pulling over 20

pounds, seated 50 percent of the time and no driving the company vehicle. She also referred Claimant for chiropractic treatment.

5. On August 20, 2013 Claimant returned to Concentra and visited Ronald Waits, NP for an examination. Claimant reported no significant symptom improvement. NP Waits decreased Claimant's work restrictions to no lifting in excess of 20 pounds with alternating sitting, standing and walking 50 percent of the time. Claimant remained limited to working four hours per day.

6. Claimant continued conservative treatment through Concentra with no reported improvement in symptoms. He was discharged from chiropractic care due to a failure to benefit. Claimant continued to work four hours per day until September 17, 2013 when he was released to work six hours per day by Patrick F. Freeman, PA. Claimant's other work restrictions remained unchanged.

7. On October 11, 2013 Claimant returned to Concentra and underwent an evaluation with PA Freeman. Claimant reported mild pain in his back and buttocks. He also noted brief daily headaches that lasted from a few seconds up to three hours. PA Freeman diagnosed Claimant with a cervical strain that had resolved, a lumbar strain that had resolved, an improving concussion and a thoracic strain. Claimant was released to return to work eight hours each day and his restrictions were reduced to lifting, pushing and pulling up to 20 pounds.

8. Claimant subsequently obtained a transfer of care to W. Rafer Leach, M.D. Dr. Leach evaluated Claimant on October 21, 2013. Claimant reported neck and back muscle pain. After reviewing Claimant's medical history and conducting a physical examination, Dr. Leach diagnosed Claimant with post-concussive syndrome, a sprain/strain of the thoracic region, vertigo, muscle spasms, disc disease of the cervical region, disc disease of the lumbar region, lumbosacral spondylosis, traumatic spondylopathy and post-traumatic headaches.

9. Claimant continued to periodically receive medical treatment from Dr. Leach. Dr. Leach restricted Claimant from all work activities. He also prescribed physical therapy and chiropractic treatment twice per week. Dr. Leach referred Claimant to Kenneth Allen, M.D. and James Benoit, M.D. for cervical and lumbar injection therapy. Drs. Allen and Benoit have performed multiple epidural steroid injections. They have not placed Claimant at Maximum Medical Improvement (MMI).

10. Claimant also continued to receive medical care from Concentra. On January 30, 2014 Matt Miller, M.D. released Claimant to return to work with restrictions of no lifting in excess of 40 pounds and no pushing or pulling in excess of 40 pounds.

11. On May 23, 2014 Claimant underwent an evaluation with John Burris, M.D. Dr. Burris noted that Claimant walked with a normal gait and transfer without

hesitation. Claimant also demonstrated full range of motion of the lumbar spine in all planes. Dr. Burris concluded that Claimant

> has a relatively benign examination with no objective findings and reportedly negative diagnostic work-up…. Based on today's examination, I find no objective basis for impairment or permanent work restrictions. He is released to full duty. Given the lack of objective findings, I would not endorse further injections until I have had a chance to review the records.

12. On June 9, 2014 Claimant visited Carlos Cebrian, M.D. for an independent medical examination. Dr. Cebrian reviewed Claimant's medical records and conducted a physical examination. He noted that Claimant exhibited full range of cervical, thoracic and lumbar motion. Dr. Cebrian determined that Claimant had reached MMI with no impairment or restrictions. Consistent with the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*), Dr. Cebrian recommended discontinuation of Dr. Leach's prescriptions of muscle relaxers. He also suggested discontinuation of Carisoprodol under the supervision of a physician over 30 days. Dr. Cebrian summarized that no additional treatment was reasonable, necessary or related to Claimant's July 24, 2013 admitted industrial injuries. He specified that additional treatment would be inconsistent with the *Guidelines* because there had been no improvement in Claimant's functional ability.

13. On November 4, 2015 Claimant underwent a 24-month Division Independent Medical Examination (DIME) with Franklin Shih, M.D. Dr. Shih noted that Claimant had received therapy, medications and injections without significant benefit. Claimant reported that his symptoms had localized to the lower back and right gluteal region and were "about the same" as when he was initially injured. Dr. Shih determined that Claimant had reached MMI on June 9, 2014. He assigned Claimant a 7% whole person impairment rating for his lower back pursuant to the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*). However, Dr. Shih assigned Claimant a 0% rating for range of motion limitations because his thoracolumbar range of motion testing was invalid after two separate attempts. Regarding maintenance care, Dr. Shih remarked that "[Claimant] via his son questioned why further injections were being pursued when previous injections had not been of any significant benefit, even short term, benefit. I would not recommend further injections. [Claimant] likely has multifactorial mechanical low back pain which is not likely to improve with further invasive treatments."

14. On February 1, 2016 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Shih's June 9, 2014 date of MMI and 7% whole person impairment rating. Respondents also acknowledged "post-MMI medical treatment provided by the authorized treating physician that is reasonable, necessary and related to the compensable injury." The FAL also reflected an overpayment of TTD

benefits in the amount of $12,841.25 for the period June 9, 2014 through November 11, 2015.

15. On April 13, 2016 Dr. Leach noted that Claimant required a "lumbosacral injection procedure, then therapy, to achieve MMI." On October 3, 2016 Dr. Leach reiterated that Claimant needed cervical and lumbar injections.

16. Dr. Cebrian testified at the hearing in this matter. He concluded that the "lumbosacral injection procedure" as requested by Dr. Leach was not reasonable and necessary. Dr. Cebrian explained that a November 15, 2013 lumbar MRI revealed that Claimant did not suffer an acute lumbar injury on July 24, 2013 but instead suffers from a degenerative condition. Claimant's worsening symptoms were not related to his industrial injury but were instead caused by his degenerative condition. Moreover, Dr. Cebrian reasoned that, despite numerous injections, physicians have not identified Claimant's pain generator. Finally, injections did not produce functional Improvement but only provided pain relief. Accordingly, lumbosactral injections were not warranted.

17. Dr. Cebrian also commented that the requested injections are not consistent with Rule 17, Exhibit 1 of the *Guidelines* because of Claimant's lack of functional improvement from prior injections. Rule 17, Exhibit 1, provides, "there is strong evidence that epidural steroid injections do not on average, provide clinically meaningful long-term improvements in leg pain, back pain, or disability in patients with sciatica." Further, the *Guidelines* specify that there is "strong evidence that ESI has no short or long term benefit for low back pain**.** A high quality meta-analysis provided additional good evidence against the use of lumbar facet or epidural injections for relief of non-radicular low back pain. Facet injections have very limited therapeutic or diagnostic use."

18. The *Guidelines* also delineate specific instructions for assessing the functional efficacy of a procedure.

> It is obligatory that sufficient data be accumulated by the examiner performing this procedure that the value of the procedure is evident to other reviewers' response to specific symptoms... A successful block requires documentation of positive functional changes by trained medical personnel experienced in measuring range of motion or assessing activity performance... To be successful the result should occur within the expected timeframe and there should be pain relief of approximately 80% demonstrated by pre-and post-Visual Analog Scale scores. Examples of functional changes may include sitting, walking and lifting. Additionally, a prospective patient completed pain diary must be recorded as part of the medical record that documents response hourly for a minimum requirement of the first eight-hours post-injection or until the block is clearly worn off and preferably for the week following an injection.

Dr. Cebrian explained that Drs. Leach, Allen and Benoit have not documented Claimant's functional improvement from previous injections. Moreover, Claimant has not provided a pain diary documenting his response to injections.

19. Finally, Rule 17, Exhibit 1 of the *Guidelines* specifies that poorly controlled diabetes mellitus is an absolute contraindication to steroid injections. Dr. Cebrian explained that Claimant suffers from poorly controlled diabetes mellitus because his blood sugar levels have been elevated over time. He thus summarized that the requested injections do not constitute reasonable, necessary and related medical maintenance benefits.

20. Claimant has failed to establish that it is more probably true than not that he is entitled to receive reasonable, necessary and related medical maintenance benefits in the form of lumbosacral injection procedures designed to relieve the effects of his July 24, 2013 industrial injuries or prevent further deterioration of his condition. Initially, Claimant received extensive conservative treatment for his industrial injuries that included therapy, medications and injections. However, the record reveals that he did not receive a significant functional benefit. After a 24-month DIME Dr. Shih determined that Claimant reached MMI on June 9, 2014 and assigned a 7% whole person impairment rating.

21. On April 13, 2016 Dr. Leach noted that Claimant required a "lumbosacral injection procedure, then therapy, to achieve MMI." On October 3, 2016 Dr. Leach recommended cervical and lumbar injections. However, Drs. Leach, Allen and Benoit have not provided justification for additional injections. Furthermore, Dr. Shih did not recommend additional injections because Claimant had not received any significant benefit from prior injections. He also noted that Claimant "likely has multifactorial mechanical low back pain which is not likely to improve with further invasive treatments."

22. Dr. Cebrian persuasively explained that additional injections would not be reasonable and necessary to relieve the effects of Claimant's July 24, 2013 industrial injuries or prevent further deterioration of his condition. Initially, he remarked that a November 15, 2013 lumbar MRI revealed that Claimant did not suffer an acute lumbar injury on July 24, 2013 but instead suffers from a degenerative condition. Claimant's worsening symptoms were not related to his industrial injury but were instead caused by his degenerative condition. Moreover, Dr. Cebrian reasoned that, despite numerous injections, physicians have not identified Claimant's pain generator. Furthermore, the requested injections are not consistent with Rule 17, Exhibit 1 of the *Guidelines* because of Claimant's lack of functional improvement from prior injections. Furthermore, Drs. Leach, Allen and Benoit have not documented Claimant's functional improvement as a result of previous injections and Claimant has not provided a pain diary documenting his response to the injections. Finally, Claimant's uncontrolled diabetes mellitus is an absolute contraindication to steroid injections. Accordingly, Dr. Cebrian summarized that the requested injections are not reasonable, necessary and

related medical maintenance benefits designed to relieve the effects of Claimant's July 24, 2013 industrial injury or prevent further deterioration of his condition.

23. Respondents have established that it is more probably true than not that they are entitled to recover an overpayment in the amount of $12,841.25. On February 1, 2016 Respondents filed a FAL. The FAL reflected an overpayment of TTD benefits in the amount of $12,841.25 for the period June 9, 2014 through November 11, 2015. On November 4, 2015 Dr. Shih had performed a 24-month DIME and concluded that Claimant reached MMI on June 9, 2014. Claimant had received TTD benefits from June 9, 2014 through November 11, 2015 for a total of $12,841.25. The TTD benefits that Respondents paid after June 9, 2014 constituted an overpayment because of Dr. Shih's MMI determination. Accordingly, Respondents are entitled to recover an overpayment from Claimant in the amount of $12,841.25.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical Maintenance Benefits

4. To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical

treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

5. Pursuant to Workers' Compensation Rule of Procedure 17-2(A) health care practitioners are to use the *Guidelines* when furnishing medical care under the Workers' Compensation Act. *See* §8-42-101(3)(b), C.R.S. The ALJ may also appropriately consider the *Guidelines* as an evidentiary tool. *Logiudice v. Siemans Westinghouse*, W.C. 4-665-873 (ICAP, Jan. 25, 2011). However the ALJ is not required to grant or deny medical benefits based upon the *Guidelines*. *Thomas v. Four Corners Health Care*, W.C. 4-484-220 (ICAP, Apr. 27, 2009). The ALJ's consideration of the *Guidelines* may include deviations where there is evidence justifying the deviations. *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (ICAP, Jan. 25, 2011). There is no requirement for an ALJ to award or deny medical benefits based on the *Guidelines*. *Thomas v. Four Corners Health Care*, W.C. No. 4-484-220 (ICAP, Apr. 27, 2009); *see Nunn v. United Airlines*, W.C. No. 40785-790 (ICAP, Sept. 9, 2011).

6. As found, Claimant has failed to establish by a preponderance of the evidence that he is entitled to receive reasonable, necessary and related medical maintenance benefits in the form of lumbosacral injection procedures designed to relieve the effects of his July 24, 2013 industrial injuries or prevent further deterioration of his condition. Initially, Claimant received extensive conservative treatment for his industrial injuries that included therapy, medications and injections. However, the record reveals that he did not receive a significant functional benefit. After a 24-month DIME Dr. Shih determined that Claimant reached MMI on June 9, 2014 and assigned a 7% whole person impairment rating.

7. As found, on April 13, 2016 Dr. Leach noted that Claimant required a "lumbosacral injection procedure, then therapy, to achieve MMI." On October 3, 2016 Dr. Leach recommended cervical and lumbar injections. However, Drs. Leach, Allen and Benoit have not provided justification for additional injections. Furthermore, Dr. Shih did not recommend additional injections because Claimant had not received any significant benefit from prior injections. He also noted that Claimant "likely has multifactorial mechanical low back pain which is not likely to improve with further invasive treatments."

8. As found, Dr. Cebrian persuasively explained that additional injections would not be reasonable and necessary to relieve the effects of Claimant's July 24, 2013 industrial injuries or prevent further deterioration of his condition. Initially, he remarked that a November 15, 2013 lumbar MRI revealed that Claimant did not suffer an acute lumbar injury on July 24, 2013 but instead suffers from a degenerative condition. Claimant's worsening symptoms were not related to his industrial injury but were instead caused by his degenerative condition. Moreover, Dr. Cebrian reasoned that, despite numerous injections, physicians have not identified Claimant's pain generator. Furthermore, the requested injections are not consistent with Rule 17, Exhibit 1 of the *Guidelines* because of Claimant's lack of functional improvement from prior injections. Furthermore, Drs. Leach, Allen and Benoit have not documented Claimant's functional improvement as a result of previous injections and Claimant has not provided a pain diary documenting his response to the injections. Finally, Claimant's uncontrolled diabetes mellitus is an absolute contraindication to steroid injections. Accordingly, Dr. Cebrian summarized that the requested injections are not reasonable, necessary and related medical maintenance benefits designed to relieve the effects of Claimant's July 24, 2013 industrial injury or prevent further deterioration of his condition.

Overpayment

9. In 1997 the General Assembly amended §§8-43-303(1), C.R.S. and 8-43-303(2)(a), C.R.S. to permit the reopening of a claim on the grounds of "fraud" or "overpayment" in addition to the traditional grounds of error, mistake or change in condition. *In Re Haney,* W.C. No. 4-796-763 (ICAP, July 28, 2011). The 1997 legislation is designated as an act "concerning the recovery from claimants of Workers' Compensation benefits to which such claimants are not entitled." *Id.* The statutes provide that reopening may not "affect moneys already" paid except in cases of fraud or overpayment. *In Re Stroman,* W.C. No. 4-366-989 (ICAP, Aug. 31, 1999). The statute contemplates that in the case of an overpayment the ALJ has the authority to remedy the situation. *In Re Haney,* W.C. No. 4-796-763 (ICAP, July 28, 2011)

10. Section 8-40-201(15.5), C.R.S, defines "overpayment" as "money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles." There are thus three categories of possible overpayment pursuant to §8-40-201(15.5). *In Re Grandestaff,* No. 4-717-644 (ICAP, Mar. 11, 2013). An overpayment may occur even if it did not exist at the time the claimant received disability or death benefits. *Simpson v. ICAO,* 219 P.3d 354, 358 (Colo. App. 2009). Therefore, retroactive recovery for an overpayment is permitted. *In Re Haney,* W.C. No. 4-796-763 (ICAP, July 28, 2011).

11. In *Mattorano v. United Airlines*, W.C. No. 4-861-379-01 (ICAP, July 25, 2013) the DIME physician assigned the claimant a permanent impairment

rating lower than that determined by her treating physician. The ATP assigned the claimant a 16% lower extremity impairment rating. The respondents filed an FAL and paid the claimant $8,490.73 in PPD benefits. However, the DIME physician subsequently assigned the claimant a 12% lower extremity impairment rating. The respondents filed an amended FAL and awarded the claimant PPD benefits in the amount of $6,368.05. The respondents filed an application for hearing and sought to recover an overpayment in PPD benefits of $2,122.60. The ALJ agreed with the respondents and ordered the claimant to repay an overpayment of $2,122.60. The ICAP affirmed because an overpayment may result even though it did not "exist at the time the claimant received disability or death benefits." The reasoning and analysis in *Mattorano* is controlling in the present matter.

12. As found, Respondents have established by a preponderance of the evidence that they are entitled to recover an overpayment in the amount of $12,841.25. On February 1, 2016 Respondents filed a FAL. The FAL reflected an overpayment of TTD benefits in the amount of $12,841.25 for the period June 9, 2014 through November 11, 2015. On November 4, 2015 Dr. Shih had performed a 24-month DIME and concluded that Claimant reached MMI on June 9, 2014. Claimant had received TTD benefits from June 9, 2014 through November 11, 2015 for a total of $12,841.25. The TTD benefits that Respondents paid after June 9, 2014 constituted an overpayment because of Dr. Shih's MMI determination. Accordingly, Respondents are entitled to recover an overpayment from Claimant in the amount of $12,841.25.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for lumbosacral injection procedures as recommended by Dr. Leach is denied and dismissed.

2. Respondents are entitled to recover an overpayment from Claimant in the amount of $12,841.25.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section*

8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-004-888-01

ISSUES

1. Whether Claimant established by a preponderance of the evidence that he sustained a compensable injury.

2. Whether Respondents are entitled to a penalty of up to one day's compensation for Claimant's failure to timely report his injury pursuant to § 8-43-102(1)(a), C.R.S.

3. Whether Claimant willfully misled the Employer concerning his ability to perform the job and whether Respondents are therefore entitled to a penalty pursuant to § 8-42-112(1)(d), C.R.S.

STIPULATIONS

1. Claimant's average weekly wage is $831.67, with a corresponding temporary total disability (TTD) rate of $554.45.

2. If compensable, Claimant is entitled to TTD from March 1, 2016 through March 31, 2016.

3. All medical treatment Claimant has received for his left shoulder is reasonable and necessary.

FINDINGS OF FACT

1. Claimant was employed by Employer as a youth corrections officer and began his employment in July of 2015.

2. As part of his employment, Claimant attended a youth and staff safety (YASS) training session in late July of 2015.

3. Prior to attending the YASS training, Claimant signed a form titled Pre-Program Statement of Physical Well Being. Claimant checked wrist condition-R and knee condition when asked to check any types of injuries he may have had or still had. Claimant signed the form on July 27, 2015. *See* Exhibit A.

4. On July 31, 2015 Claimant completed a post-program statement of physical well being where he attested that he did not incur any injuries as a result of participating in the YASS training program. *See* Exhibit A.

5. Claimant alleges that during the YASS training he injured his left shoulder while completing an arm-bar takedown with his training partner Seth Howerton.

Claimant alleges that he struck his left forearm against a pad Mr. Howerton was using and felt an immediate electrical shock like sensation in his left shoulder that knocked the wind out of him. Claimant reported he had never felt anything like that before.

6. At training, Claimant was primarily using his left arm for maneuvers. Claimant asked not to be placed in an arm bar takedown using his right shoulder and arm. Claimant's right shoulder tended to get sore with all of his past training sessions and he was worried about hurting his right shoulder. Claimant testified that he thought it was time to use his left shoulder more because of the past soreness he had with his right shoulder. Claimant is and was unaware of any condition or injury to his right shoulder other than the soreness that he had in the past.

7. Prior to working for Employer, Claimant was employed with the Summit County Sheriff's Office as a deputy sheriff for approximately five years. Claimant had undergone defensive tactics training at this prior job.

8. Following the YASS training with Employer, Claimant did not immediately report any injury, and believed he was just sore. Claimant completed the training without making a report of injury and also later completed CPR training without reporting any injury. Claimant then began his employment and worked full duty for Employer for several months before making any report of injury.

9. In September or October of 2015 Claimant made the decision to seek new employment and started searching for other jobs. Claimant was concerned that he wouldn't be able to obtain employment with his hurt shoulder and also worried that he wouldn't be able to defend himself or use his arm if needed in his job. Claimant decided to get his shoulder evaluated.

10. On November 16, 2015 Claimant was evaluated by Jasmine Aldrich, PA. Claimant reported left shoulder pain with an onset of August 2015 after intensive defense training that waxed and waned. PA Aldrich noted no antecedent event and that Claimant had more pain with abduction and forward flexion especially with lifting objects. She assessed left rotator cuff syndrome and recommended use of Motrin for pain, physical therapy, and light duty desk work for eight weeks. *See* Exhibits 9, B.

11. On November 16, 2015 Claimant notified Employer for the first time that he had injured his shoulder at the YASS training in late July, 2015. On November 17, 2015 Claimant filled out an injury/exposure on the job (IOJ) form. Claimant noted on the IOJ form that he was subject to arm bar take downs during YASS training and that at the completion of the course his whole body hurt and he didn't think he had sustained any injuries. Claimant reported that as time passed the pain and soreness, except for the left shoulder, disappeared. Claimant reported believing that he could just stretch the left shoulder out over the next few weeks and that he would be better. On the IOJ form, Claimant noted that his coworkers finally suggested he go to a doctor and that he had seen a doctor the day prior. *See* Exhibit 5.

12. On November 17, 2016 Claimant was evaluated at Concentra by Scott Richardson, M.D. Claimant reported that he was in training at work and that after about a week his left shoulder started to get tender. Claimant reported doing YASS training and that afterwards he hurt all over but the left, non dominant shoulder pain never resolved. Claimant reported no prior problems with the left shoulder. Claimant reported that he had a previous right shoulder injury so was favoring the left side. Claimant reported intermittent pain and decreased strength in the left arm with some actions. Dr. Richardson assessed left shoulder strain, recommended physical therapy, and MRI, and acetaminophen for pain. *See* Exhibits 7, C.

13. On December 3, 2015, December 17, 2013 and December 31, 2015 Claimant was evaluated by Dr. Richardson. Dr. Richardson continued to diagnose left shoulder strain and continued to recommend an MRI of the left shoulder. *See* Exhibits 7, C.

14. On January 6, 2016 Claimant was evaluated by PA Aldrich. PA Aldrich assessed left shoulder joint pain and noted a differential diagnosis of rotator cuff injury versus tear and proximal biceps strain versus tear. PA Aldrich referred Claimant for an MRI of the left shoulder and referred Claimant to orthopedics for the shoulder. *See* Exhibits 9, B.

15. On January 21, 2016 Claimant underwent an MRI of the left shoulder. The impression was moderate to high-grade intrasubstance tear at the junction of the supraspinatus and infraspinatus tendons at the footprint measuring 2 mm mediolateral by 12 mm AP. *See* Exhibit 10.

16. On February 2, 2016 PA Aldrich left a voice message for Claimant with detailed MRI results and advised Claimant that orthopedics denied an evaluation since the case was a workers' compensation case. On February 4, 2016 PA Aldrich called Claimant and discussed the MRI report, noted workers' compensation was a non-issue, and advised that orthopedics had accepted the referral. *See* Exhibits 9, B.

17. On February 11, 2016 Claimant was evaluated by orthopedic surgeon Loukas Kyonos, M.D. Claimant reported left shoulder pain since the first week of August, 2015. Claimant reported doing defensive tactics training when he put out his arm to block a punch and felt a pop in the left shoulder. Claimant reported over the next few days feeling that something was really wrong and that the left shoulder had been plaguing him since. Claimant reported that physical therapy was causing more pain so he stopped. Dr. Kyonos noted that the MRI showed a partial rotator cuff tear. Dr. Kyonos noted that x-rays of the left shoulder taken that day showed a downsloping acromion and possible mild joint space narrowing at the glenohumeral joint and also AC joint degenerative changes. Dr. Kyonos noted that the MRI of the left shoulder from January 21, 2016 showed moderate to high-grade partial thickness tearing at the junction of the supraspinatus and infraspinatus tendons at the footprint and that the long head of the biceps was intact. Dr. Kyonos assessed high grade partial thickness rotator cuff tear and subacromial impingement, and listed a diagnosis of nontraumatic partial left rotator cuff tear. *See* Exhibits 9, B, 10.

18. Dr. Kyonos discussed the risks and benefits of various treatment options with Claimant. Claimant reported being at a critical stage in his career where he was trying to go for sheriff but knew he would not be able to hold up with training the way his shoulder was. Dr. Kyonos noted that Claimant was probably going to proceed with surgery to get the most durable and long term relief. Dr. Kyonos put in a surgical case request with the diagnosis of non traumatic partial left rotator cuff tear and requested the procedure of left shoulder arthroscopy with rotator cuff repair. *See* Exhibits 9, B.

19. On March 1, 2016 Claimant underwent left shoulder surgery performed by Dr. Kyonos. The surgical procedure included arthroscopic small partial thickness rotator cuff repair and subacromial decompression. Dr. Koyonos noted in surgery that Claimant had severe bursitis and a large anterior spur. Dr. Koyonos performed bursectomy and cleared off and resected the anterior spur. Dr. Kyonos took the area of intrasubstance tearing down to a full thickness tear and repaired it. *See* Exhibit 11.

20. Following surgery, Claimant had follow up appointments as well as physical therapy. On May 31, 2016 Dr. Koyonos noted that Claimant had good cuff strength, minimal pain, and Dr. Kyonos released Claimant to full duty work. Claimant has felt great following surgery and his left shoulder is now stronger than his right shoulder. *See* Exhibits 9, B, D.

21. On August 11, 2016 Wallace Larson, M.D. performed an independent medical examination (IME) of Claimant. Claimant reported sustaining an injury to his left shoulder in mid August of 2015 while in YASS training. Claimant reported he had been in law enforcement training previously where he had used his right shoulder for most of the maneuvers and subsequently had right shoulder pain. Claimant reported because of his prior right shoulder pain he asked during the recent YASS training to use primarily his left shoulder. Claimant reported being sore daily during the week long training and that he had been thrown to the ground approximately 100 times during the week. Claimant reported during one maneuver he had his left arm up with his humerus flexed and internally rotated with the left elbow flexed when he felt an electric type shock and left shoulder pain. Claimant reported not seeing anyone initially and that his whole body hurt and he did not believe it was serious. Claimant reported initially that both of his shoulders hurt but that his right shoulder improved and his left shoulder did not. Claimant reported a history of right shoulder problems and soreness and that his symptoms were the same as the left side but that he could feel the tear on the left side. Claimant reported that he had no treatment for his right shoulder. Dr. Larson noted that the past medical history was positive for some right shoulder symptoms but not positive for left shoulder symptoms because Claimant did most of his prior training using his right shoulder. Claimant reported that following surgery his left shoulder felt great and was stronger than his right shoulder. *See* Exhibit D.

22. Dr. Larson reviewed Claimant’s medical records. Dr. Larson noted that Claimant was documented to have an atraumatic, degenerative partial-thickness tear of the rotator cuff. Dr. Larson opined that the training session would not have caused this degenerative type of tear. Dr. Larson also noted the remaining question of whether the training session aggravated a pre-existing condition and aggravated it to a degree

requiring surgical intervention. Dr. Larson opined more likely than not that the condition was non-occupational. Dr. Larson noted the three month interval between occupational exposure and the initial decision to seek medical care and opined that it was more likely than not that Claimant would have sought medical care soon after the training sessions if those sessions had resulted in an aggravation of Claimant's pre-existing condition. *See* Exhibit D.

23. Dr. Larson testified by deposition consistent with his written IME report. Dr. Larson opined that Claimant's left shoulder condition was not work related and that it was a degenerative condition in Claimant's shoulder. Dr. Larson opined that the type of condition in Claimant's left shoulder typically develops over a period of years and is caused by age-related weakening of the tendon. Dr. Larson opined that there was objective evidence from both the MRI scan and from the operative report that Claimant's condition was degenerative.

24. Dr. Larson opined that with a history of an acute rotator cuff tear oftentimes there is a single highly traumatic episode, that is painful immediately, stays painful immediately, and results in immediate weakness in the arm and is confirmed as an acute tear by diagnostic studies. Dr. Larson opined that in Claimant's case, the history was suggestive of a chronic tear with a history of aching rather than immediate severe pain and that everything in Claimant's case was consistent with a degenerative type tear. Dr. Larson noted that people with degenerative changes typically have a longer history of symptoms that aren't as severe and that people with traumatic injuries are usually seen within a few days or a week or so from when the traumatic injury occurs because it causes a big change in their life. Dr. Larson agreed that it was a possibility that the reported mechanism of injury could have aggravated an underlying shoulder condition, but that the objective evidence in this case only identified degenerative conditions.

25. Seth Howerton testified at hearing. Mr. Howerton met Claimant at the YASS training and worked with him at training. Mr. Howerton did not work with Claimant after the training class. Mr. Howerton testified that he remembered Claimant complaining of irritation in one of his shoulders and that Claimant mentioned it was irritating him and that he was going to use his other arm. Mr. Howerton also recalled that Claimant talked with the instructor about the irritation. Mr. Howerton could not remember which shoulder Claimant reported bothering him and that Claimant was still able to perform all of the training.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. *See* § 8-41-301(1)(b) & (c), C.R.S. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to establish, by a preponderance of the evidence, that he sustained a compensable work injury in late July, 2015 during the YASS training. Dr. Larson’s opinions are found credible and persuasive. Claimant had a degenerative condition in his left shoulder that typically develops over a period of years. Dr. Larson points to both the MRI and the surgical reports in support that the condition was degenerative and not acute and persuasively opined that the YASS training did not cause the tear nor did it aggravate or accelerate Claimant's underlying condition. Dr. Larson is credible and persuasive that the condition is not work related.

Further, Claimant's reports surrounding the alleged incident and mechanism of injury were not consistent throughout his treatment and in his testimony. On November 16, 2015 Claimant initially reported to his primary care provider that he had left shoulder pain that waxed and waned with no antecedent event. The next day, when referred to Concentra by Employer, Claimant reported that after one week of training his shoulder was tender. However, in his testimony he reported a specific incident where he felt an electrical type shock that knocked the wind out of him and that he had never felt anything like that before. Despite testifying about this specific incident where he had a strong sensation of electric type shock, he failed to indicate this specific shock type sensation on his reports of injury or the IOJ form he filled out. He reported no antecedent event to the first provider he visited and then a tenderness type feeling to the second provider he visited. Further, when first evaluated by orthopedic surgeon Dr. Kyonos, he reported feeling a pop in his left shoulder and that the next few days he felt like something was really wrong. Claimant's actions in waiting almost four months before reporting any incident or injury are inconsistent with an acute "never felt before" type of incident and are inconsistent with his statements to Dr. Kyonos that he knew in the next few days following the incident that something was "really wrong." Had Claimant suffered an acute injury or an acute aggravation of an underlying condition, it is logically incredible that he would have waited so long to seek treatment and Dr. Larson is persuasive in providing this opinion. Claimant has failed to meet his burden to establish, more likely than not, that the training caused any injury or aggravation to his left shoulder. Based on the inconsistencies in Claimant's reports, the credible testimony of Dr. Larson, and the objective medical evidence, Claimant has failed to demonstrate that his work activities for Employer in July of 2015 caused an acute injury, aggravated an underlying condition, or produced the need for medical treatment.

As Claimant failed to establish a compensable injury, the other issues for determination are moot.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish, by a preponderance of the evidence, that he suffered a compensable injury in July of 2015. His claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the

Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: 12/12/16

Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that the decompression surgery recommended by Dr. Castro is reasonable, necessary, and related to her November 17, 2015 work injury.

FINDINGS OF FACT

1. Claimant is employed by Employer as a full-time housekeeper. On November 17, 2015 she sustained an injury to her lumbar spine when pulling up a Glad bag with recycled newspaper. As she lifted the bag, she felt the sudden onset of low back pain.

2. On November 18, 2015 Claimant was evaluated by Dean Prok, M.D. Claimant reported developing pain in the midline and bilateral low back area with occasional radiation to the left and right legs after attempting to lift the contents of a recycling bin at work. Claimant reported pulling on the liner of the bin that contained heavy magazines when she felt pain in her back. Dr. Prok noted on exam pain in the lower back with straight leg raise and leg movement as well as slight weakness in both legs but that otherwise Claimant had a normal examination. Dr. Prok assessed lumbar strain, midline and low back pain with sciatica, and referred Claimant to Dr. Olsen. Dr. Prok continued to follow up with Claimant throughout her treatment and recommended conservative care and follow up with specialists Dr. Olsen and Dr. Castro. *See* Exhibits 9, 2.

3. On November 25, 2015 Claimant was evaluated by Nicholas Olsen, D.O. Claimant reported pain at a 4/10 level and increased with prolonged standing and prolonged sitting as well as with bending. Claimant reported continued numbness left greater than right. Dr. Olsen ordered x-rays of the lumbar spine that showed mild degenerative disc changes at all lumbar disc levels and no fracture or acute abnormality. *See* Exhibits A, 3.

4. On December 1, 2016 Claimant was evaluated by Dr. Olsen. Claimant reported pain at 7/10 with predominant axial back pain but also intermittent radiation into the left lower extremity. Dr. Olsen assessed lumbar sprain/strain, facet arthrosis, bilateral L4-5 and L5-S1 with left lower extremity radiculopathy. Dr. Olsen reassured Claimant that the x-rays showed mild degenerative changes and recommended Clamant continue physical therapy strengthening her core and reminded her to use correct lifting mechanics. *See* Exhibits A, 3.

5. On December 9, 2016 Claimant was evaluated by Dr. Olsen. Claimant reported increased pain and that physical therapy had aggravated her back. Claimant reported burning pain in the lower back exacerbated with extension maneuvers and intermittent sharp pains in the left leg. Dr. Olsen noted that Claimant continued with axial back pain despite a course of conservative care and more recently physical therapy. Dr. Olsen noted Claimant's subjective complaints suggestive of radiculopathy but yet that Claimant had a normal neurologic examination. He opined that the clinical examination was definitely consistent with possible facet arthrosis. Dr. Olsen ordered an MRI of the lumbar spine. *See* Exhibits A, 3.

6. On December 28, 205 Claimant underwent a MRI of her lumbar spine interpreted by Robert Leibold, M.D. The impression provided was: transitional vertebra, referred to as L5; and L4-5 degenerative disc disease, slightly asymmetric to the left degenerative endplate edema on the left with mild to moderate central stenosis and mild to moderate left foraminal stenosis. *See* Exhibits F, 5.

7. On January 6, 2016 Claimant was evaluated by Dr. Olsen. Claimant reported no change in her pain and intermittent paresthesias in the lower extremities. Dr. Olsen reviewed both the films and the report from Claimant's December 28, 2015 MRI. Dr. Olsen assessed lumbar facet arthrosis, bilateral L4-5 and L5-S1 with left lower extremity radiculopathy and broad based disc protrusion at L4-5, moderate central stenosis, moderate facet arthrosis, and mild-moderate left foraminal stenosis per MRI. Dr. Olsen opined that Claimant had two potential pain generators in both her lumbar disc protrusions and her moderate facet arthrosis, predominantly at the L4-5 level. Dr. Olsen opined that Claimant may note success with commitment to therapy, correct lifting mechanisms, and strengthening her core. Dr. Olsen also discussed epidural and facet injections and the unlikely possibility of surgery. Claimant indicated she would consult with her physicians about other conditions she had and whether there were any contraindications to injections. *See* Exhibits A, 3.

8. On January 20, 206 Claimant was evaluated by Dr. Olsen. Claimant reported a worsening of pain with pain at 9/10. Dr. Olsen noted that he had recommended bilateral L4-5 and L5-S1 facet injection for diagnostic purposes but that Claimant indicated she wanted to cancel the proposed injection and wanted to proceed with surgery reiterating that she just wanted it fixed. Dr. Olsen explained to Claimant that surgery was not a simple fix and that recovery from surgery could take as long as three to six months in successful cases and noted Claimant's surprise that it would not immediately address her complaints. Dr. Olsen noted that Claimant continued to want to discuss surgery believing it would be an answer and noted Claimant had an upcoming appointment with Dr. Castro. *See* Exhibits A, 3.

9. On February 1, 2016 Claimant was evaluated by Bryan Castro, M.D. Dr. Castro noted Claimant had been referred for evaluation of ongoing low back pain and pain into the left greater than right bilateral lower extremities. Dr. Castro noted Claimant had received conservative management with no injections. Dr. Castro reviewed x-rays and MRIs highlighting disc bulging and chronic disc degeneration at L4-5 on the left side

that was causing some lateral recess encroachment and could be impinging upon the exiting L4 and traversing L5 nerve root. Dr. Castro assessed chronic bilateral lumbar radiculopathy. Dr. Castro noted that a reasonable option would be an epidural injection first for treatment and diagnostics. He noted, alternatively, that a lumbar decompression surgery may be a reasonable option as well but at this juncture it was reasonable to start off with a trial of injection. He referred Claimant back to Dr. Olsen. *See* Exhibits B, 7.

10. On February 2, 2016 Claimant was evaluated by Dr. Olsen. Claimant reported that Dr. Castro had not recommended surgery and had recommended first that she exhaust interventional spine care and therapy options. Dr. Olsen again recommended bilateral L4-5 and L5-S1 facet injections and Claimant consented to undergoing the injections. *See* Exhibits A, 3.

11. On March 1, 2016 Claimant underwent bilateral L4-5 and L5-S1 facet injections with Dr. Olsen. Pre injection, Claimant reported a VAS score of 7/10 and post injection she reported a score of 6/10. Dr. Olsen noted the initial impression was a non diagnostic result and instructed Claimant to keep a pain diary hourly for the next eight hours. *See* Exhibits A, 3.

12. On March 9, 2016 Claimant was evaluated by Dr. Olsen. He noted that her recent facet injection only reduced her symptoms by 25% with no additional relief on the days after the procedure. Dr. Olsen noted that they had discussed two pain generators being possible in her case. Dr. Olsen opined the first possible pain generator was facet arthrosis and noted there had been a non diagnostic response to the injection. Dr. Olsen recommended that Claimant undergo a left L4-5 and L5-S1 transforaminal epidural steroid injection and noted that Claimant was now hopeful to avoid surgery. *See* Exhibits A, 3.

13. On March 22, 2016 Claimant underwent left L4-5 and L5-S1 transforaminal epidural steroid injections with Dr. Olsen. Pre injection she reported a VAS score of 8/10 and post injection she reported a score of 5/10. Dr. Olsen asked her to keep a pain diary hourly for the next eight hours. *See* Exhibits A, 3.

14. On March 29, 2016 Claimant was evaluated by Dr. Olsen. Claimant noted no significant relief from the epidural steroid injection and Dr. Olsen opined that based on Claimant's reports and recollection, it appeared the injection was non diagnostic. *See* Exhibits A, 3.

15. On April 4, 2016 Claimant was evaluated by Dr. Castro. Claimant reported ongoing buttock and leg pain which was lifestyle limiting. Dr. Castro opined that it was the pain was related to the L5 lateral recess encroachment and possible nerve impingement at the L5-S1 level and noted some acute bulging in the lateral recess at the L5-S1 level which could be affecting the L5 root. He recommended Claimant undergo an EMG to better evaluate the neural impingement and its possible

effects on her nerves and sent Claimant back to Dr. Olsen for the EMG testing. *See* Exhibits B, 7.

16. On April 4, 2016 Claimant was evaluated by Dr. Olsen. Claimant reported pain at a 10/10 level. Dr. Olsen noted that Dr. Castro had ordered an EMG/nerve conduction study of the left lower extremity. Dr. Olsen noted that Claimant would be scheduled for the study. *See* Exhibits A, 3.

17. On April 20, 2016 Claimant underwent an EMG with Dr. Olsen. The report shows that the study was normal and Dr. Olsen provided the impression of no electro diagnostic evidence of lumbar radiculopathy, peripheral nerve entrapment, or lumbosacral plexopathy. Dr. Olsen recommended continuing the home exercise program and following up with Dr. Castro. *See* Exhibit G.

18. On May 6, 2016 Claimant was evaluated by Dr. Castro. Dr. Castro noted that Claimant had ongoing buttock and leg pain as the predominant complaint and that it was getting worse. Dr. Castro reviewed the EMG and noted it highlighted overall good neurologic function with no evidence of radiculopathy or worrisome neurologic findings. Dr. Castro had a long conversation with Claimant concerning treatment options. He opined that one very reasonable and viable option would be expectant management only to see if she got better. Dr. Castro informed Claimant that surgical and nonsurgical outcomes were really similar. Dr. Castro noted that moving forward, surgical intervention allowed Claimant a more rapid return to function, but if Claimant chose to go the non operative course she would likely have a fairly similar long term outcome. Dr. Castro made a request on this date for approval of surgical decompression of the lumbar spine at L5-S1. *See* Exhibits B, 7.

19. On May 10, 2016 Claimant was evaluated by Dr. Olsen. Claimant reported that she wanted to pursue the lumbar discectomy surgery previously offered by Dr. Castro. Dr. Olsen noted that Claimant understood that both surgical and non surgical outcomes were similar. Dr. Olsen explained to Claimant that studies reflecting this information noted similar outcomes over 18 months to two years. Dr. Olsen noted Claimant was somewhat frustrated by the long duration of recovery regarding disc injuries. Dr. Olsen noted that Claimant understood that there was no guaranty that either approach would offer greater efficacy. Dr. Olsen noted that Claimant would think about it and if she decided to pursue surgery would contact Dr. Castro. *See* Exhibits A, 3.

20. On May 18, 2016 a letter denying the request for surgery was sent by Prium Medical Cost Management Services and by Peter Garcia, M.D. Dr. Garcia noted that he had spoken with Dr. Castro. Dr. Garcia opined that the clinical information provided did not establish the medical necessity of the surgical request. Dr. Garcia noted that there was no evidence of radiculopathy on exam or by nerve studies and that the request for surgery was not indicated. Dr. Garcia noted that surgical indications include radicular symptoms that correlated with an individual's pain, findings and evidence of nerve root compression on imaging, and failure of six to twelve weeks of

conservative treatment. Dr. Garcia opined that there was no evidence of any nerve root compression on imaging and that the electrodiagnostic studies were normal. Dr. Garcia also noted that there was no true clinical evidence of radiculopathy on physical examination and only subjective complaints. *See* Exhibits C, 8.

21. On June 1, 2016 Claimant was evaluated by Dr. Olsen. Dr. Olsen noted that they had previously discussed the pros and cons of surgery and that Claimant saw that she had no real options and planned to pursue a discectomy with Dr. Castro. Dr. Olsen noted that Claimant had exhausted more conservative care options and he again reviewed the surgical and nonsurgical outcomes. *See* Exhibits A, 3.

22. On July 5, 2016 Claimant was evaluated by Dr. Olsen. Claimant noted her surgery was on hold as the carrier denied it. Claimant reported continued pain. Dr. Olsen reviewed the importance of commitment to an exercise program. *See* Exhibits A, 3.

23. On October 4, 2016 Michael Rauzzino, M.D. issued an independent medical evaluation report. Claimant reported to Dr. Rauzzino at the evaluation that she had a primary complaint of axial back pain, and also reported radicular symptoms into her buttocks as well as burning in her feet and pain in the tops of her feet. Claimant reported wanting to have surgery so she could get back to work full time. Dr. Rauzzino noted that on the Computerized Outcomes Management Technologies assessment Claimant scored in the “distressed somatic” category for psychosocial functioning and noted that based on the score, it is possible that the examination may not demonstrate good correlation with Claimant’s history and subjective complaints. Dr. Rauzzino opined that the surgery proposed by Dr. Castro was not reasonable and necessary. Dr. Rauzzino opined that Claimant did not have an acute structural injury at L5-S1 or L4-L5 that would require decompression. Dr. Rauzzino noted that there was a negative EMG and non diagnostic response to injections. He opined that performing a decompression would not help Claimant with her symptoms since axial back pain was her primary complaint. He opined that Claimant’s symptoms did not necessarily fit the pattern of S1 radiculopathy given their location, particularly with Claimant’s reported sensation of burning at the tops of her feet. Dr. Rauzzino opined that Claimant’s symptoms were non anatomic and out of proportion to the mild degenerative changes seen on the lumbar MRI. Dr. Rauzzino opined that there was no simple surgery that would have a high likelihood of improving Claimant’s condition and noted that the fact that other modalities failed to relieve her complaints did not make surgery reasonable or necessary. Dr. Rauzzino opined that if she underwent decompression surgery, it was more likely than not that she would either be unimproved or worsened. *See* Exhibits D, 9.

24. On October 18, 2016 Dr. Olsen’s office responded to a denial of surgery that stated Claimant’s condition was not a work related injury or illness and thus was not the liability of the workers compensation carrier. Dr. Olsen strongly disagreed with the denial and with the position that the conditions were considered ordinary diseases of life. Dr. Olsen noted that Claimant’s condition had become apparent due to her work

duties and strongly disagreed with the assessment of Claimant's condition. *See* Exhibits A, 3.

25. On October 31, 2016 Claimant was evaluated by Dr. Castro. Dr. Castro noted that Claimant had largely a main complaint of low back pain and aching and some buttock pain. Dr. Castro noted that she had new right foot pain and that formerly her complaints were on the left. Dr. Castro noted that the low back pain was much more problematic than the leg symptoms. Dr. Castro opined that Claimant was not a good operative candidate from a low back pain standpoint and noted the minimal findings on MRI. Dr. Castro opined that it was reasonable to get a new MRI to better evaluate right sided compression or any new findings and that if the new MRI did not show any more nerve compression than the original MRI, he did not believe surgical intervention would be an option for her as the original December 2015 MRI findings were quite minor and largely degenerative in nature. *See* Exhibit L.

26. Dr. Rauzzino testified at hearing consistent with his independent medical evaluation report. Dr. Rauzzino noted the history where Claimant had mainly back pain at visits and vague leg pain/radiculopathy reports. Dr. Rauzzino noted that the decompression surgery was mainly for leg pain to free up a nerve that is compressed and that the decompression would not help the axial back pain Claimant had. Dr. Rauzzino opined that if Claimant has more back pain than leg pain, doing the surgery could actually make her worse. Dr. Rauzzino noted that the EMG was negative for active nerve irritability regarding the nerve in question and the level in question for the decompression and that there was no deficit on his physical examination of that nerve level. Dr. Rauzzino noted that the injections did not localize the cause of Claimant's pain. Dr. Rauzzino also noted that Claimant's leg complaints and symptoms were vague and all over the place and not referable to one nerve or the nerve that Dr. Castro wanted to decompress. Dr. Rauzzino noted that the medical treatment guidelines supported his position and that they are evidence based. Dr. Rauzzino opined that under the guidelines for surgery Claimant would have to have leg pain greater than back pain which interfered with her function, return to work, and/or active therapy and physical exam findings of abnormal reflexes, motor weakness, or radicular sensation deficits and findings on the MRI which indicate impingement of nerves or the spinal cord corresponding to reproducible physical exam findings. He opined that Claimant had none of these three requirements and opined that surgery was not reasonable or necessary.

27. Dr. Rauzzino is found to be credible and persuasive. He pointed out why surgery is unlikely to improve Claimant's condition, and why her symptoms and tests do not indicate surgery is appropriate. He also persuasively opined that the medical treatment guidelines were not met in this case.

28. Claimant is credible in her testimony that she wishes to get better as quickly as possible. Claimant also testified credibly that her pain was more in her back than her legs. However, her testimony surrounding pain and location of symptoms

along with the radiographic evidence does not indicate that decompression surgery is reasonable or necessary.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical benefits

Respondents are required to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Claimant has failed to establish by a preponderance of the evidence that the decompression surgery recommended by Dr. Castro is reasonable and necessary medical treatment. As found above, both treating providers, Dr. Olsen and Dr. Castro noted that the outcomes with either surgical or non surgical treatment were similar for Claimant. Dr. Rauzzino credibly opined why the surgical procedure was not reasonable and necessary and his opinion is consistent with the opinion of Dr. Garcia who also noted that Claimant had no evidence of radiculopathy on examination or by nerve conduction studies. Both Dr. Rauzzino and Dr. Garcia are credible and persuasive that the decompression surgery is not indicated. Further, Dr. Castro noted that it was very reasonable and viable to do expectant management only and that the outcomes of surgical and non surgical treatment were very similar. Although he opined that Claimant would have a more rapid return to function with surgery, the non surgical outcome offers Claimant a similar long term outcome and comes with much fewer risks. Additionally, it is noted that at a recent visit, Dr. Castro opined that Claimant’s low back pain was much more problematic than her leg symptoms and that from a low back standpoint she was not a good operative candidate and he recently recommended a new MRI, the results of which were not submitted at hearing. Overall, Claimant has failed to establish that the decompression surgery, more likely than not, is reasonable and necessary. Her request is denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish that the decompression surgery recommended by Dr. Castro is reasonable and necessary medical treatment. Her request for surgery is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 15, 2016,

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

1. Was Claimant "responsible for termination" of her employment?

2. Did Claimant suffer a compensable injury to her right knee as a result of her March 30, 2016 industrial accident?

3. Is Dr. Javernick an authorized treating provider?

4. Is treatment recommended by Dr. Javernick reasonable, necessary, and related to Claimant's industrial accident?

STIPULATIONS

1. Claimant's average weekly wage (AWW) from March 30, 2016 through April 19, 2016, is $658.

2. Claimant is entitled to TTD benefits at the rate of $438.67 per week from March 30, 2016 through April 18, 2016.

3. Claimant's AWW commencing April 20, 2016 is $1,081.09, which includes $423.09 per week for COBRA continuation cost ($658 plus $423.09 = $1,081.09).

4. If Claimant is awarded TTD benefits ongoing from April 19, 2016, Respondents are entitled to an offset for Claimant's receipt of unemployment compensation benefits in the amount of $357 per week commencing May 15, 2016.

FINDINGS OF FACT

1. Claimant worked for Employer as an "overnight stocker." On March 30, 2016, Claimant was injured when she fell off a ladder while stocking merchandise on high shelves.

2. Claimant experienced the immediate onset of severe pain and swelling in her left ankle. She also had pain in her right knee.

3. One of Claimant's supervisors, Dawn Tibbits, helped her as she was lying on the floor. Ms. Tibbitts applied ice to Claimant's ankle, which was visibly swollen and "looked broken." Ms. Tibbits asked Claimant if she wanted to seek medical attention, but Claimant declined. Claimant indicated she would prefer to have her husband take her home. Ms. Tibbits told Claimant if she wanted medical treatment, she would need to see a physician designated by Employer, and "only an assistant manager could take her, due to the paperwork and the drug test." Ms. Tibbits did not provide Claimant with

names of any specific physicians or medical clinics, but emphasized that she “had to” come to the store first, and an assistant manager “has to take her to the doctor.” Claimant then left the store with her husband.

4. Employer has a policy that all employees injured on the job must take a urine drug test within 24 hours of their accident. The purpose of the post-accident drug test is “to ensure the accident was not caused by intoxication.” In this case, Employer did not require Claimant to take a drug test within 24 hours of the accident.

5. Claimant’s ankle pain continued to worsen after she arrived at home, so she sought treatment at Falcon Urgent Care later that day. She had x-rays taken of the left ankle, which showed fractures of the lateral malleolus and left fifth metatarsal. She was told to avoid weight bearing on the left leg and was referred to Dr. Hainge on an emergent basis.

6. Claimant saw Dr. Hainge the next day, on March 31, 2016. Dr. Hainge noted she was “splinted and has been keeping weight off of the foot is much as possible.” On physical examination, she had “moderate-to-severe” edema of the left lower leg and ankle down into the digits. There was moderate ecchymosis of the lateral ankle and foot. She had “acute pain” to palpation of the ankle and the fifth metatarsal base. Dr. Hainge ordered and personally interpreted x-rays of the left foot. Dr. Hainge diagnosed a nondisplaced Danis-Weber type A left fibula fracture, and a “minimally displaced” fracture of the left fifth metatarsal base with an “abnormally large avulsion fracture pattern.” Dr. Hainge applied a modified Jones compression dressing and PFS, and instructed Claimant “to maintain NWB status via crutches/walker/leg caddy.” Dr. Hainge also instructed Claimant to elevate her leg above her heart on an “almost constant” basis until her next visit.

7. In compliance with Dr. Hainge’s orders, Claimant spent the next five days primarily lying in bed with her foot elevated. Her ambulatory activities around the house were mostly limited to using the restroom. Even that minimal amount of activity caused her difficulty. Claimant tried to use crutches that she had available from a prior surgery, but hurt her shoulder. Claimant used a wheeled office-type chair as a makeshift knee caddy instead.

8. Claimant returned to Dr. Hainge on April 5, 2016. He noted that “she is having difficulty with the crutches and that they are investigating a knee caddy. Her husband admits she probably has ‘been on her foot too much.’” On physical examination, the edema was improved, although “still quite moderate.” Dr. Hainge placed Claimant in a fiberglass cast, and advised her to “maintain NWB status.” Dr. Hainge further instructed Claimant to keep her leg elevated above her heart “frequently.” Claimant could increase her dependency “to tolerance” as her swelling and pain improved.

9. Claimant’s understanding of the instructions she received from Dr. Hainge on April 5 was that she should keep the leg elevated most of the time until the pain and swelling went down.

10. After her accident, Claimant had two telephone conversations with the store manager, Jennifer Smith. The first conversation took place on or about April 7, 2016. At that time, Ms. Smith told Claimant she had to come to the store to complete claim-related "paperwork" and accompany an assistant manager to take a drug test. Claimant informed Ms. Smith she could not come in because she was in severe pain and "immobile." Claimant asked if someone could mail her the paperwork, but Ms. Smith said she could not do so. Ms. Smith then "kinda put it off" because she "felt bad" for Claimant and also was not sure how to proceed under the circumstances. Ms. Smith contacted her "MAPM" for instructions on what to do next.

11. Ms. Smith was subsequently informed by the MAPM that Claimant must come in and complete the paperwork, and was required to complete the drug test. Ms. Smith was instructed to give Claimant an ultimatum of 24 hours to complete the drug test, and to fire Claimant if she did not comply.

12. Ms. Smith spoke with Claimant via telephone on April 14, 2016. She informed Claimant she would be terminated if she did not come to the store to complete paperwork and take a drug test within 24 hours. Claimant replied that she was not able to ambulate and had been instructed by her doctor to stay off her leg. Claimant was upset, but stated she would come to the store if she received assurances that Employer would "be responsible" for any reinjury or aggravation of her condition. Ms. Smith stated she could not give any such assurance. Claimant then asked to speak to a different supervisor, with whom she had a similar conversation.

13. Ms. Smith was not scheduled to work the next few days. She returned to work on April 19 and learned that Claimant had not completed the paperwork or taken the drug test. Ms. Smith terminated Claimant's employment effective April 19, 2016.

14. Between the date of injury and the date of her termination, Claimant only left her home three times, to attend medical appointments. In each instance, she required significant assistance from her husband, including being carried from her home to their vehicle. She also had the benefit of a wheelchair at the doctors' offices.

15. Claimant's testimony that she had severe pain and significant difficulty with even minimal ambulation around her home prior to April 19, 2016 is credible and supported by the medical records.

16. Claimant completed a Workers' Claim for Compensation on April 22, 2016. In the section describing the parts of her body that were injured, Claimant included "right knee."

17. Claimant saw Dr. Hainge again on April 26, 2016. Dr. Hainge documented that "she is able to use the knee caddy, but this does increase the stress on her right knee. She tried a peg leg walker for the left lower extremity, but this also exacerbated right knee pain, to the point she could not use the apparatus." On physical examination, she had "moderate" edema, which was less than her previous visit. She still had "acute pain to palpation over the distal left fibular and fifth metatarsal base fracture sites." X-

rays showed progressive consolidation of the fibular fracture, but the metatarsal avulsion fracture was “slower to consolidate.” The fiberglass cast was reapplied and she was also given a cast shoe. Dr. Hainge instructed Claimant “to maintain mostly NWB status via the knee caddy, but she can intermittently perform guarded NWB to the left cast boot, preferably with a walker or crutches. Continue intermittent elevation above the heart.”

18. Claimant’s next visit with Dr. Hainge was May 17, 2016. By that time, she had been “intermittently performing WB activity via the cast boot.” Her pain was significantly improved. She still had “moderate edema,” which Dr. Hainge noted was “above average for this milestone.” Claimant was instructed to “wear the BK pneumatic Cam boot during all WB activities. If pain increases, she can revert back and forth to the leg caddy. Maintain intermittent elevation above the heart.”

19. Claimant’s ankle continued to improve slowly throughout the summer. On July 15, 2016, Dr. Hainge noted that “she did have a setback during the transition phase attributed to increasing her weight bearing activities too quickly.” X-rays showed good consolidation of the fractures. She was allowed to discontinue the cam boot and transitioned to a lace-up Velcro strap ankle brace, and a stable shoe as tolerated. Dr. Hainge advised Claimant to “slowly increase WB activities to tolerance.” Although he did not document it in his chart notes, Dr. Hainge verbally referred Claimant to his partner, Dr. Javernick, for evaluation of her right knee pain.

20. Claimant saw Dr. Javernick on August 3, 2016 for evaluation of her right knee. She told Dr. Javernick that “her knee was doing well until four months ago when she fell off of a ladder injuring her foot, ankle, and her knee. She has had pain ever since that time and she has pain on a daily basis.” She reported knee pain with routine activities such as entering and exiting a vehicle, putting on her shoes, and performing household tasks. She reported that her knees “grind, they get stuck in a position, they get swollen.” She had been icing and elevating her knee intermittently, and taking NSAIDs, without significant relief. She reported a previous meniscal surgery with Dr. Matthews in 2015. Dr. Javernick observed Claimant ambulate with “an antalgic gait.” She was guarding her lower extremity. Physical examination was “somewhat limited secondary to the amount of pain that she is currently experiencing in the knee.” Dr. Javernick ordered x-rays, which showed advanced degenerative changes in the knee. osteoarthritis in the knee.

21. Dr. Javernick assessed Claimant as “a 46-year-old female with a recent fall and history of previous meniscal surgery now with knee pain with the diagnosis of osteoarthritis. I suspect this is a combination of degenerative change as well as posttraumatic changes. Although this is unclear, I have not seen her prior to her fall. A fall can aggravate arthritic conditions.” Dr. Javernick reviewed treatment options including activity modification, NSAIDs, physical therapy, bracing, injections, and surgery. He placed Claimant in a medial unloader brace and recommended that she start formal physical therapy. If that failed to alleviate her symptoms, he indicated he would consider a steroid injection.

22. Claimant has a pre-existing history of injury and surgery on her right knee. Claimant tore her medial meniscus in April 2015 as a result of a "misstep" while she was walking down her driveway. An MRI showed a large radial tear of the posterior horn of the medial meniscus, and significant degeneration of the articular cartilage in the medial compartment and patellofemoral joint.

23. Claimant had arthroscopic surgery with Dr. Matthews on May 11, 2015. Thereafter, she underwent physical therapy and slowly improved. The last physical therapy note the ALJ was able to review was dated August 3, 2015. On that date, Claimant reported that "she is still having pain at the end of work shift but goes away after she sleeps. Pt feels that she may be ready to manage care without PT." She tolerated exercise well without increased pain.

24. After she was discharged from physical therapy, Claimant worked her regular duties as a stocker without limitation.

25. In February and March 2016, Claimant sought treatment for pain in multiple joints, including her bilateral knees. A physical examination performed on March 8, 2016 showed tenderness to palpation of the right patella, but normal range of motion. All other provocative tests were negative. She was not given any specific diagnosis referable to her knees.

26. Dr. John Burris performed an Independent Medical Examination (IME) at Respondents' request on September 26, 2016. Dr. Burris reviewed Claimant's medical records, interviewed Claimant, and performed a physical examination. Dr. Burris opined that Claimant had received appropriate treatment for her left ankle and foot fractures, and had reached MMI for those conditions. Dr. Burris opined that Claimant's knee symptoms were not causally related to her March 30, 2016 accident. Dr. Burris noted that Claimant's early treatment records do not reference any knee symptoms, with the exception of Dr. Hainge's April 26 note referring to the knee caddy. Dr. Burris opined that Claimant's knee symptoms are related to her pre-existing degenerative arthritis.

27. Dr. Burris testified at hearing as a witness for Respondents, wherein he expounded upon the opinions expressed in his IME report. Dr. Burris reiterated his opinion that Claimant's knee symptoms are attributable to severe pre-existing degenerative changes, which were not aggravated or accelerated by the industrial accident. Dr. Burris further noted that all of the treatment recommended by Dr. Javernick is directed to osteoarthritis. Dr. Burris agreed that Dr. Javernick's treatment recommendations were reasonable, but unrelated to the industrial injury.

28. Dr. Timothy Hall performed an IME on October 5, 2016 at Claimant's request. Dr. Hall disagreed with Dr. Burris' opinion regarding causation of the right knee complaints. Dr. Hall opined that the record is "far more consistent with two acute events superimposed on degenerative changes such as the injury in 2015 and then another injury in 2016 when she fell from the ladder." Dr. Hall also opined that Claimant's knee symptoms were aggravated by "excess loading and abnormal loading the right knee," as a result of being nonweightbearing on the left foot and ankle for an extended period.

Dr. Hall opined that Claimant likely reinjured the meniscus that was repaired in 2015. He recommended an MRI of the right knee and orthopedic follow-up with Dr. Javernick.

29. Claimant received $357 in weekly unemployment insurance (UI) benefits, commencing May 15, 2016. The UI Benefit Payment History admitted into evidence shows payments made through August 27, 2016. At that time, Claimant's account had a remaining balance of $3,927. Based on her weekly rate, Claimant was entitled to an additional 11 weeks of UI benefits. ($3,927 ÷ $357 = 11 weeks). The ALJ infers that Claimant's benefits terminated as of November 13, 2016.

30. Claimant was disabled by the March 30, 2016 accident, and suffered a wage loss as a direct consequence of the injury.

31. Respondents have failed to prove by a preponderance of the evidence that Claimant was "responsible for termination" of her employment.

32. Claimant has proven by a preponderance of the evidence that she suffered a right knee injury as a result of the March 30, 2016 accident.

33. Dr. Javernick is authorized by virtue of a referral from Dr. Hainge.

34. Dr. Javernick's current treatment recommendations of a knee unloader brace and physical therapy are reasonable and necessary treatment for Claimant's compensable knee injury.

35. Respondents are entitled to reduce Claimant's TTD benefits by $357 per week from May 15, 2016 through November 13, 2016.

CONCLUSIONS OF LAW

A. Was Claimant "responsible for termination" of her employment?

The termination statutes, § 8-42-103(g) and § 8-42-105(4)(a) C.R.S., provide:

> In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury.

The employer must prove by a preponderance of the evidence that a claimant was terminated for cause or was responsible for the separation from employment. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008).

To establish that a claimant was responsible for termination, the respondents must show the claimant performed a volitional act or otherwise exercised "some degree of control over the circumstances which led to the termination." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). Whether the claimant acted volitionally or exercised control over the circumstances of the termination is a question of fact, which must be evaluated based on the totality of circumstances. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

An employer's policy, particularly one which may lead to discharge for absenteeism without regard to the reasons for the absences, is not determinative of whether a claimant acted volitionally with regard to a separation. *See Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. App. 1987). The mere fact that the employer discharged the claimant in accordance with its personnel rules does not establish that the claimant acted volitionally or exercised control over the circumstances of the termination.

Moreover, the term " responsible," as used in the termination statutes, may not be construed in a fashion which undermines the "overall scheme of the Act." *Colorado Springs Disposal v. Industrial Claim Appeals Office, supra,* In *Colorado Springs Disposal* the court held the "word 'responsible' does not refer to an employee's injury or injury-producing activity." The court reasoned that treating a claimant as "responsible" for the loss of employment caused by physical limitations resulting from the compensable injury itself would significantly alter fundamental principles of the Act.

Hence, a claimant does not act "volitionally" or exercise control over the circumstances leading to the termination if the effects of the injury ultimately lead to her termination. *E.g., Kauffman v. Noffsinger* W. C. No. 4-608-836 (ICAO, April 18, 2005); *Blair v. Art C. Klein Construction, Inc.*, W.C. No. 4-556-576 (ICAO, November 3, 2003); *Bonney v. Pueblo Youth Service Bureau,* W.C. No. 4-485-720 (ICAO, April 24, 2002).

Claimant was physically unable to comply with Employer's request that she come to the store to complete paperwork and then be taken by a manager to another location for a drug test. She had been instructed to remain completely nonweightbearing on her injured left leg throughout the three weeks preceding her termination. For the first week, Dr. Hainge instructed her to elevate her leg above her heart on an "almost continual" basis. In other words, she was instructed to stay in bed with her leg up. Even minimal activities such as getting up to use the restroom were "too much" and aggravated her pain. For the following three weeks, she was instructed to lie down with her leg elevated "frequently." Furthermore, she could not use crutches, and had to use makeshift assistive devices until she was able to purchase a knee caddy. Claimant was minimally ambulatory and had difficulty performing basic activities in her home for the entire time before her termination. Employer did not offer her any accommodation or assistance with meeting its requirements. Nor was Employer willing to accept responsibility for any additional injury she might sustain trying to comply with its demands.

Based on the totality of evidence presented, the ALJ concludes that Employer's insistence that Claimant come to the store to complete paperwork, and then be taken by a manager to some other location, was objectively unreasonable. Claimant was put in the untenable position of violating her doctor's orders and exposing herself to further injury in order to preserve her job. Her refusal to do so does not constitute "volitional conduct" within the meaning of the termination statutes.

The circumstances which prevented Claimant from complying with Employer's directives were beyond her control. Accordingly, she was not "responsible for termination" of her employment.

B. Compensability of the right knee

The respondents are liable for authorized medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a). Even if the respondents have admitted liability for an injury, they retain the right to dispute whether any particular treatment is reasonable, necessary, and causally related to the industrial injury. *Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). If the claimant's entitlement to medical benefits is disputed, the claimant must prove a causal relationship between the industrial injury and the requested medical benefits by a preponderance of the evidence. *Id.* A claimant may rely on medical or lay evidence to carry his or her burden. *Colorado Fuel and Iron Corp. v. Industrial Commission*, 380 P.2d 28 (Colo. 1963).

The mere existence of a pre-existing condition does not disqualify a claim for compensation or medical benefits. A claimant with a pre-existing condition may recover benefits if an industrial accident "aggravates, accelerates, or combines with" the pre-existing condition to cause disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom caused by the aggravation of a pre-existing condition, but an incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable aggravation. *Witt v. James J. Keil, Jr.*, W.C. No. 4-225-334 (ICAO, April 7, 1988). Rather, a claimant is entitled to medical benefits for treatment of pain only if the pain is proximately caused by the work-related activities or accident, rather than the underlying pre-existing condition. *F. R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985)*; Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990).

As found, Claimant has proven by a preponderance of the evidence that she injured her right knee as a result of the March 30, 2016 work accident. There is no doubt that Claimant suffers from significant pre-existing osteoarthritis in the right knee. But the Respondents are liable if an accident "aggravates, accelerates, or combines with" the pre-existing condition to produce a need for medical treatment. The ALJ is persuaded that the accident sufficiently aggravated her pre-existing condition to justify evaluation, diagnostic imaging, and the conservative treatment recommended by Dr. Javernick. Dr. Javernick opined Claimant's knee symptoms represent "a *combination* of degenerative change as well as posttraumatic changes." Dr. Hall agreed with that assessment. Although Dr. Burris opined that Claimant did not injure her knee as a result of the accident, he relied most heavily on the lack of notations regarding knee symptoms in the initial reports from Falcon Urgent Care and Dr. Hainge. The ALJ does not find that to be dispositive because Claimant's fractured ankle was comparatively much more severe and naturally the primary focus of evaluation. Claimant expressly claimed "right knee" problems as a compensable component of her injury on her Workers' Claim for Compensation form, which she completed slightly more than three weeks after the accident. Thereafter, Claimant has consistently described her increased right knee pain in discussions with Dr. Javernick, Dr. Hall, and Dr. Burris, and in her hearing testimony. After considering the totality of evidence presented, the ALJ concludes that Claimant suffered a compensable aggravation of her pre-existing right knee condition as a result of the March 30, 2016 accident.

C. Right knee treatment with Dr. Javernick

Besides showing that any requested medical treatment is reasonable, necessary and related, a claimant must also show that the treatment is "authorized." "Authorization" refers to a physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary within the meaning of § 8-42-101(1)(a). *Mason Jar Restaurant v. Industrial Claim Appeals Office*, 862 P.2d 1026 (Colo. App. 1993). An "authorized" provider includes any physician to whom the claimant is referred to in "the normal progression of authorized treatment." *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985).

As found, Dr. Hainge referred Claimant to Dr. Javernick for evaluation and treatment of her right knee. Therefore, Dr. Javernick is "authorized."

The ALJ further concludes that the initial evaluation with Dr. Javernick, the unloader brace, and the physical therapy he recommended are all reasonable and necessary treatment modalities for Claimant's compensable knee injury.

ORDER

It is therefore ordered that:

1. Respondents shall pay Claimant TTD benefits at the weekly rate of $438.67, from March 31, 2016 through April 19, 2016, based on the stipulated AWW of $658.

2. Respondents shall pay Claimant TTD benefits at the weekly rate of $720.73, commencing April 20, 2016 and continuing until terminated according to law, based on the stipulated AWW of $1,081.09.

3. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. Respondents may take credit for any TTD benefits previously paid to Claimant.

5. Respondents may take credit for any statutory interest previously paid to Claimant.

6. Respondents' request to terminate Claimant's TTD benefits on April 19, 2016 is denied and dismissed.

7. Respondents may reduce Claimant's TTD benefits by $357 per week, from May 15, 2016 through November 13, 2016, on account of the UI offset.

8. Respondents shall pay the charges from Falcon Urgent Care and Dr. Hainge, in accordance with the parties' stipulation.

9. Respondents shall pay the charges from Claimant's August 3, 2016 appointment with Dr. Javernick.

10. Respondents shall pay for all reasonable, necessary and authorized medical treatment related to Claimant's compensable left leg injury and right knee injury, including the unloader knee brace and physical therapy prescribed by Dr. Javernick.

11. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-942-783-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on December 6, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 12/6/16, Courtroom1, beginning at 1:37 PM, and ending at 5:00 PM).

Claimant's Exhibits 1 through 16 were admitted into evidence, without objection. Respondents' Exhibits A through J were admitted into evidence, without objection. A written transcript of the evidentiary deposition of Yusuke Wakeshima, M.D. (hereinafter "Wakesima Depo.", followed by a page and line number) was filed.

PRELIMINARY MATTER

At the commencement of the hearing, Respondents made a Motion to Strike the Application for Hearing. This motion was previously heard by Pre-Hearing ALJ (PALJ) Michael E. Harr at a pre-hearing conference. PALJ Harr's legal analysis included consideration of Respondents' objection to ripeness of the issue of medical benefits. PALJ Harr determined that "ripeness" necessarily entails whether an issue is real, immediate, and fit for adjudication. Under the ripeness doctrine, adjudication should be withheld for uncertain or contingent future matters that suppose a speculative injury that may never occur. *Olivas-Soto v. Indus. Claim Appeals Office*, 143 P.3d 1178, 1180 (Colo. App. 2006). The test for ripeness must account for whether a claimant has a “factual basis” for contesting a final admission. *Silveira v. Colo. Spgs. Health Partners*, W.C. No. 4-502-555 [Indus. Claim Appeals Office (ICAO), November 8, 2011] (issue not ripe when at the time the respondents filed their application for hearing, they had no factual basis for asserting that they should not continue to be liable for the claimant’s benefits).

In the present case, the Claimant presents a factual basis for requesting adjudication of the medical question concerning whether injections recommended by Dr. Wakeshima, the Claimant’s authorized treating physician (ATP), are reasonably necessary to cure and relieve the effects of the injury, irrespective whether such treatment is curative or reasonable to maintain the Claimant at MMI. Dr. Wakeshima recommended the injection therapy before Albert Hattem, M.D., placed the Claimant at maximum medical improvement (MMI). The Claimant’s authorized surgeon, Andrew Castro, M.D., agrees with Dr. Wakeshima’s recommendation for additional injection therapy. The PALJ agreed with the Claimant’s position that Dr. Wakeshima’s recommendation is ripe for adjudication, irrespective of the pendency of a Division Independent Medical Examiner’s (DIME) determination of MMI. PALJ Harr denied the Respondents’ Motion and the Claimant was allowed to proceed with the hearing on December 6, 2016. The present ALJ again denies Respondent’s Motion, after considering it *de novo*. The issue of reasonably necessary medical benefits is ripe for determination. The DIME process is not determinative of reasonably necessary medical care in this matter. The present ALJ hereby determines that it would subvert the underlying purpose of the Workers’ Compensation Act to provide speedy medical benefits, on a procedural legal basis, to abate reasonably necessary medical treatment because a DIME is pending. Additionally, Respondents Motion for the late endorsement of George Scharakaschwili, M.D., at the commencement of the hearing was denied on the record. A Division independent medical Examination (DIME) is pending for January 9, 2017, with Jade Dillon, M.D., however, counsel for the Claimant represented that the Claimant could not afford the DIME fee and it was unlikely that the DIME would occur.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant. It was filed, electronically, on December 13, 2016. On December 15, 2016, the Respondents filed objections to the proposed decision. After a consideration of the proposed decision and the objections thereto, the ALJ has modified the proposal and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concerns whether the Claimant is entitled to reasonably necessary medical benefits that are causally related to his admitted injury; whether his diagnosed ongoing Complex Regional Pain Syndrome (CRPS) is causally related to the admitted injury; and, whether lumbar sympathetic blocks/injections as ordered by authorized treating physician, Yusuke Wakeshima, M.D. are reasonably necessary to cure and relieve the effects of the admitted injury.

The Claimant bears the burden of proof, by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant filed an Application for Hearing, dated August 11, 2016, on the issues of reasonably necessary medical benefits, specifically lumbar sympathetic block injections for C.R.P.S. (chronic regional pain syndrome), to be performed by Dr. Wakeshima. On the same day, August 11, 2016, the Respondents filed a Final Admission of Liability (FAL), to which Claimant timely objected.

2. On October 27, 2016, PALJ Michael E. Harr issued an order denying the Respondents' Motion to Strike the Application for Hearing and allowing this matter to proceed to hearing on the issue of whether injection therapy recommended by Dr. Wakeshima is reasonably necessary to cure and relieve the effects of the Claimant's admitted injury, despite the fact that the Claimant was placed at MMI by Albert Hattem, M.D.. Because the insurance adjuster referred the Claimant to Dr. Hattem, and Dr. Hattem notes on the first visit of February 4, 2016 that [the Claimant] presented today…for a medical evaluation…Prior to today's visit medical records were forwarded for my review…." The Claimant disputes whether Dr. Hattem is an ATP. The ALJ infers that if it walks, talks and squawks like an Independent Medical Examination (IME), it probably is an IME.

General Findings

3. On February 13, 2014, the Claimant presented to Katherine Drapeau, D.O., for an Initial Evaluation and reported being a passenger in a large pickup truck and was involved in an accident in a dense fog. The Claimant complained of pain starting in the lower lumbar area and extending up to midthorax bilaterally. He complained of pain in his right leg that extended down his foot accompanied by numbness. Dr. Drapeau noted a halting gait, flattening of the lordosis, muscle spasms, and tenderness bilaterally. Dr. Drapeau diagnosed lumbar strain with right radicular symptoms which were of concern for disk pathology, and she ordered a lumbar MRI (magnetic resonance imaging).

4. On February 28, 2014, John C. Roth, M.D. interpreted the MRI of the lumbar spine as indicating annular disc bulge at L5-S1 and moderate sized right paracentral disc extrusion resulting in impingement on the right S1 nerve root and into the upper right S1 lateral recess. Also indicated in the MRI was a slight annular disc bulge and a small left posterolateral/foraminal disc protrusion at L4-5 without findings for nerve impingement at L4-5.

5. On March 7, 2014, the Claimant was evaluated by Dr. Wakeshima. Dr. Wakeshima noted that the Claimant was a 39-year-old right hand dominant male who reported axial low back pain and right leg region. The pain radiated from the thoracic level down to the lower lumbar level. He had pain in his right leg, entirely down to the foot level. The pain was greatest about the posterior aspect of the thigh and leg. The Claimant reported that the symptoms had been ongoing since an injury at work on February 11, 2014. Dr. Wakeshima further reported: Axial low back pain with right leg pain in a global distribution from the thigh down to the toe level. The patient reported his pain level was at 8/10 to 9/10. The patient also noted increased heart rate when he has pain as well as numbness and tingling in the right lower extremity (RLE). Back pain radiated to the right lumbar region and gluteal region distal to the iliac crest level. Straight leg raise was positive on the right to the entire leg region, but reported it was greatest about the posterior thigh and posterior leg region. Gait was antalgic secondary to right leg pain symptoms. Dr. Wakeshima's impressions were: "1. Axial low back pain with right lower extremity pain. A. Clinical history and examinations are consistent with discogenic etiology of low back pain with S1 radiculopathy. B. MRI of the lumbar spine on February 28, 2014 reported L5-S1 slight generalized annular disc bulge and moderate sized right paracentral disc extrusion resulting impinging of the right S1 nerve root as it exits the thecal sac into the upper right S1 lateral recess. 2. The patient is unable to tolerate oral medications." Findings were most consistent with S1 radiculopathy.

6. On June 3, 2014, Dr. Wakeshima found mild to moderate S1 radiculopathy on the right. This correlated with the Claimant's clinical presentation and MRI studies. On July 16, 2014, the Claimant received a right-sided sacroiliac joint steroid injection from Samuel Y. Chan, M.D. On July 23, 2014, Dr. Wakeshima noted "the patient with no improvement after right L5 and right S1 transforaminal epidural steroid injection on May 7, 2014 where he reports pain went from 8/10 – 9/10 down to 7/10."

7. On September 10, 2014, the Claimant reported noticing increased pain that had been more ecchymotic, especially in the morning, and there was definitely significant color change and swelling. He reported increased perspiration on the right leg compared to the left with the right leg feeling cold in the morning. Examination found slight ecchymosis about the right lateral foot region and below the lateral malleoius and also allodynia in this region. Dr. Wakeshima's impression was right lateral foot and ankle pain and allodynia. Dr. Wakeshima sought to rule out CRPS of the RLE. He ordered an x-ray of the right foot and ankle to evaluate for demineralization and requested a triple phase bone scan to evaluate for CRPS. A positive finding would suggest undergoing sympathetic blocks. On September 26, 2014. Dr. Wakeshima noted that Dr. Castro recommended surgical intervention, microdiscectomy and decompression.

8. On September 30, 2014, the Claimant had a Three Phase Bone Scan showing increased flow in the region of the mid and lateral right ankle with focal increased activity projecting anteriorly over the mid and lateral distal tibia and the distal fibula. An addendum on October 15, 2014 found an increased flow of the right ankle. Dr. Wenzel stated the opinion that, "the findings on this study are not typical of complex regional pain syndrome or (RSD), however, CRPS cannot entirely be ruled out."

9. On October 13, 2014, the Claimant presented to Tashof Bernton, M.D. Dr. bernton reported that "Patient has abnormal stress thermogram with increased temperature in the right medial thigh and right lateral leg with cooling of the affected right side and the anterior and posterior calf." Dr. Bernton recommended a Doppler study to rule out deep vein thrombosis. "If indeed Doppler is negative, the thermogram study is consistent with complex regional pain syndrome; however, this would be a complex regional pain syndrome type 2 with presence of radiculopathy. In that setting, recommendations would be to move forward with treatment of the underlying pain generator, which is radiculopathy. **Consideration could be given to sympathetic blockade at the time of surgery and close monitoring postoperatively for findings of potential CRPS** (emphasis supplied)**.**"

10. On October 14, 2014, Dr. Wakeshima sought to rule out CRPS as the patient reported temperature fluctuation about the RLE. In a phone call, Dr. Bernton stated concerns about the increased swelling in the lower extremity. He advised that the thermogram studies demonstrated findings highly suggestive of CRPS. On October 28, 2014 Dr. Wakeshima diagnosed the Claimant with axial low back pain with right posterior thigh and leg region pain down to foot level where he reported increased pain in the foot region. The clinical history and thermogram studies were suggestive of CRPS, type II with persistent radiculopathy.

11. On January 15, 2015, Dr. Bernton performed an Automonic Testing Battery (QSART) which was positive for CRPS. He recommended treatment of the radiculopathy and that the presence of CRPS, type 2, should not contraindicate treatment, including surgical treatment if otherwise indicated. "**The presence of CRPS would indicate that use of sympathetic blockade preoperatively and postoperatively would be appropriate to consider if surgical indications for radiculopathy are otherwise present** (emphasis supplied)**."**

12. On January 22, 2015 Dr. Wakeshima, on an exam of the Claimant, found significant allodynia about the right posterior thigh and right posterior leg region as well as plantar aspect of the foot. The QSART study of January 15, 2015 was positive for CRPS, type II. "I have also put a request for lumbar sympathetic block on the right to address CRPS on the right lower extremity…. If this is ineffective, we will discuss with Dr. Castro whether he still wishes to go forth with decompression surgery."

13. On February 3, 2015, Dr. Wakeshima noted that the Claimant would go forward with the sympathetic block. "Based on his response to the sympathetic block, we will discuss the possibility of having this repeated and also coordinating this with Dr. Castro to perform a sympathetic block before the surgery and then also after the surgery. Claimant would reinitiate the Butrans patch." On February 17, 2015, Dr. Wakeshima wrote, "Sympathetic block was initially ordered but not yet authorized [by the] insurance carrier… We will once again investigate the status of the sympathetic block, which I do feel is paramount and I am not sure why this is not being authorized by his insurance carrier."

14. On March 5, 2015, Dr. Wakeshima noted that the adjuster authorized the sympathetic block injections. The adjuster requested that pain levels be well documented as well as changes in skin color, temperature, or perspiration before and after the sympathetic block. He further stated "I did inform the adjuster that I would opine that he does have complex regional pain syndrome type 2 superimposed over his lumbar radiculopathy and both will need

to be addressed. I also did inform him that it is my opinion that Dr. Castro would first like to have the patient undergo the sympathetic blocks and based on his response to sympathetic blocks, he would consider whether he will go forth with the surgical intervention. I did inform him that the CRPS symptoms could potentially worsen after spine surgery, and therefore, it would be best served to have him undergo sympathetic blocks and if this helps with pain symptoms have this once again repeated right before his surgery."

15. On March 26, 2015, the Claimant presented to Dr. Chan for right lumbar sympathetic block procedure. "During 30 minutes, the temperature of the right lower extremity has elevated from the preinjection level of 28.7 degrees Celsius to 36 degree Celsius indicating a successful sympatholysis. The patient noted that his pain complaint was substantially decreased and he was able to weight bear with bilateral lower extremities when he was discharged from the surgery center." Claimant's 7-day Pain Diary with an ending date of April 1, 2015 indicated a decrease in pain from an 8/10 just walking to a 4/10 during yard work.

16. On April 2, 2015, Dr. Wakeshima noted that the Claimant demonstrated diagnostic response to sympathetic block where he reported pain level went from 8/10 to 3/10 for two days after the injection on March 26, 2015.

17. On April 8, 2015, Dr. Wakeshima requested an EMG of the RLE and a repeat sympathetic block. On April 23, 2015, the Claimant presented for a second right lumbar sympathetic block with Dr. Chan. Dr. Chan wrote, "Initial temperature of the right lower extremity was 28.3 degrees Celsius and this was elevated to 37 degree Celsius indicating a successful sympatholysis."

18. On May 5, 2015, Dr. Wakeshima noted, "Electrodiagnostic studies of the right lower extremity demonstrated electrophysiological evidence of the increased spontaneous activity in the S1 innervated muscle test today. He had moderate S1 radiculopathy on the right. There was also mild decreased amplitude and distal onset of peroneal motor nerve test at the EDD. New findings of mild peroneal motor neuropathy distal to the tibialis anterior."

19. On May 18, 2015, Dr. Wakeshima noted in a follow up medical evaluation, "He did have difficulty sitting squarely on his right buttock due to increased pain. Straight leg raise was positive on the right to the posterior thigh and leg region, and negative of the left. There was pain with internal rotation about the right hip, and negative on the left. Manual muscle testing demonstrated 5/5 strength."

20. On June 30, 2015, Dr. Wakeshima noted, "He did demonstrate allodynia about the right posterior knee region. Gait was antalgic but stable…. Clinical history and medical records are consistent with complex regional pain

syndrome superimposed over the lumbar radiculopathy on the right. Electrodiagnostic studies of the right lower extremity did demonstrate findings of moderate S1 radiculopathy on the right. There was also peroneal neuropathy just to the tibialis anterior."

21. On July 2, 2015, Dr. Wakeshima requested a RLE Sympathetic Block, then 1 week later a R L5-S1 TFO ESI, then 1 week after the ESI another RLE Symapthetic Block for the patient was to be performed by Dr. Chan and to be scheduled when authorized. At the referral of Dr. Wakeshima, on July 22, 2015, Dr. Chan performed a right L5 and S1 transforaminal epidural steroid injection. There was significant increase in the temperature of the RLE, indicating successful sympatholysis. On July 29, 2015, [Claimant] presented for repeat right lumbar sympathetic block. He had a positive response to epidural steroid injection as well as sympathetic block in the past. He then rated his pain 4/10. There was contrast flowing in the anterior sympathetic chain."

22. On September 4, 2015, Dr. Wakeshima noted, "[Claimant] has done very well with the injections and if he continues to demonstrate the current level of improvement, he may not require spine surgery."

23. On November 12, 2015, Dr. Drapeau noted that the Claimant had been diagnosed with CRPS of the right lower leg. "He also does have some disk pathology shown on MRI. He has been seen by the spine surgeon, Dr. Castro, who stated that surgery would be a last resort treatment for him." She assessed: Low back pain with some disk pathology. Right lower leg CRPS. Dr. Drapeau referred the vClaimant to Dr. Wakeshima for medications and counseling. The Claimant was given temporary restrictions of 10 pounds for lifting, repetitive lifting, carrying, and pushing/pulling.

24. On November 18, 2015, Dr. Wakeshima noted allodynia about the right lateral thigh and leg region which was in contrast to what was mentioned in Dr. Olsen's (Nicholas Olsen, D.O.) notes. Dr. Wakeshima's impression included axial low back pain with right lateral lower extremity region pain symptoms. Clinical history, examination, and diagnostic studies were most consistent with complex regional pain syndrome superimposed over lumbar radiculopathy. "The patient demonstrated profound improvement after right L5 transforaminal epidural steroid injection on July 22, 2015 with sympathetic blocks performed one week before and one week after his epidural steroid injections. Sympathetic blocks were performed on July 16, 2015 and July 29, 2015 with positive response to the sympathetic block. Thermogram and QSART studies were positive for CRPS on October 13, 2014 and January 15, 2015. Electrodiagnostic studies of the right lower extremity did demonstrate findings of moderate S1 radiculopathy on the right. There was peroneal neuropathy distal to the tibialis anterior. MRI demonstrated generalized disc bulge and moderate-sized annular

disc extrusion at L5-S1 resulting in impingement of the right S1 nerve root. There was slight annular bulge with small left posterolateral disc protrusion at L4-5 without nerve root impingement. There was facet arthrosis appreciated at L4-5 and L5-S1 level."

25. On December 8, 2015, Dr. Drapeau reported that the Claimant was not doing very well and described feeling like he was walking on broken glass. There was a lot of burning in his foot and numbness in his toes. Gait was antalgic, limping on the right. On four occasions, in her narrative and the M164, she stated that she was transferring case management to Dr. Wakeshima.

26. On December 17, 2015, Dr. Wakeshima again noted Claimant "demonstrated allodynia about the right posterior thigh region."

27. On December 17, 2015, Ricardo Esparza, Ph.D, a clinical psychologist, conducted a Psychological Assessment. Dr. Esparza reported that the Claimant "remained depressed without major physical improvement and the persistent reality of having much less income and an unknown rehabilitation outcome. This reality triggered more distress since he could not consistently manage intrusive negative thoughts of a catastrophic and black-and-white nature. There was also persistent anxiety about ending up in a disabled condition without being able to return to his former financial stability. He obsessed about losing the quality of his life and at a point, began to have suicidal ideation about crashing his truck over a freeway embankment."

28. On January 4, 2016, Dr. Esparza wrote, "Today's issues center on his dread of ending up disabled, losing his home, remaining unemployed, and being forced into a less physical job since he cannot wait to retrain. Themes of depression illustrated emotional losses associated with his inability to work, a sense of feeling useless, a change in his relationships with others because he cannot be valued as in the past. He is preoccupied about potential medication side effects, persistence of his pain, and his inability to consistently manage negative thoughts or a catastrophic and black-and-white nature."

Denial of Injection Blocks to Treat CRPS

29. On January 14, 2016, Dr. Wakeshima discussed sandwiching sympathetic blocks with surgery. Dr. Wakeshima wrote a note to Dr. Castro to see if Dr. Castro had any objections with this proposed plan.

30. On February 4, 2016, Dr. Esparza wrote, "Overall, he seems to be gaining benefit from medication for depression, anxiety and frustration. He is still benefitting from psychological counseling as a way of developing pain management and anxiety reduction. Importantly, his mood seems to be stabilizing especially prior to surgical intervention."

31. On February 29, 2016, Dr. Wakeshima wrote to Dr. Castro, “Patient has CRPS superimposed over his radiculopathy… Please contact us when you have surgery date determined so we can have sympathetic block 3 days before your surgery is scheduled.”

32. On March 11, 2016, Dr. Castro noted that the patient would require a CRPS block several days before surgery.

33. On March 21, 2016, Dr. Wakeshima sent an appeal letter for reconsideration of authorization to pre-treat the patient’s CRPS with sympathetic blocks before his surgery.

34. On April 4, 2016, Dr. Esparza noted that the Claimant was gaining benefit from medication for depression, anxiety and frustration. He still benefited from psychological counseling as a way of developing pain management and anxiety reduction. Importantly, his mood seemed to be stabilizing especially before surgery.

35. On April 8, 2016 Dr. Castro noted that prior nerve blocks for CRPS, helped temporarily. The prior epidural steroid injections did not help. Dr. Wakeshima recommended nerve blocks before surgery but they were denied. Due to pain in the right buttock and posterior right leg, however, especially with stretching, the Claimant wished to proceed with surgery as planned.

36. On April 12, 2016, Dr. Castro performed partial laminectomy, L5 and S1, left side; Undercutting facetectomy and foraminotomy, left side, L5-S1; and Lumbar microdiskectomy, left side, L5-S1. On April 18, 2016 Dr. Castro was of the opinion that the Claimant had to have an injection for CRPS, due to increased pain, which he did well from in the past.

37. On April 20, 2016, Dr. Wakeshima again stressed that the Claimant previously demonstrated profound improvement after injections and required the blocks at this time. On April 25, 2016, Dr. Wakeshima was first advised that Dr. Drapeau had transferred primary ATP responsibility to him.

38. On May 4, 2016, the Claimant presented to Dr. Wakeshima, post lumbar decompressive surgery by Dr. Castro on April 12, 2016. “Sympathetic block was requested to be performed prior to surgery and re-submitted for reconsideration; however, this was denied by the insurance carrier to pre-treat for CRPS issues prior to surgery.” On May 23, 2016, Dr. Wakeshima stated the following opinion, “I do believe that he does have profound worsening of CRPS issues as a result of his spine surgery. I did clear this with Dr. Castro’s office and they did clear the patient to receive sympathetic blocks at this juncture.”

39. On June 3, 2016, the Claimant reported pain in the right buttock area and posterior right leg, especially with stretching. Sara Kornely, PA-C

(Physician's Assistant) to Dr. Castro, noted that the Claimant had an injection planned with Dr. Wakeshima in two weeks, since he had a history of CRPS and had gotten sympathetic nerve blocks. The Claimant would proceed with injections as planned and go ahead with pool therapy.

40. On June 10, 2016, Dr. Wakeshima once again found allodynia about the right posterior thigh and posterior knee region. On June 23, 2016, Dr. Wakeshima again documented that the insurance carrier denied treatment. "[Claimant] has been once again denied on the sympathetic blocks. While I still do believe he does have CRPS issues despite what is mentioned in Dr. Ring's physician adviser notes and I do disagree with some of his findings on Dr. Ring indicating that he did not demonstrate improvement with sympathetic blocks, which is incorrect according to my last notes and that he did have positive thermogram studies, which contraindicated to what Dr. Ring mentioned about temperature changes and did have positive thermogram and QSART studies, which are accepted studies for determining CRPS according to Rule 17, Colorado Worker's Compensation Medical Treatment Guidelines, 7 CCR 1101-3 (hereinafter "Medical Treatment Guidelines").. Dr. Wakeshima stated, "we will re-submit request for sympathetic blocks. He may need then to have this run through his attorney for possible consideration for a hearing regarding this issue, as this has not been authorized by his insurance in the past."

41. On July 8, 2016, Dr. Wakeshima proposed, "If Dr. Castro has no explanation for still ongoing posterior thigh and leg region pain symptoms, we will then re-submit a request for a sympathetic block, which has been efficacious in the past, but denied multiple times by his insurance carrier."

42. On July 18, 2016, the Claimant returned to Dr. Castro. After examination, Dr. Castro agreed it would be appropriate for Dr. Wakeshima to repeat the block injections for CRPS.

43. On July 27, 2016, the Claimant reported that Dr. Castro concurred with going forth with the sympathetic block. Dr. Wakeshima spoke with the patient today, and discussed sympathetic blocks, medications, and future treatment plans.

44. On November 2, 2016, Dr. Wakeshima provided a Medical Narrative in which he explained that the Claimant had a work injury which occurred on February 11, 2014. His MRI prior to surgery demonstrated moderate sized annular disc extrusion at L5-S1. Claimant had lumbar decompression surgery by Dr. Castro on April 12, 2016. Prior to his surgery, however, he was evaluated for CRPS and did demonstrate positive diagnostic studies for complex regional pain syndrome including thermogram and QSART studies that were positive for CRPS. He demonstrated significant improvement with sympathetic blocks prior to his surgery, and Dr. Wakeshima **therefore was of the opinion**

that Claimant's clinical history, examination, and diagnostic studies were still most consistent with complex regional pain syndrome superimposed over the lumbar radiculopathy(emphasis supplied). The Claimant reported that the sympathetic blocks did help with his pain symptoms by 75%. The Claimant reported that without his pain medication, his pain level is at 9/10 compared to 6/10, and he is able to do his exercise program and walk. He reported that this medication is improving his overall functional abilities. Dr. Wakeshima recommended that Claimant be authorized up to six maintenance sympathetic blocks over the course of twelve months for maintenance treatment. Per the Treatment Guidelines, sympathetic blocks were listed for maintenance treatment not exceed 4-6 blocks in a twelve-month period for a single extremity and to be separated by no less than four week intervals. Claimant had positive diagnostic response to sympathetic blocks in the past and positive diagnostic findings for CRPS in both thermogram and QSART studies. Dr. Wakeshima believed that if the pain decreased with the sympathetic blocks then they could wean him off opioid pain medication.

45. On November 7, 2016, the Claimant reported his lower extremity was still more problematic than his back, but his swelling had increased and therefore discomfort in his bottom of his foot has also increased. There was allodynia about the posterior thigh and posterior leg region. Dr. Wakeshima believed that the Claimant may benefit from sympathetic block, which was beneficial to address CRPS issues.

46. The Claimant testified that he continues to have burning pain in his leg continuously. The symptoms seem to be worse in the mornings than later in the day. He stated he was requesting the lumbar sympathetic blocks recommended by Dr. Wakeshima because they allowed him to be more functional. He would notice that all his pain did not go away with the injections, but that it helped reduce the burning, the numbness, the sweating, the hot and cold changes, and the pain. He stated that he thought the blocks would cut the symptoms down by about 75%. The injections help him walk better and do activities of living better. On cross-examination, the Claimant indicated that at least two of his lumbar sympathetic blocks on April 23, 2015 and July 29, 2015, did not improve his pain. Dr. Wakeshima indicated, however, that there was an insufficient number of blocks to determine the success thereof.

Dr. Wakeshima's Evidentiary Deposition

47. On November 14, 2016 Dr. Wakeshima testified by deposition as follows:

a. "I have … listed that his mechanism of injury was that he was involved in a motor vehicle accident. He was a front seat passenger, wearing a shoulder and lap belt." (Wakeshima Evid. Depo. p..9, L.8-14. Hereinafter page and line numbers).

b. Claimant was being treated for low back pain, lumbar radiculopathy, complex regional pain syndrome, chronic pain, and depression issues. Dr. Castro performed spine surgery. (p.8, L.3-23).The aforementioned treatment was consistent with the impact and injury sustained by Claimant. (p.9, L.15-p.10, L.9).

c. Dr. Wakeshima testified, "Well, one of the issues was that I had been treating him for complex regional pain syndrome, which was confirmed on two diagnostic studies, and that consisted of sympathetic blocks. And he had been responding well to it." (p.10, L.15-19).

d. A typical course of treatment for complex regional pain syndrome is to do an injection before the surgery so that the complex regional pain syndrome does not worsen. That was requested multiple times, and it was denied. And then he still had worsening pain after surgery. And it was, once again, requested and it was denied. And it still is being denied." (p.10, L.20-P.11, L.2).

e. Dr. Wakeshima testified, "The diagnostic studies for complex regional pain syndrome are not 100 percent accurate. For that reason, the Division of Workers' Compensation does recommend that you have at least two diagnostic studies either confirming or refuting that diagnosis.

   And he's had thus far, three of the four diagnostic studies that are consistent with complex regional pain syndrome; that specifically being the QSART, the stress thermogram studies, and positive response to lumbar sympathetic blocks." Claimant's (p.12, L.6-15).

f. Dr. Wakeshima testified, "Well, he did have hypersensitivity to light touch, also listed in my notes as allodynia in his entire right lower extremity. There was some bruising in the lower extremity.

   And when I first ordered all these studies back in my notes from – let me find that date – September 10, 2014, I did document under my Assessment - - Impression, No. 2, that there was right lateral foot and ankle pain and allodynia with reports of increased perspiration and coldness and skin color changes in the morning, which is consistent with complex regional pain syndrome." (p.17, L.18-P.18, L.4).

g. When Dr. Wakeshima was asked if symptoms or signs were always present he testified, "No. And that is the reason why we do these diagnostic studies, because they are not always present; and findings of an examination alone is not sufficient, per the treatment guidelines, to say whether this entity exists or does not exist. And that is why they have all these studies available to confirm the situation. And that's the reason why they need to have two diagnostic studies or greater to confirm this. (p.18, L.24-P.19, L.7).

h. Dr. Wakeshima testified, "Well, one issue that makes Mr. Portillo's case challenging to treat is that he is not able to tolerate medications in a pill format and can only tolerate medication in a liquid format. And that has been his statement even since when I first started seeing him.

   So currently his medications include liquid hydrocodone; he's taking the equivalent of 5 milligrams three times per day. Liquid ibuprofen; he's taking the equivalent of 600 milligrams three times per day. And he is also - - he was on liquid sertraline that was being prescribed by Dr. Moe of psychiatry, but that has since been discontinued." (p.21, L15-P.22, L.2).

i. Q. Why is it that you have prescribed sympathetic blocks?

   A. Well, that is the treatment for complex regional pain syndrome, and he has responded to them in the past. And he has also wanted to go forth with having this available to him, if made available. And no matter what we submitted, it has been denied.

   Q. What would be the benefit of having sympathetic blocks?

   A. It will help with his CRPS symptoms in his lower extremity. If we can get this CRPS under better control with sympathetic blocks, we should be able to start weaning him further on his narcotic pain medications. (p.22, L14-25).

j. Dr. Wakeshima testified, "He was placed at maximum improvement by Dr. Hattem, but I do believe that there is still some issues ongoing. Regarding his recovery from his spine surgery, I would opine that he is at maximum medical improvement, but he still requires treatment for the complex regional pain syndrome. Those treatments can potentially be accomplished under maintenance, but I would still recommend he still receive treatment for his ongoing back pain and complex regional pain syndrome issues." (p.28, L.22-P.29, L-7).

k. "I would anticipate that he should be able to be maintained under maintenance with these sympathetic blocks. I do believe that his case would necessarily need to remain open to continue on for the sympathetic blocks, that can certainly be accomplished under maintenance." (p.29, L.14-19). He further stated that in reality, Claimant is not at maximum medical improvement for his CRPS until he had at least one more sympathetic block. (p.30, L.4-14).

Medical Treatment Guidelines Relative to CRPS

48. The following sections of the Medical Treatment Guidelines (re: CRPS) are relevant in this matter:

Section E.1.a. xv. (p. 9) Presenting symptoms related to CRPS:
A) Severe, generally unremitting burning and/or aching pain and/or allodynia.
B) Swelling of the involved area.
C) Changes in skin color.
D) Asymmetry in nail and/or hair growth.
E) Abnormal sweat patterns of the involved extremity.
F) Motor dysfunction- limited active range-of-motion, atrophy, tremors, dystonia, weakness.
G) Subjective temperature changes of the affected area.

Section F. 3. (p.16) DIAGNOSTIC COMPONENTS OF CONFIRMED CRPS - patients should have a confirmed diagnosis of CRPS to proceed to other treatment measures in this guideline.
Both CRPS I and II confirmed diagnoses require the same elements. CRPS II is distinguished from CRPS I by the history of a specific peripheral nerve injury as the inciting event.
Patient must meet the below criteria:

A clinical diagnosis meeting the above criteria in 2, and
At least 2 positive tests from the following categories of diagnostic tests:

Trophic tests
A) Comparative X-rays of both extremities including the distal phalanges.
B) Triple Phase Bone Scan.Vasomotor/Temperature test - Infrared Stress Thermography.
Sudomotor test - Autonomic Test Battery with an emphasis on QSART.
Sensory/ Sympathetic nerve test - Sympathetic Blocks.

Section F. 7. b. (p. 19) Lumbar Sympathetic Block: Useful for diagnosis and treatment of pain of the pelvis and lower extremity secondary to CRPS-I and II. This block is commonly used for differential diagnosis and is the preferred treatment of sympathetic pain involving the lower extremity. For diagnostic testing, use two blocks over a 3-14 day period. For a positive response, pain relief should be 50% or greater for the duration of the local anesthetic and pain relief should be associated with demonstrated functional improvement.

Section G. 5. a. (p. 44) Treatment Parameters – To be effective as a treatment modality, the patient should be making measurable progress in their rehabilitation program and should be achieving an increasing or sustained duration of relief between blocks. If appropriate outcomes are not achieved, changes in treatment should be undertaken.

❖ Time to Produce Effect: 1 to 2 blocks. Demonstrated greater than 50% pain relief and objective/functional gains as noted under treatment parameters.

❖ Frequency: Variable, depending upon duration of pain relief and functional gains. During the first two weeks of treatment, blocks may be provided every 3 to 5 days, based on patient response meeting above criteria. The blocks must be combined with active therapy. After the first two weeks, blocks may be given weekly with tapering for a maximum of 7 -10.

❖ Optimum Duration: 10 over a period of 6 months with documentation of progressive functional gain verified by therapist or increased work capability after each injection.

❖ Maximum: If sympathetic and functional benefits are documented with the blocks refer to Section I. 12, Maintenance Management, for information on further blocks.

Section I. (p. 103) Maintenance Management:

INJECTION THERAPY

a. Sympathetic Blocks - These injections are considered appropriate if they increase function for a minimum of 4 to 8 weeks. Maintenance blocks are combined with and enhanced by the appropriate neuro- pharmacological medication(s) and an active self-management exercise program. It is anticipated that the frequency of the maintenance blocks may increase in the cold winter months or with stress.

❖ Maintenance Duration: Not to exceed 4 to 6 blocks in a 12 month period for a single extremity and to be separated by no less than 4 week intervals. Increased frequency may need to be considered for multiple extremity involvement or for acute recurrences of pain and symptoms. For treatment of acute exacerbations, consider 2 to 6 blocks with a short time interval between blocks.

Ultimate Findings

49. The ALJ finds the opinions of Dr. Wakeshima and Dr. Castro more credible and persuasive than all other opinions to the contrary because they are carefully articulated, consistent with the Claimant’s reported symptomatology, and supported by the Medical Treatment Guidelines.

50. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Dr. Wakeshima and Dr. Castro, and to reject all opinions to the contrary.

51. The Claimant has proven, by a preponderance of the evidence that his CRPS is a direct and natural consequence of the admitted injury of December 11, 2014. Further, the Claimant has proven, by preponderant evidence that the lumbar sympathetic blocks, recommended by ATPS Dr. Wakeshima and Dr. Castro, are reasonably necessary to cure and relieve the effects of the admitted injury.

52. Based on the opinions of the Claimant's two ATPs (Dr. Wakeshima and Dr. Castro), the issues of the causal relatedness of the CRPS and the reasonable necessity of the lumbar sympathetic blocks are ripe for adjudication at the present time, regardless of the academic pendency of a DIME on January 7, 2017 (it is unlikely that it will occur because the Claimant cannot afford to pay for it and there is no indication that Dr. Dillon will perform the DIME *pro bono*). The ALJ infers and finds that reasonably necessary medical care and treatment cannot be delayed until the Claimant can afford to pay for a DIME, or until the "twelfth of never," whichever comes first. The Workers' Compensation Act is designed to provide speedy benefits, especially speedy medical care and treatment that is reasonably necessary to cure and relieve the effects of an admitted injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Wakeshima and Dr. Castro were more credible and persuasive than all other opinions to the contrary because they were carefully articulated, consistent with the Claimant's reported symptomatology, and supported by the Medical Treatment Guidelines.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. Wakeshima and Dr. Castro, and to reject all opinions to the contrary.

Causal Relatedness of CRPS and Reasonable Necessity of Lumbar Sympathetic Blocks

c. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to his CRPS, which is a direct and natural consewquence of his admitted injury of December 11, 2014. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment for his CRPS, as recommended by his ATPs, Dr. Wakeshima and Dr. Castro, including the lumbar sympathetic blocks, was and is reasonably necessary to cure and relieve the effects of the Claimant's admitted injury..

Ripeness of Medical Care Issue

d. "Ripeness" tests whether an issue is real, immediate and fit for adjudication. *See Olivas-Soto v. Indus. Claim Appeals Office*, 143 P.3d 1178 (Colo. App. 2006). Respondents argue that the issue of causal relatedness, which could be part and partial of a DIME opinion, is unripe during the pendency of a DIME. Indeed, the issue of causal relatedness of the Claimant's CRPS and the lumbar sympathetic blocks to treat the CRPS is real, immediate and fit for adjudication **now** and not at a speculative future time when the Claimant is able to afford to pay for the DIME. What is actually speculative is the Respondents' "Catch-22" argument that the pendency of the DIME, which could occur in the distant future, makes the issue of specific treatment recommended by the Claimant's ATPs months ago, and continuously recommended, unripe. The Workers' Compensation Act is not designed to allow a legal "checkmate" on reasonably necessary medical care until a DIME occurs. The ALJ concludes that the causal and "reasonably necessary" issues were ripe some time ago and are over-ripe **now**.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has proven the causal relatedness of his CRPS and the reasonable necessity of the lumbar sympathetic blocks recommended by ATPS Dr. Wakeshima and Dr. Castro.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay all the costs of medical care and treatment for the Claimant's Complex Regional Pain Syndrome (CRPS), including the lumbar sympathetic blocks recommended by authorized treating physicians, Yusuke Wakeshima, M.D. and Andrew Castro, M.D., subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Any and all issues not determined herein are reserved for future decision.

DATED this______day of December 2016.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-976-862-02

ISSUES

1. Has Claimant overcome the DIME's finding of MMI by clear and convincing evidence?

2. If Claimant has overcome the DIME, is the shoulder surgery recommended by Dr. Simpson reasonable and necessary?

FINDINGS OF FACT

1. Claimant worked as a "signing specialist" for Employer. On December 11, 2014, she sustained an admitted industrial injury when she was hit by an automobile in Employer's parking lot.

2. The accident caused injury primarily to her right shoulder. She also experienced hip and neck pain following the accident.

3. Employer referred Claimant to Emergicare for authorized treatment, where she saw Dr. Elizabeth Arrington. X-rays of Claimant's chest, right shoulder, and pelvis were negative. Dr. Arrington administered an injection and prescribed medications.

4. On December 29, 2014, Dr. Arrington ordered MRIs of the cervical spine and right shoulder. Claimant had the MRIs on January 7, 2015.

5. The cervical MRI showed moderate diffuse cervical spondylosis at multiple levels and a posterior annular tear at C3-C4. With the possible exception of the annular tear, all issues were likely degenerative in nature and predated her accident.

6. Claimant's right shoulder MRI was interpreted by Dr. Michael O'Neill, a fellowship trained neuroradiologist. Dr. O'Neill opined that the MRI showed "mild to moderate diffuse chronic tendinosis of the supraspinatus with no rotator cuff tear." There was also a joint effusion and degenerative changes of the right AC joint.

7. After reviewing the MRI reports, Dr. Arrington referred Claimant to Dr. Simpson for evaluation of her shoulder, and to Dr. Illig for evaluation of her neck.

8. Claimant was initially evaluated by Dr. Douglas Bradley on December 29, 2014, who became the primary ATP thereafter.

9. Claimant had her initial evaluation with Dr. Simpson on January 30, 2015. On physical examination, Claimant had a painful arc, positive impingement and Speed's signs, and pain with subscapularis strength testing. She also had dysesthesias in a C6 and C5 distribution. Dr. Simpson personally reviewed Claimant's MRI images. Dr.

Simpson agreed with the radiologist’s interpretation of diffuse supraspinatus tendinosis. But Dr. Simpson also thought he saw a partial-thickness tear of the supraspinatus tendon. Dr. Simpson opined Claimant’s clinical presentation was consistent with the pathology he observed on the MRI.

10. Dr. Simpson prescribed a Medrol Dosepak. He suggested steroid injections and possible surgical intervention if Claimant’s shoulder did not improve. But Dr. Simpson was more immediately concerned about the possibility of a cervical radiculopathy. He recommended that Claimant see a neurosurgeon or orthopedic spine surgeon for evaluation of her neck before proceeding with any aggressive treatment for the shoulder.

11. Claimant saw Dr. Simpson again on March 3, 2015. The Medrol Dosepak had helped, but she was still having pain in her shoulder, and numbness and tingling in her arm. Dr. Simpson reiterated his recommendation that Claimant see a surgeon for evaluation regarding her cervical spine. He administered a steroid injection in the right shoulder, which provided Claimant “100% relief” of her shoulder pain.

12. Claimant returned to Dr. Simpson on April 1, 2015. She reported receiving approximately one hour of complete pain relief after the injection, after which her pain returned. Dr. Simpson opined Claimant had a partial-thickness rotator cuff tear and was not at MMI. He also felt she would likely require an arthroscopic debridement or rotator cuff repair, due to ongoing symptomatology. Dr. Simpson indicated he could not proceed with shoulder surgery until she was cleared from a cervical spine standpoint.

13. Dr. Wallace Larson performed an Independent Medical Examination (IME) at Respondents’ request on May 20, 2015. As a result of his examination and review of records, Dr. Larson opined that Claimant was at MMI with no ratable impairment. Dr. Larson noted inconsistencies between Claimant’s description of the accident and the police report. He indicated there was no objective evidence of injury. He opined that the pathology demonstrated by the cervical and right shoulder MRIs was degenerative, and not caused by the accident.

14. On May 29, 2015, Claimant saw Dr. Scott Primack, a PM&R and electrodiagnostic specialist, for evaluation of her cervical issues. Claimant reported that “her biggest problem is at the level of the right shoulder, more so than the cervical spine.” On physical examination, her most significant findings related to the right shoulder, although she did have some minor abnormalities on the cervical and neurological exam. Dr. Primack recommended an EMG/NCV study to complete his assessment.

15. Dr. Primack performed EMG/NCV testing on June 26, 2015. He found no evidence of cervical radiculopathy or brachial plexopathy. Dr. Primack opined “based on the history, the clinical examination, and today’s electrophysiologic data, Ms. Harper’s problem is at the shoulder.” He indicated she required no further cervical spine treatment.

16. Having been cleared by Dr. Primack regarding her neck, Claimant returned to Dr. Simpson on July 15, 2015. Dr. Simpson opined Claimant was suffering from a “chronic partial-thickness rotator cuff tear.” He recommended arthroscopic shoulder surgery, “either debridement or repair of her partial-thickness rotator cuff tear depending on the pathology.”

17. Dr. Simpson’s office submitted a surgical preauthorization request on July 28, 2015. Respondents forwarded the request to Dr. Larson for a Rule 16 peer review on August 4, 2015. Dr. Larson opined that the opinions expressed in his IME report were unchanged, and the requested surgery was not reasonable, necessary or related to Claimant’s work injury.

18. Respondents denied the request for surgery based on Dr. Larson’s Rule 16 report.

19. After the surgery was denied, Dr. Bradley placed claimant at MMI on September 24, 2015. On October 5, 2015, Dr. Bradley authored an impairment rating report outlining a 17% upper extremity rating.

20. Respondents filed a Final Admission of Liability (FAL) based on Dr. Bradley’s MMI report. Claimant objected to the FAL and requested a DIME. Dr. Brian Beatty was selected as the DIME physician.

21. Dr. Beatty evaluated Claimant for the DIME on March 16, 2016. Dr. Beatty physically examined Claimant and performed a comprehensive medical records review. Dr. Beatty opined that Claimant had reached MMI on October 5, 2015.

22. Dr. Bradley testified in a deposition on behalf of Claimant on September 13, 2016. Dr. Bradley agreed with Dr. Simpson’s surgical recommendation. Dr. Bradley opined that his determination of MMI was based on the denial of surgery. Dr. Bradley had not reviewed the shoulder MRI films and offered no specific opinion regarding their interpretation.

23. Dr. Simpson testified in a deposition on behalf of Claimant on September 21, 2016. Dr. Simpson reiterated and expounded upon the opinions expressed in his reports. Dr. Simpson testified that he reviews MRI films regularly in conjunction with surgical evaluations. Dr. Simpson opined that “MRIs are not a hundred percent study,” and do not always accurately depict the nature or extent of a patient’s pathology. Dr. Simpson disagreed with the radiologist’s interpretation of Claimant’s shoulder MRI. Based on his review of the MRI, Dr. Simpson opined that claimant likely has a partial-thickness tear of the supraspinatus tendon. Dr. Simpson acknowledged that Claimant also has pre-existing issues in the right shoulder that were not caused by her industrial accident. Dr. Simpson testified that the exact nature of the surgery would depend on the specific pathology he observed during the procedure.

24. Dr. Larson testified in a deposition on behalf of Respondents on October 31, 2016. Dr. Larson agreed with Dr. Beatty that Claimant is at MMI. Dr. Larson testified that he reviewed the shoulder MRI images in addition to the report. Dr. Larson opined

the imaging studies have not identified any pathology in need of specific treatment of additional intervention.

25. Claimant has failed to overcome the DIME by clear and convincing evidence.

CONCLUSIONS OF LAW

A. Did Claimant overcome the DIME by clear and convincing evidence?

"Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment as a result of the industrial injury has become stable and when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S. A finding of MMI is premature if there is a course of treatment that has "a reasonable prospect of success" and the claimant is willing to submit to the treatment. *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1080, 1081-82 (Colo. App. 1990).

The DIME physician's determination regarding MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c), C.R.S.; *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). "Clear and convincing evidence means evidence which is stronger than a mere 'preponderance;' it is evidence that is highly probable and free from serious or substantial doubt." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Therefore, the party challenging a DIME physician's conclusion must demonstrate that it is "highly probable" that the MMI and impairment findings are incorrect. *Qual-Med*, 961 P.2d at 592. A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002).

The ICAO has repeatedly held that "mere differences of medical opinion" do not constitute clear and convincing evidence that the DIME is incorrect. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (ICAO March 18, 2016); *Javalera v. Monte Vista Head Start, Inc.*, W.C. No. 4-532-166 (ICAO July 19, 2004); *see also Gonzales v. Browning-Ferris Industries of Colorado*, W.C. No. 4-350-356 (ICAO March 22, 2000).

As found, Claimant has failed to overcome the DIME's finding of MMI by clear and convincing evidence. Claimant's challenge to MMI primarily rests on Dr. Simpson's recommendation for surgery. But, whether surgery is reasonable and necessary ultimately hinges on whether Claimant has pathology that is amenable to surgical correction and is causally related to her accident. The medical records demonstrate Claimant suffers from chronic supraspinatus tendinosis, which most likely predated her work injury. Dr. Neill did not see any tear of the supraspinatus tendon. Dr. Larson opined that the MRI does not show any pathology that warrants further treatment. By contrast, Dr. Simpson saw findings he believes are "highly suspicious" for a partial-thickness supraspinatus tear. The interpretation of Claimant's MRI appears to be an issue about which reasonable physicians can disagree. The ALJ concludes that Dr. Simpson's disagreement with Dr. Neill's interpretation of the MRI represents a "mere difference of opinion," which is insufficient to overcome the DIME.

Based on the totality of evidence presented, the ALJ concludes Claimant has failed to prove that the DIME's determination of MMI was highly probably incorrect.

B. Shoulder surgery

Claimant's request for approval of surgery is part and parcel of her challenge to the DIME. The ALJ's conclusion that Claimant failed to overcome the DIME necessarily disposes of the issue of surgery, because the surgery was proposed to "improve" Claimant's condition. *See, e.g.*, *Story v. Industrial Claim Appeals Office*, 910 P.2d 80 (Colo. App. 1995); *Milco Construction v. Cowan*, 860 P.2d 539 (Colo. App. 1992).

ORDER

It is therefore ordered that:

1. Claimant's request to overcome the DIME on the issue of MMI is denied and dismissed.

2. Claimant's request for authorization of shoulder surgery as recommended by Dr. Simpson is denied and dismissed.

3. All matters not determined herein, or otherwise closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, CO 80906

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he sustained an injury arising out of his employment on April 19, 2014?

II. Whether Claimant has proven by a preponderance of the evidence that he is entitled to temporary disability benefits from April 19, 2014, and continuing?

III. Whether Claimant has proven the correct Average Weekly Wage by a preponderance of the evidence?

IV. Whether Respondent has proven entitlement to offsets by a preponderance of the evidence?

V. Whether Respondent has proven entitlement to a penalty pursuant to §8-43-102(1)(a), for Claimant's failure to report the injury.

FINDINGS OF FACT

1. Claimant has a long-standing history of neck and back pain dating back to 1999. [Exhibit 12, p. 19]. On February 11, 2002, Claimant's primary care physician, Richard Evans, M.D., documented that Claimant was taking Vicodin (hydrocodone/acetaminophen), a narcotic pain medication. [*Id.*]. As a result of Claimant's chronic pain complaints, Claimant filed for disability benefits in 2000 and again in 2006. [Exhibit 12, p. 22]. By November 2006, Claimant's chronic pain had progressed to the point that he was taking one to two tablets of Percocet (Oxycodone Hydrochloride/Acetaminophen) 5/325 every four hours for pain. [Exhibit 12, p. 21].

2. In April 2008, Claimant sustained a non-industrial motor vehicle accident, and by March 18, 2009, Richard Evans, M.D., diagnosed Claimant with fibromyalgia, chronic pain syndrome, lumbar spondylosis, sciatica, and carpal tunnel syndrome. [Exhibit 12, p. 22].

3. On July 14, 2011, Dr. Evans documented that, because of Claimant's chronic pain syndrome, fibromyalgia, and "generalized pain and stiffness", Claimant again was contemplating filing for disability benefits and that he was "likely to need pain meds forever." [Exhibit G, p. 268]. By this time, Claimant's Percocet prescription had increased to 7.5/325 (1-2 every four hours), and he also was being prescribed OxyContin (oxycodone) 60 mg Oral Tablet Extended Release 12 Hour (1-2 every 12

hours), Carisoprodol (muscle relaxer) 350 mg Oral Tablet, and Diazepam (anti-anxiety and anti-muscle spasm medication). [Exhibit G, p. 269].

4. On April 27, 2012, Claimant complained to Dr. Evans of increased stress due to various family problems and noted that Claimant "would like to take time off work, as work is adding to his stress." [Exhibit G, p. 256]. On May 12, 2012, Dr. Evans documented that Claimant actually did begin to take time off work due to family crisis/stress and increased back and hip pain. [Exhibit G, p. 253]. Dr. Evans noted that Claimant was to be "work off until mid-June". [*Id*.] Dr. Evans continued Claimant's chronic pain syndrome medications without changes and added Prozac for the mood and anxiety problems. [*Id.*]. Dr. Evans completed short term disability paperwork on May 24, 2012, as a result of flaring pain and emotional distress related to home stressors. [Exhibit G, p. 250].

5. Claimant presented to Dr. Evans on July 22, 2013, needing refill of his medications and "questioning whether he is harming himself continuing to work while he masks some of the pain with the pain meds. But he has to work another 5 years to finish his career. Contemplating SSDI but does not know if he is qualified and wonders what to do. He hurts all the time in multiple joints now." [Exhibit G, p. 244]. Claimant complained of bilateral elbow pain, right hand pain, right hip pain, right knee pain, back pain, as well as arthralgias, joint pain, joint swelling, joint stiffness, limb pain and limb swelling. [Exhibit G, pp. 244-45].

6. On February 20, 2014, only two months before the alleged industrial injury, Dr. Evans was treating Claimant for 24 different "active problems," including acute reaction to stress; bilateral groin pain; carpal tunnel syndrome; chronic pain syndrome; depression; encounter for screening for malignant neoplasm of prostate; esophageal reflux; fibromyalgia; generalized osteoarthritis of unspecified site; insomnia; joint pain, knee; leg swelling; lumbar spondylosis; muscular aches; pain in hand; patellofemoral syndrome, left; post-traumatic stress disorder; and sciatica. [Exhibit G, p. 238]. Claimant stated that he "must earn a living a few more years, as required by the employer" and, therefore, he "continues to work but only as long has he has the pain med." *[Id.*]. However, Claimant reported that he was having problems obtaining the OxyContin because he "cannot afford the medication." [Exhibit G, p. 237]. Therefore, Dr. Evans changed Claimant's prescription medication from OxyContin to Morphine Sulfate Extended Release 15 mg. [*Id.*].

7. Claimant testified that his right elbow started hurting due to pulling and pushing pallet jacks and flatbed carts, and that on April 19, 2014, he informed Employer's store manager Shirley Holditch and produce specialist Chris Romero that his right elbow started hurting.

Q How did you injure your elbow, your right elbow?

A *Pulling and pushing on the pallet jacks and the flatbed carts*. The company started a new system called key retailing, and they brought in these new flatbed carts. And you had to put 12 items on the carts which would make them extremely heavy, but for quite a while there they weren't rolling. None of the flatbed carts were rolling. And we went to the store manager and department head, produce manager to see if we could get them to get store services in to fix those flatbeds because none of them were rolling. Even with nothing on, we would pull them and drag them, but they wouldn't roll.

Q And were these the flatbeds you were using when your elbow started to bother you?

A Yes.

Q Now after you injured your elbow, did you verbally report that injury to your employer?

A Yes, I did.

Q Who did you tell?

A I told Shirley Holditch and I told Chris Romero. He is the produce specialist.

Q And when did you verbally report your injury?

A 4-19. I was working.

Q And what did you tell them?

A I told them that my right arm started -- my right elbow started hurting. And then on 4-20-14 it started swelling up, my elbow started swelling up.

[Hearing Transcript, pp. 24:6 to 25:11](emphasis added).

8. The medical records do not support Claimant's testimony that he injured his right elbow at work on April 19, 2014, while pushing pallet jacks and flatbed carts. On the contrary, the medical records show that Claimant complained of pain to different body parts on successive visits to the physician's office as a result of carrying heavy objects while working on a roof:

- Claimant first sought treatment for this alleged injury on April 30, 2014, when he was seen by Stanley Yee, PA, in the same office as Dr. Evans. Mr. Yee documented a chief complaint of *"right back, neck, shoulder pain due to carrying heavy objects x 4d*" [Exhibit G, p. 234]. Mr. Yee's medical report dated April 30, 2014, makes no mention of pushing or pulling pallet jacks or flatbed carts, no mention of complaints of right elbow pain, and dates the onset of symptoms to four days prior to April 30, rather than the specific date of April 19, 2014.

- On May 8, 2014, Claimant saw Dr. Evans, who documented “Summary of Visit: … SHOULDER AND NECK AND ARM PAIN FROM HIS EXERTIONS ON THE ROOF OF THE HOUSE…. History of Present Illness: HURT HIS LOW BACK AT THE FARM AND SAW THE P.A. [Stanley Yee on April 30, 2014] THIS BEGAN WHILE CARRYING ROOFING PAPER UP TO THE ROOF. THIS AFFECTED THE RIGHT SHOULDER AND THE LOW BACK.” [Exhibit G, p. 231](emphasis in original). Dr. Evans further documented “Review of Systems: Musculoskeletal: …BOTH ARMS HURT ANS [sic] WELL AS SHOULDER AND NECK AREAS AFTER WORKING ON THE ROOF.” [Exhibit G, p. 232](emphasis in original);

- On May 14, 2014, Claimant returned to Dr. Evans, who documented “History of Present Illness: HAS A LOT OF PAIN IN THE RIGHT SHOULDER AREA. STARTED WORKING ON THE HOUSE, LIFTING A ROLL OF ROOFING OVER A LADDER. ALL EXTREMITIES ARE NUMB AND HAVE BEEN FOR A WHILE.”

- On June 20, 2014, Dr. Evans documented “History of Present Illness: RIGHT ELBOW PAIN AND RIGHT KNEE PAIN ISSUE AFTER WORKING AS A STOCKER AT KING SOOOPERS FOR MANY YEARS. HE NOW CANNOT LOAD OBJECTS SAFELY DUE TO THE RIGHT LATERAL ELBOW PAIN NO DIRECT INJURY. THINGS WORSENED AFTER HE HAULED A ROOFING MATERIAL UP A LADDER...THE ROOFING INCIDENT WAS IN APRIL 20TH AND HE SAW P.A. ABOUT A WEEK LATER WHEN HIS SHOULDER, KNEE AND ELBOW ERE [sic] DISABLING.” [Exhibit G, p. 224].

9. Four successive medical reports document an injury caused by heavy lifting and each report contains additional information different from the prior reports, which indicates that Claimant provided additional details regarding the roofing incident on each successive visit: April 30, 2014 (lifting heavy objects); May 8, 2014 (carrying roofing paper up to the roof); May 14, 2014 (carrying roofing paper up a ladder); and June 20, 2014 (hauled roofing material up a ladder, made elbow pain worse, roofing incident occurred on April 20, 2014). The documentation of the mechanism of injury was made contemporaneous with Claimant’s statements in April, May and June 2014, by disinterested health care providers with no bias or incentive to fabricate or exaggerate the onset and location of symptoms or the mechanism of injury, making the statements in the medical records highly credible. It is highly unlikely that Mr. Yee and Dr. Evans could have mistaken Claimant’s statements made on April 30, May 8, May 14 and June 20, regarding the mechanism of injury.

10. Both parties submitted a copy of the Rocky Mountain UFCW Unions Disability Notice: Claim for Weekly Disability Benefits form completed by Claimant and Employer. [See, Exhibit 2; Exhibit F, p. 121 and 123]. Part I of the form, to be completed by Claimant, contains the question: “Was the injury caused by claimant’s employment? Yes □ No □”.

11. Claimant testified that he marked the box for “Yes” when he completed the form on April 28, 2014, but the copy of the form in Employer’s possession appears to show that Claimant left that question blank and did not respond to that question.

12. Claimant has not shown, by a preponderance of the evidence, that he marked this box "Yes" when he filled it out. Assuming, arguendo, that Claimant did so, this application for disability benefits did not substitute for the required written notice to Employer of a workplace injury. Employer was never notified, constructively or actually, of any alleged work injury until Claimant filed a written claim for Workers Compensation on 2/29/2016.

13. Claimant further testified that he asked Store Manager Shirley Holditch to “fill out [paperwork] for workmen’s comp” but she told Claimant his injury “was not work related and would not let me fill out for workmen’s comp.” [Hearing Transcript, p. 29:7-20]. Holditch testified that in the 32 years she has been a store manager for King Soopers, she has reported over 50 workers’ compensation claims and has never made the determination of whether an injury is work-related. Holditch testified that store managers have 24 hours after an associate alleges a work-related injury to complete the multiple-page King Soopers Associate Report Packet and provide the packet to a third-party administrator, Sedgwick CMS, and that Sedgwick CMS makes the determination as to whether an injury is work-related or not based on the information in the Associate Incident Report Packet and Sedgwick’s investigation of the claim.

14. Holditch testified that Claimant never came to her wanting to report a work-related injury. She further testified that she never told Claimant that he could not complete the paperwork for a work-related injury because she had decided his injury was not caused by work. Holditch’s testimony is far more credible and persuasive than Claimant’s.

15. Holditch’s testimony that Claimant never told her that his injury was caused by work is supported by multiple documents:

- Part I of the Disability Notice: Claim for Weekly Disability Benefits (which Claimant had completed at least three times in the past for his non-industrial disability claims in 2000, 2006, and 2012), in which Claimant did not mark that his injury was caused by his employment [Exhibit G, p. 121];

- Physician’s Assistant Stanley Yee’s medical report dated April 30, 2014, documenting *“right back, neck, shoulder pain due to carrying heavy objects x 4d*” without any documentation of an elbow injury caused by pushing or pulling pallet jacks or flatbed carts [Exhibit G, pp. 234-36];

- Mr. Yee’s Physician’s Statement dated April 30, 2014, specifically stating that Claimant’s injury occurred on April 28, 2014, and was not caused by work [Exhibit F, p. 123];

- Dr. Evans' Attending Physician's Statement dated May 7, 2014, stating that Claimant's injury occurred on April 28, 2014, and was not caused by work [Exhibit F, p. 122];

- Dr. Evans' May 8, 2014, report documenting "SHOULDER AND NECK AND ARM PAIN FROM HIS EXERTIONS ON THE ROOF OF THE HOUSE" [Exhibit G, p. 231](emphasis in original);

- Dr. Evans' Physician's Statement dated May 8, 2014, stating that Claimant's injury occurred on April 28, 2014, and was not caused by work but by "working on house" [Exhibit F, p. 120];

- Dr. Evans' May 14, 2014, medical report documenting Claimant's injury occurred when he "STARTED WORKING ON THE HOUSE, LIFTING A ROLL OF ROOFING OVER A LADDER" [Exhibit G, p. 228].

- Dr. Evans' Physician's Statement completed May 14, 2014, indicating Claimant's injury occurred on April 28, 2014, and was not caused by work [Exhibit G, p. 119].

16. Claimant's testimony as to the chain of events is not credible, considering the overwhelming evidence contrary to Claimant's testimony. Claimant's testimony on almost every relevant point is inconsistent with the other evidence in this case. The ALJ concludes that Claimant's version of events has not been proven by a preponderance of the evidence.

17. Dr. Wallace Larson, M.D., provided further information through his deposition. Dr. Larson performed an independent medical examination ("IME") on Claimant, including a review of his past medical records. Dr. Larson credibly opined, among other things, that Claimant's alleged injuries are not consistent with his medical records, that his physical presentation during the IME was not consistent with the condition Claimant complains of, and that the surgery that Claimant sought through private insurance is suggestive of a repair for a long standing degenerative condition, and not from the sudden injury occurring in April, 2014, as Claimant now describes.

18. The ALJ finds that Claimant has failed to prove it more likely than not that he sustained an injury to his right elbow caused by work in April of 2014.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S.

A preponderance of the evidence is evidence that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2013. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

4. On February 20, 2014, only two months before the alleged industrial injury, Dr. Evans was treating Claimant for 24 different "active problems," including acute reaction to stress; bilateral groin pain; carpal tunnel syndrome; chronic pain syndrome; depression; encounter for screening for malignant neoplasm of prostate; esophageal reflux; fibromyalgia; generalized osteoarthritis of unspecified site; insomnia; joint pain, knee; leg swelling; lumbar spondylosis; muscular aches; pain in hand; patellofemoral syndrome, left; post-traumatic stress disorder; and sciatica. Claimant stated that he "must earn a living a few more years, as required by the employer" and, therefore, he "continues to work but only as long has he has the pain med." However, Claimant reported that he was having problems obtaining the OxyContin because he "cannot afford the medication,", causing Dr. Evans to change Claimant's prescription medication from OxyContin to Morphine Sulfate Extended Release 15 mg [Exhibit G, p. 237], a less potent pain killer than the one Claimant stated he needed in order to continue to work.

5. On April 30, 2014, Claimant was seen by a physician's assistant complaining of "right back, neck, shoulder pain due to carrying heavy objects" four days prior to April 30, 2014, stating that the pain complaints were not caused by work. On May 8, 2014, Claimant was seen by Dr. Evans complaining of "shoulder and neck and arm pain from his exertions on the roof of the house". On May 14, 2014, Claimant again saw Dr. Evans, stating that his injury occurred while working on the roof of a house, "lifting a roll of roofing over a ladder". On June 20, 2014, Claimant told Dr. Evans for the first time that he had right elbow pain "after working as a stocker" but that "things worsened after he hauled a roofing material up a ladder" on April 20, 2014. The medical records do not support Claimant's testimony that he injured his right elbow on April 19, 2014.

6. Claimant’s testimony regarding the report of his injury also is not credible or likely. Claimant testified that he reported the injury to the store manager on April 19, 2014, but the store manager ignored the report of injury. Claimant then testified that he completed a Disability Report on April 28, 2014, which stated his injury was caused by work, and again asked to complete the paperwork for a workers’ compensation injury, but the store manager refused to complete the paperwork because she had concluded that his injury was not caused by work. It is highly unlikely that the store manager would refuse to follow Employer’s established guidelines for reporting a work-related injury.

7. The AJ finds and concludes, considering the totality of the evidence, that Claimant has failed to prove by a preponderance of the evidence that he sustained an industrial injury arising out of and occurring within his employment with Employer.

8. Further, the ALJ finds and concludes that Claimant never informed Employer of any alleged injury until he submitted his Claim for Workers Compensation on 2/29/2016.

9. Because Claimant did not suffer a compensable injury, his Average Weekly Wage on the date of alleged injury is moot.

10. Because Claimant did not suffer a compensable injury, there is no need to address the issue of offsets due to any other disability claims.

11. Because Claimant did not suffer a compensable injury, any penalties sought by employer for failure to timely report this alleged injury are moot.

ORDER

It is therefore ordered that:

I. Claimant's claim for Workers Compensation benefits, including medical benefits and temporary disability, for an injury allegedly occurring in April of 2014 is denied and dismissed.

All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

Has claimant proven by a preponderance of the evidence that he sustained a compensable injury to his right shoulder on January 15, 2016?

STIPULATIONS

1. Claimant' average weekly wage is $868.68.

2. The parties reserved any issues regarding temporary disability benefits.

3. If the Claim is compensable, the surgery performed by Dr. Jones on August 10, 2016 is authorized, reasonable and necessary treatment for the injury.

FINDINGS OF FACT

1. Claimant has worked for Employer since 1998. He was hired as an assembler and subsequently progressed to the position of ASES mechanic. He typically performed tasks such as drilling, riveting, assembling items using hand tools, and putting pre-formed parts together. When drilling, Claimant used a drill press or a hand drill, depending on the specific task being performed.

2. On January 15, 2016, Claimant's work tasks involved assembling helicopter seats. At approximately 1:00 or 1:30 p.m., Claimant developed pain in his right shoulder while drilling holes in the seat frame. By the end of his shift, Claimant was feeling a "fairly good pain" the shoulder. He had no right shoulder pain before starting work on January 15.

3. Claimant recalled the pain beginning during that shift while drilling holes for a seat. He used a hand drill from a standing position, pressing forward toward the seat. The seat was clamped in a holding fixture on a table that was approximately waist-height. The drilling action required Claimant to bend over at the waist with his arms elevated and abducted to approximately 60 degrees. Claimant's face was about level with the height of the drill. A simulation of this activity can be seen in Respondents' musculoskeletal investigation report (Resp. Ex. M). Claimant testified that when he was performing this task, he was bent over a bit more and his arms were extended farther than the individual depicted in the simulation.

4. Each hole drilled by Claimant would take approximately one to two minutes of forcefully pressing forward on the drill to get through the hardened steel. Claimant used a cobalt drill bit for this activity because they were out of carbide drill bits. The cobalt bit being used was not optimal because carbide drill bits are rated for harder steel.

5. Claimant felt pain in his right shoulder immediately after completion of the drilling and mentioned to his co-worker that his shoulder was sore. He did not report the incident to his supervisor that day, because he assumed it was just a sore shoulder which would resolve after a few days of rest.

6. Claimant rested his shoulder, iced it, and took ibuprofen, but the symptoms did not resolve. On January 20, Claimant reported the injury to the Environmental Health and Safety office of Employer. Employer referred Claimant to Dr. Chad Abercrombie with Alliance Health Partners.

7. Dr. Abercrombie initially examined Claimant on January 22, 2016. Regarding the onset of symptoms, Dr. Abercrombie documents "[Claimant] reports operating a drill and pushing with a moderate amount of force when he started having right shoulder pain. He reports the pain was immediate and has since not resolved."

8. Claimant subsequently treated with Dr. Baca at Integrity Urgent Care. His first visit with Dr. Baca was February 17, 2016. On the intake form, Claimant described the mechanism of injury as "drill[ing] through a stainless steel tube, when I had pain in shoulder and arm." In response to the question "how did it happen?" Claimant stated, "applying force to hand drill while drilling tube." Dr. Baca placed Claimant on work restrictions and referred him for physical therapy.

9. Dr. Baca referred Claimant for a right shoulder MRI, which was performed on March 11, 2016. The MRI showed a chronic appearing high-grade partial articular side tear of the subscapularis, moderate long head biceps tenosynovitis, and diffuse fraying of the labrum with partial detachment of the posterior quadrant. There was no significant articular cartilage abnormality.

10. Claimant saw Dr. Christopher Jones for a surgical consultation on March 28, 2016. Claimant described his mechanism of injury as "drilling holes through stainless steel sheeting to install helicopter seats." Claimant reported that "he immediately had pain in his biceps that evening [ ] which he initially thought was just soreness. Ultimately, it continued and did not improve." Dr. Jones recommended surgical repair to include a right shoulder arthroscopy with rotator cuff repair, subacromial decompression, debridement, and bicep tenodesis. Respondents denied the surgery pending an IME.

11. Dr. Jon Erickson performed an Independent Medical Examination (IME) on behalf of Respondents on May 5, 2016. Dr. Erickson stated in his report that Claimant did not recall a specific injury *per se*, but related it was "probably" due to drilling holes in stainless steel tubing.

12. Dr. Erickson opined that the MRI revealed only degenerative conditions and no acute trauma. He opined that Claimant "is a hard-working employee and honest, but his conditions are clearly not related to his work activities." Dr. Erickson relied partially on the musculoskeletal investigation report in offering his opinion. He stated that the primary and secondary risk factors in the report were "found not to apply," and

that the only occupational risk factor that really applies to the shoulder is awkward positions/repetition, which involves prolonged activities at greater than 60 degrees of shoulder flexion/abduction. Dr. Erickson felt the requested surgery was reasonable and necessary, but not work-related.

13. Dr. Timothy Hall performed an IME on behalf of Claimant on August 5, 2016. Dr. Hall was impressed that Claimant "is a good employee and is honest." Based on the information he reviewed, Dr. Hall opined that Claimant's shoulder symptomatology was work-related. Dr. Hall opined the musculoskeletal investigation report was not helpful because Claimant's injury resulted from "specific activity," rather than cumulative trauma. Dr. Hall explained there was a temporal relationship between the event and the onset of symptoms. Claimant's symptoms began at work and were further exacerbated by work activities. The symptoms made sense in the context of the questioned activity as the drilling position put strain on the shoulder. Dr. Hall felt there was also no better explanation for the cause of Claimant's symptoms than the drilling performed on January 15, 2016. Although Claimant's shoulder had degenerative conditions before the work injury, he was asymptomatic. Dr. Hall opined that Claimant's work activities aggravated his underlying pre-existing condition, and caused a previously asymptomatic degenerative condition to become symptomatic.

14. Claimant had a prior history of problems with his shoulder. He had shoulder surgery in 2009, but recovered well and returned to normal activities. He had no significant ongoing right shoulder symptoms after this treatment ended, and no limitations of his right shoulder immediately prior to the work incident on January 15.

15. Dr. Jones performed the right shoulder surgery in August 2016. Claimant's health insurance paid for the surgery.

16. Dr. Hall testified at hearing. His testimony was consistent with the opinions expressed in his IME report. Dr. Hall opined that Claimant's injury was an acute event superimposed on Claimant's degenerative shoulder condition. Dr. Hall stated that Claimant's shoulder was admittedly in bad health before January 15, 2016. Nevertheless, Claimant went to work asymptomatic and left work symptomatic. "[I]t was a specific event that made his asymptomatic situation symptomatic and has necessitated this surgery." In other words, Claimant's work activity on January 15 was "the straw that broke the camel's back, so to speak."

17. Dr. Erickson testified at hearing on behalf of Respondents. He did not recall Claimant reporting a specific incident during his IME examination. Rather, Dr. Erickson understood that the shoulder "had gradually gotten more painful as that day had gone on, and he had significant pain later that day." Dr. Erickson opined that the medical records did not document a specific incident, specifically referring to Dr. Baca's February 17, 2016 note. On cross-examination, the specific language from the February 17, 2016 note was read to Dr. Erickson. He responded, "That sounds to me like a specific event." Dr. Erickson also agreed the first report from Dr. Abercrombie also refers to a specific event. Dr. Erickson agreed that it takes less force to tear an already degenerated rotator cuff than a perfectly healthy one.

18. Claimant's supervisor, Andrew Hoese, testified on behalf of Respondents. Mr. Hoese testified to the accuracy of the musculoskeletal investigation report. He testified it takes approximately 30 seconds to two minutes to drill each hole in the stainless steel tube. Mr. Hoese testified on cross-examination that the cobalt drill bit Claimant was using required more force and longer duration for drilling.

19. Ms. Jody Glunz, the author of the musculoskeletal investigation report, testified by telephone at hearing on behalf of Respondents in her capacity as a board certified ergonomist. She explained that her report focused on ergonomics and engineering to determine if the job duties are potentially injurious. The report focuses on different risk factors, including repetition and force.

20. Ms. Glunz opined that Claimant's job duties were not sufficiently "repetitious" to cause a cumulative trauma disorder. She further testified that the forces applied by Claimant during his drilling were only applied for a short period and did not meet levels she would consider a risk factor for CTD. She concluded there were no risk factors present in Claimant's job duties from a cumulative trauma perspective. On cross-examination, Ms. Glunz conceded that information in her report shows that "partial or complete tears to a rotator cuff tendon are more likely to occur when the rotator cuff is already weakened or damaged."

21. Both Dr. Erickson and Dr. Hall perceived Claimant as "honest." The ALJ shares that impression, and finds Claimant's testimony to be credible.

22. Dr. Hall's opinions are more credible and persuasive than medical opinions in the record to the contrary.

23. Claimant has proven by a preponderance of the evidence that he sustained a work-related injury to his right shoulder on January 15, 2016.

CONCLUSIONS OF LAW

To establish compensability, a claimant must prove by a preponderance of the evidence that he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *see also Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). The phrases "arising out of" and "in the course of" are not synonymous, and a claimant must meet both requirements. *Younger v. City and County of Denver*, 810 P.2d 647, 649 (Colo. 1991). The "course and scope" requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991). Hence, an injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17 (Colo. 1998).

The term "arises out of" refers to the origin or cause of an injury. *Deterts v. Times Publishing Co*., 552 P.2d 1033 (Colo. 1976). There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment.

An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's employment contract. *Popovich v. Irlando, supra*.

A pre-existing condition does not necessarily disqualify a claim. If an industrial injury aggravates, accelerates, or combines with a pre-existing condition so as to produce disability or a need for medical treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Walmart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). A claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation claim are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

As found, Claimant has proven by a preponderance of the evidence that he injured his right shoulder on January 15, 2016 as a result of his work activities.

Clearly, Claimant's shoulder has significant degenerative changes that predated his injury. But the degenerative pathology was asymptomatic before drilling holes on January 15. Drilling the holes required Claimant to exert force while his right shoulder was in an awkward position. Dr. Hall persuasively opined that the pre-existing degenerative changes made Claimant "more susceptible" to injury. This helps explain why Claimant's shoulder became symptomatic as a result of activities that might, at first blush, appear relatively benign.

Claimant credibly testified that he experienced the onset of symptoms while drilling the holes. Although temporal proximity alone does not automatically establish causation, it does suggest a causal relationship. In combination with other evidence of record, the ALJ finds the clear temporal relationship between the onset of symptoms and Claimant's work activities to be a persuasive factor in favor of compensability.

Dr. Erickson is undoubtedly correct that any number of activities *could have* caused Claimant's shoulder to become symptomatic. But the activity that triggered Claimant's symptoms on January 15, 2016 was a work-related job task within the course and scope of his employment. As such, the Claimant's injury had its origins in a work-related function and is compensable.

ORDER

It is therefore ordered that:

1. Claimant’s January 15, 2016 injury to his right shoulder is compensable.

2. Respondents shall provide all reasonable and necessary medical treatment for Claimant’s right shoulder injury, including reimbursement to Claimant for any out-of-pocket expenses, and any expenses paid by Claimant’s health insurance carrier for the surgery performed by Dr. Jones.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 22, 2016

s/Patrick C.H. Spencer II

Patrick C.H. Spencer II
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

I. Whether Claimant has sustained his burden of proving that his death from a fatal heart attack occurring on June 16, 2012 is compensable under the Workers' Compensation Act of Colorado.

II. If this claim is compensable, whether the surviving spouse was wholly or partially dependent upon Claimant for support at the time of his death, in order to calculate her death benefits as either a whole or partial dependent, under the Workers' Compensation Act of Colorado.

STIPULATIONS

At hearing, the parties agreed that the statute of limitations did not begin to run until the Employer flied the First Report of Injury on February 12, 2015. As a result, the parties agreed that this claim is not barred by the statute of limitations set forth in C.R.S. 8-43-103.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant became employed with the Pueblo County Sheriff's Office on January 25, 1994 and remained employed with this employer until his death on June 16, 2012. (Resp's Exh. A)

2. Beginning in approximately 2011, Claimant was assigned by Sheriff Kirk Taylor to the position of Inspector for the Office of Professional Standards. Inspector, Claimant reported directly to Sheriff Kirk Taylor and Undersheriff J.R. Hall. In his role as Inspector, Claimant was responsible for matters that were commonly known as internal affairs.

3. In addition to his other employment duties, Claimant became a member of the employer's SWAT team in approximately 1996. In approximately 2010, Claimant became a SWAT team leader, which is a leadership position in the SWAT team. As a SWAT team leader, Claimant helped coordinate and engaged in SWAT trainings on average two full days a month. These trainings were held all year around, including in the summer months, and usually involved the SWAT team members wearing their full protective gear. In addition to SWAT trainings, Claimant would respond to SWAT calls as a member of the SWAT team whenever available. Although the testimony of various employer witnesses

varied regarding the average frequency of SWAT calls, the testimony as a whole reflects that SWAT calls occurred on average approximately once every one to two months per year.

4. Mrs. Watts testified at hearing that she and Claimant were high school sweethearts and got married on August 11, 1979. Mrs. Watts further testified that they were still married at the time of Claimant's death and had never been separated during that period of time.

5. Mrs. Watts testified that prior to his death, Claimant worked out, ran and "lifted huge" and was never sick. Mrs. Watts testified that, before Claimant passed away, she was not aware of Claimant having any type of heart conditions or disease.

6. Mrs. Watts testified that Claimant had a regular workout schedule and was very disciplined about his workout routine. On Mondays, Wednesdays and Fridays Claimant would lift weights and do sit ups, pushups and other calisthenics in the basement for approximately one hour. Then on Tuesdays, Thursdays, Saturdays and more than likely Sundays, Claimant would jog three to four miles. Claimant would jog regardless of the weather and would jog no less than three miles on each occasion. In addition, in the summer months, Claimant would swim about twice a week in their pool. Mrs. Watts testified that Claimant maintained a regular exercise routine for many years, and that Claimant had been working out and exercising regularly ever since they were in high school.

7. On May 10, 2012, Claimant responded with other SWAT team members to a call involving a hostage situation and a suicidal male. During this incident, Claimant was able to reach into the residence and grab the hostage, who was the suspect's elderly mother. It was estimated that this woman weighed approximately 90-100 pounds. Claimant ran while carrying this woman to a medical vehicle that had been set up approximately 50-100 yards away. Claimant delivered the woman to the medical personnel who were attending the vehicle before returning to the residence to continue assisting the other SWAT team members. At one point, the suspect was seen descending the staircase while brandishing a shotgun a short distance from the front door where Claimant and some other SWAT team members were stationed. Following the firing of bean bags by Lieutenant Kindred and the use of a flash bang diversionary device thrown by Claimant, the suspect was tackled and taken into custody and the situation was defused.

8. J.R. Hall testified that he is the Undersheriff of Pueblo County. Undersheriff J.R. Hall testified that he was present at the May 10, 2012 SWAT call, Undersheriff Hall testified that he was at the traffic control point with the medical vehicles and that he saw Claimant running toward them while carrying the suspect's elderly mother. Undersheriff Hall testified that when Claimant arrived, he observed Claimant to be breathing hard and sweating. However, Undersheriff Hall testified

that he was also sweating even though he wasn't wearing any tactical gear as it was a warm day. Undersheriff Hall's testimony indicates that he was only able to observe Claimant for a very short period of time as Claimant left to return to the scene where the suspect was located before he had time to recover.

9. Clifford Kindred testified that he is a Lieutenant Day Shift Watch Commander for the Pueblo County Sheriff's Office. At the time of the May 10, 2012 SWAT call, he was also a member of the SWAT team. J.C. Williams testified that he is employed as a Detective for the Pueblo County Sheriff's Office. Detective Williams is also a member of the SWAT team. Lieutenant Kindred and Detective Williams both responded to the SWAT call on May 10, 2012 and worked as a team together with Claimant during the call.

10. Lieutenant Kindred testified that the incident was stressful and stood out in his mind as one of the more significant events in his seven or eight years of being on the SWAT team. Detective Williams testified that his adrenaline and stress levels were very high during this incident and that this incident was among his top five most stressful incidents in his eight-year SWAT team career. .

11. Similarly, Undersheriff Hall testified that in his thirty years of working in law enforcement, he had never actually observed this type of human rescue where the person is carried out, as opposed to a barricaded incident. Undersheriff Hall agreed that the May 10, 2012 SWAT incident was stressful.

12. Lieutenant Kindred, Detective Williams and Captain Swearingen all agreed that there is a difference in stress and adrenaline levels between doing trainings versus being called out to an actual incident.

13. Mrs. Watts testified that following the May 10, 2012 SWAT call, Claimant was very angry at how the team had handled the call. Mrs. Watts testified that Claimant appeared stressed and told her that he was going to go home rather than go back to work, that he was really tired and that it had been a very stressful call. Mrs. Watts also testified that it was not typical for Claimant to go home from work early. Mrs. Watts testified that Claimant became even more aggravated as a result of the debriefing that occurred one day after the call. Mrs. Watts also testified that she first noticed that Claimant was sweating more the day following the call when Claimant went to the debriefing.

14. During the four to six weeks following the May 10, 2012 SWAT call, Mrs. Watts testified that Claimant did not stay outside with her and her daughters when they were playing at their outdoor pool, as he usually did, because he was so hot. Mrs. Watts also noticed that Claimant would get up at night and stand by the window because he was feeling so hot. In addition, Mrs. Watts testified, Claimant complained of having more than his usual amount of indigestion after the May 10, 2012 SWAT call. Prior to the call, Claimant would drink a glass of chocolate milk to treat his indigestion symptoms. After the May 10, 2012 call,

Claimant began buying and taking antacids to treat his indigestion symptoms. Mrs. Watts estimated that Claimant was buying antacids approximately every three days on his way to work. Mrs. Watts testified that the agitation, sweating and indigestion that Claimant had during the weeks following the May 10, 2012 SWAT call were unusual for Claimant.

15. Tracey Swearingen testified that he is employed by the Pueblo County Sheriff's Office as Captain of the Emergency Services Bureau and he also serves as the SWAT team commander. Captain Swearingen testified that he and Claimant attended a community event at City Park in Pueblo on June 15, 2012, the day before Claimant's death. The event is to bring the community out to see their gear and law enforcement tools that they have displayed, and to allow the community to get to know them outside of a bad situation. On that day, Claimant drove the van carrying their equipment from the annex where they keep the van into the park. Claimant and Captain Swearingen then unloaded the gear and set it out for display so that it could be seen and viewed. Captain Swearingen testified that they did not have to carry the gear very far when unloading it and setting it out for display. Captain Swearingen further testified that Claimant may have put on a tactical vest in order to demonstrate it for a short time, but otherwise they did not don their tactical gear or equipment that day. Captain Swearingen testified that they did not demonstrate or perform any physically strenuous activities at the park that day, and that there was no unusually stressful work activity that occurred that day. Captain Swearingen also testified that it was not an unusually hot day. Nevertheless, Captain Swearingen testified that Claimant spent most of the time sitting in the van with the air conditioner on, which was unusual for Claimant. Captain Swearingen testified that Claimant was not his usual self that day, and that he was not as talkative with him as he usually was on that day. Captain Swearingen testified that he attended the entire event at the park on June 15, 2012 together with Claimant.

16. Mrs. Watts testified that the day before Claimant passed away, she went during her lunch hour to bring lemonade to Claimant and Captain Swearingen at City Park, where they were participating in a drug safety community event. Mrs. Watts testified that when she arrived, Claimant was sitting in his car with the air conditioning on. Claimant complained to her of being hot and not being able to cool down. Claimant took Mrs. Watts on a tour but declined an offer by a mounted officer to ride one of the horses. Mrs. Watts testified that Claimant did not appear to be feeling well that day.

17. Mrs. Watts testified that on the evening of the day before Claimant died, they had dinner at a restaurant to celebrate Father's Day. Mrs. Watts testified that Claimant was really tired and decided to go home after dinner instead of going with his daughters to a sporting goods shop, which is something that he liked to do. Upon arriving home, Mrs. Watts testified that Claimant watched a television show that he liked to watch and then went to bed at approximately 9:00 p.m.

18. Mrs. Watts testified that at about 6:15 a.m. on the morning of June 16, 2012, she saw Claimant sitting on the back patio cooling down, as was his habit following his runs. Mrs. Watts further testified that Claimant later came in the house and she noted that he was sweating "really bad". Claimant said to her, "I just can't cool down" and asked her for a large glass of ice water, which she gave to him. Mrs. Watts testified that she asked Claimant what time he had to meet with the Secret Service, and Claimant responded, "When they call. You're on their time schedule. So as soon as they call, you leave." However, given that it was early in the morning and that Claimant had decided to leave to go for a run, after which he was planning to take a shower before going to work, Claimant reasonably believed that he had some time before the Secret Service would be calling him that day.

19. Mrs. Watts testified that she then went upstairs to get dressed but came back downstairs upon hearing a noise and found Claimant collapsed in a chair. Mrs. Watts testified that she called 911 and also ran across the street to get the help of some neighbors, who came and started administering CPR on Claimant. Mrs. Watts testified that the ambulance arrived and that Claimant was shocked three times in the kitchen before he was taken to the hospital. After arriving at the hospital, Mrs. Watts testified, she was placed in a little room and then was later informed by the doctor that Claimant had passed away.

20. Undersheriff Hall testified that Claimant was to be on a special assignment on June 16, 2012 to meet with the Secret Service to prepare for a visit by the first lady later that week. Undersheriff Hall testified that the Secret Service was supposed to arrive around noon, and that that was when Claimant was supposed to meet with them. Undersheriff Hall further testified that although Claimant would have been paid during the time he was meeting with the Secret Service, he was not "on the clock" and was not being paid for his time at the time he suffered his fatal heart attack on June 16, 2012.

21. Mrs. Watts testified that even after the May 10, 2012 SWAT call, Claimant maintained his regular exercise routine and exercise schedule right up until the day he passed away. In addition, Mrs. Watts testified that on the morning of his death, June 16, 2012, Claimant actually jogged six miles instead of his usual three to four miles because he had just brought a bunch of young guys onto the SWAT team and he "wasn't going to let them beat him."

22. Captain Swearingen testified that between the May 10, 2012 SWAT call and Claimant's death on June 16, 2012, he did not notice any physical changes or anything unusual about Claimant other than the day that they attended the community event at the park on June 15, 2012.

23. Shonna Cruz Gutierrez testified that she is employed by the Pueblo County Sheriff's Office as an Employee Leave Technician in Human Resources. Ms. Gutierrez testified that, although she and Claimant worked in different capacities,

Claimant's office was right down the hall from her office so she saw him on a fairly daily basis and engaged in passing office interactions with him. Ms. Gutierrez testified that in the months leading up to Claimant's death on June 16, 2012, she did not recall ever noticing that Claimant looked unwell or unusual.

24. Kirk Taylor testified that he is the elected Sheriff of Pueblo County and has been so since January of 2007. Sheriff Taylor testified that Claimant's office was very close in proximity to the Undersheriff's and his offices and that he saw Claimant on a relatively daily basis before Claimant passed away. Sheriff Taylor testified that in the months leading up to his death on June 16, 2012, Claimant never said anything to him about not feeling well, nor did he ever observe Claimant looking unusual or unwell during that time period.

25. Undersheriff Hall testified that during the time that Claimant was an Inspector, he worked closely with Claimant and saw Claimant every day that both he and Claimant were at work. Undersheriff Hall testified that during the last few months before his death on June 16, 2012, Claimant did not complain to him of any health problems and he did not notice anything unusual about Claimant's appearance or condition during that time. After Claimant passed away, Undersheriff Hall assisted in cleaning out Claimant's office and testified that he observed some over the counter heartburn medication in Claimant's office. However, he had never seen him take such medication.

26. James A. Wilkerson, IV, M.D., is a forensic pathologist who conducted an autopsy of Claimant on June 17, 2012. Dr. Wilkerson produced an autopsy report that he signed on July 10, 2012. (Resp's Exh. E) In his autopsy report, Dr. Wilkerson described his findings of the cardiovascular system as follows:

> The pericardial surfaces are smooth, glistening, and unremarkable; the pericardial sac is free of significant fluid or adhesions. The coronary arteries arise normally, follow the usual distribution, and are generally widely patent with moderate atherosclerosis but no thrombosis. In the left circumflex coronary artery there is moderate to severe stenosis. No thrombosis is seen. The chambers and valves exhibit the usual size-position relationship and are unremarkable. The myocardium is dark red-brown, firm, and remarkable for lateral left ventricle fibrosis consistent with a remote myocardial infarction. The atrial and ventricular septa are intact. The left ventricular free wall is thickened. The aorta and its major branches arise normally, follow the usual course, and are widely patent, free of significant atherosclerosis, tears, aneurysms or other abnormality. The vena cava and its major tributaries return to the heart in the usual distribution and are free of thrombi. The enlarged heart weighs 540 grams. (Resp's Exh. E., p. 21)

Regarding his findings on microscopic examination, Dr. Wilkerson noted the following:

> Coronary artery sections show moderate to high-grade stenosis with atherosclerotic plaque. Within one of the plaque sections there is recent and acute hemorrhage. Sections of the myocardium show areas of perivascular and perifascicular fibrosis with some enlarged myocytes. There are also some larger areas of fibrosis. Some of the fibers show wavy fiber change but no definitive necrosis or inflammatory infiltrates are seen. Rare areas of immature fibrosis are also present. (Resp's Exh. E, p. 23)

27. Dr. Wilkerson summarized his autopsy findings as follows:

> I. Hypertensive atherosclerotic cardiovascular disease:
> A) Cardiomegaly (540 grams)
> B) Moderate stenosis of most coronary arteries
> C) Severe stenosis of left circumflex coronary artery
> D) Recent and remote lateral left ventricle myocardial infarction
> E) Sudden cardiac death
>
> II. Pulmonary congestion
>
> III. Toxicology:
> A) Urine drug screen: Negative
> B) Ethanol, whole blood: None detected

(Resp's Exh. E, p. 18) Regarding the cause of death, Dr. Wilkerson concluded that Claimant died of hypertensive atherosclerotic cardiovascular disease with sudden cardiac death. (Resp's Exh. E, p. 18)

28. Dr. Wilkerson testified at a deposition prior to hearing. Dr. Wilkerson testified that included in the information he received from the Coroner prior to conducting the autopsy was that Claimant's father and uncle had cardiovascular disease, but that Clamant had no known cardiovascular disease. Dr. Wilkerson testified that Claimant's height and weight at the time of autopsy were 5'8" and 212 pounds. Dr. Wilkerson testified that that would be considered overweight, although not necessarily obese.

29. Regarding some of the notable autopsy findings of Claimant's cardiovascular system, Wilkerson noted that Claimant had atherosclerosis, which is the deposition of fatty material into the wall of the coronary artery, in all three of his main coronary arteries. While most of it was moderate, meaning that 40-60% of the lumen of the vessel is blocked, one of the vessels, *the left circumflex coronary artery, had severe stenosis,* which Dr. Wilkerson testified meant greater than a 60% blockage of the vessel.

30. Dr. Wilkerson also testified that Claimant had an enlarged heart. While the heart of a man of Claimant's size should have probably weighed no more than about 400 grams, Claimant's heart weighed 540 grams. Dr. Wilkerson testified that Claimant probably developed the enlarged heart and that it was most likely related to hypertension. Dr. Wilkerson explained that, although hypertension did not give you symptoms, it is a condition that they treat because it causes your heart to work harder, which then causes your heart, like any muscle that is working, to get bigger. Dr. Wilkerson testified that anytime you have a heart that big, it requires more oxygen. The problem, however, is that the heart has a limited blood supply, so if it gets too big, it outgrows its blood supply. Then if you have atherosclerosis, it compounds the problem even worse. Dr. Wilkerson testified that *Claimant's enlargement of the heart is something that would have taken months or years to develop.*

31. Dr. Wilkerson testified that another finding on autopsy was a focus of scarring or fibrosis in the lateral left ventricle, *which constituted an old scar and was consistent with an old heart attack that has healed.* Dr. Wilkerson testified that the scarring was in the vascular distribution of the *severe stenosis* from the left circumflex coronary artery. Dr. Wilkerson testified that this finding indicated that Claimant most likely had had a myocardial infarction or heart attack where the muscle did not get enough oxygen and died and then formed a scar in the past. Dr. Wilkerson testified that he was not able to tell the age or timeline of this prior cardiac event by looking at this particular scar, other than that *it was older than 4-6 weeks.*

32. In contrast to the age of the old scar, Dr. Wilkerson testified that *the few rare areas of immature fibrosis seen on microscopic exam probably occurred within 4-6 weeks of Claimant's death.* Dr. Wilkerson testified that these were smaller areas of immature fibrosis that represented small, little healing heart attacks that occurred not right before Claimant's death, but probably within 4-6 weeks of his death. Dr. Wilkerson explained that they were areas of fibrosis and scarring that had not yet formed the final scar. Dr. Wilkerson further testified that the cause of these areas of immature fibrosis would be called myocardial infarctions, or death of the tissue due to lack of oxygen.

33. Dr. Wilkerson testified that, based on the history that he received, the only indication that might suggest that Claimant might have been having symptoms of a heart attack before he died was the fact that he had been having what he thought was indigestion or heartburn. Regarding findings that one might see on autopsy that might indicate whether someone was having indigestion, Dr. Wilkerson testified that sometimes you can see changes in the esophagus, although it is pretty non-specific. Dr. Wilkerson testified that he did not note any changes indicative of indigestion during Claimant's autopsy.

34. Regarding his opinion as to the cause of Claimant's death, Dr. Wilkerson testified that *Claimant died of hypertensive atherosclerotic cardiovascular disease* with

sudden cardiac death. Dr. Wilkerson explained that sudden cardiac death means a cardiac issue within an hour of onset. Dr. Wilkerson further testified that he believes the cause of Claimant's death to be the *underlying disease*. Dr. Wilkerson testified that *sudden cardiac death due to hypertensive atherosclerotic cardiovascular disease is by far the most common cause of death in the United* States today. In addition, Dr. Wilkerson testified, Claimant was in an age group where is occurs pretty regularly.

35. On cross examination, Dr. Wilkerson agreed that Claimant's lab tests from August 14, 2001 and May 1, 2009 showed that *Claimant already had risk factors for coronary artery disease* as of the dates of those tests. Specifically, Claimant had a low HDL cholesterol and elevated triglycerides, which Dr. Wilkerson testified were independent risk factors for coronary artery disease. (Resp's Exh.s I and K). Dr. Wilkerson also testified that Claimant had additional independent risk factors for coronary artery disease and heart attack, including hypertension, being overweight and a family history of heart disease in his father and uncle.

36. In addition to risk factors, Dr. Wilkerson testified that there was evidence indicating that Claimant had actual coronary artery disease at the time of his death. This evidence included the atherosclerosis seen in all of Claimant's major coronary arteries and the enlarged heart. Dr. Wilkerson opined that, based on what he has seen, *Claimant had coronary artery disease for a significant period of time, most likely years, prior to his death.*

37. Dr. Wilkerson testified that the sudden cardiac death in this case was caused by a lack of oxygen to Claimant's heart, and that most likely it was a sudden lack of oxygen to the heart. Dr. Wilkerson also testified that more likely than not, the sudden cardiac death was triggered by the run that he went on earlier that morning. Dr. Wilkerson agreed that he could not say, within a reasonable degree of medical probability, that had Claimant not gone on a run on the morning of June 16, 2012, he would have died that day anyway as a result of whatever heart damage he may have suffered prior to June 16, 2012. Dr. Wilkerson also testified that he could not say, within a reasonable degree of medical probability, that had Claimant not had the prior myocardial infarctions or "microinfarctions", that he would or would not have died after going for his run on June 16, 2012.

38. Although Dr. Wilkerson testified that what was identified as the "microinfarctions", or the few areas of immature fibrosis that were consistent with small healing heart attacks, could *possibly* have played a role in Claimant's eventual cardiac arrest, at no point did Dr. Wilkerson state this opinion to a reasonable degree of medical probability. Nor did Dr. Wilkerson ever state that this was more likely the case than not. In fact, when specifically asked whether he could state this opinion within a reasonable degree of medical *probability*, Dr. Wilkerson responded by stating that he could only say it was *possible*. Dr. Wilkerson's testimony regarding the possible relationship between the "microinfarctions" and

the sudden cardiac arrest on June 16, 2012 does not satisfy the preponderance of the evidence standard of proof that applies to this claim.

39. John A. Boerner, M.D., is a cardiologist who conducted a record review Independent Medical Evaluation on Claimant's behalf. Dr. Boerner issued an initial 2-page undated IME report (Resp's Exh. D), as well as a supplemental report dated October 14, 2016 following review of Dr. Hutcherson's deposition testimony. Dr. Boerner also testified at a deposition prior to hearing.

40. Dr. Boerner testified that, based on the medical records that he reviewed, which included the lab reports dated August 13, 2001 and April 30, 2009, Claimant had a number of risk factors for cardiovascular disease. These risk factors were also listed in Dr. Boerner's IME report and included borderline hypertension, male sex, borderline age, family history, mildly abnormal coronary risk, lipid profile (dyslipidemia) and mildly elevated triglycerides, and mildly overweight. Dr. Boerner testified that while Claimant's risk profile was abnormal, it was not strikingly abnormal and placed him at a borderline level as to whether he should have been treated. However, Dr. Boerner did testify that Claimant's family history of coronary disease was significant because it is a major risk factor for coronary disease and would have made him more aggressive in terms of trying to go after it. Dr. Boerner agreed that, *with the possible exception of the hypertension, which could be related to stress, all of these risk factors were personal to Claimant and were not work-related.*

41. Dr. Boerner agreed that the actual coronary artery disease that Claimant was found to have was significant, and that he *likely had that coronary artery disease for more than six months, and probably more than a year, before his death.*

42. Dr. Boerner opined that the cause of Claimant's death on June 16, 2012 was a ventricular fibrillation arrest. Dr. Boerner also testified that he agreed with Dr. Wilkerson's conclusion regarding the cause of death, which he understood as being a ventricular arrhythmia in the setting of hypertensive cardiovascular disease.

43. Regarding Dr. Wilkerson's testimony as to the 4-6 week timeframe of scar formation for purposes of dating the time of a heart attack, Dr. Boerner testified that he had no reason to doubt Dr. Wilkerson's testimony. However, Dr. Boerner also testified that he could not personally comment on the accuracy of this testimony as he was not personally familiar with the pathology literature regarding this.

44. Dr. Boerner agreed in general that the presence of the areas of *immature fibrosis* seen by Dr. Wilkerson on his microscopic autopsy exam alluded to some relatively *recent* heart damage and heart muscle death, or heart attack, within the six weeks prior to Claimant's death.

45. Based on his review of deposition testimony from the employer witnesses, Dr. Boerner testified that he would consider the May 10, 2012 SWAT call to be an event that would increase Claimant's chances of having a heart attack. Dr. Boerner testified that this was particularly so in view of the subsequently documented coronary disease that Claimant was discovered to have at that time.

46. Dr. Boerner agreed that there was *no way to know the actual amount of heart muscle damage that existed in Claimant's heart* ***prior to*** *the May 10, 2012 SWAT incident.* Similarly, Dr. Boerner agreed that there was no way to know how much *additional damage* ***may*** have been done to the heart muscle as a result of the SWAT incident.

47. Dr. Boerner testified that he reviewed information provided by Mrs. Watts that indicated some symptoms that Claimant was experiencing following the May 10, 2012 SWAT call. The symptoms included complaints of indigestion and feeling hot and sweaty. Dr. Boerner also noted the reports of the symptoms that Claimant was exhibiting at the event the day before his death, such as again feeling hot and sweaty, not feeling well, and staying in the van to cool off, and that it was later found that Claimant had over-the-counter heartburn medication in his office. Dr. Boerner testified that reviewing the information as a whole, he believed that Claimant's symptoms were cardiac in origin rather than indicative of any GI pathology.

48. Dr. Boerner testified that, **if** indeed May 10, 2012 was the onset of Claimant's symptoms, he could say with a reasonable degree of medical probability that the event on May 10, 2012 was a cardiac event of significant myocardial ischemia, and that Claimant's major infarction probably occurred that day. Dr. Boerner testified that *"he wondered* ***if"*** Claimant was a *"fast scar former".* If so, he may have completed the scar formation from this event within the five weeks between May 10, 2012 and his death, and the old fully healed scar seen by Dr. Wilkerson on autopsy was from a major infarction that occurred with the SWAT incident on May 10, 2012. Dr. Boerner further opined that Claimant likely suffered subsequent microinfarctions in the following five weeks until his death, seen as areas of immature fibrosis on autopsy, and that these subsequent microinfarctions occurred either spontaneously or with lesser exertions. Dr. Boerner did not identify what any of these lesser exertions might be or whether they would be work related in any way. Dr. Boerner also acknowledged that it *was possible that Claimant may have had a heart attack* ***prior to*** *May 10, 2012 that resulted in heart muscle damage and the formation of the old fully healed scar seen on autopsy,* and that Claimant may simply not have noticed or not reported symptoms at the time.

49. Dr. Boerner testified that in the presence of scarred heart muscle, it was more likely that an episode of myocardial ischemia would cause primary arrhythmias, ventricular fibrillation and sudden cardiac death than if there were no previous heart attack or other heart damage present. Dr. Boerner explained that this was

due to disruption of the normal electrical flow of the electrical energy passing through the heart.

50. Dr. Boerner testified that in this case, Claimant's ventricular fibrillation arrest resulted from a combination of a previous heart attack and continuing ongoing myocardial ischemia due to untreated coronary disease.

51. Regarding the finding by Dr. Wilkerson of a recent and acute hemorrhage seen on microscopic autopsy exam, Dr. Boerner agreed that such hemorrhage would indicate a recent plaque rupture. Dr. Boerner testified that he did not know whether the plaque rupture and hemorrhage occurred at the time of Claimant's run on the day of his death, or whether it occurred in the day or days before his death with Claimant then becoming ischemic during his run on the morning of June 16, 2012 because of the worsening obstruction caused by the plaque rupture. However, Dr. Boerner testified that aside from the run on June 16, 2012, he was unaware of any other event that would have likely been the cause of the plaque rupture and recent and acute hemorrhage seen on autopsy. Dr. Boerner also testified that it would be speculative to say that, even if Claimant had not gone on his run on the morning of June 16, 2012, he would have died that day anyway as a result of any damage that occurred to his heart at the time of the May 10, 2012 SWAT call.

52. Dr. Boerner testified that, for reasons that are not yet fully understood, it happens that people who become acutely ischemic during exercise tend to get arrhythmias post exercise as opposed to during the exercise, as happened in Claimant's case. In other words, Claimant may have died because he was ischemic from running even though he did not die while he was actually running.

53. Dr. Boerner testified that, had Claimant presented to him between May 10, 2012 and his date of death on June 16, 2012, he believed that he would have done a cardiac cath and an angioplasty, and that Clamant would be alive today. Dr. Boerner also agreed, however, that the fact that the outcome may have been different had Claimant been treated did not affect or change the actual cause of Claimant's sudden cardiac arrest.

54. John D. Hutcherson, M.D., is also a cardiologist who conducted a record review Independent Medical Evaluation, but at the request of Respondents. Dr. Hutcherson issued an IME report dated August 5, 2016. (Resp's Exh. C) Dr. Hutcherson also testified by post-hearing deposition and issued a supplemental response report (in response to Dr. Boerner's October 14, 2016 supplemental report) dated October 24, 2016.

55. Dr. Hutcherson agreed with the testimonies of Dr. Wilkerson and Dr. Boerner that Claimant had several risk factors for coronary artery disease seen as far back as 2001, that he likely had actual coronary artery disease for at least a year, if not

years, before his death, and that the amount of coronary artery disease seen on autopsy was significant.

56. Dr. Hutcherson disagreed with Dr. Boerner's opinion that Claimant may have been a fast healer and that the old, fully healed scar seen on autopsy may have been the result of a major infarct that occurred just five weeks prior to death at the time of the May 10, 2012 SWAT call. Dr. Hutcherson testified that, in light of Dr. Wilkerson's description of this fibrotic tissue as a *"totally healed scar"* he understood the scar to be *fully healed and a fully fibrotic scar.* As such, Dr. Hutcherson testified that he would *estimate the age of the scar to be over six months.* Regarding the description of the scar as "dense", Dr. Hutcherson testified that "dense" in this context would mean that it's fairly dense fibrous tissue, there's very little heart muscle left, that it's contracted and has become smaller and more dense. Dr. Hutcherson further testified that the denser a scar is, the older it is.

57. Dr. Hutcherson agreed with the testimony of Dr. Boerner that it is possible for someone to have a heart attack and not have any symptoms from it (referred to by Dr. Boerner as a "silent MI"). Dr. Hutcherson further testified that in this case, the old fibrotic fully healed scar tissue seen on autopsy *could* have been from a prior heart attack *from which Claimant did not have any symptoms.*

58. Rather than causing the older fibrotic tissue, Dr. Hutcherson agreed with Dr. Wilkerson that the May 10, 2012 SWAT incident, perhaps in combination with an episode of loading and unloading some equipment one or two days prior to the SWAT call, could have caused a coronary event that led to the areas of immature fibrosis that he (Dr. Wilkerson) estimated to be approximately 4-6 weeks old at the time of Claimant's death. Dr. Hutcherson testified that he did not see anything in Dr. Wilkerson's autopsy report or testimony that indicated to him that Dr. Wilkerson believed that the old, fully healed fibrotic scar tissue could have been the result of the May 10, 2012 SWAT call. Dr. Hutcherson also testified that the old fully healed scar may have involved a small branch, and that the newer areas of immature and healing fibrosis involved more disease than the old scar.

59. Like Dr. Boerner, Dr. Hutcherson agreed with Dr. Wilkerson's assessment regarding the cause of Claimant's death, namely, hypertensive atherosclerotic cardiovascular disease with sudden cardiac death.

60. Dr. Hutcherson also agreed with both Dr. Wilkerson and Dr. Boerner that Claimant's sudden cardiac death was caused by a sudden lack of oxygen to his heart (as described by Dr. Wilkerson) and/or an acute decreased blood supply (as stated by Dr. Boerner). Dr. Hutcherson explained that blood carries oxygen such that blood and oxygen supply go hand-in-hand.

61. Regarding Dr. Boerner's testimony, that the recent plaque rupture leading to the recent and acute hemorrhage seen on autopsy could have occurred either on the morning of the June 16, 2012 run, or a short time before with the run then causing the ischemia in the presence of the decreased blood supply due to worsening of the obstruction because of the plaque rupture, Dr. Hutcherson testified that in either case, the triggering event that led to the ischemia-induced ventricular fibrillation arrest was the run on the morning of his death. Dr. Hutcherson testified that the run on June 16, 2012 was the triggering event regardless of exactly when the plaque rupture and hemorrhage began.

62. Dr. Hutcherson recalled Dr. Boerner's opinion that Claimant's ventricular fibrillation arrest on June 16, 2012 was the result of the previous heart attack combined with ongoing myocardial ischemia due to untreated coronary artery disease. Dr. Hutcherson agreed with Dr. Boerner that the ongoing myocardial ischemia that occurred in the weeks leading up to Claimant's cardiac arrest was due to untreated coronary disease. Dr. Hutcherson testified that the cause of the untreated coronary disease, aside from the obvious lack of medical care and failure to seek treatment, was the same group of risk factors that Claimant had had for much of his life, including gender, age, weight with an increased BMI, hypertension which was poorly followed and which produced several pretty significant levels, abnormal lipids, and family history with his father and uncle having had heart trouble. In terms of risk factors, Dr. Hutcherson testified that the only factors that Claimant was missing were smoking and diabetes. Dr. Hutcherson testified that Claimant's risk factors were not work-related. Dr. Hutcherson further clarified that, although he had commented in his IME report that of Claimant's coronary risk factors, only the hypertension appeared to be work-related (Resp's Exh. C, p. 14), what he meant by this statement was that hypertension was the only risk factor that he could possibly relate to Claimant's work activities. Dr. Hutcherson testified that he did not, in fact, know what Claimant's blood pressure was at work or whether he would consider Claimant's blood pressure to in fact be work-related. Dr. Hutcherson agreed that the symptoms that Claimant purportedly experienced during the weeks leading up to his cardiac arrest were coronary in origin given that the autopsy showed that Claimant's esophagus and stomach were "clean".

63. Dr. Hutcherson testified that, whatever the extent of heart damage that was caused by the May 10, 2012 SWAT call (and/or the carrying of equipment around that time), such damage did not cause Claimant's cardiac arrest on June 16, 2012, although it may have contributed to it. Dr. Hutcherson testified that, ***if*** *the damage from the events of early May 2012 were the cause of Claimant's cardiac arrest, he would have expected the cardiac arrest to occur sooner than five weeks later.*

64. Dr. Hutcherson testified that the fact that Claimant continued to perform his normal activities between the May 10, 2012 SWAT call and his June 16, 2012 cardiac arrest, including his daily workout routine and his regular work duties,

indicated that Claimant's heart condition was not bad enough during those five weeks to cause a significant enough cardiac event or increase in symptoms to make Claimant modify his normal activities. Dr. Hutcherson further testified that the six-mile run that Claimant did on the morning of June 16, 2012 was the precipitating factor that caused Claimant's cardiac arrest. In addition, Dr. Hutcherson testified that he could not say that, had Claimant not gone on the run on the morning of June 16, 2012, he would nevertheless have died that day anyway as a result of his heart condition at that time.

65. Dr. Hutcherson testified that the areas of immature and healing fibrosis that were seen on autopsy could have been the site where the rhythm disturbance started. However, Dr. Hutcherson also noted that there were findings of some hemorrhage and plaque problems lower down in the vessel. Dr. Hutcherson testified that he could not say definitely where the ventricular fibrillation started because it begins all over the ventricle. Dr. Hutcherson further testified that in his opinion, *what played a **larger** role in Claimant's death than the areas of immature fibrosis was the severity of the atherosclerosis of the vessels and the status of the coronary artery disease and obstructive disease.*

66. Regarding the community event at the park on June 15, 2012, Dr. Hutcherson testified that he did not see anything that indicated to him that a significant cardiac event occurred that day (other than ongoing cardiac-related symptoms). Dr. Hutcherson also testified that the events at the park on June 15, 2012 were not significant in terms of causing the cardiac arrest the following day.

67. Dr. Hutcherson testified that, had Claimant presented to him and undergone treatment during the time between the May 10, 2012 SWAT call and his cardiac arrest, there is a 95% chance that Claimant would have survived for another few years after June 16, 2012, and a 75% chance that Claimant would have still been alive at the time of the hearing.

68. In his October 14, 2016 supplemental report, Dr. Boerner wrote: "His death on June 15 (sic) was not caused by a new acute MI, but by ischemia induced by exercise in a patient with severe, untreated coronary artery disease, in the setting of prior scar from an antecedent MI. Both the scar and the acute ischemia were instrumental in inducing the fatal arrhythmia." However, Dr. Boerner had also testified that he could not say that Claimant would have died on June 16, 2012 as a result of the heart condition that he had at that time had Claimant not gone on the run earlier that morning. The evidence also indicates that Claimant likely had the old fully fibrotic scar for more than six months, and perhaps longer, and that it was not causing any symptoms or interference with Claimant's activities throughout that time. Although Dr. Boerner opined that the old scar may have been caused by a cardiac event that occurred at the time of the May 10, 2012 SWAT incident, both Dr. Wilkerson and Dr. Hutcherson opined that the May 10, 2012 SWAT call may have been the cause of the newer areas of immature fibrosis, and not the older scar that was fully healed. Dr. Wilkerson described the

old fibrotic tissue as a “fully healed scar” and testified that it was older than the newer areas of immature fibrosis that were approximately 4-6 weeks old. Reviewing the evidence and testimony as a whole, the ALJ credits the opinions of Dr. Hutcherson and Dr. Wilkerson on this point and finds their testimony in this regard to be more persuasive than that of Dr. Boerner.

69. In his supplemental report dated October 24, 2016, Dr. Hutcherson reiterated his opinion that the old fibrotic myocardial infarction was not related to Claimant’s more recent cardiac events in May of 2012. Dr. Hutcherson further noted that individuals may have a silent myocardial infarction and then develop symptoms later on with advancing coronary disease. In addition, Dr. Hutcherson wrote, without treatment, coronary artery disease will usually eventually cause symptoms, including disability or death, if left untreated.

70. Based on the evidence presented, Claimant has failed to sustain his burden of proving that his death on June 16, 2012 was proximately caused by the May 10, 2012 heart attack or that it arose out of and in the course and scope of his employment.

71. Dr. Boerner and Dr. Hutcherson both agreed with Dr. Wilkerson’s assessment regarding the formal cause of Claimant’s death, which was hypertensive atherosclerotic cardiovascular disease with sudden cardiac death (ventricular fibrillation arrest). A review of the opinions and testimony of all three of these physicians indicates that all three of them identified Claimant’s underlying coronary artery disease as a primary factor in causing his ventricular fibrillation arrest and death. Dr. Wilkerson specifically testified that he believed the cause of Claimant’s death to be the underlying disease.

72. All three physicians also agreed that Claimant’s sudden cardiac death or ventricular fibrillation arrest was most likely caused by a sudden lack of oxygen to the heart (ischemia) and/or a sudden decrease in blood supply to the heart due to the lack of oxygen. All three physicians further testified that the episode of acute ischemia was in turn triggered or caused by the run that Claimant did on the morning of June 16, 2012. Dr. Wilkerson testified that the run most likely caused the plaque rupture that led to the recent hemorrhage seen on autopsy. Dr. Wilkerson further testified that the sudden cardiac death was most likely triggered by the run that Claimant went on earlier that morning. Dr. Boerner testified that he did not know whether the plaque rupture occurred during the run, or whether it may have occurred a day or few days prior to the run with Claimant then becoming ischemic during his run because of the worsened obstruction caused by the plaque rupture. As noted by Dr. Hutcherson, however, in either case as contemplated by Dr. Boerner, the triggering event that would have led to the ischemia-induced ventricular fibrillation arrest would have been the run. Dr. Hutcherson testified that the run that Claimant did on the morning of June 16, 2012 was the precipitating factor that caused Claimant’s cardiac arrest.

73. Dr. Wilkerson, Dr. Boerner and Dr. Hutcherson all testified that Claimant had many risk factors for coronary artery disease dating as far back as 2001 and was found to have a significant amount of actual coronary artery disease on autopsy. With the possible exception of hypertension, Dr. Boerner and Dr. Hutcherson agreed that these risk factors were personal to Claimant and were not work-related. Based on this testimony, the ALJ finds that Claimant's coronary risk factors were not work-related.

74. Based on the evidence presented, Claimant's run on the morning of June 16, 2012 did not arise out of or in the course and scope of employment. Mrs. Watts testified that Claimant had engaged in a regular exercise routine since the time they were in high school, prior to Claimant becoming employed with the employer. Mrs. Watts further testified that Claimant's current exercise regimen involved him working out with weights and doing calisthenics on Mondays, Wednesdays and Fridays, and going for a jog or a run on Tuesday, Thursday, Saturdays and some Sundays. Mrs. Watts testified that Claimant conducted his exercise routines at home before showering and going to work. There was no evidence presented to indicate that Claimant engaged in his exercise regimen pursuant to the instruction or direction of his employer. To the extent Claimant may have been motivated in part by a desire to not allow the new SWAT members to beat him, such motivation was self-imposed and cannot be attributed to the employer, particularly in light of the lack of evidence indicating that Claimant was directed or instructed by his employer to engage in his run. According to Mrs. Watts' testimony, Claimant had returned from his run on the morning of June 16, 2012 (at Saturday) at approximately 6:15 a.m. Although Claimant was scheduled to meet with the Secret Service that day for a special assignment to plan for a pending visit by First Lady Michelle Obama, the evidence indicates that Claimant was not in the course and scope of his employment at the time of his run on June 16, 2012. Mrs. Watts testified that Claimant had indicated to her that the Secret Service may call whenever they arrive and that when they call, you leave. However, Undersheriff Hall testified that Claimant was scheduled to meet with the Secret Service upon their arrival at noon later that day. Moreover, the fact that Claimant had decided to go for a run, following which he typically would shower before proceeding to work, indicates that he was not anticipating receiving a call from the Secret Service in the immediate future. Undersheriff Hall testified that, while Claimant would have been paid during the time he was meeting with the Secret Service, he was not on the clock and was not being paid at the time of his run and cardiac arrest. Even if it could somehow be said that Claimant was in the course and scope of his employment in the early morning of June 16, 2012, the evidence indicates that the run still did not arise out of his employment with the employer. Further, while there was some testimony that SWAT team members are on call 24/7, Claimant was not involved in any SWAT team activity at the time of his heart attack and death.

75. Based on the evidence presented, the ALJ finds that the proximate cause of Claimant's ventricular fibrillation arrest and death on June 16, 2012 was a combination of his underlying coronary artery disease and the acute ischemia that was precipitated by his run on the morning of June 16, 2012. The ALJ further finds that neither the coronary artery disease nor the run are work-related factors. Claimant was not in the course and scope of his employment at the time of his death and his death did not arise out of employment.

76. The evidence as a whole does not support the conclusion that Claimant's sudden cardiac arrest and death on June 16, 2012 were proximately caused by the May 10, 2012 SWAT incident or the heart attack that occurred at that time. Dr. Wilkerson, Dr. Boerner and Dr. Hutcherson differed in their opinions as to whether the May 10, 2012 incident caused the older fully healed fibrotic scar tissue (Dr. Boerner) or the newer areas of immature healing fibrosis seen on autopsy (Dr. Wilkerson and Dr. Hutcherson). However, all three physicians agreed that the cardiac event associated with the May 10, 2012 SWAT call likely caused some heart damage that resulted in the formation of some type of scar tissue in Claimant's heart, whether healed or in the process of healing. The physicians also testified that the presence of scar tissue could possibly help cause electrical instability or destabilization in the heart, making it more likely that an episode of acute ischemia could cause a ventricular fibrillation. However, none of the physicians stated their opinions to the requisite degree of probability so as to satisfy the standard of proof with regard to causation. Rather, their opinions were only stated as a matter of possibility. Indeed, when specifically asked if he were able to state within a reasonable degree of medical *probability* whether the areas of immature fibrosis could have played a role in Claimant's eventual cardiac arrest, Dr. Wilkerson declined and limited his testimony to saying only that it was *possible*. Because the testimonies of Dr. Wilkerson, Dr. Boerner and Dr. Hutcherson regarding the role that the areas of fibrosis may have played in causing Claimant's death was only stated in terms of possibilities, it is found that their testimonies on this point are not sufficient to meet the applicable burden of proving causation by a preponderance of the evidence. Moreover, the evidence and testimony as a whole indicates that the factors of underlying coronary artery disease and the exercise-induced acute ischemia from the run were seen as more significant and definitive factors in causing Claimant's ventricular fibrillation arrest and death. Dr. Hutcherson expressly testified that the coronary artery disease played a much more important role in causing Claimant's death than the areas of immature fibrosis.

77. In addition to the medical evidence, there is other evidence in the record that further supports the conclusion that Claimant's death was not proximately caused by the May 10, 2012 SWAT call or a heart attack from that time. The evidence reflects that Claimant continued to perform his usual activities, including his full duty work and his usual daily exercise regimen, after the May 10, 2012 SWAT call all the way up until his death. Aside from the community event at the park on June 15, 2012, none of the employer witnesses, including Sheriff Taylor and

Undersheriff Hall who testified that they saw Claimant on a daily basis, reported hearing Claimant say anything about not feeling well or noticing anything unusual about Claimant during the weeks leading up to his death. Mrs. Watts is the only witness who reported being aware of some symptoms during this time (aside from the June 15, 2012 event at the park on the day immediately prior to his death). Thus, although according to Mrs. Watts, Claimant may have begun having some symptoms, the events of May 10, 2012 and the cardiac event that occurred at that time were not sufficient to preclude Claimant from being able to perform essentially all of his usual activities for the next five weeks. As Dr. Hutcherson testified, if the May 10, 2012 SWAT call and heart attack were the cause of Claimant's sudden cardiac arrest on June 16, 2012, one would have expected the cardiac arrest to occur much sooner than it did.

78. To the extent Claimant asserts that this claim is compensable because the May 10, 2012 heart attack exacerbated or aggravated his underlying coronary artery disease, such claim is not supported by the evidence. The evidence is insufficient to support the conclusion that Claimant's underlying coronary artery disease was meaningfully aggravated, exacerbated or accelerated by the events of May 10, 2012. Rather, when specifically asked whether the microinfarction would be considered an aggravation of his pre-existing condition, Dr. Wilkerson responded that he would just consider it part of the disease process. In addition, even if the May 10, 2012 heart attack did cause an aggravation or acceleration of Claimant's underlying coronary artery disease, the run on June 16, 2012 would constitute a subsequent intervening event sufficient to break the chain of causation between any aggravation caused by the May 10, 2012 heart attack and the cardiac arrest on June 16, 2012. As noted above, Claimant was able to continue with essentially all of his usual activities, including his daily exercise regimen, during the five weeks between May 10, 2012 and June 16, 2012. However, upon completing a run that was longer than usual on the morning of June 16, 2012, he suffered an ischemia-induced ventricular fibrillation arrest. The chronology and timeline of events, together with the medical testimony and evidence as a whole, indicates that the run was a non-work related subsequent intervening event.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §§8-41-301(1)(c); 8-42-101, C.R.S. *Madden v. Mountain West Fabricators*, 977 P.2d 861 (Colo. 1999); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844

(Colo. App. 2000). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004).
The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

C. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

D. In this case, the ALJ finds that the testimony of Lori Watts is totally credible, believable, and consistent with the voluminous evidence presented in this case. Likewise for the testimony of all personnel from the Pueblo County Sheriff's Office, to wit: Sheriff Kirk M. Taylor, Undersheriff Justin Hall, Deputies Jeffrey Teschner, Tracy Swearingen, Clifford Kindred, and J.C. Williams, along with Leave Technician Shonna Gutierrez.

E. Further, the ALJ finds that the reports and testimony of all of the physicians in this case to be credible, and with the sincere intention of assisting the trier of fact with their respective professional opinions, based upon the information each had at their disposal. As such, the conclusions to be drawn in this Order are based not on truthfulness per se, but rather persuasiveness, and in interpreting the sufficiency of the evidence. Out of sheer circumstances, neither Dr. Boerner, nor Dr. Hutchinson (both eminently qualified as experts in cardiology), were able to examine or treat Mr. Watts. Nor were they able to view firsthand the heart tissue that ultimately is at issue in this matter. In reconstructing the record before them, in the end, they all acknowledge the difficulties in drawing conclusions with certitude in the face of incomplete information.

Compensability

F. Under the Workers' Compensation Act of Colorado, it is necessary for an injury to not only "arise out of" but also to occur "in the course of" employment in order for the injury to be deemed compensable. Section 8-41-301(1), C.R.S. 2015; *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17 (Colo. 1988)*.* The "course of employment" requirement is satisfied when the claimant shows that the injury occurred within the time and place limits of the employment. *Popovich v. Irlando,* 811 P.2d 379 (Colo. 1991). The time limits of the employment embrace a reasonable interval before and after official working hours when the employee is on the employer's property. 2 *Larson, Workmen's Compensation Law* § 21.60(a) (2005); *Industrial Commission v. Hayden Coal Co.,* 113 Colo. 62, 155 P.2d 158 (1944). The place limits of the employment include parking lots controlled or operated by the employer, which are generally considered part of the employer's premises. *State Compensation Insurance Fund v. Walter,* 143 Colo. 549, 354 P.2d 591 (1960); *Woodruff World Travel, Inc. v. Industrial Commission,* 38 Colo. App. 92, 554 P.2d 705 (1976).

G. The "arising out of" element is narrower than the "course of employment" element and is a test of causation which requires the claimant to prove that the injury had its origin in the claimant's work-related functions and is sufficiently related thereto to be considered part of the claimant's service to the employer. *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). However, the claimant's activity need not constitute a strict duty or obligation of employment, or confer a specific benefit on the employer. *Price v. ICAO*, 919 P.2d 207 (Colo. 1996); *City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985). It is sufficient if the injury arises out of an activity that is incidental to the conditions under which the claimant usually performs the job. *City of Boulder, supra; University of Denver v. Nemeth,* 127 Colo. 385, 257 P.2d 423 (1953). Actions such as eating, sleeping, resting, washing, toileting, seeking fresh air, getting a drink of water and keeping warm have been held to be incidental to employment under the "personal comfort" doctrine. *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 22-23 (Colo. 1988); *Industrial Commission v. Golden Cycle Corp.,* 126 Colo. 68, 246 P.2d 902 (1952); *Ventura v. Albertsons' Inc.,* 856 P.2d 35 (Colo. App. 1992). Conversely, if an employee substantially deviates from the mandatory or incidental functions of the employment, such that she is acting for her sole benefit at the time of an injury, the injury is not compensable. *Kater v. Industrial Commission,* 728 P.2d 746 (Colo. App. 1986). Further, if the industrial injury aggravates, accelerates or combines with a preexisting condition so as to cause a need for treatment, the treatment is compensable. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866 (Colo. App. 2001); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986).

H. The questions of whether an injury arose out of and in the course of employment, whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury, and whether there has been a subsequent intervening event, are generally questions of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the*

United States Court of Appeals, 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996); *University Park Care Center v. ICAO*, 43 P.3d 637 (Colo. App. 2001). The claimant bears the burden of proving both the "course of employment" and the "arising out of employment" elements by a preponderance of the evidence. Section 8-41-301(1)(b), C.R.S.

I. Section 8-41-302(2) establishes a two-prong test of compensability where the claim is based on a heart attack. The claimant must show he experienced an unusual exertion arising out of and within the course of employment, and that the heart attack was proximately caused by the unusual exertion. *Vialpando v.ICAO*, 757 P.2d 1152 (Colo. App.1988); *Kinninger v. ICAO,* 759 P.2d 766 (Colo. App. 1988). Exertion meets the statutory definition if it is unusual in kind and quality when compared to the work history of the claimant or decedent. *Vialpando v. ICAO, supra*; *Townley Hardware Co. v. Industrial Commission*, 636 P.2d 1341 (Colo. App. 1981). A claimant who is seeking benefits based on a heart attack bears the burden of proving the compensability of his claim by a preponderance of the evidence. *Prestige Homes, Inc. v. Legouffe*, 658 P.2d 850 (Colo. 1983); *Jekel v. Bankers Property*, W.C. No. 4-115-034 (ICAO, May 28, 1993); *Surprise v. Amerimar Realty Management*, W.C. No. 3-909-398 (ICAO, January 25, 1991).

J. As found, Claimant has failed to sustain his burden of proving that his death on June 16, 2012 was *proximately caused* by the May 10, 2012 heart attack, *or* that it arose out of and in the course and scope of his employment. Claimant's formal cause of death was hypertensive atherosclerotic cardiovascular disease with sudden cardiac death (ventricular fibrillation arrest). A review of the opinions and testimonies of Dr. Wilkerson, Dr. Boerner and Dr. Hutcherson as a whole indicates that Claimant's death was caused by a combination of his underlying coronary artery disease and the acute ischemia caused by his run on the morning of June 16, 2012. Claimant's coronary artery disease was caused by his risk factors, which are entirely personal to Claimant and are not work-related. As found, Claimant was not in the course and scope of his employment during the early morning of June 16, 2012 and his run did not arise out of his employment with the employer. Claimant was at home engaging in his daily exercise regimen that he had done on his own for many years. Claimant was not instructed or directed by his employer to engage in his exercise regimen or to go for a run on the morning of June 16, 2012. To the extent Claimant may have been motivated to run that day in part by a desire to not allow the new SWAT members to beat him, such motivation was self-imposed and cannot be attributed to the employer. It was approximately 6:15 a.m. when Claimant returned from his run. Although there was testimony indicating that Claimant was anticipating a call from the Secret Service, with whom he was scheduled to meet to prepare for a visit from the First Lady at some point that day, the evidence indicates that Claimant was not anticipating the Secret Service to call him at that hour or in the immediate future. Claimant was not being paid at the time he went on his run and the cardiac arrest occurred. Nor was Claimant engaged in any SWAT or other employment related activity at the time the cardiac arrest occurred.

K. In addition, as found, the evidence as a whole does not support the conclusion that Claimant's sudden cardiac arrest and death on June 16, 2012 were proximately caused by the May 10, 2012 SWAT incident or that a heart attack likely occurred at that time. A review of the opinions and testimonies of Dr. Wilkerson, Dr. Boerner and Dr. Hutcherson as a whole indicates that, while it is *possible* that the May 10, 2012 SWAT call and associated cardiac event *could* have had *some* impact in bringing about Claimant's death, *the much more likely and significant factors* were Claimant's long-standing underlying coronary artery disease and his episode of acute ischemia from the run on the morning of June 16, 2012. In addition, Claimant continued to perform his usual activities, including his full duty work and his usual daily exercise regimen, after the May 10, 2012 SWAT call all the way up until his death. While Claimant displayed some symptoms to his wife consistent with coronary issues after May 10, those symptoms did not preclude Claimant from performing essentially all of his usual activities for the next five weeks. The evidence as a whole is not sufficient to sustain Claimant's burden of proving by a preponderance of the evidence that it was more likely than not that the May 10, 2012 SWAT call and associated cardiac event proximately caused the sudden cardiac arrest on June 16, 2012.

L. As found, Claimant's underlying coronary artery disease was not meaningfully aggravated, exacerbated or accelerated by the events of May 10, 2012. Even if it were, however, the run on June 16, 2012 constitutes a subsequent intervening event that breaks the chain of causation between any aggravation caused by the May 10, 2012 SWAT call and heart attack on the one hand, and the June 16, 2012 sudden ventricular fibrillation cardiac arrest and death on the other hand.

M. Because the injuries suffered by Claimant are not compensable, the issue of dependence under C.R.S. 8-41-501, 8-42-115, and 8-42-119 need not be addressed herein.

ORDER

It is therefore ordered that:

I. Since the injuries suffered by Claimant are not compensable, Claimant's claim for benefits is denied and dismissed.

All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the

Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 23, 2016

Colorado Springs, CO 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-990-756-02

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that he is entitled to TTD benefits in from July 8, 2015 and on-going.

- If Claimant has proven that he is entitled to temporary disability benefits, have Respondents proven by a preponderance of the evidence that Claimant was "Responsible for his Termination," per C.R.S. §§ 8-42-103(1)(g), 8-42-105(4).

STIPULATION

- Claimant would be considered a maximum wage earner at the time of his alleged injury. Based on his date of alleged injury, his TTD rate would be $881.65.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was employed by Xtreme Drilling and Coil Services on two separate occasions. The first period of employment was from 2010 until October 7, 2011.

2. During this first period of employment Claimant was working as a driller. The position required him to be responsible for the crew at the rig site. Primarily, it was a position in which he was responsible for directing individual employees to work within the company guidelines and policies. He was also responsible for executing the drilling program within company guidelines and policies; he was deemed the "team lead" at the drilling site, he supervised activities that were done at any given drilling site. This was a less labor intensive position at any given rig site.

3. On October 5 and 6, 2011, Employer gave Claimant written corrective actions. Both corrective actions indicated Claimant's failure to follow through with the tasks associated with his position as Driller. The corrective actions also indicated Claimant was unable to properly direct his crew.

4. Claimant signed the second corrective action acknowledging,

> I am aware that my performance does not meet Company expectations and I agree to take the actions listed in the Performance Improvement Plan. I am also aware that failure to improve my performance to meet Company expectations

> will result in further corrective action, up to and including termination.

5. Claimant testified at hearing that he was required to follow Company policies in the drilling process. He acknowledged that the issue addressed in the corrective actions involved a generator and not following company policy is considered a safety issue, not only to the equipment but also a safety issue to the fellow crew members.

6. Employer ultimately terminated Claimant on October 7, 2011. The Separation Notice described the reasons for his separation: "[Claimant] does not run crew when given job task he never completes them. On 10-6-11 [Claimant] was having generator issues and never woke pusher or even attempted to resolve issue. [Claimant] showed poor attitude + work ethic to crew every day."

7. In July 2012, Employer re-hired Claimant. His new position was as a floor hand; this position was one in which he was directed by the driller at the site to perform drilling tasks. It was not a supervisory position. Claimant remained in this position until mid-2014. Significantly, Employer issued no corrective actions to Claimant while he worked in this position.

8. In late 2014, Employer promoted Claimant to the driller position. As discussed above, this position required Claimant again to be "team lead" and direct employees at the rig site.

9. Claimant testified that on December 25, 2014 he received a written corrective action. This is corroborated by Employer's records. The December 25, 2014 corrective action indicated Claimant was "not paying attention" at the drilling site during a serious operation. Claimant testified that failing to pay attention would be considered a safety issue involving equipment and the physical health of his drilling team. However, Claimant remained in his position as a driller.

10. On February 26, 2015 Claimant notified the Employer that he suffered a work related injury to his lower back. Respondents admitted the injury was work-related and filed a General Admission of Liability.

11. That same day Claimant sought treatment with Banner Occupational Health. The medical provider released Claimant to full duty and provided him with prescriptions for additional conservative care for his injuries.

12. On April 11, 2015, Employer issued Claimant two separate corrective actions for failing to follow proper procedure in the drilling process. Claimant admitted through testimony that this failure could have led to injuries to his fellow deck hands as well as potential damage to the drilling equipment. Claimant signed the corrective action sheets.

13. Claimant testified that the section above his signature indicated that if he was unable to comply with Company expectations, he could be terminated. This is corroborated by the corrective action document itself.

14. Ultimately, Employer issued Claimant a Separation Notice, ending his employment a second time. The final action that led to his termination was based on his inability to follow instructions from his Employer. Additionally, as noted in the Separation Notice, the client at the drilling site questioned Claimant's ability to follow instructions, as well as lead his crew.

15. Cozy Jones, Employer's human resource representative, testified to the importance of following Company policies in the drilling process. She indicated that failure to follow policies could lead to safety issues for fellow team members as well as potential for damage to the drill rig itself. Ms. Jones further testified that during Claimant's exit interview, Claimant never stated that he was unable to do his job due to his work injury.

16. Claimant testified that in his position as driller he spent the majority of his time in the "big house" on the rig floor and was to control the drilling process. This called for him to "do paperwork, control the drill itself, and direct his team members in the drilling process." Claimant was able to alternate between sitting and standing.

17. Claimant continued to work as a driller from the date of his injury until July 8, 2015 when Employer terminated his employment. Between February 26, 2015 and his termination, every medical provider Claimant saw released him to full duty.

18. It is undisputed that Claimant did not have any work restrictions until approximately one week after Employer terminated his employment. On July 15, 2015, his medical provider imposed work restrictions which were increased over the next several months.

19. On May 16, 2016, Dr. Vlahovich placed Claimant at MMI and opined that the work restrictions imposed on January 4, 2016 were permanent. Claimant has not been employed since Employer terminated his employment. Claimant attributes his unemployment to his work restrictions.

20. Claimant did not present persuasive evidence that his industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, or that he suffered any wage loss prior to his termination. Thus, the ALJ finds that Claimant did not meet his burden of proving by a preponderance of the evidence that he is entitled to temporary total disability benefits.

21. Based on the totality of the evidence, including testimony at hearing as well as the written corrective actions and separation notices that were received in evidence, the ALJ finds that Respondents met their burden of proving by a preponderance of the evidence that Employer terminated Claimant for long

standing and well documented performance issues which were within Claimant's control.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

To prove entitlement to temporary total disability ("TTD") benefits, the claimant must prove: that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). As found, Claimant did not prove by a preponderance of the evidence that his industrial injury caused a disability lasting more than three work shifts, or that he left work as a result of the disability, or that his disability resulted in an actual wage loss. Thus, the ALJ concludes that Claimant failed to establish an entitlement to TTD benefits.

Because the ALJ has found and concluded that Claimant did not meet his burden of establishing entitlement to TTD benefits, the ALJ need not reach the remaining issues.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for TTD is DENIED and DISMISSED.

2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 27, 2016

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-953-610-01

ISSUES

1. Did Respondents overcome the DIME's impairment rating by clear and convincing evidence?

FINDINGS OF FACT

1. Claimant worked as a welder for Employer. On June 9, 2014, he suffered an admitted injury when he fell from a scaffold while changing a lightbulb. Claimant fell backward and hit his head on a concrete floor.

2. As a result of the fall, Claimant suffered a concussion and injured his neck. He also injured his left hand when the light bulb he was holding broke.

3. Claimant was initially treated at Penrose Hospital emergency room. The ER report noted a "possible loss of consciousness." Claimant reported a headache, neck pain and back pain. A head CT scan was unremarkable. The CT scan of his cervical spine showed degenerative changes, with no acute fracture. His left hand was sutured; he was placed in a cervical collar and instructed to follow up with neurology.

4. Claimant saw Mr. Todd Luft, PA-C at Colorado Springs Neurological Associates on June 29, 2014. Claimant reported intermittent headaches, difficulty concentrating and "buzzing" in his head. He also reported persistent neck pain radiating into his posterior shoulders. He reported "he has times where he feels unsteady with his gait." Physical examination revealed tenderness to palpation over the midline and the cervical paraspinals bilaterally, and associated spasm. Cervical range of motion was restricted in all planes. Motor and sensory examinations were normal. A mental status exam was within normal limits. PA-C Luft diagnosed "a closed head injury as well as some neck pain." He did not recommend any specific treatment for the head injury, but stated: "we need to give this time and see if his residual symptoms improve." PA-C Luft opined that Claimant's neck pain was most likely "soft tissue/myofascial in nature." He discussed the possibility of physical therapy and a referral to a physical medicine and rehabilitation specialist; Claimant indicated he would prefer to wait "and see if he improves."

5. Employer referred Claimant to Concentra Medical Centers for authorized treatment, where he saw numerous providers. His initial visit was on July 1, 2014, with Dr. Bryan Counts. Claimant told Dr. Counts that "one of his main symptoms is feeling odd and disoriented for several minutes at a time even at rest." Claimant was suffering from headaches, dizziness, and memory loss. He was still having back and neck pain. He exhibited pain with cervical motion in all directions. Dr. Counts noted "there is [sic] significant underlying degenerative changes in the cervical spine, but the neck pain

seems to be the result of the injury, not from arthritis." Dr. Counts released Claimant to modified duties, with no lifting greater than 15 pounds and no exposure to temperatures greater than 90°F. He prescribed medication and referred Claimant for physical therapy.

6. Claimant's next visit to Concentra was July 11, 2014, and he saw Dr. Jennifer Huldin. Claimant was still having back and neck pain, along with memory loss, confusion, poor coordination, and constant headaches. Claimant exhibited short-term memory deficits. Dr. Huldin referred Claimant to Dr. Hopkins for a psychological evaluation, and to an ophthalmologist for "post-traumatic vision syndrome."

7. On July 24, 2014, Claimant saw Dr. Michael Saxerud, an ophthalmologist. Claimant reported visual disturbance and chronic headaches since his accident. He described the headaches as "severe or debilitating," and indicated that they "occur on most days." The headaches were accompanied by "dizziness/vertigo." Dr. Saxerud recommended prism lenses to treat the injury-related vision problems.

8. Claimant saw Dr. Jocelyn Cavender at Concentra on July 25, 2014. Claimant reported constant headaches and "buzzing in his head." An antidepressant prescribed by Dr. Huldin had made his sleep and mood "worse." He had bilateral trapezius muscle spasms. Dr. Cavender referred Claimant to a neurologist and prescribed massage therapy. She subsequently referred Claimant to Dr. Rauzzino for a surgical evaluation.

9. Claimant saw Dr. David Hopkins for a neuropsychological evaluation on July 29, August 7 and August 21, 2014. Claimant's mood was "overtly dysthymic." He gave "clipped answers to interview questions and had to be encouraged to expand on his responses." Claimant was "very aggravated" about his inability to return to work. He reported numerous problems since his accident, including "poor concentration," memory problems, and difficulty reading. He was having dizziness and persistent headaches. He also reported periodic episodes of disorientation as a result of "overstimulation."

10. Claimant's neuropsychological test results showed impairment in multiple areas, ranging from "mild" to "moderate." Dr. Hopkins opined that the data "matches his report of daily problems with cognition." Validity measures indicated that Claimant gave "a reasonable [sic] good effort without evidence for malingering or symptom magnification." Dr. Hopkins recommended neuropsychological counseling to help Claimant learn to compensate for his cognitive issues, and address his underlying depression and "adjustment to disability issues."

11. Dr. Rauzzino evaluated Claimant on August 5, 2014. Claimant reported worsening neck pain, and difficulty using his hands for various routine activities such as manipulating buttons and other fine motor tasks. Because of the head injury, Claimant was "generally in a fog." He had trouble receiving and processing information, and had difficulty completing paperwork at Dr. Rauzzino's office. Dr. Rauzzino reviewed Claimant's cervical MRI films, which revealed severe foraminal stenosis and severe central stenosis. Dr. Rauzzino noted Claimant had "signs and symptoms of cervical myelopathy." Claimant denied having similar symptoms before his industrial accident.

Dr. Rauzzino recommended surgery to decompress the spinal cord, and requested that Claimant return with his son to discuss treatment options.

12. On August 8, 2014, Claimant saw Dr. Walter Larimore at Concentra. Claimant's major concern was ongoing "head and neck pain." Claimant also reported "a very loud buzzing in the whole head. Feels like a buzzing cap over the entire head. The louder the buzzing the more intense the headache." Claimant described episodes of disorientation "a few times a week." On physical examination, he had tenderness and muscle spasm of the bilateral trapezius muscles and paraspinal muscles. He had no specific tenderness of the cervical spine. Cervical range of motion was reduced in all planes. Dr. Larimore described Claimant's mood as "agitated, anhedonic, concerned, flat, hard and humorless." Dr. Larimore referred Claimant for a physiatry evaluation.

13. Claimant saw Dr. John Bissell, a physiatrist, on August 26, 2014. Claimant reported ongoing post-injury symptoms including "buzzing sensation in his ears, decreased memory and decreased concentration." Claimant was having 8/10 pain in his neck and both shoulders, which increased with activity. He reported no benefit from physical therapy or dry needling, although massage therapy had been temporarily helpful. Dr. Bissell suggested trigger point injections to the cervical and thoracic musculature. Claimant ultimately declined to pursue the injections.

14. Claimant returned to Dr. Rauzzino on September 30, 2014. He reported improvement in his symptoms and limitations since the previous visit. Dr. Rauzzino continued to recommend surgical decompression and fusion to relieve the stenosis, but Claimant said "he would like to think about this" before proceeding with any surgery.

15. Dr. Albert Hattem evaluated Claimant on November 25, 2014, and assumed control of his treatment thereafter. Claimant told Dr. Hattem he did not want to pursue surgery because a family member had a poor outcome from a similar procedure. His headaches and neck pain had improved, but he was still having significant difficulties with concentration.

16. Claimant received chiropractic treatment from September 2014 through January 23, 2015. Chiropractic treatment records reflect Claimant was consistently having problems with his back, neck, and shoulders.

17. Dr. Hopkins performed repeat neuropsychological testing on January 16 and 27, 2015. The test data showed improvement in cognition, but Claimant still demonstrated mild impairment of attention, concentration and processing speed. Dr. Hopkins indicated he would be concerned about Claimant operating machinery that requires attention and processing speed.

18. On February 19, 2015, Dr. Hattem recommended Claimant continue deep tissue massage for myofascial upper back pain.

19. Dr. Hattem placed Claimant at MMI on October 22, 2015. As of that date, Claimant reported persistent discomfort between his shoulder blades, occasional dizziness when exposed to moving objects, ongoing memory problems, headaches, and

difficulty with concentration. Dr. Hattem assigned a 10% whole person impairment for residuals of Claimant's head injury. Dr. Hattem utilized Section 4.1a of the *AMA Guides,* Disturbances of Complex Integrated Cerebral Functions (p. 105, *see also* Table 1, p. 109). Dr. Hattem opined that Claimant fit the description in Category 1, which allows a rating of 5%-15%. Dr. Hattem chose that rating because he assumed Claimant retained the ability to carry out most activities of daily living. Dr. Hattem did not feel Claimant warranted a cervical rating. Regarding permanent work restrictions, Dr. Hattem advised that Claimant should not operate machinery, not climb ladders, and not work in a safety sensitive position.

20. Respondents filed a Final Admission of Liability (FAL) dated March 7, 2016, based on Dr. Hattem's rating. Claimant objected to the FAL and requested a DIME.

21. Dr. Christopher Ryan performed the DIME on May 9, 2016. Claimant reported ongoing confusion and difficulty with multitasking. Multiple stimuli made him "very disoriented." He reported word finding problems and difficulty making decisions. Claimant continued to have interscapular pain, especially when bending forward or looking up. Claimant was working, but was "extremely limited" in terms of the tasks he could perform. Dr. Ryan described Claimant as "a stoic and yet somewhat disappointed man, who is troubled by his ongoing disability." Dr. Ryan saw "no evidence for any embellishment of symptoms at all." Claimant's interscapular pain was exacerbated by movement, particularly cervical extension. Examination of the cervical spine revealed "moderate rigidity," and significantly reduced cervical range of motion. Dr. Ryan diagnosed "moderately" severe postconcussive syndrome with cognitive dysfunction and substantial permanent aggravation of cervical spondylosis with spinal stenosis.

22. Dr. Ryan rated Claimant's cervical spine and postconcussive syndrome. He assigned a 26% whole person impairment for the cervical spine. For the cognitive dysfunction, Dr. Ryan utilized the same section of the *AMA Guides* as Dr. Hattem, but opined that Claimant fit within Category 2, due to his "substantial" disruption of activities of daily living. Category 2 allows a rating of 20%-45%. Dr. Ryan chose the low end of that range and assigned 20% impairment. The two components of the rating combined to an overall impairment of 41% whole person.

23. Dr. Hattem testified in a deposition on October 14, 2016. Dr. Hattem defended his 10% brain injury rating based on his assessment of Claimant's ability to complete activities of daily living. Dr. Hattem noted there was no indication that Claimant needed any supervision in his activities of daily living. Dr. Hattem noted that Claimant had returned to work, although he needed permanent work restrictions. Dr. Hattem testified he had no information that Claimant was having difficulty working within his restrictions. Dr. Hattem testified that the specific rating for cognitive dysfunction requires a "judgment call" by the rating physician, and there are "no hard and fast rules." In discussing Dr. Ryan's 20% cognitive rating, Dr. Hattem testified:

> Honestly, I don't take that much issue with his decision to assign a higher cognitive rating. Once again, it's a judgment call. And I decided on the 10

> percent. But 20 percent, that's where he feels, after interviewing the patient, would be — I don't think that's a totally unreasonable rating."

24. Dr. Hattem disagreed more strongly with Dr. Ryan's cervical spine rating. Dr. Hattem testified that, by November 25, 2014, Claimant's neck was "resolved" and therefore did not qualify for a Table 53 specific disorder rating. Without a Table 53 rating, Claimant does not qualify for a range of motion rating. Dr. Hattem explained that between November 25, 2014 and MMI in October 2015, there were no records reflecting Claimant was having any neck pain. Dr. Hattem opined any neck pain Claimant was having during Dr. Ryan's evaluation was related to his pre-existing cervical DDD, rather than the industrial injury. Dr. Hattem admitted he had not seen the chiropractic treatment records reflecting ongoing cervical pain as of January 23, 2015. Dr. Hattem conceded Claimant was still experiencing pain between his shoulder blades at the time of MMI, similar to that which Dr. Ryan noted in his report. Dr. Hattem testified that Dr. Ryan's cervical spine rating was consistent with the *AMA Guides'* protocols, but opined that Claimant did not warrant a cervical rating in the first instance.

25. Dr. Ryan testified in a deposition on October 24, 2016. Dr. Ryan elaborated on his description of Claimant as "stoic," meaning "he wasn't very talkative, and he didn't really like to complain was my impression. He was just kind of a — just solid blue-collar type worker that didn't — wasn't very expressive and didn't like to admit weakness." Dr. Ryan opined that Claimant's cognitive symptoms were consistent with post-concussive syndrome. Regarding the head injury rating, Dr. Ryan explained Claimant more closely fit within Category 2 than Category 1. Dr. Ryan testified "there were things that he did on an everyday basis that he simply couldn't do and that had to do largely with multitasking, which he prided himself on doing before he was injured. And if he only did one thing at a time, he wasn't too bad, but if anything came in as a distraction, he was completely knocked off balance cognitively." Dr. Ryan also noted Claimant's difficulty with numerous work activities.

26. Regarding Claimant's cervical spine, Dr. Ryan explained that Table 53, 2C provides a 6% whole person impairment when there is a medically documented injury with documented rigidity or neck pain with advanced degenerative changes on structural tests. Dr. Ryan opined Claimant exhibited cervicogenic pain between his shoulder blades with movement of his head. Dr. Ryan noted Dr. Hattem's October 22, 2015 MMI report documents similar symptoms. Dr. Ryan opined that Claimant's ongoing cervical/parascapular symptoms are causally related to the industrial injury. Dr. Ryan recognized Claimant has significant pre-existing degenerative changes in his cervical spine, but the industrial accident caused a substantial and permanent aggravation of that condition.

27. Claimant testified at the October 25, 2016 hearing. He described ongoing problems with his memory, concentration, multitasking, word finding, and decision-making. Claimant's demeanor was characterized by slow pace, concrete thinking, and difficulty with memory. Claimant credibly described difficulties performing his work activities because of his cognitive issues. Claimant also described ongoing cervical spine symptoms, including stiffness and pain at the base of his neck radiating between

his shoulder blades. Claimant testified his pain waxes and wanes depending on his activity level. Claimant described aggravation from activities such as welding, grinding, turning his head, looking up, and maintaining a static neck posture.

28. Claimant's testimony regarding his ongoing symptoms and limitations attributable to the industrial accident is credible.

29. Dr. Hattem's disagreements with Dr. Ryan's rating amount to mere differences of medical opinion.

30. Respondents have failed to overcome the DIME by clear and convincing evidence.

CONCLUSIONS OF LAW

A. Did Respondents overcome the DIME by clear and convincing evidence?

The DIME physician's determination regarding MMI and whole person impairment is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c), C.R.S.; *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). The DIME's determination regarding the cause of the claimant's impairment is an "inherent" part of the diagnostic assessment which comprises the DIME process of determining MMI and rating permanent impairment. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1988). Therefore, the party disputing the DIME's opinions on the issues of permanent impairment, MMI and causation must overcome those opinions by clear and convincing evidence.

"Clear and convincing evidence means evidence which is stronger than a mere 'preponderance;' it is evidence that is highly probable and free from serious or substantial doubt." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Therefore, the party challenging a DIME physician's conclusion must demonstrate that it is "highly probable" that the MMI and impairment findings are incorrect. *Qual-Med*, 961 P.2d at 592. A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002).

The ICAO has repeatedly held that "mere differences of medical opinion" do not constitute clear and convincing evidence that the DIME is incorrect. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (ICAO March 18, 2016); *Javalera v. Monte Vista Head Start, Inc.*, W.C. No. 4-532-166 (ICAO July 19, 2004); *see also Gonzales v. Browning-Ferris Industries of Colorado*, W.C. No. 4-350-356 (ICAO March 22, 2000).

As found, Respondents have failed to overcome the DIME's impairment rating by clear and convincing evidence. Claimant's level of impairment appears to fall in the borderline area between Category 1 and Category 2. Dr. Ryan concluded that Category 2 was most appropriate. Dr. Hattem conceded that a physician evaluating cognitive dysfunction must make "judgment calls" and "there are no hard and fast rules" regarding the rating. Dr. Hattem even stated "I don't take that much issue with his decision to assign a higher cognitive rating. Once again, it's a judgment call." It also appears Dr. Ryan obtained a more detailed description from Claimant regarding the extent to which his cognitive deficits impact his vocational and avocational activities. The ALJ concludes that the appropriate rating for Claimant's cognitive dysfunction is a matter about which reasonable physicians can disagree. Respondents have not overcome Dr. Ryan's cognitive rating by clear and convincing evidence.

Nor have Respondents overcome Dr. Ryan's cervical rating by clear and convincing evidence. Claimant suffered a cervical injury as a result of his industrial accident. Although Claimant had pre-existing degenerative changes in his cervical spine, there is no persuasive evidence that he was symptomatic before the industrial accident. By contrast, he has been continuously symptomatic since the date of injury. Dr. Hattem opined that Claimant does not qualify for a cervical rating because the neck injury "had resolved by November of 2014." Dr. Hattem stated there was no record of any ongoing cervical complaints after November 24, 2015, but, in fact, Claimant continued to receive chiropractic treatment for neck pain until January 23, 2015. In February 2015, Dr. Hattem recommended that Claimant "continue deep tissue massage . . . for myofascial upper back pain." Finally, Dr. Hattem's MMI report of October 22, 2015 specifically documented that Claimant reported "persistent discomfort between his shoulder blades." Dr. Ryan found the same parascapular pain on examination, which was elicited and aggravated by neck motion. Dr. Ryan opined those symptoms were attributable to the neck, and should be rated as such. Based on the totality of evidence presented, the ALJ is not persuaded by Dr. Hattem's proposition that Claimant's neck injury had "resolved."

The ALJ concludes that Dr. Hattem's disagreement with Dr. Ryan's impairment rating represents "mere differences of opinion," which are insufficient to overcome the DIME. Therefore,the ALJ concludes Respondents have failed to prove that the DIME's rating was highly probably incorrect.

ORDER

It is therefore ordered that:

1. Respondents' request to overcome the DIME with respect to permanent impairment is denied and dismissed.

2. Insurer shall pay Claimant PPD benefits based on Dr. Ryan's 41% whole person rating.

3. Insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein, or otherwise closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 27, 2016

Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

1. Has Claimant proved by a preponderance of the evidence that she sustained a compensable injury on May 3, 2016?

2. If Claimant suffered a compensable injury, is Claimant entitled to medical benefits?

STIPULATIONS

1. Claimant's average weekly wage is $398.37.

2. Dr. Douglas Bradley at Emergicare is the primary authorized treating physician.

FINDINGS OF FACT

1. On May 3, 2016, Claimant was working as a convenience store sales clerk for Employer. Her duties include restocking shelves and coolers with product. The store where Claimant works is relatively small, so some inventory is stored in a detached shed. Claimant went to the storage shed with a wheeled "buggy" to get 6-packs and 12-packs of soda. After loading the soda into the buggy, she began backing out of the storage shed.

2. There is a defect in the floor of the shed near the threshold of the door. Apparently, some of the wooden floor had deteriorated and was repaired with a strip of metal. There is a small gap between the metal strip and the floor. The rear wheels of the buggy were caught in the gap, which caused Claimant to "jerk" her neck.

3. Claimant felt immediate pain in her neck. She reported the incident to her store manager, but did not immediately request medical treatment because she thought she would be "okay."

4. Shortly after the incident, Claimant went to pick her son up from school. On her way to the school, her neck pain continued to worsen. She could not turn her neck, which caused her to hit a curb. She took her son back to the store and asked her manager to send her to the doctor.

5. Employer referred Claimant to Emergicare for authorized treatment, where she came under the care of Dr. Douglas Bradley. In his initial report, Dr. Bradley noted that Claimant "presents for neck pain related to a work accident that occurred earlier today." She reported neck pain at a level of 10/10. She also had a headache. Dr. Bradley noted Claimant's history of "chronic neck pain and has [sic] a fusion in 2009."

On physical examination, she had decreased cervical range of motion, and tenderness to palpation on the right side of her neck. Dr. Bradley ordered x-rays, gave Claimant an injection for pain and prescribed medications including muscle relaxers, extra strength Tylenol, and an analgesic cream. He also referred her for physical therapy. Dr. Bradley diagnosed "Strain of muscle, fascia and tendon at neck level." Dr. Bradley released Claimant to work with a 5-pound lifting restriction.

6. Claimant had her initial physical therapy visit on May 5, 2016. She reported ongoing neck pain and muscle spasm, and stated she was having difficulty performing her regular job duties and activities of daily living. On physical examination, she demonstrated tenderness of the bilateral posterior paraspinal musculature, the bilateral occipital area, and bilateral trapezius. Range of motion was decreased in all planes. The therapist also documented "mild neck spasm."

7. Claimant returned to see Dr. Bradley on May 10, 2016. She reported ongoing neck pain at the level of 7/10, and was having difficulty sleeping. Physical examination revealed tenderness to palpation of the cervical spine and mild pain with cervical rotation. Dr. Bradley appreciated "moderate neck spasm." Dr. Bradley recommended that Claimant keep using the muscle relaxer and the analgesic cream, and continue with physical therapy. He also prescribed Naprosyn.

8. At her next visit on May 17, Claimant's neck pain had decreased to the level of 5/10. She continued to demonstrate tenderness to palpation of the cervical spine and decreased range of motion. Dr. Bradley recommended Claimant continue the medications and therapy, and increased her lifting restriction to 10 pounds.

9. Claimant had a few more sessions of physical therapy, the last of which occurred on June 3, 2016.

10. The Respondents filed a formal Notice of Contest denying the claim on June 6, 2016. Claimant had no further medical treatment for the injury after that date.

11. Claimant has a significant prior history of neck problems. She had a work-related injury in 2008, which ultimately resulted in a cervical fusion in 2009. She was placed at MMI on January 21, 2010, with a 22% whole person cervical spine impairment. Claimant continued to receive maintenance treatment until she settled the claim on a full and final basis in 2011.

12. Claimant had no further treatment for her neck until May 2014. At that time, she reported neck pain as a result of an incident at work. She received treatment from CCOM for approximately one month until the Respondent denied the claim. Thereafter, Claimant's neck pain improved, although it does not appear it ever completely resolved. Nonetheless, there is no documentation that Claimant required or received any medical treatment for her neck between July 2014 and May 3, 2016.

13. Dr. Timothy Hall performed an Independent Medical Examination (IME) at Claimant's request on September 21, 2016. Dr. Hall reviewed Claimant's reported mechanism of injury and performed a physical examination. He also reviewed

Claimant’s pre-existing medical history, including the cervical fusion in 2009 and an episode of symptoms in 2014. Significant physical examination findings included hypertonicity of cervical musculature and restricted range of motion. Dr. Hall diagnosed a soft tissue injury in the cervicothoracic and parascapular area. Dr. Hall opined that Claimant’s described mechanism of injury “is certainly a reasonable one for a soft tissue injury through the cervicothoracic area.” Dr. Hall opined that Claimant’s prior history of neck problems “predisposed” her to injury, but ultimately concluded Claimant’s current symptoms are related to the incident she described on May 3, 2016.

14. Dr. Eric Ridings performed an IME at Respondent’s request on September 26, 2016. Dr. Ridings reviewed Claimant’s reported mechanism of injury and performed a physical examination. Dr. Ridings was skeptical regarding Claimant’s description of the incident. He noted that the mechanism of injury described in Dr. Bradley’s initial report differed from the mechanism Claimant described at the IME. Dr. Ridings also doubted that the described incident would generate sufficient force to injure Claimant’s neck. Dr. Ridings reviewed Claimant’s pre-existing history of treatment and surgery to her cervical spine related to the 2008 injury. Claimant told Dr. Ridings her symptoms eventually resolved, and she had absolutely “no symptoms related to her neck” before the incident on May 3, 2016. Claimant did not tell Dr. Ridings about the May 2014 episode, even though she had discussed it with Dr. Hall just five days earlier, and had also disclosed it in responses to interrogatories. Dr. Ridings’ physical examination findings were similar to Dr. Hall’s findings, although the range of motion measurements were different. Dr. Ridings concurred with Respondent’s decision to deny the claim and indicated he would await supplemental medical records before completing his report.

15. Dr. Ridings reviewed the additional records and submitted an addendum to his IME report on October 15, 2016. The primary supplemental records he reviewed related to the 2014 episode of neck pain. He also reviewed Dr. Hall’s IME report. Dr. Ridings opined that the additional medical records created “further doubt” regarding Claimant’s credibility as a medical historian. Dr. Ridings opined that it is not medically probable that Claimant would have sustained any injury to her neck given the described mechanism of injury. Ultimately, Dr. Ridings concluded that Claimant did not sustain a work-related injury on May 3, 2016.

16. Dr. Bradley testified in a deposition on October 24, 2016 as a witness for Respondent. Dr. Bradley testified that Claimant had completed a handwritten intake form at her initial visit to Emergicare. Dr. Bradley reviewed his initial report, and confirmed he had described the incident differently than Claimant had described it on the intake form. Dr. Bradley testified he diagnosed Claimant with a cervical strain. Dr. Bradley indicated he prefers the term “cervical strain” as opposed to “whiplash.” He indicated the movement of the neck need not be “forceful” to cause a cervical strain. Dr. Bradley opined “it can be a rotary movement, it can be a forward-and-back movement, it can be a side-to-side movement, it could be an — an alarm in which you turn your head rapidly in a certain position for whatever reason.” Dr. Bradley testified he knew about Claimant’s prior cervical fusion but could not recall when he learned of it. Dr. Bradley did not assume Claimant was “asymptomatic” before May 3, 2016. Rather, Dr. Bradley assumed “that she was probably having some difficulty — chronic neck problems that

were bothering her." Dr. Bradley testified that his review of Dr. Ridings' reports did not change his opinions regarding causation. Dr. Bradley opined that the May 3, 2016 incident caused "an aggravation of her previous injury or injuries."

17. Dr. Ridings testified at hearing on behalf of Respondent. Dr. Ridings reiterated and expounded upon the opinions expressed in his IME reports. Dr. Ridings continued to question the mechanism of injury described by Claimant, and opined it was not sufficiently forceful to cause injury. Dr. Ridings opined that Claimant's symptoms are related to her pre-existing condition, and she did not suffer any injury on May 3, 2016 at work.

18. Claimant's testimony regarding the onset of neck pain while pulling the soda-filled buggy is credible.

19. Dr. Bradley's opinion that Claimant suffered a cervical strain as a result of her work activities on May 3, 2016 is credible and more persuasive than medical opinions in the record to the contrary.

20. Claimant has proven by a preponderance of the evidence that she suffered a compensable injury on May 3, 2016.

21. Claimant has proven by a preponderance of the evidence that the treatment prescribed by Dr. Bradley is reasonable, necessary and related to her May 3, 2016 injury.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, Claimant must prove that she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S.; *see, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997*.* Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S.

If an industrial injury aggravates, accelerates, or combines with a preexisting condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-91-616-03 (ICAO, September 9, 2016). The term medical treatment includes evaluations or diagnostic procedures required to ascertain the extent of the industrial injury. *Garcia v. Express Personnel*, W.C. No. 4-587-458 (ICAO, August 24, 2000).

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1), C.R.S. In other words, an "accident" is the cause, and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work and caused symptoms does not necessarily establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (ICAO Aug. 17, 2016).

Even a "minor strain" can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused her to seek medical treatment. The ICAO's decision in *Garcia v. Express Personnel*, W.C. No. 4-587-458 (ICAO, August 24, 2004) is instructive regarding the minimal extent of an injury that can satisfy the basic threshold requirement of compensability. In *Garcia*, the claimant felt pain in her abdomen and hip while lifting a piece of glass at work. The employer referred the claimant to Dr. Caughfield, who diagnosed a lumbar strain, but opined she had already reached MMI. The ALJ found that the claimant suffered a "minor back sprain," but also found the sprain had "resolved" within five days of the incident. The ALJ denied the claim on the grounds that the claimant failed to prove she suffered a compensable "injury." The ICAO reversed, and held that the claimant had established a compensable injury as a matter of law:

> Where pain triggers the claimant's need for medical treatment, the claimant has established a compensable injury if the industrial injury is the cause of the pain. The term medical treatment includes diagnostic procedures required to ascertain the extent of the industrial injury.
>
> Here, the ALJ found there was an industrial accident which caused a minor lumbar strain. Further, the ALJ determined that when the injury was reported to the employer, the employer offered the claimant medical services from Dr. Caughfield, which the claimant accepted. Although Dr. Caughfield placed the claimant at MMI based upon his [ ] examination, the ALJ found with record support that Dr. Caughfield diagnosed a lumbar strain. Thus, the ALJ's findings compel the conclusion the claimant established a compensable injury which entitled her to an award of medical benefits. (Citations omitted).

Conry v. City of Aurora, W.C. No. 4-195-130 (ICAO, April 17, 1996) involved a similarly minor episode that was found to establish a compensable claim as a matter of law. In *Conry*, the claimant suffered from pre-existing asthma. One day she walked into work and encountered a “strong smell of ammonia.” As a result, she “began wheezing and became short of breath.” The claimant’s supervisor advised that she go to the doctor. There is no indication in the decision that the claimant required any treatment other than the one physician visit. The ALJ denied the claim because the ammonia exposure merely caused a “temporary exacerbation” of the claimant’s pre-existing asthma. She had no ongoing sequela or require any additional treatment other than the one-time visit. Therefore, the ALJ determined the claimant failed to prove that she suffered a compensable “injury.”

The ICAO reversed and found that the claimant had proven compensability as a matter of law. The ICAO stated “the claimant’s industrial exposure to ammonia caused her to experience respiratory symptoms for which she needed and received medical treatment. . . . [T]hese findings compel a conclusion that the claimant suffered a compensable aggravation of her pre-existing condition [asthma]. Therefore, we reverse the ALJ’s determination that the claimant did not suffer a compensable injury.”

As found, Claimant has proven by a preponderance of the evidence that she suffered a compensable injury on May 3, 2016. Claimant experienced the immediate onset of neck pain after her neck was “jerked” while pulling the buggy. Although the forces involved may have been relatively minor, they were sufficient to evoke symptoms in Claimant’s neck. The pain rapidly intensified over the next few hours, and she requested medical attention. Employer obliged and referred her to Emergicare. Claimant saw Dr. Bradley later that afternoon, and demonstrated clinical findings consistent with a soft tissue injury. Dr. Bradley diagnosed a cervical strain, prescribed medications, physical therapy, and imposed work restrictions. That chain of events was triggered by the pain Claimant developed as a result of her work activities.

Although Claimant has a well-documented history of prior neck problems, the May 3, 2016 incident more likely than not exacerbated her prior symptoms. Admittedly, there are some inconsistencies in Claimant’s statements regarding the severity of symptoms she was experiencing immediately before the incident in May 2016. Nevertheless, after considering the totality of evidence presented, the ALJ is persuaded that Claimant’s symptoms were likely worse after the accident at work. The pain Claimant experienced after the incident at work was the direct and proximate cause of her decision to pursue medical treatment.

The ALJ credits Dr. Bradley’s opinion that Claimant suffered a cervical strain as a result of her work activities on May 3, 2016. Dr. Bradley prescribed treatment and imposed work restrictions as a direct and proximate consequence of the work injury. These findings compel the conclusion that Claimant has proven the elements of a compensable claim.

B. Medical benefits

Respondents are liable for medical treatment from authorized providers that is reasonably necessary to cure or relieve the employee from the effects of the injury.

Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). As found, Claimant has proven by a preponderance of the evidence that the treatment recommended by Dr. Bradley is reasonable, necessary and related to her May 3, 2016 injury.

ORDER

It is therefore ordered that:

1. Claimant's May 3, 2016 neck injury is compensable.

2. Respondent shall provide all reasonable, necessary and related medical treatment for Claimant's compensable injury, including the charges from Emergicare and the diagnostic imaging performed at Peak Medical Imaging on May 3, 2016.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

W.C. No. 5-002-271-02

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/ Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on December 7, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 12/7/16, Courtroom1, beginning at 8:30 AM, and ending at 11:50 AM).

Claimant's Exhibits 1 through 24 were admitted into evidence, without objection. Respondents' Exhibits A through P were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule. Claimant's opening brief was filed, electronically, on December 16, 2016. Respondents were granted a brief extension of time within which to file an answer brief, which was filed on December 22, 2016. Claimant's Reply Brief was filed on December 27, 2016, at which time the matter was deemed submitted for decision.

ISSUES

The issues to be determined by this decision concern whether the Claimant sustained a compensable aggravation and acceleration of her right knee condition as to require medical care and treatment and which caused temporary total disability (TTD). The paramount issue involves the compensability of a work-related event on November

26, 2015. The primary issue concerns the causal relatedness of the need for the surgery of April 28, 2016, to fix the Claimant's patellar instability, or was the need for the surgery attributable to a pre-existing condition of the right knee and not to the incident of November 25, 2015, allegedly causing an aggravation and acceleration of the need for the surgery.

The Claimant bears the burden of proof, by a preponderance of the evidence on all designated issues.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant's date of birth is January 16, 1978. She would have been in high school in the mid-1990s.

2. At the commencement of the hearing the parties stipulated, and the ALJ finds, if the claim is compensable, all of the Claimant's medical care and treatment for her right knee since November 26, 2015 is authorized, causally related and reasonably necessary, including the right knee surgery of April 28, 2016, at the hands of Nathan Faulkner, M.D.

3. If compensable, the parties further stipulated, and the ALJ finds, that the Claimant's average weekly wage (AWW) is $1,145.83, which yields a TTD rate of $753.89 per week.

4. Also, if compensable, the parties stipulated and the ALJ finds that the Claimant was temporarily and totally disabled from April 28, 2016 through August 19, 2016, both dates inclusive, a total of 114 days. The ALJ determines that this is qualified by a determination of whether or not the surgery of April 28, 2016 was causally related to the incident of November 26, 2015.

Compensability

5. The Claimant was an Employee of the Employer. On November 26, 2015, she was scooting washing mashing with her hip and leg, when she felt a burning sensation her right knee (Respondents' Exhibit B, pp.24-25). In this regard, the Claimant's testimony is undisputed. The ALJ finds that the Claimant sustained a work-related event, however, there is no persuasive or credible evidence that she required medical treatment other than evaluations and treatment for her underlying right knee condition.

6. On November 28, 2015, the Claimant first presented to Concentra and was seen by Rammohan Naidu, M.D. Dr. Naidu noted that the Claimant reported a pop and then extreme burning in her knee (Claimant's Exhibit 12, p.109). Dr. Naidhu's report supports a temporary compensable event in the nature of a right knee strain.

7. On December 3, 2015, the Claimant again reported to Concentra and was seen by Natasha Deonarain, M.D. The Claimant stated that the burning sensation feels like *the last time* she tore her ligament (Respondents' Exhibit C, p. 30). The Claimant also told Dr. Deonarain that after her last surgery (sometime) prior to the injury in this case, she had an occasional sensation of patellar "slipping" with certain activity. (*Id*.) She was also aware of the anatomy of the knee, specifically reporting to Dr. Deonarain that she had a prior "MCL repair/dislocated patella" previously for which she underwent surgery. (*Id.)* The ALJ infers and finds that the Claimant's knowledge in this regard was acquired from her more recent left knee surgeries, and not from the 1996 right knee surgery.

8. On December 9, 2016, the Claimant had an MRI (magnetic resonance imaging) on her right knee, which showed no effusion and no hemarthrosis. (Respondents' Exhibit. D, p. 34). The MRI results further support a temporary right knee strain.

Mark Failinger, M.D.

9. The Claimant was referred to Dr. Failinger, an orthopedic surgeon, for consultation. In his report of December 17, 2015, Dr. Failinger noted the Claimant's "long history" of similar problems, and noted that the Claimant related she planned to undergo surgery for her knee previously in Texas. She also reported to Dr. Failinger that she did not want any therapy, injections or other conservative therapy. Rather, she wanted the surgery to her right knee that she was going to have performed previously in Texas (the ALJ infers and finds that the allegedly recent surgery the Claimant had wanted in Texas was to fix the patellar instability of her right knee --this never happened and there is no persuasive evidence that the Claimant had even consulted with a physician in Texas around 2013). The Claimant moved away from Texas in 2013 [this is corroborated by a medical record from Thornton Medical Center, dated January 27, 2014 (Claimant's Exhibit 10)] and she had previous right knee surgery in high school in 1996. She had two left knee surgeries (not part of this claim) in Texas in 2013 or shortly before 2013.

10. Dr. Failinger noted that he would normally recommend both therapy and a cortisone injection, however, the Claimant "has already done those things in the past and she was ready to push on with the surgery now." Dr. Failinger also recommended that all of the Claimant's records be obtained (a question remains concerning what "all" medical records means), including the records from the physician in Texas who was

going to perform the surgery noted by the Claimant to the right knee. The ALJ infers and finds that Dr. Failinger was incorrectly assuming that a physician in Texas had even been consulted, concerning right knee surgery, after 1996, much less medically contemplated.

11. The Claimant was seen at Concentra again on December 17, 2015 by Cheryl Meyers-Saffold, M.D. The note from this date contains a discussion with Claimant about her engaging in PT (physical therapy) and reviewing with the Claimant Dr. Failinger's desire to see the medical records from the prior orthopedic surgeon in Texas who had recommended right knee surgery. The ALJ infers and finds that Dr.Failinger's desire to see the Texas medical records is based on an incorrect assumption that there were such records when, in fact, there is no persuasive evidence that there were any medical records in this regard.,

12. The Claimant returned to Dr. Failinger on January 7, 2016. He noted that the Claimant had a prior surgery to the right knee (1996) from some old records brought in by the Claimant and that she "always had instability" in the knee and it "has never done well" prior to her injury with the Employer herein. Dr. Failinger diagnosed the Claimant with "right knee status post-previous patellar instability with persistent symptoms." He also noted that he would proceed with a surgery wanted by the Claimant and it was "not a problem because she really wants the surgery and she was *going to have some surgery* in Texas (in 2013 or prior to 2013).

13. On April 28, 2016, the Claimant underwent surgery with Nathan Faulkner, M.D., to fix her patellar instability (Claimant's Exhibit 17, p. 201). The ALJ infers and finds that the need for this surgery was based entirely on the Claimant's pre-existing patellar instability, which was not aggravated and/or accelerated by the incident of November 26, 2015, thus, the need for the surgery was not causally related to the incident. Moreover, the totality of the evidence establishes that the incident of November 26, 2015, although a compensable event, amounted to an injury in the nature of a sprain, which necessitated some medical care and treatment prior to April 28, 2016.

14. On December 17, 2015, Dr. Failinger noted that the Claimant "was in Alamo down in Texas and was going to have surgery and decided not to do so and came up to Colorado… She just wants to have the surgery that she was going to have done at Texas performed now" (Claimant's Exhibit 12, p.139). On January 7, 2016, Dr. Failinger repeated this statement and stated she had "moved recently" from Texas (Claimant's Exhibit 12, p. 149). According to the Claimant, these were not accurate statements. The Claimant moved from Texas in 2013, and lived in Washington before moving back to Colorado. No surgery had been recommended. Dr. O'Brien [Timothy O'Brien, M.D., the Respondents' independent medical examiner (IME) stated in his testimony that he agreed it was "very possible" that Dr. Failinger had misunderstood [the Claimant] on this matter (O'Brien Depo., p. 101). The record contains no medical records prescribing a surgery in Texas for the Claimant's right knee, beyond the known

surgery in 1996. The ALJ infers and finds that Dr. Failinger misunderstood the Claimant and inadvertently distorted time and events, which made it appear that what happened 20-years or even 3-years ago happened "only yesterday." Nonetheless, Dr. Failinger's distortion of time is a "red herring" to the resolution of the issue concerning causal relatedness of the need for the April 28, 2016 surgery.

15. Dr. Failinger **neve**r rendered an opinion that the need for the April 28, 2016 surgery was causally related to an aggravation and/or acceleration of her underlying right knee condition by virtue of the incldent of November 26, 2015.

16. On April 28, 2016, the Claimant underwent surgery with Dr. Faulkner to fix her patellar instability (Claimant's Exhibit 17, p. 201).

Claimant's Independent Medical Examiner (IME), Edwin M. Healey, M.D.

17. On June 3, 2016, the Claimant presented for an IME with Dr. Healey. Dr. Healy is a Level-2 Accredited [by the Division of Workers' Compensation (DOWC) and a board certified neurologist. He is of the opinion that based *on the information available to him*, the Claimant had a permanent, severe aggravation of a pre-existing chronic patellofemoral syndrome with intermittent subluxation as a result of the November 27, 2015 injury. As found herein below, the ALJ rejects this opinion attributing everything to the November 26, 2015 incident. The ALJ notes that Dr. Healey placed several caveats on his opinion:

- Dr. Healey actually called the Claimant's attorney's office for the opportunity to review Claimant's prior medical records regarding her right knee. He was told that the attorney did not have the records, but was attempting to obtain them.
- Dr. Healey noted that he was highly dependent upon what Claimant was telling him because he did not have the prior records
- He reiterated that he had requested the additional pre-existing records, and if review of the records changes his opinion, he will provide an addendum.

18. The ALJ finds that the record does not contain persuasive evidence that the Claimant ever provided the pre-existing records to Dr. Healey, or that Dr. Healey reviewed them after production of his report. Consequently, the ALJ finds Dr. Healey's ultimate opinions concerning permanency lacking in persuasiveness and credibility. The ALJ, however, finds that Dr. Healey's opinions support a compensable right knee strain of November 26, 2015.

Respondents' IME by Timothy O'Brien, M.D.

19. On June 28, 2016, Dr. O'Brien performed an IME on behalf of Respondents. Dr. O'Brien's is a board certified orthopedic surgeon. He has performed

numerous knee surgeries, including replacements, and several ACLs and arthroscopies (Respondents' Exhibit O, p. 82 ll 1-10).

20. Dr. O'Brien is of the opinion that the onset of the right knee pain on November 27, 2015 was a manifestation of the Claimant's personal health and that there was no new tissue breakage of yielding on that date (Respondents' Exhibit. A, p 11). Based on the totality of the evidence, the ALJ rejects Dr. O'Brien's opinion insofar as it denies a compensable event on November 27, 2015, albeit, a strain amounting to a temporary exacerbation, caused by a work-related event and necessitating some medical treatment up until the time of the April 28, 2016 surgery.

21. Dr. O'Brien also stated the opinion that the Claimant's reported mechanism and behavior after the alleged event is not consistent with an injury. Dr. O'Brien has no credentials in the behavioral sciences. He noted that an acute patellar dislocation, even in a person who has a history of chronic dislocations, typically results in significant pain and the need for medical attention as it is difficult to carry on with activities (Respondents' Exhibit A, p. 11). In summary, the evidence establishes that the Claimants' pattern showed that she did not have a first-time patella dislocation on November 27, 2015 (Respondents' Exhibit O, p. 112, pp. 20-23), and the ALJ so finds.

22. Dr. O'Brien is also of the opinion that in an acute patellar dislocation, even in a person who has history of chronic or recurrent locations, there is significant pain and typically bleeding into the knee joint, which was not present in this case (Respondents' Exhibit A, p. 11).

23. Dr. O'Brien stated that the MRI (magnetic resonance imaging) shows no evidence of an acute injury. When a kneecap dislocates for the first time, there should be massive bleeding, and that was not present on the MRI (Respondents' Exhibit A, pp. 11-14). Dr. O'Brien explained that there was no evidence of acute injury on the MRI and "all evidence points to a pre-existing, longstanding condition" (Respondents' Exhibit C, p. 95).

24. Dr. O'Brien explained that what Claimant felt on November 27, 2015 was related to her pre-existing patellofemoral instability. While he thinks Claimant did feel her knee shift when pushing on the washer, no new tissue tearing occurred but instead "she felt what exists in her on a day-to-day basis for years prior to that day, and it just manifested itself again" (Respondents' Exhibit O, p. 128). To support this opinion, Dr. O'Brien stated in his IME Report that "it is medically improbable and it borders on the impossible that a kneecap dislocated and yet there was no intra-articular swelling or hemarthrosis. I have been an orthopedic surgeon for nearly 30 years and I have treated many patellar dislocations, both acute and chronic, and I have never examined a knee where the patella actually dislocated and was not associated with an intra-articular accumulation of fluid, typically blood" (Respondents' Exhibit A, p. 12)

25. Dr. O'Brien stated the opinion that there was no injury in this case. He was of the opinion that the objective MRI showed no tissue tearing or yielding and no evidence of bleeding (Respondents' Exhibit O, p. 127 ll 7-24). Although expressing a medical opinion of "no injury," Dr. O'Brien is not expressing a legal opinion concerning "injury" within the meaning of the Workers' Compensation Act. As previously found, the Claimant sustained a temporarily exacerbating, compensable injury on November 27, 2015.

26. Dr. O'Brien is of the opinion that there is no objective evidence to support that Claimant dislocated her knee cap on November 27, 2015 (Respondents Exhibit A, p. 12).

27. Dr. O'Brien was further of the opinion that the need for any medical care was not due to the events of November 27, 2015, but rather to Claimant's pre-existing condition (Respondents' Exhibit O, p. 131 ll 3-7).

The Claimant's Histories

28. The Claimant maintained at hearing that the histories recorded by Dr. O'Brien, Dr. Failinger, and her own expert, Dr. Healey, were inaccurate with respect to her prior treatment and surgical recommendation to fix her knee prior to her alleged incident on November 27, 2015. The ALJ finds that Claimant's contention that these separate experts, including her own expert, were all incorrect strains credulity to the point that this would be beyond any reasonable bounds of coincidence. The ALJ finds it especially important that Dr. Failinger reviewed with the Claimant the potential for physical therapy, or an injection, but these suggestions were rejected by the Claimant in favor of a surgery, because she did not believe the therapy or injection would do any good. This fact demonstrates the Claimant's familiarity with both conservative treatment, and the surgery which she eventually underwent, which makes it more probable that she had contemplated, with the benefit of medical advice, the same treatment regimen previously in Texas, contrary to her representations at hearing. The ALJ finds it more likely that Claimant did report such a history to the physicians in this matter, and did have a surgery proposed prior to her alleged incident in this case which was to correct the problem with her knee which was ultimately done by Dr. Faulkner on April 28, 2016. The ALJ infers and finds this further supports that the incident of November 27, 2015 did not aggravate or accelerate the Claimant's right knee condition to the point of causing the need for the surgery of April 28, 2016. Moreover, the ALJ infers and finds that the need for the surgery of April 28, 2016 was caused, entirely by her pre-existing right knee condition. The five-month delay between the incident of November 27, 2015 and the surgery of April 28, 2016 reveals that the surgery was **not** of an emergent nature. The type of surgery, correction of the right knee instability, coupled with the totality of the facts herein, establish that the desirability of the surgery was of a more long-standing nature than the five months from November 27, 2015.

Ultimate Findings

29. Based on the totality of the evidence, the ALJ finds Dr. O'Brien's opinion that the April 28, 2016 surgery was **not** causally related to the claim involving the right knee injury of November 26, 2015. Indeed, the ALJ finds Dr. O'Brien's opinion in this regard more credible and persuasive than Dr. Healey's opinion. Other than his confusion which resulted in a distorted time sequence of events in the Claimant's history, the ALJ finds Dr. Failinger's opinions credible. Dr. Failinger, however, rendered **no** opinion concerning the causal relatedness of the need for the April 28, 2016 surgery. The ALJ, however, finds that the Claimant sustained a compensable injury on November 26, 2015, which was of a temporal duration (which may be characterized as a right knee strain) up until the date of the unrelated surgery of April 28, 2016. It would be unfair to attribute any percentage of the need for surgery to the compensable right knee strain of a temporary duration.

30. Between conflicting opinions concerning the causal relatedness of the surgery of April 28, 2016, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Dr. O'Brien, part of the opinions of Dr. Failinger as specified in paragraph 29 above, and to reject all opinions to the contrary. On the compensability of the right knee strain, of temporal duration until the unrelated surgery of April 28, 2016, the ALJ accepts Dr. Healey's opinion, corroborated by the Claimant's undisputed testimony concerning the mechanics of the injury on November 27, 2015 insofar as it supports a temporary strain of the right knee.

31. The Claimant has failed to prove, by a preponderance of the evidence that the surgery of April 28, 2016, performed by Dr. Faulkner, was causally related to an aggravation and/or acceleration of her underlying right knee instability. The Claimant, however, has proven, by preponderant evidence that she sustained a compensable injury of temporal duration until April 28, 2016, on November 26, 2015, which may be characterized as a right knee strain.

32. The Claimant has proven, by a preponderance of the evidence, that Dr. Failinger and all of his referrals were authorized and within the chain of authorized referrals, insofar as they treated the temporary effects of the Claimant's right knee strain.

33. The parties stipulated and the ALJ found that the Claimant's AWW is $1,145.83, which at present is academic.

34. The Claimant did not designate as an issue nor did the Claimant prove any temporary disability prior to April 28, 2016 or after August 19, 2016.

35. The Claimant failed to prove that temporary disability from April 28, 2016 through August 19, 2016 was causally related to the compensable injury of November 26, 2015. Further, the Claimant failed to prove any temporary disability from August v19, 2016 through the hearing date of December 7, 2016. .

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, Dr. O'Brien's opinion that the April 28, 2016 surgery was **not** causally related to the claim involving the right knee injury of November 26, 2015 was more credible and persuasive than Dr. Healey's opinion. Other than his confusion which resulted in a distorted time sequence of events in the Claimant's history, the ALJ found Dr. Failinger's opinions credible as supporting a strain of the right knee resulting from the incident of November

26, 2015, which was of a temporary duration. Dr. Failinger, however, rendered **no** opinion concerning the causal relatedness of the need for the April 28, 2016 surgery. The Claimant sustained a compensable injury on November 26, 2015, which was of a temporal duration (which may be characterized as a right knee strain) up until the date of the unrelated surgery of April 28, 2016. As further found, the Claimant's description of the mechanism of injury on November 26, 2015 was credible and undisputed. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting opinions concerning the causal relatedness of the surgery of April 28, 2016, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. O'Brien, part of the opinions of Dr. Failinger and to reject all opinions to the contrary. On the compensability of the right knee strain, of temporal duration until the unrelated surgery of April 28, 2016, the ALJ accepted Dr. Healey's opinion, corroborated by the Claimant's undisputed testimony concerning the mechanics of the injury on November 27, 2015 insofar as it supported a temporary strain of the right knee.

Basic Test for Compensability

c. An "injury" referred to in § 8-41-301, C.R.S., contemplates a **disabling** injury to a claimant's person, not merely a coincidental and non-disabling insult to the body. *See Henderson v. RSI, Inc.,* 824 P.2d 91 (Colo. App. 1991). *Also see Gaudett v. Stationers Distributing Comp*any, W.C. No. 4-135-027 [Indus. Claim Appeals Office (ICAO), April 5, 1993]. A priori, the consequences of a work-related incident must require medical treatment or be disabling in order to be sufficient to constitute a compensable event. If an incident is not a significant event resulting in an injury, claimant is not entitled to benefits. *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (ICAO, March 7, 2002). The initial reports of Dr. Naidu and Dr. Deonarain, as found, support a compensable temporary right knee strain. Therefore, as found, the Claimant experienced an injury incident sufficient to be legally compensable.

Causal Relatedness of Need for April 28, 2016 Surgery

d. The employee must prove a causal relationship between the injury and the medical treatment for which the worker is seeking benefits. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997). Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1189 (Colo. App. 2002). An industrial accident is the proximate cause of a claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority,* 768 P.2d 751 (Colo. App. 1988). In order to prove that an industrial injury was the proximate cause of the need for medical treatment, an injured worker must prove a causal nexus between the need for treatment and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). It is for the ALJ, as the fact-finder, to determine whether a need for medical treatment is caused by the industrial injury, or some other intervening injury. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). Respondents are liable for the “direct and natural consequences” of a work-related injury, including consequential injuries caused by the original compensable injury. *See Travelers Ins. Co. v. Savio*, 806 P.2d 1258 (Colo. 1985). As found, the surgery of April 28, 2016, performed by Dr. Faulkner, was **not** causally related to an aggravation and/or acceleration of her underlying right knee instability.

Medical Treatment Attributable to Pre-Existing Condition

e. The law concerning apportionment, by analogy, is helpful. In the case of successive employers, the Court of Appeals determined that an apportionment was compelled where the contribution of the previous employer was significant and it would be fundamentally unfair to hold the second employer to a full responsibility rule. *See Duncan v. Indus. Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004). Although a stretched analogy, as found, in the present case, the need for the April 28, 2016 surgery was 100% attributable to the Claimant’s preexisting right knee instability, and it would be unfair to attribute any percentage of the need for surgery to the compensable right knee strain of a temporary duration.

Burden of Proof

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. This includes proving a causal relationship between the incident of November

26, 2015, and the need for the surgery of April 28, 2016. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has failed to satisfy her burden with respect to the causal relatedness of the need for the April 28, 2016 surgery and the compensable strain of November 26, 2015. The Claimant, however, has satisfied her burden with respect to the right knee strain of November 26, 2015, which was of temporary duration.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondents shall pay the costs of medical treatment at the hands of Rammohan Naidu, M.D., Natasha Deonarain, M.D., and Mark Failinger, M.D. , for treatment of the Claimant's right knee strain of temporary duration, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Any and all claims for the surgery performed by Nathan Faulkner, M.D., are hereby denied and dismissed.

C. The Claimant's average weekly wage is $1,145.83, which is academic at this point.

D. Any all claims for temporary disability benefits from April 28, 2016 through the date of hearing, December 7, 2016, are hereby denied and dismissed. Also, any and all claims for temporary disability benefits from November 26, 2015 through April 28, 2016 are hereby denied and dismissed.

E. Any and all maters not determined herein are reserved for future decision.

DATED this______day of December 2016.

____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

1. Whether the Claimant sustained a compensable injury on November 2, 2015 arising out of and in the course and scope of his employment with the employer;

2. If the Claimant has proven a compensable injury, whether the request for surgery from Dr. Mitchell is reasonable and necessary to cure and relieve him from the effects of the industrial injury; and

3. If the Claimant has proven a compensable injury, whether the medical treatment he has received was reasonable and necessary to cure and relieve him from the effects of the industrial injury, and whether he is entitled to ongoing medical treatment.

FINDINGS OF FACT

1. The Claimant was involved in a significant motor vehicle accident in 1997 while enlisted in active duty for the United States Army. (Resp. Exh. H: 78).

2. As part of his treatment for this motor vehicle accident, the Claimant underwent a surgery at the L4-L5 level of his lumbar spine, performed by Dr. Masferrer in 1998. The MRI performed on December 14, 2015 confirmed evidence of a left laminotomy procedure at this level. The Claimant described the procedure as a partial discectomy to his ATP. (Resp. Exh. D: 40).

3. On July 21, 2015, the Claimant was evaluated as part of his request to obtain military disability benefits for a service disability for the 1997 motor vehicle accident from the Department of Veterans' Affairs (VA). He reported to the VA that he sees a chiropractor twice per month to manage his chronic low back pain related to the service disability. (Resp. Exh. H: 78).

4. The Claimant's chiropractor from about 2008 forward was Aaron Smith, D.C. The Claimant presented to Chiropractor Smith approximately thirty times since 2008 for adjustments of his low back. Of particular note, the Claimant had nine chiropractic visits in the ten months prior to his alleged injury of November 2, 2015. The Claimant presented for an adjustment of L2 and L3 less than one month prior to his reported injury, reporting 3/5 pain levels. (Resp. Exh. F).

5. The Claimant alleges he sustained a low back injury on November 2, 2015. On November 3, 2015, the Claimant presented to Chiropractor Smith who performed an adjustment at the L2, L4, and L5 levels. (Resp. Exh. F: 62).

6. At his initial appointment with a Authorized Treatment Provider (ATP) doctor on November 6, 2015, the Claimant reported he was experiencing 9/10 levels of pain in his low back on the left, with pain radiating into his butt and back of his left leg. There is no indication in this initial report that the Claimant informed the doctor of his ongoing treatment for his service disability and chronic low back pain. (Resp. Exh. D: 52-54).

7. On November 20, 2015, the Claimant began physical therapy. He filled out an intake questionnaire wherein he noted that his current symptoms were similar to an injury he sustained eighteen years prior without reference to ongoing or chronic issues or treatment. He did not inform the physical therapist that he had sought chiropractic care for that condition in the ensuing eighteen years. (Resp. Exh. 60).

8. The Claimant reported on December 2, 2015 that, as part of his maintenance for the 1998 surgery, he received approximately three to four chiropractic sessions per year for ongoing lower back pain. Despite ongoing treatment, the Claimant reported to the ATP he had not had significant problems with his back since the 1998 surgery. (Resp. Exh. D: 40).

9. On January 12, 2016, the Claimant reported to Dr. Ross he had lumbar spinal surgery eighteen years prior with "resolution of symptoms and no recurrence until recent injury." (Resp. Exh. C: 17).

10. The Claimant applied for Veteran's Affairs disability benefits in 2015 for his service disability and obtained an evaluation to obtain those benefits in July 2015. He testified he scheduled this appointment because his back was still hurting and he needed to update his benefits. At his appointment, the Claimant reported:

- **Constant** pain at a **7-8/10** level, with occasional pain at the **9/10** level;
- Episodes of **electric shocks** in his back and bilateral legs **several times a day**;
- Significant range of motion deficits affecting his ability to put socks and shoes on;
- Increased pain with walking over **15 minutes**;
- A requirement for the occasional use of a walking stick; and
- An inability to perform his hobby of hiking.

In addition to these complaints, a physical examination performed established ***tenderness at the L4 level and mild radiculopathy in both lower extremities.*** The VA evaluator assessed that the claimant's pain involved sciatic nerve problems and the L4-S3 nerve roots bilaterally. (Resp. Exh. H: 78, 79, 82, 83).

12. The Claimant underwent a lumbar x-ray on this date, which established a disc protrusion at the L3-L4 level. (Resp. Exh. I: 93).

13. The Claimant testified that the result of this appointment was that his VA disability benefits were increased. He testified that his impairment for his back was 20% (which was a 10% increase from his prior rating per his testimony), and 10% impairment for nerve damage in each leg, for a total of 40% impairment. (Hrg. Tr. p. 34-35).

14. As part of his ongoing treatment for his lumbar spine post-surgery, the Claimant underwent a lumbar MRI on September 10, 2010. This study established a disc herniation at L3-L4 and bilateral facet arthropathy and hypertrophy at that level. Similarly, an x-ray performed on July 21, 2015 confirmed the existence of this L3-L4 disc herniation. (Resp. Exh. I: 92).

15. Dr. Michael Rauzzino, a neurosurgeon, testified at hearing that he had reviewed the film from the 2010 MRI and opined that it established "L3-L4 disc herniations in both directions." (Hrg. Tr. p. 56, ln. 2).

16. The Claimant has alleged that he sustained a low back injury on November 2, 2015 while working at a job site. He described that the injury occurred while he was shoveling dirt; specifically he noted a twisting mechanism of injury. (Hrg Tr. p. 12; Resp. Exh. D: 52).

17. After a course of conservative treatment, the Claimant underwent a MRI on December 14, 2015. That study established degeneration at the L3-L4 level. Dr. Orderia Mitchell opined that the findings were consistent with degeneration from T12 through the sacrum with retrolithesis at the L3-L5 levels and a disc bulge at L3-L4. (Resp. Exh. B: 8; Resp. Exh. I: 88).

18. The Claimant subsequently underwent epidural steroid injections for both diagnostic and therapeutic purposes at L4-L5 and L5-S1. No injection was performed at the L3-L4 level. The injections were noted by Dr. Mitchell to be unhelpful. (Resp. Exh. B: 8; Resp. Exh. C).

19. On January 5, 2016, Dr. Mitchell recommended a bilateral discectomy of the L3-L4 level with foraminotomies. (Resp. Exh. B: 10).

20. The Claimant testified that the alleged incident of November 2, 2015 caused new symptoms that he had not experienced previously and that his back was asymptomatic prior to the incident. He testified that his new symptoms were: (1) a "golf ball" sensation in his *left* foot; and (2) a new problem with pain on walking. (Hrg. Tr. p. 30-31). He also complained of low back pain at an 8/10 pain level while being examined by his ATP (CCOM) physicians. (Resp. Exh. D: 49).

21. The Claimant later reported to Dr. Rook (who performed an Independent Medical Examination [IME] at Claimant's request) that another completely new symptom after the alleged injury was radiation of pain into his left leg. (Cl. Exh. 13: 130).

22. At the Claimant's appointment with Dr. Mitchell on January 5, 2016, it was recorded that the claimant had the following physical examination: tenderness at L4, positive straight leg raise tests on both legs, and limited active range of motion. He specifically reported to Dr. Mitchell that he had a golf ball sensation in his *right* foot, not a golf ball in his *left* foot as he testified. (Resp. Exh. B: 12). This notation was made on January 5, 2016 in the Claimant's own handwriting. The Claimant conceded at hearing that he had a golf ball sensation in his *right* foot before the alleged incident. (Hrg. Tr. p. 27, ln. 8-9).

23. On November 20, 2015, the physical therapist similarly documented moderate loss of active range of motion, positive straight leg raise test on the left, and increased palpable tension at the piriformis. (Resp. Exh. E: 58).

24. Prior to November 2, 2015, the Claimant had voiced substantially similar subjective complaints. On September 17, 2015, the claimant was examined by his primary care physician for bilateral foot pain and complained of "golf ball pain" in his (unspecified-left or right) foot. (Resp. Exh. G: 70).

25. Despite his testimony that he had never had difficulty with walking prior to November 2, 2015, he specifically reported to the VA that any walking over 15 minutes or a few blocks caused pain and that he could no longer go hiking. He also reported to the VA occasional use of a cane or walking stick. (Resp. Exh. H: 78, 83; Hrg. Tr. p. 31, ln. 8-11).

26. Even though the Claimant specifically denied any prior radiating pain in his left leg to his own expert, the Claimant reported "electrical shocks" that radiated down *both* legs several times a day to the VA on July 21, 2015. Further, the Claimant was diagnosed with bilateral lower extremity radiculopathies on that same date. (Resp. Exh. H: 78, 82).

27. Further, on July 21, 2015, the Claimant reported to the VA that he had difficulty putting his shoes and socks on due to active range of motion loss and a physical examination documented both positive straight leg raise tests bilaterally and tenderness at the L4 level. (Resp. Exh. H: 78, 79, 82). These findings were similar to those found by Dr. Mitchell on January 5, 2016.

28. Finally, prior to the alleged work injury, which the Claimant testified caused him pain levels of 8-9/10, (Hrg T. P. 30), the Claimant had already reported to the VA the same chronic pain in July 2015 – "7-8/10 pain constantly with flares to 9/10". (Resp. Exh. H: 78).

29. The ALJ finds and determines that the great weight of the evidence establishes that the Claimant's reported subjective complaints of pain and function after the alleged incident were substantially similar to that reported by the Claimant prior to the alleged incident. The ALJ finds and determines that the Claimant's subjective presentation was largely unchanged by the alleged November 2, 2015 incident.

29. Dr. Rauzzino opined, having reviewed the Claimant's extensive medical history, there was no evidence of an acute injury occurring on November 2, 2015 and the Claimant's current condition appeared to be a natural progression of the L3-L4 disc herniation documented in the 2010 MRI. (Resp. Exh. A: 6).

30. Dr. Rauzzino, whose *report* was issued *prior to* reviewing the VA records (which were not tendered to Respondent until 9-30-16), found persuasive that the Claimant had been treating with a chiropractor in the months prior to his alleged injury, noting pain levels up to 10/10. He opined that the frequency of chiropractic care, which escalated over time, was due to the natural progression of the Claimant's degenerative changes seen on MRI in 2010. (Resp. Exh. A: 6).

31. Dr. Rauzzino testified at the hearing in this matter and was accepted as an expert in the field of his board certification, neurosurgery. (Hrg. Tr. p. 48-49).

32. Dr. Rauzzino testified that his review of the claimant's pre-incident records confirmed that the claimant was experiencing elevated levels of pain (5/5, which Dr. Rauzzino equated to 10/10 pain). He also testified the 2010 MRI established a L3-L4 disc herniation, which he would expect to naturally worsen over time. (Hrg. Tr. p. 55-57).

33. Dr. Rauzzino credibly explained that, when he compared the films of the 2015 MRI to the 2010 MRI, it showed expected progression in the disc herniation at L3-L4 seen in 2010 and similar progression of degeneration at the other spinal levels. He explained he would anticipate this progression over the period of five years between the two MRIs. (Hrg. Tr. p. 56-57).

34. Dr. Rauzzino credibly concluded that there was "no objective evidence to suggest that [the Claimant] sustained a new injury to his lumbar spine" on November 2, 2015. Rather, Dr. Rauzzino testified that the recent medical documentation established that the Claimant had "ongoing back pain, which he's had before... ongoing leg pain, which he's had before...There's nothing new here that he hasn't had before in the records." (Resp. Exh. A: 6; Hrg. Tr. p. 60, ln. 20-24).

35. Dr. Rook agreed that the Claimant had a pre-existing condition, but testified that he felt that the claimant suffered a "permanent aggravation of his chronic low back pain" on November 2, 2015 and that he developed a symptomatic radiculopathy on that date. (Rook Depo. Tr. p. 16, ln. 7-15).

36. Dr. Rauzzino disagreed with Dr. Rook's position (Dr. Rook's *report* was issued three weeks *before* receipt of the VA records by Claimant on 9-30-16) that the Claimant suffered a work-related aggravation on November 2, 2015. Dr. Rauzzino testified that the Claimant's pre-incident condition was significant: the Claimant reported 10/10 pain, was actively seeking chiropractic care, and noted a significant decrease in function to the VA. Dr. Rauzzino credibly testified that the Claimant's current condition is "the same ongoing complaints that he has had all along." (Hrg. Tr. p. 61-62).

37. The ALJ finds and determines Dr. Rook's opinion is undermined by the great weight of the medical records which establish that the Claimant had significant symptomatic low back pain and bilateral radiculopathy in the months and weeks prior to the alleged work injury -which was not reported to his treating physicians- and which was substantially similar to those pain and function complaints reported after the alleged incident.

38. The ALJ credits Dr. Rauzzino's opinions along with the supporting medical records and determines that the objective evidence in this claim supports a finding that the Claimant's objective condition was not changed by any incident occurring on November 2, 2015. Rather, the ALJ finds and determines that the objective evidence and the totality of the medical record do not support a finding that an injury occurred on November 2, 2015.

39. The ALJ also finds and determines the record does not support a finding that the Claimant experienced an aggravation of his underlying chronic low back pain on November 2, 2015. Specifically, the ALJ finds there is insufficient indication in the medical records that any incident or injury of November 2, 2015 aggravated, accelerated, or combined with a pre-existing condition to *cause the need for medical care or disability.* While Claimant may have experienced some back pain while shoveling on 11-2-15, it was, at most, due to temporary irritation of the surrounding soft tissue. In so finding, the ALJ finds Dr. Rauzzino's opinions and testimony were more persuasive than those of Dr. Rook.

40. As discussed above, the Claimant failed to fully disclose his condition arising out his service disability to his ATPs on this claim, including his own IME. Specifically, in his own handwriting, the Claimant reported:

- on November 6, 2015, that he had not had any treatment in the past for his low back;
- on November 20, 2015, the Claimant failed to disclose he had seen a chiropractor for his low back pains prior to the alleged injury; and
- he had similar symptoms 18 years prior, without mention to more recent treatment.

(Resp. Exh. D; 52; E: 60).

41. Further, the Claimant's ATPs specifically documented the Claimant reported he has not had significant problems with his back since his 1998 surgery and that post-surgery he had a "resolution of symptoms and no recurrence until recent injury." (Resp. Exh. C: 17; D: 40).

42. Dr. Rook documented the Claimant had experienced a number of work flare-ups since 2002 that required treatment with a chiropractor which he attributed to

his work with the employer. Dr. Rook is the only physician to document any such “work” flare-ups. (Cl. Exh. 13: 129-130).

43. Despite Dr. Rook’s documentation of alleged work flare-ups- as reported by the Claimant-, the medical records establish that the Claimant had no prior work injuries with the employer. In response to a direct question whether he had prior work injuries in a questionnaire, the Claimant wrote: “no work injuries till 02 Nov 15.” He also conceded in testimony that he never reported a work injury prior to this date. (Resp. Exh. D: 53; Hrg. Tr. p. 37, ln. 22-25).

44. Additionally, the Claimant reported to the VA in July 2015 that he got chiropractic treatment twice a month, not for any work injury, but due to ongoing pain from his military related disability. (Resp. Exh. H: 78).

45. The Claimant’s testimony to this Court minimized his prior history and his treatment with the ATPs. The ALJ finds that the Claimant’s testimony that he could not remember informing the ATPs of his prior history to be not persuasive. In particular, the fact that the Claimant failed to inform his providers that he was seeking treatment just weeks and months prior to the reported injury for vastly similar complaints is a significant omission. The ALJ finds and determines that the Claimant failed to disclose this information to his ATP, and to his Independent Medical Examiners.

46. The ALJ additionally finds the alleged work-related flare-ups reported to Dr. Rook were inconsistent with the great weight of the record. The ALJ finds and determines that the records establish that the Claimant specifically reported flare-up in his low pain to be related to his VA disability so as to receive benefits from the government. As a result, the ALJ finds it is more probable than not that any flare-ups, if they occurred at all, were related to this pre-existing military service disability, rather than to the Claimant’s work.

47. Based on the totality of the record and testimony, the ALJ finds and determines that the Claimant’s testimony regarding his subjective reports of pain and function were not consistent with his medical history. At least three times during the hearing, Claimant self-reported memory issues: "I need to interject something. I don't have the greatest memory." (Hrg Tr. p. 28). "My memory's not that great". (Hrg. Tr. p 33). "Your honor, my--my memory isn't what it used to be, with taking drugs every night" (Hrg Tr. p. 39).

48. Dr. Rook testified in this matter that he performed an IME, which included an interview and evaluation of the Claimant. He testified conceded that he based his causation opinions on the Claimant’s self-report of symptoms. Specifically, he conceded that he based his opinion on the Claimant’s report that he had new symptoms post-incident that he did not have pre-incident. However, Dr. Rook conceded at hearing that additional medical records had come to light – particularly the VA records – that contradicted the Claimant’s report to him regarding his “new” symptoms. Dr. Rook conceded that the Claimant reported 7-8/10 and 9/10 pain levels and radiating pain bilaterally months before the reported incident. (Rook Depo. Tr. p. 21-24).

49. Dr. Rook also testified that the Claimant reported to him that the alleged work injury affected his ability to function and perform activities that he could perform prior to the alleged work injury. Specifically, the Claimant reported that, as a result of the alleged work injury, he could no long hike, bike or walk his dog. The Claimant did not, however, report to Dr. Rook that he had already reported to the VA having difficulty with these activities prior to the alleged work injury. Dr. Rook conceded that the VA records document functional limitations inconsistent with what was reported to him at the IME. (Rook Depo. Tr. p. 55-56).

50. The ALJ finds and determines that Dr. Rook's opinion is based in large part on the Claimant's subjective reporting, which is inconsistent with the medical records and the totality of the evidence. The ALJ finds that the record does not establish that the Claimant's pre-alleged incident treatment was in any way related to his work with the employer.

51. The ALJ finds Dr. Rook's testimony and opinions to be less persuasive and credible than that of Dr. Rauzzino regarding the underlying medical reasons for the pain that Claimant now reports.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S. A Claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A workers' compensation case is decided on the merits. § 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936).

3. The Claimant's testimony was neither consistent nor persuasive with regard to his subjective reporting of pain and function pre- and post-alleged incident. Just months prior to the alleged work injury the Claimant reported severe pain and

significant functional limitations, and thereby obtained government benefits for a military disability for a low back condition with bilateral lower extremity radiculopathy.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it “aggravates, accelerates, or combines with” a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse,* 805 P.2d at 1167*.* The Workers’ Compensation Act creates a distinction between the terms “accident” and “injury.” The term “accident” refers to an “unexpected, unusual, or undesigned occurrence,” whereas an “injury” refers to the physical trauma caused by the accident. In other words, an “accident” is the cause and an injury is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). No benefits flow to the victim of an industrial accident unless the accident results in a compensable “injury.” § 8-41-201(1), C.R.S., *Wherry v. City and Cty. of Denver*, W.C. No. 4-475-818 (I.C.A.O., March 7, 2002).

5. The Claimant has failed to establish that he sustained an acute injury during the scope and course of his employment with his employer by a preponderance of the evidence. Specifically, the Claimant has failed to establish by a preponderance of the evidence that any incident at work on November 2, 2015 caused an injury that resulted in the need for medical treatment or disability. *Wherry*, W.C. No. 4-475-818.

6. The Claimant had a significant related pre-existing history of chronic low back pain and lower extremity radiculopathy that the Claimant failed to fully disclose to his treating physicians. Just months prior to the alleged work injury the Claimant sought and obtained a 40% disability rating from the VA for his low back condition and his bilateral leg pain and radiculopathy. Further, the Claimant reported similar subjective complaints and levels of function regarding areas of pain, pain levels, and activities affected in the weeks and months prior to the alleged November 2, 2015 incident and thereafter. As found, there is insufficient evidence in the medical records that any incident occurring on November 2, 2015 aggravated, accelerated, or combined with a pre-existing condition to cause the need for medical care or disability. *Merriman v. Indus. Comm’n*, 210 P.2d 448 (Colo. 1949). The ALJ finds that the opinions and testimony of Dr. Rauzzino was more persuasive than those of Dr. Rook regarding the underlying medical reasons for the pain that Claimant now reports.

7. If Claimant still desires the surgery being proposed by Dr. Mitchell to alleviate his symptoms, it may be performed outside the Workers' Compensation system.

ORDER

It is therefore ordered that:

1. The Claimant failed to prove by a preponderance of the evidence that he sustained a compensable injury during the course and scope of his employment with the Employer on November 2, 2015.

2. The Claimant's claim for medical treatment, including the proposed surgery by Dr. Mitchell, and workers' compensation benefits is denied and dismissed.

All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 29, 2016

/s/ William G Edie
William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

- Did Claimant establish by a preponderance of the evidence that he suffered a compensable injury to his lower extremity/lumbar spine and cervical spine in the course and scope of his employment in April of 2016?

- What was Claimant's AWW?

- Is Claimant entitled to receive TTD and TPD benefits?

- Did the right to designate a new authorized treating physician pass to Claimant?

- Whether the medical care Claimant received at the University of Colorado Hospital, including ambulance and EMT services on April 12, 2016, was reasonable and necessary.

Stipulations

The parties stipulated that if the claim was found compensable:

1. Claimant's average weekly wage ("AWW") as of the date of injury was $528.00 and then increased on August 1, 2016 for the loss of health insurance benefits (COBRA) to $647.53.

2. Claimant is entitled to temporary partial disability ("TPD") benefits from April 12, 2016 to June 2, 2016, to the extent he did not earn $528.00 a week.

3. Claimant is entitled to temporary total disability ("TTD") benefits from June 3, 2016 (based on an AWW of $528.00) until July 31, 2016. After July 31, 2016, Claimant is entitled to TTD benefits based on an AWW of $647.53, subject to applicable offsets.

FINDINGS OF FACT

1. Claimant, who is forty-nine (49) years old, worked for Employer for six years. He worked on the glass line, taking glass for windows and doors off the line and stacking same on carts.

2. Claimant had a prior work-related injury which occurred on April 28, 2015 in which he hurt his legs pushing a cart that held 400-500 pounds of glass. Claimant required medical treatment for this injury, but was released to work with no restrictions.

Claimant testified he returned to work without restrictions and required no medical treatment from June 7, 2015 through April 6, 2016.[1]

3. On April 7, 2016, while working on the glass line, Claimant finished filling a cart and felt a pull in the back of his legs. Claimant testified that it felt like a hernia and his pain worsened when he continued working. After reporting the injury, Claimant was provided a list of medical providers and he chose Concentra.[2]

4. Brian Counts, M.D. evaluated Claimant on April 7, 2016 and noted he had tight hamstrings bilaterally, as well as mild tenderness to touch posteriorly. Claimant was diagnosed with a hamstring strain and plantar fasciitis. Dr. Counts opined there was greater than a 50% probability that this was a work-related injury. Dr. Counts also noted that this may be seen as an aggravation of the previous work injury, but Claimant was symptom free for the previous ten (10) months. The ALJ credited this opinion of Dr. Counts. Dr. Counts issued the following work restrictions: change positions periodically to relieve discomfort; may need to take 5-10 minute breaks every two hours to rest and stretch.

5. An Employer's Incident Report was prepared on April 7, 2006 in which Mark Davis, (Assistant Plant Manager) noted that, according to the employee, this was an old work-related injury. Mr. Davis not the employee said his job tasks were irritating his feet on the soles and ankles. Mr. Davis testified he sent Claimant to Concentra and then had him work on modified duty.

6. Claimant testified he was working on the glass line on April 12, 2016 when he experienced low back pain lifting glass with a co-worker. He reported the incident to Mr. Davis, who prepared an Employer's Incident Report that day.[3] Claimant stated he lifted four big pieces of glass. In the supervisor's section of this report, Mr. Davis confirmed Claimant was assisting another employee unload 4 sheets of glass and then complained of shoulder and lower back pain. The ALJ found Claimant's description of the injury to be credible and noted it was corroborated by the testimony of Mr. Davis.

7. Claimant testified that his symptoms became worse after sitting down and he told a co-worker he couldn't drive. Claimant called an ambulance to transport him to University Hospital. The ALJ inferred that Claimant believed he required immediate medical treatment on April 12, 2016 because the pain had significantly worsened.

8. Mr. Davis testified he filled out the incident report while Claimant sat down. He then talked to Claimant to tell him a taxi was called. Mr. Davis did not talk with Claimant after that and found out from Claimant's co-worker (Carla) that an ambulance was called. After Mr. Davis was informed an ambulance was called, he cancelled the taxicab.

[1] This was confirmed by medical records from Concentra admitted as Exhibit 13.

[2] Exhibit C.

[3] Exhibits 6, A.

9. Claimant was then transported by ambulance to the University Hospital emergency room and evaluated by Mohammed Hararah, M.D. (resident) and Taylor Burkholder, M.D. (attending), whose impression was lumbar strain-initial encounter and chronic back pain. On examination, cervical and lumbar paraspinal tenderness was noted, but no neurological deficits were found. X-rays were negative. Claimant was given a prescription for a small amount of Valium and told to "follow-up with workman's comp".

10. Randy Burris, M.D. testified as an expert in Occupational Medicine. He was also Level II accredited pursuant to the W.C.R.P. Dr. Burris testified that there was not a medical necessity for an ambulance on April 12, 2016 and that Claimant did not require emergency medical care.

11. The treatment Claimant received at University Hospital was reasonable and necessary to cure and relieve the effects of his injury on April 12, 2016.

12. On April 13, 2016, Claimant returned to Concentra where he was evaluated by Glen Petersen, PA who noted that "patient claims back and neck part of original injury and lifted glasses [sic] yesterday here for a new injury and he claims is not new only aggravated 4-7 injury". PA Petersen's assessment was: hamstring sprain; strain of hip and thigh; plantar fasciitis, right; back and neck pain. PA Petersen prescribed Diclofenac and ordered physical therapy ("PT"). The ALJ inferred Claimant's reported symptoms and the results of the evaluation led PA Petersen to conclude Claimant required treatment for the work injury.

13. Claimant was evaluated by Khoi Pham, M.D. on April 22, 2016, whom he saw for a second opinion. Claimant had diffuse neck/back pain at the time of this evaluation. Dr. Pham noted next stiffness with decreased observed ROM ("range of motion"). Dr. Pham's assessment was myofascial pain, neck pain and acute low back pain.

14. Claimant returned to Concentra on May 2, 2016 and reported modified duty was aggravating his symptoms. He had back, neck, hip, thigh and bilateral heel pain. PA-C Valerie Skvarca's assessment was neck pain, back pain, strain of hip and thigh, and inflammatory heel pain (left and right). Claimant's restrictions were: lifting up to 10 lbs. (frequently) and push/pull up to 10 lbs. (frequently).

15. On May 10, 2016, Claimant was evaluated by Charles Lackey, M.D. at Concentra. He was complaining of continued pain in the neck, upper and lower back. On examination, Dr. Lackey found decreased range of motion in the cervical and lumbosacral spine (on flexion and extension). The ALJ notes these findings were objective indications of injury. Dr. Lackey's assessment was neck pain, back pain, plantar fasciitis (right and left), and laceration of finger. Dr. Lackey's restrictions included: lifting up to 20 lbs. (frequently), push/pull up to 20 lbs. frequently, change positions periodically, and no bending.

16. On May 20, 2016, a Notice of Contest was filed on behalf of Respondents.

17. Claimant underwent a lumbar MRI on May 23, 2016 and the films were read by Bao Nguyen, M.D. Dr. Nguyen's impression was moderate facet arthrosis and shallow broad-based disc protrusion at L4-5 accounting for mild-moderate bilateral foraminal stenosis and mild central canal narrowing at this level-no focal exiting nerve or deformity; other disk levels remain normal; no osseous, or spinal listthesis, no evidence of spinal infection or bone tumor; no abnormal distal thoracic signal or syrinx.

18. Claimant returned to University Hospital on May 25, 2016, complaining of upper and lower back pain. He was evaluated by the Vikhyat Bebarta, M.D., whose clinical impression was upper back pain and acute low back pain. Dr. Bebarta signed a note taking Claimant off work May 25, 2016, noting he could return to work on May 26, 2016 with the previously existing restrictions.

19. The ALJ infers it was reasonable for Claimant to return to University hospital on May 25, as it was after the Notice of Contest was sent and would have been received by him.

20. Dr. Pham completed Family Medical Leave Act forms on June 3, 2016 after evaluating Claimant. At that time, he noted Claimant was being treated for a lifting injury at work and was off work from June 3 through July 15, 2016. The ALJ drew the inference that Dr. Pham was of the opinion that Claimant could not perform his regular job duties during this period of time.

21. On June 8, 2016, Employer approved Claimant's request for leave under the FMLA.

22. Dr. Burris performed an IME at the request of Respondents on August 24, 2016. Claimant had diffuse tenderness throughout the trapezius musculature, as well as his thoracic spine. No localized tenderness was found in the lumbar spine and Dr. Burris felt Claimant was limited on forward flexion. Dr. Burris' assessment was myofacial pain and opined that Claimant had subjective complaints as opposed to objective findings. He believed Claimant was at MMI. The ALJ concluded Dr. Burris' opinion was less persuasive than Claimant's health care providers at Concentra.

23. Claimant returned to Concentra, where on September 26, 2016, he was evaluated by Amanda Cava, M.D., who diagnosed radiculopathy- cervical region and radiculopathy- lumbar region. Dr. Cava continued Claimant's work restrictions, including lifting up to 10 lbs. The ALJ infers these restrictions would preclude Claimant from performing his regular job duties with Employer.

24. Dr. Burris, who was present at the hearing, testified that Claimant's pain complaints did not follow a neuroanatomical pattern and that his symptoms were out of proportion to the physical findings on examination. Dr. Burris opined Claimant may have suffered a mild soft tissue strain which would have resolved without further treatment or intervention on April 7, 2016. Dr. Burris further testified that any symptoms reported by Claimant beyond those related to a soft tissue injury had no objective basis and there was not a valid diagnosis tying these to the April 7, 2016 incident. Dr. Burris

stated Claimant magnified his symptoms on examination. Dr. Burris conceded on cross-examination that the diagnoses by Claimant's ATPs at Concentra were reasonable given his symptom presentation. The ALJ notes Dr. Burris characterized Claimant's cervical and lumbar spine as essentially normal. However, Dr. Burris did not refute the conclusion that the incidents of April 7 and 12, 2016 could have aggravated Claimant's cervical and lumbar spine.

25. No ATP has placed Claimant at MMI.

26. Claimant sustained a compensable industrial injury arising out of and in the course of his employment on April 7, 2016, as well as a further injury/aggravation on April 12, 2016.

27. The ALJ credited the opinions of Claimant's treating physicians at Concentra, who recommended and provided treatment to him for injuries sustained on April 7 and 12, 2016.

28. Claimant was not able to return to full duty after April 12, 2016.

29. Claimant suffered a wage loss as the result of his injuries on April 7 and 12, 2016.

30. The evidence and inferences inconsistent with these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Generally, Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Compensability

Claimant argued that the evidence proved he sustained an injury in April 2016, arguing that the combination of his testimony and the support from the medical records led to this conclusion. He also contended that the treatment he received was reasonable, necessary and related. With regard to treatment after May 20, 2016, Claimant asserted that the right of selection passed to him because treatment was denied.

Respondents averred the mere fact that Claimant experienced pain at work did not create a compensable injury. Relying on the testimony of Dr. Burris, Respondents asserted there was no evidence that the duties of Claimant's employment cause the symptoms or accelerated/aggravated a pre-existing condition.

Section 8-41-301(1)(c), C.R.S., provides as a condition for the recovery of workers' compensation benefits the injury must be "proximately caused by an injury or occupational disease arising out of and in the course of the employment". A pre-existing condition "does not disqualify a Claimant from receiving workers' compensation benefits". *Duncan v. ICAO*, 107 P.3d 999, 1001 (Colo. App. 2004). Further, if a pre-existing condition is stable but is aggravated by an occupational injury, the resulting occupational injury is still compensable because the incident caused the dormant condition to become disabling. *Siefried v. Industrial Commission*, 736 P.2d 1262, 1263 (Colo. App. 1986). Thus, if an industrial injury aggravates, accelerates, or combines with a pre-existing condition so as to produce disability and need for treatment, the claim is compensable. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

The question of whether the Claimant proved an injury or occupational disease proximately caused by the performance of service arising out of and in the course of employment is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000) (proof of causation is threshold requirement that must be established before any compensation is awarded). Claimant is not required to prove that his work-related injury was the sole cause of his wage loss in order to establish eligibility to TTD benefits. Rather, the benefits are precluded only when the work-related injury plays "no part in the subsequent wage loss". *Horton v. ICAO,* 942 P.2d 1209, 1210-1211 (Colo. App. 1996).

The ALJ concludes Claimant proved by a preponderance of the evidence he sustained a compensable industrial injury arising out of and in the course of his employment on April 7, 2016, as well as a further injury/aggravation on April 12, 2016. The ALJ concluded this was a compensable injury for two principal reasons. First, Claimant's testimony was credible in his description of the injury he sustained on both dates. (Findings of Fact 3 and 6.) No contrary evidence was presented to refute the fact he was performing the job duties as described on both April 7 and 12, 2016. In fact, Mr. Davis' testimony corroborated the fact that Claimant was injured while doing his job. (Finding of Fact 6.)

Second, there was objective medical evidence to support the conclusion Claimant was injured. As found, medical records from both University Hospital and Concentra documented Claimant's symptoms, as well as positive, objective physical findings. (Findings of Fact 4, 12 and 14.) This included decreased range of motion, as documented by the Concentra physicians who evaluated Claimant on multiple occasions. (Findings of Fact 4 and 12.) It is unlikely the doctors at Concentra would have continued to treat Claimant if they were not convinced he suffered an industrial injury. The ALJ credited these opinions over those proffered by Respondents' expert.

In short, the ALJ concluded Claimant satisfied his burden of proof that that suffered an injury arising out of his employment based upon the direct testimony and medical evidence introduced at hearing.

Medical Benefits

Having concluded Claimant suffered a compensable injury, Respondents are liable to provide reasonable and necessary medical benefits to Claimant. *Colorado Compensation Insurance Authority v. Nofio,* 886 P.2d 714 (Colo. 1994). As found, the medical treatment provided at Concentra was reasonable and necessary, as well as related to the injury. The ALJ also determined the treatment Claimant received at University Hospital on April 12, 2016 was reasonable and necessary, as well as being related to the injury. (Finding of Fact 11.) Mr. Davis did not specifically arrange to have Claimant evaluated at Concentra that day and given the degree of Claimant's symptoms, it was reasonable for him to seek immediate treatment. (Finding of Fact 8.) Respondents are liable for the payment of those benefits, pursuant to the fee schedule.

With regard to the issue of payment of the ambulance bill, Claimant has argued that because of his symptoms, he was required to be transported by ambulance to the hospital. Respondents have disputed whether this medical benefit was reasonable or necessary, relying on the expert testimony of Dr. Burris.

The ALJ notes that neither Claimant no Respondents cited any authority to assist in this determination. On the one hand, the record was not clear that Claimant needed to be transported by ambulance from Employer's premises. There was no indication in the record that Claimant's condition was not stable, or required the intervention of EMT personnel. On the other hand, Mr. Davis did not follow-up directly with Claimant, speaking only with his co-worker. (Finding of Fact 8.) Mr. Davis then cancelled the taxicab, acquiescing to Claimant taking the ambulance. Claimant credibly testified that his pain had significantly worsened. Claimant could reasonably believe he could not drive himself to the hospital and since Mr. Davis did not communicate that a cab would be (had been) called, it was reasonable for Claimant to call an ambulance. Therefore, transport by ambulance was a reasonable expense related to the treatment Claimant received for his injury. Accordingly, the ALJ has determined Respondents are liable for payment of this bill.

Claimant also argued that the right of selection of an ATP passed to him after the Notice of Contest was filed. However, there was no evidence in the record that Respondents failed to provide medical treatment to Claimant for the April 7 and 12, 2016 industrial injuries. Indeed, Respondents continued to provide medical benefits through Concentra to the Claimant through September 2016. (Finding of Fact 23.)

Indemnity

Claimant seeks TPD benefits from April 12 through June 2, 2016. As found, Claimant had restrictions as issued by the ATP during this period of time. The evidence reflected he worked modified duty for Employer during this time, but did not earn his full wages. Accordingly, Claimant is entitled to temporary partial disability benefits. The ALJ notes the record was somewhat unclear as to the dates Claimant actually worked or his earnings during that period.[4] Based upon the parties' stipulation, the ALJ finds Claimant is entitled to receive temporary partial disability benefits based upon his actual earnings during this period of time. Counsel for the parties will be ordered to confer and attempt to reach an agreement as to this amount.

Claimant requested TTD benefits from June 2 through July 30, 2016 at a rate of $352.00 per week. The temporary total disability rate is increased to $431.69 per week as of August 1, 2016. The evidence established Claimant is entitled to receive these benefits, as none of the conditions set forth in 8-42-105, C.R.S. have occurred. Claimant is entitled to receive those benefits until terminated pursuant to statute.

ORDER

IT IS HEREBY ORDERED:

1. Claimant has established by a preponderance of the evidence that he suffered an injury to his lower extremities, bilateral shoulders, cervical spine and lumbar spine in the course and scope of his employment on April 7, 2016 and April 12, 2016.

2. Respondents shall provide medical benefits to cure and relieve the effects of Claimant’s April 7 and 12, 2016 injuries.

3. Claimant’s trip to the emergency room on April 12, 2016 was reasonable, necessary, and related to Claimant’s compensable injury and it shall be the responsibility of the Respondents to pay the cost of transport to University Hospital and the University Hospital bill, pursuant to the Workers’ Compensation Fee Schedule.

[4] Although Claimant’s 2015 W-2 forms were admitted as Exhibit 3, the record was unclear regarding how much time he missed after the April 12, 2016 injury.

4. Claimant is entitled to TPD benefits to the extent he did not earn $528.00 per week for the time period between April 12, 2016 and June 2, 2016.

5. Counsel for the parties are order to meet and confer regarding the amount of temporary partial disability benefits Claimant is owed based upon the stipulated AWW of $528.00 per week. To the extent an agreement cannot be reached, Claimant may file an Application for Hearing on this issue.

6. Claimant shall be paid TTD benefits payable at the rate $352.00 per week from June 2, 2016 through July 30, 2016. Beginning on August 1, 2016, Claimant shall be paid TTD at the rate of $431.69 per week until terminated pursuant to statute, subject to applicable offsets.

7. Respondents shall pay to Claimant interest at the rate of 8% per annum on all amounts of compensation not paid when due.

8. Any issues not determined in this decision are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-954-493-02

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on October 12, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 10/12/16, Courtroom1, beginning at 1:30 PM, and ending at 5:15 PM). The hearing was not completed and the matter was continued until January 9, 2017 for completion.

The Claimant was present in person and represented by Ethan McQuinn, Esq. Respondents were represented by Jeff C. Staudenmayer, Esq.

Hereinafter Bruce Mann shall be referred to as the “Claimant." South Y-W Ambulance shall be referred to as the “Employer.” All other parties shall be referred to by name.

Claimant’s Exhibits 6 through 14 and 20-23 were admitted into evidence, without objection, Claimant’s Exhibits 1 through 5 were withdrawn. The ALJ sustained Respondents’ objections to Claimant’s Exhibits 15 through 19, which were affidavits of Claimant’s witnesses, offered in lieu of their testimony. Respondents’ Exhibits A through N were admitted into evidence, without objection.

At the conclusion of the October 12, 2016 session of the hearing, the matter was continued until January 9, 2017 for completion of the hearing on the issue of average weekly wage (AWW) issue. The ALJ ordered interim briefs which were filed. On or about December 8, 2016, without securing the approval of the ALJ, the parties cancelled the January 9, 2017 session of the hearing on the ground that the AWW issue had been resolved by the parties, and the parties announced readiness for a decision. On December 12, 2016, the ALJ issued a procedural order requiring supplemental or updated briefs, including a reply brief due within 5 working days of the Respondents' answer brief. On December 22, 2016, the Claimant filed his opening brief. On December 27, 2016, the Respondents filed their answer brief. The Claimant filed a reply brief on (January 4, 2017], at which time the matter was deemed submitted for decision.

ISSUES

The sole issue to be determined by this decision is whether a reverse left shoulder arthroplasty is reasonably necessary and causally related to the admitted injury of April 2, 2014. The parties resolved the issue of AWW, the amount of which was not disclosed. Consequently, AWW is not an issue for determination.

The Claimant bears the burden of proof, by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant was born on October 10, 1962, and he was 54 years old on the date of the October 12, 2016 hearing.

2. The Claimant worked as an EMT (emergency medical technician) for the Employer on the date of the admitted injury.

3. The Claimant was involved in a work-related motor vehicle accident on April 2, 2014, when his vehicle was struck from the side by another vehicle, causing the Claimant's airbag to deploy. The Claimant was seated in the passenger seat with his seatbelt across his right shoulder.

4. At the time of impact, the Claimant guarded himself by turning downwards and with the right side of his body turned to the dashboard/airbags. He did not remember an impact to his left shoulder, however, he sustained an admitted injury to his left shoulder. The extent of the consequences thereof are in dispute.

5. The Respondents filed a General Admission of Liability (GAL), dated May 10, 2016, admitting for authorized, causally-related and reasonably necessary medical benefits, an AWW of $25.99, and temporary total disability benefits of $17.53 per week from February 9, 2016 through February 18, 2016. Among other things, the Claimant disputed the admitted AWW, and the hearing was continued until January 9, 2017 for evidence on AWW to complete the hearing. On December 8, 2016, the parties announced that the AWW issue had been resolved for an undisclosed sum.

Medical Treatment

6. Immediately after the MV accident, the Claimant was transported to Yuma District Hospital. He complained of pain in his right thigh but he denied other pain (Respondents' Exhibit J, p. 206). The Claimant's medical history is positive for rheumatoid arthritis, diabetes, and cardiac surgery. *See Id.* No swelling was noted in his extremities, and Daniel LePerriere, M.D., noted the Claimant's "Physical exam normal aside from right thigh." *Id.*

7. The Claimant returned to Dr. LaPerriere on April 9, 2014, with additional soreness, primarily in his right leg and knee, but he also had pain in his left shoulder. *Id.* at p. 211. Claimant had normal left shoulder strength. *Id.*

8. As of April 23, 2014, the Claimant noted his left shoulder was improved with "no severe pain." *Id.* at p. 216. Dr. LaPerriere stated that the Claimant had full range of motion "so doubt any major rotator cuff issue." *Id.* The Claimant continued to complain of pain and was referred for an MRI (magnetic resonance imaging) [Respondents' Exhibit M]. The MRI showed severe tendinopathy of the supraspinatus and infraspinatus with mild undersurface tearing of the supraspinatus, partial tearing and tendinopathy of the subscapularis with moderate fatty atrophy, and findings concerning for a complete tear of the biceps tendon. *Id.*

9. The Claimant was referred to Michael Rusnak, M.D. for his knee and shoulder issues (Respondents' Exhibit L, p. 304). On May 22, 2014, Dr. Rusnak noted the Claimant had "full active and passive motion . . . good strength of his rotator cuff including the subspacularis." *Id.* He also had "a little bit" of pain with testing, but there was no swelling, bruising, or instability. *Id.*

10. Sean Grey, M.D., evaluated the Claimant on August 28, 2014. *Id.* at p. 307. He noted the Claimant provided a history that, "When the airbag deployed, he ended up with pain in his left shoulder." *Id.* The Claimant complained of ongoing [left] shoulder pain and a feeling of loss of strength, especially with overhead activity. *Id.* The Claimant had full range of motion (ROM) on exam. *Id.* at p. 308. Dr. Grey noted the Claimant's condition was difficult to treat due to the thinning of his supraspinatus tendon and history of multiple co-morbid conditions, including diabetes and arthritis. *Id.* Dr.

Grey, however, felt that the Claimant's condition could be repaired via an arthroscopy, which would at least provide pain relief. *Id.*

11. The Claimant did not proceed with the surgery at that time, and he did not return to Dr. Grey for nearly two years while treating other injuries. On August 11, 2015, the Claimant was treated at Yuma District Hospital for an incident whereby he was "thrown across the corral by a cow" *(*Respondents' Exhibit J, p. 247). John D. Glick, M.D., noted at that time that the Claimant had a "lot of arthritis" in his neck. *Id.*

12. Dr. Grey finally re-evaluated the Claimant on May 17, 2016, nearly a year after his last evaluation. The Claimant complained of worsening pain, and was continuing to farm and ranch with more difficulties performing those activities (Respondents' Exhibit L, p. 310). Dr. Grey noted that the Claimant had "significant weakness," and he still had full, albeit painful, ROM (*Id.* at p. 311). The Claimant also had an MRI that day (Respondents' Exhibit M, p. 320). The MRI showed "severe fatty atrophy," a torn superior labrum, a full thickness tear of the supraspinatus tendon, and a chondral erosion of the superior humeral head. *Id.*

13. The 2016 MRI shows additional damage as compared to the 2014 MRI, including an increase in atrophy from moderate to severe, a torn labrum not previously noted, and development in the supraspinatus tendon from mild undersurface tearing to a full thickness tear. As the pathology changed, so did Dr. Grey's recommendations. He recommended a reverse arthroplasty instead of an arthroscopy, in light of the Claimant's "supraspinatus insufficiency" and underlying co-morbid conditions (Respondents' Exhibit L, p. 312).

14. The Claimant's request for surgery was reviewed by Peter Weingarten, M.D. (Respondents' Exhibit K), a staff reviewer for the insurance carrier. In a brief three-paragraph report, Dr. Weingarten expressed the opinion that the need for surgery was related to chronic degenerative changes. *Id.* He felt the procedure was questionable due to the Claimant's co-morbid conditions. *Id.*

Respondents' Independent Medical Examination (IME) by James Lindberg, M.D.

15. James Lindberg, M.D., performed an IME on August 23, 2016 (Respondents' Exhibit I) at the behest of the Respondents. Dr. Lindberg could not explain how the mechanism of injury could have caused the alleged injuries, given that the Claimant suffered no impact to his left shoulder. *Id.* at p. 196. Dr. Lindberg noted the biceps tendon rupture would have resulted in immediate pain. *Id.* He noted the Claimant did not complain of shoulder pain until one week later. *Id.* Regarding whether the arthroplasty was reasonably necessary, Dr. Lindberg wrote that such a surgery "is virtually a death sentence" for the Claimant due to his age, co-morbidities, and work as a farmer rancher which would destroy his arthroplasty "in short order." *Id.* He noted the Division of Workers' Compensation (DOWC) Medical Treatment Guidelines, Workers

Compensation Rules of Procedure (WCRP), Rule 17, 7 CCR 1101-3, do not recommend the reverse arthroplasty surgery for anyone younger than 65, and the Claimant was 53 at the time of Dr. Lindberg's evaluation. *Id.*

The Claimant's Testimony at Hearing

16. The Claimant testified he had no pre-accident pain in his left shoulder. He specifically stated that, although he has rheumatoid arthritis, "My shoulder has been a joint that has never bothered me." The Claimant testified he had right shoulder surgery in 2005, and he had remaining functional limitations in that shoulder, but he denied any ongoing pain in the right shoulder after his surgery. The Claimant stated that his left arm was his dominant arm after his right shoulder surgery until the present accident.

17. According to the Claimant, after the work accident at issue herein, he did not feel any pain in his left shoulder. His pain was in his right thigh. He stated that he felt functionally limited and had pain in his left shoulder during the week after the accident. The Claimant stated, however, that he has been limited in the types of work activities he can perform in his farming/ranching business due to his left shoulder issues.

18. The Claimant stated that he wanted to proceed with the reverse shoulder arthroplasty which had been recommended, because Dr. Grey advised him that the surgery would provide him the best chance to return to his regular farming/ranching duties. The Claimant further testified that he trusted Dr. Grey to perform the surgery based on his experience with Dr. Grey's resolution of his right shoulder issues. The Claimant stated that Dr. Grey did not tell him what was the chance of success.

Dr. Lindberg's Testimony at Hearing

19. Dr. Lindberg testified that the MRIs showed chronic changes in the left shoulder without any sign of acute changes or pathology. He was of the opinion that, if the Claimant suffered an injury to his left shoulder during the accident given the conditions shown, it would have been more painful than the hematoma in his right thigh, which was his primary complaint on the day of the accident. Dr. Lindberg also was of the opinion that if the degenerative conditions were aggravated during the accident, it would be expected within a reasonable degree of medical probability that he [Claimant] would have had immediate symptoms. Dr. Lindberg specifically refuted the possibility of a delayed onset of pain of a day or two, stating that an acute aggravation, acceleration, or exacerbation would have been evident during his post-accident evaluation at the hospital. Dr. Lindberg further testified it was unlikely that the Claimant would have been asymptomatic prior to the accident with the presence of the multiple degenerative conditions in his shoulder and the type of work he performed.

20. Dr. Lindberg is of the opinion that a reverse shoulder arthroplasty is more likely to fail than a regular shoulder arthroplasty and to fail "permanently." Dr. Lindberg stated that the high risk of failure is the reason why it is only recommended for older individuals with limited physical demands*; i.e*. those likely to lead sedentary lifestyles. Dr. Lindberg stated that the Claimant's expectation that he could return to his physical work as a farmer/rancher is not a realistic expectation and would result in the Claimant destroying his shoulder. Dr. Lindbeerg stated that the Claimant is one wrong movement away from a "disaster," and this procedure (reverse shoulder arthroplasty) is not meant to allow people to go back to physical work as the Claimant contemplates. He noted that any subsequent revision surgery would have reduced chances of success. Dr. Lindberg expressed the opinion that if the surgery did fail, the Claimant's options may only consist of having a flailed shoulder, or the arm could be fused to the shoulder to make it more stiff, and again, unusable.

General Findings

21. The mechanism of injury is not consistent with the injuries which form the basis of the surgical request. The Claimant suffered no impact to his left shoulder, and in fact, he testified that he guarded the left side of his body upon impact and did not even remember the left side of his body striking the air bag or otherwise being directly impacted. Dr. Lindberg is of the opinion that the mechanism of injury in that respect was not likely to cause a shoulder injury or acutely aggravate the conditions present in his shoulder, nor were there any signs of acute aggravation on MRI.

22. The Claimant affirmatively denied any prior left shoulder issues at hearing. A treatment note from Yuma District Hospital of March 9, 2010, however, clearly states that the Claimant had "longstanding" mid back and shoulder pain due to his rheumatoid arthritis (Respondents' Exhibit J, p. 199). This contradicts the Claimant's assertion that his shoulder was a joint which was never affected by his arthritis. Later treatment notes confirmed that this was a reference to left-sided pain (*Id.* at p. 202). Moreover, the reference is also not likely in reference to his right shoulder where the Claimant denied any remaining pain in the right upper extremity at hearing--from his 2005 right shoulder injury. When confronted with this March 9, 2010 note at hearing, the Claimant stated that he did not recall the complaint. Claimant is also documented to have a "lot of" arthritis in his neck, which is proximal to the shoulder. At hearing, the Claimant testified his arthritis affected his wrists, knees, and feet, and omitted any discussion of the effects of arthritis in the upper part of his body which is clearly documented in the medical records. Dr. Lindberg also is of the opinion that it is unlikely that the Claimant was asymptomatic from a medical perspective, given the amount of degenerative pathology in his shoulder and presence of rheumatoid arthritis. The Claimant's denial of pre-existing left shoulder pain is not likely in light of the totality of the evidence and is, therefore, not credible.

23. According to Dr. Lindberg, the Claimant would have likely suffered from immediate and severe pain if any of his left shoulder conditions were caused or aggravated by the motor vehicle accident. The Claimant's 2014 MRI documents conditions which Dr. Lindberg noted were entirely degenerative, and even if acutely caused or aggravated, would have been accompanied by immediate pain. For example, Dr. Lindberg stated that the Claimant's biceps tendon, if torn during the accident, would have resulted in immediate severe pain, swelling, and bruising. The clinical exams specifically document no swelling or bruising, and the Claimant also denied any pain in body parts other than his right thigh following the accident. There is no persuasive contrary medical evidence in the record disputing that the Claimant should have felt immediate pain to his left shoulder if the conditions present therein were caused or aggravated by the motor vehicle accident. Therefore, it is medically likely that the Claimant had a pre-existing complete biceps tear, atrophy, and other degenerative conditions prior to the time of the accident which were likely symptomatic.

24. Dr. Grey noted that the Claimant advised that, "When the airbag deployed, he ended up with pain in his left shoulder." Dr. Grey rendered an opinion that the accident was the causal impetus for the need for surgery, and it appears his understanding regarding the onset of pain in doing so is fundamentally flawed. The Claimant has presented no persuasive evidence that Dr. Grey reviewed the initial emergency room notes or that his opinion is ultimately formed by the correct set of facts*, i.e.*, that the Claimant did not suffer an immediate onset of pain in his left shoulder when the accident occurred. Consequently, the ALJ infers and finds that Dr. Grey's opinion on the causal relatedness of the need for reverse arthroplasty is only as good as the history he received from the Claimant. In light of the flawed assumption specified herein above, the ALJ does **not** find Dr. Grey's opinion on the causal relatedness of the need for left reverse arthroplasty credible.

25. The initial increase in pain does not explain the worsening pathology and clinical examinations in the subsequent two years which corresponds to Dr. Grey's changing treatment recommendations. In 2014, Dr. Grey recommended an arthroscopy. In 2016, he recommended a reverse total shoulder replacement. In the intervening time period, the MRIs show a progressive worsening, including that the Claimant apparently suffered a torn labrum, and his supraspinatus tendon went from having mild undersurface tearing to a full thickness tear. An aggravation of pain to a pre-existing condition does not lead to delayed tearing of tendons months (and even years) after the accident, and at the least, the Claimant has provided no persuasive proof of the same.

26. When recommending the arthroplasty in 2016, Dr. Grey specifically stated that the Claimant's "supraspinatus insufficiency" was a factor in recommending the arthroplasty over the arthroscopy. Dr. Grey recommended an arthroscopy, a less involved surgery, when the Claimant only had minor tearing of the supraspinatus tendon. Dr. Grey's surgery recommendation changed after the Claimant's supraspinatus completely tore for reasons unknown.

27. In addition to the pathology shown on MRIs, the Claimant's clinical picture has changed. In the months following the accident, including at the time the arthroscopy was recommended, the Claimant had complaints of pain with good to full strength and full range of motion in his left shoulder. In 2016, Dr. Grey noted the Claimant had continued to work as a farmer/rancher, a profession which the Claimant and Dr. Lindberg agreed at hearing is physically arduous. The Claimant presented with increased pain complaints and a significant reduction in strength in 2016. When examining the recommendations in detail, Dr. Grey noted, in 2014, that the surgery would provide the Claimant pain relief, while not focusing on functional limitations. Then when the Claimant's complaints became more inclusive of functional limitations, the treatment recommendation changed for the specific purpose of providing both functional and pain relief. The conditions which form the basis of Dr. Grey's reverse shoulder arthroplasty opinion were not those which were present after the accident.

28. The Claimant had pre-existing arthritis in his left shoulder, and by logical extension as shown in the records, pre-existing pain. There was no impact or otherwise a mechanism of injury involving his left shoulder. He had no immediate complaints of symptoms after the accident. He later developed symptoms of pain (consistent with his pre-existing rheumatoid arthritis) while presenting with a fairly normal clinical exam. Dr. Grey at that time recommended a less involved surgery. Two years later, the Claimant's pathology on MRI and his clinical exam had worsened substantially after the Claimant had put his shoulder through two more years of work as a farmer/rancher. This worsening condition is clearly the basis for Dr. Grey's recommendation for a reverse shoulder arthroplasty. The Claimant presented no persuasive evidence supporting that this worsening which led to the reverse shoulder arthroplasty recommendation was causally related to the accident, as opposed to continued degeneration, work as a farmer/rancher, or other unknown cause. Dr. Grey's brief written opinion is the sole medical evidence that the Claimant relies upon in this respect, but such opinion relies upon incorrect information regarding the onset of the Claimant's pain. Moreover, Dr. Grey's opinion does not address the causation of the Claimant's worsening exam and pathology.

The Reverse Shoulder Arthroplasty is not Reasonable and Necessary Treatment

29. The surgery recommended by Dr. Grey is a "salvage" procedure of last resort, which is not recommended for individuals under the age of 65-70, and as noted by Dr. Lindberg, it is certainly not recommended for individuals as active as the Claimant.

30. Dr. Grey stated that he feels that the reverse shoulder arthroplasty is the only procedure which will provide the Claimant with improvement in his pain and function (Respondents' Exhibit L, p. 317). At the time Dr. Grey recommended the procedure, he merely stated that he felt "it is more reproducible outcome in proceeding

with reverse arthroplasty that [sic] attempted rotator cuff repair" (*Id.* at p. 312). There is no persuasive evidence that Dr. Grey either considered, or discussed with the Claimant, the risks that the Claimant's work as a farmer/rancher, if continued after the surgery, would have on the viability of such a surgery, as well as the Claimant's options if the replacement surgery were to fail. To the contrary, the Claimant testified that Dr. Grey told him the shoulder replacement surgery was his best option to return to his level of functionality as a farmer/rancher. Dr. Grey's mere recommendation that he feels there is a higher chance of success in providing immediate pain relief and functionality to the Claimant does not address the larger long term dangers of the procedure for the Claimant. The ALJ finds that Dr. Grey's statements in this regard significantly undermine the credibility of his recommendation for reverse left shoulder arthroplasty.

31. According to Dr. Lindberg, neither a rotator cuff repair, nor a reverse shoulder arthroplasty had a high chance of success. Dr. Lindberg is of the opinion that the Claimant's work as a farmer rancher, his diabetes, and his rheumatoid arthritis are all complicating factors in the success of any surgery. Dr. Lindberg stated that he would first recommend a rotator cuff repair, because if that procedure failed down the line, the Claimant could then be considered for a shoulder arthroscopy. The reverse shoulder arthroscopy is a surgery of last resort.

32. Dr. Lindberg is of the opinion that the Claimant's left shoulder replacement surgery would most certainly fail if he continued his work as a farmer/rancher. The Claimant testified he intended to return to perform his work as a farmer/rancher after the surgery to the extent he was physically able to do so. Dr. Lindberg further stated the opinion that any subsequent shoulder arthroplasty after a failed surgery would have an even smaller chance of success. When the replacement shoulder would fail, Dr. Lindberg stated that the Claimant could find himself in a position of having a flailed arm or requiring a fusion of his arm to the shoulder socket, both resulting in a "dead arm" that would not be functional at all. Dr. Grey's records fail to address any of these risks. There is no persuasive evidence that Dr. Grey discussed these concerns or contingencies with the Claimant.

33. The DOWC Medical Treatment Guidelines ("Guidelines") similarly do not support performing a reverse shoulder arthroplasty in this instance. The Guidelines, the Guidelines have been accepted professional standards for care under the Workers' Compensation Act. *Rook v. Indus. Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). It is appropriate for an ALJ to consider the Guidelines in deciding whether a certain medical treatment is reasonably necessary for the Claimant's condition. *Deets v. Multimedia Audio Visual*, W. C. No. 4-327-591 [Indus. Claim Appeals Office ((ICAO), March 18, 2005). Dr. Grey's recommendation is contrary to the Guidelines in a couple respects. First, the Guidelines make clear that a reverse arthroplasty "is generally considered a salvage procedure for patients over 70. . ." (Respondents' Exhibit N, p. 323. They also note the procedure "is generally limited to patients older than 65 with low physical demands." *Id*. The Claimant is 54 years old, well below the recommended

age for the procedure. Moreover, by the Claimant's own admission, he has high physical demands as a farmer/rancher, which he intends to continue. The Claimant stated he would abide by any post-surgical restrictions. Dr. Lindberg's testimony, however, is that this procedure is limited to individuals who lead to sedentary lifestyles. The Claimant's contention of abiding by6 any post-surgical restrictions is at odds with his intention to continue physical labor in his farming/ranching business.

34. Aside from the age and physical demands considerations, the Guidelines note that if the patient "can nevertheless elevate the shoulder, non-operative treatment such as NSAIDs and steroid injections are preferable to surger." (*Id.* at p. 324). The evidence and testimony at hearing show that the Claimant has consistently shown the ability to elevate his shoulder at hearing and in clinical exams. While the Claimant is limited from the injury, the Claimant has some use of his arm, which as was noted by Dr. Lindberg, is preferable to eventually losing use of his arm completely from returning to his physically laborious work after undergoing a complete shoulder replacement.

35. The totality of the documentary and testimonial evidence demonstrates that the risks of proceeding with the recommended surgery far outweigh any short-term benefits, which in and of themselves, are questionable to be realized by the Claimant anyway. At the very least, if the ALJ finds that the Claimant requires some form of surgical intervention is necessary and related to the work-accident, then the current request should be denied and the Claimant should return to Dr. Grey for further discussion of the long term risks associated with either surgery, as well as re-consideration of a less invasive arthroscopy which does not place the Claimant's use of his arm for the rest of his life in immediate danger.

Ultimate Findings

36. The ALJ finds the opinions of Respondents' IME physician, James Lindberg, M.D., for persuasive and credible than the opinions of Sean Grey, M.D., and based on Dr. Lindberg's opinions, the ALJ finds that Dr. Grey's recommended reverse left shoulder arthroplasty is neither causally related to the admitted accident of April 2, 2014, nor is it reasonably necessary, under the Claimant's unique circumstances, to cure and relieve the effects of that injury. Dr. Lindberg's opinions are more thoroughly grounded in an understanding of reverse shoulder arthroplasty than are the opinions of Dr. Grey.

37. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of IME Dr. Lindberg and to reject the opinions of Dr. Grey relative to the need for reverse left arthroplasty.

38. The parties resolved the issue of AWW for an undisclosed sum. Therefore, AWW is not an issue for decision herein.

39. Based on the totality of the evidence, the Claimant has failed to demonstrate that it is more likely than not that the need for reverse left shoulder arthroplasty is causally related to an aggravation and acceleration of the Claimant's underlying left shoulder condition. Also, the Claimant has failed to demonstrate that the need for the recommended reverse left shoulder arthroplasy is reasonably necessary to cure and relieve the effects of the Claimant's admitted injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Respondents' IME physician, James Lindberg, M.D., were more persuasive and credible than the opinions of Sean Grey, M.D., and based on Dr. Lindberg's opinions, the ALJ found that Dr. Grey's recommended reverse left shoulder arthroplasty was neither causally related to the admitted accident of April 2, 2014, nor was it reasonably necessary, under the Claimant's unique circumstances, to cure and relieve the effects of that injury. Dr. Lindberg's opinions were more thoroughly grounded in an understanding of reverse shoulder arthroplasty than were the opinions of Dr. Grey.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of IME Dr. Lindberg and to reject the opinions of Dr. Grey relative to the need for reverse left arthroplasty.

Recommended Reverse Left Shoulder Arthroplasty

c. The employee must prove a causal relationship between the injury and the medical treatment for which the worker is seeking benefits. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App.1997). Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1189 (Colo. App. 2002). An industrial accident is the proximate cause of a claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority,* 768 P.2d 751 (Colo. App. 1988). In order to prove that an industrial injury was the proximate cause of the need for medical treatment, an injured worker must prove a causal nexus between the need for treatment and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). It is for the ALJ, as the fact-finder, to determine whether a need for medical treatment is caused by the industrial injury, or some other intervening injury. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). Respondents are liable for the "direct and natural consequences" of a work-related injury, including consequential injuries caused by the original compensable injury. *See Travelers Ins. Co. v. Savio*, 806 P.2d 1258 (Colo. 1985). As found, the need for the reverse left shoulder arthroplasty was not caused by an aggravation or acceleration of the Claimant's underlying left shoulder condition.

Reasonable Necessity of Reverse Left Shoulder Arthroplasty

d. Medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the need for the reverse left shoulder arthroplasty is not reasonably necessary to cure and relieve the effects of the admitted injury.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). Also, the Respondents may challenge the causal relatedness and reasonable necessity of medical care and treatment, at any time, and when this is done, the Claimant continues to have the burden of proof, by preponderant evidence. As found, based on the totality of the evidence, the Claimant failed to demonstrate that it was more likely than not that the need for reverse left shoulder arthroplasty was causally related to an aggravation and acceleration of the Claimant's underlying left shoulder condition. Also, the Claimant failed to demonstrate that the need for the recommended reverse left shoulder arthroplasy was reasonably necessary to cure and relieve the effects of the Claimant's admitted injury.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Any and all claims to make the Respondents liable for the reverse left shoulder arthroplasty, recommended by Sean Grey, M.D., are hereby denied and dismissed.

B. The parties having resolved the issue of average weekly wage for an undisclosed sum, the issue is moot.

C. The General Admission of Liability, dated May 10, 2016, remains in full force and effect, subject to settlement of the average weekly wage issue.

D. Any and all matters not determined herein are reserved for future decision.

DATED this______day of December 2016.

Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

I. Whether Respondent established by a preponderance of the evidence that they are entitled to withdraw either their September 18, 2013 final admission of liability which admitted for maintenance medical treatment;

II. Whether Claimant established by a preponderance of the evidence that she is entitled to a L3-L4, L4-L5 decompression with a L4-L5 fusion as maintenance care, and if not,

III. Whether Claimant established by a preponderance of the evidence that she suffered a worsening of a work related medical condition entitling her to reopen her workers' compensation claim to obtain the aforementioned L3-L4, L4-L5 decompression and fusion procedure recommended by Dr. David Wong.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. On September 7, 2010, Claimant, who was working as a desk side computer support technician injured her low back while setting up a computer. Claimant testified that she was moving a full file cabinet weighing hundreds of pounds when she felt a sudden twinge on the right side of her lower back. Claimant reported her injury and her supervisor insisted that she go in for medical evaluation. The claim was admitted and Claimant would thereafter undertake a lengthy and complex course of conservative care directed primarily by physicians at Centura Centers for Occupational Medicine (CCOM).

2. Claimant initially presented to and was treated by Dr. Richard Nanes who noted full range of motion in both legs, but mild right-sided lumbar pain during straight leg testing. Claimant was assessed as having a lumbar strain.

3. Claimant's pain worsened over the ensuing week extending into and down the right leg down to the ankle. Dr. Nanes suspected disc herniation and referred Claimant for an MRI of the lumbar spine.

4. Claimant underwent the first of many MRI's of the lumbar spine on September 15, 2010. This study revealed "multilevel, advanced degenerative changes of the lumbrosacral spine" which resulted in "neural foraminal and spinal canal narrowing." In addition, there were specific findings consistent with disc herniation and bulging at multiple segments, including a "very large disk extrusion versus potential free fragment" at L1-2, a "large posterior disk protrusion/extrusion" at L3-4, and a "large circumferential

disk bulge" and posterior "disk protrusion" at the L5-S1 level. Regarding the L4-5 level, the MRI specifically revealed, contrary to Respondents suggestion otherwise,[1] a "moderate sized central disk protrusion" and "thickening of the ligamentum flavum and degenerate facet hypertrophy." Because it was impossible to rule out that the large mass visualized posterior to the L1 vertebral body was extradural in nature, it was recommended that Claimant proceed with a repeat contrast enhanced MRI of the lumbar spine.

5. While waiting to proceed with the second MRI, Claimant was referred to and undertook treatment with Dr. Douglas Hess who administered an epidural steroid injection (ESI) into the L4-5 interspace. Dr. Hess would go on to administer two additional injections initially and multiple maintenance injections into this spinal segment over the ensuing years.

6. On October 4, 2010, Claimant underwent the recommended contrast enhanced MRI during which the large mass located at L1 was evaluated further. According to the October 4, 2010 MRI, it was unlikely that the mass was either a metastatic or neoplastic process. Based upon the sequential MRI results and the reports of Dr. Jennifer Kang, the ALJ finds that the mass located at L1-2, more probably than not, represented a large disc extrusion.

7. Claimant continued to treat with Dr. Nanes and Dr. Hess. While the ESI's provided a measure of pain relief, the records indicate that Claimant's back and leg pain waxed and waned over the ensuing months and years requiring additional injections, acupuncture and chiropractic treatment.

8. Claimant was referred for and completed an EMG on or about March 7, 2011. The EMG was apparently negative for radiculopathy.[2]

9. On March 8, 2011, Dr. Nanes released Claimant to full unrestricted work, noting that she had good lumbar flexion and a negative straight leg raise test bilaterally. Nonetheless, Dr. Nanes noted that Claimant continued to experience 3/10 pain, 30% of the time.

10. Claimant was evaluated by Dr. Jennifer Kang on April 19, 2011. During this evaluation Claimant reported continued low back and right leg pain. According to Dr. Kang's report, Claimant complained of numbness into the sole of the right foot; however, she denied focal weakness or bowel/bladder dysfunction. Claimant's diagnostic studies were reviewed after which Dr. Kang documented: "Large disc fragment located on the right side behind the body of L1 which looks like it arose from the L1-2 disc space. Multilevel DDD (degenerative disc disease) with disc protrusion at

[1] See Respondent's position statement asserting that the September 15, 2010 MRI impression focused on multilevel degenerative changes, the L1 impression focused on multilevel degenerative changes, the L1 vertebral body, and a potential large disc extrusion without "specific discussion of any other level."
[2] According to a March 8, 2011, report authored by Dr. Nanes.

the right L3-4, central bulge L4-5 and a bulge with left sided disc fragment L5-1 with lateral narrowing. All superimposed on congenital stenosis."

11. Dr. Kang's April 19, 2011 treatment note reflects that the results of Claimant's imaging and her treatment options, including continued "conservative care versus surgery" were discussed. This note reflects further that if Claimant wanted to pursue surgical options, updated imaging including a "new MRI [scan] and lumbar flexion and extension x rays to rule out instability" would be necessary. The note reflects that Claimant elected to proceed with new imaging and follow-up with Dr. Kang once completed. Based upon the content of Dr. Kang's report, the ALJ finds that surgical options were likely discussed. The ALJ also finds that as part of that discussion Claimant elected to pursue up-dated imaging in anticipation of moving forward with surgery once her low back pathology, particularly the situation concerning potential instability at L4-5 was more clearly defined.

12. On April 26, 2011, Claimant underwent x-rays of the lumbar spine as recommended by Dr. Kang. The April 26, 2011 imaging revealed a "mild grade I, 4-5 mm anterior subluxation L4 on L5", in addition to disk space loss and anterior endplate osteophytes at all lumbar levels.

13. Additional MRI imaging, as recommended by Dr. Kang, was completed on May 3, 2011. The images from this study were compared to those obtained on October 4, 2010. The May 3, 2011 MRI report documents that the "extra thecal lesion at L1 is no longer present" and the findings at L5-S1 and L3-4 appeared essentially "stable". Findings at L4-5 included: ". . . moderate central hard discs/osteophyte complex which moderately encroaches upon the thecal sac as well as both neural foramina." According to the MRI report, these changes "may have progressed slightly since the prior study." Similar progression of the changes documented at the L2-3 level was noted by the radiologist interpreting the May 3, 2011 MRI. Based upon the content of the April 26, x-rays and the May 3, 2011 MRI, the ALJ finds that the primary pain generators likely to cause Claimant symptoms were, more probably than not, were the L2-3 and L4-5 spinal levels.

14. Claimant returned to Dr. Nanes on June 28, 2011. She reported that "after considerable thought" she had elected not to proceed with surgery as recommended by Dr. Kang. Consequently, Claimant was placed at maximum medical improvement (MMI). Dr. Nanes issued an impairment rating of 24% of the whole person. He also opined that Claimant would require maintence care in the form of medications and repeat ESI's (every six months) for the next two (2) years. He also specifically noted that there was a "chance that [Claimant] will need to see the neurosurgeon if her pain should become really serve again."

15. Respondent filed a final admission of liability (FAL) accepting the opinions of Dr. Nanes regarding permanent impairment and maintenance treatment on December 2, 2011. Regarding maintenance medical benefits the FAL indicates in part: "Repeat

epidural steroid injection apprx every 6 months for 2 yrs. Chance she may need to see a neurosurgeon."

16. Claimant continued to treat with Dr. Nanes post MMI. She also participated in chiropractic treatment and acupuncture. On October 10, 2011, she returned to Dr. Nanes for a maintenance visit. During this appointment, Claimant reported increased low back pain. She requested an ESI with Dr. Hess. Dr. Hess injected the L4-5 interspace approximately three weeks later which helped reduce her symptoms.

17. Over the next several months Claimant's back pain worsened again to a 7/10 intensity level at times. Consequently, a second ESI into the L4-5 interspace was administered by Dr. Hess on May 25, 2012. This second maintenance injection was of little benefit, prompting Claimant to return to Dr. Nanes on June 13, 2012. During her June 13, 2012 appointment, Claimant raised the option of seeing Dr. Kang again.

18. Claimant returned to see Dr. Nanes for a maintenance visit on August 29, 2012. During this visit, Claimant completed a pain diagram denoting 8/10 pain in the lumbar spine and down the right leg 100% of the time. According to the report generated from this visit, Claimant requested a referral to a neurosurgeon that preformed "minimally invasive laser-type surgery." Dr. Nanes noted that Claimant was to call him with the surgeon's name and phone number and he would make the referral. He also noted that she was to return in 8 weeks for a follow-up visit at which time she would be seen by a different provider.[3] Dr. Nanes assessed Claimant as having "herniated lumbar disc at 3 levels", although he did not specify which levels.

19. Claimant returned to CCOM on October 18, 2012. She was evaluated by Dr. Daniel Olson. Dr. Olson noted that Claimant was "trying to avoid surgery but continues to have right leg pain." Although Dr. Olson noted that Claimant's multilevel involvement did not make her an "ideal" candidate for back surgery, her continued right leg pain made it "something that has to be considered." Dr. Olson prescribed neuropathic pain medication (Lyrica) and recommended yet another MRI should she fail to improve with Lyrica.[4]

20. On January 14, 2013, Claimant presented to Dr. Olson in follow-up. She complained of an increase in her back and leg pain which she attributed to cleaning her house. Dr. Olson prescribed a Medrol Dosepak in an effort to gain control of her pain. He also recommended a repeat MRI and another ESI with Dr. Hess.

21. Repeat MRI was performed January 23, 2013. The images from this study were compared to Claimant's September 2010 MRI and demonstrated a posterior L4-5 disc bulge/protrusion with indention of the thecal sac but without nerve compression. Also present at this level was minimal spondylolisthesis. Both findings were without significant change. At the L3-4 level there was interval retraction of the disc herniation

[3] Although not noted in the report from this appointment, Claimant's need to see a "different" provider was prompted by Dr. Nanes' semi-retirement.
[4] Claimant would later change from Lyrica to Cymbalta to assist with ongoing pain and depression.

previously demonstrated on the September 2010 study; however, there was “subcortical bone marrow endplate reaction due to chronic degenerative disease with progression since the prior study.”

22. On February 24, 2013, Dr. Hess performed an L4-5 ESI. With additional ESI and acupuncture treatments, Claimant’s degree of pain improved modestly; however, it worsened again around July 2013. On July 9, 2013, Claimant reported increased leg pain which necessitated additional psychiatric treatment with Dr. John Hardy for continued depression and panic attacks as well as another ESI performed by Dr. Hess on August 10, 2013.

23. On September 18, 2013, Respondent filed a FAL which FAL admitted for temporary total disability benefits after MMI “based on the assumption that Dr. Olson had rescinded MMI. The FAL reflects that Respondent had contacted Dr. Olson regarding Claimant’s MMI status and Dr. Olson responded by letter on July 12, 2013, clarifying that Claimant had not been taken off of MMI. Respondent then elected to “use the 7-9-13 date as [a] new MMI date and begin PPD again at that time.” As part of this FAL, Respondents also took a position on medical benefits after MMI. In this regard, Respondent admitted as follows: “respondents admit to reasonable, necessary and related medical care after MMI that is provided by an authorized treating physician.”

24. Claimant did not file an objection to the September 18, 2013 FAL.

25. Claimant attended a maintenance medical appointment with Dr. Olson on October 11, 2013. Dr. Olson referred Claimant to physical therapy for an active exercise program. Claimant responded well to therapy and it was documented by Dr. Olson on December 20, 2013 that the “[t]herapy folks were recommending that she do a post rehab program as well as a TENS unit.”

26. On January 2, 2014, Dr. Olson authored correspondence to the claims representative assigned to the case. Dr. Olson was responding to the adjuster’s inquiry of whether Claimant’s continued pain was related to her September 7, 2010 injury. Dr. Olson opined that Claimant’s ongoing symptoms were related to her September 7, 2010 injury. He also outlined Claimant’s need for post MMI treatment.

27. On May 3, 2014, Dr. Hess performed an L4-5 steroid injection into the L4-5 interspace.

28. On August 8, 2014, Claimant returned to Dr. Olson complaining of muscle spasms that had developed the night before. She inquired about and was given Lidoderm patches to wear 12 hours per day. She was encouraged to exercise routinely and was scheduled for a return appointment in four months.

29. On January 26, 2015, Claimant was evaluated by Dr. Olson during a

maintenance visit. Claimant complained of aching and burning pain down the right leg. It was also noticed that Claimant was demonstrating signs of right foot drop when walking. Dr. Olson recommended a surgical consultation and a repeat MRI.

30. The recommended MRI was completed on February 23, 2015 and compared to the images obtained during the MRI completed January 23, 2013. Degenerative changes were present at all lumbar segments; however, the L4-5 level changes, including the anterolisthesis and central disc extrusion indenting the ventral thecal sac were unchanged from the prior January 23, 2013 study. Moreover, the L3-4 disc level demonstrated progressive loss of height and worsened degenerative endplate changes anteriorly and towards the left when compared to the January 23, 2013 MRI.

31. Claimant reported to Dr. Olson during a maintenance appointment on February 27, 2015, that her back remained quite bothersome. She had increased pain without any inciting event. She was noted to have a pelvic shift when she stood and could not stand completely erect. During her physical therapy appointment on this date, Claimant reported severe back pain which radiated into the anterior portion of the right thigh. Dr. Olson referred Claimant to Dr. David Wong for surgical consultation.

32. Dr. Wong evaluated Claimant on March 4, 2015. During this appointment, Claimant reported an onset of symptoms after “moving a filing cabinet to plug in a cord.” Claimant also reported a history of variable pain over the years; however, she indicated that overall her symptoms were slowing progressing with the passage of time. Claimant specifically reported worsening right thigh and groin pain as her “dominant” complaint. Imaging studies, including x-rays of Claimant’s hip were taken and reviewed. Following record review and physical examination, Dr. Wong felt that Claimant had “radicular irritation from spinal stenosis at L3-4 and L4-5”, which in the case of L3-4 was progressing. He also felt that Claimant had “mechanical back pain secondary to multilevel degenerative changes throughout the lumbar spine”, noting further that Claimant had an “associated Grade I L4-5 spondylolisthesis without instability on flexion/extension x-rays. Of consequence, Dr. Wong felt that Claimant’s right anterior thigh and groin pain was an acute problem related to osteoarthritis of the hip. Regarding her low back Dr. Wong recommended an ESI at the L3-4 spinal level. He opined that Claimant may be a candidate for a microdecompression at L3-4 and L4-5 with right laminotomies and left laminoplasty if her symptoms continued following steroid injection. He also raised the potential for minimally invasive fusion.

33. Per Dr. Wong’s recommendation, Dr. Hess injected the L3-4 interspace on March 15, 2015.

34. On March 23, 2015, Claimant was evaluated by Dr. Drew Ritter regarding the condition of her right hip. Dr. Ritter completed a physical examination and after completion concluded that Claimant was likely having multifactorial pain emanating from both her back and right hip. Dr. Ritter recommended a right hip injection under fluoroscopy. The injection was completed on April 6, 2015.

35. Claimant presented to Dr. Ritter on April 8, 2015 following her right hip injection. She continued to complain of significant functional decline and ongoing back, groin and pelvic pain. Dr. Ritter's assessment of Claimant's condition was noted as osteoarthritis of the right hip, sciatica and trochanteric bursitis. Treatment options, including total hip arthroplasty, were discussed.

36. CT scan of the lower extremities completed April 17, 2015 demonstrated arthritic changes bilaterally, right greater than left. During follow-up at Dr. Ritter's office on April 23, 2015, right lower extremity range of motion reproduced pain in the groin. Moreover, Claimant's imaging yielded findings consistent with end stage osteoarthritis of the right hip joint. Consequently, Claimant was scheduled for and underwent a total right hip arthroplasty on May 5, 2015.

37. Following her hip replacement surgery, Claimant developed balance problems and experienced at least two subsequent falls; one on or about June 14, 2015 and the second on July 11, 2015. Careful review of the medical records dated June 15 and July 13 from Dr. Ritter's office concerning these falls fails to support a finding that Claimant injured her back as a consequence of falling. To the contrary, Claimant's primary concern was that she may have injured her knee and/or damaged her total hip prosthesis. Additional serious injury was ruled out and Claimant was referred for additional physical therapy with an emphasis on gait and balance training.

38. Based upon the evidence presented, the ALJ is not convinced that Claimant suffered any intervening injury to her low back since her hip replacement surgery.

39. On September 15, 2015, Claimant returned to Dr. Olson for a follow-up visit. During this appointment, Claimant reported continued 5/10 back pain. She expressed a desire to see Dr. Wong but wanted to make sure her hip had "rehabbed completely." Dr. Olson scheduled a maintence ESI with Dr. Hess.

40. On October 17, 2015, Dr. Hess injected the L4-5 interspace.

41. Claimant returned to Dr. Olson for a maintenance appointment on December 11, 2015. By pain diagram, Claimant reported ongoing aching and stabbing pain in the low back and bilateral legs. She reportedly experienced some benefit from the October 17, 2015 ESI but it was short lived. She wanted to consider her surgical options and expressed a desire to follow-up with Dr. Wong.

42. Dr. Wong reevaluated Claimant on February 10, 2016. According to Dr. Wong's report, Claimant "continued to have some persistent discomfort in the low back, buttock and right worse than left lower extremity." She also reported the development of more "left-sided lower extremity radiation, more to the thigh, but her right side is still much worse." Dr. Wong opined that Claimant was "[s]till likely having some radicular irritation and mechanical back pain from stenosis primarily at L3-4 and L4-5, lesser at L2-3." He also continued to feel that Claimant had "[m]echanical back pain from known multilevel degenerative changes but also loss of disc height at almost all lumbar levels" as well as

a minor stable spondylolisthesis at L4-5. Dr. Wong felt that Claimant needed updated imaging to clarify the best surgical approach to the L2-3 segment; otherwise he planned to proceed with microdecompression without fusion.

43. An updated MRI of the lumbar spine was completed February 23, 2016. The images from this MRI were compared to those obtained on February 23, 2015. The February 23, 2016 study demonstrated "severe degenerative changes throughout the discs from L1 through S1." Unchanged specific findings at all lumbar levels remained according to radiologist interpretation.

44. Claimant returned to Dr. Olson on March 22, 2016 with new complaints of weakness in her legs and bladder incontinence. Plans were made for her to follow-up with Dr. Wong.

45. Claimant returned to Dr. Wong on March 25, 2016. Dr. Wong noted the following concerning the findings on Claimant's February 23, 2016 MRI:

> MR showed a small disc herniation asymmetric to the right at L3-4 plus facet and ligamentous hypertrophy giving rise to right greater than left lateral recess and foraminal stenosis. At L4-5 she has a bulge or small herniation centrally plus facet and ligamentous hypertrophy giving rise to mild bilateral foraminal narrowing. She has a Grade I spondylolisthesis at L4-5. At L2-3 she has a small disc herniation to the left and left greater than right lateral recess and foraminal narrowing.

46. Dr. Wong obtained AP flexion/extension x-rays which demonstrated that Claimant's previously identified spondylolisthesis at L4-5 was shifting by 2 to 4 mm.

47. Dr. Wong opined that Claimant's symptoms were likely emanating from "her stenosis at L3-4 and L4-5 primarily. He felt Claimant required a "decompression of L3-4 and L4-5 with right laminotomies and left laminoplasty. Because of Claimant's spondylolisthesis only moved a couple of millimeters, the question regarding how aggressive to get with a fusion was considered. Dr. Wong felt that Claimant could proceed with a minimally invasive fusion involving the use of an Aspen interspinous plate. Arrangements were made to proceed with surgery.

48. On April 4, 2016, Claimant presented for a psychological evaluation with Amy Alsum. Psychological testing was administered and the results interpreted by Dr. Dale Mann. Results were interpreted as consistent with an individual who was experiencing below average to high levels of anxiety and depression in addition to average somatic distress and very high functional distress.

49. Respondent sought an opinion from Dr. Michael Rauzzino regarding the reasonableness, necessity and relatedness of the surgery recommended by Dr. Wong to Claimant's September 7, 2010 admitted work injury.

50. Dr. Rauzzino completed the requested independent medical examination (IME) on August 15, 2016. After an exhaustive medical records review and physical examination, Dr. Rauzzino opined that Claimant experienced acute disc herniation at L1-2 and L3-4 only. According to Dr. Rauzzino, Claimant's acute disc herniation subsequently resolved with time as demonstrated by the retraction (desiccation) of the disc demonstrated on repeat MRI. Dr. Rauzzino also opined that Claimant suffered from progressive non-work related degenerative change in the lumbar spine as well as a non-work related progressive and degenerative spondylolisthesis at the L4-5 disc level. Considering that Claimant's acute disc herniations resolved and given Claimant's progressive degenerative conditions, Dr. Rauzzino opined that Claimant's current back and leg pain is not work-related. Dr. Rauzzino also opined that because Claimant did not have a right L3-4 radiculopathy, "performing a right-sided laminectomy at L3-L4 would not be of great help to her." According to Dr. Rauzzino, performing a laminectomy at L3-4 would not have a reasonable chance of improving Claimant's axial back and/or radiating leg pain. The ALJ finds from Dr. Rauzzino's IME report that he believes that performing surgery at L3-4 is neither reasonable or necessary.

51. Similarly, Dr. Rauzzino did not feel that performing a L4-5 decompression/fusion was likely to "alleviate her symptoms and provide her with functional gains, although he did not explain why. Rather, he noted that a fusion presented the "chance to worsen adjacent levels which are already severely degenerated through non-work-related means." Regardless, Dr. Rauzzino did not relate the L4-5 pathology to Claimant's work related injury. Consequently, the ALJ finds that Dr. Rauzzino believes that Claimant's need for surgery at L4-5 is not reasonable and is unrelated to Claimant's September 7, 2010 industrial injury.

52. Based upon the evidence presented, the ALJ finds that while Claimant's low back and right leg pain complaints have waxed and waned over the years, she has never been pain free since the injury occurring September 7, 2010. Indeed, the totality of the medical evidence submitted establishes that following her September 7, 2010 injury, Claimant has remained variably symptomatic for the past five plus years. The evidence presented also establishes that Claimant has received substantial conservative treatment in an effort to avoid surgery. Prescription medications, chiropractic treatment, acupuncture and multiple steroid injections have all failed to result in long-term benefit.

53. The medical records submitted generally support Claimant's March 4, 2015 report to Dr. Wong that her symptoms have been worsening with time. Moreover, the medical records subsequent to March 4, 2015 support Claimant's testimony that her condition is deteriorating. Indeed, by records from CCOM, Claimant is now experiencing stabbing pains down both legs, reported weakness in the legs, loss of sensation in the right leg, causing her to fall and a loss of bladder control. Consequently, the ALJ credits Claimant's testimony to find that she has suffered a worsening of condition since being placed at MMI.

54. The evidence presented also persuades the ALJ that the need to proceed with

surgical intervention in an effort to cure and relieve Claimant of her ongoing back and leg pain was a distinct likelihood in this case as of April 19, 2011, when the subject was first broached by Dr. Kang.

55. The ALJ finds from the evidence presented that while Claimant has received prior medical care for her right shoulder and cervical spine, there is a dearth of evidence to support a finding that she has ever had prior low back/right leg symptoms or treatment prior to her September 7, 2010 work related injury.

56. The record evidence in this case also persuades the ALJ that Claimant's September 7, 2010 injury not only resulted in disc herniation at L1-2 and L3-4, but also likely caused an acute disc protrusion at L4-5. Indeed, the September 15, 2010 MRI demonstrated both a "moderate sized central disk protrusion" and the degenerative changes discussed by Dr. Rauzzino in his IME report. Dr. Rauzzino does not persuasively address the cause of this disc protrusion in his IME report, nor does he discuss whether it is acute or degenerative in nature. He simply comments upon the presence of non-work related degenerative change in the lumbar spine, the presence of what he feels is a non-work related degenerative spondylolisthesis and the fact that a fusion may worsen the degenerative changes above and below L4-5.

57. Based upon the evidence presented as a whole, the ALJ credits the opinions of Dr. Olson, Dr. Wong and Dr. Ritter over those of Dr. Rauzzino to find that Claimant's current symptoms are likely multifactorial in nature and caused by a combination of acute injury and an aggravation of pre-existing degenerative disc disease in the lumbar spine. While Claimant probably had significant degenerative change in the lumbar spine, there is a lack of convincing evidence to suggest it was symptomatic until September 7, 2010, when Claimant moved a heavy filing cabinet in furtherance of her work duties. Respondent's suggestion that because Claimant was identified early on as having significant disc herniation at L1-2 and L3-4 and Dr. Hess' did not disagree with that before injecting the L4-L5 level (which injections Respondents contend were working on Claimant's L3-L4 disc herniation) does not persuasively support an inference all physicians believed the L4-L5 level injections were to treat the L3-L4 issues. To the contrary, the ALJ is persuaded that the record evidence supports a finding that Claimant's L4-5 ESI's were reasonable and necessary to treat pain that Dr. Hess felt was emanating from the disc protrusion and the aggravated degenerative spondylolisthesis at this level. The ALJ finds it unlikely that Dr. Hess would intentionally inject the L4-5 interspace multiple times if he thought that Claimant's symptoms were actually emanating from the L3-4 level. Indeed, only one ESI was administered at the L3-4 level at the request of Dr. Wong.[5]

58. Given that the September 7, 2010 incident likely caused an acute L4-5 disc protrusion and aggravated Claimant's previously asymptomatic L4-5 degenerative spondylolisthesis, the ALJ finds Claimant's need for treatment, including the L4-5

[5] By simple count from the records submitted, Claimant has received nine (9) steroid injections into the L4-5 interspace compared to one (1) ESI into the L3-4 interspace.

injections administered by Dr. Hess and the L4-5 surgery proposed by Dr. Wong, reasonable, necessary and related to the September 7, 2010 incident. Dr. Rauzzino's opinion to the contrary is unpursuasive.

59. As noted, Respondent's principally rely upon the opinions of Dr. Rauzzino as the basis for their denial of the surgery recommended by Dr. Wong. For the reasons outlined above, the ALJ rejects Dr. Rauzzino's opinions that Claimant's L4-5 disc changes and need for surgery at this spinal level are unrelated to Claimant's September 7, 2010 industrial injury. The ALJ is also not persuaded by Dr. Rauzzino's opinion that decompressing the L3-4 spinal level is unlikely to alleviate Claimant's ongoing symptoms. To the contrary, while MRI imaging suggests that Claimant's "large posterior disk protrusion/extrusion" visualized September 15, 2010 has retracted some, the MRI from February 23, 2016 demonstrates the presence of a 4 mm broad-based right paracentral disc protrusion along with degenerative changes and osteophyte complex towards the right side causing both mild canal stenosis and severe foraminal narrowing. Based upon the evidence presented, the ALJ finds and concludes that it is reasonable to decompress this spinal segment in an effort to alleviate Claimant's persistent low back and right leg pain. Importantly, Claimant has proven that she is more functional with symptom reduction. Indeed, the record evidence establishes that conservative measures resulted in temporary improvement in Claimant's pain during which time she enjoyed increased function, including the ability to work. Consequently, the ALJ finds Dr. Wong, more probably than not, recommended surgery to prevent further escalation of symptoms and maintain Claimant's current functional abilities.

60. Respondent has failed to carry it's burden to establish that Claimant's need for ongoing treatment, including surgery is not reasonable, necessary or related to her September 7, 2010 industrial injury. To the extent that Respondent's seek to withdraw the September 18, 2013 FAL for maintence care on the grounds that it was mistakenly filed, the evidence presented persuades the ALJ otherwise. To the contrary, the FAL establishes that the FAL was filed approximately one month after Dr. Olson clarified his position regarding MMI and Claimant's maintenance treatment needs. Based upon the evidence presented, the ALJ finds that Respondent had the necessary information to admit to specific maintenance treatment and chose instead to admit generally for "reasonable, necessary and related medical treatment after MMI that is provided by an authorized treating physician." Given that they had information outlining Claimant's specific maintence treatment needs and took approximately one month to consider it before filing their FAL, the ALJ finds any assertion that the FAL was filed improvidently unpursuasive. Based upon the above, the ALJ finds that this claim remains open for ongoing medical benefits, subject to Claimant's burden to establish that the requested treatment is reasonable, necessary and related to the September 7, 2010 injury.

61. Claimant has proven by a preponderance of the evidence that her condition has worsened and that the requested spinal surgery is reasonable and necessary to prevent further deterioration of the spinal conditions caused by, i.e. related to her September 7, 2010 work related injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* In this case, Claimant must prove her entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. *Section 8-43-201(1), C.R.S.* Rather, a workers' compensation claim is to be decided on its merits. *Id.*

B. In deciding whether Claimant has met his burden of proof, the ALJ is empowered: "To resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968). As found here, the opinions of Drs. Olson, Wong and Ritter are more persuasive than the contrary opinions of Dr. Rauzzino. Furthermore, Claimant's reports concerning the worsening of her condition is consistent throughout the written record and with her later testimony. The ALJ concludes the Claimant is a reliable witness and finds her testimony persuasive.

C. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge need not address every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

Respondent's Request to Withdraw the December 2, 2011 & September 18, 2013 Admissions for Maintenance Care

D. It is well settled that where respondents file a final admission admitting for maintenance medical benefits pursuant to *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988), respondents are not precluded from later contesting liability for a particular treatment. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Moreover, when respondents contest liability for a particular medical benefit, the claimant must prove that such contested treatment is reasonably necessary to treat the industrial injury and is related to that injury. *See Grover v. Industrial Commission*, *supra; Snyder v. Industrial Claim Appeals Office*, *supra.* Where, however, respondents attempt to modify an issue that previously has been determined by an admission of liability, they bear the burden of proof for such modification. *Section 8-43-201(1), C.R.S*.; *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838 (Oct. 1, 2013); *see also Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (June 5, 2012); *Barker v. Poudre School District*, W.C. No. 4-750-735 (July 8, 2011). Section 8-43-201(1), C.R.S. was added to the statute in 2009 and provides, in pertinent part:

> …a party seeking to modify an issue determined by a general
> or final admission, a summary order, or a full order shall bear the
> burden of proof for any such modification. (2) The amendments
> made to subsection (1) of this section by Senate Bill 09-168, enacted
> in 2009, are declared to be procedural and were intended to and
> shall apply to all workers' compensation claims, regardless of the
> date the claim was filed.

E. The principal aim of the 2009 amendment to § 8-43-201(1), C.R.S. was to reverse the effect of *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). That decision held that while the respondents could move to withdraw a previously filed admission of liability, the respondents were not actually assessed the burden of proof to justify that withdrawal. The amendment to § 8-43-201(1), C.R.S. placed that burden on the respondents and made such a withdrawal the procedural equivalent of a reopening. The statute serves the same function in regard to maintenance medical benefits. The Supreme Court in *Grover v. Industrial Commission*, 759 P.2d 705, 712 (Colo. 1988), provided that after the respondents had admitted for maintenance medical benefits "the employer retains the right to file a petition to reopen, … for the purpose of either terminating the claimant's right to receive medical benefits or reducing the amount of benefits available to the claimant." The amendments to § 8-43-201(1), C.R.S., then, require that when the respondents seek a ruling at hearing that would serve as "terminating the claimant's right to receive medical benefits," they are seen as seeking to reopen that admission and the burden is theirs. In *Salisbury v. Prowers County School District*, *supra,* the Industrial Claims Panel held that where the effect of the respondents' argument is to terminate previously admitted maintenance medical treatment, the respondents have the burden, pursuant §8-43-201(1), C.R.S., to prove that such treatment is not reasonable, necessary or related to the claimant's industrial injury. In this case, Respondent is seeking to withdraw their admissions to ongoing maintenance care based upon Dr. Rauzzino's opinion that the demonstrated changes at the L4-5 disc level are not related to Claimant's September 7, 2010 injury and Claimant's ongoing need for surgery is no longer related to disc herniation caused by the September 7, 2010 injury since the work-related disc herniations retracted and are no longer causing symptoms. Simply put, Respondent's contend that Claimant's current need for treatment, including surgery at L3-4 and L4-5, is clearly related to an ongoing non-work related degenerative process in Claimant's lumbar spine. As found above, the ALJ is not persuaded.

F. Here, the evidence presented persuades the ALJ that Claimant likely had pre-existing, yet asymptomatic degenerative changes throughout the lumbar spine, to include a minor L4-5 spondylolisthesis. In addition to causing acute herniation at L1-2 and L3-4, the September 7, 2010 injury likely caused these degenerative conditions to become symptomatic necessitating the need for treatment. A pre-existing condition "does not disqualify a claimant from receiving workers compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). To the contrary, a claimant may be compensated if his or her employment "aggravates, accelerates, or "combines with" a pre-existing infirmity or disease "to produce the disability and/or need for treatment for which workers' compensation is sought". *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities and not the underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940). Here, the persuasive evidence demonstrates that Claimant sought treatment for her low back and right leg as a consequence of a specific activity, i.e. moving a heavy filing cabinet to gain access to an outlet. Although Claimant had significant pre-existing degenerative changes in the lumbar spine as confirmed by MRI, the ALJ finds a lack of persuasive evidence to establish that Claimant's pre-existing condition was symptomatic or disabling prior to September 7, 2010. Moreover Claimant's symptoms have persisted to a varying degree since September 7, 2010 in the absence of an intervening injury. The evidence presented persuades the ALJ that the stated mechanism of injury (MOI) likely placed Claimant's diseased spine in a compromised position sufficient to aggravate her pre-existing degenerative disc disease/spondylolisthesis giving rise to her symptoms and subsequent need for treatment. Accordingly, the ALJ concludes that Respondents have failed to prove, by a preponderance of the evidence, that Claimant's L4-5 spinal condition is unrelated to her September 7, 2010 injury. Moreover, the evidence presented convinces the ALJ that Claimant's need for surgery, including fusion at this level is directly related to the aforementioned aggravation and that surgery is otherwise reasonable and necessary in light of Claimant's relentless pain.

G. Concerning the L3-4 disc level, there is little question that the initial herniation demonstrated on MRI is causally related to Claimant's September 7, 2010 injury. Dr. Rauzzino concluded the same when he stated that both the L1-2 and L3-4 herniations "are temporally related to an event in which she states that she moved a moved file cabinet to manipulate a cable." Respondent is not contesting the treatment directed to this disc level through MMI. Rather, Respondent is contesting the need for post MMI treatment, including the recommended L3-4 surgery, on the ground that MRI evidence demonstrates that the large herniation present at L3-4 has desiccated and is no longer causing symptoms. Consequently, Respondents contend that the recommended surgery is no longer related to the industrial injury. Again, the ALJ is not convinced. Here, the February 23, 2016 MRI demonstrates a residual 4 mm broad-based right paracentral disc protrusion causing mild canal stenosis. This evidence persuades the ALJ that there is lingering disc herniation at L3-4 directly related to the September 7, 2010 injury. Contrary to Dr. Rauzzino's suggestion, while the disc herniation at this level has retracted, it has not "resolved" completely. Moreover, this spinal segment likely remains symptomatic as a consequence of facet hypertrophy and osteophyte formation causing severe right-sided foraminal narrowing. While the ALJ recognizes that these conditions are degenerative in nature, the ALJ is persuaded that the MOI which was sufficient to cause large disc protrusion/extrusion at multiple disc levels also likely aggravated the aforementioned degenerative changes contributing to Claimant's current symptom complex. Based upon the evidence presented, the ALJ concludes that the recommended L3-4 decompression procedure is necessary to address both the canal stenosis caused by residual disc herniation and the foraminal narrowing caused by degenerative change but made symptomatic by the accepted MOI. As found, the recommended procedure at this level is reasonable given Claimant's unremitting and worsening back and leg pain. The ALJ concludes that Respondent's have failed to carry their burden to prove that Claimant's need for treatment to cure and relieve her of ongoing symptoms attributable to this spinal level are no longer reasonable, necessary or related to the September 7, 2010 industrial injury.

H. As Respondent has failed to prove that Claimant's need for ongoing low back and leg treatment is no longer reasonable, necessary and related to her September 7, 2010 injury or that the September 18, 2013 FAL was filed improvidently, the ALJ concludes that the request to withdraw either the December 2, 2011 or the September 18, 2013 FAL must be denied and dismissed.

Reopening of the Claim

I. Section § 8-43-203(2)(b)(II)(A), C.R.S. 8-43-303 (1) C.R.S., provides that where the respondent files a FAL the case will automatically close as to the issues admitted in the FAL unless within thirty days of the final admission, the claimant contests the FAL and requests a hearing "on any disputed issues that are ripe for hearing." Here, Claimant did not object to either FAL filed by Respondent. Nonetheless, this claim remains open for "reasonable, necessary and related" maintenance treatment by virtue of Respondent's September 18, 2013 FAL admitting for the same. Consequently, the ALJ concludes that the question of wwhether Claimant established by a preponderance of the evidence that she suffered a worsening of a work related medical condition entitling her to reopen her workers' compensation claim to obtain the aforementioned L3-L4, L4-L5 decompression and fusion procedure recommended by Dr. David Wong need not be addressed further.

The Proposed Surgery as Maintenance Medical Care

J. A claimant is entitled to ongoing medical benefits after MMI if he/she presents substantial evidence that future medical treatment will be reasonably necessary to relieve the him/her of the effects of the injury or prevent deterioration of the claimant's condition. *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995).

K. In *Milco Construction v. Cowan,* 860 P.2d 539 (Colo. App. 1992), the Court of Appeals established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission, supra*. The Court stated that an ALJ must first determine whether there is substantial evidence in the record to show the reasonable necessity for future medical treatment "designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition." If the claimant reaches this threshold, the Court stated that the ALJ should then enter "a general order, similar to that described in *Grover*." Even with a general award of maintenance medical benefits, respondents still retain the right to dispute whether the need for medical treatment was caused by the compensable injury or whether it was reasonable and necessary. *See Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003) (a general award of future medical benefits is subject to the employer's right to contest compensability, reasonableness, or necessity).

L. While a claimant does not have to prove the need for a specific medical benefit, and respondents remain free to contest the reasonable necessity of any future treatment; the claimant must prove the probable need for some treatment after MMI due to the work injury. *Milco Construction v. Cowan*, supra. The question of whether the claimant met the burden of proof to establish an entitlement to ongoing medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Industrial* Claim Appeals Office, 992 P.2d 701 (Colo. App. 1999); *Renzelman v. Falcon School District,* W. C. No. 4-508-925 (August 4, 2003). Here, the ALJ concludes that Claimant has met her burden to establish her entitlement to maintenance medical treatment. Substantial persuasive evidence demonstrates that there is an ongoing need to treat Claimant's chronic pain caused the injuries sustained in this admitted claim. Claimant was injured in excess of five years ago and has undergone substantial conservative care, yet she continues to have persistent pain which she credibly testified is worsening with time. Without ongoing treatment, including surgery the ALJ concludes that Claimant's present condition will likely deteriorate further.

M. Although Claimant asserts that she is at not MMI, she presented scant evidence to support such conclusion. Here, the evidence presented persuades the ALJ that Claimant remains at MMI and the proposed surgery is contemplated for maintenance purposes to control Claimant's pain and maintain her current level of function. Given that Claimant has proven that the recommended surgery is reasonable, necessary and related to her September 7, 2010 industrial injury, the question concerning her entitlement to additional medical treatment becomes whether Dr. Wong’s recommendation for surgery is properly considered maintence treatment.

N. The ALJ recognizes that surgery is often directed to curing and relieving a claimant's medical condition and not necessarily with maintaining and preventing deterioration of the claimant's condition. However, it is the purpose for which treatment is provided, not the "nature" of the treatment, which determines whether the treatment is curative or provided for maintenance reasons. *Milco Construction v. Cowan,* supra; *Hayward v. Unisys Corp.,* W.C. No. 4-230-686 (July 2, 2002), *affd, Hayward v. Industrial Claim Appeals Office,* (Colo. App. No. 02CA1446, January 9, 2003) (knee surgery may be curative or may be a form of Grover-style maintenance treatment designed to alleviate deterioration of the claimant's condition); *Jacobson v. American Industrial Service/Steiner Corp., V/.C.* No. 4-487-349 (April 24, 2007); *Cervantes* v. *Academy School District* # 20 W. C. No. 4-604-873 (May 23, 2005). Regarding the purpose of the surgery in question here, the ALJ finds the following statement from *Milco Construction v. Cowan,* pertinent:

> We hold, therefore, that, if the evidence in a particular case establishes that, but for a particular course of medical treatment, a claimant's condition can reasonably be expected to deteriorate, so that he will suffer a greater disability than he has sustained thus far, such medical treatment, *irrespective of its nature*, must be looked upon as treatment designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition. (Emphasis added).

In this case, the ALJ concludes that irrespective of the nature of the surgery recommended, substantial evidence exists to support a finding that the purpose of the procedure is to relieve the worsening pain associated with Claimant’s spinal injuries and to prevent deterioration of her present condition by decompressing the affected areas and in the case of fusion, stabilizing the mobile segment. Consequently, the ALJ concludes that Claimant is entitled to the recommended surgery on a maintenance basis.

ORDER

Based upon the above findings of fact and conclusions of law, it is hereby ordered that:

1. Respondent’s request to withdraw either the December 2, 2011 or the September 18, 2013 admissions for maintenance medical treatment is denied and dismissed.

2. Claimant is entitled to ongoing reasonable, necessary and related maintence care, including the surgery recommended by Dr. Wong. Respondent shall pay for the costs associated with Dr. Wong’s proposed surgery, in addition to all

reasonable and necessary medical care related to that surgery on a maintenance basis.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 30, 2016

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 s. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

The issue presented for determination is whether Claimant has proven by a preponderance of the evidence that the left shoulder surgery recommended by Dr. Christopher Isaacs is reasonable, necessary, and causally related to Claimant's admitted industrial injury of December 12, 2013.

FINDINGS OF FACT

1. The Claimant worked for the Employer as a truck driver. At the time of the hearing in this matter, Claimant was 49 years old.

2. On December 12, 2013, Claimant was driving a loaded tractor-trailer and was stopped in traffic. A second tractor-trailer rear-ended Claimant's trailer.

3. Claimant was transported to the hospital by ambulance. The ambulance report notes complaints of severe back spasm and slight pain in the left hand. There is no mention of left shoulder pain.

4. The Lutheran Medical Center emergency room report notes minor damage to the Claimant's vehicle and no severe traumatic injury. The Claimant presented with back pain and spasm in the mid and upper back.

5. Claimant described the force of the impact from the accident as sufficient to knock a dashboard computer out of its rack and knock his truck out of gear. He testified he was jolted forward and to the right. He was restrained with a seat belt. According to at least one record, the accident was low speed, and the police report reflects that both vehicles sustained only minimal damage.

6. Claimant began treating with Dr. Robert Nystrom (with Concentra) on December 16, 2013. At this appointment, Claimant reported neck, back, left shoulder and tailbone pain. Claimant reported that most of his pain was in his low back and sacrum and neck and left shoulder. Dr. Nystrom noted diffuse tenderness to palpation of the left upper and posterior shoulder although the Claimant could abduct and internally rotate without too much difficulty, but he did have increased pain with resisted abduction. Dr. Nystrom assessed a left shoulder strain.

7. Dr. Nystrom's note of December 20, 2013 was silent regarding the left shoulder, but the pain diagram Claimant completed indicated posterior left shoulder pain.

8. On December 27, 2013, a Concentra nurse practitioner noted shoulder pain of 6/10 with marked spasm throughout the bilateral cervical spine, worse on the left, through the left paraspinous musculature and through the trapezius and rhomboid of the left shoulder. The range of motion of the left shoulder was complete but with pain. There was no diagnosis of the left shoulder complaints.

9. Claimant returned to Concentra on January 2, 2014 and again on January 6, 2014. The office notes from these appointments do not mention left shoulder complaints.

10. Claimant was referred to Dr. Janssen for an orthopedic consultation of his low back complaints. Dr. Janssen's office note of January 7, 2014 makes no mention of left shoulder complaints.

11. On January 13, 2014, Dr. Nystrom noted some diffuse tenderness to palpation of the left posterior shoulder. Dr. Nystrom assessed a left shoulder strain. Claimant was not exhibiting any improvement so he was referred to Dr. Jeffrey Wunder for a physical medicine evaluation.

12. Dr. Wunder first saw Claimant on January 14, 2014. The office note documents left anterior shoulder pain described as constant aching with no radiation or neurological symptoms. Dr. Wunder noted Claimant's “pain behavior was quite high and somewhat disproportionate to the palpatory pressure applied. The symptoms appeared to be in excess of objective findings.” On exam, the left shoulder had tenderness predominately at the left AC joint with minimal subacromial tenderness. Active range of motion revealed 150° of flexion and abduction, 90° exterior rotation and 60° interior rotation. Claimant had a negative cross-chest or O'Brien compression test. The Hawkins impingement maneuver was negative. Rotator cuff testing revealed no weakness. The Speed test was negative. Dr. Wunder’s impression of the left shoulder complaints was that Claimant probably had some AC joint dysfunction. He did not appear to have significant rotator cuff findings on exam. If Claimant did not respond to conservative treatment, consideration could be given to an AC joint injection

13. Claimant saw Dr. Nystrom on January 28, 2014. The office note for this appointment is silent regarding any complaints or treatment recommendations for the left shoulder.

14. On January 31, 2014, an RN at Dr. Janssen's office examined the Claimant. Claimant complained of back, neck, bilateral lower extremity and bilateral upper extremity pain. On motor exam of the shoulder adductors Claimant had 5/5 on both the left and right. The shoulder exam showed a negative impingement sign and no rotator cuff pathology. The range of motion of the upper extremity joints was full and unrestricted.

15. Claimant returned to Concentra on February 26, 2014. It was noted the left shoulder was improving with better range of motion and less pain. Claimant was

tender to palpation over the left AC joint. The range of motion was nearly full except on external and internal rotation. Physical therapy directed at Claimant's neck, lumbar spine and left shoulder was continued.

16. Dr. Leimbach conducted an EMG study of Claimant's upper extremities on February 27, 2014. He noted left greater than right upper extremity pain. He reported the EMG was consistent with C5 radiculopathy.

17. Dr. Nystrom and other providers at Concentra provided Claimant's primary treatment. The Concentra notes after March 10, 2014 are silent regarding specific problems with the left shoulder. There are comments about upper extremity radiculopathy associated with the cervical spine complaints.

18. Claimant completed pain diagrams during each visit with Concentra, and indicated which body parts were symptomatic. On nearly each pain diagram with Concentra, the left shoulder is marked as having symptoms.

19. Claimant testified he had persistent complaints of left shoulder pain since the date of injury.

20. In addition to the left shoulder complaints, however, Claimant was experiencing severe neck problems to the point where he had severe difficulty turning his head to the left. He also had numbness going down his left upper extremity.

21. Claimant testified that he had pain in his neck, that would radiate down into his shoulder, into his arms, into his fingers, and that both his shoulder and his neck would hurt during therapy.

22. Claimant understood that his treatment providers planned to treat his worst symptoms first then proceed to treat each body part as other areas improved.

23. On April 8, 2014, Claimant reported left shoulder pain to Mary Brasfield, a physician's assistant, at the Center for Spinal Disorders.

24. On June 12, 2014, Dr. Nystrom prepared a report addressing anticipated medical treatment and MMI. He indicated claimant needed injections for his neck and back followed by some physical therapy. Anticipated claimant would reach MMI six weeks after the injections. His report contained no mention of the left shoulder any recommendations for treatment relating to the left shoulder.

25. The medical records from Dr. Nystrom into late 2014 and 2015 are again silent regarding the left shoulder complaints, treatment and lack a diagnosis of any left shoulder problem.

26. In January 2015, Dr. Janssen recommended that Claimant undergo cervical spine surgery.

27. The July 30, 2015 pre-operative report noted Claimant had incapacitating neck pain and bilateral upper extremity pain. There was no mention of a specific left shoulder problem or a diagnosis of any left shoulder pathology.

28. After the neck surgery was performed, Claimant was still reporting left upper extremity weakness. On August 18, 2015, Claimant reported to Dr. Janssen’s nurse that he had experienced tremors in his left arm when he tried to tie a fly while fishing. He had never experienced tremors before. He stated he did not have the same pain he had pre-operatively and the numbness in his left upper extremity had diminished.

29. On September 15, 2015, Dr. Janssen examined the shoulder noting a negative impingement sign with no rotator cuff pathology. Range of motion of the upper extremity joints was reportedly full and unrestricted. The assessment was subjective complaints of weakness in the left upper extremity.

30. On December 16, 2015, the left shoulder diagnoses and specific left shoulder symptoms resurfaced. Claimant reported to Dr. Janssen's assistant that he had experienced increasing left shoulder pain recently. On exam he had moderate impingement findings and a positive drop sign. An MRI of the left shoulder was ordered.

31. A left shoulder MRI arthrogram was done on January 11, 2016. It showed a labral tear with small associated parameniscal cyst about the posterosuperior glenoid. The antteroinferior labrum was slightly irregular and frayed.

32. Claimant was referred to Dr. Isaacs for a consultation on the left shoulder. Claimant reported he had persistent shoulder pain since the date of injury. On exam, the impingement signs were dramatically positive while the AC joint was nontender. Drawer testing and Yergason’s sign were negative. The impression was left shoulder impingement and labral tear. Dr. Isaacs did not address causation in this report.

33. On February 4, 2016, Dr. Nystrom noted the left shoulder was getting worse. He diagnosed a degenerative tear of the glenoid labrum.

34. Claimant testified that his left shoulder pain has been the same throughout his claim, but that it is just more prominent now.

35. Respondents referred the Claimant to Carlos Cebrian, M.D., for an independent medical examination which occurred on June 1, 2016. He diagnosed as work-related conditions: a cervical strain with aggravation of pre-existing degenerative disc disease, a lumbar strain with a temporary aggravation of pre-existing lumbar pathology and a left shoulder strain. In his opinion, Claimant had reached maximum medical improvement (MMI) for all conditions. The current left shoulder pathology, i.e. the labral tear, was not related to the work injury. The mechanism of injury would not cause a labral tear.

36. After the IME, Dr. Cebrian received additional medical records, including a copy of the MRI arthrogram of the left shoulder. It remained his opinion that, to a reasonable degree of medical probability, the current left shoulder complaints were not related to the motor vehicle accident of December 12, 2013. The findings of labral tear with a paralabral cyst and impingement were degenerative in nature and not caused by an acute injury.

37. Dr. Isaacs also testified by deposition. He testified that based on Claimant's report of persistent left shoulder pain since the date of injury, the labral tear was related to the motor vehicle accident. Dr. Isaac reviewed the medical records from his practice. He did not review the medical records from Concentra. Dr. Isaac had no knowledge as to whether or not the medical records documented complaints of persistent left shoulder pain.

38. Dr. Issacs opined that if symptoms occur relative to the timing of the accident, immediately following or a short time following, then they relate to the accident.

39. Dr. Isaacs further testified that the mechanism described by Claimant was sufficient to cause the labral tear shown on the MRI performed on January 11, 2016.

40. Dr. Isaacs also explained that when there is both a cervical injury and shoulder injury, that there's a symptomatology overlap between cervical issues and shoulder issues that can be very difficult to sort out.

41. Dr. Isaacs also testified about how to determine which body part is causing the problem. Dr. Isaacs testified when one problem resolves, then you assume the other problem is the issue.

42. Dr. Isaacs acknowledged that he could not rule out a degenerative tear of the labrum. He also acknowledged that the nature of Claimant's symptoms had changed over the course Claimant's claim and treatment, including Claimant's reports or improvement in his left shoulder symptoms.

43. Dr. Cebrian testified that Claimant had complaints of left shoulder pain early on after the motor vehicle accident consistent with wearing a shoulder harness seatbelt. The early examinations of Claimant documented a different type of shoulder complaint in 2014 than he had in 2016. In 2014, there were no signs of impingement yet in 2016 there were dramatic signs of impingement, and the AC joint pain that was documented in 2014 was no longer present.

44. The complaints leading to a diagnosis of a labral tear and impingement were not documented in the medical records until December 2015, two years after the motor vehicle accident. Dr. Cebrian testified it was medically probable this was a new

condition related to degeneration that developed over a long period of time and was not related to the motor vehicle accident.

45. Dr. Cebrian's opinion is supported by the lack of documentation in the medical records from February 2014 through December 2015 of any shoulder diagnoses or work-up for shoulder-specific problems. As Dr. Cebrian explained if Claimant had continued to report shoulder symptoms, the treatment providers would not have ignored them to focus on Claimant's neck. But because Claimant had not demonstrated any signs of impingement, a labral tear or other shoulder conditions, no shoulder-related diagnostic studies were ordered. To the extent Claimant had complaints of pain in the upper extremities they were related to cervical radiculopathy and not a labral tear or impingement. This is especially true given the changing nature of Claimant's left shoulder symptoms over the course of the claim-related treatment.

46. Based on the foregoing, Claimant has failed to prove that his current shoulder symptoms and diagnoses are related to his work-related motor vehicle accident. As such, the Respondents are not liable for the surgery recommended by Dr. Isaacs.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

4. Section 8-42-101(1)(a), C.R.S., provides:

> Every employer … shall furnish … such medical, hospital, and surgical supplies, crutches, and apparatus as may reasonably be needed at the time of the injury … and thereafter during the disability to cure and relieve the employee from the effects of the injury.

5. Respondents are obligated to provide medical benefits to cure or relieve the effects of the industrial injury. Section 8-42-101(1), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Respondents, however, retain the right to dispute liability for specific medical treatment on grounds the treatment is not authorized or reasonably necessary to cure or relieve the effects of the industrial injury. *Id.*

6. Claimant has failed to sustain his burden of proving that the need for left shoulder surgery is causally related to the motor vehicle accident of December 12, 2013 for the following reasons:

Claimant testified he had persistent complaints of left shoulder pain since the date of injury. This testimony is not supported by the numerous medical records. Although Claimant documented shoulder symptoms on his pain diagrams, there is a noticeable absence of treatment and diagnosis for the left shoulder in the medical records between late February 2014 and December 16, 2015. Further, the nature of the complaints changed between early 2014 and January 2016 when Claimant was diagnosed with a labral tear, cyst and impingement symptoms. The symptoms documented in December 2015 in January 2016 are not the same symptoms claimant had in January and February 2014. The nature of injury changed from AC joint irritation to impingement signs and greatly restricted range of motion. Claimant’s testimony is not particularly persuasive.

As Dr. Cebrian opined, the medical records show initial complaints of left shoulder pain consistent with wearing a shoulder harness. These complaints seem to have ended by March 2014. There is a gap of approximately 20 months during which the medical records are silent on specific left shoulder complaints, left shoulder treatment and any diagnosis for the left shoulder. Instead the shoulder complaints Claimant did make were more likely than not related to his cervical spine condition.

Dr. Isaacs relied upon Claimant’s statement that he had persistent left shoulder pain since the date of injury in concluding the labral tear and impingement of the left shoulder were causally related to the work injury of December 12, 2013. Dr. Isaacs did not review the medical records to determine if the left shoulder complaints had been consistently documented since the date of injury. Dr. Isaacs did not review the medical records to determine if the physical exams and objective findings had been consistent since the date of injury.

Dr. Cebrian reviewed medical records of the treatment over more than two years following the date of injury. He noted the physical exam and reported symptoms changed between early 2014 and early 2016. Dr. Cebrian testified the mechanism of injury is not consistent with a labral tear. Dr. Cebrian also testified the condition of Claimant's shoulder in 2016, i.e., the labral tear and impingement, was not causally related to the motor vehicle accident of December 12, 2013.

7. The ALJ concludes that the testimony and opinions of Dr. Cebrian are more credible and persuasive than those of Dr. Isaacs. As stated above, Dr. Isaacs did not have a full picture of Claimant's medical treatment history when he opined that Claimant's labral tear was caused by the work accident. Also as stated above, the Claimant's testimony concerning the duration and nature of his left shoulder complaints was not persuasive given the medical records to the contrary.

ORDER

It is therefore ordered that:

1. Claimant's request for medical benefits consisting of surgery to repair a left shoulder labral tear and impingement is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

EXHIBITS

The following Exhibits were accepted into evidence: Claimant's Exhibits 1-18, 22-27, Golden's Exhibits A-U, Respondents' Joint Submissions A-S, South Metro's Exhibits AA-ZZ, Exhibit A House Bill 07-1008 legislative testimony, and evidentiary deposition of Dr. Mark Pattridge taken on November 10, 2010 with deposition exhibits 1-8.

ISSUES

1. Compensability under § 8-41-209, C.R.S. for prostate cancer.

2. Medical benefits, including treatment at Johns Hopkins University.

3. Average weekly wage.

STIPULATIONS

The parties stipulated to the following facts at hearing:

a) Claimant worked as a volunteer firefighter for Golden from August 7, 1990 through July 29, 2001.

b) Claimant worked as a firefighter for Castlewood from March 7, 1998 through July 30, 2001.

c) Claimant worked as a firefighter for Golden from July 30, 2001 through September 5, 2007.

d) Claimant worked as a Captain for Parker from September 6, 2007 through December 31, 2008.

e) Claimant worked as a volunteer firefighter for Golden on February 5, 2008 to present.

f) Parker merged with South Metro on January 1, 2009 and thus Claimant worked for South Metro from January 1, 2009 to present.

g) Claimant is entitled to maximum average weekly wage on date of onset of disability.

h) The medical treatment Claimant received including surgery for his prostate cancer at John Hopkins University is reasonable and necessary and authorized.

FINDINGS OF FACT

1. Claimant's date of birth is October 26, 1959.

2. Claimant has been employed as a firefighter since 1990. From August 7, 1990 through July 29, 2001, Claimant worked as a volunteer firefighter for Golden. His primary responsibilities were fire suppression and overhaul. From July 30, 2001 through September 5, 2007, Claimant worked full time for Golden as a training officer. Claimant trained volunteers and recruits and also performed fire suppression and overhauls. Approximately 3 fire suppression calls came into the station each day and Claimant usually responded to at least one of them. Claimant was rehired by Golden as a volunteer firefighter from February 5, 2008 and continuing through the date of the hearings in this matter.

3. Claimant worked as a firefighter for Castlewood from March 7, 1998 through July 30, 2001. Castlewood subsequently became South Metro. During his employment with Castlewood, Claimant's duties included public education, apparatus/equipment maintenance, fire prevention, building and hazard pre-incident planning, inspection and fire suppression and overhaul. Claimant responded to approximately 4-5 calls on a 24-hour shift and completed approximately one hundred twenty 24-hour shifts per year. Approximately 50% of the fire suppression calls were residential and 50% commercial structure fires.

4. Claimant worked for Parker as a Captain on September 6, 2007 through December 31, 2008. Claimant was a safety officer responding to major fires and going into burning structures to make sure both that operations were running safely and that firefighting equipment was properly used. Claimant was also exposed to numerous live fires during training burns while acting as a lead training instructor.

5. On January 1, 2009, Parker merged with South Metro. Claimant primarily worked as a training and safety officer for South Metro.

6. Collectively, Claimant completed five or more years of employment as a firefighter as required under Section 8-41-209, C.R.S.

7. Claimant's work as a firefighter for over 21 years, involved suppression and overhaul of residential and commercial structural fires. He also contained hazardous materials and spills as well as chemical and car fires. Both Claimant and Chief Bales credibly testified that firefighters suffer regular exposures to multiple chemicals that vary by fire type.

8. Claimant has a family history of prostate cancer. His father was diagnosed with prostate cancer at age 69/70. Two of his father's brothers were diagnosed with prostate cancer; one at age 69/70 and the other at age 71. He has a maternal uncle who was diagnosed with prostate cancer at age 69/70. Claimant has approximately 17 first cousins who are male and one has prostate cancer diagnosed at age 49. His paternal grandfather did not have cancer. His father's 3rd brother and Claimant's 58 year

old brother have not been diagnosed with cancer nor have the other 16 first male cousins.

9. On July 24, 2007, Claimant underwent a physical examination by Dr. John Harris, a physician for Parker. The physical included a digital rectal exam (DRE) and prostate exam, both of which were normal. At this time Claimant's prostate specific antigen (PSA) was 2.5. In 2007, a 2.5 PSA was not high enough to recommend a biopsy.

10. On November 4, 2008 when Claimant was 48 years old, his PSA was 3.6. This PSA was ordered by Dr. Harris. Dr. Harris referred Claimant to his family physician for follow-up. Claimant saw his family physician, Dr. Pattridge who felt that the proportional increase (velocity) of the PSA between 2007 and 2008 warranted a urological consultation and referred Claimant to Dr. Abernathy. Claimant underwent a biopsy on December 18, 2008 that showed he had clinically significant prostate adeno carcinoma. Dr. Abernathy referred Claimant to Johns Hopkins University where he underwent surgery on April 8, 2009.

11. Richard R. Augspurger, M.D., is an expert urologist. He is the medical director for The Urology Center of Colorado and has practiced medicine for more than 30 years. Dr. Augspurger has managed prostate cancer patients since 1973.

12. When asked to address the etiology of prostate cancer, Dr. Augspurger opined, "Most of them just occur spontaneously and we don't know the underlying cause. There are family histories of it where it runs through families. And then there are hereditary ones where there's a strong genetic component that runs through families." (8/12/11 hearing transcript (HT) p. 57 l. 25, p. 58 ll. 1-5). He further stated that the textbooks do not identify smoking or exposure to firefighting as a factor. (8/12/11 HT p. 58 ll. 7-9). He indicated that other risk factors for prostate cancer include a high fat diet, race, and vasectomy. (8/12/11 HT p. 60 ll. 17-25, p. 61 ll. 2-8, p. 89 ll. 1-9). When asked to explain the difference between hereditary and familial risk factors, Dr. Augspurger stated:

> If you look, we're going to take everybody who has prostate cancer and you have this big pool. Then you have another pool here and inside this pool is this. This is the prostate cancer that comes up and we don't know the cause, there's no family history, there's no genetics. And that's 85 percent of the cancers that we see. Then we have the cancers that run in families and that accounts for about 15 percent of all the cancers. And then inside that family, there are what are called the hereditary ones and that number is dependent on several factors. But if you have two family members who are less than 55 – this accounts for 43 percent of this 15 percent. So if you have two family members. So a diagnosis of familial cancer means that you have more than one person in a family that has prostate cancer.

(8/12/11 HT p. 58 ll. 17-25, p. 59 ll.1-5)

13. Dr. Augspurger opined that Claimant fell into the category between hereditary and familial. (8/12/11 HT p. 61 ll. 22-25). Dr. Augspurger testified that familial predisposition is a significant risk factor for prostate cancer. He further opined that the familial history is the most likely cause of Claimant's cancer. (8/12/11 HT p. 63 ll. 4-17). Dr. Augspurger does not believe that prostate cancer is firefighting caused or related. (8/12/11 HT p. 88). The ALJ finds Dr. Augspurger's opinions on causation to be less persuasive than the opinions of Dr. Mayer.

14. Dr. Augspurger persuasively testified that the practice of prostate cancer medicine has evolved since 2007. Dr. Augspurger opined that he "probably" would have ordered the biopsy when Claimant's PSA was 2.5 in 2007. (8/12/11 HT pg. 67 ll. 6-7)

15. Dr. Augspurger credibly explained that back in 1995 when claimant had a 1.3 PSA at age 35 that was considered "normal" because the PSA was below 2.5. Today physicians are suspicious of the existence of prostate cancer when a male who is under 50 years old has a PSA of more than 1.0. Dr. Augspurger persuasively testified that Claimant's 1.3 PSA at age 35 is suggestive that prostate cancer was present at that time. The normal PSA at age 35 should be less than 0.6. (Joint HS G)

16. Dr. Augspurger persuasively opined that it was medically probable that Claimant had prostate cancer in July 2007:

> I would say with a pretty good degree of medical probability that he had the cancer in 2007 and he probably had it in 2006. Because cancer is not just overnight you show up with cancer. So you start out with one cancer cell at some point. And depending on how fast it grows, you'll end up with a volume of cancer that's big enough to detect when you do a biopsy.

(8/12/11 HT, pg. 76 ll. 4-12)

17. Consistent with Dr. Augspurger, William Milliken, M.D., persuasively opined that it is medically probable that Claimant had prostate cancer in July 2007. Dr. Milliken is board certified in occupational medicine and Level II accredited. He has performed evaluations of hundreds of claims for assessment of whether occupational exposure to various materials was causally related to the development of various cancers. Dr. Milliken was accepted as an expert in occupational and environmental medicine.

18. Dr. Milliken testified that the firefighter statute should be limited to certain genitourinary cancers, such as kidney and/or bladder cancer, but not prostate. This is because "the path of destruction" from the chemicals involved in firefighting should not impact the prostate. (8/12/11 HT p. 107 ll. 3-25, p. 108 ll. 1-4). He did acknowledge a "weakly possible" occupational exposure contributing effect. Exhibit K, BS 166. He concluded that Claimant's carcinogenic exposure was not related to his occupation because he did not believe that carcinogens found in firefighting could impact the prostate.

19. Dr. Milliken disputes the Colorado Legislature's inclusion of the prostate gland as a covered cancer because the prostate gland is not significantly exposed to an excretory function (urine). Therefore, he believes that the statute's presumption is not supported by scientific evidence that there is a cellular interaction with prostate cell DNA. Exhibit K, BS 163.

20. Dr. Milliken agreed with Dr. Mayer that in many cases the cause of cancer is unknown.

> "A. Yes, I can. I would agree with the doctors that have all I think testified including Dr. Mayer that in many cases we don't have the precise cause of many cancers. And this is not unusual for a large number of cancers. The determination of most likely cause is based on probability or you know what does the majority of or the overwhelming percentage of the evidence suggest would be the cause.
>
> . . .
>
> So based on that probability analysis if you will when I look at genetic risk as 2 or 300 to 500 times increase in risk for prostate cancer as compared to someone without the genetic history, that to me in a very simple manner is clearly the chief risk factor. And while it may not be the sole cause or they (sic) may be other factors involved, I can't identify from that large group of other risk factors which one, if any, was the significant co-conspirator if you will or co-contributor to carcinogenesis or the development of prostate cancer. I don't know that - - I don't know that anybody could."

(8/12/11 HT p. 110 ll. 4-25, p. 111 ll. 1-5).

21. Dr. Milliken concluded, "[I]t was the familial or genetic risk that was the most prominent risk factor for prostate cancer." (8/12/11 HT p. 111 ll. 12-14). Dr. Milliken's opinions on causation are less persuasive that the opinions of Dr. Mayer.

22. Dr. Annyce Mayer was accepted as an expert in occupational medicine and public health. Dr. Mayer persuasively testified that Claimant had contracted genitourinary cancer or prostate cancer, had completed more than 5 years of firefighter service, and had undergone physical examinations at the time of becoming a firefighter and thereafter, which failed to reveal substantial evidence of the presence of prostate cancer. Therefore, Claimant has met the statutory threshold requirements set forth in § 8-41-209, C.R.S.

23. Dr. Mayer persuasively opined that the medical evidence presented by Respondents failed to demonstrate that Claimant's prostate cancer did not occur as a result of his job. She testified that although the exact cause of Claimant's prostate cancer is unknown, Claimant's cancer is likely the result of the synergistic interaction between familial factors and his occupational exposures as a firefighter. The ALJ finds Dr. Mayer's opinion in this regard to be credible and persuasive.

24. Dr. Mayer relied on published articles establishing that the risk of prostate cancer is influenced by the age of relatives in the first degree who had been diagnosed with cancer. Claimant's father was 69 or 70 when he was diagnosed and his uncles were between the ages of 69-71 when they were diagnosed with prostate cancer. Thus, Claimant's diagnosis at a much younger age indicates that other factors, including occupational exposures, combined with familial risk and unknown genes to create prostate cancer.

25. Dr. Mayer opined that Claimant's younger onset of prostate cancer was not consistent with a familial history of his other first-degree relatives. Further, of forty-two relatives in the first and second degree, only seven had some level of prostate cancer. Further, his older brother does not have prostate cancer, and his sister has not suffered from any type of cancer.

26. Dr. Mayer testified that recent epidemiological studies have demonstrated a nexus between exposure to polyaromatic hydrocarbons and the early development of cancer in individuals who were predisposed by heredity to the development of cancer. Although these studies have not defined the precise causal relationship, they provide support for the proposition that there is a relationship between an early onset of prostate cancer in individuals who are exposed to carcinogens and who have a hereditary predisposition.

27. Dr. Noel Weiss testified at the August 12, 2011 hearing as a joint witness for all Respondents. He is an epidemiologist and professor at the University of Washington in Seattle. Dr. Weiss was accepted as an expert witness in the area of epidemiology. (8/12/11 H.T. p. 13-16).

28. Dr. Weiss stated that "a strong family history predisposes to the incidence of prostate cancer. The specific means by which that operates in not known." (8/12/11 H.T. p. 46 ll. 19-21).

29. Dr. Weiss opined that it is premature to conclude that firefighting could lead to an increased risk of prostate cancer. (8/12/11 H.T. p.25, ll.12-17). Dr. Weiss stated that a person with a family history of prostate cancer is at a sharply increased risk of prostate cancer. (8/12/11 H.T. p. 26, ll. 2-8).

30. Dr. Weiss also provided testimony regarding a document prepared by a "working group" of the International Agency for Research on Cancer. This agency convenes these working groups to make judgments as to the likelihood that a particular occupation or substance is carcinogenic in human beings. Dr. Weiss explained that the International Agency specifically reviewed firefighting several years ago and found that the epidemiologic data on the relationship between cancer and firefighting was "limited" and that it was only "possible" that firefighting is a cause of cancer of any type. Dr. Weiss agreed that there is a possibility that firefighting is a cause of cancer but did not believe it was reasonable to opine beyond that *i.e.* opine based on probability. (8/12/11 H.T. p. 28, ll.19-25-p.29, ll.1-12).

31. Dr. Weiss opined within a reasonable degree of epidemiologic and medical probability that it was medically probable that Claimant would have developed prostate cancer even if he never served as a firefighter. (8/12/11 H.T. p. 29 ll.20-25 to p. 30, ll.1-2).

32. Dr. Weiss stated that when trying to gauge which is the more likely explanation for the cause of Claimant's prostate cancer, one is three times more likely to contract prostate cancer as a result of family history when compared to the 28% increased risk for firefighters to contract prostate cancer indicates that the larger figure would constitute the more likely explanation. (8/12/11H.T. p. 36 ll. 12-25, p.37, ll. 1-22).

33. Dr. Weiss opined that Claimant's cancer was not caused by firefighting but was caused by his familial predisposition. (8/12/11 H.T. p. 30, ll.1-13). The ALJ finds Dr. Weiss's opinions on causation to be less persuasive than the opinions of Dr. Mayer.

34. According to the persuasive and consistent testimony of Drs. Milliken and Augspurger, given Claimant's PSA between 2.5 and 2.8 at age 47 which increased from the 1.3 PSA Claimant had at age 35, it is medically probable that Claimant had prostate cancer in July 2007, before he went to work for Parker and South Metro.

35. Drs. Milliken and Augspurger also agree that Claimant's medical treatment following a biopsy positive for prostate cancer in July 2007, would have been identical to the treatment Claimant underwent after his official diagnosis. (8/12/11 HT p. 68 ll. 16-25, p. 69 ll. 1)

36. Dr. Augspurger persuasively opined that there is no medical literature to suggest that once the prostate cell has undergone malignant transformation, exposure to carcinogens would directly affect the cells or have any influence on the progression of the disease. In other words, once a male has prostate cancer, exposure to carcinogens will not alter, aggravate, or change the course of the prostate cancer. (8/12/11 HT, p. 69 ll. 2-9)

37. Dr. Milliken agreed that once a person has prostate cancer, the cancer has a natural progression and it is unlikely that subsequent firefighting exposures would have been significant in altering the course of Claimant's prostate cancer that likely existed in July 2007. (8/12/11 HT, pg. 167-168)

38. The ALJ finds the opinions of Dr. Augspurger and Dr. Milliken, that Claimant more likely than not had prostate cancer in July 2007 and the course of the prostate cancer was not aggravated or accelerated by carcinogen exposures or firefighting duties after July 2007, to be credible and persuasive and found as fact.

39. In passing § 8-41-209, C.R.S., the Legislature had the benefit of the expert opinion of Dr. Virginia Weaver, a specialist in the field of occupational medicine practicing at Johns Hopkins University. Dr. Weaver informed the Legislature that firefighters face an increased risk of cancer due to their occupational exposure and that these risks were frequently underestimated. She also testified that the presumption statute was needed because there is a significant challenge to determining exposure

assessment for firefighters, a challenge which is more difficult than in a controlled manufacturing setting. Nevertheless, firefighters are exposed to significant hazards which give rise to the need for increased protection.

40. Claimant met the threshold requirement of § 8-41-209. Therefore, his prostate cancer is occupationally related.

41. Respondents have failed to establish by a preponderance of the medical evidence that Claimant's prostate cancer did not occur on the job.

42. The persuasive medical evidence supports a finding that Claimant more likely than not had prostate cancer in July 2007 while employed by Golden.

43. The persuasive medical evidence supports a finding that Claimant's cancer was not caused, aggravated, or accelerated by Claimant's employment with Parker which began in September 2007 or with South Metro which began on January 1, 2009. The persuasive medical evidence also does not support a finding that Claimant had cancer during his employment with Castlewood from 1998 to 2001.

44. Claimant became disabled when he began losing time from work after his prostate cancer surgery on April 8, 2009.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S.

2. In deciding whether a party to a workers' compensation dispute has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Kroupa v. Industrial Claim Appeals Office,* 53 P3d 1192, 1197 (Colo. App. 2002). ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. lCAO,* 55. P.3d 186 (Colo. App. 2002). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and or actions; the motives of a witness; whether the testimony has been contradicted; and bias, prejudice or interest. *See Prudential ins. Co. v. Cline,* 57 P.2d 1205 (1936); CJI (2005).

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a

conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

4. Section 8-41-209 (the "firefighter cancer statute") provides:

> (1) Death, disability, or impairment of health of a firefighter of any political subdivision who has completed five or more years of employment as a firefighter, caused by cancer of the brain, skin, digestive system hematological system or genitourinary system and resulting from his or her employment as a firefighter, shall be considered an occupational disease.
>
> (2) Any condition or impairment of health described in subsection (1) of this section:
>
> (a) Shall be presumed to result from a firefighter's employment if, at the time of becoming a firefighter or thereafter, the firefighter underwent a physical examination that failed to reveal substantial evidence of such condition or impairment of health that preexisted his or her employment as a firefighter; and
>
> (b) Shall not be deemed to result from the firefighter's employment if the firefighter's employer or insurer shows by a preponderance of the medical evidence that such condition or impairment did not occur on the job.

5. "Proof by a preponderance of the evidence requires the proponent to establish that the existence of a 'contested fact is more probable than its nonexistence.'" *Jimenez-Chavez v. Cargill Meat Solutions*, W.C. No. 4-704-536 (ICAO, October 2008); *see Page v. Clark*, 592 P.2d 792 (Colo. 1979).

6. In general, "medical probability" or "more likely than not" means more than 51%. That is, the existence of a contested fact is greater than 50% likely.

7. Once the firefighter has met the threshold requirements of the firefighter statute, the burden shifts to Respondents to prove by a preponderance of the medical evidence that the firefighter's cancer was not caused by his or her employment.

8. The firefighter cancer statute has been the subject of significant litigation and appellate caselaw since its passage. The definitive interpretation of the statute was recently provided by the Supreme Court in *City of Littleton v. Industrial Claim Appeals Office*, 370 P.3d 157 (Colo. 2016). Although this claim was originally remanded for reconsideration of compensability under the Court of Appeals decision in the *City of Littleton* case, 2016 CO 25, the ALJ will apply the standards subsequently enunciated by the Supreme Court.

9. In *City of Littleton, supra,* the Supreme Court held that the statutory presumption embodied by § 8-41-209(2) "is substantive in that it remains in the case as a substitute for evidence." *Id*. at 165. But the court emphasized that the statutory presumption "is not conclusive, or irrebuttable." *Id*. at 168. The employer can overcome the presumption by proving, by a preponderance of the medical evidence, that the firefighter's cancer "did not occur on the job." *Id*. at 165. Nevertheless, the employer faces a "formidable" burden, "because the employer is tasked with proving a negative." *Id*. at 172.

10. *City of Littleton* clarified the types of evidence the employer can use to rebut the statutory presumption and prove that a firefighter's cancer is not work-related. The employer may attempt to meet its burden either with evidence addressing "general causation" or evidence regarding "specific causation." The court stated "the employer may establish, by a preponderance of the medical evidence, either: (1) that a firefighter's known or typical occupational exposures are not capable of causing the type of cancer at issue; or (2) that the firefighter's employment did not cause the firefighter's particular cancer, where, for example, the claimant firefighter was not exposed to the cancer-causing agent, or where the medical evidence renders it more probable that the cause of the claimant's cancer was not job-related." *Id*.

11. Drs. Weiss and Augspurger dispute the scientific validity of the Colorado Legislature's presumption that firefighting could give rise to an occupational disease claim. Dr. Milliken conceded the validity of the Legislature's presumptive language but did not agree that prostate cancer should be included. Despite *LeMasters*, Dr. Milliken disputes the scientific/medical validity of the Colorado Legislature's inclusion of prostate cancer as a presumptive cancer under the statute.

12. Drs. Weiss, Augspurger, and Milliken opined that the cause of prostate cancer is "unknown." Rather than attempt to prove a specific, alternative exposure or causal agent that would account for Claimant's cancer, Respondents focused on the relative risk of Claimant's familial history of prostate cancer as compared to the risk associated with firefighting.

13. *Industrial Claim Appeals Office v. Town of Castle Rock*, 370 P.3d 151, 157 (Colo. 2016), a companion case to *City of Littleton*, held that an employer "is not required to prove a specific alternate cause of the firefighter's cancer." The court further held that the employer may rely on "particularized risk-factor evidence" to prove that a firefighter's cancer is not related to his employment.

14. The ALJ is persuaded by Dr. Mayer's opinion that Claimant's "familial" predisposition does not constitute a preponderance of the medical evidence that his prostate cancer did not occur on the job. The experts testified to several risk factors for prostate cancer, including increased risk associated with working as a firefighter. The medical experts all agree that familial predisposition is risk factor. But the Claimant's increased risk of prostate cancer from familial predisposition does not diminish firefighting's causal role in the development of the disease.

15. The evidence regarding Claimant's familial predisposition does not persuade the ALJ that Claimant's cancer is not work-related. Dr. Mayer persuasively explained that there is a synergistic relationship between familial risk and Claimant's occupational exposures. Dr. Mayer testified:

> [W]here medicine is really kind of going is looking at gene by environment interactions. And we talk about how the genes load the gun and it's the environment that pulls the trigger. In so it really is most medically appropriate to consider that risk is determined not only by family history because if it were by family history, Uncle Tom, his brother, and the rest of his male cousins would also have prostate cancer. So it's a combination of genetic and environmental risk factors, not all of which we can identify, that determine risk in a particular individual.
>
> (7/1/11 HT, pp. 46-47 ll 20-25, 1-5).
>
> . . .
>
> [W]hat we're finding more and more is the gene by environment interaction where it's those people who already have the predisposition who are more susceptible to effect from an exposure.
>
> (8/12/11 HT, p. 188 ll. 19-22).

16. In accordance with *Town of Castle Rock*, *supra*, the ALJ has carefully considered the evidence of familial and other non-occupational risk factors presented by Respondents. The ALJ appreciates the opinions of Respondents' experts on this complex issue, but finds the opinions and testimony of Dr. Mayer to be more persuasive regarding the cause of Claimant's cancer.

17. Based on the totality of the evidence, the ALJ concludes that Respondents failed to prove by a preponderance of medical evidence that Claimant's cancer did not occur on the job. Therefore, Claimant's prostate cancer is occupationally related and compensable under § 8-41-209.

18. Claimant developed prostate cancer in July 2007 when he was employed by Golden. The need for medical treatment including surgery was causally related to Claimant's employment with Golden as a firefighter. Claimant's firefighting exposures after July 2007 did not aggravate or accelerate his prostate cancer or alter the course of treatment. Golden and its carrier are solely responsible for Claimant's medical treatment.

19. Onset of disability is defined as the time when Claimant's occupational disease either impairs his ability to effectively and properly perform his regular employment or renders him incapable of returning to work except in a restricted capacity. *See Ortiz v. Murphy*, 964 P.2d 595 (Colo. App. 1998).

20. It is well established that, although the onset of disability is important for several purposes, it does not determine or establish the existence of a compensable occupational disease claim in the first instance. *Wal-Mart Stores, Inc. v. ICAO*, 989 P.2d 251 (Colo. App. 1990) (holding that, “although the date of disability may be important for certain purposes such as determinations involving award of disability benefits or other situations in which the date of disability directly effects the Claimant’s benefits, a Claimant suffering from an occupational disease is nevertheless entitled to reasonable necessary medical benefits even if the disease has not yet become disabling)”. See also *Leming v. ICAO*, 62 P.3d 1015 (Colo. App. 2002); *Vigil v. United Parcel Service*, W.C. No. 4-724-653 (ICAO, 5/19/08); *Thomas v. Target Corporation, Inc.*, W.C. No. 4-683-268 (ICAO, 6/29/07).

21. Claimant’s onset of disability is April 8, 2009, when he underwent prostate cancer surgery at John Hopkins University.

ORDER

It is therefore ordered that:

1. Claimant sustained a compensable occupational disease, prostate cancer, as a result of his employment with Golden.

2. Golden and its carrier are solely liable for Claimant’s medical benefits.

3. Golden shall pay for reasonable, necessary and related medical treatment from authorized providers related to Claimant’s prostate cancer, including treatment Claimant received at Johns Hopkins University.

4. Pursuant to stipulation of the parties, Claimant is entitled to maximum average weekly wage on date of onset of disability, April 8, 2009.

5. Temporary disability benefits, and all other issues not explicitly determined herein, are reserved for future determination.

If you are dissatisfied with the Judge’s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 4, 2016

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge

STIPULATION

The parties reached the following stipulation:

Depending on the ALJ's determination regarding whole person impairment, Claimant's indemnity benefits may be limited by the statutory benefit cap pursuant to Section 8-47-107.5, C.R.S. If applicable in this case, the statutory benefit cap limits temporary disability and permanent partial disability benefits to $81,435.67.

This stipulation was accepted and approved by the ALJ.

ISSUES

The issues presented for hearing are:

1. What is the true opinion of the Division IME Dr. Joseph Fillmore regarding Claimant's permanent medical impairment?

2. Which party has the burden to overcome the Division IME opinion regarding permanent medical impairment by clear and convincing evidence?

3. Has the party with the burden to overcome the Division IME opinion regarding permanent medical impairment by clear and convincing evidence met their burden?

4. If the Division IME physician's opinion has been overcome, what is Claimant's permanent medical impairment?

5. Claimant withdrew the issue of medical maintenance benefits.

FINDINGS OF FACT

1. Claimant's date of birth is March 22, 1973 and he was 43 years old at the time of both hearings.

2. Claimant was employed as a firefighter by Employer from August 1, 2000 to August 12, 2015 (Respondent's Exhibit M, p. 240).

3. Claimant sustained an admitted work-related injury to his low back on January 11, 2015, when he was demonstrating to his colleagues how to lift a person on

a backboard. Claimant squatted down to lift the backboard and felt tightness in his low back.

4. Claimant was taken to St. Anthony Hospital North on January 12, 2015. The January 12, 2015 CT of the lumbar spine showed a large right paracentral disc herniation at the L4-L5 level. The January 12, 2015 MRI of the lumbar spine showed multilevel degenerative changes and a right central focal disc herniation at L4-L5 that was traversing the right L5 nerve root.

5. On January 19, 2015, Claimant underwent a right L4/5 hemilamynectomy, decompression of neural elements and microdiskectomy performed by Dr. Darbi Invergo (Claimant's Exhibit 7).

6. On February 19, 2015, Claimant underwent a left sacroiliac joint steroid injection under fluoroscopy with Dr. Brian Wernick (Claimant's Exhibit 8).

7. Katherine Drapeau, DO became Claimant's authorized treating physician. She provided post surgical treatment to include pain medications, dry needling, physical therapy, chiropractic treatment, and psychological treatment for pain management (Respondent's Exhibit E).

8. On March 19, 2015, Dr. Drapeau stated that Claimant was 50% better, was scheduled for physical therapy and placed on work restrictions (Respondent's Exhibit E, p. 073).

9. On March 26, 2015, Dr. Drapeau noted that Claimant had increased pain complaints after working 5 hours sitting at a desk. She noted that Claimant rated his pain at a 6/10 and was 50% worse. She removed him from work from March 26-April 2, 2015 (Respondent's Exhibit E, p. 075).

10. On April 2, 2015, Dr. Drapeau noted that Claimant rated his pain at 4-5 and "expresses concerns that he may never be strong enough to go back to work full duty, or that he will rupture the rest of his disk at a critical time during a fire. This thought has been very bothersome to him." Dr. Drapeau released him to work 4 hours per day with restrictions (Respondent's Exhibit E, p 079).

11. On April 16, 2015, Dr. Drapeau referred Claimant to massage therapy, physical therapy, and Dr. Carbaugh (Respondent's Exhibit E, p 081).

12. On May 8, 2015, Dr. Drapeau noted that Claimant complained of constant pain at a 5/10 to 6/10 "that is debilitating to him." She noted that Dr. Warnick provided an injection. She recommended a MRI (Respondent's Exhibit E, p 084).

13. On May 21, 2015, Dr. Drapeau noted that Dr. Warnick's injection was not helpful. The May 20, 2015 MRI showed enhancing epidural scar noted along the right

lateral and anterolateral margin of the thecal sac at L4-5. She referred Claimant to Dr. Samuel Chan for a second opinion (Respondent's Exhibit E, p 087).

14. On June 12, 2015, Dr. Chan evaluated Claimant and stated, "At this juncture, he is upset with the fact that he will be having chronic pain. He will most likely not be able to return back to full duty as a fire fighter. He most likely is thinking about retirement after his case is at maximum medical improvement. . . At this juncture, the patient notes that he would like to conclude his medical care." Dr. Chan recommended a FCE and follow up appointment (Respondent's Exhibit C, p 040).

15. On June 17, 2015, Claimant returned to Dr. Drapeau. She noted that Claimant had seen Dr. Chan who scheduled an FCE on July 15, 2015 and a follow up appointment with Dr. Chan on July 22, 2015. Dr. Drapeau stated that Claimant continued to complain of pain between 7/10 and 9/10 and an 8/10 at the appointment. She continued medication, physical therapy and work restrictions (Respondent's Exhibit E, pp. 089-90).

16. On July 24, 2015, Claimant returned to Dr. Chan who documented that Claimant had a FCE on June 16, 2015 and experienced an exacerbation of his pain complaints. A MRI with gadolinium was ordered. Dr. Chan stated: "the patient noted that he still has a significant amount of pain complaint and he has since been able to do less because of the FCE. He currently described his pain is axial in the lumbar spine area and he described that his pain is between 7/10 - 8/10. He discussed that this is greatly concerning to him." Dr. Chan further noted that the range of motion measurements were invalid and recommended Claimant return for additional testing after the MRI (Respondent's Exhibit C, p 043).

17. On August 14, 2015, Dr. Chan stated: "The patient noted that the main complaint is still rather severe and significant. As of today, he described that his pain is at 7/10. It is radiating down to the entire right lower extremity. Since he was most recently seen on a July 24, 2015, he was unable to do any kind of activities and (sic) all and his functional level is actually declining." Dr. Chan reported, "The patient was in mild-to-moderate acute distress. He lies down on the examining bed the majority of the time." Dr. Chan spent 45 minutes reviewing surveillance video taken on July 16, 17 and 24, 2015, and stated, "This showed that the patient's functional level was unlimited. He did not have any imitation or hesitation or distress. This is significantly different than the patient's presentation during his clinical visits. The differences observed between the appearance on the video surveillance and his clinical presentation is rather concerning. There appears to be a very unsophisticated attempt to misrepresent his symptoms. Conscious misrepresentation is the definition for malingering. Given the unlimited nature of functional level that was demonstrated on video surveillance, it is felt that the patient should be able to return his previous occupation without any difficulties. Even though the patient did have a functional capacity evaluation obtained, the function capacity evaluation is based on the patient's volitional and voluntary involvement. Since the patient's credibility is called into question, the patient is definitely not trustworthy enough to offer a valid FCE. Thus,

based on the observed video surveillance footage, the patient should be able to return to his previous occupation without any difficulties." Dr. Chan further stated, "The patient's lumbar range of motion is rather fluid and in fact on the surveillance video, there was one occasion in which the patient was able to bend at a 90 degree angle in the lumbar spine area for more than four minutes to re-arrange grocery items in the back of his pick up truck. He demonstrated the ability to bend freely to pick up jugs of milk and orange juice. Again, this is very different than when the patient was being measured on the very same day of the video footage on July 24, 2015. Since range of motion measurements are based on voluntary effort only and based on the honor system, and the patient demonstrated discrepancy when being observed and when he thought that he was not being observed, once again, his credibility is definitely called into question. At this point in time, impairment rating, the patient has had two measurements and continues to demonstrate rather invalid measurements, so there would be no impairment rating based on range of motion measurements." Dr. Chan gave 8% permanent medical impairment pursuant to Table 53 for Claimant's surgery (Respondent's Exhibit B, pp. 045-046).

18. On August 20, 2015, Dr. Drapeau noted that Claimant experienced more pain after the FCE that has not subsided. Claimant reported pain as 6/10 to 7/10. Dr. Drapeau called Dr. Chan who informed her that the impairment measurement for the lumbar spine were invalid on two different occasions and therefore Dr. Chan was not giving a range of motion rating. She noted that Dr. Chan gave an impairment rating for the surgery. Dr. Drapeau noted that Claimant did not have any permanent restrictions and was at MMI on August 14, 2015. Claimant was discharged from care at that time (Respondent's Exhibit E, p 094).

19. Dr. Joseph Fillmore performed a Division IME on December 31, 2015. Dr. Fillmore opined that Claimant was at MMI on August 14, 2015 and assigned 10% permanent medical impairment pursuant to Table 53 of the AMA Guides and 11% impairment for loss of range of motion for a combined impairment of 20%. He noted that Dr. Chan had reviewed surveillance video but could not comment on the films without personally viewing them (Respondent's Exhibit A).

20. Dr. Fillmore's deposition was taken on June 15, 2016. Dr. Fillmore reviewed the surveillance videos and when asked specifically about Claimant's activities on the July 24, 2015 video, Dr. Fillmore stated, "He does not appear to be in acute distress, which I would expect from someone who has a pain of seven or eight over ten." (Transcript deposition p. 28, ll. 20-22)

21. When asked about range of motion impairment, Dr. Fillmore testified:

> Q. So that's what I'm asking you at this point in time. You saw the surveillance tape on the same day that the range of motion was done for Dr. Chan where he tried to present with significant problems. Now you've got what you've deemed as valid range of motion. You've reviewed the surveillance. What's your opinion on the issue?

A. I'm agreeing with Dr. Chan.

Q. So you would agree there's no range of motion loss, correct?

A. I can't say that. I would agree that the range-of-motion measurements are inconsistent with what was demonstrated on the video.

Q. Okay. So at this point in time, Dr. Chan's giving a zero percent for range of motion; you would have to agree with him on that?

A. I would agree with that.

(Transcript of deposition p. 34 ll. 11-25 – p. 35 ll.1-2)

22. When asked about permanent medical impairment for specific disorders of the spine, Dr. Fillmore testified:

Q. What about the specific disorder part of this, the 8 to 10 percent? Do you agree with Dr. Chan? Or do you agree with the 10 percent that you gave?

A. Well, it's hard to say that. I'd have to prove the patient didn't have any pain. You know, so I don't know quite how to answer that. I don't have a problem with the 8 percent, the way he did it. But I don't have a problem with the 10 percent either.

Q. So it really comes down to whether the claimant has pain?

A. Yes.

Q. You, as a doctor, aren't in a position to –

A. It's hard to tell. You just use your best judgment when you evaluate a patient.

Q. So it really comes down to whether subjectively he has that pain or not?

A. Yes. And, again, what you see documented through the records.

(Transcript of deposition p. 35 ll. 3-21)

23. When asked to combine his 10% rating with Dr. Chan's 3% range of motion, Dr. Fillmore said that would total 13%. (Transcript of deposition p. 44, ll. 15-22)

24. Having reviewed his report and deposition, Dr. Fillmore's true opinion is that Claimant has 10% permanent medical impairment pursuant to the AMA Guides Table 53 II E. Dr. Fillmore's true opinion is that Claimant has no permanent medical impairment for loss of range of motion.

25. At the July 20, 2016 hearing, Claimant testified that he heard an audible pop in his back when he picked up a box at the FCE, and experienced numbness down the backside of his leg. (7/20/16 Hearing Transcript p. 51)

26. At the July 20, 2016 hearing, Claimant testified that he did not tell Dr. Chan on July 24, 2015 that he was in severe pain. Claimant further testified that he did not tell Dr. Chan on that date that he was unable to perform any kind of activities. (7/20/16 Hearing Transcript pp. 67-70)

27. Dr. Ronald Swarsen was accepted as an expert in the field of occupational medicine and Level II accreditation. Dr. Swarsen testified at the July 20, 2016 hearing that the difference between 8% and 10% permanent medical impairment pursuant to the AMA Guides Table 53 II is that 10% compensates for pain. (7/20/16 Hearing Transcript p. 110)

28. Dr. Swarsen also testified that physicians have the discretion to not give a range of motion impairment rating if they have concerns based on surveillance, invalid range of motion testing, or other information. (7/20/16 Hearing Transcript pp. 114-115)

29. Dr. Chan was accepted as an expert in physiatry and Level II accreditation at the August 19, 2016 hearing. When asked to explain the differences between the sacral range of motion testing done in his office on July 24, 2015 with the surveillance video taken that day, Dr. Chan explained:

> At 10:45 a.m. it was observed that he was reaching over the railing of flatbed truck above shoulder level with o hesitation or no distress, and later on in the morning he was observed reaching into the flatbed of the truck into a cooler while he was standing on the ground and he was unloading groceries without any issues. He was able to reach into the flatbed of the truck without any issues or problems. He was able to bend over to pick up orange juice. It was very fluid range of motion. And he was also observed to stand on just one leg only to reach inside the flatbed of the truck to rearrange the contents. And later on in the afternoon at 1:38 p.m. he climbed into the flatbed of the truck using his right leg to climb up and then using his right arm to pull up, and he was bent at the waist at 90 degrees and stays in that position for about four minutes.
>
> (8/19/16 Hearing Transcript p. 175, ll. 7-24)

30. Dr. Chan further testified:

> Well, the foundation of the rating is basically pain, and it's a self-reported. And it's basically really an honor system. You basically take the patient's word for it and says (sic) I am going to rate this. And there are some validity measures that are built in and whatnot. However, at the end of it (sic) still a medical assessment, and the Guides clearly say that we have to use all the information to make an analysis of this case.
>
> (8/19/16 Hearing Transcript p. 179, ll. 2-10)

31. Dr. Chan opined that due to the substantial discrepancies between Claimant's complaints and Claimant's actions shown on the surveillance videos, he did not assign a range of motion rating and did not believe Claimant qualified for a 10% impairment rating under the AMA Guides Table 53 II E because his pain complaints lacked credibility.

32. Dr. Chan's testimony concerning Claimant's permanent medical impairment is credible and persuasive. Dr. Chan's description of the surveillance is consistent with the ALJ's impression of the videos. Dr. Chan did not agree with Dr. Fillmore's 10% permanent impairment rating pursuant to AMA Guides Table 53 II E because he did not believe Claimant's pain complaints were credible. However, Dr. Chan did not state that Dr. Fillmore's rating was in error or not in compliance with the AMA Guides. The ALJ finds Dr. Chan's permanent medical impairment opinion a difference of opinion and does not rise to the level of clear and convincing evidence.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. §8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

ALJ Clarification of Conflicting Opinions Issued by the DIME Physician and Burden of Proof to Overcome the Opinion of a DIME Physician

The DIME physician's findings include his or her subsequent opinions, as well as his or her initial report. *Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328, 330 (Colo. App. 2005). If a Division IME physician issues conflicting or ambiguous opinions concerning whether the claimant's condition is work-related or there is an impairment rating, it is the ALJ's province to determine the Division IME's true opinion as a matter of fact. Once the ALJ clarifies the ambiguous opinion regarding these issues, the party seeking to overcome that opinion bears the burden of proof by clear and convincing evidence. The Division IME's opinions, therefore, must be overcome by clear and convincing evidence even if the opinion is arguably initially ambiguous. Section 8-42-107(8)(b)(III); *Clark v. Hudick Excavating*, W.C. No. 4-524-162 (November 5, 2004); *MGM Supply Co. v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002); *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). Clear and convincing evidence is that which is "highly probable and free from serious or substantial doubt." Thus, the party challenging the DIME physician's finding must produce evidence contradicting the DIME which is unmistakable and free from serious or substantial doubt showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015 (Colo. App. 2002).

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. C.R.S. § 8-42-101(3.7); C.R.S. §8-42-107(8)(c). Ultimately, the questions of whether the DIME physician properly applied the AMA Guides, and whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000). Not every deviation from the rating protocols of the AMA Guides requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Adams v. Manpower, supra*. Moreover, a mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

As found, Dr. Fillmore provided the Claimant with a 10% whole person permanent medical impairment rating for his one level surgically treated disc herniation pursuant to the AMA Guides Table 53 II E. That section permits a 10% whole person rating where there is a surgically treated disc with residual medically documented pain. In his deposition, Dr. Fillmore stated that he did not have a problem with Dr. Chan's 8% rating, but he did not affirmatively change his rating from 10% to 8%. Dr. Fillmore testified that he couldn't prove that Claimant did not have pain and had to use his best judgment when evaluating a patient. Dr. Fillmore further stated that he also considered what was documented throughout the records. Additionally, Dr. Fillmore opined, after reviewing the surveillance videos, that Claimant was not entitled to a range of motion impairment rating, which he had assigned 11% in his report. Therefore, the true opinion of the Division IME, Dr. Fillmore is that Claimant sustained 10% permanent medical impairment.

The Respondent's Challenge to the DIME Physician's 10% Permanent Medical Impairment Rating

The Respondents propose that Dr. Fillmore changed his rating to 8% whole person permanent medical impairment pursuant to the AMA Guides Table 53. The ALJ specifically rejected this argument as explained above. Therefore, it is the Respondent's burden to overcome the DIME's 10% rating by clear and convincing evidence.

The authorized treating physician, Dr. Chan, extensively explained his rationale for assigning 8% impairment pursuant to Table 53 II D rather than 10% pursuant to Table 53 II E. Dr. Chan explained that Claimant's complaints are not credible because they are inconsistent with the surveillance videos. While Dr. Chan's opinions are credible and persuasive, they are a difference of opinion and do not rise to the level of clear and convincing evidence. Dr. Chan did not opine that Dr. Fillmore was in error in his 10% impairment assignment or that Dr. Fillmore's rating was not consistent with the AMA Guides. Therefore, Respondent has failed to overcome the DIME opinion of Dr. Fillmore on the issue of impairment.

The Claimant's Challenge to the DIME Physician's Impairment Rating which Failed to Include Rating for the Claimant's Loss of Range of Motion

The Claimant also seeks to overcome the DIME opinion of Dr. Fillmore insofar as it does not provide a range of motion rating. Dr. Fillmore declined to give Claimant a range of motion rating based on his view of the surveillance videos. The authorized treating physician, Dr. Chan, also decided not to provide Claimant with a range of motion rating based on his review of the surveillance videos. The videos clearly show that Claimant was capable of performing motions that he stated to the physicians he was not able to do. Dr. Swarsen testified that the range of motion testing performed by Dr. Fillmore were in compliance with the AMA Guides and valid. Dr. Swarsen also testified that Dr. Chan's range of motion tests supported a 3% loss of range of motion rating. However, Dr. Chan, Dr. Swarsen and Dr. Fillmore agreed that the rating physician has discretion not to provide a range of motion rating based on their evaluation and assessment. Dr. Swarsen did not opine that Dr. Fillmore was in error or not in compliance with the AMA Guides when he chose not to provide a range of motion rating. Claimant failed to overcome the DIME's rating by clear and convincing evidence.

ORDER

It is therefore ordered that:

1. The true opinion of the DIME physician based on a review of his report and testimony is that Claimant was entitled to a 10% impairment rating pursuant to the AMA Guides Table 53 II E.

2. The Respondent failed to overcome the DIME opinion by clear and convincing evidence that the Claimant is entitled to 8% whole person impairment rating.

3. The Claimant failed to overcome the DIME opinion by clear and convincing evidence that he is entitled to 20% impairment rating which includes impairment for loss of range of motion.

4. Respondent shall pay Claimant permanent disability benefits based on 10% whole person permanent medical impairment.

5. Respondent shall be given credit for sums previously paid for PPD.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 633 17th Street, Suite 1300, Denver, Colorado, 80202. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 3, 2016

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

PRELIMINARY ISSUE

1. Whether the applicability of a safety rule violation is an issue ripe and ready to proceed to hearing.

The Claimants assert that pursuant to O.A.C.R.P. 12, parties must appraise the ALJ prior to hearing of the issues and affirmative defenses to be determined by endorsing issues and affirmative defenses in either the application for hearing or the response to application for hearing or by agreement of the parties or pursuant to a judge's order. The Claimants further assert that affirmative defenses must be explicitly pled and that penalties for an employee's willful failure to use a safety device or willful failure to follow a reasonable safety rule are affirmative defenses, and therefore, must be specifically pled or they are waived. The Claimants argue that the Respondents failed to endorse affirmative defenses pursuant to § 8-42-112(1)(a) & (b), C.R.S., in any of the multiple responses to applications for hearing filed in this matter. Respondents did not seek the Claimants' agreement to add the issue or a judge's order allowing them to add the issue for good cause shown subsequent to filing their most recent responsive pleading. Claimant RH further argues that he sought information through discovery regarding the penalties being taken in Respondents' General Admission of Liability pursuant to § 8-42-112, C.R.S. and Respondents objected to providing complete information in response to Claimant RH's discovery requests.

It is the position of the Respondents that, through the Fatal Case - General Admission, Respondents specifically asserted a safety rule violation. Respondents further argue that by Claimant MH endorsing death benefits as an issue for hearing (even though they are being paid through the admission), it is clear that the safety rule violation issue was understood. Otherwise there would be no reason for Claimant MH to proceed in the case disputing benefits paid. Respondents also note that discovery was completed regarding the safety rule violation and multiple documents acknowledged that the asserted safety rule violation was a disputed issue for the set hearing.

Waiver is the intentional relinquishment of a known right. A waiver must be made with full knowledge of the relevant facts, and the conduct should be free from ambiguity and clearly manifest the intention not to assert the right. *Johnson v. Industrial Commission, supra*; *Department of Health v. Donahue,* 690 P.2d 243 (Colo. 1984). In this case, the Respondents did clearly assert the safety rule violation on the Fatal Case – General Admission and took the penalty deduction per calculations of the benefits owed. There was considerable correspondence and multiple motions mentioning the safety rule violation. In addition, all parties indicated that they were prepared to proceed on the safety rule violation at the commencement of the hearing. The ALJ finds that the totality of the evidence shows that the parties understood that safety rule violation was an issue for hearing.

ISSUES

The issues for determination are:

1. Whether the Claimant RH is entitled to death benefits under the Workers' Compensation Act of Colorado as a dependent widower of the Decedent under the doctrine of common law marriage.

2. Determination of the Decedent's average weekly wage ("AWW") including COBRA benefits.

3. Whether Respondents have proven they are entitled to a fifty percent (50%) reduction in compensation because the Claimant's death on January 3, 2014 was caused by a willful failure to obey a reasonable rule adopted by Employer for the safety of the employee.

4. Determination of the offset amount for Social Security Survivor benefits to which the Respondent is entitled.

FINDINGS OF FACT

1. Decedent was hired by Employer as a route sales representative and delivery driver on October 25, 2012 (Claimant RH's Exhibit 34; Respondents' Exhibit H, p. 82, Respondents' Exhibit N; and Hearing Tr., p. 60:16-18).

2. Decedent was working for Employer in the course and scope of her employment when she was involved in a fatal motor vehicle accident on January 3, 2014. On January 3, 2014, the delivery vehicle of Employer's that Decedent was driving was rear ended by a tractor-trailer. The tractor-trailer pushed Decedent's vehicle off the road and caused it to rotate in a counter clockwise direction until Decedent's vehicle rolled one quarter turn onto the passenger side. Decedent was partially ejected out the front passenger side window. Decedent was killed when a portion of her vehicle came down on her head and upper torso.

3. Colorado State Trooper Seth Soukup testified via deposition on December 15, 2015. Trooper Soukup is a level 4 certified accident reconstruction specialist for the Colorado State Patrol. He is also accredited by the Accreditation Commission for Traffic Accident Reconstruction. Trooper Soukup has worked for the Colorado State Patrol since 2008. Trooper Soukup's job duties include going to crash sites, determining contributing factors, determining how the crash occurred, documenting the accident, using momentum calculations, doing computer animations, and concluding what occurred (Soukup Depo. 4:19 – 8:24).

4. Trooper Soukup testified that on January 3, 2014 he received a call to report to the scene of Decedent's accident. Trooper Soukup arrived on the scene and observed Decedent's vehicle laying on the passenger side (Soukup Depo. 9:7 – 10:17). He testified that he found Decedent deceased when he arrived on the scene. Decedent

was partially in her vehicle and partially out of the vehicle. Decedent’s torso was out of the passenger window with her head pinned beneath the A-pillar on the vehicle. Decedent’s legs and the lower part of her body were still inside the vehicle (Soukup Depo. 13:20 – 14:11). Trooper Soukup opined that the evidence shows Decedent was thrown out the passenger side window of her vehicle because the vehicle was turning left when it was hit from the rear causing it to turn even more sharply to the left. The fact that Decedent was hit from the rear by a vehicle traveling 30 to 40 miles faster than she was pushed her vehicle forward faster than she was and as a result, pushed her forward. Decedent maintained a northern course as the vehicle turned west causing her to be ejected out the passenger window (Soukup Depo. 56:2 – 60:12).

5. At the scene of the accident, Trooper Soukup was able to look into Decedent’s vehicle through the broken windshield and observed that the driver’s seat belt was fully retracted and had not been in use at the time of the accident. Trooper Soukup also entered into the vehicle and checked the seat belt at the scene to ensure it was functional and was not locked (Soukup Depo. 26:3-11 and 46:3 – 47:25). Trooper Soukup testified that he later inspected Decedent’s vehicle at the tow yard and “it was evident that the seat belt was fully retracted and had not been in use at the time of the crash.” Additionally, the seat belt was operational. When Trooper Soukup pulled on the seat belt, it was in non-locking mode so he was able to pull it out. The seat belt was able to latch and release and retracted fully (Soukup Depo. 26:3-22).

6. After completing his investigation of the accident, Trooper Soukup completed a Colorado State Patrol Traffic Accident Report. Trooper Soukup noted that Decedent’s vehicle was making a left turn at the time of the accident and was traveling at an estimated 5 mph. Trooper Soukup testified that he determined Decedent’s vehicle was traveling at 5 mph based on a speed work-up using momentum, weight and speed of the vehicles, roadway evidence, skid marks on the road, path of travel, and distance traveled. These same factors led Trooper Soukup to determine that Decedent was making a left turn at the time of impact (Respondents’ Exhibit D, p. 68 and Soukup Depo. 28:1 – 30:12). Trooper Soukup also noted that Decedent’s vehicle was equipped with safety equipment of a shoulder and lap belt that was not used at the time of the accident. Trooper Soukup testified that he determined the safety equipment was not used based on looking at the scene and the seat belt position being fully retracted and Decedent’s position under the vehicle with her torso being out of the vehicle and under the A-pillar. Trooper Soukup testified that there was evidence the seat belt had not been in use at that time (Respondents’ Exhibit D, p. 69 and Soukup Depo. 37:1-20). Trooper Soukup testified that there was no evidence Decedent was at a stop at the time of impact or that she had gotten out if her vehicle to check her stock or check a mechanical issue. This is because the driver of the other vehicle stated that he saw Decedent driving in from of him just moments before the accident (Soukup Depo. 51:7 – 52:2). Trooper Soukup also testified that at the time of impact, the driver’s side tires of Decedent’s vehicle were near the middle of the road and the passenger side tires were in the right-hand lane, several feet away from the side of the road. Decedent was not on the shoulder or side of the road due to mechanical defects or stopping for some reason. (Soukup Depo. 38:22 – 39:13).

7. In the Accident Narrative section of the report, Trooper Soukup concluded as follows:

> Both vehicles were northbound on Morgan County Road 24. Vehicle #2 [Decedent's vehicle] had slows to make a left turn onto Morgan Count Road U & 5/10 (U.5). Vehicle #1 rear-ended Vehicle #2, causing Vehicle #2 to begin to rotate counter-clockwise. Vehicle #2 traveled approximately 64.8' while it rotated one-quarter time counter-clockwise before rolling one-quarter time onto its right side. The unrestrained driver of Vehicle #2 was partially ejected out the passenger side window and Vehicle #2 came to rest partially on top of its driver. Vehicle #2 came to final rest on its right side facing southwest. Vehicle #1 came to final rest on the roadway on its wheels facing north.
>
> (Respondents' Exhibit D, p. 69)

8. Garrick Mitchell is an accident reconstruction specialist. Mr. Mitchell has a bachelor's degree and a master's degree in mechanical engineering. Mr. Mitchell is a Certified Accident Reconstructionist by the Accreditation Commission for Traffic Accident Reconstruction. Mr. Mitchell has been doing accident reconstructions since 2000. His accident investigations include mechanically inspecting vehicles, performing site inspections, gathering and analyzing data from police reports, photographs, and witness statements, and using digital site mapping (Respondents' Exhibit C, p. 58 and Mitchell Depo. 5:11-23). Mr. Mitchell has had specialized training courses on Traffic Accident Investigation, Traffic Crash Reconstruction, Commercial Vehicle Accident Reconstruction, and Human Factors in Traffic Crashes. Mr. Mitchell has given presentations on vehicle accident reconstruction, how to analyze and photograph vehicle accidents, technology in collision reconstruction, biomechanics of injury causation, and human biomechanics in low-speed vehicle collisions. Some of these courses and presentations, included seat belt training although none of the courses were exclusively on seat belts (Respondents' Exhibit C, p. 60 and Mitchell Depo. 5:24 – 8:5).

9. Mr. Mitchell completed an inspection and partial accident reconstruction of the motor vehicle accident in this matter. On January 3, 2014, Mr. Mitchell inspected the scene of the accident, spoke with the State Patrol, and took some initial photos. (Mitchell Depo. 10:19-53). Mr. Mitchell filled out an inspection form and checklist as part of his investigation to document his inspection of Decedent's vehicle. Mr. Mitchell noted that the seat belt on Decedent's vehicle was stowed, the retractor was okay and passed a functional test, and there was no damaged observed (Respondents' Exhibit A, p. 3 and Mitchell Depo. 17:25 – 19:11).

10. On January 8, 2014, Mr. Mitchell was able to perform a closer inspection of the site and Decedent's vehicle, including the seat belt in Decedent's vehicle. Mr. Mitchell did a digital map of the site, took measurements, and took numerous photos.

Mr. Mitchell took multiple photos of the seat belt to document its condition. Mr. Mitchell took photos of the seat belt depicting the driver's seat buckle, the B pillar (pillar that seat belt retracts into), the seat belt latch plate, the upper and lower D rings, and the seat belt webbing. (Resp. Ex. B p. 11-18 and Mitchell Depo 11:4 – 13:16).

11. Mr. Mitchell testified via deposition on December 7, 2015. Mr. Mitchell testified regarding his inspection of the seat belt. Mr. Mitchell also performed a functional test of the seat belt retractor to ensure that the seat belt would retract into the pillar properly and would lock and not rapidly extend if the seat belt were pulled suddenly. Mr. Mitchell also tested that the seat belt would latch and release properly. Mr. Mitchell concluded that the seat belt in Decedent's vehicle functioned properly. The seat belt was able to be fastened, it clicked into the latch properly, and it did not release improperly. Mr. Mitchell concluded that there were not any malfunctions or errors with the seat belt (Mitchell Depo. 13:20 – 14:15). Mr. Mitchell also testified that there was no physical evidence that the seat belt was being worn at the time of the accident. Mr. Mitchell described the seat belt as being "pristine" with no stains, no wear, no evidence of loading, no transfer of plastic from the D ring to the webbing, no marks on the D ring, and no grittiness in the retractor. Mr. Mitchell testified that what he observed was a seat belt that had been in the stowed position throughout the course of the accident. Mr. Mitchell concluded that Decedent had not been wearing a seat belt at the time of accident (Mitchell Depo. 14:16 – 15:10). Mr. Mitchell testified that he has only investigated one accident where a person wearing a seat belt ended up outside of the driver's seat, like Decedent did in this case. In that particular case, the vehicle hit a guardrail and the impact damaged the seat belt retractor causing the seat belt to unspool. There was severe, obvious damage to the seat belt. This was not the case in Decedent's accident. Decedent's seat belt was undamaged and not in use. (Mitchell Depo. 15:11 – 17:24). In Decedent's case, Mr. Mitchell opined that her body was lifted out of the driver's seat and ejected partially out the passenger window due to the force of the collision while the vehicle was rotating and curving off to the left at the same time. (Mitchell Depo. 36:12 – 37:10).

12. In response to questioning about whether Decedent may have recently reentered her vehicle after stopping to smoke, make a call, or check her inventory levels and may still have been in park, Mr. Mitchell noted that at the time of the accident, Decedent's vehicle was in the middle of a traffic lane. The road Decedent was driving on has a wide shoulder and Decedent was not parked on the shoulder of the road. Furthermore, Mr. Mitchell concluded that Decedent's vehicle was actually in motion at the time of the accident and not in park based on the skid marks on the ground. Decedent's vehicle was "in the northbound lane, turning left when it was rear-ended. It was not parked on the side of the road. It was in a position where it was about to or in the process of making a left turn." Mr. Mitchell could not determine the exact speed of the vehicles from his analysis since he did not do a complete accident reconstruction but he was able to determine that Decedent's vehicle's tires were in motion. Additionally, Trooper Soukup testified that the other driver, who hit Decedent's vehicle, stated he had seen Decedent driving in front of him in the moments prior to the crash. (Mitchell Depo. 33:20 – 34:20, 53:17-19, 54:14 – 55:7, and 58:3-14, Claimant MH's

Exhibit 3, and Soukup Depo. 44:14-18). The Claimants also questioned Mr. Mitchell about whether Decedent's vehicle may have had mechanical failures causing her to be stopped in the road. Mr. Mitchell testified that his examination of Decedent's vehicle lights showed that the left turn signal was illuminated at the time of impact but that the right turn signal was not illuminated at the time of impact. Therefore, Decedent likely had her left turn signal on and not her hazards or emergency lights (Mitchell Depo. 58:15-23 and 62:24 – 63:22).

13. Dr. Burson completed Decedent's autopsy on January 4, 2014. Dr. Burson recorded the following relevant articles of clothing on Decedent: a green rubber bracelet with the phrase "Safe by choice" on the left wrist, a white metal ring on the left thumb, and a yellow metal engagement-type ring with clear stones and a yellow metal band on the left ring finger (Respondents' Exhibit G, p. 76). Dr. Burson noted that the Decedent's death was due to blunt force injuries to Decedent's head and neck that were sustained during a motor vehicle accident. Specifically, Dr. Burson noted that Decedent sustained a severe crush type injury of the skull (Respondents' Exhibit G, p. 75). Dr. Burson noted that Decedent was reportedly the unrestrained driver of a delivery type vehicle that was involved in a motor vehicle accident and Decedent was partially ejected from the passenger side window. Decedent sustained fatal injuries to her head and was pronounced dead at the scene of the accident (Respondents' Exhibit G, p. 76).

14. The Morgan County Coroner's Office completed a personal effects release form for Decedent dated January 10, 2014. The form noted that Decedent was wearing a green wrist band at the time of her death. The form also noted that Decedent was wearing three rings at the time of her death-one white metal ring and two yellow metal rings with clear stones. The personal effects were received by Claimant RH who wrote that his relationship to the Deceased was "husband" (Respondents' Exhibit F). Claimant RH testified that the gold ring was the wedding band he gave Decedent when they reconciled in a church a few weeks after entry of the Divorce Decree. He referred to the rings the Claimant was wearing on her left hand as an "engagement/wedding set" (Hearing Tr. 86:16 – 87:1).

15. This is an admitted claim. Decedent and Claimant RH had one minor biological son, Claimant MH. Respondents filed a Fatal Case-General Admission on January 29, 2014 admitting to death benefits paid solely to Claimant MH, Decedent's minor son. Respondents calculated an average weekly wage of $577.85. Respondents reduced the compensation payable to Claimant MH for a 50% penalty for a safety rule violation (Claimant RH's Exhibit 10; Respondents' Exhibit V). Respondents contest that Claimant RH is entitled to benefits as a surviving spouse.

16. Claimant RH testified that he first met the Decedent on February 3, 2001. He and the Decedent were married on August 29, 2002 in front of a retired judge. There was no formal wedding ceremony at that time. The Claimant RH's credible testimony is supported by a Marriage License (Claimant RH's Exhibit 39). At the time of the marriage, Decedent was pregnant with Claimant MH. After the marriage, Decedent changed her surname from Kinion to Henry which is Claimant RH's surname.

17. Decedent and Claimant RH later separated and a separation agreement with a parenting plan was filed on October 4, 2010. Claimant RH and the Decedent were divorced effective January 4, 2011 (Claimant RH's Exhibit 40; Respondents' Exhibit S). Decedent did not legally change her surname back to Kinion following the divorce.

18. Claimant RH testified that while he and the Decedent were divorced, she moved out of their residence but they continued to see each other and worked on mending the problems they had in the marriage. Claimant RH testified that he and the Decedent reconciled on February 22, 2011 and at that time he presented the Decedent with a gold wedding ring to complete her wedding/engagement set (Hearing Tr. 53:12-18 and 69:8-17 and 86:16-24). At this time, the Decedent moved back into their shared residence. The title to the home and the mortgage remained in both their names the entire time (Hearing Tr. 53:21 – 54:16).

19. After their reconciliation, Decedent and Claimant RH were planning a ceremony in Las Vegas with their family. However, the wedding ceremony never took place (Hearing Tr. 67:25 – 68:4 and 87:7-9). Claimant RH testified that Decedent was allegedly getting pressure from her parents to have a second ceremony because they wanted a traditional kind of marriage and did not look at a marriage in front of a judge as real. He testified their parents are old-fashioned and that a formal ceremony was for their benefit (Hearing Tr. 75:6 – 76:2).

20. The Claimant RH's testimony about his marriage, divorce and subsequent reconciliation and recommitment of their marriage was credible and persuasive. The testimony is supported by evidence in the record.

21. Evelyn Oster, Claimant RH's mother, testified via telephone at the hearing. Ms. Oster testified that she believed Decedent and Claimant RH were married in their hearts in the months preceding Decedent's death. However, she later stated that she knew that they were thinking about having a wedding in Las Vegas in the future. (Hearing Tr. 106:1-8 and 112:14-18).

22. Susan Branom, Decedent's mother, testified at the hearing. Ms. Branom testified that she believed prior to Decedent's death, Decedent and Claimant RH "weren't married. They were just living together" (Hearing Tr. 125:9-13). Ms. Branom testified that Decedent and Claimant RH got divorced and then when Decedent moved back in with Claimant RH, she looked at her as living as an adultress. Ms. Branom said that she would always tell Decedent to go get married (Hearing Tr. 125:19-25). Ms. Branom testified that she did not have any issues with Decedent's marriage to Claimant RH in 2002 that was in front of a judge (Hearing Tr. 126:3-15). Ms. Branom testified that Claimant RH proposed marriage to Decedent after they reconciled by getting down on one knee and proposing marriage. Ms. Branom testified that Decedent wanted to go look for a wedding dress and go to Las Vegas to get married. Ms. Branom believed that Decedent and Claimant RH were engaged, not married, and were going to be getting

married (Hearing Tr. 131:23 – 132:4 and 135:4-25). Ms. Branom testified, however, that she is a Jehovah's Witness and that her religion does not recognize common law marriages regardless of whether they are recognized under the Colorado law. Because of her religious beliefs, she would only recognize a marriage if there is a certificate of marriage (Hearing Tr. 125:12-25).

23. The testimony of Ms. Branom actually supports Claimant RH's testimony that while he and Decedent considered themselves to be married after their reconciliation and held themselves out as married, they were still planning a formal ceremony to appease their families who were more traditional in their views of marriage. The ALJ specifically finds that the Decedent and Claimant RH did not consider themselves merely engaged to be married, in spite of planning an eventual ceremony, but rather they considered and held themselves out as husband and wife.

24. Claimant RH testified that tax returns for the years from 2002 until the Decedent's death were filed jointly. The tax returns submitted at Claimant RH's Exhibit 41 support this testimony.

25. Decedent completed a W-4 for Employer on October 25, 2012 and did not indicate she was married or single on the form. Decedent also claimed only 1 allowance on the tax form, indicating only herself and no spouse or dependents according to the personal allowance worksheet on the W-4 form. (Resp. Ex. U).

26. Claimant RH testified that he and the Decedent jointly held titles to several vehicles, namely a 1999 Chevy pickup, a 2000 Chevy pickup, and a Toyota Yaris.

27. At the time of her death, Decedent had a separate checking account in her name only. It was a single-party account. This account was opened on April 15, 2011. This was after Decedent and Claimant RH had reconciled their relationship. This was the account that Decedent requested Employer deposit her paychecks in. Claimant RH did not have access to this account while Decedent was alive. Decedent also had other checking accounts without Claimant RH's name on them. (Resp. Ex. T; Hearing Tr. 65:3-14). Claimant RH testified that when he and the Decedent first met, they had separate accounts and bills coming out of each that the other person was not responsible for, so they just kept that intact (Hearing Tr. 65:12-22).

28. Claimant RH testified that he relied on the Decedent's income to pay the family bills and that he would not have been able to cover the family bills on his own without her income (Hearing Tr. 66:12-20).

29. Claimant RH testified that when he and Decedent divorced, he began paying child support to her for Claimant MH. Claimant RH continued paying child support to Decedent despite the reconciliation and alleged remarriage (Hearing Tr. 82:8-15). Claimant RH testified that he and the Decedent had looked into terminating the child support payments but did not follow up due to court costs required (Hearing Tr. 83:20-24 and 88:22-89:3).

30. Claimant RH testified that Decedent never allowed Claimant MH to ride in a car without a car seat. Decedent's children wore seatbelts when they rode in the car with Decedent. Decedent wore a seat belt when she rode in the car with Claimant RH and he never saw Decedent not wear a seat belt. Claimant RH said that his family would stop at the edge of the driveway if anybody in the car did not have a seat belt on. Claimant RH testified that he heard Decedent reprimand the children to put on seat belts and that Decedent would stop the car and not go any further until the family had on their seat belts. (Hearing Tr. 70:24 – 71:1, 71:25 – 72:7, and 78:9 – 79:2).

31. Employer had written company rules regarding seat belt usage and all drivers following state driving/traffic laws. Employer's Fleet Safety Policies and Procedures (Respondents' Exhibit I), which requires employees to wear seat belts and follow traffic laws, state as follows:

- Page B-1 (Bates stamp p. 95) – "Obey all federal, state and local traffic laws, rules and regulations."
- Page B-1 (Bates stamp p. 95) – "Wear your seat belt – as a driver, you have a legal duty to wear your seat belt. The Federal Department of Transportation and company policy requires every employee to wear a seat belt. Enforcement will not only be by federal, state and local enforcement but all Schwan's management. You will pay any fines levied against you as a result of not complying with seat belt laws; the company will not reimburse you."
- Page B-6 (Bates stamp p. 100) – Self-Check Questions No. 1 "Both, Federal laws and Schwan's policy dictate that all drivers must wear their seatbelts. a. True b. False"
- Page D-4 (Bates stamp p. 123) – Driver Based Violations – "If the violation is driver based such as HOS, Medical Examiners Card, expired Driver License, seatbelt usage or traffic offenses, the direct supervisor will need to sign the original Inspection report and provide written documentation providing the Disciplinary Action taken to send back with the Inspection form."
- Page I-10 (Bates stamp p. 163) – Identifying High-Risk Safety Concerns – "Each supervisor will be held responsible to identify high-risk safety concerns and correct them on the spot. Although the following list is by no means complete, some safety behaviors which need on-the-spot corrections are: Failure to wear a seat belt."
- Page N-2 (Bates stamp p. 194) – Self-Check Answers No. 1 "Both, Federal laws and Schwan's policy dictate that all drivers must wear their seatbelts. (a) True. Seatbelt use is required by law and mandated by Schwan's policy. Schwan is committed to ensuring your safe return to your home, family, and friends. Using a seat belt helps ensure you're in a position to control the vehicle after impact. Statistics have shown that

> drivers who are belted-in have less severe injuries following an accident and are able to return to work sooner than those drivers involved in an accident who were not wearing a seat belt."
>
> (Respondents' Exhibit I).

32. Decedent signed a form acknowledging receipt and understanding of Employer's Fleet Safety Policies and Procedures on November 6, 2012. The acknowledgement form included a statement that Decedent had read, agreed with and understood she must comply with all federal, state, and local laws which govern the operation and maintenance of company vehicles. (Respondents' Exhibit H p. 83). A second acknowledgement form for receipt of the Employer's Fleet Safety Policies and Procedures was also completed by Decedent on November 26, 2012. (Respondents' Exhibit H p. 84).

33. The Colorado Driver Handbook states that Colorado's Safety Belt Laws (C.R.S. §§ 42-4-237 and 42-2-105.5) require that a fastened safety belt must be worn in all motor vehicles while in operation on public roadways by the driver of the vehicle. (Respondents' Exhibit J p. 211).

34. C.R.S. § 8-42-4-237(2) states that "every driver of and every front seat passenger in a motor vehicle equipped with a safety belt system shall wear a fastened safety belt while the motor vehicle is being operated on a street or highway in this state." (Respondents' Exhibit K).

35. William Vollmer, Employer's Safety Manager for the West Division of Home Service, testified via deposition on December 17, 2015. Mr. Vollmer testified that at the time of Decedent's death, he was safety manager for Colorado (Vollmer Depo. 4:25 – 5:10). Mr. Vollmer testified that Employer has a policy regarding drivers wearing seat belts and had a policy on drivers wearing seat belts at the time of Decedent's death. Employees are required to wear a seat belt while in Employer's vehicles (Vollmer Depo. 5:21 – 6:15). Employees are required to wear a seat belt any time a vehicle is in motion (Vollmer Depo. 7:18-25). Mr. Vollmer testified that employees are trained regarding the policies and rules on seat belt usage. The policy is communicated in the policy and procedure manual and is covered during training of new employees. Training includes computer work to review policies and procedures manuals and a written exam (Vollmer Depo. 6:17 – 7:17). Mr. Vollmer testified that Decedent would have been given a road test when she started work with Employer and not have been allowed to start driving until she passed the road test. A portion of the road test included wearing a seat belt (Vollmer Depo. 16:18 – 17:18). Mr. Vollmer testified that Employer's number one business priority is safety. Safety is a level 10 of importance to Employer on a scale of 0 to 10. Seat belt usage is also a level 10 of importance to Employer on a scale of 0 to 10. This is communicated on posters at every depot and also via monthly safety meetings and weekly power huddles (Vollmer Depo. 11:13 – 12:2, 13:4 – 14:12). Employees are also given green wrist bands that say "Safe By Choice" to wear to remind them to make safe choices while driving so they can come

home to their family at the end of the shift. Mr. Vollmer also testified that employees are given visor organizers in the vehicles that talk about being safe by choice. The visors have a spot for employees to place a photo of their family, kids, or anything important to them so that when they get in the vehicle, they notice the photo and it reminds them why it is important to drive safely (Vollmer Depo. 12:3 – 13:3). Mr. Vollmer also testified that there are permanent signs posted at the exits of the depots so employees can see when they are driving out. The signs remind employees to wear seat belts and buckle up (Vollmer Depo. 13:4-25). Mr. Vollmer also testified that at the time of Decedent's death, if an employee was seen not wearing a seat belt, they would receive a citation and points would be assessed against them. Employees would ultimately be terminated if they accumulated too many points. Since Decedent's death, Employer has decreased their tolerance even further and a violation of the seat belt policy is now automatic termination. (Vollmer Depo. 6:6-15 and 8:1 – 11:12).

36. At the time of her fatal injury, the Decedent was not wearing a seatbelt. Yet, there was no persuasive evidence presented as to the specific reason the Decedent failed to wear her seatbelt immediately prior to her fatal injury. Although it has been established that the seatbelt was in good working order and that the Decedent didn't fail to wear the seatbelt due to malfunction, there was no persuasive evidence to establish whether the Decedent intentionally or willfully failed to wear her seatbelt or whether she negligently forgot to wear her seatbelt or whether there was some other reason for her failure to wear her seatbelt. However based on the testimony from Claimant RH that the Decedent was vigilant about seatbelt use, and based on the evidence establishing that the Employer was adamant and vigilant about enforcement of the seat belt rule, and based on evidence that the Decedent was never disciplined for failure to use her seat belt and was generally known as a compliant employee with a good safety record, who was wearing her "Safe By Choice" bracelet at the time of her death, the ALJ makes the following inference from the evidence. It was more likely that the Decedent failed to wear her seatbelt because she negligently forgot, or for some other reason than it was that she intentionally and willfully failed to wear her seatbelt.

37. Decedent was enrolled in health insurance while employed with Employer. Decedent had elected benefits for herself, Claimant RH, and Claimant MH. Decedent completed the paperwork to obtain the benefits. Health benefits were only available for spouses and dependents of employees. In response to an April 22, 2013 eligibility audit, the Decedent provided a copy of her marriage certificate and the top portion of her most recent Federal 1040 tax return as requested by her Employer Claimant RH's Exhibit 36).

38. Respondents have admitted to an average weekly wage of $577.85. (Respondents' Exhibit V) which is based on Decedent's total earnings from 12/23/2012 to 12/21/2013 of $30,048.20 (Respondents' Exhibit P). The Claimant RH and the Claimant MH dispute this calculation and argue that it does not provide a fair approximation of wage loss and diminished earning capacity resulting from the Decedent's death and the loss of income to the Decedent's family.

39. The Decedent’s first paycheck from Employer was dated November 15, 2012 and the Decedent’s final paycheck from Employer was dated January 23, 2014. Her gross wages were paid approximately every 2 weeks and included the following categories: Product Sales Commission, Daily Base Pay, Daily Service Incentive, Incentive, New Customer Incentive, Ovations AwardperQs, and Vacation Pay. Some of these categories were included with each paycheck and some were only paid intermittently or when earned. All of these categories added up to the gross wage paid to the Decedent. Her gross wages are summarized as follows (taken from Claimant’s Exhibit 33):

Check Date	**Check Amount**
11/15/2012 (Initial Training Pay)	$1,265.00
11/29/2012	$1,137.42
12/13/2012	$1,197.80
12/27/2012	$1,102.21
1/10/2013	$1,078.35
1/24/2013	$977.93
2/7/2013	$1,137.15
2/21/2013	$1,109.64
3/7/2013	$1,212.45
3/21/2013	$1,199.53
4/4/2013	$1,147.44
4/18/2013	$1,176.49
5/2/2013	$1,230.80
5/16/2013	$1,390.79
5/30/2013	$1,335.32
6/13/2013	$1,326.81
6/27/2013	$1,558.17
7/11/2013	$1,141.13
07/25/2013	$981.56
08/08/2013	$1,443.27
08/22/2013	$1,341.03
09/05/2013	$1,238.70
09/19/2013	$1,133.46
10/03/2013	$1,153.07
10/17/2013	$1,212.17
10/31/2013	$1,300.06
11/14/2013	$1,249.13
11/27/2013	$1,315.45
12/12/2013	$1,024.38
12/26/2013	$1,208.72
01/09/2014 (final payout)	$1,383.58

40. Per the wage records, there were regular and natural fluctuations to the Decedent’s gross wages from paycheck to paycheck. Claimants argue that in the six

pay periods or twelve weeks prior to her death, the Decedent was earning increased wages because she was earning more commissions the longer she was on her route as her customer base and sales increased. Claimants argue that the Decedent earned an average weekly wage of $608.13 in this time period and that this is more representative of the wages that the Decedent was earning at the time of the injury.

41. The ALJ finds that there are fluctuations and finds persuasive the Claimants' argument that the last six regular pay periods, encompassing the last 12 full weeks the Decedent worked for Employer prior to her death would result in a fair approximation of her wages. The final paycheck on 01/09/2014 is not a regular paycheck in the ordinary course and is not included for the purposes of calculating the AWW. So, the paychecks from 10/17/2013, 10/31/2013, 11/14/2013, 11/27/2013, 12/12/2013 and 12/26/2013 which are the last 12 regular full weeks of the Decedent's employment are used to calculate AWW.

$1,212.17
$1,300.06
$1,249.13
$1,315.45
$1,024.38
$1,208.72
Total: $7,309.81
÷ 12 = **$609.16**

42. Decedent had group insurance benefits (health, dental, vision, wellness) through Employer covering herself, Claimant RH and Claimant MH at the time of her death. Per her 2014 Enrollment form which was effective January 1, 2014, the Claimant elected Health Plan, Dental and Vision Plan coverage for Employee + Spouse + Child. She did not have the Vision buy-up plan or other options, including the well-being coverage, that were available on the Annual Enrollment Form (Claimant RH's Exhibit 37). Per the COBRA Election Notice sent to Claimant RH on January 6, 2014, these benefits terminated effective January 11, 2014 in connection with the termination of Decedent's employment due to her death (Claimant RH's Exhibit 38, p. 1).

43. Per the COBRA Notice, the full cost of continuing these benefits for Individual + Spouse + Child would be $1,120.21 per month ($1,014.10 for health; $84.24 for dental; and $21.87 for vision) (Claimant RH's Exhibit 38, p. 4). The monthly amount corresponds to a weekly amount of $258.51 per week.

44. Per the COBRA Notice, the cost of continuing these benefits for only Claimant RH and Claimant MH (and excluding the Decedent) would be $739.15 per month ($664.42 for health; $59.78 for dental; and $14.95 for vision)(Claimant RH's Exhibit 38, p. 4). The monthly amount corresponds to a weekly amount of $170.57 per week.

45. As a result of her death, Decedent would no longer be eligible for health, dental and vision insurance benefits as of the date of her death. Thus, there is no actual cost associated with continuing such benefits for Decedent as there is a legal impediment to continuation.

46. Claimant MH was awarded $720.00 per month for Social Security Survivor benefits ("SSS benefits") effective January 2014 (Respondents' Exhibit N). A fifty percent offset of those periodic benefits would equate to an offset of $83.08 per week.

47. Claimant MH was awarded SSS benefits on March 1, 2014 based on the date of the Social Security Award Letter. Neither Claimant MH nor his guardian or representative notified Respondents of his receipt of benefits until September 18, 2015 with his Responses to Interrogatories, which only stated he was receiving benefits and did not provide the award amount. Claimant MH did not provide a copy of his Social Security award letter to Respondents until November 5, 2015 (Respondents' Exhibit N and II).

48. Claimant RH testified that he is also receiving SSS benefits every month. He receives a check for him and a check for Claimant MH each month. Claimant RH testified that he also received SSS benefits in the same amount of $720.00 per month. (Hearing Tr. 85:21 – 86:3 and 87:14 – 88:21). A fifty percent offset of those periodic benefits would equate to an offset of $83.08 per week.

49. Claimant RH did not notify Respondents of his receipt of SSS benefits until March 3, 2015 with his Responses to Interrogatories, which only stated he was receiving benefits and did not provide the award amount. Claimant RH did not notify Respondents of the amount of SSS benefits he was awarded until November 10, 2015 when he testified about his receipt of benefits during the hearing (Hearing Tr. 85:21 – 86:3 and 87:14 – 88:21).

50. In adjusting the Average Weekly Wage in this case, the increase for COBRA was effective on January 11, 2014. However, the SSS offset was effective starting on January 3, 2014 (Respondents' Exhibits L and N).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), C.R.S. §8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits at a reasonable cost to employers, without the necessity of litigation. C.R.S. §8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. §8-43-201. Respondent bears the burden of establishing any affirmative defenses. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. §8-43-201 (2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Dependent Death Benefits and Common Law Marriage

The payment of death benefits is governed by the Act. In the event of death, the dependents of the deceased who are entitled to benefits shall receive death benefits equal to sixty-six and two-thirds percent of the deceased employee's average weekly wages, not to exceed a maximum of ninety-one percent of the state average weekly wage per week, subject to offsets permitted by the statute. C.R.S. §8-42-114. The Act provides that "[d]eath benefits shall be paid to a dependent widow or widower for life or until remarriage…." C.R.S. §8-42-120. Under the Act, a widow or widower is presumed to by wholly dependent unless it is shown that he or she was voluntarily separated from the decedent and living apart at the time of the injury or death or was not dependent in whole or in part on the deceased for support. C.R.S. §8-41-501(a). Children of the deceased under the age of 18 years or who are under the age of 21 and were dependent on the deceased for support at the time of the decedent's death and were or are attending an accredited school are considered wholly dependent as well. § 8-41-501(1)(b)-(c).

A common law marriage may be the basis for the payment of death benefits to a widow or widower under the Act. *Sergio Reyes (Deceased) v. LVI Environmental Svcs., Inc.,* W.C. No. 4-425-155 (ICAO April 5, 2001). The determination of whether a common law marriage is proven turns on issues of fact and credibility. *Estate of Wires v. Medina,* 765 P.2d 618 (Colo. App. 1988); *Larry Baggett (Deceased) v. Don Ward, Inc.*, W.C. No. 4-391-071 (ICAO March 12, 2001).

The issue of the existence of a common law marriage arises in all types of cases. It frequently arises in the context of a dissolution proceeding under the UDMA. *See, In re Marriage of Cargill,* 843 P.2d 1335 (Colo. 1993); *In re Marriage of Gercken,* 706 P.2d 809 (Colo. App. 1985). However, the issue is also resolved in a host of other types of cases. *See, e.g., People v. Lucero,* 747 P.2d 660 (Colo. 1987)(spousal testimonial privilege); *Carter v. Firemen's Pension Fund,* 634 P.2d 410 (Colo. 1981)(entitlement to pension); *Employers Mut. Liab. Ins. Co. v. Indus. Comm'n,* 145 Colo. 91, 357 P.2d 929 (1960)(entitlement to workers' compensation benefits); *In re Estate of Sky Dancer,* 13 P.3d 1231 (Colo. App. 2000)(determination of heirship); *Whitenhill v. Kaiser Permanente, supra* (right to bring wrongful death action).

Common law marriage was first recognized by the Colorado Supreme court in *Klipfel's Estate v. Klipfel,* 92 P. 26 (Colo. 1907), noting that marriage in the State of Colorado is a civil contract or agreement between two consenting parties. A marriage by agreement of two parties with the capacity to consent, followed by other attendant circumstances, may be valid and binding. *Id.* at 28. The seminal case of *People v. Lucero,* 747 P.2d 660 (Colo. 1987) established that the consent or agreement of the parties to a common law marriage must be manifested by conduct that gives evidence of the mutual understanding of the parties. The *Lucero* court held that,

> The two factors that most clearly show an intention to be married are cohabitation and a general understanding or reputation among persons in the community in which the couple lives that the parties hold themselves out as husband and wife. Specific behavior that may be considered includes maintenance of joint banking and credit accounts; purchase and joint ownership of property; the use of the man's surname by the woman; the use of the man's surname by children born to the parties; and the filing of joint tax returns. See Mills, Common Law Marriage in Colorado, 16 Colo. Law. 252, 257 (1987). However, there is no single form that any such evidence must take. Rather, any form of evidence that openly manifests the intention of the parties that their relationship is that of husband and wife will provide the requisite proof from which the existence of their mutual understanding can be inferred.

Cohabitation is "holding forth to the world by the manner of daily life, by conduct, demeanor, and habits, that the man and woman have agreed to take each other in marriage and to stand in the mutual relation of husband and wife." *Smith v. People*, 64 Colo. 290, 170 P. 959 (1918). The Court of Appeals in *Taylor v. Taylor*, 10 Colo. App. 303, 50 P. 1049 (1897), stated:

> "Cohabitation," as here used, means something more than sexual intercourse. Bouvier defines "cohabit" to be "to live together in the same house, claiming to be married." Webster defines "cohabitation" as "the act or state of dwelling together, or in the same place with another." "It is not a sojourn, nor a habit of visiting, nor even a remaining with for a time. None of these fall within the true idea of cohabitation as a fact presumptive of marriage. To cohabit is to live or dwell together, to have the same habitation; so that, where one lives and dwells, there does the other live and dwell with him."

The *Taylor* court also held that general reputation or repute means the "understanding among the neighbors and acquaintances with whom the parties associate in their daily life that they are living together as husband and wife." *Taylor at* 1049.

Relevant to the determination in this case Claimant RH and the Decedent were married on August 29, 2002 in front of a retired judge. There was no formal wedding ceremony at that time. After the marriage, Decedent changed her surname from Kinion to Henry which is Claimant RH's surname. The Decedent and Claimant RH later separated and a separation agreement with a parenting plan was filed on October 4, 2010. Claimant RH and the Decedent were divorced effective January 4, 2011. Decedent did not legally change her surname back to Kinion following the divorce. Claimant MH, the only child born to both Decedent and Claimant RH also used the surname Henry. While Claimant RH and the Decedent were divorced, she moved out of their residence but they continued to see each other and worked on mending the problems they had in the marriage. Per the credible testimony of Claimant RH, they reconciled on February 22, 2011 and the Decedent moved back into their shared residence, long before the Decedent's fatal injury and before the Decedent even began working for Employer. The title to the home and the mortgage remained in both their names the entire time in spite of the period of separation and divorce.

After their reconciliation, Decedent and Claimant RH were planning a ceremony in Las Vegas with their family. However, the wedding ceremony never took place. Claimant RH testified credibly and persuasively that Decedent was getting pressure from her parents to have a ceremony because they wanted a traditional kind of marriage and that a formal ceremony was for their benefit.

Claimant RH's mother testified that, although she knew they were thinking about having a wedding in Las Vegas in the future, she believed Decedent and Claimant RH were married in their hearts in the months preceding Decedent's death. The Decedent's mother testified that she believed prior to Decedent's death, Decedent and Claimant RH "weren't married. They were just living together." However, Ms. Branom testified that she is a Jehovah's Witness and that her religion does not recognize common law marriages regardless of whether they are recognized under the Colorado law. Because of her religious beliefs, she would only recognize a marriage if there is a certificate of marriage. The testimony of Ms. Branom actually supports Claimant RH's testimony that while he and Decedent considered themselves to be married after their reconciliation and held themselves out as married, they were still planning a formal ceremony to appease their families who were more traditional in their views of marriage. As found, the Decedent and Claimant RH did not consider themselves merely engaged to be married, in spite of planning an eventual ceremony that ultimately did not take place, but rather they considered and held themselves out as husband and wife.

There is considerable support in the record for the determination that the Claimant RH and the Decedent were married at the time of her death, including, but not limited to:

- Claimant RH and the Decedent filing joint tax returns for the years from 2002 until the Decedent's death

- Jointly held titles to several vehicles, namely a 1999 Chevy pickup, a 2000 Chevy pickup, and a Toyota Yaris

- Claimant RH and Decedent relied upon each other to pay joint bills and Claimant RH would not have been able to cover the family bills on his own without the Decedent's income

- At the time of her fatal accident, the Decedent was wearing and engagement/wedding set on her left hand, with both a gold band and a ring with stones, rather than only the engagement ring

- Decedent completed considerable paperwork for her employer noting the Claimant RH was her husband

Based on the foregoing, Claimant RH established by a preponderance of the evidence that he was the Decedent's common law spouse and her dependent for the purposes of C.R.S. §8-42-114 and C.R.S. §8-41-501(a).

Calculation of Average Weekly Wage

Under Colorado's Workers' Compensation Act, the "average weekly wage" is a key part of the formula used to calculate compensation for injured workers, and it is based upon the definition of "wages" provided at C.R.S. § 8-40-201(19). *Industrial Claim Appeals Office v. Ray,* 145 P.3d 661 (Colo. 2006). To determine a claimant's AWW, the ALJ may choose from two different methods set forth in C.R.S. § 8-42-102. The first method, referred to as the "default provision," provides that an injured employee's AWW "be calculated upon the monthly, weekly, daily, hourly, or other remuneration which the injured or deceased employee was receiving at the time of injury." C.R.S. § 8-42-102(2). The default provision in C.R.S. § 8-42-102(2)(a)-(f), lists six different formulas for conducting this calculation. Per C.R.S. § 8-42-102(5)(a), the phrase "at the time of injury" in subsection (2) requires the AWW to be determined using the wage earned on the date of the employee's accident. The second method for calculating a claimant's AWW, referred to as the "discretionary exception," applies when the default provision will not fairly compute the employee's AWW. C.R.S. § 8-42-102(3). In such a circumstance, the ALJ has discretion to compute the AWW of a claimant in such other manner and by such other method as will, based upon the facts presented, fairly determine the employee's AWW. *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010).

The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993); *Ebersbach v. United Food & Commercial Workers Local No.*

7, W.C. No. 4-240-475 (ICAO May 7, 1997); *Vigil v. Industrial Claim Appeals Office,* 841 P.2d 335 (Colo.App.1992). Because the default method will not fairly compute the Claimant's AWW in this case, the discretionary method is appropriate to use in order to arrive at a fair approximation of the Claimant's wage loss.

Respondents have admitted to an average weekly wage of $577.85. which is based on Decedent's total earnings from 12/23/2012 to 12/21/2013 of $30,048.20. The Claimant RH and the Claimant MH dispute this calculation and argue that it does not provide a fair approximation of wage loss and diminished earning capacity resulting from the Decedent's death and the loss of income to the Decedent's family. The Decedent's first paycheck from Employer was dated November 15, 2012 and the Decedent's final paycheck from Employer was dated January 23, 2014. Her gross wages were paid approximately every 2 weeks and included the following categories: Product Sales Commission, Daily Base Pay, Daily Service Incentive, Incentive, New Customer Incentive, Ovations AwardperQs, and Vacation Pay. Some of these categories were included with each paycheck and some were only paid intermittently or when earned. All of these categories added up to the gross wage paid to the Decedent. Per the Decedent's wage records, there were regular and natural fluctuations to the gross wages from paycheck to paycheck (see chart in Findings of Fact).

Claimants argue that in the six pay periods or twelve weeks prior to her death, the Decedent was earning increased wages because she was earning more commissions the longer she was on her route as her customer base and sales increased. Claimants argue that this is more representative of the wages that the Decedent was earning at the time of the injury.

The ALJ found that there were fluctuations and finds persuasive the Claimants' argument that the last six regular pay periods, encompassing the last 12 full weeks the Decedent worked for Employer prior to her death would result in a fair approximation of her wages. The ALJ also found that the final paycheck on 01/09/2014 is not a regular paycheck in the ordinary course because it included amounts paid out due to the termination of the Decedent's employment resulting from her death. Therefore, this paycheck is not included for the purposes of calculating the AWW. So, the paychecks from 10/17/2013, 10/31/2013, 11/14/2013, 11/27/2013, 12/12/2013 and 12/26/2013 which are the last 12 regular full weeks of the Decedent's employment are used to calculate base AWW for the Decedent.

$1,212.17
$1,300.06
$1,249.13
$1,315.45
$1,024.38
$1,208.72
Total: $7,309.81
÷ 12 = **$609.16**

Calculation of the Cost of Insurance Benefits

In this case, a portion of the dispute also centers over whether the Claimants have established that the full value of a health insurance benefit provided by the Employer should be added to Claimant's AWW for a further increase to her AWW.

C.R.S. §8-40-201(19)(a), provides:

> "Wages" shall be construed to mean the money rate at which the services rendered are recompensed under the contract of hire in force at the time of the injury, either express or implied.

C.R.S. § 8-40-201(19)(b), provides, as follows:

> The term "wages" includes the amount of the employee's cost of continuing the employer's group health insurance plan and, upon termination of the continuation, the employee's cost of conversion to a similar insurance plan, and gratuities reported to the federal internal revenue service by or for the worker for purposes of filing federal income tax returns and the reasonable value of board, rent, housing and lodging received from the employer, the reasonable value of which shall be fixed and determined from the facts by the division in each particular case, but does not include any similar advantage or fringe benefit not specifically enumerated in this subsection (19). If, after the injury, the employer continues to pay any advantage or fringe benefit specifically enumerated in the subsection (19), including the cost of health insurance coverage or the cost of the conversion of health insurance coverage, that advantage or benefit shall not be included in the determination of the employee's wages so long as the employer continues to make payment.

In interpreting statutes, we must give effect to the intent of the General Assembly, and if the statutory language is clear and unambiguous, we must give the words their ordinary meaning and apply the statute as written. *See Cochran v. West Glenwood Springs Sanitation Dist.,* 223 P.3d 123, 125-26 (Colo. App. 2009). In doing so, we must read and consider the statute as a whole and interpret it in a manner giving consistent, harmonious, and sensible effect to all of its parts. *Lujan v. Life Care Centers,* 222 P.3d 970, 973 (Colo. App. 2009). We should not interpret the statute so as to render any part of it either meaningless or absurd. *Id.* Additionally, nonexistent provisions should not be read into the workers' compensation act. *Kraus v. Artcraft Sign Co.,* 710 P.2d 480, 482 (Colo. 1985).

The Colorado Supreme Court has determined that the plain language of C.R.S. § 8-40-201(19)(b), does not require claimants to actually purchase health insurance in order for the cost of the insurance to be included in the average weekly wage. *Industrial Claim Appeals Office v. Ray*, 145 P.3d 661 (Colo. 2006).

However, Respondents argue that they are not required to increase the average weekly wage for the *full* cost of continuing the terminated group insurance benefits because doing so would include premium amounts for Decedent's benefits. Respondents reason that Decedent is dead, and therefore, no longer in need of insurance. Thus, the cost of continuing insurance benefits for Claimant MH and Claimant RH (if the ALJ found him to be a dependent) would be included in the average weekly wage computation, but not the cost for continuing coverage for Decedent.

Claimant RH argues that C.R.S. § 8-40-201(19)(b) mandates that the full cost of the terminated benefits be included in the average weekly wage calculation. Claimant RH further asserts that, whether an injured worker actually uses the increased benefits to purchase health insurance, or their need to do so, has never been taken into account when addressing whether the average weekly wage is to be increased for the full amount of the terminated benefits. *See Industrial Claims Appeals Office v. Ray,* 145 P.3d 661 (Colo. 2006); and, *Restaurant Technologies, Inc. v. Industrial Claims Appeals Office*, 15CA0231 (Colo. App. February 4, 2016)(not selected for publication). Claimant RH argues that the only circumstance where the cost of insurance benefits is not includes is if an employer continues to pay for the benefits; a situation that is inapplicable here. Claimant points out that C.R.S. §8-40-201(19)(b), itself establishes that an injured worker who replaces employer provided group insurance benefits with Medicaid or some other low income medical program would still get the full average weekly wage increase. Claimant RH further argues that the average weekly wage calculation is focused on a fair approximation of the "wage" loss and the "cost" of continuing the benefit as opposed to whether or not benefits actually continue.

Yet, in this instance, it is not merely that Claimants chose to continue benefits or did not choose to continue the benefits for the Decedent. With respect to the Decedent, her death is a legal impediment to continuation of insurance benefits. The Decedent's death prevents the ability to obtain insurance coverage for the Decedent, whether it be through continuation of the employer's group health insurance plan or through the employee's cost of conversion to a similar insurance plan. The intent of the inclusion of the cost of continuing benefits is to provide the ability to continue to purchase the benefits, whether or not benefits are actually continued. In this case, the death of the Decedent means that no further benefits on her behalf would be available and could not continue under any circumstance. The Decedent's dependents could not legally choose to continue the benefits for her and, therefore, there is no cost for continuing coverage. To include this amount in the average weekly wage computation would result in a windfall for the dependents.

The cost for continuing to provide the insurance benefits for Claimant MH and Claimant RH are to be included in the from the date the benefits were terminated, January 11, 2014. However, as there is no cost for continuing coverage for the Decedent, this is not to be included in the calculation of the average weekly wage

As found, the cost of continuing these benefits for only Claimant RH and Claimant MH (and excluding the Decedent) would be $739.15 per month ($664.42 for health; $59.78 for dental; and $14.95 for vision). The monthly amount corresponds to a weekly amount of $170.57 per week.

Offsets

C.R.S. § 8-42-114 provides, in pertinent part,

> In cases where it is determined that periodic death benefits granted by the federal old age, survivors, and disability insurance act or a workers' compensation act of another state or of the federal government are payable to an individual and the individual's dependents, the aggregate benefits payable for death pursuant to this section shall be reduced, but not below zero, by an amount equal to fifty percent of such periodic benefits. C.R.S. § 8-42-114.

The purpose of the offset is to prevent receipt of the full amount of social security and workers' compensation benefits for the same disability. *Yates v. Sinton Dairy,* 883 P.2d 562 (Colo. App. 1994); See also, *Engelbrecht v. Hartford Accident & Indemnity Co.,* 680 P.2d 231 (Colo.1984).

Claimant MH was awarded $720.00 per month for Social Security Survivor benefits ("SSS benefits") effective January 3, 2014. A fifty percent offset of those periodic benefits would equate to an offset of $83.08 per week. Claimant RH testified that he is also receiving SSS benefits every month. He testified that he also received SSS benefits in the same amount of $720.00 per month. A fifty percent offset of those periodic benefits would equate to an offset of $83.08 per week.

Respondents established the SSS offset of $83.08 per week against any death benefits paid to Claimant MH. Respondents also established the SSS offset of $83.08 per week against any death benefits paid to Claimant RH. The benefits for each Claimant MH and RH are both to be reduced by this amount.

Safety Rule Violation

C.R.S. § 8-42-112(1)(a) provides for a 50% reduction in compensation to a claimant where a respondent proves that the claimant's injury was caused by the willful failure obey any reasonable rule adopted by the employer for the safety of the employee. The Respondents carry the burden of establishing all five elements of a safety rule violation, which are:

1. There must be a specific, unambiguous and definite safety rule adopted by the employer.

2. The safety rule must be reasonable.

3. The safety rule must be "brought home" to the employee and diligently enforced.

4. Violation of the safety rule must be willful.

5. The violation of the safety rule must be a cause of the claimant's injury.

Here, the evidence established that the Employer adopted a safety rule requiring employees to be aware of their surroundings and work safely. This is a reasonable rule for the safety of the Employer's employees.

However, the Respondents have failed to establish that the Claimant acted willfully and with deliberate intent. The safety rule penalty is only applicable if the violation is willful. The question of whether the respondents proved willful violation of a safety rule by a preponderance of the evidence is one of fact for the ALJ. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995). Violation of a rule is not willful unless the claimant did the forbidden act with deliberate intent. A violation which is the product of mere negligence, carelessness, forgetfulness or inadvertence is not willful. *Bennett Properties Co. v. Industrial Commission*, 437 P.2d 548 (Colo. 1968); *Johnson v. Denver Tramway Corp.,* 171 Colo. 214, 171 P.2d 410 (1946); *In re Alverado,* W.C. No. 4-559-275 (ICAO December 10, 2003). Conduct which might otherwise constitute a safety rule violation is not willful misconduct if the employee's actions were intended to facilitate accomplishment of a task or of the employer's business. *Grose v. Riviera Electric*, W.C. No. 4-418-465 (ICAO August 25, 2000). A violation of a safety rule will not be considered willful if the employee can provide some plausible purpose for the conduct. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990).

In the present case, both the investigating Colorado State Patrolmen and the Respondents' retained expert did establish that Decedent was not wearing her seatbelt at the time her delivery truck was rear-ended by the tractor trailer. Both witnesses testified to the physics of the movement of Decedent's body within the cab of her truck after it had been struck from behind by a much larger vehicle. However, neither individual could offer any persuasive evidence or analysis (nor could they be expected to) as to why an employee with a spotless safety record was not wearing her seatbelt when behind the wheel of her work vehicle.

Critically, the Respondents have failed to offer any persuasive evidence that the Decedent's failure to wear a safety belt was somehow "willful." The statute permitting the reduction in benefits requires the alleged failure to "use a safety device" or to follow a "reasonable rule" of the employer to have been "willful." Here, the record is devoid of evidence regarding alleged willfulness.

Although it has been established that the seatbelt was in good working order and that the Decedent didn't fail to wear the seatbelt due to malfunction, there was simply no persuasive evidence to establish whether the Decedent intentionally or willfully failed to wear her seatbelt or whether she negligently forgot to wear her seatbelt or whether there was some other reason for her failure to wear her seatbelt. However based on the testimony from Claimant RH that the Decedent was vigilant about seatbelt use, and based on the evidence establishing that the Employer was adamant and vigilant about enforcement of the seat belt rule, and based on evidence that the Decedent was never disciplined for failure to use her seat belt and was generally known as a compliant employee with a good safety record, who was wearing her “Safe By Choice” bracelet at the time of her death, it was found that it was more likely that the Decedent failed to wear her seatbelt because she negligently forgot, or for some other reason than it was that she intentionally and willfully failed to wear her seatbelt.

Where, as here, the Respondents fail to establish that the Decedent’s injury resulted from her willful failure to obey a reasonable rule adopted by the Employer for her safety, the Respondents are not entitled to a 50% reduction in death benefits to the dependents RH and MH. Death benefits awarded in this case shall not be subject to a 50% reduction.

ORDER

It is therefore ordered that:

1. The Claimant RH is entitled to benefits pursuant to §§ 8-42-114 & 8-41-501(1), C.R.S. as Decedent’s surviving common law spouse.

2. The average of Decedent’s paychecks for the last six regular pay periods, encompassing the last 12 full weeks the Decedent worked for Employer prior to her death would result in a fair approximation of her wages. The paychecks from 10/17/2013, 10/31/2013, 11/14/2013, 11/27/2013, 12/12/2013 and 12/26/2013 which are the last 12 regular full weeks of the Decedent’s employment are used to calculate base AWW for the Decedent. This results in a base average weekly wage of $609.16.

3. The cost for continuing to provide the insurance benefits for Claimant MH and Claimant RH are to be included in the average weekly wage calculation from the date the benefits were terminated, January 11, 2014. However, as there is no cost for continuing coverage for the Decedent, this is not to be included in the calculation of the average weekly wage. The cost of continuing these benefits for only Claimant RH and Claimant MH (and excluding the Decedent) would be $739.15 per month ($664.42 for health; $59.78 for dental; and $14.95 for vision). The monthly amount corresponds to a weekly amount of $170.57 per week to be added to the base average weekly wage.

4. Respondents established the Social Security Survivors benefit offset of $83.08 per week against any death benefits paid to Claimant MH. Claimant MH’s benefits are to be reduced by this amount.

5. Respondents established the Social Security Survivors benefit offset of $83.08 per week against any death benefits paid to Claimant RH. The benefits paid to Claimant RH are to be reduced by this amount.

6. Respondents have failed to establish that Decedent’s injury resulted from her willful failure to obey a reasonable safety rule adopted for the safety of the employees and therefore Respondents are not entitled to a reduction in benefits pursuant to §8-42-112(1).

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 4, 2016

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable injury on February 10, 2016.

2. If compensable, whether Claimant has established by a preponderance of the evidence an entitlement to reasonable and necessary medical benefits.

3. If compensable, whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from February 14, 2016 through April 25, 2016.

4. If Claimant established an entitlement to TTD benefits, whether Respondents have proven by a preponderance of the evidence that Claimant was responsible for his termination of employment.

STIPULATIONS

1. Claimant's average weekly wage from Respondent Employer is $399.62.

FINDINGS OF FACT

1. Employer is a family-friendly restaurant and entertaining corporation with a location in Denver at the intersection of Interstate 25 and Colorado Boulevard.

2. Claimant began employment with Employer at that location on or about January 12, 2016 as a line cook. Claimant's duties included preparing food, food prep work, cleaning, and doing dishes.

3. Claimant alleges he suffered a work injury on an unknown date sometime in February, 2016 when he slipped on grease, a plastic bag, and/or both in the kitchen. Claimant alleges he fell and hurt his lower back and head. Claimant continued working but alleges that the pain did not get better and that he reported the injury about one week later. Claimant then alleges he sought treatment. Claimant's initial complaints in the medical records include only low back pain. Claimant's complaints then expanded to include low back pain, thoracic/mid back pain, chest wall tenderness, a bump on the head, erectile dysfunction, and headaches. Claimant's testimony overall is not found credible or persuasive.

4. On February 15, 2016 Claimant was evaluated at University of Colorado Hospital. Claimant was evaluated by Kennon Heard, M.D. at 9:36 p.m. Dr. Heard noted complaints of back pain after heavy lifting at work 2-3 days ago. Dr. Heard noted

on examination that Claimant had normal reflexes, normal pulses, mild lower back spasm, no focal tenderness or redness, and that Claimant was able to heel and toe stand. Dr. Heard noted: fall back pain; no neurological symptoms; negative x-rays; history, exam, and testing consistent with muscular back pain; and no evidence for cauda equine, cord compression, infection, tumor, or fracture. At 9:38 p.m. Dr. Heard ordered x-rays of Claimant's lumbar spine noting "back pain fall." The x-rays reviewed by Dr. Heard showed: no fracture or malalignment; vertebral body height and alignment within normal limits; and intervertebral disc spaces grossly maintained. At 10:08 p.m. it was noted that Claimant was stable and improving with emergency department treatment and would be discharged home. The impression noted by Dr. Heard was bilateral low back pain without sciatica. Dr. Heard noted that Claimant could return to work the next day with a light duty work restriction until cleared by workmans comp. *See* Exhibits 1, A.

5. At 10:05 p.m. on February 15, 2016 Patrick Smith, RN completed emergency department notes. RN Smith noted that Claimant had complaints of falling at work while carrying dishes and that Claimant reported falling and landing on his lower back. Claimant reported pain while bending down and rising. *See* Exhibits 1, A.

6. Claimant was not treated again until approximately one month later. On March 16, 2016 Claimant was evaluated at University of Colorado Hospital by Jason Hoppe, D.O. Claimant reported back pain and that he fell at work one month prior from the ground level. Claimant reported difficulty achieving an erection over the last month. Dr. Hoppe noted lower thoracic midline pain on examination and a normal cremasteric reflex on testicular exam. X-rays of Claimant's thoracic and lumbar spine were noted to show mid and lower thoracic discogenic degenerative changes without evidence of fracture, and no evidence of acute traumatic abnormality with stable straightening of the lumbar lordosis. *See* Exhibits 1, A.

7. On April 6, 2016 Claimant was evaluated by David Yamamoto, M.D. Claimant reported that he was working as a cook for Employer when he slipped and fell on a plastic bag while in the kitchen. Claimant reported that his feet went out from under him and he went backwards landing on his back and buttocks. Dr. Yamamoto noted mild chest wall tenderness, and mild tenderness in the mid and lower back. Dr. Yamamoto also noted a small bump on Claimant's left scalp and that Claimant thought he might have bumped his head when he fell. Dr. Yamamoto assessed strain of the lower back, strain of the thoracic region, and strain of the chest wall. *See* Exhibit 2.

8. When Claimant was evaluated almost two months prior at the initial emergency department visit, there was no note of any chest wall tenderness, bump on the scalp, or mid back pain.

9. On May 2, 2016 Claimant underwent an independent medical evaluation (IME) performed by Carlos Cebrian, M.D. Dr. Cebrian noted that Claimant did not remember the date of injury and that Claimant was very tangential and a difficult historian. Claimant reported slipping on a plastic bag that was on the floor and that he

landed flat on his back. Claimant reported that he was carrying three plates under his left arm when he fell and that he had pain in his low back after the fall. Claimant reported that was the only area that hurt, but that after going home and showering he noticed that he had pain in his buttocks and upper back. Claimant denied any other injuries and reported that he did not hit his head. Claimant reported that he did not tell anyone about the accident for over one week because he thought his symptoms would go away. Claimant reported that after the fall he continued to work for the next week until he was laid off. Claimant reported pain in his low back and the he could feel a lump in his back and on the right side of his head. Claimant reported that since one week after his fall he had not had sex with his wife and was unable to get an erection. Claimant then said the problems started the day of his injury. Claimant reported that his low back pain was bilateral and denied radiation of pain into his legs. Claimant denied having any headaches even though he checked headaches on his paperwork. *See* Exhibits 3, B.

10. On examination, Dr. Cebrian noted the thoracic spine revealed no spasms, trigger points, or atrophy and that range of motion was full in all directions. Claimant reported diffuse pain present to palpation over the paraspinal thoracic muscles. Dr. Cebrian noted on examination of the lumbar spine that there were no spasms, trigger points, or atrophy and that range of motion was full in all directions. Claimant reported discomfort on extension but not on flexion and reported diffuse pain present to palpation over the paraspinal lumbar muscles. Dr. Cebrian opined that Claimant's non-claim related diagnoses included: lumbar spine degenerative disc disease; thoracic spine degenerative disc disease; diffuse and non-specific thoracic and lumbar spine pain with normal neurological exam; and subjective complaints of erectile dysfunction. *See* Exhibits 3, B.

11. Dr. Cebrian noted that Claimant's primary complaint was erectile dysfunction and that the initial complaints of lumbar spine pain expanded to mid and upper back pain one month after the alleged fall at work. Dr. Cebrian noted the inconsistencies in the date of injury as well as the mechanism of injury. Dr. Cebrian opined that Claimant had non-specific subjective complaints of thoracic and lumbar spine pain without any objective evidence and that Claimant had no neurological symptoms or examination findings that would explain erectile dysfunction secondary to a fall. Dr. Cebrian opined that Claimant did not sustain an injury on February 10, 2016. He noted that Claimant continued to work two jobs for one week after the fall, Claimant delayed one week in reporting the fall and injury, and that Claimant's initial examination on February 15, 2016 had limited physical examination findings. Dr. Cebrian opined that at the February 15, 2016 evaluation Claimant would not have had spasm without tenderness if there had been an acute injury to the lumbar spine. Dr. Cebrian also noted that Claimant's pain complaints had expanded after the initial visit to later include thoracic spine pain, erectile dysfunction, chest wall pain, and a bump to the head. Dr. Cebrian further opined that Claimant had undergone multiple examinations with normal neurological exams and that the lack of improvement of subjective pain complaints over a period of three months with limited examination findings was inconsistent. Dr. Cebrian opined that if Claimant had suffered a fall that resulted in injuries, Claimant

would have had some improvement over time. Dr. Cebrian opined that further evaluation, diagnosis, and treatment under workers' compensation was not medically reasonable, necessary, appropriate, or related. *See* Exhibits 3, B.

12. Dr. Cebrian testified at hearing consistent with his IME report. Dr. Cebrian again pointed out inconsistencies with Claimant's report of injury. Dr. Cebrian noted that at Claimant's first visit at the emergency department Claimant did not mention hitting his head, then at the first visit with Dr. Yamamoto it was noted that Claimant may have hit his head, and then at the IME with him Claimant denied hitting his head. Dr. Cebrian also pointed out that in his testimony Claimant stated that he did hit his head. Dr. Cebrian opined that Claimant would have had tenderness at his first visit if there had been acute trauma and that he would have expected the records to show tenderness to palpation in the lower back had Claimant sustained an acute injury to the low back. In this case, Dr. Cebrian noted that there was no tenderness in the lumbar spine at the initial emergency department visit, then mild tenderness in the mid and lower back when Claimant saw Dr. Yamamoto, then diffuse/widespread tenderness when Claimant was evaluated at the IME. Dr. Cebrian opined that he would not expect a lack of tenderness shortly after an acute incident, then great tenderness months later. Dr. Cebrian noted that his exam was unremarkable compared to the level of pain Claimant reported and that apart from the diffuse pain complaints from Claimant with palpation, there were no objective findings. Dr. Cebrian opined that the large and continued subjective complaints with no objective findings were highly unusual.

13. Claimant's supervisor while working for Employer was Robert Mayfield. Mr. Mayfield testified at hearing. Mr. Mayfield noted that Claimant reported the incident to him on February 14, 2016. Claimant reported that the incident happened on February 10, 2016 and that Claimant had been reaching into a drawer to grab protein when he hurt his back. Mr. Mayfield advised Claimant to see the doctors and to come back to report what the doctors said. Mr. Mayfield did not see Claimant again and terminated Claimant's employment after not hearing from Claimant and after Claimant had several days of no call/no show.

14. Claimant began working for Solid Rock Excavation on April 25, 2016. Claimant's supervisor at his new employment is Joseph Chupp who also testified at hearing. Mr. Chupp noted that Claimant is working as a labor employee on the water and sewer crew and that Claimant's crew digs under foundations to install water/sewer pipes on new construction homes. Mr. Chupp reported that Claimant is a great employee and hard worker and that Claimant is able to move pipes as needed to get the jobs done, with the two pipes they use weighing 25-35 pounds. He noted that Claimant is able to use a shovel to dig under footings, and that Claimant has never appeared to be in pain and has never mentioned pain while working.

15. The overall opinions and conclusions of Dr. Cebrian are found credible and persuasive. Claimant's pain complaints have expanded significantly from his initial visit to the emergency department shortly after the alleged incident, yet Claimant is able to perform a manual labor job well according to his current supervisor. The

inconsistencies in the records support Dr. Cebrian’s ultimate conclusions. Claimant, overall, is not credible or persuasive and has failed to meet his burden to establish that an injury occurred on February 10, 2016.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that at the time of the alleged injury he was performing service arising out of and in the course of the employment, and that the alleged injury was proximately caused by the performance of such service. *See* § 8-41-301(1)(b) & (c), C.R.S. The Act creates a distinction between an “accident” and an “injury.” The term “accident” refers to an “unexpected, unusual, or undesigned occurrence.” *See* § 8-40-201(1), C.R.S. In contrast, an “injury” contemplates the physical or emotional trauma caused by an “accident.” An “accident” is the cause and an “injury” is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable “injury.” A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO February 15, 2007). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to establish, by a preponderance of the evidence, that he suffered a compensable injury on February 10, 2016. Claimant’s testimony is not found credible or persuasive. His initial pain complaints at the emergency department are significantly different than his current pain complaints and his current expanded complaints have no objective basis. Claimant’s x-rays showed no signs of any acute trauma to his lower back, or mid back. The opinions and conclusions of Dr. Cebrian are found credible and persuasive. The opinions and assessments provided by Dr. Yamamoto are purely based on Claimant’s subjective reports and are not persuasive to establish a causal link between any work incident and a need for treatment. Dr. Yamamoto failed to address the discrepancy in Claimant’s initial limited reports close in time to the alleged incident at the emergency department and Claimant’s reports to Dr. Yamamoto which expanded to include multiple new body parts. Dr. Cebrian reviewed all the available medical reports, noted numerous inconsistencies, and provided a credible opinion that Claimant did not suffer an acute injury. His opinions, supported by the medical records lacking objective evidence of an acute injury, are found persuasive.

As Claimant has failed to meet his burden to show he sustained a compensable injury, he is not entitled to any medical benefits or temporary disability benefits.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury. His claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 4, 2016,

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

- Did Claimant prove by a preponderance of the evidence that he sustained an injury arising out of and in the course of his employment?
- If compensable, is Claimant entitled to temporary total disability benefits from December 3, 2015 through June 20, 2016?
- If compensable, is Claimant entitled to medical benefits to cure and relieve the effects of his industrial injury?

STIPULATION

Claimant and Respondents stipulated Claimant's average weekly wage at the time of the injury was $840.00 per week.

FINDINGS OF FACT

1. Claimant has worked as a journeyman painter for more than thirty (30) years.

2. There was no evidence admitted at hearing which established Claimant required treatment for his right knee prior to September 2015.

3. In 2015, Claimant was working as a painter for Employer. He had worked for the company for approximately 3 1/2 years.

4. Claimant testified that he was injured on either September 17 or 18, 2015. He was on a ladder, cutting in trim when his boot got caught and he began to fall. His body twisted, including his right knee. A co-worker (Kirt Carlson[1]) caught him and he fell to the ground. He testified he felt something in his right knee.

5. Claimant testified he did not report the injury to the supervisor, Steve Bailey, who was on the job site. He did not think it was serious and continued to work.

6. Claimant testified his knee pain worsened when he was on the next job for Employer. Specifically, Claimant then worked in Winter Park and experienced symptoms in his knee. Claimant testified that other employees assisted him with ladders on the job site. He admitted that he did not report his injury to Mr. Bailey at this time.

[1] Mr. Carlson, who could have corroborated Claimant's version of events, did not testify at hearing.

7. Claimant's last day of work was October 13, 2015. There was no evidence in the record to establish that Claimant reported an injury before he was laid off.

8. A series of text messages from Mr. Bailey's phone were admitted at hearing. On Friday, October 23, 2015, Claimant sent a text which said: "good morning Jay do I have work need to work". The response said it was going to be another week and Claimant was told to collect unemployment.

9. On October 30, 2015[2], Claimant sent a text to Mr. Bailey, asking if he was working on Monday. The text also said: "Jason I need to work unemployment does not pay bills Chuey".

10. There was no evidence in the record that Claimant provided notice of his knee injury from September 17, 2015 through October 23, 2015 .

11. Another text said: "Me and Kirt need to talk with you? Let me know OK so I can let him know so we can meet". Mr. Bailey responded that he did not know what there was to talk about. He said both of them would be back when work picked up. The ALJ notes Mr. Bailey's response related to the availability of work, however Claimant did not follow-up to report the injury.

12. Claimant testified these text messages were sent and Mr. Bailey confirmed the text messages were received.

13. On November 2, 2015, Claimant texted Mr. Bailey, explaining how he fell off a ladder at the Urban Metro Apartments. In this text, Clamant said he tried to work with it, but it got stiff and swollen. He needed to find out what was wrong with the knee, but did not want to lose his job.

14. Mr. Bailey testified Claimant has always been a good employee with very few issues. He found it "odd "that Claimant did not report the injury before this text.

15. A written report of injury, signed by Claimant on November 2, 2015, was admitted into evidence at hearing. The document was addressed: "To whom it may concern" and said that when he was working on one of the units, he almost fell off the ladder and twisted his knee. Claimant said Kirt was in the room when he almost fell and said he almost fell on him. He went on to say his knee got stiff and swollen while working at Winter Park and there was something wrong with it. He didn't want to lose his job over this, but wanted an x-ray to see what was wrong with the knee. No specific date of injury was referenced in this document.

16. Claimant was evaluated by Shelley Meyer, D.O. at Highlands Health and Wellness on November 11, 2015. At that time, he reported an injury while going up the

[2] Written copies of the screenshots were admitted into evidence at hearing as Exhibit 8 and Exhibit C respectively. Although there was no date on Exhibit 8, p. 26 /Exhibit C, p. 7, on direct examination Claimant confirmed October 30th as the date of these texts.

ladder and twisting. The ALJ notes there was no reference to almost falling off the ladder. On examination, his knee had normal joint contours, no effusion and normal range of motion. Claimant's knee had normal strength on extension and flexion, with no joint line pain noted. Dr. Meyer suspected ligament damage, which needed to be evaluated with an MRI. Ibuprofen was prescribed and a knee stabilizer was recommended, along with gentle range of motion ("ROM") exercises.

17. A Worker's Claim for Compensation was completed on November 16, 2015. Claimant specified the accident occurred at 2121 Delgany Street in Denver and said he almost fell off a ladder, twisting his knee.

18. Jason Bailey prepared a written document (statement) dated December 21, 2015. It stated he received a text from Claimant on October 23 regarding his need for work. Mr. Bailey stated Claimant had been laid off due to no work in mid-October, around October 15, 2015. Mr. Bailey noted Claimant texted him again on October 30, 2015 regarding work and stated unemployment "does not pay the bills". The statement noted Claimant wanted to talk to him, but he did not hear from him.

19. On December 23, 2015, Claimant was examined by Gary Zuehlsdorff, D.O. He reported being injured on a 4 foot stepladder, which began to slip and his foot got caught in the ladder. This caused him to twist his right knee in the lateral aspect. He fell against one of his associates, who caught him. Claimant said he reported the injury to his employer. On examination, tenderness was noted in the lateral joint line, but no significant swelling or effusion. Hard flexion caused pain in the lateral aspect of the popliteal area and some crepitus was noted. Dr. Zuehlsdorff's assessment was right lateral knee strain. Dr. Zuehlsdorff opined the injury was work related, at least from the history given by Claimant. An MRI was ordered and Claimant was given an ace wrap. Restrictions of: no kneel, crawl, squat, or climb were given.

20. Claimant underwent an MRI on his right knee on December 29, 2015. The films were read by Aamer Farooki, M.D. who noted a grade one cartilage loss in the medial compartment, patellafemoral compartment, along with full-thickness cartilage loss in the lateral compartment. Degenerative spur formation was noted in all three compartments. Dr. Farooki's impression was: complex tearing of the lateral meniscus; lateral compartment predominate osteoarthritis; and small knee effusion. The ALJ infers that the degenerative changes (osteoarthritis) noted in Claimant's knee were long- standing and not the result of trauma.

21. Claimant returned to Dr. Zuehlsdorff on January 8, 2016, at which time the MRI results were reviewed. Dr. Zuehlsdorff's assessment was right lateral knee strain, noting the x-ray showed moderate patellafemoral and lateral compartment osteoarthritis, along with MRI of right knee, which showed complex tear of the lateral meniscus with lateral compartment predominate osteoarthritis and effusion. Claimant's restrictions were continued and a prescription for Ultram was issued.

22. On January 26, 2016, Dr. Zuehlsdorff examined Claimant. Claimant reported his pain was about the same and a Synvisc injection was pending.

23. Claimant was evaluated by Rajesh Bazaz, M.D. on March 18, 2016. Claimant reported lateral sided pain, which he said was 5/10 at rest. He also noted the knee buckled the times. Dr. Bazaz' examination of the right knee showed no large joint effusion, range of motion to 110° of flexion, no gross instability and positive lateral joint tenderness. No medial joint line tenderness was noted.

24. Dr. Bazaz ordered x-rays, which showed no evidence of acute fracture dislocation. However bone-on-bone lateral compartment osteoarthritis was noted. There was no evidence of patellafemoral subluxation or tilt. Dr. Bazaz' impression was right knee advanced osteoarthritis aggravated by a knee contusion. Dr. Bazaz opined the degenerative meniscus tearing did not mean that much and did not recommend an arthroscopy. He proceeded with a steroid injection and wanted to see the Claimant for a follow-up appointment.

25. Dr. Zuehlsdorff saw Claimant on April 26, 2016 and Claimant said he was no better. He had seen Dr. Bazaz on April 15, 2016, who recommended a trial of Synvisc because the steroid injection did not work. Dr. Zuehlsdorff's assessment remained the same.

26. Mr. Bailey testified at hearing Claimant previously reported an injury on the job involving a cut on the finger. The ALJ infers Mr. Bailey believed Claimant knew he was required to report the knee injury. The ALJ credited this testimony.

27. A Notice of Contest was filed on January 19, 2016.

28. There was no evidence submitted to corroborate Claimant's testimony that he was injured on September 17 or 18, 2015. Claimant's testimony failed to persuade the ALJ he was injured as alleged.

29. Claimant's credibility was undermined by the multiple text messages he exchanged with Mr. Bailey in which he did not report an injury.

30. Claimant failed to prove that it is more probably true that not that he sustained an injury on September 17 or 18, 2015.

31. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. Section 8-43-201(1),C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the ALJ considered the credibility of Claimant and Jason Bailey on the question of compensability.

Compensability

Claimant contends he proved by a preponderance of the evidence that on September 17 or 18, 2015, he sustained a compensable injury arising out of and in the course of his employment when he fell off a ladder and twisted his knee. Claimant argued he was performing duties required by his job when he twisted his knee. Claimant averred his testimony and the records of Dr. Zuelsdorff led to the conclusion the claim was compensable. Claimant also argued the case was controlled by *City of Brighton v. Rodriquez*, 318 P.3d 496, 503 (Colo. 2014) [governing unexplained falls] to support the conclusion there was a sufficient causal connection between work activities and his knee condition.

Respondents argued Claimant did not sustain a compensable "injury" based on the delay in reporting of the injury and credibility issues regarding Claimant. Respondents cited Claimant's failure to report the injury to Mr. Bailey and asserted he was not credible because he only reported the injury after he found out there was no work available.

Claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the Claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The ALJ concludes Claimant failed to satisfy his burden of proof and did not prove he sustained an injury while working for Employer. The rationale supporting this decision was two-fold; first, Claimant failed to report any sort of injury at or near the time it occurred (Finding of Fact 5). As determined in Findings of Fact 9 through 12, Claimant initiated multiple communications with a representative of Employer (Mr. Bailey) on several occasions and failed to report that he was experiencing knee pain or that he was injured. Furthermore, Claimant had a prior finger injury, which he reported, so he was aware that he had to report work injuries. (Finding of Fact 26). The failure to report the injury hurt Claimant's credibility.

Claimant gave different versions of how the accident occurred. As found, the description Claimant provided in his statement (Finding of Fact 15–almost fell off the ladder) diverged from his testimony when he said he began falling and was caught by a co-worker. (Finding of Fact 4). Claimant also recounted different versions of the injury to Dr. Meyer (Finding of Fact 16-Claimant going up the ladder, but no mention of almost falling) than what was told to Dr. Zuehlsdorff (Finding of Fact 19-step ladder began to slip, he twisted his knee, then fell against co-worker).

Second, the medical evidence does not support the claim that Claimant sustained a traumatic injury. Although Dr. Meyer initially suspected ligament damage, no MRI was done on Claimant's right knee until December 29, 2015. (Finding of Fact 16). This was more than three months after the alleged injury and Claimant had already been off work for more than two (2) months. As found, the MRI report, as well as Dr. Bazaz's opinions regarding those objective findings, support the conclusion that Claimant had osteoarthritis in his right knee. (Findings of Fact 20 & 24). There was no evidence in the record to support the conclusion Claimant suffered an acute traumatic injury at or near September 17 or 18, 2015.

Therefore, based upon the totality of evidence before the Court, Claimant failed to persuade the ALJ that his knee was injured a result of his work for Employer.

In coming to this conclusion, the ALJ considered Claimant's argument that the case was governed by the Colorado Supreme Court's decision in *City of Brighton v. Rodriguez, supra*. The instant case was factually distinct in that it does not arise out of an "unexplained" fall. Rather, Claimant's testimony was that he lost his balance, caught his foot in the ladder and began to fall.[3] This is distinguished from the facts in *City of Rodriguez* where Claimant had no recollection or specific information as to why she fell and there were contradictory explanations as to why it occurred. *City of Brighton v. Rodriguez, supra* 318 P.3d at 500.

In light of the ruling on compensability, the issues of medical benefits and TTD benefits are moot.

[3] Hearing transcript, p. 9:11-20.

ORDER

It is therefore ordered that:

1. Claimant’s claim for benefits under W.C. 4-998-875-02 is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

The issues presented for determination are as follows:

- Whether the ALJ has jurisdiction to hear the issues Claimant endorsed for hearing;

- If the ALJ has jurisdiction, whether Claimant sustained compensable injury to her head and neck;

- Whether Claimant is entitled to medical benefits for her head and neck; and

- Whether Claimant is entitled to temporary total disability benefits from January 6, 2016 and ongoing.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge finds as fact:

1. Claimant fell on September 29, 2015 while in the course and scope of her employment. Respondents filed a General Admission of Liability (GAL) on October 22, 2015. On November 20, 2015, Respondents filed an amended GAL, which specifically denied injuries to the head and neck, and admitted that Claimant suffered a right ankle injury.

2. Claimant underwent medical treatment for her ankle injury at Concentra primarily with Dr. Candice Sobanski. Dr. Sobanski is an authorized treating physician (ATP).

3. In a report dated December 14, 2015, Dr. Sobanski indicated that Claimant had reached maximum medical improvement (MMI) for her ankle injury with no permanent impairment. Dr. Sobanski referred Claimant to her primary care physician for ongoing headaches, dizziness.

4. On January 15, 2016, Claimant filed an Application for Hearing. Claimant endorsed medical benefits, reasonably necessary, ongoing temporary indemnity benefits from January 6, 2016, and specifically sought medical benefits related to alleged injuries to her head and neck.

5. On January 27, 2016, Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Sobanski's December 14, 2015 report. It specifically stated:

> Respondents admit to the right ankle injury only. All other body parts are denied.
>
> Position on Medical Benefits after Maximum Medical Improvement (MMI): Per Dr. Sobanski's attached December 14, 2015 report, Respondents admit to the 12/14/2015 MMI date with no permanent impairment. Respondents admit to reasonable, necessary, and related post-MMI care for the right lower extremity. Respondents specifically deny medical benefits for any other body part.

6. The ALJ finds that Respondents took a specific position with respect to which body parts were accepted as compensable, and to which body parts would receive medical treatment, and that Claimant had reached MMI for her industrial injury. A determination of MMI implies that Claimant needs no further medical treatment to cure and relieve her of the compensable components of her industrial injury.

7. Claimant failed to file an objection to the January 27, 2016 FAL.

8. Claimant failed to file a Notice and Proposal to Select an Independent Medical Examiner to contest issues admitted to or denied on the January 27, 2016 FAL.

9. Claimant failed to file a new application for hearing in direct response to the January 27, 2016 FAL.

10. On February 11, 2016, the Division of Workers' Compensation requested an amended FAL. Respondents filed an Amended FAL on March 1, 2016. The Amended FAL contained the same language concerning compensable components of the work injury.

11. Again, Claimant failed to object to the March 1, 2016 amended FAL. Claimant failed to file a Notice and Proposal to Select a Division Independent Medical Examination (DIME), and Claimant failed to file a new application for hearing.

12. On April 20, 2016, after Claimant failed to object to the two FALs, Respondents filed a Motion to Strike Claimant's January 15, 2016 Application for Hearing. In their motion, Respondents asserted Claimant was jurisdictionally barred from litigating the issues closed by the FALs and argued all issues endorsed on Claimant's January 15, 2016 Application for Hearing must be stricken with prejudice.

13. On April 22, 2016, PALJ David Gallivan issued an Order striking Claimant's January 15, 2016 Application for Hearing. PALJ Gallivan found the only remaining issue for hearing on May 12, 2016 was Claimant's appeal of PALJ Gallivan's Order.

14. At the hearing held on May 12, 2016, ALJ Kimberly Allegretti overturned PALJ Gallivan's April 22, 2016 order and found PALJ Gallivan made findings of fact, which is beyond the scope of his jurisdiction. ALJ Allegretti made no independent findings on the issue of jurisdiction.

15. Based on the foregoing, the ALJ finds that Claimant's workers' compensation claim automatically closed as to the issues admitted in the January 27, 2016 FAL, and the March 1, 2016 amended FAL. Both FALs denied liability, including medical benefits, for injuries to any body part other than the Claimant's right ankle. The FAL also took a position on MMI meaning that Respondents took the position that Claimant needed no additional treatment designed to cure and relieve her of the effects of her industrial injury.

16. The Claimant took no action following the FAL to formally contest the Respondents' final position on her claim. The Claimant's continued preparation for litigation on the January 15, 2016 application for hearing does not constitute substantial compliance with § 8-43-203(2)(b)(II), C.R.S.

17. Because Claimant's claim is closed as the issues of MMI, medical benefits and permanent impairment, the ALJ lacks the authority to determine the merits of the issues Claimant endorsed in her January 15, 2016 application for hearing.

CONCLUSIONS OF LAW

Section 8-43-203(2)(b)(II), C.R.S., states, in pertinent part,

> An admission of liability for final payment of compensation must include a statement that this is the final admission by the workers' compensation insurance carrier in the case, that the claimant may contest this admission if the claimant feels entitled to more compensation, to whom the claimant should provide written objection, and notice to the claimant that the case will be automatically closed as to the issues admitted in the final admission if the claimant does not, within thirty days after the date of the final admission, contest the final admission in writing and request a hearing on any disputed issues that are ripe for hearing, including the selection of an independent medical examiner pursuant to section 8-42-107.2 if an independent medical examination has not already been conducted. If an independent medical examination is requested pursuant to section 8-42-107.2, the claimant is not required to file a request for hearing on disputed issues that are ripe for hearing until the division's independent medical examination process is terminated for any reason. Any issue for which a hearing or an application for a hearing is pending at the time that the final admission of liability is filed shall proceed to the hearing without the need for the applicant to refile an application for hearing on the issue.

The principal objective of statutory construction is to effect the legislative intent. The words and phrases in the statute are the best indicators of legislative intent, and for that reason should be given their plain and ordinary meanings. *Spracklin v. Industrial Claim Appeals Office*, 66 P.3d 176 (Colo. App. 2002). Further, the words and phrases of the statute cannot be read in isolation, but instead must be read as a whole so as to give them a consistent and harmonious meaning. *Department of Labor and Employment v. Esser*, 30 P.3d 189 (Colo. 2001).

An uncontested final admission of liability automatically closes a case "as to the issues admitted in the final admission." Section 8-43-203(2)(b)(II), C.R.S.; *Cibola Constr. v. Industrial Claim Appeals Office*, 971 P.2d 666, 667 (Colo. App. 1998). Accordingly, the failure to properly contest a FAL closes the claim on all admitted issues. *Dyrkopp v. Industrial Claim Appeals Office,* 30 P.3d 821 (Colo. App. 2001).

The filing requirements under §8-43-203(2)(b)(II), C.R.S., have been held to be jurisdictional. By failing to timely apply for a hearing under §8-43-203(2)(b)(II)(A), C.R.S., the ALJ is barred from considering the issues which were closed by the Respondent's FAL and Amended FAL. *See Leprino Foods Co. v. Industrial Claim Appeals Office*, 134 P.3d 475 (Colo. App. 2005).

The Industrial Claims Appeals Office has held that, "[t]he apparent purpose of requiring a claimant to object to a final admission within thirty days is to notify the respondents that the claimant does not accept the respondents' 'final' position concerning the claimant's entitlement to additional benefits, and to alert the respondents that there is an ongoing controversy which is not subject to resolution by administrative closure." *Mcarthur Mitchell v. Office Liquidators, Inc.*, 4-409-905 (ICAO 2000).

As found, Claimant applied for a hearing nearly a month before the Respondents took their final position regarding liability in this matter. While the Claimant correctly argues that she does not need to file a new application for hearing on any issue for which a hearing or application for hearing is pending at the time a respondent files a final admission, Claimant was not relieved of her statutory obligation to file a written objection or otherwise "contest" the Respondents' "final" position or to request a DIME given that she was necessarily disputing the MMI determination[1]. It is undisputed that the Claimant failed to contest (whether through a written objection, application for hearing and DIME request) either the FAL or the Amended FAL within 30 days of their respective filing dates. As such, the issues admitted in the FALs are closed, and the ALJ may not consider the issues endorsed in the Claimant's January 15, 2016 application for hearing.

[1] It is well settled that a DIME is a prerequisite to challenging an MMI determination. See §8-42-107(8)(b)(II)C.R.S.; *See Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998).

ORDER

It is therefore ordered that Claimant's claim is closed as a matter of law. The issues Claimant endorsed in her January 15, 2016 application for hearing are stricken.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant proved, by a preponderance of the evidence, he sustained an occupational disease; and

2. Whether future medical treatment will be reasonable, necessary, and related to Claimant's occupational disease.

STIPULATIONS

1. The parties stipulate the only worker's compensation claims number at issue is WC # 4-967-508. While there were originally two workers' compensation claims, the other claim was merged into WC # 4-967-508 by order of Prehearing ALJ Clisham on February 13, 2015.

2. The parties stipulate all medical benefits requested up to the date of the hearing have been provided.

3. The parties stipulate to reserving the issues of temporary total disability benefits, average weekly wage, penalties for Claimant's failure to notify Employer, and the affirmative defense of termination for cause pending the outcome of this order.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. In March 2013, Claimant, who was 25 years old at the time of the hearing, started working for Employer as a houseman in the Housekeeping Department. He worked approximately 40 hours per week as a houseman.

2. As a houseman, Claimant's work duties included bringing supplies to the housekeepers and moving room refrigerators that weighed between 25 and 35 pounds. Claimant stripped dirty sheets from the beds, and removed them. He also removed towels and trash from the rooms. He also moved rolling beds as needed to accommodate guests' needs.

3. In May or June 2013, Claimant also began working for Employer as a banquet houseman. His duties for this job included setting up and breaking down chairs and tables weighing as heavy as 50 to 65 pounds. He also set-up water stations and did

electrical work. At times, the banquet staff would be required to “flip” a banquet room within a very short period of time, meaning they must break down and set up a room to allow for cleaning and rearranging tables and chairs before the next banquet was scheduled to start.

4. When Claimant was performing the duties of both a housekeeping houseman and a banquet houseman, Claimant averaged 40 hours per week for both jobs in 2013; 33 hours per week in 2014; and 41 hours in 2015. However, during busy times, such as wedding season, Claimant would work 5 to 8 hours shifts after his housekeeping shift; on those days, he would work 13 to 16 hours.

5. Claimant’s wage records show that he worked more than 80 hours in a two-week pay period 6 times in 2014. Three of the 6 occasions occurred between January and late May, when he worked 87, 85.75, and 86 hours over a two-week span.

6. After working a double shift, Claimant would go home and watch TV before going to sleep; he was not involved in any extracurricular activities. Claimant was not involved in any types of accidents, including motor vehicle accidents and falls in the time span of 2013 to 2015, when he resigned from Employer.

7. During the summer of 2014, Claimant’s work became busier with increased volume of rooms to get ready and increased volume of banquets because of the wedding season. Late spring, summer, fall and the Christmas holiday season are the peak seasons for Employer.

8. Although Claimant doesn’t recall the exact date when his physical symptoms started, he remembered their exact onset. Claimant came home from working a double shift, sat down on the couch and his right leg went numb down to the foot.

9. Claimant was having pain mostly radiating from his right hip, down the knee and sometimes, farther down his leg.

10. Claimant’s symptoms of pain and numbness became more and more consistent as time went on, which would be on average three or four times a day, whenever he sat down.

11. Claimant awoke the morning of October 3, 2014 with pain in his right hip and knee as well as numbness from the knee down to his foot. He rated the pain as a ten out of ten.

12. Dr. Igor Borisov, who is Claimant’s personal physician, examined Claimant on October 6, 2014. Claimant complained of sciatic pain, back pain, and numbness in his leg. The note indicates that the onset of symptoms started suddenly about two months ago “without any known injury.” The Claimant described his symptoms as

severe and worsening. Dr. Borisov noted that Claimant had been working at a hotel lifting, moving and walking for one year.

13. Dr. Borisov asked Claimant if he did a lot of lifting and bending in his job. When Claimant responded that he did, Dr. Borisov told Claimant that his symptoms could be from his work.

14. Dr. Borisov referred Claimant for an MRI, which Claimant underwent on October 17, 2014. The MRI revealed a L4-L5 disc protrusion, moderate central canal stenosis with narrowing of the right lateral recess, and possible right L5 radiculopathy. There was also a broad L5-S1 disc bulge and mild left foraminal stenosis.

15. After Dr. Borisov suggested that Claimant's work could have caused his symptoms, Claimant reported to his Employer that he believed his symptoms were work-related. Claimant then started receiving medical treatment through HealthOne Occupational Medicine with Dr. Martin Kalevik.

16. Dr. Martin Kalevik performed an initial evaluation of Claimant on October 28, 2014. During this evaluation, Claimant denied any specific incident caused his back pain, although one form Claimant completed indicates that he lifted a mattress a "while ago" and now his pain is worse. Claimant stated that about a year earlier, he felt stiffness in his low back with some radiation down his leg. He felt it hurt then improve and it was up and down over a three-month period. He reported that about two and one-half weeks ago, it started flaring up significantly. Dr. Kalevik opined that based on Claimant's description of his job as one where he had to do lifting and moving, and that based on Claimant's history, his symptoms appeared to be work-related.

17. Claimant reported pain in his right hip and down the entirety of his right leg to his foot and his pain level was "pretty high."

18. Dr. Kalevik placed Claimant on work restrictions.

19. At the October 28, 2014 appointment, Dr. Kalevik prescribed hydrocodone because Claimant said he had taken all he had been prescribed. But Claimant filled a prescription for Vicodin from Dr. Borisov on October 21, 2014.

20. Claimant testified he took 120 Vicodin between October 21 and October 28. If he had done so, Claimant would have been hospitalized for hepatotoxicity, suffered liver failure, and likely died. None of which occurred — most notably Claimant's death.

21. Upon receiving notice of Claimant's prior prescription from Dr. Borisov, Dr. Kalevik rescinded his prescription for hydrocodone.

22. Although he raised the weight limit Claimant could lift and push, Dr. Kalevik maintained work restrictions during the course of Claimant's treatment.

23. Dr. Samuel Chan examined Claimant on January 9, 2015, after being referred by Dr. Kalevik. As he did when being examined by Drs. Kalevik and Borisov, Claimant told Dr. Chan “he was unable to pinpoint a specific traumatic incident.”

24. Claimant told Dr. Chan he had no back pain rather, the pain was in his right leg. Claimant rated his pain as 9 out of 10.

25. In his initial report, Dr. Chan wrote that he felt Claimant’s clinical findings correlated with the MRI findings. He noted that he discussed the case with Dr. Kalevik regarding causality, and even though there was not one specific traumatic incident, based on the history presented to him by Claimant regarding his work duties involving repetitive lifting of heavy objects and working 12 to 14 hours per day of setting up and breaking down banquets and tables, Claimant’s work would most definitely be a cause of the disc herniation.

26. When Dr. Chan reexamined Claimant on February 2, 2015, he again reported a pain level of nine out of ten.

27. Claimant was given oral steroids and had an epidural steroid injection. The oral steroids offered temporary relief, but the steroid injection failed to improve his symptoms.

28. EMG studies occurred on March 20, 2015. There was no evidence of lumbosacral radiculopathy on the right side, sacral plexopathy, or other peripheral neuropathy of the right lower extremity. In sum, the EMG studies were within normal limits.

29. Claimant wanted to work full time as a banquet attendant. Claimant’s Human Resources Manager, Bill Thomas, had concerns about Claimant’s health, so he denied Claimant’s request for a transfer. Claimant was already on work restrictions at the time he made the request.

30. On May 21, 2015, Claimant asked Dr. Kalevik to lift his work restrictions so he could do banquet work full time. Dr. Kalevik declined to do so because Claimant “does have a disk problem, and he was referred to a surgeon for possibly surgery.”

31. On June 8, 2015, Claimant underwent a Respondent-initiated independent medical examination with Dr. Bisgard.

32. According to Dr. Bisgard’s report, Claimant worked up to 15 hours per week as a banquet houseman. He reported that his job required him to set up tables and break them down, some of which were heavier than others. He reported working double shifts two to three days per week for several weeks. During the wedding and holiday seasons, Claimant worked more.

33. Claimant also told Dr. Bisgard he could not recall a specific incident at work from which his symptoms originated although he recalled that the hotel was very busy in May 2014. He told Dr. Bisgard his right leg would go numb once he arrived home after work and sat down. Claimant told Dr. Bisgard he woke up one morning in early October 2014 and could barely walk.

34. During Dr. Bisgard's physical examination, Claimant had a normal gait and could walk toe to heel. He had no difficulty with side bends and rotation, and full motion in those planes. He had had minimal pain with extension. Claimant had no tenderness over the spinous process and minimal tenderness in the SI joints. He had no pain with compression of the anterior superior iliac spine and a negative straight leg raise.

35. Dr. Bisgard diagnosed Claimant with preexisting degenerative disc disease and right-side disc protrusion resulting in probable L5 radiculopathy. According to Dr. Bisgard, Claimant has degenerative disc disease at a very early age. Dr. Bisgard opined Claimant likely has a congenital and genetic predisposition to herniated discs based on his father's medical history. She concluded that Claimant's "disk herniation was insidious in onset and spontaneously herniated in the fall of 2014 during sleep/upon waking."

36. Dr. Bisgard also indicated that the EMG tests were normal and Claimant had no response to the epidural steroid injection. She stated that the disc protrusion is likely not the source of Claimant's pain given that both of these tests were negative. She opined that Claimant's MRI findings do not correlate with Claimant's clinical exam. Dr. Bisgard also raised concerns about Claimant's reported high pain levels being inconsistent with his presentation and with the fact that he was taking Vicodin and Percocet at times.

37. Dr. Bisgard testified during the hearing. She essentially reiterated the opinions provided in her written report. She went on to add that although it initially appeared Claimant's degenerative disc disease was the source of his pain, this became less likely as his treatment progressed.

38. Ultimately, Dr. Bisgard concluded it was extremely unlikely Claimant's disc herniation was caused by his work for Employer. Rather, Claimant's symptoms were more likely the result of an insidious and spontaneous disc herniation that occurred while he was sleeping or awakening.

39. During a follow-up visit to Dr. Kalevik in July 23, 2015, he released Claimant from care because he could not dispute Dr. Bisgard's conclusions.

40. Claimant reported at least three different dates as the onset of his symptoms.

41. Claimant first reported his injury to Employer in October 2014.

42. On cross examination, Claimant testified he first had symptoms in October 2013. Claimant also told his employer the symptoms began about a year before October 2014.

43. Claimant informed Dr. Borisov his symptoms began in August 2014.

44. When Dr. Kalevik first examined Claimant on October 28, 2014, he reported his symptoms began about a year ago.

45. The inconsistencies in the dates of onset merely represent that Claimant's symptoms came and went (as he told Dr. Kalevik), and that the symptoms progressed over time. Claimant also explained that he just was not sure when his symptoms began and the Employer or Insurer required him to choose a date.

46. Based on the foregoing, Claimant has failed to prove that his low back and leg condition are a direct and proximate result of the work he performed for the Employer, or that his work aggravated or accelerated a pre-existing condition.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

4. A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with employer. *Section 8-41-301(1)(b), C.R.S.; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where Claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991).

5. "Occupational disease" is defined by §8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

6. This section imposes additional proof requirements beyond that required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The existence of a preexisting condition does not defeat a claim for an occupational disease. *Id.* A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.* Once claimant makes such a showing, the burden shifts to respondents to establish both the existence of a non-industrial cause and the extent of its contribution to the occupational disease. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

7. As a matter of law, medical evidence is not required to establish causation, although it is a factor that may be considered in addressing that determination. See *Savio House v. Dennis,* 665 P.2d 141 (Colo. App. 1983).

8. Claimant has failed to prove by a preponderance of the evidence that he suffered an occupational disease as a result of the work he performed for the Employer. Although the Claimant’s job involved physical activities including lifting and bending, the ALJ is not persuaded that his job duties proximately caused his leg and back condition or aggravated or accelerated any pre-existing condition. The evidence demonstrates that Claimant did not really believe his work caused or aggravated his condition until Dr. Borisov suggested it. Even after Dr. Borisov suggested to him that work may have played a role in his problems, Claimant asked to continue working in the banquet

department which involved the heaviest lifting. He also asked Dr. Kalevik to lift his restrictions so he could work in the banquet department. The ALJ acknowledges that Claimant earned significantly more money in the banquet department, but if the job duties in banquet truly caused or aggravated Claimant's physical condition, it would make sense for Claimant to avoid that type of work rather than seek it out. Claimant also had significant difficulty identifying when his symptoms started, which is not necessarily outcome determinative, but, in this case, the possible duration spans a year. If the Claimant experienced symptoms for a year which he believed had been work-related it seems he would have reported it sooner or avoided work activities that brought on the symptoms. The ALJ concludes that the persuasive evidence in the record fails to establish that Claimant suffered an occupational disease in the course and scope of his employment with the Employer. Any claim for medical benefits is denied.

ORDER

It is therefore ordered that Claimant's claim for workers' compensation is denied and dismissed. Claimant's request for medical treatment is also denied.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

The issue whether the subacromial decompression recommended by Dr. Eric McCarty is reasonable, necessary, and related to the admitted injury was raised for consideration at hearing.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant worked for Respondent as a recess supervisor. His responsibilities included monitoring children and leading them in recreational activities.

2. On August 7, 2013, while Claimant was moving children into a gymnasium out of the rain, he was struck by an I-beam weighing between 70 and 90 lbs.

3. Claimant was seen at Timberline Medical on September 4, 2013. He reported neck pain and blurred vision.

4. Claimant reported left shoulder pain in January 2014 and an MRI was ordered.

5. The MRI done on February 6, 2014 showed tendinopathy of the shoulder tendons and no evidence of deep partial thickness or full thickness rotator cuff tendon tear; concave under surface type II acromion with lateral down sloping. Acromioclavicular joint degenerative change with inferior osteophyte formation, mild degenerative osteoarthrosis, and chondromalacia of the glenohumeral joint, and trace subacromial sub deltoid bursitis.

6. Claimant was referred to Dr. Joseph Hsin for an orthopedic consult. He saw Claimant on March 5, 2014.

7. Dr. Hsin reviewed the MRI and gave Claimant an injection. Dr. Hsin indicated he did not find anything operative at that time. He released Claimant to follow up, as needed.

8. A report dated April 7, 2014, by Lorraine Scott, PAC determined that left shoulder symptoms were resolved.

9. Dr. Thurston's note of August 12, 2014, noted that Claimant's left shoulder range of motion had returned to normal and symptoms had resolved.

10. Claimant underwent an independent medical examination (IME) by Dr. Elizabeth Bisgard on August 17, 2015.

11. Dr. Bisgard noted that the left shoulder symptoms had resolved as of August 17, 2015, by Claimant's report.

12. Dr. Eric McCarty recommended subacromial decompression surgery for the left shoulder on January 4, 2016, because Claimant had recurrent pain and recurrent symptoms of impingement.

13. On January 12, 2016, Dr. Bisgard opined: that Claimant had preexisting degenerative changes in his left shoulder, that as a result of his work related injury, he developed symptoms of impingement; his left shoulder symptoms had resolved as of August 12, 2014, with full range of motion; and on December 4, 2014, Dr. Long reported full range of motion and no evidence of impingement in the left shoulder.

14. Dr. Bisgard testified by deposition that at her exam she did not find any signs of impingement; the impingement he had because of the traumatic injury had resolved by the time she examined him and that his subsequent impingement is due to his age and a natural progression of the underlying disorder not associated with the injury. Dr. Bisgard credibly testified that the symptoms that appeared in January 2016 were not related to the work accident.

15. Dr. Bisgard testified that she is Level II accredited by the Colorado Division of Workers' Compensation and has extensive training and experience in causation analysis in occupational injuries. Dr. Bisgard's opinion as an occupational medicine expert was more credible and persuasive than the opinion of Dr. McCarty, an orthopedic surgery expert.

CONCLUSIONS OF LAW

1.The purpose of the Worker's Compensation Act of Colorado (Act), C.R.S. Sections 8-40-101, et. seq., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation.

2.The ALJ's findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ does not address every piece of evidence or every inference that might lead to conflicting conclusions and has reject evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

3.When determining credibility, the fact finders should consider, among other things, the consistency or inconsistency of the witness testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Company v. Klein,* 98 Colo. 275, 57 P2d.

1205 (1936: *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192) (Colo. App. 2002).

4.Claimant contends that he has sustain his burden of proof to establish entitlement to an order awarding reasonably necessary and related medical treatment for his left shoulder injury. Respondents are liable for medical treatment reasonably necessary to cure and relieve the employee from the effects of the injury. Section 8-42-101, C.R.S. However, the right to workers' compensation benefits, including medical benefits arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of employment. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000).

5.Respondents may challenge the reasonableness and necessity of current or newly requested treatment not withstanding its position regarding previous medical care in a case. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). The question of whether a particular medical treatment is reasonable, necessary, and related is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, Supra.* The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group v. Kim,* 804 P.2d 250 (Colo. App. 1990).

6.The Judge concludes that Claimant failed to sustain his burden of proof to establish that his claim for medical treatment is related to the work injury. The evidence established that Claimant initially had symptoms in his left shoulder following the incident on August 27, 2013. Claimant also had degenerative changes upon MRI and anatomical findings that predisposed him to shoulder impingement.

7.Dr. Bisgard's credible causation analysis relies on the fact that Claimant's symptoms of impingement resulting from the work injury resolved by August 12, 2014, and Claimant had full range of motion. Dr. Bisgard credibly opined that after treatment of the work injury impingement symptoms and resolution of those symptoms, the January 2015 recurrence of impingement symptoms was no longer related to the work injury but were a natural progression of the underlying degenerative process.

ORDER

IT IS THEREFORE ORDERED:

1. The request for left shoulder surgery by Dr. Eric McCarty is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail,

as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP.   You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 5, 2016_

/s/ ***Margot W. Jones***

Margot W. Jones, Administrative Law
Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The following issues were raised for consideration at hearing:

a. Whether Claimant proved by a preponderance of the evidence that his condition has worsened and his petition to reopen should be granted; and

b. Whether Claimant is entitled to an award of penalties under Section 8-43-304, C.R.S.

FINDINGS OF FACT

Having considered the evidence presented at hearing, the following Findings of Fact are entered.

1. Claimant was born January 14, 1987, and was 29 years of age at the time of the hearing.

2. Claimant worked for Employer as a warehouse worker loading trailer trucks.

3. On July 24, 2014, Claimant was injured in the course and scope of his employment lifting an odd shaped package.

4. Claimant sustained an injury to his low back.

5. Claimant's authorized treating providers were at Concentra. Carrie Burns, M.D., documented Claimant had improved by March 13, 2015: "Improved, no pain. Self reported." (Exhibit B, Bates 000002) Under History of Present Illness: "Doing well. … Saw Dr. Aschberger yesterday and he thought there wasn't an impairment." (*Id.*) Under Review of Systems: "Musculoskeletal: no muscle pain and no back pain. Neurological: no tingling and no numbness." (*Id.*) Under Physical Exam: "Musculoskeletal: Moves easily about the room. … Lumbosacral spine: … no tenderness and full ROM. Straight leg raises negative bilaterally. No spasms." (*Id.*, Bates 000003)

6. Dr. Burns determined Claimant reached MMI with no impairment and released Claimant from care on March 13, 2015.

7. Respondents filed a Final Admission of Liability (FAL) on March 27, 2015. The FAL admitted to maintenance care with Dr. Aschberger over the next year. The FAL was not objected to and the case closed but for the admitted maintenance care.

8. Claimant continued working his physically demanding regular job after being placed at MMI.

9. On June 19, 2015, Claimant was re-examined by Dr. Aschberger. Claimant complained of a worsening of condition. Dr. Aschberger documented, “With work activities of bending and lifting, he has experienced overall worsening of symptomatology.” (Exhibit D, Bates 000006) Although Dr. Aschberger considered this related to the original date of injury, it is found this is not a natural progression of the industrial injury.

10. Correspondence submitted as evidence at hearing reflects that Claimant requested the Insurer’s claim file, in writing, from the third-party administrator (TPA), Broadspire, on September 23, 2015. Broadspire received this request, as reflected in the adjuster claim log, on September 30, 2015.

11. Claimant returned to Dr. Aschberger October 2, 2015. Dr. Aschberger noted Claimant was settling down from his flare-up. Dr. Aschberger noted, “He still gets some aggravation with repetitive bending and lifting at work.” (*Id.*) Physical examination was good. (*Id.*) Dr. Aschberger’s October 2, 2015, report does not support a worsening of Claimant’s July 24, 2014, industrial injury as a natural progression thereof.

12. Documentary evidence submitted at hearing reflected that Claimant again requested the claim file on October 22, 2015. On October 22, 2015, Insurer advised Claimant’s counsel via email that Sedgwick Claims Management (Sedgwick) was the TPA and Sedgwick had not received Claimant’s claim file from the prior TPA, Broadspire. In this email, Insurer advised Claimant that Sedgwick expected to receive the claim file on October 27, 2015. On October 26, 2015, via email, Claimant requested that Sedgwick deliver the claim file to him within 15 days of October 27, 2015.

13. Claimant argues that Respondents failed to produce the claim file until December 17, 2015. No direct evidence was presented at hearing concerning when the claim file was provided to Claimant. Claimant contends, in argument, that the claim file was produced on December 17, 2015, 70 days after his September 23, 2015, request and 51 days after the October 26, 2015, request for the claim file. It is found that Claimant made a prima facie showing that Respondents violated Section 8-43-203(4), C.R.S. by failing to timely produce the claim file. It is further found that Respondents failed to carry their burden of persuasion to establish their actions were reasonable.

14. Claimant was seen for an independent medical evaluation (IME) at his attorney’s request by Dr. Yamamoto on November 3, 2015, even though Dr. Aschberger had advised Claimant that he could return to the doctor for treatment if there was significant aggravation or deterioration. Dr. Yamamoto documented significant symptoms in his IME. Claimant never returned to Dr. Aschberger despite the maintenance care admitted in the FAL. Dr. Yamamoto’s opinions are found to lack credibility and not persuasive.

15. Dr. D’Angelo performed an extensive records review and a detailed physical examination. She testified via deposition.

16. Dr. D’Angelo was offered and accepted as a level-II accredited medical expert. Dr. D’Angelo’s opinions are found credible and persuasive. The doctor testified that the onset of symptoms in June 2015 and those documented by Dr. Yamamoto in November 2015 do not represent or support a worsening of the July 2014 industrial injury as a natural progression thereof.

17. Dr. D’Angelo credibly testified that Claimant has a worsening of condition but it is a worsening of his pre-existing osteoarthritis not a worsening of his work condition. Dr. D’Angelo explained her opinion, noting that Claimant’s complaints following his July 2014 work injury had resolved completely by February 2015, when he presented to Dr. Aschberger with no complaints of pain and had a normal physical examination. Consequently, Dr. Aschberger did not feel Claimant required assignment of an impairment rating. Dr. D’Angelo pointed out that Dr. Burns’ initial assessment of Claimant’s injury was lumbar sprain. There were no findings of radiculopathy and no findings of disc herniation at all. Dr. D’Angelo pointed out that Dr. Burns’ initial assessment of Claimant’s injury was lumbar sprain. There were no findings of radiculopathy and no findings of disc herniation at all.

18. Looking at Dr. Burns’ exam of March 13, 2015, Dr. D’Angelo noted Dr. Burns made absolutely no objective findings of radiculopathy. Dr. D’Angelo explained that objective findings are noted in the physical findings or an EMG, not in the assessment. Dr. D’Angelo opined that the mention of radiculopathy in the assessment was an unfortunate byproduct of the electronic medical records system.

19. Dr. D’Angelo noted that when Claimant first complained of radicular pain to his left leg in May 2015, ten months after his injury and three months after MMI, this was a new symptom as during the entirety of his prior treatment course he had only one episode of left leg focal “tingling,” which resolved quickly and completely. Dr. D’Angelo also noted that the August 25, 2014, MRI, one month and one day after Claimant’s work injury, revealed L5 pars fractures with associated L5-S1 degenerative disc protrusion, not an acute injury. The radiologist documented a small L5-S1 disc protrusion with no dural sac or root sleeve involvement. Dr. D’Angelo also noted that the repeat of the MRI one year later, August 24, 2015, revealed progression of Claimant’s underlying pre-existing disc desiccation with increased disc herniation at L5-S1.

20. Dr. D’Angelo credibly explained Claimant’s increased disc herniation was a normal progression of his underlying osteoarthritis or degenerative spine disease at L5-S1. Dr. D’Angelo explained that osteoarthritis of the spine is not caused by an injury, and, from a medical standpoint, aggravation of osteoarthritis lasts approximately 2 to 3 months. She also explained that neither of Claimant’s underlying conditions, the pars fracture nor the osteoarthritis, predispose him to injury. “[T]he only thing osteoarthritis in a pars fracture will predispose you to is not injury of the spine, but to pain symptoms due to those underlying anatomical abnormalities.” She noted that Claimant’s

presentation of waxing and waning symptoms are not medically anticipated with acute disc herniation. If a patient has an acute disc herniation at L5-S1 on his date of injury, it is medically anticipated he would have developed symptoms of radiculopathy, with the greatest pain complaints temporally associated with his injury.

21. She opined that progression of disc desiccation seen on Claimant's MRI is the natural history of degenerative spine disease, not a result of his work injury. Similarly, the increased symptoms described by Claimant one year after his work injury, after a complete pain resolution, are the natural history of degenerative spine disease, not a result of his work injury. Dr. D'Angelo noted that at her April 4, 2016, independent medical evaluation, she found no objective evidence of neurological deficits or motor strength loss, muscle atrophy or even straight leg raising pain. She explained this is not consistent with symptomatic disc herniation with neurological impingement.

22. It is specifically found Claimant failed to meet his burden of proof. It is specifically found Claimant's complaints of increased symptoms in June and November 2015, and as testified to at hearing do not establish a worsening of condition as a natural progression of the July 24, 2014 industrial injury.

23. It is found that Dr. D'Angelo's opinions are more credible and persuasive than those contained in Dr. Yamamoto's, Dr. Sacha's, and Dr. Aschberger's written reports. Dr. D'Angelo reviewed medical records which support the conclusion that Claimant's complaints in November 2015 were not related to the industrial injury. Rather, the records reflect that the symptoms documented by Dr. Aschberger in June and October 2015 and Dr. Yamamoto's documentation in November 2015 were as a result or a natural consequence of Claimant's underlying pre-existing degenerative conditions, not caused by the industrial injury.

24. It is found that Claimant failed to sustain his burden of proof to establish that his petition to reopen should be granted. It is found Claimant's complaints of increased symptoms in June and November 2015 did not establish a worsening of his work related condition. Therefore, the petition to reopen is denied.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

1. The purpose of the Workers' Compensation Act of Colorado (Act), sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case

must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

2. A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ need not address every piece of evidence or every inference that might lead to conflicting conclusions. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936) (overruled on other grounds in *Lockwood v. The Travelers Insurance Company*, 498 P.2d 947, 952 (Colo. 1972)).

4. In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002).

Petition to Reopen

5. A workers' compensation "award" may be reopened within six years after the date of injury on the ground of fraud, an overpayment, an error, a mistake, or change in condition. Section 8-43-303(1), C.R.S. A change in condition refers either "to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that can be causally connected to the original compensable injury." *Anderson v. Longmont Toyota, Inc.*, 102 P.3d 323, 330 (Colo. 2004).

6. The party seeking to reopen an issue or claim bears the burden of proof as to any issues sought to be reopened. Section 8-43-303(4), C.R.S. A claimant has the burden of proof in seeking to reopen a claim for a worsened condition. *Richards v. Indus. Claim Appeals Office*, 996 P.2d 756, 758 (Colo. App. 2000).

7. The reopening authority granted to an ALJ by Section 8-43-303, C.R.S. "is permissive, and whether to reopen a prior award when the statutory criteria have been met is left to the sound discretion of the ALJ." *Renz v. Larimer County Sch. Dist. Poudre R-1*, 924 P.2d 1177, 1181 (Colo.App.1996). Moreover, whether the claimant's condition is due to the natural progression of a pre-existing condition or a new industrial accident is one of fact for resolution by the ALJ. *Pavelko v. Southwest Heating and Cooling, LLC*, W.C. No. 4-897-489-02 (ICAO 9/4/15) (citing *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999)). Further, whether the claimant proved

a worsened condition, and whether the worsening was causally related to the industrial injury, are factual issues for resolution by the ALJ. *Id.*

8. As found, Dr. D'Angelo's opinion that Claimant has not experienced a worsening of his work injury is credible and persuasive. Dr. D'Angelo testified that Claimant has a worsening of condition but it is a worsening of his pre-existing osteoarthritis not a worsening of his work condition.

9. In contrast, Dr. Yamamoto, Dr. Sacha, and Dr. Aschberger do not differentiate symptoms related to Claimant's pre-existing condition from those related to his work injury.

10. Based upon a complete review of the evidence, it is concluded that Claimant has failed to prove by a preponderance of the evidence that his claim should be reopened. The ALJ concludes as a matter of law that based upon the credible and persuasive evidence it is more likely than not that Claimant has not sustained a worsening of condition that is a natural progression of or causally related to the industrial injury since being placed at MMI on March 13, 2015. The ALJ finds and concludes the opinions of Dr. D'Angelo are more credible and persuasive than those of Dr. Yamamoto, Dr. Sacha, and Dr. Aschberger.

11. In light of the ALJ's findings and conclusions on Claimant's petition to reopen, the ALJ need not address Claimant's request for medical benefits or temporary total disability benefits.

Penalties

12. Claimant established by a preponderance of the evidence that Respondents failed to comply with Section 8-43-203(4), C.R.S. when Respondents did not timely provide the claims file. Claimant seeks a penalty under Section 8-43-304(1), C.R.S. for Respondents failure to comply with a provision of the Act under Section 8-43-203(4), C.R.S. Claimant argues Respondents failed to timely produce the claims file until December 17, 2015. Claimant contends that providing the claim file on December 17, 2015, is 70 days after his September 23, 2015, request and 51 days after the October 26, 2015, request for the claim file.

13. Claimant contends that he is entitled to penalties under Section 8-43-304, C.R.S. for Respondent's failure to comply with Section 8-43-203(4), C.R.S. and that Claimant is entitled to a penalty for each day that Respondents failed to produce the claim file. Claimant contends that Respondents delay in producing the claim file caused unnecessary litigation and harmed Claimant's ability to timely assess his case.

14. Respondents contend that no penalty is warranted because Sedgwick did not have the claim file and therefore could not provide a copy of the claim file to Claimant until the file was received by Sedgwick from Broadspire.

15. Whether statutory penalties may be imposed under Section 8-43-304(1), C.R.S. involves a two-step analysis. The statute provides for the imposition of penalties of up to $1,000 per day where the insurer “violates any provision of article 40 to 47 of [title 8], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or the panel, for which no penalty has been specifically provided, or fails, neglects or refuses to obey any lawful order made by the director or panel....” Thus, the ALJ must first determine whether the insurer’s conduct constitutes a violation of the Act, a rule, or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable.

16. The reasonableness of the insurer’s action depends on whether it was based on a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.*, W.C. No. 4-187-261 (I.C.A.O. August 2, 2006), *but see, Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005) (standard is less rigorous standard of “unreasonableness”). However, there is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth*, 924 P.2d 1094 (Colo. App. 1996).

17. The question of whether the insurer’s conduct was objectively reasonable ordinarily presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005). A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a provision of the Act. If the claimant makes such a prima facie showing, the burden of persuasion shifts to the respondents to show their conduct was reasonable under the circumstances. *Pioneers Hospital v. Industrial Claim Appeals Office*, *supra*, *Human Resource Co. v. Industrial Claim Appeals Office*, 984 P.2d 1194 (Colo. App. 1999).

18. In this case, Claimant made a prima facie showing that Respondents violated Section 8-43-203(4), C.R.S., by failing to provide Claimant’s claim file by October 8, 2015, or fifteen days from the date of mailing of Claimant’s first request for the claim file. Therefore, the burden of persuasion shifted to Respondents to show that their conduct was reasonable. Respondents did not carry their burden of persuasion to show that their conduct was reasonable. Respondents did not explain the delay in producing the claim file beyond Respondents’ October 26, 2015, email advising Claimant that Respondents were not in possession of the claim file. Thereafter, there is no explanation for the delay in producing the file.

19. Accordingly, it is concluded that Claimant is entitled to award of penalties under Section 8-43-304(1), C.R.S. Claimant is award $25.00 per day for each of the 70 days Respondent failed to produce the claim file, or an amount of $1,750.00.

ORDER

It is therefore ordered that:

1. Claimant's petition to reopen is denied.

2. Claimant is awarded penalties under Section 8-43-304(1), C.R.S. for failure to comply with Section 8-43-203(4), C.R.S. Respondents shall pay Claimant $1,750.00 for failure to timely produce his claim file.

3. The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 5, 2016

Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that, because Respondents failed to timely deny his requests for prior authorization for a lumbar MRI and an intra-articular left hip injection, the procedures were deemed authorized pursuant to WCRP 16-9 & WCRP 16-10.

2. Whether Claimant has established by a preponderance of the evidence that a lumbar MRI and an intra-articular left hip injection constitute reasonable, necessary and causally related medical treatment for his July 27, 2012 industrial injuries.

FINDINGS OF FACT

1. Claimant worked for Employer as a Forklift Operator. On July 27, 2012 he suffered admitted industrial injuries to his lower back, buttocks and left hip during the course and scope of his employment with Employer. Claimant slipped on soap and fell into his forklift.

2. After a course of conservative treatment Authorized Treating Physician (ATP) Jeffrey A. Wunder, M.D. determined that Claimant had reached Maximum Medical Improvement (MMI) on June 3, 2013. He assigned a 15% left lower extremity impairment rating. Dr. Wunder noted that Claimant suffered chronic left hip pain, a left acetabular laberal tear and degenerative osteoarthritis.

3. Claimant challenged Dr. Wunder's MMI determination and sought a Division Independent Medical Examination (DIME). On October 23, 2013 Claimant underwent a DIME with Wallace K. Larson, M.D. Dr. Larson determined that Claimant had not reached MMI and recommended a total hip arthroplasty. He noted that Claimant had not suffered any impairment to the lumbar spine.

4. On May 20, 2015 Claimant underwent a total left hip arthroplasty with Joshua Snyder, M.D. Dr. Snyder remarked that the hip implant was satisfactorily stable.

5. Claimant returned to Dr. Wunder for medical care. On May 27, 2015 he drafted a letter to Insurer noting that Claimant was experiencing surgical complications and had an unsteady gait. Dr. Wunder requested home health care assistance for Claimant.

6. On September 24, 2015 Claimant returned to Dr. Snyder for an examination. Dr. Snyder remarked that Claimant had been recovering well but began to experience increasing pain along the inside of his thigh down to the knee. Claimant

was required to use crutches. Dr. Snyder recommended strengthening of the adductor and decreased activity.

7. On November 16, 2015 Claimant returned to Dr. Wunder for an examination. Claimant reported pain primarily in the medial right thigh. Dr. Wunder diagnosed Claimant with chronic left hip pain and “S/P left THA.” He explained that Claimant required an “electrodiagnostic study to make sure there is no abnormality of the obturator nerve causing pain in the medial left thigh.” Dr. Wunder also referred Claimant to Dr. Pouliot “to consider [an] intra-articular injection of his left hip.”

8. Dr. Wunder’s Patient Care Coordinator and Medical Assistant Shurri Shaffer testified that her job duties include obtaining authorizations for referrals and medical care. She explained that when she needs to obtain prior authorization for a referral or procedure she FAXes a copy of Dr. Wunder’s referral, the M-164 Form and the dictated note for the date of service to the insurance adjuster.

9. Ms. Shaffer commented that on November 17, 2015 she sent Dr. Wunder’s November 16, 2015 hand-written referral, an M-164 Form and office dictation by facsimile to Insurer’s adjuster Kimberly Harrington requesting the intra-articular left hip injection. However, she never received any response from Insurer.

10. On November 19, 2015 Claimant visited Dr. Snyder for an examination. Dr. Snyder remarked that Claimant had been doing well after his total left hip arthroplasty but began experiencing increasing pain in the medial thigh of his left leg. On physical examination Claimant exhibited tenderness to palpation along his adductor and tenderness in his knee. Although Claimant had numbness along the “lateral femoral cutaneous nerve distribution” Dr. Snyder could not explain the reason for the symptoms. He noted that “I do not think that it is related to his total hip as he was doing well with it when it began to hurt.”

11. On December 17, 2015 Claimant returned to Dr. Wunder for an evaluation. Claimant reported continuing back and left leg pain. Dr. Wunder determined that it was not clear whether Claimant’s chronic left hip pain was work-related. He prescribed a “lumbar MRI scan to make sure that there [was] no high lumbar disc protrusion which could be responsible for his left groin and thigh pain.”

12. Ms. Shaffer testified that on December 17, 2015 she sent Dr. Wunder’s hand-written prescription referral, M-164 Form and office dictation requesting a left hip injection and lumbar MRI to Insurer. Ms. Shaffer never received a response.

13. On January 18, 2016 Claimant again visited Dr. Wunder for an examination. Claimant reported continuing left hip pain. Dr. Wunder noted that he had ordered a lumbar MRI scan that had not been authorized. He again recommended an MRI scan of the lumbar spine to determine whether there was a “lumbar contribution to his pain.” Dr. Wunder also recommended a left hip injection. He commented that, after the completion of the preceding diagnostic procedures, he would possess additional information about recommendations for further treatment and MMI.

14. Ms. Shaffer explained that on January 19, 2016 Ms. Shaffer sent Dr. Wunder's hand-written prescription referral, M-164 Form and office dictation requesting a left hip injection and lumbar MRI to Insurer. She never received a response.

15. On March 29, 2016 Claimant underwent an independent medical examination with Jorge O. Klajnbart, M.D. After reviewing Claimant's medical records and performing a physical examination, Dr. Klajnbart responded to several interrogatories. Initially, he diagnosed Claimant with a muscle/tendon injury of the left hip and mild, degenerative, pre-existing left hip arthrosis. Dr. Klajnbart remarked that the lumbar MRI recommended by Dr. Wunder was not related to Claimant's July 27, 2012 industrial accident. He detailed that Claimant's EMG/nerve conduction study did not reveal any lumbar radiculopathy and only one physical therapy note documented any back pain. Dr. Klajnbart summarized that Claimant's soft tissue injury had resolved as reflected in the medical records and there was thus no evidence to proceed with a lumbar MRI.

16. Dr. Klajnbart also addressed Dr. Wunder's request for a fluoroscopic guided intra-articular injection. He explained that the injection was not necessary to bring Claimant to MMI because he reached MMI approximately one year after his May 20, 2015 total left hip arthroplasty. Dr. Klajnbart commented that there was no evidence in the medical records suggesting any kind of infectious process or hardware loosening.

17. On May 11, 2016 Insurer sent a letter to Dr. Wunder addressing medical treatment for Claimant's July 27, 2012 industrial injuries. The letter specified that the "medical providers should proceed with whatever treatment is necessary in regard to [Claimant's] injury." The correspondence explained that all medical records would be reviewed "to determine if the treatment rendered was reasonable, necessary and related to the work-injury for payment consideration." The letter noted that Insurer might seek the opinion of "an outside medical professional to assist with such review and determination."

18. Claimant testified at the hearing in this matter. He explained that, after he received the MRI referral from Dr. Wunder on December 19, 2015, he attempted to obtain the MRI at Fort Collins MRI. However, he was advised that he needed prior authorization from Insurer to undergo the procedure.

19. Dr. Wunder also testified at the hearing in this matter. He clarified that injecting Claimant's left hip with a local anesthetic and completing the lumbar MRI would assist in diagnosing the root of Claimant's increased symptoms. Absent the diagnostic tests he would be unable to furnish a final diagnosis. Dr. Wunder explained that the tests were reasonable, necessary and related to Claimant's industrial injury. The tests were necessary to determine an appropriate diagnosis and course of treatment. Dr. Wunder remarked that after he requested prior authorization for the lumbar MRI and left hip injection on November 16, 2015, December 17, 2015 and January 18, 2016 he did not receive any response from Insurer.

20. On August 18, 2016 the parties conducted the post-hearing evidentiary deposition of Dr. Klajnbart. He explained that the purpose of the fluoroscopic guided intra-articular hip injection would be to determine the site of Claimant's continued pain. Dr. Klajnbart testified that it would be reasonable from a diagnostic standpoint. He remarked that the lumbar MRI was likely reasonable but not related to Claimant's industrial injury. Claimant had not suffered significant lower back pain for some time and the EMG/nerve conduction study had yielded normal results.

21. Claimant has demonstrated that it is more probably true than not that, because Respondents failed to timely deny his requests for prior authorization for a lumbar MRI and an intra-articular left hip injection, the procedures were deemed authorized pursuant to WCRP 16-9 & WCRP 16-10. The record reveals that Claimant visited Dr. Wunder for examinations on November 16, 2015, December 17, 2015 and January 18, 2016. Dr. Wunder recommended or prescribed a lumbar MRI and an intra-articular left hip injection at the evaluations. Ms. Shaffer credibly commented that on November 17, 2015 she sent Dr. Wunder's November 16, 2015 hand-written referral, an M-164 Form and office dictation by facsimile to Insurer's adjuster Kimberly Harrington requesting prior authorization for an intra-articular left hip injection. However, she never received any response from Insurer. Furthermore, Ms. Shaffer also detailed that on December 17, 2015 and January 18, 2016 she again requested prior authorization from Insurer for a left hip injection and lumbar MRI by submitting Dr. Wunder's hand-written referrals, M-164 Forms and office dictation. However, Insurer again failed to respond to the requests.

22. WCRP 16-9(F) specifies that a completed prior authorization request requires the provider to concurrently explain the reasonableness and medical necessity of the services requested and provide relevant supporting medical documentation. The medical documentation includes materials "used in the provider's decision-making process to substantiate the need for the requested service or procedure." Dr. Wunder's office notes from November 16, 2015, December 17, 2015 and January 18, 2016 reflect that he recommended or prescribed a lumbar MRI and an intra-articular left hip injection. Furthermore, Ms. Shaffer's credible testimony reflects that she requested prior authorization for the procedures by submitting Dr. Wunder's hand-written referrals, M-164 Forms and office dictation to Insurer's adjuster. The supporting medical documentation apprised Insurer of the reasonableness and necessity of the services requested. Because Insurer failed to respond to Dr. Wunder's requests for a lumbar MRI and an intra-articular left hip injection within seven business days, the procedures were deemed authorized pursuant to WCRP 16-9 & WCRP 16-10. It is thus unnecessary to address whether Claimant has established that it is more probably true than not that a lumbar MRI and an intra-articular hip injection constitute reasonable, necessary and causally related medical treatment for his July 27, 2012 industrial injuries.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured

workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. W.C.R.P. 16-9(C) provides that prior authorization for a procedure may be granted immediately and without medical review. However, payers are required to respond to all providers requesting prior authorization within seven business days from receipt of the provider's completed request under W.C.R.P. 16-9(F). The duty to respond to a provider's written request applies regardless of who transmitted the request.

5. WCRP 16-10(A) explains that, "if the payer contests a request for prior authorization for non-medical reasons as defined under section 16-11(B)(1), the payer shall notify the provider and parties, in writing, of the basis for the contest" within seven business days from receipt of the completed request under WCRP 16-9(F). Moreover, WCRP 16-10(E) specifies that the failure of a payer to timely respond to a request for prior authorization shall be "deemed authorization for payment" unless a hearing is requested or the requesting provider is notified that the matter is proceeding to a hearing.

6. WCRP 16-9(F) defines a "completed request" for prior authorization as follows:

> To complete a prior authorization request, the provider shall concurrently explain the reasonableness and the medical necessity of the services requested, and shall provide relevant supporting medical documentation. Supporting medical

documentation is defined as documents used in the provider's decision-making process to substantiate the need for the requested service or procedure.

(1) When the indications of the Medical Treatment Guidelines are met, no prior authorization is required. If the provider requests prior authorization for payment, the following documentation is recommended:

(a) An adequate definition or description of the nature, extent, and necessity for the procedure;

(b) Identification of the appropriate Medical Treatment Guideline application to the requested service;

(c) Medical Treatment Guideline indications have been met; and

(d) Final diagnosis.

7. Claimant asserts that, because Respondents did not properly deny the requests for prior authorization of the lumbar MRI and an intra-articular hip injection on November 16, 2015, December 17, 2015 and January 18, 2016, the procedures were deemed authorized pursuant to WCRP 16-9 & WCRP 16-10. Respondents reply that Dr. Wunder's requests for prior authorization did not constitute "completed requests" pursuant to WCRP 16-9(F). Respondents claim that they were thus not required to respond.

8. As found, Claimant has demonstrated by a preponderance of the evidence that, because Respondents failed to timely deny his requests for prior authorization for a lumbar MRI and an intra-articular left hip injection, the procedures were deemed authorized pursuant to WCRP 16-9 & WCRP 16-10. The record reveals that Claimant visited Dr. Wunder for examinations on November 16, 2015, December 17, 2015 and January 18, 2016. Dr. Wunder recommended or prescribed a lumbar MRI and an intra-articular left hip injection at the evaluations. Ms. Shaffer credibly commented that on November 17, 2015 she sent Dr. Wunder's November 16, 2015 hand-written referral, an M-164 Form and office dictation by facsimile to Insurer's adjuster Kimberly Harrington requesting prior authorization for an intra-articular left hip injection. However, she never received any response from Insurer. Furthermore, Ms. Shaffer also detailed that on December 17, 2015 and January 18, 2016 she again requested prior authorization from Insurer for a left hip injection and lumbar MRI by submitting Dr. Wunder's hand-written referrals, M-164 Forms and office dictation. However, Insurer again failed to respond to the requests.

9. As found, WCRP 16-9(F) specifies that a completed prior authorization request requires the provider to concurrently explain the reasonableness and medical necessity of the services requested and provide relevant supporting medical documentation. The medical documentation includes materials "used in the provider's decision-making process to substantiate the need for the requested service or

procedure." Dr. Wunder's office notes from November 16, 2015, December 17, 2015 and January 18, 2016 reflect that he recommended or prescribed a lumbar MRI and an intra-articular left hip injection. Furthermore, Ms. Shaffer's credible testimony reflects that she requested prior authorization for the procedures by submitting Dr. Wunder's hand-written referrals, M-164 Forms and office dictation to Insurer's adjuster. The supporting medical documentation apprised Insurer of the reasonableness and necessity of the services requested. Because Insurer failed to respond to Dr. Wunder's requests for a lumbar MRI and an intra-articular left hip injection within seven business days, the procedures were deemed authorized pursuant to WCRP 16-9 & WCRP 16-10. It is thus unnecessary to address whether Claimant has established that it is more probably true than not that a lumbar MRI and an intra-articular hip injection constitute reasonable, necessary and causally related medical treatment for his July 27, 2012 industrial injuries.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for prior authorization for a lumbar MRI and an intra-articular left hip injection is granted. Respondents shall be financially responsible for the procedures.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP.   You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: October 5, 2016.

ISSUES

The issue to be determined by this decision is whether the two-level cervical artificial disc replacement at C3-C4 and C4-C5 recommended by Dr. Chad Prusmack is reasonable and necessary to cure and relieve Claimant of the effects of his work injury.

FINDINGS OF FACT

1. The Claimant is a 50 year old male who has worked for the Employer as a construction foreman since November 24, 2014.

2. Claimant's job as construction foreman required him to install tile and stone in construction projects, and to supervise others who did such installation work. The job required climbing up ladders and scaffolds, hauling product, and setting tiles and stones for floors. He was a "working foreman."

3. On March 11, 2015, Claimant suffered an injury. Claimant testified that he was running up a scaffolding ladder and struck his head while wearing a hard hat.

4. Respondents filed a General Admission of Liability on May 1, 2015, and a second General Admission of Liability on July 17, 2015.

5. Claimant has received extensive conservative care and numerous injections since his date of injury. Claimant testified that he struggles to move his head at the neck and must move his whole body to see to the left or to the right.

6. Claimant's authorized treating providers at Castle Pines Urgent Care began treating him on March 12, 2015. Claimant presented with neck and back pain. On March 19, 2015, Claimant complained of dizziness, a headache, and transient numbness and tingling in his upper and lower extremities. A CT scan was ordered of his cervical spine.

7. Claimant underwent the CT scan on March 16, 2015. The scan revealed some mild degenerative changes, but there were no acute findings.

8. Claimant underwent an MRI of his cervical spine on March 27, 2015. The imaging revealed some inflammatory osteoarthropathy, mild annular bulges, and mild facet arthropathy.

9. Claimant's pain complaints persisted, and he was referred to Dr. Prusmack for a neurosurgical consultation on April 21, 2015. Dr. Prusmack reviewed Claimant's MRI and noted that he did not have any acute disc herniation or active

radiculopathy. He concluded that he did not see any indication as yet to consider a cervical discography. He recommended that Claimant continue physical therapy and he prescribed Valium and oral steroids.

10. On May 21, 2015, Claimant was evaluated by Dr. Larry Wilner at Castle Pines Urgent Care. Dr. Wilner noted that Claimant was stable, but not improving. He referred Claimant back to Dr. Prusmack. On June 22, 2015, Claimant was evaluated again at Castle Pines. He complained of numbness in his right hand and foot.

11. Dr. Prusmack examined Claimant again on July 6, 2015. He noted that Claimant had not shown any improvement, and he referred him for an epidural steroid injection at C7-T1. The request was reviewed by Dr. Lynne Fernandez on July 13, 2015. Dr. Fernandez concluded that it was unclear why Dr. Prusmack wished to inject that level because there was no indication on the MRI or physical exam to support a conclusion that an injection at this level would provide any relief. Dr. Prusmack appealed the denial on July 30, 2015. Dr. Prusmack stated that an injection at C7-T1 would adequately flood the length of Claimant's cervical spine from C2-T1. He noted that this would be the most efficient and cost effective way to address Claimant's pain complaints without requiring him to undergo multiple injections at individual levels. He noted that the injection was for therapeutic purposes only.

12. The injections were approved, and Dr. Giancarlo Checa performed the procedure on August 13, 2015. Before receiving the injection, Claimant reported to Dr. Checa that his pain radiated down his neck and into his right and left arms to the tips of his fingers. Following the injection, Claimant reported to Dr. Checa that he felt a 30% reduction of his pain.

13. On September 9, 2015, Claimant returned to Dr. Wilner and reported that the injection only provided relief for 72 hours, and that he actually felt worse. Claimant also reported paresthesia down his right arm.

14. Claimant returned to Dr. Prusmack on September 22, 2015. Dr. Prusmack referred Claimant for a cervical discogram. The request was reviewed by Dr. Floyd Ring, who recommended that Claimant first undergo a series of facet injections to see if those relieved his pain complaints.

15. Claimant underwent a left facet injection at C2-C3, and bilateral facet injections at C6-C7 and C7-T1 with Dr. Checa on November 11, 2015. Claimant reported no immediate relief from the injections. On December 9, 2015, Dr. Ring evaluated the discogram request for a second time. He concluded that the discogram was appropriate at that time due to the failure of the facet injections.

16. Around this same time, due to Claimant's ongoing complaints to Dr. Wilner of pain that travelled into his upper extremities bilaterally, accompanied by intermittent numbness and tingling, he was referred for an EMG and pain management evaluation.

17. On December 23, 2015, Dr. Levi Miller performed the EMG. It was negative for any evidence of a left or right median or ulnar neuropathy, cervical radiculopathy, brachioplexopathy, neurogenic thoracic outlet syndrome or generalized peripheral neuropathy.

18. Dr. Scott Primack evaluated the Claimant on January 4, 2016. Dr. Primack concluded Claimant was approaching maximum medical improvement, and he was not sure that surgical intervention would help Claimant.

19. On February 10, 2016, Claimant underwent a cervical discography with Dr. Robert Wright. Dr. Wright noted that Claimant had highly concordant pain responses at C3-C4 and C4-C5. He also noted annular tears at those levels. No pain response was documented at C5-C6, but Dr. Wright stated that the anatomy was normal at that level.

20. Claimant also underwent a CT scan with contrast on February 10, 2016. The radiologist noted contrast materials in the central nucleus at C3-C4, contrast material that extended to the outer annular margins at C4-C5, and annular tearing at C5-C6.

21. On February 24, 2016, Dr. Prusmack reviewed the discography results. Dr. Prusmack noted that Claimant had a reproduction of pain at C3-C4 and C4-C5, which was supported by annular tears at both levels. Dr. Prusmack stated that based on Claimant's lengthy intractable pain and failing conservative care, he recommended a two-level artificial disc replacement.

22. Dr. Michael Janssen, an orthopedic surgeon, reviewed the request for a two-level disc replacement and authored a report dated March 8, 2016. Dr. Janssen noted that, according to the Cervical Spine Treatment Guidelines, cervical discography is not the best predictor for the outcome of symptomatology of the neck. He recommended a denial of the surgery until an IME could be performed. Respondents scheduled an IME with Dr. Michael Rauzzino.

23. Dr. Rauzzino performed an IME of Claimant on April 9, 2016. In his report, Dr. Rauzzino concluded that given the radiographic findings, Claimant's mechanism of injury, Claimant's presentation, and his neurologic complaints, the requested surgery was unlikely to provide relief of Claimant's symptoms. Specifically, Dr. Rauzzino noted that the MRI that Claimant underwent on March 27, 2015, showed "no acute structural injury…that would have been caused by [Claimant's] work-related injury." Additionally, Dr. Rauzzino noted that Claimant did not present with any neurologic symptoms that correlate with the affected levels at C3-C4 and C4-C5.

24. During the IME, Dr. Rauzzino administered a Computerized Outcomes Management Technologies ("COMT") assessment. Claimant scored in the "Distressed-Somatic" category for psychosocial functioning. Dr. Rauzzino noted that based on his scores, it is possible that an examination of Claimant would not demonstrate an

objective correlation with his subjective complaints. He therefore felt that reliance on Claimant's subjective reports during the discogram was flawed. Dr. Rauzzino recommended a second MRI of Claimant's cervical spine, as his last study was a year old, as well as a psychological evaluation due to his delayed recovery and the findings on his COMT test.

25. On May 17, 2016, Claimant followed up with Dr. Wilner at Castle Pines Urgent Care. Dr. Wilner reviewed Dr. Rauzzino's IME report and noted that he was in agreement with Dr. Rauzzino that Claimant's mechanism of injury did not correlate with the degree of pain that he was exhibiting although Dr. Wilner admitted he would "defer to the specialist on this subject as they have more expertise in this area." Dr. Wilner concluded that a psychological evaluation and better pain management strategies would be the best course of action.

26. Claimant underwent the second MRI on May 26, 2016. The imaging revealed mild degenerative changes of C3-C4 down to C5-C6 without evidence of nerve root impingement or cord compression.

27. Dr. Rauzzino reviewed the MRI report and authored an addendum to his IME report on June 16, 2016. Dr. Rauzzino stated that there was no significant difference between the two MRIs. Specifically, Dr. Rauzzino commented that the MRI was "fairly normal" for Claimant's age, he had minor degenerative changes at multiple levels, and there was no significant central or foraminal stenosis. Dr. Rauzzino re-affirmed his opinion that the C3-C4 and C4-C5 artificial disc replacements are not medically reasonable or necessary.

28. Dr. Rauzzino testified via pre-hearing deposition as an expert in neurosurgery with an expertise in the treatment of cervical spine conditions, spinal surgery, and as a Level II accredited physician in the State of Colorado. He testified that Claimant's pain presentation is not necessarily different from the general population who complain of neck pain on a daily basis. Dr. Rauzzino testified that an important consideration in evaluating this type of surgery is to accurately define the pain generator by ensuring that there are consistent radiographic findings, neurologic findings and a consistent exam that excludes all other causes of pain. He noted that this ensures that when you remove a piece of that person's anatomy, you are as certain as possible that they actually have an acute structural injury that will benefit from the operation.

29. Dr. Rauzzino explained that Claimant did not meet the prerequisite qualifications for the requested surgery due to a number of factors. Dr. Rauzzino testified that Claimant's mechanism of injury was not consistent with sustaining an acute structural injury based on his description of what happened, the mechanism of the injury, and the radiographic findings.

30. Dr. Rauzzino further testified that Claimant actually had annular tears at three levels of his cervical spine, despite the fact that two levels were reported as positive for pain during the discogram. Additionally, Dr. Rauzzino noted that Dr. Wright

had failed to record the levels of pressure that he utilized as part of the discography which goes against the recommendations in the Medical Treatment Guidelines.

31. Dr. Rauzzino explained that objective findings are needed to corroborate the subjective pain complaints. Surgeons look for radiographic findings of a disc pressing against a nerve, or shooting pain down an arm to corroborate patients' subjective complaints. He testified that not only does Claimant have no nerve root impingement in his cervical spine, he no longer complains of shooting pains, and his EMG was normal. Furthermore, Dr. Rauzzino noted that the kind of radicular symptoms that Claimant has complained of do not correlate with the cervical discs that Dr. Prusmack wishes to remove. For example, during his IME, Claimant complained of areas of itching in his fingers which actually correspond to C5-C6 and C6-C7. Additionally, Dr. Rauzzino testified that the potential benefits that Claimant would receive from the proposed surgery are far outweighed by the risks associated with the disc replacement. Dr. Rauzzino explained that the risks of the proposed surgery were numerous and included, but were not limited to injury to the spinal cord and vocal cords, a spinal fluid leak, bleeding, and infection.

32. Dr. Rauzzino went on to testify that the Medical Treatment Guidelines only allow for a one-level artificial disc replacement. Dr. Rauzzino also reiterated in his testimony that Claimant should undergo a psychological evaluation before any further treatment is considered.

33. Dr. Prusmack testified at a post-hearing deposition. Dr. Prusmack is a board certified neurosurgeon who is also Level II accredited in the State of Colorado. Dr. Prusmack agreed with Dr. Rauzzino that there were no acute findings on Claimant's May 26, 2016 MRI but that the May 27, 2015 MRI shows an inflammatory osteoarthropathy of the C2-3 facet joints. He believes that MRIs, however, "are not good at showing acute versus chronic changes."

34. Dr. Prusmack has recommended a C3-C4, C4-C5 total artificial disc replacement for Claimant, a procedure which he believes is medically appropriate, necessary and related to the admitted work injury. He believes that conservative therapy has been exhausted in this case.

35. Dr. Prusmack testified that he believes that the recommended surgery has a 95% chance of providing Claimant with a 50% improvement or greater of his overall pain. Dr. Prusmack explained that his position is based on the theory that the annular tears found in Claimant's cervical spine are the source of his pain. He testified that the reason that Claimant has pain at C3-C4 and C4-C5 is due to the annular tears at those levels. He likened the pain response to someone who has a hairline fracture down to the nerve in their tooth which you cannot see, yet the person still has shooting pain whenever they bite down on something. He stated that it is impossible to know where that pain is localized because it looks normal. Dr. Prusmack testified that discs themselves have pain fibers, and when you tear a disc down to the nerve supply it will create pain, similar to a tooth.

36. Dr. Prusmack has performed 2,400 cervical surgeries. He has performed approximately between 200 and 300 artificial cervical disc replacements in his career. He has probably performed between 20 and 30 two level cervical disc replacement surgeries.

37. He answered Dr. Rauzzino's question about why he chose the 4 levels for the discogram that he did by stating: "So based off physics, the literature, and standardization, all neurosurgeons know C3 to C7 you do uniformly."

38. Dr. Prusmack opined that Claimant has a 95 percent chance of improvement of pain with the surgery. Pointing to his personal experience as a surgeon, he stated that 95 percent of his patients who get cervical discography have had a 50 percent or greater improvement in their overall pain.

39. Dr. Prusmack stated that of the two options for Claimant, fusion or artificial disc replacement, "All literature supports artificial disc outperforms fusion in the long run and short run." He explained that the recovery time is shorter for disc replacement because the physician is not waiting for the biologic process of fusion to occur, that Claimant's expected time to go back to normal daily activities would be two weeks, and that his ability to return to manual work would range between six weeks and 4.5 months.

40. Dr. Prusmack opined that the artificial disc is preferable to the fusion over time because, "[a]n artificial disc moves. There is [sic] long term studies showing that the reoperation rate in 10 years for a fusion is around 20 percent, not because you have to fuse a level above or below, [but] because of the adjacent additional stress you get from the fusion because you've restricted motion."

41. With reference to the Colorado Medical Treatment Guidelines, Dr. Prusmack opined:

a. Claimant is otherwise a candidate for fusion under p. 51, A,(iii) because he has persistent non-radicular pain, non-operative treatment has failed,, residual symptoms of pain and signs of functional disability are unacceptable at the end of six months of active treatment and/or frequent recurrences of symptoms cause serious functional limitations, all pain generators are identified by discography, and a psychosocial evaluation is not indicated because he saw there were no listed history or concerns of depression, anxiety, posttraumatic stress disorder, or medication for any psychological disease, and the Claimant is not a smoker.

b. With respect to indicators for a total artificial cervical disc replacement, he opined that the patient has met fusion surgery criteria, that the patient is expected to comply with pre and post-operative protocol, and that he, the surgeon, is well-versed in anterior spinal techniques.

c. With respect to the restriction to a one-level disc replacement, Dr. Prusmack opined that the Guidelines are not up to date because they do not refer to the two level FDA trial of artificial disc versus anterior fusion, which is now at the 8 year mark, and they do not reflect that the FDA approved two level disc replacement surgery within the last two years.

42. Dr. Prusmack opined that his experience with 20 to 30 two-level disc replacement surgeries "supersedes the antiquated guidelines". Dr. Prusmack opined:

> …if you were a logician, and one would say a two-level cervical fusion is allowed, and you believe that a two-level artificial disc is better than a cervical fusion, and you can logically understand that, if you prevent his gentleman from having an artificial disc replacement, you are preventing him from having the medically necessary care to make his outcome the most optimal, and you are contradicting a surgeon who is experienced in this particular field.

43. Dr. Prusmack predicted that Claimant would have an 80 percent reduction of overall pain.

44. He opined that the type of disc bulging seen on Claimant's MRI are related to the industrial accident and whiplash injury, deduced by his knowledge of the mechanism of injury and how the physics would cause this annular tearing and bulging.

45. Dr. Prusmack explained that Dr. Rauzzino is incorrect that the discogram also revealed that there was an annular tear at the level of C5-C6. However, the CT scan did show an annular tear at C5-C6.

46. Dr. Prusmack testified that the Medical Treatment Guidelines do not recommend two-level artificial disc replacements because they are outdated, and the FDA approved two-level artificial disc replacements approximately two years ago. He admitted though that he had not read the Medical Treatment Guidelines with respect to artificial cervical disc replacements recently.

47. Dr. Prusmack also discussed the need for a psychological evaluation before surgery briefly in his testimony. He noted that because Claimant does not have a history or concerns of depression, anxiety, post-traumatic stress disorder, or medication for a psychological disease, he did not feel a psychological evaluation would be necessary.

48. Dr. Rauzzino drafted a rebuttal report in response to Dr. Prusmack's deposition testimony. Dr. Rauzzino explained that the idea that annular tears cause pain in the manner described by Dr. Prusmack is not as clear as it seems. Dr. Rauzzino noted that when surgeons perform spinal surgery they will typically remove a disc fragment and enlarge a hole in the spinal column to remove more pieces of a disc. When this occurs, the patient has a large hole in the annulus of their disc, however such

patients typically do not experience severe pain despite having a large hole in the annulus. However, if there is a causal relationship between annular tears and pain, one would expect the annular tear present at C5-C6 to be painful as well.

49. Dr. Rauzzino noted in his rebuttal report that two-level disc replacements are not generally accepted by all treating providers as the best treatment option when surgically treating claimants with neck pain. He stated that, regardless of Dr. Prusmack's assertions, the Medical Treatment Guidelines were written to exclude two-level disc replacements based on the authors' review of the current literature.

50. Dr. Rauzzino also called into question Dr. Prusmack's assertion that he guaranteed Claimant would have a 50% or more reduction in his pain. He stated that he did not believe that any literature supports Dr. Prusmack's position of being able to predict a 95% chance of a 50% or greater improvement of pain based on a discography alone.

51. In concluding his testimony, and in his rebuttal report, Dr. Rauzzino reiterated that the benefits of the recommended surgery are far outweighed by the risks associated with the surgery, and that there is not enough objective evidence to justify assuming those risks. He concluded that if he honestly believed that the proposed surgery would improve Claimant's functional and clinical outcomes and reduce his pain, then he would have no problem recommending authorization of the surgery. However, Dr. Rauzzino remained adamant that the clinical evidence that is present at this point does not indicate that Claimant would benefit from the surgery, nor does it indicate that Claimant should assume the risks of such a surgery.

52. The Claimant has failed to meet his burden of proving that the two-level artificial disc replacement surgery is reasonable, necessary and related to the industrial injury. Dr. Rauzzino's opinions regarding the proposed surgery were more credible and persuasive than Dr. Prusmack's. More particularly, Dr. Rauzzino's testimony and reports illustrated the difference between the subjective and objective findings in this case. The ALJ also credits Dr. Rauzzino's opinion that Claimant did not have pathology which warranted the proposed surgery. The ALJ notes that Dr. Rauzzino's opinions are consistent with the opinions of Dr. Primack, Dr. Wilner and Dr. Janssen in regard to Claimant's pain presentation, need for a psychological evaluation, and Claimant's current candidacy for the surgery in general. Dr. Prusmack's opinion regarding the sufficiency of the discogram, identity of the pain generator, and Claimant's need for surgery is an outlier opinion outweighed by the other evidence. Finally, the ALJ credited Dr. Rauzzino's opinion that the potential risks of the surgery outweigh the potential benefits.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

4. Section 8-42-101(1)(a), C.R.S., provides:

> Every employer … shall furnish … such medical, hospital, and surgical supplies, crutches, and apparatus as may reasonably be needed at the time of the injury … and thereafter during the disability to cure and relieve the employee from the effects of the injury.

5. Respondents are obligated to provide medical benefits to cure or relieve the effects of the industrial injury. Section 8-42-101(1), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Respondents, however, retain the right to dispute liability for specific medical treatment on grounds the treatment is not authorized or reasonably necessary to cure or relieve the effects of the industrial injury. *Id.*

6. As found, the Claimant has failed to meet his burden of proving that the cervical spine two-level artificial disc replacement surgery is reasonable, necessary and related to the industrial injury. Dr. Rauzzino’s opinions regarding the proposed surgery were more credible and persuasive than Dr. Prusmack’s. More particularly, Dr.

Rauzzino's testimony and reports illustrated the difference between the subjective and objective findings in this case. The ALJ also credits Dr. Rauzzino's opinion that Claimant did not have pathology which warranted the proposed surgery. The ALJ notes that Dr. Rauzzino's opinions are consistent with the opinions of Dr. Primack, Dr. Wilner and Dr. Janssen in regard to Claimant's pain presentation, need for a psychological evaluation, and Claimant's current candidacy for the surgery in general. Dr. Prusmack's opinion regarding the sufficiency of the discogram, identity of the pain generator, and Claimant's need for surgery is an outlier opinion outweighed by the other evidence. Finally, the ALJ credited Dr. Rauzzino's opinion that the potential risks of the surgery outweigh the potential benefits.

ORDER

It is therefore ordered that:

1. Claimant's request for a two-level cervical spine artificial disc replacement surgery is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

The issues to be determined by this decision are the following issues:

- Whether Claimant overcame the Division Independent Medical Examination (DIME) physician's opinions that Claimant reached maximum medical improvement (MMI) on June 11, 2015.

- Whether Claimant is entitled to medical benefits, including post-MMI medical benefits, in the form of an arthroplasty/full knee replacement.

FINDINGS OF FACT

1. Claimant is a traffic control supervisor for the Employer. His job duties involved driving and setting up traffic barricades. He sustained an injury to his right-knee during the course and scope of his employment on December 18, 2014, as a result of a fall. This is an admitted claim with an initial general admission of liability filed on January 27, 2015.

2. Dr. Cynthia Lund acted as Claimant's primary treating physician for this claim. Claimant initially underwent conservative treatment. Dr. Lund eventually referred Claimant for an MRI and to Dr. David Walden for an orthopedic consultation.

3. On February 13, 2015, Dr. Walden performed a right knee arthroscopy, which included a partial medial meniscectomy and right knee chondroplasty patella. Dr. Walden's post-operative diagnoses included right knee medial meniscal tear and right knee osteoarthritis with elements of pseudo-gout. Dr. Walden told Claimant that "arthroscopy was not curative for arthritis." Dr. Walden recorded his observations during the procedure, stating that the patellofemoral joint had significant osteoarthritic changes and elements of calcium crystal deposits.

4. Following his surgical procedure, Claimant continued to follow-up with Dr. Lund. He filled out a pain diagram on February 25, 2015, noting that his pain level was improved and that his pain was at 3/10 level. On that date, Dr. Lund wrote that Claimant stated that he had started physical therapy the week prior, and that his "ROM is slowly improving."

5. Claimant returned to Dr. Walden's office on March 10, 2015, where he was evaluated by Rachel Cerchia, PA-C. Claimant noted that his pain was diminishing.

6. On March 18, 2015, Claimant returned to Dr. Lund and again noted that his pain levels were at a 3/10, and that he was improving. His pain diagram noted that he had a greater activity level.

7. On April 7, 2015, Claimant again filled out a pain diagram in which he marked that he was improving, that his pain level was at a 2/10, and that he had an increased activity level. Dr. Lund remarked that Claimant "states he is doing better because PT is good." She also noted, "[m]inimal pain, gradually improving with ROM and strength with PT and HEP. No new complaints."

8. Claimant returned to Dr. Walden on April 21, 2015. Dr. Walden remarked that Claimant "reports that his knee is feeling better (approximately 80%)…." Claimant reported discomfort in and around the patellofemoral joint and anteromedial joint line. In an attempt to expedite Claimant's recovery and reduce swelling, Dr. Walden performed a steroid injection into the right knee. He noted that return to work could be considered if his knee continued to improve within the next week.

9. Claimant returned to Dr. Lund's office on April 29, 2015, where he again stated that he was improving, with pain level at a 2/10. Claimant also reported painful crepitance in the anterior right knee, and diffuse knee swelling. Claimant reported that Dr. Walden gave him a steroid injection, but he received no pain or swelling relief. Dr. Lund assessed probable aggravation of underlying osteoarthritis post-op.

10. Dr. Walden evaluated Claimant on May 19, 2015. Dr. Walden documented that the steroid injection given on April 21, 2015 was "not helpful." Claimant reported that had not returned to work, but his boss was willing to get him a helper for awhile so Claimant could attempt to ease back into normal work. Claimant expressed that he was hopeful he could get back to the heavy work he had previously performed but did not think he could yet. Dr. Walden noted that Claimant was slow to recover from the surgery, which may be attributable to the combination of arthritis and partial medial meniscectomy. Dr. Walden performed another steroid injection "in hopes of getting him from where is [sic] now to full duty."

11. The next day, May 20, 2015 Claimant returned to Dr. Lund. On his pain diagram, he marked that he had improved and that his pain level was at a 1-2/10. He was cleared to return to commercial driving and lift/carry up to 40 pounds.

12. On June 8, 2015, Claimant told his physical therapist, Heather Boehlke, DPT, that he felt 90% better, and was ready to return to normal work and activities.

13. A functional capacity evaluation (hereinafter "FCE") was performed by Michael Moore and Ashely Zimmerman at Excel Physical & Occupational Therapy on June 9, 2015. The purpose was "for assessment of right knee range of motion and current functional abilities as prescribed by his physician." The results of the FCE were considered valid, noting that Claimant "gave a reliable effort, with 6 of 6 consistency measures within expected limits." The FCE determined that he was able to push in the very heavy category, carry, pull and low-lift in the heavy category, and mid-lift and high-

lift in the heavy category. The FCE determined that Claimant was able to stoop or sit on a constant basis, walk, crouch or stand on a frequent basis, and kneel or climb stairs on an occasional basis.

14. Following the FCE, Claimant returned to Dr. Lund on June 11, 2015. On that date, Claimant relayed that he was ready to be released, and that his pain was at a 2/10. Dr. Lund cleared Claimant to return to full duty without restriction. Dr. Lund noted that Claimant's right-knee condition had stabilized, that it was not likely to improve with further active medical or surgical treatment, and that his degree of impairment was not likely to change more than 3% within the next year. Claimant was placed at MMI and assigned 25% impairment rating to his right-lower extremity. No maintenance care was prescribed but Claimant was advised to continue with home exercises.

15. Respondents filed a final admission of liability, and Claimant requested a DIME.

16. Claimant returned to work. Claimant's work schedule calendar notes that he began work again on June 14, 2015. His schedule documents that he continued to a work on a full-time basis through October 26, 2015.

17. Claimant did not seek any medical care between June 12, 2015 and October 26, 2015. On October 27, 2015, Claimant returned to Dr. Lund's office, where he was evaluated by Dr. Susan Fowler. At that time, Claimant stated that his right knee pain was at a 9/10, and that he could barely walk or straighten his knee. He denied re-injury, and claimed that "since the knee surgery his knee has never been the same." Claimant reported that he had been working and driving a lot. Claimant was given an injection and referred for another MRI.

18. The MRI of the right knee was done on October 27, 2015. The findings included moderate to severe thickening and scarring of the ACL, prior partial medial meniscectomy with more focal attenuation and fraying of the extreme posterior horn to root, likely in part post-operative although acute on chronic degenerative fraying/tearing cannot be excluded; moderate joint effusion with synovitis; grade 2-3 chondral wear; and at least 1-2 small osseous bodies are present.

19. Dr. Lund evaluated Claimant on November 2, 2015. Claimant reported his pain level was at a 7/10. Claimant "states knee always painful but worse and unable to tolerate wt. [bearing] x one month, after fall from truck and he also has been lifting a lot, up to 80 lb freq. at work for past 3-4 weeks. knee [sic] did pop." Dr. Lund suspected a "probable aggravation with heavy lifting…over past month at work with gradually increasing right knee pain. Also fell off truck 3 weeks ago, but does not think that he injured knee with that fall."

20. Dr. Lund referred the Claimant back Dr. Walden, who evaluated Claimant on November 9, 2015. Dr. Walden wrote that Claimant's "symptoms are emanating from overuse of his arthritic knee. Dr. Walden wrote that Claimant's job did not lead to his knee arthritis, but suggested that the meniscectomy could have aggravated the

condition. Diagnoses included chronic persistent symptoms from osteoarthritis. Dr. Walden referred Claimant to Dr. Michael Schuck regarding a total knee replacement.

21. On November 18, 2015, Dr. Timothy Sandell performed the DIME He found Claimant had reached MMI effective June 11, 2015. Claimant reported ongoing symptoms, but did not report any new injury. With regard to MMI, he wrote that he did believe that Claimant "was appropriately brought to MMI by his treating physicians. Therefore, I would agree with the MMI date June of 11, 2015. Dr. Sandell further wrote, that if an orthopedic surgeon opined that Claimant's ongoing problems were related to the original injury as opposed to normal wear and tear, he would need to be "taken off MMI status" to pursue potential surgical treatment. Respondents filed a final admission of liability consistent with the 19% impairment rating imposed by Dr. Sandell.

22. Dr. Michael Schuck and Andrew Dormer, PA, evaluated Claimant the next day, November 19, 2015. Mr. Dormer noted that Claimant had grade II and grade III degenerative changes in the knee at the time of the February 2015 procedure. Claimant reported that he had persistent pain following that right knee surgery, and underwent lengthy conservative treatment thereafter. Dr. Shuck noted, Claimant has experienced "steadily worsening symptoms for most of this year" without symptomatic relief from cortisone injections, viscosupplementation and physical therapy.

23. Dr. Schuck recommended arthroplasty. Dr. Shuck opined that Claimant's December 2014 injury aggravated his osteoarthritis.

24. Dr. Jon Erickson performed a record review regarding the proposed arthroplasty on behalf of the Insurer. He recommended denial of the request for the procedure because Claimant's "now symptomatic degenerative arthritis was not caused or aggravated by his work injury."

25. In response to a December 29, 2015 appeal from Dr. Walden, which remarked that the meniscectomy was to blame for the degeneration in Claimant's condition, Dr. Erickson wrote that "[this] is one of the reasons why, in the orthopedic literature, it is generally not recommended to perform arthroscopic debridement on the arthritic knee, simply because whatever benefits there might be are usually short term and have no effect on the progression of the patient's disease." Dr. Erickson went on to state that there was no way Dr. Walden's opinion can be proven. He also noted that osteoarthritis is a progressive disease, and Claimant went a full four months post-surgery without any reported pain. For these reasons he recommended continued denial of the procedure.

26. Claimant continued to follow-up with Dr. Lund through April 19, 2016. On that date Dr. Lund wrote that "at the time of MMI on 06-11-2015, [Claimant] desired to return to his regular job and completed work tasks on a Functional Capacity Evaluation which demonstrated that he was capable of returning to his regular job duties (lifting up to 50 lb)." She further wrote that "by mid-October, 2015, [Claimant] experienced increasing right knee pain and swelling with sense of instability after he had performed some repetitive, heavy lifting…." Dr. Lund noted that the Insurer denied the knee

arthroplasty and any further medical treatment. Dr. Lund placed Claimant at MMI a second time. She indicated that Claimant's knee is not likely to improve with further active medical intervention and he is in need of a total knee replacement. She opined that Claimant's function would improve with the knee replacement thereby improving his employability. She provided him a new rating. She apportioned the rating "since [Claimant] had a previous rating to this same knee for a work related injury of right knee on 06-24-2015."

27. Dr. Brian Lambden performed an IME on Respondents' behalf on June 21, 2016. Claimant told Dr. Lambden that the arthroscopy did not help, that the two steroid injections did not help, but may have masked his pain, but his knee was still not right. Dr. Lambden did not believe that the rapid degeneration in Claimant's knee condition was related to postoperative change alone "and likely there were other factors involved such as…abnormal response to steroid injections, presence of pseudogout crystal, or some type of unusual immunologic response." He remarked that the changes in Claimant's osteoarthritis "take many years to develop" and disagreed with Dr. Walden that the removal of the meniscus aggravated Claimant's condition. He recommended further workup to assess for pseudo-gout, and consideration of a repeat arthroscopy, before proceeding with any arthroplasty. He did not see significant joint destruction that would necessitate immediate total knee arthroplasty.

28. Claimant testified at hearing. He testified that when he was placed at maximum medical improvement, he could not bend or place weight on his knee. He stated that he relayed this information to Dr. Lund.

29. Claimant testified that Dr. Lund asked him to try to return to work to see if he could do his job. Claimant did return to work, and has he told Dr. Lund, the Employer gave him a helper. After Claimant returned to full duty work, his right knee pain increased.

30. Claimant testified that he needed to return to work because was concerned about losing his job.

31. Claimant testified on both direct and cross-examination that his pain overall only increased over time. Claimant testified that prior to his meniscectomy, his pain was usually at a level of 6-8/10. He testified that after he underwent the meniscectomy performed by Dr. Walden, he experienced no sustained improvement in his pain level, and that he only got worse.

32. After being confronted with the pain diagrams that he filled out at Dr. Lund's office, which indicated improvement in pain levels for months post-surgery, Claimant alleged some temporary relief. Claimant testified on cross-examination that he reported temporary pain relief on those days by chance, because injections that he received by Dr. Walden decreased his pain levels temporarily during his visits with Dr. Lund. Claimant denied that he ever told any of his physicians that the injections performed by Dr. Walden offered no relief. He also denied telling Dr. Lund that he felt a pop in his knee, as noted in her November 2, 2015 medical record.

33. Dr. Lambden testified by deposition post-hearing. He is specializes in physical medicine and rehabilitation. He is not an orthopedic surgeon. Dr. Lambden reiterated his belief that the surgical procedure did not advance Claimant's osteoarthritis, because "we do see a gradual increase in osteoarthritis over a 10- or 15-year period, but not over a 3- to 6-month period." He testified that pseudo-gout, or calcium pyrophosphate disease, is a typically genetic condition that deposits crystals in the knee joint, resulting in waxing and waning acute episodes of knee pain. He testified that claimant's post-surgery pain complaints are consistent with pseudo-gout. He testified that Claimant needed additional workup for pseudo-gout, including arthrocentesis and joint fluid analysis. He disagreed that an arthroplasty should be performed, because "even in the absence of pseudo-gout…his cartilage in his knee is not bone-on-bone. So it's not a typical recommendation for knee arthroplasty if you still have relatively decent cartilage in your knees."

34. Dr. Sandell testified by post-hearing deposition. He testified that he stood by his finding that Claimant was at MMI on June 11, 2015, based upon the information that he had at the time. He also testified that he agreed with Drs. Walden and Shuck that Claimant's need for a total knee replacement was work-related.

35. When asked whether it was reasonable to conclude that Claimant never reached MMI, Dr. Sandell testified that it "possible" that Claimant never actually reached MMI.

36. Dr. Sandell had not reviewed Dr. Lund's November 2, 2015 report, which documented Claimant engaging in heavy lifting and fall out of a truck. Dr. Sandell indicated that those two events were a concern, but that it is hard to understand the extent of any new injury. Dr. Sandell reiterated that Claimant was appropriately placed at MMI in June 2015, but then reiterated that the need for the total knee replacement surgery is related to the industrial injury.

37. Dr. Schuck testified by post-hearing deposition. He is a board certified orthopedic surgeon. He testified that he recommended surgical intervention in part because Claimant had gone through non-surgical treatments, including injections, without any reported relief.

38. Dr. Schuck testified that it is likely that the meniscectomy caused the rapid progression of the osteoarthritis. Dr. Schuck opined that the need for the knee arthroplasty was accelerated by Claimant's work injury and subsequent surgery. Dr. Schuck also opined that the crystals (or indications of pseudogout) had no bearing on the recommendation for a total knee arthroplasty.

39. Dr. Schuck testified that Claimant reported "his symptoms progressively worsened after having the knee arthroscopy…." He confirmed that Dr. Walden's records established that Claimant alleged that the cortisone injections offered no relief.

40. Dr. Schuck testified that Claimant reported "worsening knee pain that began with this original injury back in December 2014." Dr. Schuck was not aware of

the lifting and fall incidents described by Dr. Lund in her November 2, 2015 report. . Dr. Schuck testified that this did not concern him, because his primary reason for recommending the surgery was based upon how Claimant's knee appeared at the time of the original arthroscopy.

41. Dr. Schuck testified that if Claimant did in fact report 80% to 90% improvement in his symptoms following his arthroscopy, he was appropriately placed at maximum medical improvement in June of 2015. He further testified that the FCE supported the conclusion that Claimant was appropriately placed at MMI.

42. Dr. Schuck disagreed with Dr. Lambden's opinions that it would be unusual for a patient's osteoarthritis to rapidly progress following a meniscectomy. Dr. Schuck also disagreed with Dr. Lambden's recommendation to workup Claimant for pseudogout before the arthroplasty.

43. Dr. Schuck also testified that he would expect a person who goes from light duty to full duty after having knee surgery to experience a worsening of their symptoms.

44. Dr. Schuck's ultimate opinion is that Claimant needs a right knee arthroplasty and that it is related to Claimant's initial work injury.

45. Based on the foregoing, the ALJ finds that Claimant has overcome the opinions of Dr. Sandell concerning MMI. It is apparent that Claimant continued to have symptoms in his knee, and that at times those symptoms were temporarily relieved by injections. The Claimant obviously continued to present to Dr. Walden post-surgery with complaints or Dr. Walden would not have repeated injections. In addition, Dr. Sandell admitted that Claimant may not have been at MMI in June 2015 if his knee symptoms had persisted and if the need for a right knee arthroplasty was determined to be causally related to the initial industrial injury. The ALJ also finds Claimant's testimony credible concerning the circumstances surrounding his placement at MMI, the temporary relief injection therapy provided, and the rapid worsening of his symptoms after he returned to work full duty.

46. Claimant has proven that the need for the right knee arthroplasty is causally related to the initial injury. The opinions of Drs. Sandell, Schuck, Walden and Lund are more persuasive and credible than those of Drs. Lambden or Erickson. Dr. Lambden is not an orthopedic surgeon, and he examined the Claimant one time. Dr. Schuck, on the other hand, credibly opined that the work-related meniscectomy advanced the Claimant's osteoarthritis producing the need for the arthroplasty.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a

reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

4. Sections 8-42-107(8)(b)(III) and (c), *supra*, provide that the finding of a DIME selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004).

5. Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all the evidence, the trier-of-fact finds it to be highly probable and free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert*, *supra*. The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (Nov. 17, 2000).

6. The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). Since the DIME physician is required to identify and evaluate all losses and restrictions which result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Id.*

7. However, if the DIME physician offers ambiguous or conflicting opinions concerning MMI, it is for the Administrative Law Judge to resolve the ambiguity and

determine the DIME’s true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385, 388 (Colo. App. 2000). In doing so, the Administrative Law Judge should consider all of the DIME’s written and oral testimony. *Lambert & Sons, Inc., v. Industrial Claim Appeals Office*, 984 P.2d 656 (Colo. App. 1988).

8. As found, the Claimant has overcome the opinions of Dr. Sandell concerning MMI by clear and convincing evidence. It is unmistakable and free from substantial doubt that Claimant had not reached MMI in June 2015. The credible evidence establishes that Claimant continued to have symptoms in his knee, and that at times those symptoms were temporarily relieved by injections. As Dr. Schuck explained, injections only provide temporary pain relief and patients can experience significant relief for a temporary period of time. The evidence establishes that this was the case for Claimant who was provided an injection prior to being placed at MMI.

9. The Claimant obviously continued to present to Dr. Walden post-surgery with complaints or Dr. Walden would not have repeatedly provided injections. In addition, Dr. Sandell admitted that Claimant may not have been at MMI in June 2015 if his knee symptoms had persisted and if the need for a right knee arthroplasty was determined to be causally related to the initial industrial injury. Finally, the ALJ finds Claimant’s testimony credible concerning the circumstances surrounding his placement at MMI, the temporary relief injection therapy provided, and the rapid worsening of his symptoms after he returned to work full duty.

10. Furthermore, Dr. Sandell was not provided the most recent medical records prior to the DIME evaluation. The most recent records establish that Dr. Lund had taken Claimant off MMI, Dr. Walden was recommending a total knee replacement surgery, and Claimant’s work restrictions had changed. The evidence establishes that Claimant’s knee deteriorated after returning to work and after injections wore off. The evidence also establishes that the deterioration in the knee is directly related to the industrial injury and arthroscopic surgery. Therefore, Claimant has established by clear and convincing evidence that he is not at maximum medical improvement for his industrial injury.

11. Respondents are obligated to provide medical benefits to cure or relieve the effects of the industrial injury. Section 8-42-101(1), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Respondents, however, retain the right to dispute liability for specific medical treatment on grounds the treatment is not authorized or reasonably necessary to cure or relieve the effects of the industrial injury. *Id.*

12. As found, Dr. Walden, Dr. Schuck, Dr. Sandell, and Dr. Lund all agree that the total knee replacement surgery is reasonable, necessary and related to the industrial injury. All four doctors also agree that the Claimant would benefit from a total knee replacement surgery. The Claimant suffered from pre-existing osteoarthritis prior to the injury on December 18, 2014. However, the evidence establishes that any pre-existing osteoarthritis was asymptomatic prior to the industrial injury. The MRIs clearly

establish that the osteoarthritis was permanently aggravated and accelerated after the injury and after the meniscus repair surgery. Dr. Walden and Dr. Schuck both agree that the meniscus repair surgery caused the osteoarthritis to worsen more rapidly due to the removal of the part of the meniscus. The ALJ rejects the opinions of Dr. Lambden as unpersuasive. He is not an orthopedic surgeon, and he examined the Claimant one time. Dr. Schuck, on the other hand, credibly opined that the work-related meniscectomy advanced the Claimant's osteoarthritis producing the need for the arthroplasty. Claimant has proven that the total knee replacement surgery is reasonable necessary and related to the industrial injury.

ORDER

It is therefore ordered that:

1. Claimant is not at MMI.

2. Respondents shall be liable for the right total knee replacement surgery recommended by Dr. Schuck.

3. The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that the right shoulder surgery recommended by Kevin Borchard, M.D. is causally related, reasonable and necessary to cure or relieve the effects of his June 11, 2008 admitted industrial injury.

FINDINGS OF FACT

1. Claimant worked for Employer as a Medical Technician. On June 11, 2008 Claimant suffered an admitted industrial injury to his right upper extremity during the course and scope of his employment. While Claimant was opening a door to enter his place of employment a strong wind gust caused the door to fly back and twist his right arm up and over his head.

2. After undergoing conservative treatment Claimant reached Maximum Medical Improvement (MMI) for his right upper extremity injury on August 6, 2008. However, Respondents' voluntarily reopened the claim so that Claimant could undergo right elbow surgery on June 7, 2012.

3. During post-operative physical therapy Claimant began to experience increased right shoulder pain. A November 30, 2012 MRI revealed moderately severe supraspinatus tendinosis with probable partial thickness tear, subscapularis tendonitis with a partial tear and severe acromioclavicular joint osteoarthritis including inferior labral degeneration and fraying.

4. On May 9, 2014 Claimant underwent right shoulder surgery with David Weinstein, M.D. The surgery involved a right arthroscopic subacromial decompression, right arthroscopic extensive glenohumeral debridement of a partial rotator cuff tear and right arthroscopic biceps tendonesis. Claimant subsequently received conservative post-operative care.

5. .On September 15, 2014 Kevin Rice, M.D. concluded that Claimant had reached MMI. He assigned Claimant a 19% right upper extremity impairment rating that converted to an 11% whole person rating. He noted that Claimant did not require medical maintenance care for his condition.

6. Respondents subsequently filed a Final Admission of Liability (FAL) consistent with Dr. Rice's MMI and impairment determinations. The FAL specified that Claimant did not require medical maintenance treatment and he was released to full duty employment.

7. Claimant objected to the FAL and the parties proceeded to a hearing before ALJ Lamphere on April 30, 2015. ALJ Lamphere concluded that Claimant was entitled to receive medical maintenance care for his June 11, 2016 industrial injury.

8. On August 15, 2015 Claimant began receiving medical treatment from Authorized Treating Physician (ATP) Kevin Borchard, M.D. Because Claimant continued to experience right shoulder pain and neck symptoms, Dr. Borchers referred Claimant for an MRI.

9. On January 27, 2016 Claimant underwent a right shoulder MRI. The MRI revealed no full-thickness rotator cuff tear, a moderate intralamellar tearing of the distal infraspinatus tendon, mild bursa surface fraying and intrasubstance tearing of the supraspinatus tendon.

10. On April 1, 2016 Claimant visited Dr. Borchard for an examination. Dr. Borchard explained that he was unclear of the extent to which Claimant's cervical spine condition had caused right shoulder symptoms. He recommended revision of the intra articular biceps tenodesis, subpectoral biceps tenodesis and distal clavicle excision. Respondents objected to Dr. Borchard's surgical recommendations and sought a hearing.

11. On June 6, 2016 Claimant underwent an independent medical examination with Nicholas K. Olsen, D.O. Dr. Olsen also testified at the hearing in this matter. He reviewed Claimant's medical records and conducted a physical examination. In addressing Claimant's January 27, 2016 right shoulder MRI, Dr. Olsen remarked that there was no evidence of a full-thickness rotator cuff tear, the biceps tendons were intact and there was no identification of acromial compromise. More specifically, there was no structural damage to the biceps tendon. Dr. Olsen explained that Dr. Weinstein's May 9, 2014 right shoulder surgery had created sufficient space for the biceps tendon, rotator cuff and bursa to function properly and the desired surgical results had been achieved.

12. Dr. Olsen commented that during the physical examination Claimant exhibited significant hypertonicity in the upper trapezius. The trapezius bridges the gap between the shoulder and neck. The hypertonicity constituted evidence of significant muscle imbalance. Dr. Olsen remarked that correcting the muscle imbalance would be the most effective treatment for Claimant's pain reduction. He commented that Claimant has bursitis and impingement as a result of the muscle imbalance. Dr. Olsen summarized that Claimant had not undergone sufficient physical therapy and required additional therapy to correct the muscle imbalance.

13. Dr. Olsen maintained that medical providers had not identified a pain generator for Claimant's symptoms. Absent identification of a pain generator, the proposed surgery would not constitute reasonable and necessary medical treatment. Dr. Olsen summarized that the proposed surgery would not provide functional improvement, diminish pain or decrease medications. Accordingly, the surgery

proposed by Dr. Borchard was not reasonable and necessary to cure or relieve the effects of Claimant's June 11, 2008 admitted industrial injury.

14. On June 16, 2016 Claimant returned to Dr. Borchard for an evaluation. Dr. Borchard noted no significant changes in Claimant's symptoms. In his treatment recommendations he stated, "I discussed with them that I felt he had multiple pain issues that were probably not necessarily related to the shoulder and that I would not expect him to have all of his pain etiologies treated with a shoulder surgery. Despite that he felt it would be worth trying. Now he is thinking he would like to have further evaluation into his cervical spine and brachial plexus as possible causes for his pain. I think this is reasonable before committing to a surgical procedure."

15. Based on a referral from Dr. Borchard Claimant visited Gregory Gazzillo, M.D. for an examination on July 15, 2016. After reviewing Claimant's medical history and radiology results, Dr. Gazzillo explained that Claimant had "multiple issues" and that it was "hard to determine" whether the shoulder pain was related to the shoulder girdle or originated in the cervical spine. Dr. Gazzillo noted that physical therapy was the most important aspect of Claimant's treatment and a right shoulder injection could be considered. However, he did not recommend surgery.

16. Claimant testified at the hearing in this matter. He explained that he continued to experience pain across the top of his right shoulder to the top of the scapula and into the neck. Claimant noted that physical therapy had not been effective and he wished to proceed with the surgery recommended by Dr. Borchard.

17. Claimant has failed to demonstrate that it is more probably true than not that right shoulder surgery as recommended by Dr. Borchard is causally related, reasonable and necessary to cure or relieve the effects of his June 11, 2008 admitted industrial injury. Initially, on April 1, 2016 ATP Dr. Borchard recommended right shoulder surgery in the form of an intra articular biceps tenodesis, a subpectoral biceps tenodesis and a distal clavicle excision. However, he expressed uncertainty about the extent to which Claimant's cervical spine condition had caused the right shoulder symptoms. By June 16, 2016 Dr. Borchard noted that Claimant had multiple pain generators and right shoulder surgery would not likely relieve all of his symptoms. He remarked that it was reasonable to assess alternative possible pain generators before committing to right shoulder surgery. Furthermore, Dr. Gazzillo also could not determine whether Claimant's shoulder pain was related to the shoulder girdle or the cervical spine. Dr. Gazzillo noted that physical therapy was the most important aspect of Claimant's treatment and a right shoulder injection could be considered. However, he did not recommend surgery.

18. Dr. Olson explained that Claimant did not exhibit evidence of a full-thickness rotator cuff tear, the biceps tendons were intact and there was no identification of acromial compromise. More specifically, there was no structural damage to the biceps tendon. Dr. Olsen explained that the May 9, 2014 right shoulder surgery had created sufficient space for the biceps tendon, rotator cuff and bursa to function properly and the desired surgical results had been achieved. Moreover,

medical providers had not identified a pain generator for Claimant's symptoms. Absent identification of a pain generator, the proposed surgery would not constitute reasonable and necessary medical treatment. Dr. Olsen summarized that the proposed surgery would not provide functional improvement, diminish pain or decrease medications. Accordingly, the surgery proposed by Dr. Borchard is not reasonable and necessary to cure or relieve the effects of Claimant's June 11, 2008 admitted industrial injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. As found, Claimant has failed to demonstrate by a preponderance of the evidence that right shoulder surgery as recommended by Dr. Borchard is causally

related, reasonable and necessary to cure or relieve the effects of his June 11, 2008 admitted industrial injury. Initially, on April 1, 2016 ATP Dr. Borchard recommended right shoulder surgery in the form of an intra articular biceps tenodesis, a subpectoral biceps tenodesis and a distal clavicle excision. However, he expressed uncertainty about the extent to which Claimant's cervical spine condition had caused the right shoulder symptoms. By June 16, 2016 Dr. Borchard noted that Claimant had multiple pain generators and right shoulder surgery would not likely relieve all of his symptoms. He remarked that it was reasonable to assess alternative possible pain generators before committing to right shoulder surgery. Furthermore, Dr. Gazzillo also could not determine whether Claimant's shoulder pain was related to the shoulder girdle or the cervical spine. Dr. Gazzillo noted that physical therapy was the most important aspect of Claimant's treatment and a right shoulder injection could be considered. However, he did not recommend surgery.

6. As found, Dr. Olson explained that Claimant did not exhibit evidence of a full-thickness rotator cuff tear, the biceps tendons were intact and there was no identification of acromial compromise. More specifically, there was no structural damage to the biceps tendon. Dr. Olsen explained that the May 9, 2014 right shoulder surgery had created sufficient space for the biceps tendon, rotator cuff and bursa to function properly and the desired surgical results had been achieved. Moreover, medical providers had not identified a pain generator for Claimant's symptoms. Absent identification of a pain generator, the proposed surgery would not constitute reasonable and necessary medical treatment. Dr. Olsen summarized that the proposed surgery would not provide functional improvement, diminish pain or decrease medications. Accordingly, the surgery proposed by Dr. Borchard is not reasonable and necessary to cure or relieve the effects of Claimant's June 11, 2008 admitted industrial injury.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for right shoulder surgery as recommended by Kevin Borchard, M.D. is denied and dismissed.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to*

Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80202

ISSUES

1. Whether the Claimant proved by a preponderance of the evidence that he sustained a worsening of his condition that would entitle him to a reopening of W.C. Case No. 4-819-262 under Section 8-43-303(1), C.R.S.

2. If the Claimant proved that his condition worsened, whether the Claimant proved, by a preponderance of the evidence, that the cubital tunnel release surgery and removal a cyst in the left elbow, as recommended by Dr. In Sok Yi, is reasonably necessary and causally related to the Claimant's February 10, 2010 admitted work injury.

FINDINGS OF FACT

1. The Claimant suffered an admitted injury at work on February 5, 2010. The Claimant was replacing posts with reflectors after a snowstorm using a post hammer to beat the post down. When the post hit a piece of concrete it came to an abrupt stop injuring both of the Claimant's elbows.

2. The Claimant ultimately underwent three surgeries performed by Dr. In Sok Yi.

3. The Claimant had surgery on his right elbow on August 11, 2010 with both release of the right lateral epicondyle with debridement on the ECRB tendon and also a radial nerve release at the radial tunnel. Then, on April 13, 2011, the Claimant had a right cubital tunnel release surgery. The Claimant testified credibly that the surgeries on the right side took a while to heal, but they did heal well.

4. Based on the improvement to Claimant's right arm and elbow following Claimant's recovery from the right elbow surgery, Dr. Yi proposed and then, on October 11, 2011, proceeded with a left radial tunnel release and left ulnar release surgery during which he did not transpose or move the Claimant's left ulnar nerve.

5. However, the Claimant received no immediate relief from the left elbow surgery and continued to receive treatment and evaluation into 2012 and then into 2013.

6. The Claimant testified credibly that he continues to suffer symptoms in his left elbow, arm and hand and the condition has gotten worse as time has gone by with increased swelling and pain.

7. In 2011 and again in 2012, the Claimant had EMG studies which showed marked slowing of nerve signals across his left elbow.

8. On March 18, 2013, the Claimant had a repeat MRI scan of the left elbow which showed a small partial-thickness tear of the common extensor tendon and chronic calcification at the epicondyle and a small ganglion cyst behind the humeral attachment of the common extensor tendon. Dr. Yi was unable to explain why the MRI findings which were lateral were causing symptoms medially.

9. On March 8, 2013, Dr. Braden Reiter placed the Claimant at maximum medical improvement (MMI) and gave permanent impairment ratings for both of the Claimant's arms. Dr. Reiter assessed a 7% impairment of the left upper extremity and a 3% impairment of the right upper extremity. He imposed permanent restrictions of no lifting, pushing or pulling over 10 pounds.

10. On April 16, 2013, the Respondents filed a Final Admission of Liability (FAL). The FAL admits the Claimant reached MMI on April 9, 2013 and admits for the upper extremity impairment ratings provided by Dr. Reiter. The FAL admits for ongoing medical benefits after MMI.

11. On August 13, 2013, the Claimant returned for evaluation by Dr. Yi complaining of pain in both of his elbows. Dr. Yi noted that the left elbow MRI revealed a ganglion cyst and also a partial thickness tear of the common extensor tendon at the humeral attachment. He noted there is also the possibility of triceps tendonitis and mild radiocapitellar fusion. Dr. Yi stated, “I do not have a complete explanation for the fact that he has significant pain on both the medial and lateral aspect of the elbow.” To aid in diagnosis, Dr. Yi performed a diagnostic and therapeutic injection around the ganglion cyst posteriorly around the humerus and the Claimant was to return in 3-4 weeks for follow up evaluation.

12. On return to Dr. Yi on September 10, 2013, Dr. Yi noted that the Claimant reported the injection decreased his symptoms but the injection wore off and his pain worsened. Dr. Yi opined that because the injection helped with the Claimant’s symptoms, he felt that the ganglion cyst was symptomatic and he recommended an elbow arthrotomy with ganglion cyst excision. Dr. Yi stated that he didn’t have anything further to offer the Claimant about the residual numbness in his hands after the median nerve release and carpal tunnel release.

13. On January 22, 2014, the Claimant went to hearing to get authorization for proposed surgery by Dr. Yi to excise a ganglion cyst on the left elbow. ALJ Cain considered the opinions of Drs. Bisgard, Sollender and Ogin opining that the Claimant has undergone multiple surgeries without any substantial improvement which was indicative to them that the surgery recommended by Dr. Yi was also unlikely to benefit the Claimant by reducing pain or increasing functionality. ALJ Cain also considered the contrary opinions of Drs. Yi and Hughes that the Claimant’s condition had worsened

and that the surgical treatment plan was recommended. ALJ Cain denied the claim and the proposed surgery was never authorized.

14. After that hearing, the Claimant continued to receive maintenance care from Dr. Stephen Moe for psychiatric care, Dr. William Boyd for psychological care and Dr. Kristen Mason for physical medicine and rehabilitation.

15. The Claimant saw Dr. Mason on August 19, 2014 reporting he continued to struggle with pain most pronounced in the left elbow. She noted that Dr. Yi had referred the Claimant to Dr. Sing for a repeat EMG/nerve conduction study and neurologic evaluation. Dr. Mason also noted that the Claimant perceived that symptomatology was spreading to other areas of his body and he was having difficulty coping with his chronic pain.

16. On October 14, 2014, Dr. Mason reviewed the Claimant's EMG test with Dr. Sing which was compared to the 2011 EMG by Dr. Ogin. Dr. Mason noted bilateral median delayed sensory latencies and significant slowing across the ulnar nerve and stated that if the EMG from 2011 was pre-operation on the left arm, the EMG was really concerning given how bad the conduction across the elbow was. She noted that Dr. Yi was still recommending surgery and that the Claimant was considering remediation through private insurance because he wanted to proceed so he could return to work.

17. On January 20, 2015, the Claimant saw Dr. Yi again regarding his continuing left elbow pain and increasing numbness and tingling and pain on the left. Dr. Yi noted that the Claimant's treatment options for the left elbow and arm were doing nothing or a repeat ulnar nerve release with anterior subcutaneous transposition, arthroscopy to look at the cyst and evaluation for tennis elbow release. Dr. Yi noted, "[t]he main goal of the operation is to keep him from getting worse, but it can make the numbness and tingling better. The strength may also improve."

18. The Claimant saw Dr. Mason again on February 3, 2015 and she noted that Dr. Yi was still recommending further surgery for the ulnar nerve and she surmised that it sounded like a transposition. The Claimant reported that Kaiser was not willing to proceed with surgery and so he did not have the option to use his primary medical insurance.

19. There is no evidence of new trauma or cumulative trauma to Claimant's left elbow contained in the records of the three doctors providing regular maintenance care. The Claimant testified credibly at the hearing that he had no new injuries to his arms since being placed at MMI.

20. The Claimant was completely off work from the day of injury in 2010 until he returned to work in September 2015.

21. During his prolonged period not working, the Claimant was severely depressed and received medication and maintenance care to treat his depression.

22. The Claimant advised his treating physicians that he wanted to proceed with the surgery as his symptoms were getting worse and he could not leave it the way it was.

23. On February 5, 2015, Dr. Yi faxed a request to Insurer for pre-authorization for the left ulnar nerve release surgery and transposition with elbow arthroscopy along with his January 20, 2015 notes.

24. On February 15, 2015, Dr. Sollender issued a report regarding Dr. Yi's 2015 request and he opined that the work relatedness of the condition which required for Dr. Yi's proposed surgery was not established by the information supplied for review. Dr. Sollender further recommended denial of the proposed surgery because he opined that nothing in the current reports or examination findings are appreciably different from his examination in 2012. Dr. Sollender also expressed concern that the Claimant had "failed every surgical procedure he has had in the past" and so he felt it unwise to offer any procedure and get the Claimant's hopes up. Dr. Sollender opined that the Claimant remained at MMI and had not suffered any worsening of his condition from any occupational exposure.

25. On June 2, 2015, Dr. Yi issued a brief report in which he explained why he thought the surgery he was proposing was necessary and related to the original, admitted injury. Dr. Yi stated that he felt that after the ulnar release surgery with no moving of the nerve, the nerve had become unstable and started subluxing over the medial epicondyle causing irritation to the ulnar nerve, as will happen with a small percentage of the nerve release surgeries. Therefore, in this regard, he found the current condition to be related to the original injury. He noted that the removal of the cyst was not work-related as there were multiple prior MRIs in the past that did not show any cyst in the elbow.

26. At the hearing, Dr. Sollender testified that he previously discussed left ulnar nerve release surgery with submuscular transposition for the Claimant, but, on October 7, 2013, based on his perception that the carpal tunnel surgery the Claimant underwent had failed, Dr. Sollender withdrew that proposed treatment and stated that he did not recommend any further surgery for this claim.

27. The Claimant testified that did feel relief, somewhat delayed by his depression, from the surgeries on his right elbow and wrist. He testified credibly that he felt well enough by Autumn 2015 that he was able to return to work. The Claimant testified that he has, for the past several months, been a bus driver for travel to and from the airport. His job duties sometimes require him to lift luggage with both his hands but primarily with his right arm and hand.

28. The Claimant is found to be credible regarding the worsening of his condition and his left elbow symptoms.

29. Dr. Yi is found to be credible regarding the reasonable need of a repeat ulnar release surgery on Claimant's left elbow, this time with transposition of the nerve, and Dr. Yi is found to be credible regarding the change of the position of the nerve being related to the admitted injury.

30. Dr. Sollender’s opinion is less persuasive than Dr. Yi’s in that he once discussed the same surgery for the Claimant that he now opines is not reasonable or related to the admitted injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers’ compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *Robinson v. Youth Track*, W.C. No. 4-649-298 (ICAO May 15, 2007).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Petition to Reopen

The Claimant filed his Petition to Reopen on the ground that his medical condition has worsened. The Claimant initially sustained work injuries on February 10, 2010 when he was replacing posts with reflectors after a snowstorm using a post hammer to beat the post down. When a post hit a piece of concrete it came to an abrupt stop injuring both of the Claimant’s elbows. The Claimant ultimately underwent three surgeries performed by Dr. In Sok Yi for both extremities. Based on the improvement to the Claimant's right arm and elbow following Claimant's recovery from the right elbow surgery, Dr. Yi proposed and then, on October 11, 2011, proceeded with a left radial tunnel release and left ulnar release surgery during which he did not transpose or move the Claimant's left ulnar nerve. However, the Claimant received no immediate relief from the left elbow surgery and continued to receive treatment and evaluation into 2012 and then into 2013. The Claimant established that he continues to suffer symptoms in his left elbow, arm and hand and the condition has gotten worse as time has gone by with increased swelling and pain. The Claimant now seeks medical benefits in the nature of a repeat ulnar release surgery on Claimant's left elbow with transposition of the nerve and removal of a ganglion cyst per Dr. Yi’s recommendation.

Section 8-43-303(1), C.R.S., provides that an award may be reopened at any time within six years after the date on the ground of a change in condition. The claimant shoulders the burden of proving his condition has changed and his entitlement to benefits by a preponderance of the evidence. Section 8-43-201; *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725 P.2d 63 (Colo. App. 1986). A change in condition refers either to change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition. *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082 (Colo. App. 2002). Reopening is warranted if the claimant proves that additional medical treatment or disability benefits are warranted. Reopening is not warranted if once reopened, no additional benefits may be awarded. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo. App. 1988).

As a threshold matter, the Claimant bears the burden of establishing that change in the Claimant’s condition is causally related to the original injury. Section 8-41-301(1)(c), C.R.S.; *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). The question of whether the claimant met the burden of proof to establish a causal relationship between the industrial injury and the worsened condition is one of fact for determination by the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). The weight and credibility to be assigned expert testimony on the issue of causation is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. Moreover, medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado, 717 P.2d 1000 (Colo. App. 1986).*

Colorado recognizes the "chain of causation" analysis holding that results flowing proximately and naturally from an industrial injury are considered to be compensable consequences of the injury. Thus, if the industrial injury leaves the body in a weakened condition and the weakened condition plays a causative role in producing additional disability or the need for additional treatment, such disability and need for treatment represent compensable consequences of the industrial injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970); *City of Durango v. Dunagan*, *supra*. However, to the extent that the worsening of a condition occurs as the result of an independent intervening cause, then reopening would not be warranted as this is unrelated to the original compensable injury. Whether a particular condition is the result of an independent intervening cause is a question of fact for the ALJ. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187, 1188 (Colo. App. 2002).

On March 8, 2013, Dr. Reiter placed the Claimant at maximum medical improvement (MMI) and gave permanent impairment ratings for both of the Claimant's arms. Dr. Reiter assessed a 7% impairment of the left upper extremity and a 3% impairment of the right upper extremity. He imposed permanent restrictions of no lifting, pushing or pulling over 10 pounds. By January 20, 2015, when the Claimant saw Dr. Yi again regarding his continuing left elbow pain and increasing numbness and tingling and pain on the left, Dr. Yi noted that the Claimant's treatment options for the left elbow and arm were doing nothing or a repeat ulnar nerve release with anterior subcutaneous transposition, arthroscopy to look at the cyst and evaluation for tennis elbow release. Dr. Yi noted, "[t]he main goal of the operation is to keep him from getting worse, but it can make the numbness and tingling better. The strength may also improve." There is no evidence of new trauma or cumulative trauma to Claimant's left elbow contained in the records of the three doctors providing regular maintenance care. The Claimant testified credibly at the hearing that he had no new injuries to his arms since being placed at MMI. The Claimant was completely off work from the day of injury in 2010 until he returned to work in September 2015. The Claimant advised his treating physicians that he wanted to proceed with the surgery as his symptoms were getting worse and he could not leave it the way it was.

Dr. Sollender issued a report regarding Dr. Yi's 2015 request and he has opined that the work relatedness of the condition which required for Dr. Yi's proposed surgery was not established by the information supplied for review. Dr. Sollender further recommended denial of the proposed surgery because he opined that nothing in the current reports or examination findings are appreciably different from his examination in 2012. Dr. Sollender also expressed concern that the Claimant had “failed every surgical procedure he has had in the past” and so he felt it unwise to offer any procedure and get the Claimant’s hopes up. Dr. Sollender opined that the Claimant remained at MMI and had not suffered any worsening of his condition from any occupational exposure.

On June 2, 2015, Dr. Yi issued a brief report in which he explained why he thought the surgery he was proposing was necessary and related to the original, admitted injury. Dr. Yi stated that he felt that after the ulnar release surgery with no moving of the nerve, the nerve had become unstable and started subluxing over the medial epicondyle causing irritation to the ulnar nerve, as will happen with a small percentage of the nerve release surgeries. Therefore, in this regard, he found the current condition to be related to the original injury. He noted that the removal of the cyst was not work-related as there were multiple prior MRIs in the past that did not show any cyst in the elbow.

At the hearing, Dr. Sollender testified that he previously discussed left ulnar nerve release surgery with submuscular transposition for the Claimant, but, on October 7, 2013, based on his perception that the carpal tunnel surgery the Claimant underwent had failed, Dr. Sollender withdrew that proposed treatment and stated that he did not recommend any further surgery for this claim. Contrary to Dr. Sollender’s opinion that all of the Claimant’s surgeries had failed, the Claimant testified that did feel relief from the surgeries on his right elbow and wrist. He testified credibly that he felt well enough by Autumn 2015 that he was able to return to work. The Claimant testified that he has, for the past several months, been a bus driver for travel to and from the airport. His job duties sometimes require him to lift luggage with both his hands but primarily with his right arm and hand. The Claimant is found to be credible regarding the worsening of his condition, his left elbow symptoms, related to the admitted injury. The Claimant’s testimony is persuasively supported by Dr. Yi who has opined that the proposed surgery of repeat ulnar nerve release with anterior subcutaneous transposition is related to the admitted injury.

Because the Claimant has proven by a preponderance of the evidence that his condition has changed and he is entitled to benefits, WC Claim No. 4-819-262 is reopened.

Medical Benefits – Reasonably Necessary

Once a claimant establishes the worsened condition is causally related, the claimant must prove the proposed medical treatment is reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S. Although Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury, Respondents may, nevertheless, challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care in a case. *See Kroupa v. Industrial Claim*

Appeals Office, 53 P.3d 1192 (Colo. App. 2002), (upholding employer's refusal to pay for third arthroscopic procedure after having paid for multiple surgical procedures).

The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). Factual determinations related to this issue must be supported by substantial evidence in the record. Section 8-43-301(8), C.R.S. Substantial evidence is that quantum of probative evidence which a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411, 415 (Colo. App. 1995).

Pursuant to W.C. Rule of Procedure 17-2 (A), 7 Code Colo. Regs. 1101-3, health care practitioners are to use the Medical Treatment Guidelines referenced as Exhibits at W.C. Rule of Procedure 17-7, 7 Code Colo. Regs. 1101-3 (the “Medical Treatment Guidelines”) when furnishing medical aid under the Workers’ Compensation Act. The ALJ may also appropriately consider the Medical Treatment Guidelines as an evidentiary tool. *Logiudice v. Siemans Westinghouse,* W.C. 4-665-873 (ICAO January 25, 2011). However the ALJ is not required to grant or deny medical benefits based upon the Medical Treatment Guidelines. *Thomas v. Four Corners Health Care,* W.C. 4-484-220 (ICAO April 27, 2009). The Medical Treatment Guidelines are not definitive, but merely guidelines, and the ALJ has the discretion to make findings and orders which follow or deviate from the Medical Treatment Guidelines depending upon the evidence presented in a particular case. *Jones v. T.T.C. Illinois, Inc.,* W.C. 4-503-150 (ICAO May 5, 2006), *aff’d Jones v. Industrial Claims Appeals Office,* N. 06CA1053 (Colo. App. March 1, 2007)(not selected for official publication); *Nunn v. United Airlines,* W.C. 4-785-790 (ICAO September 9, 2011).

On January 20, 2015, the Claimant saw Dr. Yi again regarding his continuing left elbow pain and increasing numbness and tingling and pain on the left. Dr. Yi noted that the Claimant's treatment options for the left elbow and arm were doing nothing or a repeat ulnar nerve release with anterior subcutaneous transposition, arthroscopy to look at the cyst and evaluation for tennis elbow release. Dr. Yi opined that the proposed surgery is to keep the Claimant from getting worse, and potentially to improve the symptoms of numbness and tingling and increase the Claimant’s strength. On February 5, 2015, Dr. Yi faxed a request to Insurer for pre-authorization for the left ulnar nerve release surgery and transposition with elbow arthroscopy along with his January 20, 2015 notes.

Dr. Sollender subsequently issued a report regarding Dr. Yi's request and he opined that the work relatedness of the condition which required for Dr. Yi's proposed surgery was not established by the information supplied for review. Dr. Sollender further recommended denial of the proposed surgery because he opined that nothing in the current reports or examination findings are appreciably different from his examination in

2012. Dr. Sollender also expressed concern that the Claimant had “failed every surgical procedure he has had in the past” and so he felt it unwise to offer any procedure and get the Claimant’s hopes up.

On June 2, 2015, Dr. Yi issued a brief report in which he explained why he thought the surgery he was proposing was necessary and related to the original, admitted injury. Dr. Yi stated that he felt that after the ulnar release surgery with no moving of the nerve, the nerve had become unstable and started subluxing over the medial epicondyle causing irritation to the ulnar nerve, as will happen with a small percentage of the nerve release surgeries. Therefore, in this regard, he found the current condition to be related to the original injury. He noted that the removal of the cyst was not work-related as there were multiple prior MRIs in the past that did not show any cyst in the elbow.

At the hearing, Dr. Sollender testified that he previously discussed left ulnar nerve release surgery with submuscular transposition for the Claimant, but, on October 7, 2013, based on his perception that the carpal tunnel surgery the Claimant underwent had failed, Dr. Sollender withdrew that proposed treatment and stated that he did not recommend any further surgery for this claim. To the contrary, the Claimant testified that did feel relief from the surgeries on his right elbow and wrist. He testified credibly that he felt well enough by Autumn 2015 that he was able to return to work. The Claimant testified that he has, for the past several months, been a bus driver for travel to and from the airport. His job duties sometimes require him to lift luggage with both his hands but primarily with his right arm and hand.

Dr. Yi is found to be credible regarding the reasonable need of a repeat ulnar release surgery on Claimant's left elbow, this time with transposition of the nerve, and Dr. Yi is found to be credible regarding the change of the position of the nerve being related to the admitted injury. Dr. Yi’s opinion is likewise credible, and supported by Dr. Sollender and other medical records, that the surgery to excise the ganglion cyst is not related to the original injury. Dr. Sollender’s opinion is less persuasive than Dr. Yi’s in that he once discussed the same surgery for the Claimant that he now opines is not reasonable or related to the admitted injury.

In weighing all of the evidence presented, the ALJ concludes that the recommended surgery proposed by Dr. Yi for a repeat ulnar release surgery on Claimant's left elbow, this time with transposition of the nerve is reasonably necessary to cure and relieve the Claimant from the effects of his February 5, 2010 work injury or prevent further deterioration. However, surgery to remove the ganglion cyst is not reasonably necessary to cure and relieve the Claimant from the effects of his February 5, 2010 work injury.

ORDER

It is therefore ordered that:

1. Workers' Compensation Case No. 4-819-262 is reopened.

2. Insurer is liable for the repeat ulnar release surgery on Claimant's left elbow with transposition of the nerve recommended by Yi, but not for surgery for the removal of the ganglion cyst.

3. Insurer is liable for the post-surgical medical care the Claimant receives that is reasonably necessary to cure and relieve him from the effects of the compensable injury as determined by his authorized treating physicians and any authorized referrals per the Act, except as provided in paragraph 2 above.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-957-400-01

ISSUES

➢ Whether claimant has overcome, by clear and convincing evidence, the findings of the Division-sponsored Independent Medical Examination ("DIME") physician regarding maximum medical improvement ("MMI") and permanent impairment rating.

➢ Whether claimant has overcome, by clear and convincing evidence, the findings of the Division-sponsored Independent Medical Examination ("DIME") physician that claimant's lower back pain in not work related.

➢ Whether the claimant sustained a serious permanent disfigurement to areas of his body normally exposed to public view, resulting in additional compensation.

STIPULATIONS

➢ At hearing, the parties stipulated that claimant reached MMI for his right ankle on September 21, 2015. The issue regarding MMI as it relates to claimant's alleged low back injury remains at issue.

FINDINGS OF FACT

1. Claimant is employed with employer's Road and Bridge Department. Claimant sustained an admitted industrial injury to his right ankle on June 25, 2014. The injury occurred when the claimant was working on an uneven edge of road and rolled his right ankle. Initially the claimant was diagnosed with a "sprained ankle".

2. As demonstrated by claimant's medical records and Dr. David Orgel's testimony, claimant's June 25, 2014 injury resulted in a Wolin lesion on his right ankle requiring surgery. Claimant underwent surgery on September 24, 2014 consisting of arthroscopy, debridement, and synovectomy of his right ankle.

3. As demonstrated by claimant's medical records and Dr. Deborah Saint-Phard's testimony, a nerve block administered during the September 24, 2014 surgery resulted in right distal tibial nerve damage. Dr. Saint-Phard testified that this nerve damage caused the claimant to walk with an altered gait.

4. Claimant demonstrated at the August 25, 2016 hearing that he continues to walk with an antalgic gait as a result of his June 25, 2014 injury and September 24, 2014 surgery.

5. As indicated by claimant's testimony and the medical records, claimant received various modes of treatment for his industrial injury. These treatments included physical therapy with Select Physical Therapy; biofeedback with the Denver

Biofeedback Clinic; and electrodiagnosic evaluation with Dr. L. Barton Goldman. During these various medical treatments, claimant made no complaints related to low back and/or buttock pain.

6. Claimant was placed at MMI on September 21, 2015 by his authorized treating physician ("ATP") Dr. William Miller. At that time, Dr. Miller provided claimant with a permanent impairment rating of 22% to claimant's right lower extremity.

7. Respondent filed a Final Admission of Liability ("FAL") admitting for the lower extremity permanent impairment rating. Claimant timely challenged the impairment rating through the Division-sponsored independent medical examination ("DIME") process.

8. A DIME was conducted by Dr. John Sacha on February 4, 2016. Dr. Sacha reviewed claimant's medical records, obtained a medical history, and performed a physical examination of claimant in connection with the DIME. Following the DIME, Dr. Sacha issued a DIME report and agreed with Dr. Miller's determination that claimant had reached MMI on September 21, 2015. Dr. Sacha also assigned a 22% lower extremity impairment rating. Dr. Sacha included a 2% psychological whole person rating, resulting in an 11% whole person rating. The claimant received no additional medical treatment between September 21, 2015 and the February 4, 2016 DIME.

9. On March 29, 2016 respondents filed a FAL admitting for the 22% lower extremity impairment rating and 2% psychological whole person rating as determined by Dr. Sacha.

10. As demonstrated by Dr. Sacha's report, during the DIME claimant complained of lower back and buttock pain, with posterior thigh pain bilaterally. Dr. Sacha opined that claimant's low back and buttock pain is unrelated to the work injury.

11. Based on claimant's testimony and the medical records, the ALJ finds that the February 4, 2016 DIME was the first time the claimant raised complaints related to lower back and buttock pain. Claimant testified that he did not report complaints to his medical providers that he did not believe to be work related.

12. Claimant underwent an independent medical examination ("IME") with Dr. Orgel on June 13, 2016. Dr. Orgel reviewed claimant's medical records, obtained a medical history, and performed a physical examination of claimant in connection with his IME. Dr. Orgel indicated in his June 13, 2016 report that he assessed a permanent impairment rating of 37% for claimant's right lower extremity. Dr. Orgel testified at hearing consistent with his IME report

13. With regard to claimant's low back and buttock pain, Dr. Orgel testified that it was his opinion that this pain was caused by claimant's June 24, 2014 injury. Specifically, Dr. Orgel testified that the claimant's low back and buttock pain is caused by his antalgic gait. As the altered gait arose from the claimant's September 24, 2014 surgery, Dr. Orgel opines that the ankle injury ultimately gave rise to claimant's current

low back and buttock pain. In addition, Dr. Orgel opines that claimant had not reached MMI with regard to his low back and buttock pain.

14. Claimant underwent an IME with Dr. Saint-Phard on June 27, 2016. Dr. Saint-Phard reviewed claimant's medical records obtained a medical history, and performed a physical examination of claimant in connection with her IME. Dr. Saint-Phard opined in her IME report that claimant sustained a permanent impairment rating of 27% to the lower right extremity. As it pertains to Dr. Sacha's permanent impairment rating, Dr. Saint-Phard testified that she had a slight difference of opinion, but that Dr. Sacha did not err in his determination of claimant's permanent impairment rating. Dr. Saint-Phard testified in this matter consistent with her IME report.

15. Dr. Saint-Phard testified, that within a reasonable degree of medical probability, claimant's low back and buttock pain do not relate to the June 24, 2014 injury, the September 24, 2014 surgical procedure, or claimant's altered gait. Dr. Saint-Phard noted that claimant told her that he has had low back pain for "about a year" because of "the way he walks". Approximately one year ago, claimant was actively treating with various workers' compensation providers and he did not report any back complaints to those providers. It was not until the DIME, five months post-MMI, that claimant raised any complaints related to lower back and/or buttock pain. In support of her causal analysis, Dr. Saint-Phard opined that if claimant's low back and buttock pain related to the September 24, 2014 surgical procedure and/or his altered gait, she would have expected the low back complaints to have occurred within the year prior to MMI, and not five months post MMI.

16. Dr. Saint-Phard testified that she did not find any errors made by Dr. Sacha regarding the date of MMI or his causal analysis. Dr. Saint-Phard testified that differing interpretations of causation of back pain between Dr. Sacha, Dr. Orgel and herself constituted a difference of opinion.

17. The ALJ credits the medical records and the opinions of Dr. Miller, Dr. Sacha and Dr. Saint-Phard over the conflicting opinion of Dr. Orgel and finds that claimant has failed to overcome the DIME physician on the issues of permanent impairment and MMI by clear and convincing evidence. The ALJ further finds the opinions expressed by Dr. Sacha and Dr. Saint-Phard to be credible and persuasive regarding claimant's low back and buttock complaints.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not

interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2013. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S., *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2013).

3. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probable that the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra.* A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000). The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

4. As found, claimant has failed to prove by clear and convincing evidence that Dr. Sacha's opinions regarding MMI and permanent impairment were incorrect. As found, Dr. Sacha's opinion is shared by Dr. Miller and Dr. Saint-Phard and is supported by the medical records. Claimant has failed to establish anything other than a difference of opinion between medical providers. The difference between the permanent impairment ratings determined by Dr. Sacha, Dr. Orgel, and Dr. Saint-Phard is merely a difference of medical opinion and does not demonstrate error.

5. Section 8-42-108 (1), C.R.S. provides that at claimant may be entitled to additional compensation if, as a result of the work injury, he has sustained a serious permanent disfigurement to areas of the body normally exposed to public view.

6. As found, claimant has a visible disfigurement to his body consisting of an antalgic gait as a result of his June 25, 2014 work injury. Therefore, claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view.

ORDER

It is therefore ordered that:

1. Claimant has failed to overcome the DIME physician on the issues of MMI and permanent impairment rating.

2. Respondent shall pay claimant $1,000.00 for his disfigurement. Respondent shall be given credit for any amount previously paid for disfigurement in connection with this claim.

3. Respondent shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 6, 2016

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

1. Whether Claimant has overcome the DIME, which places Claimant at MMI on September 28, 2015, by clear and convincing evidence; and

2. Whether Claimant's requested arthroscopic hip surgery is reasonable, necessary, and related to Claimant's work injury.

FINDINGS OF FACT

1. The Claimant was injured in a work accident on January 27, 2015, when she jumped over a chair while trying the catch a student who had run away.

2. The Claimant immediately thought that her injury was a quadriceps injury. The Claimant received treatment from Dr. Annu Ramaswamy for what was described as a left quadriceps strain, left gluteus strain and left greater trochanteric bursitis.

3. The medical records reveal, and the Claimant testified, that she was referred to a Dr. Fell for chiropractic care which made a significant difference in her symptoms. When the Claimant was found to be at MMI by Dr. Ramaswamy on September 28, 2015, he noted that the Claimant could walk "normally", that she was "80% better" and that the chiropractic treatment made a "significant difference for her." [Exhibit "B" and Exhibit "3"] When the Claimant was found to be at MMI on September 28, 2015, it was noted that she had been diagnosed as having a urinary tract infection, along with kidney stones.

4. The Respondents filed a Final Admission of Liability, based upon Dr. Ramaswamy's report, dated October 6, 2015. [Exhibit "B"]

5. The Claimant timely objected to the Final Admission of Liability and requested a DIME. The DIME physician was Dr. Joseph H. Fillmore. Dr. Fillmore also noted that the chiropractic care caused the Claimant's trochanteric tenderness and gluteal strain to have improved dramatically [Exhibit "C"] and when he examined her, the Claimant was in no acute distress and had only minor residuals of gluteus medius tendonosis and possible left sacroiliac joint irritation. He noted only minor limitations to her hip range of motion and provided her with a 2% lower extremity impairment rating in his report dated February 11, 2016. [Exhibit "C"]

6. After MMI, Dr. Ramaswamy referred the Claimant to Dr. Phillip Stull (orthopedist). In Dr. Stull's narrative report of January 15, 2016, he noted ongoing trochanteric bursitis in the left hip and provided the Claimant with an injection in the trochanteric bursa. The Claimant's condition did not improve with the injection. Dr. Stull

recommended an MRI. He reviewed the MRI on March 31, 2016 and noted a tear in the superior labrum of the hip. The Claimant was referred to Dr. Nathan Faulkner (an orthopedist who performs hip procedures regularly) for evaluation for potential surgery.

7. Dr. Faulkner saw the Claimant on April 11, 2016 and noted that the Claimant was reporting a "sharp pain in her groin and over the posterior lateral aspect of the hip." Dr. Faulkner twice mentioned proceeding with a *right* hip arthroscopy based upon the symptoms, despite the injury being to her *left* hip. The ALJ finds that references to the *right* hip are merely typographical errors, and that the *left* hip is the subject of this report.

8. The Respondents contested the reasonableness, relatedness and necessity of the hip arthroscopic labral surgery, pursuant to W.C.R.P. 16. Respondents had the Claimant's records reviewed by Dr. James Lindberg, a board certified orthopedic surgeon. Dr. Lindberg issued a report dated April 28, 2016 indicating that arthroscopic surgery was not reasonable because there had not been adequate work-up of the Claimant's pain complaints to isolate the problem to hip joint pathology. Dr. Lindberg indicated that despite there being a positive labral tear, the Claimant needed injections into the hip joint with anesthesia and corticosteroids, to see if her hip joint was the pain generator.

9. Dr. Lindberg also noted that even if the Claimant had a labral tear, it was not the result of the work-related injury, and there was no indication of groin pain until she had been seen by Dr. Faulkner. He noted that at no time, from the time of the injury until the examination by Dr. Faulkner, did Claimant complain of groin pain. He opined that if a labral tear repair was attempted, it should be done outside the workers' compensation system. Dr. Lindberg explained in his narrative report, and at his deposition, that it did not appear that the labral tear was symptomatic, and could be explained by her chronic congenital femoral acetabular impingement syndrome, which was not caused by trauma.

10. The Claimant testified at hearing on September 8, 2016 that she continues to have the same pain over her left lateral hip and gluteal region that she had when she was examined by both Dr. Ramaswamy and the DIME doctor, Dr. Joseph Fillmore. The Claimant explained that she did have groin pain when she was examined by Dr. Faulkner and that it was subsequently determined that the groin pain was related to her kidney stones. Once the Claimant passed the kidney stones, the groin pain subsided.

11. As recently as her office visit with Dr. Stull on January 29, 2016, Claimant denied any "pain in the groin or catching or popping or locking in the hip joint per se."

12. All of the physicians' records agree that the Claimant's initial quadriceps strain had resolved and was not permanently impairing her function.

13. Dr. James Lindberg testified at a deposition on September 12, 2016 for preservation of testimony. Dr. Lindberg testified that he is a board certified orthopedic

surgeon and Level II certified. He testified that he is currently retired, but when he was actively practicing, 50% of his practice was focused on hip injuries.

14. Dr. Lindberg testified that he reviewed all of the records and was able to look at the injury from a chronological standpoint. He noted that the original injury was a quadriceps strain. A month later, the Claimant was having some "hip pain," located over the trochanteric area and gluteal pain. Dr. Lindberg testified that he believed that the trochanteric bursitis and gluteal strains were correctly diagnosed and treated by Dr. Ramaswamy, until Dr. Ramaswamy found the Claimant to be at MMI, without impairment. Dr. Lindberg testified that there was no evidence of hip joint impairment, which he described as dysfunction of the articulating surfaces in the hip. Dr. Lindberg testified that there was no mention of any groin pain until Dr. Faulkner examined the Claimant in 2016. Dr. Lindberg testified that the Claimant did have groin pain when examined by Dr. Faulkner and the groin pain could possibly been an indication of hip joint dysfunction. However, the groin pain disappeared with the Claimant's treatment for kidney stones. Groin pain can also be a symptom of kidney stones. Thus, Dr. Lindberg testified that it was understandable that Dr. Faulkner might have thought that there was a hip joint dysfunction, based upon the fact that there was a labral tear accompanied, at that time, by groin pain. It was Dr. Lindberg's opinion that there was no need for arthroscopic surgery to repair a non-symptomatic labral tear.

15. Dr. Lindberg further testified at his deposition that the Claimant's trochanteric bursitis and gluteal strains have not resolved due to her weight, which puts a strain on the trochanteric bursa and gluteal area. Sciatica is a common symptom of being overweight. Dr. Lindberg believes that the treating physician, Dr. Ramaswamy and the DIME physician, Dr. Fillmore, were correct in finding the Claimant to be at MMI as of September 28, 2015. The Claimant's claimed relief from chiropractic care, in Dr. Lindberg's opinion, is indicative that her only problems related to the industrial injury are the trochanteric bursitis and gluteal strain, with possible sciatic pain. He does not believe that she has any articulating hip joint problems that will be improved by surgery. Dr. Lindberg explained the difference between actual hip joint dysfunction and lateral hip discomfort, based on trochanteric bursitis. He explained that Dr. Faulkner was probably convinced that there was true hip joint dysfunction because of the groin pain complaint, without realizing it was temporary groin pain related to kidney stones.

16. Dr. Lindberg's opinion is that the Claimant's work-related injury did not cause the labral tears seen on the MRI. Improper tracking of her femur and acetabulum could explain the labral tears as a result of the congenital malformation of the femur and the acetabular articulating surfaces. Since the Claimant is now asymptomatic in the groin area, after passing the kidney stone, there is no indication of any hip joint dysfunction that can be relieved by arthroscopic labral repair.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* Claimant must prove that he is a covered employee who suffered an injury arising out of and in the course of employment. *Section 8-41-301(1), C.R.S.; See, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo.App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo.App. 2001). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo.App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo.App. 1997), *cert. denied* September 15, 1997*.* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. In this case, Claimant's testimony is generally consistent with the content of the medical records. Consequently, the ALJ finds Claimant to be a generally credible, if unpersuasive witness.

C. A workers' compensation case is decided on its merits. *Section 8-43-201, C.R.S.* In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

Overcoming the DIME Physician’s Finding of MMI

D. It is well-established that the DIME physician’s opinion on MMI or a medical impairment rating is binding unless overcome by “**clear** and **convincing**” evidence. Section 8-42-107(8)(c), C.R.S., 2008; *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995).

> **Clear and convincing evidence** is evidence which proves that it is ‘highly probable’ the DIME physician’s opinion is incorrect. *Metro Moving and Storage Co. v. Gussert, supra.*

In other words, to overcome a DIME physician's opinion, “there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt.” Adams v. Sealy, Inc., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAP, Nov. 17, 2000). The courts have held that the DIME physician’s determination that an impairment is or is not caused by the industrial injury is also subject to the clear and convincing evidence standard. See, *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998).

E. The ALJ concludes that the findings by the DIME physician, Joseph Fillmore, M.D., that the Claimant was at MMI on September 28, 2015 (as also found by the treating physician Dr. Ramaswamy) has not been overcome by clear and convincing evidence. This conclusion is bolstered by the opinions of orthopedic specialist, James Lindberg, M.D., which are likewise credible and believable. The Claimant has admitted that her left lateral hip pain, which was diagnosed as trochanteric bursitis and gluteal pain, was the same pain that she reported to both Dr. Ramaswamy and the DIME physician, Dr. Joseph Fillmore. The ALJ concludes that these symptoms were properly considered and rated for permanent impairment by both Dr. Ramaswamy and the DIME physician, Dr. Fillmore. Although the DIME physician did not have the benefit of the MRI results when he placed her at MMI, it has not been clearly and convincingly shown that he would have reached a different conclusion if he had had said MRI results. Claimant’s congenital femoral acetabular impingement syndrome was referenced in the MRI report, and Claimant had yet to report the groin pain one would expect with a labral tear which resulted from trauma occurring about a year prior.

Medical Benefits

F. Claimant bears the burden of establishing entitlement to medical treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). Once a claimant has established a compensable work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S.*; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo.App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of the his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949). Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970); § 8-41-301(1)(c), C.R.S. 1997.

G. As found here, Claimant has not shown by a preponderance of the evidence that the labral tear appearing in her MRI from March 18, 2016 was caused by the admitted work accident which occurred on January 21, 2015. Likewise, it has not been shown that the proposed arthroscopic procedure is reasonable and necessary to cure and relieve Claimant from the injuries she did suffer due to this accident, to wit: trochanteric bursitis and gluteus strain. Although it was reasonable for Dr. Faulkner to conclude, based upon the information available from Claimant's exam in April, 2015, that this surgery was reasonable and necessary, the source of her groin pain disappeared once the kidney stone issue was resolved. The report and testimony of Dr. Lindberg is more persuasive in showing that the labral tear was not symptomatic, except for this limited interval during which Claimant suffered from kidney stones. Due to her congenital femoral acetabular impingement syndrome (as noted by Dr. Seda from Claimant's MRI), it is at least equally likely that she suffered this asymptomatic tear at some other time and place. The ALJ therefore concludes that the workplace injury Claimant suffered on January 21, 2015 was not the proximate cause of the labral tear to her left hip.

ORDER

It is therefore Ordered that:

1. Claimant's request to overcome the Division IME's opinion that Claimant reached MMI on September 28, 2015 is denied and dismissed.

2. Claimant has failed to show that the labral tear to her left hip was proximately caused by the admitted workplace injury which occurred on January 21, 2015. Her request for this arthroscopic surgery is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, CO 80906

ISSUES

Did Claimant prove by a preponderance of the evidence that ongoing prescription of Xarelto is reasonable, necessary and related to her industrial injury?

FINDINGS OF FACT

1. Claimant works as a Lead Principal Recruiter for Employer. Her job entails managing teams in Colorado Springs and Rockville, Maryland. She recruits personnel for various defense contracts throughout the United States. Her job requires frequent travel to launch new contracts and support existing contracts on behalf of her employer. She also travels to meet with supervisors in California, Maryland and Virginia.

2. Claimant sustained an admitted industrial injury on December 9, 2013 while working for Employer in Utah. Claimant slipped and fell while walking down a flight of stairs at the hotel where she was staying. As a result of the fall, she sustained several right lower extremity fractures.

3. Claimant did not immediately seek medical attention, because she assumed she merely suffered a strain or sprain. When Claimant returned to Colorado Springs, her pain was severe. She presented to Memorial Hospital on December 12, 2013 with complaints of right ankle and foot pain. She was placed in a knee immobilizer, Ace wrap and an ankle stirrup.

4. On December 17, 2013, Claimant was evaluated by Stephanie Noble, a physician's assistant in Dr. John Shank's office. Claimant was diagnosed with a right ankle talus fracture, a right calcaneus fracture and medial malleolus fracture. She was placed in a high-tied walking boot.

5. Claimant again saw PA-C Noble on January 6, 2014, and reported right lower leg pain of the medial aspect of the right knee which shot up to the inner side of her thigh. Due to Claimant's high pain level, PA-C Noble recommended evaluation for a deep vein thrombosis (DVT).

6. Claimant was evaluated that same day at Memorial Hospital, and had an ultrasound of her right leg. The ultrasound showed an "[a]cute venous embolism and thrombosis of the deep vessels of the distal lower extremity." The DVT was "extensive," extending from high in the groin down through the calf.

7. Claimant was started on Lovenox and Coumadin and given compression stockings to treat the DVT.

8. Claimant had difficulty controlling her INR level on Coumadin. Additionally, Claimant felt “quite ill” on the Coumadin and experienced bleeding gums when she brushed her teeth.

9. Claimant began treating with Dr. Timothy Murphy, a hematologist, on February 19, 2014. Due to the difficulty she was having managing her INR levels, Dr. Murphy discontinued Coumadin and prescribed a different anticoagulant, Xarelto.

10. Xarelto offers several advantages to Coumadin: Xarelto allows “fixed dosing” and does not require continual monitoring to determine therapeutic levels; it has fewer issues with drug-to-drug interactions and fewer issues with nutritional interaction. Dr. Murphy testified that Xarelto has proven equally safe as Coumadin, without the inconvenience and expense of continual monitoring.

11. Although the DVT eventually resolved, Claimant still suffers from chronic thrombophlebitis in the right leg, with swelling and pain. The right leg swelling improved over time with compression stockings, but has never resolved.

12. Claimant began treating at Concentra Medical Centers on February 24, 2014. Eventually, her care was transferred to Dr. Albert Hattem. Dr. Hattem placed Claimant at MMI on June 19, 2014, and recommended maintenance care. Dr. Hattem recommended anticoagulation monitoring by Dr. Murphy through at least December 2014, but also stated “I defer to his recommendation as to the duration of anticoagulation.”

13. Dr. Hendrick Arnold performed a DIME on November 19, 2014. Dr. Arnold’s diagnoses included “right lower extremity deep vein thrombosis with residual dysesthesias and swelling. She has pain that interferes with her activities, namely hiking, running, working, and flying.” Dr. Arnold assigned a 23% lower extremity impairment rating, but offered no opinion regarding maintenance treatment.

14. Respondents filed a Final Admission of Liability (FAL) on December 5, 2014 based on Dr. Arnold’s rating. The FAL also admitted for reasonable and necessary medical treatment after MMI from authorized providers.

15. Dr. Murphy reevaluated Claimant on January 26, 2014 regarding her anticoagulation regimen. At that time, she was still taking Xarelto daily. Claimant continued to experience edema in her leg by the end of the day despite regularly using compression stockings. Physical examination revealed edema in the right leg. Dr. Murphy recommended that Claimant discontinue the daily Xarelto, and begin daily aspirin. Dr. Murphy opined that “given the persistent phlebitis of the leg, she will be at risk for recurrent DVT. If she develops a second clot in that leg, then she will need lifelong anticoagulation.” Dr. Murphy further opined that Claimant “will be at risk for recurrent phlebitis for years.” Given Claimant’s frequent job-related travel, Dr. Murphy recommended Claimant use Xarelto as a prophylactic measure on lengthy plane flights.

16. Dr. Murphy evaluated Claimant again on September 8, 2015. He noted she could not take aspirin as a secondary prophylaxis due to an allergy. He reiterated

that Claimant is at risk for recurrent DVT and will require lifelong anticoagulation if she develops a second clot in her leg. He recommended that she continue with the compression stockings indefinitely, and utilize Xarelto as prophylaxis during air travel.

17. Dr. Carlos Cebrian performed an Independent Medical Examination (IME) at Respondents' request on May 8, 2015. Dr. Cebrian agreed that claimant should continue to wear compression stockings to treat her ongoing phlebitic syndrome. But Dr. Cebrian opined that Xarelto was no longer reasonable or necessary. Dr. Cebrian cited 2012 Guidelines from the American College of Chest Physicians (ACCP) which do not recommend that long-distance travelers use aspirin or anticoagulants to prevent DVT secondary to air travel. Dr. Cebrian provided a follow-up opinion on July 13, 2016 that was unchanged from his original report.

18. Dr. Murphy testified at hearing as a witness for Claimant. Dr. Murphy explained that Xarelto is a better anti-coagulant medication than Coumadin in multiple respects. Dr. Murphy opined that Claimant's "biggest risk factor" for recurrent DVT is the extensive clot she suffered in December 2013 and ongoing venous damage, as evidenced by the persistent postphlebitic syndrome. Claimant's entire vein was damaged by the clot, which places her at high risk for recurrent DVT. Dr. Murphy testified that the risk of a recurrent DVT in Claimant's case outweighs the comparatively minor risks associated with Xarelto. Dr. Murphy opined there is significant risk of developing a recurrent blood clot during lengthy plane flights, and a recurrent DVT might be life-threatening. At a minimum, she would require continuous anticoagulation medication for life, which Dr. Murphy characterized as "a big change of life for people."

19. Regarding the ACCP's 2012 Guidelines, Dr. Murphy testified that the recommendation against anticoagulation during air travel is not based on strong scientific evidence, and the recommendation is the weakest in the ACCP's grading scheme. Dr. Murphy noted that Xarelto is FDA-approved for the prevention of blood clots. Dr. Murphy opined that compression stockings alone would not be sufficient in a high-risk patient such as Claimant.

20. Dr. Cebrian testified at hearing as a witness for Respondents. Dr. Cebrian opined that Xarelto is not reasonable, necessary or related to the admitted injury. Dr. Cebrian testified that Claimant had a temporary aggravation of her DVT based on the admitted injury that has resolved. Dr. Cebrian interpreted Claimant's medical records as showing a prior history of blood clots. Dr. Cebrian testified Claimant has several non-work related risk factors associated with DVT. Dr. Cebrian recommended that the claimant use compression stockings on any flights, but that Xarelto is not reasonable or necessary.

21. Claimant testified that she had never been diagnosed or treated for DVT prior to December 9, 2013. There was a "suspicion" of DVT in her left leg in 1998, but she underwent an ultrasound and had no treatment for DVT or follow up.

22. The ALJ finds that Dr. Murphy's opinions are more persuasive than medical opinions in the record to the contrary.

23. The ALJ finds Claimant's testimony to be credible.

24. Claimant has proven by a preponderance of the evidence that the ongoing prescription of Xarelto is reasonable, necessary and causally related to her December 2013 industrial injury.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1). The claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Walmart Stores Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. The claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation claim are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

2. A workers' compensation case is decided on its merits. Section 8-43-201. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved conflicting evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item in the record, and the ALJ has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. Section 8-42-101(1)(a), supra, provides:

> Every employer … shall furnish … such medical, hospital, and surgical supplies, crutches, and apparatus as may reasonably be needed at the time of the injury … and thereafter during the disability to cure and relieve the employee from the effects of the injury.

4. Thus, Respondents are liable for medical treatment from authorized providers that is reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond the point of maximum medical improvement (MMI) if the claimant requires periodic maintenance care to prevent further deterioration of their physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988).

5. Even where the respondents admit liability for medical benefits after MMI, they retain the right to challenge the compensability, reasonableness, and necessity of specific treatment. *Hanna v. Print Expediters Inc.*, 77 P.3d 863 (Colo. App. 2003). When the respondents challenge the claimant's request for specific post-MMI medical

treatment, the claimant must prove entitlement to the medical benefit(s) at issue. *Ford v. Regional Transportation District*, W.C. No. 4-309-217 (ICAO February 12, 2009). On the other hand, if the effect of Respondents' challenge to medical treatment is to terminate all previously admitted maintenance benefits, Respondents must prove under § 8-43-201(1) that treatment is not reasonable, necessary or related to the injury.

6. Respondents' counsel stated on the record that Respondents are only challenging the Xarelto prescription, and are not seeking to terminate all maintenance care. Based on that representation, the ALJ has placed the burden of proof on the Claimant.

7. As found, Claimant proved by a preponderance of the evidence that periodic prescriptions of Xarelto in conjunction with air travel, as determined and recommended by Dr. Murphy, are reasonably necessary to relieve the effects of the December 2013 industrial injury. Claimant suffered an extensive DVT in December 2013, and continues to suffer from residual venous damage, as evidenced by her ongoing postphlebitic syndrome. Dr. Murphy persuasively explained that the relatively small risk associated with Xarelto is outweighed by the substantial risks associated with recurrent DVT.

8. The preponderance of persuasive evidence shows that the need for continued Xarelto is causally related to the December 9, 2013 industrial injury. Although the medical records suggest a concern for a DVT in 1998, there is no record that Claimant was diagnosed with or received any treatment for DVT before the 2013 industrial injury. If Claimant truly had a substantial pre-existing problem with DVTs, the ALJ would expect to have received medical records documenting that history and treatment.

9. Additionally, the previous "suspicion" of DVT was directed to Claimant's contralateral left leg, rather than the right leg injured in the 2013 industrial accident.

10. By contrast, the "extensive" DVT caused by the December 2013 injury is well-documented throughout the record. Additionally, Claimant has suffered from postphlebitic syndrome and associated edema in the right leg since the industrial injury. Although this condition has "improved" over time, it has not resolved.

11. After carefully considering the totality of the evidence, the ALJ concludes that the December 9, 2013 industrial injury is the most probable cause of Claimant's need for ongoing prophylactic treatment with Xarelto.

[ORDER CONTINUES ON NEXT PAGE]

ORDER

It is therefore ordered that:

1. Respondents shall pay for Xarelto medication as prescribed by Dr. Murphy or other authorized provider(s).

2. All matters not determined herein, or otherwise closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see OACRP 26. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 12, 2016

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge

ISSUES

The issues addressed by this decision involve Claimant's entitlement to additional medical benefits. The specific questions answered are:

I. Whether Respondents are barred from contesting the surgical procedure requested by Dr. Paul Stanton by the doctrine of collateral estoppel (Issue Preclusion) and if not;

II. Whether Claimant has proven by a preponderance of the evidence presented that the L4-S1 fusion procedure recommended by Dr. Stanton is reasonable and necessary.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Dr. Markus, the ALJ enters the following findings of fact:

1. Claimant sustained an admitted industrial injury to his low back while unloading a produce truck on December 16, 2012.

2. Claimant initially sought treatment from his primary care physician at Colorado Springs Family Practice on December 20, 2012.

3. Claimant eventually obtained care from Dr. Baca at Integrity Urgent Care. Care under Dr. Baca included physical therapy. Because Claimant continued to have persistent low back pain, Dr. Baca referred Claimant for an orthopedic evaluation.

4. On February 25, 2013, Claimant was evaluated by orthopedic surgeon Dr. Paul Stanton. During this appointment, Claimant reported ongoing pain in his back radiating down his right lower extremity. Dr. Stanton recommended injections and referred Claimant to Dr. Brooks for L4-L5 and L5-S1 facet injections. The recommended injections were performed on March 20, 2013; however, failed to provide relief.

5. Claimant returned to Dr. Stanton on April 2, 2013, complaining of escalating pain in his lower extremities. Dr. Stanton referred Claimant back to Dr. Brooks for L4-3 right side transforaminal injections.

6. Claimant underwent right L4-L5, L5-S1 transforaminal epidural steroid injections on April 17, 2013 Claimant with Dr. Brooks.

7. Additional injection therapy failed to provide lasting relief prompting Dr.

Stanton to document the following during a follow-up appointment with Claimant on July 2, 2013:

> At this point, as the patient has not done well with medications, therapy or epidural steroid injections, he wishes to proceed with operative intervention. I have recommended that he undergo an anterior posterior fusion for his grade 1 mobile spondylolisthesis at L4-5 and a right-sided L5-S1 laminoforaminotomy to relieve his foraminal stenosis.

8. On October 28, 2013 Claimant undertook the above referenced procedures on October 28, 2013. Dr. Stanton's office note indicates that Claimant was doing better with his leg pain although he was still having some intermittent leg pain at night.

9. On December 10, 2013, Claimant returned to Dr. Stanton with complaints of increased pain down his right side which Dr. Stanton felt may be due to an increase in activity. Dr. Stanton felt that Claimant's nerves were irritated. He prescribed a Medrol Dosepak and referred Claimant to Dr. Christopher Malinky for a right sided SI joint injection.

10. On January 16, 2014, Claimant was seen by Dr. Stanton for an acute onset of pain in his lower extremities. Dr. Stanton was concerned about an L5-S1 disc herniation and ordered an MRI.

11. An MRI of the lumbar spine was done on January 29, 2014. In note dated February 25, 2014 Dr. Stanton noted that the MRI showed moderate L5-S1 disc disease and mild L5-S1 right side foraminal stenosis along with mild to moderate right upper S1 lateral recess stenosis. Dr. Stanton referred Claimant for physical therapy and an additional L5-S1 facet injection.

12. On March 27, 2014 Claimant underwent a bilateral L5-S1 facet injection performed by Dr. Chris Malinkey.

13. Claimant returned to Dr. Stanton on April 15, 2014 at which time he told Dr. Stanton his pain was "worse now than before the injection." Dr. Stanton noted that Claimant was having significant arthritis at L5-S1 more on the left side than the right which seems to be more sacroiliac in nature and possibly due to irritation caused by an altered gait secondary to left knee pathology. Dr. Stanton felt that if Claimant's gait could be improved, his back pain may also improve. Dr. Stanton referred Claimant out for a left SI joint injection with Dr. Malinky.

14. On May 13, 2014, Dr. Stanton noted that Claimant continued to have left sided symptoms and that it was possible that his "L5-S1 segment may still be generating some of his pain." Dr. Stanton noted that Claimant had not experienced "good relief" with injection therapy. Nonetheless, he noted that with injections he was "definitely trying to isolate [Claimant's] pain generator." He referred Claimant for an additional transforaminal injection and if this provided relief, then Claimant "may be a candidate for

a limited decompressive vs. reconstruction of his L5-S1 segment.

15. On June 5, 2014, Claimant returned to Dr. Stanton reporting that we was "not doing well." He wanted his L5-S1 segment addressed. Dr. Stanton did not feel that additional left sided decompression was in Claimant's best interests as this was "likely" to "destabilize his spine where he has already had a right-sided decompression and he has an existing fusion at the L4-5 segment. Based upon Claimant's prior surgical intervention and his continued symptoms, Dr. Stanton recommended a L5-S1 fusion.

16. Respondents denied Dr. Stanton's request to perform the above referenced L5-S1 fusion on the grounds that the surgery was not related to Claimant's admitted December 16, 2012 work injury.

17. The issue surrounding the relatedness of Claimant need for a L5-S1 fusion to his December 16, 2012 work injury proceeded to hearing on October 15, 2014 before ALJ Kimberly B. Turnbow. Based on the evidence presented at the hearing, Judge Turnbow, issued an order on December 2, 2014, finding and concluding that the requested procedure was related to Claimant's December 16, 2012 work injury. Accordingly, Judge Turnbow ordered Insurer to pay for the L5-S1 fusion procedure. Respondents did not appeal Judge Turnbow's order.

18. On February 3, 2015, Claimant returned to Dr. Stanton in follow-up regarding the recommended surgery Judge Turnbow ordered Insurer to pay the expenses of. Claimant reported that he was "ready to proceed with surgery of his L5-S1 level" as he had "persistent" pain in his legs which had become "very debilitating with his activities of daily living." Before proceeding, Dr. Stanton noted that Claimant's last MRI was "greater than 1-year old." Consequently, Dr. Stanton noted that he "would like to update this to be sure there is no new onset of pathology before proceeding." Dr. Stanton requested an updated MRI.

19. On February 13, 2015, Claimant underwent an MRI of his lumbar spine which revealed findings consistent with metastatic disease within the T-12 and L-1 vertebral bodies with extensive retroperitoneal lymphadenopathy. The MRI also revealed a new right paramedian disc extrusion at the L5-S1 level, when compared to an MRI done on January 31, 2013, which displaced the exiting right L-5 nerve root.

20. Claimant returned to Dr. Stanton on February 15, 2015 to go over the MRI results Dr. Stanton referred Claimant for a full oncological work up. Claimant's surgery was postponed pending further care for his cancer.

21. On March 9, 2015, Claimant was seen by oncologist Dr. Maurice Markus. Dr. Markus performed an examination including a number of diagnostic tests and concluded that Claimant had metastatic prostate cancer which had spread to the L1 vertebral, some ribs, and some lymph nodes.

22. Claimant underwent chemotherapy with Dr. Markus through August, 2015 with

good results. Claimant is currently on a maintenance regimen of Depo Lupron.

23. On January 8, 2016, Claimant was seen by Dr. Markus' nurse practitioner (NP), Anne Zobec. During this appointment Claimant had multiple questions regarding his ability to undergo the back surgery recommended by Dr. Stanton. Claimant told NP Zobec that his legs are weak and his back bothers him a lot. NP Zobec noted that Claimant was not taking his medication due to a lack of funds. NP Zobec advised Claimant that if he could control his pain with over the counter medication and is able to maintain a "very active" lifestyle "we" would not recommend surgery.

24. Claimant follow-up with Dr. Markus on January 18, 2016. In response to Claimant's fitness to proceed with additional spinal surgery, Dr. Markus noted that he would "defer to Dr. Stanton on this" but "there are no oncological contraindications to this" and that if Claimant "could receive significant palliative benefit from the surgery, it would not be unreasonable to proceed."

25. On February 25, 2016, Claimant presented back to Dr. Stanton. On this date, Claimant told Dr. Stanton that he was experiencing significant pain and weakness in his lower extremities similar to what he had at his last visit back on February 17, 2015. Dr. Stanton recommended a L4-S1 ROH TLIF posterior spinal fusion.

26. On March 3, 2016, respondents denied Dr. Stanton's request for the L4-S1 ROH TLIF posterior spinal fusion.

27. On July 19, 2016, in a letter addressed "To Whom It May Concern", Dr. Stanton explained his reasoning for changing the recommended procedure from an L5-S1 fusion to a "contiguous" L4-S1 fusion. The ALJ finds the reasoning articulated in the July 19, 2016 letter persuasive of the concern regarding the necessity to extend Claimant's current need for an L5-S1 fusion to a revision of the L4-5 fusion. According to Dr. Stanton, contiguous fusion with re-instrumentation as necessary to make one longer construct is the standard of care when "performing an adjacent level of fusion for preexisting fusion construct."

28. On August 16, 2015, Claimant was evaluated by Dr. Tashof Bernton at the request of Respondents. In his report prepared after his independent medical examination (IME), Dr. Bernton came to the following conclusions:

- Claimant had a work related exacerbation of underlying disc disease;
- That Claimant's metastatic cancer involving the L1 vertebrae is certainly contributing to Claimant's low back pain;
- That Claimant's lower lumbar spine pain is consistent with his L5-S1 and L4-L5 degenerative disc disease and his upper lumbar spine pain is related to his prostate cancer;
- That Claimant's disability at the time of his evaluation is related to both his

work injury as well as the cancer but within three to six months the prostate cancer will be "by far" the cause of his disability;

- That as he progresses, Claimant's low back symptoms due to the cancer will increase and present a progressive and progressively escalating cause of disability and limitation;

- That both the patient's present cancer and work injury are equal contributors to Claimant's disability but the apportionment may drastically change;

29. In a letter dated July 19, 2016, Dr. Stanton explained that he still recommends a L5-S1 fusion. Dr. Stanton further explained that the standard of care in this type of surgery is to extend Claimant's current L4-L5 fusion so as to be contiguous with the L5-S1 fusion. In order to do this requires removal of the instrumentation with re-instrumentation as necessary to make one longer construct. The reason the L4-L5 posterior instrumentation would need to be revised is this technically is a better construct in terms of connecting to an existing fusion. According to Dr. Stanton, it would not be considered the standard of care to try to perform a stand-alone fusion at L5-S1 without connecting to the L4-L5 segment.

30. Claimant testified that he has undergone treatment for his prostate cancer and wishes to proceed with the back surgery recommended by Dr. Stanton. Claimant testified that he continues to have low back pain with pain and weakness down his legs which affects his functional abilities. Claimant testified that he tries to do very light yard work and perform other light activities but still has significant problems with most activities of daily living. His daughter helps with cleaning and doing the dishes. He has given up fishing as it requires too much walking and walking increases his pain. At this time, Claimant is only taking Aleve for pain control. Claimant credibly testified that he does not like taking strong pain medication due to their side effects. Claimant also testified that prescription pain medication is expensive. For these reasons Claimant avoids strong pain medication. Insofar as his back pain is concerned, Claimant testified that the pain is variable; that he has good days and bad days but he always has a degree of daily pain.

31. As referenced above, Dr. Markus testified by deposition as a board certified hematologist, medical oncologist and internal medicine physician on July 14, 2016. Dr. Markus testified that Claimant's prostate cancer has metastasized to the bone, including the T5 and L1 vertebral segments. Consequently, he testified that it is medically probable that Claimant's bony metastatic disease could be a contributing to his back pain. However, Dr. Markus testified that it is impossible to say to what extent Claimant's back pain is related to the cancer versus the injury. Moreover, he testified that it is possible that both were contributing to Claimant's pain to some degree. While Dr. Markus testified that it is impossible to determine to what extent Claimant's current back pain was caused by his metastatic disease versus his injury, Dr. Markus testified that it "seems unlikely that a metastasis to L1 would radiate down to the L5 distribution."

32. In reiterating his opinion that there are no oncological contraindications to proceeding with the surgery recommended by Dr. Stanton, Dr. Markus testified that the requested surgery "would not worsen oncologic outcomes" and that "if Dr. Stanton feels that it would provide the patient with improvement of his quality of life, then it's worth pursuing." Dr. Markus also testified that because Claimant's "prognosis is measured in the order of multiple years from his disease" and "palliation of his symptoms should be paramount in terms of our goals of care", increases in Claimant's PSA would not be a contraindication to proceeding with surgery. Dr. Markus repeated his stated decision to "defer" to Dr. Stanton to surgically treat the "area he thinks is causing most of the symptoms."

33. As noted, Dr. Bernton, an expert in internal and occupational medicine, testified at hearing. Dr. Bernton testified that the surgery recommended by Dr. Stanton is neither reasonable nor necessary. Dr. Bernton reasoned that Claimant is fairly active and is only taking Aleve for his symptoms which indicates to him that Claimant's pain is not bad enough to require surgery. Dr. Bernton also testified that Claimant's low back pain is at least partially caused by the metastatic disease in the lumbar spine found on MRI. Dr. Bernton testified that Claimant's main complaints are of low back pain and not so much leg pain. Accordingly, Dr. Bernton testified that Claimant does not have a radiculopathy which would be amenable to surgery.

34. Dr. Bernton testified that the surgery recommended by Dr. Stanton on February 25, 2016 is not the same surgery that was being recommended in May, 2014, in that it involves an additional spinal segment.

35. Dr. Bernton testified that under Colorado's Medical Treatment Guidelines (hereinafter the "Guidelines") surgery should be contemplated within the context of expected functional outcomes and not purely for the purposes of pain relief. Dr. Bernton testified the Claimant's pain generator has not been adequately identified as is required by the Guidelines prior to performing surgery. Consequently, Dr. Bernton testified that is not medically reasonable or necessary to perform a major surgical procedure, which requires a major recovery period on a patient with a limited life expectancy and a limited period during which his health will be reasonably well, particularly in a case where the pain generator has not been adequately identified.

36. Dr. Bernton testified that the surgery being requested by Dr. Stanton will do nothing to address the pain being caused by Claimant's metastatic disease.

37. Relying primarily on the January 8, 2016 note from Dr. Markus' office, Respondents suggest that Dr. Markus is actually recommending against surgery. Respondents' contend further that Dr. Bernton agrees with this opinion noting that Dr. Bernton testified that while there are no oncological contraindications to surgery that Dr. Markus was not "actively" recommending it. The ALJ finds Respondents' suggestion unpursuasive. The January 8, 2016 report was prepared by NP Anne Zobec who opined that, if Claimant could control his pain with over-the-counter pain medications

and remain “very active”, “we” would recommend against surgery. It is unclear as to who NP Zobec means when using the term “we”; however, the deposition testimony of Dr. Markus convinces the ALJ that while he defers to Dr. Stanton regarding which area (spinal segment) is causing most of Claimant’s symptoms, proceeding with surgery is reasonable and “palliation of Claimant’s symptoms should be paramount in terms of our goals of care.” Moreover, the ALJ finds the evidence that Claimant has been able to control his pain with over the counter medications wanting. The ALJ finds the fact that Claimant does not take prescription pain medications does not automatically lead to a conclusion that his pain is controlled with over the counter analgesics. To the contrary, Claimant credibly testified that he experiences a degree of daily pain despite his use of over the counter medication.

38. Based upon the evidence presented, the ALJ finds the opinions of Dr. Stanton and Dr. Markus credible and more persuasive than the contrary opinions of Dr. Bernton.

39. Claimant has proven by a preponderance of the evidence that the recommended L4-S1 surgery requested by Dr. Stanton is reasonable and necessary.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers’ Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* In this case, Claimant must prove his entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers’ compensation case are not interpreted liberally in favor of either claimant or respondents. *Section 8-43-201(1), C.R.S.* Rather, a workers’ compensation claim is to be decided on its merits. *Id.*

B. In deciding whether Claimant has met his burden of proof, the ALJ is empowered: “To resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence.” *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App.

2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

C. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge need not address every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

Collateral Estoppel (Issue Preclusion)

D. Issue preclusion principles, although developed in the context of judicial proceedings, may be applied to administrative proceedings in Workers Compensation Claims. *Sunny Acre Villa Inc. v. Cooper*, 25P3d 44 (Colo. App.). Issue and claim preclusion work to preclude the relitigation of matters that have already been decided. *Argus Real Estate, Inc. v. E-470 Pub Highway Auth.,* 109 P3d 604, 608 (Colo. 2005). The doctrine is intended to promote judicial economy and to confirm the finality of judgments by preventing inconsistent decisions. *Argus,* 109 P3d at 608, 611.

E. Issue preclusion bars re-litigation of an issue if all of the following elements are satisfied: (1) The issue sought to be precluded is identical to an issue actually determined in the prior proceeding; (2) The party against whom estoppel is asserted has been a party to or in privity with a party to the prior proceeding; (3) There is a final judgment on the merits in a prior proceeding; and (4) The party against whom the doctrine is asserted had a full and fair opportunity to litigate the issue in a prior proceeding: *Sunny Acre Village, Inc.,* 25 P3d at 47, and *Bebo Construction Co. v. Mattox & O' Brien, P.C.*, 990 P2d 78, 84 (Colo. 1999).

F. In this case, Claimant has failed to establish that Respondents are barred from challenging the surgical procedure requested by Dr. Stanton by the doctrine of collateral estopple. While the parties in the prior hearing before ALJ Turnbow are the same as those before this Court and the order issued by ALJ Turnbow on December 2, 2014 ordering Respondents to pay for Claimant's L5-S1 fusion is final, the issues heard by ALJ Turnbow and subsequently by the undersigned are not identical. Rather, ALJ Turnbow addressed the distinct issue of whether or not Claimant's need for a L5-S1 fusion procedure as recommended by Dr. Stanton was related to his December 16, 2012 industrial injury. In the instant case, the undersigned has been tasked with determining whether or not Claimant's need for an L4-S1 fusion is reasonable and necessary. The undersigned ALJ also notes that the surgical procedures recommended between the first hearing and the instant case are not identical. To the contrary, the back surgery at issue in the first proceeding involved a request to proceed with a L5-S1 fusion where as Dr. Stanton's current request involves performing an anterior/posterior spinal fusion extending from L4 through S1. The ALJ has considered

Claimant's argument that the surgery ordered by ALJ Turnbow is identical to the procedure at issue because either surgery necessarily would include a revision of Claimant's previous L4-L5 fusion. The ALJ rejects this argument as unpursuasive. Based upon the evidence presented, the ALJ concludes that there are distinct differences between the procedures recommended. Contrary to Claimant's assertion, the issue litigated and determined in the prior proceeding before ALJ Turnbow is not identical to the issues for determination before the undersigned.

G. Insofar as Claimant has failed to meet an element required to be established for the doctrine of issue preclusion to apply, the ALJ concludes that Respondents are not collaterally estopped from litigating the issue of whether Dr. Stanton's request for a L4-S1 fusion is reasonable and necessary simply because the recommended procedure includes a spinal segment (L5-S1) which was the subject of a previous order issued by ALJ Turnbow. Nonetheless, the evidence presented persuades the undersigned that the request is reasonable and necessary.

Medical Benefits

H. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). As found here, Claimant has proven by a preponderance of the evidence that he sustained a compensable injury to his low back. The evidence presented persuades the ALJ that this compensable injury is the proximate cause of Claimant's current need for medical treatment, including the recommended surgical procedure. Taken in its entirety, the ALJ finds the evidentiary record to contain substantial evidence to support a conclusion that the pathology in his low back secondary to his industrial injury and not his metastatic disease is the cause his current symptoms and need for treatment. Consequently, the ALJ concludes that Claimant has established that his need for L4-S1 fusion surgery is causally related to his December 16, 2012 work-related injury. Moreover, the totality of the evidence presented establishes that the proposed L4-S1 fusion surgery is reasonable and necessary given Claimant's credible complaints of continued pain and functional decline. Consequently, the ALJ concludes that Respondents are liable for the L4-S1 fusion recommended by Dr. Stanton.

ORDER

It is therefore ordered that:

1. Respondents shall pay for all medical expenses, pursuant to the Workers' Compensation fee schedule, to cure and relieve Claimant from the effects of his low back injury, including the L4-S1 fusion surgery recommended by Dr. Stanton.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant established by a preponderance of the evidence that she sustained a work related injury to her right knee on September 14, 2015 arising out of and in the course of her employment.

II. Whether Claimant established by a preponderance of the evidence that the surgery recommended by Dr. Simpson is reasonably necessary and causally related to her alleged September 14, 2015 work related injury.

STIPULATIONS

At the commencement of hearing, the parties stipulated that if Claimant's injury was determined to be compensable, Claimant's average weekly wage is $841.38. The ALJ approved the stipulation.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Dr. O'Brien, the ALJ enters the following findings of fact:

1. Claimant works as a correctional officer for Respondent-Employer. She has been employed as a correctional officer for the past 8 ½ years. On September 14, 2015, Claimant drove to work arriving at work at approximately 5:45 a.m. She parked her car, grabbed her lunch and exited her car in preparation to walk from the parking lot into work. While walking into work from the parking lot, Claimant stepped up onto a concrete island. As she stepped up, her right ankle rolled outward resulting in a pop and sharp pain in her right knee.

2. Claimant testified that Respondent's exhibits L and M accurately depict the island that she stepped onto that day. Claimant admitted the island was a typical island that you would encounter in other parking lots and public areas. Claimant also admitted that the island was not icy, she did not step into a hole on the island, she did not trip, she did not strike her knee on anything on the island, and she did not fall. Claimant was just stepping up onto the island when her ankle rolled causing an injury to her right knee.

3. Claimant reported her injury and was referred to Dr. Douglas Bradley where she provided a history of injury consistent with her hearing testimony. Dr. Bradley conducted and examination and ordered x-rays of the right knee.

4. X-rays demonstrated "small effusion" and "mild patellofemoral and minimal medial compartment degenerative change" but "no joint space narrowing.

5. Claimant testified to a pre-existing history of arthritis in both of her knees prior to September 14, 2015. This is corroborated by the medical records admitted into evidence at hearing. Treatment for her pre-existing arthritis has included cortisone injection therapy, Voltaren gel, and prescription medications. On April 3, 2015, approximately five (5) months before her alleged work related injury, Claimant was seen by Dr. Patrick Timms for a rheumatologic consultation for her arthritis. In the clinic notes, it indicates that Claimant had been diagnosed with bilateral osteoarthritis in her knees 6 years ago. (Exhibit D, bate stamp 12) Dr. Timms noted that Claimant's knee pain was worse when negotiating stairs and that she has issues standing on her feet for prolonged periods of time. Dr. Timms obtained x-rays of Claimant's knees which demonstrated "slight loss of joint space in the medial as well as the bilateral patellofemoral compartments" of the knees. Dr. Timms diagnosed Claimant with osteoarthritis involving the patellofemoral joint and recommended the use of Voltaren gel four times a day for her knees.

6. Claimant testified regard the changing nature of her right knee pain following the alleged September 14, 2015 injury. Claimant testified that following the September 14, 2015 incident she has experienced constant pain in the right knee, particularly on the medial aspect of the knee. Moreover, Claimant testified that since the September 14, 2015 injury, the right knee feels unstable which she feels may affect her ability to run and perform take downs currently. Respondent does not take issue with this testimony. Indeed, Respondent concedes that Claimant probably sustained an injury in the form of a medial meniscus tear to her right knee on September 14, 2015. Rather, it is Respondent's position that Claimant's pre-existing arthritis caused her meniscus tear and that the island is not a special hazard of employment.

7. Claimant also admitted to prior injuries involving the right knee and right ankle. Specifically, Claimant admitted suffering a work related injury to her right knee on July 25, 1995 while employed with M Cline Inc., a work related injury to her right foot on August 18, 2007 with pain extending from her right foot up to her right knee, a work related injury to her right foot, ankle, and knee on February 1, 2012 when she kicked a door, and a work related injury to her right knee on September 9, 2013 while climbing onto a bunk and falling.

8. Claimant had an MRI scan of her right knee on September 21, 2015, seven days after the September 14, 2015 incident. The MRI revealed "moderately advanced osteoarthritis involving the patellofemoral compartment with diffuse articular cartilage loss and subchondral degenerative cystic changes", "subchondral degenerative cystic changes involving the trochlear region of the distal femur and mild osteoarthritic changes involving the medical and lateral compartments of the knee with mild marginal hypertrophic osteophyte formations." Importantly, the MRI also demonstrated "small joint effusion" and "mild intrasubstance degenerative signal scattered throughout the medial meniscus" suggesting the presence of a "subtle radial tear involving the posterior horn of the medial meniscus . . ." Based upon the findings the radiologist interpreting the MRI reached the following impressions: "1. Moderately advanced osteoarthritis

involving the patellofemoral compartment; 2. Small joint effusion and 3. Questionable subtle radial tear involving the posterior horn of the medial meniscus.

9. Claimant was referred to Dr. Michael Simpson for a consultation on October 7, 2015. Dr. Simpson reviewed Claimant's MRI noting that the "MRI scan of the right knee obtained 09/21/15 shows inches of some degenerative signal throughout the medial meniscus with a radial tear at the posterior horn of the medial meniscus." Dr. Simpson went on to document that Claimant was having pain at the time of his examination that was "distinctly different from the pain she has had before. He expressed his opinion that the change in Claimant's pain was suspicious for "meniscal pathology" rather than an "exacerbation of her underlying arthritis." Consequently, Dr. Simpson recommended an arthroscopic medial meniscectomy.

10. Respondent sought an opinion from Dr. Timothy O'Brien regarding the cause of Claimant's meniscal tear and whether the arthroscopic surgery recommended by Dr. Simpson was reasonable, necessary and related to Claimant's alleged September 14, 2015 work related injury. Dr. O'Brien performed an Independent Medical Evaluation (IME) and generated a written report on March 30, 2016. Following his evaluation, Dr. O'Brien opined that the September 14, 2015 incident "resulted in a minor right knee strain/sprain that temporarily aggravated [Claimant's] pre-existing and longstanding patellofemoral osteoarthritis but did not produce an acute meniscus tear." Dr. O'Brien substantiated his opinion by the findings documented on the September 21, 2015 MRI which noted a "questionable subtle tear of the posterior horn of the medial meniscus and the small amount of effusion which he concluded was "entirely consistent" with Claimant's osteoarthritis.

11. Regarding the reasonableness and necessity of surgery as recommended by Dr. Simpson, Dr. O'Brien noted:

> What Dr. Simpson will achieve, if he is allowed to undertake the surgery he is recommending, is the creation of an intractable synovitis due to the introduction of rigid arthroscopic instrumentation with its attendant high-pressure, high-volume hydrodistention. The intractable synovitis will result from the surgical trauma and injury that awakens quiescent areas of arthritis. [W]hat Ms. Avila will actually experience is an acceleration of her osteoarthritis symptomology rather than pain relief.

12. Dr. O'Brien concluded that the "risk/benefit analysis, based upon scientific and empirical evidence, convincingly argues against Dr. Simpson's recommendation to proceed with surgical intervention in the form of an arthroscopy." Consequently, Dr. O'Brien opined that not only was the recommended surgery unreasonable, it was actually "contraindicated."

13. As noted Dr. O'Brien testified as an expert in orthopedic surgery during a post-hearing deposition convened August 1, 2016. During his deposition, Dr. O'Brien reiterated his opinion that while Claimant did sustain a "minor strain or sprain" injury on

September 14, 2015 she did not tear her meniscus on that date and the “MRI scan proves that.” With regard to the MRI findings, Dr. O’Brien explained that an acute traumatic tear would have produced a large hemarthrosis or synovial effusions which were not seen on the MRI and the “absence of those findings that herald acute injury” supports a conclusion that all the findings on MRI were chronic in nature. Dr. O’Brien reviewed the September 21, 2015 MRI film prior to his deposition. Dr. O’Brien testified that a review of the actual MRI film supported the concerns he noted in his IME report regarding the reading of that film and that in his opinion, there is no true medial meniscus tear, only intrameniscal changes, that are normal age-related degenerative changes. To the extent that there is evidence of a meniscal tear supported by MRI, the ALJ infers from Dr. O’Brien’s testimony that he believes that such tear is degenerative in nature and unrelated to the September 14, 2015 incident.

14. Dr. O’Brien testified that there was no clinical evidence of a symptomatic meniscus tear during his evaluation of Claimant on March 30, 2016 and that the pain Claimant experienced on September 14, 2015 was the predictable manifestation of her underlying osteoarthritis. With regard to Claimant’s reported knee pain during palpation, Dr. O’Brien explained that because Claimant failed multiple McMurray tests during his examination; her reported pain was more likely the result of her underlying arthritis rather than a symptomatic meniscus tear.

15. Dr. O’Brien referred to scientific studies involving arthroscopic surgery in expanding on his opinion that introducing instrumentation into Claimant’s knee during the surgery proposed by Dr. Simpson was contraindicated and would only introduce additional trauma to the knee which would likely aggravate Claimant’s underlying osteoarthritis and increase her pain complaints. According to Dr. O’Brien, double-blinded studies establish that the surgery recommended by Dr. Simpson “doesn’t help people with arthritis and a degenerative meniscus tear.”

16. The ALJ has carefully considered Dr. O’Brien’s opinions and has weighed them against the balance of the competing evidence. Based upon the totality of the evidence presented, the ALJ finds Dr. O’Brien’s opinions credible and persuasive.

17. The evidence presented, persuades the ALJ that Claimant failed to prove that she suffered an acute tear of the medial meniscus as a direct consequence. To the contrary, the evidence presented persuades the ALJ that Claimant’s meniscal tear is, more probably than not, degenerative in nature and caused by her underlying, longstanding advanced osteoarthritis rather than by rolling her right ankle while stepping up on the concrete island as she claims. Consequently, Claimant has failed to prove by a preponderance of the evidence that she sustained a work related injury arising out of her employment on September 14, 2015.

18. Even if Claimant had established a causal connection between her right medial meniscal tear and her work related functions, she failed to prove by a preponderance of the evidence that the surgery recommended by Dr. Simpson is reasonable or necessary. To the contrary, the ALJ is persuaded by Dr. O’Brien’s testimony that given

Claimant's preexisting osteoarthritis that the recommended surgery is specifically unreasonable and contraindicated as it would only introduce additional trauma to the knee which would likely aggravate Claimant's underlying osteoarthritis and increase her pain complaints.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

B. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968). As found, the ALJ concludes the testimony of Dr. O'Brien to be credible and persuasive.

C. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

D. To recover benefits under the Worker's Compensation Act, the Claimant's injury must have occurred "in the course of" and "arise out of" employment. *See* § 8-41-301, C.R.S.*; Horodyskyj v. Karanian* 32 P.3d 470 (Colo. 2001). The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements to establish compensability. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). Thus, an injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Based upon the evidence presented, the ALJ finds that Respondents are not contending that Claimant's alleged injury did not occur in the course of her employment. Rather, based principally on the testimony of Dr. O'Brien and the medical records presented, the undersigned ALJ understands Respondents contention to be that Claimant's medial meniscal tear did not "arise out" of her employment. In other words, Respondents contend that Claimant's medial meniscus tear was precipitated by a pre-existing condition, i.e. her longstanding osteoarthritis, and not an activity or condition distinctly associated with Claimant's employment, i.e. stepping up onto a concert island while walking into work. Given the evidence presented, the argument is persuasive.

E. The term "arises out of refers to the origin or cause of an injury. *Deterts v. Times Publ'g Co. supra.* There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of Denver, supra.* An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's employment contract. *Popovich v. Irlando supra.* As noted above, it is the Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. § 8-43-201, C.R.S. 2014. Here, Dr. O'Brien persuasively testified that Claimant's MRI did not correlate with an acute injury but rather demonstrated chronic degenerative changes. Dr. O'Brien also testified that Claimant has osteoarthritis which he suspected was the cause of her small joint effusion. The record evidence supports Dr. O'Brien's opinions. Indeed, Claimant's MRI specifically notes that there was evidence of "intrasubstance degenerative signal scattered throughout the medial meniscus." Concerning Claimant's pre-existing arthritis and the condition of her right knee as a whole, the ALJ finds Dr. O'Brien's opinion that what Claimant experienced on September 14, 2015 was the predictable manifestation of her underlying osteoarthritis credible and persuasive.

F. The question of whether Claimant met the burden of proof to establish the requisite causal connection between the industrial injury and her need for medical treatment is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App.

2000). The fact that Claimant may have experienced an onset of pain while performing job duties does not mean that she sustained a work-related injury or occupational disease. An incident which merely elicits pain symptoms without a causal connection to industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988)*; Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989). In this case Claimant has failed to establish a causal connection between her employment related duties and the resulting condition for which medical treatment benefits are sought. Here, the origin and cause of Claimant's injury while stepping up onto the island on September 14, 2015, more probably than not, was her significant pre-existing arthritis. Consequently, her claim must be denied and dismissed. *See Horne v. St. Mary-Corwin Hospital*, W.C. No. 4-205-014 (April 14, 1995); *Crass v. Cobe Laboratories,* W.C. No. 3-960-622 (October 10, 1991); *Gutierrez v. Wal-Mart Stores, Inc.*, W.C. No. 4-432-838 (November 30, 2000).

G. Although Claimant is not alleging that her meniscal tear was "precipitated" by a pre-existing condition and instead by a discrete injury, the ALJ finds and concludes, that Respondents are contending, that the meniscal tear is a consequence of a pre-existing condition brought by Claimant to the workplace. Consequently, the ALJ has also analyzed the compensable nature of this case pursuant to the decision announced by the Colorado Supreme Court in *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014) and the "special hazard" rule announced by the Court of Appeals in *Ramsdell v. Horn,* 781 P.2d 150 (Colo. App. 1989).

H. In *City of Brighton*, the Colorado Supreme Court identified three categories of risk that cause injuries to employees: (1) employment risks directly tied to the work itself; (2) personal risks, which are inherently personal; and (3) neutral risks, which are neither employment related nor personal. 318 P.3d 496 (Colo. 2014). The second category includes risks that are entirely personal or private to the employee. Such risks would include an employee's pre-existing or idiopathic condition that is completely unrelated to her employment. Idiopathic conditions have been defined to mean "self-originated." *Id.* at 503. Purely idiopathic personal injuries generally are not compensable unless an exception applies. *Id.* at 503. One exception is when a pre-existing or idiopathic condition precipitates an accident and combines with a hazardous condition of employment to cause an injury. Referred to as the "special hazard rule", the Colorado Court of Appeals held that a claimant may be compensated if a preexisting injury, infirmity, or disease is exacerbated by "the concurrence of a pre-existing weakness and a hazard of employment." *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989); *Gates Rubber Co. v. Industrial Comm'n.*, 705 P.2d 6, 7 (Colo. App. 1985). The rationale for this rule is that unless a special hazard of employment increases the risk or extent of injury, an injury due to the claimant's pre-existing condition does not bear sufficient causal relationship to the employment to "arise out of the employment. *Gates Rubber Co. V. Industrial Commission, supra; Gaskins v. Golden Automotive Group, L.L.C.,* W.C. No. 4-374-591 (August 6, 1999). In such cases, the existence of a special hazard, which elevates the probability of injury or the extent of the injury incurred, serves to establish the required causal relationship between the employment and the injury. *See Ramsdell v. Horn, supra.* In order to be considered a special hazard, the employment condition cannot be a ubiquitous one; it must be a special hazard not generally encountered. *Id.* The rationale for this exception is that unless a special hazard of employment increases the risk or extent of injury, an injury due to a claimant's personal or idiopathic condition does not bear a sufficient causal relationship to the employment to "arise out of" the employment. *Gates, supra* at 7. Courts have previously held that hard level concrete floors, concrete stairs, and a sidewalk curb are not special hazards of employment. *Id.; Alexander v. ICAO*, No. 14CA2122 (Colo. App. June 4, 2015); *Gaskins v. Golden Automotive Group, LLC*, W.C. No. 4-374-591 (ICAO Aug. 6, 2009). There is no requirement that the pre-existing condition is symptomatic prior to the injury in order for the special hazard rule to apply. *Alexander v. Emergency Courier Services, supra*. Here, Claimant did not testify that any particular flaw in the island caused her right knee injury. This is supported by her testimony and the photographs submitted into evidence. The island is not a special hazard of employment but rather a ubiquitous condition which Claimant could have encountered off the job. Moreover, as found, the record evidence supports a conclusion that Claimant's meniscal tear was precipitated by her pre-existing osteoarthritis. Consequently, the ALJ concludes that Claimant bore the burden to establish that there was a concurrence of a pre-existing weakness and a hazard of employment to result in a compensable work injury to Claimant's right knee. *See National Health Laboratories v. Industrial Claim Appeals Office*, 844 P.2d 1259 (Colo. App. 1992); See *also Ramsdell v. Horn*, *supra.* Here Claimant failed to establish that a special hazard of employment combined with her pre-existing condition to cause the injury in question. Accordingly, her claim for benefits must be denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant's claim for worker's compensation benefits is denied and dismissed.

2. Claimant's claim for the surgery recommended by Dr. Simpson is denied and dismissed as it is neither reasonably necessary nor causally related to the September 14, 2015 incident.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding

procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-010-091-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

SELF-INSURED
c/o GALLAGHER BASSETT,

Third-party Administrator (TPA)

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on September 28, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 9/28/16, Courtroom 3, beginning at 8:30 AM, and ending at 11:15 AM).

The Claimant was present in person and represented by Andrew Sandomire, Esq. Respondent was represented by Nancy Hummel, Esq.

Hereinafter jack Hogan II shall be referred to as the "Claimant." Vail Valley Resorts shall be referred to as the "Employer." All other parties shall be referred to by name.

Claimant's Exhibits 2, 3, 7, 8, 9 and 10 were admitted into evidence, without objection. Claimant's Exhibits 1, 4, 5 and 6 were withdrawn. Respondent's Exhibits A through K were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and took the matter under advisement for the preparation of a written decision, which hereby issues.

ISSUES

The paramount issue to be determined by this decision concerns whether the Claimant suffered a compensable injury to his left leg as the result of a fall on March 18, 2016, arising out of the course and scope of his employment; or, whether his injury was the result of a significant deviation from the course and scope of his employment so as to take his injury outside the sphere of his employment. If the injury is compensable, the additional issue concerns entitlement to medical benefits.

The Claimant bears the burden of proof, by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant was born on May 25, 1993 and was 23 years of age on the date of the hearing.

2. The Claimant began working at his current position since around November 2015. The Employer operates a ski resort in Colorado.

3. The Claimant was a ski lift operator for the Employer. His job duties included operating a ski lift to which he was assigned. His duties encompassed a wide variety of tasks including operating the ski lift, loading passengers, clearing snow from the lift and so forth.

The Incident on March 18, 2016

4. On March 18, 2016, while traveling to his assigned lift, the Claimant was accompanied by co-workers Brian Atkins and Nick Murray. This group was at the top of the mountain attempting to reach Lift 7 in order to open the lift. The designated route for traveling to Lift 7 was a route known as Lost Boy. Due to snow conditions from the night before, however, the Claimant and his two coworkers decided to take The Woods route. On direct examination, the Claimant stated that one of his coworkers was using a snowboard and that the grade of the Lost Boy route would require him to unstrap from his board and walk up the hill. The Claimant further testified that the lift needed to be opened around 8 AM. According to the Claimant, their decision to take The Woods

route arose because they did not want to be late opening Lift 7. The Claimant testified that late openings were “frowned upon” by his supervisors. While nearing the bottom of The Woods, the Claimant skied on top of a ridge and fell onto a bed of rock that was covered by snow. Atkins and Murray did not witness the fall but heard the Claimant screaming in pain.

5. The Claimant experienced severe hip and leg pain at the time of the impact. He struck around the left leg/hip area and sustained a broken left femur. The medical records support and corroborate a significant injury.

6. The Claimant was eventually taken to the Vail Valley Medical Center where it was determined that his injury required immediate surgery. Following surgery to his left leg, the Claimant was in the hospital for four days. He was physically unable to start working again until May 1, 2016. He also attended follow up medical appointments, completed physical therapy (PT), and he received acupuncture for his leg following his discharge from the hospital.

7. Soon after the work-related incident, the Claimant’s coworkers reported the injury to their supervisor. The supervisor immediately fired the Claimant on March 18, 2016 and asked him to vacate his company apartment on April 1, 2016.

8. On direct examination, Chris Mills, who is the Senior Manager for Lift Operations, testified that the Claimant did not follow the designated route policy. Mills testified that the Claimant and all other lift operators were trained to follow their designated route and seek permission if an alternate route was to be taken. Safety violation was **not** designated as an issue. Moreover, the Respondent argues that “not following the designated route,” although in furtherance of getting the job done, amounted to a frolic and detour, which took the Claimant out of the course and scope of his employment.

9. The Employer has refused to cover any medical expenses associated with the initial work-related incident. The Employer contests the Claimant’s assertion that the leg injury arose during the scope of employment.

10. During closing arguments, the Respondent maintained that the Claimant’s decision to take The Woods route without permission constituted a significant deviation and therefore placed the Claimant’s injury outside the scope of employment.

Ultimate Findings

11. The ALJ finds that the Claimant's testimony is credible, convincing, and it persuasively refutes the Respondent's denial of causal relatedness (to work) concerning the incident of March 18, 2016. Thus, the ALJ finds that the Claimant has proven, by a preponderance of the evidence, a work-related left leg injury as a consequence of his fall on a bed of rocks during the course and scope of his employment. While, the Respondent presented Mills' opinion that contradicted the Claimant's testimony, the Claimant's testimony is based upon his state of mind at the time of the incident, *i.e.,* furthering the interests of his Employer. The Claimant's primary justification for taking an alternate route concerned snow conditions and arriving to the lift on time in furtherance of his job for the Employer. A mistake in judgment on the Claimant's part does **not** amount to a significant deviation, frolic and detour from the course and scope of his employment.

12. The ALJ makes a rational choice, based on substantial evidence, to accept the testimony of the Claimant as dispositive and to reject the Respondent's claim that the left leg injury was caused outside the course and scope of the Claimant's employment.

13. The Claimant has proven, by a preponderance of the evidence that he sustained a compensable injury to his left leg, arising out of the course and scope of his employment.

14. The evidence does **not** support a "frolic and detour significant enough to take the Claimant's accident outside the course and scope of his employment. At the time of his accident, the Claimant was furthering the interests of his Employer, although misguidedly taking a different route to open the lift on time. The evidence simply does **not** support the proposition that the Claimant's actions were for his **sole** benefit. In fact, the evidence establishes that the Claimant experienced a significant injury to his left leg while attempting to reach his assigned lift on time, in furtherance of his work for the Employer.

15. The Claimant has proven, by preponderant evidence that his medical care and treatment was authorized, within the chain of authorized referrals, causally related to the accident of March 18, 2016, and reasonably necessary to cure and relieve the effects of that injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions; the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony was credible, convincing, and it persuasively refuted the Respondent's denial of causal relatedness (to work) concerning the incident of March 18, 2016. As further found, while the Respondent presented Mills' opinion that contradicted the Claimant's testimony, the Claimant's testimony was based upon his state of mind at the time of the incident, *i.e.,* furthering the interests of his Employer. The Claimant's primary justification for taking an alternate route concerned snow conditions and arriving to the lift on time. A mistake in judgment on the Claimant's part does **not** amount to a significant deviation, frolic and detour from the course and scope of his employment.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007).

Substantial evidence is “that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence.” *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ’s resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice, based on substantial evidence, to accept the testimony of the Claimant as dispositive and to reject the Respondent’s claim that the left leg injury was caused outside the course and scope of the Claimant’s employment.

Detour From the Course and Scope of Employment

c. Indeed, the “dual purpose” doctrine holds that an injury sustained while the employee is performing an act for the mutual benefit of the employer and the employee is usually compensable. *See Berry’s Coffee Shop, Inc. v. Palomba,* 161 Colo. 369, 423 P.2d 2 (1967); *Bob Hagestad Porsche Audi, Inc. v. Indus. Comm’n,* 503 P.2d 628 (Colo. App. 1972). Typical “frolics and detours” from the course and scope of employment involve: (1) recreational activities [*see White v. Indus. Claim Appeals Office,* 8 P.3d 621 (Colo. App. 2000)]; horseplay [*see McKnight v. Houck,* 87 Colo. 234, 286 P. 279 (1930)], or actions for the **sole** benefits of the employee such as recreational skiing as a perk of employment. *See Kater v. Indus. Comm’n,* 728 P.2d 746 (Colo. App. 1986) [holding that the question of whether a deviation from employment is significant enough to remove the claimant from the scope of employment is generally a question of fact to be determined by the fact finder]. The Respondent cited an old Industrial Claim Appeals Office Order, wherein the Claimant was engaged in **recreational** skiing on a slope specifically prohibited to the claimant. *See Satterfield v. Vail Associates, Inc.,* W.C. No. 3-108-224 [Indus. Claim Appeals Office (ICAO), March 24, 1994]. In *Satterfield,* the claimant was engaged in **recreational** skiing on a slope which the Employer prohibited to the claimant There is a substantial, distinguishing fact pattern in *Satterfield,* as opposed to the facts in the present case, *i.e.,* in the present case, the Claimant was pursuing his Employer’s interests to open the ski lift on time. *Also see* 1A Larson, *Workmen’s Compensation Law,* section 234.00. It is **fundamental** that eligibility for workers’ compensation benefits is not dependent upon **fault.** *See Banks v. Indus. Claim Appeals Office,* 794 P.2d 1062 (Colo. App. 1990). The fact that an employee sustains an injury as a result of his own negligence does **not** affect the employee’s right to workers’ compensation benefits. *See Colorado Springs Disposal v. Indus. Claim Appeals Office,* 58 P.3d 1061 (Colo. App. 2002). As found, at the time of his accident, the Claimant was furthering the interests of his Employer, although misguidedly taking a different route to open the lift on time in furtherance of his Employer's interests.

Medical Benefits

d. Because this matter is compensable, Respondent is liable for medical treatment which is reasonably necessary to cure or relieve the effects of an industrial injury. § 8-42-101(1) (a), C.R.S; *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). Pursuant to § 8-43-404 (5) (a) (I) (A), C.R.S., the employer is required to furnish an injured worker a list of at least two physicians or two corporate medical providers, in the first instance. An employer's right of first selection of a medical provider is triggered when the employer has knowledge of the accompanying facts connecting the injury to the employment. *Jones v. Adolph Coors Co.,* 689 P. 2d 681 (Colo. App. 1984). An employer must tender medical treatment forthwith on notice of an injury or its right of first selection passes to the injured worker. *Rogers v. Indus. Claim Appeals Office,* 746 P.2d 565 (Colo. App. 1987). As found, all of the Claimant's medical care and treatment for his left leg injury was authorized.

e. To be authorized, all referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). When an ATP refers an injured worker to his personal physician, under the mistaken belief that the claim was not compensable, the referral was nonetheless within the chain of authorized referrals and, thus, subsequent treatment was authorized. *See Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277 (Colo. App. 2008). As found, all referrals were within the chain of authorized referrals.

f. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to the compensable accident of March 18, 2016. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary to cure and relieve the effects of his compensable left leg injury of March 18, 2016.

Burden of Proof

g. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden with respect to compensability and medical benefits.

Appealable Order

h. Recently, the Industrial Claim Appeals Office (ICAO) apparently changed course and determined that a "change of physician" order was **not i**nterlocutory but appealable. In finding an evidentiary fact and/or testimonial inference that differed from the fact finder's finding, ICAO held that a letter to the respondents, indicating that the claimant had no faith in her then present treating physicians and was changing to another doctor did **not** amount to a request to change physicians, thus the ALJ' s order permitting a change of physicians was reversed. *See Huston v. Allcable, Inc.,* W.C. No. 4-997-535-01 [Indus. Claim Appeals Office (ICAO), October 5, 2016].

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondent shall pay the costs of medical care and treatment for the Claimant's compensable left leg injury, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Any and all issues not determined herein are reserved for future decision.

DATED this______day of October 2016.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that the back surgery recommended by Sanjay Jatana, M.D. is reasonable and necessary to cure or relieve the effects of his May 17, 2015 admitted industrial injuries.

FINDINGS OF FACT

1. Claimant worked for Employer as a Superintendent who operated heavy equipment. On May 17, 2015 he suffered admitted industrial injuries to his head, neck, right shoulder and back. While operating a mini-excavator Claimant was struck by a dump truck that rolled downhill. Upon impact, Claimant was thrown from the mini-excavator.

2. Sanjay Jatana, M.D. diagnosed Claimant with cervical region spinal stenosis and provided medical treatment for the injuries. An MRI of Claimant's neck revealed a C3-C4 left paracentral disc bulge causing moderate spinal left neural foraminal stenosis. Claimant also had foraminal stenosis at C5-C6 and C6-C7. Dr. Jatana recommended a C3-C6 anterior cervical discectomy and fusion. He also suggested a possible fusion at C6-C7.

3. Claimant testified through a post-hearing evidentiary deposition in this matter. He explained that he suffers pain in his neck that goes down his right shoulder into his arm. He has received radio frequency ablations, facet injections, trigger point injections and physical therapy. Claimant obtained temporary relief from conservative treatment. He wishes to proceed with the surgery recommended by Dr. Jatana.

4. Brian Reiss, M.D. conducted a records review of Claimant's case and testified at the hearing in this matter. He distinguished between a neurological comprise and axial or mechanical back pain. Dr. Reiss commented that, if a patient exhibits a neurological compromise, surgical outcomes are usually positive. However, if a patient suffers from axial back pain, surgical outcomes are typically not positive.

5. Dr. Reiss commented that Claimant's cervical MRI films revealed left-sided pathology but he complained of right-sided neck pain. Moreover, although Claimant had received facet blocks and epidural steroid injections, they occurred contemporaneously in overlapping locations. The tests thus had limited diagnostic value. Furthermore, an emergency room report from December 8, 2015 revealed that Claimant's neurological status was intact with no weakness, sensory deficits or reflex deficits. Claimant thus likely suffered from neck pain that would not likely be remedied through the cervical fusion proposed by Dr. Jatana. Finally, Dr. Reiss noted that Claimant did not have a response to epidural steroid injections. His nerve roots thus

were not likely the source of his pain. Because Claimant's pain is likely axial and myofascial in origin, the fusion surgery proposed by Dr. Jatana would not likely be effective.

6. Relying on the Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*), Dr. Reiss explained that back surgery is not appropriate unless a pain generator has been clearly identified, the proposed surgery is designed to yield functional improvement and the patient has undergone a psychological evaluation. However, he commented that a clear pain generator has not been identified, the proposed surgery would not decrease Claimant's pain or improve his function and psychological evaluations have revealed that Claimant is a poor surgical candidate. Dr. Reiss thus summarized that Dr. Jatana's proposed surgery is not reasonable and necessary to cure or relieve the effects of Claimant's May 17, 2015 admitted industrial injuries.

7. On December 10, 2015 Claimant underwent a psychological evaluation with Ron Carbaugh, Psy.D. After reviewing Claimant's history and administering diagnostic tests, Dr. Carbaugh concluded that Claimant was a poor candidate for invasive surgery. He explained:

> Clearly [Claimant] is having a dramatic psychological reaction to his injury. This is not to minimize any physiologic or objective medical findings that are present. However, it is clear that psychological factors and compromised coping strategies are impacting his recovery and response to appropriate treatment.
>
> Based on his presentation on this date, he would appear to be a poor candidate for any invasive or interventional strategies. Expect these types of interventions to provide no relief, or, of more concern, create iatrogenic complications. This appears to be the case with the radiofrequency neurotomies performed some weeks ago.

8. Dr. Jatana responded to written questions in a letter from Claimant's attorney dated January 20, 2016. He noted that psychological factors, including anxiety and depression, would not affect Claimant's recovery from the proposed surgical procedure. Furthermore, he commented that the psychological factors outlined in Dr. Carbaugh's report would not preclude the proposed surgery.

9. On February 18, 2016 Claimant underwent a psychological evaluation with Kevin J. Reilly, Psy.D. Dr. Reilly reviewed Claimant's history and psychological testing results. He diagnosed Claimant with somatic symptom disorder, adjustment disorder with mixed and depressed mood, and substance abuse-unspecified. Dr. Reilly determined that Claimant's presentation was indicative of chronic pain/delayed recovery syndrome. He remarked that Claimant's frustration and irritability was likely a feature of his depressive disorder and chronic pain syndrome. Dr. Reilly agreed with Dr. Carbaugh that Claimant would "not likely benefit from medical interventions." He

explained that Claimant would "potentially benefit from behavioral medicine treatment focused on chronic pain coping and adjustments."

10. Claimant has failed to demonstrate that it is more probably true than not that the back surgery recommended by Sanjay Jatana, M.D. is reasonable and necessary to cure or relieve the effects of his May 17, 2015 admitted industrial injuries. Dr. Jatana diagnosed Claimant with cervical region spinal stenosis and recommended a C3-C6 anterior cervical discectomy and fusion. He also suggested a possible fusion at C6-C7. Claimant explained that he suffers pain in his neck that goes down his right shoulder into his arm. He has received radio frequency ablations, facet injections, trigger point injections and physical therapy but has only obtained temporary relief. Claimant wishes to proceed with the surgery recommended by Dr. Jatana.

11. In contrast, Dr. Reiss persuasively determined that Dr. Jatana's proposed surgery is not reasonable and necessary to cure or relieve the effects of Claimant's May 17, 2015 admitted industrial injuries. He explained that Claimant's diagnostic testing had limited value. Furthermore, an emergency room report from December 8, 2015 revealed that Claimant's neurological status was intact with no weakness, sensory deficits or reflex deficits. Claimant thus likely suffered from neck pain that would not likely be remedied through the cervical fusion proposed by Dr. Jatana. Finally, Dr. Reiss noted that Claimant did not have a response to epidural steroid injections. Claimant's nerve roots thus were probably not the source of his pain. Because Claimant's pain is likely axial and myofascial in origin, the fusion surgery proposed by Dr. Jatana would not likely be effective.

12. Relying on the *Guidelines*, Dr. Reiss explained that back surgery is not appropriate unless a pain generator has been clearly identified, the proposed surgery is designed to yield functional improvement and the patient has undergone a psychological evaluation. However, he commented that a clear pain generator has not been identified, the proposed surgery would not decrease Claimant's pain or improve his function and psychological evaluations have revealed that Claimant is a poor surgical candidate. Dr. Reiss thus summarized that Dr. Jatana's proposed surgery is not reasonable and necessary to cure or relieve the effects of Claimant's May 17, 2015 admitted industrial injuries.

13. Psychological evaluations also reveal that Claimant is not an appropriate surgical candidate. Dr. Carbaugh persuasively explained that Claimant experienced a dramatic psychological reaction to his injury. He commented that psychological factors and compromised coping strategies were impacting his recovery and response to appropriate treatment. Dr. Carbaugh thus determined that Claimant would be a poor candidate for an invasive surgical procedure and did not expect surgical intervention to provide any relief. Furthermore, Dr. Reilly persuasively determined that Claimant's presentation was indicative of chronic pain/delayed recovery syndrome. He remarked that Claimant's frustration and irritability was likely a feature of his depressive disorder and chronic pain syndrome. Dr. Reilly agreed with Dr. Carbaugh that Claimant would "not likely benefit from medical interventions." He concluded that Claimant would "potentially benefit from behavioral medicine treatment focused on chronic pain coping

and adjustments." Although Dr. Jatana noted that psychological factors would not preclude the proposed surgical procedure, the record reveals that Claimant suffers a myriad of psychological factors and deficient coping strategies that would render him a poor surgical candidate. Accordingly, the surgery proposed by Dr. Jatana is not reasonable and necessary to cure or relieve the effects of Claimant's May 17, 2015 admitted industrial injuries.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. As found, Claimant has failed to demonstrate by a preponderance of the evidence that the back surgery recommended by Sanjay Jatana, M.D. is reasonable

and necessary to cure or relieve the effects of his May 17, 2015 admitted industrial injuries. Dr. Jatana diagnosed Claimant with cervical region spinal stenosis and recommended a C3-C6 anterior cervical discectomy and fusion. He also suggested a possible fusion at C6-C7. Claimant explained that he suffers pain in his neck that goes down his right shoulder into his arm. He has received radio frequency ablations, facet injections, trigger point injections and physical therapy but has only obtained temporary relief. Claimant wishes to proceed with the surgery recommended by Dr. Jatana.

6. As found, in contrast, Dr. Reiss persuasively determined that Dr. Jatana's proposed surgery is not reasonable and necessary to cure or relieve the effects of Claimant's May 17, 2015 admitted industrial injuries. He explained that Claimant's diagnostic testing had limited value. Furthermore, an emergency room report from December 8, 2015 revealed that Claimant's neurological status was intact with no weakness, sensory deficits or reflex deficits. Claimant thus likely suffered from neck pain that would not likely be remedied through the cervical fusion proposed by Dr. Jatana. Finally, Dr. Reiss noted that Claimant did not have a response to epidural steroid injections. Claimant's nerve roots thus were probably not the source of his pain. Because Claimant's pain is likely axial and myofascial in origin, the fusion surgery proposed by Dr. Jatana would not likely be effective.

7. As found, relying on the *Guidelines*, Dr. Reiss explained that back surgery is not appropriate unless a pain generator has been clearly identified, the proposed surgery is designed to yield functional improvement and the patient has undergone a psychological evaluation. However, he commented that a clear pain generator has not been identified, the proposed surgery would not decrease Claimant's pain or improve his function and psychological evaluations have revealed that Claimant is a poor surgical candidate. Dr. Reiss thus summarized that Dr. Jatana's proposed surgery is not reasonable and necessary to cure or relieve the effects of Claimant's May 17, 2015 admitted industrial injuries.

8. As found, psychological evaluations also reveal that Claimant is not an appropriate surgical candidate. Dr. Carbaugh persuasively explained that Claimant experienced a dramatic psychological reaction to his injury. He commented that psychological factors and compromised coping strategies were impacting his recovery and response to appropriate treatment. Dr. Carbaugh thus determined that Claimant would be a poor candidate for an invasive surgical procedure and did not expect surgical intervention to provide any relief. Furthermore, Dr. Reilly persuasively determined that Claimant's presentation was indicative of chronic pain/delayed recovery syndrome. He remarked that Claimant's frustration and irritability was likely a feature of his depressive disorder and chronic pain syndrome. Dr. Reilly agreed with Dr. Carbaugh that Claimant would "not likely benefit from medical interventions." He concluded that Claimant would "potentially benefit from behavioral medicine treatment focused on chronic pain coping and adjustments." Although Dr. Jatana noted that psychological factors would not preclude the proposed surgical procedure, the record reveals that Claimant suffers a myriad of psychological factors and deficient coping strategies that would render him a poor surgical candidate. Accordingly, the surgery

proposed by Dr. Jatana is not reasonable and necessary to cure or relieve the effects of Claimant's May 17, 2015 admitted industrial injuries.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for the back surgery recommended by Sanjay Jatana, M.D. is denied and dismissed.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: October 12, 2016.

ISSUES

The issues for determination are:

1. The calculation of the Claimant's average weekly wage ("AWW").

2. Whether the Claimant proved, by a preponderance of the evidence, that she is entitled to temporary total disability indemnity benefits from June 25, 2015 ongoing.

FINDINGS OF FACT

1. The Claimant was employed as a produce clerk for Respondent Employer on February 3, 2015 when she sustained a compensable work injury. At the time of this injury, the Claimant also was concurrently employed as a home attendant for IRN International.

2. The Claimant was taken off work from her job at Respondent Employer and was paid TTD benefits beginning February 4, 2015. The Claimant testified credibly that due to her injury, she also had to quit her job as a home attendant on February 3, 2015 because she was unable to perform the job duties.

3. She testified credibly worked seven days a week as a home attendant for IRN, the concurrent employer, with varying hours from two to two-and-a-half hours per day, and was paid $10.00 per hour. This testimony would place her range of weekly wages from the concurrent employer from $140.00 - $175.00 per week.

4. From the Claimant's W-2s for the concurrent employer, the Claimant grossed $10,310 in 2014 and $2,137.50 in 2015. If the Claimant worked all 52 weeks in 2014, this would average out to $198.27 per week for 2014. If the Claimant stopped working on February 3, 2015 (as she testified), then she worked for 4 weeks and 6 days of 2015 or 4.86 weeks. This would average out to $439.81 per week.

5. As the amount of $439.81 is significantly higher than the $140.00 - $175.00 estimated rate to which the Claimant testified and is more than double the 2014 rate, the ALJ concludes that it is likely that the 2015 W-2 does not correspond to only 4.86 weeks of work and this calculation is not reliable for the purpose of calculating average weekly wage for the Claimant for her concurrent employment. Therefore, the ALJ will use the average weekly wage of $198.27 calculated from the Claimant's 2014 W-2 from her concurrent employer to calculate the addition to the AWW to account for wages from the concurrent employer.

6. The Respondents filed a General Admission of Liability on February 23, 2015 and admitted for an AWW of $435.16 for Claimant's employment with Employer only. This corresponds to a TTD rate of $290.11 per week (Claimant's Exhibit 2).

7. The average weekly wage for the Claimant's job with Employer and her job with the concurrent employer IRN equals $633.43 ($435.16 + $198.27) which corresponds to a TTD rate of $422.29.

8. Subsequent to the Claimant's work injury, Hiep Ritzer, M.D. became an authorized treating physician. Dr. Ritzer referred the Claimant to Samuel Chan, M.D. and Sean Griggs, M.D. for further evaluation (Claimant's Exhibit 5, p. 6).

9. On June 16, 2015, Dr. Ritzer noted that she returned the Claimant to modified duties of four hours per day on May 26, 2015 but the Claimant reported she was unable to tolerate that. Dr. Ritzer observed and reported pain behaviors including the Claimant keeping her eyes closed in the exam room, walking with slow gait and holding on to counters or her husband for stability. Dr. Ritzer opined, "her subjective complaints are out of proportion to her objective findings" and indicated the Claimant would follow up with Dr. Chan for pain management. Dr. Ritzer reported this was a "delayed recovery" case and kept her at modified duty (Claimant's Exhibit 7, pp. 26-28).

10. On June 25, 2015, Dr. Chan placed the Claimant at maximum medical improvement with no impairment and return to work full time and on a full duty basis. Dr. Chan's opinion relied, in large part, on his belief that the Claimant was engaged in "an unsophisticated attempt to misrepresent her symptoms" after viewing surveillance video footage and the Claimant's appearance at her follow up medical examination. Dr. Chan noted that at this juncture in the Claimant's treatment, "…since we are treating pain and there is no credibility on the patient's part, I do not feel that further treatment intervention will alter any kind of outcome" (Claimant's Exhibit 8; Respondent's F).

11. Dr. Ritzer also placed the Claimant at maximum medical improvement on June 25, 2015 upon discharge from care. Dr. Ritzer noted the Claimant presented for her follow up visit unchanged from the prior visit in terms of subjective reports of pain and physical functioning. Dr. Ritzer noted that she discussed the Claimant's case with Dr. Chan who also saw the Claimant on this same day and he advised her that he closed the Claimant's case after reviewing surveillance video. Dr. Ritzer noted that Dr. Chan felt the Claimant "may be malingering." Dr. Ritzer opined the Claimant was now at MMI and gave the Claimant a return to work at full duty with no restrictions, no maintenance care and no impairment rating (Claimant's Exhibit 7, pp. 29-32; Respondents' Exhibit E).

12. Respondents filed a Final Admission of Liability on July 9, 2015 consistent with Dr. Ritzer's 6/25/2016 medical report (Claimant's Exhibit 3, p. 3). The Final Admission of Liability terminated the Claimant's temporary total disability benefits, which she received from February 4, 2015 through June 24, 2015.

13. Subsequently, Kristin Mason, M.D. performed a Division IME on November 16, 2015. Dr. Mason determined that the Claimant was not at maximum medical improvement. Dr. Mason opined that the Claimant's restrictions were no lifting over 5 pounds at waist level for the right upper extremity and bilateral lifting restrictions of 20 pounds. The Claimant was unrestricted for the left upper extremity. (Clm. Ex. 6, Bates No. 23).

14. A hearing was held May 5, 2016 before ALJ Felter on the issues of (1) Respondents' request to overcome the Division IME (DIME) opinion of Dr. Kristin Mason, who had determined that the Claimant had not reached maximum medical improvement (MMI) and (2) medical benefits (Claimant's Exhibit 5, p. 6). The issues of temporary disability benefits and average weekly wage were not an issue at that hearing.

15. ALJ Felter ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant. Respondents did not file a timely objection to the proposed order. ALJ Felter thereafter modified the proposed Order and entered Full Findings of Fact, Conclusions of Law and Order on May 17, 2016 and the Order was served on May 18, 2016 (Claimant's Exhibit 5).

16. Respondents did not appeal the May 18, 2016 Order.

17. The May 18, 2016 Order made the following factual findings concerning the work releases provided by attending physicians Dr. Ritzer and Dr. Chan:

- Dr. Chan failed to adequately evaluate Claimant's right shoulder injury as a treating physician, and he ignored the MRI findings that documented the Type IV SLAP tear resulting from this occupational injury. His moral characterization of the Claimant as "malingering" and misrepresenting her symptoms is rejected by the ALJ as not credible or persuasive. Because Dr. Chan misapprehended Claimant's activities on video surveillance and failed to provide medical treatment that relieved Claimant from the effects of the SLAP tear, his opinion that Claimant could work without any work restrictions is rejected as not credible or persuasive.

- Claimant remained under work restrictions given by Dr. Ritzer of no use of the upper right extremity through at least June 16, 2015 . . . when she released Claimant to lifting and carrying no more than 5 pounds and no use of her right arm to reach overhead, away from her body or for repetitive motion. . . The full work release given by Dr. Ritzer on June 25, 2015 . . .was based solely on Dr. Chan's opinion and, thereby, is also rejected by the ALJ as not credible or persuasive evidence as to Claimant's work abilities prior to MMI.

(Findings of Fact # 22 and #23, Claimant's Exhibit 5, p. 10)

18. Judge Felter ordered that the Claimant was not at maximum medical improvement and that Respondents shall pay the costs of all causally related and

reasonably necessary medical expenses to cure and relieve the effects of the laimant's admitted injury. There was no Order regarding temporary total disability benefits or average weekly wage (Claimant's Exhibit 5, p. 15).

19. The Respondents filed an Amended General Admission of Liability on July 18, 2016, still admitting for $435.16 in average weekly wage, with a corresponding temporary total disability rate of $290.11 per week. Those temporary total disability benefits began on February 4, 2015. Respondents did not admit to ongoing temporary total disability benefits because Dr. Chan and Dr. Ritzer had not rescinded the full duty release and the full duty was still in place. (Claimant's Exhibit 4; Respondent's Exhibit C).

20. Subsequently, the Claimant filed an Application for Hearing on April 25, 2016 on the issue of average weekly wage because she was concurrently working as a home health care attendant for IRN International up until the date of her February 3, 2015 injury with the Employer (Claimant's Exhibit 11). Respondents filed a Response only endorsing the issue of AWW (Claimant's Exhibit 12).

21. At a prehearing conference on July 19, 2016, PALJ Eley granted Claimant's Motion to endorse the additional hearing issues of temporary disability and interest on benefits.

22. At a prehearing conference on August 16, 2016, PALJ Goldstein granted the Respondent's Motion to endorse the affirmative defense to TTD of release to full duty.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1), The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. Respondent bears the burden of establishing any affirmative defenses. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201 (2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Calculation of Claimant's Average Weekly Wage and Temporary Total Disability Award

Under Colorado's Workers' Compensation Act, the "average weekly wage" is a key part of the formula used to calculate compensation for injured workers, and it is based upon the definition of "wages" provided at section 8-40-201(19). *Industrial Claim Appeals Office v. Ray,* 145 P.3d 661 (Colo. 2006). To determine a claimant's AWW, the ALJ may choose from two different methods set forth in section 8-42-102. The first method, referred to as the " default provision," provides that an injured employee's AWW " be calculated upon the monthly, weekly, daily, hourly, or other remuneration which the injured or deceased employee was receiving at the time of injury." § 8-42-102(2), C.R.S. The default provision in § 8-42-102(2)(a)-(f), C.R.S lists six different formulas for conducting this calculation. Per § 8-42-102(5)(a), the phrase "at the time of injury" in subsection (2) requires the AWW to be determined using the wage earned on the date of the employee's accident. The second method for calculating a claimant's AWW, referred to as the "discretionary exception," applies when the default provision will not fairly compute the employee's AWW. § 8-42-102(3), C.R.S. In such a circumstance, the ALJ has discretion to compute the AWW of a claimant in such other manner and by such other method as will, based upon the facts presented, fairly determine the employee's AWW. *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010).

The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993); *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997); *Vigil v. Industrial Claim Appeals Office,* 841 P.2d 335 (Colo.App.1992). Because the default method will not fairly compute the Claimant's AWW in this case, the discretionary method is appropriate to use in order to arrive at a fair approximation of the Claimant's wage loss.

There is no dispute regarding the Claimant's AWW with respect to her job with Employer. The AWW attributable to that job is $435.16. The issue arises with respect to additions to the AWW due to wages the Claimant earned in her concurrent employment with IRN. Calculation of the Claimant's AWW for the concurrent employment position is complicated by the fact that she is an hourly wage earner whose hours would have varied. Using the estimate of hours worked at the concurrent employment that the

Claimant provided in her testimony at the hearing actually results in the lowest amount of the potential approximation of income. She testified credibly worked seven days a week as a home attendant for IRN, the concurrent employer, with varying hours from two to two-and-a-half hours per day, and was paid $10.00 per hour. This testimony would place her range of weekly wages from the concurrent employer from $140.00 - $175.00 per week.

However, from the Claimant’s W-2s for the concurrent employer, the Claimant grossed $10,310 in 2014 and $2,137.50 in 2015. If the Claimant worked all 52 weeks in 2014, this would average out to $198.27 per week for 2014. If the Claimant stopped working on February 3, 2015 (as she testified), then she worked for 4 weeks and 6 days of 2015 or 4.86 weeks. This would average out to $439.81 per week. As the amount of $439.81 is significantly higher than the $140.00 - $175.00 estimated rate to which the Claimant testified and is more than double the 2014 rate, the ALJ concludes that it is likely that the 2015 W-2 does not correspond to only 4.86 weeks of work and this calculation is not reliable for the purpose of calculating average weekly wage for the Claimant for her concurrent employment. Therefore, the ALJ used the average weekly wage of $198.27 calculated from the Claimant’s 2014 W-2 from her concurrent employer to calculate the addition to the AWW to account for wages from the concurrent employer.

As a result of the foregoing, the ALJ determines that a fair approximation of the Claimant's total wage loss in this case is expressed as an AWW of $633.43 ($435.16 + $198.27) which corresponds to a TTD rate of $422.29.

Temporary Total Disability Benefits

Temporary disability benefits compensate an injured employee for wage loss or impaired earning capacity during the healing time following a compensable injury. *Eastman Kodak Co. v. Indus. Comm’n of State of Colorado*, 725 P.2d 107 (Colo. App. 1986). In order to receive temporary disability benefits, a claimant must establish a causal connection between the injury and the loss of wages. Pursuant to C.R.S. §8-43-103(1)(a), an award of temporary disability benefits is mandated by the Workers’ Compensation Act if: (1) the injury or occupational disease causes the disability; (2) the injured employee leaves work as a result of the injury; and (3) the temporary disability is total and lasts for more than three regular working days duration.

Respondents admitted liability for temporary total disability benefits in the July 18, 2016 General Admission of Liability. The time period was from February 4, 2015 through June 24, 2015. Respondents terminated benefits on June 25, 2015 when the authorized treating physicians, Dr. Ritzer and Dr. Chan, found that the Claimant was able to return to work full duty.

C.R.S. §8-42-105(3) provides in relevant part:

> Temporary total disability benefits shall continue until the first occurrence of any one of the following: (a) The employee reaches maximum medical improvement; (b) The employee returns to regular or modified employment; (c) The attending physician gives the employee a written release to return to regular employment; or (d)(I) The attending physician gives the employee a written released to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment.

At issue in this case is the provision under (3)(c) that terminates TTD benefits upon a written release to return to regular employment by an attending physician.

Respondents rely upon the opinion in *Burns v. Robinson Dairy, Inc. and Indus. Claim Appeals Office*, 911 P.2d 661, 662 (Colo. App. 1995) that the use of the word "shall" in the statute is presumed to indicate a mandatory requirement for the ALJ to terminate benefits. Respondents argue that, "the effect of this mandate is to limit the scope and frequency of disputes concerning the duration of TTD benefits by treating the opinion of the attending physician as conclusive with respect to a claimant's ability to perform regular employment" *Burns* at 662. "Thus, unless the record contains conflicting opinions from attending physicians regarding a claimant's release to work, the ALJ is not at liberty to disregard the attending physician's opinion that a claimant is released to return to employment." *Id*. Any evidence concerning claimant's self-evaluation of his ability to perform his job is irrelevant and should be disregarded by the ALJ. *See Id.*

Respondents further argue that even though Judge Felter made findings in his May 18, 2016 Order regarding restrictions, those findings were not binding. Additionally, temporary total disability benefits and defenses to temporary total disability benefits were not issues for the hearing in May 2016. The Respondents characterize the findings on restrictions as extraneous findings and note that there is no order regarding TTD benefits, only regarding MMI and medical benefits.

Respondents finally argue that there were no conflicting opinions from the treating/attending physicians in this case. Both Dr. Chan and Dr. Ritzer determined that the Claimant could return to work full duty without restrictions on June 25, 2015. The record is void of any conflicting opinions from any other attending physicians regarding the Claimant's release to work full duty after June 25, 2015. Respondents dispute that the Division IME restrictions from Dr. Mason have any legal effect on restrictions because Dr. Mason is not an attending or authorized treating physician.

The Claimant acknowledges that TTD benefits are terminated pursuant to C.R.S. §8-42-105(3)(c) upon a full duty release to employment by attending physicians. However, the Claimant points out that there is an exception per *Burns v. Robinson Dairy, Inc., supra*, where the record contains conflicting opinions from attending physicians regarding a claimant's release to work. The Claimant also argues that conflicting opinions of an attending physician can include situations where there is an internal conflict in an attending physician's report as to whether the Claimant has been released to regular employment. In such cases, the Claimant argues the ALJ has authority to weigh the evidence in order to resolve the conflict. *Imperial Headware, Inc. v. Industrial Claim Appeals Office*, 15 P.3d 295 (Colo.App. 2000). Claimant notes that in resolving such conflicts the ALJ may consider earlier medical reports.

Under this argument, the Claimant points out that Dr. Ritzer's June 16, 2015 report shows the Claimant was continuing with Dr. Griggs for treatment of a type IV SLAP tear of the right shoulder. Dr. Ritzer referred the Claimant to Dr. Ament, a headache specialist, and to Dr. Hawkins for psychological pain evaluation/biofeedback and was awaiting authorization and scheduling. In addition, Dr. Ritzer provided work restrictions for Claimant's right shoulder injury. The Claimant points out that ten days later, with none of the recommended treatment having been provided, Dr. Ritzer released the Claimant to full duty because Dr. Chan opined the Claimant was malingering after he reviewed a surveillance video. Because of this, the Claimant urges the ALJ to find that there is a conflict in medical reports of the attending physicians due to an internal conflict in Dr. Ritzer's opinon.

Having reviewed all of the evidence and considering the arguments, the ALJ finds no conflict exists among attending physicians regarding the Claimant's full duty release to employment with no restrictions. While Dr. Ritzer lifted all work restrictions from the Claimant on June 25, 2015 that she had previously placed on June 16, 2015, she was clear about her reasons. Even at the June 16, 2015 appointment, Dr. Ritzer expressed concern that the Claimant's subjective presentation was inconsistent with any objective findings. She nevertheless placed restrictions and kept the Claimant at modified duty. By June 25, 2016, Dr. Ritzer unequivocably changed her mind and provided a full duty release to return to regular employment. There was nothing ambiguous or conflicting about Dr. Ritzer's opinion as expressed in the medical record of June 25, 2016.

While the DIME physician, Dr. Mason, holds a different opinion, that the Claimant is not at MMI and still requires work restrictions, Dr. Mason is, by definition, not an attending or treating physician. Per ALJ Felter's May 18, 2016 Order, the Respondents failed to overcome the DIME opinion on the issue of MMI and this is controlling on that issue. However, this has no bearing on the issue of the termination of TTD benefits due to the application of C.R.S. §8-42-105(3)(c).

Currently, no treating physician has issued restrictions contrary to the June 25, 2015 full duty return to work release, and the opinions of Dr. Chan and Dr. Ritzer are unequivocal and without internal conflict, so temporary total disability benefits were properly terminated on June 25, 2015. Because the attending physicians have provided the Claimant with a full duty written release as of June 25, 2015, the ALJ is bound by law to find that Claimant is not entitled to temporary total disability benefits pursuant to C.R.S. § 8-42-105(3)(c).

ORDER

It is therefore ordered that:

1. The Claimant's average weekly wage (AWW) is $633.43.

2. The Claimant's temporary total disability benefits were properly terminated on June 25, 2015. Because the attending physicians have provided the Claimant with a full duty written release as of June 25, 2015, and there is no conflict or ambiguity in the opinions of the attending physicians, the ALJ is bound by law to find that Claimant is not entitled to temporary total disability benefits pursuant to C.R.S. § 8-42-105(3)(c).

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 12, 2016

Kimberly A. Allegretti
Administrative Law Judge

Denver, Colorado, 80203

ISSUES

- Did Claimant suffer a compensable injury to his low back on June 19, 2015 arising out of and in the course of his employment?

- If the injury is compensable, is Claimant entitled to medical benefits to cure and relieve the effects of his industrial injury?

FINDINGS OF FACT

1. Claimant is employed as a materials technician for Employer, a job he has held for twelve years, eight months. In that capacity, he works primarily in the warehouse. Claimant testified he performs the following job duties on a regular basis: unload trucks (including gas pipe, concrete vaults, and electrical conduit), handle freight inside the warehouse, get materials ready for those working in the field, open boxes, perform inventory and operate a fork lift. Claimant testified this is a physically demanding job.

2. Claimant's prior medical history was significant, as he sustained several prior injuries to his low back. More particularly, he sustained a work-related injury in August 2009. Claimant testified he was lifting a streetlight pole, tried to straighten it out on the forklift and he wrenched his back.

3. Claimant was evaluated on August 24, 2009 by Kyle Akers, M.D.[1] Dr. Akers noted Claimant was having some pain down the posterior right leg to mid-calf, but no weakness, numbness or tingling. Dr. Akers' assessment was right lumbar strain/sprain.

4. Improvement was noted as of August 29, 2009, when Dr. Akers recorded Claimant's lumbar spine was non-tender, had normal range of motion and no pain. Dr. Akers stated Claimant could resume full-time duty, with no medical restrictions on August 31, 2009.

5. There was no evidence admitted at hearing which showed Claimant required treatment for his low back from September 2009 until December 2010.

6. On December 3, 2010, Claimant re-injured his low back lifting heavy equipment at work. Claimant testified he felt a sharp pain in his right back.

7. Claimant was examined by Dr. Akers that same day, who recorded mild

[1] Dr. Akers works for Employer.

pain with function/extension, marked pain with tilts, particularly to the left. Dr. Akers assessment was right mid-back strain/spasm. Claimant was told he could return to work on December 6, 2010, if he felt fine.

8. No evidence was present in the record that Claimant required medical treatment for his low back from December 3, 2010 until November 15, 2011. No diagnostic testing was done on Claimant's lumbar spine before 2011.

9. In November 2011, Mr. Zappitelli experienced an episode of low back symptoms. Claimant testified there was no particular incident which caused the increased pain, but he worked the day before he experienced the increased pain.

10. On November 15, 2011, he saw his primary care provider (Anthony Vecchiarelli, M.D.) and was seen by April Caldwell, PA-C who recorded:

> "R lower back/hip/leg pain X this AM. Woke up 2:30 AM w/ pain. Had lifting-related injury @ work 2 years ago. Dx: back sprain. [No] known or specific injury recently. Works for utilities – does work w/ forklift and doing lifting (manual). 0 bowel or bladder incont. Pain worse with sitting & moving."

11. Claimant described pain from his right buttock down the back of his right leg. He had a "slight limp, favoring L leg". On examination, strength and reflexes in his lower extremities were normal, but he did have a positive straight leg raise. PA-C Caldwell diagnosed "sciatica" and prescribed Robaxin and Naprosyn. Claimant was also referred for a lumbar MRI.

12. An MRI was performed on Claimant's lumbar spine on November 21, 2011. The films were read by James Sweeney, M.D., whose impression was: bilobed posterior disc herniation L5-S1, with an extruded disk fragment that extends caudally and compresses the right S1 nerve root. A second focal disc herniation was superimposed on a degenerated bulging disc at the left S1 nerve root and may also compress the left S1 nerve root significantly. Other small disc abnormalities were present in each level, including a bulge or osteophyte at L1-L2, slight lateral herniation at L3-4 and slight diffuse posterior bulging disc at L4-5.

13. Claimant returned to PA-C Caldwell on November 28, 2011, who made a neurosurgery referral and referred Claimant for physical therapy ("PT").

14. Claimant received treatment from Jason Keller, D.C., starting on December 5, 2011. At that time, he rated his back and leg symptoms at 7/10. Claimant received various treatment modalities, including chiropractic decompression, electro stimulation, and cryo/thermal therapy. Two weeks later (December 19), his leg pain had decreased to 3/10. On December 27, 2011, he stated his back pain was "100% better" and his leg symptoms were "95% better". He continued to report minimal symptoms

until his final chiropractic visit on February 23, 2012. The ALJ infers Claimant received relief from the treatments with Dr. Keller.

15. On March 15, 2012, Claimant was evaluated by Dr. Akers, who recorded that Claimant pulled his right back while loading 2 inch gas coil pipe onto a forklift. When he pushed the pipe above his head, he experienced increased pain in his right lumbar area with some numbness/tingling in his right foot. Dr. Akers's assessment was low back strain with right radicular symptoms, but no objective signs. Dr. Akers offered some analysis on the issue of causation, stated "the challenge will be in determining if either of his prior back incidents at work had anything to do with the MRI findings, …which was probably unknowable"; or "if the March 14 incident merely resulted in a simple muscle strain, which should resolve fairly quickly/easily, or if it actually aggravated the L5-S1 HNP". The ALJ infers Dr. Akers was of the opinion that the work-related incidents could have aggravated Claimant's lumbar spine.

16. Claimant returned to Dr. Akers on March 19, 2012, who noted Claimant's low back pain had resolved, with no pain down his legs. Dr. Akers' assessment was lumbar strain, temporary aggravation. Claimant was returned to full duty, with no restrictions.

17. On February 11, 2013[2], Claimant was evaluated at Freedom Chiropractic. As his primary complaint/condition, Claimant listed weight loss. He listed low back pain "secondarily" as a complaint. He rated his back pain at 1/10. Lumbar range of motion was normal, with the exception of slightly reduced right lateral flexion. Records for three (3) other appointments [April 4, 2013, June 25, 2013 and December 18, 2014] were admitted at hearing. The appointments on June 25, 2013 and December 18, 2014 related to low back and hip pain, respectively.

18. There was no evidence admitted at hearing which documented any treatment for Claimant's low back condition from December 19, 2014 to June 22, 2015.

19. There was no evidence in the record which showed Claimant had anything more than temporary work restrictions from 2009-2014.

20. Claimant testified he believed his work during the week of June 15-19, 2015 injured his low back. Claimant stated they were under time pressure to complete the process of creating small spools of 250-300 feet of wire from a 5000 foot reel. The process of creating the spools of wire required Claimant to lift a motor (weighing 45 lbs.) to chest height, attach it to the spindle, then lower it to the floor. Then he had to remove a spindle shank from the completed reel, place the spindle shank on a new blank reel, and lift the motor from the floor and place it back on the winding machine.

21. Claimant completed 62 spools of wire that week, and each spool required the motor be lifted two times for each spool of wire–first to place the motor on the

[2] The ALJ notes the physical, neurological and orthopedic exam form notes were dated February 12, 2013.

machine, and again when removing the completed spool. Claimant was working with another employee, who performed other parts of the job, including getting the forklift ready and taking the reels of the spools. Claimant did a majority of the lifting. Claimant estimated that he lifted the motor 65-70% of the time.[3] The ALJ inferred that the time pressure created by the deadline for completion of this task caused Claimant to work faster than he normally would and increased the forces operating on his low back.

22. Claimant testified he noticed low back pain around Thursday of that week (June 18, 2015), which really started flaring up on Friday (June 19, 2015).

23. On June 22, 2015, Claimant was evaluated by Dr. Akers. The clinic note stated:

> Works in warehouse materials handling. Has history of right low back/right leg problems, pain, numbness/tingling dating back to 2009. Has been in to see us several times over the past few years for exacerbations. In November 2011, got out of bed one morning with marked right lumbar and right leg pain, numbness/tingling with no reported preceeding trauma. Saw his personal physician who got an MRI which showed a large right S1 disk herniation. His doctor recommended surgery[4], but employee decided against it. Gradually improved. Has had episodes off and on the last few years, has been seeing a chiropractor for several years. He reports that last week he noticed increasing symptoms again, right low back pain, right leg pain, and right leg/foot numbness/tingling. His job for the past few years involves reported picking up and moving 50 pound spools and motors about 10 times a day, 3 to 4 days a week on average. Has not suffered any unusual twist, slip or fall. Having pain at night, worse in the morning.

24. The ALJ finds the June 22, 2015 note from Dr. Akers was consistent with Claimant's testimony that he noticed increasing symptoms the week before. Dr. Akers noted an MRI might show if the lumbar spine had worsened and also stated the etiology of the condition had not been established. Dr. Akers referred Claimant to Dr. Leggett for an evaluation[5].

25. A second MRI was performed on Claimant's lumbar spine on June 25, 2015. The films were read by Timothy Cloonan, M.D., whose impression was: persistent degenerative disc disease of the lumbar spine with osteoarthritis of the posterior elements. The most severe level, as before, was L5-S1. Improvement was noted in the previous bilobed posterior disc protrusion since the prior exam. Resolution of the bilateral lateral recess encroachment of the traversing bilateral S1 nerve joints

[3] Claimant argued this equated to 86 separate incidents of lifting that motor (62 x 2 = 124 x 70% = 86.

[4] This appears to be an error, as there was no evidence of a surgical recommendation made by any physician.

[5] Exhibit 3, p. 10.

was also noted. No significant spinal stenosis was found, however, there was mild foraminal encroachment.

26. Claimant was evaluated by Dwight Leggett, II, M.D. on July 10, 2015. He reported pain beginning at the center of the back, just below his belt line, traveling into his right buttock, with numbness in tingling down the lateral aspect of the leg and to the foot. On examination, moderate myofascial tightness and tenderness was noted extending from the mid lumbar paraspinals downward, as well as into the quadratus lumbar spine, and right greater than left internal and external obliques, latissimus dorsi and gluteal musculature. Paresthesias were reproduced traveling down the lateral aspect of the right leg and into the foot. Claimant also had a mild amount of antalgia with a widened base of support and mildly decreased stance phase and stride length on the right. Dr. Leggett's diagnoses were: lumbar disc derangement; lumbar sprain/strain; lumbar radiculopathy, and myofascial pain. Dr. Leggett recommended an epidural steroid injection targeting the right L5-S1level.

27. On October 19, 2015 Nicholas Olsen, D.O. performed an independent medical evaluation ("IME") of Claimant on behalf of Respondent. Dr. Olsen's objective findings included: reduction in forward flexion, signs of lumbar radiculopathy involving the L5 nerve root and, to a lesser degree, the L4 and S1 nerve roots. His diagnosis was: history of acute disc extrusion in November 2011, now with progressive degenerative disc disease. Interval improvement of MRI imaging most recently completed 6/25/15 demonstrating resolution of disc extrusion leading to a diagnosis of chronic degenerative disc disease with right lower extremity radiculopathy. Dr. Olsen did not believe Claimant qualified for a cumulative trauma disorder and related to symptoms he was experiencing in June 2015 to those which he experienced in 2011.

28. Dr. Hall performed an IME on February 10, 2016, at the request of Claimant. Dr. Hall's impressions were: disc pathology, primarily L5-S1 with a history of extruded fragment; right L5 and S1 radiculopathy, improved with epidural steroid injection; and general deconditioning. Dr. Hall disagreed with Dr. Olsen's opinion regarding causation. Dr. Hall opined that Claimant's symptoms related to his work activities. Dr. Hall felt calling it a cumulative trauma event was reasonable. Dr. Hall stated Claimant initially injured his back at work, probably in 2009, and has had episodes ever since. Dr. Hall opined that the increased work activity in June 2015 was a permanent exacerbation of the low back condition.

29. Claimant's work restrictions issued by Dr. Leggett have been in effect since July 10, 2015. Employer has provided modified duty to Claimant since that time.

30. Dr. Hall testified as a medical expert by way of evidentiary deposition on June 15, 2016. Dr. Hall was qualified as an expert in Physical Medicine and Rehabilitation, a specialty in which he is board-certified. Dr. Hall is Level II accredited pursuant to the W.C.R.P. Dr. Hall reiterated his diagnosis of Claimant, as documented in the February 10, 2016 report. Dr. Hall noted Claimant's exam was pretty benign, although there was a loss of normal lordosis, possibly indicative of reactive muscle spasm. Claimant had minimal sensory abnormalities. He did not believe Claimant was

a surgical candidate, but felt the epidural steroid injection was a reasonable course of treatment.

31. In his testimony, Dr. Hall provided additional information as to why he thought cumulative trauma was a reasonable explanation. In taking Claimant's history, Claimant explained to Dr. Hall, that he did a number of activities during the week of June 15, 2015 which were out of the ordinary in the workplace. This activity put stress on Claimant’s discs, ligaments and facet joints. Dr. Hall opined this aggravated the underlying pre-existing disc problem. The ALJ credited Dr. Hall's testimony on this subject.

32. Dr. Olsen testified as a medical expert. Dr. Olsen was qualified as an expert in Physical Medicine and Rehabilitation, a specialty in which he is board-certified, as well as electrodiagnostic studies and epidural injections. Dr. Olsen is Level II accredited percent to the W.C.R.P. Since his October 19, 2015 report, Dr. Olsen reviewed Dr. Hall’s records and his deposition. Dr. Olsen testified Claimant did not identify a singular incident or injury at work which caused the sudden onset of back pain on or about June 19, 2015. Dr. Olsen also was of the opinion that, based on Claimant’s statements to him as well as to Dr. Akers about his general work activities and the work activities that were performed for the week ending June 19, 2015, Claimant’s work activities for that week did not amount to anything more than Claimant’s usual exertions for the week. As a result, Dr. Olsen believed it was necessary to make a determination as to whether Claimant’s general work activities rose to the level of a compensable occupational disease.

33. Dr. Olsen testified that, in determining whether general work activities rise to the level of compensable occupational disease, an analyzing physician must look at three particular areas. First, a physician must assess the exertion that the individual needs to apply to accomplish his job. Second, the physician then needs to determine the frequency with which that exertion is applied. Third, the physician needs to determine the duration of each of these specific events of exertion. Frequency and duration of these exertions are important relative to whether an individual has adequate time to rest or recover from exertions.

34. Dr. Olsen stated that if Claimant is performing work activities that allow for enough time to rest and recover from exertions, Claimant’s low back would not have been continually stressed, and his low back would have an adequate amount of time to recover between exertions. Dr. Olsen reviewed Dr. Hall’s deposition testimony. He agreed that if an individual performs exertional work activities, but was allowed enough time to rest and recover between those exertional activities, such activities help that individual build their strength in those particular activities, which would be protective. Dr. Olsen opined that Claimant had sufficient time to rest in between his lifting activities. He also believed the lifting Claimant performed during the week of June 15-19, 2015 was not significantly different than his normal duties.

35. Claimant testified he continues to experience pain in his low back, which limited his activities. The ALJ found Claimant to be credible when he described the symptoms in his lumbar spine.

36. The ALJ found Dr. Hall's opinions to be more persuasive than those offered by Dr. Olsen.

37. The ALJ concludes it is more probable than not that Claimant's work activities during the week of June 15-19, 2015 exacerbated his low back condition and caused his current symptoms. The ALJ concluded Claimant's work activities were sufficient to cause an aggravation of the preexisting condition present in his lumbar spine.

38. The ALJ was not persuaded Claimant’s employment caused an occupational disease in his lumbar spine. Rather, the events of June 15-19, 2015 constituted an acute traumatic exacerbation of Claimant's low back condition.

39. Claimant’s lumbar spine requires medical treatment.

40. The recommendations made by Dr. Leggett are reasonable and necessary to cure and relieve the effects of his injury.

41. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado (Act), §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the credibility of Claimant, as well as the various health care providers bore directly on the issue of compensability.

Claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing a service for Respondent-Employer arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. §§ 8-41-301(1)(b) & (c), C.R.S.; *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); § 8-41-301(1)(c), C.R.S. The question of whether Claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Compensability

Claimant contended he sustained a compensable injury to his low back during the week of June 15-19, 2015, specifically that his work duties aggravated a preexisting degenerative condition. Claimant argued first, there was a medically plausible relationship between Claimant’s lifting activities and his symptoms, as he was performing repetitious lifting at work during this period of time. Second, there was a sufficient temporal relationship between Claimant’s lifting activities and his development of symptoms. Third, there was no other alternative explanation that is an equally or more probable explanation for the exacerbation of his low back pain and radiculopathy. Claimant argued all of the causation criteria were satisfied in this case.

Respondent argued the claim was not compensable, as Claimant did not introduce sufficient evidence to show he suffered a trauma or occupational disease. Respondent disputed Claimant’s work duties the week of June 15, 2015 represented a period of unusual exertion. Respondent argued Claimant’s work activities that week were not out of the ordinary. Respondent relied upon the testimony of Dr. Olsen to support their contention that Claimant’s symptoms came from his pre-existing low back condition and not the work performed in June 2015.

This case presented the question of whether Claimant’s work for Employer was the cause of his low back symptoms, as opposed to preexisting degenerative changes. A pre-existing condition “does not disqualify a Claimant from receiving workers' compensation benefits". *Duncan v. Indus. Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). A Claimant may be compensated if the work-related injury "aggravates, accelerates, or combines with" a worker's pre-existing infirmity or disease “to produce the disability for which workers' compensation is sought". *H&H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990).

The Colorado Supreme Court 's holding in *Colorado Fuel and Iron Corp. v. Industrial Commission*, 380 P.2d 28, 30 (Colo. 1960) has application to the case at bar. In that case, the Court held Respondents can be liable for the aggravation of a pre-existing condition (pre-existing low back condition); which resulted in the need for medical treatment. Where Claimant had a dormant pre-existing physical condition, which had not interfered with his ability to do work,"a direct causal connection between a precipitating event and the resulting disability can be proved by lay testimony and without affirmative medical testimony". *Id.*

Subsequent decisions reinforced the precept that when a pre-existing condition is aggravated by an employee's work, the resulting disability is a compensable industrial injury*. Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. App. 1990). As the Court of Appeals held in *Cowin & Co. v. Medina,* 860 P.2d 535, 538, an employer must take an employee as it finds him/her, "so that the employer is responsible for any increased disability resulting to an injured worker from a preexisting weakened condition". *Id.*

The evidence before the ALJ established Claimant experienced low back pain for which he required treatment before 2015. (Findings of Fact 2-4 and 9-17). More particularly, Claimant required treatment for two work-related incidents, which occurred in 2009 and 2010. (Findings of Fact 2 and 6). As determined in Findings of Fact 9-12, Claimant also experienced a significant episode of low back pain in 2011 and an MRI was ordered which revealed degenerative changes, as well as a disc extrusion. The occasions where Claimant required treatment prior to 2015 were noteworthy for the fact that Claimant treated for a relatively short period of time, after which there were intervals during which there was no evidence he received treatment. The evidence showed Claimant had only temporary work restrictions after any of these episodes of low back pain from 2009 through 2014. (Finding of Fact 19).

The most significant area of dispute concerned the impact of Claimant's work activities during the second week of June 2015. In this regard, Respondent did not contest Claimant's version of his work tasks that week, namely, putting wire on 62 reels from a 5000 foot spool, which he did with a co-worker. (Finding of Fact 20). Claimant also testified he was required to work with increased alacrity during the week of June 15, 2015, which provided a rational explanation for increased symptoms. This was not disputed by Respondent. As found, this work involved both repetitive activities, as well as speed. (Finding of Fact 21).

The ALJ was persuaded by Claimant's testimony that he experienced discomfort in his lower back toward the end of that week. (Finding of Fact 22). This was corroborated by his report to Dr. Akers on June 22, 2015, which was consistent with his testimony at hearing. Accordingly, the evidence presented established both a proximal and temporal connection with Claimant's reported low back pain after June 15-19, 2015.

Having determined the evidence established Claimant's work duties were the cause of his increased symptoms, the inquiry turned to the whether the medical evidence showed his preexisting condition was aggravated by his work for Employer.

The ALJ answered this question in the affirmative after considering of the expert opinions of Drs. Hall and Olsen. As found, the activities performed at work during this week were sufficient to aggravate Claimant's low back condition, as opined by Dr. Hall. (Finding of Fact 31). Dr. Hall's written report and expert testimony supported this conclusion.

The ALJ considered Dr. Olsen's opinion that Claimant's condition was degenerative in nature and connected with the symptoms he experienced in 2011. Dr. Olsen opined Claimant's symptoms were a natural progression of the degenerative condition. Dr. Olsen's opinion did not persuade the ALJ for two reasons; first, Claimant's symptoms were worse in 2015 than in 2011 and resulted in work restrictions, as established by the medical evidence and Claimant's testimony.

In this regard, Dr. Olsen postulation was based on the assumption Claimant performed 50% of the job duties involving the lifting and had sufficient time to rest. When confronted with the evidence that Claimant performed a greater percentage of these duties, Dr. Olsen's opinion did not vary and he concluded Claimant's symptoms were the results of degenerative changes in the low back. Respondent cited Dr. Olsen's opinions to dispute the effect the work activities from June 15-19, 2015 had on Claimant's lumbar spine. Notwithstanding Dr. Olsen's opinions, the ALJ was persuaded that the speed with which Claimant performed his job duties during this week was an aggravating factor and Claimant developed symptoms for which he sought treatment.

Second, the objective medical evidence in the form of the MRI findings actually documented improvement in the lumbar spine (no disc extrusion noted in 2015). As opined by Dr. Hall, Claimant's radicular symptoms were supported by the MRI findings. The objective evidence concerning Claimant's lumbar spine actually documented improvement in that there was resorption of the disc fragment. Dr. Hall's testimony that the stress on Claimant's facet joints and connective tissues aggravated his symptoms provided a plausible explanation to the ALJ.

The medical records admitted at hearing also provided support for the conclusion Claimant did not require treatment in the months before June 2015. This undercut Dr. Olsen's conclusion that Claimant's current symptoms resulted from the episode in 2011. Following Dr. Olsen's opinion to its logical conclusion, Claimant should have had less symptoms in 2015, as the disc fragment was not present on the MRI. The more plausible explanation was that Claimant suffered an acute exacerbation of his low back condition directly caused by his work activities during the week of June 15-19, 2015.

After considering the evidence, Claimant met his burden of proof that the work activities accelerated his underlying low back condition. The ALJ was persuaded that it was more probable than not that Claimant's work activities June 15-19, 2015 exacerbated his low back condition. Therefore, this aggravation of Claimant's pre-existing condition is compensable and Claimant is entitled to benefits under the Colorado Workers' Compensation Act.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

In this case, the evidence established Claimant continues to experience symptoms in his low back. Since the claim has been found compensable, Claimant is entitled to receive treatment to cure and relieve the effects of his industrial injury, which must be provided by Respondent. § 8-42-101(1)(a), C.R.S. More particularly, Claimant treated with Dr. Akers, the on-site physician for Employer, who referred him to Dr. Leggett. Dr. Leggett made treatment recommendations, which are reasonable and necessary. Respondent is liable for medical benefits to cure and relieve the effects of Claimant's injury, including the treatment recommended by Dr. Leggett.

ORDER

It is therefore ordered that:

1. Claimant suffered an aggravation of his low back condition which was caused by his work activities during the week of June 15, 2015.

2. Respondent shall provide medical benefits to Claimant under the Colorado Workers' Compensation Act.

3. Respondent shall pay for the treatment recommended by Dr. Akers, Dr. Leggett and other referrals from ATPs.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether either party is bound by the ratings provided by an authorized treating provider (ATP) as to Claimant's permanent partial disability (PPD) impairment since neither party requested a Division Independent Medical Examination (DIME).

2. Whether Claimant has established by a preponderance of the evidence that he suffered functional impairment to the whole person that is not included on the schedule of injuries set forth by § 8-42-107(2) C.R.S.

FINDINGS OF FACT

1. Claimant worked for Employer as a forklift driver. On March 16, 2015 Claimant sustained an injury to his left hand and wrist when they became trapped and crushed between the forklift he was driving and a forklift behind him.

2. On March 17, 2015 Claimant was evaluated by Allison Hedien, NP at Concentra. Claimant reported smashing his left hand between two forklifts. Claimant was noted to have 10/10 pain to his left hand, swelling, seeping, edema, possible cellulitis, and notable infection with swelling radiating up his left arm. NP Hedien noted Claimant was unable to move his fingers which were also swollen. NP Hedien assessed cellulitis of hand, and left hand fracture. NP Hedien referred Claimant to the emergency room. *See* Exhibit 1.

3. On March 19, 2015 Claimant was evaluated by NP Hedien. Claimant reported that the emergency room told him to follow up with Concentra. NP Hedien continued to assess cellulitis of hand and left hand fracture. Dr. Hedien referred Claimant to a hand specialist and noted a stat referral was placed to hand surgery and that Claimant should see them the next day. *See* Exhibit 1.

4. On March 20, 2015 Claimant was evaluated at Hand Surgery Associates by Philip Heyman, M.D. Dr. Heyman noted that Claimant had smashed his left hand between two forklifts. Dr. Heyman noted that an x-ray of the hand was negative for fracture or dislocation. Dr. Heyman diagnosed: pain in the hand/finger; swelling in the finger/hand/arm; and crush injury of the left hand. *See* Exhibit F.

5. On March 24, 2015 Claimant was evaluated by Dr. Heyman. Dr. Heyman noted that the soft tissue swelling in Claimant's palm had gone down by 30-40% and that the wound over the thenar eminence was healing without signs of infection. Dr. Heyman noted the impression of contusion of the left hand, laceration that was healing

without infection, and soft tissue swelling. Dr. Heyman recommended therapy to work on edema control and mobilization. *See* Exhibit F.

6. On March 27, 2015 Claimant was evaluated by Dr. Heyman. Dr. Heyman noted that Claimant was getting better and making very slow progress in therapy. Claimant had continued soft tissue swelling in the palm of the hand. Dr. Heyman noted that Claimant had about 75% of normal motion of his PIP and DIP joints digits 2 through 5. Dr. Heyman noted that Claimant tended to hold his wrist in ulnar deviation 30 degrees, but with coaxing, could present his wrist in neutral and hold it there. Dr. Heyman again noted that the wound on the base of the thumb/thenar eminence area was healing without sign of infection. Dr. Heyman provided the impression of crush injury left palm, slowly improving. *See* Exhibit F.

7. On April 8, 2015 Claimant was evaluated by Dr. Heyman. Claimant had some edema in the palm but Dr. Heyman noted that it had gone down rather significantly. Dr. Heyman noted that Claimant was now holding his wrist in about 10 degrees of ulnar deviation, less than what was last seen. Dr. Heyman provided the impression of persisting edema of the left hand, slow progress. *See* Exhibit F.

8. On April 8, 2015 Claimant was evaluated Concentra by Diane Adams, D.O. Dr. Adams noted that Claimant had been seeing a hand specialist. Claimant reported that his hand was feeling better, his pain and swelling was improving, that he had sutures removed, and that he was going to therapy 3-5 times per week. Dr. Adams ordered a CT scan of Claimant’s left wrist and hand and noted the plan to monitor for RDS and compartment symptoms. *See* Exhibit E.

9. On April 23, 2015 Claimant underwent a CT scan of his left hand that was interpreted by Charles Wennogle, M.D. Dr. Wennogle provided the impression of: mildly displaced fracture through the midportion of the trapezium with 6 mm of displacement; and fracture of the tip of the hook of the hamate. *See* Exhibit D.

10. On April 27, 2015 Claimant was evaluated by Dr. Adams. Dr. Adams noted Claimant’s continued pain in the left wrist and hand. Dr. Adams reviewed the CT scan and noted a displaced fracture of the mid trapezium and a fracture of the tip of the hamate. Dr. Adams referred Claimant to hand specialist Dr. Sachar and also referred Claimant to a physiatrist for evaluation of CRPS. *See* Exhibit E.

11. On April 27, 2015 Claimant was evaluated at Hand Surgery Associates by Kavi Sachar, M.D. Dr. Sachar noted that Claimant had normal skin and subcutaneous tissue in the involved regions, but a very swollen left hand. Dr. Sachar noted the ulnar deviated position was about 30 degrees. Dr. Sachar opined that Claimant appeared to be grossly neurologically intact. Dr. Sachar reviewed multiple view x-rays taken that day as well as a CT scan. Dr. Sachar noted abnormalities of the fourth and fifth CMC joints, separation between the ulnar column and the radial column, and what appeared to be a hamate fracture as well as a triquetrum fracture. Dr. Sachar wanted to get

another CT scan to see the wrist better before assessing whether or not surgical intervention was indicated. *See* Exhibit F.

12. On April 29, 2015 Claimant was evaluated by Dr. Sachar. Dr. Sachar reviewed the CT scans in detail. Dr. Sachar planned to try therapy to get better range of motion and to get the edema down. *See* Exhibit F.

13. On May 6, 2015 Claimant was evaluated by Dr. Sachar. Dr. Sachar noted better finger motion. Dr. Sachar opined that he was not certain that surgical intervention would be beneficial and that the fractures were essentially healed. Dr. Sachar noted the goal of trying to get as good of motion as they could with continued therapy. Dr. Sachar opined that at some point they might need to take out the hook of the hamate but that it was not a major part of Claimant's pain. *See* Exhibit F.

14. On May 18, 2015 Claimant was evaluated by Dr. Sachar. Claimant was doing well and it was noted that therapy had been helping. Dr. Sachar noted that Claimant would be seeing Dr. Kawasaki for pain management. *See* Exhibit F.

15. Claimant was evaluated by NP Hedien on May 6, 2015 and May 20, 2016. NP Hedien noted the plan to continue evaluation and treatment with specialists *See* Exhibit E.

16. On May 21, 2015 Claimant was evaluated by Robert Kawasaki, M.D. for a physical medicine consultation. Dr. Kawasaki noted that Claimant had hypersensitivity along the dorsum of his hand particularly in a radial nerve distribution. Dr. Kawasaki noted the left hand, wrist, and forearm were swollen particularly along the dorsum of the left hand. Dr. Kawasaki noted that the left hand was cooler than the right with some skin color change with darkness of the left hand compared to the right. Dr. Kawasaki noted hyperhidrosis bilaterally but that Claimant appeared to be sweatier on the left than the right side. Dr. Kawasaki provided the impression of crush injury left hand, wrist fractures of the lunate and hamate, and radial neuritis with potential causalgia. Dr. Kawasaki discussed with Claimant CRPS/reflex sympathetic dystrophy of the left upper extremity and opined that based on a clinical basis the diagnosis could be made. Dr. Kawasaki recommended starting Claimant on prednisone for a two week course with a higher initial dose that decreased over the two week period to help decrease the inflammation in Claimant's left upper extremity. Dr. Kawasaki planned to recheck Claimant after two weeks. Dr. Kawasaki opined that if the steroid did not significantly decrease Claimant's symptoms then he would consider electro diagnostic testing and potentially a workup for CRPS. Dr. Kawasaki also opined that cervical stellate ganglion blocks might be an option down the line, but he would see if he could get Claimant's symptoms under control more conservatively. *See* Exhibit B.

17. On May 27, 2015 Claimant underwent occupational therapy with Helen March, OT. Claimant reported he was able to now make a better fist and was using the hand helper one time per day as recommended. Claimant reported he was taking prednisone and that his pain was decreasing overall. Claimant reported that he could

now dress himself. OT March assessed an overall improvement in range of motion and recommended he continue therapy 3-5 times per week. *See* Exhibit G.

18. On June 1, 2015 Claimant was evaluated by Dr. Sachar. Dr. Sachar noted that Claimant was 11 weeks status post crush injury and that Claimant was now seeing Dr. Kawasaki. Dr. Sachar noted Claimant's wounds were nicely healed, that he was still fairly stiff in terms of wrist motion, and that finger motion was improving. *See* Exhibit F.

19. On June 4, 2015 Claimant was evaluated by Dr. Kawasaki. Claimant reported continued problems with his left upper extremity and reported that the prednisone had helped somewhat to decrease the inflammation. On examination Claimant had some swelling along the dorsum of the hand into the wrist and some skin color change with darkening of the skin on the left compared to the right. Dr. Kawasaki also noted hyperhidrosis and hypersensitivity. Dr. Kawasaki provided the impression of: crush injury of the left hand, wrist fracture of the lunate and hamate, radial neuritis with causalgia, and left upper extremity CRPS. Dr. Kawasaki put Claimant on anti-inflammatory medication (diclofenac potassium) and added Gabapentine 300 mg. Dr. Kawasaki noted he would see how Claimant did with the new medications and that if Claimant was not improved, that he might need to consider stellate ganglion blocks. *See* Exhibit B.

20. On June 17, 2015 Claimant was evaluated by Dr. Adams. Dr. Adams assessed crush injury of hand, hand fracture left, and complex regional pain syndrome. Dr. Adams noted the treatment plan was to continue care with specialists. *See* Exhibit E.

21. On June 25, 2015 Claimant was evaluated by Dr. Kawasaki. Claimant reported overall improvement. Claimant had continued dorsal swelling with some skin color changes and some hypersensitivity of the hand. Dr. Kawasaki also noted hyperhidrosis but that Claimant sweated somewhat profusely on both sides. Dr. Kawasaki provided the impression of left hand crush injury, wrist fracture of the hamate lunate, and radial neuritis with causalgia/CRPS. Dr. Kawasaki opined that Claimant was improving overall and had made good gains. Dr. Kawasaki noted he would hold off on stellate ganglion blocks, although they remained an option. *See* Exhibit B.

22. On June 29, 2015 Claimant was evaluated by Dr. Sachar. Dr. Sachar noted that Claimant's wounds were nicely healed, that Claimant was not taking any pain medication, and that Claimant was doing quite well. *See* Exhibit F.

23. On July 6, 2015 Claimant was evaluated by Dr. Adams. Dr. Adams noted that Claimant was doing much better and was only taking NSAIDs. Dr. Adams re-ordered occupational therapy and provided a treatment plan of continuing specialist care. *See* Exhibit E.

24. On July 30, 2015 Claimant was evaluated by Dr. Kawasaki. Claimant reported his wrist was somewhat improved but that he continued to have chronic pain in the wrist with any motion. Dr. Kawasaki noted that it was unclear if Dr. Sachar planned to do surgery. On examination Claimant had some mild swelling in the left hand, no significant hypersensitivity, and symmetric hyperhydrosis sweat patterns. Dr. Kawasaki provided the impression of left hand crush injury, left hamate and lunate fractures, and radial neuritis with causalgia. Dr. Kawasaki noted that if Dr. Sachar opined that surgery was not indicated then Claimant would be at maximum medical improvement. Dr. Kawasaki opined that Claimant did not require any medication. Dr. Kawasaki noted that he would see Claimant for follow up after Claimant saw Dr. Sachar and that if no surgical recommendations were made, Claimant would be placed at maximum medical improvement and given an impairment rating. *See* Exhibit B.

25. On August 10, 2015 Claimant was evaluated by Dr. Sachar. Dr. Sachar noted that Claimant continued to sit in a slight ulnar deviation posture but could now get passively into a full fist and had near full extension. Dr. Sachar continued the therapy plan and opined that Claimant was continuing to make progress. *See* Exhibit F.

26. On August 17, 2015 Claimant was evaluated by Dr. Adams. Dr. Adams opined that Claimant was doing much better and she referred Claimant for an impairment rating. Dr. Adams noted that Claimant was to see Dr. Sachar first, then see Dr. Kawasaki for an impairment rating. Dr. Adams also requested that Claimant return to her for a follow up after the impairment rating. *See* Exhibit E.

27. On September 9, 2015 Claimant was evaluated by Dr. Sachar. Claimant reported that he would be seeing Dr. Kawasaki soon for an impairment rating. Dr. Sachar noted that all of Claimant's wounds were healed, that Claimant had limited range of motion and slight ulnar deviation but could make a composite fist. Dr. Sachar opined that he did not have much more to offer Claimant. Dr. Sachar noted that Claimant had multiple injuries to the wrist with a small hamate fracture and some carpal bone injuries and opined there was not really anything specifically that could help Claimant with surgery. Dr. Sachar opined that taking out the hamate fragments of the hyperthenar eminence would not make much of a difference in terms of pain. Dr. Sachar agreed with Claimant going ahead and getting an impairment rating and noted that he would see Claimant back as needed. *See* Exhibit F.

28. On September 17, 2015 Claimant was evaluated by Dr. Kawasaki. Dr. Kawasaki noted a history of Claimant's treatment. Dr. Kawasaki opined that Claimant had initially had some findings suspicious for CRPS but that Claimant's pseudomotor changes had diminished. Dr. Kawasaki opined that Claimant did not have significant swelling of the hand or significant hypersensitivity. Dr. Kawasaki noted that the hand specialist Dr. Sachar had no further recommendations. Dr. Kawasaki also noted that Claimant remained quite limited with regard to left hand function. Dr. Kawasaki noted that Claimant had no cervical tenderness and no problems with the distal upper extremities. Dr. Kawasaki noted no temperature change or color change from side to side and that Claimant had hyperhidrosis but of both hands. Dr. Kawasaki noted

decreased sensation over the left radial nerve distribution with some hypersensitivity. Dr. Kawasaki provided the impression of left wrist fractures of the hamate and lunate, and radian neuralgia with causalgia. Dr. Kawasaki opined that Claimant was at maximum medical improvement. Dr. Kawasaki performed an impairment rating pursuant to the AMA Guides to Evaluation of Permanent Impairment, Third Edition Revised. Dr. Kawasaki performed range of motion testing and opined that Claimant had a 22% impairment of the upper extremity. Dr. Kawasaki also noted that Claimant had radial distribution causalgia. Dr. Kawasaki used Table 14, page 46 radial sensory giving a maximum of 5% impairment of the upper extremity multiplied by a sensory grade for causalgia on Table 10, page 42 of 80% of the maximum produced a 4% impairment of the upper extremity. Dr. Kawasaki used the Combined Values Charts to reach a 25% impairment of the upper extremity, and noted for a nonscheduled rating it would equal 15% impairment whole person. *See* Exhibit B.

29. On September 21, 2015 Claimant was evaluated by Dr. Adams. Dr. Adams referred Claimant for a functional capacity evaluation. Dr. Adams noted that Dr. Kawasaki had done an impairment rating with a 25% upper extremity rating and Dr. Adams noted that equaled 15% impairment of whole person. *See* Exhibit E.

30. On October 5, 2015 Claimant was evaluated by Dr. Adams. Dr. Adams noted that Claimant was doing much better but documented that Claimant had minimal use with his left hand. Dr. Adams noted that Claimant could not use his hand to wash his body, get dressed, or comb his hair. Dr. Adams noted that Claimant was released from care as maximum medical improvement had been reached for his injuries. Dr. Adams noted Claimant was to continue in therapy/rehabilitation as scheduled, continue medications as directed, and continue specialist care. Dr. Adams noted Dr. Kawasaki's impairment rating of 25% of upper extremity but opined that given Claimant's CRPS in his non dominant hand with the deficits in self-care, the Spinal Cord injury rating was more appropriate to rate Claimant's injury and disability. Dr. Adams noted that using the Table on page 107 of the AMA Guides to the Evaluation of Permanent Impairment she found a 25% whole person impairment. Dr. Adams listed the date of maximum medical improvement as October 5, 2016 and provided permanent work restrictions of: sedentary work capacity – Claimant may lift 1 pound with his left hand. *See* Exhibit E.

31. On October 6, 2015 Claimant underwent a function capacity evaluation. Claimant reported that his response to treatment had been poor and that he was at 20% overall function. Claimant reported that his left hand function was poor for self-care and most activities. The summaries and conclusions noted that based upon the validity measures, Claimant might not have put forth consistent effort during testing. It was concluded that Claimant's overall demonstrated abilities were most consistent with the light work category for occasional work and the sedentary work category for frequent work. *See* Exhibit C.

32. On November 2, 2015 Respondents filed a Final Admission of Liability (FAL). In the FAL Respondents admitted to a PPD rating of .25% of the scheduled impairment of body code 01. Respondents attached Dr. Adams' October 5, 2015 report

that listed Dr. Kawasaki's rating of 25% upper extremity as well as her different rating of 25% whole person. Also attached to the FAL was Dr. Kawasaki's worksheet showing the range of motion and impairment calculations he made in coming to the 25% upper extremity rating. *See* Exhibit J.

33. No party requested a Division IME. Instead, Claimant applied for hearing.

34. On February 1, 2016 Claimant was evaluated by Dr. Adams. Dr. Adams noted that Claimant was there for pain medications and a onetime evaluation. Dr. Adams noted that Claimant had been released in October with pain management as the only medical maintenance and that the medical maintenance was specified to be with Dr. Kawasaki. Dr. Adams assessed crush injury of hand and left hand fracture and removed the CRPS assessment. Dr. Adams noted the plan of care was to continue with medical maintenance and pain medications as needed per Dr. Kawasaki. *See* Exhibit E.

35. On February 10, 2016 Claimant underwent an independent medical examination performed by Michael Striplin, M.D. Claimant reported constant left wrist and hand pain that made the use of his left hand difficult or impossible, extreme pain with light touch over the dorsum of the left hand on the radial side, and intermittent paresthesias over the dorsum of the left hand. On examination Dr. Striplin noted the left wrist and hand showed normal color and temperature, enlargement and possible swelling over the radial side of the dorsum of the left hand and the radial side of the left wrist. Dr. Striplin was unable to take motion measurements reliably due to Claimant's reported pain and light touch sensitivity. *See* Exhibit A.

36. Dr. Striplin assessed: carpal bone fractures, left wrist; lesion of the left radial nerve; and left wrist and hand pain. Dr. Striplin opined that Claimant had symptoms and clinical findings compatible with CRPS involving the radial nerve at the wrist. Dr. Striplin opined that on physical examination Claimant's motion was only minimally worse than the measurements obtained by Dr. Kawasaki and that the impairment rating performed by Dr. Kawasaki resulting in a 25% upper extremity rating was performed without mathematical or procedural errors. Dr. Striplin opined that the injury to the carpal bones and the radial nerve involved the upper extremity (arm) and was a scheduled injury. Dr. Striplin opined that there was no basis to rate Claimant's impairment as a spinal cord injury. See Exhibit A.

37. Dr. Adams testified by deposition in this matter. Dr. Adams noted that she referred Claimant to physiatrist Dr. Kawasaki due to her concern that Claimant might have some CRPS symptoms. Dr. Adams testified that she would not make a diagnosis of CRPS but that if she had suspicions she would refer to a specialist. Dr. Adams also testified that prior to Claimant's case, she had never performed an impairment rating. Dr. Adams testified that her office was very busy and that impairment ratings were very time consuming. Dr. Adams testified that she generally referred people out for impairment ratings unless it was something simple and that anything complicated was referred out.

38. Dr. Adams testified that once she reviewed Dr, Kawasaki's impairment rating, she did not think that it was appropriate or adequate. Dr. Kawasaki testified that she decided to perform her own impairment rating and believed she could override Dr. Kawasaki's rating. Dr. Adams opined that her rating was predominantly based on limitations in self-care and Claimant's ability to use the involved extremity but with difficulty. Dr. Adams noted that Claimant's crush injury involved diffuse pain and all of the nerves in his hand and that it was thus something that would tend to go back up more towards the nerve root. Dr. Adams testified that after conferring with a colleague and based on the impairment rating tips provided by the division, she believed she could rate Claimant either using the spinal cord table or the peripheral nerve table. Dr. Adams opined that the spinal cord table was more appropriate for Claimant's injury.

39. Michael Striplin, M.D. testified at hearing. Dr. Striplin is board certified in occupational medicine and is level II accredited. Dr. Striplin has performed a significant number of DIME evaluations dealing with injuries to the hand and wrist. Dr. Striplin noted that none of the doctors involved in Claimant's care had performed CRPS testing. Dr. Striplin noted that Claimant had injured the radial nerve on the thumb side of the wrist and that he suspected if electro diagnostic testing had been performed that it would have been abnormal for the radial nerve. Dr. Striplin noted that Dr. Kawasaki thought it was likely that the radial nerve was injured and used the table for sensory loss of that nerve in his rating. Dr. Striplin noted that the radial nerve has origins in the spinal cord at C5-T1, and then exits the spinal canal through the brachial plexus. Dr. Striplin opined that if you injure the radial nerve higher up, you can get motor loss at the shoulder or elbow. Dr. Striplin opined that when you injure the radial nerve lower and at the wrist only the sensory function at the wrist is involved

40. Dr. Striplin noted that CRPS was a consideration in Claimant's care. However, he noted that as time developed, the possible CRPS diagnosis was not substantiated. Dr. Striplin opined that Claimant's diagnoses were carpal bone fractures and a radial nerve injury at the wrist. Dr. Striplin opined that Dr. Kawasaki's impairment was accurate and the same or similar to his rating and opined that the impairment rating should not be converted to a whole person rating. Dr. Striplin opined that the injury clearly involved the wrist/hand and did not go into the shoulder or beyond the upper extremity. Dr. Striplin opined that the situs of impairment is at the wrist.

41. Dr. Striplin opined that even if CRPS was theoretically a correct diagnosis, for CRPS you can use either the peripheral nerve tables or the spinal cord table in providing a rating and opined that with Claimant's injury, the peripheral nerve tables would adequately address the impairment. Dr. Striplin noted that Dr. Adams based the rating on Claimant's subjective reports on his ability to perform self care when Claimant's reports at physical therapy were different. Dr. Striplin noted that at physical therapy Claimant reported he could get dressed and could carry items.

42. The opinions of Dr. Kawasaki and Dr. Striplin are found credible and persuasive. Their opinions are consistent with the overall medical evidence. The

opinion of Dr. Adams is not found as credible or persuasive. Her opinion is based in part on Claimant's subjective reports that were inconsistent with his reports at occupational therapy. Dr. Adams also could not adequately describe or explain her use of the spinal cord table or provide an analysis as to why it was more appropriate in to use in this case. Dr. Kawasaki used the peripheral nerve table and noted the peripheral nerve involved and Dr. Striplin provided a credible and persuasive opinion as to why the peripheral nerve table was appropriate.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. (2013), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. (2013). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. (2013). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Absence of DIME

Initially at the outset of hearing, both parties argued that the opposing party should have requested a division independent medical evaluation (DIME) in response to the final admission of liability (FAL).

Claimant argues that Respondents were required to admit to authorized treating provider (ATP) Dr. Adams' whole person impairment rating of 25% whole person and that because Respondents did not request a DIME to dispute ATP Dr. Adams' whole person rating, Respondents were bound by the rating. Claimant cited *Egan v. ICAO*, 971 P.2d 664 (Colo. App. 1998) in support of their argument. Claimant's argument is not found persuasive.

Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Kilwein v. Industrial Claim Appeals Office*, 198 P.3d 1274 (Colo. App. 2008); *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Claimant's argument centers on the determinations made by ATP Dr. Adams. However, Claimant fails to address the fact that Dr. Kawasaki, who is also an ATP in this claim, provided an extremity impairment rating of 25%. As found above, Claimant was referred to Dr. Kawasaki for treatment, for an impairment rating, and for maintenance treatment. Dr. Kawasaki is an ATP and he placed Claimant at MMI and provided an impairment rating of 25% extremity.

The Respondents issued an FAL based on ATP Dr. Kawasaki's impairment rating. Attached to the FAL was a copy of Dr. Adams' report where she noted her disagreement with Dr. Kawasaki's rating. The report lists both Dr. Adam's and Dr. Kawasaki's ratings. Also attached to the FAL was Dr. Kawasaki's impairment rating worksheet showing the calculations and measurements that got him to the 25% extremity rating. In the *Egan* case cited by Claimant, an ATP had provided a whole person impairment rating that included the injured worker's neck and upper extremity. Despite the ATP's rating, the respondents only admitted to the upper extremity part of the rating and they did not admit to the whole person rating provided by the ATP. The respondents did so without requesting a DIME. The court held that because the respondents had failed to request a DIME to dispute the ATP's whole person rating, in which the ATP considered both the neck and upper extremity to be causally related, the court had no jurisdiction to consider causation or to alter the rating provided by the ATP. Essentially, the respondents in *Egan* were attempting to admit that only part of the body was causally related when the ATP had opined both body parts were related and rated both. The facts of this case are distinguishable from the *Egan* case. Here, Respondents are not admitting to only a part of an ATP's rating. Rather, they admitted in the FAL to the entire rating provided by ATP Kawasaki. As they agreed in whole with his rating, they were not required to seek a DIME to dispute the rating provided. Although an additional ATP, Dr. Adams, provided a different impairment rating after reviewing ATP Dr. Kawasaki's rating, the ALJ is not aware nor does Claimant point the

ALJ to any requirement that the Respondents admit to one ATP's higher rating over another ATP's rating. In his argument, Claimant essentially argues that Respondents admitted to the 25% extremity rating without reason and contrary to the ATP's rating. However, this is inaccurate. The 25% extremity rating is the exact rating provided by the ATP to whom Claimant was referred not only for ongoing treatment throughout the claim, but also to provide the impairment rating, and to provide ongoing maintenance care. Respondents admitted to this rating in whole and the ALJ can find no basis to deny the Respondents from presenting evidence or from being barred from moving forward in this matter for failing to request a DIME. Respondents were not required to either admit for ATP Adams' rating or request a DIME. They also had the option of admitting to ATP Kawasaki's rating, in whole, which they did.

Respondents also argued at the outset of hearing that Claimant should have and was compelled after the FAL was filed to request a DIME to dispute the 25% extremity rating. This argument also is not found persuasive. Scheduled and non-scheduled impairments are treated differently under the Act for purposes of determining permanent disability benefits. In particular, the procedures of § 8-42-107(8)(c), which state that a DIME finding as to permanent impairment can be overcome only by clear and convincing evidence and that such finding is a prerequisite to a hearing on permanent impairment, have been recognized as applying only to non-scheduled impairments. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo.App.1998); *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691 (2000). There is no requirement that Claimant undergo a DIME as a prerequisite to a hearing on permanent impairment when, in this case, the FAL admitted to a scheduled impairment rating. The ALJ finds no bar to Claimant applying for hearing to dispute the scheduled impairment rating admitted by the Respondents in the FAL, and similarly finds no basis to deny Claimant from presenting evidence to dispute the admitted scheduled rating.

Scheduled Injury vs. Whole Person Impairment

The Act classifies work-related injuries as either scheduled or non-scheduled injuries. Scheduled injuries are those listed in § 8-42-107(2). Non-scheduled injuries are those that are not listed or that are excluded from the statutory schedule. *See* §§ 8-42-107(1)(b) and 8-42-107(8). Whether a claimant's impairment falls within the schedule in § 8-4-107(2) is a question of fact for the ALJ. Langton v. Rocky Mountain Health Care Corp., 937 P.2d 883 (Colo.App.1996). The term "injury" refers to the part or parts of the body that sustain the ultimate loss, not necessarily the situs of the injury itself. Thus, the term "injury" refers to the part or parts of the body that have been functionally disabled or impaired. *Warthen v. Industrial Claim Appeals Office,* 100 P.3d 581 (Colo. App. 2004); *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996). Under this test the ALJ is required to determine the situs of the functional impairment, not the situs of the initial harm, in deciding whether the loss is one listed on the schedule of disabilities. *Strauch v. PSL Swedish Healthcare System, supra.* Claimant bears the burden of proof to establish by preponderant evidence that he suffered functional impairment that is not included on the schedule of injuries listed at § 8-42-107(2) C.R.S. Whether Claimant has met the burden of proof presents an issue of fact for determination by the ALJ. *Delaney v. Industrial Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2001); *Maestas v. American Furniture Warehouse,* WC No. 4-662-369 (June 5, 2007).

In this case, Claimant has failed to meet the burden of proof to establish that the situs of his functional impairment was beyond his arm at the shoulder or that he is entitled to a whole person impairment rating. The expert opinions of Dr. Striplin and Dr. Kawasaki, substantiated by the medical records, establish that the rating provided using the peripheral nerve table was appropriate for Claimant's condition and limitations from his work injury. Claimant did not establish functional impairment beyond his left upper extremity and did not establish that the spinal cord table would be appropriate. The opinions of Dr. Striplin and Dr. Kawasaki are found credible and persuasive. Dr. Adams is not found as credible or persuasive. As found above, Dr. Kawasaki was the specialist and provider to whom Dr. Adams referred Claimant for treatment as she recognized that diagnosing and/or treating potential CRPS was outside her specialty. Dr. Kawasaki found peripheral nerve problems on the radial nerve on the dorsum side, which is why he found the peripheral nerve table appropriate for rating Claimant's permanent impairment. Dr. Striplin concurred that the peripheral nerve table was appropriate given Claimant's impairment. Further, Dr. Adams actually referred Claimant to Dr. Kawasaki for an impairment rating as she typically did not deal with impairment ratings on difficult cases. Dr. Adams was unable to persuasively explain why the spinal cord table would be more appropriate and her indications that Claimant had trouble in self-care are partly discredited by Claimant's statement to the occupational therapist in May of 2015 that he was able to dress himself. In viewing the evidence overall, Claimant has failed to meet his burden to show an impairment off the schedule. Claimant's functional impairment and diagnoses are limited to the left upper extremity and do not extend beyond the arm at the shoulder. Further, the peripheral nerve table used by ATP Kawasaki in his rating is found appropriate and supported by the medical evidence as well as by the opinion of Dr. Striplin.

ORDER

It is therefore ordered that:

1. Claimant has failed to meet his burden to establish that he suffered functional impairment to the whole person that is not included on the schedule of injuries set forth by § 8-42-107(2) C.R.S.

2. Claimant is entitled to PPD benefits as calculated by Dr. Kawasaki of 25% of the left upper extremity.

3. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 12, 2016

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

STIPULATIONS

1. The Claimant's Average weekly wage is $768.89, including COBRA.

2. If the Claimant proves he sustained a compensable injury, Respondent is responsible for all medical treatment at Concentra Medical Center, Patient's First Medical Center, CACC Physical Therapy, and the lumbar spine MRI from Touchstone Imaging on December 31, 2015 and for any authorized referrals from those providers.

ISSUES

The issues for determination are:

1. Whether the Claimant proved, by a preponderance of the evidence, that he suffered a compensable injury in the course and scope of his employment on December 16, 2015.

2. If the Claimant proves he suffered a compensable injury, whether the Claimant proved, by a preponderance of the evidence, that he is entitled to temporary total disability indemnity benefits from December 22, 2016 ongoing.

4. If the Claimant proves he suffered a compensable injury, whether the Respondents proved, by a preponderance of the evidence, that the Claimant is responsible for his termination of employment and resulting wage loss.

FINDINGS OF FACT

1. The Employer is a dairy plant which supplies affiliated grocery stores throughout the country with dairy products for sale. The plant where the Claimant worked began operations in April of 2014.

2. The Claimant submitted an online application for employment with Employer on October 20, 2014. The Claimant testified at the hearing that, in his interview, he informed the Employer that he was enrolled in college and needed weekends off of work to attend classes. However, interview notes from the Claimant's employment file noted that the Claimant stated he was available to work any shift and made no mention of attending classes or needing weekends off. Additionally, the transcript from Columbia College shows that Claimant last was enrolled in a course ending on May 17, 2014 and Jennifer Thorpe, Registrar for Columbia College testified

that there was no indication that the Claimant was enrolled in any courses after May 17, 2014.

3. The Claimant was hired to work on Employer's "Distribution" team in early November 2014. On November 10, 2014, the Claimant signed a Receipt and Acknowledgement of Employer's Handbook, which is attached as Appendix B a copy of Employer's attendance policy (Respondents' Exhibit B).

4. On March 9, 2015, Employer placed the Claimant on probation for violations of the attendance policy. The Written Disciplinary Warning for Attendance, signed by Claimant on April 2, 2015, notified the Claimant that the probation would last for nine months and that a total of three additional attendance occurrences in that nine-month period would result in termination of the Claimant's employment.

5. As part of an organizational restructure, Employer dissolved the Distribution team in March 2015, and the Claimant was transferred to the "Aseptic" team. Jeff Hotaling, Employer's Team Lead for the Aseptic team, testified that within weeks of the Claimant transferring onto the Aseptic team, the Claimant began to complain of an inability to work weekends, stating he needed weekends off to attend school. However, the Claimant's statements that he needed weekends off to attend school in 2015 were deceptive as the Columbia College transcript of enrollment establishes that the Claimant last was enrolled in a class which ended in May 2014, which was before he began working for Employer. The ALJ finds that the Claimant's statements to Mr. Hotaling in March 2015 that he needed weekends off to attend school are an attempt to mislead the Employer that he was attending classes on the weekends so that he would not be scheduled to work weekends.

6. Mr. Hotaling testified that in the Fall 2015, the Aseptic team expanded distribution to affiliated grocery stores nationwide, resulting in a significant increase in plant production and a corresponding need for Aseptic team members to work more and more weekends. Jeff Hotaling, Susan Long and Human Resources trainee Luke Clayton all testified that the Claimant repeatedly complained in September, October, November and December 2015, that he needed weekends off to attend school. Thus, the Claimant continued to deceive Employer in order to avoid working weekends.

7. The Claimant received an attendance occurrence on September 14, 2015, and a second attendance occurrence on November 24, 2015 (Respondents' Exhibit A, pp. 7-8). According to Employer's attendance policy, a third attendance violation while the Claimant was still on attendance probation would result in the Claimant's termination.

8. Mr. Hotaling testified that in early-November 2015, the other Aseptic team members began to express their frustration to him that the Claimant was not being scheduled weekends when all other Aseptic team members were required to work weekends. Therefore, Mr. Hotaling notified the Claimant that Mr. Hotaling would need to schedule the Claimant to work on the weekends.

9. The Claimant then presented to Employer a letter dated October 23, 2015, which he represented was from Columbia College, stating that the Claimant was enrolled in the late-fall session beginning October 26, 2015, and running through Saturday, December 19, 2015 (Respondent's Exhibit C). In Respondent's case-in-chief, Respondent presented the testimony of the Registrar for Columbia College, Ms. Jennifer Thorpe, who testified that the letter presented by the Claimant dated October 23, 2015, in fact was not generated by anyone at Columbia College, as the letter is not on Columbia College letterhead and is not signed by anyone at Columbia College. Furthermore, Thorpe testified that all enrollment records are kept on Columbia College servers, and she has reviewed the same and there is no evidence that the Claimant ever applied for enrollment in the late-fall session 2015, or at any time after 2014. Ms. Thorpe is not associated with Respondent and has no incentive to testify falsely in this case or to have any bias in favor of either party. Further, Thorpe's testimony is supported by a copy of a letter with the true letterhead from Columbia College (Respondent's Exhibit P, p. 84), which is materially different from the letter which the Claimant presented to Employer. The ALJ finds that it is more likely true than not that the Claimant generated a counterfeit letter to Employer in order to continue his deception regarding attendance at school so that he would not be scheduled to work weekends.

10. On both direct examination and cross-examination the Claimant repeatedly testified dishonestly under oath that he was enrolled in school on the weekends in 2015. It was only *after* Thorpe's testimony that the Claimant testified on rebuttal that he never was enrolled in the late-Fall semester or any other semester in 2015. The ALJ finds that the Claimant's testimony lacks credibility and that he perpetuated a lie to his Employer, and continued to present this lie through his testimony at the hearing, about enrollment in college courses to avoid working on weekends. He continued this lie until he was confronted with solid evidence to the contrary.

11. Employer's Human Resources trainee Luke Clayton testified that, on December 10, 2015, the Claimant approached Mr. Clayton, telling Mr. Clayton that he was having problems with attending college courses on the weekends due to being scheduled to work on the weekends. Mr. Clayton discussed with the Claimant that many people attend school while still working their full schedules and that the Claimant must find ways to prioritize his time and attendance. Mr. Clayton also documented that the Claimant requested that Mr. Clayton to look into the status of the Claimant's attendance probation. On December 11, 2015, Mr. Clayton responded to the Claimant's inquiry about the status of his attendance probation, informing the Claimant that he would be terminated for missing another day of work while on probation, but that he would be off probation effective Monday, December 14, 2015. In addition, Mr. Clayton testified and documented that sometime during the following week of December 13-19, 2015 (after the Claimant's attendance probation ended on December 14, 2015), the Claimant again asked about the attendance policy and when occurrences drop off under the policy. Mr. Clayton informed the Claimant that a total of four occurrences in the previous six months would put the Claimant back on probation again.

12. Mr. Hotaling testified that the Claimant advised him that he would not be appearing for his scheduled workdays on the weekend of December 19-20, 2015, because he needed to take a family member to Oklahoma. Mr. Hotaling clearly testified that the Claimant never stated he needed the time off to go to school, and stated only that he needed to take someone to Oklahoma. Mr. Clayton also testified that the Claimant stated that he would not be appearing for work on December 19-20, 2015, because he needed to take someone to Oklahoma. Susan Long testified that Mr. Hotaling told her sometime before December 19, 2015, that the Claimant announced that he would be not be appearing for work on December 19-20 in order to take someone to Oklahoma. The Claimant's testimony regarding the conversation with Mr. Hotaling was vague, evasive and introduces another excuse that the Claimant provided to his Employer for not working weekend shifts:

Q: So at some point, Jeff Hotaling gave you days off, your testimony is, to go to school. Yes or no?

A. No.

Q. He never gave you days off to go to school?

A. He gave me days off, but he didn't give me days off. It wasn't elaborated for that particular thing.

Q. Okay. He just said you can have two days off for whatever you want?

A. Correct.

Q. Okay. And originally -- and that was so you could go to Oklahoma?

A. No.

Q. That was so you could go to school?

A. That was so I could study for school, basically. Right.

Q. Okay. But yet you knew you had to go to Oklahoma?

A. No.

Q. You previously testified that you couldn't drive to Oklahoma because of your back injury?

A. Okay.

Q. So you knew you had to go to Oklahoma?

A. I knew I didn't have to. It wasn't something I had to do. It was just something that was requested for me to do.

Q. Okay. Did you go?

A. Requested.

Q. And so let me rephrase that. You knew that you were going to drive to Oklahoma if you hadn't been injured. Right?

A. No.

Q. No?

A. It was something that was requested. I didn't -- I didn't say I was going to do it or anything like that. It was a request.

Q. You never told Jeff Hotaling you wanted those two days off to go to Oklahoma?

A. No. I said it was a request. I said I might. I didn't tell him I was going.

Q. I thought you just said you just told him you needed two days off and you didn't tell him what for?

A. He knew I was in school. He knew I was in school. That was pretty much what it was.

Q. See, that is not what I asked, though.

A. I know.

Q. I didn't ask what he knew. I asked what you told him.

A. I told him I need these two days off. He said, okay.

Q. So did you tell him you needed two days off to go to Oklahoma?

A. Not to go to Oklahoma, no.

(May 10, 2016, Hearing Transcript, pp. 129:9-131:14)

13. The Claimant’s testimony regarding the conversation with Hotaling is not credible for several reasons:

- This conversation occurred only a few weeks after Mr. Hotaling informed the Claimant that he needed to start scheduling the Claimant to work weekends and while the Claimant still was on attendance probation, so it is not logical that Mr. Hotaling would have told Claimant he could have two days off for whatever reason the Claimant wanted. Rather, it is much more likely that the Claimant announced he would not be coming to work, and Mr. Hotaling simply said acknowledged what the Claimant told him since the Claimant had consistently stated he could not work on weekends so it did not matter what Mr. Hotaling told him.

- Mr. Hotaling, Mr. Clayton and Ms. Long all testified that the Claimant announced he would not be appearing for the scheduled weekend shifts because he needed to drive a family member to Oklahoma, and that the Claimant did not request to be taken off the schedule and was not given permission to be taken off the schedule for December 19-20, 2015.

- Despite the fact that the Claimant never was enrolled in the late-Fall 2015 semester, the Claimant testified falsely under oath that he needed December 19-20 off to study for school.

- The context of the Claimant's conversations with Mr. Clayton on December 10, 2015, December 11, 2015, and sometime during the week of December 13-19, 2015, makes it more likely that the Claimant knew several days beforehand that he would be missing his scheduled shifts on December 19-20, 2015, in order to drive a family member to Oklahoma, and wanted to know the consequences of receiving the two attendance occurrences on his continued employment;

- If Mr. Hotaling had given the Claimant December 19-20, 2015 off from work, there would have been no reason for the Claimant to call the attendance line on December 19 and December 20, 2015, because the Claimant would not have been on the schedule for those two days. Yet, the Employer's records indicate that the Claimant did call the attendance line to report absences (Respondent's Exhibit A, pp. 9-10).

14. The ALJ finds that the Claimant announced to Mr. Hotaling that he would not be appearing for his scheduled shifts on December 19-20, 2015, because he needed to drive a family member to Oklahoma. Based on the Claimant's conversations with Mr. Clayton the previous weeks, the Claimant knew that he would receive two attendance occurrences and that it was a likelihood that his employment would be terminated on December 21, 2016 as a result of the absences.

15. On December 16, 2015, the Claimant struck a pole while driving a double-walkie pallet jack. The Claimant testified that the floor was wet and slippery, precipitating the machinery striking the pole. The Claimant testified that after striking the pole he immediately felt excruciating pain in his left buttocks and lower back:

Q. Now, you testified also that you were having excruciating pain in your left buttocks and lower back. When did you start having this excruciating pain?

A. Immediately after I was injured on the Double Walkie.

Q. So before you even went to Jeff Hotaling, you were having this excruciating pain in your left buttocks and lower back?

A. Correct.

[(May 10, 2016, Hearing Transcript, p. 84:12-21)

16. HR Leader Susan Long testified that the Employer had motion-activated security cameras which recorded all activity in the packaging area, and that the software for viewing the video file documents the time of all activities over the course of the day, allowing someone to review all those times in which any activity occurred during a work shift. Ms. Long testified that the security video approached the pole in question only nine times over the course of his shift. The security video of the Claimant's activities on the double-walkie each time he approached the pole in question shows that he never gave any indication of being injured, and did not stop the double-walkie after striking the pole despite the Claimant's claim of immediate "excruciating" pain. Instead, the Claimant continued to work his shift and perform his regular duties for the rest of his shift.

17. The Claimant testified that shortly after striking the pole he told both Aseptic Team Lead Mr. Hotaling and Aseptic supervisor Nick Jackson that he was in pain and needed medical care, but neither Mr. Jackson nor Mr. Hotaling completed paperwork or referred him to a physician. Mr. Jackson and Mr. Hotaling both denied that the Claimant ever stated that he was in pain, only that he struck the pole.

18. The Claimant finished his shift that day and punched out at 9:58 p.m. The Claimant testified that when he went home after work on December 16, 2015, he continued to experience "excruciating pain going down my left buttocks and my lower back." The Claimant testified that he appeared for work on December 17, 2016, and December 18, 2016, and on both days told both Nick Jackson and Kiet Nguyen he was in excruciating pain and needed treatment:

Q: So 12/17, who do you tell again, "I am in excruciating pain, I need treatment"? Who do you tell on 12/17?

A. I tell Nick and I tell Kiet.

(May 10, 2016, Hearing Transcript, p. 109:12-15)

* * *

Q: So now we are on the 18th. You're now working another full shift, full duty, and I asked you, who did you report it to and -- I'm confused.

A. I told Nick.

Q. Again, you told Nick.

A. Exactly.

Q. So you told Nick on the 17th, the following day, and then you told him again on the 18th?

A. Correct.

Q. No doubt in your mind about that?

A. I told Nick twice.

Q. So you told him the 16th, the 17th, the 18th?

A. Twice. Three times, exactly. He knew about the injury. He was supposed to do the paperwork two days, and he never did.

(May 10, 2016, Hearing Transcript, pp. 111:18-112:8)

19. The Claimant's testimony that he told Jackson and Nguyen that he was injured on December 16, December 17, or December 18, 2015, is not credible for several reasons:

- Nick Jackson, who no longer works for the Employer, testified that his normal days off were Thursday, Friday and Saturday and he did not work Thursday, December 17 or Friday, December 18, 2015, so the Claimant could not have told him he was injured and needed medical care on those two days;

- It is not likely that three supervisors, Jeff Hotaling, Nick Jackson and Kiet Nguyen all would ignore the Claimant's report of an injury and request for medical treatment, and instead force Claimant to work his normal job despite "excruciating" pain on December 16, December 17, and December 18, 2015, especially since each of these supervisors testified regarding company policy that all injuries were required to be reported immediately;

- Kiet Nguyen testified that he had no knowledge of the alleged injury until Claimant approached him on December 21, 2015, and that he reported the alleged injury as soon as the Claimant mentioned it to him.

20. The ALJ finds the testimony of Mr. Hotaling, Mr. Jackson and Mr. Nguyen more credible than that of the Claimant, and finds that the Claimant did not tell anyone at Employer that he was injured as a result of striking the pole until December 21, 2015, when he presented to Mr. Nguyen who completed the Initial Incident Form (Respondent's Exhibit F).

21. The Claimant worked his normal shift on December 18, 2015, clocking out at 9:53 p.m. (Respondent's Exhibit M, p. 70). The Claimant then called the attendance line sometime between 11:00 p.m. and midnight notifying his Employer that he would not be in to work on Saturday, December 19, 2015. The Claimant testified that he specifically stated he was "sick because of a back injury":

> Q. Did you say, I won't be in because I'm sick, or I won't be in because I injured my back?
>
> A. I said I was sick because of the back injury.
>
> (May 10, 2016, Hearing Transcript, p. 120:5-9).

22. The ALJ finds the Claimant's testimony again is not credible for several reasons:

- Paul Hammer completed the Absentee Report marking as the reason for the absence only "Other" without specifying a reason. [Exhibit A, p. 9]

- Mr. Hammer testified that Claimant's voice message was sent to Hammer by the attendance line via e-mail, and that Claimant did not state why he would not be into work on December 19, 2015, never stated it was as a result of an alleged injury, and that if Claimant had stated he injured his back Mr. Hammer would have notified Safety Manager Mary Beth Clark and Human Resources Lead Susan Long;

- This version of events would involve four different supervisors who each ignored the Claimant's report of an injury, despite all four supervisors testifying that the Employer had a policy requiring them to report work injuries and that all of the supervisors had reported work injuries in the past;

- Tim Weber testified that he received an e-mail from the he attendance line at noon on Sunday, December 20, 2015, containing the audio file of the Claimant's call to the attendance line on that date, and that the Claimant again did not report that he was missing time as a result of an alleged injury.

23. The Claimant's testimony is inconsistent with the bulk of evidence to the contrary. Even if the Claimant had not created a counterfeit letter from Columbia college to perpetuate his deception on his Employer or repeatedly lied under oath in his testimony on direct and cross examination about attending school in 2015, the Claimant still testified in direct conflict with multiple credible witnesses (Mr. Hotaling, Mr. Jackson, Mr. Nguyen and Mr. Hammer) that they all ignored the Claimant's report of an injury. Additionally, the Claimant persisted in his testimony that there was "no doubt" in his mind that he reported the alleged injury to Mr. Jackson on December 17 and December 18, 2015, dates when Mr. Jackson was not even working. The ALJ finds that the

Claimant lacks credibility on the issue of reporting a work injury to his Employer prior to December 21, 2015.

24. The Claimant reported for work on December 21, 2015, and reported a back injury to Kiet Nguyen, who completed the Initial Injury Form (Respondent's Exhibit F). On the morning of December 22, 2015, the Claimant reported to Concentra for treatment, where he was seen by physician's assistant Glenn Peterson. The physician's assistant assessed "Crush injury, back" and "contusion of left hip and thigh" (Claimant's Exhibit 7, p. 18). The "Physical Exam" portion of the physician's assistant's report does not list any objective findings, instead listing only the Claimant's subjective complaints of pain or tenderness.

25. After leaving Concentra, the Claimant returned to Employer and met with Safety Manager Mary Beth Clark. Ms. Clark and Susan Long both testified that when the Claimant walked into Clark's office he had an obvious and significant limp. Ms. Clark testified that during her meeting with the Claimant he presented with significant pain behaviors and barely could sit down or stand up from his chair during the meeting. However, security video of the Claimant entering the building only minutes before meeting with Ms. Clark shows that Claimant exited the passenger side of a motor vehicle without any problems moving from a seated position to a standing position and quickly walked into the building without a limp. The same security video shows the Claimant leaving the meeting with Mr. Clark, briskly walking from the Employer's plant and actually hopping over a pile of snow in the Employer's parking lot without hesitation or pain behaviors (Respondent's Exhibit S).

26. Ms. Clark testified that she had viewed the video surveillance at Exhibit S and that the Claimant's presentation during the meeting with her differed substantially from his presentation in the security video. While Ms. Long did not stay for the meeting, she did see the Claimant walk into Ms. Clark's office and testified that the Claimant had a significant limp which differed substantially from the security video. Again, the Claimant's subjective presentation at his meeting with Ms. Clark, and during times when he knew he was being observed, is inconsistent with the objective evidence of his condition while walking into the building without a limp and jumping over the snow in the curb without any hesitation.

27. Dr. Michael Striplin performed an Independent Medical Examination of the Claimant on May 11, 2016. Dr. Striplin stated that the medical records do not document any objective evidence of a crush injury to the back or a contusion of the left hip or thigh, and that the diagnosis of a contusion is based "solely on Claimant's subjective complaints" (Respondent's Exhibit Q, p. 89). Dr. Striplin further stated that he reviewed the Claimant's MRI findings and those on MRI are consistent with degenerative changes which could exist without sustaining any injury and can exist in the absence of any symptoms. In other words, Dr. Striplin stated that the only evidence of any claimed injury is the Claimant's subjective statement that he is in pain.

28. While the Respondent agrees that the double-walkie that the Claimant was driving on December 16, 2015 struck a pole, Respondent argues that the Claimant

did not sustain any injury when he struck the pole on December 16, 2015. Since the physician's assistant who examined Claimant on December 22, 2015, did not document any objective evidence of an injury such as ecchymosis (bruising), hematoma (blood in the tissues), erythema (redness of the skin caused by increased blood flow), edema (swelling) or inflammation, the only evidence of an injury is based exclusively on the Claimant's subjective complaints of pain. Therefore, Claimant's credibility is crucial to a determination of the question of whether he sustained an injury when the double-walking he was driving struck a pole. As previously documented in these findings of fact, the Claimant has a serious credibility issue. Namely,

- The Claimant repeatedly knowingly testified under oath during direct and cross examination that he was enrolled in school in 2015, and finally admitted that he never was enrolled in school in 2015 only on rebuttal testimony, after Columbia College Registrar Jennifer Thorpe's testimony and the Columbia College transcript brought to light the Claimant's series of compounding lies regarding his enrollment in school;

- The Claimant's testimony that he told the Employer at the time he was hired that he needed weekends off to attend school is inconsistent with the Claimant's own application for employment indicating he was not enrolled in school and the notes in his employment file from the interview process indicating the Claimant was available to work weekends and was not enrolled in school;

- The Claimant repeatedly lied to multiple Employer representatives over the course of nine months from March through December 2015, that he needed weekends off to attend school when, in fact, the Claimant never was enrolled in school in 2015;

- The Claimant submitted a counterfeit letter from Columbia College dated October 23, 2015, in order to perpetuate his lies and convince the Employer to give him weekends off;

- The Claimant's testimony that he was in excruciating pain after striking the pole is inconsistent with the security video showing the Claimant continuing to work without even pausing on numerous occasions that he approached the pole in question on December 16, 2015, and is also inconsistent with the Claimant's working full shifts on December 17 and December 18, 2015, without exhibiting any pain behaviors;

- The Claimant's testimony that he told Mr. Hotaling, Mr. Jackson, Mr. Nguyen, and Mr. Hammer that he was injured when he struck the pole is highly improbable, as it makes no sense that all four witnesses would ignore the reports of injury until December 21, 2015, despite Employer's policy requiring all injuries to be reported;

- The Claimant's testimony that there is "no doubt" that he reported the injury to Mr. Jackson and requested medical care on December 17 and December 18, 2015, cannot be reconciled with the fact that Mr. Jackson did not work on those two dates;

- Ms. Clark and Ms. Long both testified that the Claimant limped significantly when he entered Ms. Clark's office on December 22, 2015, and Ms. Clark testified that the Claimant barely could sit down in the chair upon entering her office or stand up from the chair upon leaving her office, but the security video of the Claimant entering and leaving the building on December 22, 2015, shows that upon entering the building the Claimant moved fluidly from a seated position in a car to a standing position and walked briskly into the building without any limp, and upon leaving actually jumped over a pile of snow at the curb of Employer's parking lot without any hesitation or pain behaviors.

29. Several days *before* striking the pole with the double-walkie on December 16, 2015, the Claimant told both Mr. Hotaling and Mr. Clayton that he would be missing his scheduled shifts on December 19 and 20, 2015, and had several conversations with Human Resources trainee Mr. Clayton about the attendance policy and what would happen if the Claimant missed any more time from work. Thus, before he struck the pole on December 16, 2015, the Claimant clearly knew that when he missed his scheduled shifts on December 19 and 20, 2015, he would be facing some type of disciplinary action up to and including probation or termination. Therefore, it is more likely than not that the Claimant reported an injury on December 21, 2015 in order to avoid disciplinary action for missing his shifts on December 19 and 20, 2015, as opposed to the possibility that the Claimant actually sustained an injury on December 16, 2015. The ALJ finds that the Claimant fabricated his story of an injury and did not, in fact, sustain any injury when his double-walkie struck a pole.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1), The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. Respondent bears the burden of establishing any affirmative defenses. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201 (2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Compensability

A claimant's right to compensation initially hinges upon a determination that the claimant suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. C.R.S. § 8-41-301. Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009). It is the burden of the claimant to establish causation by a preponderance of the evidence. *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado, 717 P.2d 1000 (Colo. App. 1986).* The weight and credibility to be assigned expert testimony on the issue of causation is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

Compensable injuries are those which require medical treatment or cause disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970). In order to prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001); *H and H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986). However, where an industrial injury merely causes the discovery of the underlying disease to happen sooner, but does not accelerate the need for the surgery for the underlying disease, treatment for the preexisting condition is not compensable. *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

The Claimant was hired by Employer in early November of 2014. By March of 2015, he was on probation for attendance issues. When the Employer's needs for its employees to work weekends increased due to an expansion of the workload required of the facility, the Claimant convinced his supervisors that he could not work weekends due to a scheduling conflict with college courses he stated he was taking. As the evidence established, the Claimant was not, in fact, taking college classes at Columbia College. He had not been enrolled in classes, either in person or on-line courses, since May of 2014, months prior to his starting the job with his Employer. The Claimant's statements that he needed weekends off to attend school in 2015 were deceptive and an attempt to mislead the Employer that he was attending classes on the weekends so that he would not be scheduled to work weekends. The Claimant even presented a counterfeit letter dated October 23, 2015, which he represented was from Columbia College, stating that the Claimant was enrolled in the late-fall session beginning October 26, 2015, and running through Saturday, December 19, 2015. The ALJ found that the Claimant's testimony lacked credibility and that he perpetuated a lie to his Employer, and continued to present this lie through his testimony at the hearing, about enrollment in college courses to avoid working on weekends. He continued this lie until he was confronted with solid evidence to the contrary.

The Claimant received an attendance occurrence on September 14, 2015, and a second attendance occurrence on November 24, 2015. According to Employer's attendance policy, a third attendance violation while the Claimant was still on attendance probation would result in the Claimant's termination. The Claimant also engaged in a series of discussions and inquiries with the Employer's Human Resources trainee Luke Clayton about the status of the Claimant's attendance probation. On December 11, 2015, Mr. Clayton responded to the Claimant's inquiry about the status of his attendance probation, informing the Claimant that he would be terminated for missing another day of work while on probation, but that he would be off probation effective Monday, December 14, 2015. In addition, Mr. Clayton testified and documented that sometime during the following week of December 13-19, 2015 (after the Claimant's attendance probation ended on December 14, 2015), the Claimant again asked about the attendance policy and when occurrences drop off under the policy. Mr. Clayton informed the Claimant that a total of four occurrences in the previous six months would put the Claimant back on probation again. Around this time period, the Claimant also advised his supervisor Mr. Hotaling that he would not be appearing for his scheduled workdays on the weekend of December 19-20, 2015, because he needed to take a family member to Oklahoma. The Claimant testified that he either told Mr.

Hotaling that he needed time off for school or that he was granted a weekend off for no particular reason. However, Mr. Hotaling clearly testified that the Claimant never stated he needed the time off to go to school, and stated only that he needed to take someone to Oklahoma. Mr. Clayton also testified that the Claimant stated that he would not be appearing for work on December 19-20, 2015, because he needed to take someone to Oklahoma. The Claimant's testimony regarding the conversation with Mr. Hotaling was found not credible and Mr. Hotaling's testimony was found to be credible, supported and persuasive. Therefore, the ALJ found that the Claimant announced to Mr. Hotaling that he would not be appearing for his scheduled shifts on December 19-20, 2015, because he needed to drive a family member to Oklahoma. Based on the Claimant's conversations with Mr. Clayton the previous weeks, the Claimant knew that he would receive two attendance occurrences and that it was a likelihood that his employment would be terminated on December 21, 2016 as a result of the absences.

On December 16, 2015, the Claimant struck a pole while driving a double-walkie pallet jack. The Claimant testified that the floor was wet and slippery, precipitating the machinery striking the pole. The Claimant testified that after striking the pole he immediately felt excruciating pain in his left buttocks and lower back. However, this testimony is refuted by the testimony of other witnesses and surveillance video. The security video of the Claimant's activities on the double-walkie each time he approached the pole in question shows that he never gave any indication of being injured, and did not stop the double-walkie after striking the pole despite the Claimant's claim of immediate "excruciating" pain. Instead, the Claimant continued to work his shift and perform his regular duties for the rest of his shift.

The Claimant also testified that shortly after striking the pole he told both Aseptic Team Lead Mr. Hotaling and Aseptic supervisor Nick Jackson that he was in pain and needed medical care, but neither Mr. Jackson nor Mr. Hotaling completed paperwork or referred him to a physician. Mr. Jackson and Mr. Hotaling both denied that the Claimant ever stated that he was in pain, only that he struck the pole. The Claimant then finished his shift that day and punched out at 9:58 p.m. The Claimant testified that when he went home after work on December 16, 2015, he continued to experience "excruciating pain going down my left buttocks and my lower back." The Claimant testified that he appeared for work on December 17, 2016, and December 18, 2016, and on both days told both Nick Jackson and Kiet Nguyen he was in excruciating pain and needed treatment. The Claimant's testimony that he told Mr. Jackson and Mr. Nguyen that he was injured on December 16, December 17, or December 18, 2015, was found not credible in part because Nick Jackson's normal days off were Thursday, Friday and Saturday and he did not work Thursday, December 17 or Friday, December 18, 2015, so the Claimant could not have told him he was injured and needed medical care on those two days. The Claimant's testimony about reporting an injury on December 16th and 17th is also not credible as it is unlikely that three supervisors, Jeff Hotaling, Nick Jackson and Kiet Nguyen all would ignore the Claimant's report of an injury and request for medical treatment, and instead force the Claimant to work his normal job despite "excruciating" pain on December 16, December 17, and December 18, 2015, especially since each of these supervisors testified regarding company policy that all injuries were required to be reported immediately. After working his normal shift on December 18, 2015, the Claimant then called the attendance line sometime between 11:00 p.m. and midnight notifying his Employer that he would not be in to work on Saturday, December 19, 2015. The Claimant testified that he specifically stated he was “sick because of a back injury,” however, the ALJ found that this testimony was not credible and found that the Claimant did not report a back injury when calling in to the attendance line.

Overall, the Claimant’s testimony is inconsistent with the bulk of evidence to the contrary. Even if the Claimant had not created a counterfeit letter from Columbia college to perpetuate his deception on his Employer or repeatedly lied under oath in his testimony on direct and cross examination about attending school in 2015, the Claimant still testified in direct conflict with multiple credible witnesses (Mr. Hotaling, Mr. Jackson, Mr. Nguyen and Mr. Hammer) that they all ignored the Claimant’s report of an injury. Additionally, the Claimant persisted in his testimony that there was “no doubt” in his mind that he reported the alleged injury to Mr. Jackson on December 17 and December 18, 2015, dates when Mr. Jackson was not even working. The ALJ finds that the Claimant lacks credibility on the issue of reporting a work injury to his Employer prior to December 21, 2015.

The initial medical records also fail to contain any objective evidence that the Claimant has sustained a low back work injury on December 16, 2015. On the morning of December 22, 2015, the Claimant reported to Concentra for treatment, where he was seen by physician’s assistant Glenn Peterson. The physician’s assistant assessed “Crush injury, back” and “contusion of left hip and thigh.” The “Physical Exam” portion of the physician’s assistant’s report does not list any objective findings, instead listing only the Claimant’s subjective complaints of pain or tenderness. Then, after leaving Concentra, the Claimant returned to Employer and met with Safety Manager Mary Beth Clark. Ms. Clark and Susan Long both testified that when the Claimant walked into Clark’s office he had an obvious and significant limp. Ms. Clark testified that during her meeting with the Claimant he presented with significant pain behaviors and barely could sit down or stand up from his chair during the meeting. However, security video of the Claimant entering the building only minutes before meeting with Ms. Clark shows that Claimant exited the passenger side of a motor vehicle without any problems moving from a seated position to a standing position and quickly walked into the building without a limp. The same security video shows the Claimant leaving the meeting with Mr. Clark, briskly walking from the Employer’s plant and actually hopping over a pile of snow in the Employer’s parking lot without hesitation or pain behaviors. Ms. Clark testified that she had viewed the video surveillance at Exhibit S and that the Claimant’s presentation during the meeting with her differed substantially from his presentation in the security video.

Dr. Michael Striplin also performed an Independent Medical Examination of the Claimant on May 11, 2016. Dr. Striplin stated that the medical records do not document any objective evidence of a crush injury to the back or a contusion of the left hip or thigh, and that the diagnosis of a contusion is based “solely on Claimant’s subjective complaints.” Dr. Striplin further stated that he reviewed the Claimant’s MRI findings and those on MRI are consistent with degenerative changes which could exist without sustaining any injury and can exist in the absence of any symptoms. In other words, Dr.

Striplin stated that the only evidence of any claimed injury is the Claimant's subjective statement that he is in pain.

While the Respondent agrees that the double-walkie that the Claimant was driving on December 16, 2015 struck a pole, Respondent argues that the Claimant did not sustain any injury when he struck the pole on December 16, 2015. Since the physician's assistant who examined Claimant on December 22, 2015, did not document any objective evidence of an injury, the only evidence of an injury is based exclusively on the Claimant's subjective complaints of pain. Therefore, Claimant's credibility is crucial to a determination of the question of whether he sustained an injury when the double-walking he was driving struck a pole. As previously documented in these findings of fact, the Claimant has a serious credibility issue.

Ultimately, the Claimant's claim for compensability fails as a result of credibility issues. Several days *before* striking the pole with the double-walkie on December 16, 2015, the Claimant told both Mr. Hotaling and Mr. Clayton that he would be missing his scheduled shifts on December 19 and 20, 2015, and had several conversations with Human Resources trainee Mr. Clayton about the attendance policy and what would happen if the Claimant missed any more time from work. Thus, before he struck the pole on December 16, 2015, the Claimant clearly knew that when he missed his scheduled shifts on December 19 and 20, 2015, he would be facing some type of disciplinary action up to and including probation or termination. Therefore, it is more likely than not that the Claimant reported an injury on December 21, 2015 in order to avoid disciplinary action for missing his shifts on December 19 and 20, 2015, as opposed to the possibility that the Claimant actually sustained an injury on December 16, 2015. The ALJ finds that the Claimant fabricated his story of an injury and did not, in fact, sustain any injury when his double-walkie struck a pole.

Based on the foregoing, it hereby determined that the Claimant's testimony with regards to critical elements related to the purported work injury on December 16, 2016 is not credible and persuasive. Given the circumstances, including the inconsistent statements made by the Claimant, and the contrasting and more persuasive testimony of other witnesses, and the lack of evidence of injury in the medical records, the ALJ determines that the Claimant has failed to meet his burden of proof to establish that he sustained a work injury on December 16, 2016. As such, the Claimant's claims for compensation under W.C. 5-002-613-01 are denied and dismissed.

Remaining Issues

The Claimant failed to prove that when he struck a pole while working on a double-walkie on December 16, 2016, this resulted in a compensable injury requiring medical treatment or caused a disability that resulted in wage loss due to the inability to work. As such, the remaining issues regarding temporary disability benefits, medical benefits and responsibility for termination are moot.

ORDER

It is, therefore, ordered that:

1. The Claimant has failed to sustain his burden of proving by a preponderance of the evidence that he suffered a compensable injury resulting from work activities on December 16, 2015.

2. The Claimant's claims for benefits under the Workers' Compensation Act of Colorado under case number WC 5-002-613-01are denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 11, 2016

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

The issues to be determined by this decision are the following:

1. Whether Claimant overcame the Division independent medical examiner's (DIME's) opinion with regard to impairment rating and/or causation by clear and convincing evidence;

2. Whether Claimant proved by a preponderance of the evidence entitlement to permanent total disability (PTD) benefits;

3. Whether Respondents accrued an overpayment;

4. Whether Claimant proved by a preponderance of the evidence that Claimant is entitled to a general award of maintenance medical benefits; and

5. Whether Claimant established by a preponderance of the evidence that she is entitled to a disfigurement award.

FINDINGS OF FACT

Having considered the evidence presented at hearing and the depositions of Dr. Jeffrey Wunder and Katie Montoya, the following Findings of Fact are entered.

1. Claimant is a 62 year old female who has been employed by Employer for 11 years in Fort Collins, CO. On July 16, 2012, Claimant sustained an admitted injury. She testified she tripped over a piece of rubber and fell to her left. She described a hyperextension of her left knee and striking her right hand and right knee on the ground.

2. Claimant has a medical history significant for right upper extremity conditions, specifically, right arm pain, dysesthesias, neuralgia, and carpal tunnel for which she received neurological treatment just days prior to the work injury. Specifically, on July 12, 2012, four days prior to the work injury, Claimant presented to Dr. Curiel to evaluate right hand/arm pain that had resulted in Claimant having trouble at work typing because of right hand pain, which was reported to be aggravated by use. Claimant was prescribed a Gabapentin formulation to control her upper extremity pain.

3. In the months leading to the work injury, Claimant sought treatment for decreased wrist range of motion, a 1.5 year-history of hand numbness and pain, arthritis, and Ehlers-Danlos syndrome. These conditions interfered with her sleep.

4. Ehlers-Danlos is a connective tissue condition which results in joint laxity. Over time, this joint laxity can result in osteoarthritis, nerve pathology, and neuropathies.

5. Claimant's medical history is also significant for a 2011 right carpal tunnel release and a 2000 bilateral total knee replacement.

6. Following Claimant's July 16, 2012, work injury, initial diagnostic testing established unremarkable bilateral knee x-rays, a right wrist x-ray showed no acute abnormality, and a negative brain MRI.

7. An EMG established a C7 radiculopathy without any evidence of an ulnar neuropathy. Subsequently, a cervical MRI was performed, finding degeneration at multiple levels, multilevel neural foraminal stenosis, anterolisthesis of C7 on T11, and development of central canal stenosis from C3 through C6.

Overcoming the DIME with Regard to Causation;
The ulnar nerve, carpel tunnel and the left knee condition

8. The ALJ finds that Claimant did not overcome Dr. Ginsburg's causation opinions by clear and convincing evidence with regard to Claimant's ulnar nerve, carpel tunnel and her left knee condition. In coming to this conclusion, the ALJ finds the opinions of Dr. Ginsburg, Dr. Cebrian, and Dr. Edmonds to be more persuasive and credible than that of Dr. Wunder.

9. Claimant's right ulnar nerve condition, including the need for surgery and ongoing sequelae, is not related to the July 16, 2012, industrial injury. While Claimant's authorized treating physicians (ATPs) initially aimed at conservative treatment of Claimant's right ulnar nerve condition, Claimant was referred to a neurosurgeon for a surgical consultation. Dr. Hans Coester ultimately recommended a C4-C5, C5-C6, and C6-C7 anterior cervical discectomy and fusion. He opined this procedure was partially required due to Claimant's underlying Ehlers-Danlos syndrome. This procedure occurred on September 24, 2013.

10. Claimant testified her first complaints of ulnar issues, including numbness in her ring and middle fingers, occurred after her cervical surgery. She testified she was getting physical therapy for post-operative rehabilitation when the symptoms began.

11. Dr. Jeffrey Wunder, an ATP, opined Claimant's development of an ulnar neuropathy was either related to her time in physical therapy arising from the cervical surgery or the result of positioning during the neck surgery.

12. Dr. Wunder subsequently retracted the positioning argument for causation and opined that Claimant developed ulnar neuropathy during the physical therapy sessions performed as part of her post-operative care arising from the cervical surgery.

13. In deposition testimony, Dr. Wunder conceded that he could not read the handwritten physical therapy notes, so he did not know which activities were performed during these sessions. Because of this, he could not explain if any of those activities met the W.C.R.P. 17 guidelines known to plausibly cause ulnar neuropathy.

14. Dr. Cebrian credibly testified at hearing that Dr. Wunder's causation theory was not medically probable. Specifically, because Claimant spent an insignificant amount of time in physical therapy for a few weeks at the time of the onset of symptoms, those activities would not meet the threshold requirements of a W.C.R.P. 17 causation analysis.

15. Dr. Hope Edmonds, an ATP, agreed with Dr. Cebrian that Claimant's development of ulnar neuropathy was not work related.

16. Dr. Ginsburg, the DIME, also credibly opined that the right carpal tunnel syndrome was not related to the July 16, 2012, work injury. Dr. Wunder agreed with Dr. Ginsburg that there was no aggravation of Claimant's underlying right carpal tunnel syndrome as a result of the July 16, 2012, work injury. Accordingly, the ALJ finds that Claimant failed to overcome the DIME opinion with regard to causation of the Claimant's right carpal tunnel syndrome.

17. The DIME physician opined Claimant's left knee condition was not related to the July 16, 2012, work injury, but rather was a pre-existing condition that did not cause additional difficulty after the work injury.

18. Dr. Wunder initially opined he "could not determine...if there was any additional injury to the left knee as a result of her work related injury." He subsequently retracted this opinion, noting it was a typographical error and he meant there was no ratable left knee injury. He conceded, however, that when he compared the left knee to the right knee, they were "virtually" the same. He also conceded that his opinion regarding causation of the left knee was merely a different opinion than that of the DIME.

19. Dr. Wunder did not point to any specific errors in Dr. Ginsburg's causation analysis. Dr. Wunder reluctantly conceded on cross examination that his opinions with regard to causation of the left knee and right upper extremity conditions were differences of opinion. However, with regard to the left knee, Dr. Wunder persisted in the opinion that the left knee condition was a rateable condition for which Claimant received a 0% impairment.

20. The ALJ finds the opinion presented by Claimant regarding the causal analysis of the left knee condition is merely a difference of opinion from that of the DIME physician and does not amount to clear and convincing evidence that Dr. Ginsburg's opinion is most probably incorrect.

.

Maintenance Medical Benefits for unrelated medical conditions

21. The ALJ finds that Claimant failed to prove by a preponderance of the evidence that her request for medical maintenance treatment related to the right ulnar nerve, right carpel tunnel and the left knee condition is for reasonably necessary and related medical treatment. Since the DIME physician concluded that the right ulnar nerve, right carpel tunnel and the left knee conditions are not related to the work injury, maintenance medical treatment for these condition is not reasonably necessary or related.

22. The DIME physician, Dr. Ginsburg, opined the only condition that was related to the work injury was the cervical condition. Dr. Ginsburg's causation opinion is supported by both the opinion of Dr. Edmonds (ATP) and Dr. Cebrian.

23. Claimant testified that the right ulnar nerve condition, the right upper extremity condition, and the left knee conditions were related to her work injury. In support of that argument, she presented the opinion of Dr. Wunder. However, Dr. Wunder did not point to any specific errors in Dr. Ginsburg's causation analysis. Dr. Wunder reluctantly conceded on cross examination that his opinions with regard to causation of the left knee and right upper extremity conditions were differences of opinion. However, with regard to the left knee, Dr. Wunder persisted in the opinion that the left knee condition was a rateable condition for which Claimant received a 0% impairment.

Overcoming the DIME with Regard to Impairment

24. Dr. Ginsburg, the DIME physician, opined Claimant had a 20% whole person impairment arising out of her cervical condition. The rating arose from a Table 53(II)(D) rating of 9% whole person impairment for the multi-level disc lesion and 12% whole person impairment for range of motion loss. He opined the date of maximum medical improvement (MMI) was December 1, 2014.

25. While Dr. Edmonds' impairment rating of 23% whole person was higher than the DIME, she concurred with a 9% whole person rating for Table 53(II)(D), but found 15% whole person impairment for range of motion loss.

26. Dr. Wunder provided an impairment rating of 26% whole person impairment. His opinion was based on a cervical condition (22% whole person impairment) and an exacerbation of the right wrist condition (8% scheduled impairment). Discounting the right wrist impairment, the sole difference between Dr. Wunder's cervical impairment and the Division IME's opinion is with regard to an additional rating under Table 53(II)(F); Dr. Wunder does not explain in his report how that rating was arrived at, nor did he give an opinion regarding why that rating was incorrectly omitted by the DIME physician.

27. Claimant did not overcome the DIME with regard to causation of the right wrist, thus there can be no impairment for a right wrist condition. The ALJ finds Claimant has not overcome the DIME with regard to impairment arising out of any right wrist condition. The ALJ finds the opinions of Dr. Ginsburg, Dr. Cebrian, and Dr. Edmonds to be more persuasive than that of the opinion of Dr. Wunder.

28. The ALJ also finds that in Claimant's argument to overcome the DIME with regard to cervical impairment, Claimant merely presented a different medical opinion. Claimant did not present significant evidence regarding any error made by Dr. Ginsburg in his impairment rating. Therefore, the ALJ finds Claimant has not overcome the DIME with regard to cervical impairment. In this regard, the ALJ credits the opinion of Dr. Ginsburg, which is supported by Dr. Edmonds and Dr. Cebrian.

29. The ALJ finds that Claimant reached MMI on December 1, 2014, with a 20% whole person impairment arising out of her cervical condition. Claimant failed to sustain her burden of proof to establish by clear and convincing evidence that the DIME physician is most probably incorrect with regard to causation and impairment rating.

PTD

30. Claimant's job history includes accounting work, bookkeeping, paralegal work, performing work as a title clerk at a car dealership, handling the business side of a self-owned business for 10-plus years, performing payroll services, and transcribing and managing a police substation in Fort Lupton, CO.

31. Claimant's job at Employer, prior to her injury, was an office job, where most of the day was spent at a desk typing and answering phones. Additionally, Claimant has significant managerial/supervisory skills; Claimant managed four employees while working for the employer and managed thirty-five employees in a business she operated with her husband for ten years.

32. Claimant is qualified to work in sedentary jobs. Claimant's prior jobs as a bookkeeper, office worker, and legal assistant were all sedentary jobs according to the Dictionary of Occupational Titles. Claimant has good transferable skills for other professions/jobs. Claimant is considered to be in a skilled classification of work.

33. Prior to Claimant's placement at MMI for the work injury, Dr. Edmonds referred Claimant to a functional capacities evaluation (FCE). That FCE was performed over a two day period, on November 21, 2014, and December 4, 2014. That exam reached the following conclusions:

- Claimant was able to sit unrestricted during the intake interview for 85 minutes;
- Stationary standing was limited to 12 minutes prior to a positional change, i.e. walking, in a 30 minute test;
- Walking restricted to 4 minutes 45 seconds; and

- Lifting in the light work classification category (20 pounds from 11.5" to knuckle, 17.5 pounds knuckle to shoulder, 12 pounds shoulder to overhead, and 100 foot bilateral lift carrying 15 pounds).

34. Having reviewed the November 21, 2014, and December 4, 2014, FCE, Dr. Edmonds, the ATP, indicated the sole restriction on Claimant's work was a limitation to a six-hour work day.

35. Dr. Wunder did not assign permanent work restrictions contemporaneous with Claimant's placement at MMI. Rather, almost a year later, on August 10, 2015, Dr. Wunder opined Claimant should have a 10 pound lift/push/pull limitation on an occasional basis and 5 pounds frequently. He also limited Claimant's use of the right hand to occasional use.

36. On October 12, 13 and 14, 2015, Claimant underwent a second FCE at Starting Points, at the request of Claimant's attorney. That FCE concluded Claimant had the ability to lift up to 10 pounds, should take "micro-breaks" during her day, and should be limited to 4 hours of work per day. No physician has adopted the October 2015 FCE. Dr. Wunder specifically rejected the four hour limitation provided by the Starting Points FCE.

37. Dr. Wunder issued a second opinion regarding restrictions on November 12, 2015. There, he noted that many of the restrictions identified by the Starting Points FCE would not be related to the work injury. Specifically, he opined many of the restrictions, including the bending, crouching, squatting, kneeling, and crawling restrictions are in regard to Claimant's longstanding low back and knees problem and are not related to her work injuries.

38. Dr. Cebrian opined that Claimant's claim-related permanent work restrictions were no lifting, pushing, or pulling over 20 pounds. He also opined there would be no requirement for time limitations arising out of the work injury.

39. The Starting Point FCE occurred on October 12-14, 2015; therein, there is no mention of right hip pain. Ms. Montoya performed her vocational evaluation on October 21, 2015. At the time of her interview, Claimant had been taken off work by Dr. Clark for two weeks for an acute onset of AVN/hip pain. Claimant reported to Ms. Montoya that the week prior to the interview, she did not work several days because of this hip pain. Claimant alleged at the hearing that her right hip condition had very little impact on the Starting Point FCE because in the couple weeks prior to that FCE, her hip symptoms resolved. Claimant's testimony is not credible.

40. Despite Claimant's testimony, the record establishes that Claimant sought right hip treatment with Dr. Clark on October 15, 2015, the day after the FCE. Dr. Clark noted that Claimant had a limp and has been unable to work due to hip pain. Dr. Clark noted that activity modification had failed. On October 29, 2015, Dr. Clark reported that

Claimant was unable to stand for a couple of minutes and able to walk about a block before the onset of severe pain.

41. Mr. Blythe, Claimants vocational expert, testified he was did not know about the severe hip problem and he was not aware of any work absences arising out of that problem. Despite not knowing about the hip and its timing of symptoms, Mr. Blythe testified he gave the Starting Point FCE more weight than the FCE performed in 2014.

42. Dr. Cebrian opined that, at the time of the Starting Point FCE, Claimant was being evaluated for severe right hip pain that he opined would significantly impact Claimant's performance on testing and her reported pain levels. Dr. Cebrian testified this condition invalidates the Starting Point FCE and potentially explained the differences in the Starting Point FCE relative to the 2014 FCE. .

43. Ms. Montoya also questioned the Starting Point FCE because Claimant was still symptomatic for the hip and undergoing care and treatment for that condition. She testified it was difficult to separate out the implications of the hip pain and mobility from the other issues examined by the FCE.

44. Ms. Montoya credibly testified the 2014 FCE correctly allowed for a light classification of work, lifting 20 pounds occasionally and that the definition of light work, being able to materially handle (lift) up to 20 pounds occasionally and 10 pounds or less frequently without limitation of the lifting level.

45. Mr. Blythe's opinions regarding Claimant's employability were found less credible than the opinions of Ms Montoya. Based on the inconsistencies in Mr. Blythe's testimony and report, the ALJ finds and determines that his testimony and report are not credible.

46. Ms. Montoya opined in her report that Claimant was able to work within the restrictions put forth by Dr. Edmonds, allowance of six hours per day. Ms. Montoya opined the ongoing job with Employer, performed until December 2015, was appropriate for Claimant as the job was sedentary, and there was no physical reason Claimant could not continue at six hours per day as recommended by the ATP. Ms. Montoya similarly opined the work restrictions as proffered by Dr. Cebrian and Dr. Wunder would allow Claimant to continue her work with the employer. Ms. Montoya opined that, considering the opinions of Dr. Edmonds, Dr. Cebrian, and Dr. Ginsburg, Claimant maintains the capacity to return to work.

47. Ms. Montoya credibly opined that Claimant would be hired due to her good skill base and because she is a desirable candidate and Claimant will be able to maintain employment. Ms. Montoya further credibly opined that this is because Claimant is working within the restrictions she has been provided, frequent absences and/or breaks will not be hindrances to her continued employment.

48. Ms. Montoya credibly testified Claimant was employable in the following fields: reception, general clerical, and customer service. She testified these types of jobs were readily available in the Fort Collins geographical area. Ms. Montoya testified her opinion was based on the work restrictions opinions issued by the providers, along with consideration of Claimant's relevant vocational background. The ALJ finds Ms. Montoya's testimony that Claimant is employable in her competitive labor market within her restrictions to be credible and persuasive. In so finding, the ALJ finds Ms. Montoya's employability opinion to be more credible and persuasive than that of Mr. Blythe. Claimant has not met her burden to establish that she is PTD as the result of her July 16, 2012 work injury.

49. It is found that Claimant's continued employment with Employer was not sheltered employment. Claimant worked within her work restrictions as assigned by Dr. Edmonds from the date of maximum medical improvement (MMI) December 1, 2014, until mid-December 2015. Claimant, in her post-MMI work, earned approximately $38,000 per year and maintained her pre-injury job title. Claimant testified that the reason she stopped working for Employer in December 2015 was because she thought her workers' compensation claim settled and that as part of that settlement she agreed to resign. Claimant did not return to Employer after December 2015 to try to work again.

50. Ms. Montoya credibly testified that the job Claimant was performing post-MMI for the employer was not sheltered employment. She testified that she came to this conclusion because (1) Claimant was still performing the work tasks that were required for her position, (2) Claimant was still performing needed work tasks, and (3) the actual work performed, clerical and customer service work, is available in the Fort Collins labor market. Claimant was actually productive during this post-MMI employment and Ms Montoya learned that she did not have excessive or frequent absences.

51. Ty Hendrickson was Claimant's supervisor from July 2012 until July 2015. He testified credibly at hearing. The following is found that in the position post-MMI with Employer: Claimant arranged her schedule given her six-hour-work restriction and that Claimant would schedule her medical appointments around that limitation; Claimant's hour limitation was not a problem because in a call center all employees report at different hours, so there was flexibility; Claimant had average productivity between December 2014 and July 2015 on par with other employees; Claimant performed the same job duties as all other coordinators for the Employer; and Claimant could have continued her job had she not resigned in December 2015.

52. Dave Mueller, Claimant's supervisor from September 2015 through December 2015, testified credibly at hearing. It is found that Claimant's performance during that time was similar to that of other employees and, if Claimant did not cease her employment in December 2015, she would still be working for Employer.

53. Based on the totality of the evidence, the ALJ finds that Claimant failed to establish by a preponderance of the evidence that she is unable to earn any wages. Therefore, it is found that Claimant is not permanently totally disabled.

Overpayment

54. Claimant was originally placed at MMI by Dr. Edmonds on December 18, 2014, with a rating of 23% whole person impairment. Subsequently, the DIME placed Claimant at MMI on December 1, 2014, with a 20% whole person impairment. On September 15, 2015, Respondents filed a Final Admission of Liability, admitting to the DIME opinions on MMI and impairment rating.

55. Payroll records reflect that as of May 9, 2016, Respondents paid $71,106.18 in combined TTD, TPD, and PPD benefit payments. The Final Admission of Liability, dated September 15, 2015, admits to a total of combined TTD, TPD, and PPD benefit in the amount of $78,482, consistent with the benefit cap under Section 8-42-107.5, C.R.S.

56. Respondents concede that any overpayment initially incurred due to the filing a Final Admission of Liability after the placement of MMI has been recouped. The ALJ finds that no overpayment exists.

Disfigurement

57. As a result of Claimant's July 16, 2012, work injury, Claimant has a visible disfigurement to the body consisting of an one and one half inch long and one fourth inch wide neck scar. Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a

conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936).

Overcoming the DIME

3. A DIME's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Indus. Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates it is "highly probable" that the DIME's findings are incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME's opinion, "there must be evidence that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (I.C.A.O., Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (I.C.A.O., July 19, 2004).

4. Claimant failed to overcome the DIME with regard to causation or impairment by clear and convincing evidence. Claimant presented the opinion of Dr. Wunder, which was merely a difference of opinion from the DIME on both causation and impairment. Dr. Wunder's opinions are insufficient to meet the clear and convincing standard required for the claimant to overcome the DIME. *Javalera*, *supra*. In reaching this conclusion, the ALJ credits the persuasive opinions of the DIME, which was supported by the totality of the medical record and the opinions of Dr. Edmonds and Dr. Cebrian.

Medical Benefits for Unrelated Body Parts

5. The need for medical treatment may extend beyond the point of MMI, where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent deterioration of his condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). The claimant must prove entitlement to maintenance medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915 (Colo. App. 1993).

6. As found, Claimant's right wrist condition, right ulnar condition, and left knee condition are not related to the work injury pursuant to the opinion of the DIME. Claimant's request for maintenance medical benefits, including the knee brace and physical therapy, for these body parts is denied.

Maintenance Medical Benefits for Claimant's Cervical Spine Injury

7. The claimant must prove entitlement to maintenance medical benefits for her cervical spine injury by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.*, *supra.* Claimant failed to establish by a preponderance of the evidence that maintenance medical benefits are warranted. Dr. Cebrian credibly opined that maintenance medical care was not reasonably necessary or related. Dr. Edmonds credibly opined that a minimal amount maintenance care would be required for one year following Claimant's placement at MMI on December 18, 2014.

8. Claimant specific requests for a TENS unit for the cervical spine pain and compounded topical pain medications was addressed by Dr. Cebrian who credibly opined that the TENS unit was not reasonably necessary or related maintenance medical treatment and compounded pain medications are not recommended by the chronic pain guidelines.

9. Accordingly, it is concluded that Claimant's claim for maintenance medical benefits for her cervical injury is denied.

PTD

10. PTD is defined as the inability to earn "any wages in the same or other employment." Section 8-40-201(16.5)(a), C.R.S.; *Christie v. Coors Transportation Co*., 933 P.2d 1330 (Colo. 1997). Under this statute, a claimant is not PTD if he is able to earn some wages in modified, sedentary, or part-time employment. *McKinney v. Indus. Claim Appeals Office,* 894 P.2d 42 (Colo. App. 1995). *T*he claimant has the burden of proof to establish PTD by a preponderance of the evidence. The question of whether the claimant has proven PTD is a question of fact for resolution by the ALJ*. Id.* A claimant is required to prove a direct causal relationship between the industrial injury and the resulting PTD, which necessitates a determination of the nature and extent of her residual impairment from the industrial injury. *Seifried v. Indus. Comm'n,* 736 P.2d 1262 (Colo. App. 1986).

11. In determining whether the claimant is unable to earn any wages, the ALJ may consider a number of "human factors." *Christie*, *supra*. These factors include the claimant's physical condition, mental ability, age, employment history, education, and the "availability of work" the claimant can perform. *Weld County School Dist. RE-12 v. Bymer,* 955 P.2d 550 (Colo. 1998). Another human factor is the claimant's ability to obtain and maintain employment within his physical abilities. *See Professional Fire Protection, Inc. v. Long, 867 P.2d 175 (Colo. App. 1993).*

12. In this case, as found, Claimant failed to sustain her burden of proof to establish that she is PTD as a result of the admitted work injury. The testimony of Dr. Cebrian, and a review of the medical records, is persuasive that Claimant's permanent

work restrictions are limited to the cervical spine and would permit a full range of sedentary work, which is the type and kind of work she performed prior to the work injury. Additionally, based on the credible and persuasive opinions of Ms. Montoya, Claimant is able to earn wages in her geographical labor market of Fort Collins and within her work restrictions. *Bymer, supra*.

Disfigurement

13. Pursuant to Section 8-42-108 (1), C.R.S., Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation.

ORDER

It is therefore ordered that:

1. Claimant failed to overcome the DIME with regard to causation or impairment. Claimant is at MMI as of December 1, 2014, with a whole person impairment of 20%. The right upper extremity, ulnar or wrist, and the left knee complaints are not related to the work injury of July 16, 2012.

2. Claimant failed to establish an entitlement to post-MMI maintenance medical benefits to treat her left knee condition, her right wrist condition, or her right ulnar condition. Claimant's request for medical benefits for those body parts is denied and dismissed with prejudice.

3. Claimant failed to establish that she is permanently and totally disabled as a result of the July 16, 2012, work injury. Claimant's claim for permanent total disability benefits is denied and dismissed with prejudice.

4. Insurer shall pay Claimant $500.00 for her disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

5. The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That

you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

STIPULATION

1. At the time of the hearing the Claimant's Average Weekly Wage (AWW) was still in dispute. Subsequent to the close of the hearing, the Respondent agreed and thus the parties stipulate that the Claimant's AWW prior to COBRA is $982.66 and subsequent to the inclusion of COBRA, beginning on September 1, 2016, is $1,076.13.

ISSUES

The issues for determination are:

1. Whether the Claimant proved, by a preponderance of the evidence, that he suffered a compensable injury in the course and scope of his employment on February 1, 2016.

2. If the Claimant proves he suffered a compensable injury, whether the Claimant proved, by a preponderance of the evidence, that he is entitled to temporary total disability indemnity benefits.

3. If the Claimant proves he suffered a compensable injury, whether the Respondents proved, by a preponderance of the evidence, that the Claimant is responsible for his termination of employment and resulting wage loss.

FINDINGS OF FACT

1. The Claimant was employed in the commercial bakery operated by Employer as a bread molder for freezer bread. The Claimant testified that he would "tap" on the bread loaves going by to top them with flour or other toppings and make sure that they pass by correctly on the conveyor belt. The Claimant testified that after the dough passed by him it would travel by conveyor belt to the freezer. The Claimant's normal station is about 40 meters away from where an incident of bread falling off an overhead conveyor belt occurred.

2. The bakery has overhead conveyor belts that transport loaves of raw bread dough. On February 1, 2016, the conveyor belt was not functioning properly and bread dough fell in pieces from the conveyor belt and then through the catch tarp beneath the conveyor belt to the floor below.

3. The Claimant and a coworker went to pick up the dough off the floor after the overhead conveyor belt was shut down. As the store video of the incident shows,

the dough had accumulated into one large piece which would stretch several feet and eventually break into two pieces. The dough was stretchy and it would drape on the arm of the co-worker and on the sides of a disposal bin as the Claimant and the co-worker lifted the dough into the bin. The Claimant did not cut the dough contrary to what he later reported to Dr. Sadie Sanchez. Rather, he pulled the stretchy, pliable dough up from the ground and put it into the bin. While the Claimant and the co-worker were picking up the dough, the conveyor belt was accidentally restarted. Another piece of dough fell off the conveyor belt and through the chute onto the back of the Claimant around his shoulder/neck area as he was bent over. The Claimant had started his shift at 5:30 p.m. This incident occurred approximately one hour later, around 6:30 p.m.

4. After the dough struck the Claimant, store video of the incident shows that the Claimant reached behind his neck with his arm and touched the back of his neck. He then proceeded to pick up more dough from the floor and place it in the bin, and then push bin under the chute where the dough had fallen from. To the bakery's operations manager, Duane Perea, from the video it appeared that when the Claimant reached behind his back, he was cleaning dough or flour from the back of his neck. Mr. Perea testified that the dough that fell would have been covered with a dusting of flour.

5. The Claimant admitted that he did not see the piece of dough that actually struck him because his head was down. Despite not having seen the dough, he reported to Dr. Sadie Sanchez that it consisted of 10 or more loaves of bread, and that one loaf weighed 1.2 lbs., so the entire piece of dough weighed 10 to 20 pounds (Respondent's Exhibit C-1). The Claimant also told an independent medical examiner, Dr. John Raschbacher that one loaf weighs 1.2 pounds and that 10 or more loaves fell on him. (Respondent's Exhibit B-2). However, the video showed what appears to be one loaf of dough, or possibly two loaves combined, fall on the Claimant. Subsequent pieces of dough that fell appeared to be the size of one loaf of bread.

6. Duane Perea, the operations manager, watched the video of the February 1, 2016 incident. He testified credibly that he estimated that two pieces of dough struck the Claimant. The weight of two loaves of bread dough is 38.92 oz. (this would be just about 2 lbs. 7 oz). Mr. Perea concluded it was just two pieces of dough based not only on what he saw in the video, but also on the fact that the catch tarp had previously been cleared out when a rather large blob of dough had fallen shortly before the incident, causing the conveyor belt to be turned off. There was not enough time after the conveyor belt was restarted for enough dough to collect to comprise 10 or more loaves (also see Respondent's Exhibit J-4).

7. The Claimant told Dr. Sadie Sanchez on February 5, 2016 that the conveyor belt from which the bread dough fell was about 30 feet above the floor (Respondent's Exhibit C-1). However, Duane Perea measured the distance between the floor and the bottom of the chute, or tarp, at 10 ½ feet. Mr. Perea estimated that the dough fell six feet when it struck the Claimant as the Claimant was bending over. Respondent's Exhibit J-1 and J-2 are photographs that show that the distance between the bottom of the chute and the floor is approximately 10 feet (the individual in the

photograph is 6’1” tall), so the distance the dough would have fallen before striking the Claimant would probably have been around six feet, as estimated by Mr. Perea.

8. The Claimant testified at the hearing that the temperature of the dough was “a lot less” than room temperature. The colder the dough, the more it weighs, he said. Cold implies the dough tended to be stiffer and harder, but the store video clearly showed the dough to be soft and pliable when the Claimant and a co-worker were picking up a large piece of dough that had fallen to the floor, and the dough was so malleable that the Claimant and the co-worker had a difficult time picking it up because it stretched out as they were pulling it up from the floor.

9. The Claimant’s supervisor, Jesse Gonzales, testified that the dough was “freezer bread” which is 69 to 71° F as compared to “normal bread dough” which would be 76 to 78°F. When the dough is on the conveyor belts moving through the bakery, it is not actually frozen. Duane Perea also testified that the dough is very pliable, so if it strikes something, “it’s just going to form itself around the – whatever it strikes.”

10. The Claimant continued working after the dough strike incident for about five hours, taking a thirty-minute break during that five hour period.

11. Around 11:30 p.m., the Claimant reported the incident to his supervisor, Jesse Gonzales. The Claimant stated that he reported to Mr. Gonzales that he had sustained an injury, but Mr. Gonzales testified that the Claimant reported only that an incident happened in which he was struck by a piece of dough, and that he didn’t require any medical treatment. The Claimant told Mr. Gonzales that he was reporting the incident after speaking to a couple of associates who said that he should reported it to his supervisor. Mr. Gonzales understood the Claimant to be reporting the incident only because reporting of incidents was required by the Employer’s policies. Mr. Gonzales gave the Claimant a list of doctors as “standard protocol… That’s our best practice. That way they are informed, you know, if they need to a later date … seek medical treatment, they can do so.” This report is called an “FYI, for your information.” Mr. Gonzalez credibly testified that the Claimant did not indicate in any way that he was having pain or problems as a result of the incident when he reported the incident to Mr. Gonzales. Mr. Gonzales specifically denied offering the Claimant pain medication or telling him to take the rest of the shift off. He also denied instructing the Claimant to go to the emergency room. The Claimant never indicated to Mr. Gonzales that he thought he needed to go to the emergency room.

12. After reporting the incident, the Claimant went to the Denver Health Medical Center’s emergency department for medical treatment on February 2, 2016. He complained of neck pain. The MRI and CT scans performed that day were normal. He was diagnosed with a neck strain and was advised that most patients are back at work or school within a few days. Typically, the report said, complete healing takes about 2 to 3 weeks (Respondent’s Exhibit D-1).

13. The Claimant told Dr. Sanchez that he “was *sent* to Denver General ER,” but in his testimony, the Claimant waivered on this, stating that the supervisor gave him a list of medical providers but the supervisor did not “have to decide” whether he should go to the emergency room. He testified that Dr. Sanchez “could be” wrong when she said that the Claimant’s supervisor sent him to the emergency room.

14. The Claimant went to a different emergency department, at the University of Colorado Hospital, the following day, February 3, 2016. The diagnosis was “neck pain.” (Respondent’s Exhibit E-1). The Claimant did not explain why he went to two different emergency rooms on two consecutive days.

15. Around February 2 or February 3, Mr. Gonzales briefly observed the Claimant in the hallway at the bakery. He observed the claimant in a C-collar, “kind of scaling the wall, walking very disoriented, almost like he was intoxicated… To me he just extremely exaggerated the situation.” By scaling the wall, Mr. Gonzales further testified that he meant that the Claimant was “dragging along (the wall) to help keep him standing,” much like an intoxicated person would look if they been drinking or if someone was on medication where “they’re kind of disoriented and stumbling about.”

16. The Claimant reported to Dr. Sanchez on February 5, 2016 that he had 10/10 pain in his head, neck, shoulder and back along with left-sided arm and leg weakness (Respondent’s Exhibit C-1). However, Dr. Sanchez’s physical examination, under the title “musculoskeletal,” reports that the Claimant’s loss of motion was negative, muscle weakness, extremity pain, back pain was negative (Respondent’s Exhibit C-2). Dr. Sanchez said that the Claimant was walking “with a small, very deliberate steps and not moving his upper body.” He demonstrated “very limited ROM of neck (patient reports pain in all directions), patient reports pain in neck and upper back with a very light palpation to the top of his head, diffuse TTP of posterior neck, no spasms noted” (Respondent’s Exhibit C-2). Dr. Sanchez noted that the MRI and CT scan of the cervical spine were negative (Respondent’s Exhibit C-3).

17. When he testified, the Claimant contended that as a result of this incident, he sustained an injury to his entire head except for his face. The alleged injury includes a constant headache on the top of his head and both sides which keeps him from “human emotion,” cooking, doing laundry, or driving, although he admitted that he had since driven a few times. On a scale of 1 to 10, the Claimant rates his pain as a 9. The Claimant stated that because he has not had any treatment, “I don’t think there is any reason for it to get any better,” which is contrary to what the University of Colorado Hospital emergency room report stated. The Claimant did not testify that he had left side pain and left leg weakness, unlike what he had initially reported to Dr. Sanchez.

18. Dr. Sanchez was able to review the store surveillance video before seeing the Claimant again on February 5, 2016. She stated that the incident as described to her initially by the Claimant was not consistent with what she saw in the store video (Respondent’s Exhibit C-3). She noted that the conveyor belt appeared to be a few feet above the Claimant’s head, not 30 feet as reported by the Claimant. She noted a

disagreement between the bakery manager and the Claimant regarding the weight of the dough. Dr. Sanchez felt that the appearance and size of the dough on the surveillance was more consistent with the Employer's description. Further, Dr. Sanchez said, the video depicted the Claimant stepping away from the conveyor and rubbing the right side of his neck with his right arm for a few seconds. When more employees entered the area, the Claimant appear to repeatedly motion using his right arm to the conveyor to explain what happened. It appeared that he even reenacted the incident with exaggerated movements. Dr. Sanchez said that the Claimant exhibited no pain symptoms at that point and continued to push a bin on rollers with both arms and pick up more dough from the floor. Based on the video and imaging results, Dr. Sanchez did not believe that the incident correlated with the Claimant's complaints. She noted it was unclear how an alleged injury to the right side of the Claimant's neck would cause left-sided weakness, especially of the lower extremity. However, Dr. Sanchez found that the Claimant may have sustained a right-sided neck strain (Respondent's Exhibit C-3).

19. Dr. Sanchez stated that the Claimant did not need to use the cervical collar, and it was emphasized that the collar may increase pain and weakness his muscles (Respondent's Exhibit C-4).

20. On February 8, 2016, Dr. Sanchez initially placed the Claimant on restricted duty consisting of no lifting, carrying, or pushing/pulling greater than 10 lbs. (Claimant's Exhibit 5, p. 33). On February 9, 2016, Dr. Sanchez wrote that the restricted duty would end on February 15, 2016 (Respondent's Exhibit C-7).

21. The Claimant testified that he returned to light duty work on two consecutive days following the date of injury, working two hours the first day and one hour the second. His job was to ensure that each bag of bread that passed by on a conveyor belt had a clip or tag on it, and to remove the any bag of bread that did not have a clip on it. He could place the bag of bread without a clip in the trash or return it to get tagged. He said this required bending, grabbing, and walking 6 to 7 feet to the 4 foot high trash can, and grabbing from two conveyor belts at the same time. He said this job caused him considerable pain.

22. In contrast to the Claimant's description of the light duty work, Duane Perea testified that the modified duty offered to the Claimant consists of quality inspection. It requires the associate to sit in front of two conveyers that are converging and watch individual bags of bread run by. If an individual loaf of bread is not in good shape or if it doesn't have a closure tag on it, the associate is supposed to take the bag off of the line and either put it in a basket for others to deal with or throw it away if it's too "disheveled." One bag of bread weighs 1.5 lbs. The basket in which the associate puts the loaf of bread is raised to whatever level is comfortable for the associate. If the bread is to be thrown away, the trash container in which the bread is placed can be located next to the associate, so the associate can remain seated while throwing the bread away. The position does not require any overhead reaching, reaching in general, or bending. Other injured workers have successfully worked in this modified position, and Mr. Perea has never had another worker complain that this modified work causes

pain. Mr. Perea also disputed the Claimant's testimony that the Claimant actually attempted to perform the modified duty. Mr. Perea testified on cross-examination that when the Claimant was told what the modified job was, the Claimant said he did not feel that he could do it and he left the bakery and asked to go see the doctor again.

23. In any event, after the two times the Claimant was asked to perform light duty work, he did not return to work again after either refusing to perform light duty or failing to be able to do the requested work.

24. Dr. Raschbacher testified that if the Claimant truly had a neck strain, he did not see any reason why the Claimant could not have tolerated the modified duty that was offered, "particularly as he has no lesion, he has no anatomic abnormality." Dr. Raschbacher further testified that the Claimant never actually needed any restrictions. He testified that he could understand how Dr. Sanchez may have imposed restrictions at the time as appropriate, based on the information and presentation she had. However, considering all of the information now available, Dr. Raschbacher opines that there was not a need for work restrictions based on what is known about the Claimant's condition.

25. The Claimant was terminated for cause on August 8, 2016 based on the following events. Mr. Perea testified that the Claimant could have protected his job by applying for short-term disability and also for leave under the Family Medical Leave Act. The Claimant was required by both union and employer policies and procedures to fill out the paperwork for a medical and/or personal leave of absence. Zach Burgesser, the safety manager, tried multiple times, unsuccessfully, to contact the Claimant about this. The human resources leader, Luke Clayton, tried unsuccessfully to reach the Claimant twice by telephone so that the Claimant could apply for leave under these policies. The second time, the Claimant's phone was out of service, so Mr. Clayton called the Claimant's sister, who was listed in the employer's records as a back-up contact, and asked her to tell him that he needed to complete the paperwork. There was no response from the Claimant, and the Claimant made no contact with the employer.

26. Respondent had absentee policy that if an associate does not call in an absence for three days, the associate will be terminated for cause. The claimant was trained on both the "Met-Life" short term disability policy and the absentee policy every year. The claimant missed more than three days from work without calling in. Thus, when the employer was not able to communicate with the Claimant or obtain the necessary applications for short term disability, leave under the Family Medical Leave Act, or a personal leave of absence, the Employer decided to enforce the attendance policy. Mr. Clayton sent the Claimant a letter on August 8, 2016, advising him that he was terminated for violation of the attendance policy; namely, three incidents of "No Call, No Show." The Claimant's failure to provide the necessary paperwork for a leave of absence, which would have protected his job, was the underlying reason that the Respondent finally decided to enforce the absenteeism policy (Respondent's Exhibit G).

27. The Claimant wore a hard cervical collar to the hearing, with a scarf wrapped around it because he testified that “I don’t like people asking me questions,” although the hard collar was clearly visible under the scarf. He testified that takes the collar off only when he goes to sleep. The Claimant admitted that Dr. Sanchez told him to remove the cervical collar, but he refused and testified that “since she denied my case I don’t think I should follow up with what she tells me.”

28. Dr. John Raschbacher, a specialist in occupational medicine, conducted an independent medical examination on May 20, 2016. When he wrote his report of the same date, Dr. Raschbacher had not seen the store video or heard the testimony of the lay witnesses. As he did for the hearing, the Claimant also wore a hard cervical collar, jacket, and winter scarf around his neck over the collar to Dr. Raschbacher’s examination. (Respondent’s Exhibit B-4). Dr. Raschbacher stated that the collar was not helpful. Moreover, he noted, the Claimant was wearing a hard collar rather than a soft collar. A hard collar is usually only provided post-operatively or for a major trauma. Emergency departments do not usually give out hard collars unless imaging has identified a fracture or a reason for immobilizing the cord. Further, the collar is counterproductive by restricting motion and promoting muscle atrophy. Thus, Dr. Raschbacher said, this this collar signified pain behavior rather than a medical condition.

29. During Dr. Raschbacher’s examination, the Claimant appeared “to make a fairly minimal effort in testing for pinch grip, power grip, finger abduction and adduction.” On palpation, the Claimant told Dr. Raschbacher not to press, and he clutched his trapezius muscle. This occurred even with very light touch. The pain was diffuse, per the Claimant’s subjective report, but there was no spasm or objective finding” (Respondent’s Exhibit B-3). Dr. Raschbacher noted that the Claimant even complained of trapezius pain when wrinkling the forehead on cranial nerve motor testing, and the Claimant grabbed his trapezius muscle with his hand from the opposite side (Respondent’s Exhibit B-4). In his report, Dr. Raschbacher stated that he did not see any clear evidence that the Claimant did in fact suffer an industrial injury. He noted that the Claimant’s “presentation was marked in terms of its non-physiologic nature. (The Claimant’s) range of motion at cervical spine was quite minimal. His pain behaviors including wearing a hard cervical collar and wearing a winter scarf in the summer were fairly remarkable…. His presentation is grossly inconsistent with a cervical strain or contusion injury and is not explicable on a physical or physiologic or medical basis” (Respondent’s Exhibit B-4).

30. Dr. Raschbacher also testified at the hearing. He testified that the Claimant essentially declined that part of the examination involving palpation which was “grossly unusual.” Dr. Raschbacher also noted that the Claimant’s range of motion was “almost nil. Forward flexion 4° net, extension 4° net, right lateral bend nil, nothing. Left lateral bend, four over three, one degree. This is virtually an immobile neck. And there’s just no -- there is nothing in terms of the lesion or anatomy that would explain that. He also had multiple other things, the grip strength was 15 pounds and 10 pounds which (I) could not explain, shoulder motion 94° on the right instead of 180. 97 degrees on the

left instead of 180…. There is no medical explanation for his presentation." He testified that normal grip strength ranged from 80 to 130 pounds depending on the individual. Dr. Raschbacher could not explain why the grip strength was different between the right and left hands or why the Claimant would have such a limitation and strength with the type of injury he was alleging. Normal shoulder range of motion is 180°, so Dr. Raschbacher could not explain why the Claimant's shoulder range of motion was so limited in the absence of any lesion in the shoulder. Dr. Raschbacher also testified that the Claimant's headache which covers his entire head except for his face did not fit any pattern that he was able to discern.

31. Dr. Raschbacher stated that Dr. Sanchez's initial conclusion that part of the Claimant's complaints were work-related was reasonable based on all the symptoms the Claimant reported to her at the time, his visits to the emergency room, and the description of the dough weighing 10 to 20 pounds and falling from 30 feet. However, with the information that Dr. Raschbacher now has in its entirety, it no longer makes sense to conclude that the Claimant ever sustained an actual injury in the February 1, 2016 event at work.

32. Dr. Raschbacher subsequently viewed the store video at the hearing and listened to the testimony of the other witnesses at the hearing. Dr. Raschbacher testified that based on the video and other information, his best understanding of the incident was that two soft loaves of bread dough, with a temperature of 70°, fell approximately 6 feet onto the back the claimant's head and neck. He understood that the dough weighed 38-39 oz., and that it was soft, not frozen or partially frozen. With the additional information, Dr. Raschbacher testified that the event on February 1, 2016 would not have been expected to cause an actual injury, and that it was not likely that it did cause an actual injury.

33. Other reasons that Dr. Raschbacher offered for determining that the Claimant likely did not sustain an injury was the Claimant's "gross magnification of the reported mechanism of injury, the fact that he's exhibiting fairly pronounced pain behaviors, particularly the wearing a hard collar at this juncture, which I would describe not as treatment, but as a pain behavior (and) the fact that he's reporting no improvement over a significant period of time, even though there's been no anatomic disruption, no injury. These things when you put them together in a package I think have a fair amount of force in addition to just considering the mechanism of injury."

34. Finally, when Dr. Raschbacher was asked how he knew the Claimant did not even have a minor injury such as a neck strain that may have been masked by the Claimant's exaggerations, Dr. Raschbacher stated that he would have to "retreat to the medical likelihood." While, initially the Claimant's complaints may have made some sense to Dr. Sanchez or the emergency department doctor, Dr. Raschbacher said he has now seen the mechanism of injury, the Claimant's overall presentation, and things that don't make sense medically. So, he said "I'm extrapolating back to say well if these things aren't true or likely now when were they ever true or likely....I think that that

begins if you take a critical eye and go back and look at the described mechanism of injury."

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1), The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. Respondent bears the burden of establishing any affirmative defenses. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201 (2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Compensability

A claimant's right to compensation initially hinges upon a determination that the claimant suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. C.R.S. § 8-41-301. Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009). It is the burden of the claimant to establish causation by a preponderance of the evidence. *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). An incident or accident at work that does not result in an injury is not a compensable claim. *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (ICAO March 2, 2002).

The evidence must establish a causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado, 717 P.2d 1000 (Colo. App. 1986).* The weight and credibility to be assigned expert testimony on the issue of causation is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

Compensable injuries are those which require medical treatment or cause disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970). In order to prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment.

In this case, there was an incident, when the piece of bread dough fell on the back of the Claimant's upper back/neck area. However, there is insufficient evidence that this incident actually caused an injury.

The Claimant greatly exaggerated the event itself, initially advising that the conveyor belt from which the bread dough fell was 30 feet off the ground and that at least 10 lbs. of frozen dough struck him from that height. Actual measurements show that the distance between the catch tarp below the conveyor belt (from which the dough fell) and the floor was 10 ½ feet, and that with the Claimant bent over, the dough probably fell about 6 feet. The Claimant insists that at least 10 pounds of dough fell on him, whereas Employer presented persuasive evidence that the video of the incident showed only, at most, the equivalent of two loaves falling, which would weigh 2 to 2.6 pounds. The Employer testified that multiple pieces of dough had already collected and fallen to the ground in a large blob by the time the conveyor belt was shut down, which meant that after the conveyor belt was restarted, there is not a sufficient time for more than a few loaves of dough to collect and fall as the Claimant stood underneath the conveyor belt.

The video of the incident shows that immediately after the Claimant was struck by the piece of dough, he reached behind his neck, either rubbing it or, as Mr. Perea contended, rubbing off flour from the dough. He did not evidence any pain behaviors at that time although he did demonstrate what happened to co-workers with some gesturing. Shortly thereafter, the Claimant proceeded to pick up some more dough from the floor and then wheeled the trash bin under the chute to collect any other dough that might fall. The Claimant did not act like he was injured at that point.

The Claimant then continue to work for the next five hours, taking only his usual half-hour break. He did not report the incident to a supervisor, Jessie Gonzales, until five hours after it happened. There is dispute between the Claimant and Mr. Gonzales as to whether the Claimant actually reported an injury rather than just the incident itself. Mr. Gonzales denies that the Claimant told him he was injured. Mr. Gonzales gave the Claimant a list of doctors to see, as per the employer's protocol, in case the Claimant later thought that he needed medical treatment. Mr. Gonzales did not know that the Claimant left work after the Claimant reported the incident to him, and he did not know that the Claimant intended to go to the emergency room. The Claimant was evasive in his testimony about the conversation he had with Mr. Gonzales regarding the emergency room. The Claimant was not forthcoming with Mr. Gonzales about reporting an injury resulting from the incident of the dough striking him. The testimony of Mr. Gonzalez was found to be more credibly and persuasive than that of the Claimant where there are variations in the testimony.

The Claimant sought medical treatment at two different emergency rooms during the next two days. It is unclear why he went to two different facilities. The first day, Denver Health Medical Center reported that MRI and CT scans were normal, and that the diagnosis was a cervical strain. The University of Colorado Hospital's diagnosis was merely "neck pain." Both of these diagnoses would be based on subjective complaints alone, and therefore, the Claimant's credibility is critical in order to determine if the diagnoses are reliable.

The Claimant came back to work a few days later. Mr. Gonzales observed the Claimant acting in a very exaggerated manner, as if he was intoxicated. The Claimant testified that he attempted to work in modified duty for two hours one day and one hour on the next but that the work caused him too much pain. Mr. Perea stated that the Claimant rejected the offer of modified work on the days he reported to work after the incident and never actually attempted the work. Mr. Perea described the modified work as very light, consisting of pulling loaves of bread from a conveyor belt that had missing tags or were defective in some manner, and placing the bags of bread in either a basket or a trash can, both of which would have been situated next to the Claimant as he remained seated.

When the Claimant was first examined by Dr. Sadie Sanchez on February 5, 2016, he reported not only back and neck pain, but head and shoulder pain and left-sided arm and leg weakness. He said his pain was 10/10. Dr. Sanchez noted that he took "small, very deliberate steps and not moving his upper body." He had "very limited range of motion in his neck (patient reports pain in all directions)," pain with very light palpation to the top of the head and diffuse pain in the posterior neck and back, although no spasms were noted by the doctor. Dr. Sanchez later viewed the store video of the incident and stated that the incident as initially described to her by the Claimant was not consistent with what she saw in the video. Dr. Sanchez did not believe that the incident correlated with the patient's complaints but she said it was reasonable that the Claimant could have right-sided neck/back/shoulder pain only. There was no mention of headaches. The rest of the Claimant's injuries were in question.

On February 9, 2016, Dr. Sanchez noted the Claimant was wearing a soft collar and the Claimant stated he could not hold his head up without it. He would not look directly at Dr. Sanchez and often had his eyes closed during the examination. He complained of memory loss, headaches, and pain in his entire body. Dr. Sanchez noted that his findings were nearly normal and is imaging was negative.

Dr. Raschbacher was of the opinion that the Claimant's presentation was greatly exaggerated and there was no basis for finding that he had been injured whatsoever. Dr. Raschbacher understood Dr. Sanchez's decision to accept a neck sprain as a possibility based on the Claimant's initial subjective reports. However, the fact that the Claimant's behaviors had been so exaggerated for an extended period of time, about six months, with no improvement whatsoever, and the fact that the mechanism of injury was so minimal, Dr. Raschbacher was of the opinion that there was no clear evidence that the Claimant suffered any injury at all as a result of the February 1, 2016 incident. The ALJ finds Dr. Raschbacher's opinion persuasive in this case. Prior diagnoses and treatment were offered based primarily on the Claimant's subjective complaints. In viewing all of the evidence presented, the Claimant's representations to physicians were significantly exaggerated and his testimony at the hearing and his physical presentation was not credible. While physicians relied on the Claimant's earlier representations in good faith, the totality of the evidence now suggests that the physicians were misled by the Claimant's presentation and exaggerated statements regarding the mechanism of injury.

Based on the foregoing, it hereby determined that the Claimant's testimony with regards to critical elements related to the purported work injury on February 1, 2016 is not credible and persuasive. Additionally, his exaggerated presentation to his treating physicians, and when he testified in person at the hearing, further damage his credibility. Given the circumstances, including the inconsistent statements made by the Claimant, and the contrasting and more persuasive testimony of other witnesses, and the lack of objective evidence of actual injury in the medical records, the ALJ determines that the Claimant has failed to meet his burden of proof to establish that he sustained a work injury on February 1, 2016. As such, the Claimant's claims for compensation under W.C. 5-006-280-01 are denied and dismissed.

Remaining Issues

The Claimant failed to prove that he suffered a compensable injury on February 1, 2016 when a small amount of soft dough fell from approximately 6 feet and landed on the back of the Claimant's neck before falling to the ground. The Claimant failed to prove that this incident caused him to require medical treatment or caused a disability that resulted in wage loss due to the inability to work. As such, the remaining issues regarding temporary disability benefits, medical benefits and responsibility for termination are moot.

ORDER

It is, therefore, ordered that:

1. The Claimant has failed to sustain his burden of proving by a preponderance of the evidence that he suffered a compensable injury resulting from work activities on February 1, 2016.

2. The Claimant's claims for benefits under the Workers' Compensation Act of Colorado under case number WC 5-006-280-01are denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 11, 2016

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

The following issues were raised for consideration at hearing:

- Whether Claimant suffered a compensable acute injury and occupational disease.

- Whether Claimant is entitled to medical benefits if her claim is compensable;

- Identification of authorized treating providers; and

- Whether Claimant is entitled to temporary total disability benefits, beginning October 23, 2015, and ongoing.

STIPLATIONS

1. The parties stipulated to an average weekly wage of $879.97.

2. Unemployment benefits were received by Claimant, and the parties stipulate that an offset is appropriate, should there be an award of temporary benefits. The specific amount of unemployment benefits were unknown, and the parties will endeavor to come to an agreement regarding offset, but reserve the issue of the amount of offset for future determination if necessary.

FINDINGS OF FACT

1. Claimant is a 44 year old woman who was working as a production worker for the Employer when she asserts she developed right hand pain and discomfort. Claimant is right hand dominant.

2. On September 14, 2015, Claimant reported to the Employer that she started feeling slight discomfort and pain in her right thumb, hand, and wrist during her work shifts. Claimant testified that her onset was August 6, 2015. In her prior interrogatory responses, Claimant asserted an onset date of September 17, 2015.

3. Claimant began working for the Employer in mid-January 2015, and was engaged in preparing the interiors of wind turbine blades manufactured and sold by the Employer.

4. At the time of onset, Claimant worked in the Blades Assembly department. She worked with a team to create large fiberglass parts to be later assembled into blades for electric windmills. Details of her duties in that position were discussed at hearing. Photographs were used to illustrate the process. The blade parts are very

large. Claimant and those she worked with would use a large mold to create the various parts. The parts were designated alphabetically, and fit together when completed to become the inside of a windmill blade, later covered with a shell.

5. Claimant testified that she normally worked on the "B" mold, which is an upside down "U" shaped. First, a layer of plastic is laid on the mold to assist with later removal of the fiberglass blade part. Layers of fiberglass biax, similar to fabric, are then laid upon the mold one layer at a time. *(examples of fabric biax and scissors shown at hearing and photos of same provided as supplemental Exhibits W-Y)* The fiberglass biax came pre-sized in rolls in "kits" with additional fabric available for use as needed. 8 layers were laid at 5 minutes per layer, and pushed and tucked into place. Each layer was placed over the mold by rolling out the biax fabric and trimmed with scissors as appropriate for each layer. Claimant testified that she used only manual scissors for cutting, which weighed about 1 pound, and were provided for viewing at the hearing. Claimant trimmed approximately 11 meters per day, 5-10 minutes per cut. After all fiberglass layers are in place, a bag is placed over the molded fabric, and air is removed with a vacuum process. Resin is then infused into the fabric. Claimant or another worker carried the buckets of resin to the mold one at a time as the buckets were emptied in the infusion process, 4-5 times per 12 hour shift, 100 feet, comprised of 3 buckets of 20 kilos, 1 of 15 kilos, and 1 of 10 kilos, with breaks in between carrying as dictated by when buckets need to be replaced.

6. Claimant testified that the infusion process took about two hours. A sleeping-bag type of cover is then rolled over the fiberglass blade part on the mold. The fiberglass blade part is then cured. Once cured, the mold was debagged, using hand grip up to 30-60 minutes per shift. When assembly of one part on the mold was completed and infusion began, Claimant would proceed with debagging and finishing another fiberglass part.

7. Claimant testified that she worked 12 hour shifts and 1 ¼ to 1 ½ fiberglass parts were completed by her crew per shift.

8. Claimant credibly testified that she began experiencing pain in her right arm in late spring to her right arm but continued to full-time work.

9. Claimant credibly testified that during the week of August 3, 2015, she spoke twice to her supervisor Jared Becker, telling him she was suffering severe pain in her right arm. When the Claimant was not referred for medical treatment, she sought medical attention from her primary treating doctor, Dr. Sonya Norman, who referred her to Dr. David A. Chavez.

10. A note dated August 26, 2015 from Dr. Chavez documents complaints of left rotator cuff tendinitis and right de Quervains, stating that the pain was "from lifting blades" and had a two-month duration at that point. Dr. Chavez performed an injection which Claimant reported had helped. She stated that her pain had returned after the holiday (Labor Day holiday).

11. Following reporting her injury, and during the month of August, Mr. Becker move the Claimant to "carbon" with regular duty, twelve hours a day. This position required measuring then cutting carbon pieces by manually operating scissors. She then stacked the pieces throughout the day.

12. Claimant was then moved to the "Assembly" section. Work in "Assembly" involved sanding throughout the twelve hour shift, using a hand sander and not automatic electric sanding machines to remove glue applied. The Employer determined that the electric sanding machines would create deformities in the glue on top of the web. In addition, the Claimant was using a hand tool to screw in scrivets.

13. After reporting her claim in writing as work related on September 14, 2015, Claimant was referred to Peak Form Professional, LLC on that same date. The treatment note indicates, "Patient has noted pain in her right wrist forearm and hand slowly developing over the past 3-4 months getting worse in August and really hurting her last week when she went to see her PCP."

14. Claimant saw Dr. Craig Davis on October 14, 2015. His report states, "In early August she developed fairly rapid onset of pain over the radial aspect of her right wrist." He noted that Claimant reported the symptoms to her supervisor but was discouraged from filing a claim. Claimant reported severe activity-related pain and a "grinding" sensation over the dorsal radial aspect of her distal forearm. On physical examination, Dr. Davis observed swelling, he noted tenderness to palpation over the distal forearm, and extreme response to Finkelstein's test, and crepitation. Dr. Davis's impression was intersection syndrome of the right distal forearm. He provided an injection of lidocaine and Depo-Medrol.

15. Claimant reported on October 26, 2015 that the injection only helped a little bit in terms of tenderness, but not in terms of activity related pain, which was unchanged. Another injection was done, she was provided with a brace, topical cream, tramadol and physical therapy.

16. On October 23, 2015, Dr. Carol Ramsey at Peak Performance determined that Claimant could no longer work. On October 27, 2015, Claimant was placed on modified duty that severely limited the use of her right arm. She was also restricted to working eight-hour shifts.

17. Claimant has not worked since October 23, 2015. The Employer did not offer her modified duty after October 23, 2015, and Claimant's position was eventually terminated in July 2016.

18. On November 9, 2015, Dr. X.J. Ethan Moses stated that he had assumed treatment of Claimant after Dr. Ramsey departed from Peak Performance. As the authorized treating physician, he stated, "It appears clear from the notes that there was no specific injury, but rather an insidious onset of pain as the result of repetitive motions." He recommended a work-site evaluation.

19. On November 23, 2015, Dr. Moses discussed his review of the job task analysis with Claimant. Following that discussion and review, his assessment was, "right forearm intersection syndrome with associated swelling and pain, not compensable under the Colorado Division of Workers' Compensation Medical Treatment Guidelines, Rule 17, Exhibit 5." ("Guidelines"). Dr. Moses encouraged Claimant to establish care for her right arm symptoms with her primary care physician.

20. The job duties analysis was performed by Jeanette Hrubes of Peak Form Physical Therapy and Occupational Medicine. The initial analysis was done on November 20, 2015. An addendum was done on February 23, 2016. Ms. Hrubes noted, "Initial job task analysis was performed 11/20/15. Second job task analysis was performed with Sonia Huerta present to make sure that all tasks that she performed during her shifts were captured accurately. There were several additional tasks noted, that were not captured in the first analysis. These will be bolded to assist in identification."

21. Claimant testified that she felt that the job analysis done did not accurately reflect her duties. Specifically, she discussed carrying buckets of resin, gripping to take finished blade forms off molds, cutting hard resin, and the use of manual scissors.

22. Ms. Hrubes testified that during the second job duties evaluation, Claimant was present, and was provided the opportunity to explain her duties. Ms. Hrubes discussed her observations with Claimant in a meeting after Ms. Hrubes watched employees perform Claimant's usual job duties. In the revised job analysis, carrying buckets, gripping, cutting resin, and use of manual scissors were included. Using the threshold standards of the Guidelines, Ms. Hrubes concluded that there were no duties that met either primary or secondary risk factors, including additional duties discussed with Claimant and included in her revised report.

23. Claimant testified that the employees Ms. Hrubes observed did not perform the tasks in the same way that Claimant performed them. She did not use electric scissors as none were available to her; she manually carried the resin buckets rather than using a cart; and she and her co-workers manually lifted the blades rather than having a crane for assistance. In addition, Claimant explained that she held her scissors at a 90-degree angle while cutting in awkward position, and at times, above her head whereas Ms. Hrubes documented use of scissors at an even level.

24. Dr. Moses saw Claimant again on January 5, 2016. His notes indicate that he worked with Claimant to appeal her short term disability denial and to make clear that he felt her condition was not work related. He discussed reviewing the updated job analysis and his continued conclusion that Claimant did not experience a work-related injury.

25. Claimant testified that she has continued treatment with her personal providers, including Dr. Leo, and that he has continued to give her work restrictions.

26. Dr. Allison Fall evaluated Claimant on March 1, 2016. She testified at hearing and was qualified as an expert in physical medicine and rehabilitation and causation under the Cumulative Trauma Conditions Medical Treatment Guidelines. Dr. Fall discussed the history with Claimant. She reviewed the medical records, including the revised job analysis. She listened to Claimant's testimony. Her conclusion after considering all of these facts was that Claimant has not experienced either an acute injury or an occupational disease. Dr. Fall testified that diagnosis in this case was questionable. Her possible diagnosis was 1) right distal forearm pain, possible wrist extensor tenosynovitis versus intersection syndrome based upon medical records, and 2) Psychological issues likely playing a role in persistent symptomology. Dr. Fall explained that she felt that the diagnosis at #1 were a more specific types of extensor tendon disorder of the wrist. Dr. Fall noted that, although Claimant had stopped working for the employer in October of 2015, her complaints continued at the time of her March 1, 2016 evaluation. She testified that this further indicated to her that Claimant's condition was not work related. Claimant, however, testified that her symptoms have improved since she stopped working.

27. Dr. Fall explained that, as a medical professional, she relies upon the Guidelines in her analysis of cumulative trauma causation. She explained the time and expertise that has gone into the creation of the causation guidelines and the algorithmic steps for causation assessment contained in the Guidelines. The thresholds of the primary and secondary risks factors have been established using evidenced based medical studies. Dr. Fall testified that these are guidelines, and there are situations where a medical professional could choose not use them. She testified that this is not a case that she felt would warrant deviation from the causation analysis process recommended by the Guidelines.

28. Claimant has proven that she suffered a compensable occupational disease. The ALJ is persuaded by Claimant's testimony concerning her job duties and that her job duties brought on her symptoms. The opinions of Dr. Fall and Dr. Moses are rejected.

29. The Claimant has proven that the Employer failed to provide her with a list of authorized providers after she initially reported the injury to her supervisor. She elected to see Dr. Norman who referred her to Dr. Chavez. Thereafter, the Employer referred the Claimant to Peak Performance where she received treatment with Dr. Ramsey and Dr. Moses. Dr. Moses referred Claimant back to her primary care physician for non-medical reasons (he opined her injury was not work-related so he discharged her from care). Dr. Chavez then referred Claimant to Dr. John Mangelson.

CONCLUSIONS OF LAW

General

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a

reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with employer. *Section 8-41-301(1)(b), C.R.S.; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where Claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991).

Compensability

"Occupational disease" is defined by §8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond that required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The existence of a preexisting condition does not defeat a claim for an occupational disease. *Id.* A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.* Once claimant makes such a showing, the burden shifts to respondents to establish both the existence of a non-industrial cause and the extent of its contribution to the occupational disease. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

As a matter of law, medical evidence is not required to establish causation, although it is a factor that may be considered in addressing that determination. See *Savio House v. Dennis,* 665 P.2d 141 (Colo. App. 1983).

The Colorado Division of Workers' Compensation has adopted the Guidelines for use by medical providers rendering treatment under the Workers' Compensation Act. They were established by the Director pursuant to an express grant of statutory authority found at § 8-42-101(3.5)(a)(II), C.R.S.

In this case, the Respondents urge the ALJ to rely upon the opinions of Dr. Fall and Dr. Moses because they applied the Guidelines to conclude that Claimant is not suffering from an occupational disease. However, as specifically found in § 8-43-201(3), C.R.S., the ALJ is not required to use the Guidelines as the as "the sole basis" for determining whether treatment is reasonable, necessary or related to an occupational disease. Furthermore, in *Hall v. Industrial Claim Appeals office*, 74 P.3d 459 (Colo. App. 2003) the Court noted that the Guidelines are to be used by health care practitioners when furnishing medical aid under the Act. See §8-42-101(3)(b), C.R.S. 2008.

The Guidelines further state that treatment for a work-related condition is covered when the work exposure causes the activation of a previously asymptomatic or latent medical condition or the work exposure combines with, accelerates or aggravates a pre-existing symptomatic condition.

Based on the persuasive and credible evidence, the Claimant has proven by a preponderance of the evidence that her job duties caused her to develop a new condition or caused an aggravation of a pre-existing latent condition. At this point, Claimant has had three different diagnoses for her right arm symptoms, thus whether intersection syndrome, de Quervain's syndrome or wrist extensor tenosynovitis, the ALJ finds and concludes that such condition was brought on by Claimant's work duties. Claimant credibly explained her job duties and the required use of her hands while performing them. The ALJ credits Claimant's testimony that the job duties evaluation did not accurately reflect the manner in which she performed her job.

In addition, the findings on physical examination during medical appointments established Claimant's need for treatment. Specifically, Dr. Davis noted that the Claimant was extremely tender over the intersection area near the distal forearm and does have some crepitation with range of motion of her thumb. He also stated that she continued to have severe activity related pain and a grinding sensation over the dorsal radial aspect of her distal forearm. Dr. Fall also agreed that Claimant is suffering from some condition in the right forearm. Dr. Fall just believes it is not work-related.

Authorized Provider

After the Claimant reported her injury to her supervisor in early August 2015 she was not referred for medical care by the employer "in the first instance". Section 8-43-404(5), C.R.S. She thereafter sought the medical attention from her primary care physician, Dr. Norman, who referred her to Dr. Chavez. Because of the Employer's failure to comply with § 8-43-404(5), C.R.S., Drs., Chavez and Norman are authorized treating providers. The Respondents thereafter referred the Claimant to Peak Performance where she saw Drs. Ramsey and Moses. Dr. Ramsey referred the Claimant to Dr. Davis. After concluding that Claimant did not suffer a work-related injury, Dr. Moses referred Claimant back to her primary care physician. Claimant returned to Dr. Chavez who then referred the Claimant to Dr. Mangelson. In light of the foregoing, the following are the Claimant's ATPs: Drs. Norman, Chavez, Moses, Davis, Ramsey and Mangleson.

Medical Benefits

Respondents are obligated to provide medical benefits to cure or relieve the effects of the industrial injury. Section 8-42-101(1), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Respondents, however, retain the right to dispute liability for specific medical treatment on grounds the treatment is not authorized or reasonably necessary to cure or relieve the effects of the industrial injury. *See Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Williams v. Industrial Commission*, 723 P.2d 749 (Colo. App. 1986). The Claimant is entitled to medical treatment to cure and relieve her of the effects of her right forearm condition whether diagnosed as intersection syndrome, de Quervain's syndrome or wrist extensor tenosynovitis.

Temporary Total Disability

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

Claimant has proven that her compensable occupational disease caused or contributed to her wage loss beginning on October 23, 2015. Claimant's authorized treating physician restricted Claimant to "no work" beginning on October 23, 2015, then released to her restricted duty effective October 27, 2015. The Employer did not offer Claimant modified duty work after October 23, 2015, and Claimant has not returned to work. The parties agreed that Claimant received some unemployment insurance benefits and that the Respondents would be entitled to an offset in an amount to be determined.

ORDER

It is therefore ordered that:

1. The Claimant suffered an occupational disease of the right forearm in the course and scope of her employment with the Employer.

2. The Claimant's medical treatment with Drs. Norman, Chavez, Moses, Ramsey, Mangleson, and Davis is authorized.

3. The Claimant is entitled to medical benefits to cure and relieve her of the effects of her work-related occupational disease.

4. The Claimant is entitled to TTD benefits commencing her last day worked on October 23, 2015, ongoing, payable at the TTD rate of $584.06 pursuant to the stipulated AWW of $879.97, subject to unemployment benefits offset.

5. The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

WC No. 4-928-516 (August 11, 2013 D.O.I):

- Whether the Respondents proved, by a preponderance of the evidence, that the 26 percent scheduled impairment rating assigned by Division Examiner, Dr. Kenneth Finn, is incorrect.

- Whether the Respondents proved, by a preponderance of the evidence, that the claimant does not require medical treatment to maintain his condition arising out of the August 11, 2013, injury at MMI.

- Whether the claimant proved, by a preponderance of the evidence, that he suffered impairment beyond the arm at the shoulder as a result of the August 11, 2013, industrial injury.

- If the claimant proved he suffered impairment beyond the arm at the shoulder as a result of the August 11, 2013, industrial injury, what is the correct percent of whole person permanent physical impairment which should be assigned to the injury?

WC No. 4-952-124 (May 18, 2014 D.O.I.):

- Did the claimant prove, by a preponderance of the evidence, that he is entitled to an award of temporary total disability from May 5, 2015 through May 23, 2016?

- Did the Respondents prove, by a preponderance of the evidence, that the claimant was responsible for the termination of his employment on May 5, 2015, and therefore, not entitled to an award of temporary total disability benefits?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 50-year-old man with a March 31, 1966 date of birth. Claimant was hired by Employer on May 23, 2008 to work as a sales associate.

2. Claimant initially injured his right shoulder in an admitted accident in the course and scope of his employment with Employer on August 11, 2013, when he was lifting cases of frozen chicken. An August 15, 2013, MRI showed a complete rupture of the long head of the biceps tendon, retracted, 3mm insertional

intrasubstance partial tear supraspinatus tendon, and moderate subscapularis tendinosis, without tear.

3. Claimant was referred to orthopedic surgeon, Dr. Richard Cunningham. Dr. Cunningham evaluated Claimant on August 19, 2013. He noted the MRI findings and recommended a diagnostic arthroscopy with debridement followed by probable open biceps tenodesis. Dr. Cunningham performed surgery on August 30, 2013. At the time of surgery, the AC joint was inspected and revealed "exposed eburnated bone." Dr. Cunningham performed an arthroscopic distal clavicle resection removing approximately 8 mm of bone.

4. Following surgery, Claimant continued to complain of pain with limited range of motion due to guarding. Dr. Cunningham thought Claimant would go on to have full range of motion and strength.

5. Due to Claimant's ongoing pain complaints, an MRI was performed on December 24, 2013. Dr. Cunningham reviewed the MRI and thought it was consistent with adhesive capsulitis. Although Dr. Cunningham did not think Claimant would need it, an arthroscopic lysis of adhesions could be performed.

6. On March 7, 2014, Dr. Cunningham performed a right shoulder arthroscopy with lysis of adhesions, manipulation under anesthesia, arthroscopic subacromial decompression and debridement of low grade partial supraspinatus tearing and rotator cuff fraying.

7. On May 18, 2014, Claimant was exiting the restroom at work when he slipped and fell striking the posterior aspect of his head, without loss of consciousness. Claimant presented to the Vail Valley Medical Center Emergency Room where he complained of right wrist, right shoulder, and diffuse left knee and bilateral back pain. On physical exam, Claimant had no evidence of swelling or discoloration of the shoulder. There was a small amount of soft tissue swelling of the wrist. Claimant was assessed with right wrist pain, left knee pain, right shoulder pain, lumbar back strain and posterior scalp contusion. He was directed to follow-up with Dr. Cunningham.

8. Dr. Cunningham evaluated Claimant on May 19, 2014. On exam, there was mild swelling over the right shoulder. Claimant's right wrist was placed in a splint and he was referred to a hand specialist.

9. Claimant continued to complain of right wrist pain. An MRI performed on June 20, 2014 was read as showing an avulsion fracture of a carpal bone on the dorsum of the right wrist. On August 27, 2014, Claimant underwent surgery on his right wrist, a right hand carpal nonunion repair with excision and an osteoplasty.

10. On March 7, 2014, Dr. Cunningham documented "good shoulder range of motion."

11. Despite extensive physical therapy for the shoulder and the wrist, Claimant was not progressing. On October 23, 2014, authorized provider, NP Lucia London, received a call from Claimant's physical therapist who was concerned about his lack of progress. The therapist was spending at least 80 percent of her visits discussing Claimant's concerns and problems. Claimant did not seem to be progressing with therapy and she was concerned that there might be some psychosocial barriers preventing Claimant from progressing.

12. Multiple providers noted that psychological factors appeared to be present in Claimant's pain presentation. Dr. Raub noted on September 25, 2014, that, "after evaluating this patient, I have some concerns about the inconsistencies in his history and my discussion with Lucia London, NP. Additionally, he has multiple musculoskeletal complaints beyond what one would expect from his lumbar MRI. I am concerned about other influences, perhaps, psychosocial issues." Dr. J. Tashof Bernton opined, "The patient's examination is characterized by multiple nonorganic findings and inconsistencies, which indicate a significant psychologically based contribution to his pain presentation." Dr. Bernton further opined, "There is significant evidence of somatoform disorder, and, given the Waddell findings on examination, significant symptom magnification is probably present." On May 14, 2015 (two months before the DIME), Dr. Scherr noted, "Severe pain behaviors are present. . . He has limited ROM in all planes, but has suboptimal effort... Grip strength is diminished, but again, suboptimal…Shoulder is not swollen, but diffusely tender with jerking upon light touch." Dr. Scherr also documented a phone call from the physical therapist who reported Claimant was "so obsessed with his pain that therapy was nearly impossible to perform. The therapist stated that he would continually talk about the pain and would not perform the activities or exercises." Therapy was put on hold secondary to this.

13. Authorized treating provider, Dr. Susan Lan, placed Claimant at MMI from the August 11, 2013, accident on November 19, 2014. Dr. Lan assigned 8 percent scheduled impairment for loss of right shoulder motion. Eight percent scheduled impairment converts to 5 percent whole person impairment. Dr. Lan indicated, "Maintenance care should include therapy bands for a home exercise program and a 3 month gym membership so he can continue exercising."

14. Insurer filed a Final Admission of Liability consistent with Dr. Lan's opinions on MMI, impairment and medical treatment post-MMI.

15. Claimant was dissatisfied and requested a Division IME. Dr. Kenneth Finn was selected as the Division Examiner. Dr. Finn performed his examination on August 7, 2015. In the course of his examination, Dr. Finn took a history of Claimant's injury from him. Claimant reported undergoing seven months of physical therapy, "which was not helpful". Claimant told Dr. Finn that, after his May 18, 2014, fall, he noted increasing right shoulder pain. On physical exam, Dr. Finn noted Claimant had give way weakness in throughout the right upper extremity and nonanatomic diminished sensation to light touch throughout the

right upper extremity. Despite Claimant’s give way weakness and nonanatomic findings, Dr. Finn assigned 18 percent scheduled impairment for loss of shoulder motion. He assigned an additional ten percent scheduled impairment for Claimant’s distal clavicle resection of “eburnated bone”. The combined scheduled impairment is 26 percent. Twenty six percent scheduled impairment converts to 16 percent whole person impairment.

16. Prior to undergoing the Division IME, the claimant’s employment with the Respondent Employer was terminated on May 4, 2015, for gross misconduct, “integrity issue”.

17. Employer’s Assistant Manager, Glen Liguori, testified at hearing. Mr. Liguori testified that on May 4, 2015, Claimant was employed by Employer in a modified work position of “People Greeter”. Mr. Liguori testified that, at that time, he was the Assistant Manager over the front end, which included the management and supervision of associates in the position of People Greeter. Mr. Liguori testified that he had also been Claimant’s supervisor when he worked in the produce department. Mr. Liguori credibly testified that new associates are required to attend an orientation session, which discusses Employer’s policies and procedures, including attendance, Open Door policy, breaks, meal periods, and days of rest, and Statement of Ethics. Mr. Liguori credibly testified that Employer provides the orientation in both the English and Spanish languages for their associates. Mr. Liguori testified that in addition to their initial orientation, Employer’s associates are required to complete annual “Computer based learning,” which also reviews Employer’s policies relating to breaks and meal periods. Mr. Liguori testified concerning Employer’s four-step disciplinary process and situations when the four-step disciplinary process is not used, such as instances of “Gross Misconduct”. Mr. Liguori testified Employer’s associates are permitted two paid 15 minute breaks per shift. He testified concerning the circumstances leading up to the termination of Claimant’s employment. Mr. Liguori credibly testified that he reviewed in-store security video in an effort to ascertain Claimant’s whereabouts after being questioned by another associate. At that time, he learned Claimant had taken an extended break. On further review, Mr. Liguori discovered that throughout April 2015, Claimant was taking anywhere from 25 minutes up to 41 minutes for his paid 15 minute breaks. Mr. Liguori credibly testified this is considered “theft of time” and gross misconduct and resulted in the termination of Claimant’s employment with Employer. Claimant is responsible for the termination of his employment with Employer.

18. A reasonable employee would appreciate that repeatedly taking paid breaks, of two to three times in length of the allotted time, would likely result in the termination of employment. As found, Respondents have proven, by a preponderance of the evidence, that Claimant was responsible for the termination of his employment.

19. Dr. Carlos Cebrian examined Claimant on December 18, 2015, at Respondents’ request. Dr. Cebrian also testified at hearing as a Level II accredited expert in

the field of occupational medicine and family medicine. In connection with his IME, Dr. Cebrian reviewed surveillance video of Claimant, which is included in the record at Exhibit K. The surveillance video was not available to Dr. Finn at the time of the Division IME.

20. On Dr. Cebrian's physical exam, consistent with his presentation to Dr. Finn, Claimant demonstrated jerky cog wheeling movements on range of motion testing. However, when Dr. Cebrian tested Claimant's strength, he was able to hold both arms at shoulder level at 90 degrees in flexion, inconsistent with his range of motion.

21. After Dr. Cebrian's evaluation, Dr. Scherr placed Claimant at MMI from the May 18, 2014 accident. In connection with that determination, Dr. Scherr attempted to provide an impairment rating of the right shoulder. In Dr. Scherr's May 23, 2016, evaluation, he notes, "PT did not feel PT was beneficial due to [Claimant's] pain behaviors and his inability to participate. He did have the FCE and because of his severe pain behaviors was a difficult exam and was hard to validate. He has had 3 stellate ganglion blocks which have been helpful, but only temporarily. He did have a urine drug screen in which the UDT was negative for Oxycodone when it should have been positive…. There is also the issue of the surveillance video that indicates his ability to do more with his right arm than is demonstrated here in the office." Dr. Scherr noted, "Very Severe Pain behaviors are present, which makes any exam difficult, as he won't even really try to move his arm period. He will raise the arm about 120 degrees in flexion/abduction, which is an improvement… I attempted to measure both L and R shoulders today and he was very difficult in complying with the request, despite the interpreter and my demonstrating several times the correct movement of the arm. I was able to obtain the L shoulder measurements. The R, I was not able to do IR and ER due to pain behaviors and reported pain. His R arm movements were non-physiologic…. I was unable to obtain accurate physiologic measurements from the R arm, so I was not able to impair this arm for ROM." Regarding maintenance care, Dr. Scherr opined, "As stellate ganglion blocks only temporarily helpful and UDT testing inconsistency with absence of Oxycodone when should have been positive, as such, no maintenance care required."

22. Dr. Cebrian credibly testified that Dr. Finn erred at the time of his DIME, in assigning impairment for the range of motion measurements that he obtained as they were not an accurate reflection of Claimant's range of motion resulting from the August 11, 2013, injury. The only appropriate ranges of motion measurements are those Dr. Lan obtained when she placed Claimant at MMI on November 19, 2014. According to the AMA Guides, page 78, "Pain, fear of injury, or neuromuscular inhibition may limit mobility by diminishing effort. Such limitations provide inaccurately low and inconsistent measurements that lead to improperly inflated impairment estimates." Dr. Cebrian credibly explained that Dr. Finn's rating is not in accordance with the AMA Guides because it is not reproducible and physiologic.

23. Dr. Cebrian credibly testified that Dr. Finn erred in assigning an additional ten percent impairment for the distal clavicle resection to remove eburnated bone. The purpose of the distal clavicle resection was to remove osteoarthritis in the AC joint. Claimant did not injure or aggravate his AC joint in the August 11, 2013 accident. He suffered a rupture of the biceps tendon and a partial supraspinatus tear. Dr. Cunningham was not considering a distal clavicle resection at the time of pre-operative planning. At the time of surgery, Dr. Cunningham found the AC joint had degenerative findings of exposed and eburnated bone. At that time, he elected to perform a distal clavicle resection for a degenerative and non-claim related condition.

24. The opinions of Dr. Cebrian are more credible and persuasive than those of Dr. Finn.

25. Claimant testified his right shoulder condition worsened between his November 19, 2014, date of MMI and his appointment with Dr. Finn. Dr. Finn agreed with the November 19, 2014, date of MMI. When Dr. Lan placed Claimant at MMI on November 19, 2014, she restricted him to no lifting in excess of fifteen to 20 pounds. By the time Claimant was evaluated by Dr. Finn, his restrictions had increased to no lifting in excess of five pounds. Impairment is to be determined as of the date of MMI. The range of shoulder motion exhibited by Claimant, as measured by Dr. Lan on the date of MMI, more accurately reflects Claimant's permanent physical impairment from the August 11, 2013 accident.

26. Claimant testified to restrictions in the use of his right upper extremity and difficulty sleeping, as evidence that his impairment is beyond the arm at the shoulder. However, Claimant's physicians strongly encouraged him to use the right upper extremity normally. Despite this encouragement, Claimant does not use his right upper extremity normally. He exhibits severe pain behaviors with non-physiologic movements. Claimant's sleep disturbance pre-existed the August 11, 2013 date of injury.

27. Respondents have proven, by a preponderance of the evidence, that the scheduled impairment rating assigned by Dr. Finn is incorrect. The only appropriate ranges of motion measurements are those Dr. Lan obtained when she placed Claimant at MMI on November 19, 2014. Claimant's correct impairment rating is eight percent scheduled impairment to the right upper extremity, as assigned by Dr. Lan. As found, the additional ten percent scheduled impairment assigned by Dr. Finn for the distal clavicle resection was incorrectly assigned. The procedure was performed to correct a non-work-related degenerative condition in the AC joint.

28. Claimant has failed to prove, by a preponderance of the evidence that the 8 percent scheduled impairment assigned by Dr. Lan should be converted to whole person.

29. Dr. Cebrian testified that no treatment provided to date has improved Claimant's subjective complaints. Claimant has been noncompliant with physical therapy, as noted by the treating physicians. The treating physician also noted a non-compliant urine drug test and recommended against medical treatment to maintain MMI. The opinions of Dr. Scherr and Dr. Cebrian that Claimant does not require medical treatment to maintain his August 11, 2013 injury at MMI are credible and persuasive.

30. The ALj declines to order a gym membership and therapy bands as maintenance care, given Claimant's refusal to participate in supervised physical therapy. Claimant provided no credible evidence that he needs, or even desires, medical treatment to maintain his condition at MMI.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits, including medical benefits, by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

A rating physician must rate impairment in accordance with the provisions of the *AMA Guides to the Evaluation of Permanent Impairment,* 3d Ed., Revised. Section 8-42-101(3.7), C.R.S.; § 8-42-107(8)(c), C.R.S.; *see also, Wilson v. Industrial Claim*

Appeals Office, 81 P.3d 1117 (Colo. App. 2003). Impairment is to be determined as of the date of MMI.

As found, Dr. Finn's evaluation of the claimant's loss of range of shoulder motion was not in accordance with the provisions of the *AMA Guides to the Evaluation of Permanent Impairment,* 3d Ed., Revised. As found, Dr. Finn's assigned impairment for loss of shoulder motion was not consistent with those in the record and were not reproducible and physiologic. Therefore, they are not an accurate reflection of the claimant's permanent impairment and should not be used. The range of motion reflected in Dr. Lan's November 19, 2014, report of MMI and impairment more accurately reflects the claimant's impairment as of MMI. As found, Dr. Finn inappropriately included an additional ten percent scheduled impairment for a distal clavicle excision, which was performed to remove eburnated bone, a non-work-related condition. Accepting Dr. Lan's range of motion and excluding Dr. Finn's additional ten percent for loss of shoulder motion, the claimant's permanent physical impairment resulting from the August 11, 2013 accident totals eight percent of the right upper extremity.

Section 8-42-107, C.R.S., sets forth two different methods of compensating medical impairment. Subsection (2) provides a schedule of disabilities and Subsection (8) provides a Division Independent Medical Examination ("DIME") process for whole person ratings. The threshold issue is application of the schedule and this is a determination of fact based upon a preponderance of the evidence. The application of the schedule depends upon the "situs of the functional impairment" rather than just the situs of the original work injury. *Langton v. Rocky Mountain Health Care Corp.,* 937 P.2d 803 (Colo. App. 1996); *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996). The heightened burden of proof in Subsection (8) applies only if the threshold determination is made that the impairment is not limited to the schedule. Then, and only then, does either party face a clear and convincing evidence burden to overcome the rating of the DIME. *Webb v. Circuit City Stores, Inc.*, W.C. No. 4-467-005 (ICAO, August 16, 2002).

The question of whether a claimant's impairment falls within the schedule of benefits is one of fact for the Administrative Law Judge. *Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo.App. 1996). It is the situs of the functional impairment that is at issue. *See, e.g., Id.* at 368.

The claimant described functional limitations primarily affecting the use of his right arm and shoulder. As found, the claimant failed to prove, by a preponderance of the evidence, that the situs of functional impairment for the right upper extremity extended beyond the extremity. Therefore, § 8-42-107(7)(b)(II), C.R.S. precludes an award of medical impairment benefits for the right upper extremity based on the whole person conversion of the appropriate upper extremity rating.

The claimant has the burden of proving entitlement to medical benefits by a preponderance of the evidence. Section 8-43-201, C.R.S; *City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985).

Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work-related injury or disease and the condition for which benefits or compensation is sought. *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo.App. 1997). Whether the claimant sustained his burden of proof is a factual question for resolution by the ALJ. *City of Durango v. Dunagan,* 939 P.2d 496 (Colo.App. 1997).

Here, as found, the claimant failed to meet his burden of proving that he requires medical treatment to maintain his condition at MMI.

To obtain indemnity benefits, a claimant must prove, by a preponderance of the evidence, that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 639 (Colo. App. 1997).

Under sections 8-42-105(4) and 8-42-103(1)(g), C.R.S., the claimant is precluded from receiving indemnity benefits if he is found to be responsible for his wage loss. The concept of "responsibility" in sections 8-42-105(4) and 8-42-103(1)(g), is similar to the concept of "fault" under the previous version of the statute. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). "Fault" requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994). Fault does not require willful intent. *Richards v. Winter Park Recreational Association*, 919 P.2d 933 (Colo. App. 1996)(unemployment insurance).

Respondents sustained their burden of proof to establish that Claimant engaged in volitional acts, which caused the termination of his employment. Respondents' evidence, both documentary and testimonial, was found more credible and persuasive than the testimony provided by Claimant.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for an award of 26 percent scheduled permanent physical impairment is denied and dismissed;

2. Respondents are ordered to pay Claimant an award of 8 percent scheduled impairment, taking credit for any PPD benefits previously admitted and paid;

3. Claimant's request for conversion of the award of scheduled impairment benefits to whole person permanent physical impairment benefits is denied and dismissed;

4. Claimant's request for an award of medical benefits post-MMI is denied and dismissed.

5. Claimant's request for an award of TTD benefits from May 4, 2015 through May 23, 2016, is denied and dismissed.

6. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED October 14, 2016

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-800-018-03

ISSUES

The following issue was raised for consideration at hearing:

1. Whether Claimant proved, by a preponderance of the evidence, that the medical treatment consisting of L5-S1 fusion surgery recommended by Dr. Feler is related and reasonably necessary to cure and relieve the effects of the Claimant's July 14, 2015 work injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ finds as fact:

1. The Claimant, who was 35 years old as of October 25, 2015, worked as a driver. The Claimant lives in Cheyenne, Wyoming.

2. The Claimant testified credibly that on July 14, 2015, he was unloading a trailer that came from Denver, CO to Cheyenne, WY. When a trailer arrives from Denver, CO, certain boxes are to stay in Cheyenne, WY and certain boxes are to be delivered to Casper, WY.

3. The Claimant was in the process of unloading boxes from a trailer that weighed between 5 pounds up to 75 or 100 pounds. When he was about ¾ of the way through the unload, the Claimant picked up a box weighing approximately 25 pounds, stood, heard a snap but stated that he didn't that much of it at the time. He finished unloading boxes that were to remain in Cheyenne and then drove the remainder of the boxes from Cheyenne to Casper, WY. The Claimant testified that he made the drive to Casper, WY without feeling any pain. When Claimant arrived in Casper, and tried to get out of the truck, he felt pain. He testified that he could not get in touch with anyone in the Denver office to report his medical issue. On his return to Cheyenne, the Claimant went to the doctor for medical attention because his back was hurting badly by that point.

4. The Claimant reported the problem to his employer and was referred for medical care to Dr. Nevins, Dr. Ribnik and Dr. Feler.

5. On Dr. Ribnik's new patient paperwork, the Claimant reported he was most uncomfortable standing; sitting; bending at the waist; and lying on his back, stomach, left side, and right side. Claimant reported that activities guaranteed to make pain worse included "moving my body, walking, sitting for long periods of time." On the pain diagram, the Claimant shaded the low back area and the back of both lower extremities (Respondents' Exhibit F).

6. On July 14, 2015, X-ray of the lumbar spine was read to reflect grade 1 anterior listhesis of L5 on S1 and mild degenerative changes throughout the lumbar spine (Respondents' Exhibit G).

7. On July 23, 2015, an MRI of the lumbar spine had findings which included L5 spondylolysis and grade 1 L5-S1 spondylolisthesis. Severe left foraminal stenosis and possible left L5 nerve root compression. Moderate right foraminal stenosis at L5-S1. There is disc narrowing and diffuse bulge with circumferential osteophytes. There is no sac stenosis but there is severe left foraminal stenosis and moderate right foraminal stenosis. There is a flattening of the left L5 nerve root as it traverses its foramen. (Respondents' Exhibit H).

8. On August 3, 2015, Dr. Harlan Ribnik evaluated the Claimant and recommended bilateral L4/5 transforaminal epidural injections, medications, and a referral for physical therapy (Claimant's Exhibit 2; Respondents' Exhibit I).

9. On August 17, 2015, Dr. Nevins recommended work restrictions of sedentary work only until reevaluation on September 17, 2015; no lifting over 10 pounds, no forceful pushing, pulling, or gripping, cannot drive, no prolonged bending, stooping, kneeling, squatting or climbing, no prolonged walking and/or standing (Claimant's Exhibit 1, p. 27; Respondents' Exhibit J).

10. On August 20, 2015, Dr. Ribnik evaluated the Claimant after an August 10, 2015 epidural steroid injection. The Claimant reported his pain remained stable in character and distribution. The Claimant reported that his pain interfered with general activity (8), normal work (10), and interfered with his walking ability (7). (Claimant's Exhibit 2, p. 80; Respondent's Exhibit K).

11. On August 24, 2015 Dr. Eric Siiteri evaluated the Claimant. The Claimant reported that his pain increases with prolonged walking, sitting, or standing longer than twenty minutes. Dr. Siiteri noted that the Claimant "makes an effort to ignore his pain, and engage in physical activities to divert his attention away from pain." Dr. Siiteri 's impression was that the Claimant was "generally stable psychologically, and behaviors and complaints [were] consistent with identifiable pathology" (Claimant's Exhibit 8).

12. On September 3, 2015, the Claimant saw Dr. Ribnik and reported increased pain after another epidural injection that occurred on August 28, 2015. The Claimant reported that his pain interfered with general activity, normal work, and interfered with his walking ability (Claimant's Exhibit 2, p. 62; Respondents' Exhibit N).

13. On September 10, 2015, Dr. Ribnik reported that the Claimant did not think the epidural steroid injections improved his pain and in fact increased his pain. By this visit, the Claimant was reporting that his pain had returned to his pre-injection level and he was better (Claimant's Exhibit 2, p. 59; Respondents' Exhibit P).

14. On September 11, 2015, Dr. Nevins maintained the Claimant's restrictions of sedentary work only; no lifting over 10 pounds, no forceful pushing, pulling, or

gripping, cannot drive, no prolonged bending, stooping, kneeling, squatting or climbing, no prolonged walking and/or standing (Respondents' Exhibit O).

15. On September 28, 2015, Dr. Ribnik noted that the Claimant reported the epidural steroid injections made his usual pains miserable. The Claimant rated his pain at 10/10. He further reported that Lyrica at bedtime was helpful for sleep (Claimant's Exhibit 2, p. 53; Respondents' Exhibit R).

16. On October 1, 2015, electrodiagnostic testing reflected bilateral tarsal tunnel, F waves and H reflexes asymmetric by more than 1 ms and some polyphasia that suggested proximal injury (Claimant's Exhibit 2, pp. 50-52; Respondents' Exhibit S).

17. On October 12, 2015, Dr. Ribnik noted that the Claimant's left lower extremity goes numb quicker in any position or during any activity and he still can't identify any particular activity or position that will improve his symptoms reliably. Dr. Ribnik recommended referral to another spine surgeon because he saw Dr. Feler who felt the Claimant was too young at this point for a fusion (Respondents' Exhibit T).

18. On October 12, 2015 Dr. Nevins noted the Claimant "appears to have exhausted all conservative measures without any improvement in symptoms. Next step likely surgery but will await his decision" (Claimant's Exhibit 1, Page 21).

19. On October 26, 2015, Dr. Claudio Feler reported that the Claimant "failed multiple modalities including NSAIDS, Pain Meds, LSO bracing, and multiple injections. He has mechanical low back pain with radiating paresthesias down both legs, right worse than left. We will plan for L5-S1 fusion" (Claimant's Exhibit 5, p. 179; Respondents' Exhibit U).

20. Dr. Nevins noted the Claimant was medically cleared to proceed with the planned surgery (Claimant's Exhibit 1, p. 18).

21. On October 27, 2015, Dr. Ribnik noted that Dr. Feler now recommended L5-S1 lumbar fusion and he cautioned the Claimant about the potential of adjacent level degeneration with a fusion. The Claimant reported medications were only providing about 10% pain relief (Claimant's Exhibit 2, p. 46; Respondents' Exhibit V).

22. On November 9, 2015, Dr. Nevins stated that the Claimant has not had much improvement with anything attempted and the next medical step appears to be surgical intervention. However, there was a delay due to some video surveillance. Dr. Nevins noted, "the amount of activity seen in the video was not over and above what I would expect him to be able to do for short periods of time when feeling well but he would certainly not be able to keep that level of activity up for an entire day of labor intensive work or qualify for a CDL driving on his current medications (Claimant's Exhibit 1, p. 16).

23. On November 17, 2015, Dr. Ribnik noted that the Claimant was having difficulty with Worker's Compensation due to video surveillance. The Claimant was felt to have been magnifying his condition. Dr. Ribnik reported he that reviewed the videos

“and did not see any indication of heavy lifting or activity that he has been limited from.” Pain medications provided 30% relief (Claimant’s Exhibit 2, p. 37; Respondents’ Exhibit W).

24. On January 6, 2016, Dr. Nevins reported that the Claimant’s activities in the video were consistent with his presentation in clinic and did not exceed the recommended restrictions. “On the good days I could see him attempting some of these activities but on the poor days as he presents to clinic it would not be possible… [the Claimant’s] activities on the video do exceed the recommended restrictions. One of the restrictions was not to drive and he is clearly driving in the video, although the intent of that was not to drive using his CDL license. Additionally, he was lifting several objects in the video. None appeared overly heavy to me but they certainly may have been over 10 pounds, which was the extent of his restrictions.” Dr. Nevins noted that the MRI explained some of the Claimant’s radicular symptoms and that “the pain still seems to be primarily generated from the L5/S1 disc and subsequent nerve impingement as well as surrounding inflammation/spasm.” He opined that “medically I do not feel that there is anything further to be done other than proceeding with the proposed surgery by Dr. Feler.” This was Dr. Nevins’ main recommendation at this time “given his lack of improvement with typical medical therapy and steady progression of symptoms to date” (Claimant’s Exhibit 1, pp. 1-2; Respondents’ Exhibit Y.)

25. The Claimant saw Dr. Jeffrey Wunder for an IME on January 19, 2016. The Claimant reported back pain and he described to Dr. Wunder that “he was loading boxes weighing between 10-100 pounds. He was putting boxes from the trailer onto a roller belts. He reported he picked up a box weighing about 15 pounds and heard a pop in his back but had no immediate onset of pain. He reported finishing unloading and then drove to Casper. When he got to Casper, he reported that his pain was worse, and he could not stand erect due to his pain, which extended from his low to mid back. He had no lower extremity pain radiation. He reported that he drove his truck back to Cheyenne, Wyoming.” Dr. Wunder then summarized medical records dated July 28, 2015 to January 6, 2016 that he had reviewed. Dr. Wunder’s impression was “non-specific complaints of low back pain, grade 1 L5-S1 spodylolisthesis long-standing and preexisting the work related injury and symptom embellishment. Dr. Wunder had also reviewed video surveillance and generally commented on the parts when Dr. Wunder felt that the Claimant was demonstrating lesser symptoms in the video than his presentation for Dr. Wunder. Dr. Wunder also identified parts of the surveillance that Dr. Wunder believes show the Claimant engaged in activities outside of his work restrictions. Dr. Wunder disputes Dr. Nevins opinion that “the L5-S1 spondylolisthesis is the pain generator and is causing radicular symptoms in his lower extremities.” In Dr. Wunder’s opinion, there are significant issues of symptom embellishment and perhaps malingering. Dr. Wunder opined that the Claimant is not a surgical candidate, needs no further treatment, has reached MMI and had a 0% permanent impairment with no physical restrictions (Respondent’s Exhibit A).

26. Dr. Wunder testified on May 16, 2016 by deposition. His deposition testimony was substantially similar to his report. Ultimately, Dr. Wunder opined that the proposed surgery is not indicated for the Claimant. Dr. Wunder bases this on his

physical examination and what he felt to be significant pain behaviors. Dr. Wunder contrasts the limited lumbar range of motion on examination with the range of motion that he observed in the video surveillance. Dr. Wunder also opines that he finds no evidence of radiculopathy. Dr. Wunder also testified that he does not believe that the Claimant's reported mechanism of injury would result in a significant lumbar disk load. Dr. Wunder also questioned how the Claimant could have a severe back injury without the immediate onset of back pain. Dr. Wunder also testified that he had concerns about performing a fusion surgery on the Claimant due to his relatively young age. He discussed the concerns about putting more pressure on adjacent levels and the higher potential for future surgery.

27. The Claimant testified at the hearing that when he saw Dr. Wunder, the exam was strange because he was putting pressure on lower back with one hand (which made the Claimant hurt) but then using his other finger to push in at other places on his middle and upper back. At one point, Dr. Wunder told the Claimant to straighten all the way up and was pushing him back. The Claimant told him to stop doing that because he does not straighten up all the way like that anymore. The Claimant also testified about events depicted on the video surveillance. The Claimant admitted he assists his son who is in a wheelchair. The Claimant testified that he is independent in activities of daily living. He walks without assistive devices. He did recall moving a dishwasher with his son. He admitted he probably moved trash cans and he admitted moving golf bags.

28. Overall, after review of the video surveillance and review of the testimony of the Claimant and Dr. Wunder, as well as the notes of the Claimant's treating physicians Dr. Nevins and Dr. Ribnik, the ALJ finds that the Claimant's activities, more likely than not, were generally within his restrictions. The ALJ finds the Claimant credible that he has some days that are better days for him and he is able to function at higher level than usual. This is supported by the medical opinions of Drs. Nevins and Ribnik, which the ALJ finds more persuasive than the opinion of Dr. Wunder.

29. Although there is conflicting testimony on the issue, crediting the persuasive medical reports of Drs. Nevins, Ribnik and Feler and the Claimant's testimony, it is found that the Claimant's current low back symptoms are related to the Claimant's July 14, 2015 work injury. It is further found that based upon the MRI, the EMG findings and the Claimant's lack of progress with conservative treatment, the fusion surgery proposed by Dr. Feler is more likely than not to provide the Claimant relief his symptoms. Therefore, Dr. Feler's recommendation for L5-S1 fusion surgery is reasonably necessary to cure and relieve the effects of the Claimant's July 14, 2015 work injury. Although an intended purpose of the surgery is pain relief, there is also an intended goal of improved function and permitting the Claimant to engage in his normal activities. While the surgery itself is intended to improve function, in part, this second goal of improved function may also be achieved by the reduction or elimination of the need for medications which are a limiting factor in the Claimant's overall functioning as they would prevent him from driving with a CDL.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Benefits – Relatedness and Reasonably Necessary

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301(1)(c); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951).

All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970). However, no compensability exists when a later accident or injury occurs as the direct result of an independent intervening cause. An unrelated medical problem may be considered an independent intervening cause even where an industrial injury impacts the treatment choices for the underlying medical condition. *Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187 (Colo. App. 2002); *Post Printing & Publishing Co. v. Erickson,* 94 Colo. 382, 30 P.2d 327 (1934).

In order to prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001); *H and H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986). However, where an industrial injury merely causes the discovery of the underlying disease to happen sooner, but does not accelerate the need for the surgery for the underlying disease, treatment for the preexisting condition is not compensable. *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

Although Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury, Respondents may, nevertheless, challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care in a case. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002), (upholding employer's refusal to pay for third arthroscopic procedure after having paid for multiple surgical procedures). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). Factual determinations related to this issue must be supported by substantial evidence in the record. Section 8-43-301(8), C.R.S. Substantial evidence is that quantum of probative evidence which a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411, 415 (Colo. App. 1995).

Pursuant to W.C. Rule of Procedure 17-2 (A), 7 Code Colo. Regs. 1101-3, health care practitioners are to use the Medical Treatment Guidelines referenced as Exhibits at W.C. Rule of Procedure 17-7, 7 Code Colo. Regs. 1101-3 (the “Medical Treatment Guidelines”) when furnishing medical aid under the Workers’ Compensation Act. The ALJ may also appropriately consider the Medical Treatment Guidelines as an evidentiary tool. *Logiudice v. Siemans Westinghouse,* W.C. 4-665-873 (ICAO January 25, 2011). However the ALJ is not required to grant or deny medical benefits based upon the Medical Treatment Guidelines. *Thomas v. Four Corners Health Care,* W.C. 4-484-220 (ICAO April 27, 2009). The Medical Treatment Guidelines are not definitive, but merely guidelines, and the ALJ has the discretion to make findings and orders which follow or deviate from the Medical Treatment Guidelines depending upon the evidence presented in a particular case. *Jones v. T.T.C. Illinois, Inc.,* W.C. 4-503-150 (ICAO May

5, 2006), *aff'd Jones v. Industrial Claims Appeals Office,* N. 06CA1053 (Colo. App. March 1, 2007)(not selected for official publication); *Nunn v. United Airlines,* W.C. 4-785-790 (ICAO September 9, 2011).

Rule 17, Exhibit 1 of the Medical Treatment Guidelines sets forth the guidelines for treatment of low back pain. Per, Rule 17, Exhibit 1 (B)(8): "Surgical Interventions should be contemplated within the context of expected functional outcome and not purely for the purpose of pain relief. The concept of "cure" with respect to surgical treatment by itself is generally a misnomer. All operative interventions must be based upon positive correlation of clinical findings, clinical course, and diagnostic tests. A comprehensive assimilation of these factors must lead to a specific diagnosis with positive identification of pathologic conditions."

In considering spinal fusion as an operative intervention, pre-operative surgical indications include: all pain generators are adequately defined and treated, all physical medicine and manual therapy interventions are completed, X-ray, MRI, or CT/Discography demonstrate disc pathology or spinal instability, spine pathology is limited to two levels, psychosocial evaluation with confounding issues addressed and the injured worker is to refrain from smoking for at least 6 weeks prior to surgery and during the period of fusion healing. *Rule 17, Exhibit 1 (F)(4)(d), Medical Treatment Guidelines.*

The medical records and the credible testimony of the Claimant establish that the Claimant underwent extensive conservative treatment but nothing offered long-term relief from the pain symptoms that the Claimant continues to suffer. While there have been concerns raised by Dr. Wunder as to the pain generator for the current symptoms, Dr. Feler has opined that the pain generator is at the L5-S-1 level and that the Claimant has mechanical low back pain with radiating paresthesias down both legs, right worse than left.

Crediting the opinions of Drs. Feler, Ribnik and Nevins, it is found the fusion surgery proposed by Dr. Feler is more likely than not to provide relief from symptoms and L5-S1 fusion surgery is reasonably necessary to cure and relieve the effects of the Claimant's July 14, 2015 work injury. Despite Dr. Wunder's conflicting opinion, it is also found that the Claimant is a reasonable candidate for the proposed surgery.

Therefore, the Claimant has established by a preponderance of the evidence that Dr. Feler's recommendation for L5-S1 surgery is reasonably necessary to cure and relieve the effects of the Claimant's July 14, 2015 work injury.

ORDER

It is therefore ordered that:

1. The L5-S1 fusion surgery requested by Dr. Feler is reasonably necessary to cure and relieve the Claimant from the effects of his July 14, 2015 work injury.

2. Respondents liability shall specifically include medical treatment consisting of the proposal of Dr. Feler to perform the L5-S1 fusion surgery and all related medical treatment required for appropriate preparation for the surgery, as well as post-surgical follow-up treatment.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 17, 2016

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUE

The following issue was raised for consideration at hearing:

1. Whether the Claimant proved, by a preponderance of the evidence, that the medical treatment consisting of right knee surgery recommended by Dr. David Schneider is reasonable, necessary, and causally related to the Claimant's December 10, 2014 admitted industrial injury.

FINDINGS OF FACT

1. The Claimant sustained an admitted work related injury on December 10, 2014 during an altercation with a patient at Swedish Hospital. At the time, the Claimant worked as a patrol officer. According to the December 10, 2014 Swedish Medical Center Emergency Department report, the Claimant "was tackled to the ground by another patient when he stopped him as he tried to leave the ED. He states that he hit his back on the door and then landed on his back on the ground, denies hitting head, no LOC" (Claimant's Exhibit 7, p. 151). As a result of this assault, the Claimant sustained injuries to his low back, right shoulder and left hip/pelvic. The Claimant did not complain of any right knee pain or injury at the outset of the claim.

2. The Claimant conceded in testimony that he did not report or experience any right knee pain until approximately November 2015, at which point he reported the pain to Dr. Gellrick, his authorized treating physician. He also conceded that had he experienced right knee pain at any point, he would have reported that pain to his doctors (Hrg. Tr. p. 23, ll. 9-18; p. 32, ll. 18-22; Respondents' Exhibit C, p. 71).

3. The medical records corroborate that no right knee pain or injury was reported by the Claimant to his treating physicians prior to November 2015:

- The Claimant specifically denied extremity pain or injury, had full extremity range of motion, and no contusions when he presented to the Swedish emergency room immediately after the incident (Respondents' Exhibit J, p. 151).
- The Claimant had normal gait and stance and good range of motion in his knees on December 12, 2014 (Respondents' Exhibit I, p. 147).
- The Claimant reported bilateral lumbopelvic pain with radiculopathy and no knee complaints to Dr. Roth on January 23, 2015 (Respondents' Exhibit G).
- Dr. Gellrick's initial evaluation on February 7, 2015 noted symptoms of low back pain, right lateral pelvis and hip pain, and right shoulder pain, with no mention of knee pain (Respondents' Exhibit C, p. 96).

- On May 22, 2015, Shawn Karns, MPA, PA-C performed a physical examination and noted that the Claimant's knees had "good range of motion with no significant discomfort" (Respondents' Exhibit D, p. 103).
- The Claimant omitted any knee pain or symptoms in a medical history form completed on July 2, 2015 (Respondents' Exh E).
- On October 21, 2015, the last appointment with Dr. Gellrick before the right knee pain was noted, the Claimant reported low back and hip pain, but no right knee pain or complaints and had normal reflexes in his lower extremities (Respondents' Exhibit C, p. 73).

4. At his November 19, 2015 appointment with Dr. Gellrick, nearly a year after the admitted injury, the Claimant reported right knee pain and instability. This is the first mention of right knee pain during the course of the Claimant's treatment for his work related injuries to his back, pelvic, right shoulder and hip (Respondents' Exhibit C, p. 71).

5. Dr. Gellrick documented in her November 19, 2015 report that the Claimant "recollects his mechanism of injury and tells me he was thrown back and landed on his back sacral region and then landed on both his knees but it is the right knee that is worrying him now; had old surgery." This is the first and only mention of an acute right knee injury sustained on December 10, 2014 (Respondents' Exhibit C, p. 71).

6. Dr. Gellrick's November 19, 2015 report is inconsistent with her initial treatment record of the Claimant. On February 7, 2015, just two months after the incident, she recorded that the Claimant hit his back on a door and then landed on his back on the floor. She also noted that the assailant, after throwing the Claimant on his back on the floor, got on top of the Claimant and was choking him. There is no mention of the Claimant flipping onto his knees or sustaining a right knee contusion (Respondents' Exhibit C, p. 95).

7. Dr. Gellrick's November 19, 2015 report is also inconsistent with the mechanism of injury explained by the Claimant to his initial treaters:

- The Claimant told Swedish emergency room personnel on the date of injury that "he hit his back on the door and then landed on his back on the ground" (Respondents' Exhibit J, p. 149).
- In the December 12, 2014 Colorado Urgent Care Physicians report, the Claimant explained to Dr. Siefer that he was picked up by the waist and thrown to the ground and then the patient got on top of him and put him in a choke hold (Respondents' Exhibit I, p. 146).
- On December 22, 2014, the Claimant reported to chiropractor, Dr. Michael Vernay, that a hallucinating patient slammed him against a door multiple times and he fell backwards onto the floor where the Claimant placed the patient in a head lock until the police arrived (Respondents' Exhibit H, pp. 138-139).

8. Timothy O'Brien, M.D. performed an independent medical evaluation on behalf of Respondents. On March 28, 2016, Dr. O'Brien evaluated the Claimant's various versions of the mechanism of injury (including the history taken during the IME exam) and opined that "there was no way he could have landed on his buttocks with a patient who was admittedly larger than him, and then somehow land on his knees.... a person cannot fall on his buttocks and then somehow bounce off his buttocks and onto his knees with a patient on top of him" (Respondents' Exhibit A, p. 36).

9. In addition to basing her initial causation opinion on the Claimant's revised mechanism of injury, Dr. Gellrick also noted in her November 19, 2015 report that the Claimant suddenly remembered that his right knee was initially contused by the December 10, 2014 incident (Respondents' Exhibit C, p. 72).

10. However, the initial emergency room record does not document any contusions. Specifically, the record documents that the Claimant's skin was "normal to inspection" Respondents' Exhibit J, p. 151).

11. At the hearing, Dr. O'Brien was accepted as an expert in orthopedic surgery and Level II accredited at the Division of Workers' Compensation. Dr. O'Brien testified that the Claimant was "very thoroughly evaluated in the emergency room...and an excellent history was taken and they went through a checklist and the exam was very thorough." He explained that that initial evaluation was not consistent with the Claimant sustaining an acute ACL tear on December 10, 2014 (Hrg. Tr. p. 44, ll. 4-7, 21-25).

12. Dr. O'Brien credibly opined that the Claimant did not sustain an acute right knee injury on December 10, 2014 based on his review of the medical records and the various versions of the mechanism of injury (Respondents' Exhibit A, p. 36).

13. The ALJ finds and determines that the Claimant did not sustain an acute injury to his right knee on December 10, 2014. In so finding, the ALJ credits the totality of the medical record and the persuasive opinions and testimony of Dr. O'Brien. The ALJ also finds persuasive that despite Dr. Gellrick's November 2015 opinion (which is contrary to the totality of the medical record), the Claimant concedes he did not sustain an acute injury to his right knee on December 10, 2014. The ALJ finds that the Claimant's revised mechanism of injury as described in Dr. Gellrick's November 19, 2015 report to be inconsistent with the totality of the medical record and therefore not credible or persuasive.

14. Prior to his admitted industrial injury, the Claimant underwent two ACL reconstructions to his right knee in approximately 2004 and 2006 (Respondents' Exhibit K, p. 169; Hrg. Tr. p. 20, ll. 1-5).

15. The Claimant testified that after these surgeries, he had no ongoing symptoms and did not need treatment for ongoing knee pain (Hrg. Tr. p. 20, ll. 7-9).

16. Despite the Claimant's testimony to the contrary, the medical records establishes that:

- The Claimant presented to Denver Health on August 12, 2010 with complaints of bilateral knee pain and a sensation that his right knee was "shorter" than his left knee. An x-ray of the right knee was performed to evaluate his condition (Respondents' Exhibit K, pp. 169-170; Respondents' Exhibit L, p. 178).

- On July 30, 2011, the Claimant returned to Denver Health complaining of right lateral knee pain. Again, an x-ray was performed to evaluate for acute trauma to the right knee. The Claimant was dispensed Vicodin for pain control (Respondents' Exhibit K, p. 168; Respondents' Exhibit L, p. 177).
- On August 1, 2011, the Claimant was evaluated at Denver Health for right knee pain following an emergency room visit for the same complaint. The Claimant was referred for a MRI to evaluate whether he had a minor strain from repetitive motion or cartilage ACL damage (Respondents' Exhibit K, p. 167).
- A MRI of the right knee was performed on August 16, 2011. That study established an undisplaced tear of the frontal horn lateral meniscus (a full thickness tear); attenuation of the tibial portion of the ACL tendon repair; and a buckled PCL which could indicate ligamentous laxity and instability (Respondents' Exhibit L, p. 174).

17. Dr. O'Brien testified that the August 16, 2011 MRI demonstrated evidence of a failed ACL graft. He explained that as of 2011, the right ACL was attenuated, or torn, which is evidence the graft had failed after the second reconstruction surgery. He testified that he would expect that a physical examination performed contemporaneous with this 2011 MRI would establish right knee joint instability (Hrg. Tr. p. 63, ll. 4-8).

18. Dr. O'Brien testified that the 2011 MRI was "essentially" the same as the post-injury MRI of the right knee performed in December 2015. He testified that the 2015 MRI did not show any acute injury (Hrg. Tr. pp. 49-50; p. 52, ll. 10-17; Respondents' Exhibit L, pp. 171, 174).

19. Dr. O'Brien further testified that the Claimant's right knee condition continued to naturally deteriorate after the two failed ACL reconstructions. Specifically, he testified that the prior graft performed in 2006 failed due to "attrition over time" because either (a) the graft was misplaced at the time of revision procedure in 2006 or (b) the revision procedure required that the graft be placed in a less than ideal location due to the prior procedure (Hrg. Tr. p. 65, ll. 7-14).

20. While the Claimant testified that he was able to ride his bike without knee pain prior to December 10, 2014, Dr. O'Brien testified that that ability did not surprise him. Specifically, Dr. O'Brien testified that biking is a tool that orthopedists have individuals with an ACL insufficient knee perform to rehabilitate their knee as it is one activity that should not cause knee instability (Hrg. Tr. p. 55, ll. 2-13).

21. The ALJ finds and determines that the totality of the medical record establishes that the Claimant had a failed right ACL graft prior to the industrial injury that was structurally similar in pre-injury and post-injury diagnostic imaging.

22. The Claimant underwent left hip surgery performed by Dr. Brian White on June 29, 2015. The Claimant was on crutches for three and one-half months and non-

weight bearing for his left leg for one month with gradual progression of weight on the left leg. The Claimant testified that after the surgery and using the right leg to walk for three and one-half months, his right hip and right knee started to hurt (Hrg. Tr. p. 23, ll. 22-25; p. 24. ll, 1-2).

23. The Claimant also testified that after the left hip surgery, he was required to squat with his right leg during rehabilitation and his right knee began to hurt and then felt loose. (Hrg. Tr. p. 25, ll. 19-25; p. 26, l. 1).

24. On November 19, 2015, the Claimant report to Dr. Gellrick that he was experiencing right knee pain with physical therapy and "having trouble doing deep knee squats" as well as instability. Dr. Gellrick referred the Claimant to an orthopedic surgeon (Respondents' Exhibit C)

25. Dr. David Schneider performed an orthopedic evaluation of the Claimant's right knee on December 7, 2015. He noted that the Claimant's right knee became painful during rehabilitation following the hip surgery and especially while doing squat exercises. He recorded that the Claimant "has a feeling of clicking and mechanical instability." Dr. Schneider ordered a MRI (Respondents' Exhibit B, p. 45)

26. On March 30, 2016, Dr. Schneider opined that the Claimant had an incompetent ACL and recommended ACL reconstruction. Dr. Schneider did not opine on the cause of the Claimant's right knee condition and need for surgery (Respondents' Exhibit B, p. 40)

27. Dr. O'Brien testified that the Claimant's use of crutches after the left hip surgery and a temporary limp favoring the left leg would not have caused the Claimant's right knee pain and symptoms. Specifically, Dr. O'Brien testified that individuals who were recovering from surgery (like the Claimant) are globally less active and are almost sedentary. Dr. O'Brien testified that Claimant conceded a less active history after his left hip surgery during the IME exam. As a result, Dr. O'Brien testified that the Claimant could not have created an "over-use" environment that would generate enough energy to cause Claimant's right ACL to fail (Hrg. Tr. p. 40-41; Respondents' Exhibit A, p. 36). Dr. O'Brien's opinions are credible and persuasive.

28. Dr. O'Brien also credibly and persuasively testified that, in his experience of performing thousands of hip and knee surgeries, there was a lack of empirical evidence for the Claimant's suggestion that his crutch use or non-weight bearing status could have caused his right knee pain. Specifically, Dr. O'Brien noted that, after performing nearly 3000 knee surgeries and 1500 hip surgeries, he had "never once seen an individual develop contralateral lower extremity pain or tissue breakage or yielding as they were recovering from the surgery on the contralateral side" (Hrg. Tr. p. 41, ll. 7-25; Respondents' Exhibit A, p. 36).

29. With regard to the Claimant's attribution of knee pain to his post-surgery physical therapy and the squat exercises that he performed, Dr. O'Brien credibly and persuasively testified that an individual cannot tear an ACL squatting as the ACL is one of the strongest ligaments in the body (Hrg. Tr. p. 42, ll. 10-17).

30. Dr. O'Brien further credibly and persuasively testified that even where the ACL was attenuated prior to the Claimant's onset of pain (as documented in the 2011

MRI), the acts of squatting or using crutches would not cause the already failed ACL to further deconstruct or aggravated the underlying condition (Hrg. Tr. p. 65, ll. 2-7).

31. Dr. O'Brien credibly testified that prior to the admitted injury, the Claimant had an ACL insufficiency in his right knee for a long period of time (Hrg. Tr. p. 66, ll. 13-14).

32. Dr. O'Brien credibly and persuasively testified that the December 10, 2014 incident neither caused a new acute knee condition nor accelerated or aggravated a pre-existing knee condition (Hrg. Tr. p. 53-54).

33. Dr. O'Brien further credibly and persuasively testified that no treatment rendered as part of the work injury caused a new acute knee condition or accelerated/aggravated a pre-existing knee condition (Hrg. Tr. p. 54-55).

34. The ALJ finds that the Claimant's explanations of potential causes for his right knee pain are not credible or persuasive. In so finding, the ALJ credits the totality of the medical records and the testimony of Dr. O'Brien. The ALJ finds that the mere onset of pain after the Claimant's injury does not causally link the onset of that pain to the Claimant's date of injury or treatment thereof.

35. The ALJ finds that the incident of December 10, 2014 did not cause, aggravate, accelerate, or contribute to the Claimant's pre-existing failed right ACL. The ALJ also finds that no treatment rendered as part of the December 10, 2014 injury caused, aggravated, accelerated, or contributed to the Claimant's pre-existing failed right ACL. In so finding, the ALJ finds the opinions and testimony of Dr. O'Brien to be more persuasive and credible than the opinions expressed in the records of Dr. Gellrick.

36. Dr. O'Brien credibly and persuasively testified that the proposed procedure was directed at a pre-existing condition of the Claimant's right knee that was unrelated to the December 10, 2014 incident. Specifically, he testified that the reconstruction procedure was aimed at correcting a failed graft that was known to have failed as early as 2011 as evidenced in the 2011 MRI (Hrg. Tr. p. 53, ll. 24-25; p. 54, ll. 1-3, 23-25).

37. The ALJ finds and determines that the Claimant has not proven, by a preponderance of the evidence, that the need for the right ACL reconstruction surgery as proposed by Dr. Schneider was causally related to either the December 10, 2014 injury or any subsequent treatment. In so finding, the ALJ finds the testimony and opinions of Dr. O'Brien to be more persuasive and credible than the opinions of Dr. Gellrick.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Benefits – Related and Reasonably Necessary

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101, C.R.S. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301(1)(c); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951).

In order to prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001); *H and H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986). However, where an industrial injury merely causes the discovery of the underlying disease to happen sooner, but does not accelerate the need for the surgery for the underlying disease, treatment for the preexisting condition is not compensable. *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

Here, the Claimant conceded that he did not experience any right knee pain or symptoms at the time of the December 10, 2014 work related altercation at Swedish Hospital. The Claimant conceded that he did not report any right knee pain or symptoms to his medical providers until November 19, 2015 when he saw Dr. Gellrick. The mechanism of injury stated in Dr. Gellrick's November 19, 2015 report is inconsistent with her initial treatment records. Dr. Gellrick initially documented that at the time of the altercation, the Claimant hit his back on a door and then landed on his back on the floor. This description of the incident significantly changed in her November 19, 2015 report wherein she documented that the Claimant was thrown back and landed on his back sacral region and then flipped onto his knees. This later description is inconsistent with the mechanism of injury explained by the Claimant to his other treaters including the Swedish Hospital emergency room personnel immediately after the incident. Therefore, Dr. Gellrick's opinion that the Claimant sustained a right knee injury as a result of the altercation was found not credible and persuasive.

Dr. O'Brien opined that there was no way the Claimant could have landed on his buttocks with a patient on top of him and then somehow flipped over onto his knees. Dr. O'Brien also testified that the Claimant had been thoroughly evaluated in the emergency room and there was no documentation of an acute ACL tear. Dr. O'Brien further opined that the Claimant did not sustain an acute right knee injury on December 10, 2014 based on his review of the medical records. His opinions were found credible and persuasive. Therefore, the Claimant failed to prove by a preponderance of the evidence that he sustained a right knee injury as a result of the altercation on December 10, 2014.

The Claimant also failed to prove by a preponderance of the evidence that he sustained a right knee injury as a result of the medical treatment he received following the December 10, 2014 work incident or that the work altercation or treatment thereof aggravated, accelerated, or contributed to his pre-existing condition. Dr. O'Brien testified that the Claimant's use of crutches after the left hip surgery and a temporary limp favoring the left leg would not have caused the Claimant's right knee pain and symptoms. He explained that the Claimant could not have created an overuse environment that would generate enough energy to cause the Claimant's right ACL to fail. Dr. O'Brien further testified that the Claimant did not tear an ACL squatting during physical therapy as the ACL is one of the strongest ligaments in the body. Dr. O'Brien opined that neither the December 10, 2014 incident nor the treatment afterwards caused a new acute knee condition or accelerated, aggravated, or contributed to the Claimant's current knee condition. Dr. O'Brien's opinions were found credible and persuasive. The Claimant underwent two ACL reconstructions to his right knee in 2004 and 2006. The August 16, 2011 MRI demonstrated evidence of a failed ACL graft. The December 2015 MRI was essentially the same as the 2011 MRI and the 2015 MRI did not show any acute injury. It is more likely than not that the Claimant's preexisting failed right ACL graft continued to naturally deteriorate resulting in his current condition and need for surgery.

The proposed right knee surgery recommended by Dr. Schneider is treatment for a pre-existing condition unrelated to the Claimant's December 10, 2014 industrial incident. The Claimant's work injury did not cause, combine with, or aggravate the Claimant's pre-existing right knee condition, nor did it accelerate the need for the surgical treatment proposed. As a result, the Claimant's request for medical benefits consisting of a right ACL reconstruction surgery is denied.

ORDER

Based on the foregoing Findings of Fact and Conclusions of Law, it is therefore ordered that:

1. The Claimant's request for medical benefits consisting of a right ACL reconstruction surgery is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-625-241-06

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on September 28, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 9/28/16, Courtroom 3, beginning at 1:30 PM, and ending at 3:00 PM).

Claimant’s Exhibits 1 and 2 were admitted into evidence, without objection. Respondents’ Exhibits A through J were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondents, which was filed, electronically, on October 5, 2016. On October 6, 2016, counsel for the Claimant indicated that the Claimant did not take issue with the proposed decision. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUE

The sole issue to be determined by this decision concerns a medical benefit, *i.e.,* the reasonable necessity of prescribed Tramadol as post-maximum medical improvement (MMI) maintenance benefits (post-MMI *Grover* medicals).

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant is a 36-year-old man with a September 25, 1980, date of birth.

2. The Claimant injured his low back in an admitted May 10, 2004, accident in the course and scope of his employment with the Employer.

3. A Division Independent Medical Examiner (DIME), Ray Jenkins, M.D., originally placed the claimant at MMI on August 15, 2007. Dr. Jenkins assigned a 16 % whole person physical impairment as a result of the Claimant's May 10, 2004, industrial injury. In a Final Admission of liability (FAL), dated February 6, 2007, the Respondents admitted liability consistent with Dr. Jenkins' opinions on MMI and medical impairment.

4. The Claimant's claim was subsequently reopened based on his worsened condition. On January 19, 2010, the Claimant underwent a disc replacement surgery, performed by John Beard, M.D., for treatment of his work injuries.

5. Following the January 19, 2010, surgery, authorized treating physician (ATP), Gregory Reichhardt, M.D., placed the Claimant at MMI on February 14, 2011. Dr. Reichhardt assigned a 16 % whole person permanent physical impairment, resulting from the May 10, 2004, accident. Dr. Reichhardt imposed permanent physical restrictions of no lifting in excess of 50 pounds, with no other restrictions indicated. In his February 14, 2011, report of MMI and impairment, Dr. Reichhardt stated the opinion, "I recommend the availability of four follow-up visits with a physician, four follow-up visits with a therapist, coverage of medications and any necessary laboratory tests to monitor for side effects of medications. I would recommend the above be available on an as-needed basis over each of the next five years". On the date of MMI, the Claimant was taking Tramadol 50 mg. six times per day. The Respondents filed a March 23,

2011, FAL, admitting liability consistent with Dr. Reichhardt's opinions on MMI, impairment and medical treatment, post-MMI.

DIME by John Douthit, M.D.

6. The Claimant objected to the March 23, 2011, FAL and requested a DIME. DIME, Dr. Douthit, agreed with Dr. Reichhardt's MMI date of February 14, 2011. Dr. Douthit, however, assigned a 17 % whole person permanent physical impairment as a result of the May 10, 2004, accident. The Respondent filed a January 24, 2012, FAL, consistent with Dr. Reichhardt's opinion on medical treatment post-MMI and Dr. Douthit's opinions on MMI and impairment.

The Tramadol Prescription

7. After reaching MMI on February 14, 2011, the Claimant continued treatment with Dr. Reichhardt. On March 28, 2012, the Claimant reported taking six Tramadol tablets per day, but requested a prescription for eight tablets per day. Dr. Reichhardt prescribed Tramadol, 50 mg., two tablets four times per day, as needed. Dr. Reichhardt, however, also discussed the importance of minimizing the Claimant's medication usage at the lowest possible dose

8. Dr. Reichhardt last evaluated the Claimant on October 13, 2015. At that follow-up, the Claimant reported working 60 to 70 hours per week, as well as helping to care for his twin infant children.

9. Since Dr. Reichhardt's October 13, 2015, evaluation, the Claimant moved to Bullhead City, Arizona. Dr. Reichhardt expressed an unwillingness to prescribe Tramadol, a Schedule I narcotic, across state lines. As a result, the Claimant sought treatment from Khatib Family Practice. Respondents contest the authorization of Dr. Khatib and his referrals, Dr. Tang for example, within the workers' compensation system. Nadim B. Khatib, M.D., first evaluated the Claimant on June 29, 2016. Dr. Khatib's June 29, 2016, treatment note indicates that the Claimant is working as a data analyst with the Aquarius Casino. Dr. Khatib documented the Claimant's history of a January 20, 2010, arthroplasty and chronic pain medications, including Tramadol 50 mg., two tablets four times a day. Dr. Khatib provided a 30-day refill of the Claimant's Tramadol prescription. He also diagnosed obesity and recommended a lower calorie diet, regular exercise, as well as dietary management education, guidance and counseling.

10. Dr. Khatib reevaluated the Claimant on July 26, 2016. The Tramadol prescription was again refilled for a 30-day supply, 50 mg., two tablets orally, every six hours. Dr. Khatib again recommended a lower calorie diet, regular exercise, as well as dietary management education, guidance and counseling.

11. On August 22, 2016, the Claimant was evaluated by Nianjun Tang, M.D. Dr. Tang's August 22, 2016, treatment note reflects the Claimant's "current medications" to be Tramadol 50 mg., one tablet by mouth twice a day as needed for pain and Tramadol 50 mg. one tablet by mouth four times a day as directed. Dr. Tang's August 22, 2016, treatment note reflects a prescription was written for 60 Tramadol, 50 mg., "one tablet by mouth twice a day as needed for pain". Dr. Tang also instructed the Claimant to increase his physical activity, as to "deal more effectively with a chronic pain condition, [the patient] has to take responsibility for daily exercises, within abilities".

12. Neither Dr. Khatib's nor Dr. Tang's treatment notes reflect that the Claimant signed an "Opioid Contract" detailing the side effects anticipated from the medication, the Claimant's requirement to continue active therapy, the Claimant's need to achieve functional goals, and the reasons for termination of opioid management, referral to addiction treatment, or tapering of medications.

13. The Respondents dispute Dr. Khatib and Dr. Tang's status as ATPs. The issue of authorization was not endorsed for hearing and shall be reserved for future determination.

Independent Medical Examination (IME)/Medical Records Review by Timothy O'Brien, M.D.

14. On April 4, 2016, Dr. O'Brien performed a review of the medical records relating to the Claimant's May 10, 2004, industrial injury. Dr. O'Brien disagreed with the ongoing prescription of Tramadol to treat the Claimant's chronic pain. Dr. O'Brien was of the opinion that "Tramadol contains an opiate. All opiates are addictive. Addiction to an opiate can lead to overdosing and death." Dr. O'Brien further was of the opinion that, if the Claimant "needs medication to treat his chronic pain, he needs to be directed to an over-the-counter anti-inflammatory, which he should use on an as needed basis. If his primary care physician wants to monitor [the claimant's] kidney function while he is using over-the-counter anti-inflammatories on a chronic basis, I would advise this."

15. Dr. O'Brien testified at hearing as a Level II accredited physician with expertise in the field of orthopedics and orthopedic surgery. Dr. O'Brien further explained that chronic use of Tramadol has toxic effects on the liver and kidneys. Dr. O'Brien credibly testified that while the Claimant is tolerant and dependent on Tramadol from his many years of usage, he is not currently exhibiting any addictive behaviors. Dr. O'Brien further testified that Dr. Tang's August 22, 2016, treatment note appears to reflect a "weaning dose" of Tramadol. Dr. O'Brien stated the opinion that the Claimant should be weaned off of Tramadol and utilize over-the-counter anti-inflammatories, lose weight and exercise in treatment of his chronic pain. Dr. O'Brien explained that discontinuing Tramadol, weight loss and aerobic exercise would be beneficial to the Claimant and, after weaning, effectively treat the Claimant's chronic pain.

16. Dr. O'Brien outlined a schedule for weaning the Claimant off of Tramadol over a three-month period. Because Dr. O'Brien only reviewed medical records, the ALJ is not persuaded by his testimony regarding the schedule for weaning the Claimant off Tramadol. The ALJ finds the prescribing physician, Dr. Tang, who is actually treating the Claimant at present, is in a better position to outline a schedule for weaning the Claimant off of Tramadol.

Ultimate Findings

17. The ALJ finds Dr. O'Brien's testimony as articulate, thorough, credible and more persuasive than all other medical opinions contained in the evidence.

18. Between apparently conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Dr. O'Brien and to reject all medical opinions to the contrary, with the exception of a weaning off Tramadol schedule, which is yet to be done.

19. The ALJ finds that the Claimant failed to prove, by a preponderance of the evidence that the continued prescription of Tramadol is reasonably necessary medical treatment to maintain his condition at MMI, however, a weaning off Tramadol period is reasonably necessary, and should best be done by the Claimant's present primary care physician, Dr. Tang.[1]

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The

[1] Dr. Tang has not been authorized by the Respondents.

same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995 As found, Dr. O'Brien's testimony was articulate, thorough, credible and more persuasive than all other medical opinions contained in the evidence.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between apparently conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. O'Brien and to reject all medical opinions to the contrary, with the exception of a weaning off Tramadol schedule. As further found, the ALJ does not accept Dr. O'Brien's suggested three-month weaning of period. Moreover, as found, the present primary care physician, Dr. Tang, although not authorized by the Respondents, is in the best position to wean the Claimant off Tramadol.

Respondents' Challenge to Post-MMI Medical Benefits

c. Where respondents file an FAL, admitting for post-MMI medical maintenance medical benefits pursuant to *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988), respondents are not precluded from later contesting the causal relatedness or reasonable necessity for a particular treatment. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Moreover, when respondents contest liability for a particular medical benefit, the claimant must prove, by a preponderance of the evidence, that such contested treatment is reasonably necessary to treat the industrial injury and is causally related to that injury. *See Grover v. Indus. Comm'n, supra; Snyder v. Indus. Claim Appeals Office, supra*. As found, the Claimant failed to prove that the continued prescription of Tramadol is **reasonably necessary,** however, a reasonable weaning off period is necessary, as appropriate in the medical judgment of the Claimant's present primary care doctor, Dr. Tang.

Burden of Proof

d. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits, including entitlement to post-MMI medical maintenance benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has failed to prove that an indefinite prescription of Tramadol is reasonably necessary to cure and relieve the effects of his May 12, 2004 industrial injury, however, it has been established that a reasonable weaning off period, in the medical judgment of the Claimant's present primary care physician, Dr. Tang, is warranted.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Nianjun Tang, M.D., shall, within 20 days of the mailing of this decision, provide Claimant's counsel and Respondents' counsel a Pain Contract, signed by the Claimant. In addition to the information suggested by the Colorado's Medical Treatment Guidelines, Rule 17, Exhibit 9(F)(7)(g), Workers' Compensation Rules of Procedure (WCRP), the signed Pain Contract shall provide a reasonable schedule for weaning the Claimant off the medication Tramadol. The proposed weaning schedule shall start immediately following the Claimant's signature on the contract, whereby the Claimant shall be completely weaned from the medication within six (6) months.

B. Any and all issues not determined herein are reserved for future decision.

DATED this______day of October 2016.

____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Whether claimant has shown by a preponderance of the evidence that he is entitled to an award of temporary total disability ("TTD") benefits from April 4, 2016 and ongoing.

- If claimant has proven entitlement to TTD, whether respondents have proven by a preponderance of the evidence that claimant committed a volitional act that led to his termination of employment.

- If respondents have proven that claimant was responsible for his termination of employment, whether claimant has shown by a preponderance of the evidence that he sustained a worsening of his condition that would establish a reinstatement of TTD benefits.

FINDINGS OF FACT

1. Claimant began employment with the employer on April 1, 2013 as a merchandiser. On June 10, 2013, claimant was promoted to the position of warehouse operations lead. Claimant's job duties included moving cases of product in employer's beverage distribution warehouse. This involved lifting and moving product from pallets and also stacking product onto new pallets. This process can be done by hand, with the use of pallet jacks, or with a fork lift. Cases of product varied in weight from approximately 15 pounds to more than 20 pounds.

2. Claimant suffered an admitted injury to his left upper extremity on March 4, 2016. Respondents filed a General Admission of Liability in which claimant's average weekly wage ("AWW") was determined to be $803.21.

3. As indicated in the medical records, after claimant's March 4, 2016 injury, he was first seen by Dr. Jon Hamilton on March 7, 2016. Dr. Hamilton released claimant to return to work with a 15 pound lifting restriction for his left upper extremity. On March 21, 2016, Dr. Hamilton specified that in addition to the general 15 pound lifting restriction, claimant was also limited to repetitive lifting of 15 pounds and pushing/pulling of 15 pounds.

4. Claimant's supervisor, Doug Yochem, Sales Center Manager, testified that he and claimant met to discuss work tasks that would comply with claimant's work restrictions. Both claimant and Mr. Yochum testified that claimant continued to work under these restrictions at the time his employment was terminated on April 4, 2016.

5. As indicated by claimant's testimony and the employment records in evidence, Mr. Yochum presented claimant with an annual performance evaluation on

March 30, 2016. Claimant received a 2.33 out of a possible score of 4 on his evaluation. A score of 2 is considered "meets most requirements". In this March 30, 2016 review claimant was notified that he was expected "to improve his ability to work well with individuals to enhance professionalism through the organization" and that he "must find ways to interact in a professional manner with coworkers".

6. Mr. Yochem testified that at the conclusion of the March 30, 2016 evaluation discussion claimant was receptive to the issues addressed in the evaluation. The claimant did not demonstrate any disagreement or anger about his score at that time. Claimant's March 4, 2016 injury was not discussed at the March 30, 2016 evaluation meeting.

7. As indicated by claimant's employment records, he received a score of 2.92 on a similar evaluation on April 1, 2014. On March 6, 2015 claimant received a score of 3.1 on his annual evaluation. In that 2015 evaluation claimant was described as "pleasant and easy to work with".

8. Mr. Yochum testified that between the 2015 and 2016 evaluations, he had observed a general decline in claimant's job performance. Mr. Yochem discussed various performance related issues with the claimant five or six times between the March 2015 evaluation and the March 2016 evaluation. These performance related discussions occurred prior to claimant's March 4, 2016 injury.

9. Claimant testified that in the days following the evaluation he considered the evaluation and felt that it was unfair. When he arrived at work on April 1, 2016, claimant approached Mr. Yochem about his dissatisfaction with the evaluation.

10. Mr. Yochem testified that when claimant approached him on April 1, 2016 claimant stated: "Really. This is the lowest score I've ever gotten. This is bullshit". Mr. Yochem asked claimant what specific concerns he had. Claimant responded by stating "you gave me a shitty review" and "kept me out of the sales manager position". Also during this discussion claimant yelled at Mr. Yochem; called him "a fucking liar"; and told him he was "full of shit". Claimant did not discuss his work injury during this time. Based upon claimant's behavior Mr. Yochem informed claimant that he was suspended for the remainder of the day.

11. Mr. Yochem testified that after being told that he was suspended, claimant left Mr. Yochem's office and entered his own office. Claimant then called Byron Bultsma, Product Supply Manager. During that telephone discussion, claimant again asserted that he believed his evaluation was unfair. Mr. Bultsma agreed with Mr. Yochem that it was appropriate to suspend claimant. Ultimately claimant left the work place as instructed.

12. Claimant testified that when he initiated the discussion on April 1, 2016 he did so in a calm manner. Claimant testified that both he and Mr. Yochem became "heated" during that discussion. Claimant testified that at one point in the discussion, Mr. Yochem informed claimant "I'm the boss and you'll do whatever the fuck I tell you to

do". Claimant testified that at that time he exited Mr. Yochem's office and returned to his own office. Claimant testified that Mr. Yochem followed claimant to claimant's office. At that time claimant called Mr. Bultsman. Claimant testified that he was not suspended until after he had returned to his office and contacted Mr. Bultsman.

13. Beverly Morris, Director of Human Resources, testified at hearing that claimant's behavior toward his supervisor was a violation of employer's "work rules and standards policy". Specifically, Ms. Morris opined that that claimant failed to behave professionally.

14. Mr. Yochem and Ms. Morris testified that claimant's employment was terminated when he returned to work on Monday, April 4, 2016 because of the insubordinate behavior he demonstrated on April 1, 2016.

15. It is undisputed that prior to April 1, 2016 claimant would raise his voice at Mr. Yochem when a disagreement arose in the work place. Both Mr. Yochem and claimant describe an incident in which claimant became upset by the poor job performance of a coworker, Oz. In doing so claimant yelled and used obscenities when communicating with Mr. Yochem. Claimant admits that this was a normal way for him to communicate with Mr. Yochem.

16. As indicated by the medical records, claimant continued to see Dr. Hamilton for treatment. On April 11, 2016, Dr. Hamilton included the same lifting restrictions he had indicated on March 21, 2016; (a general 15 pound lifting restriction; repetitive lifting restricted to 15 pounds; and pushing/pulling restricted to 15 pounds).

17. As indicated by the medical records, on July 18, 2016 Dr. Hamilton changed claimant's work restrictions to "use right arm only". Dr. Hamilton indicated in his notes that claimant had described to him that his "pain had gotten worse recently". However, Dr. Hamilton found no explanation for claimant's symptoms.

18. As indicated by the medical records, respondents referred claimant for an independent medical examination ("IME") with Dr. Eric Ridings on August 6, 2016. Dr. Ridings reviewed claimant's medical records, obtained a history from claimant and performed a physical examination in connection with his IME. Dr. Ridings issued a medical report that summarized his findings and opined that claimant has not reached maximum medical improvement ("MMI"). Dr. Ridings also recommended a lifting restriction of 25 pounds for the left upper extremity, and no limitations for the right upper extremity up to shoulder height. Dr. Ridings further opined that claimant may push and pull up to 100 pounds bimanually.

19. Claimant testified that he continues to have the work restrictions determined by Dr. Ridings. Claimant has been seeking other employment since his job separation on April 4, 2016. However, due to his work restrictions claimant has been unable to obtain employment.

20. The ALJ credits the testimony of Mr. Yochem as to the claimant's behavior on April 1, 2016 over claimant's contradictory testimony. The ALJ finds that claimant

engaged in the behavior as described by Mr. Yochem and was suspended and ultimately discharged for that behavior. The ALJ also finds that respondents have demonstrated that it is more likely than not that claimant's employment was terminated because of a volitional act by the claimant, specifically claimant's insubordination toward his supervisor.

21. The ALJ credits the testimony of Mr. Yochem over the contradictory testimony of claimant. Claimant had previously engaged in inappropriate and unprofessional behavior in the work place. On March 30, 2016, claimant was specifically informed that he was expected to "to improve his ability to work well with individuals to enhance professionalism through the organization" and that he "must find ways to interact in a professional manner with coworkers". The claimant knew, or reasonably should have known, that his behavior two days later in which he yelled vulgarities at his direct supervisor was a failure to meet these expectations of the employer. The claimant's actions on April 1, 2016 constitute a volitional act that resulted in his termination of employment.

22. The ALJ credits claimant's testimony regarding his work restrictions; Dr. Hamilton's increased work restrictions as of July 18, 2016; and the work restrictions included in Dr. Ridings's report and finds that it is more likely than not that claimant's condition has worsened since the termination of employment on April 4, 2016. Specifically, claimant's condition had worsened as of July 18, 2016.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2015).

4. To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *Id*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

5. As found, claimant has proven by a preponderance of the evidence that his injury resulted in work restrictions. In turn these work restrictions have resulted in a loss of income, as claimant is unable to find employment with his current work restrictions.

6. Sections 8-42-105(4) and 8-42-103(1)(g), C.R.S., contain identical language stating that in cases “where it is determined that a temporarily disabled employee is responsible for termination of employment the resulting wage loss shall not be attributable to the on-the-job injury.” In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P3d 1061 (Colo. App. 2002), the court held that the term “responsible” reintroduced into the Workers’ Compensation Act the concept of “fault” applicable prior to the decision in *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Hence, the concept of “fault” as it is used in the unemployment insurance context is instructive for purposes of the termination statutes. *Kaufman v. Noffsinger Manufacturing*, W.C. No. 4-608-836 (Industrial Claim Appeals Office, April 18, 2005). In that context, “fault” requires that the claimant must have performed some volitional act or exercised a degree of control over the circumstances resulting in the termination. *See Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1995) *opinion after remand* 908 P.2d 1185 (Colo. App. 1995).

7. As found, respondents have demonstrated by a preponderance of the evidence that claimant committed a volitional act that resulted in his termination of employment. As found, the ALJ credits the testimony of Mr. Yochem over the contradictory testimony of claimant regarding the April 1, 2016 confrontation at work that led to claimant’s termination of employment.

8. As found, claimant had previously engaged in inappropriate and unprofessional behavior in the work place. On March 30, 2016, claimant was specifically informed that he was expected to “to improve his ability to work well with individuals to enhance professionalism through the organization” and that he “must find

ways to interact in a professional manner with coworkers". The claimant knew, or reasonably should have known, that his behavior two days later in which he yelled vulgarities at his direct supervisor was a failure to meet these expectations of the employer. The claimant's actions on April 1, 2016 constitute a volitional act that resulted in his termination of employment.

9. In *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004) the Colorado Supreme Court held that in cases where it is determined that the claimant is responsible for his or her termination of employment, the statutory provisions of Sections 8-42-103(1)(g) and 8-42-105(4), C.R.S., are not a permanent bar to receipt of temporary disability benefits. In *Anderson*, the claimant suffered a worsened condition causally related to the industrial injury as evidenced by increased work restrictions after claimant's termination of employment that prevented claimant from working. The court held in *Anderson* that because the worsened condition and not the termination of employment caused the wage loss, the claimant was entitled to temporary disability benefits. See *Anderson, supra.*

10. As found, claimant has established by a preponderance of the evidence that he sustained a worsening of his condition that has resulted in wage loss. As found, the claimant had the same work restrictions shortly after his job separation when he saw Dr. Hamilton on April 11, 2016. Then on July 18, 2016, Dr. Hamilton noted a worsening of claimant's condition, resulting in increased work conditions. Although Dr. Ridings' changed claimant's work restrictions again after the IME, these restrictions of 25 pounds are clearly higher than the initial 15 pound work restrictions. As found, it is the worsening condition and not the April 4, 2016 job separation that has caused claimant's wage loss. Therefore, despite the claimant's volitional action that resulted in termination of his employment, he is entitled to an award of TTD benefits as of July 18, 2016.

ORDER

It is therefore ordered that:

1. Respondent shall pay claimant TTD benefits based on an AWW of $803.21 for the period of July 18, 2016 and continuing until terminated by law or statute.

2. The respondent shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For

statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Grand Junction, Colorado 81501

ISSUES

➢ Whether claimant has shown by a preponderance of the evidence that that he is entitled to an award of penalties pursuant to Section 8-43-304 C.R.S. for respondent's alleged failure to timely pay temporary total disability ("TTD") benefits; alleged failure to pay for claimant's reasonable and necessary medical treatment; and alleged failure to file a bond with the Division of Workers' Compensation.

➢ Whether claimant has shown by a preponderance of the evidence that an order for payment of attorney fees is appropriate in this matter pursuant to Section 8-43-408(4) C.R.S.

ISSUE BIFIRCATED AT HEARING

On September 15, 2016 claimant submitted an Unopposed Motion to Bifurcate Issue of Piercing the Corporate Veil. The undersigned ALJ granted the motion on September 20, 2015.

FINDINGS OF FACT

1. Claimant was employed with employer in the service department as a mechanic. Claimant sustained a compensable injury to his low back on June 19, 2015. The injury occurred when claimant fell while he was carrying a fuel tank and slipped on fuel that had spilled on the floor. The fuel tank claimant was carrying landed on his chest.

2. Employer was not insured for workers' compensation injuries at the time of claimant's June 19, 2015 injury.

3. On December 15, 2015 and February 3, 2016, claimant proceeded to hearing before Administrative Law Judge Keith E. Mottram on the issues of compensability; medical benefits; temporary total disability benefits; average weekly wage; penalties pursuant to Section 8-43-408 C.R.S. for employer's failure to maintain workers' compensation insurance; and penalties pursuant to Section 8-43-103(1) C.R.S. for employer's failure to timely file a notice of injury with the Division of Workers' Compensation ("DOWC").

4. On December 15, 2015 Monty Dana, Owner of Dana Motors, appeared at hearing without legal representation. At that time, Mr. Dana requested a continuance to obtain counsel. The continuance was granted by Judge Mottram. However, on February 3, 2016, Mr. Dana again appeared at hearing without counsel and proceeded to hearing pro se.

5. On February 22, 2016, Judge Mottram issued his Findings of Fact, Conclusions of Fact and Order in which claimant's June 19, 2015 work injury was found to be compensable. In that February 22, 2016 order, employer was ordered to pay temporary total disability ("TTD") benefits to the claimant beginning June 20, 2015. Those TTD benefits were to be paid at a higher average weekly wage of $924.61 because at the time of claimant's injury, employer was uninsured. Judge Mottram ordered that employer was entitled to credit against TTD benefits in the amount of $3,678.25 for wages paid to claimant in July 2015.

6. Judge Mottram also ordered employer to pay for all reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury. Judge Mottram's February 22, 2016 order specifically listed treatment provided by St. Mary's Hospital Emergency Room; St. Mary's Occupational Medicine; Dr. Ellen Price; and Grand Junction Therapies; as being reasonable medical treatment employer was to pay.

7. Pursuant to Section 8-43-203(2)(a), C.R.S. Judge Mottram ordered additional penalties of $570.00 ($285.00 to claimant and $285.00 to the subsequent injury fund) related to employer's failure to timely notify the DOWC of the injury.

8. Finally, Judge Mottram calculated the value of employer's liability as of the February 22, 2016 order and ordered employer, in lieu of payments to claimant, to file a bond or deposit the sum of $41,000.00 with the DOWC.

9. On March 2, 2016, Sue Sobolik, Trustee for the Division of Workers' Compensation Special Funds Unit, sent a letter to employer providing notice of nonpayment of any ordered amounts including failure to make a trust deposit or file a bond as ordered by Judge Mottram. Ms. Sobolik advised employer that if payments were not made additional penalties could be assessed pursuant to Section 8-43-408(3), C.R.S.

10. On March 30, 2016, claimant applied for hearing endorsing the issue of penalties against employer.

11. Notice of the September 20, 2016 hearing was sent to the parties on July 14, 2016 by the Office of Administrative Courts ("OAC"). These notices were sent to the email addresses found in the records of the OAC. The email address used for employer was martydana67@gmail.com. Thereafter, claimant submitted a Case Information Sheet ("CIS") on September 12, 2016 to the OAC and sent copies to employer's email address of martydana67@gmail.com and employer's physical address of Dana Motors, Inc., 2586 Highway 6 & 50, Grand Junction, Colorado 81501.

12. As indicated by the records, the parties have participated in three (3) pre-hearing conferences with the DOWC. These pre-hearing conferences were held on May 5, 2016; July 7, 2016; and August 4, 2016; and employer participated in each one. Employer was provided notices and subsequent orders at the same email address of martydana67@gmail.com for these pre-hearing matters. Therefore, the ALJ finds that

the email address used by OAC to notify employer of the September 20, 2016 hearing was appropriate and likely to have been received by employer.

13. Employer did not appear at the September 20, 2016 hearing before the undersigned ALJ. At the time of hearing, the ALJ waited 20 minutes before the commencement of the hearing to allow employer time to appear. At that time, the ALJ considered the factors listed in OACRP 23. As of the date of this order, employer has not filed a motion or otherwise contacted this court.

14. At the current hearing, claimant testified that since the issuance of Judge Mottram's February 22, 2016 order he has not received any payments of TTD benefits payments from employer.

15. Claimant testified that all medical bills related to his work injury remain unpaid. Claimant estimates that the total amount owed to these medical providers is $15,000.00. As of the date of the hearing, St. Mary's Hospital has attempted to collect $3,297.35 directly from claimant for treatment he received related to his work injury. In addition, claimant's medical providers have refused claimant additional treatment because of the unpaid bills. Respondent's failure to make payments on claimant's medical bills is negatively impacting claimant's credit.

16. Claimant testified that it is his understanding that no payments have been made by respondent to any of the medical providers. Nor has the respondent contacted the medical providers regarding payment.

17. Employer failed to appear at the hearing in this matter. As a result, there is no persuasive evidence on the record to demonstrate any mitigating circumstances that would have resulted in respondent's failure to comply with Judge Mottram's order. Nor has the employer provided any explanation that his failure to comply is reasonable.

18. The ALJ relies upon claimant's testimony and the exhibits entered into evidence and finds that it is more likely than not that employer has failed to comply with Judge Mottram's February 22, 2016 order.

19. Claimant has requested an order of attorney fees pursuant to Section 8-43-408(4), C.R.S. Claimant asserts that he has incurred legal fees in response to employer's failure to comply with Judge Mottram's February 22, 2016 order. The ALJ has reviewed Mr. Mueller's "Affidavit of Time Spent on Dustyn Laude v. Dana Motors, Inc. Hearing and Litigation" (Exhibit 14) which shows a total of 30 hours.

20. In consideration of what constitutes "reasonable attorney fees" the ALJ finds that time spent from employer's initial non-compliance through the present hearing is "reasonable". Therefore, the 7.5 hours indicated in the affidavit as "Hearing & Post-hearing position statement" is reduced from 7.5 hours to 1.5 hours to remove time spent preparing the post-hearing position statement. The ALJ further reduces the amount of "Additional legal research" from 2.5 hours to 0.5. Therefore, a total of 22 hours is deemed to be reasonable.

21. The affidavit presented by Mr. Mueller does not provide the ALJ with an hourly rate to apply in this matter. Absent a specific hourly rate, the ALJ determines that it is within her discretion to ascertain an appropriate hourly rate. Therefore, the ALJ finds that $175.00 is a reasonable hourly rate for Mr. Mueller's time. Therefore, the reasonable attorney fees in this matter of 22 hours at $175.00 per hour totals $3,850.00.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

3. Section 8-43-304, C.R.S., governs when penalties may be imposed in a workers' compensation matter and provides, in relevant part, that any employer or insurer:

> "who violates any provision of [the Workers' Compensation Act], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or panel…, or fails, neglects, or refuses to obey any lawful order…, shall be subject to … a fine of not more than one thousand dollars per day for each such offense."

This provision has been construed as applying to violation of an order issued by an ALJ. *Giddings v. Industrial Claim Appeals Office,* 39 P.3d 1211 (Colo. App. 2001).

4. Before penalties may be assessed the ALJ must first determine whether a party has violated any provision of the Workers' Compensation Act or an order. If the ALJ finds such a violation, penalties may be imposed if it is also found that the

employer's actions were objectively unreasonable. Section 8-43-304, C.R.S*.* *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003); *Pioneers Hospital of Rio Blanco County v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Jimenez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). The "objective standard" is measured by reasonableness of the insurer's action and does not require knowledge that the conduct was unreasonable." *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo. App. 1995).

5. An order is defined as including "any decision, finding and award, direction, rule, regulation, or other determination arrived at by the director or an administrative law judge." *See* Section 8-40-201(15), C.R.S. The fine shall be apportioned in whole or part at the discretion of the director or administrative law judge between the aggrieved party and the workers' compensation cash fund created in Section 8-44-112, C.R.S. with the amount apportioned to the aggrieved party being a minimum of fifty percent of any penalty assessed. *See* Section 8-43-304, C.R.S. In addition, Section 8-43-305 C.R.S. provides that each day a party engages in the violation is construed as a separate offense.

6. In this case, the Claimant seeks penalties for three reasons: 1) employer's failure to pay TTD benefits; 2) employer's failure to pay for claimant's medical treatment; and 3) employer's failure to post a bond with the Division of Workers' Compensation.

7. As found, claimant has demonstrated by a preponderance of the evidence that employer has failed to comply with Judge Mottram's February 22, 2016 order. There is no persuasive evidence on the record to demonstrate any mitigating circumstances that would indicate a reasonable cause for respondent's failure to comply. As found, employer's failure to comply with Judge Mottram's order is not reasonable. Therefore, Section 8-43-304 C.R.S. is applicable.

8. Pursuant to Section 8-43-301(2), C.R.S, an ALJ's order becomes final 20 days after it is mailed to the parties, if a petition to review is not filed by the parties. Additionally, Section 8-43-401(2)(a), C.R.S. provides that "in cases where there have been no appeals, all insurers and self-insured employers shall pay benefits within thirty days after any benefits are due".

9. Pursuant to Section 8-43-301(2), C.R.S., Judge Mottram's February 22, 2016 order became final 20 days after it was issued. However, applying Section 8-43-401(2)(a), C.R.S., respondent had 30 days from the date of the order to pay benefits as ordered. Therefore, any penalties begin on the 31st day. In this matter, 31 days from February 22, 2016 is March 24, 2016.

10. As found, Sections 8-43-304 and 8-43-305 C.R.S. are applicable in this matter. Therefore, employer shall be assessed penalties in the amount of $1,000.00 per day beginning on March 24, 2016 through and including the date of hearing of September 20, 2016. This is a total of 180 days, resulting in penalties totaling $180,000.00. These penalties shall be apportioned 60% to claimant and 40% to the subsequent injury fund.

11. Section 8-43-408, C.R.S. addresses employers who, at the time of the injury, are uninsured. Additionally, Section 8-43-408(4) C.R.S. specifically provides that:

> "[a]ny employer who fails to comply with a lawful order or judgment issued to pursuant to subsection (2) or (3) or this section is liable to the employee . . . in addition to the amount in the order or judgment, for an amount equal to fifty percent of such order or judgment or one thousand dollars, whichever is greater, plus reasonable attorney fees incurred after entry of a judgment or order."

12. As found, employer was uninsured at the time of claimant's injury. Employer failed to comply with a lawful order in this matter. Therefore, claimant has shown by a preponderance of the evidence that an award of attorney fees is appropriate. As found, 22 hours of reasonable attorney fees, at an hourly rate of $175.00, have been incurred by claimant after entry of Judge Mottram's February 22, 2016 order. Therefore, attorney fees in the amount of $3,850.00 are awarded to claimant.

ORDER

It is therefore ordered that:

1. Employer shall be liable to claimant for 180 days of penalties at the rate of $1,000.00 per day, totaling $180,000.00. Sixty percent (or $108,000.00) shall be paid to claimant and forty percent (or $72,000.00) shall be paid to the subsequent injury fund.

2. Employer shall pay the Director of the Division of Workers' Compensation on behalf of the Workers' Compensation Cash Fund as follows: employer shall issue any check payable to "Cash Fund" and shall mail the check to: Brenda Carrillo, SIF Penalty Coordinator, Revenue Assessment Officer, DOWC Special Funds Unit, P.O. Box 300009, Denver, Colorado 80203-0009.

3. Employer shall pay attorney fees of $3,850.00, pursuant to Section 8-43-408(4) C.R.S.

4. Employer continues to be responsible for filing a bond in the original amount of $41,000.00 with the Division of Worker's Compensation as ordered by Judge Mottram

5. Employer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

7. In lieu of payment of the above compensation and benefits to the claimant, the Respondent-Employer shall:

a. Within ten (10) days of the date of service of this order, deposit the sum of $224,850.00 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation/Trustee. The check shall be mailed to the Division of Workers' Compensation, P.O. Box 300009, Denver, Colorado 80203-0009, Attention: Sue Sobolik/Trustee; OR

b. Within ten (10) days of the date of service of this order, file a bond in the sum of $224,850.00 with the Division of Workers' Compensation within ten (10) days of the date of this order:

(1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or

(2) Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation and benefits awarded.

IT IS FURTHER ORDERED: That the Respondent-Employer shall notify the Division of Workers' Compensation of payments made pursuant to this order.

IT IS FURTHER ORDERED: That the filing of any appeal, including a petition to review, shall not relieve the employer of the obligation to pay the designated sum to the trustee or to file the bond. §8-43-408(2), C.R.S.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 17, 2016

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

- Whether claimant has proven by a preponderance of the evidence that she suffered a compensable injury on February 17, 2016, arising out of an in the course and scope of her employment with employer.

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment she received from Dr. Krebs and his referrals were reasonable and necessary to cure and relieve claimant from the effects of the work injury.

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment provided by Dr. Krebs and his referrals was authorized medical treatment.

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that she is entitled to an award of temporary total disability (“TTD”) benefits.

STIPULATIONS

At hearing, the parties stipulated that if claimant’s claim is found to be compensable her average weekly wage (“AWW”) is $785.50.

FINDINGS OF FACT

1. Claimant began her employment with employer on January 10, 2010 as a licensed practical nurse (“LPN”). Claimant’s job duties included passing medications to patients, providing medical treatments, and other resident care. Claimant’s normal work schedule was Wednesday through Saturday; 2:00 p.m. to 10:00 p.m.

2. As indicated by claimant’s testimony and the medical records, she has been diagnosed with Parkinson’s disease. Claimant testified that her Parkinson’s related symptoms do not impact her ability to perform her job tasks.

3. Claimant underwent total hip replacement surgery for her left hip on March 25, 2015. Thereafter, claimant pursued physical therapy and recovered from the surgery. Claimant testified that after the March 2015 surgery she returned to work in late summer 2015. On December 15, 2015 claimant reported to Dr. Christopher Copeland that she had mild and dull pain in her left hip. On that date, Dr. Copeland administered a cortisone injection. Related to her left hip pain, claimant also pursued some physical therapy treatment in December 2015.

4. Claimant saw Dr. Jonathan Osorio on January 21, 2016. During that visit claimant requested prescription refills for “chronic left hip pain” and also raised concerns related to her Parkinson’s symptoms.

5. Claimant testified that prior to February 17, 2016 pain in her left hip did not impact her ability to work. Claimant had no work restrictions related to her March 25, 2015 surgery or the hip pain she reported to Dr. Copeland in December 2015.

6. Claimant testified that on February 17, 2016 she was at work performing her normal duties at the Nurses’ Station. At approximately 3:30 p.m., a resident in an electric wheelchair was attempting to exit the building to the outside smoking area. Claimant attempted to assist this resident by opening the door. However, at that same moment the resident accelerated the electric wheelchair into the door. Claimant testified that this momentum caused her to fall out the door onto the concrete, landing on her face, elbows, knees, and left side.

7. Claimant testified that her coworkers, Tia Shipley and Owana Forehand observed her fall. Both Ms. Shipley and Ms. Forehand assisted claimant into a wheelchair, while other coworkers assisted in providing claimant with first aid care including icing her nose and applying dressings to the wounds on her elbows and knees.

8. Claimant’s co-worker, Tia Shipley, CNA, testified that she witnessed claimant’s February 17, 2016 fall. Ms. Shipley’s testimony regarding the fall is consistent with claimant’s testimony.

9. Claimant’s co-worker, Jessica Christensen, CNA, testified that she did not see claimant fall, but did see claimant soon after. Ms. Christensen noted that claimant appeared to be limping after the February 17, 2016 fall. Ms. Christensen also testified that when she saw claimant at work on February 18, 2016, claimant told her that she was working because there was no one available to replace her.

10. Claimant testified that after receiving the initial first aid care, she completed an incident report with Donna Treat, Business Office Director for employer. In the incident report, claimant indicated that the body parts involved were her nose, right hand, right elbow, right knee, and left knee. Claimant did not report pain in her back or hips at that time.

11. Both claimant and Ms. Treat testified that Ms. Treat informed claimant that if she wished to receive medical care employer would assist her with scheduling an appointment with a provider. Claimant did not request medical treatment at that time.

12. Lucy Frahm, an Administrator for employer, testified that at the time of claimant’s fall on February 17, 2016, employer’s former workers’ compensation provider had closed his practice. As a result, employer was unsure where to refer claimant for medical treatment. Later, employer was able to obtain a list of providers from insurer.

13. Cheryl “Cherry” Chriestenson, Director of Nursing for employer, testified at hearing that when she spoke with claimant following the incident, claimant indicated that her knees hurt but that she was “good to go” to complete her shift on February 17, 2016.

14. Claimant testified that she was in pain following the fall on February 17, 2016. However, she completed the remainder of her shift on that date because no one was available to work in her place. Claimant also testified that at the end of her shift she had pain in both knees, her left hip, both wrists, and both elbows.

15. Claimant and claimant’s spouse, Lloyd Lewis, testified that Mr. Lewis drove claimant home after her shift on February 17, 2016 because claimant was in pain. Claimant did not seek medical care after her shift. Claimant testified that she believed that she did not have permission from employer to seek medical care at that time.

16. Claimant testified that she worked on February 18, 2016, because there was no one available to cover her shift. Coverage was found for the claimant’s February 19, 2016 shift and claimant was scheduled to be off on February 20 and 21, 2016. Claimant has not worked since February 18, 2016.

17. Claimant and Ms. Treat both testified that on February 22, 2016, claimant informed Ms. Treat that she wanted to seek medical treatment related to her February 17, 2016 fall. Ms. Treat informed claimant she could see Dr. Jeffrey Krebs on February 24, 2016.

18. As demonstrated by the medical records entered into evidence, claimant began receiving treatment from Dr. Krebs on February 24, 2016. Claimant reported to Dr. Krebs that she had pain in her back, left hip, and left leg. Claimant testified that this left hip pain was different from pain she experienced leading up to her hip replacement surgery. Claimant likened her pain after February 17, 2016 as a sciatic type pain which she felt in her low back, left buttock, and left leg.

19. Dr. Krebs initially released claimant to return to modified duty as of February 24, 2016. According to his report, Dr. Krebs determined that claimant was able to work 4 hours per day, but only able to perform work while sitting. At that time, claimant’s work restrictions included no bending, squatting, or twisting. However, beginning February 29, 2016, Dr. Krebs restricted claimant to “no work”.

20. Mr. Lewis testified that prior to the February 17, 2016 fall, claimant intended to take a week-long vacation beginning on February 24, 2016. However, due to the pain claimant experienced related to her fall on February 17, 2016, the trip was cancelled.

21. Ms. Frahm testified that claimant was offered “alternate duty” that included answering phones and completing admissions charts. These offers were made to claimant on March 1, 2016 and March 8, 2016, respectively. As indicated by the medical records, as of those dates claimant was restricted from all work according to Dr. Krebs’ February 29, 2016 report.

22. As indicated by the medical records, Dr. Krebs ordered x-rays of claimant's left hip and lower lumbar spine. The x-ray of claimant's left hip was conducted on February 24, 2016. That x-ray was normal and showed that claimant's hip replacement hardware components were well seated without evidence of complication. The x-ray of claimant's lower lumbar spine was conducted on February 29, 2016 and showed no acute fracture or dislocation. Magnetic resonance imaging ("MRI") of claimant's lumbar spine was performed on March 14, 2016. The MRI showed diffuse degenerative change at the lumbar facets without evidence of focal neural impingement.

23. Respondents filed a notice of contest ("NOC") to claimant's worker's compensation claim on March 28, 2016.

24. Dr. Krebs referred claimant to Dr. Michael Hehmann as of May 12, 2016. Claimant initially saw Dr. Hehmann on June 7, 2016. At that time Dr. Hehmann performed an electromyography ("EMG") on claimant's lower left extremity. The EMG showed a chronic type of denervation at the L5-S1 myotoma, but no acute denervation.

25. Dr. Krebs also referred claimant to Dr. Ellen Price as of June 9, 2016. Claimant initially saw Dr. Price on July 5, 2016. Dr. Price recommended sacroiliac joint injection with fluoroscopy. In her report, Dr. Price suggested claimant would benefit from a sacroiliac ("SI") belt and yoga. In light of Dr. Price's recommendations, Dr. Krebs ordered yoga and a SI belt for claimant. In her July 5, 2016 written report, Dr. Price opines that claimant's Parkinson's symptoms did not cause her February 17, 2016 injury.

26. Dr. Krebs has also referred claimant for physical therapy, massage therapy, and acupuncture.

27. The ALJ finds that claimant's report of injury occurring at work on February 17, 2016 is consistent with the medical records entered into evidence. The ALJ also credits the testimony of Mr. Lewis, Ms. Shipley, and Ms. Jessica Christensen. The ALJ credits the testimony of claimant and Ms. Treat and finds that claimant reported the injury to Ms. Treat on the date the injury occurred. Claimant sought treatment from Dr. Krebs, the physician designated by employer.

28. The ALJ finds that claimant has proven that it is more likely than not that she injured her low back, left hip, and left leg in the course and scope of her employment with employer on February 17, 2016 when she fell. Although claimant had prior left hip issues, the claimant has proven that it is more likely than not that the fall on February 17, 2016 aggravated, accelerated, or combined with her prior left hip issues to necessitate treatment.

29. The ALJ credits the medical records; work restrictions set forth by Dr. Krebs beginning on February 29, 2016; and claimant's testimony at hearing; and determines that claimant has established that it is more likely than not that she is not capable of performing her regular job duties and is currently unable to return to work.

30. The ALJ recognizes employer's offers of modified employment on March 1, 2016 and March 8, 2016. However, these offers were extended to claimant after Dr. Krebs had determined claimant was unable to return to work. The ALJ finds that these offers of modified employment did not comply with the current restrictions set for claimant by Dr. Krebs, the attending physician designated by employer.

31. The ALJ credits claimant's testimony at hearing and the medical records entered into evidence and finds that claimant has proven that it is more probable than not that the treatment provided to claimant by Dr. Krebs and his referrals (including but not limited to Dr. Hehmann and Dr. Price) is reasonable medical treatment necessary to cure and relieve claimant from the effects of the industrial injury.

32. The ALJ credits claimant's testimony at hearing and the medical records entered into evidence and finds that claimant has proven that it is more probable than not that the treatment provided to claimant by Dr. Krebs and his referrals (including but not limited to Dr. Hehmann and Dr. Price) is authorized medical care. Specifically, the ALJ finds that employer referred claimant to Dr. Krebs on February 22, 2016. The ALJ credits the medical records and finds that Dr. Hehmann and Dr. Price were authorized by virtue of the referrals from Dr. Krebs.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., (2015). A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical

condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. As noted by the court in *City of Brighton*, the term "arising out of" refers to the origin or cause of an employee's injury. *City of Brighton,* 318 P.3d at 502, *citing Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo.2001). Specifically, the term calls for examination of the causal connection or nexus between the conditions and obligations of employment and the employee's injury. *Id.* An injury "arises out of" employment when it has its "origin in" an employee's work-related functions and is "sufficiently related to" those functions so as to be considered part of employment. *Id*. It is not essential, however, that an employee be engaged in an obligatory job function or in an activity resulting in a specific benefit to the employer at the time of the injury. *Id. citing City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo.1985).

5. As found, claimant has proven by a preponderance of the evidence that she suffered a compensable injury to her low back, left hip, and left leg arising out of an in the course of her employment with employer when she fell at work on February 17, 2016. As found, claimant's fall on February 17, 2016, aggravated, accelerated, or combined with her preexisting left hip condition to require treatment. The ALJ finds the medical records; claimant's testimony; and the testimony of Mr. Lewis, Ms. Shipley, and Ms. Jessica Christensen to be credible and persuasive.

6. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

7. "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008). Section 8-43-404(5)(a) specifically states: "In all cases of injury, the employer or insurer has the right in the first instance to select the physician who attends said injured employee. If the services of a physician are not tendered at the time of the injury, the employee shall have the right to select a physician or chiropractor." "[A]n employee may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion…." *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985), *citing*, 2 A. Larson, *Workers' Compensation Law* § 61.12(g)(1983).

8. When the authorized treating physician refers the claimant to another health care provider, the treatment rendered by the referred provider is compensable as

part of the legal chain of authorization. *Mason Jar Restaurant v. Industrial Claim Appeals Office*, 862 P.2d 1026, 1029 (Colo. App. 1993) (*citing Greager v. Industrial Commission,* 701 P.2d 168 (Colo. App. 1985)).

9. As found, claimant has proven by a preponderance of the evidence that the treatment claimant has received and continues to receive from Dr. Krebs and Dr. Krebs' various referrals is reasonable and necessary to cure and relieve claimant from the effects of her February 17, 2016 work injury. Furthermore, the treatment provided by Dr. Hehmann and Dr. Price is deemed authorized by virtue of the referrals from Dr. Krebs.

10. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

11. As found, claimant has proven by a preponderance of the evidence that she is entitled to TTD commencing on February 19, 2016, when she was unable to work because of her compensable work injury. Based on claimant's testimony at hearing and the medical records entered into evidence, the ALJ finds claimant has established by a preponderance of the evidence that her inability to work has limited her ability to earn wages. Therefore, claimant is entitled to an award of TTD for the period of February19, 2016 until terminated by law.

12. Section 8-42-105(3), C.R.S. provides, in pertinent part, that temporary total disability benefits shall continue until the first occurrence of any one of the following: (a) the employee reaches maximum medical improvement; (b) the employee returns to regular or modified employment; or (c) the attending physician gives the claimant a written release to return to regular employment.

13. As found, employer offered claimant modified employment on March 1, 2016 and March 8, 2016. However, these offers were extended to claimant after Dr. Krebs had determined claimant was unable to return to work. Therefore, ongoing TTD

benefits are appropriate at this time because claimant was unable to accept the offer of modified employment as of February 29, 2016 due to the restrictions of Dr. Krebs.

ORDER

It is therefore ordered that:

1. Respondents shall pay claimant TTD benefits beginning February 19, 2016 and continuing until terminated by law, based upon an AWW of $785.50.

2. Respondents shall pay for the reasonable medical treatment necessary to cure and relieve claimant from the effects of the February 17, 2016 industrial injury including treatment provided by Dr. Krebs and his referrals.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 18, 2016

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUE

Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Kristin D. Mason, M.D. that Claimant has not reached Maximum Medical Improvement (MMI) for his admitted February 20, 2015 back injury.

FINDINGS OF FACT

1. Claimant worked for Employer as a Delivery Driver. On February 20, 2015 Claimant was pulling a dolly carrying approximately 200 pounds of groceries up an outside stairway of an apartment building. He slipped on ice, twisted and experienced immediate mid-line lower back pain.

2. Employer referred Claimant to Concentra Medical Centers for medical treatment. Authorized Treating Physician (ATP) Eric Tentori, M.D. determined that Claimant "may have sustained a thoracic strain, lumbar strain and lumbosacral strain." After receiving conservative treatment including medications, physical therapy, massage therapy and chiropractic treatment, Dr. Tentori concluded that Claimant reached Maximum Medical Improvement (MMI) on September 8, 2015. Dr. Tentori assigned Claimant a 0% permanent impairment rating and did not recommend any additional treatment for his injuries.

3. On September 16, 2015 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Tentori's MMI and impairment determinations. Claimant challenged the FAL and sought a Division Independent Medical Examination (DIME).

4. On January 25, 2016 Claimant underwent a DIME with Kristin D. Mason, M.D. After reviewing Claimant's medical history and conducting a physical examination, Dr. Mason diagnosed Claimant with a left pelvic upslip with resulting SI mediated pain. She commented that Claimant has suffered from consistent back pain since the date of his industrial accident. She noted that an April 3, 2015 MRI reflected no acute abnormalities associated with the work accident. Dr. Mason concluded that Claimant had not reached MMI because his function could be improved through additional treatment. To achieve MMI, Dr. Mason recommended manual treatment, chiropractic, osteopathic or physical therapy and lumbopelvis stabilization training. She also suggested transition to a gym-based or home-based independent exercise program. Dr. Mason anticipated 8-12 weeks of treatment to achieve functional improvement. Finally, Dr. Mason assigned Claimant a 5% provisional whole person impairment rating pursuant to Table 53 of the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*) and a 7% whole person rating for range of motion deficits. Combining the Table 53 and range of motion ratings yields a total 12% whole

person impairment for Claimant's February 20, 2015 industrial injury. She noted that Claimant did not suffer any thoracic spine or psychological impairment as a result of his work accident.

5. On June 8, 2016 Claimant underwent an independent medical examination with John Burris, M.D. Dr. Burris recounted that Claimant developed back pain while pulling a dolly loaded with groceries upstairs while at work on February 20, 2015. An April 3, 2015 MRI did not reveal any acute abnormalities associated with the work accident. He diagnosed Claimant with lower back pain. Dr. Burris explained that, despite conservative treatment, Claimant continued to have subjective pain complaints. He summarized that

> Based on the original mechanism, subsequent examinations, and the MRI, the only diagnosis that can reasonably be associated with the work event is the lumbosacral soft tissue strain/sprain. This type of injury heals predictably, regardless of treatment, within days to weeks. His persistent subjective complaints, 18 months later, are not consistent with the original diagnosis. His reported pain does not follow a known neuroanotomical pattern. There is no realistic expectation that additional treatment will affect his subjective complaints.

6. On June 27, 2016 Claimant underwent an independent medical examination with David Orgel, M.D. Dr. Orgel considered Claimant's mechanism of injury, treatment history and medical records. He remarked that Claimant was still experiencing lower back pain in his mid-lumbar spine. Dr. Orgel commented that the April 3, 2015 MRI reflected scarring on the spinal cord that was likely not caused by the industrial injury or the source of Claimant's back pain. He recommended an MRI of Claimant's lower back with contrast to determine whether there was a significant lesion. Barring a significant lesion, he recommended the treatment prescribed by Dr. Mason. Dr. Orgel assigned Claimant a provisional 5% whole person impairment rating pursuant to Table 53 of the *AMA Guides* and a 5% rating for range of motion deficits. Combining the ratings yields a 10% whole person impairment.

7. Dr. Burris testified at the hearing in this matter. He maintained that Dr. Mason erroneously determined that Claimant had not reached MMI. Dr. Burris explained that Claimant had completed reasonable and necessary treatment pursuant to the Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*). He also commented that Claimant's April 3, 2015 MRI did not reveal any acute abnormalities associated with the work accident and Dr. Tentori did not note any objective findings. Dr. Burris noted that no physicians besides Dr. Mason had diagnosed Claimant with left pelvic upslip with resulting SI mediated pain. He remarked that, if a DIME physician diagnoses an injury that is not in the prior medical records, the injury is unrelated to the industrial event. Similarly, Dr. Burris commented that there was no evidence of nerve impingement on Claimant's MRI or in the medical records, but Dr. Mason had documented that Claimant exhibited a positive slump test. He noted that it was unlikely that treating physicians had missed the pathology identified by Dr.

Mason. Finally, Dr. Burris explained that Claimant did not have any objective evidence to support a rating pursuant to the *AMA Guides*.

8. Dr. Burris explained that the treatment recommended by Dr. Mason would not cure or relieve the effects of Claimant's February 20, 2015 industrial injury. He remarked that Claimant had already received the treatment recommended by Dr. Mason and it had been unsuccessful. It would thus be unlikely that the same treatment would create functional improvement approximately six months later. Furthermore, because Claimant had returned to full-duty employment, it was unlikely that additional treatment would improve his functional abilities.

9. Dr. Orgel also testified at the hearing in this matter. He maintained that Dr. Mason properly concluded that Claimant has not reached MMI as a result of his February 20, 2015 industrial injury. Dr. Orgel explained that Dr. Mason was not the first medical provider to identify Claimant's SI joint issue. In fact, Claimant had received SI joint treatment from Richard Mobus, D.C. subsequent to his February 20, 2015 industrial injury. Dr. Orgel commented that, although Claimant had received prior chiropractic treatment and physical therapy, the modalities had failed to completely address Claimant's problems. He concluded that Claimant required the additional treatment recommended by Dr. Mason to achieve MMI. Finally, he assigned Claimant a provisional 5% whole person impairment rating pursuant to Table 53 of the *AMA Guides* and a 5% rating for range of motion deficits. Combining the ratings yields a 10% whole person impairment.

10. Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Mason that Claimant has not reached MMI for his admitted February 20, 2015 back injury. Dr. Mason diagnosed Claimant with a left pelvic upslip with resulting SI mediated pain. She commented that Claimant has suffered from consistent back pain since the date of his industrial accident. Dr. Mason concluded that Claimant had not reached MMI because his function could be improved through additional treatment. To achieve MMI, Dr. Mason recommended manual treatment, chiropractic, osteopathic or physical therapy and lumbopelvis stabilization training.

11. In contrast, Dr. Burris maintained that Dr. Mason erroneously determined that Claimant had not reached MMI. He explained that, based on Claimant's mechanism of injury, subsequent examinations and the MRI, Claimant suffered a lumbosacral soft tissue strain/sprain. Dr. Burris noted that a lumbosacral strain/sprain will heal, regardless of treatment, within days to weeks. Claimant's continued subjective complaints 18 months after the date of injury are simply not consistent with his diagnosis. Dr. Burris explained that Claimant had completed reasonable and necessary treatment pursuant to the *Guidelines*. He also commented that Claimant's April 3, 2015 MRI did not reveal any acute abnormalities associated with the work accident and Dr. Tentori had not noted any objective findings. Dr. Burris commented that no physicians besides Dr. Mason had diagnosed Claimant with left pelvic upslip with resulting SI mediated pain. He remarked that, if a DIME physician diagnoses an injury that is not in the prior medical records, the injury is unrelated to the industrial event. Dr. Burris

concluded that the treatment recommended by Dr. Mason would not cure or relieve the effects of Claimant's February 20, 2015 industrial injury. He remarked that Claimant had already received the treatment recommended by Dr. Mason and it had been unsuccessful.

12. Although Dr. Burris disagreed with Dr. Mason's determination that Claimant has not reached MMI, the persuasive testimony of Dr. Orgel supports Dr. Mason conclusion. Dr. Orgel maintained that Dr. Mason properly concluded that Claimant has not reached MMI as a result of his February 20, 2015 industrial injury. He explained that Dr. Mason was not the first medical provider to identify Claimant's SI joint issue. In fact, Claimant had received treatment from chiropractor Dr. Mobus subsequent to his February 20, 2015 industrial injury. Dr. Orgel commented that, although Claimant had received prior chiropractic treatment and physical therapy, the modalities had failed to completely address Claimant's problems. He concluded that Claimant required the additional treatment recommended by Dr. Mason to achieve MMI. Moreover, Dr. Burris' opinion simply constitutes a difference of opinion with Dr. Mason about whether Claimant has attained MMI. He disagreed with Dr. Mason's diagnosis and recovery time. However, Dr. Mason reviewed Claimant's medical history, conducted a physical examination and diagnosed Claimant with a left pelvic upslip and resulting SI mediated pain. Because prior treatment modalities had failed to completely address Claimant's problems, Dr. Mason reasonably recommended approximately 8-12 weeks of additional treatment to achieve functional improvement. Accordingly, Respondents have failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Mason's MMI determination was incorrect.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the

reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

. 6. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

7. As found, Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Mason that Claimant has not reached MMI for his admitted February 20, 2015 back injury. Dr. Mason diagnosed Claimant with a left pelvic upslip with resulting SI mediated pain. She commented that Claimant has suffered from consistent back pain since the date of his industrial accident. Dr. Mason concluded that Claimant had not reached MMI because his function could be improved through additional treatment. To achieve MMI, Dr. Mason recommended manual treatment, chiropractic, osteopathic or physical therapy and lumbopelvis stabilization training.

8. As found, in contrast, Dr. Burris maintained that Dr. Mason erroneously determined that Claimant had not reached MMI. He explained that, based on Claimant's mechanism of injury, subsequent examinations and the MRI, Claimant suffered a lumbosacral soft tissue strain/sprain. Dr. Burris noted that a lumbosacral strain/sprain will heal, regardless of treatment, within days to weeks. Claimant's continued subjective complaints 18 months after the date of injury are simply not consistent with his diagnosis. Dr. Burris explained that Claimant had completed reasonable and necessary treatment pursuant to the *Guidelines*. He also commented that Claimant's April 3, 2015 MRI did not reveal any acute abnormalities associated with the work accident and Dr. Tentori had not noted any objective findings. Dr. Burris commented that no physicians besides Dr. Mason had diagnosed Claimant with left pelvic upslip with resulting SI mediated pain. He remarked that, if a DIME physician diagnoses an injury that is not in the prior medical records, the injury is unrelated to the industrial event. Dr. Burris concluded that the treatment recommended by Dr. Mason would not cure or relieve the effects of Claimant's February 20, 2015 industrial injury. He remarked that Claimant had already received the treatment recommended by Dr. Mason and it had been unsuccessful.

9. As found, although Dr. Burris disagreed with Dr. Mason's determination that Claimant has not reached MMI, the persuasive testimony of Dr. Orgel supports Dr. Mason conclusion. Dr. Orgel maintained that Dr. Mason properly concluded that Claimant has not reached MMI as a result of his February 20, 2015 industrial injury. He explained that Dr. Mason was not the first medical provider to identify Claimant's SI joint issue. In fact, Claimant had received treatment from chiropractor Dr. Mobus subsequent to his February 20, 2015 industrial injury. Dr. Orgel commented that, although Claimant had received prior chiropractic treatment and physical therapy, the modalities had failed to completely address Claimant's problems. He concluded that Claimant required the additional treatment recommended by Dr. Mason to achieve MMI. Moreover, Dr. Burris' opinion simply constitutes a difference of opinion with Dr. Mason about whether Claimant has attained MMI. He disagreed with Dr. Mason's diagnosis and recovery time. However, Dr. Mason reviewed Claimant's medical history, conducted a physical examination and diagnosed Claimant with a left pelvic upslip and resulting SI mediated pain. Because prior treatment modalities had failed to completely address Claimant's problems, Dr. Mason reasonably recommended approximately 8-12 weeks of additional treatment to achieve functional improvement. Accordingly, Respondents have failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Mason's MMI determination was incorrect.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have failed to overcome the DIME opinion of Dr. Mason. Claimant has not reached MMI.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

WC No. 4-928-516 (August 11, 2013 D.O.I):

- Whether the Respondents proved, by a preponderance of the evidence, that the 26 percent scheduled impairment rating assigned by Division Examiner, Dr. Kenneth Finn, is incorrect.

- Whether the Respondents proved, by a preponderance of the evidence, that the claimant does not require medical treatment to maintain his condition arising out of the August 11, 2013, injury at MMI.

- Whether the claimant proved, by a preponderance of the evidence, that he suffered impairment beyond the arm at the shoulder as a result of the August 11, 2013, industrial injury.

- If the claimant proved he suffered impairment beyond the arm at the shoulder as a result of the August 11, 2013, industrial injury, what is the correct percent of whole person permanent physical impairment which should be assigned to the injury?

WC No. 4-952-124 (May 18, 2014 D.O.I.):

- Did the claimant prove, by a preponderance of the evidence, that he is entitled to an award of temporary total disability from May 5, 2015 through May 23, 2016?

- Did the Respondents prove, by a preponderance of the evidence, that the claimant was responsible for the termination of his employment on May 5, 2015, and therefore, not entitled to an award of temporary total disability benefits?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 50-year-old man with a March 31, 1966 date of birth. Claimant was hired by Employer on May 23, 2008 to work as a sales associate.

2. Claimant initially injured his right shoulder in an admitted accident in the course and scope of his employment with Employer on August 11, 2013, when he was lifting cases of frozen chicken. An August 15, 2013, MRI showed a complete rupture of the long head of the biceps tendon, retracted, 3mm insertional

intrasubstance partial tear supraspinatus tendon, and moderate subscapularis tendinosis, without tear.

3. Claimant was referred to orthopedic surgeon, Dr. Richard Cunningham. Dr. Cunningham evaluated Claimant on August 19, 2013. He noted the MRI findings and recommended a diagnostic arthroscopy with debridement followed by probable open biceps tenodesis. Dr. Cunningham performed surgery on August 30, 2013. At the time of surgery, the AC joint was inspected and revealed "exposed eburnated bone." Dr. Cunningham performed an arthroscopic distal clavicle resection removing approximately 8 mm of bone.

4. Following surgery, Claimant continued to complain of pain with limited range of motion due to guarding. Dr. Cunningham thought Claimant would go on to have full range of motion and strength.

5. Due to Claimant's ongoing pain complaints, an MRI was performed on December 24, 2013. Dr. Cunningham reviewed the MRI and thought it was consistent with adhesive capsulitis. Although Dr. Cunningham did not think Claimant would need it, an arthroscopic lysis of adhesions could be performed.

6. On March 7, 2014, Dr. Cunningham performed a right shoulder arthroscopy with lysis of adhesions, manipulation under anesthesia, arthroscopic subacromial decompression and debridement of low grade partial supraspinatus tearing and rotator cuff fraying.

7. On May 18, 2014, Claimant was exiting the restroom at work when he slipped and fell striking the posterior aspect of his head, without loss of consciousness. Claimant presented to the Vail Valley Medical Center Emergency Room where he complained of right wrist, right shoulder, and diffuse left knee and bilateral back pain. On physical exam, Claimant had no evidence of swelling or discoloration of the shoulder. There was a small amount of soft tissue swelling of the wrist. Claimant was assessed with right wrist pain, left knee pain, right shoulder pain, lumbar back strain and posterior scalp contusion. He was directed to follow-up with Dr. Cunningham.

8. Dr. Cunningham evaluated Claimant on May 19, 2014. On exam, there was mild swelling over the right shoulder. Claimant's right wrist was placed in a splint and he was referred to a hand specialist.

9. Claimant continued to complain of right wrist pain. An MRI performed on June 20, 2014 was read as showing an avulsion fracture of a carpal bone on the dorsum of the right wrist. On August 27, 2014, Claimant underwent surgery on his right wrist, a right hand carpal nonunion repair with excision and an osteoplasty.

10. On March 7, 2014, Dr. Cunningham documented "good shoulder range of motion."

11. Despite extensive physical therapy for the shoulder and the wrist, Claimant was not progressing. On October 23, 2014, authorized provider, NP Lucia London, received a call from Claimant's physical therapist who was concerned about his lack of progress. The therapist was spending at least 80 percent of her visits discussing Claimant's concerns and problems. Claimant did not seem to be progressing with therapy and she was concerned that there might be some psychosocial barriers preventing Claimant from progressing.

12. Multiple providers noted that psychological factors appeared to be present in Claimant's pain presentation. Dr. Raub noted on September 25, 2014, that, "after evaluating this patient, I have some concerns about the inconsistencies in his history and my discussion with Lucia London, NP. Additionally, he has multiple musculoskeletal complaints beyond what one would expect from his lumbar MRI. I am concerned about other influences, perhaps, psychosocial issues." Dr. J. Tashof Bernton opined, "The patient's examination is characterized by multiple nonorganic findings and inconsistencies, which indicate a significant psychologically based contribution to his pain presentation." Dr. Bernton further opined, "There is significant evidence of somatoform disorder, and, given the Waddell findings on examination, significant symptom magnification is probably present." On May 14, 2015 (two months before the DIME), Dr. Scherr noted, "Severe pain behaviors are present. . . He has limited ROM in all planes, but has suboptimal effort... Grip strength is diminished, but again, suboptimal…Shoulder is not swollen, but diffusely tender with jerking upon light touch." Dr. Scherr also documented a phone call from the physical therapist who reported Claimant was "so obsessed with his pain that therapy was nearly impossible to perform. The therapist stated that he would continually talk about the pain and would not perform the activities or exercises." Therapy was put on hold secondary to this.

13. Authorized treating provider, Dr. Susan Lan, placed Claimant at MMI from the August 11, 2013, accident on November 19, 2014. Dr. Lan assigned 8 percent scheduled impairment for loss of right shoulder motion. Eight percent scheduled impairment converts to 5 percent whole person impairment. Dr. Lan indicated, "Maintenance care should include therapy bands for a home exercise program and a 3 month gym membership so he can continue exercising."

14. Insurer filed a Final Admission of Liability consistent with Dr. Lan's opinions on MMI, impairment and medical treatment post-MMI.

15. Claimant was dissatisfied and requested a Division IME. Dr. Kenneth Finn was selected as the Division Examiner. Dr. Finn performed his examination on August 7, 2015. In the course of his examination, Dr. Finn took a history of Claimant's injury from him. Claimant reported undergoing seven months of physical therapy, "which was not helpful". Claimant told Dr. Finn that, after his May 18, 2014, fall, he noted increasing right shoulder pain. On physical exam, Dr. Finn noted Claimant had give way weakness in throughout the right upper extremity and nonanatomic diminished sensation to light touch throughout the

right upper extremity. Despite Claimant's give way weakness and nonanatomic findings, Dr. Finn assigned 18 percent scheduled impairment for loss of shoulder motion. He assigned an additional ten percent scheduled impairment for Claimant's distal clavicle resection of "eburnated bone". The combined scheduled impairment is 26 percent. Twenty six percent scheduled impairment converts to 16 percent whole person impairment.

16. Prior to undergoing the Division IME, the claimant's employment with the Respondent Employer was terminated on May 4, 2015, for gross misconduct, "integrity issue".

17. Employer's Assistant Manager, Glen Liguori, testified at hearing. Mr. Liguori testified that on May 4, 2015, Claimant was employed by Employer in a modified work position of "People Greeter". Mr. Liguori testified that, at that time, he was the Assistant Manager over the front end, which included the management and supervision of associates in the position of People Greeter. Mr. Liguori testified that he had also been Claimant's supervisor when he worked in the produce department. Mr. Liguori credibly testified that new associates are required to attend an orientation session, which discusses Employer's policies and procedures, including attendance, Open Door policy, breaks, meal periods, and days of rest, and Statement of Ethics. Mr. Liguori credibly testified that Employer provides the orientation in both the English and Spanish languages for their associates. Mr. Liguori testified that in addition to their initial orientation, Employer's associates are required to complete annual "Computer based learning," which also reviews Employer's policies relating to breaks and meal periods. Mr. Liguori testified concerning Employer's four-step disciplinary process and situations when the four-step disciplinary process is not used, such as instances of "Gross Misconduct". Mr. Liguori testified Employer's associates are permitted two paid 15 minute breaks per shift. He testified concerning the circumstances leading up to the termination of Claimant's employment. Mr. Liguori credibly testified that he reviewed in-store security video in an effort to ascertain Claimant's whereabouts after being questioned by another associate. At that time, he learned Claimant had taken an extended break. On further review, Mr. Liguori discovered that throughout April 2015, Claimant was taking anywhere from 25 minutes up to 41 minutes for his paid 15 minute breaks. Mr. Liguori credibly testified this is considered "theft of time" and gross misconduct and resulted in the termination of Claimant's employment with Employer. Claimant is responsible for the termination of his employment with Employer.

18. A reasonable employee would appreciate that repeatedly taking paid breaks, of two to three times in length of the allotted time, would likely result in the termination of employment. As found, Respondents have proven, by a preponderance of the evidence, that Claimant was responsible for the termination of his employment.

19. Dr. Carlos Cebrian examined Claimant on December 18, 2015, at Respondents' request. Dr. Cebrian also testified at hearing as a Level II accredited expert in

the field of occupational medicine and family medicine. In connection with his IME, Dr. Cebrian reviewed surveillance video of Claimant, which is included in the record at Exhibit K. The surveillance video was not available to Dr. Finn at the time of the Division IME.

20. On Dr. Cebrian's physical exam, consistent with his presentation to Dr. Finn, Claimant demonstrated jerky cog wheeling movements on range of motion testing. However, when Dr. Cebrian tested Claimant's strength, he was able to hold both arms at shoulder level at 90 degrees in flexion, inconsistent with his range of motion.

21. After Dr. Cebrian's evaluation, Dr. Scherr placed Claimant at MMI from the May 18, 2014 accident. In connection with that determination, Dr. Scherr attempted to provide an impairment rating of the right shoulder. In Dr. Scherr's May 23, 2016, evaluation, he notes, "PT did not feel PT was beneficial due to [Claimant's] pain behaviors and his inability to participate. He did have the FCE and because of his severe pain behaviors was a difficult exam and was hard to validate. He has had 3 stellate ganglion blocks which have been helpful, but only temporarily. He did have a urine drug screen in which the UDT was negative for Oxycodone when it should have been positive…. There is also the issue of the surveillance video that indicates his ability to do more with his right arm than is demonstrated here in the office." Dr. Scherr noted, "Very Severe Pain behaviors are present, which makes any exam difficult, as he won't even really try to move his arm period. He will raise the arm about 120 degrees in flexion/abduction, which is an improvement… I attempted to measure both L and R shoulders today and he was very difficult in complying with the request, despite the interpreter and my demonstrating several times the correct movement of the arm. I was able to obtain the L shoulder measurements. The R, I was not able to do IR and ER due to pain behaviors and reported pain. His R arm movements were non-physiologic…. I was unable to obtain accurate physiologic measurements from the R arm, so I was not able to impair this arm for ROM." Regarding maintenance care, Dr. Scherr opined, "As stellate ganglion blocks only temporarily helpful and UDT testing inconsistency with absence of Oxycodone when should have been positive, as such, no maintenance care required."

22. Dr. Cebrian credibly testified that Dr. Finn erred at the time of his DIME, in assigning impairment for the range of motion measurements that he obtained as they were not an accurate reflection of Claimant's range of motion resulting from the August 11, 2013, injury. The only appropriate ranges of motion measurements are those Dr. Lan obtained when she placed Claimant at MMI on November 19, 2014. According to the AMA Guides, page 78, "Pain, fear of injury, or neuromuscular inhibition may limit mobility by diminishing effort. Such limitations provide inaccurately low and inconsistent measurements that lead to improperly inflated impairment estimates." Dr. Cebrian credibly explained that Dr. Finn's rating is not in accordance with the AMA Guides because it is not reproducible and physiologic.

23. Dr. Cebrian credibly testified that Dr. Finn erred in assigning an additional ten percent impairment for the distal clavicle resection to remove eburnated bone. The purpose of the distal clavicle resection was to remove osteoarthritis in the AC joint. Claimant did not injure or aggravate his AC joint in the August 11, 2013 accident. He suffered a rupture of the biceps tendon and a partial supraspinatus tear. Dr. Cunningham was not considering a distal clavicle resection at the time of pre-operative planning. At the time of surgery, Dr. Cunningham found the AC joint had degenerative findings of exposed and eburnated bone. At that time, he elected to perform a distal clavicle resection for a degenerative and non-claim related condition.

24. The opinions of Dr. Cebrian are more credible and persuasive than those of Dr. Finn.

25. Claimant testified his right shoulder condition worsened between his November 19, 2014, date of MMI and his appointment with Dr. Finn. Dr. Finn agreed with the November 19, 2014, date of MMI. When Dr. Lan placed Claimant at MMI on November 19, 2014, she restricted him to no lifting in excess of fifteen to 20 pounds. By the time Claimant was evaluated by Dr. Finn, his restrictions had increased to no lifting in excess of five pounds. Impairment is to be determined as of the date of MMI. The range of shoulder motion exhibited by Claimant, as measured by Dr. Lan on the date of MMI, more accurately reflects Claimant's permanent physical impairment from the August 11, 2013 accident.

26. Claimant testified to restrictions in the use of his right upper extremity and difficulty sleeping, as evidence that his impairment is beyond the arm at the shoulder. However, Claimant's physicians strongly encouraged him to use the right upper extremity normally. Despite this encouragement, Claimant does not use his right upper extremity normally. He exhibits severe pain behaviors with non-physiologic movements. Claimant's sleep disturbance pre-existed the August 11, 2013 date of injury.

27. Respondents have proven, by a preponderance of the evidence, that the scheduled impairment rating assigned by Dr. Finn is incorrect. The only appropriate ranges of motion measurements are those Dr. Lan obtained when she placed Claimant at MMI on November 19, 2014. Claimant's correct impairment rating is eight percent scheduled impairment to the right upper extremity, as assigned by Dr. Lan. As found, the additional ten percent scheduled impairment assigned by Dr. Finn for the distal clavicle resection was incorrectly assigned. The procedure was performed to correct a non-work-related degenerative condition in the AC joint.

28. Claimant has failed to prove, by a preponderance of the evidence that the 8 percent scheduled impairment assigned by Dr. Lan should be converted to whole person.

29. Dr. Cebrian testified that no treatment provided to date has improved Claimant's subjective complaints. Claimant has been noncompliant with physical therapy, as noted by the treating physicians. The treating physician also noted a non-compliant urine drug test and recommended against medical treatment to maintain MMI. The opinions of Dr. Scherr and Dr. Cebrian that Claimant does not require medical treatment to maintain his August 11, 2013 injury at MMI are credible and persuasive.

30. The ALj declines to order a gym membership and therapy bands as maintenance care, given Claimant's refusal to participate in supervised physical therapy. Claimant provided no credible evidence that he needs, or even desires, medical treatment to maintain his condition at MMI.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits, including medical benefits, by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

A rating physician must rate impairment in accordance with the provisions of the *AMA Guides to the Evaluation of Permanent Impairment,* 3d Ed., Revised. Section 8-42-101(3.7), C.R.S.; § 8-42-107(8)(c), C.R.S.; *see also, Wilson v. Industrial Claim*

Appeals Office, 81 P.3d 1117 (Colo. App. 2003). Impairment is to be determined as of the date of MMI.

As found, Dr. Finn's evaluation of the claimant's loss of range of shoulder motion was not in accordance with the provisions of the *AMA Guides to the Evaluation of Permanent Impairment,* 3d Ed., Revised. As found, Dr. Finn's assigned impairment for loss of shoulder motion was not consistent with those in the record and were not reproducible and physiologic. Therefore, they are not an accurate reflection of the claimant's permanent impairment and should not be used. The range of motion reflected in Dr. Lan's November 19, 2014, report of MMI and impairment more accurately reflects the claimant's impairment as of MMI. As found, Dr. Finn inappropriately included an additional ten percent scheduled impairment for a distal clavicle excision, which was performed to remove eburnated bone, a non-work-related condition. Accepting Dr. Lan's range of motion and excluding Dr. Finn's additional ten percent for loss of shoulder motion, the claimant's permanent physical impairment resulting from the August 11, 2013 accident totals eight percent of the right upper extremity.

Section 8-42-107, C.R.S., sets forth two different methods of compensating medical impairment. Subsection (2) provides a schedule of disabilities and Subsection (8) provides a Division Independent Medical Examination ("DIME") process for whole person ratings. The threshold issue is application of the schedule and this is a determination of fact based upon a preponderance of the evidence. The application of the schedule depends upon the "situs of the functional impairment" rather than just the situs of the original work injury. *Langton v. Rocky Mountain Health Care Corp.,* 937 P.2d 803 (Colo. App. 1996); *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996). The heightened burden of proof in Subsection (8) applies only if the threshold determination is made that the impairment is not limited to the schedule. Then, and only then, does either party face a clear and convincing evidence burden to overcome the rating of the DIME. *Webb v. Circuit City Stores, Inc.*, W.C. No. 4-467-005 (ICAO, August 16, 2002).

The question of whether a claimant's impairment falls within the schedule of benefits is one of fact for the Administrative Law Judge. *Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo.App. 1996). It is the situs of the functional impairment that is at issue. *See, e.g., Id.* at 368.

The claimant described functional limitations primarily affecting the use of his right arm and shoulder. As found, the claimant failed to prove, by a preponderance of the evidence, that the situs of functional impairment for the right upper extremity extended beyond the extremity. Therefore, § 8-42-107(7)(b)(II), C.R.S. precludes an award of medical impairment benefits for the right upper extremity based on the whole person conversion of the appropriate upper extremity rating.

The claimant has the burden of proving entitlement to medical benefits by a preponderance of the evidence. Section 8-43-201, C.R.S; *City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985).

Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work-related injury or disease and the condition for which benefits or compensation is sought. *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo.App. 1997). Whether the claimant sustained his burden of proof is a factual question for resolution by the ALJ. *City of Durango v. Dunagan,* 939 P.2d 496 (Colo.App. 1997).

Here, as found, the claimant failed to meet his burden of proving that he requires medical treatment to maintain his condition at MMI.

To obtain indemnity benefits, a claimant must prove, by a preponderance of the evidence, that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 639 (Colo. App. 1997).

Under sections 8-42-105(4) and 8-42-103(1)(g), C.R.S., the claimant is precluded from receiving indemnity benefits if he is found to be responsible for his wage loss. The concept of "responsibility" in sections 8-42-105(4) and 8-42-103(1)(g), is similar to the concept of "fault" under the previous version of the statute. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). "Fault" requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994). Fault does not require willful intent. *Richards v. Winter Park Recreational Association*, 919 P.2d 933 (Colo. App. 1996)(unemployment insurance).

Respondents sustained their burden of proof to establish that Claimant engaged in volitional acts, which caused the termination of his employment. Respondents' evidence, both documentary and testimonial, was found more credible and persuasive than the testimony provided by Claimant.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant’s request for an award of 26 percent scheduled permanent physical impairment is denied and dismissed;

2. Respondents are ordered to pay Claimant an award of 8 percent scheduled impairment, taking credit for any PPD benefits previously admitted and paid;

3. Claimant’s request for conversion of the award of scheduled impairment benefits to whole person permanent physical impairment benefits is denied and dismissed;

4. Claimant’s request for an award of medical benefits post-MMI is denied and dismissed.

5. Claimant’s request for an award of TTD benefits from May 4, 2015 through May 23, 2016, is denied and dismissed.

6. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED October 14, 2016

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

STIPULATION

At the commencement of hearing, the parties agreed that since the question of the overpayment is directly impacted by whether claimant prevails in overcoming the Division Independent Medical Examination (DIME); the issue of an asserted overpayment should be held in abeyance until a determination on claimant's attempt to overcome the DIME. The ALJ approves the parties' stipulation.

REMAINING ISSUES

I. Whether Claimant established by clear and convincing evidence that Dr. Polanco, as the Division IME physician, erred in calculating Claimant's impairment rating.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant sustained an admitted work related injury on February 6, 2014 while working for Employer when he slipped and fell on ice. He fell straight forward, landing on his left elbow. He experienced pain in his left elbow, left shoulder, and some pain. He denied striking his head. R.E. E, Bates 46.

2. Claimant was referred to Concentra as the designated provider. He first presented to Concentra on February 7, 2014. Upon examination, he was found to have full active range of motion in all directions without pain or stiffness in his left shoulder. His left elbow showed some mild swelling without any ecchymosis or redness. Examination of claimant's neck revealed no evidence of external trauma; he had some diffuse tenderness along the trapezius musculature, but he had adequate range of motion in all directions. Claimant did not complain of any headaches or low back pain. He was returned to full duty without restrictions. R.E. E, Bates 46.

3. Claimant undertook extensive conservative care for his neck, upper back and left elbow including physical therapy (PT), chiropractic treatment with Dr. Brian Polvi and physiatric evaluation on June 5, 2014 with Dr. John Bissell, M.D.

4. On June 9, 2014, when claimant returned to Concentra, he reported constant headaches and intermittent numbness to the left 3rd to 5th fingers, in addition to ongoing neck and upper back pain. Claimant was referred to Dr. Hattem, for delayed recovery. R.E. X.

5. On June 13, 2014, claimant presented to his personal primary care physician complaining of ongoing headaches since April 2014, two weeks following claimant's original date of injury. Claimant was diagnosed with acute sinusitis and started on antibiotics. R.E. Y.

6. Due to persistent diffuse complaints of numbness and tingling, Claimant was referred for electrodiagnostic (EMG) testing on July 2, 2014. EMG testing was interpreted as being normal, without evidence of carpal tunnel syndrome, cubital tunnel syndrome or cervical radiculopathy. R.E. Z.

7. Claimant returned to Concentra on July 21, 2014 complaining of very diffuse and extremely migratory "increased pain all over, occipital to mid scalp headaches, neck and back pain from his neck down his upper and lower back, and both arms and legs are now numb." This July 21, 2014 medical record is the first documented complaint of pain in the low back. R.E. EE.

8. On August 7, 2014, Claimant returned to Dr. Albert Hattem reporting that "his whole body [hurt]." Physical examination revealed mild paracervical tenderness in the cervical spine. Nonetheless, claimant demonstrated full cervical range of motion. Likewise, claimant had full range of motion at the shoulders and elbows, as well as a normal neurologic examination. R.E. II.

9. Dr. Hattem documented that he could find no indication that claimant ever complained of low back pain until three months following the original date of injury. Dr. Hattem opined that claimant's complaints of low back pain were not work related. He further noted that claimant's initial complaints were in the left upper extremity, not the right and that claimant's pain complaints were migrating without objective explanation. Documenting his concerns that there were behavioral issues that were impeding the claimant's recovery, Dr. Hattem referred claimant for a psychological evaluation with David Hopkins. R.E. II.

10. On September 9, 2014, claimant underwent a psychological evaluation with David Hopkins. Dr. Hopkins assessed claimant as having an adjustment disorder with depression and anxiety, as well as a pain disorder with physical and psychological factors. He recommended that claimant continue with biofeedback training in addition to 4 to 6 individual psychotherapy sessions. He also suggested that claimant would be a good candidate for antidepressant medication, apparently unaware that claimant was already being prescribed Wellbutrin for a nonwork related condition of depression and anxiety. R.E. PP; R.E. VVVV, Bates 411.

11. In the interim between the August 7, 2014 appointment with Dr. Hattem and the September 9, 2014 psychological evaluation with David Hopkins, claimant returned to his personal primary care provider continuing to complain of headaches. Claimant was diagnosed with chronic sinusitis. R.E. JJ.

12. As part of claimant's pain management treatment, he underwent occipital nerve blocks. In a follow-up with pain management specialist Dr. Bissell on October 6, 2014, claimant reported no improvement with the occipital nerve blocks and limited benefit with Tramadol. Subsequently, on October 14, 2014, Dr. Bissell administered cervical and thoracic trigger point injections. Claimant's pain diagram from this date indicates aching, numbness, burning, pins and needles, and stabbing from the bottom of his ribs proximally, throughout the entirety of his right and left upper extremity, and in the right low back and butt talk, and extending throughout the right lower extremity. R.E. XX, AAA.

13. Claimant's last medical appointment with Dr. Bissell was on November 3, 2014. On that date, claimant reported no improvement after administration of the above referenced trigger point injections. Dr. Bissell documented that claimant complained of low back pain and right lower extremity pain which were new pain complaints since his initial evaluation by Dr. Bissell on June 5, 2014. Dr. Bissell further noted that claimant's left elbow contusion had resolved. R.E. CCC.

14. Dr. Bissell explained to claimant on November 3, 2014 that he had no further treatment options which he felt would be beneficial to claimant and that from his standpoint, claimant had reached maximum medical improvement (MMI). R.E. CCC.

15. On November 20, 2014, claimant presented to Dr. Timothy Hart, who had previously examined and evaluated claimant under this workers' compensation claim for his bilateral upper extremity complaints. Dr. Hart noted that claimant complained of diffuse numbness bilaterally, noting further that these complaints did not correlate with the objective findings on claimant's previously conducted nerve conduction studies. Dr. Hart noted that claimant had "somewhat transitory . . . symptoms over time." As he had stated previously, Dr. Hart reiterated his opinion that claimant was not a surgical candidate stating, "I do not think it likely to be successful because we do not have a clear correlation between objective findings and subjective complaints." Dr. Hart then discharged claimant from his care. R.E. EEE.

16. Claimant returned to Dr. Hattem at Concentra for a follow-up appointment on November 25, 2014. Claimant presented in no acute distress. Physical examination revealed mild decreased range of motion of the cervical spine and full shoulder range of motion. Claimant's upper extremities demonstrated good muscle tone with normal muscle strength. Dr. Hattem's impression was that claimant suffered an aggravation of pre-existing cervical spondylosis; a cervical MRI preformed previously demonstrating cervical spondylosis most prominent at the C5-6 level with potential impingement of the exiting C6 nerve root and a previous cervical x-ray demonstrating degenerative disc disease at C5-6 and C6-7. Dr. Hattem also documented that claimant had completed physical therapy and six chiropractic visits as well as biofeedback and psychological counseling. Additionally, Dr. Hattem documented that claimant had undergone ultrasound-guided left cervical and thoracic paraspinal steroid and anesthetic trigger point injections with no improvement, and that Dr. Bissell had discharged claimant because he had no further treatment options to recommend. Dr. Hattem also remarked

on the findings of Dr. Hart, specifically noting that there was a mismatch between the EMG findings and the somewhat changing nature of claimant's symptoms over time. Finally, he documented that his opinion that claimant's low back pain was not causally related to the February 6, 2014 original work injury and that claimant's pain complaints were migrating without objective medical findings to support them was unchanged. R.E. FFF.

17. Claimant underwent a functional capacity evaluation on December 15, 2014. The study was valid and found the claimant able to lift 40 pounds occasionally, carry 40 pounds, push 65 pounds, and pull 78 pounds. R.E. GGG. Claimant then returned to Dr. Hattem on February 12, 2015, during which appointment Dr. Hattem placed claimant at MMI. Dr. Hattem assigned 4% whole person impairment rating for abnormal cervical motion and a Table 53 impairment of 6% whole person for six months of medically documented pain with moderate to severe degenerative changes on structural test, yielding an overall 10% whole person impairment rating for the February 6, 2014 work injury. Dr. Hattem also recommended that claimant retain access to maintenance medical care to include prescription refills. Lastly, Dr. Hattem stated that regarding claimant's work capabilities, he should return to the medium category of work, referencing the functional capacity evaluation. R.E. III.

18. Respondents filed a final admission of liability (FAL) consistent with Dr. Hattem's report, admitting for the 10% whole person impairment rating and maintenance medical care following MMI. Claimant subsequently sought a Division of Workers Compensation sponsored independent medical examination (DIME). Dr. Frank Polanco was selected as the DIME doctor.

19. Dr. Polanco conducted the requested DIME on June 23, 2015. At the time of the DIME, claimant continued to complain of his arms and hands becoming numb, pain in his neck and shoulders "that feels like numbness and heat," that his elbows were painful, and that he had low back pain extending from the right side down his leg with numbness in his foot. R.E. JJJ, Bates 276.

20. On physical examination, Dr. Polanco found claimant to have a normal spinal curvature and an intact neurological examination. He also found claimant to hold his head erect and move it in a smooth coordination with his body motion. Bony palpation was unremarkable. According to Dr. Polanco, claimant had "normal muscle tone with no evidence of muscular tightness, tenderness, trigger points, or muscular spasm", as well as normal alignment and normal muscle tone in the thoracolumbar spine. In the upper extremities, claimant had normal range of motion throughout and normal neurologic examination as was also the case in the lower extremities. R.E. JJJ, Bates 278-279.

21. After review of claimant's medical treatment records related to this industrial injury, including diagnostic study results, and after conducting his own physical examination of claimant, Dr. Polanco documented no findings to support that claimant sustained a structural injury to his cervical, thoracic, or lumbar spine or that he

permanently aggravated a pre-existing degenerative condition in the spine. While claimant had ongoing complaints of pain, Dr. Polanco could find no objective clinical findings on physical examination to support a Table 53 diagnosis related impairment. Dr. Polanco assigned 0% impairment for claimant's cervical/thoracic strain. R.E. JJJ, Bates 279. Because he concluded that claimant did not qualify for Table 53 impairment, Dr. Polanco did not include any impairment for cervical range of motion loss, despite performing range of motion measurements.

22. Respondents filed a FAL consistent with Dr. Polanco's DIME report, noting the overpayment for permanent partial disability benefits that had already been paid. Claimant subsequently filed an objection and an application for hearing to overcome the DIME with regard to the impairment rating and permanent partial disability benefits.

23. In support of his attempt to overcome Dr. Polanco's DIME opinion regarding permanent impairment, claimant sough an opinion from Dr. Jack Rook. Consequently, Dr. Rook completed an independent medical examination (IME) on September 10, 2015. On presentation to Dr. Rook, claimant complained of headaches, neck pain, upper extremity numbness, and low back pain that radiates into the right lower extremity. In his description of the mechanism of injury to Dr. Rook, claimant stated that when he slipped on ice and fell in the driveway, his feet went out from under him and he fell forward's, landing on his forearms and elbows. He further claimed that his head whipped forward after the impact but it did not strike the ground and he did not sustain a loss of consciousness. R.E. KKK, Bates 281. This version of the events described to Dr. Rook is different from claimant's first report of injury and his initial descriptions of the mechanism of injury to his treatment providers under the workers' compensation claim. Additionally, in the version presented to Dr. Rook, claimant contends for the very first time that his head whipped forward.

24. Upon examination of claimant, Dr. Rook diagnosed claimant with chronic neck pain – aggravation of cervical degenerative disc disease most severe at the C5-6 level and myofascial pain syndrome; upper extremity paresthesias – physical examination consistent with myogenic thoracic outlet syndrome; sleep disturbance; and reactive depression. R.E. KKK, Bates 287-288.

25. With regard to claimant's lumbar spine complaints, Dr. Rook conceded that "it is difficult to relate the low back condition to the occupational injury in view of the lack of documentation early on." However, as Dr. Rook documented in his IME report and testified at hearing, it is his opinion that claimant has had persistent complaints of headaches, neck pain, and upper extremity symptoms since the date of injury. R.E. KKK, Bates 288. The medical records submitted at hearing support this opinion.

26. Dr. Rook testified that claimant experienced bilateral upper extremity pain immediately following the injury on February 6, 2014, yet in response to the very next question, testified that claimant documented pain complaints were to only the left elbow and left shoulder.

27. Dr. Rook testified that the MRI of claimant's cervical spine revealed advanced degenerative disc disease that occurred over many years prior to the date of injury. Dr. Rook testified that claimant aggravated this underlying degenerative condition in the fall suggesting that claimant experienced "pretty significant traumatic forces" in what Dr. Rook characterized as a "whiplash type event." The ALJ infers from Dr. Rook's report and testimony that he believes claimant qualifies for an impairment rating under Table 53 of the American Medical Association (AMA) Guidelines to the Evaluation of Permanent Impairment because claimant sustained a medically documented injury (sprain/strain) to his cervical spine and subsequently experienced a minimum of six months of medically documented pain and rigidity associated with moderate to severe degenerative changes on structural tests. Consequently, Dr. Rook opined that Dr. Polanco erred when he concluded that claimant did not qualify for a Table 53 diagnosis related impairment.

28. Dr. Rook explained his opinion that Claimant has a permanent impairment as follows:

> He has a permanent impairment because he has residual complaints of neck pain associated with functional limitations and impairment of the quality of his life and impairment of his sleep, which is – which is disturbed.
>
> He has chronic neck pain. He has been found to have moderate to advanced degenerative changes in his cervical spine. I knew of his residual complaints of neck pain way more than two years occupational injury, in conjunction with objective findings, both on physical examination and objective testing.
>
> He warrants an impairment rating for specific diagnosis according to Table 53 on page 80 of the guidelines. This has to be administered in conjunction with range of motion measurements.
>
> Range of motion measurements were not taken by both Dr. Polanco and the Respondents' independent medical examiner, Dr. Ridings, whereas range of motion testing was performed by Dr. Hattem when he provided the impairment rating on the 7th. (Hr. Tr., p. 35-36).

29. Dr. Rook testified that Dr. Polanco erred in determining that claimant had sustained no impairment because Dr. Polanco did not perform range of motion measurements and if he did he erred when he did not attach the range of motion worksheets to his DIME report.

30. Referencing his testimony that because claimant had continued subjective complaints of ongoing cervical pain, this would make claimant eligible for an impairment rating for that condition, Dr. Rook was asked on cross examination why, using this reasoning, he did not rate claimant for significant chronic headaches or upper extremity

numbness, since claimant continued to complain of symptoms associated with these conditions. In response, Dr. Rook testified that he had no diagnosis or objective findings to support a rating for these complaints.

31. In support of its position that Dr. Polanco's DIME findings are correct, respondents referred claimant for an IME with Dr. Eric Ridings on May 2, 2016. Dr. Ridings reviewed a significant volume of claimant's medical records as related to this workers compensation claim, he obtained a personal history from the claimant, and performed his own physical examination of claimant.

32. Upon presentation to Dr. Ridings, claimant complained of constant pain at the bilateral elbows, primarily from the lateral epicondyles into the forearms. He also reported neck pain extending from the sub occipital region all the way down into the thoracic interscapular region to the bottom of the scapulae. Claimant described this as one unified area of pain. He also stated that his arms and hands are constantly numb. He reported to Dr. Ridings that he is 0% improved with pain ranging from 4/10 – 9/10. R.E. PPPP, Bates 417.

33. When recalling the mechanism of injury and claimant's initial pain complaints, claimant changed his description to state that his right upper extremity symptoms were worse immediately following the fall than they were on the left. R.E. PPPP, Bates 419. This is inconsistent with claimant's first report of injury and claimant's reports of the mechanism of injury to his treating providers as well as to his own IME, Dr. Rook.

34. On examination of claimant, Dr. Ridings could find no objective findings any current medical diagnosis for claimant beyond an anxiety disorder. Dr. Ridings documented in his IME report his suspicion that claimant's anxiety is the primary reason for claimant's complaints of ongoing significant symptoms (although claimant has been able to successfully continue his fairly heavy job duties to the present). R.E. PPPP, Bates 419. Specifically, on examination, Dr. Ridings found claimant to have clearly normal myofascial tone throughout the cervicothoracic region and across the upper traps and the rest of the bilateral upper quadrants. Claimant did not report any tenderness with palpation in these areas when relaxed. Shoulder ranges of motion were full bilaterally without discomfort. Claimant also had good cervical range of motion. Claimant had full range of motion of the elbows bilaterally with no pain with wrist flexion or wrist extension. R.E. PPPP, Bated 418. Dr. Ridings also found claimant to have a normal neurologic examination including strength, sensation, and reflexes. Testing for cervical radiculopathy and myogenic thoracic outlet syndrome were negative.

35. On May 20, 2016 Dr. Ridings provided an update to his original evaluation of claimant addressing a motor vehicle accident, which Claimant was involved in on December 17, 2015, after the on-the-job injury. (Resp. Ex. VVVV). In that addendum, Dr. Ridings attacked claimant's credibility because he perceived that Claimant did not disclose the motor vehicle accident during his May 2, 2016, IME. (Resp. Ex. VVVV). In

challenging claimant, Dr. Ridings noted that the "[claimant's] failure to report the intervening motor vehicle accident to me at his independent medical examination was in my opinion deceptive, and damages the [claimant's] credibility." However, Dr. Ridings had discussed the motor vehicle accident with Claimant during the original IME and makes reference regarding his failure to ask specific questions regard that MVA in his original IME report. (Resp. Ex. PPPP). On cross examination, Dr. Ridings admitted that Claimant did in fact discuss the motor vehicle accident with him during the IME. (Hr. Tr., p. 75). Dr. Ridings testified that his addendum report was "too strongly stated" and that he "forgot" about the information claimant imparted to him during the original IME. (Id., p. 76). Based upon the evidence presented, the ALJ finds Dr. Ridings addendum report and his subsequent testimony contradictory. While the ALJ finds Dr. Ridings reporting in this case inconsistent, as a practical matter, the ALJ finds Dr. Riding's testimony/opinion of claimant's credibility of limited value in resolving the issue presented in this case. The question to be answered here is whether Dr. Polanco erred when calculating claimant's impairment rating, not whether Dr. Ridings believes claimant is credible. Accordingly, the undersigned ALJ has focused his attention in resolving this question on the content of claimant's medical records documenting the presence/absence of objective findings on physical examination and not Dr. Ridings comment on whether claimant should be deemed credible by virtue reporting a post MMI MVA.

36. In this regard, the ALJ finds documentation from the following medical records relevant:

- Concentra Medical Centers: 2/12/2014: Neck: . . . Midline tenderness over the C5-7 spines with minimal paracervical discomfort with no spasm or nodularity. Negative spurling and axial load.

- Concentra Medical Centers: 2/27/2014: Neck: Full range of motion. No palpable bony or muscular tenderness. Negative spurlings & axial load.

- Concentra Medical Centers: 3/13/2014: X-Rays of cervical spine: There is no paravertebral soft tissue swelling or other soft tissue abnormality.

- Concentra Medical Centers: 4/22/2014: Neck: The neck is supple and symmetric with midline trachea and no masses. . . Normal muscle strength and tone. Cervical spine with normal lordosis, no tenderness and full ROM.

- Absolute Health Center, Inc. (Dr. Polvi): 4/28/2014: "Physical examination findings were relatively unremarkable for determining any valid pain generators for the patient's persistent symptomatology. The patient has minimal myofascial reactive dysfunction and compensatory mechanical dysfunction of the posterior element joints/facet joints. The patient's continued reported symptomatology does not have significant objective findings to justify their ongoing symptomatology."

37. While a note from Dr. Ginsburg dated June 9, 2014 references bilateral muscle spasms in the cervical paraspinal muscles, which notation carries through, without modification, to other records from Concentra Medical Centers, no such findings were documented by Dr. Hattem when he placed claimant at MMI on February 12, 2015. Rather, Dr. Hattem only documented a "slight" decrease in claimant's cervical range of motion. Moreover, Dr. Hattem did not document the presence of increased muscle tone, spasms or rigidity. To the contrary, Dr. Hattem simply noted that claimant complained of paracervical tenderness.

38. Dr. Ridings testified that by February 27, 2014, the objective medical evidence supported a finding that claimant's symptoms and physical findings had resolved. He further testified that once everything is resolved from the acute traumatic event, medically you wouldn't expect that a person would then have a worsened symptoms, particularly in other parts of the body that weren't a problem in the first two weeks following the injury.

39. Dr. Ridings also testified that he had the opportunity to review Dr. Rook's IME report and that he disagreed with the findings and conclusions of Dr. Rook. Specifically, Dr. Ridings testified that his findings were consistent with those of DIME physician Dr. Polanco to include a palpatory examination failing to reveal a finding of increased myofascial tone. Dr. Ridings further testified that claimant's failure to improve with the array of treatment measures provided makes it likely that there is significant symptom magnification and that the lack of any objective findings to yield a diagnosis makes it clear that claimant did not qualify for any impairment rating under the AMA Guides.

40. Dr. Ridings testified that Dr. Polanco specifically documented his reasoning for not providing an impairment rating in this case, including the lack of any objective findings, i.e. increased muscle tome/rigidity to support a Table 53 diagnosis, which is required in order to provide a Table 53 diagnosis related impairment rating.

41. Dr. Ridings testified that Dr. Polanco did not err in any way and that he agreed with the opinions and conclusions reached by Dr. Polanco in the DIME.

42. Based upon the evidence presented, the ALJ finds that the opinions expressed by Dr. Polanco in his DIME report are generally supported by the content of the medical records presented to him for review. Moreover, the ALJ finds a paucity of evidence to suggest that Dr. Polanco erred in the methodology he employed to complete the DIME in this case. Rather, the ALJ finds that Dr. Polanco performed a physical examination, the findings of which are consistent with the findings of other providers who also failed to discern evidence of increased muscle tone and/or rigidity to support a finding that claimant is entitled to a Table 53 diagnosis related impairment rating. Despite Dr. Rook's testimony to the contrary, the evidence presented persuades the ALJ that Dr. Polanco performed range of motion measurements.

Indeed, the DIME report references the same, noting specific degrees of cervical range of motion for flexion, extension, right and left lateral bending and rotation.

43. The ALJ finds the opinions expressed by Dr. Polanco to be supported by his review of the medical records and his examination findings. Accordingly, the ALJ finds the opinions expressed by Dr. Polanco credible and more persuasive than the contrary opinions of Dr. Rook.

44. Claimant has failed to prove that the 0% impairment rating as calculated by Dr. Polanco is highly probably incorrect.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to Assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME Opinion of Dr. Polanco

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by “clear and convincing evidence.” Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). “Clear and convincing evidence” is evidence that demonstrates that it is “highly probable” the DIME physician's opinion concerning impairment is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding impairment the party challenging the DIME must demonstrate that the physicians determinations in this regard is highly probably incorrect and this evidence must be “unmistakable and free from serious or substantial doubt.” *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

E. In resolving the question of whether the DIME physician’s opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The determination of impairment under the AMA Guides inherently requires the rating physician, when diagnosing the claimant’s condition, to evaluate and identify all losses caused by the industrial injury.

F. The AMA Guides, Section 1.2 provides, “The key to an effective and reliable evaluation of impairment is review of the office and hospital records maintained by the physicians who have provided care since the onset of the medical condition.” Section 2.1 further states that, “When a medically sufficient evaluation is carried out, the current clinical status of the individual will be documented accurately. If the current findings are consistent with the result of previous clinical evaluations performed by other observers, the findings may be compared with the tables in the Guides to determine the percentage of impairment.”

G. The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). In the present matter, Dr. Frank Polanco reviewed the claimant’s medical treatment records, obtained his own personal history from the claimant, and performed his own physical examination of claimant which included range of motion testing. Dr. Polanco documented very specifically in his DIME reports his findings on physical exam, to include a structural examination, neurological examination, cervical spine examination, thoracolumbar spine examination, upper extremity examination, lower extremity examination, and behavioral examination. Dr. Polanco further specifically documented in his DIME report that he could find no objective findings to support that claimant sustained a structural cervical spine, thoracic, or lumbar injury or that claimant sustained a permanent aggravation of his pre-existing degenerative findings. Dr. Polanco went on to state that while claimant has had ongoing complaints of pain, on examination claimant has no objective clinical findings to qualify for a Table 53 diagnosis. He further documented that even if claimant could qualify for a range of motion impairment, claimant's range of motion is essentially normal. Consequently, the ALJ concludes that there would 0% impairment for cervical range of motion loss. As found, the opinions expressed by Dr. Polanco are generally supported by the documentation of other providers who periodically evaluated claimant. Similar to the evaluation findings of Dr. Polanco, these providers documented normal muscle tone and full range of motion in the cervical spine. While the ALJ recognizes that some of the records provided may have lead Dr. Polanco to conclude differently as to impairment, Dr. Polanco's own evaluation rendered results which he concluded were indicative of claimant having no structurally related diagnosis which would support a finding of impairment as required by Table 53 of the AMA Guides. The fact that Dr. Rook disagrees with Dr. Polanco, based upon his interpretation of the medical records does not rise to the level of clear and convincing evidence to overcome Dr. Polanco. Likewise, merely because Dr. Rook observed some rigidity during his examination does not prove that Dr. Polanco's did not.

H. After considering the totality of the evidence presented, the ALJ concludes that Claimant has failed to produce unmistakable evidence establishing that Dr. Polanco's determination regarding impairment is highly probably incorrect. Rather, the ALJ concludes that the evidence presented at hearing establishes a mere difference of opinion between the DIME physician and claimant's retained medical expert (Dr. Rook). A professional difference of opinion do not rise to the level of clear and convincing evidence that is required to overcome Dr. Yamamoto's opinion concerning MMI. *See generally, Gonzales v. Browning Farris Indust. of Colorado, W.C. No. 4-350-356 (ICAO March 22, 2000),* Consequently, Respondents have failed to meet their required legal burden to set Dr. Polanco's opinion regarding impairment aside.

I. The ALJ also rejects claimant's argument that the DIME is incomplete in this case and that Dr. Polanco erred and based upon the failure to attach range of motion worksheets to his DIME report. *See Carlson v. Informatics Corporation,* W.C. No. 4-380-302 (November 1, 2002)(claimant's argument that a Division-sponsored independent medical examination (DIME) report was incomplete because it did not include an evaluation of mental impairment or the mental impairment worksheet rejected).

ORDER

It is therefore ordered that:

1. Claimant's request to set aside the Division IME opinion of Dr. Polanco

regarding impairment is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 18, 2016

/s/ Richard M. Lamphere

Colorado Springs, CO 80906

ISSUES

- Whether claimant has proven by a preponderance of the evidence that he sustained an injury arising out of and in the course and scope of his employment with employer.

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment he received, including surgery performed on March 16, 2016, was reasonable and necessary to cure and relieve claimant from the effects of the work injury.

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment he received was authorized medical treatment.

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that he is entitled to an award of TTD benefits.

STIPULATIONS

At the time of hearing, the parties stipulated to the following:

- Claimant's average weekly wage ("AWW") is $575.00

- If claimant is found to be entitled to temporary total disability ("TTD") benefits, the dates of any TTD award will be from March 16, 2016 through April 3, 2016.

- The parties have reserved the issue of total partial disability ("TPD") benefits for the period of April 4, 2016 through May 4, 2016.

FINDINGS OF FACT

1. Claimant has been employed by employer since March 2013 in employer's dog treat manufacturing operation. Claimant's job duties include weighing out, lifting, and moving tubs of dog treats for bagging. The tubs weigh between 35 and 55 pounds. Claimant testified that he will lift and move tubs in this way repeatedly throughout his workday.

2. Claimant testified that once treats are bagged, they are placed in boxes. Claimant then lifts these full boxes from a table that is approximately 3 feet high and carries the boxes, at waist level, to other areas of the warehouse. Claimant describes that lifting full boxes in this way "is like hugging a tree".

3. Claimant testified that on March 16, 2016 he was performing his normal job duties of lifting bags of dog treats off of the table when he felt a sharp pain in his lower abdomen. The pain was so severe that claimant left the warehouse floor and went to the restroom. While in the restroom, claimant noted a bulge in his abdomen. Claimant testified that he reported his pain to his supervisor, Tyrel “Ty” Corem.

4. As indicated by claimant’s testimony and the First Report of Injury, Mr. Corem instructed claimant to go to Mountain Peaks Urgent Care in Montrose, Colorado. Due to the severity of the claimant’s condition, the staff at Mountain Peaks Urgent Care instructed claimant to seek treatment at the emergency room (“ER”) at Montrose Memorial Hospital.

5. Claimant testified that he sought treatment at the ER immediately and was evaluated by Dr. Andrew Yeowell who diagnosed claimant’s condition as an incarcerated right inguinal hernia. Dr. Yeowell made two attempts to reduce the hernia while claimant was awake. When these attempts were unsuccessful, Dr. Yeowell discussed the case with Dr. K. Michael Jay. Dr. Yeowell and Dr. Jay determined that the claimant’s condition required emergency hernia surgery. Dr. Jay performed surgery that same day. Dr. Jay also diagnosed the claimant with incarcerated right inguinal hernia hydrocele.

6. On April 18, 2016, Dr. Jay opined that there was “no evidence that [claimant] previously had an incarcerated hernia”. In Dr. Jay’s opinion claimant’s hernia was “brought on due to heavy lifting at [claimant’s] place of employment.”

7. Claimant testified that he that he did not return to work until he was released to modified duty on April 4, 2016. Claimant had work restrictions of no lifting over 10 pounds and no pushing or pulling at that time. On May 4, 2016, claimant was cleared to return to full duty. Since his return to work, claimant’s job duties have been that of a “warehouse runner”.

8. Claimant submitted to an independent medical exam (“IME”) on May 25, 2016 with Dr. Douglas Scott. Dr. Scott reviewed claimant’s medical records, obtained a medical history, and performed a physical examination of claimant in connection with the IME. Following the IME, Dr. Scott issued an IME report and opined that claimant had a preexisting hydrocele in his right scrotum prior to March 16, 2016. Dr. Scott further opined that claimant’s hernia on March 16, 2016 did not arise from his job duties with employer. Dr. Scott’s testimony was consistent with his IME report.

9. Dr. Scott testified that he disagreed with Dr. Jay’s causation analysis that claimant’s hernia was caused by lifting at work. Dr. Scott opined that claimant’s hydrocele hernia was more likely the result of a direct blow to his scrotum. Dr. Scott testified that claimant would likely have had this same diagnosis and resulting surgery whether or not he had been working on March 16, 2016. Dr. Scott further testified that hydroceles are typically congenital.

10. Claimant testified that prior to the events of March 16, 2016 he did not have any issues with his abdomen or his scrotum. Claimant had no knowledge of any preexisting condition.

11. The ALJ credits the testimony of claimant regarding the injury that he sustained on March 16, 2016. The ALJ also credits the medical records and the opinion of Dr. Jay over the contrary opinion of Dr. Scott and finds that claimant's work duties on March 16, 2015 let to the incarcerated right inguinal hernia hydrocele.

12. The ALJ finds that claimant has proven that it is more likely than not that he sustained the incarcerated right inguinal hernia hydrocele in the course and scope of his employment with employer on March 16, 2016 while he was lifting boxes of dog treats. Although claimant may have had a preexisting condition, as opined by Dr. Scott, claimant has proven that it is more likely than not that lifting on March 16, 2016 aggravated, accelerated, or combined with his preexisting condition which necessitated treatment including emergency hernia surgery.

13. The ALJ credits claimant's testimony at hearing and the medical records entered into evidence and finds that claimant has proven that it is more probable than not that the treatment provided to claimant by Montrose Memorial Hospital, including emergency surgery, was reasonable medical treatment necessary to cure and relieve claimant from the effects of the industrial injury.

14. The ALJ credits claimant's testimony at hearing and the medical records entered into evidence and finds that claimant has proven that it is more probable than not that the treatment provided to claimant by Montrose Memorial Hospital was authorized medical care. Specifically, the ALJ finds that employer referred claimant to Mountain Peaks Urgent Care on March 16, 2016, making Mountain Peaks Urgent Care an authorized provider. The ALJ credits the medical records and finds that Montrose Memorial Hospital was authorized by virtue of the referral from Mountain Peaks Urgent Care.

15. In addition, the ALJ finds that claimant sought care with Montrose Memorial Hospital on March 16, 2016 on an emergent basis for his abdominal pain. The ALJ also notes that claimant sought care with the tacit approval of employer, because claimant's supervisor Mr. Corem knew claimant was seeking medical care and had directed him to Mountain Peaks Urgent Care.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page*

v. Clark, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

4. As found, claimant has proven by a preponderance of the evidence that he suffered a compensable injury out of an in the course of his employment with employer when he suffered a right inguinal hernia hydrocele on March 16, 2016 while lifting bags of dog treats. As found, claimant's employment aggravated, accelerated, or combined with a preexisting condition to require treatment, including emergency surgery. The ALJ finds the medical records and claimant's testimony to be credible and persuasive.

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Pursuant to Section 8-43-404(5), C.R.S., Respondents are afforded the right, in the first instance, to select a physician to treat the industrial injury. Once respondents have exercised their right to select the treating physician, claimant may not change physicians without first obtaining permission from the insurer or an ALJ. *See Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996).

6. "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008). Section 8-43-404(5)(a) specifically states: "In all cases of injury,

the employer or insurer has the right in the first instance to select the physician who attends said injured employee. If the services of a physician are not tendered at the time of the injury, the employee shall have the right to select a physician or chiropractor." "[A]n employee may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion…." *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985), *citing*, 2 A. Larson, *Workers' Compensation Law* § 61.12(g)(1983).

7. When the authorized treating physician refers the claimant to another health care provider, the treatment rendered by the referred provider is compensable as part of the legal chain of authorization. *Mason Jar Restaurant v. Industrial Claim Appeals Office*, 862 P.2d 1026, 1029 (Colo. App. 1993) (*citing Greager v. Industrial Commission,* 701 P.2d 168 (Colo. App. 1985)).

8. As found, claimant has proven by a preponderance of the evidence that the treatment he received from Montrose Memorial Hospital was reasonable and necessary to cure and relieve him from the effects of his March 16, 2016 work injury. Furthermore, the treatment provided by Montrose Memorial Hospital is deemed authorized by virtue of the referral from Mountain Peaks Urgent Care.

9. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*.

10. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo.App. 1998).

11. As found, claimant has proven by a preponderance of the evidence that for the period or March 16, 2016 through April 3, 2016 he was unable to work due to his compensable work injury. As found, claimant has established by a preponderance of the evidence that his inability to work limited his ability to earn wages for the period of March 16, 2016 through April 3, 2016. Therefore, claimant is entitled to an award of TTD for the period of March 16, 2016 through April 3, 2016.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the reasonable medical treatment necessary to cure and relieve claimant from the effects of the March 16, 2016 industrial injury provided by Montrose Memorial Hospital, including but not limited to the surgery performed on March 16, 2016.

2. Respondents shall pay claimant TTD benefits for the period of March 16, 2016 through April 3, 2016 based on the stipulated AWW of $575.00.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 19, 2016

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

PROCEDURAL HISTORY

As noted above, the referenced hearings were held pursuant to an order of the Industrial Claim Appeals Office (ICAO) which reversed a procedural order issued by the undersigned ALJ striking Claimant's December 4, 2015 application for hearing. Consequently, the matter was remanded to the undersigned ALJ for further proceedings. The case has a lengthy procedural history which is summarized as follows:

On October 18, 2009, a hearing in this matter was held before ALJ Keith Mottram in Glenwood Springs. Claimant was represented during this hearing by Attorney Paul Gertz. In an Order dated January 20, 2010, ALJ Mottram determined that Claimant failed to prove that he sustained a compensable injury. The order specified as follows: "Claimant's claim for benefits is denied and dismissed." The order also provided that "[a]ll matters not determined herein are reserved for future determination."

Claimant did not appeal ALJ Mottram's January 20, 2010 order. Rather, on December 4, 2015, Claimant filed an application for hearing endorsing, among other issues, compensability, medical benefits and "petition to reopen". The stated basis for Claimant's "petition to reopen" included an assertion that the medical testimony of Dr. John Brodie, Respondents expert was perjured and as such constituted a fraud perpetrated on the Court and ALJ Mottram.

In a motion dated December 23, 2015, Respondent-Insurer moved to strike Claimant's application for hearing on the grounds of claim preclusion (*res judicata)*. In their motion, Respondents argued that all the elements required for the doctrine of claim preclusion to apply were present concerning the issues raised in Claimant's December 4, 2015 Application for Hearing. Consequently, Respondents requested that Claimant's application be stricken..

On January 13, 2016, the undersigned ALJ issued an order striking Claimant's December 4, 2015 application for hearing, albeit for reasons other than that requested by Respondents. The undersigned ALJ found that while Claimant had endorsed "Petition to Reopen", ostensibly on the grounds of fraud, he concluded that Claimant's claims were barred by the applicable statute of limitations as the request to reopen the matter was filed outside the six year time frame to reopen any award on the grounds of fraud. Claimant appealed to the ICAO which issued an opinion in *Cotter v. Busk Construction*, W.C. No. 4-796-185-02 on May 25, 2016.

The ICAO reversed, concluding that the statute of limitations referenced in C.R.S. § 8-43-303(1) was not jurisdictional and must be raised affirmatively. Because Respondents had not raised the defense and Claimant had not been afforded an opportunity to respond to any assertion that the statute of limitations defense barred his claims, the Panel concluded that the "application of the statute of limitations as a basis for striking the claimant's application for hearing was premature." See *Kersting v. Industrial Commission*, 567 P.2d 394 (Colo. App. 1977). The Panel also noted that pursuant to *Renz v. Larimer County School District*, 924 P.2d 1177 (Colo. App. 1996), the doctrine of *res judicata* does not bar an attack on a prior decision in a workers' compensation matter through application of the reopening statute described in C.R.S. § 8-43-303. Accordingly, the Panel found that the ALJ could entertain a challenge to ALJ Mottram's 2010 decision. Finally, the panel found that ALJ Mottram's 2010 order contained a reservation clause which reserved jurisdiction over issues not specifically addressed in his order. See *Brown & Root v. Industrial Claim Appeals Office*, 883 P.2d 980 (Colo. App. 1991)(holding that if an order grants of denies one category of benefits, but does not mention another type of benefit that order will still constitute an award in regard to the unmentioned benefit). Consistent with the holding of the *Brown & Root* and the decision announced in *Hire Quest, LLC v. Industrial Claim Appeals Office*, 264 P.3d 632 (Colo. App. 2011), the Panel concluded that the "only issue actually determined by ALJ Mottram's order and barred from future litigation was respondents' liability for the four months of medical treatment." All other issues, including claimant's entitlement to temporary total disability benefits, permanent disability benefits, and medical benefits subsequent to October 2009 were, as concluded by the Panel, "preserved" for future determination. Accordingly, the Panel concluded:

> In accord with the *Hire Quest* decision, because these benefits have not been determined, the claimant's eligibility for them has is not closed. It is not necessary for the claimant to reopen them. They are not subject to the statute of limitations set forth in § 8-43-303(1) and they are not barred by the doctrine of claim preclusion.

The ICAO further held that if Respondents pled the statute of limitations defense, "the running of the limitations period for reopening would prevent the claimant from reopening the issue of liability for medical benefits between June and October, 2009."[2]

ISSUES

Based upon the remand order of the Industrial Claim Appeals Panel, the undersigned ALJ concludes the following issues require determination:

I. Whether Claimant sustained any compensable injury on June 18, 2009 during the course and scope of his employment with employer.

II. If Claimant did suffer a compensable injury, whether he is entitled to an award of temporary total disability (TTD) benefits.

[2] As noted above, Respondents moved to add the issue/defense of statute of limitations following Claimant's request for a continuance of the proceedings at the first hearing convened August 19, 2016. Both Claimant's motion for an extension of time and Respondents' motion to add the statute of limitations defense were granted.

III. If Claimant did suffer a compensable injury, whether he is entitled to an award of temporary partial disability (TPD) benefits.

IV. If Claimant did suffer a compensable injury, whether he is entitled to an award of permanent partial disability (PPD) benefits.

V. If Claimant did suffer a compensable injury, whether he is entitled to an award of permanent total disability (PTD) benefits.

VI. If Claimant did suffer a compensable injury, whether he is entitled to an award of reasonable, necessary and related medical benefits subsequent to October 18, 2009.

VII. Whether Claimant's established by a preponderance of the evidence that he is entitled to reopen his claim on the issue of liability for medical benefits between June and October, 2009, on the grounds of fraud.

VIII. Whether Claimant's petition to reopen his claim for additional medical benefits between June 2009 and October 2009 is barred by the statute of limitations.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Review of the transcript of hearing from October 18, 2009, reveals that Claimant was employed as an interior trim carpenter for Employer. While there was discussion about whether Claimant would be brought on with the company as a subcontractor, the evidence persuades the ALJ that Claimant was hired as an employee on or about June 15, 2009. He was paid $30 per hour.

2. Claimant was brought on to assist Employer in completing a large job with a tight deadline. Claimant was one of a number of people retrained to complete the job, although the others were hired as subcontractors.

3. As part of his employment contract, Claimant underwent a pre-employment physical on June 16, 2009 that included an examination of his low back. Claimant was cleared to work in the position for which he was hired as objective findings on examination revealed normal range of motion in low back and a negative straight leg test.

4. On June 18, 2009, Claimant reportedly injured his back while lifting a slide miter saw weighing approximately 45 pounds out of his toolbox. According to Claimant the feet which connected to the saw to the stand which the saw stood on got "hooked" on the tool tray in Claimant's tool box as he attempted to lift the saw.

5. Claimant testified that he experienced a sharp burning pain in his low back at that “point” in time.

6. Claimant also admitted to a prior history of low back pain, caused a prior injury to his low back in 1986 while employed with B&H Construction and a pars fracture to his low back in 1995.

7. At hearing on October 18, 2009, Claimant testified that he thought he pulled a muscle. He was able to complete his shift for the day and return home. Claimant did not report his injury to his employer, choosing instead to wait until after the weekend to determine if his back felt better. Claimant testified that he did not report his work injury immediately because he felt if he reported a minor injury to his employer it would expose his employer to workers’ compensation claims and was fearful that he would be fired.

8. Claimant testified the injury occurred on a Thursday, and that he did not work Friday, Saturday or Sunday due to a project shut down to accommodate a community event. Claimant reported that his back pain remained the same during the course of the day and over the weekend. He testified that he tried to loosen up his back by riding his bicycle and by soaking in the hot water of the wading pools in Glenwood Springs. He also took Aleve and generally took it easy over the weekend.

9. Claimant returned to work on Monday. Upon his arrival at work, he was pulled aside by the owner of Employer and was advised that his employment was not working out. Claimant was terminated. He did not report his alleged low back injury prior to being terminated, nor did he mention it at the time he was discharged. Rather, Claimant told employer “yeah, you can fire me” and turned and walked away. Claimant testified that he was not given a reason for his termination.

10. Claimant testified that after he was terminated he was contacted by Employer’s office manager, Paula Busk who had a check or his unpaid wages, asking him to come to the office and pick it up. Claimant testified that the paycheck included money in excess of what he had earned as an employee. Claimant refused the check since it paid him as though he was a contractor and not an employee. He also reportedly informed Ms. Busk, “I’m sorry to tell you, but I’ve got a back injury and I don’t know what it is, and I’d like to know what’s wrong with the back before I accept the check.” Ms. Busk contacted a physician whom Claimant later contacted and an appointment was scheduled.

11. Claimant reported to Dr. Brokering on June 23, 2009, the day after he was terminated from employer. Claimant reported to Dr. Brokering that he was employed as a carpenter for employer for one week before being terminated. Claimant reported to Dr. Brokering that he was picking up a miter saw on June 18 when he injured his lower back. Claimant reported to Dr. Brokering that he had a history of low back pain. Dr. Brokering noted Claimant had fairly good range of motion on flexion and extension but experienced tenderness in his back with lateral flexion and twisting. Dr. Brokering intended to take an x-ray of the low back, but Claimant refused citing concerns over

sterility from the radiation. Claimant suggested an MRI as an alternative. Dr. Brokering diagnosed Claimant with a low back strain and referred him for physical therapy with Peak Performance. He also provided Claimant with a prescription for Celebrex and Cyclobenzaprine. Finally, Dr. Brokering provided Claimant with work restrictions of no lifting greater than ten (10) pounds.

12. Claimant returned to Dr. Brokering on June 24, 2009 and advised Dr. Brokering that he was concerned about taking Celebrex from a cardiologic standpoint after reading the accompanying warning label. Claimant requested a prescription for Vicodin, which was provided.

13. Claimant attended physical therapy (PT) sessions during which he reported a pain level of 9.5/10 at its maximum. Claimant reported to the physical therapist that his pain interfered with his personal care, kept him from sleeping and made it so he was unable to work. He also reported that he needed pain medication to be comfortable. Claimant returned to the physical therapist on June 26, 2009 reporting increased left lower extremity weakness and his leg giving out.

14. During hearing on October 18, 2009, Claimant conceded that following his workplace injury, but before seeing Dr. Brokering on June 23, 2009, he was able to work on his truck to remove four aluminum cylinder heads. He denied lifting anything over 30 to 40 pounds in performance of this work. He testified that he continued working on his truck outside of his home, and lifted up to 30 pounds, even after seeing Dr. Brokering who had imposed a lifting restriction of 10 pounds. He testified that the Vicodin masked his pain which made it possible to work on this truck. He continued to work on the truck on August 18, 20 and 21, 2009, which was documented in video surveillance. According to Claimant, his pain had improved by August 18, 2009. Indeed, Claimant report that by this date his pain was “on and off”.

15. On his own accord, Claimant sought a medical opinion regarding the condition of his low back from Dr. Thomas St. John. Claimant reported to Dr. St. John on July 15, 2009 with complaints of lower back pain and right leg/foot pain with bilateral weakness and numbness of his lower extremities. Dr. St. John performed a magnetic resonance image (“MRI”) of the lumbar spine which revealed “endplate edema and mild to moderate central disc protrusion at L2-3, slightly more to the left than right…but without impingement of the ganglia or L3 nerve.”

16. Claimant returned to Dr. St John for a follow-up evaluation of his lumbar spine on July 21, 2009. During this appointment, Dr. St. John interpreted Claimant’s MRI film, noting that he had a “very long discussion “with Claimant concerning the findings on MRI. According to Dr. St. John’s July 21, 2009 report, Claimant did not have a “surgically treatable lesion” noting further that “his changes are degenerative in nature”. Dr. St. John recommended “physical therapy, activity modification, and oral anti-inflammatory medications”. Contrary to his previous documentation, Dr. St. John placed a question mark in front of the impression of work-related injury in his July 21, 2009 report.

17. Claimant underwent a Respondent requested independent medical examination ("IME") with Dr. Brodie on September 15, 2009.

18. Claimant alleged to Dr. Brodie that on June 19, 20 and 21, 2009, his low back pain was at a 9/10. He then alleged that by June 22, 2009, when he returned to work, his back pain had improved to a level of 3/10. He told Dr. Brodie that he had pulled the cylinder head off of his truck on June 23, 2009. Dr. Brodie noted that he had reviewed the July 15, 2009 MRI scan report noting that the conclusion was "endplate edema and mild to moderate disk protrusion at L2-3". Claimant relayed a history of back injuries to Dr. Brodie, noting a previous pars fracture at L5-S1 and a swimmers fracture at T4-T5. He reported and subsequently testified that his September of 2008 incident was caused by a fall while working in a mine. He denied the allegations of chronic back pain as referenced in the emergency room records testifying that his history was confused by the medical providers at Heart of the Rockies Regional Medical Center.

19. Dr. Brodie opined that review of the medical records "documents abnormalities of the lumbar spine for the MRI scan, such as degenerative changes, which may not be causally attributable to any specific incident, including the incident in 1995, 2008, or 2009." According to Dr. Brodie, the content of Claimant's pre-injury medical records indicated that it was more probable than not that Claimant did have chronic low-back pain prior to June 18, 2009 and that there was a paucity of evidence or data to suggest that any incident on June 18, 2009 altered claimant's baseline condition. Dr. Brodie noted a difference between Claimant's presentation and complaints as compared to his demonstrated functional abilities on video surveillance, which he opined was inconsistent with a disabling back injury. He also indicated that the reporting delay, the reporting after employment termination, the lack of credibility of Claimant concerning his pre-existing injuries and the overall inconsistencies in the record raised concerns for the presence of a factitious[3] or cognitive disorder.[4] Because there was no medical data in the case "documenting or suggesting" a factitious or cognitive disorder, Dr. Brodie noted that the presence of a "malingering disorder, perhaps for secondary gain issues, [remained] plausible". Ultimately, Dr. Brodie opined that Claimant's low back pain was the consequence of a chronic pre-existing pain condition, and that is was not probable that he suffered a back injury or aggravated a pre-existing degenerative condition on June 18, 2009.

20. Dr. Brodie testified at hearing consistent with his medical report. He testified that "it's not probable that Mr. Cotter sustained an injury at work as he describes, and more probable, that he has a pre-existing and ongoing chronic back pain condition that was not affected by his work activities…." He testified that the MRI showed degenerative changes, and did not change his opinion regarding the cause of Claimant's pain complaints. He testified that the June 18, 2009 incident did not aggravate Claimant's pre-existing condition.

[3] According to Dr. Brodie, a factitious disorder could include a somatoform disorder, a conversion disorder, a histrionic condition and malingering disorders.

[4] Cognitive disorders includes those conditions leading to memory deficits.

21. On cross-examination, Mr. Cotter's previous counsel, Mr. Gertz, questioned Dr. Brodie concerning the endplate edema on the MRI scan. Dr. Brodie testified that the edema indicates a problem with a disc. As discussed below, the presence of endplate edema is central to Claimant's contention that Dr. Brodie perpetrated a fraud upon ALJ Mottram which entitles him to reopen the case for the medical treatment he received between June 23, 2009 and October 18, 2009.

22. Several employer witnesses testified at the October of 2009 hearing. Donnie Suazo testified that he worked with Claimant on June 18, 2009, and witnessed him work and lift without issue or limitation.

23. Gustavo Menchaca testified that he discussed with Claimant that his production was not up to par and that he was causing problems with co-workers on June 18, 2009. According to Mr. Menchaca, Claimant did not allege or display any injury on June 18, 2009.

24. Kevin Busk testified that Claimant was terminated because of his slow work and his inability to get along with his co-workers. He testified that he told Claimant why he was terminated. He testified that before he terminated Claimant on June 22, 2009, he found him setting up and getting ready to work.

25. Based upon careful review of the evidence presented as a whole, the ALJ finds Claimant's testimony concerning the mechanism of injury, the pre-existing condition of his low back and his functional capabilities to be contradicted by the content of the medical records submitted, the activity described on video tape per the transcript of the October 18, 2009 hearing and the more persuasive testimony of Dr. Brodie, Donnie Suazo, Gustavo Menchaca and Kevin Busk. The ALJ finds Claimant's testimony inconsistent with the more convincing competing evidence. Consequently, the ALJ finds Claimant's testimony that he was injured while lifting a miter saw unreliable and unpursuasive.

26. The ALJ credits the opinions of Dr. Brodie, to find that Claimant's low back pain is, more probably than not, unrelated to lifting a miter saw from a toolbox, even assuming that Claimant engaged in such lifting. The ALJ infers and finds from the evidence presented, including the MRI report, Dr. St. John's medical record and Dr. Brodie's testimony that Claimant's low back pain is, more probably than not, due to the natural progression of a pre-existing degenerative process in his lumbar spine rather than any work related aggravation of that condition or an acute injury suffered as a consequence of lifting a miter saw.

27. Claimant submitted an engineering report from Dr. Ngai regarding the cause of Claimant's low back pain. The ALJ finds many of the conclusions expressed by Dr. Ngai regarding the cause of Claimant's symptoms to constitute medically based causation opinions. The ALJ sustains Respondents' objections to Dr. Ngai's medically based causation opinions on foundation grounds and rejects those opinions as unpursuasive.

28. Claimant has failed to prove by a preponderance of the evidence presented that he sustained a compensable aggravation of his pre-existing low back condition or in the alternative a acute low back injury on June 18, 2009.

29. As noted, Claimant's primary assertion that he is entitled to have his claim reopened, is the contention that Dr. Brodie's testimony was perjured. Specifically, Clamant characterizes Dr. Brodie's testimony as conceding that he suffered an acute injury to his low back as evidenced by the presence of endplate edema caused by bleeding from the acute injury and that he "lied" when he testified during the October 18, 2009 hearing that such findings were not present on Claimant's MRI. A complete understanding of Claimant's assertion requires reference to the colloquy between Dr. Brodie and Claimant's then counsel, Paul Gertz. The following exchange was had:

> Q: Doctor, would an MRI definitely show a muscle strain?
>
> A: Rarely. If it was severe enough to cause tearing of the muscle, then you'd see bleeding, you'd get fluid accumulation. In this case we did not see that.
>
> Q: Was there some (inaudible) edema?
>
> A: In the MRI scan?
>
> Q: Yes.
>
> A: I will take a look. I don't see that. My summary provided in my report (inaudible) Have. Just a moment. If you have the hard copy (inaudible) that . . .
>
> Q: Okay.
>
> A: I did find it. (Inaudible) edema is mentioned. That is fluid at the edge of the disc.
>
> Q: And what does that fluid indicate? That there's some problem with the disc?
>
> A: Yes it does.

30. Based upon the evidence being discussed, the ALJ finds that the inaudible portion of the record preceding the word "edema", more probably than not, relates to the finding of endplate edema on Claimant's MRI scan. While it is true that Dr. Brodie, without having a copy of his report in front of him, initially noted that he did not "see that", i.e. endplate edema, the record supports that once he found his reference materials, Dr. Brodie testified that endplate edema was present and that the presence of endplate edema suggested a problem with the disc. No follow-up was forthcoming as to what may have caused the disc problem however.

31. The undersigned ALJ finds from the evidence presented that Claimant has failed to establish that Dr. Brodie "lied" or otherwise perjured his testimony at the October 18, 2009 hearing before ALJ Mottram. Accordingly, the ALJ finds that Claimant

has failed to prove by a preponderance of the evidence that he is entitled to reopening of his case on the basis of fraud. The ALJ has also considered and rejects Claimant's remaining assertions that the evidence, as presented, supports a finding that an error or mistake of law or fact was made in the initial determination of the claim, which error or mistake would justify the limited reopening for additional medical benefits between June and October 2009 as addressed in the remand order of the ICAO.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence presented. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). As found, the testimony of Claimant is inconsistent with and contradicted by the documentary evidence and the testimony of Claimant's co-workers and Dr. Brodie. The inconsistencies in Claimant's testimony cannot be reconciled with the competing record evidence. Rendering Claimant's testimony unconvincing and unreliable. Moreover, the testimony of Dr. Brodie, contrary to Claimant's assertions, is credible and supported by the balance of the medical records submitted. Even Dr. St. John, Claimant's hand selected physician, identified the changes on Claimant's MRI to be degenerative in nature not warranting surgical intervention.

Compensability

D. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment*.* *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

E. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Here, there is little question that Claimant's alleged injury occurred within the time and place limits of his employment relationship with Employer and during an activity, specifically setting up a miter saw as part of his duties as an interior trim carpenter for Employer. Nonetheless, the question of whether the alleged conditions, for which Claimant seeks benefits, "arose out of" his employment must be resolved before the injury is deemed compensable.

F. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001).

G. A pre-existing condition "does not disqualify a claimant from receiving workers compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). To the contrary, a claimant may be compensated if his or her employment "aggravates, accelerates, or "combines with" a pre-existing infirmity or disease “to produce the disability and/or need for treatment for which workers’ compensation is sought”. *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo. App. 1981). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities and not the underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940).

H. While pain may represent a symptom from the aggravation of a pre-existing condition, the fact that Claimant may have experienced an onset of pain while performing job duties does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of the natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (August 18, 2005). An incident which merely elicits pain symptoms without a causal connection to the industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta*, *supra*; *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988)*; Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989). In this case, Claimant’s medical records include reference to a prior history of back pain pre-existing the alleged June 18, 2009 incident. There is no convincing evidence establishing Claimant’s allegation that both the physician and the nurse at Heart of the Rockies Regional Medical Center both erred in noting documenting Claimant’s complaints of chronic low-back pain in September of 2008. While Claimant challenges this documentation specifically, his testimony is unreliable and is contradicted by the extent of degenerative change noted on MRI.

I. Additionally, his complaints varied widely over the course of several days following his alleged workplace injury. Claimant initially alleged that he did not report his injury because he thought that the issue was minor and would go away. Then, he alleged that he was in extreme pain on June 19 – 21, 2009, with pain at a 9/10 level. Despite this, he appeared at work on June 22, 2009, ready to work until being terminated, yet he still did not to report any workplace injury. He claimed that his pain had dissipated to a 3/10 by January 23, 2015. Then, when he returned to physical therapy the next day, he was back in extreme pain. His extreme pain complaints belie his demonstrated functional abilities, evidenced by his ability to both ride his bicycle and work on his truck following his alleged injury. Claimant had almost full range of motion (ROM) when he treated with Dr. Brokering, but his ROM was extremely limited with Dr. Brodie approximately three months later, after initiating his claim. Claimant’s fluctuating pain levels prompted ALJ Mottram to find as follows:

> Claimant’s testimony inconsistent with the anticipated progression of a back injury insofar as Claimant’s pain apparently was present immediately, but

Claimant did not believe that the pain was reportable because it was a minor injury.[5] Claimant's pain then increased over the weekend, but decreased prior to Claimant reporting to work on Monday morning. Then, after being fired by his employer, Claimant's pain increased over the next two days when Claimant was examined by Dr. Brokering (the day after his termination) and the physical therapist (two days after termination.

J. The undersigned ALJ finds record support for ALJ Mottram's findings. Based upon the evidence presented as a whole, the undersigned finds/concludes from Dr. Brodie's opinion that malingering, possibly for secondary gain, is a plausible phenomenon at play in this case. Regardless, the undersigned ALJ also finds and concludes that Claimant's testimony regarding his alleged injury is not credible. In this case, the evidence presented persuades the ALJ that Claimant's low back symptoms and need for treatment are related to the natural progression of a degenerative condition in the lumbar spine and not related to his work duties as a carpenter. In this case, Claimant has failed to prove that a logical causal connection exists between his work duties, his low back symptoms and his need for treatment. Because Claimant failed to establish he suffered a compensable "injury" as defined by the aforementioned legal opinions, his claim is denied and dismissed. Accordingly, the remaining claims for medical, temporary, permanent partial and permanent total disability benefits need not be addressed.

Reopening

K. C.R.S. § 8-43-303(1) provides in pertinent part that "at any time within six years after the date of injury, the director or an administrative law judge may, after notice to all parties, review and reopen any award on the ground of fraud, an overpayment, an error, a mistake, or a change in condition…" The party seeking to reopen bears the burden of proof to establish grounds for reopening. *See Garcia v. Qualtek Manufacturing*, W.C. No. 4-391-294 (ICAO August 13, 2004).

L. Claimant's assertion that his claim should be re-opened on the basis that Dr. Brodie perjured his testimony and committed fraud is unconvincing. The elements of fraud were set forth by the Colorado Supreme Court in *Morrison v. Goodspeed*, 100 Colo. 470, 68 P.2d 458 (1937). In that case, the Court stated: "The constituents of fraud, though manifesting themselves in a multitude of forms, are so well recognized that they may be said to be elementary. They consist of the following:

(1) A false representation of a material existing fact, or representation as to a material existing fact made with a reckless disregard of its truth or falsity; or concealment of a material existing fact, that in equity and good conscience should be disclosed.

[5] During the October 18, 2009 hearing, Claimant admitted that he knew it was company policy to report all injuries occurring on the job, including minor injuries.

(2) Knowledge on the part of the one making the representation that it is false; or utter indifference to its truth or falsity; or knowledge that he is concealing a material fact that in equity and good conscience he should disclose.

(3) Ignorance on the part of the one to whom representations are made or from whom such fact is concealed, of the falsity of the representation or the existence of the fact concealed.

(4) The representation or concealment made or practiced with the intention that it shall be acted upon.

(5) Action on the representation or concealment resulting in damages."

M. As noted by the Panel in *Essien v. Metro Cab*, W.C. Number 3-853-693 (ICAO August 22, 1991), "[t]he existence of the elements is generally a question of fact for the determination of the ALJ", and because proof of fraud is a factual issue, the ALJ may base his decision on inferences drawn from circumstantial or direct evidence. *See Essien*, supra, citing *Electric Mutual Liability Insurance Co. v. Industrial Commission*, 154 Colo. 491, 391 P.2d 677 (1964). Here, Claimant's suggestion that Dr. Brodie lied to ALJ Mottram about the existence of endplate edema as cover for what Claimant believe constitutes evidence of an acute injury is not supported by the record when it is viewed in its entirety. Rather, the record of Dr. Brodie's testimony supports a conclusion that he admitted that endplate edema was present and that it constituted evidence of a disc problem is evident. Ignoring that Claimant failed to question Dr. Brodie concerning the "cause" of any disk problem supported by the presence of endplate edema, the ALJ concludes that the record does not support that Dr. Brodie directly lied to ALJ Mottram with the intent to deceive him when he initially testified that he did not see evidence of endplate edema/fluid accumulation and that those findings were not present. As is clear in the record, Dr. Brodie noted that he would need to review his records and that upon doing so, he confessed that endplate edema was present. Based upon the evidence presented, the ALJ finds/concludes that while the strength of Dr. Brodie's memory could affect his credibility and the weight of his opinion, there was nothing fraudulent about his testimony at the October 18, 2009 hearing. Accordingly, the ALJ denies and dismisses Claimant's request to reopen the claim based upon fraud. As the ALJ concludes that Claimant failed to carry his burden to prove that Dr. Brodie perjured his testimony constituting a fraud upon the Court, this decision does not address application of the statute of limitation regarding the reopening period provided by § 8-43-303(1).

N. The ALJ also concludes that to the extent that Claimant asserts that his claim should be reopened based upon error or mistake, Claimant failed to establish such error or mistake. In this case, Claimant contends that that ALJ Mottram unreasonably determined the facts of the case, based upon the evidence presented, that is that the findings of fact do not support the order. Claimant also contends that ALJ Mottram's Conclusions of Law are not supported by the evidence presented.

O. When determining whether a particular mistake justifies reopening, the ALJ may consider whether it is the type of mistake which justifies reopening, including whether the mistake could have been avoided by the timely exercise of available remedies. *See Fisher v. Wal-Mart Stores,* W.C. No. 4-247-158 (ICAO August 20, 1998): *Travelers Ins. Co v. Industrial Comm'n,* 646 P.2d 399, 400 (Colo. App. 1981). Reopening is not appropriate "based on facts and evidence which were clear or should have been within the knowledge of [the Claimant] at the time the Order was issued" by the ALJ. *Colo. Dept. of Agriculture v. Wayne*, 493 P.2d 683, 684 (Colo. App. 1971). In this case, the undersigned ALJ views the petition to reopen as a mere substitute for Claimant's failure to timely appeal the January 20, 2010 order of ALJ Mottram. An ALJ does not commit an abuse of discretion if he denies a petition to reopen where the evidence indicates that the error or mistake presents a question which could have been raised by direct appeal. *Colorado Department of Agriculture v. Wayne*, *supra*; *Perrin v. Colorado Department of Labor and Employment* W. C. No. 3-984-399 (March 25, 1996). Here, the evidence presented supports a conclusion that Claimant had at his disposal all information outlining his rights and obligations to object to and appeal the January 20, 2010 order FAL and failed to do so. Accordingly, the ALJ concludes that any error or mistaken alleged to have occurred on the grounds that the facts were unreasonably determined and/or that the conclusions of law are do not support the order are errors or mistakes which could have been raised directly on appeal. The petition to reopen on such grounds is denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant has failed to prove by a preponderance of the evidence that he suffered a compensable injury arising out of and in the scope of his employment on June 18, 2009, consequently his claims for compensation and benefits are denied and dismissed as follows:

   a. Claimant's request for medical benefits subsequent to October 18, 2009 is denied and dismissed.

   b. Claimant's requests for indemnity benefits including temporary partial disability benefits, temporary total disability benefits, permanent partial disability benefits and permanent total disability benefits are denied and dismissed.

2. Claimant's petition to reopen his claim for medical benefits between June 18, 2009 and October 18, 2009 is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That

you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 24, 2016

ISSUES

- Whether claimant has proven by a preponderance of the evidence that he sustained an injury arising out of and in the course and scope of his employment with employer.

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment he received was reasonable and necessary to cure and relieve claimant from the effects of the work injury.

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment he received was authorized medical treatment.

FINDINGS OF FACT

1. Claimant began his employment with employer in March 2014 as a concrete finisher. Claimant's job duties included setting concrete forms, tying rebar, pouring concrete, and finishing concrete. Claimant testified that it is physically demanding work.

2. Claimant testified that he sustained an injury to his back while at work on November 5, 2015. Claimant testified that he was pushing snow off a tarp with a 2 by 4 when he felt a popping in his back and felt a lot of pain. Claimant testified that he sat for approximately one hour after this incident and performed no work. Claimant testified that he reported the November 5, 2015 incident to Nathan Moffat, the owner of Custom Concrete Services, Inc., on that same date.

3. Claimant testified that Mr. Moffat told him he needed to stretch more. Employer did not provide claimant with a list of medical providers and claimant did not seek medical care at that time. Claimant testified that he worked the remainder of his normal shift on November 5, 2015. The ALJ takes judicial notice that November 5, 2015 was a Thursday. Claimant worked on Friday, November 6, 2015 and was not scheduled on Saturday, November 7, 2015 or Sunday, November 8, 2015. Claimant returned to work on Monday, November 9, 2015 as scheduled.

4. On November 9, 2015, claimant sought medical treatment at Mountain Family Health Center. Claimant testified that he had a previously scheduled appointment related to his white blood cell count. During that appointment, claimant notified Dr. Amy Brown that that he had pain in his lower back. Claimant reported to Dr. Brown that he was bending over at work when he twisted to shove snow off a tarp and

felt pain in his low back that shot down into his right buttock. Dr. Brown recommended claimant use over the counter pain relievers such as ibuprofen and prescribed Cyclobenzaprine, a muscle relaxer.

5. Claimant testified that he returned to work on November 9, 2015 and reported to work each day until January 18, 2016. Claimant testified that although he was at work, he did not perform the physically demanding aspects of his job. Claimant testified that he would only begin to work if Mr. Moffat arrived at the job site. However, as indicated by the time records in evidence claimant continued to complete his time cards as if he was working full days of physical concrete work including setting stairs, pouring stairs, and tying rebar. Claimant testified that he falsified his time records so that he could be paid.

6. Claimant testified that on November 13, 2015 he sought additional treatment at Valley View Hospital and was treated by Dr. Gregg Minion. Dr. Minion's report states that claimant reported low back pain after working "last Thursday". Dr. Minion referred claimant for x-rays which were conducted on November 13, 2015 and showed an anterior wedge compression at T12 which Dr. Minion deemed to be an old injury. Dr. Minion recommended claimant treat with ice, ibuprofen, back exercises and prescribed Vicodin. Dr. Minion did not assign any work restrictions. Dr. Minion's report also indicated that claimant reported a "prior condition". At hearing claimant testified that he does not have a prior history of back pain and no prior back injury.

7. Claimant testified that in December 2015 he received a bill for approximately $2,000.00 from Valley View Hospital for x-rays. Claimant testified that he asked Mr. Moffat to pay this bill because claimant knew that employer had assisted other employees with medical bills. Claimant testified that Mr. Moffat agreed to pay the bill.

8. Claimant testified that he did not seek additional medical care and continued to report to work, but did not work unless Mr. Moffat was present. Claimant testified that his last day working for employer was January 18, 2016. Claimant did not miss any work between November 5, 2015 and January 18, 2016. Claimant turned in his completed time cards for that period writing "last day" on the time card for January 18, 2016. However, claimant testified at hearing that he did not quit and Mr. Moffat told him "to leave".

9. Claimant filed his Worker's Claim for Compensation on January 20, 2016 for the alleged November 5, 2015 incident. Claimant testified that he did not initiate a workers' compensation claim until he learned that employer had not paid the Valley View Hospital bill.

10. Claimant sought additional medical treatment on January 30, 2016 at Valley View Hospital and was examined by Dr. Charles Abramson. Claimant reported to Dr. Abramson that he had increasing pain in his right lower back in the three days prior to January 30, 2016, but had no new trauma or falls. Dr. Abramson diagnosed sciatica, recommended claimant use ibuprofen and also prescribed Flexeril.

11. Claimant submitted to an independent medical exam ("IME") on July 9, 2016 with Dr. Kathleen D'Angelo. Dr. D'Angelo reviewed claimant's medical records, obtained a medical history, and performed a physical examination of claimant in connection with the IME. Following the IME, Dr. D'Angelo issued an IME report and opined that claimant suffered a mild lumbar myofascial irritation on November 5, 2015 and has reached maximum medical improvement ("MMI"). Dr. D'Angelo also noted that it is her opinion that claimant does not require any further acute or maintenance care. Dr. D'Angelo's testimony was consistent with her IME report.

12. As indicated by Dr. D'Angelo's report, claimant told Dr. D'Angelo that he quit on January 18, 2016 because Mr. Moffat was not paying attention to him and had reassigned claimant's work truck to another employee. Claimant also informed Dr. D'Angelo that he had continued to perform his normal job duties until he decided to slow down four or five days before January 18, 2016.

13. The ALJ credits the testimony and report of Dr. D'Angelo and finds that the statements claimant made to Dr. D'Angelo at the IME are more credible than claimant's testimony at hearing. Claimant's testimony at hearing was internally inconsistent and also inconsistent with prior statements he made to Dr. D'Angelo at the IME. The ALJ finds claimant's testimony at hearing neither credible nor persuasive and finds that claimant was able to continue working in a physically demanding job until January 18, 2016 and missed no work between November 5, 2015 and his final day of January 18, 2016.

14. The ALJ further credits statements claimant made to Dr. D'Angelo regarding his job separation and finds that claimant quit on January 18, 2016 because Mr. Moffat had assigned the company vehicle to another employee and was not paying attention to claimant.

15. At hearing, claimant confirmed that he had failed to disclose a period of employment in which he had sustained a work injury while working for another employer. Claimant admits that prior work injury was reported under a different date of birth and a different social security number. However, claimant testified that the hospital was responsible for these errors. The circumstances of that prior work injury are wholly unrelated to the current alleged injury. However, the ALJ notes that claimant's failure to disclose this information undermines his credibility in the current case.

16. Claimant's testimony regarding his alleged injury in this case relies upon the claimant being found credible at hearing. The ALJ notes that claimant's testimony is contradicted by the history he provided to Dr. D'Angelo. Claimant testified that his appointment with Dr. Brown on November 9, 2015 was previously scheduled for his white blood cell count and was not specifically made for his alleged work injury.

17. The ALJ credits the medical reports from Dr. Minion and finds that claimant's treatment on November 13, 2015 was intended to treat an old injury and was not related to claimant's alleged injury with employer on November 5, 2015.

18. The ALJ credits the medical records from Dr. Abramson and finds that his pain increased in the three days prior to January 30, 2016, which was after he had stopped his employment with employer on January 18, 2016.

19. The ALJ determines that claimant has failed to meet his burden of proving that the alleged incident at work on November 5, 2015 resulted in the need for medical treatment to cure and relieve him from the effects of the work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Pursuant to Section 8-43-404(5), C.R.S., Respondents are afforded

the right, in the first instance, to select a physician to treat the industrial injury. Once respondents have exercised their right to select the treating physician, claimant may not change physicians without first obtaining permission from the insurer or an ALJ. *See Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996).

5. "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008). Section 8-43-404(5)(a) specifically states: "In all cases of injury, the employer or insurer has the right in the first instance to select the physician who attends said injured employee. If the services of a physician are not tendered at the time of the injury, the employee shall have the right to select a physician or chiropractor." "[A]n employee may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion…." *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985), *citing*, 2 A. Larson, *Workers' Compensation Law* § 61.12(g)(1983).

6. As found, claimant's testimony at hearing regarding the facts and circumstances surrounding his alleged injury, including his symptoms after the alleged injury, is neither persuasive nor credible.

7. As found, the ALJ finds claimant's treatment with Dr. Brown on November 9, 2015 was related to his white blood cell count and was not related to claimant's alleged work injury with employer.

8. As found, the ALJ credits the reports of Dr. Minion and finds that claimant has failed to establish that his medical treatment on November 13, 2015 was related to claimant's alleged work injury with employer on November 5, 2015.

9. As found, claimant has failed to establish by a preponderance of the evidence that his medical treatment with Dr. Abramson on January 30, 2016 was reasonable, necessary, or related to any alleged injury with employer on November 5, 2015.

10. As found, the ALJ credits Dr. D'Angelo's testimony and the medical records entered into evidence over the testimony of claimant at hearing and finds that claimant has failed to prove that he sustained a compensable injury arising out of and in the course of his employment with employer.

11. As found, claimant continued to work with employer from November 5, 2015 through January 18, 2016. As found, claimant's testimony that he did not perform heavy labor during that time is neither credible nor persuasive.

12. As found, claimant has failed to meet his burden of proof establishing a compensable injury. Therefore, claimant's claim for benefits is denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant's claim for benefits related to a November 5, 2015 work injury is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 25, 2016

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

STIPULATIONS

1. The parties stipulated the Claimant's Average Weekly Wage (AWW) is $543.29.

2. Unemployment benefits were paid and the parties stipulated that these will result in an offset.

3. If the Claimant is entitled to temporary disability benefits, they would be for the time period of September 9, 2014 to November 9, 2014 and would be offset by unemployment benefits paid.

4. The issue of permanent total disability (PTD) is reserved.

ISSUES

The issues for determination are:

1. Whether the Respondents are permitted to withdraw the Final Admission of Liability filed on October 20, 2015, having proved, by a preponderance of the evidence, that the Claimant did not suffer a compensable injury or occupational disease.

2. If the evidence establishes that the Claimant suffered a compensable injury or occupational disease, whether the Claimant proved, by a preponderance of the evidence, that she is entitled to maintenance medical benefits.

3. If the evidence establishes that the Claimant suffered a compensable injury or occupational disease, whether Claimant proved by a preponderance of the evidence that she suffered a functional impairment contained off the schedule of injuries set forth at C.R.S. § 8-42-107(2), C.R.S. and is entitled to permanent partial disability benefits based upon a whole person conversion of the upper extremity rating.

4. If the Claimant proves she suffered a compensable injury, whether the Claimant proved, by a preponderance of the evidence, that she is entitled to temporary total disability indemnity benefits from September 9, 2014 to November 10, 2014.

5. If the Claimant proves she is entitled to temporary total disability benefits, whether the Respondents proved, by a preponderance of the evidence, that the Claimant is responsible for her termination of employment and resulting wage loss.

6. Whether the Claimant is entitled to compensation for disfigurement pursuant to C.R.S. § 8-42-108 and, if so, the amount of compensation.

FINDINGS OF FACT

1. The Claimant, now 77 years of age, began working for the hospital in 1989 as an environmental services technician, mainly cleaning at the third floor birthing rooms and the operating room for C-section deliveries. She continued in this position until she was terminated on September 9, 2014.

2. The claimed mechanism of injury in this case was the repetitive and forceful use of the micro mop, particularly when it came to cleaning up dried blood and meconium. The Claimant described the process as soaking everything first and then picking up blood clots with a towel. If some substances stuck to the floor, she used more wet towels and then a scraper to remove it. Whereas the string mop picked up the blood, the micro mop did not, so she had to get on her knees and scrape. The Claimant testified that it got to where she was more or less just getting a little scraper and scraping it up and using a towel then just sort of rinse the floor out with the micro mop. But she testified she was mostly doing the messy cleaning squatted down with towels.

3. Over the course of the claim, the Claimant's theory of how the micro mop caused her injury evolved into having to use pressure on the handle to keep the mop from flipping over. First of all, as testified by Ms. Kechter, the mop flipping over is usually caused by putting too much pressure on the mop. If putting pressure on the handle was causing the Claimant's pain, it would seem logical that she would use less pressure to avoid pain, which would in turn help prevent the mop from flipping over. Second, the problem of the mop flipping over is easily remedied by merely lifting up the lightweight mop and allowing the mop head to right itself. Third, the use of the micro mop was not a significant portion of the job. According to Ms. Kechter, a typical birthing room took approximately 30 to 40 minutes to clean, of which 6 to 7 minutes was mopping. (Exh. EE, p. 7: use of vacuum and micro mop was a total of one hour per day.). An operating room would typically take a little longer. Only a small percentage of the mopping time required using extra force to clean up dried substances. The majority of the workday was spent using a wet cleaning cloth to wipe down rooms and equipment. (Exh. EE, p. 5). Other tasks included wiping down computer screens, keyboards, tabletops, surgical trays, surgical tables; cleaning the walls and ceilings as necessary, emptying trash and removing sharps containers; and to ensure the entire suite was decontaminated. (Exh. EE, p. 1). Fourth, the micro mop is much easier on the muscles than a string mop. The micro mop weighs less than 1 pound and the force exerted on the micro mop rarely exceeded one or two pounds, as measured by Martin Rauer. (Exh. EE, p. 5).

4. The Claimant alleges an occupational disease to her neck, left shoulder, collarbone, and sternoclavicular joint due to using a micro-fiber mop ("micro mop"). A micro mop is pictured at Exhibit DD. The Claimant was first exposed to the micro mop in 2006 and she complained of symptoms similar to those in this claim.

5. The Claimant was seen December 31, 2007 by Dr. Frederick Scherr, M.D. Claimant noted that the use of the “micro mop” had caused increased pain and discomfort in her right shoulder and neck area. She noted that the mop required more pressure for her to push down on the mop and that it would flip on her. She did not have right shoulder or neck problems prior to the use of the “micro mop”. She was given restricted duty to include no mopping.

6. The Claimant was seen by Dr. Scherr on January 14, 2008. Dr. Scherr wrote in his report, “We discussed long and hard about being smart while she is at work with any of her problems and also discussed making sure that she does talk with her supervisor about the mopping duties and the use of the micro mop and make sure that she is using it appropriately, and if it is not working for her whether or not there are some alternatives to her job duties that she may be able to use that will not aggravate her cervical strain” (Exh. 4 p. 23).

7. After some conservative treatment and returning to using the regular string mop, the Claimant’s symptoms resolved and she returned to her regular duty without impairment and continued using the regular string mop. She had no symptoms and required no treatment until August of 2014.

8. At some point prior to September 2013, the employer formally transitioned to the use of the micro mops and began requiring their employees to use them in place of the regular string mops; however, the Claimant was reluctant to make the transition. On September 21, 2013, Melissa Kechter, the Claimant’s immediate supervisor, emailed her superiors saying that the Claimant was “balking at using the micro mops.” The Claimant had informed Ms. Kechter that she had a previous work-related injury that prohibited her from using the micro mop, but Ms. Kechter’s take on the matter was that she thought that the Claimant just did not want to use the micro mops. (Exh. AA, pages 1-2). The Claimant preferred the string mops because she thought they cleaned better.

9. On September 26, 2013, Marianne Beaver, Ms. Kechter’s direct supervisor, wrote to the Claimant following up on the Claimant’s annual meeting with Ms. Beaver’s supervisor, Dutch Fla Havhan, regarding the use of the micro mop. She noted that the Claimant was required to provide a doctor’s note to verify that she could not use a micro mop, but in the meantime, she was required to use them. She pointed out that they were easier to use and lighter in weight. In her note, Ms. Beaver voiced her understanding that people who have cleaned for a long time “find reasons why they can’t use the micro mops” and that this may not be an easy transition. Ms. Beaver informed the Claimant that she supplied her cleaning cart with the micro mop supplies. (Exh. Z). Ms. Beaver also removed the string mop from the Claimant’s cart.

10. The Claimant explained in her testimony that using the micro mop caused pain in her collarbone, which led to pain in her shoulder and neck and up into her head. She explained that pushing down on the micro mop pushed up her ribs which pushed up her collarbone. The pain went down to the middle of her right arm and up to the middle of her neck. At the time of the hearing, it was still hard for her to hold onto things,

pick up heavy items, and push with her right arm. The tight neck muscles causes pain to the left side of her head and sometimes affects her hearing in her left ear.

11. In August 2013, prior to using the micro mop, the Claimant reported to her private physician, Flora Brewington, M.D., with complaints of tension in her neck muscles, which was "pretty chronic for her." (Exh. P, p. 7). The following month (still prior to using the micro mop) she presented to another physician, Jeffrey Kauffman, M.D., with neck swelling and a collarbone that protruded more on the right side. The Claimant explained at hearing that whenever her neck gets bad, it swells. The Claimant explained to Dr. Kaufman that she had a childhood injury of her collarbone at that location. Dr. Kauffman's examination showed that the right sternoclavicular joint and medial clavicle were more prominent and larger than the left side. She also had mild rotational change which Dr. Kauffman related to mild scoliosis to the right in the thoracic spine. (Exh. P, p. 6).

12. Although the Claimant sought medical treatment thereafter for various conditions, the record is devoid of any complaints related to the use of a micro mop. On June 23, 2014, the Claimant was seen at the emergency room after falling down approximately four steps and landing on her left side. She complained of left upper arm and elbow pain, left knee and hip pain, and left-sided neck pain. She reported a loss of consciousness from the fall and was placed in a cervical collar. (Exh. M).

13. On July 15, 2014, the Employer issued a second written warning regarding attendance issues. The notice detailed absences and tardies and noted that every unexcused absence was adjacent to a day off or a weekend off. She was warned that one more unexcused absence in a three month period would result in termination. (Exh. V).

14. On July 29, 2014, the Claimant saw her family physician, John Cranor, M.D., to obtain FMLA paperwork related to her migraines and Ménière's disease. Dr. Cranor noted that she was followed in the past for dyspepsia, symptomatic menopause, mild hyperlipidemia, and hypovitaminosis D. There is no mention of her collarbone, neck, or shoulder. (Exh. L).

15. On Friday, August 22, 2014, the Claimant called Ms. Kechter approximately 30 minutes after her shift was scheduled to begin (9:30 p.m.), and explained that she was going to be late because she had been stuck on a long distance phone call. The Claimant told Ms. Kechter that she had been speaking with a cousin about getting the electricity turned on at the ranch. The Claimant arrived late to work and failed to complete her tasks for that day. (Exh. S). Under the hospital's policy, this was considered an unexcused absence. The Claimant testified that on that day, as she was leaving for her shift, her husband's colostomy bag burst. The Claimant's husband was bed ridden. There was no one else present to clean up her husband and his bed. The Claimant testified that she cleaned up the mess and proceeded to work. The Claimant qualified for FMLA due to her husband's condition. She testified that she could have called in under FMLA but she knew work would be short handed so she went in

even though it meant she would be late. Ms. Kechter testified that the Claimant did not tell her about the situation with her husband's colostomy bag. The ALJ finds Ms. Kechter's testimony that the Claimant did not advise her of the situation with her husband to be credible.

16. On Monday, August 25, 2014, the Claimant reported to her employer that she was experiencing pain to her right upper side from using the micro mops. She listed the date of injury as August 20, 2014. (Exh. U). She reported the injury to Mr. Fla Havhan.

17. Later that day, the Claimant was seen by Tracey Stefanon, M.D., the authorized treating physician. The Claimant explained to Dr. Stefanon that the pain she was experiencing, which was now at the level of 9/10 (Exh. E, p.2), had developed over the last year to year and a half at approximately the same time she started using the micro mop. She informed Dr. Stefanon that the fullness in the sternoclavicular area developed in the last one to one and a half months. Dr. Stefanon commented that she was unclear as to whether the Claimant's condition was caused by the occupational exposure of using a micro mop. (Exh. J). Dr. Stefanon felt that the Claimant's underlying osteoarthritis could have been contributing to her symptoms and that the fullness in the sternoclavicular joint clearly stemmed from arthritis. (Depo. Stefanon, p. 9).

18. At no time prior to reporting the claim did the Claimant tell anyone she was having difficulties or request accommodations for her alleged condition with the micro mop. The only thing the Claimant discussed with her co-workers and supervisors was her disapproval of the micro mop – not pain from using it (although the Claimant testified she did discuss pain in her shoulders on a couple occasions after gardening over the weekend). The fact that she did not raise the claim until after she knew she was going to get fired, and after having used the micro mop for a year without pain complaints to anyone, leads to the conclusion that the claim is not really related to the micro mop, but is a distraction from attendance issues.

19. On August 26, 2014 the Claimant was seen by her physical therapist, Barbara Walden. The Claimant complained that her head was vibrating up and down, but without any movement. Ms. Walden reported that the Claimant jumped with light palpation of all areas along her right shoulder, and was unable to sustain muscle testing and collapsed with all tests. Ms. Walden characterized the Claimant's reactions as demonstrating fear-avoidance activities and commented that the Claimant had shown to have delayed recovery with past injuries for which Ms. Walden had treated her. (Exh. I).

20. On September 9, 2014, the Claimant was called into Mr. Fla Havhan's office and was told she was being terminated. The Claimant did not explain what had happened with her husband on the evening of August 22, 2014. The Claimant testified that she already felt that her employer was trying to get rid of her because of her age. She testified that was asked frequently when she intended to retire. The Claimant testified that she did not think it was worth trying to defend herself regarding why she was late. She testified that she had never reported that she felt harrassed and offended

because her supervisors used profanity and harassed her about retirement so she felt she had no one to report it to. She did not report the abuse to Mr. Fla Havhan because he was not present when she was working the night shift. The Claimant likely knew she was going to lose her job after calling into work late on August 22, 2014. When she walked into Mr. Fla Havhan's office, she asked him if he was going to fire her before he said anything. When Ms. Beaver was walking the Claimant out after she was terminated, the Claimant confided with her that her family had warned her that she was going to be fired because of her attendance issues.

21. On November 6, 2014, Dr. Stefanon commented that it was "interesting" that at her previous evaluation the Claimant's range of motion on the right side was better than the unaffected left side, but on that day the range of motion was significantly different. Dr. Stefanon had no explanation for why the Claimant would show this degree of improvement and then digress to her current state. Dr. Stefanon stated, "I would definitely consider this case to be delayed recovery." (Exh. E, p. 4).

22. On November 13, 2014, the Claimant was seen by orthopedist Steven Seiler, M.D. The Claimant explained that the pain in her right shoulder, neck, scapula, and sternoclavicular joint was due to using the micro mop. Her primary complaint was pain at the base of her neck. Dr. Seiler felt that the prominence at the sternoclavicular joint was likely due to osteoarthritis and assessed her with "neck pain." He had no treatment to offer her and felt she was at MMI. (Exh. D).

23. Dr. Stefanon placed the Claimant at MMI on November 20, 2014. At that point, Dr. Stefanon came to the conclusion that the Claimant's condition did not relate to the use of the micro mop. (Exh. C). As she explained in her deposition testimony, Dr. Stefanon reached this conclusion because the Claimant's condition really had not changed even though the Claimant had not used a micro mop for an extended period of time. When looking at causality, she explained that symptoms should either improve or resolve once the exposure to the pain-inducing activity is removed. Dr. Stefanon was also concerned with the Claimant's pain behaviors and inconsistencies with her range of motion testing. (Depo. Stefanon, p. 20). She released the Claimant with no permanent impairment and no maintenance medical care. (Exh. C).

24. The Respondents filed a Final Admission of Liability on November 24, 2014, consistent with Dr. Stefanon's determinations. (Exh. 8).

25. The Claimant had an Independent Medical Examination performed by John Hughes, M.D. on January 6, 2015. Dr. Hughes diagnosed the Claimant with a sternoclavicular joint sprain/strain with globalizing right myofacial pain in the cervicothoracic region. (Depo. Tr. p. 15, l. 3 -5). He opined that this was an inflammatory problem as a result of her work related activities, particularly using the micro mop. (Depo. Tr. p. 15 l. 9 – 12). It was his understanding that the Claimant would push down on the micro mop forcibly. "Force is transmitted through the arm and shoulder through a single bony articular complex. And that's the clavicle with two joints, the acromioclavicular and sternoclavicular joints." (Depo. Tr. p. 15 l. 20 – 23).

When Dr. Hughes was asked why other employees did not developed the same problem, Dr. Hughes explained that Claimant was uniquely vulnerable because of her age, small stature, and female gender. (Depo. Tr. p. 16 l. 13 – 15). “People with those particular underlying factors are more vulnerable to joint and soft tissue problems of the upper extremities and scapulothoracic articulation complex.” (Depo. Tr. p. 16 1. 15 -18).

26. The Claimant requested a Division IME and was seen for that purpose by Franklin Shih, M.D. on September 8, 2015. The Claimant explained that her neck pain and pain into the upper back area was from using the micro mop at work. Within a few months of using the micro mop, she had pain radiating to her right hand and she developed numbness in the second and third digits. She denied any previous cervical or upper extremity injuries other than the 2007 problems and a 2005 motor vehicle accident. Dr. Shih noted that the Claimant exhibited marked pain behavior during the examination. Dr. Shih agreed with the November 20, 2014 date of MMI and assessed the Claimant with a 10% right upper extremity impairment rating. (Exh. B).

27. The Respondents filed a Final Admission of Liability on October 20, 2015, consistent with Dr. Shih’s determinations and admitted to PPD benefits in the amount of $5,762.22. (Exh. 9).

28. The Claimant was seen by Allison Fall M.D. on February 4, 2016 at the Respondents’ request. Dr. Fall’s examination was limited secondary to the Claimant’s pain behaviors. (Exh. A, p. 7). Examination of the cervical spine revealed a range of motion that was much more limited than what she observed during the Claimant’s spontaneous activities. The Claimant was able to abduct her right shoulder to 80° initially but only to 45° on the second attempt. Dr. Fall noted that these measurements were significantly less than those measured by Dr. Hughes and Dr. Shih and were likely not physiologic. The Claimant indicated that she could not internally rotate at all; whereas Dr. Seiler obtained an internal rotation of 70° a year and a half earlier (Exh. D) and the therapist found normal internal rotation in August 2014. (Exh. I). Dr. Fall documented give-way weakness throughout the right upper extremity, similar to that noted by other examiners.

29. It was Dr. Fall’s opinion that use of the micro mop would not lead to a sternoclavicular joint injury, a shoulder injury, or to cervical radiculopathy. (Exhibit A). Dr. Fall questioned whether cognitive issues were playing a role. She felt that the Claimant’s right shoulder and neck pain could be explained based on progressive degeneration that was noted in her cervical spine x-rays throughout the years. She felt the Claimant had sustained no permanent impairment from using the micro mop. (Exh. A).

30. At the hearing, Dr. Fall testified consistent with her written opinion. Overall, Dr. Fall opined that it is not probable that use of the micro mop led to the Claimant’s right sided neck and shoulder complaints. Dr. Fall felt that, if anything, listening to the Claimant’s testimony over 2 days of hearing provided even greater support for her opinion that the micro mop use didn’t require an additional use of force

that could have caused the reported symptoms. Dr. Fall further opined that use of the micro mop did not in any way aggravate, accelerate or exacerbate the Claimant's preexisting conditions which were: prominence of her right clavicle and arthritis in her neck. Dr. Fall also pointed out that Rule 17 cumulative trauma issues are usually seen for the neck and shoulder.

31. Dr. Hughes testified in this matter by deposition. Based on his testimony, he was unaware of how long the Claimant had been using the micro mop. His causation opinion was based on his understanding that the Claimant had been using the micro mop for a seven-year period of time. (Depo. Hughes, pp. 5-6, 24). His understanding of the mechanism of injury, as obtained from the Claimant, was that the Claimant would need to apply a lot of pressure when getting blood and fluids off the floor. (Depo. Hughes, p. 7). He understood that it took up to 15 pounds of pressure when pushing hard on the mop, but he conveyed no understanding of how much time during the day was spent removing the substances or how much pressure was typically used. (Depo. Hughes, p.12, ll.15-16). Dr. Hughes felt that the Claimant had sustained a sternoclavicular joint sprain/strain, but explained that it is much more common to see an acromioclavicular joint problem than a sternoclavicular joint problem. (Depo. Hughes, p. 15-16). When asked why the Claimant was having sternoclavicular issues, Dr. Hughes responded, "I really have no idea." (Depo. Hughes, p. 16). Additionally, Dr. Hughes did not seem to be aware that the Claimant had been seen prior to her use of the micro mop with regard to her sternoclavicular joint, which was likely caused by scoliosis and arthritis.

32. The Claimant filed an Application for Hearing endorsing the issue of permanent total disability benefits. Respondents filed a Response to the Application for Hearing endorsing the issue of compensability and withdrawal of the Final Admission of Liability.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1), The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. Respondent bears the burden of establishing any affirmative defenses. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201 (2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Withdrawal of Admissions Made in a General Admission of Liability

C.R.S. § 8-43-201 generally establishes the burden of proof in disputes arising under the Workers' Compensation Act of Colorado. It provides, in pertinent part, that,

> A claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer; a workers' compensation case shall be decided on its merits; and a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification.

Thus, under the provisions of C.R.S. § 8-43-201(1), the party seeking to modify an issue already determined by a general or final admission shall bear the burden of proof for any such modification. *Rodriguez v. City of Brighton,* W.C. No. 4-782-516 (ICAO August 23, 2011). Here, the Respondents seek to modify the issue of compensability of an occupational disease claim as determined by a General Admission of Liability filed by Insurer. Respondents therefore bear the burden of proof, by a preponderance of the evidence, to show that the Claimant did ***not*** sustain a compensable occupational disease with a date of injury of August 20, 2014.

Compensability - Occupational Disease

The Claimant's right to compensation initially hinges upon a determination that "at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment." C.R.S. § 8-41-301(1)(b). The "arising out of" test is one of causation which requires that the injury or illness have its origins in an employee's work-related functions. There is no presumption than an injury or illness which occurs in the course of employment arises out of the employment. *Finn v.*

Industrial Commission, 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co*., 124 Colo. 210, 236 P.2d 293 (1951). The weight and credibility to be assigned expert testimony on the issue of causation is a matter within the discretion of the ALJ. Cordova v. Industrial Claim Appeals Office, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); *Robinson v. Youth Track*, supra.

An occupational disease, as opposed to an occupational injury, arises not from an accident, but from a prolonged exposure occasioned by the nature of the employment. *Colorado Mental Health Institute v. Austill*, 940 P.2d 1125 (Colo. App. 1997). Occupational diseases are subject to a more rigorous test than accidents or injuries before they can be found compensable. All elements of the four-part test mandated by the statute must be met to ensure the disease arises out of and in the course of employment.

C.R.S. § 8-40-201(14) defines “occupational disease” as:

> “A disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been generally exposed outside of the employment.”

The statute imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test which requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. Id. Where the disease for which a claimant is seeking compensation is produced solely by some extrinsic or independent cause, it is not compensable. *Anderson* at 824. The purpose of this rule “is to ensure that the disease results from the claimant’s occupational exposure to hazards of the disease and not hazards to which the claimant is equally exposed outside of employment.” *Saenz-Rico v. Yellow Freight System, Inc.,* W.C. No. 4-320-928 (January 20, 1998); see also *Stewart v. Dillon Co.,* W.C. No. 4-257-450 (November 20, 1996). Once the claimant makes such a showing, the burden of establishing the existence of a nonindustrial cause and the extent of its contribution to the occupational disease shifts to the employer. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

The hazardous conditions of employment need not be the sole cause of the disease. A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866 (Colo. App. 2001); *H and H Warehouse v. Vicory*, supra; *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986).

Pursuant to W.C. Rule of Procedure 17-2 (A), 7 Code Colo. Regs. 1101-3, health care practitioners are to use the Medical Treatment Guidelines referenced as Exhibits at W.C. Rule of Procedure 17-7, 7 Code Colo. Regs. 1101-3 (the "Medical Treatment Guidelines") when furnishing medical aid under the Workers' Compensation Act. The ALJ may also appropriately consider the Medical Treatment Guidelines as an evidentiary tool. *Logiudice v. Siemans Westinghouse*, W.C. 4-665-873 (ICAO January 25, 2011). However the ALJ is not required to grant or deny medical benefits based upon the Medical Treatment Guidelines. *Thomas v. Four Corners Health Care*, W.C. 4-484-220 (ICAO April 27, 2009). The Medical Treatment Guidelines are not definitive, but merely guidelines, and the ALJ has the discretion to make findings and orders which follow or deviate from the Medical Treatment Guidelines depending upon the evidence presented in a particular case. *Jones v. T.T.C. Illinois, Inc.*, W.C. 4-503-150 (ICAO May 5, 2006), *aff'd Jones v. Industrial Claims Appeals Office*, N. 06CA1053 (Colo. App. March 1, 2007)(not selected for official publication); *Nunn v. United Airlines*, W.C. 4-785-790 (ICAO September 9, 2011).

Of particular importance in the Claimant's case is analysis of whether or not she has suffered a work-related cumulative trauma injury which is addressed in Rule 17, Exhibit 5 of the Guidelines.

Rule 17, Exhibit 5 (D)(3) provides that,

> The clinician must determine if it is medically probable (greater than 50% likely or more likely than not) that the need for treatment in a case is due to a work-related exposure or injury. Treatment for a work-related condition is covered when: 1) the work exposure causes a new condition; or 2) the work exposure causes the activation of a previously asymptomatic or latent medical condition; or 3) the work exposure combines with, accelerates, or aggravates a pre-existing symptomatic condition. In legal terms, the question that should be answered is: "Is it medically probable that the patient would need the treatment that the clinician is recommending if the work exposure had not taken place?" If the answer is "yes," then the condition is not work-related. If the answer is "no," then the condition is most likely work-related.

The Cumulative Trauma Guidelines then set out the steps the clinician should follow to make a proper causation evaluation. There is a 6-step general causation analysis and a 5-step causation analysis when using risk factors to determine causation.

The claimed mechanism of injury in this case was the repetitive and forceful use of the micro mop, particularly when it came to cleaning up dried blood and meconium. The Claimant described the process as soaking everything first and then picking up blood clots with a towel. If some substances stuck to the floor, she used more wet towels and then a scraper to remove it. Whereas the string mop picked up the blood, the micro mop did not, so she had to get on her knees and scrape. The Claimant testified that it got to where she was more or less just getting a little scraper and scraping it up and using a towel then just sort of rinse the floor out with the micro mop. But she was mostly doing the messy cleaning squatted down with towels.

The Claimant likely knew she was going to lose her job after calling into work late on August 22, 2014. When she walked into Mr. Fla Havhan's office, she asked him if he was going to fire her before he said anything. When Ms. Beaver was walking the Claimant out after she was terminated, the Claimant confided with her that her family had warned her that she was going to be fired because of her attendance issues.

The Claimant did not report her condition until her pain reached 9/10 (Exh. E, p. 2). She continued to work her regular job up until August 25, 2014 when she reported the injury and was first seen by Dr. Stefanon. At no time prior to reporting the claim did she tell anyone she was having difficulties or request accommodations for her alleged condition. The only thing the claimant discussed with her co-workers and supervisors was her disapproval of the micro mop – not pain from using it (although the claimant testified she did discuss pain in her shoulders on a couple occasions after gardening over the weekend). The fact that she did not raise the claim until after she knew she was going to get fired, and after having used the micro mop for a year without pain complaints to anyone, leads to the conclusion that the claim is not really related to the micro mop, but is a distraction from a attendance issues.

Over the course of the claim, the Claimant's theory of how the micro mop caused her injury evolved into having to use pressure on the handle to keep the mop from flipping over. First of all, as testified by Ms. Kechter, the mop flipping over is usually caused by putting too much pressure on the mop. If putting pressure on the handle was causing the Claimant's pain, it would seem logical that she would use less pressure to avoid pain, which would in turn help prevent the mop from flipping over. Second, the problem of the mop flipping over is easily remedied by merely lifting up the lightweight mop and allowing the mop head to right itself. Third, the use of the micro mop was not a significant portion of the job. According to Ms. Kechter, a typical birthing room took approximately 30 to 40 minutes to clean, of which 6 to 7 minutes was mopping. (See Exh. EE, p. 7: use of vacuum and micro mop was a total of one hour per day.). An operating room would typically take a little longer. Only a small percentage of the mopping time required using extra force to clean up dried substances. The majority of the workday was spent using a wet cleaning cloth to wipe down rooms and equipment.

(Exh. EE, p. 5). Other tasks included wiping down computer screens, keyboards, tabletops, surgical trays, surgical tables; cleaning the walls and ceilings as necessary, emptying trash and removing sharps containers; and to ensure the entire suite was decontaminated. (Exh. EE, p. 1). Fourth, the micro mop is much easier on the muscles than a string mop. The micro mop weighs less than 1 pound and the force exerted on the micro mop rarely exceeded one or two pounds, as measured by Martin Rauer. (Exh. EE, p. 5).

The medical opinions varied among the experts as to the compensability of the claim. However, the ALJ finds that the Claimant's ATP Dr. Stefanon and Dr. Fall had the clearest understanding as to what the Claimant's actual job duties were, and the Claimant's complete medical history. Dr. Fall was in the hearing room and heard all the evidence presented in the proceeding. Both these physicians concluded that the use of the micro mop did not lead to the Claimant's condition. As noted by Dr. Stefanon, Dr. Shih performed no causation analysis. (Depo. Dr. Stefanon, p. 47).

The Claimant's expert, Dr. Hughes, was unaware of how long the Claimant had been using the micro mop. His causation opinion was based on his understanding that the Claimant had been using the micro mop for a seven-year period of time. (Depo. Hughes, pp. 5-6, 24). His understanding of the mechanism of injury, as obtained from the claimant, was that the Claimant would need to apply a lot of pressure when getting blood and fluids off the floor. (Depo. Hughes, p. 7). He understood that it took up to 15 pounds of pressure when pushing hard on the mop, but he conveyed no understanding of how much time during the day was spent removing the substances or how much pressure was typically used. (Depo. Hughes, p.12, ll.15-16). Dr. Hughes felt that the Claimant had sustained a sternoclavicular joint sprain/strain, but explained that it is much more common to see an acromioclavicular joint problem than a sternoclavicular joint problem. (Depo. Hughes, p. 15-16). When asked why the Claimant was having sternoclavicular issues, Dr. Hughes responded, "I really have no idea." (Depo. Hughes, p. 16). Dr. Hughes was seemed unaware that the Claimant had been seen prior to her use of the micro mop with regard to her sternoclavicular joint, which was likely caused by scoliosis and arthritis.

The experts all agreed that temporality was an important factor to consider when addressing causation. Dr. Hughes felt that the temporality of the Claimant's condition fit the aggravation model. However, as noted above, he thought that the Claimant had been using the micro mop for seven years, and that once the micro mop was removed, the claimant got better. As noted by Dr. Fall and Dr. Stefanon, the Claimant initially reported an improvement when she began physical therapy and the micro mop was removed. Given that these two variables were changed at the same time, it was impossible to know what was causing the improvement at the time. However, when the Claimant's condition then worsened over time once the physical therapy was removed, it is evident that the removal of the micro mop was not a factor in her initial improvement. Dr. Fall noted that the range of motion measurements of the shoulder actually deteriorated over time and after removal of the micro mop, leading her to conclude that the micro mop was not an injury-inducing factor.

The Claimant explained in her testimony that using the micro mop caused pain in her collarbone, which led to pain in her shoulder and neck and up into her head. She explained that pushing down on the micro mop pushed up her ribs which pushed up her collarbone. There is no medical support for this claim. At the time of the hearing, it was still hard for her to hold onto things, pick up heavy items, and push with her right arm. It is difficult to understand how the claimant could have continued performing her regular job up to August 25, 2014 if her current condition is actually an improvement on her condition due to the removal of the micro mop.

Dr. Fall explained that the shoulder is not covered under Rule 17 cumulative trauma disorders, because the shoulder and neck problems are typically not caused by an overuse exposure.

The doctors could all agree that the Claimant had pre-existing multilevel degenerative disc disease, underlying cervical spine spondylosis, and osteoarthritis. Dr. Hughes also believed that the Claimant likely had rheumatoid arthritis given his examination of her fingers. Dr. Hughes, Dr. Fall, and Dr. Stefanon all agreed that the Claimant's symptoms could have been evident in a 77-year-old woman absent any injurious exposure other than activities of daily living.

The Claimant generally has the burden of proving compensability by a preponderance of the evidence. In this case, however, the Respondents had the burden, given their admission of liability. See § 8-43-201(1). The fact that there was a DIME performed in this case does not change the evidentiary standard. *Faulkner v. ICAO*, 12 P.3d 844 (Colo. App. 2000). The Respondents have carried their burden of proving by a preponderance of the evidence that the Claimant's purported injuries did not arise out of her use of the micro mop.

Remaining Issues

The Respondents are permitted to withdraw the Final Admission of Liability having proven by a preponderance of the evidence, that the Claimant did not suffer a compensable injury or occupational disease. As such, the remaining issues regarding temporary disability benefits, maintenance medical benefits, disfigurement, conversion, and responsibility for termination are moot.

Overpayment

The term "overpayment" is defined in C.R.S. § 8-40-201(15.5), as,

> money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles. For an overpayment to result, it

> is not necessary that the overpayment exist at the time the claimant received disability or death benefits under said articles.

"Generally, an 'overpayment' is anything that has been 'paid' but is not 'owing as a matter of law.'" *Cooper v. Indus. Claim Appeals Office*, 109 P.3d 1056 (Colo. App. 2005). Further, in *Simpson*, the Court considered the statutory definition of "overpayment" in § 8-40-201(15.5) and found it provided for three distinct categories of overpayment:

> The statute makes clear that the phrases are disjunctive such that three categories of possible overpayment are included in the statutory definition: one category is for overpayments created when a claimant receives money "that exceeds the amount that should have been paid"; the second category is for money received that a "claimant was not entitled to receive"; and the final category is for money received that "results in duplicate benefits because of offsets that reduce disability or death benefits" payable under articles 40 to 47 of Title 8. § 8-40-201(15.5). See *Simpson*, 219 P.3d 359.

The definition is explicit that an "overpayment" can be found even when there would not have been an overpayment "at the time the claimant received … benefits." Thus, in *Haney v. Shaw, Stone & Webster,* W.C. No. 4-796-763 (July 28, 2011), the panel determined that temporary benefits paid pursuant to a general admission could be ordered retroactively repaid to the respondents. In *Haney*, the ALJ determined that the claimant was responsible for his termination of employment and that the respondents were able to retroactively recover TTD payments made since the date of termination of employment as an overpayment. *See also Stroman v. Southway Services, Inc.*, W. C. No. 4-366-989 (August 31, 1999).

The Respondents admitted to PPD benefits in the amount of $5,762.22. (Exh. 9). Because the claim is not compensable, this amount constitutes an overpayment. The Claimant is required to repay this amount.

The Claimant is no longer employed by Employer. It would be a serious hardship for her to repay the entire amount of the overpayment in a lump sum. Therefore, the Claimant is not required to pay the entire $5,762.22 in a lump sum. The Claimant shall make payments of $50.00 per month until the overpayment is repaid.

ORDER

It is therefore ordered that:

1. Respondents are permitted to withdraw the Final Admission of Liability filed on October 20, 2015 having proven by a preponderance of the evidence, that the Claimant did not suffer a compensable injury or occupational disease.

2. As the Claimant did not suffer a compensable injury or occupational disease, the issues of disfigurement, temporary disability, post-MMI medical benefits, and permanent partial disability/conversion are moot and are denied and dismissed.

3. The Respondents proved that there was an overpayment for PPD benefits that were paid but not due. The overpayment amount was $5,762.22. The Claimant shall make payments of $50.00 per month until the overpayment is repaid.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 18, 2016

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

- Did Claimant suffer a compensable injury to her right eye on November 30, 2015 arising out of and in the course of her employment?

- If compensable, is Claimant entitled to medical benefits to cure and relieve the effects of her industrial injury?

STIPULATION

Claimant and Respondents stipulated Claimant was on travel status on November 30, 2015. The Court accepted the stipulation.

FINDINGS OF FACT

1. Claimant worked for Employer as a flight attendant for 10 years. Claimant testified her duties included ensuring the security of the passengers.

2. Claimant was based in Denver, Colorado.

3. There was no evidence admitted at hearing which showed Claimant had an injury to her right eye before November 30, 2015.

4. Claimant was working on November 30, 2015 for Employer on a flight from Denver to Cancun. Claimant testified this was a redeye flight and they arrived in Cancun at 6:00 a.m.

5. Claimant testified the flight crew checked in at the hotel sometime between 6:00 a.m. and 7:00 a.m. She then took a nap, as working a redeye was very tiring. Claimant estimated she woke up somewhere between 11:00 a.m. and 12:00 PM.

6. Claimant testified the hotel was paid for by Employer. She confirmed there were no meetings she had to attend for Employer on November 30, 2015 and there were no activities required by Employer that day.

7. Claimant was on travel status while staying at the hotel in Cancun.

8. Claimant testified she had lunch with other flight attendants on the beach that day. Claimant testified she could not bring food with her on such a trip and had to purchase meals. Employer paid a per diem for food. Claimant was at the hotel location on the beach eating lunch, which was incidental to her employment. The act of eating lunch did not constitute a purely personal errand or deviation.

9. Claimant described the weather as very hot and windy. She testified she and her co-workers relaxed on the beach, as they were scheduled to return at 7:00 a.m. the next morning. Claimant testified FAA rules restricted them from drinking alcohol eight (8) before the flight the next morning. This regulation limited Claimant's activities that day and was related to her employment.

10. After lunch, Claimant testified she noticed her eye was red, but she did not know if it was because she was tired from the night before or because she had gotten sand in her eye. Claimant testified she and the other flight attendants made plans to eat dinner at another hotel and they walked to that hotel along the beach. Claimant confirmed it was still very windy when they were walking along the beach.

11. Claimant testified that she went to dinner at the Taco Factory and on the way home walking along the street, she noticed the lights on billboards were very bright. This caused pain in her right eye, which she talked about with another flight attendant (Meghan). Claimant testified the pain was excruciating by the time she returned to the hotel room and she took her contacts out and went to bed. Her eye was sensitive to light and she woke up at approximately 3:00 a.m. with pain and could not turn on the light because her eye was so sensitive.

12. The ALJ concludes it is more probable than not that Claimant's eye was exposed to sand while she was on the layover in Cancun. The ALJ infers this exposure most likely occurred during the time she was eating lunch and with her co-workers, as Claimant testified she noticed the eye irritation around that time. This exposure to sand was incidental to Claimant's employment. Claimant's testimony regarding her exposure to sand was persuasive to the ALJ.

13. Claimant's activities on November 30, 2015 did not constitute a substantial deviation from employment.

14. Claimant treated with the hotel nurse, who flushed out her eye and confirmed there was no foreign body in it.

15. Claimant contacted crew scheduling, as they had to leave the hotel at 6:00 a.m. for the return leg of her trip. Employer scheduled another flight attendant for the flight and Claimant returned to Denver as part of "dead head" leg.

16. Claimant contacted the triage nurse for Employer and was told to go to the ER. Claimant testified this was the procedure she was required to follow. Claimant was seen that night at Medical Center of the Rockies at approximately 9:50 p.m.

17. Records from Medical Center of the Rockies were admitted at hearing. Claimant reported that she was on the beach and thought sand had flown in her eye. Since that time, she noticed irritation and photosensitivity in her right eye. Henry Lansgaard, D.O. examined her right eye, which had a corneal abrasion, but no corneal flair, or ulcer, foreign body, no hypehma, and no hypopyon. The diagnosis was:

corneal abrasion.[1] Claimant was prescribed Hydrocodone and Ciprofloxacin.

18. Claimant testified her eye has improved and she has no problems with it.

19. A Worker's Claim for Compensation was filed on or about December 30, 2015. In that document, Claimant stated the injury occurred “while walking outside, the wind was strong-sand got in under her contact”.

20. Claimant suffered a compensable eye injury while on travel status.

21. Claimant’s eye required medical treatment as a result of the injury suffered while on the layover in Mexico. Respondents are liable for medical treatment to cure and relieve the effects of the injury to Claimant’s eye.

22. Dr. Landsgaard is an ATP.

23. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General

The purpose of the Workers’ Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Generally, Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

[1] This referred to the left eye, which appears to be a typographical error, as all other references were to the right eye.

Claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing a service for Respondent-Employer arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. §§ 8-41-301(1)(b) & (c), C.R.S.; *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); § 8-41-301(1)(c), C.R.S. The question of whether Claimant met her burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Compensability

Claimant alleged she sustained a compensable injury to her right eye while she was on travel status working for Employer. In this regard, Claimant argued the injury to eye occurred while she was engaged in activities that were incidental to her employment. Claimant cited *Continental Airlines v. Industrial Commission,* 709 P.2d 953, 954 (Colo. App. 1985) as an analogous and controlling case.

Respondents argued that Claimant injured her eye while she was engaged in a purely recreational activity on the beach with other co-workers and that the current case is comparable to *Silver Engineering Works, Inc. v. Simmons,* 505 P.2d 966, 968 (Colo. 1973). In that case, Claimant drowned during a fishing trip with co-workers on his day off while on a business trip in Mexico. The Court concluded that the claim was not compensable, as the activities were personal and not connected to the employment. *Id.* Alternatively, Respondents averred that Claimant deviated from the scope of her employment while she was eating in the cabana and walking on the beach between hotels because she voluntarily engaged in those activities and such activities were not incidental to her responsibilities as a flight attendant.

As a starting point, the parties stipulated that Claimant was on travel status while she was in Cancun on a layover day for work when her injury occurred. The issue is whether Claimant's injury occurred while she was within the scope of her employment or when she deviated from the course of her employment duties on a personal errand or recreational activity.

As a general rule, an employee whose work for the employer necessitates travel away from home is deemed to be in continuous employment from the time she leaves until the time she returns home. *Alexander Film Co. v. Industrial Commission*, 319 P.2d 1074 (Colo. 1957); *Continental Airlines v. Industrial Commission, supra.* Circumstances not covered by the travel doctrine include activities where the employee is shown to have made a distinct departure on a purely personal errand or is engaged in recreational activity while on travel status. *Silver Engineering Works, Inc. v. Simmons, supra,* at 968. [2] Such departures are characterized as acts not “beneficial or incidental to her employment and would constitute a stepping aside from employment”.

However, employee activities that involve personal or bodily ministrations are not considered deviations, but rather incidental to and within the scope of employment, and an employee can be compensated for any injuries arising out of activities that include eating and sleeping. *Phillips Contracting, Inc. v. Hirst,* 905 P.2d 9, 12 (Colo. App. 1995). In *Phillips Contracting, Inc*, the Colorado Court of Appeals affirmed the ICAO Order holding Claimant was on travel status when he was injured while riding with a co-worker in a company truck. The employees were working out of town in Limon, Colorado and obtained permission to drive a company truck for personal errands on a Saturday (doing laundry and buying winter clothes). On the way back, they stopped at a bar for lunch and the co-worker consumed alcohol. Claimant was injured in a motor vehicle accident on the return trip to Limon. The Court held that an employee returned to travel status, even after the departure for a personal errand.

As Justice Pierce articulated: "It is sufficient if the injury arises out of a risk which is reasonably incidental to the conditions and circumstances of the particular employment. [citing *City of Boulder v. Streeb*, *supra,* 706 P.2d 786]. This rule, applied to traveling employees, means that the risks associated with the necessity of eating, sleeping, and ministering to personal needs away from home are considered incidental to and within the scope of the traveling employee's employment”. *Phillips Contracting, Inc. v. Hirst,* 905 P.2d at 12.

The parties stipulated Claimant was on travel status and away from home for work. As found, Claimant was not allowed to bring her own food off the planes and received a per diem allowance to purchase meals for herself while on a layover day. (Finding of Fact 8). Claimant had no choice but to go out and eat meals in nearby restaurants. *Id.* As found, eating meals was incidental to Claimant’s employment and the location of where she ate lunch was reasonably incidental to the circumstances of her trip to Cancun.

Furthermore, the evidence admitted at hearing revealed Claimant's exposure to sand most probably occurred during the time she was at lunch. (Findings of Fact 8, 12 and 22). Eating meals was incidental to Claimant's employment. Therefore, the instant case fits within the ambit of those cases describing what has been described as the personal comfort or personal ministration doctrine for an employee on travel status. The specific circumstances of Claimant’s employment and the temporal proximity of her work on the redeye flight to this injury made the claim compensable. *Phillips Contracting, Inc. v. Hirst,* supra. Under the facts of the instant case, the ALJ declined to find Claimant had deviated from her employment. (Finding of Fact 8).

[2] The ALJ notes *Silver Engineering Works, Inc. v. Simmons, Alexander Film Co. v. Industrial Commission*, *Continental Airlines v. Industrial Commission* were all decided before the 1991 amendments to the Act, including §8-40-201(8) C.R.S.,the recreational activities statute.

In concluding that the claim was compensable, the ALJ considered Respondents' argument that pursuant to the Worker's Compensation Act found in §8-40-201(8) C.R.S., Claimant should not be compensated for engaging in a voluntary recreational activity. C.R.S. § 8-40-201(8) provides that the scope of employment shall not include "the employee's participation in a voluntary recreational activity or program, regardless of whether the employer promoted, sponsored, or supported the recreational activity. § 8-40-201(8) C.R.S. Respondents compared Claimant's forays on the beach while in Cancun to the Claimant in *Dover Elevator Co. v. industrial Claim Appeals Office* where the injury that occurred during Claimant's voluntary participation in a game of bowling while attending a mandatory company holiday party was found to be not compensable, which was affirmed on appeal. *Dover Elevator Co. v. Industrial Claim Appeals Office,* 961 P.2d 1141,1143 (Colo. App. 1998).

In *White v. Industrial Claim Appeals Office,* 8 P.3d 621 (Colo. App. 2000), the court held that the statutory term "recreational activity" should be given its plain and ordinary meaning as an activity that "has a refreshing effect on either the mind or the body." Determining whether an activity is "recreational" depends on consideration of the circumstances including whether the activity occurred during working hours, whether the injury occurred on the employer's premises, whether the employer initiated the activity, whether the employer exerted control over the employee's participation in the activity, and whether the employer stood to benefit from the employee's participation in the activity. Determination of whether the Claimant's participation in a recreational activity was "voluntary" requires consideration of the Claimant's "motive" for participation in the activity. *Dover Elevator Co. v. Industrial Claim Appeals Office,* supra, 961 P.2d at 1143. The question of whether an activity was "recreational" is one of fact for determination by the ALJ. *Lopez v. American Lumber Construction,* W.C. No. 4-434-488 (I.C.A.O. Oct. 29, 2003).

As found, it was most probable that Claimant's eye injury occurred during the time she was outside at lunch, as her unrefuted testimony established she noticed redness after she had eaten lunch and was outside with her co-workers. (Finding of Fact 12). This is distinct from the situation in *Dover*, where the Court gave the words "recreational activity" their plain meaning and found Claimant voluntarily engaged in such activity. There was no direct evidence that Claimant's activities which led to her exposure were purely recreational. Under these facts, Claimant was engaged in personal ministration activities, as opposed to recreational activity. As such, the ALJ determined this exception did not apply.

The ALJ also considered *McLachlan v. Center for Spinal Disorders,* W.C. 4-789-747 (ICAO July 2, 2010) cited by Respondents. In that case, the Panel affirmed the ALJ's denial of benefits for an injury sustained while playing at an employer-sponsored street hockey match. Claimant did not dispute that playing street hockey was a voluntary recreational activity and the evidence supported such a finding. However Claimant asserted the ALJ erroneously concluded that playing street hockey was a substantial deviation from employment. The Court reasoned, under the totality of circumstances test, the evidence supported the conclusion Claimant's playing street hockey was a substantial deviation, which removed it from the employment relationship.

In the case at bench there was insufficient evidence adduced at hearing to establish such a deviation. (Finding of Fact 13). The Employer could anticipate Claimant would eat at a restaurant in the hotel where she was staying and for which a per diem was paid. It could further be anticipated that Claimant would eat lunch at the location in the hotel which was outside and could expose Claimant to sand. As such, Claimant's activities were did not remove her for the employment relationship.

Accordingly, the ALJ finds the eye injury sustained by Claimant arose out and was in the course of her employment and was therefore compensable.

ORDER

It is therefore ordered that:

1. Claimant suffered an injury to her right eye arising out of her employment on November 30, 2015.

2. Respondents shall provide medical benefits to Claimant under the Colorado Workers' Compensation Act, including Medical Center of the Rockies and Dr. Landsgaard.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 19, 2016

Timothy L. Nemechek
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

The following issues were raised for consideration at hearing:

- Whether Claimant suffered a compensable acute injury and occupational disease.

- Whether Claimant is entitled to medical benefits if her claim is compensable;

- Identification of authorized treating providers; and

- Whether Claimant is entitled to temporary total disability benefits, beginning October 23, 2015, and ongoing.

PROCEDURAL STATUS

The Findings of Fact, Conclusions of Law, and Order were issued on October 11, 2016 and mailed on October 13, 2016. On October 20, 2016, Respondents filed a Request for Corrected Findings of Fact, Conclusions of Law, and Order. The undersigned ALJ[1] reviewed this request and finds good cause exists to issue a Corrected Order.

STIPULATIONS

1. The parties stipulated to an average weekly wage of $879.97. The Court accepted the stipulation. Claimant's TTD rate is $586.65.

2. Unemployment benefits were received by Claimant, and the parties stipulate that an offset is appropriate, should there be an award of temporary benefits. The specific amount of unemployment benefits were unknown, and the parties will endeavor to come to an agreement regarding offset, but reserve the issue of the amount of offset for future determination if necessary.

FINDINGS OF FACT

1. Claimant is a 44 year old woman who was working as a production worker for the Employer when she asserts she developed right hand pain and discomfort. Claimant is right hand dominant.

2. On September 14, 2015, Claimant reported to the Employer that she started feeling slight discomfort and pain in her right thumb, hand, and wrist during her

[1] As ALJ Broniak left the Office of Administrative Courts, the Request for Corrected Findings of Fact, Conclusions of Law, and Order was reviewed by the undersigned.

work shifts. Claimant testified that her onset was August 6, 2015. In her prior interrogatory responses, Claimant asserted an onset date of September 17, 2015.

3. Claimant began working for the Employer in mid-January 2015, and was engaged in preparing the interiors of wind turbine blades manufactured and sold by the Employer.

4. At the time of onset, Claimant worked in the Blades Assembly department. She worked with a team to create large fiberglass parts to be later assembled into blades for electric windmills. Details of her duties in that position were discussed at hearing. Photographs were used to illustrate the process. The blade parts are very large. Claimant and those she worked with would use a large mold to create the various parts. The parts were designated alphabetically, and fit together when completed to become the inside of a windmill blade, later covered with a shell.

5. Claimant testified that she normally worked on the "B" mold, which is an upside down "U" shaped. First, a layer of plastic is laid on the mold to assist with later removal of the fiberglass blade part. Layers of fiberglass biax, similar to fabric, are then laid upon the mold one layer at a time. *(examples of fabric biax and scissors shown at hearing and photos of same provided as supplemental Exhibits W-Y)* The fiberglass biax came pre-sized in rolls in "kits" with additional fabric available for use as needed. 8 layers were laid at 5 minutes per layer, and pushed and tucked into place. Each layer was placed over the mold by rolling out the biax fabric and trimmed with scissors as appropriate for each layer. Claimant testified that she used only manual scissors for cutting, which weighed about 1 pound, and were provided for viewing at the hearing. Claimant trimmed approximately 11 meters per day, 5-10 minutes per cut. After all fiberglass layers are in place, a bag is placed over the molded fabric, and air is removed with a vacuum process. Resin is then infused into the fabric. Claimant or another worker carried the buckets of resin to the mold one at a time as the buckets were emptied in the infusion process, 4-5 times per 12 hour shift, 100 feet, comprised of 3 buckets of 20 kilos, 1 of 15 kilos, and 1 of 10 kilos, with breaks in between carrying as dictated by when buckets need to be replaced.

6. Claimant testified that the infusion process took about two hours. A sleeping-bag type of cover is then rolled over the fiberglass blade part on the mold. The fiberglass blade part is then cured. Once cured, the mold was debagged, using hand grip up to 30-60 minutes per shift. When assembly of one part on the mold was completed and infusion began, Claimant would proceed with debagging and finishing another fiberglass part.

7. Claimant testified that she worked 12 hour shifts and 1 ¼ to 1 ½ fiberglass parts were completed by her crew per shift.

8. Claimant credibly testified that she began experiencing pain in her right arm in late spring to her right arm but continued to full-time work.

9. Claimant credibly testified that during the week of August 3, 2015, she spoke twice to her supervisor Jared Becker, telling him she was suffering severe pain in her right arm. When the Claimant was not referred for medical treatment, she sought medical attention from her primary treating doctor, Dr. Sonya Norman, who referred her to Dr. David A. Chavez.

10. A note dated August 26, 2015 from Dr. Chavez documents complaints of left rotator cuff tendinitis and right de Quervains, stating that the pain was "from lifting blades" and had a two-month duration at that point. Dr. Chavez performed an injection which Claimant reported had helped. She stated that her pain had returned after the holiday (Labor Day holiday).

11. Following reporting her injury, and during the month of August, Mr. Becker move the Claimant to "carbon" with regular duty, twelve hours a day. This position required measuring then cutting carbon pieces by manually operating scissors. She then stacked the pieces throughout the day.

12. Claimant was then moved to the "Assembly" section. Work in "Assembly" involved sanding throughout the twelve hour shift, using a hand sander and not automatic electric sanding machines to remove glue applied. The Employer determined that the electric sanding machines would create deformities in the glue on top of the web. In addition, the Claimant was using a hand tool to screw in scrivets.

13. After reporting her claim in writing as work related on September 14, 2015, Claimant was referred to Peak Form Professional, LLC on that same date. The treatment note indicates, "Patient has noted pain in her right wrist forearm and hand slowly developing over the past 3-4 months getting worse in August and really hurting her last week when she went to see her PCP."

14. Claimant saw Dr. Craig Davis on October 14, 2015. His report states, "In early August she developed fairly rapid onset of pain over the radial aspect of her right wrist." He noted that Claimant reported the symptoms to her supervisor but was discouraged from filing a claim. Claimant reported severe activity-related pain and a "grinding" sensation over the dorsal radial aspect of her distal forearm. On physical examination, Dr. Davis observed swelling, he noted tenderness to palpation over the distal forearm, and extreme response to Finkelstein's test, and crepitation. Dr. Davis's impression was intersection syndrome of the right distal forearm. He provided an injection of lidocaine and Depo-Medrol.

15. Claimant reported on October 26, 2015 that the injection only helped a little bit in terms of tenderness, but not in terms of activity related pain, which was unchanged. Another injection was done, she was provided with a brace, topical cream, tramadol and physical therapy.

16. On October 23, 2015, Dr. Carol Ramsey at Peak Performance determined that Claimant could no longer work. On October 27, 2015, Claimant was placed on

modified duty that severely limited the use of her right arm. She was also restricted to working eight-hour shifts.

17. Claimant has not worked since October 23, 2015. The Employer did not offer her modified duty after October 23, 2015, and Claimant's position was eventually terminated in July 2016.

18. On November 9, 2015, Dr. X.J. Ethan Moses stated that he had assumed treatment of Claimant after Dr. Ramsey departed from Peak Performance. As the authorized treating physician, he stated, "It appears clear from the notes that there was no specific injury, but rather an insidious onset of pain as the result of repetitive motions." He recommended a work-site evaluation.

19. On November 23, 2015, Dr. Moses discussed his review of the job task analysis with Claimant. Following that discussion and review, his assessment was, "right forearm intersection syndrome with associated swelling and pain, not compensable under the Colorado Division of Workers' Compensation Medical Treatment Guidelines, Rule 17, Exhibit 5." ("Guidelines"). Dr. Moses encouraged Claimant to establish care for her right arm symptoms with her primary care physician.

20. The job duties analysis was performed by Jeanette Hrubes of Peak Form Physical Therapy and Occupational Medicine. The initial analysis was done on November 20, 2015. An addendum was done on February 23, 2016. Ms. Hrubes noted, "Initial job task analysis was performed 11/20/15. Second job task analysis was performed with Sonia Huerta present to make sure that all tasks that she performed during her shifts were captured accurately. There were several additional tasks noted, that were not captured in the first analysis. These will be bolded to assist in identification."

21. Claimant testified that she felt that the job analysis done did not accurately reflect her duties. Specifically, she discussed carrying buckets of resin, gripping to take finished blade forms off molds, cutting hard resin, and the use of manual scissors.

22. Ms. Hrubes testified that during the second job duties evaluation, Claimant was present, and was provided the opportunity to explain her duties. Ms. Hrubes discussed her observations with Claimant in a meeting after Ms. Hrubes watched employees perform Claimant's usual job duties. In the revised job analysis, carrying buckets, gripping, cutting resin, and use of manual scissors were included. Using the threshold standards of the Guidelines, Ms. Hrubes concluded that there were no duties that met either primary or secondary risk factors, including additional duties discussed with Claimant and included in her revised report.

23. Claimant testified that the employees Ms. Hrubes observed did not perform the tasks in the same way that Claimant performed them. She did not use electric scissors as none were available to her; she manually carried the resin buckets rather than using a cart; and she and her co-workers manually lifted the blades rather than having a crane for assistance. In addition, Claimant explained that she held her

scissors at a 90-degree angle while cutting in awkward position, and at times, above her head whereas Ms. Hrubes documented use of scissors at an even level.

24. Dr. Moses saw Claimant again on January 5, 2016. His notes indicate that he worked with Claimant to appeal her short term disability denial and to make clear that he felt her condition was not work related. He discussed reviewing the updated job analysis and his continued conclusion that Claimant did not experience a work-related injury.

25. Claimant testified that she has continued treatment with her personal providers, including Dr. Leo, and that he has continued to give her work restrictions.

26. Dr. Allison Fall evaluated Claimant on March 1, 2016. She testified at hearing and was qualified as an expert in physical medicine and rehabilitation and causation under the Cumulative Trauma Conditions Medical Treatment Guidelines. Dr. Fall discussed the history with Claimant. She reviewed the medical records, including the revised job analysis. She listened to Claimant's testimony. Her conclusion after considering all of these facts was that Claimant has not experienced either an acute injury or an occupational disease. Dr. Fall testified that diagnosis in this case was questionable. Her possible diagnosis was 1) right distal forearm pain, possible wrist extensor tenosynovitis versus intersection syndrome based upon medical records, and 2) Psychological issues likely playing a role in persistent symptomology. Dr. Fall explained that she felt that the diagnosis at #1 were a more specific types of extensor tendon disorder of the wrist. Dr. Fall noted that, although Claimant had stopped working for the employer in October of 2015, her complaints continued at the time of her March 1, 2016 evaluation. She testified that this further indicated to her that Claimant's condition was not work related. Claimant, however, testified that her symptoms have improved since she stopped working.

27. Dr. Fall explained that, as a medical professional, she relies upon the Guidelines in her analysis of cumulative trauma causation. She explained the time and expertise that has gone into the creation of the causation guidelines and the algorithmic steps for causation assessment contained in the Guidelines. The thresholds of the primary and secondary risks factors have been established using evidenced based medical studies. Dr. Fall testified that these are guidelines, and there are situations where a medical professional could choose not use them. She testified that this is not a case that she felt would warrant deviation from the causation analysis process recommended by the Guidelines.

28. Claimant has proven that she suffered a compensable occupational disease. The ALJ is persuaded by Claimant's testimony concerning her job duties and that her job duties brought on her symptoms. The opinions of Dr. Fall and Dr. Moses are rejected.

29. The Claimant has proven that the Employer failed to provide her with a list of authorized providers after she initially reported the injury to her supervisor. She elected to see Dr. Norman who referred her to Dr. Chavez. Thereafter, the Employer

referred the Claimant to Peak Performance where she received treatment with Dr. Ramsey and Dr. Moses. Dr. Moses referred Claimant back to her primary care physician for non-medical reasons (he opined her injury was not work-related so he discharged her from care). Dr. Chavez then referred Claimant to Dr. John Mangelson.

CONCLUSIONS OF LAW

General

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with employer. *Section 8-41-301(1)(b), C.R.S.; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where Claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991).

Compensability

"Occupational disease" is defined by §8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond that required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The existence of a preexisting condition does not defeat a claim for an occupational disease. *Id.* A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.* Once claimant makes such a showing, the burden shifts to respondents to establish both the existence of a non-industrial cause and the extent of its contribution to the occupational disease. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

As a matter of law, medical evidence is not required to establish causation, although it is a factor that may be considered in addressing that determination. See *Savio House v. Dennis,* 665 P.2d 141 (Colo. App. 1983).

The Colorado Division of Workers' Compensation has adopted the Guidelines for use by medical providers rendering treatment under the Workers' Compensation Act. They were established by the Director pursuant to an express grant of statutory authority found at § 8-42-101(3.5)(a)(II), C.R.S.

In this case, the Respondents urge the ALJ to rely upon the opinions of Dr. Fall and Dr. Moses because they applied the Guidelines to conclude that Claimant is not suffering from an occupational disease. However, as specifically found in § 8-43-201(3), C.R.S., the ALJ is not required to use the Guidelines as the as "the sole basis" for determining whether treatment is reasonable, necessary or related to an occupational disease. Furthermore, in *Hall v. Industrial Claim Appeals office*, 74 P.3d 459 (Colo. App. 2003) the Court noted that the Guidelines are to be used by health care practitioners when furnishing medical aid under the Act. See §8-42-101(3)(b), C.R.S. 2008.

The Guidelines further state that treatment for a work-related condition is covered when the work exposure causes the activation of a previously asymptomatic or latent medical condition or the work exposure combines with, accelerates or aggravates a pre-existing symptomatic condition.
