Based on the persuasive and credible evidence, the Claimant has proven by a preponderance of the evidence that her job duties caused her to develop a new condition or caused an aggravation of a pre-existing latent condition. At this point, Claimant has had three different diagnoses for her right arm symptoms, thus whether intersection syndrome, de Quervain's syndrome or wrist extensor tenosynovitis, the ALJ finds and concludes that such condition was brought on by Claimant's work duties. Claimant credibly explained her job duties and the required use of her hands while performing them. The ALJ credits Claimant's testimony that the job duties evaluation did not accurately reflect the manner in which she performed her job.

In addition, the findings on physical examination during medical appointments established Claimant's need for treatment. Specifically, Dr. Davis noted that the Claimant was extremely tender over the intersection area near the distal forearm and does have some crepitation with range of motion of her thumb. He also stated that she continued to have severe activity related pain and a grinding sensation over the dorsal radial aspect of her distal forearm. Dr. Fall also agreed that Claimant is suffering from some condition in the right forearm. Dr. Fall just believes it is not work-related.

Authorized Provider

After the Claimant reported her injury to her supervisor in early August 2015 she was not referred for medical care by the employer "in the first instance". Section 8-43-404(5), C.R.S. She thereafter sought the medical attention from her primary care physician, Dr. Norman, who referred her to Dr. Chavez. Because of the Employer's failure to comply with § 8-43-404(5), C.R.S., Drs., Chavez and Norman are authorized treating providers. The Respondents thereafter referred the Claimant to Peak Performance where she saw Drs. Ramsey and Moses. Dr. Ramsey referred the Claimant to Dr. Davis. After concluding that Claimant did not suffer a work-related injury, Dr. Moses referred Claimant back to her primary care physician. Claimant returned to Dr. Chavez who then referred the Claimant to Dr. Mangelson. In light of the foregoing, the following are the Claimant's ATPs: Drs. Norman, Chavez, Moses, Davis, Ramsey and Mangleson.

Medical Benefits

Respondents are obligated to provide medical benefits to cure or relieve the effects of the industrial injury. Section 8-42-101(1), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Respondents, however, retain the right to dispute liability for specific medical treatment on grounds the treatment is not authorized or reasonably necessary to cure or relieve the effects of the industrial injury. *See Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Williams v. Industrial Commission*, 723 P.2d 749 (Colo. App. 1986). The Claimant is entitled to medical treatment to cure and relieve her of the effects of her right forearm condition whether diagnosed as intersection syndrome, de Quervain’s syndrome or wrist extensor tenosynovitis.

Temporary Total Disability

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

Claimant has proven that her compensable occupational disease caused or contributed to her wage loss beginning on October 23, 2015. Claimant’s authorized treating physician restricted Claimant to “no work” beginning on October 23, 2015, then released to her restricted duty effective October 27, 2015. The Employer did not offer Claimant modified duty work after October 23, 2015, and Claimant has not returned to work. The parties agreed that Claimant received some unemployment insurance benefits and that the Respondents would be entitled to an offset in an amount to be determined.

ORDER

It is therefore ordered that:

1. The Claimant suffered an occupational disease of the right forearm in the course and scope of her employment with the Employer.

2. The Claimant’s medical treatment with Drs. Norman, Chavez, Moses, Ramsey, Mangleson, and Davis is authorized.

3. The Claimant is entitled to medical benefits to cure and relieve her of the effects of her work-related occupational disease.

4. The Claimant is entitled to TTD benefits commencing her last day worked on October 23, 2015, ongoing, payable at the TTD rate of $584.06 pursuant to the stipulated AWW of $879.97, subject to unemployment benefits offset.

5. The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

The issue raised for consideration is whether Respondent established by a preponderance of the evidence that there are no disputed issues of fact between the parties and that judgment should be entered for Respondent as a matter of law on Claimant's six penalty claims.

FINDINGS OF UNDISPUTED FACT

1. Prior to the work injury, Claimant's medical history included neck problems for which Dr. Van Buskirk performed cervical fusion surgery at C4-7 on September 23, 2014.

2. On January 8, 2015, Claimant reinjured his neck and upper back in a work related motor vehicle collision. This injury is the subject of this claim.

3. In February 2015, Claimant's counsel requested a copy of the entire claim file from the adjuster. This was prior to Respondent's counsel's entry of appearance in this matter.

4. The adjuster produced the claim file but omitted the claim notes. On March 13, 2015, Claimant's counsel requested a copy of the claim notes. When the claim notes were not produced, more than one year later, Claimant requested a Prehearing Conference that was held on May 13, 2016, and Claimant filed an Application for Hearing on May 27, 2016.

5. On April 14, 2015, Dr. Sander Orent placed Claimant at maximum medical improvement (MMI) with no impairment.

6. On April 20, 2015, Respondent filed a Final Admission consistent with Dr. Orent's report.

7. On May 13, 2015, Claimant objected to the Final Admission and started the Division independent medical examination (DIME) process.

8. Dr. Stieg performed the DIME. Initially, Dr. Stieg reported Claimant was not at MMI.

9. After additional treatment, Dr. Orent reported Claimant reached MMI on February 10, 2016, and rated Claimant with a 19% whole person impairment.

10. Claimant returned to Dr. Stieg for a follow up DIME. This time, Dr. Stieg agreed that Claimant reached MMI on February 10, 2016. Dr. Stieg rated Claimant with a

30% cervical spine impairment and used the Division of Workers' Compensation apportionment worksheets to arrive at 17% whole person impairment due to the work injury.

11. Respondent filed a Final Admission based on Dr. Stieg's DIME report and determination that Claimant reached MMI and suffered a work related 17% whole person impairment.

12. Claimant objected to the Final Admission and filed an Application for Hearing on May 27, 2016, and listed the issues of Permanent Partial Disability Benefits, Permanent Total Disability Benefits and Penalties.

13. Claimant asserts six bases for the claim for penalties:

    1 - Respondent's apportionment "that they know is a mistake";
    2 - Respondent's violation of Section 8-43-203(4), C.R.S. for failure of provide the claim file within 15 days of request made on February 11, 2015 and March 6, 2015;
    3 - Respondent's violation of Section 8-43-203(4), C.R.S., WCRP 9-4, C.R.C.P. 11 and C.R.C.P.26(5)(g)(2) for providing a "false privilege log" on June 4, 2015, through May 2, 2016, and failure to provide adequate privilege logs that did not include information required by 1.5 and were not signed by an attorney;
    4 - Respondent's violation of Sections 8-43-401.5 and 10-3-1104(1)(hh) and (ii) because "CCMSI is incentivizing reduction of benefits and that probably is a cause for the bogus apportionment";
    5 - Respondent's violation of Section 8-43-404(5)(C), C.R.S. for ex parte communication in January and February of 2015;
    6 – Respondent's violation of Section 8-43-503(3), C.R.S. for attempts to direct medical care in January and February 2015.

14. On July 22, 2016, Respondent moved for summary judgment on the ground that there are no disputed issues of fact between the parties and judgment should be entered for Respondent as a matter of law

CONCLUSIONS OF LAW

General Legal Principles of Law

The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S.

The Law Related to Respondent's Motion for Summary Judgment

OAC Rule 17 authorizes a party to file a motion for summary judgment concerning any endorsed issue for hearing. Summary judgment is appropriate only if the pleadings and supporting documents demonstrate that there is no genuine issue of material fact and the moving party is entitled to judgment as a matter of law. The burden is on the moving party to establish that no genuine issue of fact exists, and any doubts in this regard must be resolved against the moving party. *Wilson v. Marchiondo,* 124 P.3d 837 (Colo. App. 2005). The non-moving party is entitled to all favorable inferences that may be drawn from the undisputed facts. *A.C. Excavating v. Yacht Club II Homeowners Ass'n., Inc.,* 114 P.3d 862 (Colo. 2005). However, if the moving party meets its burden to establish the nonexistence of a genuine issue of material fact, the burden shifts to the non-moving party to present specific facts demonstrating the existence of a disputed issue of material fact, and the non-moving part may not rest on its pleadings or the arguments of counsel to meet the burden*. Snook v. Joyce Homes, Inc.,* 215 P.3d 1210 (Colo. App. 2009).

OAC Rule 17 requires that a motion for summary judgment be supported by "an affidavit or affidavits, transcripts of testimony, or medical reports or employer records." CRCP 56 is also applicable to motions for summary judgment filed with the OAC to the extent that it is consistent with OAC Rule 17. Specifically CRCP 56(e) applies except that there is no requirement that medical records and employer records be supported by sworn affidavits. *See Fera v. Industrial Claim Appeals Office,* 169 P.3d 231 (Colo. App. 2007). CRCP 56(c) permits consideration of pleadings and answers to interrogatories when considering a motion for summary judgment, and the ALJ concludes that consideration of these items is not inconsistent with OAC Rule 17.

Claimant's Penalty Claims

1. **Respondent seeks an order granting summary judgment on the grounds that that Claimant's claim for a penalty against Respondent for filing a Final Admission of Liability (FAL) based on the DIME report is without merit as a matter of law and the claim should be summarily dismissed.**

Respondent contends that Claimant seeks penalties because Respondent filed a FAL based on a DIME report. Respondent contends it cannot be penalized for filing a FAL consistent with a DIME report and that summary judgment should be entered for Respondent on this penalty issue.

Claimant argues that he is seeking penalties against Respondent for filing a FAL based on an erroneous Division independent medical examiner (DIME) report, which, Claimant contends, Respondent knew was erroneous. Claimant contends that Respondent took credit for an apportionment that they knew was mistaken. Claimant does not site authority for his position that he is entitled to penalties for Respondent's alleged action. Claimant does not specify what penalty provision is relied upon.

It is found and concluded that Respondent is legally obligated to file a FAL consistent with the DIME report or set the matter for hearing to overcome the DIME. Section 8-42-107.2(4)(c), C.R.S.; WCRP 5-5(F) In this case, Respondent complied with their legal obligation and timely filed a FAL consistent with the DIME report regarding MMI and impairment rating. Claimant asserts no legal basis for his contention that penalties should be imposed on Respondent for its action in filing a FAL based on the DIME report. Claimant cannot challenge the DIME's determination on apportionment by making a claim for penalties. Accordingly, it is concluded that Respondent is entitled to summary judgment as a matter of law based on this claim for penalties. Claimant's claim for penalties is without merit and summary judgment for Respondent is granted on this claim.

2. **Respondent seeks an order granting summary judgment for Claimant's claim for penalties against Respondent, for Respondent's alleged failure to timely provide Claimant a complete copy of the claim file pursuant to Section 8-43-203(4), C.R.S.**

Respondent seeks summary judgment for Claimant's claim for penalties, under Section 8-43-203(4), C.R.S., for Respondent's alleged failure to timely provide Claimant a complete copy of the claim file. Respondent contends that Claimant's claim for penalties is barred by a statute of limitation found in Section 8-43-304(5), C.R.S. which requires the claim for penalties to be brought within one year after the date that the requesting party first knew or reasonably should have known of the facts giving rise to the penalty claim.

The evidence is undisputed that in February 2015, Claimant's counsel requested a copy of the entire claim file from the adjuster. And, further, it is undisputed that the adjuster produced the claim file but omitted the claim notes. On March 13, 2015, Claimant's counsel requested a copy of the claim notes. Claimant took no further action to get the claim file until more than one year later when Claimant requested a Prehearing Conference that was held on May 13, 2016, and Claimant filed an Application for Hearing on May 27, 2016.

Claimant correctly contends that the question whether Claimant's claim is barred by a statute of limitation is determined based on the date when the claim accrued. In other words, when did Claimant know or when should Claimant have known of the facts giving rise to the claim for penalties. Respondent argues that date is in March 2015 when the complete claim file was produced for Claimant. Claimant contends that the claim file was not produced until June 2015.

Since there is a disputed issue of fact between the parties, the issue whether penalties against Respondent should be imposed for failure to timely produce the claim file is not appropriate for summary disposition and the motion for summary judgment is denied.

3. **Respondent seeks an order granting summary judgment on the grounds that no basis exist for Claimant's claim for penalty under Section 8-43-203(4), C.R.S. related to the production of privilege logs.**

Respondent seeks an order granting summary judgment on the grounds that there is no disputed issue of fact between the parties and that judgment as a matter of law should be entered for Respondent. Respondent argues in support of the motion for summary judgment that no basis exist for Claimant's claim for penalty under Section 8-43-203(4), C.R.S. related to the production of privilege logs. Respondent contends that it produced privilege logs consistent with the provisions of Section 8-43-203(4), C.R.S. Claimant contends that he is entitled to a penalty for Respondent's failure to provide privilege logs and Claimant argues his entitlement to the penalty cannot be resolved by summary disposition. Claimant contends that Respondent's assertion of privilege is a matter of opinion and cannot be resolved without testimony and evidence. Claimant further contends that penalties need not be imposed if Respondent's actions are shown to be objectively reasonable, another question which cannot be resolved by summary disposition. Claimant contends that the issues raised by his penalty claim can only be established by Respondent through evidence produced at a hearing.

The undisputed facts do not form a basis to draw conclusions regarding Claimant's claim for penalties. Nor do the undisputed facts form a basis for summary disposition of this claim regarding Respondent's production of the privilege logs or regarding the reasonableness of Respondent's actions in regard to the production of privilege logs.

4. **Respondent seeks an order granting summary judgment because Claimant did not pled his claim for penalties with specificity in regard to Claimant's claim that under Sections 8-43-401.5 and 10-3-1104(1)(hh) and (ii), C.R.S. "[Respondent] is incentivizing reduction of benefits and that probably is the cause of the bogus apportionment."**

Respondent contends that Claimant failed to plead the claim for penalties with specificity and Respondent is unable to ascertain from Claimant's allegations what provision of the Workers' Compensation Act it failed to comply with.

Respondent's motion for summary judgment is granted with regard to Claimant's claim for penalties under Sections 8-43-401.5 and 10-3-1104(1)(hh) and (ii), C.R.S. "[Respondent] is incentivizing reduction of benefits and that probably is the cause of the bogus apportionment." Claimant's conspiracy theory does not provide specificity with regard to his penalty claim and is summarily dismissed.

5. **Respondent seeks an order granting summary judgment on Claimant's claim that Respondent's violated Section 8-43-404(5)(C), C.R.S. by having ex parte communication in January and February 2015.**

Under Section 8-43-404(5)(C), a treating physician shall not communicate with the employer or insurer of an injured worker regarding the injured worker unless the worker is present or the physician makes an accurate written record of the communication. Claimant's allegation of penalty under Section 8-43-404(5)(C) failed to provide Respondent with information regarding the allegation of ex parte communication with a treating physician. Claimant did not inform Respondent of the dates the alleged communication occurred or the nature of the communication. In the absence of pleading containing specificity, Respondent cannot cure the alleged violation and Respondent is left to speculate regarding the basis of the penalty claim. Accordingly, it is concluded that Respondent's motion for summary judgment is granted with regard to this penalty claim.

6. **Respondent seeks an order granting summary judgment on Claimant's claim for penalties under Section 8-43-503(3), C.R.S. Claimant alleges that Respondent attempted to direct medical care in January and February 2015.**

Section 8-43-503(3), C.R.S. provides that no party shall dictate to any physician the type or duration of treatment or degree of physical impairment. The bald allegation that Respondent directed medical care in January and February 2015 does not allow Respondent to cure or defend against the penalty. Accordingly, Respondent's motion for summary judgment is granted with regard to this penalty claim.

ORDER

Based on the undisputed facts, it is ordered that Respondent's motion for summary judgment is granted, in part, and denied, in part.

1. Respondent's motion for summary judgment is granted with regard to: Claimant's penalty claim for filing a FAL based on the DIME report; Claimant's penalty claim for violation of Sections 8-43-401.5 and 10-3-1104(1)(hh) and (ii); Claimant's penalty claim for violation of Section 8-43-404(5)(C) for ex parte communication by the employer or insurer with the treating physician; and Claimant's penalty claim for violation of Section 8-43-503(3), C.R.S. for Respondent's alleged attempt to direct medical care.

2. There are disputed issues of fact between the parties with regard to Claimant’s claim for penalties for failure to provide the claim file and failure to provide disclosure logs and therefore these penalty claims are not appropriate for summary disposition and Respondent’s motion for summary judgment with regard to these claims is denied.

All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

- Did Claimant suffer a compensable injury to her right eye on November 30, 2015 arising out of and in the course of her employment?

- If compensable, is Claimant entitled to medical benefits to cure and relieve the effects of her industrial injury?

STIPULATION

Claimant and Respondents stipulated Claimant was on travel status on November 30, 2015. The Court accepted the stipulation.

FINDINGS OF FACT

1. Claimant worked for Employer as a flight attendant for 10 years. Claimant testified her duties included ensuring the security of the passengers.

2. Claimant was based in Denver, Colorado.

3. There was no evidence admitted at hearing which showed Claimant had an injury to her right eye before November 30, 2015.

4. Claimant was working on November 30, 2015 for Employer on a flight from Denver to Cancun. Claimant testified this was a redeye flight and they arrived in Cancun at 6:00 a.m.

5. Claimant testified the flight crew checked in at the hotel sometime between 6:00 a.m. and 7:00 a.m. She then took a nap, as working a redeye was very tiring. Claimant estimated she woke up somewhere between 11:00 a.m. and 12:00 PM.

6. Claimant testified the hotel was paid for by Employer. She confirmed there were no meetings she had to attend for Employer on November 30, 2015 and there were no activities required by Employer that day.

7. Claimant was on travel status while staying at the hotel in Cancun.

8. Claimant testified she had lunch with other flight attendants on the beach that day. Claimant testified she could not bring food with her on such a trip and had to purchase meals. Employer paid a per diem for food. Claimant was at the hotel location on the beach eating lunch, which was incidental to her employment. The act of eating lunch did not constitute a purely personal errand or deviation.

9. Claimant described the weather as very hot and windy. She testified she and her co-workers relaxed on the beach, as they were scheduled to return at 7:00 a.m. the next morning. Claimant testified FAA rules restricted them from drinking alcohol eight (8) before the flight the next morning. This regulation limited Claimant's activities that day and was related to her employment.

10. After lunch, Claimant testified she noticed her eye was red, but she did not know if it was because she was tired from the night before or because she had gotten sand in her eye. Claimant testified she and the other flight attendants made plans to eat dinner at another hotel and they walked to that hotel along the beach. Claimant confirmed it was still very windy when they were walking along the beach.

11. Claimant testified that she went to dinner at the Taco Factory and on the way home walking along the street, she noticed the lights on billboards were very bright. This caused pain in her right eye, which she talked about with another flight attendant (Meghan). Claimant testified the pain was excruciating by the time she returned to the hotel room and she took her contacts out and went to bed. Her eye was sensitive to light and she woke up at approximately 3:00 a.m. with pain and could not turn on the light because her eye was so sensitive.

12. The ALJ concludes it is more probable than not that Claimant's eye was exposed to sand while she was on the layover in Cancun. The ALJ infers this exposure most likely occurred during the time she was eating lunch and with her co-workers, as Claimant testified she noticed the eye irritation around that time. This exposure to sand was incidental to Claimant's employment. Claimant's testimony regarding her exposure to sand was persuasive to the ALJ.

13. Claimant's activities on November 30, 2015 did not constitute a substantial deviation from employment.

14. Claimant treated with the hotel nurse, who flushed out her eye and confirmed there was no foreign body in it.

15. Claimant contacted crew scheduling, as they had to leave the hotel at 6:00 a.m. for the return leg of her trip. Employer scheduled another flight attendant for the flight and Claimant returned to Denver as part of "dead head" leg.

16. Claimant contacted the triage nurse for Employer and was told to go to the ER. Claimant testified this was the procedure she was required to follow. Claimant was seen that night at Medical Center of the Rockies at approximately 9:50 p.m.

17. Records from Medical Center of the Rockies were admitted at hearing. Claimant reported that she was on the beach and thought sand had flown in her eye. Since that time, she noticed irritation and photosensitivity in her right eye. Henry Lansgaard, D.O. examined her right eye, which had a corneal abrasion, but no corneal flair, or ulcer, foreign body, no hypehma, and no hypopyon. The diagnosis was:

corneal abrasion.[1] Claimant was prescribed Hydrocodone and Ciprofloxacin.

18. Claimant testified her eye has improved and she has no problems with it.

19. A Worker's Claim for Compensation was filed on or about December 30, 2015. In that document, Claimant stated the injury occurred "while walking outside, the wind was strong-sand got in under her contact".

20. Claimant suffered a compensable eye injury while on travel status.

21. Claimant's eye required medical treatment as a result of the injury suffered while on the layover in Mexico. Respondents are liable for medical treatment to cure and relieve the effects of the injury to Claimant's eye.

22. Dr. Landsgaard is an ATP.

23. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Generally, Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

[1] This referred to the left eye, which appears to be a typographical error, as all other references were to the right eye.

Claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing a service for Respondent-Employer arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. §§ 8-41-301(1)(b) & (c), C.R.S.; *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); § 8-41-301(1)(c), C.R.S. The question of whether Claimant met her burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Compensability

Claimant alleged she sustained a compensable injury to her right eye while she was on travel status working for Employer. In this regard, Claimant argued the injury to eye occurred while she was engaged in activities that were incidental to her employment. Claimant cited *Continental Airlines v. Industrial Commission,* 709 P.2d 953, 954 (Colo. App. 1985) as an analogous and controlling case.

Respondents argued that Claimant injured her eye while she was engaged in a purely recreational activity on the beach with other co-workers and that the current case is comparable to *Silver Engineering Works, Inc. v. Simmons,* 505 P.2d 966, 968 (Colo. 1973). In that case, Claimant drowned during a fishing trip with co-workers on his day off while on a business trip in Mexico. The Court concluded that the claim was not compensable, as the activities were personal and not connected to the employment. *Id.* Alternatively, Respondents averred that Claimant deviated from the scope of her employment while she was eating in the cabana and walking on the beach between hotels because she voluntarily engaged in those activities and such activities were not incidental to her responsibilities as a flight attendant.

As a starting point, the parties stipulated that Claimant was on travel status while she was in Cancun on a layover day for work when her injury occurred. The issue is whether Claimant’s injury occurred while she was within the scope of her employment or when she deviated from the course of her employment duties on a personal errand or recreational activity.

As a general rule, an employee whose work for the employer necessitates travel away from home is deemed to be in continuous employment from the time she leaves until the time she returns home. *Alexander Film Co. v. Industrial Commission*, 319 P.2d 1074 (Colo. 1957); *Continental Airlines v. Industrial Commission, supra.* Circumstances not covered by the travel doctrine include activities where the employee is shown to have made a distinct departure on a purely personal errand or is engaged in recreational activity while on travel status. *Silver Engineering Works, Inc. v. Simmons, supra,* at 968. [2] Such departures are characterized as acts not “beneficial or incidental to her employment and would constitute a stepping aside from employment”.

However, employee activities that involve personal or bodily ministrations are not considered deviations, but rather incidental to and within the scope of employment, and an employee can be compensated for any injuries arising out of activities that include eating and sleeping. *Phillips Contracting, Inc. v. Hirst,* 905 P.2d 9, 12 (Colo. App. 1995). In *Phillips Contracting, Inc*, the Colorado Court of Appeals affirmed the ICAO Order holding Claimant was on travel status when he was injured while riding with a co-worker in a company truck. The employees were working out of town in Limon, Colorado and obtained permission to drive a company truck for personal errands on a Saturday (doing laundry and buying winter clothes). On the way back, they stopped at a bar for lunch and the co-worker consumed alcohol. Claimant was injured in a motor vehicle accident on the return trip to Limon. The Court held that an employee returned to travel status, even after the departure for a personal errand.

As Justice Pierce articulated: "It is sufficient if the injury arises out of a risk which is reasonably incidental to the conditions and circumstances of the particular employment. [citing *City of Boulder v. Streeb*, *supra,* 706 P.2d 786]. This rule, applied to traveling employees, means that the risks associated with the necessity of eating, sleeping, and ministering to personal needs away from home are considered incidental to and within the scope of the traveling employee's employment”. *Phillips Contracting, Inc. v. Hirst,* 905 P.2d at 12.

The parties stipulated Claimant was on travel status and away from home for work. As found, Claimant was not allowed to bring her own food off the planes and received a per diem allowance to purchase meals for herself while on a layover day. (Finding of Fact 8). Claimant had no choice but to go out and eat meals in nearby restaurants. *Id.* As found, eating meals was incidental to Claimant’s employment and the location of where she ate lunch was reasonably incidental to the circumstances of her trip to Cancun.

Furthermore, the evidence admitted at hearing revealed Claimant's exposure to sand most probably occurred during the time she was at lunch. (Findings of Fact 8, 12 and 22). Eating meals was incidental to Claimant's employment. Therefore, the instant case fits within the ambit of those cases describing what has been described as the personal comfort or personal ministration doctrine for an employee on travel status. The specific circumstances of Claimant’s employment and the temporal proximity of her work on the redeye flight to this injury made the claim compensable. *Phillips Contracting, Inc. v. Hirst,* supra. Under the facts of the instant case, the ALJ declined to find Claimant had deviated from her employment. (Finding of Fact 8).

[2] The ALJ notes *Silver Engineering Works, Inc. v. Simmons, Alexander Film Co. v. Industrial Commission*, *Continental Airlines v. Industrial Commission* were all decided before the 1991 amendments to the Act, including §8-40-201(8) C.R.S.,the recreational activities statute.

In concluding that the claim was compensable, the ALJ considered Respondents' argument that pursuant to the Worker's Compensation Act found in §8-40-201(8) C.R.S., Claimant should not be compensated for engaging in a voluntary recreational activity. C.R.S. § 8-40-201(8) provides that the scope of employment shall not include "the employee's participation in a voluntary recreational activity or program, regardless of whether the employer promoted, sponsored, or supported the recreational activity. § 8-40-201(8) C.R.S. Respondents compared Claimant's forays on the beach while in Cancun to the Claimant in *Dover Elevator Co. v. industrial Claim Appeals Office* where the injury that occurred during Claimant's voluntary participation in a game of bowling while attending a mandatory company holiday party was found to be not compensable, which was affirmed on appeal. *Dover Elevator Co. v. Industrial Claim Appeals Office,* 961 P.2d 1141,1143 (Colo. App. 1998).

In *White v. Industrial Claim Appeals Office,* 8 P.3d 621 (Colo. App. 2000), the court held that the statutory term "recreational activity" should be given its plain and ordinary meaning as an activity that "has a refreshing effect on either the mind or the body." Determining whether an activity is "recreational" depends on consideration of the circumstances including whether the activity occurred during working hours, whether the injury occurred on the employer's premises, whether the employer initiated the activity, whether the employer exerted control over the employee's participation in the activity, and whether the employer stood to benefit from the employee's participation in the activity. Determination of whether the Claimant's participation in a recreational activity was "voluntary" requires consideration of the Claimant's "motive" for participation in the activity. *Dover Elevator Co. v. Industrial Claim Appeals Office,* supra, 961 P.2d at 1143. The question of whether an activity was "recreational" is one of fact for determination by the ALJ. *Lopez v. American Lumber Construction,* W.C. No. 4-434-488 (I.C.A.O. Oct. 29, 2003).

As found, it was most probable that Claimant's eye injury occurred during the time she was outside at lunch, as her unrefuted testimony established she noticed redness after she had eaten lunch and was outside with her co-workers. (Finding of Fact 12). This is distinct from the situation in *Dover*, where the Court gave the words "recreational activity" their plain meaning and found Claimant voluntarily engaged in such activity. There was no direct evidence that Claimant's activities which led to her exposure were purely recreational. Under these facts, Claimant was engaged in personal ministration activities, as opposed to recreational activity. As such, the ALJ determined this exception did not apply.

The ALJ also considered *McLachlan v. Center for Spinal Disorders,* W.C. 4-789-747 (ICAO July 2, 2010) cited by Respondents. In that case, the Panel affirmed the ALJ's denial of benefits for an injury sustained while playing at an employer-sponsored street hockey match. Claimant did not dispute that playing street hockey was a voluntary recreational activity and the evidence supported such a finding. However Claimant asserted the ALJ erroneously concluded that playing street hockey was a substantial deviation from employment. The Court reasoned, under the totality of circumstances test, the evidence supported the conclusion Claimant's playing street hockey was a substantial deviation, which removed it from the employment relationship.

In the case at bench there was insufficient evidence adduced at hearing to establish such a deviation. (Finding of Fact 13). The Employer could anticipate Claimant would eat at a restaurant in the hotel where she was staying and for which a per diem was paid. It could further be anticipated that Claimant would eat lunch at the location in the hotel which was outside and could expose Claimant to sand. As such, Claimant's activities were did not remove her for the employment relationship.

Accordingly, the ALJ finds the eye injury sustained by Claimant arose out and was in the course of her employment and was therefore compensable.

ORDER

It is therefore ordered that:

1. Claimant suffered an injury to her right eye arising out of her employment on November 30, 2015.

2. Respondents shall provide medical benefits to Claimant under the Colorado Workers' Compensation Act, including Medical Center of the Rockies and Dr. Landsgaard.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable left shoulder injury during the course and scope of his employment with Employer on July 15, 2015.

2. Whether Claimant has proven by a preponderance of the evidence that the medical treatment he received prior to November 18, 2015 was authorized.

3. A determination of Claimant's Average Weekly Wage (AWW).

4. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period July 15, 2015 until terminated by statute.

FINDINGS OF FACT

1. Claimant worked for Employer as a Courier. Claimant's wages for the period March 11, 2016 through July 11, 2016, or 17.571 weeks, totaled $9,221.58. Dividing $9,221.58 by 17.571 weeks yields an Average Weekly Wage (AWW) of $524.81.

2. Claimant testified that he injured his left shoulder on July 15, 2015 while unloading J-Cans for Employer. He specifically noted that, as he was placing the J-Cans on a belt, he experienced a burning sensation in his left shoulder area. Claimant did not report the injury to Employer and completed his work shift.

3. Claimant explained that his left shoulder pain and discomfort continued to worsen over time. He thus sought medical treatment from his personal physician Kelly Locke, M.D. Dr. Locke administered injections but Claimant did not receive any lasting benefits.

4. On November 1, 2015 Claimant requested leave without pay from his employment for the period November 3, 2015 through November 7, 2015. He sought to care for his wheelchair-bound father and build a wheelchair ramp at his father's home. Claimant testified that, although he cared for his father, he did not construct the wheelchair ramp.

5. Claimant returned to work for Employer on November 10, 2015. He initially reported his July 15, 2015 injury to his acting supervisor because Operations Manager Jean Anton was on vacation. The acting supervisor contacted Ms. Anton to discuss Claimant's injury.

6. On November 10, 2015 Claimant contacted Ms. Anton by telephone. He reported that he had injured his back and left shoulder, visited a doctor and received a 10 pound lifting restriction. Ms. Anton inquired whether Claimant had injured his shoulder while building a ramp for his father and he responded that he was uncertain about how he had injured himself. Ms. Anton also asked Claimant whether he was reporting a workplace injury and he replied "no." Although Ms. Anton repeatedly requested a statement concerning the injury and documentation regarding lifting restrictions, Claimant failed to provide any information until November 18, 2015. The documentation stated that Claimant injured himself while working approximately three and one-half months earlier but did not include a specific date of injury.

7. On November 18, 2015 Claimant received medical treatment at Aspen Orthopedic Associates with Mark L. Purnell, M.D. Claimant reported left shoulder pain. He specified that while working for Employer on July 15, 2015 he was unloading cargo. Claimant noted that while he was unloading objects he felt a stabbing pain in the anterior aspect of his left shoulder. He remarked that he has continued working for the past three months. Claimant commented that he had visited Dr. Locke, received a corticosteroid injection that provided only temporary relief and has undergone physical therapy with continued pain and range of motion limitations. Dr. Purnell determined that Claimant's history was "most consistent with a rotator cuff tear, probably supraspinatus." He recommended an MRI to ascertain whether Claimant had a surgical lesion. Dr. Purnell suggested no "overhead loading of the shoulder."

8. On November 25, 2015 Claimant visited Glenn E. Kotz, M.D. at MidValley Family Practice P.C. for an evaluation. Claimant reported that in late June or early July his was at work lifting a very heavy box when he experienced immediate left shoulder pain. However, he also explained that in mid-July 2015 he was unloading cargo, felt a pull and believed he had suffered a shoulder strain. Claimant remarked that he had been heating and icing his left shoulder "every chance he gets" but his pain has continued to worsen.

9. Claimant continued to work for Employer through November 26, 2015.

10. On December 9, 2015 Claimant returned to Dr. Purnell to review his left shoulder MRI. The MRI revealed left shoulder impingement, supraspinatus tendinitus and biceps tendinitis. Claimant subsequently underwent arthroscopic surgery for his left shoulder condition.

11. Claimant has a long history of timely reporting Workers' Compensation injuries. On August 8, 1992 Claimant sustained an ankle injury and reported the accident to his employer on the same day. On January 4, 1999 Claimant suffered a left wrist injury and reported the incident to his employer on January 6, 1999. On October 7, 2015 Claimant suffered a cut on his head while working for Employer. He reported the incident to his supervisor but did not request medical treatment and declined to pursue a Workers' Compensation claim.

12. Claimant has failed to demonstrate that it is more probably true than not that he suffered a compensable left shoulder injury during the course and scope of his employment with Employer on July 15, 2015. Initially, Claimant testified that he injured his left shoulder on July 15, 2015 while unloading J-Cans for Employer. He specifically noted that, as he was placing the J-Cans on a belt, he experienced a burning sensation in his left shoulder area. However, Claimant failed to report his injury until November 18, 2015 or approximately 127 days after the incident.

13. Ms. Anton credibly explained that on November 10, 2015 Claimant contacted her by telephone. He reported that he had injured his back and left shoulder, visited a doctor and received a 10 pound lifting restriction. Ms. Anton inquired whether Claimant had injured his shoulder while building a ramp for his father and he responded that he was uncertain about how he had injured himself. Ms. Anton also asked Claimant whether he was reporting a workplace injury and he replied "no." In conjunction with Claimant's significant delay in reporting his work accident, his explicit denial that he suffered a work-related injury suggests that his testimony is not credible. Furthermore, on November 25, 2015 Claimant visited Dr. Kotz and reported that in late June or early July his was at work lifting a very heavy box when he experienced immediate left shoulder pain. However, he also explained that in mid-July 2015 he was unloading cargo, felt a pull and believed he had suffered a shoulder strain. The ambiguity in Claimant's report to Dr. Kotz also reveals that Claimant unlikely injured his left shoulder while working for Employer on July 15, 2015.

14. Claimant also has a long history of timely reporting Workers' Compensation injuries. On August 8, 1992 Claimant sustained an ankle injury and reported the accident to his employer on the same day. On January 4, 1999 Claimant suffered a left wrist injury and reported the incident to his employer on January 6, 1999. On October 7, 2015 Claimant suffered a cut on his head while working for Employer. He reported the incident to his supervisor but did not request medical treatment and declined to pursue a Workers' Compensation claim. Claimant's failure to report his July 15, 2015 claim for 127 days is contrary to his pattern of timely reporting work-related injuries. Finally, although Dr. Purnell determined that Claimant's history was "most consistent with a rotator cuff tear, the opinion is not persuasive based on the complete medical records, testimony of Ms. Anton and Claimant's prior history of timely reporting work-related injuries. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004).

The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a

coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered a compensable left shoulder injury during the course and scope of his employment with Employer on July 15, 2015. Initially, Claimant testified that he injured his left shoulder on July 15, 2015 while unloading J-Cans for Employer. He specifically noted that, as he was placing the J-Cans on a belt, he experienced a burning sensation in his left shoulder area. However, Claimant failed to report his injury until November 18, 2015 or approximately 127 days after the incident.

8. As found, Ms. Anton credibly explained that on November 10, 2015 Claimant contacted her by telephone. He reported that he had injured his back and left shoulder, visited a doctor and received a 10 pound lifting restriction. Ms. Anton inquired whether Claimant had injured his shoulder while building a ramp for his father and he responded that he was uncertain about how he had injured himself. Ms. Anton also asked Claimant whether he was reporting a workplace injury and he replied "no." In conjunction with Claimant's significant delay in reporting his work accident, his explicit denial that he suffered a work-related injury suggests that his testimony is not credible. Furthermore, on November 25, 2015 Claimant visited Dr. Kotz and reported that in late June or early July his was at work lifting a very heavy box when he experienced immediate left shoulder pain. However, he also explained that in mid-July 2015 he was unloading cargo, felt a pull and believed he had suffered a shoulder strain. The ambiguity in Claimant's report to Dr. Kotz also reveals that Claimant unlikely injured his left shoulder while working for Employer on July 15, 2015.

9. As found, Claimant also has a long history of timely reporting Workers' Compensation injuries. On August 8, 1992 Claimant sustained an ankle injury and reported the accident to his employer on the same day. On January 4, 1999 Claimant suffered a left wrist injury and reported the incident to his employer on January 6, 1999. On October 7, 2015 Claimant suffered a cut on his head while working for Employer. He reported the incident to his supervisor but did not request medical treatment and declined to pursue a Workers' Compensation claim. Claimant's failure to report his July 15, 2015 claim for 127 days is contrary to his pattern of timely reporting work-related injuries. Finally, although Dr. Purnell determined that Claimant's history was "most consistent with a rotator cuff tear, the opinion is not persuasive based on the complete medical records, testimony of Ms. Anton and Claimant's prior history of timely reporting work-related injuries. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUE

Whether Claimant proved by a preponderance of the evidence that the situs of his functional impairment extends beyond the arm at the shoulder, entitling him to have his scheduled impairment rating converted to a whole person impairment rating.

FINDINGS OF FACT

1. At hearing, Claimant testified that he is employed as a youth correctional officer at Division of Youth Corrections, Spring Creek. Claimant was working at Spring Creek throughout the claim, and remains employed there.
2. On February 18, 2014, Claimant suffered a compensable injury to his right shoulder while at work. Claimant testified that pulled a resident "over the railing" after he threatened to jump from the upper tier of the unit. Claimant testified that he felt "a little pop" in his shoulder during the take down. As Claimant walked away from the scene, he began feeling "pain just starting to rush in."
3. Claimant testified that he immediately reported the incident to his supervisor, and went for treatment right away.
4. Claimant testified that he underwent some physical therapy and treatment for his injury at CCOM, but was eventually released back to work.
5. On December 6, 2014, Claimant suffered a compensable re-injury to his right shoulder while restraining a resident. Claimant testified that he responded to a

"gang fight" on his unit, and once again had to restrain a resident, while performing a "takedown" (physically restraining an inmate), then another "takedown" about 5 minutes later.

6. Claimant testified that he immediately reported this to his supervisor, and returned to CCOM to restart treatment.

7. Claimant underwent a right shoulder arthroscopic distal clavicle resection, subacromial decompression, and limited debridement with Dr. Derek Purcell on June 1, 2015 (Claimant's exhibit 13).

8. Claimant testified that he remembered the surgery had occurred "kind of going down to upper right chest, shoulder area. On the side—[his] deltoid, and on the back of [his] shoulder".

9. Claimant had the following post-operative diagnoses:

   1. Right shoulder AC osteoarthritis.
   2. Right shoulder rotator cuff tendinopathy with extensive subacromial bursitis.
   3. Right shoulder posterior superior labral tear.
   4. Right shoulder anterior mid glenoid chondrosis" (Claimant's exhibit 13).

10. During this surgery, "a chondroplasty of the anterior glenoid rim was performed utilizing an arthroscopic shaver". Additionally, "a bursectomy was performed," with "extensive bursitis extending down through the subdeltoid bursa as well." Later, "A burr was utilized to perform an anterior acromioplasty and approximately 5mm of bone was resected off the anterior surface." Finally, a burr was used to resect "approximately 3 to 4 mm of bone… off the distal end of the clavicle as well as the distal aspect of the acromion. (Claimant's exhibit 13).

11. Claimant was released by Dr. Purcell on October 15, 2015. (Exhibit B) At that time, Dr. Purcell noted that Claimant felt "significantly improved from his preoperative status" and released Claimant to return to all activities as tolerated. (Exhibit B) Dr. Purcell did not document any complaints in the neck, back, head, torso or anywhere else beyond the arm at the shoulder. (Exhibit B)

12. Following his release from Dr. Purcell, Claimant testified that he continued to treat with Dr. Johnson, the authorized treating physician for this claim, at CCOM. From October 20, 2015 through December 15, 2015 Claimant reported having only minor infrequent pain. (Exhibit C). Claimant did not report taking any medications for pain during this period of time. Dr. Johnson did not document any complaints in the neck, back, head, torso or anywhere else beyond the arm at the shoulder during this time period.

13. The Claimant continued treating until January 21, 2016, when Dr. George Johnson placed him at MMI (Claimant's exhibit 7). At this appointment, Dr. Johnson noted that the Claimant was still in "mild to moderate pain." He noted "decreased range of motion following the surgery." He noted that Claimant "did not have problems with [his] shoulder prior to the injury." Claimant also noted that the pain, intermittent though it was, was made worse by lifting away from his body.

14. However, Dr. Johnson further noted that Claimant had no pain with crepitis, nor any apparent pain with motion while performing movements for an impairment rating. During this exam, Claimant reported that after returning to work "it has not been *too* difficult" for him.

15. Claimant testified at hearing that after he was released, he “wasn’t at a hundred percent” because he “didn’t have full strength back.” He testified that he was told “don’t lift any weights…don’t overexert yourself,” and so his strength “had really gone down”. Claimant testified that both Dr. Johnson and Dr. Purcell told him not to do anything he felt he couldn’t do.

16. He testified that he couldn’t put his arm behind his back or “far above” his shoulder, to reach items on a tall shelf, and that this remains an issue.

17. Claimant testified that he suffered from “slight” pain, along with stiffness and soreness. These were all issues existing before February of 2016.

18. Claimant testified that he performed his job without any “major” issues, to the best of his abilities. Claimant testified that he did suffer from pain at work, and reported this to his supervisor. He testified that he was not performing “to a hundred percent degree”.

19. He testified that he suffers from anxiety because of the injury, and requires “prescription medication to calm his anxiety down.” Claimant specifically referenced anxiety about having to perform “takedowns”, as part of his regular duties at work.

20. Claimant testified that he would “wake up in the middle of the night” with soreness and pain if he slept on his right shoulder, and this still bothers him.

21. Claimant testified that he was very active in various ball sports before his injury, but has not participated in sports since his initial injury. However, he has not been specifically told by any treating physician that he should not do so, nor did he testify that he has tried, but failed, to continue to play his preferred sports,

which are football, basketball, baseball, and softball. Claimant testified that when he goes to the gym, he can no longer do everything he used to do. Specifically, he no longer does “certain chest presses,” and he “[doesn’t] even attempt” shoulder presses. He testified that his “strength isn’t where it used to be.”

22. Claimant testified that he has difficulty putting things on high shelves with his right arm, because it “just kind of goes to a certain point”.

23. On February 27, 2016, Claimant once again reinjured his shoulder while taking down a resident, and that it hurt right away. He again returned to CCOM. Claimant testified that he has not had any surgery for this claim—to date. He only has had the surgery occurring on June 1, 2015.

24. On April 18, 2016, Claimant saw Dr. Frank Polanco for a Division Independent Medical Exam. Dr. Polanco agreed that Claimant was at maximum medical improvement. He gave Claimant a 15% upper extremity impairment rating. Five percent was for range of motion, and the other ten was based on impairment resulting from the rotator cuff repair with distal clavicle resection. Dr. Polanco stated that conversion would be calculated at a 9% whole person rating.

25. In his DIME report, Dr. Polanco also noted that Claimant had “tenderness to palpation at the posterior supraspinatus muscle”.

CONCLUSIONS OF LAW

General Conclusions

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

Permanent Partial Disability

4. Section 8-42-107, C.R.S., sets forth two different methods of compensating medical impairment. Subsection (2) provides a schedule of disabilities and subsection (8) provides for whole person ratings. The threshold issue is application of the schedule and this is a determination of fact based upon a preponderance of the evidence. The question of whether the Claimant sustained a whole person medical impairment compensable under § 8-42-107(8), C.R.S., is one of fact for determination by the ALJ. The application of the schedule depends upon the "situs of the functional impairment" rather than just the situs of the original work injury. *Langton v. Rocky Mountain Health Care Corp.,* 937 P.2d 893 (Colo. App. 1996); *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996).

5. Pain and discomfort which limit a Claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury

is off the schedule. See *Langton v. Rocky Mountain Healthcare Corp.*, *supra*; *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996).

6. Claimant has proven by a preponderance of the evidence that the situs of his functional impairment extends beyond the "arm at the shoulder." The credible evidence shows that Claimant's right shoulder joint itself is impaired. It does not function as it did before Claimant's work injury. Thus, the situs of the functional impairment is the shoulder joint, which is not on the schedule of injuries. The mere fact that the shoulder joint affects arm mobility does not mean Claimant sustained only a "loss of arm at the shoulder." In addition, whether Claimant had neck or back symptoms resulting from his right shoulder injury is only one factor to consider. In this case, Claimant credibly testified that he continues to have pain and some loss of function involving his right shoulder. Claimant credibly testified to limitations proximal to the glenohumeral joint with range of motion and activities. Accordingly, Claimant's impairment is not on the schedule of permanent impairment.

7. While no direct evidence was elicited which showed that his participation in various ball sports was impossible or medically proscribed, a diminished ability to participate up to one's pre-injury potential is a natural consequence of a limited range of right shoulder motion.

8. In addition to ball sports, Claimant was a regular participant in weight lifting before his injury. While he has been medically cleared to return to these activities "as tolerated," Clamant testified credibly that certain exercises, notably *chest* and *shoulder* presses, cannot be performed to the degree they once were without pain.

9. An integral part of Claimant's job duties involves "takedowns" of unruly inmates. These are tasks which might be reasonably expected of him by his employer. A diminished range of motion, and accompanying pain while lifting away from his body significantly impact his ability to perform his job as safely as he could before this injury occurred.

10. Further, according to the DIME report, Claimant experienced some pain with palpation to the supraspinatus muscle. The supraspinatus muscle is proximal to the glenohumeral joint; thus the effects of the injury extend beyond the shoulder and into the whole person of Claimant. The DIME's physical exam findings corroborate Claimant's testimony that he experiences functional limitations beyond his arm.

Disfigurement

11. As a result of Claimant’s right shoulder work-related injury, he has a visible disfigurement to the body. The amount of compensation for this has been stipulated to be $500. Claimant has sustained a serious permanent disfigurement to areas of his body normally exposed to public view, which entitles Claimant to additional compensation. Section 8-42-108 (1), C.R.S. Insurer shall pay Claimant $500 for that disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

ORDER

It is therefore ordered that:

1. Claimant’s request to convert the scheduled rating of his right shoulder to a whole person rating and award Permanent Partial Disability (“PPD”) benefits based on the whole person is granted. Respondents shall pay Claimant a PPD award consistent with the 9% whole person impairment rating assigned by the DIME physician Dr. Polanco.

2. Respondents shall pay Claimant $500.00 for disfigurement, pursuant to § 8-42-108 (1), C.R.S.

3. Claimant’s Average Weekly wage is $751.14, and shall form the basis for any calculations made pursuant to this Order.

4. Respondents shall pay Claimant $26.47 in Temporary Partial Disability.

5. Respondents shall pay Claimant $1329.46 in Temporary Total Disability.

6. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 26, 2016 William G Edie

William G Edie
Administrative Law Judge

Colorado Springs, CO 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-991-181-04

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

SELF-INSURED c/o
SEDGWICK CMS, INC.,

Third Party Administrator (TPA),

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on September 6, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 9/6/16 Courtroom 4, beginning at 8:30 AM, and ending at 9:00 AM).

At hearing, Claimant's Exhibits 1 through 3 were admitted into evidence, without objection. Respondent's Exhibits A through G were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ kept the record open for the filing of a written transcript of the evidentiary deposition of Gary Zuehldorff, D.O., which was taken on August 26, 2016, and a transcript thereof filed on September 20, 2016. A written transcript of the evidentiary deposition of Lawrence Lesnak, D.O., was filed at the commencement of the hearing.

Also, at the conclusion of the hearing, the ALJ established a briefing schedule: Claimant's opening brief to be filed within 5 calendar days of the filing of a written transcript of Dr. Zuehldorff's evidentiary deposition, or no later than September 27, 2016. Respondent's answer brief to be filed within 5 calendar days of the Claimant's opening brief; and, the Claimant's reply brief, if any, within 2 calendar days of the answer brief. The Respondent's answer brief was filed on September 22, 2016. On September 23, 2016, the Claimant moved for an extension of time until September 27, 2016 within which to file an opening brief. On the same date, the ALJ denied to Motion for Extension of Time, however, he granted leave until September 27, 2016 within which the Claimant should file a **reply brief.** No reply brief was timely filed. Consequently, the matter was deemed ready for decision on September 28, 2016.

ISSUE

The sole issue to be determined by this decision concerns whether Dr. Zuehldorff's [the authorized treating physician (ATP)] recommendation for diagnostic right shoulder arhroscopy is causally related to, and reasonably necessary, to cure and relieve the effects, of the admitted right shoulder injury of June 23, 2015.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. While working for the Employer, the Claimant injured her right shoulder on June 23, 2015.

2. The Respondent filed a General Admission of Liability (GAL) on April 19, 2016. The Respondent admitted to medical benefits; an average weekly wage (AWW) of $505.74; and, temporary partial disability (TPD) and temporary total disability (TTD) benefits. For the latest period, the Claimant has been receiving temporary TTD benefits since April 4, 2016.

3. The Claimant began treatment with Dr. Zuehldorff's office on June 25, 2015. For her first appointment, she saw a nurse practitioner. (Zuehldorff Depo., page. 6, lines10-11.) Dr. Zuehldorff, a physician, specializing in internal and occupational medicine, examined the Claimant for this first time on July 8, 2015.

4. On July 13, 2015, the Claimant underwent a right shoulder MRI (magnetic resonance imaging) arthrogram, or an MRI with contrast. The MRI arthrogram revealed a full thickness tear of the supraspinatus tendon.

5. Christopher Isaacs, D.O., surgically repaired a 2 centimeter avulsion tear in Claimant's right rotator cuff on August 14, 2015.

6. As part of her post-surgical recovery, the Claimant went to physical therapy (PT).

7. Because the Claimant had not regained a full range of motion, Dr. Isaacs performed a right shoulder manipulation under general anesthesia on December 14, 2015. After the manipulation, Dr. Isaacs injected the Claimant's right shoulder with a corticosteroid.

8. Upon Dr. Zuehldorff's referral, Ron Carbaugh, Psy.D., a clinical psychologist, examined the Claimant on January 4, 2016.

9. Dr. Carbaugh observed that the Claimant's high self-reported pain levels were more likely related to "high pain sensitivity and compromised pain coping skills[]."

10. Dr. Carbaugh diagnosed the Claimant with depression, and observed her depression will interfere with her recovery.

11. The Claimant was approved for six pain and adjustment counseling sessions with Dr. Carbaugh. After her February 3, 2016 session, Dr. Carbaugh was of the opinion that the Claimant's "current level of dysfunction" was "out of proportion to [her] medical physical findings."

12. The Claimant last saw Dr. Carbaugh on February 3, 2016, and never returned to his care after February 3, 2016.

13. On February 22, 2016, Dr. Isaacs reexamined the Claimant. The Claimant reported continued discomfort in her right shoulder and little improvement. Dr. Isaacs observed that PT was not progressing her range of motion and mobility. He recommended that the Claimant "push herself" during PT.

14. Dr. Zuehldorff re-examined the Claimant on March 9, 2016. He estimated that the Claimant was at 70-75% and making progress. Dr. Zuehldorff recommended that the Claimant "continue to push hard in therapy."

15. On March 21, the Claimant complained of significant pain although her passive range of motion was "quite good," and her Drawer test was negative.

16. Dr. Zuehldorff ordered a second MRI of the Claimant's right shoulder. He mistakenly ordered an MRI without contrast. (Zuehldorff Depo., page 48, lines:14-17.)

17. On April 6, 2016, Dr. Zuehldorff observed the sessions with Dr. Carbaugh were helping the Claimant, and he recommended that she continue to treat with Dr. Carbaugh.

18. The non-contrast MRI occurred on April 7, 2016. It revealed that the repaired tendon was intact and "no substantial evidence of recurrent high-grade or full-thickness tearing of tendon or tendon retraction."

19. The MRI also showed infraspinatus tendinosis, subacromial subdeltoid bursitis, degenerative morphology of the superior labrum without definite tear, and mild degenerative changes to the acromioclavicular joint.

20. Dr. Zuehldorff recommended a third right-shoulder surgery, and sought a second opinion from orthopedic surgeon, Rajesh Bazaz, M.D.

21. Dr. Bazaz examined the Claimant on May 9, 2016. (*Id.* at 8:16-9:4; R. Ex. E, Bates 15.) Upon reviewing her July 13, 2015 and April 7, 2016 MRIs, Dr. Bazaz observed "the rotator cuff repair seems to have taken quite nicely." Dr. Bazaz also noted the steroid injection did not help the Claimant.. He also noted that there was no evidence of internal or external rotator pathology, significant glenohumeral joint osteoarthrosis, displaced labral pathology, anchors in the bone, or paralabral cysts.

22. The Claimant denied having any outward signs of infection to Dr. Bazaz. During his physical examination, the Claimant's active forward flexion and abduction were both 90 degrees. Passively, her forward flexion was 160 degrees and abduction was 150 degrees. Because the Claimant had reasonable passive range of motion, Dr. Bazaz was of the opinion that she did not have adhesive capsulitis again. Ultimately, Dr. Bazaz concluded that the "etiology of [Claimant's] pain is not clear." He offered two treatment options: "live with the situation" or shoulder arthroscopy. The arthroscopy would provide a "clear look at the rotator cuff repair" and permit biopsies and cultures to rule out an infection. A full debridement would also be performed "with the hope that if there is inflammatory tissue that can be removed to help with her pain/active motion."

Independent Medical Examination (IME) by Lawrence Lesnak, D.O.

23. Dr. Lesnak performed an IME, at the request of the Respondent, on June 21, 2016 (Lesnak Depo. p.4, lines:8-11.) Dr. Zuehldorff, who regularly worked with Dr. Lesnak during the first few years of his medical practice, described Dr. Lesnak as an "excellent colleague."

24. At the IME, the Claimant reported constant diffuse pain throughout her right shoulder that worsened when she moved her right arm or shoulder. (Lesnak Depo. p. 10, lines14-16;p. 50:lines13-14.)

25. Over the six weeks before her examination with Dr. Lesnak, the Claimant rated her worst pain at 70 out of 100, with 100 being pain so severe she would feel as though she might pass out or die. The Claimant rated her current pain as 50-60.

26. During the IME, the Claimant expressed tenderness in her right shoulder even to gentle brushing of the skin.

27. As part of Dr. Lesnak's IME, the Claimant underwent a Computerized Outcome Assessment (COA). The COA is accepted in the field of osteopathic medicine, with literature and textbooks on the subject, according to Dr. Lesnak. (Lesnak Depo. at p. 34, lines20-24). Additionally, it is part of the Workers' Compensation Medical Treatment Guidelines [Workers' Compensation Rules of Procedure (WCRP), Rule 17, exhibit 1, 7 CCR 1101-3] and has associated codes for payment.

28. The COA measures whether any psychosocial factors may be influencing a patient's symptoms and how a patient perceives his/her functionality. Indeed this computerized test may be able to look into the soul of the subject.

29. According to Dr. Lesnak, the COA is a screening test — not a formal psychiatric evaluation.

30. Based on the Claimant's answers to the COA, Dr. Lesnak concluded that psychosocial factors are influencing her symptoms, recovery, and/or perceived function.

31. During Dr. Lesnak's physical examination, the Claimant had the following active right shoulder range of motion measurements: 68 degrees flexion; 50 degrees abduction; 48 degrees extension; 30 degrees adduction; 80 degrees internal rotation; and 10 degrees external rotation.

32. Dr. Lesnak was of the opinion, however, that the Claimant self-limited the active range of motion because she had "more active range of motion in these planes" during her time in his presence. Dr. Lesnak estimated that the Claimant's actual active flexion was 90-100 degrees and abduction was 80-90 degrees because of her actions and "normal-day decisions" during the IME. (Lesnak Depo., p. 30, linesd1-24.) According to Dr. Lesnak, the difference in these measurements is "dramatic."

33. Dr. Lesnak also performed provocative maneuvers on the Claimant's right shoulder. (Lesnak Depo., p. 17, lies12-15.) All formal provocative tests were negative. (*Id.* at p. 1, 7lines15-16;p. 60, lines15-16.)

34. According to Dr. Lesnak, there are no objective clinical findings to suggest that theClaimant has residual right shoulder adhesive capsulitis, no clinical evidence of right shoulder impingement, and the post-operative MRI revealed changes without a recurrent high grade or full thickness rotator cuff tear.

35. Dr. Lesnak was also of the opinion that the Claimant was at maximum medical improvement (MMI) as of May 18, 2016. Dr. Lesnak based his opinion in part on three factors: (1) Dr. Isaacs discharged the Claimant from his care following the post-surgical MRI because there was no evidence of surgical pathology; (2) her discharge from physical therapy in March 2016; and (3) she has a very high sensitivity to pain according to Dr. Carbaugh.

Dr. Zueldorff

36. On August 8, 2016, Dr. Zuehldorff responded to Dr. Lesnak's IME. (Cl. Ex. 1, Bates 2.) He was of the opinion that the Claimant's right shoulder injury requires further treatment because of the results of the postoperative MRI and her continued reports of pain.

37. During his deposition, however, Dr. Zuehldorff stated that that he "would throw out the MRI completely in this case. I don't think it has much relevance at all." (Zuehldorff Depo., p. 37, lines 14-16.)

38. According to Dr. Zuehldorff, relying on an MRI in the Claimant's situation is "fraught with potential for artificial overlay that can basically hide true pathology." Dr. Zuehldorf further was of the opinion that an MRI "in and of itself of the shoulder has limited specificity for ultimately determining true and final diagnoses." Moreover, using an "MRI as the final determinant as to whether or not the patient should have surgery is almost completely unfounded," according to Dr. Zuehldorff.

39. Dr. Zuehldorff is of the opinion that an MRI arthrogram usually provides "better delineation of certain integral structures." And, in his case it would "clarify" the clinical state of Claimant's right shoulder.

40. Dr. Zuehldorff is of the opinion that even if the Claimant were to receive an MRI arthrogram that is "relatively negative and not much worse than this other MRI we did without contrast, I would still say you need to go in[.]" [arthroscopic surgery].

41. Dr. Zuehldorff also stated that there is "no question she (Claimant) does have a low pain trigger."

42. Once or twice while Dr. Zuehldorff was examining the Claimant, she expressed tenderness in her right should even to gentle brushing of the skin.

43. Dr. Zuehldorff concluded that "there's some degree of psychological component to [Claimant's] pain."

44. If the surgery were to occur and not reveal anything, Dr. Zuehldorff would likely conclude that he did everything he could for the Claimant. Additional physical therapy, injections, or medication would be unlikely to make a difference, according to Dr. Zuehldorff.

45. In Dr. Zuehldorff's opinion, the diagnostic arthroscopy would provide "a better determination of the diagnoses, [and] hopefully there could be some intervention surgically that could then help resolve them." In essence, the ALJ finds that Dr. Zuehldorff is searching for a diagnosis.

46. Dr. Zuehldorff concedes that the Claimant did not "follow a linear recovery pattern," and "obviously had a delayed recovery." He also described the Claimant's responses to the two previous surgical procedures as "unusual." (Zuehldorff Depo., p. 22, lines 3-5).

Dr. Lesnak

47. Like Dr. Zuehldorff, Dr. Lesnak believes that the Claimant has had a delayed recovery. (*See* Lesnak Depo., p. 27, lines 4-7). Dr. Lesnak observed Claimant has not healed "as her own treating physician has expected." (*Id.* at 27:4-7).

48. Because the Claimant has no surgical pathology, Dr. Lesnak disagreed with Dr. Zuehldorff's recommendation for a diagnostic arthroscopy and to obtain a second opinion.

49. In Dr. Lesnak's opinion, Dr. Bazaz neither diagnosed the Claimant with a specific condition requiring surgical repair nor recommended a specific treatment he would perform. Instead, Dr. Bazaz suggested the shoulder arthroscopy simply "to take a look" and determine if there might be a clinical reason for the Claimant's pain

50. Dr. Lesnak is of the opinion that the Claimant should have had a positive diagnostic response — albeit temporarily — to the corticosteroid injection performed by Dr. Isaacs. (Lesnak Depo., p. 15, lines16-22). Dr. Lesnak observed that the Claimant did not improve when the right shoulder was numb. (*Id.* at p. 19, lines 20-22.)

51. According to Dr. Lesnak, there was no clinical indication that the Claimant has an infection in her shoulder. (*Id.* at p. 51, lines 6-7.) Also, the post-operative MRI did not show any inflammation, which is an indication of infection. (*Id.* at p. 51, lines 17-21).

52. In Dr. Lesnak's opinion, the Claimant's subjective complaints of pain may be unreliable due to her hypersensitivity. **(***Id.* at p. 52, lines 12:20).

53. Ultimately, Dr. Lesnak concluded that the Claimant is not a candidate for any type of right-shoulder surgery (Lesnak Depo. , p. 13, lines 2; p. 21, lines 8-9; p. 40, lines 1-9.) According to Dr. Lesnak, the Claimant's "symptoms are not coming from inside her shoulder." (Lesnak Depo., p. 13, lines 19-20). According to Dr. Lesnak, one does not perform "diagnostic surgery [on a shoulder] to try and find something." (*Id.* at p. 61, lines 16-21). Furthermore, Dr. Lesnak stated that he does not rely on referrals to surgeons to help him diagnose patients. (*Id.* at p. 43, lines 4-5.) Instead, he refers patients to a surgeon if they have the surgical pathology warranting surgery — not for a diagnostic procedure. (*Id.* at p. 43, lines10-12).

54. According to the Workers' Compensation Medical Treatment Guidelines diagnostic arthroscopy is deemed reasonably necessary depending on the clinical correlation (Zuehldorff Depo. p. 36, lines 21-25). In the present case, there is no clinical correlation for the diagnostic arthroscopy because there are no objective clinical findings that the Claimant needs this surgery, according to Dr. Lesnak (Lesnak Depo., p. 21, lines 7-12). This is true according to Dr. Zuehldorff as well.

Ultimate Findings

55. Based on the totality of the evidence, the ALJ finds Dr. Lesnak's opinion that the recommended right shoulder arthroscopy is not reasonably necessary to cure and relieve the effects of the Claimant's admitted right shoulder injury of June 23, 2015 is more credible and persuasive than Dr. Zuehldorff's opinion. Indeed, Dr. Zuehldorff concedes that there is no clinical correlation for the diagnostic arthroscopy because there are no objective clinical findings that the Claimant needs the surgery. The ALJ infers and finds that Dr. Zuehldorff wants to try one last-ditch effort to look inside the Claimant's right shoulder to see if he finds something.

56. Between conflicting medical opinions, if they are indeed in conflict, the ALJ makes a rational decision, based on substantial evidence, to accept Dr. Lesnak's opinion that surgery is not warranted and to reject opinions to the contrary.

57. Because there are no objective clinical findings that the Claimant needs arthroscopic surgery, the weight of the medical evidence establishes that the Claimant has failed to prove, by a preponderance of the evidence that the arthroscopic surgery recommended by Dr. Zuehldorff is reasonably necessary to cure and relieve the effects of the Claimant's June 23, 2015 right shoulder injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Lesnak and Dr. Zuehldorff are in agreement that there are no objective clinical findings indicating that surgery is warranted. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As further found, Dr. Lesnak's opinion that the recommended right shoulder arthroscopy is not reasonably necessary to cure and relieve the effects of the Claimant's admitted right shoulder injury of June 23, 2015 is more credible and persuasive than Dr. Zuehldorff's opinion. Indeed, Dr. Zuehldorff conceded that there was no clinical correlation for the diagnostic arthroscopy because there were no objective clinical findings that the Claimant needs the surgery.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, if they were indeed in conflict, the ALJ made a rational decision, based on substantial evidence, to accept Dr. Lesnak's opinion that surgery is not warranted and to reject opinions to the contrary.

Reasonable Necessity of Recommended Right Shoulder Arthroscopy

c. The Respondent is only liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S. The question of whether medical treatment is reasonably necessary to cure and relieve the effects of an industrial injury is one of fact for determination by the ALJ. *Kroupa v. Indus. Claim Appeals Office*, *supra,* and the Claimant bears the burden of proof to establish the right to specific medical benefits. *Wal-Mart Stores, Inc. v. Indus. Claims Office*. 989 P.2d 251, 252 (Colo. App. 1999).

Burden of Proof

d. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361

(D.C. Cir. 2001). “Preponderance” means “the existence of a contested fact is more probable than its nonexistence.” *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to sustain her burden of proof concerning the reasonable necessity of the arthroscopic surgery recommended by Dr. Zuehldorff.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant’s request for the arthroscopic surgery recommended by Gary Zuehldorff, D.O., is hereby denied and dismissed.

B. The general Admission of Liability, dated April 19, 2016 remains in full force and effect.

C. Any and all issues not determined herein are reserved for future decision.

DATED this______day of October 2016.

____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge’s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge’s order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-968-142-01

ISSUES

The issue determined in this order involves Claimant's entitlement to medical benefits. The specific question is whether Claimant has established, by a preponderance of the evidence, that a patellar femoral joint (PFJ) arthroplasty recommended by Dr. Matthew Simonich is reasonable, necessary, and related to his admitted industrial injury.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Dr. Simonich and Dr. O'Brien, the ALJ enters the following findings of fact:

1. Claimant was employed by Respondent-Employer as a correctional officer on September 6, 2014 when he sustained an admitted work related injury to his right knee while ascending a flight of stairs. According to Claimant he caught his toe/foot on a stair causing his right knee to twist as he shifted to the right to avoid an inmate who was running down the stairs.

2. Claimant was seen at St. Mary Corwin Hospital in the emergency room (ER) on the morning of September 7, 2014 for continued complaints of right knee pain. A history was taken where after it was documented that Claimant reported a "history of meniscal tear in that knee that was surgically repaired." The reference to "that" meaning the right knee. Physical examination was positive for effusion and tenderness over the medial joint line. There was no ligamentous laxity to varus and valgus stress or AP drawer testing. X-rays were obtained which were interpreted failing to demonstrate "acute change". Claimant was diagnosed with a "knee sprain" and instructed to wear a knee immobilizer and follow-up with Centura Centers for Occupation Medicine (CCOM).

3. Claimant was first seen at CCOM on September 8, 2014. Dr. Merchant noted that Claimant's knee was grossly normal appearing without ecchymosis or erythema, although he had "mild swelling around the anterior and medial side of the patella" and tenderness "along the medial joint line and medial collateral." Claimant "denied a prior history of right knee injury." The history regarding prior injury to the right knee as provided to Dr. Merchant conflicts with the history of prior surgical repair of a right meniscal tear documented by the ER physician on September 7, 2014. Dr. Merchant diagnosed internal derangement of the knee and referred Claimant for an MRI.

4. MRI of the right knee was completed on September 12, 2014. Findings included "increased signal in the medial marrow of the distal femur consistent with marrow contusion" and "mild irregularity of the medial articular facet of the patella . . . and increased signal in the subarticular marrow of the patella as well." There was also

“increased signal in the distal femoral marrow” which may have represented a “portion of the same injury.” Finally there was a “small amount of joint fluid” present in the joint and a “small Baker’s cyst noted posteriorly” in the knee.

5. Claimant was referred to Dr. Alex Romero who initiated a course of conservative treatment, including injection therapy focused on Claimant’s right knee condition. Conservative measures failed to produce lasting improvement. Consequently, Claimant underwent a right knee arthroscopy and debridement of an articular cartilage defect on December 8, 2014 as performed by Dr. Romero. As justification for the arthroscopy, Dr. Romero noted that Claimant had failed several months of conservative measures. That surgery and the associated follow up care, including post surgical injections to which Claimant had an allergic response did not resolve Claimant’s pain.

6. On August 5, 2015, Claimant was seen in follow-up in CCOM by Physician Assistant Robert Simmons who noted that he “spent a long time discussing further treatment options . . . given [Claimant’s] chronic progressive pain.” PA Simmons raised the potential for patellofemoral unicompartmental arthroplasty and felt Claimant should obtain a second opinion regarding his candidacy for the procedure. As neither Dr. Romero nor his partner Dr. Nakamura performed the procedure, Claimant was referred to Dr. Simonich for “another opinion.”

7. Claimant saw Dr. Simonich on August 20, 2015 and was diagnosed with mild/moderate osteoarthritis in his right knee. Dr. Simonich recommended a repeat MRI noting that if Claimant’s “symptoms persist and he had a lesion then consideration could be given for the performance of a fracture arthroplasty vs. a mosaicplasty vs. an ACI. However, Dr. Simonich felt the chance of success with these procedures was affected by the fact that Claimant had pathology on both sides of the patellofemoral joint and he was overweight. Dr. Simonich went on to note: “I think he is too young, too heavy, too active and without endstage OA for a partial PFJ arthroplasty to be successful.” Based upon the content of the medical record, the ALJ finds Dr. Simonich’s initial opinion to be qualified as he was waiting on the repeat MRI results and because he later noted that “[w]e may need to do anther arthroscopy and be ready to do all the above” meaning a fracture arthroscopy, a mosaicplasty, an ACI or a partial PFJ arthroplasty.

8. A repeat MRI was completed on September 1, 2015. Findings from that MRI included “thinned and somewhat irregular” patellar cartilage “suggesting chrondromalica patella.” Both the cruciate ligaments and menisci appeared intact without tears. The radiologist reached the following pertinent impression: “Chrondromalacia patella type 3.”

9. Claimant returned to Dr. Simonich on September 8, 2015. Dr. Simonich’s diagnosis continued to be mild/moderate osteoarthritis of the right knee, “unchanged.” Dr. Simonich scheduled Claimant for a right PFJ arthroplasty.

10. Surgical authorization was denied by Respondent-Employer. On December 22,

2015, Claimant returned to Dr. Simonich who noted that Claimant's pain was worsening by report. He noted further that the knee was locking and the patella was not tracking. Dr. Simonich documented that Claimant would be scheduled for a six month follow-up and if Claimant's persisted at that time he would "consider repeat arthroscopic chrondroplasty vs. cortisone injection since we can't get a PFJ arthroplasty authorized . . . ."

11. Claimant was examined at Respondent-Employer's request by Dr. Timothy O'Brien on February 24, 2016. Following his independent medical examination (IME), Dr. O'Brien opined that Claimant's injury was "minor" which opinion is substantiated by the mechanism of injury described. According to Dr. O'Brien, the minor twisting event described by Claimant would not generate sufficient amounts of energy to result in significant "tissue breaking or yielding" i.e. acute chrondral tearing of the PFJ and medial compartment. If such tissue breaking or yielding would have occurred, Dr. O'Brien testified that it would have resulted in "massive bleeding of the joint and/or a massive effusion." Because such hemarthrosis and effusion were not present on MRI, Dr. O'Brien opined that the findings on the MRI represent "chronic degenerative chrondromalacia changes without effusion. Accordingly, Dr. O'Brien opined that Claimant sustained "no significant intra-articular injury."

12. Dr. O'Brien noted further that minor injuries such as that sustained by Claimant in this case would "heal reliably and expeditiously and without sequel." Dr. O'Brien went on, indicating that Claimant had reached an "end-of-healing before Dr. Romero performed surgery on December 8, 2014, which Dr. O'Brien characterized as "ill-advised and not indicated", citing epidemiological studies which purport to stand for the proposition that patients who have knee pain secondary to osteoarthritis have "absolutely no hope" of benefitting from arthroscopic surgery. According to Dr. O'Brien, arthroscopic surgery in such patients increases their pain because the surgery creates additional trauma due to the introduction of rigid instruments operating under high pressure which "awakens quiescent areas of osteoarthritis due to the creation of an intractable synovitis" which "accelerates" the symptoms associated with osteoarthritis rather than relieving them. Consequently, Dr. O'Brien noted that he was "unable to reconcile Dr. Simonich's recommendation to proceed with . . . arthroscopic surgical intervention when this surgery has already proven to be a failure." Finally, Dr. O'Brien opined against additional surgery on the grounds that Claimant's arthritis is "not advanced enough"; he is obese and is young to warrant such intervention. Regarding the last two of these factors, Dr. O'Brien noted, "[t]he main reason that Mr. Walter has significant ongoing knee dysfunction and pain is due to his obesity and physically deconditioned state." Dr. O'Brien opined that it is "inappropriate for Mr. Walter to continue to rely on the medical system to provide him with an answer for his knee pain as he has already exhausted all available medical treatment modalities." According to Dr. O'Brien, the "medical system has already proven to be a failure, not the least reason of which is its misapplication [of] an arthroscopic surgical intervention which predictably was doomed to fail before it was ever undertaken." For these reasons, Dr. O'Brien opined that Claimant was not a candidate for an arthroscopy or a unicompartmental to total knee arthroplasty regardless of the cause of his right knee arthritis.

13. Claimant returned to Dr. Simonich on April 22, 2016 for reevaluation and follow-up. During this appointment, Claimant continued to report worsening pain and dysfunction regarding the right knee. He reported that his knee was buckling and giving out and that his ongoing pain was limiting his sleep to 2 hours at a time. Dr. Simonich recommended additional arthroscopic debridement. The ALJ finds Dr. Simonich's recommendation for arthroscopic debridement on this date to constitute a different procedure than a PFJ unicompartmental arthroplasty as he had recommended previously. The ALJ also finds that Dr. Simonich, more probably than not recommended a different procedure because he could not secure authorization to proceed with the PFJ unicompartmental arthroplasty that he had scheduled Claimant for on September 21, 2015.

14. On May 18, 2016 Respondent-Employer requested a WCRP Rule 16 evaluation regarding Dr. Simonich's request to proceed with an arthroscopy and chrondroplasty following Claimant's April 22, 2016 appointment. Respondent-Employer requested that Dr. O'Brien conduct such review. Citing the opinions expressed in his March 14, 2016 IME report, Dr. O'Brien reiterated that Dr. Simonich's requested surgery was contraindicated, was likely to increase Claimant's right knee pain and was neither reasonable nor necessary. Consequently, Dr. O'Brien opined that the surgery should be denied.

15. Dr. Simonich testified by deposition. He testified that when he reviewed Claimant's MRI films he noted that the "articular cartilage on the back side of the kneecap was thinned and somewhat irregular." He also noted what he felt were "cartilage defects on the trochlear side of the joint as well." Based upon review of the evidence as a whole, the ALJ finds that the backside of the knee cap and the trochlea articulate with one another to comprise the patella femoral joint (PFJ).

16. Dr. Simonich attributed Claimant's PFJ defects to Claimant's September 6, 2014 industrial injury.

17. Dr. Simonich testified that proceeding with a PFJ unicompartmental arthroplasty is not contraindicated in an absolute fashion. He explained that from a relative fashion surgeons do not like performing such procedures on young patients but in Claimant's situation he has a "bipolar lesion" and some "early bony changes going on due to the stress of the loss of cartilage on both the trochlear side of the joint and the patellar side of the joint. Consequently, Dr. Simonich testified that while Claimant was not a "ideal" candidate for a partial knee replacement procedure because of his age, weight and extent of disease, he has been through all conservative treatment modalities that one could do and because he still has ongoing pain and disability at a level that has precluded his return to work, the recommended PFJ arthroplasty procedure is "really the only option that he has."[1]

18. According to Dr. Simonich, the recommended partial knee replacement is

[1] During his deposition, Dr. Simonich agreed that additional arthroscopic surgery would not help Claimant.

reasonably calculated to relieve Claimant's ongoing symptoms and return him to work. Dr. Simonich testified that he believed the surgery would be successful and that the condition of the claimant's knee will not heal on its own. Specifically, Dr. Simonich testified, when asked if the Claimant's knee condition would heal on its own without the partial knee replacement: "No. We don't grow cartilage."

19. Dr. Simonich further testified that he reviewed Claimant's situation with other orthopedists during an orthopedic sports medicine society in July of 2015. After reviewing Claimant's case with those additional doctors, Dr. Simonich's testified that there was a consensus that Claimant was not a "good candidate for anything other than patella femoral joint arthroplasty."

20. Dr. O'Brien testified by deposition on August 15, 2016. Dr. O'Brien testified that while the PFJ arthroplasty might "temporarily be successful in relieving pain" it would, with "100 percent" certainty fail in five years. Moreover, Dr. O'Brien testified that the procedure would not relieve pain but conversely "induce more pain." Consequently, Dr. O'Brien testified that performing the procedure would be a "catastrophic failure early on" and Claimant should not have it done. According to Dr. O'Brien, if Claimant "truly had advanced arthritis, severely advanced bone-on-bone" . . . [was] a little bit fitter, lost weight . . . and could modify his activity level to avoid high-impact activity, [he] might consider patellofemoral replacement." Because he felt Claimant was physically deconditioned, aerobically unfit and trending towards being morbidly obese, Dr. O'Brien opined that Claimant was not a candidate for such procedure. Dr. O'Brien recommended additional injections, weight loss and up-modulating Claimant's fitness level. If these modalities did not affect sustained improvement, Dr. O'Brien testified that Claimant would have to "live with pain."

21. Dr. O'Brien testified that the Claimant did not suffer an injury on September 8, 2014 to his right knee and did not exacerbate a preexisting condition either. Relying upon the ER record documenting that Claimant had a prior menicsal surgery to the right knee; Dr. O'Brien testified that Claimant had sustained a prior injury to his right knee. Outside of the one historical entry from the ER regarding prior injuries to the right knee, careful review of the medical record fails to substantiate any support for the conclusion that Claimant ever suffered a prior right knee injury let alone a prior surgery to repair/debride a damaged meniscus. Based upon the evidence presented, the ALJ finds an absolute dearth of evidence to support that Claimant was ever treated for symptoms associated with a right knee condition prior to the incident occurring in this case. Consequently, the ALJ finds that the ER physician, more probably than not, mistakenly documented that Claimant had a prior surgery to the right knee, considering the aforementioned lack of evidentiary support and considering that there is evidence that Claimant suffered an injury to his left knee that was surgically repaired.

22. Based upon the evidence presented, the ALJ is persuaded that the September 6, 2014 mechanism of injury probably aggravated a pre-existing, albeit asymptomatic condition in Claimant's right knee resulting in his need for treatment. The ALJ is also

persuaded that Claimant's current symptoms and need for treatment, i.e. a PFJ arthroplasty is causally related to that aggravation.

23. The ALJ credits the opinions of Dr. Simonich to find that Claimant suffers from pain and dysfunction caused by a bipolar lesion in the PFJ which, more probably than not will respond positively to the partial knee replacement procedure recommended and requested by Dr. Simonich. While Claimant is not an ideal candidate for such surgery, even Dr. O'Brien concedes that the surgery will be successful, if nothing else on a temporary basis in relieving Claimant's pain. Moreover, Dr. Simonich credibly and persuasively testified that the surgery would be successful and that the condition of Claimant's knee will not heal on its own. Based upon the testimony of Dr. Simonich and the evidence presented as a whole, the ALJ is convinced that the PFJ arthroplasty is more likely to ameliorate Claimant's ongoing pain and functional decline than is Dr. O'Brien's recommendation of performing additional injections and/or "living with pain." Accordingly, the ALJ finds the requested unicompartmental knee replacement reasonable and necessary.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* Claimant must prove that he is a covered employee who suffered an injury arising out of and in the course of employment. *Section 8-41-301(1), C.R.S.; See, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997*.* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968). In this case, Claimant has provided consistent statements to all medical providers. Accordingly, the ALJ concludes that his current reports of pain and dysfunction are reliable and persuasive. Moreover, based solely on the above referenced facts, the expert medical opinions of Dr. Simonich are more persuasive than the contrary opinions of Dr. O'Brien. While Dr. O'Brien's opinion that the introduction a rigid arthroscope operating under high pressure is likely to activate other areas of quiescent osteoarthritis in the knee is persuasive, the record supports that the requested PFJ arthroplasty is an open procedure directed to the specific areas of pathology in the knee negating those concerns. Indeed, Dr. O'Brien cites his opposition to the requested PFJ procedure on the basis that Claimant is too young, too heavy and without sufficient pathology to warrant the requested procedure.

C. In accordance with § 8-43-215, C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).*

Medical Benefits

D. A pre-existing condition "does not disqualify a claimant from receiving workers compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). To the contrary, a claimant may be compensated if his or her employment "aggravates, accelerates, or "combines with" a pre-existing infirmity or disease "to produce the disability and/or need for treatment for which workers' compensation is sought". *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo. App. 1981). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities and not the underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940).

E. While pain may represent a symptom from the aggravation of a pre-existing condition, the fact that Claimant may have experienced an onset of pain while performing job duties does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of the natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (August 18, 2005). As found in this case, the totality of the evidence presented persuades the ALJ that Claimant's current symptoms and need for treatment, i.e. a PFJ arthroplasty is causally related to a industrially based aggravation of a pre-existing osteoarthritic condition in the right knee. In so concluding, the undersigned ALJ rejects Dr. O'Brien's contrary opinions as unpursuasive.

F. Once a claimant has established the compensable nature of his/her work injury, as in this case, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable, necessary and related medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S*.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). However, Claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball, 172 Colo. 510, 474 P.2d 622 (1970); § 8-41-301(1)(c), C.R.S.* Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, *supra*. As found, Claimant has established that his need for PFJ arthroplasty is directly related to his compensable right knee injury. Nonetheless, the question of whether the PFJ arthroplasty is reasonable and necessary must be addressed.

G. The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). As found here, Claimant has proven by a preponderance of the evidence that the right PFJ arthroplasty is reasonable and necessary. The medical reports submitted outline persistent pain and functional decline in the face of failed conservative treatment leading Dr. Simonich to recommend surgery which he testified will be successful in reliving Claimant's pain and returning him to work. Dr. O'Brien agrees with this, but asserts that benefit will be short lived and the procedure will fail catastrophically within five years. While the ALJ concludes that such failure is possible, the ALJ finds Dr. O'Brien's opinion that the procedure will "100 percent" fail amounts to hyperbole as such opinion is not supported by the evidence presented, including the various published epidemiological studies cited by Dr. O'Brien and submitted into evidence. Taken in its entirety, the ALJ concludes that the evidentiary record contains substantial evidence to support a conclusion that the right knee PFJ arthroplasty is reasonable and necessary to cure and relieve Claimant of the ongoing effects of his September 6, 2014 industrial injury.

ORDER

It is therefore ordered that:

1. Respondents shall pay for all medical expenses, pursuant to the Workers' Compensation medical benefits fee schedule, to cure and relieve Claimant from the effects of his right knee injury, including the right knee PFJ arthroplasty as requested by Dr. Simonich

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 27, 2016

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

1. Determination of Claimant's average weekly wage (AWW).

2. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from 9/14/15 through 11/29/15 and from 12/4/15 through 12/6/15 at an increased AWW.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary partial disability (TPD) benefits.

4. Whether Claimant has established by a preponderance of the evidence an entitlement to a permanent partial disability (PPD) rating of 10% whole person.

STIPULATIONS

1. The issue of mileage reimbursement was withdrawn.

FINDINGS OF FACT

1. Claimant works for Employer as a janitor. On April 9, 2015 Claimant sustained an admitted injury to his right shoulder and arm.

2. At the time of his injury in addition to working for Employer, Claimant also worked as a janitor for Kohl's.

3. Prior to his injury, and from December 28, 2014 through April 4, 2015 Claimant earned a total of $2,957.88 in gross wages from Kohl's. These wages were earned during a 14 week period of time resulting in an average weekly wage from Kohl's of $211.27.

4. For Respondent Employer, Claimant was paid twice per month. In the three months prior to his work injury and from January 1, 2015 through March 31, 2015 Claimant earned gross wages of $4,374.75. These wages were over a 90 day period and amount to an average daily wage of $48.61 which multiplied by 7 days in the week provides an average weekly wage of $340.27.

5. Due to his injury, Claimant underwent an MRI of his right shoulder on July 24, 2015 that was interpreted by Eduardo Seda, M.D. Dr. Seda provided the

impression of supraspinatus and infraspinatus tendinosis and acromioclavicular osteoarthritis. *See* Exhibit 4.

6. On September 14, 2015 Claimant underwent right shoulder surgery performed by John Papilion, M.D. Dr. Papilion performed arthroscopic debridement of the superior labrum and partial thickness, bursal sided rotator cuff, arthroscopic subacromial decompression with release of the coracoacromial ligament, and arthroscopic distal clavical resection. *See* Exhibit B.

7. On September 22, 2015 Claimant was evaluated by Allison Hedien, NP. Claimant reported that he had not yet started physical therapy, that he was taking pain medications which helped, and that he was tolerating symptoms okay. Claimant had sharp pain in the upper right area of his neck and back, sharp pain in the upper right neck/arm area, joint swelling and joint stiffness. Claimant reported moderate neck pain and pain migrating to the upper back area. NP Hedien noted Claimant's activity status was no work. *See* Exhibit 3.

8. On September 24, 2015 Claimant was evaluated by Dr. Papilion. Dr. Papilion noted that Claimant had been in the sling and on the CPM machine and that his pain was under control. Dr. Papilion recommended getting Claimant into a course of physical therapy and provided work restrictions of no use of the right arm and noted that Claimant did not require pain medication and could wean out of the sling in the next 1-2 weeks. *See* Exhibit 3.

9. On October 6, 2015 Claimant was evaluated by NP Hedien. Claimant reported that his pain was improving, that he felt physical therapy was helpful, and that he was only taking Norco a few times at night. NP Hedien noted on examination tenderness in the AC joint, anterior shoulder, lateral shoulder, and posterior shoulder with limited range of motion in all planes. NP Hedien noted the plan was to continue physical therapy, use ice/head/meds as helpful, and continued the work restriction of no use of the right upper extremity. *See* Exhibit 3.

10. Claimant returned to work for Kohl's in mid October. Between October 18, 2015 and October 31, 2015 Claimant worked 59.07 hours. Claimant continued to work at Kohl's in November and December and continued to earn wages consistent with his AWW from Kohl's prior to his injury. Claimant testified credibly that he was able to work at Kohl's despite his work restrictions and that he was able to self-modify his duties. *See* Exhibit 5.

11. On December 3, 2015 Claimant was evaluated by Dr. Papilion. Claimant was noted to be three months post shoulder surgery with improvement in motion through therapy. Claimant reported continued pain with overhead use and difficulty with internal rotation. Dr. Papilion performed a subacromial injection. *See* Exhibit 3.

12. On February 2, 2016 Claimant underwent physical therapy with Angela Wilt, PT. PT Wilt noted that Claimant had continued signs of shoulder impingement and

that they had to modify therapy exercises due to pain complaints and scapular weakness. Claimant reported fatigue in the right shoulder/scapular at the end of the session. PT Wilt noted the follow up plan included a focus on scapular stabilization and strengthening. *See* Exhibit 3.

13. On February 23, 2016 Claimant underwent physical therapy with PT Wilt. Claimant reported he was not having any shoulder pain that day and that he sometimes had shoulder pain at work that comes and goes. PT Wilt noted range of motion deficits and that Claimant was making significant progress toward his goal of being pain free. *See* Exhibit C.

14. On February 25, 2016 Claimant underwent physical therapy with PT Wilt. Claimant reported having no shoulder pain for a couple of days. Claimant reported that repetitive movements increased his pain and that his shoulder was usually sore by the end of the work day. Claimant reported that he was unable to sleep on his right shoulder due to pain. PT Wilt noted that the goal status for pain was 90% achieved as Claimant still had occasional shoulder pain and soreness at the end of the work day. PT Wilt discharged Claimant from therapy services due to the anticipated goals and expected outcomes being achieved. PT Wilt noted that the goal of lifting trash bins weighing 20 pounds was 100% achieved, the goal of push/pull a mop was 100% achieved, the goal of push/pull carpet cleaner with 50 pounds of force was 100% achieved, that the goal of lifting 20 pounds overhead with the right arm was 100% achieved, and that the goal of repetitively lifting 5-10 pounds overhead was 100% achieved. PT Wilt in her evaluation noted that Claimant's impairment list included pain and a pinching feeling at OH end range, impaired joint mobility, impaired motor function, impaired muscle performance, and impaired range of motion. *See* Exhibit C.

15. On February 29, 2016 Claimant was evaluated by Eric Tentori, D.O. Dr. Tentori noted that the surgeon, Dr. Papilion, had indicated that there was nothing more to offer Claimant. Dr. Tentori reviewed the operative report from Dr. Papilion and also performed an examination of Claimant. Dr. Tentori noted that Claimant had well-healed arthroscopic surgical sites with no edema, minimal residual discomfort with palpation of a diffuse nature, and active range of motion deficits. Dr. Tentori noted that the neurovascular systems were grossly intact in the right upper extremity and that there was no significant crepitance with passive range of motion. Dr. Tentori placed Claimant at maximum medical improvement (MMI). Dr. Tentori performed an impairment rating pursuant to the AMA Guides to the Evaluation of Permanent Impairment. Dr. Tentori provided a 7% upper extremity impairment rating for right shoulder active range of motion deficits, a 10% upper extremity impairment rating for the distal clavicle resection, and combined the upper extremity ratings using the combined values chart to provide a total upper extremity rating of 16%. Dr. Tentori noted that, if applicable, according to Table 3 of the Guides, the 16% upper extremity rating would convert to a 10% whole person impairment rating. Dr. Tentori noted that no additional impairment rating was indicated. *See* Exhibits 3, B.

16. Dr. Tentori also placed Claimant on permanent work restrictions for Claimant’s bilateral upper extremities with a maximum lifting on an occasional basis limited to 25 pounds and a maximum pushing/pulling on an occasional basis limited to 30 pounds. For Claimant’s right upper extremity, Dr. Tentori placed Claimant on permanent work restrictions with a maximum lifting on an occasional basis limited to 5-10 pounds and with no work with the right upper extremity at or above right shoulder height. *See* Exhibits 3, B.

17. On March 7, 2016 Respondents filed a Final Admission of Liability (FAL). In the FAL they admitted to an AWW of $340.27. They also admitted to a scheduled impairment rating of 16% of body code 01. Respondents also admitted to TTD from 9/14/15 through 11/29/15 and from 12/4/15 through 12/6/15 at a rate of $226.85 per week. *See* Exhibit A.

18. Claimant testified credibly at hearing. Claimant missed time from work at both Kohl’s and Employer due to his surgery. Claimant continues to have pain in his right shoulder that interferes with sleeping, driving, and his work duties. Claimant’s right shoulder has pain that travels from his shoulder in three different points and goes up to his neck and back down. Claimant indicated in court the three main points of pain that he feels with use of his right shoulder. Claimant pointed to the front of his right shoulder, the side of his right shoulder, and the backside of his right shoulder leading to his neck. Claimant has pain and limitations from his shoulder injury that go into his neck and that are outside the glenohumeral joint.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance*

Co. v. Cline, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Scheduled Injury vs. Whole Person Impairment

Section 8-42-107, C.R.S., sets forth two different methods of compensating medical impairment. Subsection (2) provides a schedule of disabilities and subsection (8) provides for whole person ratings. The question of whether the Claimant sustained a whole person medical impairment compensable under § 8-42-107(8), C.R.S., is one of fact for determination by the ALJ. The application of the schedule depends upon the "situs of the functional impairment" rather than just the situs of the original work injury. *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996). Pain and discomfort which limit a Claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule. *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). Claimant bears the burden of establishing functional impairment beyond the arm at the shoulder and the consequent right to permanent partial disability benefits under § 8-42-107(8)(c), C.R.S., by a preponderance of the evidence. *Maestas v. American Furniture Warehouse,* W.C. No. 4-662-369 (June 5, 2007); *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005).

In this case Claimant's testimony, substantiated by the medical records, establish that the Claimant is entitled to a whole person medical impairment rating under § 8-42-107(8)(c), C.R.S. Claimant has established that he suffered a functional impairment to a part of the body that is not contained on the schedule of impairment and that his functional impairment extends beyond the "arm at the shoulder." The credible evidence shows that Claimant's shoulder joint itself is impaired. It does not function as it did before Claimant's work injury. Work activities and other activities of daily living cause pain in his arm, shoulder, shoulder joint, upper right back muscles, and cervical area such that he is unable or limited in his ability to engage in actions requiring overhead movement. His impairment has caused him to make adaptations in the performance of his work duties and activities including driving and sleeping. Claimant's testimony is credible and persuasive that he has pain and limitations over areas that are part of his upper right back and into his neck that are not limited to his arm at the shoulder. Claimant's continued pain and limitations in these areas are consistent with the areas shown on MRI to have tendinosis and are also consistent with the surgical procedure that was done and the later injection that was done. NP Hedien noted pain in the upper right area of Claimant's neck and back consistent with his testimony at hearing. PT Wilt noted scapular weakness and a plan to focus on scapular stabilization which is also consistent with Claimant's testimony at hearing. The MRI, the surgery, and the injection all showed indications that the injury was beyond the glenohumeral joint and support Claimant's continued pain and limitation to areas beyond the glenohumeral joint. Accordingly, the ALJ finds that Claimant has established by preponderant evidence that his impairment is not on the schedule of permanent impairments that he is entitled a rating of 10% whole person.

Average Weekly Wage

Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's AWW on her earnings at the time of injury. Under some circumstances, the ALJ may determine a claimant's TTD rate based upon her AWW on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Earnings from concurrent employment may be included in a claimant's AWW where the injury impairs earning capacity from such employment. *Jefferson County Schools v. Dragoo*, 765 P.2d 636 (Colo. App. 1988).

Claimant has established that earnings from his employment at Kohl's are properly included in the determination of his AWW. Claimant had loss of earning capacity from Kohl's due to his work injury. Claimant has established that his AWW from his concurrent employment at Kohl's was $211.27.

For Respondent Employer, Claimant was paid twice per month. In the three months prior to his work injury and from January 1, 2015 through March 31, 2015 Claimant earned gross wages of $4,374.75. These wages were over a 90 day period and amount to an average daily wage of $48.61 which multiplied by 7 days in the week provides an average weekly wage of $340.27. The objective of calculating AWW is to arrive at a fair approximation of Claimant's wage loss due to his injury. Here, in the months immediately preceding his injury, Claimant was earning the wages listed above. Although it is true that prior to January of 2015, Claimant's average gross pay was generally less over each pay period than it was after January of 2015, the wage records have established that Claimant was earning an average weekly wage of $340.27 at the time of his injury. The ALJ concludes that a fair approximation of Claimant's lost earning capacity includes the wages more close in time to his injury and a fair approximation would not include wages earned prior to January 1, 2015 when he was working fewer hours and making less money. At the time of his injury his average weekly wage for Respondent Employer was $340.27. Adding the AWW from his concurrent employment at Kohl’s results in an overall AWW at the time of his injury of $551.54.

Temporary Total Disability (TTD)

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*. TTD benefits shall continue until the employee returns to regular or modified employment. *See* § 8-42-105(3)(b), C.R.S.

Claimant is asking for an increase of TTD benefits due to his increased AWW. Claimant has established concurrent employment from Kohl’s and an entitlement to an increase in his overall AWW and thus the corresponding TTD benefits for the period of September 14, 2015 through October 17, 2015. Claimant’s testimony, substantiated by the medical records, establishes that he had shoulder surgery and was off work completely for a period of time following the surgery while he recovered and was in a sling. However, Claimant has failed to establish a continued entitlement to TTD benefits from October 18, 2015 through November 29, 2015 and has failed to establish an entitlement to TTD benefits from December 4, 2015 through December 6, 2015. TTD benefits continue until an employee returns to regular or modified employment. The wage records submitted show that Claimant returned to employment at Kohl’s and earned wages from October 18, 2015 through November 29, 2015 and from December 4, 2015 through December 6, 2015. Claimant failed to demonstrate an entitlement to TTD and an inability to resume his prior work during these periods of time. Although Claimant had restrictions and impairments that prevented him from working for Respondent Employer, he was still able to work for and earn wages from Kohl’s and therefore has not established that he was totally disabled from earning wages during these time periods. Thus, Claimant has failed to establish an entitlement to TTD benefits from October 18, 2015 through November 29, 2015 and from December 4, 2015 through December 6, 2015. Claimant has established an entitlement to TTD benefits based on the higher AWW of $551.54 for the period of time covering September 14, 2015 through October 17, 2015.

Temporary Partial Disability

Section 8-42-106, C.R.S. provides that in cases of temporary partial disability, the employee shall receive sixty-six and two-thirds percent of the difference between the employee's average weekly wage at the time of the injury and the employee's average weekly wage during the continuance of the temporary partial disability. Claimant has established an entitlement to TPD from October 18, 2015 through November 29, 2015 and from December 4, 2016 through December 6, 2016. During these periods of time Claimant was recovering from shoulder surgery and from a shoulder injection. Due to his injury, he had the loss/restriction of use of his injured shoulder/arm and had medical restrictions that made him unable to perform his regular employment with Respondent Employer. During this period of time, Claimant was able to work for Kohl's and so was able to earn his normal AWW from Kohl's. However, as he was impaired from earning wages from Respondent Employer, Claimant has established an entitlement to TPD and sixty-six and two-thirds percent of the difference between his AWW at the time of the injury and his AWW during the continuance of the TPD. Here, Claimant has established an entitlement to sixty-six and two-thirds percent of $340.27 (AWW at time of injury of $551.54 minus Kohl's AWW of $211.27 that he continued to earn) for the periods of time covering October 18, 2015 through November 29, 2015 and December 4, 2015 through December 6, 2015.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence an entitlement to a permanent partial disability rating of 10% whole person.

2. Claimant's average weekly wage is $551.54.

3. Claimant has established an entitlement to temporary total disability benefits from 9/14/15 through 10/17/15 at a rate of **$367.69** per week. (sixty-six and two-thirds percent of his AWW).

4. Claimant has established an entitlement to temporary partial disability benefits from 10/18/15 through 11/29/15 and from 12/4/15 from 12/6/15 at a rate of $226.85 per week. (sixty-six and two-thirds percent of the difference between his AWW at the time of the injury and the AWW during his TPD).

5. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 27, 2016

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-996-905-02**

ISSUES

The following issues were raised for consideration at hearing:

- Whether Claimant suffered a compensable acute injury and occupational disease.
- Whether Claimant is entitled to medical benefits if her claim is compensable;
- Identification of authorized treating providers; and
- Whether Claimant is entitled to temporary total disability benefits, beginning October 23, 2015, and ongoing.

PROCEDURAL STATUS

The Findings of Fact, Conclusions of Law, and Order were issued on October 11, 2016 and mailed on October 13, 2016. On October 20, 2016, Respondents filed a Request for Corrected Findings of Fact, Conclusions of Law, and Order. The undersigned ALJ[1] reviewed this request and finds good cause exists to issue a Corrected Order. A Corrected Order was issued on October 21, 2016.

Respondents requested a Second Corrected Findings of Fact, Conclusions of Law, and Order to reflect the correct TTD rate in the Order section. Good cause exists to issue a Corrected Order, pursuant to §8-43-302(1)(a), C.R.S.

STIPULATIONS

1. The parties stipulated to an average weekly wage of $879.97. The Court accepted the stipulation. Claimant's TTD rate is $586.65.

2. Unemployment benefits were received by Claimant, and the parties stipulate that an offset is appropriate, should there be an award of temporary benefits. The specific amount of unemployment benefits were unknown, and the parties will endeavor to come to an agreement regarding offset, but reserve the issue of the amount of offset for future determination if necessary.

[1] As ALJ Broniak left the Office of Administrative Courts, the Request for Corrected Findings of Fact, Conclusions of Law, and Order was reviewed by the undersigned.

FINDINGS OF FACT

1. Claimant is a 44 year old woman who was working as a production worker for the Employer when she asserts she developed right hand pain and discomfort. Claimant is right hand dominant.

2. On September 14, 2015, Claimant reported to the Employer that she started feeling slight discomfort and pain in her right thumb, hand, and wrist during her work shifts. Claimant testified that her onset was August 6, 2015. In her prior interrogatory responses, Claimant asserted an onset date of September 17, 2015.

3. Claimant began working for the Employer in mid-January 2015, and was engaged in preparing the interiors of wind turbine blades manufactured and sold by the Employer.

4. At the time of onset, Claimant worked in the Blades Assembly department. She worked with a team to create large fiberglass parts to be later assembled into blades for electric windmills. Details of her duties in that position were discussed at hearing. Photographs were used to illustrate the process. The blade parts are very large. Claimant and those she worked with would use a large mold to create the various parts. The parts were designated alphabetically, and fit together when completed to become the inside of a windmill blade, later covered with a shell.

5. Claimant testified that she normally worked on the "B" mold, which is an upside down "U" shaped. First, a layer of plastic is laid on the mold to assist with later removal of the fiberglass blade part. Layers of fiberglass biax, similar to fabric, are then laid upon the mold one layer at a time. *(examples of fabric biax and scissors shown at hearing and photos of same provided as supplemental Exhibits W-Y)* The fiberglass biax came pre-sized in rolls in "kits" with additional fabric available for use as needed. 8 layers were laid at 5 minutes per layer, and pushed and tucked into place. Each layer was placed over the mold by rolling out the biax fabric and trimmed with scissors as appropriate for each layer. Claimant testified that she used only manual scissors for cutting, which weighed about 1 pound, and were provided for viewing at the hearing. Claimant trimmed approximately 11 meters per day, 5-10 minutes per cut. After all fiberglass layers are in place, a bag is placed over the molded fabric, and air is removed with a vacuum process. Resin is then infused into the fabric. Claimant or another worker carried the buckets of resin to the mold one at a time as the buckets were emptied in the infusion process, 4-5 times per 12 hour shift, 100 feet, comprised of 3 buckets of 20 kilos, 1 of 15 kilos, and 1 of 10 kilos, with breaks in between carrying as dictated by when buckets need to be replaced.

6. Claimant testified that the infusion process took about two hours. A sleeping-bag type of cover is then rolled over the fiberglass blade part on the mold. The fiberglass blade part is then cured. Once cured, the mold was debagged, using hand grip up to 30-60 minutes per shift. When assembly of one part on the mold was completed and infusion began, Claimant would proceed with debagging and finishing another fiberglass part.

7. Claimant testified that she worked 12 hour shifts and 1 ¼ to 1 ½ fiberglass parts were completed by her crew per shift.

8. Claimant credibly testified that she began experiencing pain in her right arm in late spring to her right arm but continued to full-time work.

9. Claimant credibly testified that during the week of August 3, 2015, she spoke twice to her supervisor Jared Becker, telling him she was suffering severe pain in her right arm. When the Claimant was not referred for medical treatment, she sought medical attention from her primary treating doctor, Dr. Sonya Norman, who referred her to Dr. David A. Chavez.

10. A note dated August 26, 2015 from Dr. Chavez documents complaints of left rotator cuff tendinitis and right de Quervains, stating that the pain was "from lifting blades" and had a two-month duration at that point. Dr. Chavez performed an injection which Claimant reported had helped. She stated that her pain had returned after the holiday (Labor Day holiday).

11. Following reporting her injury, and during the month of August, Mr. Becker move the Claimant to "carbon" with regular duty, twelve hours a day. This position required measuring then cutting carbon pieces by manually operating scissors. She then stacked the pieces throughout the day.

12. Claimant was then moved to the "Assembly" section. Work in "Assembly" involved sanding throughout the twelve hour shift, using a hand sander and not automatic electric sanding machines to remove glue applied. The Employer determined that the electric sanding machines would create deformities in the glue on top of the web. In addition, the Claimant was using a hand tool to screw in scrivets.

13. After reporting her claim in writing as work related on September 14, 2015, Claimant was referred to Peak Form Professional, LLC on that same date. The treatment note indicates, "Patient has noted pain in her right wrist forearm and hand slowly developing over the past 3-4 months getting worse in August and really hurting her last week when she went to see her PCP."

14. Claimant saw Dr. Craig Davis on October 14, 2015. His report states, "In early August she developed fairly rapid onset of pain over the radial aspect of her right wrist." He noted that Claimant reported the symptoms to her supervisor but was discouraged from filing a claim. Claimant reported severe activity-related pain and a "grinding" sensation over the dorsal radial aspect of her distal forearm. On physical examination, Dr. Davis observed swelling, he noted tenderness to palpation over the distal forearm, and extreme response to Finkelstein's test, and crepitation. Dr. Davis's impression was intersection syndrome of the right distal forearm. He provided an injection of lidocaine and Depo-Medrol.

15. Claimant reported on October 26, 2015 that the injection only helped a little bit in terms of tenderness, but not in terms of activity related pain, which was

unchanged. Another injection was done, she was provided with a brace, topical cream, tramadol and physical therapy.

16. On October 23, 2015, Dr. Carol Ramsey at Peak Performance determined that Claimant could no longer work. On October 27, 2015, Claimant was placed on modified duty that severely limited the use of her right arm. She was also restricted to working eight-hour shifts.

17. Claimant has not worked since October 23, 2015. The Employer did not offer her modified duty after October 23, 2015, and Claimant's position was eventually terminated in July 2016.

18. On November 9, 2015, Dr. X.J. Ethan Moses stated that he had assumed treatment of Claimant after Dr. Ramsey departed from Peak Performance. As the authorized treating physician, he stated, "It appears clear from the notes that there was no specific injury, but rather an insidious onset of pain as the result of repetitive motions." He recommended a work-site evaluation.

19. On November 23, 2015, Dr. Moses discussed his review of the job task analysis with Claimant. Following that discussion and review, his assessment was, "right forearm intersection syndrome with associated swelling and pain, not compensable under the Colorado Division of Workers' Compensation Medical Treatment Guidelines, Rule 17, Exhibit 5." ("Guidelines"). Dr. Moses encouraged Claimant to establish care for her right arm symptoms with her primary care physician.

20. The job duties analysis was performed by Jeanette Hrubes of Peak Form Physical Therapy and Occupational Medicine. The initial analysis was done on November 20, 2015. An addendum was done on February 23, 2016. Ms. Hrubes noted, "Initial job task analysis was performed 11/20/15. Second job task analysis was performed with Sonia Huerta present to make sure that all tasks that she performed during her shifts were captured accurately. There were several additional tasks noted, that were not captured in the first analysis. These will be bolded to assist in identification."

21. Claimant testified that she felt that the job analysis done did not accurately reflect her duties. Specifically, she discussed carrying buckets of resin, gripping to take finished blade forms off molds, cutting hard resin, and the use of manual scissors.

22. Ms. Hrubes testified that during the second job duties evaluation, Claimant was present, and was provided the opportunity to explain her duties. Ms. Hrubes discussed her observations with Claimant in a meeting after Ms. Hrubes watched employees perform Claimant's usual job duties. In the revised job analysis, carrying buckets, gripping, cutting resin, and use of manual scissors were included. Using the threshold standards of the Guidelines, Ms. Hrubes concluded that there were no duties that met either primary or secondary risk factors, including additional duties discussed with Claimant and included in her revised report.

23. Claimant testified that the employees Ms. Hrubes observed did not perform the tasks in the same way that Claimant performed them. She did not use electric scissors as none were available to her; she manually carried the resin buckets rather than using a cart; and she and her co-workers manually lifted the blades rather than having a crane for assistance. In addition, Claimant explained that she held her scissors at a 90-degree angle while cutting in awkward position, and at times, above her head whereas Ms. Hrubes documented use of scissors at an even level.

24. Dr. Moses saw Claimant again on January 5, 2016. His notes indicate that he worked with Claimant to appeal her short term disability denial and to make clear that he felt her condition was not work related. He discussed reviewing the updated job analysis and his continued conclusion that Claimant did not experience a work-related injury.

25. Claimant testified that she has continued treatment with her personal providers, including Dr. Leo, and that he has continued to give her work restrictions.

26. Dr. Allison Fall evaluated Claimant on March 1, 2016. She testified at hearing and was qualified as an expert in physical medicine and rehabilitation and causation under the Cumulative Trauma Conditions Medical Treatment Guidelines. Dr. Fall discussed the history with Claimant. She reviewed the medical records, including the revised job analysis. She listened to Claimant's testimony. Her conclusion after considering all of these facts was that Claimant has not experienced either an acute injury or an occupational disease. Dr. Fall testified that diagnosis in this case was questionable. Her possible diagnosis was 1) right distal forearm pain, possible wrist extensor tenosynovitis versus intersection syndrome based upon medical records, and 2) Psychological issues likely playing a role in persistent symptomology. Dr. Fall explained that she felt that the diagnosis at #1 were a more specific types of extensor tendon disorder of the wrist. Dr. Fall noted that, although Claimant had stopped working for the employer in October of 2015, her complaints continued at the time of her March 1, 2016 evaluation. She testified that this further indicated to her that Claimant's condition was not work related. Claimant, however, testified that her symptoms have improved since she stopped working.

27. Dr. Fall explained that, as a medical professional, she relies upon the Guidelines in her analysis of cumulative trauma causation. She explained the time and expertise that has gone into the creation of the causation guidelines and the algorithmic steps for causation assessment contained in the Guidelines. The thresholds of the primary and secondary risks factors have been established using evidenced based medical studies. Dr. Fall testified that these are guidelines, and there are situations where a medical professional could choose not use them. She testified that this is not a case that she felt would warrant deviation from the causation analysis process recommended by the Guidelines.

28. Claimant has proven that she suffered a compensable occupational disease. The ALJ is persuaded by Claimant's testimony concerning her job duties and

that her job duties brought on her symptoms. The opinions of Dr. Fall and Dr. Moses are rejected.

29. The Claimant has proven that the Employer failed to provide her with a list of authorized providers after she initially reported the injury to her supervisor. She elected to see Dr. Norman who referred her to Dr. Chavez. Thereafter, the Employer referred the Claimant to Peak Performance where she received treatment with Dr. Ramsey and Dr. Moses. Dr. Moses referred Claimant back to her primary care physician for non-medical reasons (he opined her injury was not work-related so he discharged her from care). Dr. Chavez then referred Claimant to Dr. John Mangelson.

CONCLUSIONS OF LAW

General

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with employer. *Section 8-41-301(1)(b), C.R.S.; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where Claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991).

Compensability

"Occupational disease" is defined by §8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond that required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The existence of a preexisting condition does not defeat a claim for an occupational disease. *Id.* A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.* Once claimant makes such a showing, the burden shifts to respondents to establish both the existence of a non-industrial cause and the extent of its contribution to the occupational disease. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

As a matter of law, medical evidence is not required to establish causation, although it is a factor that may be considered in addressing that determination. See *Savio House v. Dennis,* 665 P.2d 141 (Colo. App. 1983).

The Colorado Division of Workers' Compensation has adopted the Guidelines for use by medical providers rendering treatment under the Workers' Compensation Act. They were established by the Director pursuant to an express grant of statutory authority found at § 8-42-101(3.5)(a)(II), C.R.S.

In this case, the Respondents urge the ALJ to rely upon the opinions of Dr. Fall and Dr. Moses because they applied the Guidelines to conclude that Claimant is not suffering from an occupational disease. However, as specifically found in § 8-43-201(3), C.R.S., the ALJ is not required to use the Guidelines as the as "the sole basis" for determining whether treatment is reasonable, necessary or related to an occupational disease. Furthermore, in *Hall v. Industrial Claim Appeals office*, 74 P.3d 459 (Colo. App. 2003) the Court noted that the Guidelines are to be used by health care practitioners when furnishing medical aid under the Act. See §8-42-101(3)(b), C.R.S. 2008.

The Guidelines further state that treatment for a work-related condition is covered when the work exposure causes the activation of a previously asymptomatic or latent medical condition or the work exposure combines with, accelerates or aggravates a pre-existing symptomatic condition.

Based on the persuasive and credible evidence, the Claimant has proven by a preponderance of the evidence that her job duties caused her to develop a new condition or caused an aggravation of a pre-existing latent condition. At this point, Claimant has had three different diagnoses for her right arm symptoms, thus whether intersection syndrome, de Quervain's syndrome or wrist extensor tenosynovitis, the ALJ finds and concludes that such condition was brought on by Claimant's work duties. Claimant credibly explained her job duties and the required use of her hands while performing them. The ALJ credits Claimant's testimony that the job duties evaluation did not accurately reflect the manner in which she performed her job.

In addition, the findings on physical examination during medical appointments established Claimant's need for treatment. Specifically, Dr. Davis noted that the Claimant was extremely tender over the intersection area near the distal forearm and does have some crepitation with range of motion of her thumb. He also stated that she continued to have severe activity related pain and a grinding sensation over the dorsal radial aspect of her distal forearm. Dr. Fall also agreed that Claimant is suffering from some condition in the right forearm. Dr. Fall just believes it is not work-related.

Authorized Provider

After the Claimant reported her injury to her supervisor in early August 2015 she was not referred for medical care by the employer "in the first instance". Section 8-43-404(5), C.R.S. She thereafter sought the medical attention from her primary care physician, Dr. Norman, who referred her to Dr. Chavez. Because of the Employer's failure to comply with § 8-43-404(5), C.R.S., Drs., Chavez and Norman are authorized treating providers. The Respondents thereafter referred the Claimant to Peak Performance where she saw Drs. Ramsey and Moses. Dr. Ramsey referred the Claimant to Dr. Davis. After concluding that Claimant did not suffer a work-related injury, Dr. Moses referred Claimant back to her primary care physician. Claimant returned to Dr. Chavez who then referred the Claimant to Dr. Mangelson. In light of the foregoing, the following are the Claimant's ATPs: Drs. Norman, Chavez, Moses, Davis, Ramsey and Mangleson.

Medical Benefits

Respondents are obligated to provide medical benefits to cure or relieve the effects of the industrial injury. Section 8-42-101(1), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Respondents, however, retain the right to dispute liability for specific medical treatment on grounds the treatment is not authorized or reasonably necessary to cure or relieve the effects of the industrial injury. *See Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Williams v. Industrial Commission*, 723 P.2d 749 (Colo. App. 1986). The Claimant is entitled to medical treatment to cure and relieve her of the effects of her right forearm condition whether diagnosed as intersection syndrome, de Quervain's syndrome or wrist extensor tenosynovitis.

Temporary Total Disability

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

Claimant has proven that her compensable occupational disease caused or contributed to her wage loss beginning on October 23, 2015. Claimant's authorized treating physician restricted Claimant to "no work" beginning on October 23, 2015, then released to her restricted duty effective October 27, 2015. The Employer did not offer Claimant modified duty work after October 23, 2015, and Claimant has not returned to work. The parties agreed that Claimant received some unemployment insurance benefits and that the Respondents would be entitled to an offset in an amount to be determined.

ORDER

It is therefore ordered that:

1. The Claimant suffered an occupational disease of the right forearm in the course and scope of her employment with the Employer.

2. The Claimant's medical treatment with Drs. Norman, Chavez, Moses, Ramsey, Mangleson, and Davis is authorized.

3. The Claimant is entitled to medical benefits to cure and relieve her of the effects of her work-related occupational disease.

4. The Claimant is entitled to TTD benefits commencing her last day worked on October 23, 2015, ongoing, payable at the TTD rate of $586.65 pursuant to the stipulated AWW of $879.97, subject to unemployment benefits offset.

5. The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable injury to her back on August 10, 2015.

2. Whether Claimant has established by a preponderance of the evidence that she is entitled to a general award of reasonable and necessary medical benefits.

FINDINGS OF FACT

1. Claimant is employed by Employer as a store manager at a McDonald's location. Claimant's general duties include scheduling employees, training employees, ordering and inventory, and performing other duties as needed.

2. Claimant's typical work week involves six days of work, working approximately 9-10 hours per day. Claimant regularly takes on other duties when the restaurant is short staffed.

3. On August 10, 2015 the restaurant was short staffed. Between approximately 5:00 and 5:30 p.m. a delivery of frozen food arrived. The food needed to be put into the freezer and with no one there to put it away, Claimant began carrying the cases of food to the freezer.

4. While carrying the cases, Claimant felt something in her back pull and felt a sharp pain that caused her to lean to the left. Claimant completed her work shift and walked home, but was leaning to the left during her walk.

5. The next day Claimant was scheduled for a work meeting, but had difficulty getting out of bed due to her severe back pain. Claimant did not attend the work meeting and went to the doctor for evaluation.

6. Claimant had previously experienced back pain but never to a degree as severe as what she felt the morning of August 11, 2015. Claimant had never missed work before due to back pain and had never received prior back treatment or pain medicine for her back.

7. On August 11, 2015 Claimant was evaluated at Clinica Colorado by James Williams, M.D. On the report, Dr. Williams noted chief complaint of abdominal pain, but also noted that Claimant had come in for left lower back pain. Dr. Williams also noted that Claimant had left low back pain intermittently for 2 months, that she worked at McDonalds, and that she had severe pain in the left lower back and down the left leg to her ankle for three days. On examination Claimant sat leaning back on her

left hand and was very tender at the midline and left sciatic notch. Dr. Williams assessed: back pain, left sciatica, rule out disc disease; and gastritis. Dr. Williams prescribed prednisone and vicodin and wrote a note taking Claimant off work for one week. *See* Exhibits E, 4.

8. On August 18, 2015 Claimant was evaluated by Dr. Williams. Dr. Williams noted the chief complaint was: recheck leg pain. Claimant reported feeling slightly better. On examination Claimant was in much less pain, but had pain all the way to her toes on the left. Claimant had more tenderness in the left sciatic notch and less in the midline. Claimant was prescribed tramadol and was taken off work until August 26, 2015. *See* Exhibits E, 4.

9. On September 3, 2015 Claimant was evaluated by Dr. Williams. Dr. Williams noted that Claimant had severe pain now for 3.5 weeks and was not getting better in spite of bed rest and minimal activity. Dr. Williams noted the pain went down her low back into her left leg and that she moved very slowly and cautiously. Dr. Williams continued to assess back pain, left sciatica, and rule out disc disease. Dr. Williams referred Claimant for an MRI of the lumbar spine and took Claimant off work until September 15, 2015. *See* Exhibits E, 4.

10. On September 4, 2015 Claimant underwent an MRI of her lumbar spine interpreted by Sean Bryant, M.D. Dr. Bryant's impression was L4-L5 large disc extrusion and severe thecal sac narrowing. Dr. Bryant noted that there was multilevel mild facet osteoarthritis. *See* Exhibits E, 7.

11. On September 14, 2015 Claimant was evaluated by Dr. Williams. Dr. Williams reviewed the large central disc with compression shown by MRI. Dr. Williams noted that Claimant was still in significant pain with walking and was tender in the low mid back and on the left thigh adductor tendon. Dr. Williams assessed large L4-L5 midline herniated disc and left thigh adductor tendonitis. Dr. Williams recommended Claimant rest the left thigh as much as possible and opined that it was inflamed from sitting and walking abnormally. Dr. Williams noted that Claimant would apply for Medicaid and would try to arrange a surgery consultation. *See* Exhibits E, 4.

12. On November 9, 2015 Claimant was evaluated by Dr. Williams. Claimant was noted to have less left leg pain. Dr. Williams noted that Claimant had severe family stress with her mom just having a below the knee amputation for diabetic neuropathy. Dr. Williams noted that Claimant moved with pain, he continued prescription medications, and provided a note taking Claimant off work until December 15, 2015. Dr. Williams noted that Claimant needed to put off her medical issues to stabilizer her mom. *See* Exhibits E, 4.

13. On November 17, 2015 Claimant was evaluated by Dr. Williams. Claimant reported that her pain was less with use of Gabapentin but that it was now going down both legs. Dr. Williams noted Claimant was walking fairly normal. Dr. Williams assessed essential hypertension and herniated L4-5 disc. *See* Exhibits E, 4.

14. On December 14, 2015 Claimant was evaluated by Dr. Williams. Dr. Williams noted that Claimant was now 4 months with the herniated disc and that she was feeling better. Claimant reported no pain in her legs but that her back was weak and tired easily. Dr. Williams assessed herniated L5-5 disc and provided a note that Claimant could return to work on February 15, 2016. Dr. Williams continued the tramadol prescription and instructed Claimant to begin more activity to strengthen the back and legs. *See* Exhibits E, 4.

15. On March 28, 2016 Respondents submitted a letter to Dr. Williams asking questions surrounding Claimant's maximum medical improvement date, relatedness of her symptoms to a work injury, ability to return to work full duty, and impairment rating. On March 30, 2016 Dr. Williams hand wrote the following response: "I am not a workers comp doctor and do not do disability evaluations. Therefore, I cannot answer these questions. My last visit with Pamela was 12/14/15." *See* Exhibits E, 4.

16. On April 8, 2016 Claimant underwent an independent medical examination performed by John Raschbacher, M.D. Claimant reported that her symptoms were getting worse and that she was no better with use of Gabapentin. Claimant reported that at the leg she might have had a little bit of improvement, but had no improvement in her back symptoms. Claimant reported that the week prior to the alleged injury on a Wednesday, she told her supervisor she hurt herself and had low back pain and trouble with walking and strength. Claimant reported that on August 10, 2015 she had a little bit of pain before it worsened and really flared up. Dr. Raschbacher noted on examination that Claimant was very obese, and that she had had non physiologic presentation. *See* Exhibits D, 5.

17. Dr. Raschbacher opined that he was unable to explain the degree of Claimant's symptomatology and her presentation with quite reduced active range of motion based on the radiographic findings. He opined that it was reasonable to conclude, medically, that the disc extrusion and herniated disc was likely caused by work-related activities. However, he noted that individuals can and frequently do sustain disc herniation in the complete absence of any causative factor. Dr. Raschbacher also opined that her current complaints were not substantiated by the September 2015 MRI findings and that even if she had a symptomatic disc, her range of motion and strength testing were non physiologic. Dr. Raschbacher opined that Claimant's pain behaviors were fairly remarkable and therefore precluded the use of her subjective complaints as a good basis to rely upon. *See* Exhibits D, 5.

18. Dr. Raschbacher recommended repeating the lumbar MRI and noted that he could make further comment depending on what the MRI showed. He opined that given the left lower extremity symptomatology, there should be an attempt to determine whether or not the disc protrusion was symptomatic and thus also recommended bilateral lower extremity EMG nerve conduction studies. He also opined that further comments could be made after the testing with respect to treatment recommendations, maximum medical impairment, impairment rating, etc. *See* Exhibits D, 5.

19. On June 22, 2016 Claimant underwent an MRI of her lumbar spine that was interpreted by Michael Bennett, M.D. The impression was: resolved disc extrusion and central stenosis at L4-5; and unchanged mild lateral recess and foraminal narrowing at L4-5 and right L5-S1. *See* Exhibits F, 7.

20. On August 10, 2016 Claimant underwent an independent medical examination performed by John Hughes, M.D. Claimant reported the gradual onset of low back pain for a couple of months prior to August 10, 2015. Claimant reported that on August 10, 2015 a shipment of frozen food arrived and needed to be carried to the freezer. Claimant reported while carrying a box weighing 35-45 pounds she felt that something pulled and had increased low back pain and the onset of radiating pain into her left leg. Claimant reported that she continued to have burning quality low back pain that was worse at the end of the day and that the low back pain radiated into her left leg, that she had diffuse numbness in her left leg, and that her left leg was weak. *See* Exhibit 6.

21. Dr. Hughes assessed: lumbar spine sprain/strain with development of an L4-L5 disc extrusion, resolved by MRI criteria by June 22, 2016; persistence of facet joint arthropathy, secondary to the lumbar spine sprain/strain, rule out left lower extremity radiculopathy; and deconditioning and obesity. Dr. Hughes opined that Claimant sustained the lumbar spine injuries on August 10, 2015 and had a rather significant change in her symptoms. Dr. Hughes opined that it was probable that Claimant sustained an acute disc extrusion as a result of her work activities. Dr. Hughes opined that Claimant still had left lower extremity symptoms despite the disc extrusion resolving and that Claimant was not yet at maximum medical improvement pending left lower extremity EMG and nerve conduction studies to assess radiculopathy. *See* Exhibit 6.

22. Dr. Raschbacher testified at hearing. Dr. Raschbacher noted that Claimant's subjective complaints of pain were inexplicable. Dr. Raschbacher noted that Claimant's June 2016 MRI showed that the disc herniation had resolved and was gone yet Claimant continued to have significant subjective symptoms. Dr. Raschbacher opined that Claimant's complaints did not match his examination findings, the radiological findings of the MRI scan, and that her complaints were non-physiologic. Dr. Raschbacher opined that initially he thought Claimant's explanation of work injury might have reasonably caused her back pain, but that he had changed his opinion based on the inconsistencies and non-physiologic pain complaints. Dr. Raschbacher noted the same pain complaints reported by Claimant when she had the disc herniation and when the herniation had resolved. Dr. Raschbacher also noted inconsistencies in the reported date of injury and mechanism of injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that at the time of the alleged injury she was performing service arising out of and in the course of the employment, and that the alleged injury was proximately caused by the performance of such service. *See* § 8-41-301(1)(b) & (c), C.R.S. The Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." *See* § 8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-

650-711 (ICAO February 15, 2007). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has met her burden of proof to establish that she suffered a compensable injury to her back on August 10, 2015. The ALJ finds credible that on that date, while working, Claimant had severe sharp back pain while unloading frozen food products. Although Claimant had prior back pain, she sustained an acute onset of severe pain on August 10, 2015 that caused her to begin missing work. Claimant had previously worked 50-60 hours per week without issue performing all her normal job duties and functions. After August 10, 2015 and this acute onset of severe pain, Claimant was unable to continue performing her job duties. The acute onset of severe pain is also supported by MRI findings showing a herniation.

Claimant is credible in describing the incident and acute onset of severe pain and has established, more likely than not, that she sustained a compensable injury on August 10, 2015. The opinion of Dr. Hughes is found credible and persuasive. The opinion of Dr. Raschbacher is not found as credible or persuasive. Dr. Raschbacher pointed out inconsistencies in the date of injury reported. However, the ALJ finds it credible and persuasive that although Claimant had some pre-existing low back pain, she had a specific incident causing severe pain while at work on August 10, 2015. This caused her to seek back treatment the following day, to stop working her normal 50-60 hour per week schedule, and to begin medications. Claimant had previously been able to work significant hours in a demanding position and had never previously been treated or medicated for her lower back. Dr. Raschbacher also pointed out discrepancies in the subjective symptoms Claimant has continued to report at this time despite the MRI showing that the herniation had resolved. However, Claimant has initially established that she sustained a compensable injury and is entitled to a general award of medical treatment and benefits. Whether she still has a need for treatment as the herniation has resolved is an issue for future determination. Claimant is found credible in describing the acute injury and has established, more likely than not, that an acute injury was sustained.

Medical Treatment

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). As Claimant has established that she sustained a compensable work injury, she has established an entitlement to reasonable and necessary medical treatment for her injury. The issue of whether any specific treatment is reasonable or necessary was not before the ALJ. Therefore, the ALJ provides a general award of medical benefits and Respondents retain the right to contest any specific treatment recommendations going forward.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that she sustained a compensable injury to her lower back on August 10, 2015.

2. Claimant is entitled to medical treatment that is reasonable and necessary to cure and relieve the effects of her injury.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 27, 2016,

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge

Denver, CO 80203

ISSUES

1. Is the DIME's finding that Claimant is not at MMI barred or otherwise limited by the doctrines of issue preclusion, claim preclusion and/or law of the case based on ALJ Lamphere's February 3, 2016 Final Order?

2. If the answer to the first question is no, has Respondent overcome the DIME on the issue of MMI by clear and convincing evidence?

3. Is the left elbow transposition revision surgery reasonable and necessary treatment for the admitted industrial injury?

FINDINGS OF FACT

1. Claimant was employed as an Automotive and Diesel Vehicle Technician for Employer for over 21 years. His job duties included repair and maintenance of over-the-road and local delivery trucks. Claimant sustained admitted injuries to his bilateral upper extremities on April 30, 2010, while performing maintenance work on a vehicle.

2. Claimant's injuries lead to a lengthy course of treatment involving conservative measures and surgical intervention. In the course of this claim, Claimant has undergone the following surgical procedures:

- 12/9/10: right shoulder subacromial decompression/distal clavicle resection
- 7/7/11: left shoulder subacromial decompression/distal clavicle resection
- 7/7/11: left elbow ulnar neurolysis/elbow debridement
- 3/6/12: right elbow ulnar neurolysis
- 3/6/12: right carpal tunnel release
- 2/7/14: right elbow epicondylar debridement/ulnar nerve revision

3. Claimant initially presented to Concentra on April 30, 2010, complaining of shoulder and elbow symptoms. Claimant described pain in both shoulders attributable to his job duties, which included repetitive lifting, use of upper extremities, and overhead work. Claimant also described pain in his bilateral elbows, at a level of 6/10. Dr. Suzanne Malis assessed shoulder impingement and bilateral epicondylitis due to cumulative trauma.

4. Claimant subsequently obtained a change of physician to Dr. Dallenbach, who has been the primary ATP since July 8, 2010.

5. In the early portion of his claim, treatment was primarily focused on Claimant's bilateral shoulders. Claimant saw Dr. Weinstein, an orthopedic surgeon, on

July 26, 2010, who diagnosed bilateral rotator cuff tendinitis, bilateral acromioclavicular joint inflammation, and right elbow lateral epicondylitis. Dr. Weinstein recommended a right shoulder arthroscopic subacromial decompression and a distal clavicle resection. He also proposed a steroid injection to the right elbow.

6. Dr. Weinstein subsequently diagnosed left lateral epicondylitis and provided a steroid injection to the left elbow on August 30, 2010.

7. Dr. Weinstein performed right shoulder surgery on December 9, 2010.

8. On March 28, 2011, Claimant's saw Dr. Jutta Worwag for an independent medical examination (IME) at the Respondent's request. Dr. Worwag opined that Claimant's bilateral shoulder and bilateral elbow diagnoses were causally related to his work for the Employer. Dr. Worwag concluded that Claimant was at maximum medical improvement (MMI) for the right shoulder and bilateral elbows. She opined "there is no reasonable expectation that any surgical intervention with respect to the elbows would lead to any meaningful lasting functional gains."

9. On April 19, 2011, Claimant underwent bilateral EMG and nerve conduction studies of the upper extremities with Dr. Griffis. The electrodiagnostic testing showed bilateral moderately severe cubital tunnel syndrome. Dr. Griffis recommended cubital tunnel injections. If the symptoms persisted, he recommended that Claimant consider a cubital tunnel release.

10. Claimant started treating with Dr. Karl Larsen, an orthopedic surgeon, on May 23, 2011. Dr. Larsen diagnosed bilateral cubital tunnel syndrome and bilateral epicondylitis. Dr. Larsen recommended a left lateral tennis elbow debridement and left ulnar release surgery. Dr. Larsen advised Claimant that while surgery was an option for the lateral epicondylitis, it was "not a guaranteed success, and the recovery from this [could] be lengthy and incomplete." Regarding the right elbow, Dr. Larsen recommended cubital tunnel decompression, so his condition did not progress to something more chronic.

11. On July 7, 2011, Claimant underwent left shoulder arthroscopic subacromial decompression and left arthroscopic distal clavicle resection surgery performed by Dr. Weinstein. During the same surgery, Dr. Larsen performed a left elbow cubital tunnel release and left elbow lateral upper condyle debridement.

12. Claimant returned to Dr. Larsen on December 19, 2011, and described complete relief as a result of the left ulnar surgery. But Claimant continued to complain of occasional pain over the left lateral elbow with gripping and grasping. Dr. Larsen noted that Claimant "still needs to consider cubital . . . tunnel release[] on the right side but is not quite ready to do so from a recovery perspective on the left side.

13. Six weeks later Claimant returned to Dr. Larsen, who noted that Claimant was recovering "relatively well" on the left side. He indicated that Claimant was ready to proceed with the right elbow surgery. Claimant ultimately underwent right in-situ ulnar neurolysis on March 6, 2012.

14. Dr. Worwag performed a second IME on May 10, 2012. At that time, Claimant rated his pain as 7/10. His symptoms included “both shoulders pain, both elbows postop pain, right hand postop pain.” Dr. Worwag reiterated that Claimant’s bilateral shoulder and bilateral elbow symptoms were related to his work for the Employer. Dr. Worwag noted that despite numerous surgical interventions, Claimant had not experienced any significant change in his functional status.

15. Dr. Dallenbach placed Claimant at MMI on June 25, 2012.

16. Claimant returned to see Dr. Larsen on December 5, 2012. Claimant described persistent right lateral elbow pain, similar to the pain on the left side for which he had surgery. Claimant described difficulty with gripping and grasping activities. As Claimant’s persistent symptoms were unacceptable to him, Dr. Larsen noted he could proceed with additional surgery for his right elbow pain, which would be scheduled on receipt of authorization.

17. Dr. Worwag completed a record review concerning Dr. Larsen’s request for right lateral upper condyle surgery. Dr. Worwag cited the Colorado Medical Treatment Guidelines (MTGs) and opined that the surgeon and the patient should clearly define expected functional gains when evaluating the appropriateness of surgery. Dr. Worwag noted that the Claimant had not returned to work or otherwise demonstrated significant functional improvement as a result of his previous surgeries. Dr. Worwag believed there was little reason to expect any significant improvement as a result of the proposed right elbow surgery.

18. Claimant underwent a Division Independent Medical Examination (DIME) with Dr. Thomas Higginbotham on January 14, 2013. The DIME disagreed with Dr. Worwag’s characterization of Claimant’s clinical responses to treatment. He opined that the surgery proposed by Dr. Larsen was reasonable and necessary, and “would benefit” the Claimant. Accordingly, the DIME determined that Claimant was not at MMI.

19. The Respondent challenged the DIME’s MMI determination. In conjunction with that process, Claimant underwent an IME with Dr. Kavi Sachar on June 19, 2013. Dr. Sachar largely agreed with Dr. Worwag’s assessment regarding the proposed surgery. Dr. Sachar opined that the surgery was not reasonable or necessary. Dr. Sachar opined that the Claimant had not demonstrated significant functional improvement as a result of the previous surgeries, and concluded that the potential for Claimant regaining significant function and significant pain relief from the recommended surgery was “extremely guarded.”

20. Hearings were held before ALJ Walsh in September and November 2013. ALJ Walsh determined that Respondent failed to overcome the DIME regarding MMI, and further found that the right elbow surgery proposed by Dr. Larsen was reasonable, necessary, and related to the industrial injury.

21. Subsequently, Claimant underwent a revision of the right ulnar nerve at the elbow, a right submuscular ulnar nerve transposition, and a right lateral tennis elbow

debridement with Dr. Larsen on February 11, 2014. The intraoperative findings showed significant ongoing pathology affecting the ulnar nerve. There was “dense” scar tissue overlying the nerve. Additionally, the nerve had developed a “bulbous pseudoneuroma” the ulnar nerve had “clearly subluxated” and was “where it had subluxated onto the medial epicondyle and taken a fairly acute turn to come back into the forearm muscles.”

22. Dr. Larsen’s notes over the ensuing several months document slow but steady progress and improvement as Claimant recovered from the right ulnar transposition surgery. On May 5, 2014, Claimant reported he was “very pleased” with the improvement of paresthesias in his right hand. He still had some aching discomfort over the lateral elbow, but “overall he feels like he is doing quite a bit better.”

23. On September 15, 2014, Claimant reported he was “doing very well” with “complete resolution” of numbness and tingling in his right hand. Unfortunately, Dr. Larsen noted “he has developed recurrent lateral epicondylar pain on the left side. He feels like he has developed a recurrent numbness in the ring and small finger with small discomfort at the medial elbow.” On physical examination of the left elbow, Dr. Larsen observed that “the [ulnar] nerve itself feels mobile.” Dr. Larsen indicated that Claimant “has done well from his revision surgery on the right side from the ulnar nerve; however, his lateral epicondylar pain still persists.” The ALJ infers that Dr. Larsen was referring to the left side when describing the persistent “lateral epicondylar pain.”[1]

24. Claimant underwent an EMG/NCV testing by Dr. Griffis on November 11, 2014. The testing revealed mild left cubital tunnel syndrome and moderate right cubital tunnel syndrome.

25. On December 1, 2014, Claimant returned to Dr. Larsen. Dr. Larsen concluded that the electrodiagnostic testing results were “generally better” than the earlier studies. Dr. Larsen opined that the ongoing neuropathy symptoms were “fairly typical for post-surgery,” and there was “not much left for me to do” regarding the lateral epicondyle. Dr. Larsen concluded that “I certainly would not advocate for a revision on the left side unless he got far worse.”

26. Claimant underwent an IME with Dr. Castrejon on January 5, 2015, at Respondent’s request. Claimant reported ongoing pain in both elbows. Dr. Castrejon opined that the Claimant was at MMI, as he did not expect further surgery to result in any significant functional gains. Dr. Castrejon opined that additional surgery carried a “high risk for functional loss and worsening chronic pain.”

27. Dr. Larsen subsequently placed Claimant at MMI on January 26, 2015. He recommended maintenance care, including a home exercise program, periodic steroid injections for flare-ups, and access to orthopedic follow-up if Claimant’s symptoms worsened.

28. Claimant returned to Dr. Larsen on April 20, 2015, complaining of worsening left upper extremity symptoms. Claimant described tenderness along the

[1] This inference is consistent with Dr. Larsen’s testimony in his October 7, 2015 deposition at p. 19.

course of his ulnar nerve, as well as pain and numbness in the ring and small fingers "when he rests on the area." On physical examination, he had a "rapidly positive elbow flexion compression test," although Dr. Larsen noted that "the nerve is not frankly subluxating back and forth over the epicondyle." Dr. Larsen opined that Claimant's presentation was consistent with ulnar nerve irritation or ulnar neuritis of the left elbow. Dr. Larsen explained that he did not see any non-surgical solution to the symptoms, and Claimant's "options are to live with it or consider a revision." Claimant indicated "his symptoms are bad enough that he wants to pursue left side [surgery]." Therefore, Dr. Larsen requested authorization for left arm surgery to include a revision ulnar neurolysis and submuscular transposition. This is the same procedure Claimant previously had on the right elbow.

29. Respondent applied for a hearing to contest Dr. Larsen's request for prior authorization of surgery.

30. Claimant had a second IME with Dr. Sachar at Respondent's request on July 6, 2015. His physical examination noted full range of motion and "diffuse tenderness along the ulnar nerve with a mildly positive Tinel's sign in that area." Dr. Sachar found "no evidence of subluxation of the nerve. It is in an anterior transposed position." Dr. Sachar opined that the surgery recommended by Dr. Larsen was not reasonable, necessary, or related to the original industrial injury.

31. The parties subsequently obtained deposition testimony from Dr. Larsen and Dr. Sachar. In his deposition testimony, Dr. Larsen explained that the proposed ulnar nerve revision and transposition is the "last" surgical option, and "there is nowhere else to go from there." Dr. Larsen opined that Claimant's significant level of symptoms in the left elbow warranted further treatment. Dr. Larsen stated the goal of surgery is to alleviate symptoms which will hopefully lead to improved functional capacity. Dr. Larsen does not feel the repeat EMG/NCV test results are substantially helpful in determining whether Claimant would benefit from an additional surgery because electrodiagnostic test results can be skewed by the effects of prior surgery. Dr. Larsen opined "you can't base everything on electrodiagnostic findings . . . . At the end of the day, we are treating Mr. Holcombe, not his electrodiagnostic tests." Regarding causation, Dr. Larsen considered Claimant's symptoms to represent "a failure of his previous surgery," which was a compensable benefit under the admitted claim. Dr. Larsen noted that Claimant had a positive outcome from the "identical" surgery performed on the right elbow with respect to improved symptomatic complaints, which supports the decision to move forward with surgery on the left.

32. Dr. Sachar's deposition was taken on October 13, 2015. Dr. Sachar opined the left elbow transposition surgery is not reasonable or necessary because he does not anticipate it will lead to any significant improvement. Dr. Sachar opined the surgery is more likely to make Claimant's condition "worse."

33. A hearing was held before ALJ Lamphere on December 2, 2015 regarding the left elbow revision surgery. In an order dated February 3, 2016, ALJ Lamphere determined that the left ulnar nerve revision and transposition surgery was not

reasonable and necessary. Accordingly, ALJ Lamphere denied and dismissed the request for surgery. Neither party appealed ALJ Lamphere's order, and it became final.

34. After the surgery had been denied, Claimant returned to Dr. Dallenbach on February 18, 2016. Dr. Dallenbach referred Claimant back to Dr. Higginbotham for a follow-up DIME "to assess MMI status as well as impairment rating."

35. Claimant saw Dr. Higginbotham for the follow-up DIME on April 25, 2016. The DIME stated this is "a difficult and complicated case." He noted Claimant had received benefit from the revision ulnar transposition surgery on the right elbow. The DIME further noted that the left ulnar neuritis has worsened since the initial left elbow surgery, at least from a clinical and symptomatic standpoint. The DIME opined that "beyond a reason[able] degree of medical probability, the recommendation [made by Dr. Larsen] for the left ulnar nerve transposition is necessary and reasonable," and concluded Claimant "is not at MMI until after the proposed left ulnar nerve transposition."

36. The Respondent requested a hearing to challenge the determination that Claimant is not at MMI until he receives the left ulnar nerve transposition surgery. Respondent notes that procedure was explicitly denied and dismissed by ALJ Lamphere in a final order. In the alternative, the Respondent asserts that the DIME determination is contradicted by clear and convincing evidence.

37. Dr. Castrejon performed a second IME on August 2, 2016, at Respondent's request. Dr. Castrejon disagrees with the DIME's determination that Claimant is not at MMI, and does not believe further surgery is likely to improve Claimant's condition or functional capacity. Dr. Castrejon indicated that Claimant's physical examination findings were "nearly identical" to the initial IME. Dr. Castrejon did not appreciate any physical findings to support the need for revision surgery.

38. Dr. Castrejon elaborated on his opinions in a deposition on August 30, 2016. Dr. Castrejon disagrees with Dr. Larsen and the DIME regarding whether Claimant achieved any significant functional gains from the revision surgery previously done on the right elbow. Dr. Castrejon opined that symptom relief alone, absent corresponding functional gains, does not justify surgery. Based on Claimant's response to the right-side revision surgery, Dr. Castrejon does not anticipate functional gains on the left.

39. The DIME testified via deposition on September 26, 2016. The DIME explained that his recommendation to proceed with the left ulnar transposition is based on Claimant's "persistent elbow pain and numbness and tingling in that ulnar distribution of his left hand," coupled with the "reasonable outcome" from the identical surgery performed on the right side. When asked to identify clinical findings that support surgery, the DIME cited the anatomic distribution of numbness and tingling consistent with an ulnar neuropathy, and tenderness around the elbow "where the nerve would be." The DIME explained that transposing the nerve relieves it from being stretched as it

passes the medial condyle, thereby eliminating or at least reducing the tension which irritates the nerve and causes it to be symptomatic.

40. Claimant testified regarding the functional improvement he has experienced since his right side ulnar nerve revision surgery. He provided several examples of improvement in his capacity to perform activities of daily living. Claimant testified he can now shift to the manual transmission of his car and open jars with his right hand. In addition, he can vacuum and stir food with his right arm. He can carry groceries with the right arm. He has gone fishing on a few occasions and cast the reel with his right arm. Moreover, Claimant described significant symptomatic improvement in the right arm. He testified that the right revision surgery "absolutely" helped his pain level. He no longer has numbness in his fourth and fifth digits on the right and has no pain in the right elbow.

41. Claimant's testimony regarding symptomatic improvement following the right ulnar revision surgery is supported by records from his treating providers. For instance, in September 2014 Claimant reported to Dr. Larsen that he was "doing very well" with "complete resolution" of numbness and tingling in his right hand. Similarly, on June 24, 2015, he told Dr. Dallenbach that "the surgery performed on his right elbow has been quite helpful." Dr. Dallenbach's records in 2015 and 2016 document progressive improvement in right elbow symptoms. A physical examination on December 15, 2015 revealed only "minimal swelling and only slight tenderness of the [right] lateral epicondyle." On that same date, motor, sensory, and vascular status in the right upper extremity was "intact" and "within normal limits." By August 15, 2016, Dr. Dallenbach noted there was "no swelling or tenderness" of the right lateral epicondyle.

42. The ALJ finds that issue preclusion does not bar relitigation of Claimant's entitlement to the left elbow revision surgery because the issues in the current proceedings are not "identical" to the issues decided by ALJ Lamphere's February 3, 2016 order.

43. The ALJ finds that Respondents have failed to overcome the DIME's finding that Claimant is not at MMI by clear and convincing evidence. Claimant will not be at MMI until he undergoes the revision ulnar transposition surgery on the left elbow.

44. The ALJ finds that the left elbow revision surgery has a reasonable prospect of improving the Claimant's condition. Consequently, the surgery is reasonable and necessary treatment for the admitted industrial injury.

CONCLUSIONS OF LAW

1. Issue preclusion does not apply to the DIME's determination of MMI

The sole basis for the DIME's determination that Claimant is not at MMI is the opinion that "the recommendation for the left ulnar nerve transposition is necessary and reasonable." Consequently, the DIME opined that Claimant "is not at MMI until after the proposed left ulnar nerve transposition."

As noted, that exact surgical procedure was the subject of ALJ Lamphere's February 3, 2016 final order, wherein ALJ Lamphere denied and dismissed the request for surgery as not reasonable or necessary. Consequently, the DIME's determination is squarely at odds with ALJ Lamphere's final order.

Respondents argue that the DIME's MMI finding is overcome as a matter of law because it rests solely on a treatment that was previously adjudicated not reasonable and necessary in a final order. On the other hand, Claimant argues that the Act allows the DIME to revisit ALJ Lamphere's determination in deciding whether Claimant is at MMI, and the prior finding is not binding if a party seeks to overcome the DIME.

Issue preclusion (*i.e.,* collateral estoppel), is an equitable doctrine that bars relitigation of an issue that has been finally decided by a court in a prior action. *Bebo Construction Co. v. Mattox & O'Brien*, 990 P.2d 78, 84 (Colo. 1999). The doctrine's purpose is to relieve parties of the burdens of multiple lawsuits, to conserve judicial resources, and to promote reliance on and confidence in the judicial system by preventing inconsistent decisions. *Id*. Although issue preclusion was conceived as a judicial doctrine, it has been extended to administrative proceedings, where it "may bind parties to an administrative agency's findings of fact or conclusions of law." *Sunny Acres Villa, Inc. v. Cooper*, 25 P.3d 44, 47 (Colo. 2001). In *Sunny Acres*, the Supreme Court held that:

> Issue preclusion bars relitigation of an issue if: (1) the issue sought to be precluded is identical to an issue already determined in the prior proceeding; (2) the party against whom estoppel is asserted has been a party to or is in privity with a party to the prior proceeding; (3) there is a final judgment on the merits in the prior proceeding; and (4) the party against whom the doctrine is asserted had a full and fair opportunity to litigate the issue in the prior proceeding. Id. at 47.

At first blush, it would appear that all the requirements for issue preclusion are satisfied in this case. There is no question that elements (2)-(4) are present. But the difficult question involves whether the first prong of the test is met. Respondent argues that the issues in the two proceedings are identical because ALJ Lamphere specifically denied the same surgery that the DIME found the Claimant needs.

In a series of cases, the ICAO has indicated that the DIME's authority to determine MMI and permanent impairment is not constrained by prior ALJ orders. *Mahana v. Grand County*, W.C. No. 4-430-788 (ICAO Feb. 15, 2007); *Braun v. Vista Mesa*, W.C. No. 4-637-254 (ICAO Apr. 15, 2010); *Ortega v. JBS USA*, W.C. No. 4-804-825 (ICAO Jun. 27, 2013); *Sanchez v. American Federation of State*, W.C. No. 4-666-226-06 (ICAO Nov. 27, 2013); *Madrid v. Trinet Group, Inc.*, W.C. No. 4-851-315-03 (ICAO Apr. 1, 2014).

Of the above-cited cases, the situation in *Mahana v. Grand County* is the closest to Claimant's case. In *Mahana*, ALJ Jones had previously determined that the Claimant did not suffer from CRPS and failed to prove that sympathetic blocks were a reasonable and necessary treatment for the industrial injury. Subsequently, the claimant underwent a DIME, which determined that the claimant suffered from sympathetically mediated pain (SMP) or complex regional pain syndrome (CRPS) and recommended sympathetic blocks. The respondents challenged the DIME at a hearing before ALJ Felter. ALJ Felter found the respondents failed to overcome the DIME on the issue of MMI and ordered respondents to pay for the sympathetic blocks. The respondents argued ALJ Felter was precluded from adjudicating whether the claimant was entitled to sympathetic blocks because ALJ Jones had previously denied that same treatment in a prior final order.

The ICAO ultimately held that ALJ Jones' final order did not preclude ALJ Felter from readjudicating the claimant's entitlement to medical benefits in the context of challenging a DIME. The ICAO stated:

> Affording preclusive effect to ALJ Jones' order regarding the Claimant's diagnosis of CRPS would eviscerate the DIME process designed to permit a party to challenge maximum medical improvement or the extent of permanent impairment. The DIME physician in this case was specifically charged with determining whether the claimant was at maximum medical improvement. . . . As we read the DIME report, it was expressly *because* the claimant was suffering from SMP and expressly *because* she needed the sympathetic blocks to treat that condition that the DIME physician opined that she had not reached maximum medical improvement. **Precluding the DIME physician from stating that opinion regarding maximum medical improvement because a previous ALJ had determined that the medical treatment was not reasonable and necessary would, in our view, impermissibly interfere with the statutory role of the DIME doctor.** (Italics in original, bold emphasis added).

The ICAO has followed this principle repeatedly in a variety of contexts. For instance, in *Braun v. Vista Mesa, supra*, the ICAO held that a previous ALJ finding that the claimant suffered from thoracic outlet syndrome (TOS) and awarding medical benefits did not preclude the DIME from subsequently determining the claimant did not have TOS and did not require further treatment for TOS.

Similarly, *Madrid v. Trinet Group, Inc., supra*, held that a previous ALJ order denying treatment for symptoms beyond the claimant's elbow as unrelated to the industrial injury did not preclude the DIME from determining the claimant suffered from CRPS of the entire arm and was not at MMI without a spinal cord stimulator trial.

In *Ortega v. JBS USA, supra*, the ICAO held that a prior ALJ order finding that the claimant's industrial injury did not aggravate his pre-existing arthritis, did not preclude the DIME from subsequently concluding that the work injury *did* aggravate arthritis, and providing an impairment rating.

Finally, in *Sanchez v. American Federation of State*, *supra*, a previous ALJ finding that the claimant's low back problems were causally related to his industrial injury was not binding when the DIME later determined that the back issues were not injury-related.

The rule in *Mahana* and the other cases is based on a conclusion that the issues in a hearing challenging a DIME are not "identical" to issues tried in a previous hearing because of the differing burdens of proof (*i.e.*, "preponderance" vs. "clear and convincing"). The ICAO has repeatedly cited *Holnam, Inc. v. Industrial Claim Appeals Office*, 159 P.3d 795 (Colo. App. 2006) as "instructive" on how different burdens of proof impact the application of issue preclusion. In each of these cases, the ICAO stated that issue preclusion did not apply because the issues decided by the first ALJ were not "identical" to the issues addressed by the second ALJ when reviewing a DIME's determination.

It necessarily follows that the DIME was not precluded from determining that Claimant requires the elbow revision surgery, notwithstanding ALJ Lamphere's order. Consequently, the DIME's determination is binding unless overcome by clear and convincing evidence.

2. Did Respondent overcome the DIME by clear and convincing evidence?

"Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment as a result of the industrial injury has become stable and when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S. A finding of MMI is premature if there is a course of treatment that has "a reasonable prospect of success" and the claimant is willing to submit to the treatment. *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1080, 1081-82 (Colo. App. 1990).

The DIME physician's determination regarding MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c), C.R.S.; *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). "Clear and convincing evidence means evidence which is stronger than a mere 'preponderance;' it is evidence that is highly probable and free from serious or substantial doubt." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Therefore, the party challenging a DIME physician's conclusion must demonstrate that it is "highly probable" that the MMI and impairment findings are incorrect. *Qual-Med*, 961 P.2d at 592. A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002).

The ICAO has repeatedly held that "mere differences of medical opinion" do not constitute clear and convincing evidence that the DIME's determination is incorrect. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (ICAO March 18, 2016); *Javalera v. Monte Vista Head Start, Inc.*, W.C. No. 4-532-166 (ICAO July 19, 2004); *see* *also Gonzales v. Browning-Ferris Industries of Colorado*, W.C. No. 4-350-356 (ICAO March 22, 2000).

As found, Respondent has failed to overcome the DIME's determination that Claimant is not at MMI by clear and convincing evidence. The DIME and Dr. Larsen persuasively opined that the proposed left elbow revision surgery has a reasonable likelihood of improving the Claimant's symptoms and function. That opinion is bolstered by the positive results the Claimant enjoyed as a result of the "identical" surgery on the right elbow. The good outcome on the right elbow increases the likelihood that Claimant will have a similar result from the revision surgery on the left elbow.

By contrast, Dr. Sachar and Dr. Castrejon opined the left elbow revision surgery will most likely either result in no improvement or make the Claimant's condition worse. While that may ultimately prove to be the case, that supposition is not consistent with the experience with the Claimant's right elbow. Respondent's experts have given substantial weight to the fact that Claimant has not returned to work. The ALJ is not persuaded that return to work is necessarily the most significant factor in determining whether a course of treatment is reasonable and necessary. To the contrary, a treatment modality that significantly improves an individual's symptoms fits within the definition of reasonable and necessary, regardless of whether it ultimately enables the individual to return to work. *E.g., City and County of Denver, School Dist. 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). The ALJ further notes it is unlikely Claimant will ever return to the same work that caused his injuries. Respondent has not offered Claimant's any modified duty, and a temporarily disabled claimant has no affirmative obligation to seek alternative employment. *Denny's Restaurant, Inc. v. Husson*, 746 P.2d 63 (Colo. App. 1987). Accordingly, the ALJ finds that whether the Claimant has returned to work is not a particularly helpful yardstick by which to measure whether the proposed surgery has a reasonable prospect of improving his condition.

Reasonable physicians can disagree (as they have here) regarding whether the proposed left elbow revision will be beneficial for the Claimant. The DIME's opinion trumps other opinions unless it is clearly incorrect. Although the Respondent's experts have presented cogent arguments to support their position, the ALJ does not find that the evidence presented rises to the level of clear and convincing evidence to overcome the DIME.

The preponderance of persuasive evidence establishes that the left elbow revision surgery has a reasonable prospect of improving Claimant's condition. Consequently, the surgery is reasonable and necessary treatment for the admitted injury.

[ORDER CONTINUES ON NEXT PAGE]

ORDER

It is therefore ordered that:

1. Respondent has failed to overcome the DIME's determination that Claimant is not at MMI.

2. Respondent shall pay for the revision left ulnar transposition surgery recommended by Dr. Larsen.

3. All matters not determined herein, or otherwise closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-002-879-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on September 21, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 9/21/16, Courtroom 4, beginning at 8:30 AM, and ending at 12:00 PM).

Claimant's Exhibits 1 through 14 were admitted into evidence, without objection. Respondents' Exhibits A through R were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule: The Claimant's opening brief was filed on September 28, 2016. The Respondents' answer brief was filed on the same date. No timely reply brief, due 2 working days after the answer brief, was filed. Therefore, the matter was deemed submitted for decision on October 3, 2016.

ISSUES

The paramount issues in this case concerns whether the Claimant's cervical condition is causally related to the admitted injury that occurred on June 3, 2015, and whether the anterior cervical fusion at C5-C7 is reasonably necessary to cure and relieve the effects of the industrial injury.

The burden of proof rests with the Claimant by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant was born on August 10, 1956 and was 60 years of age on the date of the hearing.

2. The Claimant is a full time employee and has worked in his current position for the Employer since April 21, 2015. He has been an employee with Employer for over ten years.

3. The Claimant is an administrative assistant in the shipping and receiving department for Employer. His job duties include handling all mail and packages which include transporting mail, and loading and unloading deliveries.

4. On June 3, 2015, while attempting to open the shipping door for mail delivery, the Claimant tripped on a weather rug and fell forward landing hard on the left side of his body with his left arm outstretched bracing his fall. He landed on his hand and hit his left hip. The accident was recorded on camera but was later deleted through inadvertence on the part of the Employer.

5. On June 4, 2015, the Claimant received medical treatment at Harmony Urgent Care of the University of Colorado Health Sciences Center (UCHSC). The Claimant experienced the immediate onset of pain in his left hip and wrist, and pain and numbness in his thumb. He was diagnosed with a probable triquetral fracture of the left wrist and referred to Occupational Health Services at UCHSC.

6. The Respondents filed a General Admissions of Liability (GAL) on February 11, 2016 and August 31, 2016, admitting to medical benefits only.

Subsequent Diagnosis and Treatment for Cervical Condition

7. On June 5, 2015, the Claimant was evaluated by Kevin T. O’Connell, M.D. at Occupational Health Services at UCHSC. Dr. O’Connell assessed the Claimant to

with a triquetral fracture in his left wrist, a contusion of the greater trochanter in his left hip, and hypesthesia diffusely in the digits of his left hand. Dr. O'Connell then referred the Claimant to Mark B. Durbin, M.D. at the Orthopedic and Spine Center of the Rockies.

8. The Claimant saw Dr. Durbin on August 19, 2015 and he reported complete numbness to his left thumb region. Dr. Durbin recommended that the Claimant undergo a nerve conduction study to check for nerve damage. Dr. O'Connell agreed with Dr. Durbin's recommendation for an EMG of the left upper extremity (LUE) to determine if there was a nerve injury because he found that the Claimant had left thumb radial and ulnar digital nerve neuropraxia.

9. On September 25, 2015, Raymond P. van den Hoven, M.D. completed electrodiagnostic testing of the Claimant's LUE and found moderate acute/subacute left arm denervation in a C6 myotome pattern. Dr. van den Hoven observed decreased reflexes in the Claimant's left biceps and pronator teres, sensory changes in the C6 dermatome, and clear weakness of biceps, pronator teres, and wrist dorsiflexion. Dr. van den Hoven could not, however, confirm conclusive evidence for the Claimant's cervical radiculopathy.

10. At a follow-up appointment, Dr. O'Connell was of the opinion that considering the work-relatedness of the left thumb pain and numbness and after reviewing the previous tests and examinations, the impact resulting from the fall wrenched the Claimant's left shoulder and neck which resulted in either traction or contusion, leading to the C6 nerve root impingement. Both Dr. O'Connell and Dr. Durbin recommended that the Claimant proceed with an MRI (magnetic resonance imaging) scan of the cervical spine.
.

11. On November 25, 2015, the Claimant underwent a cervical spine MRI without contrast in Fort Collins. The MRI revealed moderately advanced and diffused cervical spondylosis with disc desiccation and annular bulging in several areas including the C5-C6 and C6-C7 vertebrae. After completion of the cervical spine MRI, the Claimant felt no change in his pain and other symptoms, and Dr. O'Connell referred the Claimant to David J. Columbus, D.O., for a cervical epidural steroid injection at the C6-C7 level which Dr. Columbus performed on January 12, 2016.

12. Following the injection, the Claimant still had persistent numbness and increased intensity of left thumb paresthesias and increased discomfort on the left side of his neck with right lateral bending. Dr. O'Connell recommended a trial of physical therapy (PT) for the neck as well as referring the Claimant to neurosurgeon Hans Coester, M.D. Dr. O'Connell doubted that the Claimant would make significant recovery from PT and believed that surgical decompression should be considered "as other more conservative measures have gotten no significant results".

13. Satoru T. Chamberlain, M.D. evaluated the Claimant on March 14th, 2016, and observed that the Claimant's EMG demonstrated C6 and possibly C7 nerve root involvement that coincided with the Claimant's MRI findings. Dr. Chamberlain also advised the Claimant to keep his appointment with Dr. Coester for the cervical surgical evaluation. Stuart Peterson, P.T.(physical therapist), who provided the Claimant with PT services, consistently noted a decrease in sensation at the C6 dermatome at the thumb as well as significant tenderness at the C6 spinous process and ROM (range of motion) deficits at the cervical spine.

14. On April 16, 2016, the Claimant was examined by Dr. Coester. Dr. Coester found decreased sensation in a C6-C7 nerve distribution on the left and diminished reflexes in the triceps. Dr. Coester was of the opinion that the Claimant was having neck pain, arm pain, and weakness due to disc disease at C5-C6 and C6-C7 and recommended a C5-C6 and C6-C7 anterior cervical discectomy and fusion. Dr. Coester discussed the procedural risks and side effects with the Claimant. Dr. Coester also commented that the Claimant had a 4 out of 5 chance that he would gain improvement from the procedure, but he also noted that the procedure will not make the Claimant pain free but would put increased stress on the levels above and Claimant has a risk of needing more surgery higher or lower down in the future. Dr. Coester also was of the opinion, however, that the Claimant "has pretty much exhausted the more conservative options."

15. On June 16, 2016, the Claimant was examined by a Dr. O'Toole who reiterated that Claimant had numb*nes*s in the dorsum of his left thumb and, after further examination of the EMGs, showed evidence for a C6 radiculitis. Dr. O'Toole also noted that the Claimant had pain in a radicular type pattern from the neck into the shoulder.

Medical Records Review by Respondents' Independent Medical Examiner (IME), Carlos Cebrian, M.D.

16. Dr. Cebrian completed a review of the Claimant's records and concluded that the fall on June 3, 2015, did not cause injury to the Claimant's neck because he did not see evidence that the Claimant struck his head and because the cervical complaints were not noted immediately following the incident. The ALJ finds that Dr. Cebrian's reasoning underlying his opinion that there was no cervical injury was general and vague. For the reasons articulated herein below, the ALJ does not find Dr. Cebrian's opinion in this regard persuasive or credible; and, his opinion is outweighed by the totality of the medical and lay evidence. Dr. Cebrian felt that the surgery should be "denied" because the cervical condition was independent, incidental, and unrelated to the work accident. The ALJ infers and finds that Dr. Cebrian's use of the word "**denied"** illustrates a partisanship against surgery and is an additional factor giving rise to an inference that Dr. Cebrian's opinion in this regard is not credible.

17. On June 30, 2016, the Claimant was referred back to Dr. Chamberlain to move forward with the left thumb the surgery, which the Respondents authorized on July 13, 2016, although Dr. Chamberlain recommended that the Claimant should have his neck condition addressed first. The Respondents did not authorize the neck surgery based on the opinions of Dr. Cebrian and Brian Reiss, M.D. The Claimant underwent the authorized thumb surgery on August 17, 2016, which improved pain at his thumb joint but did not improve the numbness in his thumb or weakness in his arm, hand, or wrist.

Respondents' Independent Medical Examiner (IME), Brian Reiss, M.D.

18. On May 11, 2016, the Respondents referred the Claimant to Dr. Reiss, who is the Respondents' IME, who also testified at the hearing. Like Dr. Cebrian, Dr. Reiss was of the opinion that the Claimant's cervical condition was not caused by his fall on June 3, 2015.

19. Dr. Reiss stated the opinion that the Claimant did not suffer a traction injury during the fall; and, because there was no immediate neck pain, such an injury "is very unlikely" to have occurred without significant impact to the neck or head. Dr. Reiss is of the opinion that radiculopathy without pain is possible but highly unlikely. Dr. Reiss also noted that there were no evidence of neck symptoms until time has passed from the date of the accident and after Claimant had an EMG and was advised that he had a cervical problem. For the reasons articulated herein below, the ALJ finds Dr. Reiss' opinions lacking in credibility and contrary to the weight of the evidence.

20. Regarding the EMG, Dr. Reiss is of the opinion that such results are not diagnostic, particularly in light of no paraspinal muscle spasms on examination. He is of the opinion that a peripheral nerve injury was a much more likely cause of the Claimant's symptoms. Dr. Reiss further stated that instead of improving mobility and reducing pain, a cervical fusion would most likely worsen the Claimant's condition. Dr. Reiss characterized the medical opinions recommending surgery as "speculative," but he was unwilling to characterize the recommendations as "medical malpractice." The ALJ infers and finds that reason and common sense, without the necessity of a medical degree, dictates that the performance of "speculative" surgery may amount to malpractice, thus, Dr. Reiss' opinions in this regard are lacking in persuasiveness and credibility.

21. Dr. Reiss testified that the recommended surgery was contrary to the Division's Medical Treatment **Guidelines** and that the Claimant had not received adequate conservative treatments. Dr. Reiss did not adequately explain his underlying reasons for this generalized opinion. Dr. Reiss also stated that the fact that the epidural steroid injection had no effect on the Claimant's condition was a strong indicator against surgery. He explained that an injection would have had some diagnostic response,

even if momentarily, if the Claimant was indeed suffering from a cervical issue which, according to Dr. Reiss, the Claimant was not.

Jeffrey Wunder, M.D., Claimant's Independent Medical Examiner (IME)

22. On July 19, 2016, the Claimant was referred for a Claimant's IME with Jeffery Wunder, M.D., who testified at the hearing by telephone. Dr. Wunder is of the opinion that the Claimant's continuing symptoms are a result of a cervical condition caused by his fall on June 3, 2015.

23. Dr. Wunder reviewed the Claimant's medical records and noted the continuing numbness and decrease in sensation in Claimant's left fingers as well as signs of tenderness in the central cervical spine and left cervical paraspinal muscles along with several other symptoms. He noted that the Claimant's MRI showed multilevel cervical degenerative disc disease and foraminal stenosis, and that the Claimant's fall caused traction on the nerves which most likely produced some nerve root irritation in multiple nerve roots producing a pattern of numbness, tingling, and sensory loss.

24. Dr. Wunder was further of the opinion that while the Claimant had degenerative changes in his neck prior to the injury, the Claimant never had any symptoms or findings suggestive of cervical radiculopathy prior to his fall. He continued to state that radiculopathy can occur without any back or neck pain and that the EMG revealed proximal neurological issues that were not found previously. Dr. Wunder believed that the EMG confirmed the C6 radiculopathy and was consistent with the Claimant's physical presentation from his first evaluation with Dr. O'Connell to the present. Like Dr. O'Connell, Dr. Wunder is of the opinion that due to the Claimant's lack of improvement with conservative care and the correlation of symptoms, the cervical fusion surgery is reasonably necessary to cure and alleviate the Claimant's condition after the compensable accident.

Ultimate Findings

25. The ALJ finds that Dr. Wunder's testimony including the expert opinions of Dr. O'Connell, Dr. Durbin, Dr. Chamberlain, Dr. O'Toole, and Dr. Coester, are more credible, convincing, and persuasive than opinions to the contrary; and, they refute the Respondents' denial of causal relatedness of the cervical spine, concerning the incident of June 3, 2015. Thus, the ALJ finds that the Claimant has proven a work-related cervical injury that was caused by his fall when he tripped on a mat at work. While the Respondents presented Dr. Reiss' medical opinion that contradicted Dr. Wunder's opinion, Dr. Wunder's medical opinion is corroborated by the other physicians who diagnosed and treated the Claimant for over a year. Dr. Reiss's underlying rationale relies on surface observations, *i.e.,* the lack of neck pain reported by the Claimant immediately following the accident and Dr. Reiss' interpretation of the medical records

that the Claimant did not fall onto his head or neck. Furthermore, Dr. Reiss's main objection to the cervical fusion surgery is that it is allegedly not within the Division's Medical Treatment Guidelines. The ALJ finds Dr. Wunder's opinions concerning the causal relatedness of the cervical spine; and, the reasonable necessity of the cervical surgery significantly more persuasive and credible than Dr. Reiss' opinions.

26. The ALJ makes a rational choice between conflicting medical opinions, based on substantial evidence, to accept the opinions of Dr. Wunder and the other ATPs, including Dr. Coester, and to reject the opinion of Dr. Reiss and the Respondents' position that the cervical condition was not causally related to the Claimant's accident at work on June 3, 2015. Also, there is no persuasive evidence that the Claimant's degenerative changes in his neck prior to the injury were the main cause for his current condition post injury. Indeed, the Claimant has proven an acceleration sand aggravation of his underlying degenerative cervical condition.

27. The evidence establishes that the Claimant experienced a significant impact on his left hand, wrist, and arm which caused traction on the nerves producing nerve root irritation. Therefore, the Claimant has proven, by preponderant evidence that he sustained a compensable injury to his neck on June 3, 2015. Also, all of the Claimant's medical care and treatment for his compensable neck injury was and is causally related thereto and reasonably necessary to cure and relieve the effects of his injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254

(1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, Dr. Wunder's testimony including the expert opinions of Dr. O'Connell, Dr. Durbin, Dr. Chamberlain, Dr. O'Toole, and Dr. Coester, were more credible, convincing, and persuasive than opinions to the contrary; and, these opinions refute the Respondents' denial of causal relatedness of the cervical spine, concerning the incident of June 3, 2015. Thus, as found, the Claimant proved a work-related cervical injury that was caused by his fall when he tripped on a mat at work. While the Respondents presented Dr. Reiss' medical opinion that contradicted Dr. Wunder's opinion, Dr. Wunder's medical opinion is corroborated by the other physicians who diagnosed and treated the Claimant for over a year. Dr. Reiss' underlying rationale relied on surface observations, *i.e.,* the lack of neck pain reported by the Claimant immediately following the accident and Dr. Reiss' interpretation of the medical records that the Claimant did not fall onto his head or neck. Furthermore, Dr. Reiss's main objection to the cervical fusion surgery is that it is allegedly not within the Division's Medical Treatment Guidelines. The ALJ finds Dr. Wunder's opinions concerning the causal relatedness of the cervical spine; and, the reasonable necessity of the cervical surgery significantly more persuasive and credible than Dr. Reiss' opinions.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice between conflicting medical opinions, based on substantial evidence, to accept the opinions of Dr. Wunder and the other ATPs, including Dr. Coester, and to reject the opinion of Dr. Reiss and the Respondents' position that the cervical condition was not causally related to the Claimant's accident at work on June 3, 2015. Also, there was no persuasive evidence that the Claimant's degenerative changes in his neck prior to the injury were the main cause for his current condition post injury. Indeed, the Claimant proved an acceleration sand aggravation of his underlying degenerative cervical condition.

Reasonable and Necessary Medical Care: recommended Surgery

c. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to the admitted injury injury of June 3, 2015. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S; *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment for the cervical spine was and is reasonably necessary to cure and relieve the effects of his admitted injury.

Burden of Proof

d. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden that the cervical spine injury is causally related to the admitted June 3, 2015 fall, and that the recommended surgery is reasonably necessary to cure and relieve the effects of that injury.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondents shall pay the costs of the recommended cervical spine surgery, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Any and all issues not determined herein are reserved for future decision.

DATED this______day of November 2016.

____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUE

Whether Claimant has established that he is entitled to recover penalties pursuant to §8-43-304(1), C.R.S. based on Respondents’ violations of §8-42-102(2)(d), C.R.S. and §8-42-105(1), C.R.S. for failing to accurately calculate his Average Weekly Wage (AWW).

FINDINGS OF FACT

1. On November 14, 2015 Claimant suffered an admitted industrial injury during the course and scope of his employment with Employer. On December 18, 2015 Insurer filed a General Admission of Liability (GAL) acknowledging that Claimant was entitled to receive medical benefits and Temporary Total Disability (TTD) benefits for the period November 15, 2015 until terminated by statute. Insurer also noted that Claimant earned an Average Weekly Wage (AWW) of $900.99.

2. Insurer’s Claims Adjuster Daniel Bay testified at the hearing in this matter. He explained that an AWW is determined by adding a claimant’s gross wages for a period of time and then dividing by the number of weeks in the period. Gross pay includes overtime earnings, bonuses, room and board and mileage reimbursement. Referencing Claimant’s wage records, Mr. Bay commented that Claimant’s gross wages for the 16 week period from July 13, 2015 through November 1, 2015 were $14,415.85. He then divided $14,415.85 by 16 to arrive at an AWW of $900.99.

3. Mr. Bay only used Claimant’s regular gross wages in calculating the AWW. There are a total of nine columns on the wage record attached to the GAL. The regular gross wages appear in the third column of the wage record. There are also separate columns for Claimant’s overtime hours and gross pay. Moreover, Claimant’s taxable gross wages appear two columns from the right side of the wage record. Despite the delineation of Claimant’s overtime pay in the wage records, Mr. Bay failed to include overtime amounts when calculating the AWW.

4. On January 27, 2016 Claimant’s counsel drafted an e-mail to Mr. Bay regarding the AWW calculation. Claimant’s counsel explained that Mr. Bay had understated Claimant’s AWW by over $600 by failing to include overtime pay. Claimant’s counsel specified that Claimant’ earned taxable gross wages, including overtime, of $24,165.79 for the period July 13, 2015 through November 1, 2015. Dividing $24,165.79 by 16 weeks yields an AWW of $1,510.36. He commented that Mr. Bay’s failure to include overtime pay in calculating Claimant’s AWW constituted an “obvious discrepancy” that warranted a claim for penalties.

5. Mr. Bay explained that he mistakenly failed to include Claimant's overtime pay in the AWW calculation. He noted that he incorrectly used the "gross" column instead of the "taxable gross" column in Claimant's wage records in calculating the AWW. Mr. Bay explained that the miscalculation was not intentional and he recognized that overtime wages should have been included in the AWW calculation.

6. After reviewing his calculations and conferring with in-house counsel, Mr. Bay amended Claimant's AWW determination to $1,510.36 on February 5, 2016. Because February 5, 2016 was a Friday, Insurer did not issue an Amended GAL until Monday, February 8, 2016. Nevertheless, Insurer issued the Amended GAL, and cured any violation of the Act, well-within 20 days of receiving the January 27, 2016 letter from Claimant's counsel. Respondents sent Claimant a check in the amount of $3,571.05 to reimburse him for the TTD deficiency because of the initially incorrect AWW calculation.

7. Claimant has failed to establish that he is entitled to recover penalties pursuant to §8-43-304(1), C.R.S. based on Respondents' violations of §8-42-102(2)(d), C.R.S. and §8-42-105(1), C.R.S. for failing to accurately calculate his AWW. Claimant asserts that Insurer was legally obligated to admit liability for a higher AWW. His argument is premised on the assumption that Insurer was legally obligated to admit liability for a higher AWW. However, Insurer did not violate any provision of the Act when it initially failed to include Claimant's overtime pay in the AWW calculation. Although Insurer mistakenly understated Claimant's AWW by approximately $600.00, the error does not support a claim for penalties. The reasoning of *Allison, Sanchez* and *Reves* reflects that, if a respondent admits liability, the respondent is only liable to pay benefits in accord with the admission. The amount of liability need not ultimately be determined to be correct to avoid penalties. Because §§8-42-102 & 8-42-105(1), C.R.S. do not mandate an admission for a specific AWW, penalties cannot be imposed for failing to admit for a certain wage. There is simply no specific statutory violation in failing to admit for what is ultimately determined to be the correct AWW. Respondents conduct thus did not violate a provision of the Act or a Rule. Accordingly, Claimant's request for penalties is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. A party may be penalized under §8-43-304(1), C.R.S. for up to $1,000 day for any failure, neglect or refusal to obey any lawful order of the director or panel. *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. Ct. App. 2003). The moving party for a penalty bears the burden of proving that a person failed to take an action that a reasonable party would have taken. *City of County of Denver v. Indus. Claim Appeals Office*, 58 P.3d 1162, 1164-65 (Colo. Ct. App. 2002). Once the prima facie showing of unreasonableness has been made, the burden of persuasion shifts to the party who committed the alleged penalty to show that the conduct was reasonable under the circumstances. *See e.g. Pioneers Hosp. of Rio Blanco County v. Indus. Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Postlewait v. Midwest Barricade*, 905 P.2d 21, 23 (Colo. App. 1995).

5. The imposition of penalties under §8-43-304(1), C.R.S. requires a two-step analysis. *See In re Hailemichael,* W.C. No. 4-382-985 (ICAP, Nov. 17, 2004). The ALJ must first determine whether the disputed conduct violated a provision of the Act or rule. *Allison v. Industrial Claim Appeals Office,* 916 P.2d 623, 624 (Colo. App. 1995). If a violation has occurred, penalties may only be imposed if the ALJ concludes that the violation was objectively unreasonable. *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office,* 907 P.2d 676, 678-79 (Colo. App. 1995). The reasonableness of an insurer's actions depends upon whether the action was predicated on a "rational argument based in law or fact." *In re Lamutt,* W.C. No. 4-282-825 (ICAP, Nov. 6, 1998).

6. Even if an insurer's actions are objectively unreasonable, a violation of §8-43-304(1), C.R.S. may be cured within 20 days after an application for hearing is filed. If a violation is cured no penalties may be imposed in the absence of "clear and convincing evidence" that the violator "knew or reasonably should have known" of the violation. §8-43-304(4), C.R.S. "Clear and convincing evidence" exceeds the preponderance standard and is evidence that "makes a proposition highly probable and free from serious doubt." *In re Barnes,* W.C. No. 4-632-352 (ICAP, Oct. 30, 2006). Whether a respondent's actions were objectively unreasonable and whether it knew or should have known of a violation are questions of fact for the ALJ. *In re Lamutt,* W.C. No. 4-282-825 (ICAP, Nov. 6, 1998).

7. In *Allison v. Industrial Claim Appeals Office,* 916 P.2d 623 (Colo. App. 1995) the court of appeals determined that the respondents' failure to admit liability for the correct temporary disability benefits did not support the imposition of penalties under §8-43-304, C.R.S. In *Allison* the respondents filed an admission of liability for TTD benefits but reduced the weekly disability payment based upon an asserted offset for the claimant's receipt of proceeds from a structured settlement. Although the claimant sought penalties because the respondents withheld the full weekly benefits, the court reasoned that the TTD statute does not create an express duty to pay benefits without regard to any applicable offsets. *Id.* at 624. The *Allison* court specifically noted that the respondents' obligations were limited "by statute only to admit or deny liability in a timely manner and pay benefits consistent with that admission." The claimant thus failed to establish a violation of the Act that would entitle him to recover penalties. *Id.*

8. In *Sanchez v. Pueblo Medical Investors,* W.C. No. 3-942-960 (ICAP, Dec. 14, 1998) the claimant sought penalties for the respondents' failure to include concurrent wages into her AWW. Relying on *Allison*, the ICAP reasoned that "where the respondents admit liability, they are only required to pay according to admitted liability." The ICAP thus "rejected the claimant's contention that if a respondent admits liability, the amount of admitted liability must be correct to avoid penalties." There is therefore no specific statutory violation in failing to admit for what is ultimately determined to be the correct AWW. *Sanchez v. Pueblo Medical Investors,* W.C. No. 3-942-960 (ICAP, Dec. 14, 1998).

9. Similarly, in *Reves v. McCormick Excavation & Paving, LLC.*, W.C. No. 4-835-166-04 (ICAP, Jan. 2, 2013) the insurance adjuster intentionally omitted some of the claimant's actual wages and used her own calculation to approximate the claimant's earnings. Claimant was a seasonal employee with a short period of employment. The adjuster used the claimant's daily pay rate without including overtime pay. Relying on *Allison*, the ICAP explained that "if penalties cannot be imposed for an incorrect admission of TTD benefits, penalties cannot be imposed for an incorrect admission of AWW." The ICAP thus specified that "because the statute does not mandate an admission for a specific AWW, penalties cannot be imposed for failure to admit for a specific wage." *Reves v. McCormick Excavation & Paving, LLC.*, W.C. No. 4-835-166-04 (ICAP, Jan. 2, 2013).

10. Section 8-43-203(1), C.R.S. gives the respondents the option to admit or deny liability and require the claimant to prove his entitlement to benefits. Furthermore, the Act specifically assigns the claimant the burden of proving his entitlement to benefits. §8-43-201, C.R.S. Under the preceding statutory scheme, if a respondent admits liability for a claim, it need not be correct in order to avoid the imposition of penalties. Similarly, §8-42-102, C.R.S. does not describe a precise method for calculating a claimant's AWW and an insurer does not violate the Act when it fails to admit liability for a specific wage. *See Reves v. McCormick Excavation & Paving, LLC.*, W.C. No. 4-835-166-04 (ICAP, Jan. 2, 2013).

11. As found, Claimant has failed to establish that he is entitled to recover penalties pursuant to §8-43-304(1), C.R.S. based on Respondents' violations of §8-42-

102(2)(d), C.R.S. and §8-42-105(1), C.R.S. for failing to accurately calculate his AWW. Claimant asserts that Insurer was legally obligated to admit liability for a higher AWW. His argument is premised on the assumption that Insurer was legally obligated to admit liability for a higher AWW. However, Insurer did not violate any provision of the Act when it initially failed to include Claimant's overtime pay in the AWW calculation. Although Insurer mistakenly understated Claimant's AWW by approximately $600.00, the error does not support a claim for penalties. The reasoning of *Allison, Sanchez* and *Reves* reflects that, if a respondent admits liability, the respondent is only liable to pay benefits in accord with the admission. The amount of liability need not ultimately be determined to be correct to avoid penalties. Because §§8-42-102 & 8-42-105(1), C.R.S. do not mandate an admission for a specific AWW, penalties cannot be imposed for failing to admit for a certain wage. There is simply no specific statutory violation in failing to admit for what is ultimately determined to be the correct AWW. Respondents conduct thus did not violate a provision of the Act or a Rule. Accordingly, Claimant's request for penalties is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for penalties is denied and dismissed.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: October 27, 2016.

Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
633 17th Street Suite 1300
Denver, CO 80202

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-938-765-05

ISSUES

- Whether Claimant's fall at work on December 30, 2013 and related medical treatment are compensable.
- Whether Claimant is entitled to a change of physician.
- Whether Claimant is entitled to a disfigurement award and, if so, in what amount.

STIPULATIONS

- The issues of average weekly wage, TTD, TPD, and offsets are reserved for future determination.
- The parties stipulated that if the claim is found compensable, the medical treatment to Claimant's right lower extremity is reasonable, necessary, and related; and is provided by an authorized treating physician..

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was employed by Employer as a full time assembler for 33 years.

2. Claimant's first language is Korean. Medical records from Boulder Community hospital note that some information from Claimant was "difficult to ascertain" as Claimant demonstrated, "slight language barrier in as much as she is Korean but I am still able to discern" that she takes certain specified medications. The record also notes, "She does not speak fluent [E]nglish, but communicates well enough to discuss her condition with her."

3. On December 30, 2013, Claimant was working her regular job. As Claimant was returning from a break walking near an exit door and laundry machines, she slipped and fell onto her right side fracturing her right femur.

4. When Claimant's coworker could not help her up, the coworker notified the supervisor, Henry Homer. Eventually paramedics arrived and transported Claimant to Boulder Community Hospital where she was diagnosed with a right femur fracture. During transport, the paramedics gave Claimant pain medication, Fentanyl, which made her fall asleep. Claimant testified that she awoke in a hospital room.

5. Claimant was given additional Fentanyl and Versed upon hospital admission.

6. On December 31, 2013, Claimant underwent open reduction and internal fixation surgery performed by Jeffrey R. Gagliano, M.D., and remained in the hospital for approximately five days. Nothing in the surgical report indicates Claimant's fracture was "atypical" or likely caused by anything other than a mechanical fall.

7. Dr. Gagliano's surgical report includes the following finding:

   > Short oblique subtrochanteric femur fracture with mild comminution. The patient did have notable sub-trochanteric, lateral-sided cortical spur defects at the fracture site as well as on the non-operative left hip consistent with possible prior tension-sided stress fracture or response.

   No persuasive medical testimony was offered to explain this finding or its relevance, if any.

8. Claimant was discharged to a skilled nursing facility and also participated in physical and occupational therapy as part of her rehabilitation.

9. Claimant experienced persistent greater trochanteric pain near the area of the screw used to secure the internal fixation hardware.

10. On September 28, 2015, Claimant underwent a second surgery to remove the screw. The surgery involved two incisions. Findings from that surgery include "Copious scar around the illiotibial band as well as the fat superficial to the ITB. There was additional scarring between the IT band and the vastus lateralis fascia."

Mechanism of Injury

11. Clamant testified at hearing that she slipped and fell. She explained "It was a really bad day for that day, because there is a, a lot of water travel in and out, because it was really sunny and a lot of snow. And so water's in and out, and also we have a washing machine there. And they got a drain there sometimes that dripping water there, too." When asked if she knew where the water came from, Claimant answered, "Like I say, it was a, a – really was a traffic was pretty bad. And the salt, salt, and the sand is in and out – lots of things." She also testified that after she fell, her head was close to the drain. Claimant landed on her right side.

12. On cross examination, Respondents' counsel asked a number of questions that elicited much more ambiguous answers about the circumstances of Claimant's fall. The ALJ finds these answers to be less clear and reliable than those in Claimant's direct and rebuttal testimony.

13. Claimant testified that her leg did not give out and that she had not previously fallen. Her leg was not weak the day of the injury, and she walked for exercise that morning before work. Claimant also hiked without difficulty prior to her injury.

14. The paramedics' report notes that Claimant "was standing talking to [a] co-worker when she turned to walk away and 'tripped over my own foot and fell down." The report is not attributed to Claimant.

15. Boulder Community Hospital's intake report records, "Per patient, she was at work, pivoted and 'my feet got caught up' and the patient tripped and fell onto her right hip."

16. With respect to this report, Claimant testified that she did not provide information. "No, I didn't told her anything what happened." Claimant further explained that she did not talk to anybody about what happened, but rather a nurse told her what had happened.

17. Similarly, Dr. Gagliano's record indicates that Claimant's feet became tangled up and that she fell from standing. However, Claimant testified that he had not asked her how she fell and that she never mentioned anything to him about how she fell.

18. Dr. Gagliano's discharge summary attributes the fracture to being caused by the fall: "[Claimant] is a 63-year-old female who fell on 12/30/2013 causing a subtrochanteric femur fracture."

19. On September 18, 2014, Dr. Bisgard performed a Respondents sponsored independent medical examination (IME). Claimant reported to Dr. Bisgard that there was a laundry basket of wet towels near where she fell and that the floor was also wet as the result of melted snow being tracked in from outside. While Claimant was unsure which was the source of the water, Claimant specified that there was water on the floor where she slipped and fell. When Dr. Bisgard referred in her hearing testimony to Claimant's report of the mechanism of her injury, she described Claimant's report as consistent, and that Claimant gave a good description of water being on the floor. Dr. Bisgard testified further hat she found Claimant to be credible, very forthcoming, and a reliable historian. After examining Claimant, taking her history, and reviewing Claimant's medical records – including the paramedic report, the emergency room report, and Dr. Gagliano's initial record – Dr. Bisgard opined that Claimant's fall caused her femur fracture.

20. Respondents introduced Employer's Incident Investigation Report. Claimant's supervisor Henry Holmes completed the report and noted, "the floor area she fell in was clean and free of any liquid or other slippery substance." No evidence was presented to establish when Mr. Holmes observed the area or completed the report, however, it is clear from context that Mr. Holmes made his observations after the paramedics had transported Claimant to the hospital.

21. The ALJ reasonably infers that the responding paramedics would have removed any fall hazards as part of their response to the call. Thus, the ALJ does not find the incident report to be a reliable source of information as to the condition of the area where Claimant fell at the time of her fall.

22. Prior to her injury, Claimant had been diagnosed with a number of medical conditions including osteoarthritis, rheumatoid arthritis, osteopenia, and osteoporosis.

23. Employer's Incident Investigation Report noted that one of Claimant's coworkers and Mr. Holmes had noticed Claimant walking with a slight limp for approximately two weeks.

24. Claimant, who stands 4'8" and weighs approximately 95 pounds, testified that she worked at a high table and that she had to raise her chair too high which caused her legs to fall asleep. When she then stood up, it would affect her walking. Claimant's testimony is supported by employment records which indicate that Employer previously modified Claimant's workspace because of her very slight stature, as she was unable to properly use her ergonomic chair. Claimant acknowledged a slight limp in both her deposition and hearing testimony.

25. Claimant acknowledged mentioning problems with her right leg at a regularly scheduled December 18, 2013 appointment with Dr. Jeffrey Perkins, the doctor she saw for her arthritis. Dr. Perkins' records reveal that he was familiar with the medications Claimant had taken historically and was then taking. She described the feeling as being in her muscle and indicated during testimony that the feeling was located over her right knee and lower thigh. Dr. Jeffrey Perkins diagnosed Claimant with right iliotibial band syndrome and prescribed physical therapy which Claimant did with good result. Dr. Perkins continued the iliotibial band syndrome diagnosis in his December 26, 2013 medical record.

26. Dr. Ammie Christiansen's medical records reflect that Claimant took a medication called Boniva for approximately five years until 2011, and that the medication was associated with an increased risk of atypical femur fractures.

27. Dr. Bisgard testified that other medications Claimant took also were associated with an increased risk of typical femoral fractures, as well as some of Claimant's medical conditions. However, the medical records reflect that her treatment providers were monitoring her "Long-Term Dangerous Medication," and those records reflect that lab work was done and that there were no signs of medication toxicity or side effects. Additionally, Dr. Bisgard offered no persuasive testimony concerning how high that risk was.

28. Dr. Bisgard testified that if an x-ray had been taken just prior to Claimant's fracture, it could have shown "a very specific pattern of bone loss in that area" if the fracture was atypical. While no x-ray was taken before the fall, numerous

xrays were taken at the hospital to diagnose and fix the fracture. No persuasive evidence was offered that those x-rays showed that specific pattern of bone loss.

29. At hearing, Dr. Bisgard testified that during the very early morning hours before the hearing, she reviewed the incident report prepared by Mr. Holmes which documented no water being on the floor. She described the report as her “ah-ha moment.” Dr. Bisgard went back “and reviewed the records even further.” She testified that “given the fact that [Claimant] had multiple risk factors for what we call these atypical femur fractures, it’s likely that the fracture occurred, causing her to fall.” Dr. Bisgard acknowledged that she did not know when Mr. Holmes prepared the report or whether the area appeared the same as at the time Claimant fell.

30. Dr. Bisgard’s testimony did not rise to the level of medical probability. Rather, she hedged her testimony. For example, when discussing whether Claimant fell causing the fracture of fell because of the fracture, she stated, “Which came first? I can’t tell you which came first. All I can do is tell you these, these are the scenarios that are possible.” When discussing whether Claimant had experienced an atypical fracture, Dr. Bisgard stated, “I can’t, definitely, tell you, with 100% certainty, or even more that 50%certainty, what exactly happened.”

31. No persuasive evidence was offered to support a finding that Claimant’s leg gave out causing her to fall.

32. The ALJ finds Claimant to be a reliable historian and finds credible her reports and testimony that she slipped on a wet floor at work, causing her to fall and fracture her femur.

33. The ALJ finds Dr. Bisgard’s IME report to be more credible and persuasive than her hearing testimony. The report was based on Claimant’s reports of slipping on a wet surface which the ALJ has found to be credible and persuasive. The IME report is also stated to a reasonable degree of medical probability. In contrast, Dr. Bisgard’s hearing testimony was based on portions of Claimant’s testimony which the ALJ found to be ambiguous, and on an incident report which the ALJ finds unreliable. Dr. Bisgard’s hearing testimony was also expressly not stated in terms of reasonable medical probability.

34. The ALJ finds Claimant’s right leg injuries to be related to her employment and that her medical treatment for those injuries reasonable, necessary, and related to her employment.

Change of Physician

35. Claimant endorsed for Hearing the issue of change of physician. Claimant has been treating with the same medical provider, Boulder Community Hospital, since her fall. This is an approved medical provider through Claimant’s employer.

36. Claimant's first request for a change of physician was in her Application for Hearing dated February 29, 2016. Respondents timely denied this request through their Response to Application for Hearing dated March 9, 2016. Respondents complied with the 20-day requirement for denying a written request for change of physician under Rule 8-7 and section 8-43-404(5)(a)VI.

37. Claimant testified that neither Employer nor Insurer provided her with a choice of treatment providers as required by statute. Respondents did not offer any persuasive evidence to the contrary.

38. Claimant testified that she was happy with her treatment providers and had not requested a change of physicians.

39. The ALJ finds no cause for a change in Claimant's medical care, as she has been receiving care for her right leg injury, and has no complaints about her medical care.

Disfigurement

40. The ALJ finds and concludes that as a result of her December 30, 2013 work injury, Claimant has a visible disfigurement to the body consisting of two highly discolored scars on the lateral aspect of her right thigh, each measuring two and one-half inches long with significant skin dimpling. Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation. Section 8-42-108 (1), C.R.S.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers' Compensation Act of Colorado", 8-40-101, *et seq.*,, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. See Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of Administrative Law Judge. *University Park Care Center v. Industrial Claim Appeals Office,* 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

A claimant is required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See Section* 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998).

The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.2d 844 (Colo. App. 2000).

Based on the totality of the evidence, the ALJ finds and concludes that Claimant slipped on water at work causing her to fall and fracture her femur. This conclusion is supported by the weight of Claimant's persuasive and credible testimony and the lack of persuasive evidence to the contrary. To the extent that Dr. Bisgard attempted to suggest that the fracture was caused by Claimant's medical conditions, the ALJ finds such testimony not credible or persuasive as it was based on evidence the ALJ has found was ambiguous and unreliable. No persuasive evidence suggested that Claimant's femur spontaneously fractured causing her to fall.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's right leg injuries are compensable.

2. Claimant's medical treatment for those injuries is reasonable, necessary, and related to her employment.

3. Insurer shall pay Claimant $2,100 for her disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

4. Issues not expressly decided herein are reserved to the parties for future determination.

5. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 1, 2016

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-927-874-02

ISSUES

- Whether Respondent proved by a preponderance of the evidence that Claimant's claim is closed pursuant to §8-43-203(2)(b)(II)(A),C.R.S.

- If not closed, whether Respondent proved by a preponderance of the evidence that Claimant waived his right to challenge the Final Admission of Liability.

- If not closed, whether Respondent proved by a preponderance of the evidence that Claimant's request for benefits is barred by laches.

- If not closed, waived, or barred by laches, whether Claimant has proven by a preponderance of the evidence that the situs of his functional impairment extends beyond the arm at the shoulder entitling him to have his scheduled impairment rating converted to a whole person impairment rating.

STIPULATIONS

Claimant's counsel stipulated at hearing that he agrees with the Respondent's calculation of average weekly wage as contained in the Final Admission of Liability.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant sustained an admitted workers' compensation injury in a motor vehicle accident on August 24, 2013 while employed as a State Trooper for the State of Colorado, Department of Public Safety. (Exhibit A)

2. Claimant underwent surgery on his left shoulder with Dr. Durbin on September 4, 2014. (Exhibit D, bate stamp 14)

3. On November 11, 2014, Dr. Durbin noted that Claimant was doing "extremely well" 10 weeks out from surgery. No clinical findings were documented for any complaints/symptoms in the neck, back, head, torso or anywhere else beyond the arm at the shoulder. (Exhibit C, bate stamp 5)

4. Claimant returned to Dr. Durbin on December 16, 2014 at which time Dr. Durbin noted that Claimant was doing "extremely well" with "minimal complaints", "just a little bit of soreness every once in a while". Dr. Durbin further noted that Claimant was back to almost full strength and that he had returned to full activities. No clinical findings were documented for any complaints/symptoms in the neck, back, head, torso

or anywhere else beyond the arm at the shoulder. Claimant was released to return to full activities with no restrictions. (Exhibit C, bate stamp 3-4)

5. Claimant was placed at MMI by Dr. O'Toole on February 12, 2015. At the time, Dr. O'Toole noted that Claimant had "returned to full duty and has been tolerating unrestricted work without difficulty. He has no pain or other complaints related to his shoulder injury." The Review of Systems and Physical Examination do not include any complaints/symptoms in the neck, back, head, torso or anywhere else beyond the arm at the shoulder. Dr. Durbin provided Claimant with a 14% upper extremity impairment rating (8% whole person), released Claimant to return to work with no permanent work restrictions, and did not recommend any medical maintenance treatment. (Exhibit D, bate stamp 10-17)

6. A Final Admission of Liability was filed on April 2, 2015 admitting to the 14% upper extremity impairment rating. (Exhibit D)

7. Claimant filed an Application for Hearing on May 1, 2015 (Exhibit E) but never set a hearing so the Application for Hearing was stricken pursuant to OAC Rule 8(K).

8. On March 16, 2016, Respondent filed a Motion to Close Claim for Failure to Prosecute. (Exhibit G) Claimant responded by filing the current Application for Hearing on March 25, 2016. An Order to Show Cause was entered on March 31, 2016. (Exhibit H)

9. Because Claimant's May 1, 2015 Application for Hearing was stricken, it is as if it was never filed. As a result, Claimant's current claim for conversion filed on March 25, 2016 is not timely. Claimant's claim is closed pursuant to §8-43-203(2)(b)(II)(A), C.R.S.

10. Claimant, through his inaction in setting a hearing on his May 1, 2015 Application for Hearing or otherwise pursuing his objections to the Final Admission of Liability for nearly 1 year, has waived his right to challenge the Final Admission of Liability. The current Application for Hearing was filed more than 1 year after Claimant was placed at MMI and almost 1 year after the Final Admission of Liability was filed. By failing to timely contest the Final Admission of Liability, Claimant frustrates the express legislative intent of the Workers' Compensation Act, unconscionably delays the statutory remedy available to him to challenge the Final Admission of Liability, and prejudices the Respondent's right to have Claimant's permanent medical impairment determined at or near the time Claimant was placed at MMI.

11. Claimant and his attorney were sent copies of the Final Admission of Liability. The Final Admission of Liability contains a Notice to Claimant, that he had 30 days to object to the Final Admission of Liability. A timely Application for Hearing was filed but never set. It wasn't until Respondent filed a Motion to Close Claim for Failure to Prosecute that Claimant pursued his claim for conversion. Claimant's failure to contest the Final Admission of Liability for nearly 1 year is inconsistent with the

assertion of his right to challenge that admission, manifests his intent not to challenge the admission, and constitutes a waiver of that right.

12. There are no medical records in evidence after Claimant was placed at MMI. Claimant did not attend the hearing or offer any testimony regarding his inability to meet any personal, social, or occupational demands. Claimant's attorney argued at hearing that Claimant had cervical tightness/soreness entitling Claimant to have his scheduled injury converted to a whole person impairment rating. Claimant's counsel's argument is not evidence and is not supported by the medical records near or at the time that Claimant was placed at MMI.

13. Claimant was released to return to work full duty, without any restrictions, on December 16, 2014. When Claimant returned to the ATP on February 12, 2015, he did not report any problems as a result of returning to work full duty. The MMI report contains no notations of complaints of pain or functional limitations beyond the arm at the shoulder. No evidence was submitted after Claimant was placed at MMI documenting any complaints or limitations as a result of being released to return to work without any permanent restrictions. Accordingly, the ALJ concludes that the situs of Claimant's functional impairment does not extend beyond the arm at the shoulder.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Generally

The purpose of the Workers' Compensation Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. Claimant carries the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. Respondent carries the burden of proof, by a preponderance of the evidence, for its affirmative defenses. *Johnson v. Industrial Commission*, 761 P.2d 1140 (Colo. 1988); *Sholund v. Argenbright Security*, W.C. No. 4-415-403 (June 16, 2004). A preponderance of the evidence is evidence which leads the trier-of fact, after conserving all of the evidence, to find a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (1979). Facts in a workers' compensation case are not interpreted liberally in favor of either the injured worker or the employer. C.R.S. §8-43-201.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Closure, Waiver, and Laches

§8-43-203(2)(b)(II)(A), C.R.S. provides, in relevant part, that a case will close as to the issues admitted in a final admission if the claimant does not contest the final admission within 30 days after the date of the final admission. The automatic closure of contested issues from a Final Admission of Liability furthers the legislative intent of providing the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Leewaye v. Industrial Claim Appeals Office*, 178 P.3d 1254 (Colo. App. 2007). Failure to contest an admission within 30 days closes the claim on all admitted issues. *Dyrkopp v. Industrial Claim Appeals Office*, 30 P.3d 821 (Colo. App. 2001). Once a case has closed, the issues resolved by the Final Admission of Liability are not subject to further litigation unless they are reopened pursuant to §8-43-303, C.R.S. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270, 272 (Colo. App. 2005); *Ballesteros v. Westaff, Inc.*, W.C. No. 4-475-838 (November 24, 2008). As found, because Claimant's May 1, 2015 Application for Hearing was stricken, it is as if it was never filed. The March 25, 2016 Application for Hearing was not filed within 30 days of the Final Admission of Liability so the Court has no jurisdiction to hear the issues endorsed in that Application for Hearing absent a reopening.

Waiver is the intentional relinquishment of a known right. *Johnson, supra*. The exercise of a statutory right is always subject to equitable limitations. *Id.* Waiver may be implied as when a party engages in conduct which manifests an intention to relinquish the right or acts inconsistently with its assertion. *Id.; see also, Munoz v. JBS Swift & Company*, W.C. No. 4-780-871 (March 1, 2010); *Rodriguez v. Safeway Stores, Inc.*, W.C. No. 4-712-019 (June 3, 2009). A party may, through inaction, delay, or other similar conduct, waive specific rights. *Johnson, supra.; Munoz, supra.*; *Rodriguez, supra.*; *Gaither v. The Resource Exchange*, W.C. No. 4-125-439 (September 14, 1994); *Stein v. Alliance*, W.C. No. 4-533-782 (October 5, 2004); *Sholund*, supra.; *Hakizimana v. JBS USA, LLC*, W.C. No. 4-909-058 (October 23, 2014). The equitable defense of laches may be used in a workers' compensation proceeding to deny relief to a party whose unconscionable delay in enforcing his rights has prejudiced the party against whom enforcement is sought. *Small v. Coors Porcelain Company*, W.C. No. 3-500-834; *Safeway, Inc. v. Industrial Claim Appeals Office*, 186 P.3d 103 (Colo. App. 2008); *Burke v. Industrial Claim Appeals Office*, 905 P.2d 1 (Colo. App. 1994); *Bacon v. Industrial Claim Appeals Office*, 746 P.2d 74 (Colo. App. 1987). Parties to a workers' compensation claim are presumed to know the applicable law. *Midget Consol. Gold Mining Co. v. Industrial Commission*, 193 P. 493 (Colo. 1920); *Paul v. Industrial Commission*, 632 P.2d 638 (Colo. App. 1981). The presumption aids a party in meeting its burden of proof. *Union Ins. Co. v. RCA Corp.*, 724 P.2d 80 (Colo. App. 1986). A party may not use ignorance of the law as a defense to its legal duties. *Grant v. Professional Contract Services*, W.C. No. 4-531-613 (January 24, 2005).

As found, Claimant, through his inaction in setting a hearing on his original Application for Hearing or otherwise pursuing his objections to the Final Admission of Liability for nearly 1 year, has waived his right to challenge the Final Admission of Liability. The period of time to challenge a Final Admission of Liability is provided by statute to further the legislative intent of providing the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. The period of time to challenge a Final Admission of Liability is also provided by statute to further the legislative intent that impairment is to be determined at the time of MMI. §8-42-107(8)(c), C.R.S. By failing to challenge the Final Admission of Liability for almost 1 year since the Final Admission of Liability was filed, Claimant frustrates the express legislative intent of the Workers' Compensation Act, unconscionably delays the statutory remedy available to him to challenge the Final Admission of Liability, and prejudices the Respondent's right to have Claimant's permanent medical impairment determined at or near the time Claimant was placed at MMI. Claimant, through his attorney, knew that he had 30 days to challenge the Final Admission of Liability. Claimant's failure to challenge the Final Admission of Liability for nearly 1 year is inconsistent with the assertion of his right to challenge the Final Admission of Liability, manifests his intent not to challenge the Final Admission of Liability, and constitutes a waiver and/or unconscionably delay of that right.

Permanent Impairment

Permanent medical impairment is to be determined at the time of MMI. §8-42-107(8)(c), C.R.S. As found, it has been more than 1 year since Claimant was placed at MMI. When a claimant's injury is listed on the schedule of disabilities, the award for that injury is limited to a scheduled disability award. §8-42-107(1)(a), C.R.S. However, a claimant may establish that his injury has resulted in "functional impairment" beyond the schedule enumerated in C.R.S. §8-42-107(2)(a); thus, entitling him to "conversion" of the scheduled impairment to impairment of the whole person. This is true because the term "injury" as used in §8-42-107(1)(a)-(b), C.R.S., refers to the part or parts of the body which have been impaired or disabled not the situs of the injury itself of the medical reason for the ultimate loss. *Walker v. Jim Fucco Motor Co.*, 942 P.2d 1390 (Colo. App. 1997); *see also Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996). In the case of a shoulder injury, the question is whether the claimant has sustained functional impairment beyond the arm at the shoulder. *Langton v. Rocky Mountain Health Care Corp.*, 937 P.2d 883 (Colo. App. 1996); *Strauch, supra.* The issue of conversion is a question of fact for the ALJ. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691 (Colo. App. 2000).

"Functional impairment" is distinct from physical (medical) impairment under the AMA Guidelines and as noted above, the site of functional impairment is not necessarily the site of the injury itself. The site of functional impairment is that part of the body which has been impaired or disabled. *Strauch, Supra.* Physical impairment relates to an individual's health status as assessed by medical means. On the other hand, disability or functional impairment pertains to a person's ability to meet personal, social, or occupational demands, and is assessed by non-medical means. Consequently, physical impairment may or may not cause "functional impairment" or disability. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656, 658 (Colo. App. 1998). Physical impairment becomes a disability only when the medical condition limits the claimant's capacity to meet the demands of life's activities. *Lambert & Sons, Inc., supra.*

Symptoms of pain do not automatically rise to the level of a functional impairment. To the contrary, there must be evidence that such pain limits or interferes with a claimant's ability to use a portion of his body to be considered a functional impairment. *See Mader v. Popejoy Construction Co., Inc.,* W.C. No. 4-198-489 (August 9, 1996). Thus, in order to determine whether permanent disability should be compensated as physical impairment on the schedule or as functional impairment as a whole person, the issue is not whether Claimant has pain, but whether the injury and the associated pain caused thereby has impacted part of Claimant's body which limits his "capacity to meet personal, social and occupational demands." *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996); *Bernal v. CMHIP*, W.C. No. 4-956-645 (October 5, 2015).

As found, Claimant did not attend the hearing or offer any testimony regarding his inability to meet any personal, social, or occupational demands. Claimant's counsel's argument that Claimant had cervical tightness/soreness entitling Claimant to have his scheduled injury converted to a whole person impairment rating is not evidence. *Lewis v. Pacific Fruit Produce*, W.C. No. 3-048-301 (November 15, 1995); *Subsequent Injury Fund v. Gallegos*, 746 P.2d 71 (Colo. App. 1987). Claimant was released to return to work full duty, without any restrictions, on December 16, 2014. When Claimant returned to the ATP on February 12, 2015, he did not report any problems as a result of returning to work full duty. The MMI report contains no notations of complaints of pain or functional limitations beyond the arm at the shoulder. No evidence was submitted after Claimant was placed at MMI documenting any complaints or limitations as a result of being released to return to work without any permanent restrictions. Accordingly, the ALJ concludes that the situs of Claimant's functional impairment does not extend beyond the arm at the shoulder.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim is closed pursuant to §8-43-203(2)(b)(II)(A), C.R.S.

2. Claimant has waived his right to challenge the Final Admission of Liability.

3. Claimant's claim is barred by laches.

4. Claimant's claim for conversion is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm

DATED: September 2, 2016

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-938-765-05

ISSUES

- Whether Claimant's fall at work on December 30, 2013 and related medical treatment are compensable.
- Whether Claimant is entitled to a change of physician.
- Whether Claimant is entitled to a disfigurement award and, if so, in what amount.

STIPULATIONS

- The issues of average weekly wage, TTD, TPD, and offsets are reserved for future determination.
- The parties stipulated that if the claim is found compensable, the medical treatment to Claimant's right lower extremity is reasonable, necessary, and related; and is provided by an authorized treating physician..

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was employed by Employer as a full time assembler for 33 years.

2. Claimant's first language is Korean. Medical records from Boulder Community hospital note that some information from Claimant was "difficult to ascertain" as Claimant demonstrated, "slight language barrier in as much as she is Korean but I am still able to discern" that she takes certain specified medications. The record also notes, "She does not speak fluent [E]nglish, but communicates well enough to discuss her condition with her."

3. On December 30, 2013, Claimant was working her regular job. As Claimant was returning from a break walking near an exit door and laundry machines, she slipped and fell onto her right side fracturing her right femur.

4. When Claimant's coworker could not help her up, the coworker notified the supervisor, Henry Homer. Eventually paramedics arrived and transported Claimant to Boulder Community Hospital where she was diagnosed with a right femur fracture. During transport, the paramedics gave Claimant pain medication, Fentanyl, which made her fall asleep. Claimant testified that she awoke in a hospital room.

5. Claimant was given additional Fentanyl and Versed upon hospital admission.

6. On December 31, 2013, Claimant underwent open reduction and internal fixation surgery performed by Jeffrey R. Gagliano, M.D., and remained in the hospital for approximately five days. Nothing in the surgical report indicates Claimant's fracture was "atypical" or likely caused by anything other than a mechanical fall.

7. Dr. Gagliano's surgical report includes the following finding:

   > Short oblique subtrochanteric femur fracture with mild comminution. The patient did have notable sub-trochanteric, lateral-sided cortical spur defects at the fracture site as well as on the non-operative left hip consistent with possible prior tension-sided stress fracture or response.

   No persuasive medical testimony was offered to explain this finding or its relevance, if any.

8. Claimant was discharged to a skilled nursing facility and also participated in physical and occupational therapy as part of her rehabilitation.

9. Claimant experienced persistent greater trochanteric pain near the area of the screw used to secure the internal fixation hardware.

10. On September 28, 2015, Claimant underwent a second surgery to remove the screw. The surgery involved two incisions. Findings from that surgery include "Copious scar around the illiotibial band as well as the fat superficial to the ITB. There was additional scarring between the IT band and the vastus lateralis fascia."

Mechanism of Injury

11. Clamant testified at hearing that she slipped and fell. She explained "It was a really bad day for that day, because there is a, a lot of water travel in and out, because it was really sunny and a lot of snow. And so water's in and out, and also we have a washing machine there. And they got a drain there sometimes that dripping water there, too." When asked if she knew where the water came from, Claimant answered, "Like I say, it was a, a – really was a traffic was pretty bad. And the salt, salt, and the sand is in and out – lots of things." She also testified that after she fell, her head was close to the drain. Claimant landed on her right side.

12. On cross examination, Respondents' counsel asked a number of questions that elicited much more ambiguous answers about the circumstances of Claimant's fall. The ALJ finds these answers to be less clear and reliable than those in Claimant's direct and rebuttal testimony.

13. Claimant testified that her leg did not give out and that she had not previously fallen. Her leg was not weak the day of the injury, and she walked for exercise that morning before work. Claimant also hiked without difficulty prior to her injury.

14. The paramedics' report notes that Claimant "was standing talking to [a] co-worker when she turned to walk away and 'tripped over my own foot and fell down." The report is not attributed to Claimant.

15. Boulder Community Hospital's intake report records, "Per patient, she was at work, pivoted and 'my feet got caught up' and the patient tripped and fell onto her right hip."

16. With respect to this report, Claimant testified that she did not provide information. "No, I didn't told her anything what happened." Claimant further explained that she did not talk to anybody about what happened, but rather a nurse told her what had happened.

17. Similarly, Dr. Gagliano's record indicates that Claimant's feet became tangled up and that she fell from standing. However, Claimant testified that he had not asked her how she fell and that she never mentioned anything to him about how she fell.

18. Dr. Gagliano's discharge summary attributes the fracture to being caused by the fall: "[Claimant] is a 63-year-old female who fell on 12/30/2013 causing a subtrochanteric femur fracture."

19. On September 18, 2014, Dr. Bisgard performed a Respondents sponsored independent medical examination (IME). Claimant reported to Dr. Bisgard that there was a laundry basket of wet towels near where she fell and that the floor was also wet as the result of melted snow being tracked in from outside. While Claimant was unsure which was the source of the water, Claimant specified that there was water on the floor where she slipped and fell. When Dr. Bisgard referred in her hearing testimony to Claimant's report of the mechanism of her injury, she described Claimant's report as consistent, and that Claimant gave a good description of water being on the floor. Dr. Bisgard testified further hat she found Claimant to be credible, very forthcoming, and a reliable historian. After examining Claimant, taking her history, and reviewing Claimant's medical records – including the paramedic report, the emergency room report, and Dr. Gagliano's initial record – Dr. Bisgard opined that Claimant's fall caused her femur fracture.

20. Respondents introduced Employer's Incident Investigation Report. Claimant's supervisor Henry Holmes completed the report and noted, "the floor area she fell in was clean and free of any liquid or other slippery substance." No evidence was presented to establish when Mr. Holmes observed the area or completed the report, however, it is clear from context that Mr. Holmes made his observations after the paramedics had transported Claimant to the hospital.

21. The ALJ reasonably infers that the responding paramedics would have removed any fall hazards as part of their response to the call. Thus, the ALJ does not find the incident report to be a reliable source of information as to the condition of the area where Claimant fell at the time of her fall.

22. Prior to her injury, Claimant had been diagnosed with a number of medical conditions including osteoarthritis, rheumatoid arthritis, osteopenia, and osteoporosis.

23. Employer's Incident Investigation Report noted that one of Claimant's coworkers and Mr. Holmes had noticed Claimant walking with a slight limp for approximately two weeks.

24. Claimant, who stands 4'8" and weighs approximately 95 pounds, testified that she worked at a high table and that she had to raise her chair too high which caused her legs to fall asleep. When she then stood up, it would affect her walking. Claimant's testimony is supported by employment records which indicate that Employer previously modified Claimant's workspace because of her very slight stature, as she was unable to properly use her ergonomic chair. Claimant acknowledged a slight limp in both her deposition and hearing testimony.

25. Claimant acknowledged mentioning problems with her right leg at a regularly scheduled December 18, 2013 appointment with Dr. Jeffrey Perkins, the doctor she saw for her arthritis. Dr. Perkins' records reveal that he was familiar with the medications Claimant had taken historically and was then taking. She described the feeling as being in her muscle and indicated during testimony that the feeling was located over her right knee and lower thigh. Dr. Jeffrey Perkins diagnosed Claimant with right iliotibial band syndrome and prescribed physical therapy which Claimant did with good result. Dr. Perkins continued the iliotibial band syndrome diagnosis in his December 26, 2013 medical record.

26. Dr. Ammie Christiansen's medical records reflect that Claimant took a medication called Boniva for approximately five years until 2011, and that the medication was associated with an increased risk of atypical femur fractures.

27. Dr. Bisgard testified that other medications Claimant took also were associated with an increased risk of typical femoral fractures, as well as some of Claimant's medical conditions. However, the medical records reflect that her treatment providers were monitoring her "Long-Term Dangerous Medication," and those records reflect that lab work was done and that there were no signs of medication toxicity or side effects. Additionally, Dr. Bisgard offered no persuasive testimony concerning how high that risk was.

28. Dr. Bisgard testified that if an x-ray had been taken just prior to Claimant's fracture, it could have shown "a very specific pattern of bone loss in that area" if the fracture was atypical. While no x-ray was taken before the fall, numerous

xrays were taken at the hospital to diagnose and fix the fracture. No persuasive evidence was offered that those x-rays showed that specific pattern of bone loss.

29. At hearing, Dr. Bisgard testified that during the very early morning hours before the hearing, she reviewed the incident report prepared by Mr. Holmes which documented no water being on the floor. She described the report as her “ah-ha moment.” Dr. Bisgard went back “and reviewed the records even further.” She testified that “given the fact that [Claimant] had multiple risk factors for what we call these atypical femur fractures, it’s likely that the fracture occurred, causing her to fall.” Dr. Bisgard acknowledged that she did not know when Mr. Holmes prepared the report or whether the area appeared the same as at the time Claimant fell.

30. Dr. Bisgard’s testimony did not rise to the level of medical probability. Rather, she hedged her testimony. For example, when discussing whether Claimant fell causing the fracture of fell because of the fracture, she stated, “Which came first? I can’t tell you which came first. All I can do is tell you these, these are the scenarios that are possible.” When discussing whether Claimant had experienced an atypical fracture, Dr. Bisgard stated, “I can’t, definitely, tell you, with 100% certainty, or even more that 50%certainty, what exactly happened.”

31. No persuasive evidence was offered to support a finding that Claimant’s leg gave out causing her to fall.

32. The ALJ finds Claimant to be a reliable historian and finds credible her reports and testimony that she slipped on a wet floor at work, causing her to fall and fracture her femur.

33. The ALJ finds Dr. Bisgard’s IME report to be more credible and persuasive than her hearing testimony. The report was based on Claimant’s reports of slipping on a wet surface which the ALJ has found to be credible and persuasive. The IME report is also stated to a reasonable degree of medical probability. In contrast, Dr. Bisgard’s hearing testimony was based on portions of Claimant’s testimony which the ALJ found to be ambiguous, and on an incident report which the ALJ finds unreliable. Dr. Bisgard’s hearing testimony was also expressly not stated in terms of reasonable medical probability.

34. The ALJ finds Claimant’s right leg injuries to be related to her employment and that her medical treatment for those injuries reasonable, necessary, and related to her employment.

Change of Physician

35. Claimant endorsed for Hearing the issue of change of physician. Claimant has been treating with the same medical provider, Boulder Community Hospital, since her fall. This is an approved medical provider through Claimant’s employer.

36. Claimant's first request for a change of physician was in her Application for Hearing dated February 29, 2016. Respondents timely denied this request through their Response to Application for Hearing dated March 9, 2016. Respondents complied with the 20-day requirement for denying a written request for change of physician under Rule 8-7 and section 8-43-404(5)(a)VI.

37. Claimant testified that neither Employer nor Insurer provided her with a choice of treatment providers as required by statute. Respondents did not offer any persuasive evidence to the contrary.

38. Claimant testified that she was happy with her treatment providers and had not requested a change of physicians.

39. The ALJ finds no cause for a change in Claimant's medical care, as she has been receiving care for her right leg injury, and has no complaints about her medical care.

Disfigurement

40. The ALJ finds and concludes that as a result of her December 30, 2013 work injury, Claimant has a visible disfigurement to the body consisting of two highly discolored scars on the lateral aspect of her right thigh, each measuring two and one-half inches long with significant skin dimpling. Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation. Section 8-42-108 (1), C.R.S.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers' Compensation Act of Colorado", 8-40-101, *et seq.,*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. See Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of Administrative Law Judge. *University Park Care Center v. Industrial Claim Appeals Office,* 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

A claimant is required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See Section* 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998).

The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.2d 844 (Colo. App. 2000).

Based on the totality of the evidence, the ALJ finds and concludes that Claimant slipped on water at work causing her to fall and fracture her femur. This conclusion is supported by the weight of Claimant's persuasive and credible testimony and the lack of persuasive evidence to the contrary. To the extent that Dr. Bisgard attempted to suggest that the fracture was caused by Claimant's medical conditions, the ALJ finds such testimony not credible or persuasive as it was based on evidence the ALJ has found was ambiguous and unreliable. No persuasive evidence suggested that Claimant's femur spontaneously fractured causing her to fall.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's right leg injuries are compensable.

2. Claimant's medical treatment for those injuries is reasonable, necessary, and related to her employment.

3. Insurer shall pay Claimant $2,100 for her disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

4. Issues not expressly decided herein are reserved to the parties for future determination.

5. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 1, 2016

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-950-337-04

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on June 28, 2016 and August 22, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 6/28/16, Courtroom 4, beginning at 1:30 PM, and, ending at 2:10 PM; and, 8/22/16, Courtroom 3, beginning at 1:30 PM, and ending at 2:45 PM).

Claimant's Exhibits 1 through 9 were admitted into evidence, without objection, After the conclusion of the hearing, closing of the evidence and bench ruling in favor of the Respondents on August 22, 2016, the Claimant filed additional medical reports from Dr. Gehrs, which may be considered by the Respondents concerning post maximum medical improvement (MMI) medical benefits, admitted in the Final Admission of Liability (FAL). Respondents' Exhibits A through L were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondents. The proposed decision was filed, electronically, on August 29, 2016. No timely objections were filed. After a consideration of the proposed decision, the ALJ has modified the proposal and hereby issues the following decision.

PRELIMINARY MATTERS

At the outset of the hearing, the ALJ heard arguments from the Claimant and Respondents. Claimant admitted that he was attempting to overcome the determination of the Division Independent Medical Examiner (DIME), Anjmun Sharma, M.D., by clear and convincing evidence as to both maximum medical improvement (MMI) and degree of permanent impairment based upon his own disagreement with Dr. Sharma's decision to not find that his thoracic spine required continued medical care and/or an impairment rating arising from the admitted work injury. The ALJ confirmed with the Claimant that he had no additional testimonial evidence to rely upon, besides that which was contained in the exhibit packets, other than his arguments and commentary as to evidence in the Exhibits.

Upon confirmation that the Claimant did not intend to offer additional evidence, and after confirming with counsel for the Respondents that Respondents therefore had no additional evidence to present if Claimant was not going to submit additional evidence, the ALJ ruled from the bench in favor of the Respondents based upon the Exhibits submitted into the record.

ISSUES

The issues to be determined by this decision concern: (1) the Claimant's attempt to overcome the opinion of the Division Independent Medical Examiner (DIME), Anjmun Sharma, M.D., by clear and convincing evidence; (2) the Claimant's request for temporary total disability (TTD) benefits and temporary partial disability (TPD) benefits if Dr. Sharma's maximum medical improvement (MMI) determination was overcome; (3) the Claimant's request for additional pre-MMI medical benefits, if Dr. Sharma's MMI opinion were overruled; and, (4)the Claimant's request for a change of physician.

The Claimant also endorsed average weekly wage (AWW) as an issue for hearing, but at the hearing he conceded he had no contrary evidence to dispute the admitted AWW and he withdrew the issue.

The standard of proof for overcoming the DIME is by "clear and convincing evidence." The standard of proof for change of physician is "preponderance of the evidence."

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant was born on August 20, 1976, and he was 40 years of age at the date of the hearing.

2. The Claimant was working for the Employer as a Rig Hand in Carlsbad, New Mexico, on the date of the injury. He had been employed with the Employer for approximately three weeks at the time of the injury.

3. Ultimately, the Respondents filed an amended FAL, dated February 9, 2016, based on DIME dr. Sharma's opinion, admitting for 11% whole person permanent impairment for the back; an MMI date of April 28, 2015; an AWW of $1,057.42; TTD benefits through April 19, 2015; and, reasonably necessary and causally related post-MMI medical maintenance benefits (*Grover* medicals) [Respondents' Exhibit L]..

The Injury Incident

4. The Claimant suffered a work-related injury on May 8, 2014 when he slipped and fell off a pipe. Claimant's "First Report of Injury" that he completed referenced that he injured his left lower back and suffered a "pinch nerve lower back" (Claimant's Exhibit 9).

5. The Respondents first filed a General Admission of Liability (GAL) on May 22, 2014, which admitted for ongoing temporary TTD benefits, medical benefits, and an AWW of $1,057.42.

The Claimant's Medical Treatment Post-Injury

6. The Claimant's primary authorized treating provider (ATP) in this claim is Aviation and Occupational Medicine. The Claimant was first evaluated by Hector J. Brignoni, M.D., on May 15, 2014. Dr. Brignoni is an authorized treating physician (ATP). The Claimant complained of pain in his left lower back, radiating into his left leg, as well as pain in his mid-back (Respondents' Exhibit E, pp. 110-111). Dr. Brignoni diagnosed the Claimant with a lumbar strain and thoracic strain, and he referred the Claimant for physical therapy (*Id.* at pp. 115-116).

7. The Claimant thereafter moved to Tulsa, Oklahoma, where he was evaluated by Randal Hendricks, M.D., an orthopedic surgeon. Claimant had a lumbar MRI (magnetic resonance imaging) on June 26, 2014 (Respondents' Exhibit J, p. 216). It showed mild findings with a small annular tear and disc protrusion at L5-S1. *Id.* Dr. Hendricks authored a note dated August 6, 2014 in which he noted that the Claimant continued to complain of significant low back and leg pain (Claimant's Exhibit 1). Dr. Hendricks noted attempting an epidural steroid injection which only provided temporary relief, and he recommended the Claimant undergo a discectomy and fusion at L5-S1. *Id.* There is no discussion of thoracic complaints in this record or any of Dr. Hendricks' records submitted into evidence. *See Id.* However, Dr. Hendricks referred the Claimant

for a thoracic MRI, which occurred on September 12, 2014. The MRI noted a moderate right disc protrusion at T7-8 without associated cord impingement, and small protrusions at T8-9 and T9-10 (Respondents' Exhibit J, p. 218).

8. James Ogsbury III, M.D., a neurosurgeon, reviewed the request for lumbar surgery and recommended denial of the requested surgery on the basis that a fusion was not indicated without six months of conservative care and in the absence of spinal instability (Claimant's Exhibit 3).

9. The Claimant moved back to Colorado. He was scheduled for an independent medical examination (IME) with Brian Reiss, M.D., an orthopedic surgeon, at the request of the Respondents. He also resumed treatment with Aviation and Occupational Medicine. On November 17, 2014, Dr. Brignoni noted re-evaluating the Claimant for the first time, he referred the Claimant to Franklin Shih, M.D., for evaluation and treatment, and Dr. Shih noted waiting on the results of the Dr. Reiss IME (Respondents' Exhibit E*,* p. 117).

10. Dr. Shih first evaluated the Claimant on November 19, 2014 (Respondents' Exhibit H, pp. 176-178). Dr. Shih noted that the Claimant complained of mid back and low back pain, but his examination was "unremarkable." *Id.* Dr. Shih noted that he did not recommend that the Claimant proceed with any more injections or surgery, but he recommended focused physical therapy and acupuncture. *Id.*

Dr. Reiss' Independent Medical Examination (IME)

11. Dr. Reiss performed his IME of the Claimant on December 10, 2014. He noted that he agreed with the treatment outlined by Dr. Shih and recommended a core strengthening, aerobic conditioning, and stretching program (Respondents' Exhibit F). He disagreed with Dr. Hendricks' prior request for surgery in the absence of instability, and he noted that there were no objective findings to identify the true pain generator. *Id.* Dr. Reiss noted at that time that he believed the Claimant's work injury caused a thoracolumbar strain. *Id.*

Continued Medical Treatment

12. As of December 23, 2014, the Claimant was continuing his treatment with Dr. Shih, another ATP, who noted again that he informed the Claimant that "if I was in his shoes I would not pursue this into more invasive treatment" (Respondents' Exhibit H, p. 184). On December 30, 2014, Dr. Shih reiterated his belief that the Claimant should not pursue more invasive treatment for his mid or low back pain. *Id.* at p. 186. He

referred the Claimant for an appointment with Nicholas K. Olsen, D.O., and scheduled an EMG. *Id.* Dr. Olsen became an ATP.

13. Dr. Shih performed the EMG for ongoing low back pain and alleged left leg symptoms on January 6, 2015. *Id.* at p. 188. The EMG was normal. *Id.*

14. Dr. Olsen evaluated the Claimant on January 13, 2015 (Respondents' Exhibit I, pp. 193-194). Dr. Olsen recommended, on the Claimant "reassurance that he has predominantly mechanical pain in his thoracic spine," a left S1 transforaminal epidural steroid injection for his lumbar spine complaints. *Id.* He administered the injection on January 27, 2015. *Id.* The Claimant reported no relief from the injection, so Dr. Olsen recommended a left L3-4 medial branch block and L5 dorsal primary ramus block. *Id.* at p. 198. Those injections occurred on February 17, 2015. *Id.* at p. 201.

15. Michael V. Ladwig, M.D., authored a letter to Pinnacol Assurance on February 16, 2015, stating that he agreed that the Claimant was not a surgical candidate for his lumbar spine pathophysiology after reviewing Dr. Reiss's IME report (Respondents' Exhibit E, p. 136). Dr. Ladwig was also an ATP.

16. The Claimant reported to Dr. Olsen on February 23, 2015 that he received only temporary relief from the injections (Respondents' Exhibit I, p. 203). Dr. Olsen recommended either a surgical consultation or an attempt at work conditioning. *Id.* Dr. Olsen referred the Claimant for work conditioning, and he later referred the Claimant to Andrew Castro, M.D., an orthopedic surgeon, for a surgical consultation.

17. Dr. Ladwig referred the Claimant for an updated thoracic MRI on February 25, 2015 (Respondents' Exhibit E, p. 137). The MRI occurred on February 28, 2015. It showed small central disc protrusions at T7-8, and T8-9 without significant foraminal compromise or cord compression (Respondents' Exhibit J, p. 220).

18. On March 9, 2015, the Claimant reported continuing low back and left lower extremity symptoms to Dr. Olsen. *Id.* at p. 206. There were no complaints mentioned as to the Claimant's mid or upper back at this time. *Id.*

19. Dr. Castro evaluated the Claimant on April 1, 2015 (Respondents' Exhibit G). Dr. Castro referred to the Claimant's complaints of low back pain, and there were no references to complaints of mid or upper back pain in this evaluation. *Id.* Dr. Castro definitively stated that that he felt Dr. Hendrick's prior opinion in favor of surgery was "not indicated and indeed further, I think, somewhat inappropriate." *Id.* at p. 173. He went on to state that he did not believe the Claimant would benefit from surgery of any kind, and he recommended the Claimant continue his conservative treatment. *Id.*

20. Dr. Olsen re-examined the Claimant on April 6, 2015 (Respondents' Exhibit I, p. 208). On re-examination, the Claimant's only abnormal finding was some

tenderness and mild deconditioning in the lower back. There was again no discussion of mid to upper back symptoms at this time.

21. ATP Dr. Olsen placed the Claimant at MMI on April 20, 2015. There were no references to mid to upper back complaints at this time either. Dr. Olsen provided a 7% whole person impairment rating for the Claimant's low back. *Id.* He recommended maintenance care of a 12 month health club membership.

22. Dr. Brignoni re-examined the Claimant on April 28, 2015. He noted the Claimant brought up his ongoing concerns with his upper back/thoracic region (Respondents' Exhibit E, p. 143). Dr. Brignoni in his handwritten notes wrote that he discussed in length with the Claimant about his thoracic MRI and the anatomy shown therein. *Id.* at p. 145. Dr. Brignoni confirmed Dr. Olsen's MMI finding, which Dr. Brignoni made effective as of that date, April 28, 2015. *Id.* He also confirmed post-MMI medications as a 12 month gym membership only. *Id.* The FAL was based on the opinions of ATPs Dr. Brignoni and Dr. Olsen.

23. The Claimant returned to see Dr. Brignoni on May 14, 2015, complaining of continued pain and was referred for additional physical therapy sessions (Respondents' Exhibit E, p. 147).

Dr. Sharma's DIME Opinion

24. Dr. Sharma performed the DIME on August 6, 2015 (Respondents' Exhibit C). Dr. Sharma documented that the Claimant had complained of both low back pain and mid-back pain as a result of his injury. *Id.* at p. 16. Dr. Sharma documented a comprehensive review of the Claimant's medical records, which discussed the Claimant's lumbar and thoracic complaints throughout his claim. *See Id.* Dr. Sharma documented that the Claimant had high pain behaviors and it was difficult for him to understand how the Claimant's pain was so out of proportion to the examination. *Id.* at p. 34. Dr. Sharma nonetheless assigned an 11% whole person impairment rating for the Claimant's lumbar spine. *Id.* at p. 35. Ultimately, the Respondents filed an amended FAL, based on Dr. Sharma's DIME opinions.

25. Dr. Sharma noted that the Claimant was requesting an additional surgical consultation. *Id.* Dr. Sharma discussed that he "was not necessarily sure that this was the best option for the patient . . ." *Id.* He also noted that he was skeptical the referral would be helpful, but he was willing to give him the opportunity to discuss with one more surgeon. *Id.* at p. 36. He therefore withheld finding that the Claimant was at MMI at that time. His diagnoses for the Claimant included low back pain but no thoracic diagnosis.

26. Dr. Sharma's deposition occurred on November 30, 2015. Dr. Sharma was asked repeatedly regarding his lack of findings for thoracic spine. Dr. Sharma

testified that he did not examine the thoracic spine, because “I do not believe he was complaining of any thoracic symptoms” (Respondents’ Exhibit D, p. 51, lines. 7-8). Dr. Sharma went on to clarify that he did not feel the thoracic spine was the pain generator for this claim, and he therefore did not feel it was appropriate to include it into the claim. *Id.* at p. 94, ll. 23-25. He explicitly stated that, “I do not think that the thoracic spine is involved necessarily.” *Id.* at p. 72, ll. 19-21. He also noted that the Claimant’s complaints as to his thoracic spine had been more sporadic than his low back complaints. *Id.* at p. 95, ll. 13-15.

27. Dr. Sharma further testified that he had not had Dr. Castro’s surgical evaluation report at the time he conducted the DIME. *Id.* at p. 101, ll. 2-4. He testified that he was curious as to why Dr. Castro felt the Claimant was not a surgical candidate, that he would like to review the report, and he would be willing to answer additional questions based upon the report. *Id.* at pp. 101-102.

28. Dr. Sharma authored an Addendum Report on January 27, 2016 based upon his subsequent review of Dr. Castro’s report (Respondents’ Exhibit C, pp. 42-43) He noted that Dr. Castro’s report clearly indicated that the Claimant was not a surgical candidate. *Id.* at p. 43. He concurred with Dr. Castro’s assessment and placed the Claimant at MMI as of April 28, 2015, the previous date assigned by Dr. Brignoni. *Id.*

The Claimant’s Post-DIME Medical Treatment

29. Dr. Reiss performed a follow-up IME on June 8, 2016. Dr. Reiss noted that the Claimant was complaining of 10/10 pain, but he displayed no corresponding pain behaviors and was able to move with no apparent distress (Respondents’ Exhibit F, pp. 164-168). Dr. Reiss agreed that the Claimant was at MMI. *Id.* He stated that he doubted that the Claimant’s thoracic complaints were related to his work injury. *Id.* Dr. Reiss further was of the opinion that the Claimant’s psychological screening was very concerning for depression and potentially a somatic disorder. *Id.* He recommended a psychological evaluation be performed as maintenance care. *Id.*

30. The Claimant was evaluated by Dr. Ladwig again on October 23, 2015. Dr. Ladwig noted at that time that the Claimant’s pain, “is primarily in low back.” *Id.* at p. 151.

Claimant’s Change of Physician Request

31. With respect to the Claimant’s change of physician request, the Claimant admitted at hearing that he had no evidence to submit verifying the identity of a physician to whom he was requesting a change of physician. Therefore, Claimant’s request to change physicians should be denied.

Findings, Re: The Claimant Voluntarily Declining to Testify

32. The Claimant advised the ALJ and the Respondents at the outset of the hearing that he had no additional evidence to provide other than what had been submitted as documentary exhibits. The ALJ listened to the arguments of the parties and ruled on the evidence submitted.

33. Although the Claimant's thoracic spine was discussed and evaluated in the claim, the evidence demonstrates that towards the end of the Claimant's treatment his complaints were almost entirely focused on his lumbar spine. There is nothing on the face of Dr. Sharma's opinion which indicates that he was clearly wrong in excluding any remaining complaints from the claim and determining that the Claimant was at MMI. In fact, Dr. Sharma's report and deposition testimony clearly demonstrate that he was aware of and considered the Claimant's prior thoracic complaints, but he finally determined that the Claimant had no thoracic complaints on the date of the DIME, the thoracic spine was not a pain generator, and Dr. Sharma did not believe a rating for the thoracic spine should have been included in a rating for this claim. Ultimately, the ALJ finds that the Claimant failed to present evidence sufficient to prove that Dr. Sharma was clearly wrong in his opinions.

Ultimate Findings

34. Based on the findings herein above, the ALJ finds DIME Dr. Sharma's opinions persuasive, credible and based on the medical records including the Claimant's earlier complaints of thoracic pain. Indeed, the Claimant presented no medical evidence which contradicts Dr. Sharma's findings, including his decision to exclude any impairment rating for the thoracic spine. To the contrary, Dr. Sharma's findings regarding MMI and impairment were entirely consistent with Dr. Olsen who assigned a lumbar rating only, with the physicians at Aviation and Occupational Medicine who incorporated Dr. Olsen's findings, and with Dr. Reiss who agreed with Dr. Sharma's MMI determination and determination that the Claimant's ongoing thoracic complaints were not a ratable condition to include in the claim.

35. The ALJ finds that the Claimant has failed to overcome the opinions of Dr. Sharma by showing that it is highly probable, unmistakable and free from serious and substantial doubt that Dr. Sharma's failure to rate the Claimant's thoracic spine and placing the Claimant at MMI was in error. Therefore, the Claimant failed to overcome Dr. Sharma's DIME opinions by clear and convincing evidence.

36. The Claimant has failed to prove, by a preponderance of the evidence, that he is entitled to a change of physician.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, DIME Dr. Sharma's opinions were persuasive, credible and based on the medical records including the Claimant's earlier complaints of thoracic pain. Indeed, the Claimant presented no medical evidence which contradicts Dr. Sharma's findings, including his decision to exclude any impairment rating for the thoracic spine. To the contrary, Dr. Sharma's findings regarding MMI and impairment were entirely consistent with Dr. Olsen who assigned a lumbar rating only, with the physicians at Aviation and Occupational Medicine who incorporated Dr. Olsen's findings, and with Dr. Reiss who agreed with Dr. Sharma's MMI determination and determination that the Claimant's ongoing thoracic complaints were not a ratable condition to include in the claim.

Post-MMI Medical Benefits

b. As admitted in the latest FAL, the Claimant is entitled to causally-related and reasonably related post-MMI medical care and treatment. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988).

Change of Physician Request

c. If a claimant wants to change physicians, there is a statutory obligation to follow the prescribed procedures in § 8-43-404(5)(a), C.R.S.; *Yeck v. Indus. Claim Appeals Office,* 996 P.2d 228, 229 (Colo. App. 1999). The Act does not permit an injured worker to change physicians or employ additional physicians without notice and consent. *Pickett v. Colorado State Hospital,* 513 P.2d 228 (Colo. App. 1973). A claimant may, however, seek a change of physician upon a "proper showing." § 8-43-404(5)(a)(VI),C.R.S. As found, Claimant presented no evidence substantiating to whom he was requesting a change of physician or a basis for the same. He argued that he wanted a new physician located closer to where he lived and because Dr. Ladwig's office had told him they would not see him again. As found, the Claimant did not made a proper showing justifying a change of physician without any documentation of to whom he wanted to take over his care. Also, as found, the Claimant was unable to make a proper showing of the need for a change of physician when he was already released at MMI, Dr. Ladwig had seen the Claimant on multiple occasions post-MMI already, and the Respondents had filed an FAL which admitted for post-MMI medical care. The Claimant's request for a change of physician is accordingly denied.

Overcoming the DIME

d. The party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's determination of MMI is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005); *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 400 (Colo. App. 2009). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). In other words, a DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P. 2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. A mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Bush, Inc.,* W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). As found, the Claimant failed to overcome DIME DR. Sharma's determination that the Claimant's thoracic spine was not ratable and the Claimant was therefore at MMI, with an 11% whole person permanent impairment rating by **clear and convincing evidence.**

Burden of Proof on Change of Physician

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to prove, by preponderant evidence that he is entitled to a change of physicians.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant's request to have the maximum medical improvement and impairment rating determinations of the Division Independent Medical Examiner Anjmun Sharma, M.D. overcome is hereby denied and dismissed.

B. The ultimate Final Admission of Liability, dated February 9, 2016, is hereby adopted and approved as if fully restated herein. Any and all other benefits requested, including average weekly wage, that are inconsistent with the latest Final Admission of Liability are hereby denied and dismissed.

C. The Claimant's request for a change of physician is hereby denied and dismissed without prejudice to properly requesting a change of physician with the Respondents according to the procedures. *See* § 8-43-404 (5) (a) (VI), C.R.S.

DATED this______day of September 2016.

____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-950-337-04

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on June 28, 2016 and August 22, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 6/28/16, Courtroom 4, beginning at 1:30 PM, and, ending at 2:10 PM; and, 8/22/16, Courtroom 3, beginning at 1:30 PM, and ending at 2:45 PM).

Claimant's Exhibits 1 through 9 were admitted into evidence, without objection, After the conclusion of the hearing, closing of the evidence and bench ruling in favor of the Respondents on August 22, 2016, the Claimant filed additional medical reports from Dr. Gehrs, which may be considered by the Respondents concerning post maximum medical improvement (MMI) medical benefits, admitted in the Final Admission of Liability (FAL). Respondents' Exhibits A through L were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondents. The proposed decision was filed, electronically, on August 29, 2016. No timely objections were filed. After a consideration of the proposed decision, the ALJ has modified the proposal and hereby issues the following decision.

PRELIMINARY MATTERS

At the outset of the hearing, the ALJ heard arguments from the Claimant and Respondents. Claimant admitted that he was attempting to overcome the determination of the Division Independent Medical Examiner (DIME), Anjmun Sharma, M.D., by clear and convincing evidence as to both maximum medical improvement (MMI) and degree of permanent impairment based upon his own disagreement with Dr. Sharma's decision to not find that his thoracic spine required continued medical care and/or an impairment rating arising from the admitted work injury. The ALJ confirmed with the Claimant that he had no additional testimonial evidence to rely upon, besides that which was contained in the exhibit packets, other than his arguments and commentary as to evidence in the Exhibits.

Upon confirmation that the Claimant did not intend to offer additional evidence, and after confirming with counsel for the Respondents that Respondents therefore had no additional evidence to present if Claimant was not going to submit additional evidence, the ALJ ruled from the bench in favor of the Respondents based upon the Exhibits submitted into the record.

ISSUES

The issues to be determined by this decision concern: (1) the Claimant's attempt to overcome the opinion of the Division Independent Medical Examiner (DIME), Anjmun Sharma, M.D., by clear and convincing evidence; (2) the Claimant's request for temporary total disability (TTD) benefits and temporary partial disability (TPD) benefits if Dr. Sharma's maximum medical improvement (MMI) determination was overcome; (3) the Claimant's request for additional pre-MMI medical benefits, if Dr. Sharma's MMI opinion were overruled; and, (4)the Claimant's request for a change of physician.

The Claimant also endorsed average weekly wage (AWW) as an issue for hearing, but at the hearing he conceded he had no contrary evidence to dispute the admitted AWW and he withdrew the issue.

The standard of proof for overcoming the DIME is by "clear and convincing evidence." The standard of proof for change of physician is "preponderance of the evidence."

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant was born on August 20, 1976, and he was 40 years of age at the date of the hearing.

2. The Claimant was working for the Employer as a Rig Hand in Carlsbad, New Mexico, on the date of the injury. He had been employed with the Employer for approximately three weeks at the time of the injury.

3. Ultimately, the Respondents filed an amended FAL, dated February 9, 2016, based on DIME dr. Sharma's opinion, admitting for 11% whole person permanent impairment for the back; an MMI date of April 28, 2015; an AWW of $1,057.42; TTD benefits through April 19, 2015; and, reasonably necessary and causally related post-MMI medical maintenance benefits (*Grover* medicals) [Respondents' Exhibit L]..

The Injury Incident

4. The Claimant suffered a work-related injury on May 8, 2014 when he slipped and fell off a pipe. Claimant's "First Report of Injury" that he completed referenced that he injured his left lower back and suffered a "pinch nerve lower back" (Claimant's Exhibit 9).

5. The Respondents first filed a General Admission of Liability (GAL) on May 22, 2014, which admitted for ongoing temporary TTD benefits, medical benefits, and an AWW of $1,057.42.

The Claimant's Medical Treatment Post-Injury

6. The Claimant's primary authorized treating provider (ATP) in this claim is Aviation and Occupational Medicine. The Claimant was first evaluated by Hector J. Brignoni, M.D., on May 15, 2014. Dr. Brignoni is an authorized treating physician (ATP). The Claimant complained of pain in his left lower back, radiating into his left leg, as well as pain in his mid-back (Respondents' Exhibit E, pp. 110-111). Dr. Brignoni diagnosed the Claimant with a lumbar strain and thoracic strain, and he referred the Claimant for physical therapy (*Id.* at pp. 115-116).

7. The Claimant thereafter moved to Tulsa, Oklahoma, where he was evaluated by Randal Hendricks, M.D., an orthopedic surgeon. Claimant had a lumbar MRI (magnetic resonance imaging) on June 26, 2014 (Respondents' Exhibit J, p. 216). It showed mild findings with a small annular tear and disc protrusion at L5-S1. *Id.* Dr. Hendricks authored a note dated August 6, 2014 in which he noted that the Claimant continued to complain of significant low back and leg pain (Claimant's Exhibit 1). Dr. Hendricks noted attempting an epidural steroid injection which only provided temporary relief, and he recommended the Claimant undergo a discectomy and fusion at L5-S1. *Id.* There is no discussion of thoracic complaints in this record or any of Dr. Hendricks' records submitted into evidence. *See Id.* However, Dr. Hendricks referred the Claimant

for a thoracic MRI, which occurred on September 12, 2014. The MRI noted a moderate right disc protrusion at T7-8 without associated cord impingement, and small protrusions at T8-9 and T9-10 (Respondents' Exhibit J, p. 218).

8. James Ogsbury III, M.D., a neurosurgeon, reviewed the request for lumbar surgery and recommended denial of the requested surgery on the basis that a fusion was not indicated without six months of conservative care and in the absence of spinal instability (Claimant's Exhibit 3).

9. The Claimant moved back to Colorado. He was scheduled for an independent medical examination (IME) with Brian Reiss, M.D., an orthopedic surgeon, at the request of the Respondents. He also resumed treatment with Aviation and Occupational Medicine. On November 17, 2014, Dr. Brignoni noted re-evaluating the Claimant for the first time, he referred the Claimant to Franklin Shih, M.D., for evaluation and treatment, and Dr. Shih noted waiting on the results of the Dr. Reiss IME (Respondents' Exhibit E*,* p. 117).

10. Dr. Shih first evaluated the Claimant on November 19, 2014 (Respondents' Exhibit H, pp. 176-178). Dr. Shih noted that the Claimant complained of mid back and low back pain, but his examination was "unremarkable." *Id.* Dr. Shih noted that he did not recommend that the Claimant proceed with any more injections or surgery, but he recommended focused physical therapy and acupuncture. *Id.*

Dr. Reiss' Independent Medical Examination (IME)

11. Dr. Reiss performed his IME of the Claimant on December 10, 2014. He noted that he agreed with the treatment outlined by Dr. Shih and recommended a core strengthening, aerobic conditioning, and stretching program (Respondents' Exhibit F). He disagreed with Dr. Hendricks' prior request for surgery in the absence of instability, and he noted that there were no objective findings to identify the true pain generator. *Id.* Dr. Reiss noted at that time that he believed the Claimant's work injury caused a thoracolumbar strain. *Id.*

Continued Medical Treatment

12. As of December 23, 2014, the Claimant was continuing his treatment with Dr. Shih, another ATP, who noted again that he informed the Claimant that "if I was in his shoes I would not pursue this into more invasive treatment" (Respondents' Exhibit H, p. 184). On December 30, 2014, Dr. Shih reiterated his belief that the Claimant should not pursue more invasive treatment for his mid or low back pain. *Id.* at p. 186. He

referred the Claimant for an appointment with Nicholas K. Olsen, D.O., and scheduled an EMG. *Id.* Dr. Olsen became an ATP.

13. Dr. Shih performed the EMG for ongoing low back pain and alleged left leg symptoms on January 6, 2015. *Id.* at p. 188. The EMG was normal. *Id.*

14. Dr. Olsen evaluated the Claimant on January 13, 2015 (Respondents' Exhibit I, pp. 193-194). Dr. Olsen recommended, on the Claimant "reassurance that he has predominantly mechanical pain in his thoracic spine," a left S1 transforaminal epidural steroid injection for his lumbar spine complaints. *Id.* He administered the injection on January 27, 2015. *Id.* The Claimant reported no relief from the injection, so Dr. Olsen recommended a left L3-4 medial branch block and L5 dorsal primary ramus block. *Id.* at p. 198. Those injections occurred on February 17, 2015. *Id.* at p. 201.

15. Michael V. Ladwig, M.D., authored a letter to Pinnacol Assurance on February 16, 2015, stating that he agreed that the Claimant was not a surgical candidate for his lumbar spine pathophysiology after reviewing Dr. Reiss's IME report (Respondents' Exhibit E, p. 136). Dr. Ladwig was also an ATP.

16. The Claimant reported to Dr. Olsen on February 23, 2015 that he received only temporary relief from the injections (Respondents' Exhibit I, p. 203). Dr. Olsen recommended either a surgical consultation or an attempt at work conditioning. *Id.* Dr. Olsen referred the Claimant for work conditioning, and he later referred the Claimant to Andrew Castro, M.D., an orthopedic surgeon, for a surgical consultation.

17. Dr. Ladwig referred the Claimant for an updated thoracic MRI on February 25, 2015 (Respondents' Exhibit E, p. 137). The MRI occurred on February 28, 2015. It showed small central disc protrusions at T7-8, and T8-9 without significant foraminal compromise or cord compression (Respondents' Exhibit J, p. 220).

18. On March 9, 2015, the Claimant reported continuing low back and left lower extremity symptoms to Dr. Olsen. *Id.* at p. 206. There were no complaints mentioned as to the Claimant's mid or upper back at this time. *Id.*

19. Dr. Castro evaluated the Claimant on April 1, 2015 (Respondents' Exhibit G). Dr. Castro referred to the Claimant's complaints of low back pain, and there were no references to complaints of mid or upper back pain in this evaluation. *Id.* Dr. Castro definitively stated that that he felt Dr. Hendrick's prior opinion in favor of surgery was "not indicated and indeed further, I think, somewhat inappropriate." *Id.* at p. 173. He went on to state that he did not believe the Claimant would benefit from surgery of any kind, and he recommended the Claimant continue his conservative treatment. *Id.*

20. Dr. Olsen re-examined the Claimant on April 6, 2015 (Respondents' Exhibit I, p. 208). On re-examination, the Claimant's only abnormal finding was some

tenderness and mild deconditioning in the lower back. There was again no discussion of mid to upper back symptoms at this time.

21. ATP Dr. Olsen placed the Claimant at MMI on April 20, 2015. There were no references to mid to upper back complaints at this time either. Dr. Olsen provided a 7% whole person impairment rating for the Claimant's low back. *Id.* He recommended maintenance care of a 12 month health club membership.

22. Dr. Brignoni re-examined the Claimant on April 28, 2015. He noted the Claimant brought up his ongoing concerns with his upper back/thoracic region (Respondents' Exhibit E, p. 143). Dr. Brignoni in his handwritten notes wrote that he discussed in length with the Claimant about his thoracic MRI and the anatomy shown therein. *Id.* at p. 145. Dr. Brignoni confirmed Dr. Olsen's MMI finding, which Dr. Brignoni made effective as of that date, April 28, 2015. *Id.* He also confirmed post-MMI medications as a 12 month gym membership only. *Id.* The FAL was based on the opinions of ATPs Dr. Brignoni and Dr. Olsen.

23. The Claimant returned to see Dr. Brignoni on May 14, 2015, complaining of continued pain and was referred for additional physical therapy sessions (Respondents' Exhibit E, p. 147).

Dr. Sharma's DIME Opinion

24. Dr. Sharma performed the DIME on August 6, 2015 (Respondents' Exhibit C). Dr. Sharma documented that the Claimant had complained of both low back pain and mid-back pain as a result of his injury. *Id.* at p. 16. Dr. Sharma documented a comprehensive review of the Claimant's medical records, which discussed the Claimant's lumbar and thoracic complaints throughout his claim. *See Id.* Dr. Sharma documented that the Claimant had high pain behaviors and it was difficult for him to understand how the Claimant's pain was so out of proportion to the examination. *Id.* at p. 34. Dr. Sharma nonetheless assigned an 11% whole person impairment rating for the Claimant's lumbar spine. *Id.* at p. 35. Ultimately, the Respondents filed an amended FAL, based on Dr. Sharma's DIME opinions.

25. Dr. Sharma noted that the Claimant was requesting an additional surgical consultation. *Id.* Dr. Sharma discussed that he "was not necessarily sure that this was the best option for the patient . . ." *Id.* He also noted that he was skeptical the referral would be helpful, but he was willing to give him the opportunity to discuss with one more surgeon. *Id.* at p. 36. He therefore withheld finding that the Claimant was at MMI at that time. His diagnoses for the Claimant included low back pain but no thoracic diagnosis.

26. Dr. Sharma's deposition occurred on November 30, 2015. Dr. Sharma was asked repeatedly regarding his lack of findings for thoracic spine. Dr. Sharma

testified that he did not examine the thoracic spine, because “I do not believe he was complaining of any thoracic symptoms” (Respondents’ Exhibit D, p. 51, lines. 7-8). Dr. Sharma went on to clarify that he did not feel the thoracic spine was the pain generator for this claim, and he therefore did not feel it was appropriate to include it into the claim. *Id.* at p. 94, ll. 23-25. He explicitly stated that, “I do not think that the thoracic spine is involved necessarily.” *Id.* at p. 72, ll. 19-21. He also noted that the Claimant’s complaints as to his thoracic spine had been more sporadic than his low back complaints. *Id.* at p. 95, ll. 13-15.

27. Dr. Sharma further testified that he had not had Dr. Castro’s surgical evaluation report at the time he conducted the DIME. *Id.* at p. 101, ll. 2-4. He testified that he was curious as to why Dr. Castro felt the Claimant was not a surgical candidate, that he would like to review the report, and he would be willing to answer additional questions based upon the report. *Id.* at pp. 101-102.

28. Dr. Sharma authored an Addendum Report on January 27, 2016 based upon his subsequent review of Dr. Castro’s report (Respondents’ Exhibit C, pp. 42-43) He noted that Dr. Castro’s report clearly indicated that the Claimant was not a surgical candidate. *Id.* at p. 43. He concurred with Dr. Castro’s assessment and placed the Claimant at MMI as of April 28, 2015, the previous date assigned by Dr. Brignoni. *Id.*

The Claimant’s Post-DIME Medical Treatment

29. Dr. Reiss performed a follow-up IME on June 8, 2016. Dr. Reiss noted that the Claimant was complaining of 10/10 pain, but he displayed no corresponding pain behaviors and was able to move with no apparent distress (Respondents’ Exhibit F, pp. 164-168). Dr. Reiss agreed that the Claimant was at MMI. *Id.* He stated that he doubted that the Claimant’s thoracic complaints were related to his work injury. *Id.* Dr. Reiss further was of the opinion that the Claimant’s psychological screening was very concerning for depression and potentially a somatic disorder. *Id.* He recommended a psychological evaluation be performed as maintenance care. *Id.*

30. The Claimant was evaluated by Dr. Ladwig again on October 23, 2015. Dr. Ladwig noted at that time that the Claimant’s pain, “is primarily in low back.” *Id.* at p. 151.

Claimant’s Change of Physician Request

31. With respect to the Claimant’s change of physician request, the Claimant admitted at hearing that he had no evidence to submit verifying the identity of a physician to whom he was requesting a change of physician. Therefore, Claimant’s request to change physicians should be denied.

Findings, Re: The Claimant Voluntarily Declining to Testify

32. The Claimant advised the ALJ and the Respondents at the outset of the hearing that he had no additional evidence to provide other than what had been submitted as documentary exhibits. The ALJ listened to the arguments of the parties and ruled on the evidence submitted.

33. Although the Claimant's thoracic spine was discussed and evaluated in the claim, the evidence demonstrates that towards the end of the Claimant's treatment his complaints were almost entirely focused on his lumbar spine. There is nothing on the face of Dr. Sharma's opinion which indicates that he was clearly wrong in excluding any remaining complaints from the claim and determining that the Claimant was at MMI. In fact, Dr. Sharma's report and deposition testimony clearly demonstrate that he was aware of and considered the Claimant's prior thoracic complaints, but he finally determined that the Claimant had no thoracic complaints on the date of the DIME, the thoracic spine was not a pain generator, and Dr. Sharma did not believe a rating for the thoracic spine should have been included in a rating for this claim. Ultimately, the ALJ finds that the Claimant failed to present evidence sufficient to prove that Dr. Sharma was clearly wrong in his opinions.

Ultimate Findings

34. Based on the findings herein above, the ALJ finds DIME Dr. Sharma's opinions persuasive, credible and based on the medical records including the Claimant's earlier complaints of thoracic pain. Indeed, the Claimant presented no medical evidence which contradicts Dr. Sharma's findings, including his decision to exclude any impairment rating for the thoracic spine. To the contrary, Dr. Sharma's findings regarding MMI and impairment were entirely consistent with Dr. Olsen who assigned a lumbar rating only, with the physicians at Aviation and Occupational Medicine who incorporated Dr. Olsen's findings, and with Dr. Reiss who agreed with Dr. Sharma's MMI determination and determination that the Claimant's ongoing thoracic complaints were not a ratable condition to include in the claim.

35. The ALJ finds that the Claimant has failed to overcome the opinions of Dr. Sharma by showing that it is highly probable, unmistakable and free from serious and substantial doubt that Dr. Sharma's failure to rate the Claimant's thoracic spine and placing the Claimant at MMI was in error. Therefore, the Claimant failed to overcome Dr. Sharma's DIME opinions by clear and convincing evidence.

36. The Claimant has failed to prove, by a preponderance of the evidence, that he is entitled to a change of physician.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, DIME Dr. Sharma's opinions were persuasive, credible and based on the medical records including the Claimant's earlier complaints of thoracic pain. Indeed, the Claimant presented no medical evidence which contradicts Dr. Sharma's findings, including his decision to exclude any impairment rating for the thoracic spine. To the contrary, Dr. Sharma's findings regarding MMI and impairment were entirely consistent with Dr. Olsen who assigned a lumbar rating only, with the physicians at Aviation and Occupational Medicine who incorporated Dr. Olsen's findings, and with Dr. Reiss who agreed with Dr. Sharma's MMI determination and determination that the Claimant's ongoing thoracic complaints were not a ratable condition to include in the claim.

Post-MMI Medical Benefits

b. As admitted in the latest FAL, the Claimant is entitled to causally-related and reasonably related post-MMI medical care and treatment. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988).

Change of Physician Request

c. If a claimant wants to change physicians, there is a statutory obligation to follow the prescribed procedures in § 8-43-404(5)(a), C.R.S.; *Yeck v. Indus. Claim Appeals Office,* 996 P.2d 228, 229 (Colo. App. 1999). The Act does not permit an injured worker to change physicians or employ additional physicians without notice and consent. *Pickett v. Colorado State Hospital,* 513 P.2d 228 (Colo. App. 1973). A claimant may, however, seek a change of physician upon a "proper showing." § 8-43-404(5)(a)(VI),C.R.S. As found, Claimant presented no evidence substantiating to whom he was requesting a change of physician or a basis for the same. He argued that he wanted a new physician located closer to where he lived and because Dr. Ladwig's office had told him they would not see him again. As found, the Claimant did not made a proper showing justifying a change of physician without any documentation of to whom he wanted to take over his care. Also, as found, the Claimant was unable to make a proper showing of the need for a change of physician when he was already released at MMI, Dr. Ladwig had seen the Claimant on multiple occasions post-MMI already, and the Respondents had filed an FAL which admitted for post-MMI medical care. The Claimant's request for a change of physician is accordingly denied.

Overcoming the DIME

d. The party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's determination of MMI is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005); *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 400 (Colo. App. 2009). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). In other words, a DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P. 2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. A mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Bush, Inc.,* W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). As found, the Claimant failed to overcome DIME DR. Sharma's determination that the Claimant's thoracic spine was not ratable and the Claimant was therefore at MMI, with an 11% whole person permanent impairment rating by **clear and convincing evidence.**

Burden of Proof on Change of Physician

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to prove, by preponderant evidence that he is entitled to a change of physicians.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant's request to have the maximum medical improvement and impairment rating determinations of the Division Independent Medical Examiner Anjmun Sharma, M.D. overcome is hereby denied and dismissed.

B. The ultimate Final Admission of Liability, dated February 9, 2016, is hereby adopted and approved as if fully restated herein. Any and all other benefits requested, including average weekly wage, that are inconsistent with the latest Final Admission of Liability are hereby denied and dismissed.

C. The Claimant's request for a change of physician is hereby denied and dismissed without prejudice to properly requesting a change of physician with the Respondents according to the procedures. *See* § 8-43-404 (5) (a) (VI), C.R.S.

DATED this______day of September 2016.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-983-648-07

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on, in Denver, Colorado. The hearing was digitally recorded (reference: 8/25/16, Courtroom 1, beginning at 8:30 AM, and ending at 10:40 AM).

Claimant's Exhibits 1, 2 and 4 through 12 were admitted into evidence, without objection. Respondents' objected to Claimant's Exhibit 3 (adjuster notes), the ALJ reserved ruling thereon and ultimately sustains the objection. Respondents' Exhibits A through G (a video of the Claimant at work during the time of the alleged injury) were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondents, which was filed, electronically, on August 31, 2016. No timely objections were filed. After a consideration of the proposed decision, the ALJ has modified the proposal and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern whether Claimant sustained a compensable injury to his left shoulder on May 14, 2015; If so, whether the Claimant is entitled to reasonably necessary medical benefits; whether the Claimant is entitled to temporary total disability (TTD) benefits from July 2, 2015 to January 22, 2016; and, whether the Respondents proved that the Claimant was responsible for termination and therefore not entitled to temporary benefits

The Claimant bears the burden of proof, by a preponderance of the evidence on all issues with the exception of "responsibility for termination," in which case the Respondents bear the burden of proof.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Stipulations and Findings

At the commencement of the hearing, the parties stipulated and the ALJ finds:

1. If compensable, the Claimant's average weekly wage (AWW) is $1,131.06.

2. If compensable, the Claimant's authorized treating physicians (ATPs) are at Injury Care Colorado, Anthony Euser, M.D. and Adam Bonner, PA-C.

3. The Claimant received unemployment benefits (UI) beginning July 4, 2015 through February 28, 2016 at the weekly rate of $502.00, except for September 1, 2015 to October 25, 2015.

Preliminary Findings

4. The Claimant was born on March 17, 1962 and was 54 years of age at the time of the hearing.

5. The Claimant began working for the Employer on July 3, 2014. The Employer manufactures sheet metal and coils.

6. The Claimant was a truck driver for the Employer. His job duties included securing and un-securing loads of sheet metal and coils and transporting the loads to and from destinations in Colorado.

7. The Claimant's job of securing the loads required him to tie down straps. This entailed tossing the straps from the driver's side to the passenger's side, affixing the straps to hooks and then ratcheting the straps down after placing protective covers between the straps and the sheet metal. Upon delivery, the secured straps had to be "un-ratcheted."

The Alleged Injury Incident

8. On May 14, 2015, the Claimant alleged that, at approximately 11:30 AM, while securing a load, he tripped on a strap and fell with his left shoulder going into the load and then he fell to the ground.

9. The Employer had continuous real-time equipment and cameras located on the south side of the facility. Review of the continuous real-time video (Respondents' Exhibit G) established that the alleged trip and fall could not possibly have occurred.

10. The continuous real-time, unedited, nature of the video evidences that no "doctoring" of the video occurred. The Claimant confirmed, on cross-examination, that the video showed the location and the time when the alleged trip and fall occurred. He further conceded that the video does not establish the trip and fall occurred nor did he offer any credible explanation why it did not show his trip and fall. The video is credible and persuasive.

11. Although there was medical documentation that Claimant had a torn rotator cuff in his left shoulder, merely having medical documentation of pathology does not establish that pathology was caused by a compensable industrial injury, arising out of the course and scope of employment. The ALJ specifically finds that the credible evidence does not support that the pathology documented by the MRI (magnetic resonance imaging) was a direct or proximate result of the alleged May 14, 2015 incident.

Ultimate Findings

12. At the close of Claimant's case-in-chief, Respondents moved for a judgment in the nature of a directed verdict. Respondents argued that the continuous unedited video of the date, time and location of the alleged incident established that Claimant was not injured on the job. Therefore judgment should be entered in their favor.

13. The ALJ specifically finds that the video, introduced and shown during the Claimant's case-in-chief (Respondents' Exhibit G), is credible, persuasive and it conclusively refutes the Claimant's testimony concerning the alleged incident of May

14, 2015, thus, the ALJ is compelled to find that Claimant's testimony lacking in credibility.

14. At the conclusion of the Claimant's case-in-chief, he failed to prove, by preponderant evidence that he sustained a compensable injury to his left shoulder on May 14, 2015.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Judgment in the Nature of a Directed Verdict

a. Colo. Rules of Civil Procedure, Rule 41(b) (1), provides that, after a plaintiff in a civil action *tried without a jury* has completed the presentation of his evidence, the defendant may move for a dismissal on the grounds that the plaintiff has failed to present a prima facie case for relief. In determining whether to grant a motion to dismiss or in the nature of a directed verdict, the court is not required to view the evidence in the light most favorable to the plaintiff, as argued by a claimant. *Rowe v. Bowers*, 160 Colo. 379, 417 P.2d 503 (Colo. 1966)*; Blea v. Deluxe/Current, Inc.*, W.C. No. 3-940-062 [Indus. Claim Appeals Office (ICAO), June 18, 1997] (applying these principles to workers' compensation proceedings). Neither is the court required to "indulge in every reasonable inference that can be legitimately drawn from the evidence" in favor of the Claimant. Rather, the test is whether judgment for the respondents is justified on the claimant's evidence. *Amer. National Bank v. First National Bank*, 28 Colo. App. 486, 476 P.2d 304 (Colo. App. 1970); *Bruce v. Moffat County Youth Care Center*, W. C. No. 4-311-203 (ICAO, March 23, 1998). The question of whether the Claimant carried this burden was one of fact for resolution by the ALJ. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). As found, at the close of Claimant's case-in-chief, the totality of the evidence revealed that the Claimant had not proven compensability by preponderant evidence. Therefore, a judgment in the nature of a directed verdict was appropriate.

Credibility

b. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, 2012 COA 85. The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). As found, the video (respondents' exhibit G), introduced and shown during the Claimant's case-in-chief, is credible, persuasive and it conclusively refutes the Claimant's testimony concerning the alleged incident of May 14, 2015, thus, the ALJ was compelled to find that Claimant's testimony lacking in credibility.

Burden of Proof

c. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to satisfy his burden as of the conclusion of his case-in-chief.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for workers' compensation benefits are hereby denied and dismissed.

DATED this______day of September 2016.

____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

The issues determined by this decision are the same for the above referenced consolidated claims. The specific questions answered are:

I. Whether Claimant established by a preponderance of the evidence that she sustained a compensable injury to her left elbow on November 2nd/3rd, 2015 or alternatively on November 8th/9th as alleged in W.C. No. 5-001-385

II. Whether Claimant established by a preponderance of the evidence that she sustained a traumatic injury to her left knee arising out of and in the course and scope of her employment on January 2, 2016, as alleged in W.C. No. 5-007-049

III. Whether Claimant established by a preponderance of the evidence that she sustained a traumatic injury to her left elbow, left shoulder, and left upper extremity arising out of and in the course and scope of her employment on January 2, 2016, as alleged in W.C. No. 5-007-050,

IV. If Claimant has proven that a compensable injury occurred in any of the above referenced claims, whether she has proven, by a preponderance of the evidence, that the medical benefits she requests are causally related to that compensable work injury;

V. If Claimant has proven that she sustained a compensable injury in any of the above referenced claims, whether her average weekly wage (AWW) is $333.55 as calculated by Respondent;

VI. If Claimant has established that she sustained a compensable injury in any of the aforementioned, whether she has proven by a preponderance of the evidence that she is entitled to temporary total disability (TTD) benefits;

VII. Whether Respondent established by a preponderance of the evidence that Claimant was responsible for her wage loss secondary to a voluntary resignation, thereby precluding her entitlement to temporary total disability (TTD) benefits.

FINDINGS OF FACT

Based upon the evidence presented as hearing, the ALJ enters the following findings of fact:

Background

1. Respondent-Employer operates a convenience store in Limon, Colorado. Claimant worked as a cashier/customer service representative for Respondent-Employer. Claimant's duties included waiting on customers, stocking, counting cash and cleaning the store.

2. Claimant is currently 50 years old and has a complex medical history concerning her left knee, low back and left shoulder.

3. Claimant injured her left knee in 2010 while playing softball. Imaging at that time revealed a torn meniscus which was subsequently treated surgically. Claimant has had continued complaints of periodic knee and low back pain since 2010. On July 13, 2015, Claimant reported a two month duration of left lateral knee pain radiating into the left hip which was aggravated by standing and squatting. Medical restrictions of no "prolonged standing and no lifting over 20 pounds were imposed on July 20, 2015.

4. On July 30, 2015, Claimant's restrictions were clarified and it was further recommended that Claimant have a "bench step stool for stocking lower shelves, preferably with a handle to aid in standing and back up." Claimant returned to work with these restrictions. Follow-up with an orthopedic specialist was planned.

5. Claimant was seen by her primary care provider on August 10, 2015 for continued left knee and low back pain.

6. On August 18, 2015, Claimant was evaluated by Dr. Adams who directed treatment to Claimant's low back. Treatment focus remained primarily on the low back and left hip through October 26, 2015 when Claimant reported increased symptoms as a consequence of straining her low back when her grandson jumped from a bed into her extended arms.

7. Claimant also has a history of prior injury to the left shoulder. On December 8, 2012, while working as a correctional officer, Claimant was shaking down a cell when she inadvertently knocked a metal box off a shelf onto her left shoulder. Claimant was evaluated by Kristen Janssen, PA-C who obtained x-rays which demonstrated mild AC arthritis. Claimant was diagnosed a trapezius strain and referred to physical therapy.

Claimant's Alleged November 2, 2015 Elbow Injury[1]

8. On November 2, 2015, Claimant was assigned to work the graveyard shift which extended into the early morning hours of November 3, 2015. As part of her work duties, Claimant testified that she began mopping the store in sections between 12:00

[1] Although Claimant testified that her injury occurred on November 2, 2015, the evidence presented establishes that her claimed injury would actually have occurred on November 3, 2015 since she was mopping between 12:00 and 4:00 AM. The ALJ finds that Claimant likely reported that her injury occurred on November 2nd and not November 3rd as her work shift actually began on November 2, 2015 and she was allegedly injured during this shift.

and 4:00 am. Claimant was alone in the store at the time. Claimant testified that she developed pain around the outside portion of her left elbow hours after mopping the store. Claimant also reportedly developed a large “bump” in the area of the left lateral elbow.

9. Claimant testified that she reported her elbow condition to Leticia Crosby, an assistant manager and her immediate supervisor, when Ms. Crosby reported to the store for her shift on November 3, 2015. According to Claimant, Ms. Crosby brushed off the report and delayed reporting the injury to her supervisor, Chris Jones until November 8, 2015, because she “did not know how to find nor fill out the workers’ compensation paperwork.”

10. Claimant testified that she then reported her injury again on November 8, 2015, by calling Chris Jones, the store manager. According to Claimant, she reported to Mr. Jones that her elbow injury occurred November 2, 2015. Claimant testified that during her discussion with Mr. Jones she felt “coerced” into using November 8, 2015 as the date of injury for her elbow claim despite her indication to Mr. Jones that the injury occurred November 2, 2015. Claimant suggested that Mr. Jones would not process the claim or allow her to get help and would otherwise retaliate against her if she did not use the November 8, 2015 date of injury as he demanded. Consequently, Claimant testified that she used November 8, 2015 as the date of injury to appease her employer.

11. The “Associate Work Related Injury/Illness Report” completed by Claimant and submitted into evidence documents the date of injury (DOI) as November 8, 2015. The completed report indicates that the injury took place between “somewhere” in the store between 12:00 and 4:00 am, while Claimant was mopping. Claimant’s report of injury was signed November 9, 2015. In addition to Claimant’s report of work related injury, the evidence presented establishes that Claimant was provided with a designated medical provider list from which she selected Peak Vista Community Health Care Center (hereinafter Peak Vista) as the provider to attend to her claimed elbow injury. Claimant signed the designation form November 9, 2015.

12. Regarding her decision to use November 8, 2015 as the DOI, Claimant was questioned about her interrogatory answers completed while she was attorney represented. In her responses, Claimant reported that the injury occurred November 8, 2015. Claimant responded to the obvious inconsistency between her hearing testimony, the documentary evidence and her prior interrogatory response by testifying simply that both her boss and her prior attorney told her to “lie” about the DOI. Claimant went on to testify that she subsequently corrected the record concerning the DOI by reporting to Dr. Ridings, an expert witness for Respondent-Employer that the injury occurred on November 2, 2015.

13. Review of Claimant’s medical records reveals that she was seen at Peak Vista on November 3, 2015 and again on November 9, 2015. Inspection of the record from the November 3, 2015 encounter reveals that Claimant reported to the clinic at 3:30 pm with complaints of back pain. Assessment included “lumbago with sciatica, left

side", "segmental and somatic dysfunction of thoracic region" as well as segmental and somatic dysfunction of lumbar region." Claimant ascribed her symptoms to "doing a lot of cleaning at work and not taking breaks" and generally overdoing it. The report is devoid of any mention of elbow pain, which by Claimant's report would have happened earlier that day during her graveyard shift.

14. Review of the November 9, 2015 report indicates that Claimant reported that she "hurt her elbow last week mopping at work." According to the report, Claimant complained of symptoms of one week in duration. Claimant reported tenderness and "moderate pain w/motion" of the left elbow."

15. Leticia Crosby testified that she was acting assistant manager when Claimant alleged she injured her elbow in November 2015. According to Ms. Crosby, Respondent-Employer had been accommodating work restrictions for Claimant since August 2015. Based upon the evidence presented, the ALJ finds that Respondent-Employer was likely accommodating the restrictions imposed on Claimant's work capacity secondary to her left knee and low back conditions; not an elbow condition.

16. Ms. Crosby testified that Claimant reported working over and above her restrictions and limitations periodically. Ms. Crosby responded to Claimant's reports by counseling her not to work beyond her restrictions. She also testified that she was careful to schedule Claimant so she would not have to complete tasks which exceeded her work restrictions. Regardless, the ALJ finds from the evidence presented, that Claimant was not precluded from mopping based upon the restrictions imposed on her by her medical provider.

17. Ms. Crosby testified that Claimant reported suffering an elbow injury earlier during her shift on November 8, 2015, when she (Ms. Crosby) arrived at work later in the morning on the 8th. Ms. Crosby testified that once Claimant reported the injury, she contacted Chris Jones so that the necessary paper work to initiate the claim could be completed. Ms. Crosby testified that she never told Claimant what to include in the injury report as she (Claimant) completed it. She also testified that Claimant never reported to her that the actual DOI was November 2, 2015 as opposed to November 8, 2015 while Claimant completed her Associate Work Related Injury/Illness Report.

18. Ms. Crosby testified that Respondent-Employer does not have a corporate culture of dissuading injured workers from reporting injuries. Ms. Crosby also testified that she did not delay in taking Claimant's report of injury by a week nor did Mr. Jones ever direct her not to file the claim.

19. Christopher Jones testified as a 15 year employer of Respondent-Employer. He is currently the manager of Store 50 in Calhan, Colorado. He previously managed the store where Claimant worked in Limon for 4 years prior to his transfer to Store 50. He worked directly with Claimant. As part of his managerial duties, Mr. Jones testified he is familiar with the forms to be completed to initiate claims of injury in the work place.

20. As noted above, Mr. Jones managed Claimant and has worked with her frequently. Mr. Jones testified that in August 2015, Claimant was given work restrictions, including lifting limitations, which were accommodated. According to Mr. Jones, Claimant was provided with a stool and anti-stress/fatigue mats for use in the store as part of the accommodation surrounding her restrictions caused by her left knee and low back conditions, particularly her sciatica.

21. Echoing the testimony of Ms. Crosby, Mr. Jones testified that Claimant would report that she was working above her restrictions occasionally. Consequently, Mr. Jones would remind Claimant to stay within her work restrictions. He would also make sure Claimant was scheduled to work with others who could assist her should she need help with task completion secondary to her left knee and low back conditions and the restrictions imposed as a consequence of both.

22. Mr. Jones testified that he was informed about Claimant's alleged left elbow injury from another employee on November 8, 2015. Based upon the evidence presented, the ALJ finds the "other employee" referenced to be Leticia Crosby. Mr. Jones testified further that when he became aware of the alleged injury, he immediately took steps to initiate a claim, including directing the co-employee (Ms. Crosby) to complete an injury report form and send it to the appropriate persons. Mr. Jones testified further that Claimant was very vague about her injury in that she did not provide a specific time or location regarding when and where the injury occurred. Mr. Jones testified that he did not resist in taking the claim nor did he delay in filing it. Contrary to Claimant's suggestion, Mr. Jones testified that he was not angry with Claimant for filing her claim, that there were no threats not to file Claimant's reported injury and there was no retaliation for filing it.

23. Based upon the evidence presented, the ALJ finds Claimant's suggestion that Ms. Crosby and/or Mr. Jones delayed in filing her claimed left elbow injury incredible. These is a lack of evidence to support that either Ms. Crosby and/or Mr. Jones retaliated against Claimant for reporting her left elbow injury by delaying the taking of Claimant's report and/or filing of the claim by a week.

24. Throughout November and December 2015, Claimant continued to see her provider at Peak Vista.

25. On November 13, 2015, Claimant reported left elbow pain along with low back pain. She also complained of left shoulder pain. She was referred to physical therapy for evaluation and treatment for elbow, shoulder and low back pain.

26. On December 8, 2015, Claimant returned to Peak Vista for a discussion regarding her need for pain medication. During this encounter, Claimant reported 7/10 pain which was relieved by a ½ tablet of methadone she obtained from a friend.

27. On December 29, 2015, Claimant was reevaluated at Peak Vista complaining

of “acute” left hip and low back pain radiating down the leg to the left knee. Claimant also noted that her left shoulder continued to “bother” her and that this was under workers compensation. Imaging studies of the low back and hip were ordered.

28. Respondent-Employer requested an independent medical examination (IME) with Dr. Eric Ridings. Dr. Ridings completed his examination on May 18, 2016. As part of his examination, Dr. Ridings took a verbal history from Claimant regarding her injuries. Concerning the alleged left elbow injury as a consequence of mopping, Dr. Ridings documented that Claimant reported a DOI of November 9, 2015. After additional discussion with Claimant, wherein she reported again that her claim was delayed by a week, Dr. Ridings clarified that Claimant was alleging that her elbow injury occurred the week before. According to Dr. Ridings report, Claimant changed the history of her alleged injury after she was confronted about the inconsistency in her reported dates of injury. The ALJ infers from Dr. Ridings report and his testimony that Claimant told him she was injured during the early morning hours of November 9, 2015 and only when he brought up the fact that the medical record suggested that she was claiming to have been injured a week earlier did Claimant assert that her claims were delayed by Ms. Crosby and Mr. Jones. This contradicts Claimant’s testimony that she told Dr. Ridings that she actually injured her left elbow on November 2, 2015 and not November 8/9th as is documented in Dr. Ridings report.

29. Dr. Ridings testified that regardless of the DOI, it was unusual to develop pain several hours after engaging in offending activity. Dr. Ridings noted: “I do not see any causal link between physical activity several hours earlier and the subsequent development of focal pain at the elbow.” Additionally, Dr. Ridings noted that Claimant’s physical examination upon follow-up to the clinic on November 9, 2015 was not consistent with injury to the elbow. According to Dr. Ridings, a complaint of pain on examination does not mean that Claimant sustained an injury. The ALJ infers and finds from review of Claimant’s medical records and the testimony from Dr. Ridings that Claimant possessed no objective evidence of having sustained an injury to her left elbow on November 2/3rd or November 8/9th, 2015.

Claimant’s Alleged January 2, 2016 Upper Extremity (Elbow/Shoulder) Claim

30. During the evening hours of January 2, 2016, Claimant alleged that she suffered a second injury to her left elbow in addition to an injury to the left shoulder as a consequence of shaking dirt and debris out of the stores area rugs. Claimant reported the injury to Ms. Crosby by leaving a hand written note wherein she noted the following: “Your going to hate me but I reinjured my left elbow by shaking out the rugs you can look on the camera between 9-10 pm.” Claimant also noted that, if needed, she could complete paperwork surrounding the claimed injuries when she returned to the store at around 3:00 pm on January 3, 2016.

31. Claimant completed an “Associate Work Related Injury/Illness Report” form

on January 5, 2016. In her report, Claimant indicates that she was in the processing of “standing” a heavy rug up to “shake it out” when she “felt a pull” in her left elbow (shoulder). Claimant stopped the activity and brought the rug back into the store. Claimant was working the store with Karon Kilmer at the time of this alleged injury.

32. Claimant testified that while the store had a vacuum, it was clogged and it would not have been effective in cleaning the rug.

33. Ms. Crosby testified that the store rugs are cleaned with the use of a vacuum and not by shaking them out. She testified that to her knowledge, the store vacuum was working on January 2, 2016 and if not Claimant never mentioned that it was inoperable to her.

34. Mr. Jones testified that employees are trained to use a vacuum to clean the store area rugs. He repeated Ms. Crosby's testimony that employees have never been trained to take the rugs outside to shake them out. Nonetheless, Mr. Jones completed an "Associate Incident In-Store Investigation report providing the following incident description: "9:30 ish, shaking out rugs . . . has been asked not to by myself and Leticia Crosby. We have a vacuum . . . left elbow/shoulder pain." As part of the investigation into the claims, video tape of the activity in the store on January 2, 2016 was viewed by the District Manager for Respondent-Employer.

35. Leah Gortticelli has worked as the Distinct Manager for the store in question since May 2016. Ms. Gortticelli testified that she viewed all in-store activity for the period extending 15 minutes before and 15 minutes after the alleged injury occurring on January 2, 2016. According to Ms. Gortticelli, video evidence verified that Claimant pulled rugs outside of the store. While Claimant pulled the rugs from the store, Ms. Gortticelli testified that Claimant cannot be seen shaking the rugs out.

36. Based upon the content of Mr. Jones' investigation report and Ms. Gortticelli's testimony, the ALJ finds that while the store had a vacuum to clean the store's area rugs, Claimant likely repeatedly cleaned them by shaking them out despite being "asked not to" by Mr. Jones and Ms. Crosby.

37. Claimant saw Nurse Practitioner (NP), Kendra Black for left arm pain on January 4, 2016. NP Black documented the following history of present illness: "She presents today for workmen's comp injury to Lt arm and Left leg that occurred 2 days ago. She states she was shaking out a heavy rug in order to vacuum it and she felt a sharp pain from the Lt elbow up to her Lt shoulder and middle of back." During this visit, Claimant completed a description of her injury. She provided as follows: "left arm again- was shaking out carpets and felt my arm/shoulder give out." The ALJ finds this history inconsistent with the written statement provided in the Associate Work Related Injury/Illness Report" form on January 5, 2016 wherein Claimant specifically indicates that she was in the processing of "standing" a heavy rug up to "shake it out" when she "felt a pull" in her left elbow (shoulder) rather than her shoulder "giving out."

38. Although a physical examination of the shoulder was conducted during Claimant's initial, there is no documentation that provocative testing for the elbow and/or shoulder was preformed. Rather, the results of physical examination document only

that Claimant had subjective complaints of tenderness and decreased range of motion, secondary to complaints of pain, in the left elbow and shoulder. X-rays of the left elbow and shoulder were ordered.

39. X-rays of the elbow and shoulder were interpreted as being negative for acute boney abnormality. Minimal degenerative changes were noted in the coracoclavicular joint of the left shoulder.

40. As part of his IME, Dr. Ridings addressed Claimant's alleged upper extremity injury from shaking rugs. Dr. Ridings completed a physical examination which included range of motion testing and special maneuvers testing. Following his physical examination, Dr. Ridings noted that Claimant did not have provocative testing results consistent with "intraarticular pathology." Furthermore, he noted full range of motion combined with normal muscle tone of the shoulder did not support a diagnosis of myofascial pain. He also noted that overall Claimant's subjective complaints of pain were "out of proportion" considering the lack of objective findings on physical examination.

Claimant's Alleged Left Knee Injury

41. In addition to asserting that she injured her left shoulder while shaking out rugs on January 2, 2016, Claimant alleges that she injured her left shoulder and left knee later during her shift when she was assisted from the floor of the store by a co-worker after counting the money in the company safe.

42. Claimant testified that toward the end of her shift she sat on the floor of the store to count the money in the safe. After counting the safe, Claimant testified that she attempted to get up from the floor by rolling onto her right knee with her left foot on the floor and the left knee in the air. Claimant explained that she pivoted to her right and grabbed the safe handle with her right hand to pull herself up. While in the process of pulling herself from the floor, Claimant testified that Karon Kilmer reached over her right shoulder and grabbed her underneath her right arm and jerked her from the floor.[2] According to Claimant, she twisted her left knee in the process.

43. As part of her Associate Work Related Injury/ Illness Report, Claimant noted: "I felt someone grab under my right arm to help me get up which caused my right knee to turned (sic) to the left and I felt a a (sic) pull." Claimant also referenced that in-store video would confirm Ms. Kilmer's actions and her knee injury.

44. As noted, Ms. Gortticelli viewed in-store video concerning the incident. In addition to verifying that Claimant pulled the rugs from the store, Ms. Gortticelli testified that the video confirmed that Claimant was sitting on the floor counting the safe and that Ms. Kilmer helped her get up. Contrary to the testimony of Claimant, Ms. Gortticelli testified that the video demonstrates that Ms. Kilmer placed her hand on Claimant's

[2] See also Claimant's "Workers Claim form Compensation" which provides that Claimant was "getting up from the floor using my right side, co-worker assisted from behind me, twisted knee."

upper arm to steady her as she gets up. According to Ms. Gortticelli no "jerking" was involved.

45. Karon Kilmer provided a witness statement in which Ms. Kilmer notes that Claimant was kneeling down to count the safe and that as Claimant began to stand up by pulling on the safe handle, she reached down to offer a "hand to steady her" so Claimant would not hit her face on the safe if she fell forward.

46. Ms. Kilmer testified that she observed Claimant sitting on the floor counting the safe and that she was complaining that her arm was hurting. She noticed that Claimant was having a hard time pulling herself up so she testified that she placed her hand under Claimant's right arm, between the elbow and arm pit, in an effort to steady her as she stood up. According to Ms. Kilmer, Claimant stood on her own. She did not lift or "jerk" Claimant as she rose from the floor. Ms. Kilmer also testified that she used her right arm to steady Claimant was she stood because she has lifting restrictions on her left arm.

47. Dr. Ridings addressed Claimant's alleged left knee injury during his May 18, 2016 IME. Claimant's report regarding her left knee injury as provided to Dr. Ridings is consistent with her testimony. She also reported to Dr. Ridings that she felt a "small pop" and a shift in the knee as she stood up.

48. On January 10, 2016 an x-ray of left knee was performed which demonstrated "no fracture, dislocation or osseous abnormality." Additionally, the "patella and extensor mechanism [appeared] intact and there [was] no effusion." The impression of the interpreting radiologist was: "degenerative change involving the medial femoral compartment.

49. During his IME, Dr. Ridings completed a physical examination of the left knee. He documented "moderate swelling" without redness, increased warmth or other sings of inflammation. There was no ligamentous laxity and meniscal testing was negative. However, patella grind testing produced pain, per Claimant's report, extending from the knee up the lateral thigh to the hip, which according to Dr. Ridings was a "non-anatomic" response.

50. Based upon the evidence presented, the ALJ is not persuaded that Ms. Kilmer's assistance caused any injury to Claimant's left arm/shoulder. Even if Ms. Kilmer "jerked" Claimant up from the floor, as she has suggested, the force (pulling) was to Claimant's right, not left arm. There is simply no mechanism likely to cause injury to the left arm during the incident in question. The ALJ is also not convinced that Claimant sustained an acute injury to her left knee as she rose from the floor. In his IME report, Dr. Ridings opined that Claimant's "patellofemoral syndrome at the left knee is clearly preexisting and in my opinion was not caused, aggravated, or accelerated by the incident getting up from the floor on January 2, 2015." He explained Claimant's subjective symptoms were non-physiologic, including Claimant's asserted inability to flex the left knee to 90 degrees when asked to demonstrate her range of motion despite sitting for an hour with her knee at 90 degrees of flexion. Careful review of the record

evidence persuades the ALJ that Claimant's left knee was symptomatic and functionally limiting prior to her alleged January 2, 2016 injury. Indeed, Claimant's was given restrictions, in part, for left lateral knee pain extending into her hip which was aggravated by standing and squatting as of July 13, 2015.

51. The ALJ finds Dr. Ridings medical opinions supported by the record evidence presented, including the records documenting Claimant's following-up visits at Peak Vista after November 9, 2015. Dr. Ridings' opinions are more persuasive than Claimant's contrary testimony, which the ALJ finds inconsistent, evasive and unreliable, when record evidence is considered as a whole.

52. Claimant has failed to prove, by a preponderance of the evidence, that she sustained an injury to her left elbow on 2/3, 2015 or alternatively 8/9, 2015, while mopping. Furthermore, the ALJ is not convinced that Claimant sustained a compensable injury to either her left elbow, left shoulder or left knee on January 2, 2016 while shaking out rugs or getting up from the floor after counting the safe at the end of her work shift. While the incident in question may have occurred, the ALJ is persuaded that the incident did not cause compensable injuries.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

D. Where a party presents expert opinion on the issue of causation, the weight, and credibility, of the opinion is a matter exclusively within the discretion of the ALJ as the fact-finder. *Cordova v. Industrial Claim Appeals Office*, P.3d (Colo. App. No. 01CA0852, February 28, 2002); *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990). To the extent that expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). As found, the testimony of Claimant is inconsistent and unreliable. Moreover, the medical opinions of Dr. Ridings regarding Claimant's medical conditions and causality are supported by the record evidence and are more persuasive than the contrary assertions of Claimant.

Compensability

E. To sustain her burden of proof concerning compensability, Claimant must establish that the condition for which she seeks benefits was proximately caused by an "injury" arising out of and in the course of employment*.* *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

F. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Here, there is little question that

Claimant's alleged injuries occurred within the time and place limits of her employment relationship with Employer and during an activity, specifically mopping, cleaning and counting the safe as a cashier/clerk for Employer. Nonetheless, the question of whether the alleged conditions, for which Claimant seeks benefits, "arose out of" her employment must be resolved before the injury is deemed compensable.

G. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). The fact that Claimant may have experienced an onset of pain while, or in the case of her first elbow injury, shortly after performing job duties, does not mean that she sustained a work-related injury. An incident which merely elicits pain symptoms without a causal connection to the industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988)*; Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989).

H. Under the Workers' Compensation Act (hereinafter Act) there is a distinction between the terms "accident" and "injury". An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *see also*, § 8-40-201(2)(injury includes disability resulting from accident). Consequently, a "compensable injury" is one which requires medical treatment or causes disability. *Id*.; *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, supra; § 8-41-301, C.R.S.

I. Given the distinction between the terms "accident" and "injury" an employee can experience symptoms, including pain from at work without sustaining a compensable "injury." This is true, as in the instant case, even when the employee is clearly in the course and scope of employment performing a job duty. See *Aragon*, supra, ("ample evidence" supports ultimate finding that no injury occurred even where a claimant experienced pain when struck by a bed she was moving as part of her job duties); see also, *McTaggart-Kerns v. Dell, Inc.,* W.C. No. 4-915-218 (ICAO, May 29, 2014)(where a claimant involved in motor vehicle accident without resultant injuries suffered no compensable injury). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (October 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted, "[C]orrelation is not causation." Thus, merely because a coincidental correlation between Claimant's work and her symptoms exists in this case does not mean there is a causal connection between Claimant's alleged injury and her work duties.

J. The determination of whether there is a sufficient "nexus" or causal relationship between a claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). Moreover, the question of whether Claimant met the burden of proof to establish the requisite causal connection between the industrial injury and the need for medical treatment is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

A. As found, the ALJ conclues that the expert opinions of Dr. Ridings regarding the cause of Claimant’s left upper extremity and left knee symptoms are credible and more persuasive than contrary opinion/assertions of Claimant. In this case, the totality of the evidence presented, including the testimony of Dr. Ridings, in addition to the medical records, particularly the Peak Vista records, persuades the ALJ that Claimant’s worsening extremity pain/symptoms are, more probably than not, a direct result of the natural progression of Claimant’s pre-existing degenerative change in the left shoulder and knee rather than her work duties on January 2, 2016. In the case of Claimant’s alleged November 2/3 elbow claim, the evidence presented convinces the ALJ that Claimant’s complaints of severe pain as a consequence of mopping are not credible and that the claim was motivated by social/psychological factors as alluded to by Dr. Ridings and argued by Respondents. Accordingly, the ALJ concludes that Claimant has failed to prove, by a preponderance of the evidence, that there is a causal connection between her employment and the resulting condition for which medical treatment and indemnity benefits are sought. §8-43-201, C.R.S.; *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). Because Claimant failed to establish she suffered a compensable “injury” as defined by the aforementioned legal opinions, her claim is denied and dismissed and the claims for medical and temporary disability benefits need not be addressed.

ORDER

It is therefore ordered that:

Claimant’s claims for compensation for injuries occurring November 2/3, 2016 and January 2, 2016 are denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding

procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 7, 2016

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, Co 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-927-874-02

ISSUES

- Whether Respondent proved by a preponderance of the evidence that Claimant's claim is closed pursuant to §8-43-203(2)(b)(II)(A),C.R.S.

- If not closed, whether Respondent proved by a preponderance of the evidence that Claimant waived his right to challenge the Final Admission of Liability.

- If not closed, whether Respondent proved by a preponderance of the evidence that Claimant's request for benefits is barred by laches.

- If not closed, waived, or barred by laches, whether Claimant has proven by a preponderance of the evidence that the situs of his functional impairment extends beyond the arm at the shoulder entitling him to have his scheduled impairment rating converted to a whole person impairment rating.

STIPULATIONS

Claimant's counsel stipulated at hearing that he agrees with the Respondent's calculation of average weekly wage as contained in the Final Admission of Liability.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant sustained an admitted workers' compensation injury in a motor vehicle accident on August 24, 2013 while employed as a State Trooper for the State of Colorado, Department of Public Safety. (Exhibit A)

2. Claimant underwent surgery on his left shoulder with Dr. Durbin on September 4, 2014. (Exhibit D, bate stamp 14)

3. On November 11, 2014, Dr. Durbin noted that Claimant was doing "extremely well" 10 weeks out from surgery. No clinical findings were documented for any complaints/symptoms in the neck, back, head, torso or anywhere else beyond the arm at the shoulder. (Exhibit C, bate stamp 5)

4. Claimant returned to Dr. Durbin on December 16, 2014 at which time Dr. Durbin noted that Claimant was doing "extremely well" with "minimal complaints", "just a little bit of soreness every once in a while". Dr. Durbin further noted that Claimant was back to almost full strength and that he had returned to full activities. No clinical findings were documented for any complaints/symptoms in the neck, back, head, torso

or anywhere else beyond the arm at the shoulder. Claimant was released to return to full activities with no restrictions. (Exhibit C, bate stamp 3-4)

5. Claimant was placed at MMI by Dr. O'Toole on February 12, 2015. At the time, Dr. O'Toole noted that Claimant had "returned to full duty and has been tolerating unrestricted work without difficulty. He has no pain or other complaints related to his shoulder injury." The Review of Systems and Physical Examination do not include any complaints/symptoms in the neck, back, head, torso or anywhere else beyond the arm at the shoulder. Dr. Durbin provided Claimant with a 14% upper extremity impairment rating (8% whole person), released Claimant to return to work with no permanent work restrictions, and did not recommend any medical maintenance treatment. (Exhibit D, bate stamp 10-17)

6. A Final Admission of Liability was filed on April 2, 2015 admitting to the 14% upper extremity impairment rating. (Exhibit D)

7. Claimant filed an Application for Hearing on May 1, 2015 (Exhibit E) but never set a hearing so the Application for Hearing was stricken pursuant to OAC Rule 8(K).

8. On March 16, 2016, Respondent filed a Motion to Close Claim for Failure to Prosecute. (Exhibit G) Claimant responded by filing the current Application for Hearing on March 25, 2016. An Order to Show Cause was entered on March 31, 2016. (Exhibit H)

9. Because Claimant's May 1, 2015 Application for Hearing was stricken, it is as if it was never filed. As a result, Claimant's current claim for conversion filed on March 25, 2016 is not timely. Claimant's claim is closed pursuant to §8-43-203(2)(b)(II)(A), C.R.S.

10. Claimant, through his inaction in setting a hearing on his May 1, 2015 Application for Hearing or otherwise pursuing his objections to the Final Admission of Liability for nearly 1 year, has waived his right to challenge the Final Admission of Liability. The current Application for Hearing was filed more than 1 year after Claimant was placed at MMI and almost 1 year after the Final Admission of Liability was filed. By failing to timely contest the Final Admission of Liability, Claimant frustrates the express legislative intent of the Workers' Compensation Act, unconscionably delays the statutory remedy available to him to challenge the Final Admission of Liability, and prejudices the Respondent's right to have Claimant's permanent medical impairment determined at or near the time Claimant was placed at MMI.

11. Claimant and his attorney were sent copies of the Final Admission of Liability. The Final Admission of Liability contains a Notice to Claimant, that he had 30 days to object to the Final Admission of Liability. A timely Application for Hearing was filed but never set. It wasn't until Respondent filed a Motion to Close Claim for Failure to Prosecute that Claimant pursued his claim for conversion. Claimant's failure to contest the Final Admission of Liability for nearly 1 year is inconsistent with the

assertion of his right to challenge that admission, manifests his intent not to challenge the admission, and constitutes a waiver of that right.

12. There are no medical records in evidence after Claimant was placed at MMI. Claimant did not attend the hearing or offer any testimony regarding his inability to meet any personal, social, or occupational demands. Claimant's attorney argued at hearing that Claimant had cervical tightness/soreness entitling Claimant to have his scheduled injury converted to a whole person impairment rating. Claimant's counsel's argument is not evidence and is not supported by the medical records near or at the time that Claimant was placed at MMI.

13. Claimant was released to return to work full duty, without any restrictions, on December 16, 2014. When Claimant returned to the ATP on February 12, 2015, he did not report any problems as a result of returning to work full duty. The MMI report contains no notations of complaints of pain or functional limitations beyond the arm at the shoulder. No evidence was submitted after Claimant was placed at MMI documenting any complaints or limitations as a result of being released to return to work without any permanent restrictions. Accordingly, the ALJ concludes that the situs of Claimant's functional impairment does not extend beyond the arm at the shoulder.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Generally

The purpose of the Workers' Compensation Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. Claimant carries the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. Respondent carries the burden of proof, by a preponderance of the evidence, for its affirmative defenses. *Johnson v. Industrial Commission*, 761 P.2d 1140 (Colo. 1988); *Sholund v. Argenbright Security*, W.C. No. 4-415-403 (June 16, 2004). A preponderance of the evidence is evidence which leads the trier-of fact, after conserving all of the evidence, to find a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (1979). Facts in a workers' compensation case are not interpreted liberally in favor of either the injured worker or the employer. C.R.S. §8-43-201.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Closure, Waiver, and Laches

§8-43-203(2)(b)(II)(A), C.R.S. provides, in relevant part, that a case will close as to the issues admitted in a final admission if the claimant does not contest the final admission within 30 days after the date of the final admission. The automatic closure of contested issues from a Final Admission of Liability furthers the legislative intent of providing the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Leewaye v. Industrial Claim Appeals Office*, 178 P.3d 1254 (Colo. App. 2007). Failure to contest an admission within 30 days closes the claim on all admitted issues. *Dyrkopp v. Industrial Claim Appeals Office*, 30 P.3d 821 (Colo. App. 2001). Once a case has closed, the issues resolved by the Final Admission of Liability are not subject to further litigation unless they are reopened pursuant to §8-43-303, C.R.S. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270, 272 (Colo. App. 2005); *Ballesteros v. Westaff, Inc.*, W.C. No. 4-475-838 (November 24, 2008). As found, because Claimant's May 1, 2015 Application for Hearing was stricken, it is as if it was never filed. The March 25, 2016 Application for Hearing was not filed within 30 days of the Final Admission of Liability so the Court has no jurisdiction to hear the issues endorsed in that Application for Hearing absent a reopening.

Waiver is the intentional relinquishment of a known right. *Johnson, supra*. The exercise of a statutory right is always subject to equitable limitations. *Id.* Waiver may be implied as when a party engages in conduct which manifests an intention to relinquish the right or acts inconsistently with its assertion. *Id.; see also, Munoz v. JBS Swift & Company*, W.C. No. 4-780-871 (March 1, 2010); *Rodriguez v. Safeway Stores, Inc.*, W.C. No. 4-712-019 (June 3, 2009). A party may, through inaction, delay, or other similar conduct, waive specific rights. *Johnson, supra.; Munoz, supra.*; *Rodriguez, supra.*; *Gaither v. The Resource Exchange*, W.C. No. 4-125-439 (September 14, 1994); *Stein v. Alliance*, W.C. No. 4-533-782 (October 5, 2004); *Sholund*, supra.; *Hakizimana v. JBS USA, LLC*, W.C. No. 4-909-058 (October 23, 2014). The equitable defense of laches may be used in a workers' compensation proceeding to deny relief to a party whose unconscionable delay in enforcing his rights has prejudiced the party against whom enforcement is sought. *Small v. Coors Porcelain Company*, W.C. No. 3-500-834; *Safeway, Inc. v. Industrial Claim Appeals Office*, 186 P.3d 103 (Colo. App. 2008); *Burke v. Industrial Claim Appeals Office*, 905 P.2d 1 (Colo. App. 1994); *Bacon v. Industrial Claim Appeals Office*, 746 P.2d 74 (Colo. App. 1987). Parties to a workers' compensation claim are presumed to know the applicable law. *Midget Consol. Gold Mining Co. v. Industrial Commission*, 193 P. 493 (Colo. 1920); *Paul v. Industrial Commission*, 632 P.2d 638 (Colo. App. 1981). The presumption aids a party in meeting its burden of proof. *Union Ins. Co. v. RCA Corp.*, 724 P.2d 80 (Colo. App. 1986). A party may not use ignorance of the law as a defense to its legal duties. *Grant v. Professional Contract Services*, W.C. No. 4-531-613 (January 24, 2005).

As found, Claimant, through his inaction in setting a hearing on his original Application for Hearing or otherwise pursuing his objections to the Final Admission of Liability for nearly 1 year, has waived his right to challenge the Final Admission of Liability. The period of time to challenge a Final Admission of Liability is provided by statute to further the legislative intent of providing the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. The period of time to challenge a Final Admission of Liability is also provided by statute to further the legislative intent that impairment is to be determined at the time of MMI. §8-42-107(8)(c), C.R.S. By failing to challenge the Final Admission of Liability for almost 1 year since the Final Admission of Liability was filed, Claimant frustrates the express legislative intent of the Workers' Compensation Act, unconscionably delays the statutory remedy available to him to challenge the Final Admission of Liability, and prejudices the Respondent's right to have Claimant's permanent medical impairment determined at or near the time Claimant was placed at MMI. Claimant, through his attorney, knew that he had 30 days to challenge the Final Admission of Liability. Claimant's failure to challenge the Final Admission of Liability for nearly 1 year is inconsistent with the assertion of his right to challenge the Final Admission of Liability, manifests his intent not to challenge the Final Admission of Liability, and constitutes a waiver and/or unconscionably delay of that right.

Permanent Impairment

Permanent medical impairment is to be determined at the time of MMI. §8-42-107(8)(c), C.R.S. As found, it has been more than 1 year since Claimant was placed at MMI. When a claimant's injury is listed on the schedule of disabilities, the award for that injury is limited to a scheduled disability award. §8-42-107(1)(a), C.R.S. However, a claimant may establish that his injury has resulted in "functional impairment" beyond the schedule enumerated in C.R.S. §8-42-107(2)(a); thus, entitling him to "conversion" of the scheduled impairment to impairment of the whole person. This is true because the term "injury" as used in §8-42-107(1)(a)-(b), C.R.S., refers to the part or parts of the body which have been impaired or disabled not the situs of the injury itself of the medical reason for the ultimate loss. *Walker v. Jim Fucco Motor Co.*, 942 P.2d 1390 (Colo. App. 1997); *see also Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996). In the case of a shoulder injury, the question is whether the claimant has sustained functional impairment beyond the arm at the shoulder. *Langton v. Rocky Mountain Health Care Corp.*, 937 P.2d 883 (Colo. App. 1996); *Strauch, supra.* The issue of conversion is a question of fact for the ALJ. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691 (Colo. App. 2000).

"Functional impairment" is distinct from physical (medical) impairment under the AMA Guidelines and as noted above, the site of functional impairment is not necessarily the site of the injury itself. The site of functional impairment is that part of the body which has been impaired or disabled. *Strauch, Supra.* Physical impairment relates to an individual's health status as assessed by medical means. On the other hand, disability or functional impairment pertains to a person's ability to meet personal, social, or occupational demands, and is assessed by non-medical means. Consequently, physical impairment may or may not cause "functional impairment" or disability. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656, 658 (Colo. App. 1998). Physical impairment becomes a disability only when the medical condition limits the claimant's capacity to meet the demands of life's activities. *Lambert & Sons, Inc., supra.*

Symptoms of pain do not automatically rise to the level of a functional impairment. To the contrary, there must be evidence that such pain limits or interferes with a claimant's ability to use a portion of his body to be considered a functional impairment. *See Mader v. Popejoy Construction Co., Inc.,* W.C. No. 4-198-489 (August 9, 1996)*.* Thus, in order to determine whether permanent disability should be compensated as physical impairment on the schedule or as functional impairment as a whole person, the issue is not whether Claimant has pain, but whether the injury and the associated pain caused thereby has impacted part of Claimant's body which limits his "capacity to meet personal, social and occupational demands." *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996); *Bernal v. CMHIP*, W.C. No. 4-956-645 (October 5, 2015).

As found, Claimant did not attend the hearing or offer any testimony regarding his inability to meet any personal, social, or occupational demands. Claimant's counsel's argument that Claimant had cervical tightness/soreness entitling Claimant to have his scheduled injury converted to a whole person impairment rating is not evidence. *Lewis v. Pacific Fruit Produce*, W.C. No. 3-048-301 (November 15, 1995); *Subsequent Injury Fund v. Gallegos*, 746 P.2d 71 (Colo. App. 1987). Claimant was released to return to work full duty, without any restrictions, on December 16, 2014. When Claimant returned to the ATP on February 12, 2015, he did not report any problems as a result of returning to work full duty. The MMI report contains no notations of complaints of pain or functional limitations beyond the arm at the shoulder. No evidence was submitted after Claimant was placed at MMI documenting any complaints or limitations as a result of being released to return to work without any permanent restrictions. Accordingly, the ALJ concludes that the situs of Claimant's functional impairment does not extend beyond the arm at the shoulder.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim is closed pursuant to §8-43-203(2)(b)(II)(A), C.R.S.

2. Claimant has waived his right to challenge the Final Admission of Liability.

3. Claimant's claim is barred by laches.

4. Claimant's claim for conversion is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-972-954-02

ISSUE

The following issue was raised for consideration at hearing:

Whether Claimant proved by a preponderance of the evidence that the need for surgery to repair her right knee meniscal tear is related to the admitted work injury of January 6, 2015.

FINDINGS OF FACT

Having considered the evidence presented at hearing, the following Findings of Fact are entered.

1. Claimant, who was a medical assistant with the Employer, sustained compensable injuries when she slipped and fell on ice while pulling open a door at work on January 6, 2015. Her right leg went straight out in front of her and her left leg went under her. Her left knee hit the ground and her buttocks landed on her left heel which caused her to "shoot" to the left.

2. Soon after, she was seen in the emergency room at the Employer where she worked. Records from the emergency room described a bruise on the left knee with tenderness to palpation over the right posterior thigh and left anterior knee. The diagnosis was left knee contusion.

3. Two days later, Claimant was seen by her authorized treating physician, Gary Petry, M.D., who recorded a similar description of the fall. Dr. Petry is not level 2 accredited with the Division of Workers Compensation. He sees only one workers' compensation patient a week and seldom addresses causation. Dr. Petry diagnosed a right hamstring strain or tear. Claimant declined pain medication.

4. Dr. Petry referred Claimant to Parker Physical Therapy where on January 12, 2015, the therapist noted complaints of anterior-medial left knee pain where her knee touched down during the fall. As described by the previous providers, the therapist also noted right hamstring and quadricep pain.

5. The left knee pain quickly resolved and Claimant made no further complaints of pain to that body part. She testified at hearing that she had no long-term problems with the left knee.

6. By February 2, 2015, Claimant reported to Vail-Summit Orthopedics that her leg pain, as it related to her hamstring injury, was a 2 out of 10, whereas her low back pain was a 7 out of 10.

7. On February 24, 2015, Claimant reported to her therapist that she had no pain on Saturday and just a little pain the next day and had been walking over 10 minutes daily. By March 6, 2015, at her 17th physical therapy appointment, the therapist noted that treatment for the right hamstring injury had diminished and greater emphasis was being placed on treating the low back pain. The therapist noted that Claimant was able to ambulate on a treadmill for 10 minutes at 1.2 mph.

8. On March 26, 2015, Scott Raub, D.O., who saw Claimant for her back pain, stated that Claimant was significantly overweight and that he believed that was contributing to ongoing symptoms and also contributing to delayed recovery. He reported that Claimant walked with a normal gait.

9. Dr. Raub administered facet injections on May 6, 2015. Claimant informed Dr. Brian Lambden, Respondents' independent medical examiner (IME), that the injections into her low back from Dr. Raub decreased almost all of her pain for two months.

10. On May 19, 2015, Dr. Petry observed that Claimant was able to ambulate without deficit and was able to completely extend the right knee and that the tightness in her hamstring was improving.

11. On June 25, 2015, Claimant informed Dr. Petry that she awakened with pain radiating from the right lower back area up to the right scapula; however, she was able to sit in her chair, which had been causing her discomfort in the past. He noted that her strength in her right lower extremity was normal as was her neurological function of her right lower extremity.

12. The physical therapist noted on July 21, 2015, that Claimant had no pain extending into her legs.

13. On July 27, 2015, Claimant informed Dr. Raub that she had recently noticed increased right scapular pain, which he felt was related to postural issues.

14. On July 28, 2015, Dr. Petry again noted that Claimant was ambulating without deficit.

15. On September 22, 2015, Claimant informed Dr. Petry that the epidural steroid injections in her low back had helped significantly and that her pain was now 2/10.

16. The therapist noted on September 24, 2015, that Claimant was feeling better and had worked eight hours a day before and a partial day that day without difficulty. On October 22, 2015, the physical therapist noted that treatment had consisted of ambulating on the treadmill and that Claimant had been able to participate in a walking program and basic core strengthening exercises without difficulty.

17. On December 21, 2015, after 38 therapy visits, Claimant reported to her therapist that she had the onset of right knee pain and swelling after riding in a vehicle

to Denver for two hours, walking about 30 minutes, and returning home. With the exception of two isolated references to right knee pain early in the claim, this was the first mention of serious right knee pain with swelling observed.

18. On December 29, 2015, Claimant reported to Dr. Petry that she started having right knee pain and swelling after shopping on Christmas Eve. He noted that she was unable to completely extend the right knee because of pain in her right hamstring muscles and down along the medial aspect of the knee.

19. On January 21, 2016, Dr. Petry stated that Claimant had “intermittently complained of right leg pain above and below her right knee [but that] recently, the pain ha[d] become more localized to her right knee.” Dr. Petry suspected internal derangement such as a medial collateral ligament injury or medial meniscus injury.

20. Subsequent therapy notes discuss the improvement of low back pain but increasing right medial knee pain along with a significant limping gait.

21. Dr. Petry referred Claimant to Richard Cunningham, M.D., who saw Claimant on January 29, 2016. When asked if she had a problem with the right knee in the past, Claimant answered, “No.” In fact, when asked about prior surgeries, she revealed to Dr. Cunningham prior bunion surgery to both feet in 2005, but not a 2006 right knee surgery. She was placed on crutches the day of the December 27, 2005, right knee injury, had been living with mild arthritis in her knee for some time before the injury, and was still experiencing knee pain four months after surgery, which was thought to be due to arthritis in the medial compartment of the knee.

22. When describing her right knee pain to Dr. Cunningham on February 2, 2016, Claimant stated that she experienced immediate pain and swelling in her right knee from the January 6, 2015, slip and fall injury, and that her symptoms were constant and had remained unchanged since their onset. Claimant again denied any history of right knee pain prior to this incident. At hearing, Claimant testified that her right knee pain really did not start until December 2015 after her trip to Denver, which is consistent with the record up to December 2015.

23. On February 29, 2016, after viewing images from the February 22, 2015, MRI that demonstrated a complex tear of the body and posterior horn segments of the medial meniscus and other abnormalities, Dr. Cunningham recommended right knee arthroscopy with partial medial meniscectomy.

24. Claimant had previously undergone a right knee medial meniscus repair and a partial lateral meniscectomy to repair a right medial meniscus tear and right lateral meniscus tear on January 18, 2006. The preoperative MRI of January 12, 2006, showed increased signal intensity throughout the posterior horn of the medial meniscus, an old area of chondral degeneration, and a tear of the proximal fibers of the MCL.

25. Dr. Brian Lambden, M.D., an expert in physical medicine and rehabilitation, performed an IME at Respondents’ request on May 5, 2016. In his report, Dr. Lambden credibly stated that he did not believe that Claimant’s right knee symptoms

were related to the work injury because the symptoms did not occur for almost one year and she had a prior history of a right knee injury in 2005. He stated that it was difficult to relate the acute onset of knee pain on December 21, 2015, to the January 6, 2015, falling incident. He believed that the onset of right knee pain was related to her prior history of a complex meniscal tear and apparent new extrusion with aggravation of knee pain complicated by obesity. He testified that the MRI findings from 2005 and 2016 were essentially the same, with some worsening as would be expected through the natural degeneration process. The tear was in exactly the same place.

26. Claimant told Dr. Lambden that she had never before seen a physician for knee problems, and when discussing her surgeries, informed him of a carpal tunnel release 10 years previously, the bunionectomy, and a patent foramen ovale surgery from 20 years ago.

27. At hearing, Claimant attributed her right knee problems to limping and her inability to stretch her leg out because of her hamstring injury. However, the records reveal that Claimant was walking with a normal gait at least as of March 2015. Surveillance video from April 2015 shows Claimant walking with a regular gait with full extension of her right leg. An unnatural gait cannot be the cause of Claimant's current knee condition, because the serious pain did not appear until December 2015, long after her gait returned to normal. In any case, as testified by Dr. Lambden, walking without fully extending the knee can shorten the stride, but it would not lead to a medial meniscal tear, the reason surgery is needed.

28. Dr. Petry’s opinion that the intense pain Claimant was experiencing in other body parts masked the pain in her right knee is not credited, as the evidence does not support it. Claimant declined pain medicine offered by Dr. Petry two days after the incident. Claimant was reporting low levels of pain in her right hamstring and low back long before the onset of right knee pain. Further, Claimant initially reported left knee pain for the first few days, but the left knee pain quickly resolved and was no more than a bruise. Likewise, Claimant started reporting pain to her right shoulder in June 2015, which was felt to be related to postural issues.

29. The delay in the onset of symptoms to the right knee also contradicts the fact that if Claimant had torn her medial meniscus or done something to aggravate her pre-existing condition, it should have been apparent to her soon after the incident, if not immediately, as testified by Dr. Lambden. It is not persuasive support for Claimant’s position that she could feel a bruise on her left knee but not a torn meniscus on her right knee on the date of the incident or soon after bearing weight on the right leg.

30. Dr. Petry’s explanation that the reason Claimant experienced pain after sitting for two hours in December 2015 was due to a bucket-handle tear in the knee is not credited. The MRI, which Dr. Petry did not review, does not show a bucket-handle tear. As stated by Dr. Lambden, knee pain after getting up from sitting for long periods of time is a classic symptom of osteoarthritis of the knee, a condition which is confirmed by the MRIs from before and after the incident. Dr. Petry’s explanation also fails to

explain why it took over 11 months for the condition to be revealed, and why, if the proposed surgery is for a meniscal tear, the bucket-handle tear is relevant.

31. Claimant points to a February 2, 2015, report from Vail-Summit Orthopedics as evidence that Claimant complained of right knee pain early on. First, February 2, 2015, is four weeks from the date of injury. Second, the pain was in the back of the right knee, which both Dr. Lambden and Dr. Petry attributed to the hamstring tear. In fact, the same report stated that the discomfort in the right knee was due to resistance to flexion from the hamstring discomfort.

CONCLUSIONS OF LAW

Having entered the foregoing Findings of Fact, the following Conclusions of Law are entered.

General legal authority

1. The purpose of the Workers' Compensation Act of Colorado (Act), Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

3. A Workers' Compensation case is decided on its merits. Section 8-43-201. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Benefits

4. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). Claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990).

5. Claimant contends that she is entitled to medical benefits to cure and relieve her of the right knee meniscal tear. Respondents argue that the right knee meniscal tear is not related to the January 6, 2015, admitted work injury.

6. In order to prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. Although a preexisting condition does not disqualify a claimant from receiving workers' compensation benefits, Claimant must prove a causal relationship between the injury and the medical treatment claimant is seeking. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo.App. 1997). Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1189 (Colo. App. 2002).

Conclusion

7. Claimant has failed to prove by a preponderance of the evidence that she sustained an injury to her right knee from the January 6, 2015, fall, either directly or indirectly.

8. Claimant's representations to Dr. Lambden and Dr. Cunningham that she experienced immediate pain and swelling in her right knee from the slip and fall injury, and that her symptoms were constant and had remained unchanged since their onset, are not credible. These representations were discredited by the medical records and Claimant's own testimony at hearing.

9. Claimant denied prior right knee problems and the previous right knee surgery to Dr. Lambden and Dr. Cunningham. Dr. Petry was not aware of the prior right knee problems until a few days before hearing. In fact, when asked about prior surgeries, she revealed to Dr. Cunningham prior bunion surgery to both feet in 2005, but not the 2006 right knee surgery. She was placed on crutches the day of the December 27, 2005, right knee injury, had been living with mild arthritis in her knee for

some time before the injury, and was still experiencing knee pain four months after surgery, which was thought to be due to arthritis in the medial compartment of the knee. Claimant told Dr. Lambden that she had never before seen a physician for knee problems, and when discussing her surgeries, informed him of a carpal tunnel release 10 years previously, the bunionectomy, and a patent foramen ovale surgery from 20 years ago.

10. Claimant's representation to the court that she was walking with an altered gait is contradicted by the medical records and the surveillance video.

11. Dr. Petry is not Level 2 accredited with the Division of Workers Compensation. He sees only one workers' compensation patient a week and seldom addresses causation. Dr. Lambden, who was accepted as an expert witness, is Level 2 accredited and board certified in physical medicine and rehabilitation. Dr. Lambden's opinion that Claimant's right knee symptoms are not related to the work injury is credible. The right knee symptoms did not occur for almost one year and Claimant had a prior history of an arthritic right knee with surgery in 2006. As stated by Dr. Lambden, it is difficult to relate the acute onset of knee pain on December 21, 2015 to the January 6, 2015 falling incident, especially since the MRI findings from 2005 and 2016 are essentially the same, with some expected degeneration.

ORDER

It is therefore ordered that:

1. Claimant's request for surgery to the right knee is denied and dismissed.

2. Any and all issues not determined herein are reserved for future decision.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-982-261-04

STIPULATION OF FACT

The parties stipulated and agreed that Claimant's average weekly wage is $1,163.17, the temporary total disability (TTD) rate is $775.44 and Respondents shall pay Claimant retroactively owed TTD in the amount of $11,281.26.

ISSUES

> The following issues were raised for consideration at hearing: whether Respondents overcame by clear and convincing evidence the opinion of the Division Independent Medical Examiner (DIME) regarding a 26% whole person impairment rating

FINDINGS OF FACT

Having considered the evidence presented at hearing, the following findings of fact are entered.

1. Claimant was injured in a motor vehicle accident on November 11, 2014, in Fort Collins, Colorado in the course and scope of his employment for Employer. Claimant sustained a herniated disc in his cervical spine as a result of the accident.

2. On October 27, 2015, Claimant was evaluated by Paul M. Legant, M.D. and was placed at maximum medical improvement (MMI). On November 20, 2015, Claimant was assigned an 11% whole person impairment rating by Wallace K. Larson, M.D.

3. Respondents filed a Final Admission of Liability (FAL) on December 1, 2015, and an amended FAL on December 18, 2015. The FALs admitted for an 11% whole person rating. Claimant timely objected to both FAL and pursued a DIME.

4. The Division Independent Medical Examination took place on March 22, 2016, with Brian Beatty, D.O. Dr. Beatty concluded in his report that "Based on the AMA Guides Third Edition Revised, the [Claimant] was found to have a 26% whole person impairment." Dr. Beatty's rating was broken down as follows:

   a. A total 26% whole person impairment based upon 18% impairment for the cervical spine and 10% impairment for the lumbar spine;

b. The cervical spine impairment of 18% was based on a 6% impairment from table 53 combined with a 13% impairment for loss of range of motion;

c. The lumbar spine impairment of 10% was based on 5% impairment from table 53 combined with 5% impairment for loss of range of motion.

5. Claimant filed an application for hearing on April 18, 2016, on the issue of AWW. Respondents filed a response to the application for hearing on April 21, 2016, seeking to overcome the DIME's impairment rating. The parties resolved the AWW issue at hearing by stipulation.

6. Dr. Beatty credibly testified at hearing that in the course of the DIME, measurements were taken regarding Claimant's lumbar flexion range of motion, among others. The results of these measurements were invalid according to Dr. Beatty. Dr. Beatty also testified that he stands by all aspects of the impairment rating measurements.

7. Dr. Beatty credibly testified that he was familiar with the *AMA Guides* and followed them to the best of his ability when performing his DIME. Dr. Beatty testified that nothing in his report was incorrect. Dr. Beatty credibly testified regarding Claimant's 5% specific disorder rating for the lumbar spine and the 18% rating on the cervical spine. Dr. Beatty conducted lumbar range of motion impairments and those range of motion impairments were *valid*.

8. Dr. Beatty's lumbar flexion range of motion measurements were invalid. Dr. Beatty took six range of motion lumbar flexion measurements. Dr. Beatty was familiar with the Division of Workers' compensation Level II curriculum, and testified that he was supposed to repeat the range of motion tests given they were invalid. Dr. Beatty did not repeat the range of motion measurements.

9. Dr. Beatty reaffirmed Claimant was at MMI and had an impairment rating of 26% whole person. Dr. Beatty's testimony was credible and persuasive and no other testimony was elicited at hearing. It is found that Respondents failed to sustain their burden of proof to prove that Dr. Beatty's impairment rating is most probably incorrect.

CONCLUSIONS OF LAW

Having entered the foregoing findings of fact the following conclusions of law are reached.

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Except as noted below, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that

which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

2. Respondents in this matter challenge Dr. Beatty's DIME determination with regard to Claimant's impairment rating. Respondents contend that Dr. Beatty did not comply with the *American Medical Association Guides to the Evaluation of Permanent Impairment, Third Edition (Revised)* (*AMA Guides*) with regard to range of motion measurements. Respondents contend that Dr. Beatty was required under the *AMA Guides* to repeat the range of motion measurements where the measurements were invalid. Respondents argue that, because Dr. Beatty did not get valid lumbar range of motion measurements, his impairment rating is most probably incorrect.

3. The determination of MMI and the assessment of permanent impairment both require the DIME physician to diagnose the claimant's condition or conditions, and determine their causal relationship to the industrial injury. *See Cordova v. Industrial Claim Appeals Office*, P.3d (Colo. App. No. 01CA0852, February 28, 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). The burden of proof rests on the party challenging the DIME physician's determinations to overcome them by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office, supra; Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656 (Colo. App. 1998). Clear and convincing evidence is evidence demonstrating that it is "highly probable" that the DIME physician's rating is incorrect. *American Compensation Insurance Co. v. McBride,* 107 P.3d 973, 980 (Colo. App. 2004). Such evidence must be unmistakable and free from serious or substantial doubt. *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1150 (Colo. App. 2002). The questions of whether the DIME physician has correctly applied the rating protocols, and ultimately whether the rating itself has been overcome by clear and convincing evidence, are questions of fact for the ALJ. *McLane Western Inc. v. Industrial Claim Appeals Office,* 996 P.2d 263 (Colo. App. 1999*); Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000). Further, even if the ALJ finds the DIME physician deviated from the rating protocols of the *AMA Guides*, the party challenging the rating must still demonstrate that the deviation casts substantial doubt on the overall validity of the rating. *Schrameck v. USA Waste Management*, W.C. No. 4-407-221 (ICAO May 18, 2001), *Rivale v. Beta Metals, Inc*., W.C. No. 4-2655-360 (April 16, 1998), *aff'd. Rivale v. Industrial Claim Appeals* Office, (Colo. App. No. 98CA0858, January 28, 1999) (not selected for publication).

4. In *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*, the court noted that under the *AMA Guides* the "evaluation or rating of impairment is an assessment of data collected during a clinical evaluation and the comparison of those data to the criteria contained in the Guides." Consistent with this concept the Industrial Claim Appeals Office has upheld a DIME physician's impairment rating that excluded "valid" range of motion deficits from an impairment rating based on the determination that the range of motion deficits did not correlate with clinical observations and data.

Adams v. Manpower, W.C. No. 4-389-466 (I.C.A.O. August 2, 2005); *Garcia v. Merry Maids,* W.C. No. 4-493-324 (I.C.A.O. August 12, 2002).

5. Ultimately, the questions of whether the DIME physician properly applied the *AMA Guides*, and whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. Not every deviation from the rating protocols of the *AMA Guides* requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the *AMA Guides* constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Logan v. Durango Mountain Resort,* W.C. No. 4-679-289 (ICAO April 3, 2009). Moreover, a mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

6. Here, in this case, there is no difference of opinion. Dr. Beatty was the only medical expert to testify at hearing. He testified credibly that he is fully aware of the *AMA Guides* and did his best to comply with them. Dr. Beatty affirmed the correctness of Claimant's 26% whole person impairment rating after his repeated attempts to obtain valid lumbar range of motion measurements.

7. The ALJ concludes that Respondents failed to present clear and convincing evidence that Dr. Beatty's DIME opinion regarding impairment rating was most probably incorrect.

ORDER

It is therefore ordered that:

1. Respondents shall pay Claimant workers' compensation benefits based on Dr. Beatty 26% whole person permanent impairment rating.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that the two year statute of limitations for filing a Claim for Workers' Compensation was tolled because Respondent failed to file a First Report of Injury with the Division of Workers' Compensation pursuant to §8-43-103(2), C.R.S.

2. Whether Claimant has established by a preponderance of the evidence that Decedent's August 11, 2012 death occurred during the course and scope of his employment with Employer and she is thus entitled to receive death benefits pursuant to §§8-42-114 & 8-42-115 C.R.S.

3. Whether Respondent has proven by a preponderance of the evidence that Decedent willfully failed to obey a safety rule in violation of §8-42-112(1)(b) C.R.S. on August 11, 2012.

4. Whether Respondent has demonstrated by a preponderance of the evidence that it is entitled to a 50% reduction in nonmedical compensation benefits pursuant to §8-42-112.5 C.R.S. because Decedent's death resulted from the presence of non-medically prescribed controlled substances in his system during working hours.

FINDINGS OF FACT

1. Employer is a university located in Colorado. Decedent worked for Employer as a Stationary Plant Operator. On August 11, 2012 Decedent was found dead in Employer's steam tunnels underneath the campus. Decedent was born on March 10, 1963 and thus was 49 years old at the time of his death.

2. Respondent challenges Claimant's contention that Decedent died during the course and scope of his employment. Respondent contends that Decedent was not engaged in work-related activities, did not have permission to enter the steam tunnels and was on vacation at the time of his death on August 11, 2012.

3. Employer's heating system consists of boilers in the heating plant that generate high temperature steam conveyed campus-wide through a closed loop system of pipes to various buildings on the campus. The steam is returned to the heating plant through "condensate return" pipes that feed the boilers. The closed loop system traverses a maze of underground tunnels that span beneath Employer's campus.

4. Decedent's job description included "[r]esponsibility for proper operation and maintenance of campus wide water treatment program for steam and hot water boilers, cooling towers; closed loop systems; [and] condensate return systems." His job duties included, "[a]nalyz[ing] equipment failures and determin[ing] methods of repair,

modification or replacement; perform[ing] and follow[ing] a preventative maintenance program …; [and] isolat[ing] and repair[ing] piping for steam, condensate, compressed air and chilled water distribution." Decedent was charged with the "proper operation and maintenance of campus wide water treatment program for steam and hot water boilers; closed loop systems; [and] condensate returns systems."

5. Utility Plant Supervisor Ken Vergo testified at the hearing in this matter. He explained that he supervised six Stationary Plant Operators. Mr. Vergo specified that Utility Plant Operators maintain and monitor boilers and chillers on Employer's campus. Utility Plant Operators primarily work in the Operational Control Room in Employer's Heating Plant. They are responsible for the steam pipes exiting the boilers before the pipes enter the steam tunnels. Mr. Vergo summarized that Stationary Plant Operators do not normally work in the steam tunnels except when the Distribution Crew or Pipefitters request help or during the annual outage when the steam system is closed for repairs.

6. Pipe Mechanical Trade Supervisor or Pipefitter Ralph Lewis testified at the hearing in this matter. He noted that Pipefitters are responsible for the maintenance and repair of the Steam Distribution System in Employer's steam tunnels. Mr. Lewis commented that major leaks are repaired immediately but minor leaks are deferred until an annual shutdown of the system. Pipefitters enter Employer's steam tunnels approximately twice each month to perform inspections and complete repairs. He clarified that the Steam Distribution System does not include boilers but only the steam distribution pipes within the tunnels.

7. Mr. Lewis explained that Pipefitters noted leaks on a whiteboard in the Distribution Office. The Distribution Office is upstairs from the Operational Control Room. Mr. Lewis commented that Pipefitters use a buddy system and never enter the steam tunnels alone. Notably, Mr. Vergo also maintained that employees never work alone in the steam tunnels.

8. Claimant testified that Decedent worked the night shift from 2:00 p.m. until 10:00 p.m. on August 8-10, 2012. She explained that on the evening of August 10, 2012 Claimant returned home from work at approximately 12:00 a.m. After Claimant and Decedent talked for several hours, Claimant left home to visit his workplace at approximately 3:30 a.m.. Claimant explained that Decedent visited his workplace to enter his time and use a FAX machine to send a rental application that had to be submitted by 5:00 a.m. She also assumed that Decedent had gone to work to look for a steam leak in the campus heating system.

9. A weekly Operations Department schedule reveals that Decedent worked on August 7, 2012 but did not work on August 8-10, 2012. Mr. Vergo noted that August 8-10, 2012 were Decedent's regularly scheduled days off from work. Moreover, Decedent had requested vacation time for the entire period from August 8-19, 2012. In fact, handwritten Operations Logs reflect that Decedent did not work at any time from 2:00 p.m. on August 9, 2012 through his death on August 11, 2012. The Operations

Logs reflect that Decedent’s co-worker Greg Zupon worked the 2:00-10:00 p.m. shift on August 9-10, 2012.

10. Human Resources Manager of the Facilities Department Kim Dahleen testified that she reviewed Decedent’s timesheets and payroll information. She commented that Decedent last entered time into Employer’s system on August 7, 2012. The timesheet entry included annual leave for August 11-12, and 16-19, 2012. Decedent did not make any time entries for August 8-10, 2012 because those were his regularly scheduled days off.

11. When Decedent did not return home on the morning of August 11, 2012 Claimant contacted Decedent’s coworkers. She specifically called Jorge Figueroa and stated that Decedent had left home at 3:30 a.m. to use a work computer but had not returned. Mr. Figueroa subsequently contacted the campus police department. Campus Police Officer Josiah Thiemann responded to the scene. Mr. Figueroa noted that Claimant had informed him that Decedent had come to work to use a computer.

12. Officer Thiemann contacted Claimant. Claimant explained that Decedent enjoyed exploring Employer’s steam tunnels. She also stated that Decedent may have visited Employer’s motor pool to salvage and recycle scrap metal. Claimant noted that Decedent had located several large pieces of copper but was uncertain whether he could move them. Notably, Decedent operated a scrap metal recycling business for approximately 20-22 hours each week.

13. Campus police, fire and rescue workers searched Employer’s steam tunnels for Decedent beginning at about 8:15 p.m. Approximately 45 minutes later searchers found Decedent’s body in the tunnels near a manhole access about 0.85 miles from the heating plant. Officer Thiemann reported that there was a very large copper pipe leaning against a ladder towards the manhole near where Decedent’s body was found. He noted that Decedent appeared to have attempted to remove the copper pipe from the tunnel, sat down to take a break and never got back to his feet.

14. Campus Police Officer Chris Melvin conducted a follow-up investigation of Decedent’s death. He contacted Claimant on August 13, 2012. Claimant reported that Decedent had gone to Employer’s campus to use a computer and fix a steam leak in the tunnels.

15. Officer Thiemann testified at the hearing in this matter that Claimant did not report that Decedent had entered the steam tunnels to perform his job duties on August 11, 2012. He suspected that Decedent entered the tunnels to steal copper piping from Employer. Officer Thiemann knew that Decedent had used methamphetamines and addicts used copper piping to supplement their incomes. Moreover, Decedent could have driven his car over to the hatch above where his body and the copper piping were found. Finally, Decedent did not possess any tools that could have been used to repair a steam leak.

16. Officer Melvin testified at the hearing in this matter that Decedent was likely attempting to steal copper pipe from Employer at the time of his death. He explained that Decedent's clothes were very dirty and covered with small bits of gravel. Decedent's clothing thus suggested that he had been crawling around in the steam tunnels. Considering Decedent was not working or scheduled to work, was not following safety protocols and had not notified anyone that he planned to enter the steam tunnels, Officer Melvin concluded that Decedent was attempting to steal property from Employer at the time of his death.

17. Mr. Lewis stated that he was familiar with the storage of copper piping in Employer's steam tunnels. He explained that copper piping was typically stored approximately 200-300 feet from where Decedent's body was found. Mr. Lewis noted that there is a ditch encased in concrete that runs through a tunnel. There is approximately two feet of clearance in the ditch. The copper was stored on the south side of the ditch and was never stored on the north side of the ditch. Because Decedent's body and copper piping were found on the north side of the ditch, Mr. Lewis remarked that the copper piping must have been moved. Mr. Lewis finally noted that there were no leaks or required repairs in the steam system at the time of Decedent's death.

18. Larimer County Coroner Patrick Allen, M.D. performed an autopsy on Decedent's body to assess the cause and manner of his death. He concluded that Decedent died as a result of heat stroke with the ingestion of 1000 mg/dl of methamphetamines as a contributory factor. At the hearing in this matter Dr. Allen maintained that Decedent's high level of methamphetamines in conjunction with the hot environment of the steam tunnels contributed to his death. He noted that methamphetamines increase the effects of heat on the human body. Dr. Allen remarked that he discarded Decedent's blood sample after one year according to standard procedures.

19. Toxicologist and Occupational Medicine Physician Michael Kosnett conducted a forensic evaluation of the cause of Decedent's death. He issued a report on April 27, 2015 and testified at the hearing in this matter. Dr. Kosnett agreed with Dr. Allen that Decedent died of heat stroke with methamphetamines as a contributing factor. He emphasized that methamphetamines constituted a highly substantial factor in Decedent's death because methamphetamines are associated with elevated body temperatures.

20. Claimant filed a Claim for Workers' Compensation on November 14, 2014 or over two years after Decedent's August 11, 2012 death. Employer's Workers' Compensation Manager Kenda Weigang testified that she did not complete an Employer's First Report of Injury prior to Claimant's Claim for Workers' Compensation because she had no knowledge that Decedent's death was related to his work for Employer. She explained that prior to the filing of the November, 14, 2014 Claim for Workers' Compensation she had not been notified by Claimant or anyone acting on Claimant's behalf that Decedent's death had occurred during the course and scope of his employment. Ms. Weigang remarked that, if she had been notified that Decedent's

death was related to his job duties, she would have completed an Employer's First Report of Injury. On December 4, 2014 Insurer filed a Notice of Contest challenging Claimant's claim because Decedent's death was not work-related.

21. Claimant has demonstrated that it is more probably true than not that the two year statute of limitations for filing a Claim for Workers' Compensation was tolled because Respondent failed to file a First Report of Injury with the Division of Workers' Compensation pursuant to §8-43-103(2), C.R.S. Ms. Weigang did not complete an Employer's First Report of Injury prior to the filing of Claimant's Claim for Workers' Compensation because she had no knowledge that Decedent's death was related to his work for Employer. She remarked that she had not been notified by Claimant or anyone acting on Claimant's behalf that Decedent's death occurred while he was performing his job duties. However, Decedent had worked for Employer and was found dead in Employer's steam tunnels on August 11, 2012. Although it was questionable whether Decedent's death occurred during the course and scope of his employment, Employer had some knowledge of accompanying facts connecting Decedent's death with the employment and suggesting to a reasonably conscientious manager that the case might involve a potential compensation claim. Because Respondent failed to file a First Report of Injury the statute of limitations in §8-43-103(2), C.R.S. did not begin to run Accordingly, Claimant's November 14, 2014 Claim for Workers' Compensation is not barred by the statute of limitations in §8-43-103(2), C.R.S.

22. Claimant has failed to establish that it is more probably true than not that Decedent's August 11, 2012 death occurred during the course and scope of his employment with Employer and she is thus not entitled to receive death benefits pursuant to §§8-42-114 & 8-42-115 C.R.S. Decedent's death did not originate from his work-related functions and was not sufficiently related to his job duties to be considered part of his service to Employer. The record reveals that Decedent was on vacation and not performing any job duties for Employer at the time of his death.

23. Claimant testified that Decedent worked the night shift from 2:00 p.m. until 10:00 p.m. on August 8-10, 2012. She explained that on the evening of August 10, 2012 Claimant returned home from work at approximately 12:00 a.m. After Claimant and Decedent talked for several hours, Decedent left home to visit his workplace at approximately 3:30 a.m. Claimant explained that Decedent visited his workplace to enter his time and use a FAX machine to send a rental application that had to be submitted by 5:00 a.m. However, a weekly Operations Department schedule reveals that Decedent worked on August 7, 2012 but he did not work on August 8-10, 2012. In fact, the Operations Logs reflect that Decedent's co-worker Greg Zupon worked the 2:00-10:00 p.m. shift on August 9-10, 2012. Mr. Vergo noted that August 8-10, 2012 were Decedent's regularly scheduled days off from work. Moreover, Decedent had requested vacation time for the entire period from August 8-19, 2012. Furthermore, Ms. Dahleen testified that she reviewed Decedent's timesheets and payroll information. She commented that Decedent last entered time into Employer's system on August 7, 2012. The timesheet entry included annual leave for August 11-12, and 16-19, 2012. Decedent did not make any time entries for August 8-10, 2012 because those were his regularly scheduled days off.

24. During a follow-up investigation with Officer Melvin Claimant reported that Decedent had gone to Employer's campus to use a computer and fix a steam leak in the tunnels. She also testified that she assumed Decedent had gone to work to look for a steam leak in the campus heating system. However, the record is devoid of persuasive evidence that Decedent entered Employer's steam tunnels at approximately 3:30 a.m. on August 12, 2012 to repair a steam leak. Mr. Vergo specified that Utility Plant Operators primarily work in the Operational Control Room in Employer's Heating Plant. They are responsible for the steam pipes exiting the boilers before the pipes enter the steam tunnels. Mr. Vergo summarized that Stationary Plant Operators do not normally work in the steam tunnels except when the Distribution Crew or Pipefitters request help or during the annual outage when the steam system is closed for repairs. Mr. Lewis noted that Pipefitters are responsible for the maintenance and repair of the Steam Distribution System in Employer's steam tunnels. Furthermore, Officer Thiemann testified that Claimant did not report that Decedent had entered the steam tunnels to perform his job duties on August 11, 2012. He suspected that Decedent entered the tunnels to steal copper piping from Employer. Officer Thiemann remarked that Decedent did not possess any tools when he was found that could have been used to repair a steam leak. Finally, Officer Melvin testified that Decedent was likely attempting to steal copper pipe from Employer at the time of his death. He explained that Decedent's clothes were very dirty and covered with small bits of gravel. Decedent's clothing thus suggested that he had been crawling around in the steam tunnels. Considering Decedent was not working or scheduled to work, was not following safety protocols and had not notified anyone that he planned to enter the steam tunnels, Officer Melvin concluded that Decedent was attempting to steal property from Employer at the time of his death. Finally, Mr. Lewis commented that, because Decedent's body and copper piping were found on the north side of the ditch, the copper piping must have been moved. He noted that there were no leaks in the steam system that required repairs at the time of Decedent's death.

25. The bulk of the evidence reflects that Decedent was not performing any job duties at the time of his death. There were no steam leaks in need of repair at the time of his death. While Decedent may have been allowed to use Employer's FAX machine or computer for personal reasons, his job duties did not require him to independently search for or repair leaks in the tunnels at 3:30 a.m. without notifying other employees. Decedent's death thus did not occur within the time and place limits of his employment. Decedent's presence in Employer's steam tunnels during a scheduled vacation at the time of his death was not sufficiently related to the conditions and circumstances under which he generally performed his job functions to be considered part of his service to Employer. Moreover, Decedent's death did not arise out of a risk that was reasonably incidental to the conditions and circumstances of his employment. Accordingly, Claimant's request for death benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured

workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Statute of Limitations

4. Section 8-43-103(2), C.R.S. specifies that the right to Workers' Compensation benefits is barred unless a formal claim is filed within two years after the injury. However, §8-43-103(2), C.R.S. also provides, in relevant part, "in all cases in which the employer has been given notice of an injury and fails, neglects, or refuses to report said injury to the division as required by the provisions of said articles, this statute of limitations shall not begin to run against the claim of the injured employee or said employee's dependents in the event of death until the required report has been filed with the division." Notably, §8-43-103(2), C.R.S.also specifies that employers shall immediately provide notice of the death of an employee from an injury to the Division of Workers' Compensation. An employer is deemed to have notice of an injury when it has "some knowledge of accompanying facts connecting the injury or illness with the employment and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Jones v. Adolph Coors Co.* 689 P.2d 681, 684 (Colo. App. 1984); *In Re Gillespie*, W.C. No. 4-737-182 (ICAP, Mar. 4, 2009). In the event the employer does not file a first report of injury or death, the statute of limitations is "tolled because of employer's failure to report the injury to the Division." *City of Englewood v. Indus. Claim Appeals Office*, 954 P.2d 640, 642-43 (Colo.App. 1998).

5. The claimant bears the burden of demonstrating that the employer had sufficient knowledge to trigger the duties required by §8-43-103(2), C.R.S. *In Re Gillespie*, W.C. No. 4-737-182 (ICAP, Mar. 4, 2009). The claimant bears the burden of proof because the tolling provisions create an exception to the claimant's duty to file a

claim within two years of the injury. *Id.* The question of whether the employer had notice of an injury or death is a factual determination for the ALJ. *Id.*

6. As found, Claimant has demonstrated by a preponderance of the evidence that the two year statute of limitations for filing a Claim for Workers' Compensation was tolled because Respondent failed to file a First Report of Injury with the Division of Workers' Compensation pursuant to §8-43-103(2), C.R.S. Ms. Weigang did not complete an Employer's First Report of Injury prior to the filing of Claimant's Claim for Workers' Compensation because she had no knowledge that Decedent's death was related to his work for Employer. She remarked that she had not been notified by Claimant or anyone acting on Claimant's behalf that Decedent's death occurred while he was performing his job duties. However, Decedent had worked for Employer and was found dead in Employer's steam tunnels on August 11, 2012. Although it was questionable whether Decedent's death occurred during the course and scope of his employment, Employer had some knowledge of accompanying facts connecting Decedent's death with the employment and suggesting to a reasonably conscientious manager that the case might involve a potential compensation claim. Because Respondent failed to file a First Report of Injury the statute of limitations in §8-43-103(2), C.R.S. did not begin to run Accordingly, Claimant's November 14, 2014 Claim for Workers' Compensation is not barred by the statute of limitations in §8-43-103(2), C.R.S.

Compensability

7. To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991).

8. There is no requirement under the Act that a claimant must be on the clock or performing an act "preparatory to employment" in order to satisfy the "course of employment" requirement. *In Re Broyles,* W.C. No. 4-510-146 (ICAP, July 16, 2002). As noted in *Ventura v. Albertson's, Inc.,* 856 P.2d 35, 38 (Colo. App. 1992):

> The employee, however, need not be engaged in the actual performance of work at the time of injury in order for the "course of employment" requirement to be satisfied. Injuries sustained by an employee while taking a break, or while leaving the premises, collecting pay, or in retrieving work clothes, tools, or other materials within a reasonable time after termination of a work shift are within the course of employment, since these are normal incidents of the employment relation.

9. The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its “origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee’s service to the employer.” *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). Nevertheless, the employee’s activity need not constitute a strict duty of employment or confer a specific benefit on the employer if it is incidental to the conditions under which the employee typically performs the job. *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). It is sufficient “if the injury arises out of a risk which is reasonably incidental to the conditions and circumstances of the particular employment.” *Phillips Contracting, Inc. v. Hirst,* 905 P.2d 9, 12 (Colo. App. 1995). Incidental activities include those that are “devoid of any duty component, and are unrelated to any specific benefit to the employer.” *In Re Rodriguez,* W.C. 4-705-673 (ICAP, Apr. 30, 2008). Actions including eating, sleeping, resting, washing, toileting, seeking fresh air, drinking water and keeping warm have been determined to be incidental to employment under the personal comfort doctrine. *In Re Rodriguez,* W.C. 4-705-673 (ICAP, Apr. 30, 2008). Whether a particular activity has some connection with the employee’s job-related functions as to be “incidental” to the employment is dependent on whether the activity is a common, customary and accepted part of the employment as opposed to an isolated incident. *See Lori’s Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715 (Colo. App. 1995).

10. As found, Claimant has failed to establish by a preponderance of the evidence that Decedent’s August 11, 2012 death occurred during the course and scope of his employment with Employer and she is thus not entitled to receive death benefits pursuant to §§8-42-114 & 8-42-115 C.R.S. Decedent’s death did not originate from his work-related functions and was not sufficiently related to his job duties to be considered part of his service to Employer. The record reveals that Decedent was on vacation and not performing any job duties for Employer at the time of his death.

11. As found, Claimant testified that Decedent worked the night shift from 2:00 p.m. until 10:00 p.m. on August 8-10, 2012. She explained that on the evening of August 10, 2012 Claimant returned home from work at approximately 12:00 a.m. After Claimant and Decedent talked for several hours, Decedent left home to visit his workplace at approximately 3:30 a.m. Claimant explained that Decedent visited his workplace to enter his time and use a FAX machine to send a rental application that had to be submitted by 5:00 a.m. However, a weekly Operations Department schedule reveals that Decedent worked on August 7, 2012 but he did not work on August 8-10, 2012. In fact, the Operations Logs reflect that Decedent’s co-worker Greg Zupon worked the 2:00-10:00 p.m. shift on August 9-10, 2012. Mr. Vergo noted that August 8-10, 2012 were Decedent’s regularly scheduled days off from work. Moreover, Decedent had requested vacation time for the entire period from August 8-19, 2012. Furthermore, Ms. Dahleen testified that she reviewed Decedent’s timesheets and payroll information. She commented that Decedent last entered time into Employer’s system on August 7, 2012. The timesheet entry included annual leave for August 11-12, and 16-19, 2012.

Decedent did not make any time entries for August 8-10, 2012 because those were his regularly scheduled days off.

12. As found, during a follow-up investigation with Officer Melvin Claimant reported that Decedent had gone to Employer's campus to use a computer and fix a steam leak in the tunnels. She also testified that she assumed Decedent had gone to work to look for a steam leak in the campus heating system. However, the record is devoid of persuasive evidence that Decedent entered Employer's steam tunnels at approximately 3:30 a.m. on August 12, 2012 to repair a steam leak. Mr. Vergo specified that Utility Plant Operators primarily work in the Operational Control Room in Employer's Heating Plant. They are responsible for the steam pipes exiting the boilers before the pipes enter the steam tunnels. Mr. Vergo summarized that Stationary Plant Operators do not normally work in the steam tunnels except when the Distribution Crew or Pipefitters request help or during the annual outage when the steam system is closed for repairs. Mr. Lewis noted that Pipefitters are responsible for the maintenance and repair of the Steam Distribution System in Employer's steam tunnels. Furthermore, Officer Thiemann testified that Claimant did not report that Decedent had entered the steam tunnels to perform his job duties on August 11, 2012. He suspected that Decedent entered the tunnels to steal copper piping from Employer. Officer Thiemann remarked that Decedent did not possess any tools when he was found that could have been used to repair a steam leak. Finally, Officer Melvin testified that Decedent was likely attempting to steal copper pipe from Employer at the time of his death. He explained that Decedent's clothes were very dirty and covered with small bits of gravel. Decedent's clothing thus suggested that he had been crawling around in the steam tunnels. Considering Decedent was not working or scheduled to work, was not following safety protocols and had not notified anyone that he planned to enter the steam tunnels, Officer Melvin concluded that Decedent was attempting to steal property from Employer at the time of his death. Finally, Mr. Lewis commented that, because Decedent's body and copper piping were found on the north side of the ditch, the copper piping must have been moved. He noted that there were no leaks in the steam system that required repairs at the time of Decedent's death.

13. As found, the bulk of the evidence reflects that Decedent was not performing any job duties at the time of his death. There were no steam leaks in need of repair at the time of his death. While Decedent may have been allowed to use Employer's FAX machine or computer for personal reasons, his job duties did not require him to independently search for or repair leaks in the tunnels at 3:30 a.m. without notifying other employees. Decedent's death thus did not occur within the time and place limits of his employment. Decedent's presence in Employer's steam tunnels during a scheduled vacation at the time of his death was not sufficiently related to the conditions and circumstances under which he generally performed his job functions to be considered part of his service to Employer. Moreover, Decedent's death did not arise out of a risk that was reasonably incidental to the conditions and circumstances of his employment. Accordingly, Claimant's request for death benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation death benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: September 2, 2016.

Denver, CO 80203

STIPULATION

1. The parties stipulate and agree that the Claimant's average weekly wage (AWW) is $260.00

ISSUES

The issues for determination are:

1. Whether the Claimant proved, by a preponderance of the evidence, that he suffered a compensable injury in the course and scope of his employment on November 10, 2014.

2. If the Claimant proves he suffered a compensable injury, whether the Claimant proved, by a preponderance of the evidence, that medical treatment that he received is reasonably necessary to cure and relieve the Claimant of the effects of his November 10, 2014 injury, including, but not limited to medical treatment provided by South Aurora Family Health Services and Quality Health Physical Therapy.

3. If the Claimant proves he suffered a compensable injury, whether the Claimant proved, by a preponderance of the evidence, that he is entitled to temporary total disability indemnity benefits August 23, 2015 ongoing.

4. If the Claimant proves he suffered a compensable injury, whether the Respondents proved, by a preponderance of the evidence, that the Claimant is responsible for his termination of employment and resulting wage loss.

FINDINGS OF FACT

1. The Claimant is a 36-year-old man with a date of birth of March 6, 1980. The Claimant was hired by Employer in September of 2014 in the housekeeping department and his typical job duties as a housekeeper included keeping locker rooms clean, keeping the racquet ball and basketball courts prepared, folding towels, and keeping the gym clean.

2. The Claimant testified at the hearing that on November 10, 2014, he began work for Employer at approximately 6:00am and that he sustained an injury at work around 10:00am. The Claimant testified that while he was preparing to mop the locker rooms, he received a call from his manager on duty to go outside and pick up a

delivery from FedEx. The delivery man left a dolly stacked with packages for the Claimant to take. The dolly had a flat tire and was difficult to move (Hrg. Tr., pp. 15–16).

3. After the Claimant unloaded the bales of towels and the boxes off the dolly, the Claimant returned to his usual job duties, which at that point in time consisted of stocking folded towels for the club members. The Claimant bent over to reach into a bin to grab some towels to fold. He testified that his back popped as he attempted to stand up from the bent position from grabbing the towels. He described feeling a pinching sensation in the middle of his back shortly thereafter. The Claimant denied ever having any problems in this middle area of his back prior to this event (Hrg. Tr., pp. 16-17).

4. The Claimant's testimony about his mechanism of injury is credible and has been generally consistent since his first report of injury. While there have been some variations of the reporting, these do not appear to be attributable to the Claimant providing inconsistent stories, but rather they are more likely due to note takers mixing up some of the details of the reporting.

5. The Claimant notified his supervisor after the incident occurred. The Claimant testified that he told his supervisor that he had just hurt his back, but the supervisor would not meet with him to complete an incident report on the day of the injury (Hrg. Tr., pp. 17-19). The Claimant testified that he insisted on completing an incident report the following day and so it was prepared on November 11, 2014. (Hrg. Tr., p. 19; Claimant's Ex. 3, p. 9).

6. The Claimant received medical treatment on November 11, 2014 after he was instructed to receive treatment from Concentra. (Hrg. Tr., p. 20). The Claimant was examined by Allison Hedien, NP, and she noted a mechanism of injury that the assisted with a Fed Ex delivery but the dolly was broken but he assisted with heavy loads of towels. NP Hedien noted that he the Claimant "felt a sudden onset of a sharp, pulling, throbbing pain in his thoracic back" which "remained last night and through today" making it difficult to work and giving him "excruciating pain." MP Hedien documented that the Claimant was now experiencing a throbbing pain in his thoracic spine to the point of him crying in the examination room. Her physical examination also documented tenderness over the thoracic paraspinal muscles around the T5-T12 area. The Claimant was assessed with a (1) strain of thoracic region; and (2) thoracic myofascial strain. The Claimant was taken off work until he could be seen for a recheck the next day (Claimant's Exhibit 4, pp. 14-17; Respondents' Exhibit C, pp. 24-25).

7. On November 12, 2014, the Claimant was evaluated again by NP Hedien and his pain level was reported again at 8/10. He was continued with a "no work" status (Claimant's Exhibit 4, pp. 22-24; Respondents' Exhibit C, pp. 26-27). That same day, the Claimant was evaluated by Sara Landgrave, DPT for an initial physical therapy evaluation. The Claimant reported a mechanism of injury that he assisted with a delivery and he had to use a dolly with a broken wheel to carry the bales of towels. Then after repeatedly loading and unloading the dolly, the Claimant bent into a bin to grab some

towels and felt a sharp pain in his back. The Claimant currently described a pain along his mid-back that was a constant, burning pain. Physical therapy twice a week was recommended until the Claimant's next re-check (Claimant's Exhibit 4, p. 18-20).

8. The Claimant's first examination by a doctor took place on November 14, 2014 with Dr. Jennifer Huldin. Dr. Huldin confirmed the diagnosis of a thoracic myofascial strain. She ordered the Claimant to continue physical therapy and referred him for chiropractic care. The Claimant was returned to work with modified duty with no lifting over 5 pounds, no work above the shoulder and no work below knee level (Claimant's Exhibit 4, pp. 28-34; Respondents' Exhibit C, pp. 28-30).

9. At a visit with NP Hedien on November 20, 2014, the Claimant reported an improving 6/10 pain level and that physical therapy was going well and helping significantly. The Claimant was returned to work with modified duty and restrictions of no lifting greater than 15 pounds, no pushing and pulling over 20 pounds, with walking, standing and bending up to 6 hours a day, no walking on uneven terrain and no climbing stairs or ladders and no reaching above head with affected extremities (Claimant's Exhibit 4, pp. 41-43; Respondents' Exhibit C, pp. 31-32).

10. The Claimant saw Richard Mobus, DC, for an initial chiropractic evaluation on November 24, 2014. He noted that the Claimant's cervical region and upper and lower extremities were pain free with normal active range of motion. On palpation, Dr. Mobus noted only discrete tenderness and moderate periarticular hypertonicity, most prominently at the T-5-T6 level on the left. The Claimant was instructed to ice the treatment area and provided with resisted stretching exercises for the anterior shoulder girdle (Claimant's Exhibit 4, pp. 45-46; Respondents' Exhibit E, pp. 49-50). The Claimant continued to treat with Dr. Mobus through November and the beginning of December.

11. On December 12, 2014, the Claimant saw Dr. Aschberger who noted that chiropractic treatments were providing temporary relief. The Claimant reported that he was working his usual duties as of this visit. The Claimant reported pain in the mid thoracic levels and pain across the ribs to the chest. On examination, Dr. Aschberger noted tenderness at the costosternal junction at the mid thoracic levels bilaterally, right more than left. Dr. Aschberger assessed the Claimant with a thoracic strain with some associated rib restriction and noted that a discogenic component to the symptoms should be considered (Claimant's Exhibit 4, pp. 64-65; Respondents' Exhibit C, pp. 36-37).

12. The Claimant saw Dr. Aschberger again on January 9, 2015 with continued thoracic irritation. The Claimant was discharged from chiropractic care due to lack of progress. Dr. Aschberger noted stiffness and tightness at the right ribs at the mid thoracic levels and increased pain with lateral compression over the ribs. The Claimant reported his symptoms were up and down. Dr. Aschberger recommended a home exercise program and massage with osteopathic manual therapy (Claimant's Exhibit 4, p. 73; Respondents' Exhibit C, p. 41).

13. On January 12, 2015, the Claimant reported to NP Hedien that he felt his pain was not improved and remained at 7-8/10. He reported he had been working light duty, but his hours may be cut soon due to his restrictions. NP Hedien noted that his MRI was negative but he was having pain in his right trapezoid and occasionally wrapping around his right ribs. His work restrictions were lifting up to 15 pounds, pushing and pulling up to 20 pounds, standing and walking frequently/up to 6 hours per day (Claimant's Exhibit 4, pp. 74-76; Respondents' Exhibit C, pp. 42-44).

14. On February 9, 2015, the Claimant saw NP Hedien again at Concentra reporting a pain level of 6-7/10. He reported that he was working on restrictions and it was going okay. NP Hedien noted that Dr. Aschberger referred the Claimant to Dr. Winslow for manual therapy and the Claimant had several appointments with him, along with continuing massage therapy and behavioral based psychotherapy sessions with Dr. Cohen. At this point the Claimant was discharged from further chiropractic with Dr. Mobus. As of this visit the work restrictions were lifting up to 15 pounds, pushing and pulling up to 20 pounds, bending up to 3 hours per day, and standing and walking up to 6 hours per day (Claimant's Exhibit 4, pp. 83-85; Respondents' Exhibit 45-47).

15. The Claimant testified that on February 14, 2015, he was incarcerated. He testified that the only treatment he received for his back while incarcerated was some prescription pills. The Claimant was released from jail on August 23, 2015 (Hrg. Tr., pp. 22-24). The Department of Corrections medical records document that the Claimant requested treatment for his low back while incarcerated. The healthcare provider documented that the Claimant sustained a back injury in 2014 and had been receiving treatment through workers' compensation although her note contains some inaccurate details about the Claimant working for Fed Ex when he was injured (Claimant's Exhibit 6, p. 88).

16. On March 5, 2015, the Claimant was voluntarily separated from employment due to not being available for work because of his incarceration. The Employer's separation form indicates that the Claimant was eligible for rehire (Respondents' Exhibit I).

17. After the Claimant was released from jail on August 23, 2015, he resumed treatment for his back pain at South Metro Community Provider Network/South Aurora Health Services/HealthONE Aurora South since Concentra had previously closed his claim for noncompliance (Hrg. Tr., p. 24 and Claimant's Exhibit 4, p. 86).

18. The Claimant saw PA-C Tiffany Knudsen at South Aurora Health Services on October 19, 2015 for back pain. She noted that the Claimant reported a known back injury a year ago with a period of incarceration in the intervening time. The Claimant reported Tylenol and Ibuprofen was not helping his symptoms. He reported that the pain was originally more in the left back but is now more in the middle of the back. PA-C Knudsen referred the Claimant to physical therapy and provided him with home

exercises and medications (Claimant's Exhibit 7, p. 109-111; Claimant's Exhibit 8, pp. 135-154; Respondents' Exhibit G, pp. 80-83).

19. At an initial physical therapy evaluation on October 27, 2015, the Claimant demonstrated decreased range of motion and reported pain that limited his functional activities. DPT Brian Shin found deficits that could be addressed by physical therapy and recommended 1-2 physical therapy visits per week for 4-6 weeks (Claimant's Exhibit 7, pp. 109-110).

20. On December 17, 2015, the Claimant continued to treat with providers at Aurora South who noted that the Claimant's treatment for a prior work injury was not completed and during the interruption while he was incarcerated, the Claimant did not receive treatment. While he was doing better before, the Claimant was reporting that the pain is now interfering with his daily activities and his ability to work (Claimant's Exhibit 8, pp. 131-135; Respondents' Exhibit G, pp. 75-79). The Claimant followed up again at Aurora South on January 13, 2016 continuing to report back pain. His medications were changed and he was referred for physical therapy (Claimant's Exhibit 8, pp. 115-131; Respondents' Exhibit G, pp. 59-75).

21. The Claimant underwent an Independent Medical Examination with Dr. Edwin Healey on February 5, 2016 (Claimant's Exhibit 9, pp. 155-170). The Claimant reported a mechanism of injury to Dr. Healey of being at work as a housekeeper when he was called by his supervisor to unload boxes and bales of towels being delivered by a FedEx truck. The dolly used to bring the items in to the health club had a flat tire and the Claimant struggled to push and pull the loaded dolly to the storage room. Then after this, when the Claimant bent to grab some towels, the Claimant felt a pop in his mid back and had an immediate onset of pain (Claimant's Exhibit 9, p. 155). Dr. Healey reviewed the Claimant's medical records from prior to his dates of incarceration. Dr. Healey also reviewed medical records from HealthONE Aurora South after the Claimant was released, and he provided a thorough summary of the records (Claimant's Exhibit 9, pp. 156-164). The Claimant reported that he has continued to have thoracic pain since the initial injury but the pain has fluctuated in severity. Now, the Claimant reports to Dr. Healey that prolonged sitting, standing, bending, twisting and lifting more than 10 pounds aggravates his upper back pain. The Claimant reported that initially, his pain was primarily in the thoracic region, but over time it has developed and now radiated into his upper low back (Claimant's Exhibit 9, p. 165). On examination, Dr. Healey noted tenderness, hypertonicity and trigger points in the T5-T12 paraspinals with deep palpation causing pain to radiate into his upper lower back. Based on the history, medical records and the examination, Dr. Healey opined that "the current diagnoses causally and directly related to the November 10, 2014 work injury include thoracic sprain/strain, with secondary myofascial pain and referral to the upper lumbar region" (Claimant's Exhibit 9, p. 166). Dr. Healey opined that the Claimant does not have significant lumbar pain, but to the extent he does, Dr. Healey found it unrelated to the November 10, 2014 injury. Dr. Healey recommended a trial of aggressive myofascial low back pain treatment, psychological counseling and possible antidepressant medication. He specifically opined that the Claimant "is still symptomatic as a result of

his November 10, 2014 work injury and needs further evaluation and treatment" (Claimant's Exhibit 9, p. 167). Dr. Healey recommended work restrictions of no lifting greater than 10 pounds, no repetitive bending at the waist and no pushing/pulling greater than 20 pounds (Claimant's Exhibit 9, p. 168).

22. On March 3, 2016, the Claimant returned to Concentra and was by Dr. Bryan Counts. Dr. Counts assessed the Claimant with thoracic myofascial strain and referred the Claimant for osteopathic manipulative treatments with Dr. Winslow. Dr. Counts placed work restrictions on the Claimant that he may lift up to 20 pounds up to 3 hours per day (Respondents' Exhibit C, pp. 47a-47d).

23. The Claimant testified that he did not go back to the Employer after his release from incarceration to be reinstated in his job (Hrg. Tr., p. 31).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1), The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. Respondent bears the burden of establishing any affirmative defenses. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201 (2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Compensability

A claimant's right to compensation initially hinges upon a determination that the claimant suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. C.R.S. § 8-41-301. Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009). It is the burden of the claimant to establish causation by a preponderance of the evidence. *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado, 717 P.2d 1000 (Colo. App. 1986).* The weight and credibility to be assigned expert testimony on the issue of causation is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

Compensable injuries are those which require medical treatment or cause disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970). In order to prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001); *H and H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Seifried v. Industrial Commission,* 736 P.2d 1262 (Colo. App. 1986). However, where an industrial injury merely causes the discovery of the underlying disease to happen sooner, but does not accelerate the need for the surgery for the underlying disease, treatment for the preexisting condition is not compensable. *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

There is sufficient evidence in the record that the Claimant suffered an injury to thoracic spine on November 10, 2014 and the Claimant's testimony regarding his mechanism of injury was credible. While there were some slight variations in medical notes and reporting to prison intake personnel, these seem to be due more to the note takers than the Claimant's story changing. The Claimant does appear to have consistently reported a mechanism of injury that while he was preparing to mop the locker rooms, he received a call from his manager on duty to go outside and pick up a delivery from FedEx. The delivery man left a dolly stacked with packages for the Claimant to take. The dolly had a flat tire and was difficult to move. After the Claimant unloaded the bales of towels and the boxes off the dolly, the Claimant returned to his usual job duties, which at that point in time consisted of stocking folded towels for the club members. The Claimant bent over to reach into a bin to grab some towels to fold. Immediately, the Claimant had an onset of pain.

The Claimant testified credibly that he did not have prior issues with the area of his back that he injured on November 10, 2014 and he also reported this to medical treatment providers. There was no persuasive evidence presented to contradict this and no indication of prior thoracic spine injury. As of January 2015, Dr. Aschberger continued to opine that the Claimant had a thoracic irritation and he reported evidence of symptoms on examination and per the report of the Claimant. At that point he was recommending osteopathic manual therapy and exercise and the Claimant was continued under work restrictions.

There is also evidence to establish that the Claimant continues to have symptoms resulting from his November 10, 2014 work injury. While the diagnosis is thoracic strain or sprain and this would generally have been expected to resolve, the Claimant's medical care was interrupted by a period of incarceration from February 14, 2015 to August 23, 2015. After being released from jail, the Claimant sought treatment again for his symptoms and Dr. Healey opined that at least some of his symptoms, including thoracic sprain/strain with secondary myofascial pain referred to his upper lumbar region are related to the original work injury and the Claimant still requires treatment for this. Dr. Healy also opined that the Claimant requires psychological counseling and possibly antidepressants due to the ongoing, chronic nature of the Claimant's symptoms.

Subsequent to the IME by Dr. Healy, the Claimant was seen back at Concentra by Dr. Bryan Counts who also assessed the Claimant with thoracic myofascial strain and recommended osteopathic manipulative treatments and work restrictions. The Claimant was not placed at MMI by his treating physician as of the date of the hearing and continued to suffer symptoms consistent with his original injury.

Based on the foregoing, the ALJ determines that the Claimant has proven by a preponderance of the evidence that his work activities on November 10, 2014 caused the injury that previously and currently produced the need for medical treatment. Thus, the Claimant suffered a compensable injury on that date.

Medical Benefits – Authorized, Reasonable and Necessary

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990).

Treatment is compensable under the Act where it is provided by an "authorized treating physician." *Kilwein v. Industrial Claim Appeals Office*, 198 P.3d 1274 (Colo. App. 2008); *Popke v. Industrial Claim Appeals Office,* 944 P.2d 677 (Colo. App. 1997). Authorization to provide medical treatment refers to a medical provider's legal authority to provide medical treatment to a claimant with the expectation that the provider will be compensated by the insurer for providing treatment. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Under C.R.S. § 8-43-404(5)(a), the Employer or Insurer is afforded the right in the first instance to select a physician to treat the injury. The employer's duty to provide designated medical providers is triggered once the employer or insurer has some knowledge of facts that would lead a reasonably conscientious manager to believe the case may involve a claim for compensation. *Bunch v. Industrial Claim Appeals Office of State of Colorado*, 148 P.3d 381 (Colo. App. 2006); *Jones v. Adolph Coors Co*., 689 P.2d 681 (Colo. App. 1984). Once an ATP has been designated the claimant may not ordinarily change physicians or employ additional physicians without obtaining permission from the insurer or an ALJ. If the claimant does so, the respondents are not liable for the unauthorized treatment. *Yeck v. Industrial Claim Appeals Office,* 996 P.2d 228 (Colo. App. 1999).

However, respondents may by their conduct or acquiescence waive the right to object to a change of physician. A claimant "may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion." *Greager v. Industrial Commission,* 701 P.2d 168, 170 (Colo. App. 1985); *Brickell v. Business Machines, Inc.,* 817 P.2d 536 (Colo. App. 1990); *Rogers v. Industrial Claims Appeals Office*, 746, 565 (Colo. App. 1987); *Cabela v. ICAO*, 198 P. 3d 1277 (Colo. pp. 2008); *Roybal v. University of Colorado Health Sciences Center*, 768 P .2d 1249 (Colo. App. 1988).

Authorized providers also include those medical providers to whom an authorized treading physician ("ATP") refers a claimant in the normal progression of authorized treatment. *Cabela v. Industrial Claim Appeals Office,* 198 P.3d 1277 (Colo. App. 2008); *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997); *Suetrack USA v. Industrial Claim Appeals Office,* 902 P.2d 854 (Colo. App. 1995).

Here, the Claimant was receiving medical treatment at Concentra that was interrupted by a period of incarceration. As of the Claimant's last medical record prior to his incarceration on February 9, 2015, the Claimant was reporting a pain level of 6-7/10. He reported that he was working on restrictions and it was going okay. NP Hedien noted that Dr. Aschberger referred the Claimant to Dr. Winslow for manual therapy and the Claimant had several appointments with him, along with continuing massage therapy and behavioral based psychotherapy sessions with Dr. Cohen. At this point the Claimant was discharged from further chiropractic with Dr. Mobus. As of this visit the work restrictions were lifting up to 15 pounds, pushing and pulling up to 20 pounds, bending up to 3 hours per day, and standing and walking up to 6 hours per day.

After the Claimant was released from jail on August 23, 2015, he resumed treatment for his back pain at South Metro Community Provider Network/South Aurora Health Services/HealthONE Aurora South since Concentra had previously closed his claim for noncompliance. He treated with providers at HealthONE Aurora South and their referrals from October 2015 through January 2016. Then, on February 5, 2016, Dr. Healey performed an IME of the Claimant and determined that the Claimant's current diagnoses of thoracic sprain/strain with secondary myofascial pain and referral to the upper lumbar region are causally and directly related to the November 10, 2014 work injury and that the Claimant should have work restrictions of no lifting greater than 10 pounds, no repetitive bending at the waist and no pushing/pulling greater than 20 pounds. He recommended treatment similar to the conservative care that was provided by HealthONE Aurora South. Shortly after this, on March 3, 2016, the Claimant returned to Concentra and was seen by Dr. Bryan Counts. Dr. Counts also assessed the Claimant with thoracic myofascial strain and referred the Claimant for osteopathic manipulative treatments with Dr. Winslow. Dr. Counts placed work restrictions on the Claimant that he may lift up to 20 pounds up to 3 hours per day.

The opinion of Dr. Healey was based on a thorough review of pre-incarceration and post-incarceration medical records as well as a physical examination and is persuasive. Further, upon return to treatment with Dr. Counts at Concentra, the Claimant was provided with medical treatment and work restrictions similar to that recommended by Dr. Healey. Having received little to no treatment during his period of incarceration, the Claimant's condition did not improve and dragged longer than was originally expected. The Claimant did not have the option to return to Concentra right after his incarceration was complete since his claim was closed for non-compliance. Therefore, he sought treatment from providers at HealthONE Aurora South until Dr. Healey opined that the Claimant still suffered from a work related condition and the Claimant was returned to Concentra for treatment. The conservative treatment recommended and provided Concentra providers after March 3, 2016 is similar to that from HealthONE Aurora South providers.

Respondents argue that the HealthONE Aurora South medical treatment is not authorized and treatment there was directed at the Claimant's lumbar spine, not his thoracic spine. However, Dr. Healey noted that the Claimant did not have significant lumbar pain. Rather Dr. Healey opined that the Claimant still had a thoracic strain with referred pain to the upper lumbar region.

The Claimant argues that because Claimant's case was closed by Concentra for non-medical reasons, the Respondents are liable for the care received by the Claimant through HealthONE Aurora South and its referrals, as well as continuing care recommended by Dr. Healey and the physicians at Concentra since March 3, 2016.

The Claimant has established that he is entitled to further evaluation of his lower back condition to determine if he requires any additional medical treatment to cure and relieve the Claimant from the effects of the injury in accordance with the Act and based on the medical opinion of his current treating physicians at Concentra. The Claimant has also established that the care received from HealthONE Aurora South and its referrals was reasonably necessary. Further, as Respondents closed the Claimant's case for non-medical reasons, Respondents waived the right to object to the care received at HealthONE Aurora South for his work related condition on the grounds that it was unauthorized.

Temporary Disability Benefits

To prove entitlement to temporary total disability ("TTD") benefits, the Claimant must prove: that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). C.R.S. § 8-42-103(1)(a), requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*. Pursuant to statute, temporary total disability benefits may cease at the first occurrence of any one of the following:

(a) the employee reaches maximum medical improvement;
(b) the employee returns to regular or modified employment;
(c) the attending physician gives the employee a written release to return to regular employment; or
(d) the attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment.

However, an individual who is otherwise entitled to benefits shall not receive benefits for any week during which he is confined in a jail, prison or any department of corrections facility. C.R.S. § 8-42-113(1). Once released from confinement, the individual shall be restored to the same position with respect to entitlement to benefits as he would otherwise have been as of the time of release from confinement C.R.S. § 8-42-113(2).

In this case, the Claimant established that he suffered a compensable work injury on November 10, 2014, but he did not establish that he suffered a wage loss due to that injury prior to his incarceration. Rather, in January 2015, the Claimant was working light duty for Employer in accordance with his work restrictions. Then, in February 2015, the Claimant was incarcerated and he was not released until August 23, 2015. Pursuant to statute, he would not be entitled to benefits during this period of incarceration.

Then, as found, the Claimant required continued medical treatment for his thoracic spine after his release from incarceration. Treatment providers at South Metro Community Provider Network/South Aurora Health Services/HealthONE Aurora South found that while the Claimant has been improving with treatment prior to incarceration, he did not receive any significant treatment during the period of incarceration and his pain was again interfering with his daily activities and his ability to work. His medications were changed and he was referred for physical therapy.

At an IME on February 5, 2016, Dr. Edwin Healey reviewed the Claimant's medical records from prior to his dates of incarceration. Dr. Healey also reviewed medical records from HealthONE Aurora South after the Claimant was released, and he provided a thorough summary of the records. He also performed a physical examination and determined that the current diagnoses causally and directly related to the November 10, 2014 work injury include thoracic sprain/strain, with secondary myofascial pain and referral to the upper lumbar region. Dr. Healey recommended additional medical treatment and recommended work restrictions of no lifting greater than 10 pounds, no repetitive bending at the waist and no pushing/pulling greater than 20 pounds. On March 3, 2016, the Claimant returned to Concentra and was by Dr. Bryan Counts who then placed work restrictions on the Claimant of no lifting greater than 20 pounds up to 3 hours per day.

Based on the continued need for medical treatment and physical restrictions due to disability that physicians have related back to the original work related injury, the Claimant established an impaired earning capacity that entitles him to TTD benefits after August 23, 2015. After August 23, 2015, the Claimant is not at MMI, has not returned to regular or modified employment, has not received a written release to return to regular employment, and Employer has not offered modified employment to the Claimant that he failed to begin.

Therefore, it is necessary to address Respondents' contention that the Claimant is precluded from receiving temporary indemnity benefits because the Claimant is responsible for his termination on March 5, 2015.

Responsible for Termination

A claimant found to be responsible for his or her own termination is barred from recovering temporary disability benefits under the Act. §§ 8-42-103(1)(g), 8-42-105(4). *Anderson v. Longmont Toyota, Inc*., 102 P.3d 323 (Colo. 2004). Because the termination statutes constitute an affirmative defense to an otherwise valid claim for temporary disability benefits, the burden of proof is on the Respondents to establish the Claimant was "responsible" for the termination from employment. *Henry Ray Brinsfield v. Excel Corporation,* W.C. No. 4-551-844 (I.C.A.O. July 18, 2003). Whether an employee is at fault for causing a separation of employment is a factual issue for determination by the ALJ. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129 (Colo. App. 2008). In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002), the court held the term "responsible" as used in the termination statutes reintroduces the concept of "fault" as it was understood prior to the Supreme Court's decision in *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995).

Thus, a finding of fault requires a volitional act or the exercise of a degree of control by a claimant over the circumstances leading to the termination. *Gilmore v. Industrial Claim Appeals Office*, supra; *Padilla v. Digital Equipment Corp.,* 902 P.2d 414 (Colo. App. 1994), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995); *Brinsfield v. Excel Corp., supra.* Violation of an employer's policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. 1987). Yet, a claimant may act volitionally if he is aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office, supra*.

However, in any event, the word "responsible" does not refer to an employee's injury or injury-producing activity since that would defeat the Act's major purpose of compensating work-related injuries regardless of fault and would dramatically alter the mutual renunciation of common law rights and defenses by employers and employees alike under the Act. Hence, the termination statutes are inapplicable where an employer terminates an employee because of the employee's injury or injury-producing conduct. *Colorado Springs Disposal v. Industrial Claim Appeals Office of State of Colorado,* 58 P.3d 1061 (Colo. App. 2002).

On March 5, 2015, the Claimant was voluntarily separated from employment by Employer due to not being available for work because of his incarceration. However, Respondents did not provide persuasive evidence that the Claimant committed a volitional act that led to his termination. Discharge for violation of an employer's policy alone is not enough to establish that the Claimant acted volitionally or exercised control over the circumstances of his employment. There was no persuasive evidence presented as to the terms and conditions of the Claimant's parole or probation, nor was there evidence presented that the Claimant understood that the act that he committed, or action/requirement that he failed to do, would cause a revocation of his parole or probation that would result in his incarceration that caused him to be unavailable for work. In fact, there was no evidence presented that established the reason the Claimant was incarcerated or the Claimant's knowledge that whatever he did (or didn't do) would result in incarceration.

Thus, the Respondents have failed to establish that the Claimant was responsible for his termination from employment.

ORDER

It is therefore ordered that:

1. The Claimant suffered a compensable industrial injury during the scope and course of his employment with Employer on November 10, 2014.

2. The Claimant proved, by a preponderance of the evidence, that medical treatment that he received is reasonably necessary to cure and relieve the Claimant of the effects of his November 10, 2014 injury, including, but not limited to medical treatment provided by South Aurora Family Health Services and Quality Health Physical Therapy, and is either authorized or deemed authorized due to Respondents' denial of medical treatment for case closure due to non-medical reasons.

3. The Claimant proved, by a preponderance of the evidence, that he is entitled to temporary total disability indemnity benefits August 23, 2015 ongoing.

4. Respondents failed to prove that the Claimant is responsible for his termination of employment and resulting wage loss.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 6, 2016

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

PRELIMINARY MATTERS

The Respondent was not present and was not represented by counsel at the hearing. The Notice was not returned as undelivered. Written notice of the hearing scheduled for August 9, 2016 at 8:30 PM was sent to the Respondent by e-mail from the Office of Administrative Courts. Through testimony and exhibits, the Claimant established that this e-mail address was correct. The notice was not returned as undelivered. Based upon the information contained in the file, and the testimony presented at hearing, the ALJ determined that there was sufficient notice to the Respondents for the hearing and the hearing could proceed notwithstanding the failure of the Respondents to appear.

ISSUES

The following issues were raised for consideration at hearing:

1. Whether the Claimant proved he suffered a compensable injury while performing services arising out of and in the course of his employment with Respondents on November 19, 2015.

2. If the Claimant's claim is compensable, whether the Claimant proved that medical treatment he received was reasonably necessary to cure and relieve the effects of his November 19, 2015 work injury and whether the Claimant is entitled to additional medical benefits.

3. If the Claimant's claim is compensable, whether the Claimant proved that he is entitled to temporary disability benefits.

4. The calculation of the Claimant's average weekly wage.

FINDINGS OF FACT

Based upon the evidence presented at hearing and contained in Claimant's exhibits, which were admitted into evidence without objection, the ALJ makes the following findings of fact:

1. Respondents failed to appear at the hearing, after being properly notified. Respondents had actual notice via texts from the Claimant's father as well as the emailed Notice of Hearing. Claimant's Exhibit 6 sets forth the evidence of the mailing address which Respondent Bob Wolf provided to the Claimant and his father and insisted be used for communications. Claimant's Exhibit 6 also sets forth the e-mail address that the Respondent Bob Wolf provided to the Claimant and his father.

2. The Claimant testified credibly that he was employed by the Employer on November 19, 2015. The Claimant was a friend of the owner’s son and the son got the Claimant the job with the Employer. The Claimant’s job duties for the Employer included making deliveries of bagels and driving the delivery truck. The Claimant would start delivering bagels at 1:30 AM to approximately 8-9 locations.

3. The Claimant testified that he made $11.00 an hour. He usually started working at 1:30 AM and finished work at 9:00 AM, working 7.5 hours a day, four hours per week. Based on the testimony of the Claimant which is further supported with text messages in Claimant’s Exhibit 6 between the Claimant and the owner’s son, the Claimant’s average weekly wage is found to be $330.00.

4. On November 19, 2015 the Claimant left for a delivery to a store in Golden, CO and, at approximately 3:00 AM, lost control of the truck on eastbound I-70, causing the truck to strike a barricade, rolling onto the driver’s side (also see Claimant’s Exhibit 2). The Claimant established this collision occurred during the course and scope of his job duties.

5. The Claimant was injured in the collision that occurred on November 19, 2015. He was transported to Exempla Lutheran Medical Center by ambulance. The ER report notes that,

> The Claimant was the restrained driver traveling in a work vehicle at 65 mph on the highway, when he hit the median in the front passenger compartment of his vehicle. Patient’s car rolled onto its side and the airbags deployed. He self-extricated, and was able to ambulate normally. Patient reports moderate pain in the bridge of his nose, and a left elbow abrasion with pain. He denies headache or loss of consciousness. No neck or back pain. No chest wall pain, abdominal pain, pelvic pain, or other extremity pain….
> (Claimant’s Exhibit 3).

The ER physician noted that an x-ray of the left elbow revealed a persistent foreign body, but it could not be located with irrigation and exploration of the wound. The wound was left open for recheck and so that the foreign body might work its way out (Claimant’s Exhibit 3).

6. The Claimant timely reported the injury to the Employer. There are multiple text messages between the Claimant and the owner’s son and messages between the Claimant’s father and the Respondent Bob Wolf in Claimant’s Exhibit 6 to establish the notification and that the Employer was aware that the Claimant was in a work injury that required medical treatment. The vehicle that the Claimant was driving was severely damaged and inoperable and was a total loss.

7. In spite of notice to the Employer of the work injury, the Claimant was not provided a choice of physicians.

8. On December 8, 2015, the Claimant was seen by Dr. David Yamamoto for a left elbow injury. Dr. Yamamoto reviewed a photocopy of the x-rays taken at the emergency department at Lutheran Hospital and noted the appearance of a foreign body. The Claimant reported that the Claimant doesn’t have elbow pain until he moves the elbow into certain positions and then gets a loose body sensation and pain. Dr. Yamamoto assessed the Claimant with left elbow contusion, open left elbow wound and laceration of the left elbow with foreign body. He recommended the Claimant be seen by a hand specialist. Dr. Yamamoto noted the Claimant was at full duty work status with no restrictions (Claimant’s Exhibit 4).

9. On December 17, 2015, the Claimant was seen by Dr. Tracy Wolf for an initial encounter regarding the laceration with foreign body on the left elbow. The billing history from Dr. Wolf’s office indicates contact by phone between the office and Bob Wolf about payment of the bill of $300.00. The bill appears to have been submitted to CNA worker’s compensation insurance and this bill was paid (Claimant’s Exhibit 5).

10. The Claimant testified that all of the treatment listed in Exhibit 5 was related to his injuries from the MVA on November 19, 2015. ‘

11. The Claimant testified that his current symptoms are that a few pieces of shrapnel in his left elbow that cause irritation, but there is not much that can be done to improve this situation.

12. The Claimant’s father, Laurence Bacon, provided testimony about the Claimant’s outstanding medical bills and contact that he had with Mr. Wolf about payment of those bills. Mr. Bacon testified that all of the bills in Exhibit 5 had been provided to Mr. Wolf, sent by certified mail to the address that Mr. Wolf provided to Mr. Bacon. Mr. Bacon testified that two of the submitted bills were paid, the radiology bill of $162.50 and the doctor bill for Tracy Wolf, M.D. for $300.00. Both Mr. Bacon and the Claimant testified that the remaining bills remained unpaid despite repeated demands to Mr. Bob Wolf to pay the same.

13. The Claimant submitted the following bills and both he and his father testified credibly about the payment status of each bill (set forth below). The following bills related to the Claimant’s treatment for his November 19, 2015 injury are:

(a)	Lutheran Medical Center		$11,127.55
(b)	Emergency Service Physicians, P.C.		$ 833.70
(c)	Rocky Mountain Radiologists, P.C.	**(paid)**	**($ 162.50)**
(d)	Tracy Wolf, M.D.	**(paid)**	**($ 300.00)**
(e)	David Yamamoto, M.D.		$ 197.00
(f)	Out-of-pocket medical supplies		$ 150.00
	Total medical bills remaining unpaid:		$12,770.75

14. The Claimant submitted a Claim for Workers’ Compensation on December 2, 2015 (Claimant’s Exhibit 1). The Claimant filed an Application for Hearing and Notice to Set on June 7, 2016 requesting a hearing on the issues of: Compensability, Medical Benefits – Authorized Provider, Reasonably Necessary, Average Weekly Wage, Disfigurement, TTD from November 19, 2015 to December 31, 2015. There is no record of a Response filed with the Office of Administrative Courts in this case.

15. The Claimant’s testimony regarding his injury and medical treatment was supported by the testimony of his father and by the medical bills submitted as Exhibit 5. His corroborated testimony was not controverted, was credible and persuasive and is found as fact.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers’ compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Notice of Hearing

OAC Rule 23 provides the following with respect to non-appearing parties:

> If a party fails to appear at a hearing after the OAC has sent notice of the hearing to that party, prior to entering any orders against the non-appearing party as a result of that hearing, the judge will consider:
>
> A. The addresses to which the notice of hearing was sent are the most recent addresses provided by the non-appearing party to either the OAC or the Division of Workers' Compensation; or
>
> B. If no address for the non-appearing party is on file with the OAC or the Division of Workers' Compensation, the judge finds on the basis of other evidence that:
>
> 1. Notice of the hearing was sent to an address at which it is likely to be received by the non-appearing party or the non-appearing party's authorized representative; or
>
> 2. The non-appearing party in fact received notice of the hearing.

Respondents failed to appear at the hearing, after being properly notified. Respondents had actual notice via texts from the Claimant's father as well as the emailed Notice of Hearing. Claimant's Exhibit 6 sets forth the evidence of the mailing address which Respondent Bob Wolf provided to the Claimant and his father and insisted be used for communications. A copy of the Application for hearing was mailed to this address along with other documents. Claimant's Exhibit 6 also sets forth the e-mail address that the Respondent Bob Wolf provided to the Claimant and his father. This is the e-mail address that the OAC used to send the Notice of Hearing. Although the Respondents did not appear, it was proper to proceed with the hearing and it is proper to enter orders against the Respondents.

Compensability

The Claimant's right to compensation initially hinges upon a determination that "at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment." C.R.S. § 8-41-301(1)(b). The "arising out of" test is one of causation which requires that the injury have its origins in an employee's work-related functions. There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951).

Compensable injuries involve an "injury" which requires medical treatment or causes disability. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970). Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo.App.Div. 5 2009).

The Claimant testified credibly that he was employed by the Employer on November 19, 2015. The Claimant was a friend of the owner's son and the son got the Claimant the job with the Employer. The Claimant's job duties for the Employer included making deliveries of bagels and driving the delivery truck. The Claimant would start delivering bagels at 1:30 AM to approximately 8-9 locations. The Claimant further testified credibly that on November 19, 2015 the Claimant left for a delivery to a store in Golden, CO and, at approximately 3:00 AM, lost control of the truck on eastbound I-70, causing the truck to strike a barricade, rolling onto the driver's side. The Claimant established this collision occurred during the course and scope of his job duties. The Claimant was injured in the collision that occurred on November 19, 2015. He was transported to Exempla Lutheran Medical Center by ambulance. The ER medical report corroborates the Claimant's testimony and established that he suffered a work injury that required medical treatment. The Claimant's testimony is further supported by a follow up medical record of Dr. Yamamoto.

Based upon the Claimant's uncontroverted and supported testimony and the medical records confirming the Claimant's physical condition, and other records confirming the Claimant's employment status, it is found that the Claimant suffered a compensable injury.

Medical Benefits – Reasonably Necessary

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990).

Under C.R.S. § 8-43-404(5)(a), the Employer or Insurer is afforded the right in the first instance to select a physician to treat the injury. Once an ATP has been designated the claimant may not ordinarily change physicians or employ additional physicians without obtaining permission from the insurer or an ALJ. If the claimant does so, the respondents are not liable for the unauthorized treatment. *Yeck v. Industrial Claim Appeals Office,* 996 P.2d 228 (Colo. App. 1999). However, an employer has an obligation to designate a treating physician forthwith upon notice of the injury or the right of selection of a physician passes to the employee. An employer is deemed notified of an injury when it has "some knowledge of accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006).

Moreover, in an emergency situation, an employee need not give notice to the employer nor await the employer's choice of a physician before seeking medical attention. A medical emergency allows an injured party the right to obtain treatment without undergoing the delay inherent in notifying the employer and obtaining his referral or approval. However, once the emergency has ended, the employee must give notice to the employer of the need for continuing medical service and the employer then has the right to select a physician. *Sims v. Industrial Claim Appeals Office of State of Colo*., 797 P.2d 777 (Colo. App. 1990).

Awards of emergency medical treatment have been upheld where the claimant's condition was so acute, and the need for treatment so immediate, that the claimant could not reasonably wait for authorization or a hearing to obtain permission for the treatment. See *Lucero v. Jackson Ice Cream*, W.C. No. 4-170-105 (January 6, 1995); *Ashley v. Art Gutterson*, W.C. No. 3-893-674 (January 29, 1992). However, compensable emergency treatment is not restricted to such circumstances. *Lutz v. Western Pacific Airlines, Inc*., W.C. No. 3-333-031 (ICAO, December 27, 1999). There is no precise legal test for determining the existence of a medical emergency. Rather, the question of whether the claimant has proven a bona fide emergency is dependent on the particular facts and circumstances of the claim. The question of whether a bona fide emergency exists is one of fact and is dependent on the circumstances of the particular case. An ALJ's determination whether there was a bona fide emergency or not will be upheld if supported by substantial evidence. *Hoffman v. Wal-mart Stores, Inc*., W.C. No. 4-774-720 (ICAO, January 12, 2010); *Timko v. Cub Foods*, W. C. No. 3-969-031 (ICAO, June 29, 2005).

Here, the Claimant has established that the medical treatment he received from Lutheran Medical Center, Emergency Service Physicians, P.C., Rocky Mountain Radiologists, P.C., was provided on a bona fide emergency basis. The medical treatment provided by Tracy Wolf, M.D., David Yamamoto, M.D., and out-of-pocket medical supplies for bandages and antibiotic solutions was also reasonably necessary to cure and relieve the effects of the November 19, 2015 work injury. Additionally, this treatment was provided after Employer had notice of the Claimant's work injury and failed to provide a choice of physicians. Therefore. the right to select a physician passed to the Claimant and he saw Dr. Yamamoto who then referred the Claimant to a specialist, Dr. Tracy Wolf. The outstanding medical bills for Claimant's work-related treatment total $12,308.25.

The Claimant has also established that he is entitled to further evaluation of his elbow to determine if he requires additional medical treatment and/or physical therapy to cure and relieve the Claimant from the effects of the injury in accordance with the Act.

Because the Employers are liable for payment of Claimant's medical costs associated with his work injury, no medical provider shall seek to recover such costs from the Claimant. C.R.S.§ 8-42-101(4), C.R.S.

Calculation of Claimant's Average Weekly Wage

Under Colorado's Workers' Compensation Act, the "average weekly wage" is a key part of the formula used to calculate compensation for injured workers, and it is based upon the definition of "wages" provided at C.R.S. § 8-40-201(19). *Industrial Claim Appeals Office v. Ray*, 145 P.3d 661 (Colo. 2006). To determine a claimant's AWW, the ALJ may choose from two different methods set forth in C.R.S. § 8-42-102. The first method, referred to as the "default provision," provides that an injured employee's AWW " be calculated upon the monthly, weekly, daily, hourly, or other remuneration which the injured or deceased employee was receiving at the time of injury." *§ 8-42-102(2), C.R.S.* The default provision in § 8-42-102(2)(a)-(f), C.R.S lists six different formulas for conducting this calculation. Per § 8-42-102(5)(a), the phrase "at the time of injury" in subsection (2) requires the AWW to be determined using the wage earned on the date of the employee's accident. The second method for calculating a claimant's AWW, referred to as the "discretionary exception," applies when the default provision will not fairly compute the employee's AWW. *§ 8-42-102(3), C.R.S.* In such a circumstance, the ALJ has discretion to compute the AWW of a claimant in such other manner and by such other method as will, based upon the facts presented, fairly determine the employee's AWW. *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010).

The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993); *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997); *Vigil v. Industrial Claim Appeals Office*, 841 P.2d 335 (Colo.App.1992).

Here, at the time of his injury, and prior thereto, the Claimant received wages of $330.00 per week. He worked 7.5 hours per day for 4 days per week at the rate of $11.00 per hour.

Temporary Disability Benefits

To prove entitlement to TTD benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). § 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). If the period of disability lasts longer than two weeks from the day the injured employee leaves work as the result of the injury, disability indemnity shall be recoverable from the day the injured employee leaves work. § 8-42-103(1)(b), C.R.S. TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*, namely:

- The employee reaches maximum medical improvement;
- The employee returns to regular or modified employment;
- The attending physician gives the employee a written release to return to regular employment; or
- the attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment.

The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

Although the Claimant suffered a work injury on November 19, 2015 that required medical treatment, the ER physicians placed no work restrictions on the Claimant upon discharge nor was he provided any narcotic pain medications which may have impaired his ability to work. On December 8, 2015, Dr. Yamamoto examined the Claimant and confirmed an elbow laceration with foreign body, but he did not place any work restrictions and returned the Claimant to full duty work. The Employer offered substitute work opportunities to the Claimant since the vehicle that the Claimant used for deliveries was rendered inoperable. The Claimant's own testimony was that his elbow condition was irritating to him and, at times, caused discomfort. However, he did not testify that the condition caused loss or restriction of body function such that he could not work.

Therefore, as the Claimant has the burden to establish entitlement to temporary total disability benefits under the Act, the claim for TTD benefits between November 19, 2015 and December 31, 2015, is denied and dismissed.

ORDER

Based on the above factual findings and legal conclusions, it is therefore ORDERED that:

1. The Claimant was an employee of the Employer under the Act and the Claimant suffered a compensable injury on November 19, 2015.

2. Medical treatment and evaluation that the Claimant received that related to the November 19, 2015 motor vehicle accident and his elbow condition was reasonably necessary to cure and relieve the Claimant from the effects of the work injury.

3. The Respondent Employer shall pay the following medical bills to the providers:

(a)	Lutheran Medical Center	$11,127.55
(b)	Emergency Service Physicians, P.C.	$ 833.70
(c)	David Yamamoto, M.D.	$ 197.00
(d)	Out-of-pocket medical supplies	$ 150.00
	Total medical bills remaining unpaid:	$12,770.75

To the extent that the Claimant has paid all or any portion of the above bills, the Respondent Employer shall reimburse the Claimant for the amounts that the Claimant paid and pay any remaining balance due to the providers. Because the Employers are liable for payment of Claimant's medical costs associated with his work injury, no medical provider shall seek to recover such costs from the Claimant. C.R.S.§ 8-42-101(4), C.R.S.

4. The Claimant shall continue to receive reasonable and necessary medical treatment that is designed to cure or relieve the effects of work injury suffered on November 19, 2015, including, but not limited to, reasonable and necessary evaluation, assessments and care of the Claimant's current medical condition by Dr. Yamamoto and/or Dr. Wolf subject to the provisions of the Act. The Respondent Employer shall be responsible for the payment of all such medical treatment.

5. The Claimant's average weekly wage (AWW) is $330.00.

6. The Claimant's claim for temporary total disability benefits is denied and dismissed

7. All compensation not paid when due shall bear interest at the rate of 8% per annum.

8. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at:
http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 6, 2016

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he should be permitted to reopen his April 25, 2010 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive authorized, reasonable and necessary medical treatment for his admitted April 25, 2010 left knee injury.

FINDINGS OF FACT

1. On August 13, 2015 the undersigned Administrative Law Judge (ALJ) conducted a hearing in this matter. The issue presented was whether Claimant had established by a preponderance of the evidence that he should be permitted to reopen his April 25, 2010 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S. On September 16, 2015 the ALJ issued Findings of Fact Conclusions of Law and Order in this matter. He denied Claimant's Petition to Reopen because Claimant failed to demonstrate that he suffered a change in the condition of his original compensable injury or a change in his physical or mental condition that was causally connected to the original injury.

2. Claimant appealed the denial of his Petition to Reopen to the Industrial Claim Appeal Panel (ICAP). On January 28, 2016 the ICAP dismissed Claimant's Petition to Review without prejudice for lack of a final order. The ICAP noted that the only issue presented to the ALJ involved Claimant's Petition to Reopen. The ICAP reasoned that Claimant "has not made a request for any medical or compensation benefits at this point in the claim and, therefore, the ALJ's order does not grant or deny a benefit." Accordingly, the ICAP lacked the ability to review the ALJ's September 16, 2015 Order.

3. On February 15, 2016 Claimant filed a new Application for Hearing. The Application listed Petition to Reopen and medical benefits as issues to be considered at the hearing. The Application noted that, because of ICAP's January 28, 2016 decision, "we are requesting payment of medical bills for treatment subsequent" to Claimant's April 25, 2010 admitted industrial injury."

4. The parties subsequently executed a Stipulated Motion to Open Order agreeing that the issues for the upcoming hearing remained the same as the issues determined at the August 13, 2015 hearing with the addition of a request for medical benefits. The parties specifically sought a determination of the reasonableness and necessity of additional left knee treatment. The Stipulation reflected that the parties

presented evidence at the August 13, 2015 hearing regarding the reasonableness, necessity and relatedness of the requested left knee treatment. The Stipulation also sought reopening of the undersigned ALJ's September 16, 2015 Findings of Fact, Conclusions of Law and Order to address the issue of medical benefits. By adding the issue of medical benefits the parties desired to obtain a final appealable order for the ICAP's review. On June 29, 2016 the undersigned ALJ denied the Stipulated Motion to Open Order.

5. On July 13, 2016 the parties participated in a pre-hearing conference with Pre-Hearing Administrative Law Judge (PALJ) Barbo. The parties jointly sought an order allowing the merits judge at the July 28, 2016 hearing to utilize the transcript of the testimony taken at the August 13, 2015 hearing. The parties agreed that all evidence was presented at the August 13, 2015 hearing and desired to facilitate judicial economy. PALJ Barbo granted the joint motion and specified that the merits ALJ at the July 28, 2016 hearing could utilize the hearing transcript from the August 13, 2015 hearing instead of considering repetitive testimony on the issues presented for determination. He also noted that the parties added the issue of medical benefits to be decided at the July 28, 2016 hearing.

6. At the July 28, 2016 hearing Claimant again sought to reopen his April 25, 2010 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S. However, the September 16, 2015 Findings of Fact, Conclusions of Law and Order did not award or deny benefits. Consequently, the Order was interlocutory and afforded no basis for the application of the doctrines of issue or claim preclusion.

7. Claimant has not presented any new evidence but simply relied on the transcript from the August 13, 2015 hearing. There is thus no reason to disturb the September 16, 2015 Order denying Claimant's Petition to Reopen based on a change in condition. Applying the law of the case doctrine, there are no persuasive circumstances warranting modification of the September 16, 2015 Order. Accordingly, Claimant's Petition to Reopen is denied and dismissed.

8. At the July 28, 2016 hearing Claimant also added the issue of whether he is entitled to receive authorized, reasonable and necessary medical treatment for his admitted April 25, 2010 left knee injury. The parties sought a determination of Claimant's entitlement to medical benefits to construct an appealable Order for review by the ICAP. Because Claimant's Petition to Reopen is denied and dismissed, his request for authorized, reasonable and necessary medical benefits is also denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S.

A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-43-303(1), C.R.S. provides that a Worker's Compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving his condition has changed and he is entitled to benefits by a preponderance of the evidence. *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (ICAP, Oct. 25, 2006). The determination of whether a claimant has sustained his burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* W.C. No. 4-543-945 (ICAP, July 19, 2004).

5. Although the principles of issue or claim preclusion were developed in the context of judicial proceedings, the doctrines are applicable in Workers' Compensation matters. *Sunny Acres Villa, Inc. v. Cooper,* 25 P.3d 44 (Colo. 2001). Issue preclusion is an equitable doctrine that bars relitigation of an issue that has been finally decided by a court in a prior action. *Bebo Construction Co. v. Mattox & O'Brien*, 990 P.2d 78, 84 (Colo. 1999). The purpose of the doctrine is to relieve parties of the burden of multiple lawsuits, to conserve judicial resources and to promote reliance upon and confidence in the judicial system by preventing inconsistent decisions. *Id.* Issue preclusion operates to bar the relitigation of matters that have already been decided as well as matters that could have been raised in prior proceedings. *Argus Real Estate, Inc. v. E-470 Pub. Highway Auth.,* 109 P.3d 604 (Colo. 2005). The doctrine prevents relitigation of an issue when the following apply: "(1) the issue sought to be precluded is identical to an issue actually determined in the prior proceedings; (2) the party against whom estoppel is asserted has been a party to or is in privity with a party to the prior proceeding; (3)

there is a final judgment on the merits in the prior proceeding; and (4) the party against whom the doctrine is asserted had a full and fair opportunity to litigate the issue in the prior proceeding." *Sunny Acres Villa, Inc.*, 25 P.3d at 47; *In re Lockhart*, W.C. No. 4-725-760 (ICAP, May 21, 2009).

6. Workers' Compensation orders that do not require the payment of benefits or penalties or deny the claimant benefits or penalties are interlocutory and not subject to review. §8-43-301(2), C.R.S.; *Ortiz v. Industrial Claim Appeals Office*, 81 P.3d 1110 (Colo. App. 2003). An order denying a petition to reopen that does not determine the claimant's entitlement to benefits is thus not final and reviewable. *Director of the Division of Labor v.* Smith, 725 P.2d 1161 (Colo. App. 1986); *Bishop v. City of* Thornton, W.C. No. 4-830-904 (ICAP, Aug. 22, 2014).

7. As found, the September 16, 2015 Findings of Fact, Conclusions of Law and Order did not award or deny benefits. Consequently, the Order was interlocutory and afforded no basis for the application of the doctrines of issue or claim preclusion.

8. An ALJ is not precluded from adhering to a prior interlocutory ruling or determination if the parties were afforded due process of law. Reliance on a prior determination may be characterized as the "law of the case." However, application of the "law of the case" doctrine is discretionary. An ALJ may elect not to follow a prior ruling if new facts, changes in the law or other "persuasive circumstances" warrant modification of the ruling. *Dworkin, Chambers and Williams v. Provo,* 81 P.3d 1053 (Colo. 2003); *In re Younger*, W.C. No. 4-326-355 (ICAP, June 17, 2004).

9. As found, Claimant has not presented any new evidence but simply relied on the transcript from the August 13, 2015 hearing. There is thus no reason to disturb the September 16, 2015 Order denying Claimant's Petition to Reopen based on a change in condition. Applying the law of the case doctrine, there are no persuasive circumstances warranting modification of the September 16, 2015 Order. Accordingly, Claimant's Petition to Reopen is denied and dismissed.

10. As found, at the July 28, 2016 hearing Claimant also added the issue of whether he is entitled to receive authorized, reasonable and necessary medical treatment for his admitted April 25, 2010 left knee injury. The parties sought a determination of Claimant's entitlement to medical benefits to construct an appealable Order for review by the ICAP. Because Claimant's Petition to Reopen is denied and dismissed, his request for authorized, reasonable and necessary medical benefits is also denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request to reopen his April 25, 2010 Workers' Compensation claim is denied and dismissed.

2. Claimant's request for authorized, reasonable and necessary medical benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-001-044-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

SELF-INSURED

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on August 8, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 8/8/16, Courtroom 3, beginning at 8:30 AM, and ending at 4:00 PM). A written transcript of the hearing was lodged with the office of Administrative Courts on August 24, 2016.

Claimant's Exhibits 1 through 4 were admitted into evidence, without objection. Respondents' Exhibits through V, with the exception of Exhibits I,J & K (for which the Claimant's objections were sustained and the exhibits were rejected) were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule: The Claimant's opening brief was filed on August 22, 2016. The Respondent's answer brief was filed on September 6, 2016. No timely reply brief, which was due by the close of business on September 8, 2016, was filed. Therefore, the matter was deemed submitted for decision on September 9, 2016.

ISSUES

The issues to be determined by this decision concern whether the Claimant sustained a compensable aggravation of her pre-existing asthmatic condition at work with a date of alleged last injurious exposure of January 1, 2016. If so, additional issues concern medical benefits and temporary total disability (TTD) benefits from May 3, 2016 and continuing.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant is 77 years old and semi-retired. She works as a community worker at the Elizabeth Workforce Center (under the Division of Employment & Training, Colorado Department of Labor & Employment). She has been a part-time worker at the facility which is located in the end unit of a strip mall in Elizabeth, Colorado.

2. The Claimant typically works 20 hours per week at 4 hour intervals Monday through Friday either from 8:00 AM. to 12:00 PM or from 1:00 PM to 5:00 PM.

3. The Claimant has been working at the same location of the Workforce Center at 240 Elizabeth St. Suite A-1, Elizabeth, Colorado, since 2009. Since her arrival, there has been an operational nail salon adjacent to the Workforce Center.

4. In late 2014, the Claimant underwent a cervical fusion for a non-work related condition. According to the Claimant, she was released from the hospital with bronchitis.

5. Immediately after her release from the hospital, the Claimant was treated by Amilda Heckman, M.D., on January 12, 2015 for acute sinusitis before returning to work post-surgery (Respondents’ Exhibit B, p. 109).

Onset of the Alleged Occupational Exposure

6. The Workforce Center had always been located next to a nail salon (since 2009 and the Claimant has worked there since 2009). The Claimant filed an Application for Hearing, listing a “date of injury” of December 4, 2015. According to the Claimant, she began smelling an increase in odors from the nail salon although she testified that

has no sense of smell. Based on the totality of the evidence, the ALJ infers and finds that the Claimant is alleging an onset of the alleged aggravation of her asthmatic condition sometime in 2015.

7. According to the Claimant, while at work she would develop respiratory problems including Bronchitis, coughing, heaviness in her chest and she kept having bronchial infections. She testified that she “normally doesn’t have these (conditions).”

8. Based on the totality of the Claimant’s testimony and the other evidence, The ALJ infers and finds that theClaimant’s perception as to the timing of and cause of her symptoms is not reliable. She has a complicated medical history that requires a detailed analysis of the timing of her symptoms. When this is done, it becomes clear to the ALJ that there is not a temporal relationship between the Claimant’s subjective symptoms and her alleged exposure at work. More importantly, the Claimant has failed to establish that the air quality in the Workforce Center is more hazardous than the air quality outside of the Center. Indeed, based on the evidence, it is equally probable that the Claimant was exposed to aggravating factors outside of work.

Dawn Garcia

9. According to Dawn Garcia the Claimant worked at the Workforce Center until approximately December 30, 2015. The Claimant then began to work from home on about January 25, 2016 (Respondent’s Exhibit L, p.327). The Claimant then stopped working on March 30, 2016 (Respondent’s Exhibit. L, p. 320) due to an exacerbation of her sinusitis that occurred when she was working from home (Respondent’s Exhibit. B, p.31-33).

10. According to Dawn Garcia, the Claimant returned to work at the Workforce Center after it reopened on April 18, 2016 (Respondent’s Exhibit L, p. 316).

Jeffrey S. Schwartz, M.D., Respondent’s Independent Medical Examiner (IME)

11. The Claimant had a longstanding history of asthma and chronic rhinosinusitis (CRS), dating back about 25 years. This is a common disorder that is of unknown etiology but is often related to asthma. CRS is known to wax and wane and the Claimant’s medical records document long standing problems with frequent exacerbations typical of the disorder pursuant to the opinion of Dr. Schwartz (Respondent’s Exhibit A, p. 11).

12. Dr. Schwartz was accepted as an expert witness in the fields of pulmonology, internal medicine and critical care. He has been practicing medicine for several years and has treated dozens of patients with asthma and CRS.

13. According to Dr. Schwartz, the Claimant's alleged exacerbations to CRS and/or asthma after April of 2015 could not have been due to poor air quality since the results of the mold evaluation in May of 2015 by MoldCheck was negative. Further, the air quality testing by A.G. Wassenaar established good air quality in January of 2016. (Respondent's Exhibit A, p. 12).

14. According to Dr. Schwarz and set forth in his report, the Claimant's cause and effect analysis is not valid since she did not improve once leaving the Workforce Center. Dr. Schwartz stated at hearing and in his report that the non-correlation between the Claimant's recurrence of sinusitis and the work environment is most evident when the Claimant had not been in the work place for at least 11 weeks when she sought treatment by Dr. Heckman for acute sinusitis on March 26, 2016 (Respondent's Exhibit A. p. 12). He also noted that the Claimant had acute sinus complaints on February 22, 2016 and March10, 2016 when she had been away from the workplace for 6.5 and 9 weeks, respectively, at the time of these alleged acute exacerbations (Respondent's Exhibit A, p. 12).

15. Dr. Schwartz is of the opinion that the Claimant's medical records over the past 3 years do not show any objective evidence of asthma exacerbation. These would include findings of wheezing or air flow obstruction on her many spirometries performed by Allergy Asthma Center (Respondent's Exhibit A p. 12).

16. Dr. Schwartz is of the opinion that the medical literature has established that a patient's history of concern for occupational asthma is unreliable by itself upon which to base a diagnosis of work-related asthma (respondent's Exhibit A, p. 12).

17. According to Dr. Schwartz, there is no evidence that the Claimant was exposed to a workplace environment that was substandard or that would have caused an exacerbation of her underlying CRS and asthma (Claimant's Exhibit 13). Dr. Schwartz is of the opinion that there is no clear temporal correlation between the Claimant's respiratory exacerbations and her exposure to her workplace environment since she had 3 separate exacerbations in February and March 2016 after being away from the office for at least 6 weeks (Respondent's Exhibit A, p. 13).

18. Dr. Schwartz is of the opinion that it is **very** improbable that any exposure in the workplace would have caused these exacerbations many weeks later (Respondent's Exhibit A, p. 13).

19. According to Dr. Schwartz, even if the Claimant had an exposure to nail salon fumes that she couldn't smell, any response to this would have been temporary and short lived. Any such irritation would last only hours or maybe a day or two but would not cause longstanding symptoms or acute symptoms months later.

Kirk L. Nelson, D.O.

20. Since undergoing sinus surgery, the Claimant has denied having a sense of smell. She reported to the Employer, in a memo dated August 3, 2015, complaining of odors in the workplace. She wrote "since I've had no sense of smell for years I haven't been able to experience the odor but continue to have sinus and bronchial health issues" (Claimant's Exhibit 5). This is consistent with what she told Dr. Heckman when she said "she cannot smell the fumes because she has a hard time smelling, but another worker tells her there are fumes" (Respondent's Exhibit B, p. 52).

21. Dr. Nelson examined the Claimant first on December 28, 2015. In that examination, the Claimant told him that she has a poor sense of smell. She indicated her belief of exposure to "noxious smells" came by virtue of the comments from other people. She told Dr. Nelson that there was "black mold" under the carpet (Respondent's Exhibit. H, p. 178). There was no evidence substantiating "black mold" under the carpet.

22. Dr. Nelson performed pulmonary function testing which showed the Claimant's lungs were functioning normally (Respondent's Exhibit H, p. 248). On January 21, 2016, Dr. Nelson found the Claimant had returned to baseline in spite of her cough" (Respondent's Exhibit H, p. 248).

23. After reviewing the A.G. Wassenaar Report, Dr. Nelson agreed that the Claimant was not exposed to a sensitizing asthma agent (Respondent's Exhibit H, p. 243). He also noted that the Claimant's pulmonary function tests were within range of the previous pulmonary function studies performed by her PCP and her pulmonologist.

24. Dr. Nelson acknowledged and relied upon the findings of the A.G. Wassenaar Report to find that the Claimant was not exposed to an asthma sensitizer. He stated that the condition of the office could be considered to exacerbate her chronic conditions, but he did not say it in fact exacerbated her chronic conditions (Respondent's Exhibit H, p. 243). Dr. Nelson did not and could not say that the air in the Workforce Center was different than the ambient air outside. He could not say that the Claimant was exposed to harmful levels of contaminants or what those purported contaminates were in fact. The ALJ finds that Dr. Nelson has **not** expressed an opinion concerning a work-related exposure to a reasonable degree of medical probability.

25. Dr. Nelson recommended that the Claimant follow up with her primary care physician and her "pulmonologist as she would regularly see them". He did not see a need to refer her to anyone to address her condition (Respondent's Exhibit. H, p. 243). He did not prescribe or administer any treatment.

26. Dr. Nelson did **not** review the Claimant's prior medical records. He relied exclusively on the Claimant's subjective report that her symptoms were worse without

having full knowledge of the medical context in which those symptoms presented themselves. Furthermore, he offered the Claimant no specific medical treatment. He simply said that the Claimant could continue to treat with the physicians she would otherwise have seen.

27. Dr. Nelson suggested that the Claimant work from home until the recommendations made by AG Wassenaar were completed. These recommendations were completed and the Claimant was invited back to work at the Center. Therefore, the conditions upon which Dr. Nelson said the Claimant could return to work at the Workforce Center facility had been met (Respondent's Exhibit V). Additionally, Dr. Heckman had also stated that the Claimant could return to work at the facility as of April 14, 2016 (Respondent's Exhibit B, p.32).

28. Dr. Schwartz's knowledge of the Claimant's past medical records was greater than that of Dr. Nelson. Dr. Schwartz had reviewed additional documentation that was not available to Dr. Nelson at the time Dr. Nelson authored his reports. Dr. Schwartz also has greater medical expertise, training and experience in pulmonary matters that render his opinion on causation the more reliable than Dr. Nelson's opinions.

Environmental Testing

29. The Claimant returned to work for a couple of weeks in April 2016, but then refused to come back because she still thought the air was making her ill. The ALJ finds that even though the air quality was within acceptable limits for a human workplace to start with, extra steps had been taken to improve air circulation in the center and a smoke test had confirmed that there was no air passing from the nail salon to the Claimant's office through the roof deck or walls (Respondent's Exhibit V). The ALJ finds that the totality of the evidence establishes that any exposure to aggravating factors at the Workforce Center was no greater than exposure to aggravating factors in the world at large, regardless of the Claimant's alleged hyper-sensitivity.

MoldCheck

30. In April 2015, MoldCheck, Inc. was retained by the owner of the strip mall in which the Workforce Center was located to perform a visual inspection for mold in the Workforce Center. Jeff Werpy, owner and operator of Moldcheck, performed a visual inspection of the Center and performed thermal imaging with a camera to inspect for moisture in the walls. There was no moisture in the walls. Readings were also obtained in the affected areas near the front door and rear the entryway of the unit. There was no elevated moisture in the walls at these areas that would be suggestive of mold growth. Werpy nevertheless recommended that a portion of the carpet be removed and that an apparent leak in the roof be assessed. Once these tasks were

done, Werpy recommended that the indoor air quality be assessed to establish whether spore activity was within acceptable limits (Respondent’s Exhibit S).

31. The Workforce Center’s landlord completed the recommended modifications. Moldcheck, Inc. was invited back to perform indoor air quality sampling. The air quality sampling was performed on May 20, 2015 (Respondent’s Exhibit T). An outdoor air quality sample was taken from the rear entry way and compared with mold spore activity inside. Samples of air in the Workforce Center were taken within the offices and compared to the outdoor sample. The results of the testing showed that the indoor spore levels were not five (5) times or greater than the control sample. Therefore, the indoor quality of the indoor air was deemed acceptable in Werpy’s opinion. The quality of the indoor air was comparable to the quality of the outdoor air.

32. Claimant presented no credible evidence at hearing that the air quality in the Workforce Center contained mold spores or other chemicals at un-acceptable levels, exceeding those in the outdoor air. The Claimant presented no credible evidence that the air in the Workforce Center actually contained any hazards to which she was not equally exposed to outside of her employment.

The Claimant and the Employer’s Actions

33. In October 2015, the Claimant complained of severe headaches, stuffiness and congestion to her ENT (eye, ear, nose and throat) specialist Michael R. Menachof, M.D. Dr. Meanachof recommended a CT scan of the Claimant’s sinuses to rule out infection. The CT scan was negative (Respondent’s Exhibit D, p. 195). The Claimant’s pulmonary function testing at Parker Adventist Hospital on March 6, 2016 was normal (Respondent’s Exhibit E). Dr. Schwartz’s pulmonary function testing in May 2016 was normal (Respondent’s Exhibit A. p. 15).

34. At the Claimant’s request, the Employer purchased an air purifier for the Workforce Center in late October 2015. The Claimant also had an air purifier at her home which is out in the country and dusty. The Claimant has been found to be allergic to grasses, weeds, pet hair and dust.

35. Despite the removal of the carpet at the Workforce Center,, the addition of an air purifier and normal air test results, the Claimant continued to complain to her Employer that she believed that she suffered respiratory problems as a result of the air in the Workforce Center.

A.G. Wassenaar and Todd Kramer, Industrial Hygienist

36. Todd Kramer is a senior industrial hygienist with A.G. Wassenaar, Inc. He was accepted as an expert witness in the field of industrial hygiene. An industrial hygienist is one who analyzes the interaction of chemicals and the environment to

determine if there is a health risk to the occupants of a given space or building. Kramer also is an expert in the sampling and analysis of work environments to determine if there are airborne or other contaminants which can be hazardous to the health of workers. He is has been employed in this field for 23 years and has been with A.G. Wassenaar for the past 19 years.

37. Kramer's testing in January 2016 and later smoke testing in March 2016 both establish no harmful fumes were coming from the nail salon next door.

38. Kramer testified and authored two reports (Respondent's Exhibits U and V). He performed sampling of the Workforce Center at the Employer's request to determine if there were excessive amounts of mold spores or other agents in the air which could be causing the Claimant's respiratory issues.

39. Kramer sampled the air at the Workforce Center in all of the offices and the waiting area on January 4, 2016. This took place over an 8 hour period during a typical work day, while the usual ventilation system was running and while the nail salon was at work as it usually is. The sampling included two samples for airborne concentrations of chemicals commonly used in the nail salon industry.

40. Kramer also tested for particulate/bio aerosol sampling to determine if the airborne levels of fungal spores and other particulates which could also cause irritation were present. One sample was taken of outdoor air for comparison and the others were collected in the lobby/front door area, in the Claimant's office and in Cynthia Rears' office (Respondent's Exhibit R). On January 7, 2016, surficial tape left samples were taken from surfaces in the Workforce Center.

41. An analysis of the chemical air sampling showed that all of the chemicals tested for were at significantly lower levels than the level at which have been documented to cause irritation in most individuals (Respondent's Exhibit R, p. 6). Most were under the odor threshold level (Respondent's Exhibit U, p. 5).

42. An analysis of the non-biological particles present in the indoor **air**, including molds revealed that the mold identified in the indoor samples were consistent with the normal outdoor populations for Colorado and were similar to the mold genera identified on the outdoor sample collected during the sample event. No Stachybotrys (referred to by the media as toxic black mold) were identified on the indoor samples. Only low levels of Penicillium/Aspergillus type spores were observed (Respondent's Exhibit U. p. 6).

43. With respect to the air sampling, none of the spores tested for were at levels many times of that of the sample outdoor air. (Table 2, p. 5, Respondent's Exhibit R). In fact, some spore counts were at levels less than the outdoor air (Penicillium/aspergillus). To assist in the interpretation of the results, the lab provides a

“mold score” which indicates the likelihood that they originated from an indoor source. A low score means it is less likely that the spores detected originated from the indoor source. The score for the Workforce Center was “low”, meaning it is likely that the fungal spores that were detected indoors most likely originated from entrainment of the **outdoor air** (Respondent’s Exhibit U. p. 7).

44. In sum, Kramer concluded that he did not identify air contaminants within the indoor air at elevated levels.

45. The surface testing done on the west wall of the Workforce Center was positive for a small spot of Stachybotrys. According to Kramer, the existence of surface spores is not necessarily harmful. This is because for the spores to be affecting someone’s respiratory system, they must be inhaling the excess levels of the spores. The existence of the spores alone is inconsequential just as Dr. Schwartz stated that a piece of moldy bread on a counter is not hazardous. For mold to affect the respiratory system it has to be both airborne and airborne in excessive levels. In this case, neither condition was met, according to Kramer and Dr. Schwartz.

46. There is no persuasive, objective evidence that the air in the Workforce Center contained excessive or elevated levels of fungus mold or nail salon fumes that could be responsible for causing or aggravating the Claimant’s breathing issues. There is no persuasive, objective evidence of fumes from the nail salon in excess of OSHA permissible limits. Many of the chemicals were below the smell threshold level.

47. The Claimant presented no persuasive evidence that the sampling and testing done by MoldCheck, Inc., A.G. Wassenaar and/or Todd Kramer was not valid or reliable. The Claimant presented no credible evidence the sampling was flawed. In fact, the sampling was done under the same conditions in which the Claimant worked day after day. The results of the air testing done by Todd Kramer in January 2016 are consistent with the results of the air quality testing done in May 2015 by MoldCheck.

48. Claimant’s “smell test” is not as reliable an indicator of the air quality as that of the experts who performed actual scientific tests.

49. Two separate, independent testing companies both concluded the air quality inside the Workforce Center was comparable to the fresh air outside of the building. This objective testing is un-refuted by the Claimant. The Claimant presented no expert testimony that the air in the Workforce Center was in any way different from or more hazardous than the air to which the Claimant was equally exposed outside of the work place.

Findings Concerning Completion of A.G. Wassenaar Recommendations

50. The lay testimony and perceptions of the Claimant and her co-worker are insufficient to establish causation in this type of case where the burden of proof is on the Claimant to show that she suffered an exposure at work to contaminants **that she would not otherwise have been exposed in the world-at-large.**

51. The Employer went well above the call of duty in this case to reassure the Claimant that the conditions at the Workforce Center were safe. The Employer insisted that the landlord implement the recommendations (not requirements) made by Todd Kramer of A.G. Wassenaar. Further, the Employer voluntarily closed the Workforce Center while the upgrades were being made.

52. Kramer revisited the Workforce Center on March 8, 2016 to assure that the five recommendations were completed (Respondent's Exhibit.V). Kramer confirmed that the suggested work had been completed with the exception that he could not confirm certain baseboards had been removed and replaced.

53. Dawn Garcia was there at the Workforce Center when the contractor performed this work and took photos of those areas. She confirmed that the baseboards had been replaced. She also confirmed the drywall on the west wall had been cut out and replaced.

54. The Claimant last worked at the Workforce Center on December 28, 2016. After that time, she was permitted to work from home until April 18, 2016. The ALJ infers and finds that If the Workforce Center was making the Claimant ill, then working from home should have alleviated her exposure to harmful substances,. but it did not.

55. While working from home, the Claimant sought treatment from Dr. Heckman on March 30, 2016, for "recheck of sinusitis", onset was "gradual 4 days ago." Symptoms were "severe and unchanged". The symptoms included chills and periorbital swelling, nasal congestion, purulent rhinorrhea, postnasal drainage, cheek pain, forehead pain, cough and headache (Respondent's Exhibit B p.33). Dr. Heckman's notes reflect that the Claimant stated her condition "started after church Sunday, today is Wednesday, started with sore throat and runny nose, now with nasal discharge (Respondent's Exhibit B, p. 36). The Claimant also noted that she was too exhausted to feed the dogs and was "probably never totally well from the last visit."

56. On March 10, 2016, the Claimant was seen by Dr. Heckman and treated for sinusitis (Respondent's Exhibit B, p. 45). This occurred although the Claimant was working from home and hadn't been to the Workforce Center in over 9 weeks.

Additional Medical Treatment

57. On January 20, 2016, the Claimant was treated by Dr. Heckman for an upper respiratory infection (Respondent's Exhibit B, p. 59).

58. The Claimant was diagnosed by Dr. Heckman with sinusitis on February 22, 2016 (Respondent's Exhibit B, p. 52). The Claimant was relating this to the air in the Workforce Center but she had not breathed air at the Workforce Center for several weeks. Dr. Heckman reported "she cannot smell the fumes because she has a hard time smelling, but another worker tells her there were fumes" (Respondent's Exhibit B, p. 52)

59. On April 1, 2016, before returning to work on April 18, 2016 the Claimant was seen by ENT Dr. Menachof because previously treated symptoms of a sinus infection "have returned" (Claimant's Exhibit 1, p. 1). These were the same symptoms the Claimant complained of in 2015 when she saw Dr. Menachof and he noted that the Claimant has "been bothered by these symptoms for years" (Respondent's Exhibit C, p. 180).

60. The Claimant's primary care physician (PCP), Dr. Heckman, agreed that based on the Claimant's subjective complaints alone, she could not draw a medical conclusion that the Claimant's respiratory symptoms were a result of her work environment. Dr. Heckman carefully made clear that it was the Claimant's opinion, not Dr. Heckman's opinion, that the workplace was affecting the Claimant's health (Respondent's Exhibit A, pp. 21. 32 and. 50).

61. Dr. Heckman agreed that the Claimant could return to regular employment on April 14, 2016, and reaffirmed this on April 18, 2016 (Respondent's Exhibit B, pp. 30 (a) and 32). Dr. Heckman agreed that the Claimant was physically able to return to work, but that "She (the Claimant) believes the workplace is still toxic so will not return". (Respondent's Exhibit B, p. 32). Dr. Heckman deferred to the expertise of Dr. Schwartz and Todd Kramer as to the causation of the Claimant's health condition. Dr. Heckman was satisfied that "if you have determined it is safe-it is safe" (Respondent's Exhibit B. p. 32).

62. The Claimant returned to work on April 18, 2016, and began working her normal 4 hour shift. She last worked on May 2, 2016 (Respondent's Exhibit L, p. 314). According to Dawn Garcia from that point on, the Claimant just started calling into work saying she was "sick."

Factors Affecting the Credibility of the Claimant's Case

63. According to Dawn Garcia, in the past the Claimant had asked her if she could reduce her hours to 10 hours per week because of her declining age. But Garcia told her that she could not permit this because it would make it impossible to hire someone to cover the other 10 hours. The Claimant is post-retirement age and her desire to retire is clear from her resignation letter dated March 16, 2016 when she said she was not going to return to work because of her health issues (Respondent's Exhibit M).

64. There are no physical work restrictions in effect now, nor have there been since the Claimant was released to return to work by her authorized treating physician (ATP), Dr. Heckman, on April 18, 2016. The repairs to the Workforce Center were made and the Claimant's co-worker has been back to work since. The Claimant may not be in a physical condition to work but it is not a result of any work related exposure.

65. The Claimant seeks temporary total disability (TTD) benefits for wage loss subsequent to May 10, 2016. Any lost time after the Claimant returned to work, however, was based on the Claimant's voluntary decision to not to return to work (Respondent's Exhibit B,pp. 24 and 28).

Ultimate Findings

66. The Claimant had pre-existing asthma and CRS for many years. Her conditions would wane and routinely require the interventions of the Claimant's primary care provider and specialists in the areas of ENT and pulmonology.

67. Although the Workforce Center had always been located next to the nail salon, for unknown reasons, the Claimant began sensing an increase in odors from the nail salon even though she stated that has no sense of smell. The Claimant also began complaining of "mold" growing in the Center. Her complaints seem to coincide with comments made by her co-worker, Cynthia Rule.

68. The complaints came at a time after there was some water intrusion into the Workforce Center. Although multiple tests established the air in the Workforce Center was comparable to outside air, the landlord and the Employer took steps to clean, remove, or fix all perceived deficiencies with the air flow in the Workforce Center.

69. After the repairs were made and after a period of closure of the Center, the Claimant continued to claim that the environment at the Center is "toxic" and she will not return to work at the facility.

70. The ALJ accepts the medical opinions of Dr. Schwartz, which are undisputed by other medical opinions, and rejects the Claimant's lay opinion on the

issue of causation. There is a plethora of medical evidence that the Claimant suffered non-work related exacerbations of her pre-existing respiratory conditions whereby she required medical care.

71. Dr. Nelson did not render an opinion to a reasonable degree of medical probability that the Claimant's asthma or sinusitis was exacerbated by work-related factors. He only stated that it might have been. "Might" is a word of possibility **not** "probability." Additionally, Dr. Nelson's conclusions were based solely on the subjective report of the Claimant's increase in symptoms while at work. Dr. Schwartz credibly was of the opinion that the Claimant's subjective reports of worsening symptomology are not a reliable indicator of a worsened condition warranting medical care. Further, Dr. Nelson did not have the benefit of reviewing all of Claimant's past medical records at the time he saw the Claimant in January 2016. Therefore the ALJ finds Dr. Schwartz's expert opinions on causation highly persuasive, credible and undisputed by any other medical evidence or testimony.

72. The ALJ makes a rational decision, based on substantial evidence, to accept the medical opinions of Dr. Schwartz on causation, and to reject the Claimant's lay opinions thereon.

73. The Claimant failed to prove, by a preponderance of the evidence that her asthma and/or chronic sinusitis was caused, aggravated or accelerated by the employment or the conditions under which she worked. She failed to prove such conditions followed as a natural incident of the work and as a result of an exposure caused by the Claimant's employment, which can be traced to her employment as a proximate cause and which did not come from a hazard to which the Claimant would have been equally exposed outside of work. Therefore, the Claimant has failed to prove a compensability injury or occupational disease by preponderant evidence. .

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, Dr. Schwartz's expert opinions concerning the lack of work-relatedness of any aggravation or acceleration of the Claimant's pre-existing respiratory conditions are undisputed by any other credible medical evidence. No other medical provider has opined to a reasonable degree of medical probability that the conditions of the Claimant's work at the Workforce Center aggravated and/or accelerated her pre-existing respiratory conditions. .*See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As further found, the ALJ accepted the medical opinions of Dr. Schwartz, which are undisputed by other medical opinions, and rejected the Claimant's lay opinion on the issue of causation. There is a plethora of medical evidence that the Claimant suffered non-work related exacerbations of her pre-existing respiratory conditions whereby she required medical care. Underlying the main thrust of the Claimant's argument for compensability is the holding in *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997). Under the totality of the evidence in this case, the application of the *Lymburn* rationale in this case is entirely inappropriate.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational decision, based on substantial evidence, to accept the medical opinions of Dr. Schwartz on causation, and to reject the Claimant's lay opinions thereon, thus, determining that application of the holding in *Lymburn v. Symbios logic, supra,* is inappropriate in this case.

Occupational Disease

c. An "occupational disease" means a disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment. § 8-40-201 (14), C.R.S. *See City of Colorado Springs v. Indus. Claim Appeals Office,* 89 P. 3d 504 (Colo. App. 2004). As found, the Claimant failed to prove, by preponderant evidence that airborne mold or other irritants at work proximately caused her an aggravation or acceleration of her asthma or sinusitis, and she failed to show that the air inside the Workforce Center contained irritants that were not contained in the air outside of the Workforce Center.

Aggravation/Acceleration of pre-Existing Condition

d. A compensable injury is one that arises out of and in the course of employment. § 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the Claimant has failed to meet any of the tests for compensability based on a work-related aggravation and/or acceleration of her pre-existing respiratory conditions.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to sustain her burden on compensability.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for workers' compensation benefits are hereby denied and dismissed.

DATED this______day of September 2016.

____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-990-404-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on August 24, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 8/24/16, Courtroom 3, beginning at 8:30 AM, and ending at 11:20 AM).

Claimant's Exhibits 1 through 7 were admitted into evidence, without objection. Respondents' Exhibits B through J were admitted into evidence, without objection. Respondents' Exhibit A was withdrawn.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondents, which was filed on August 31, 2016. No timely objections were filed. After a consideration of the proposed decision, the ALJ has modified the proposal and hereby issues the following decision.

ISSUES

At the threshold, the Claimant raised to issue of spoliation of evidence, specifically, the fact that the Employer's real time video of the Claimant's fall at work was not available. *Black's Law Dictionary,* Tenth Ed. (2014) defines "spoliation" as:"the **intentional** (emphasis supplied) destruction, mutilation, alteration or concealment of evidence." The Claimant bears the burden of proof, by a preponderance of the evidence to establish a spoliation of the real time video occurred. In the alternative, Claimant's counsel moved to exclude any testimony concerning the viewing of the video by two Employer supervisors on the basis of the "best evidence" rule. Secondary evidence in the form of witnesses' verbal statements concerning their observations of a video that is unavailable are admissible if the real time video is unavailable. The burden of establishing "unavailability" is upon the proponent of the testimony in lieu of viewing the unavailable video. *See* Rule 804 (a), C.R.E.

The paramount issue to be determined by this decision is whether or not the Claimant suffered compensable injuries as the result of a fall on July 23, 2015, arising out of the course and scope of his employment for the Employer; or, whether the injuries sustained were the result of a non-work related syncope. Because this decision determines that the Claimant did not sustain work-related injuries, the other issues are moot.

The Claimant bears the burden of proof by a preponderance of the evidence of establishing "spoliation" of the real time video of the injury incident, in order to exclude any secondary evidence concerning the unavailable video. The Respondents bear the burden of establishing "unavailability" of the video.

At the conclusion of the Claimant's case-in-chief, he failed to prove, by preponderant evidence, that he sustained compensable injuries to his head on July 23, 2015, thus, the ALJ granted the Respondents' motion for a judgment in the nature of a directed verdict.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Stipulations and Findings

1. At the commencement of the hearing, the parties stipulated and the ALJ finds: (a) if compensable, the Claimant's average weekly wage (AWW) is $298.35; and, (b) the Claimant's date of hire was June 22, 2015. As found herein below, any issues concerning AWW are moot.

Preliminary Findings

2. The Claimant was born on September 9, 1932 and was 83 years of age at the date of the hearing.

3. The Claimant began working for the Employer on June 22, 2015. The Employer provides mobile blood donation centers for the Denver metro area.

4. The Claimant was a bus driver for the Employer. His job duties included driving the buses to various locations and setting up or taking down the mobile blood donation centers.

The Injury Incident

5. On July 23, 2015, the Claimant alleged that, at approximately 5:00 PM, while walking up a flight of stairs at the Employer's facility, he collapsed and fell down the stairs onto the ground.

6. Prior to arriving at the Employer's facility, according to the Claimant, he had driven the blood mobile in from 6th Avenue in heavy traffic, however, he testified that this was not stressful to him. Indeed, there is no persuasive evidence of any work-related stressors leading up to the Claimant's fall on the Employer's premises.

7. The real-time surveillance video of the incident is no longer available since the data was routinely and periodically deleted from the Employer's servers. Curtis D. Larson, the Employer's facility manager, credibly testified that he transferred the video footage of the incident to a computer file, however, for unexplained reasons after the passage of time he could not find the file. There was no evidence of deliberate or negligent spoliation of the file with the video showing the before and after time of the incident. Although the video itself is the best evidence of before-and-after the fall, the Respondents have established, by preponderant evidence that it the video unavailable for unexplained reasons and secondary evidence of the witnesses stating what they saw on the video is admissible. In sum, the ALJ finds that the Claimant's objections to the testimony of Larson and goes to weight rather than admissibility.

8. The Employer had continuous real-time equipment and cameras located on the facility. Review of the continuous real-time video by Larson and Mike Davidson, established that the Claimant fell, but it did not illustrate any special hazards of work causing the fall. Indeed, stairs are ubiquitous and the stairs in question were not steep nor did they illustrate any characteristics that would pose a special hazard (*e.g.,* metal runners upon which the heel of a shoe could be caught causing a person to lose balance). The Claimant just fell after coming down a normal and short flight of outside stairs. The Claimant had no memory concerning the before-and-after circumstances preceding his fall.

9. The witnesses who viewed the original footage (Curtis Larson and Mike Davidson) confirmed, on direct examination, that the video showed the location and the

time when the Claimant's fall occurred. According to both witnesses, the Claimant was walking up the stairs, became unsteady, and then collapsed. The witnesses further conceded that the video does not establish where the Claimant landed after the fall. The area of the fall was not within the view of the surveillance video. These testimonies are credible and persuasive. There was no testimony concerning any special hazards on the stairs that could have triggered the Claimant's fall.

10. Although there was medical documentation that the Claimant had a small right-side subarachnoid hemorrhage, there is no persuasive evidence that a special hazard on the stairs caused the subarachnoid hemorrhage which in turn caused the fall. Merely having medical documentation of a medical condition does not establish that an injury is a compensable injury, arising out of the course and scope of employment. At the time of hospitalization, the Claimant was also found to be in atrial fibrillation. In order to address this issue, a pacemaker was implanted to ensure that the Claimant's heart could perform cardiac contractions.

11. Jeffrey S. Schwartz, M.D., testified as a medical expert in pulmonary and emergency medicine on behalf of Respondents. After reviewing the Claimant's medical records, Dr. Schwartz was of the opinion that the Claimant's heart had numerous blockages which did not allow the proper transmission of electrical impulses through the heart (atrial fibrillation). Dr. Schwartz found that the atrial fibrillation caused an episode of sudden syncope (loss of consciousness) which led to Claimant falling down the stairs.

12. Dr. Schwartz is of the opinion that the cardiac event leading to the Claimant's **syncope** was not caused by the Claimant's job duties because the abnormality was present before the fall.

Ultimate Findings

13. The ALJ specifically finds that the Respondents' witness testimony, including the expert opinion of Dr. Schwartz, is credible, persuasive, and it persuasively refutes the Claimant's assignment of causal relatedness (to work) concerning the incident of July 23, 2015. Thus, the ALJ finds that the Claimant has failed to prove, by a preponderance of the evidence a work-related aggravation or acceleration of his heart condition that resulted in his injuries as a consequence of his fall and his subsequent hospitalization. The Claimant presented no medical opinion that contradicted Dr. Schwartz's opinion, thus, Dr. Schwartz's medical opinion is undisputed by other medical evidence. It is disputed only by the Claimant's testimony.

14. The ALJ makes a rational choice, based on substantial evidence, to accept the opinion of Dr. Schwartz as dispositive and to reject the Claimant's lay opinions. Also, there is no evidence of any special hazards at the Employer's facility contributing to the fall.

15. The Claimant has failed to prove, by a preponderance of the evidence that he sustained compensable injuries on July 23, 2015, arising out of the course and scope of his employment. In fact, the evidence establishes that the Claimant experienced a syncopal or idiopathic event which caused his fall which in turn caused the head injury in question.

16. At the conclusion of the Claimant's case-in-chief, he had failed to prove, by preponderant evidence, that he sustained a compensable injury to his head on July 23, 2015, thus, the ALJ granted the Respondents' motion for judgment in the nature of a directed verdict.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Judgment in the Nature of a Directed Verdict

a. Colo. Rules of Civil Procedure, Rule 41(b) (1), provides that, after a plaintiff in a civil action *tried without a jury* has completed the presentation of his evidence, the defendant may move for a dismissal on the grounds that the plaintiff has failed to present a prima facie case for relief. In determining whether to grant a motion to dismiss or in the nature of a directed verdict, the court is not required to view the evidence in the light most favorable to the plaintiff, as argued by a claimant. *Rowe v. Bowers*, 160 Colo. 379, 417 P.2d 503 (Colo. 1966)*; Blea v. Deluxe/Current, Inc.*, W.C. No. 3-940-062 [Indus. Claim Appeals Office (ICAO), June 18, 1997] (applying these principles to workers' compensation proceedings). Neither is the court required to "indulge in every reasonable inference that can be legitimately drawn from the evidence" in favor of the Claimant. Rather, the test is whether judgment for the respondents is justified on the claimant's evidence. *Amer. National Bank v. First National Bank*, 28 Colo. App. 486, 476 P.2d 304 (Colo. App. 1970); *Bruce v. Moffat County Youth Care Center*, W. C. No. 4-311-203 (ICAO, March 23, 1998). The question of whether the Claimant carried this burden was one of fact for resolution by the ALJ. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). As found, at the conclusion of the Claimant's case-in-chief, he had failed to prove, by preponderant evidence, that he sustained a compensable injury to his head on July 23, 2015, thus, the ALJ granted the Respondents' motion for judgment in the nature of a directed verdict.

Credibility

b. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant presented no medical opinion that contradicted Dr. Schwartz's opinion, thus, Dr. Schwartz's medical opinion is undisputed by other medical evidence. It is disputed only by the Claimant's testimony. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As further found, the Respondents' witness testimony, including the expert opinion of Dr. Schwartz, was credible and it persuasively refuted the Claimant's assignment of causal relatedness (to work) concerning the incident of July 23, 2015.

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial**

evidence which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice, based on substantial evidence, to accept the opinion of Dr. Schwartz as dispositive and to reject the Claimant's lay opinions, with cognizance of the holding in *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997). Also, there was no evidence of any special hazards at the Employer's facility contributing to the fall.

Lack of Special Hazards/Syncope

d. To recover benefits under the Act, an employee's injury must both occur "in the course of" employment and "aris[e] out of" employment. § 8-41-301(1)(c), C.R.S. The term "arising out of" refers to the origin or cause of an employee's injury. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). Specifically, the term calls for examination of the causal connection or nexus between the conditions and obligations of employment and the employee's injury. *Id*. An injury "arises out of" employment when it has its "origin in" an employee's work-related functions and is "sufficiently related to" those functions so as to be considered part of employment. *Id*. As held in *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo.. 2014), **2014 CO 7*,*** "All risks that cause injury to employees can be placed within three well-established, overarching categories: (1) employment risks, which are directly tied to the work itself; (2) personal risks, which are inherently personal or private to the employee him- or herself; and (3) neutral risks, which are neither employment related nor personal." The second category contains risks that are entirely personal or private to the employee. *See Horodyskyj*, 32 P.3d at 475-77. These types of purely idiopathic or personal injuries are generally not compensable under the Act, unless an exception applies. These risks include an employee's preexisting idiopathic illness or medical condition that is completely unrelated to his or her employment. *Irwin v. Indus. Comm'n*, 695 P.2d 763, 765-66 (Colo. App. 1985) (holding that an employee who had a medical history of blacking out and who did so at work did not suffer an injury "arising out of" employment); *Gates Rubber Co. v. Indus. Comm'n*, 705 P.2d 6, 7 (Colo. App. 1985) (holding the same, regarding an employee who had an epileptic seizure and struck his head on a level, non-slippery concrete floor).

e. The "special hazard" doctrine represents an exception to the general rule of non-compensability for personal risks. Under this doctrine, an injury is compensable even if the most direct cause of that injury is a preexisting idiopathic disease or condition so long as a special employment hazard also **contributed** to the injury. *Gates Rubber Co. v. Indus. Comm'n*, *supra*, and *Ramsdell v. Horn*, 781 P.2d 150, 152 (Colo. App. 1989). To be considered an employment hazard for this purpose, however, the employment condition must not be a **ubiquitous** one; it must be a special hazard not generally encountered. *Gates*, 705 P.2d at 7. Ordinary stairs, absent some unusual feature (which there was not) are ubiquitous. It was Dr. Schwartz's persuasive an undisputed opinion that the cause of Claimant's collapse was due to an interruption of the electric impulses controlling cardiac contractions in the Claimant's heart. The interruptions in the electric impulses in Claimant's heart are an idiopathic condition and were purely personal to the Claimant. The interruptions in the electric impulses were unrelated to the conditions of the Claimant's employment. Further, there is no indication of any contribution between a special hazard of employment, the interruptions in the electric impulses, and Claimant's episode of sudden syncope, which caused the fall and subsequent head injury.

Burden of Proof

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to sustain his burden concerning compensable injuries on July 23, 2015, arising out of the course and scope of his employment. In fact, the evidence established that the Claimant experienced a syncopal or idiopathic event which caused his fall which in turn caused the head injury in question.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Judgment in the Nature of a Directed Verdict in favor of the Respondents is hereby granted.

B. Any and all claims for workers' compensation benefits are hereby denied and dismissed.

DATED this______day of September 2016.

____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he should be permitted to reopen his December 18, 2013 Workers' Compensation claim based on a worsening of condition pursuant to §8-43-303(1), C.R.S.

2. If Claimant's claim should be reopened, whether he has proven by a preponderance of the evidence that the surgeries performed by Wayne Gersoff, M.D. on January 5, 2016 and March 1, 2016 were reasonable, necessary and related to his admitted December 18, 2013 left knee injury.

FINDINGS OF FACT

1. Claimant has worked as a Firefighter with Employer for almost 22 years. On December 18, 2013 Claimant suffered an admitted industrial injury to his left knee during the course and scope of his employment with Employer. Claimant was responding to a fire call in an engine that had a different number of steps than he was accustomed to on his usual engine. As he was exiting the engine he stepped down, slipped and twisted his left knee.

2. Claimant has suffered a long history of prior left knee problems. On September 1, 2002 Claimant was in a street intersection collecting money for a Muscular Dystrophy Association "Fill the Boot" campaign. He was struck by a motor vehicle and rolled over the top of the car. Claimant sustained injuries to his left hip and left knee as a result of the September 1, 2002 incident. Following the accident Claimant returned to regular employment and was released from care without any permanent impairment in late October 2002.

3. By 2007 Claimant was still suffering left knee pain. He sought a consultation with his personal care provider Orthopedic Surgeon Roger L. Greenberg, M.D. After diagnostic testing, Dr. Greenberg advised Claimant that he had a torn meniscus. Dr. Greenberg prescribed Diclofenac for Claimant's left knee pain and swelling. He also informed Claimant that he would eventually require a total left knee replacement.

4. On July 20, 2012 Claimant again visited Dr. Greenberg to obtain an updated Diclofenac prescription for his left knee pain. Repeat x-rays revealed that Claimant suffered from left knee tricompartmental degenerative disease. Dr. Greenberg assessed Claimant with degenerative joint disease that was "well compensated on medication." In the months preceding Claimant's December 18, 2013 admitted left knee injury he obtained refills of Diclofenac on August 7, 2013, September 26, 2013 and December 11, 2013.

5. Claimant did not immediately seek medical treatment for his December 18, 2013 admitted left knee injury. However, on February 7, 2014 he visited Elizabeth W. Bisgard, M.D. for an evaluation. Claimant identified the September 1, 2002 motor vehicle accident as the original date of his left knee injury. He advised Dr. Bisgard that he had been experiencing left knee problems since the September 1, 2002 incident. Dr. Bisgard remarked that she had known Claimant through annual Firefighter physicals and noted that he had been suffering knee pain at the examinations. Claimant reported that his left knee pain had worsened over the last couple of years. Although he had continued to work full duty, he had modified his activities and was no longer playing basketball or pivoting his left knee. In characterizing the December 18, 2013 incident, Dr. Bisgard noted that Claimant had "jolted" his knee as he stepped down from a fire truck. Claimant experienced immediate pain and swelling. After conducting a physical examination Dr. Bisgard diagnosed Claimant with left knee degenerative disease including questionable meniscal pathology and referred him for an MRI. She authorized continued full duty employment.

6. On February 15, 2014 Claimant underwent a left knee MRI. Radiologist Jeffry Weingardt, M.D. read the MRI. He noted a complex, vertical, peripheral zone tear of the meniscus with marked and mucoid degeneration. Dr. Weingardt summarized the following left knee findings: (1) chronic lateral bucket handle meniscal tear; (2) complex central and peripheral zone tear of the posterior horn of the medial meniscus; (3) evidence of tricompartmental chondromalacia most advanced in the lateral compartment; (4) intact ACL; and (5) moderate volume joint effusion with Baker's cyst.

7. On February 19, 2014 Claimant returned to Dr. Bisgard for an examination. Claimant remarked that he had been working full duty without difficulty. Dr. Bisgard referred Claimant to Steven E. Horan, M.D. for a surgical consultation.

8. On February 26, 2014 Claimant visited Dr. Horan for an examination. Claimant reported that he had injured his left knee "long ago" but it had become "much, much worse" over the last couple of months. Claimant remarked that he had been experiencing swelling after activities such as playing basketball or performing his job duties. There is no specific mention in Dr. Horan's report of the December 18, 2013 work injury. Dr. Horan noted that the February 15, 2014 left knee MRI revealed a chronic lateral meniscal tear and a new medial meniscus tear. He thus assessed Claimant with left knee medial and lateral meniscus tears with some degenerative changes.

9. On April 2, 2014 Claimant underwent left knee surgery with Dr. Horan. Dr. Horan specifically performed a partial medial meniscectomy, partial lateral meniscectomy, osteophyte removal and chrondroplasties of the medial, lateral and patellofemoral compartments.

10. On May 5, 2014 Claimant visited Lone Tree Physical Therapy for a physical therapy session. Claimant reported a long history of left knee pain, mensical tears and osteoarthritis. He remarked that he was able to delay surgery for a long time by avoiding cutting and deep squatting. Claimant commented that in December 2013

he had “tweaked” his left knee exiting a truck. He stated that over the ensuing months the pain continued and he decided to get an MRI and undergo surgery.

11. On June 4, 2014 Claimant advised Dr. Bisgard that he had returned to full duty work, completed several tours and was not having any difficulties with his knee. Although Claimant still noted some occasional swelling and pain levels that were at most up to 2/10, the symptoms did not limit his activities. Dr. Bisgard summarized Claimant’s left knee problems, December 18, 2013 injury and course of treatment. She placed Claimant at Maximum Medical Improvement (MMI) and assigned a 15% permanent impairment rating for the left lower extremity. Dr. Bisgard released Claimant to full duty employment and noted that he did not require maintenance treatment.

12. On June 9, 2014 Respondent filed a Final Admission of Liability (FAL) consistent with Dr. Bisgard’s MMI and impairment determinations. Claimant did not file an objection to the FAL and the matter closed by operation of law.

13. Because Claimant continued to experience left knee pain, he underwent an MRI on August 6, 2014. After comparing the MRI with Claimant’s February 15, 2014 MRI, Todd D. Greenberg, M.D. provided the following summary:

> (1) When compared to February 15, 2014, there has been an interval surgery. Possible lateral meniscectomy considering the smaller size of the lateral meniscus. Otherwise, the lateral meniscal remnant is very similar in morphology, frayed posteriorly. Consistent with a partial lateral meniscectomy. No evidence of a retear if the prior surgery confirms interval progressive lateral meniscectomy; (2) Interval medial meniscectomy with a frayed edge of the posterior remnant within the posterior horn. No retear; (3) Stable high-grade broad surface area of chondromalacia of the lateral compartment cartilage; (4) Stable grade 3-4A chondromalacia of the medial compartment cartilage; (5) Unchanged capsulitis; and (6) Patellofemoral disease grade 3 chondromalacia, limited. medial facet and lateral facet.

14. On August 20, 2014 Claimant returned to Dr. Bisgard for an evaluation. He reported that he was still suffering left knee pain. Dr. Bisgard recommended viscosupplementation treatment with Dr. Horan and referred him to Rocky Mountain Spine & Sport for instruction on a directed exercise program. She continued Claimant on full duty employment.

15. On August 29, 2014 Claimant visited Rocky Mountain Spine & Sport for physical therapy. Claimant reported that 10 years ago he was run over by a car and suffered significant bruising to his left side. He also commented that a few months following the incident he began having left knee pain. Claimant explained that five years earlier he underwent a left knee x-ray that revealed an “un-repairable meniscus tear” and was advised that he would need a knee replacement. Claimant reported that he avoided surgery and began taking medications to help control the pain. He also remarked that in December 2013 he twisted his left knee and suffered significant

swelling. Claimant reported that his symptoms have worsened since he underwent surgery in April 2014. He commented that he was unable to participate in activities such as jogging, jumping, cutting or agility movements. Claimant underwent treatment at Rocky Mountain Spine & Sport through September 19, 2014.

16. On December 12, 2014 Claimant visited Robert Broghammer, M.D. for an examination. After Claimant reported continued left knee pain, Dr. Broghammer discussed the possibility of a total knee arthroplasty, additional viscosupplementation or meniscus replacement. Dr. Broghammer recommended consultation with an orthopedist to consider additional left knee surgery.

17. Claimant testified that, because of his continuing left knee problems he suffered an increased loss of balance, limitations in range of motion and sleep disturbances. He also modified his work activities because of continuing knee pain.

18. On January 2, 2015 Claimant visited Orthopedic Surgeon ATP Wayne Gersoff, M.D. After conducting a physical examination and reviewing Claimant's medical records, Dr. Gersoff discussed the pathophysiology of a meniscal deficient knee and the subsequent chondral injury that develops. Dr. Gersoff mentioned the possibilities of biologic reconstruction utilizing lateral meniscus allograft transplantation and Carticel implantation rather than a unicompartmental knee replacement. He noted that he would perform an arthroscopy of Claimant's left knee joint to further evaluate the articular cartilage and determine whether Claimant was a good candidate for a biological reconstructive procedure.

19. Respondent did not authorize the surgical procedures recommended by Dr. Gersoff. Claimant wished to undergo the procedures but was unable to obtain the surgery through his group health insurance. He remarked that he had to wait until the open enrollment period in January 2016 to change his insurance coverage so that he could undergo the surgeries with Dr. Gersoff. In the meantime, Dr. Gersoff administered Synvisc injections to Claimant's left knee on May 18, 2015 and November 2, 2015.

20. Claimant testified about the progressive worsening of his left knee condition. His symptoms became more evident during a training session in October 2015 in which he had to remain on his knees while learning a new technique about deploying a hose into a commercial structure. Because of his left knee symptoms, Claimant remarked that he had significant difficulties performing the new technique.

21. On January 5, 2016 Claimant underwent left knee surgery with Dr. Gersoff. The surgery involved the removal of the left knee meniscus. In his operative report Dr. Gersoff listed his postoperative diagnoses as left knee lateral meniscus deficiency, articular cartilage defect of the lateral femoral condyle and hypertrophic scar tissue. Dr. Gersoff noted that a meniscus transplant was not currently appropriate. Instead, he would proceed with a cartilage biopsy and then perform a combined procedure of a meniscus transplant and autologous chondrocyte implantation.

22. On March 1, 2016 Dr. Gersoff performed a second surgery on Claimant's left knee. The procedure involved the re-installation of the meniscus after laboratory growth. Dr. Gersoff diagnosed Claimant with a left knee lateral meniscal deficiency and a grade 4 chondral defect of the lateral femoral condyle.

23. On February 24, 2016 Claimant underwent an independent medical examination with Orthopedic Surgeon Mark Failinger, M.D. Dr. Failinger also testified through a post-hearing evidentiary deposition in this matter on July 11, 2016. In addition to reviewing Claimant's medical records and performing a physical examination, Dr. Failinger considered the February 15, 2014 and August 6, 2014 MRI's of his left knee. Dr. Failinger concluded that Claimant has not suffered a worsening of his left knee condition since he reached MMI on June 4, 2014. Instead, Claimant's worsening left knee symptoms are attributable to the natural progression of his pre-existing degenerative joint disease.

23. Dr. Failinger explained that Claimant's December 18, 2013 admitted left knee injury constituted a flare-up or exacerbation of his pre-existing degenerative joint disease. He remarked that it was not probable that the December 18, 2013 incident caused any significant change in Claimant's underlying pathology. Dr. Failinger noted that the February 15, 2014 MRI findings reflected a chronic and progressive degenerative left knee condition. There were no MRI findings that suggested a new or acute left knee injury.

24. Dr. Failinger testified that he did not review any objective evidence that Claimant suffered a worsening of his left knee condition after he reached MMI on June 4, 2014. He commented that he was not surprised by Claimant's subjective report of worsening symptoms because his presentation was typical of degenerative joint disease. Dr. Failinger summarized Claimant's course of symptoms as "classic." He explained that "arthritis has this course of getting worse and then it kind of settles down as you take it easier, take anti-inflammatories. Then it can come back. It may be an event, it may not be an event. Say I was on it hiking. Maybe it's just weather changes. So then it gets worse and then it gets better; but given that he's down to bone and he doesn't have any cartilage left out there really essentially, one would expect him to have this worsening course that would flare up with anything or nothing." Based on what he knew about the condition of Claimant's left knee as it existed prior to December 18, 2013, Dr. Failinger commented that he would have expected Claimant's symptoms to progress over time. He summarized that Claimant had a "very typical course" and it was "just a classic story of how arthritis progresses."

25. Dr. Failinger determined that nothing occurred during Dr. Horan's April 2, 2014 left knee surgery that would have caused the acceleration of Claimant's underlying degenerative arthritis. Because Claimant's left knee condition was essentially down to the bone, "there really wasn't cartilage to be scraped." Moreover, even on the inner part of Claimant's left knee where Dr. Horan trimmed the meniscus, there might be "increased symptoms or repeat acceleration" but very little, if any cartilage remained. Dr. Failinger also noted that the post-operative MRI dated August 6, 2014 was

consistent with the pre-operative MRI and did not show significant changes that would precipitate or aggravate Claimant's underlying arthritis condition.

26. Dr. Failinger explained that the surgeries performed by Dr. Gersoff on January 5, 2016 and March 1, 2016 involved the lateral compartment of Claimant's left knee. He determined that the preceding surgeries were not causally related to Claimant's December 18, 2013 industrial injury or Dr. Horan's April 3, 2014 surgery because Claimant suffered from pre-existing lateral compartment arthritis that had not worsened. He noted that Carticel transplants were designed for people with single knee compartment disease instead of Claimant's multi-compartment problems. The surgeries thus did not impact Claimant's underlying pathology of degenerative arthritis. Dr. Failinger also commented that the surgeries had a low probability of success because of Claimant's chronic degenerative changes.

27. Claimant has failed to establish that it is more probably true than not that he should be permitted to reopen his November 18, 2013 Workers' Compensation claim based on a worsening of condition. The record is replete with evidence that Claimant has suffered a long-history of degenerative left knee arthritis. Claimant's increasing left knee symptoms constitute the natural progression of his pre-existing degenerative joint disease.

28. Initially, Claimant has suffered a long history of prior left knee problems. On September 1, 2002 Claimant was in a street intersection collecting money for a Muscular Dystrophy Association "Fill the Boot" campaign. He was struck by a motor vehicle and sustained injuries to his left hip and left knee. Following the accident Claimant returned to regular employment and was released from care without any permanent impairment in late October 2002. However, by 2007 Claimant was still suffering left knee pain and sought a consultation with personal care provider Dr. Greenberg. After diagnostic testing, Dr. Greenberg advised Claimant that he had a torn meniscus. Dr. Greenberg prescribed Diclofenac for Claimant's left knee pain and swelling. He also informed Claimant that he would eventually require a left knee replacement. On July 20, 2012 Claimant again visited Dr. Greenberg to obtain an updated Diclofenac prescription for his left knee pain. Repeat x-rays revealed that Claimant suffered from left knee tricompartmental degenerative disease. Dr. Greenberg assessed Claimant with degenerative joint disease that was "well compensated on medication." In the months preceding Claimant's December 18, 2013 left knee injury he obtained refills of Diclofenac on August 7, 2013, September 26, 2013 and December 11, 2013. Finally, at a May 5, 2014 physical therapy appointment Claimant reported a long history of knee pain, mensical tears and osteoarthritis, but remarked that he was able to delay surgery for a long time. The record thus reveals that Claimant has suffered a long history of persistent, progressively worsening left knee pain as a result of degenerative arthritis.

29. On December 18, 2013 Claimant suffered an admitted left knee injury when he slipped and twisted as he exited a fire engine. On April 2, 2014 Claimant underwent left knee surgery with Dr. Horan. Dr. Horan specifically performed a partial medial meniscectomy, partial lateral meniscectomy, osteophyte removal and

chrondroplasties of the medial, lateral and patellofemoral compartments. By June 4, 2014 Claimant advised Dr. Bisgard that he had returned to full duty work, completed several tours and was not having any difficulty with his knee. Dr. Bisgard thus released Claimant to MMI and assigned a 15% permanent impairment rating for the left lower extremity. However, Claimant continued to experience progressive left knee symptoms. On January 5, 2016 Claimant underwent left knee surgery with Dr. Gersoff. The procedure included the removal of the left knee meniscus. On March 1, 2016 Dr. Gersoff performed a second surgery involving the re-installation of the meniscus after laboratory growth.

30. The persuasive medical reports and testimony of Dr. Failinger also reflect that Claimant has not suffered a worsening of his left knee condition since he reached MMI on June 4, 2014. Instead, Claimant's worsening left knee symptoms are attributable to the natural progression of his pre-existing degenerative joint disease. Dr. Failinger commented that he was not surprised by Claimant's subjective reports of worsening symptoms because his presentation was typical for degenerative joint disease. He summarized Claimant's course of symptoms as "classic." Dr. Failinger explained that arthritis symptoms typically wax and wane and can flare up for any or no reason. Based on what he knew about the condition of Claimant's knee as it existed prior to December 18, 2013, Dr. Failinger commented that he would have expected Claimant's symptoms to progress over time. He summarized that Claimant had a "very typical course" and that it was "just a classic story of how arthritis progresses." Furthermore, Dr. Failinger determined that nothing occurred during Dr. Horan's April 2, 2014 left knee surgery that would have caused the acceleration of Claimant's underlying degenerative arthritis. The post-operative MRI dated August 6, 2014 was consistent with the pre-operative MRI and did not show significant changes that would precipitate an aggravation of Claimant's underlying arthritis condition. Finally, the surgeries performed by Dr. Gersoff on January 5, 2016 and March 1, 2016, involved the lateral compartment of Claimant's left knee. Dr. Failinger determined that the preceding surgeries were not causally related to Claimant's December 18, 2013 industrial injury or Dr. Horan's April 3, 2014 surgery because Claimant suffered from pre-existing lateral compartment arthritis that had not worsened. The surgeries thus did not impact Claimant's underlying pathology of degenerative arthritis. Accordingly, Claimant has failed to demonstrate that he has suffered a change in the condition of his original compensable injury or a change in his physical or mental condition that is causally connected to the original injury. Claimant's request to reopen his December 18, 2013 Workers' Compensation claim based on a worsening of condition pursuant to §8-43-303(1), C.R.S. is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering

all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-43-303(1), C.R.S. provides that a Worker's Compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving his condition has changed and he is entitled to benefits by a preponderance of the evidence. *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (ICAP, Oct. 25, 2006). The determination of whether a claimant has sustained his burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* W.C. No. 4-543-945 (ICAP, July 19, 2004).

5. As found, Claimant has failed to establish by a preponderance of the evidence that he should be permitted to reopen his November 18, 2013 Workers' Compensation claim based on a worsening of condition. The record is replete with evidence that Claimant has suffered a long-history of degenerative left knee arthritis. Claimant's increasing left knee symptoms constitute the natural progression of his pre-existing degenerative joint disease.

6. As found, initially, Claimant has suffered a long history of prior left knee problems. On September 1, 2002 Claimant was in a street intersection collecting money for a Muscular Dystrophy Association "Fill the Boot" campaign. He was struck by a motor vehicle and sustained injuries to his left hip and left knee. Following the accident Claimant returned to regular employment and was released from care without any permanent impairment in late October 2002. However, by 2007 Claimant was still suffering left knee pain and sought a consultation with personal care provider Dr. Greenberg. After diagnostic testing, Dr. Greenberg advised Claimant that he had a torn

meniscus. Dr. Greenberg prescribed Diclofenac for Claimant's left knee pain and swelling. He also informed Claimant that he would eventually require a left knee replacement. On July 20, 2012 Claimant again visited Dr. Greenberg to obtain an updated Diclofenac prescription for his left knee pain. Repeat x-rays revealed that Claimant suffered from left knee tricompartmental degenerative disease. Dr. Greenberg assessed Claimant with degenerative joint disease that was "well compensated on medication." In the months preceding Claimant's December 18, 2013 left knee injury he obtained refills of Diclofenac on August 7, 2013, September 26, 2013 and December 11, 2013. Finally, at a May 5, 2014 physical therapy appointment Claimant reported a long history of knee pain, mensical tears and osteoarthritis, but remarked that he was able to delay surgery for a long time. The record thus reveals that Claimant has suffered a long history of persistent, progressively worsening left knee pain as a result of degenerative arthritis.

7. As found, on December 18, 2013 Claimant suffered an admitted left knee injury when he slipped and twisted as he exited a fire engine. On April 2, 2014 Claimant underwent left knee surgery with Dr. Horan. Dr. Horan specifically performed a partial medial meniscectomy, partial lateral meniscectomy, osteophyte removal and chrondroplasties of the medial, lateral and patellofemoral compartments. By June 4, 2014 Claimant advised Dr. Bisgard that he had returned to full duty work, completed several tours and was not having any difficulty with his knee. Dr. Bisgard thus released Claimant to MMI and assigned a 15% permanent impairment rating for the left lower extremity. However, Claimant continued to experience progressive left knee symptoms. On January 5, 2016 Claimant underwent left knee surgery with Dr. Gersoff. The procedure included the removal of the left knee meniscus. On March 1, 2016 Dr. Gersoff performed a second surgery involving the re-installation of the meniscus after laboratory growth.

8. As found, the persuasive medical reports and testimony of Dr. Failinger also reflect that Claimant has not suffered a worsening of his left knee condition since he reached MMI on June 4, 2014. Instead, Claimant's worsening left knee symptoms are attributable to the natural progression of his pre-existing degenerative joint disease. Dr. Failinger commented that he was not surprised by Claimant's subjective reports of worsening symptoms because his presentation was typical for degenerative joint disease. He summarized Claimant's course of symptoms as "classic." Dr. Failinger explained that arthritis symptoms typically wax and wane and can flare up for any or no reason. Based on what he knew about the condition of Claimant's knee as it existed prior to December 18, 2013, Dr. Failinger commented that he would have expected Claimant's symptoms to progress over time. He summarized that Claimant had a "very typical course" and that it was "just a classic story of how arthritis progresses." Furthermore, Dr. Failinger determined that nothing occurred during Dr. Horan's April 2, 2014 left knee surgery that would have caused the acceleration of Claimant's underlying degenerative arthritis. The post-operative MRI dated August 6, 2014 was consistent with the pre-operative MRI and did not show significant changes that would precipitate an aggravation of Claimant's underlying arthritis condition. Finally, the surgeries performed by Dr. Gersoff on January 5, 2016 and March 1, 2016, involved the lateral compartment of Claimant's left knee. Dr. Failinger determined that the preceding

surgeries were not causally related to Claimant's December 18, 2013 industrial injury or Dr. Horan's April 3, 2014 surgery because Claimant suffered from pre-existing lateral compartment arthritis that had not worsened. The surgeries thus did not impact Claimant's underlying pathology of degenerative arthritis. Accordingly, Claimant has failed to demonstrate that he has suffered a change in the condition of his original compensable injury or a change in his physical or mental condition that is causally connected to the original injury. Claimant's request to reopen his December 18, 2013 Workers' Compensation claim based on a worsening of condition pursuant to §8-43-303(1), C.R.S. is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following Order:

Claimant's request to reopen his December 18, 2013 Workers' Compensation claim is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: September 9, 2016.

Denver, CO 80203

PROCEDURAL ISSUES

At the commencement of hearing, the parties agreed to reserve, for future determination, if necessary, the issues of average weekly wage, temporary partial disability and temporary total disability.

ISSUES

The remaining issues addressed in this decision concern compensability and Claimant's entitlement to medical benefits. The specific questions answered are:

I. Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable injury to his low back arising out of and in the course of his employment on January 20, 2016.

II. Whether Claimant has proven by a preponderance of the evidence that he is entitled to all reasonable, necessary, and related medical treatment stemming from his January 20, 2016 injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant works as a specialist on the hard-line department of Employer's department store. As a specialist, Claimant organizes the dock and loading area. He also stocks merchandize, including kitchen and house wares.

2. On January 20, 2016, Claimant was working alone on the loading dock in an effort to break down a pallet to clear a pathway to additional merchandize destined for stocking. The pallet contained multiple 30-35 pound boxes of plastic bags. Claimant had to bend over and reach forward to move the boxes from the pallet to a U-boat. While lifting and twisting to clear the boxes from the pallet, Claimant developed pain in his low back. Claimant's shift on the day of injury extended from approximately 6:00 am to 2:00 pm.

3. Claimant reported his low back pain and was immediately sent to Centura Centers for Occupational Medicine (CCOM) where he was evaluated by Dr. Daniel Olson. Dr. Olson completed his evaluation and prepared a report outlining his findings/ and opinions which he signed on 10:42 am.

4. During his initial examination with Dr. Olson, Claimant reported while he was moving some boxes of plastic bags weighing approximately 30-35 pounds from a pallet he began to experience sharp pains in his left lower back. Claimant denied having any shooting pains down his legs. Dr. Olson noted, “He does appear to be in mild to moderate discomfort. He does get spasms with any type of change position. Looking at his back he does have some dextroscoliosis noted. He also has spasms and acute tenderness in the left lower paraspinals. He has difficulty getting up and down off the exam table due to the spasms.” Regarding his past medical history, Claimant reported to Dr. Olson that he “does not have any pain in [the] back on a day-to-day basis but sometimes with activity.” Dr. Olson opined, “The cause of this problem is related to work activities.” Dr. Olson diagnosed claimant with a sprain of ligaments of lumbar spine which he related to Claimant’s work activity. Dr. Olson offered a Toradol injection, which claimant declined. Claimant was prescribed Naproxen and Cyclobenzaprine. Claimant was to remain off of work until January 22, 2016. (Respondents Ex. B, pgs. 36-40).

5. On January 22, 2016 claimant attended a follow-up exam with Dr. Olson. Dr. Olson noted the Claimant had fairly limited movement. Claimant reported he had discomfort across the lower back and some up into his mid thoracic area. Dr. Olson noted, “His sitting posture is a little improved today. He is getting up out of the chair a little easier. He still has palpable spasm in the left lower paraspinals that are still tender to palpation.” Dr. Olson released the Claimant to return to work under modified duty with a 10 pound lifting restriction, limited bending at the waist, no ladders, and change positions frequently. (Respondents Ex. B, pgs. 29-35).

6. Claimant testified following the injury he missed work on January 21st and January 22nd. He then engaged in a previously scheduled vacation, after which he returned to work.

7. Claimant returned to Dr. Olson on January 27, 2016 for a follow-up. Dr. Olson reported the Claimant had started physical therapy, but was still experiencing spasms in his lower back. Dr. Olson noted, “He is alert but still appears to be in mild to moderate discomfort. His overall movement is a little bit quicker, but he still has a fair amount of guarding. He is still firm and tender in the left lower paraspinals. He also has some discomfort in the upper lumbar region on the right side.” Claimant was released to continue modified duty. (Respondents Ex. B, pgs. 25-28).

8. Claimant attended a follow-up with Dr. Olson on February 17, 2016. Claimant reported making very slow progress in physical therapy. Claimant reported any time he tried to advance his activities and exercise he got spasms. Claimant’s pain diagram indicated pain in the low back as well as the rest of the spine. Dr. Olson noted, “His overall sitting posture is good. He is not favoring his back at all. He is a little stiff getting to a standing position. He does appear to have a mild scoliosis with some firmness on the right side thoracic muscles, but again not as tender.” Claimant was to be evaluated by Dr. Michael Sparr and continue medications and physical therapy. (Respondents Ex. B, pgs. 17-20).

9. Claimant was evaluated by Dr. Sparr on March 16, 2016. Claimant reported he was injured while lifting cases of storage bags from a pallet. Claimant reported sharp shooting pains in his low back, left-sided which radiated to the upper back. Claimant reported working a second job at Sears in the Warehouse Department. Claimant reported this did not require heavy lifting. Physical examination revealed a levoconvex lumbar scoliosis with muscular imbalance, lumbar and gluteal tightness and spasm, left sacroiliac up-slip, mildly positive Lesegue's maneuver and positive facet loading testing at L5-S1 on the left. Additionally, straight leg raise testing caused increased back and buttock pain but "no obvious lower extremity symptoms." Following examination, Dr. Sparr noted, "The patient presents today with significant asymmetric myofascial tightness in the left thoracic lumbar and gluteal regions. He has underlying scoliosis which contributes. There is an element of left greater than right sacroilitis. He likely has facet dysfunction and arthralgias in the mid to lower lumbar region." Dr. Sparr recommended the Claimant undergo an MRI. (Respondents Ex. C, pgs. 41-45).

10. On March 24, 2016, Insurer requested a prospective pre-certification to determine whether an additional eight sessions of physical therapy (PT) was medically necessary. Claimant's medical records were forwarded to Dr. Moshe Lewis for review. Dr. Lewis prepared a report following his records review in which he notes: "This claimant sustained a work related injury. He was lifting cases of storage bags from a pallet, when he felt a sharp shooting pain in his low back, left sided which radiated to the upper back." Dr. Lewis continued: The claimant has attended land-based physical therapy twice weekly for several weeks. He did not feel this was particularly beneficial. He has been in the pool for two weeks and reported good benefit." Dr. Lewis noted that 6 additional PT visits were medically necessary.

11. Prior to his alleged January 20, 2016 industrial injury, Claimant was evaluated at CUHCC Clinic on April 29, 2015 for neck and low back pain and spasms associated with a motor vehicle accident (MVA) occurring on April 21, 2015. Claimant reported persistent pain in the cervical and lumbar regions with pain down both legs. Claimant was diagnosed with back and neck spasms. Claimant was to begin physical therapy and start chiropractic treatment once the spasms settled down. Claimant was released to return to work with a 10 pound limit for one week. (Respondents Ex. A, pgs. 1-2).

12. Respondents denied liability for Claimant's alleged January 20, 2016 injury and requested an independent medical examination (IME) with Dr. Eric Ridings.

13. Dr. Ridings completed the IME on May 25, 2016. As part of his IME, Dr. Ridings reviewed Claimant's medical records. With regards to Dr. Olson's initial report Dr. Ridings opined that it would have been "helpful" if Dr. Olson "had documented information about the frequency, location, and character of the pain that he gets at times with activity." Dr. Ridings explained, "[i]f for example, his usual symptoms were exactly like the symptoms he were having at presentation on that visit, that might raise a question as to whether this was simply his pre-existing back pain rather than a new injury." (Respondents Ex. E, pg. 49).

14. Claimant provided Dr. Ridings with an MRI report dated March 31, 2016. While reviewing the MRI report Dr. Ridings noted, “This was read as normal at L1-2 and L2-3. L3-4 had a minimal posterior disc bulge. L4-5 had a minimal disc bulge and mild facet hypertrophy leading to mild to moderate bilateral neural foraminal narrowing. At L5-S1 there was a mild disc bulge and mild thickening of the ligamentum falvum and mild degenerative facet hyerptrophy.” (Respondents Ex. E, pg. 51).

15. Following review of Claimant’s MRI report, Dr. Ridings opined, “This study is well within the normal range for asymptomatic middle-aged population. I would not typically expect any of the mild degenerative changes noted to by symptomatic.” (Respondents Ex. E, pg. 51).

16. Claimant reported to Dr. Ridings on January 20, 2016 he was moving store supplies in boxes from a pallet onto a U-boat. Claimant reported while stacking the boxes he felt discomfort in his left low back which radiated all the way up to the top of the left shoulder. (Respondents Ex. E, pg. 52).

17. Upon examination, Claimant reported to Dr. Ridings that his primary complaint was to his lower back with “pins and needles up and down his back to the top of the thoracic region.” Claimant also reported pain in the left groin and lateral left hip area with pins and needles on the bottom of his left foot. Claimant reported increased pain with any sort of activity and also when lying down. Dr. Ridings noted, “I was unable to determine a pattern such as increased pain with flexion versus extension. His pain ranges from 5/10 to 9/10 and is improved with “just the right amount of rest.”“ (Respondents Ex. E, pgs. 52-53).

18. Claimant denied any previous injuries or problems in his current areas of complaint. Upon examination Dr. Ridings noted: “He complained of severe pain with flinching away with light touch, brushing my thumbs across the skin of his back from the interscapular region to the buttocks on the left more so than on the right. Pain with light touch caused marked pain behaviors in the left lumbar and gluteal regions, in the groin over the iliopsoas, and at the lateral hip more so than in the left thoracic region which was then more than through the entire right thoracolumbar region. Nevertheless, even on the least severe right side of his back he had pain behaviors with brushing the surface of the skin to a non-physiologic degree.” (Respondents Ex. E, pg. 53).

19. Dr. Ridings continued his examination of the Claimant and noted, “The patient did not relax sufficiently to all assessment of his underlying muscle tone throughout his areas of complaint and did not well tolerate more firm palpation in any case.” (Respondents Ex. E, pg. 54).

20. Dr. Ridings opined that combining the results of Claimant’s MRI scan with the findings on physical examination lead him to believe that it was “unlikely that the patients pain is discogenic or radicular.” Rather, because his “pain was quite diffuse, and his exam was marked by non-physiologic pain behaviors such as complaints of widespread severe pain with light touch and brushing the surface of his skin throughout the thoracic lumbar and gluteal regions” the only diagnosis he would consider, if in fact

Claimant had a work related injury, was a left lumbar strain. (Respondents Ex. E, pg. 54-55). Regarding whether Claimant could have been injured in the manner he described, Dr. Ridings noted: "it is certainly medically possible to sustain an injury from lifting and moving boxes in this manner." According to Dr. Riding, the "differential diagnosis based upon the mechanism of injury in my opinion would be a thoracolumbar strain, disc injury, or SI joint dysfunction.

21. Nonetheless, Dr. Ridings opined, "I am not convinced that Mr. Shannon sustained a work injury on January 20, 2016 given his quite diffuse complaints that do not localize to any one structure or even pair of structures, several fairly unusual complaints such as cramping after lying down, and numbness, pins and needles in his back among others. Additionally, his physical examination was, as noted, marked by non-physiologic pain behaviors of a severity that limited the diagnostic utility of the entire physical examination. It also does not make a lot of sense to me that he was having such severe complaints and severe discomfort with minimal stimulation on physical examination, yet stated he was 60% improved. Beyond pain behaviors, I was unable to determine any specific objective abnormality on examination."

22. Dr. Ridings concluded, "It is my opinion at this time that while it is possible that he sustained a work injury on January 20, 2016, I cannot state that it is more likely than not that he did so based on the totality of my evaluation of the patient today…It is not medically probable that the patient sustained an injury as he described. I do not find it probable or reasonable that in lifting boxes of medium weights that he sustained an injury or injuries that would lead to the patient's wide ranging and wide spread symptoms, with severe pain on physical examination, yet tolerates working 20 hours a week with a 15 pound restriction at Kohl's and another 20 hours a weeks as a cashier at Sears. It is my judgment that, more likely than not, symptom magnification is present in this case." (Respondents Ex. E, pg. 55).

23. Dr. Ridings testified at hearing. Dr. Ridings testified that Claimant's reported mechanism of injury during the IME was consistent with his testimony at hearing. Nevertheless, Dr. Ridings testified that there was nothing on the MRI that would cause Claimant's symptoms nor were there objective findings[1] on physical examination suggestive of injury. Consequently, Dr. Ridings testified that while the reported mechanism of injury (MOI) could cause a lumbar strain he was unable to conclude that the MOI, more probably than not, did cause the alleged injury. Dr. Ridings testified that two things were needed in order to state that an injury was work-related. The first prong, according to Dr. Ridings is that there must be a MOI that can cause the alleged injury. The second prong is that the MOI is the most probable cause of the alleged injury.

[1] Dr. Ridings testified that physicians often use the term spasms incorrectly typically when a injured worker demonstrates increased muscle tone as a consequence of guarding which he testified is does not represent true spasm but is frequently documented as such.. Consequently, Dr. Ridings testified that generally speaking, he does not consider reported "muscle spasm(s)" to constitute "objective" evidence when he encounters the term in review of medical records.

24. Dr. Ridings testified that none of the other physicians who evaluated Claimant performed a causation analysis. However, on cross examination, Dr. Ridings admitted that he could not identify an activity, other than lifting, that was likely to cause Claimant's symptoms, which was identified by Dr. Olson as causing a sprain of the ligaments of the lumbar spine on January 20, 2016. Dr. Ridings testified that Claimant did not have an objective medical diagnosis that fit with his complaints of diffuse back pain and without an objective diagnosis; Claimant could not be determined to have sustained an injury. Accordingly, Dr. Ridings testified that he could not state to a reasonable degree of medical probability that Claimant sustained a work-related injury on January 20, 2016. The undersigned ALJ is not persuaded.

25. The ALJ finds the examinations of Dr. Olson and Sparr to contain objective evidence consistent with low back injury. While Dr. Ridings apparently does not believe that Claimant presented to Dr. Olson and Dr. Sparr with actual muscle spasm and they were mistaken when they documented the same, the ALJ finds Dr. Ridings testimony surrounding the question of whether Claimant had spasm unpursuasive. The ALJ also finds Dr. Ridings' explanation of what Drs. Olson and Sparr were appreciating, i.e. spasm versus guarding, during their physical examination speculative and equally unconvincing. Finally, beyond spasm, the evaluation of Dr. Sparr contains reference to positive provocative testing suggestive of injury to the low back and/or SI joints. The ALJ finds the difference in the objective findings on examination between the early evaluations of Drs. Olson and Sparr and the IME findings of Dr. Ridings' four months after injury likely due to Claimant's treatment, including PT and injection therapy, which Claimant testified was particularly effective in reducing his symptoms.

26. Crediting the reports of Dr. Olson and Dr. Sparr along with the consistent and credible testimony of Claimant, the ALJ finds it more probable than not that Claimant's described MOI is the cause of his low back and SI joint symptoms and need for treatment. Accordingly, the ALJ finds that Claimant has met his burden of proof to establish that he suffered a compensable industrial injury on January 20, 2016.

27. Based upon the evidence presented, the ALJ finds the treatment rendered to Claimant by Drs. Olson and Sparr reasonable, necessary and related to his January 20, 2016 injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. The claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an “injury” arising out of and in the course of employment. *Section 8-43-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo.App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo.App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a workers’ compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A workers’ compensation claim is decided on its merits. *Section 8-43-201, supra.*

B. In accordance with § 8-43-215, C.R.S., this decision contains specific findings of *f*act, conclusions of law and an order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo.App. 2000).*

C. In determining credibility, the ALJ should consider the witness’ manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. As found here, Claimant’s testimony is credible, consistent and convincing. Moreover, the opinions of Dr. Olson and Dr. Sparr regarding diagnosis, causality and treatment are more persuasive than the contrary opinions of Dr. Ridings.

Compensability

D. A “compensable injury” is one which requires medical treatment or causes disability. *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990). No benefits flow to the victim of an industrial accident unless the accident results in a compensable “injury.” *Romero*, supra; § 8-41-301, C.R.S. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an “injury” arising out of and in the course of employment*.* *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff’d Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

E. The phrases "arising out of” and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Here, there is little question that Claimant's alleged injuries occurred within the time and place limits of his employment relationship with Employer and during an activity, specifically moving merchandize from a pallet to a U-boat as a hard-line inventory specialist for Employer. Nonetheless, the question of whether the alleged conditions, for which Claimant seeks benefits, "arose out of" his employment must be resolved before the injury is deemed compensable.

F. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). The fact that Claimant may have experienced an onset of pain while performing job duties does not mean that Claimant sustained a work-related injury. An incident which merely elicits pain symptoms without a causal connection to the industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988)*; Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989). As found, the examinations of Drs. Olson and Sparr, on the day of and after the asserted injury, contain objective findings consistent with a low back/SI joint injury. More probably than not, the lifting pattern employed by Claimant to repeatedly lift 30-35 pound boxes from the pallet sprained/strained the soft tissue and ligaments of the lumbar spine giving rise to Claimant's symptoms. Even Dr. Ridings admitted it is medically possible to sustain an injury from lifting and moving boxes in the manner described by Claimant. Consequently, the ALJ concludes that a logical causal connection exists between Claimant's work duties and his low back symptoms and his need for treatment. Claimant's low back/SI joint injury is compensable.

Medical Benefits

G. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). As found here, Claimant has proven by a preponderance of the evidence that he sustained a compensable injury to his low back and/or SI joints. The evidence presented persuades the ALJ that this compensable "injury" is the proximate cause of Claimant's need for medical treatment, including his need for physical therapy and the injection(s) subsequently provided by Dr. Sparr. Taken in its entirety, the ALJ finds the evidentiary record to contain substantial evidence to support a conclusion that Claimant's work duties and not a pre-existing condition caused by his scoliosis or a prior injury from an MVA occurring approximately nine (9) months earlier caused his current symptoms and need for treatment, including PT and injection therapy. Consequently, the ALJ concludes that Claimant has established that his need for treatment with Drs. Olson and Dr. Sparr was causally related to his work-related lifting injury on January 20, 2016. Moreover, the totality of the evidence presented establishes that the care, including physical and injection therapy were reasonable and necessary given Claimant's continued pain and functional decline as evidenced by the imposition of work restrictions by Dr. Olson. Consequently, the ALJ concludes that Respondents are liable for Claimant's care at CCOM with Dr. Olson and Dr. Sparr. As Claimant has not been placed at maximum medical improvement (MMI), Respondents remain liable for all future reasonable, necessary and related care.

ORDER

It is therefore ordered that:

1. Claimant has proven, by a preponderance of the evidence, that he suffered a compensable injury to his low back/SI joints as a consequence of lifting and moving 30-35 pound boxes of plastic storage bags from a pallet on January 20, 2016.

2. Respondents shall pay for all medical expenses, pursuant to the Workers' Compensation fee schedule, to cure and relieve Claimant from the effects of his right shoulder injury, including the care provided at CCOM by Dr. Olson and his referrals, specifically Dr. Sparr.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding

procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she suffered a right leg injury on June 7, 2016 during the course and scope of her employment with Employer.

2. Whether Claimant has demonstrated by a preponderance of the evidence that she is entitled to receive reasonable, necessary and related medical benefits for her June 7, 2016 industrial injury.

FINDINGS OF FACT

1. Claimant worked as a Bus Driver for Employer. She was assigned to drive a charter bus of football players from Eaton High School to Chadron State College in Nebraska for a football mini-camp from June 5-8, 2016. The actual travel days were June 5, 2016 and June 8, 2016.

2. Claimant stayed at the Best Western Inn in Chadron while the football players stayed on the campus of Chadron State College. On June 6, 2016 Claimant drove the football team to a local Wal-Mart store and washed the charter bus. Claimant also drove to Chadron State Park to service the toilet because it was the only dump station in the area. Chadron State Park is located approximately eight miles south of town.

3. Claimant explained that on June 7, 2016 she spoke with the coach of the football team. He told her that she would not be needed that morning. Because she would not be needed, Claimant prepared a small sack lunch and drove to Chadron State Park. Claimant planned to spend time at the lake but decided to take a guided horseback trail ride through the park. Approximately one-quarter of a mile from the stable one of the guides' horses became startled and turned into Claimant's horse. Both the guide and Claimant fell from their horses. Claimant fractured her lower right leg during the incident.

4. Employer's Bus Supervisor Bob Killian testified at the hearing in this matter. He explained that on travel days bus drivers are paid for their bus inspection and drive times for up to 15 hours each day. On non-travel days, when a bus driver is out of town, drivers are "on call" but are paid for eight hours each day because they are out of state. On non-travel days bus drivers may take passengers to meals, hotels or on sightseeing trips. When bus drivers are not needed and "on call" they may engage in their own activities but must be available within 30 minutes. Bus drivers are also permitted to use the bus for reasonable personal transportation.

5. Claimant has failed to establish that it is more probably true than not that she suffered a compensable right leg injury on June 7, 2016 during the course and scope of her employment with Employer. Claimant explained that on June 7, 2016 she spoke with the coach of the football team. He told her that she would not be needed that morning. Claimant was thus "on call" and permitted to engage in her own activities but had to be available within 30 minutes. Claimant drove approximately eight miles to Chadron State Park and decided to take a guided horseback trail ride through the park. Approximately one-quarter of a mile from the stable Claimant fell from her horse and fractured her lower right leg. Although Claimant was permitted to engage in personal activities on the morning on June 7, 2016 her participation in a voluntary recreational activity and substantial personal deviation from employment reflects that her right leg injury did not arise during the course and scope of her employment with Employer.

6. Claimant voluntarily went horseback riding at Chadron State Park. Claimant's voluntary participation in a recreational activity is specifically excluded from the definition of "employment" pursuant to §8-40-201(8), C.R.S. Moreover, Claimant was not an "employee" pursuant to §8-40-301(1), C.R.S. while she was horseback riding.

7. The record reveals that Claimant's right leg injury did not arise in the course and scope of her employment with Employer. Claimant's job duties involved driving a bus for the football team. Her injury did not occur within the time and place limits of her employment because the accident happened in Chadron State Park when she fell from a horse. Claimant's injury also did not arise out of her job duties for Employer. Claimant's activity of horseback riding when she was "on call" was for her sole benefit and constituted a substantial deviation from the mandatory or incidental duties of employment. Her action of riding a horse did not have its origin in her work-related functions and was not sufficiently related to her work activities to be considered part of her service to Employer. Accordingly, Claimant has failed to demonstrate that she suffered a compensable right leg injury during the course and scope of her employment with Employer on June 6, 2016. Claimant's claim for Workers' Compensation benefits is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. The Workers' Compensation Act specifically excludes from the definition of "employment" "the employee's participation in a voluntary recreational activity or program, regardless of whether the employer promoted, sponsored, or supported the recreational activity or program." §8-40-201(8), C.R.S. Additionally, §8-40-301(1), C.R.S. defines the scope of the term "employee" to exclude any person "while participating in recreational activity." The preceding statutes reflect that the intent of the General Assembly was to remove the voluntary participation in a recreational activity from the employment relationship. *In re McLachlan* W.C. No. 4-789-747 (ICAP, July 2, 2010).

5. To establish a compensable injury an employee must prove by a preponderance of the evidence that her injury arose out of the course and scope of employment with her employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of her employment and during an activity that had some connection with her work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "time" limits of employment include a reasonable interval before and after working hours while the employee is on the employer's property. *In Re Eslinger v. Kit Carson Hospital,* W.C. No. 4-638-306 (ICAP, Jan. 10, 2006). The "place" limits of employment include parking lots controlled or operated by the employer that are considered part of employer's premises. *Id.*

6. Although injuries incurred while traveling to and from work do not occur in the course of employment, an employee who has fixed hours and a place of work is covered while going to and coming from work while on the employer's premises. *In re Broyles,* W.C. No. 4-510-146 (ICAP, July 16, 2002). The preceding principle has been extended to injuries that occur on the employer's premises during an unpaid lunch break even if the employee is not required to remain on the premises for lunch. *Id.*

7. There is no requirement under the Act that a claimant must be on the clock or performing an act "preparatory to employment" in order to satisfy the "course of employment" requirement. *In re Broyles,* W.C. No. 4-510-146 (ICAP, July 16, 2002). As noted in *Ventura v. Albertson's, Inc.,* 856 P.2d 35, 38 (Colo. App. 1992):

> The employee, however, need not be engaged in the actual performance of work at the time of injury in order for the "course of employment" requirement to be satisfied. Injuries sustained by an employee while taking a break, or while leaving the premises, collecting pay, or in retrieving work clothes, tools, or other materials within a reasonable time after termination of a work shift are within the course of employment, since these are normal incidents of the employment relation.

8. The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). Nevertheless, the employee's activity need not constitute a strict duty of employment or confer a specific benefit on the employer if it is incidental to the conditions under which the employee typically performs the job. *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). It is sufficient "if the injury arises out of a risk which is reasonably incidental to the conditions and circumstances of the particular employment." *Phillips Contracting, Inc. v. Hirst,* 905 P.2d 9, 12 (Colo. App. 1995). Incidental activities include those that are "devoid of any duty component, and are unrelated to any specific benefit to the employer." *In re Rodriguez,* W.C. 4-705-673 (ICAP, Apr. 30, 2008). Actions including eating, sleeping, resting, washing, toileting, seeking fresh air, drinking water and keeping warm have been determined to be incidental to employment under the personal comfort doctrine. *In re Rodriguez,* W.C. 4-705-673 (ICAP, Apr. 30, 2008). Whether a particular activity has some connection with the employee's job-related functions as to be "incidental" to the employment is dependent on whether the activity is a common, customary and accepted part of the employment as opposed to an isolated incident. *See Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715 (Colo. App. 1995).

9. The issue is thus whether the "claimant's conduct constitutes such a deviation from the circumstances and conditions of the employment that the claimant stepped aside from her job and was performing an activity for his sole benefit." *In re Laroc,* W.C. 4-783-889 (ICAP, Feb. 1, 2010); *see Panera Bread, LLC v. Industrial Claim Appeals Office,* 141 P.3d 970 (Colo. App. 2006). It is thus not essential that the activities of an employee emanate from an obligatory job function or result in a specific benefit to the employer for a claim to be compensable. *City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985). Ministerial actions for an employee's personal comfort do not constitute a substantial deviation from employment unless the personal need being met or the means chosen by the employee to satisfy his personal comfort is unreasonable. *In re Rodriguez,* W.C. 4-705-673 (ICAP, Apr. 30, 2008); *see Larson's Workers' Compensation Law,* §21.00.

10. When the employer asserts a personal deviation from employment activities "the issue is whether the activity giving rise to the injury constituted a deviation from employment so substantial as to remove it from the employment relationship."

Roache v. Industrial Commission, 729 P.2d 991 (Colo. App. 1986); *In re Laroc,* W.C. 4-783-889 (ICAP, Feb. 1, 2010). If an employee substantially deviates from the mandatory or incidental duties of employment so that she is acting for her sole benefit at the time of injury, her claim is not compensable. *Kater v. Industrial Commission,* 729 P.2d 746 (Colo. App. 1986). The question of whether a deviation is significant enough to remove the claimant from the course and scope of employment is a factual determination for the ALJ. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715 (Colo. App. 1995).

11. As found, Claimant has failed to establish by a preponderance of the evidence that she suffered a compensable right leg injury on June 7, 2016 during the course and scope of her employment with Employer. Claimant explained that on June 7, 2016 she spoke with the coach of the football team. He told her that she would not be needed that morning. Claimant was thus "on call" and permitted to engage in her own activities but had to be available within 30 minutes. Claimant drove approximately eight miles to Chadron State Park and decided to take a guided horseback trail ride through the park. Approximately one-quarter of a mile from the stable Claimant fell from her horse and fractured her lower right leg. Although Claimant was permitted to engage in personal activities on the morning on June 7, 2016 her participation in a voluntary recreational activity and substantial personal deviation from employment reflects that her right leg injury did not arise during the course and scope of her employment with Employer.

12. As found, Claimant voluntarily went horseback riding at Chadron State Park. Claimant's voluntary participation in a recreational activity is specifically excluded from the definition of "employment" pursuant to §8-40-201(8), C.R.S. Moreover, Claimant was not an "employee" pursuant to §8-40-301(1), C.R.S. while she was horseback riding.

13. As found, the record reveals that Claimant's right leg injury did not arise in the course and scope of her employment with Employer. Claimant's job duties involved driving a bus for the football team. Her injury did not occur within the time and place limits of her employment because the accident happened in Chadron State Park when she fell from a horse. Claimant's injury also did not arise out of her job duties for Employer. Claimant's activity of horseback riding when she was "on call" was for her sole benefit and constituted a substantial deviation from the mandatory or incidental duties of employment. Her action of riding a horse did not have its origin in her work-related functions and was not sufficiently related to her work activities to be considered part of her service to Employer. Accordingly, Claimant has failed to demonstrate that she suffered a compensable right leg injury during the course and scope of her employment with Employer on June 6, 2016. Claimant's claim for Workers' Compensation benefits is thus denied and dismissed. *See In re McLachlan*, W.C. No. 4-789-747 (ICAP, July 2, 2010) (concluding that claim was not compensable where the application of §8-40-201(8), C.R.S. was dispositive and the claimant's voluntary participation in a street hockey game constituted a substantial deviation from employment activities).

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

The Respondents' application for hearing states that Respondents "request a judicial determination as to what treatment Claimant is currently receiving from her authorized physicians is reasonable and necessary and related to the injury." The Respondents failed to identify any specific treatment with which they take issue. At the commencement of hearing, the Respondents again failed to identify any specific treatment they believed was no longer reasonable, necessary or related to the Claimant's work injury. During opening statement, Respondents' counsel indicated that Respondents have "some issues about what . . . ongoing symptom presentology [sic] may be related to the injury." Respondents also asserted that multiple medications as well as interventional treatment including injections, and diagnostic studies such as MRI arthrogram studies are no longer reasonable and necessary.

Based on the application for hearing, the comments made by counsel, the evidence presented, and the post-hearing position statements filed by the parties, the ALJ finds that the issues to be determined by this decision are whether the Claimant has proven that continued Oxycontin, Percocet, Methocarbamol, Cymbalta, Protonix, and Gabapentin are reasonable, necessary and related to her workers' compensation claim. The ALJ declines the invitation by Respondents to determine whether future diagnostic studies, injections or any other specific treatment recommendations not currently pending are reasonable, necessary or related to Claimant's injury. Such a determination would be speculative, and evaluating the merits of treatment not currently being recommended would be difficult. The ALJ also declines to determine which body parts are causally related to the work injury unless a specific treatment recommendation is pending for that body part.

FINDINGS OF FACT

General Findings

1. The Claimant is a 62-year old woman.

2. On February 17, 1993, ALJ Conway Gandy found that Claimant sustained an occupational disease to her low back.

3. On July 15, 2006, ALJ Gandy found Claimant permanently and totally disabled as a result of the occupational disease, and ordered the Respondents to pay for Claimant's future medical expenses arising out of her compensable injury.

4. In 1992, Claimant had surgery under her workers' compensation claim that consisted of a posterior lumbar interbody fusion with instrumentation done at L4-5 and L5-S1. Claimant still has hardware in her lumbar spine.

5. Claimant testified that she continues to experience low back pain that sometimes radiates up to her neck. She has bilateral leg pain and groin pain. She experiences spasms in her low back and upper back about two to three times per week. Her average pain level is 7 out of 10 with medications.

6. Dr. Harlan Ribnik has been the Claimant's authorized treating physician (ATP) for approximately 18 years.

7. Dr. Ribnik manages Claimant's prescription medications. As of the date of the hearing Dr. Ribnik prescribed the following medications to the Claimant:

Oxycontin
Percocet
Methocarbamol (Robaxin)
Cymbalta
Protonix
Gabapentin (Neurontin)
Senokot
Trazadone

8. The Claimant testified that she feels stable on her medications. She can engage in activities and care for herself.

9. According to Dr. Ribnik's records, the Claimant consistently reports pain at a level of 7 out of 10.

10. Dr. Ribnik testified by deposition. He explained that Claimant has chronic low back pain, some sacroilitis, post laminectomy syndrome, pain in the lower extremities, lumbar spinal stenosis and lumbosacral spondylolysis.

11. Dr. Ribnik described Claimant's symptoms as predominantly back pain, pain her hips and pain in her lower extremities, with the pain greater in her right rather than left lower extremity. Dr. Ribnik associates all of these symptoms with her work injury.

12. There is no pending treatment recommendation for Claimant's lower extremities other than Gabapentin, and no treatment recommendation pending for Claimant's groin or hips.

13. Dr. Ribnik indicated that Claimant suffers from depression and anxiety due to her work injury. He explained Claimant suffers from the sleep issues due to difficulties with finding a comfortable position because of pain. He prescribes Trazadone for sleep.

14. Claimant walks with a marked antalgic gait to the right side and uses a cane. Dr. Ribnik opined that Claimant's symptoms are consistent with the pathology in her lower back associated with the work injury. He explained that it was not uncommon for people who have extensive lumbar surgery to have continued pain in that area and that the lower extremity pain is related to the nerves involved in the low back.

15. Dr. Ribnik indicated that Claimant suffers from some nerve irritation related to her back surgery. He indicated that the hardware "creates an abnormal physiologic and mechanical condition and it occupies a space that can potentially attract scarring or create narrowing of areas against which nerves may rub and become irritated."

16. Dr. Ribnik testified that Claimant's description of her leg pain fits the S1 dermatomal pattern.

17. Claimant is compliant with her medication. She has had no failed drug screens.

18. Dr. Ribnik testified that his treatment goal for Claimant is to maintain a reasonable level of function, control pain and allow Claimant to take care of herself. He does not believe she is symptom magnifying.

19. On February 23, 2015, Dr. Elizabeth Bisgard performed an independent medical examination at Respondents' request. Dr. Bisgard examined the Claimant as well as reviewing the Claimant's medical records prior to issuing a report.

20. Dr. Bisgard indicated that multiple diagnostic studies demonstrate that Claimant's hardware is intact and, therefore, not the source of Claimant's back pain. Dr. Bisgard also indicated that CT myelograms failed to reveal the source of Claimant's back or leg pain.

21. Dr. Bisgard diagnosed the following:

Chronic low back pain secondary to posterior fusion, L4 to S1.
Groin pain bilaterally.
Bilateral leg pain without clear radiculopathy.
Depression.
Chronic constipation secondary to chronic narcotic pain medication.
Narcotic dependency.

22. Dr. Bisgard noted that Claimant has not responded to SI joint injections, radiofrequency ablation of the SI joints or numerous epidural injections.

23. Dr. Bisgard noted that Claimant reports only a 10-20% improvement in her function with medications. She ultimately opined that Dr. Ribnik's records fail to document increased functional activity or decreased pain thus Claimant should be weaned from all pain medications.

24. Dr. Bisgard also opined that Claimant should receive no maintenance medication under her workers' compensation claim, but if it is determined Claimant is entitled medications, the only appropriate medications would be Cymbalta, 30 mg, twice per day, and methocarbamol as needed at the lowest recommended dose of 500 mg.

25. Claimant has been reporting ongoing right leg pain. The medical records reflect that Claimant has been reporting right leg pain since 2004 or earlier.

26. Dr. Ribnik believes that there is objective support for Claimant's right leg pain, and that she carries a diagnosis of S1 radiculopathy.

27. Dr. Bisgard disagrees that objective evidence supports S1 radiculopathy or any right leg symptoms.

28. Dr. Ribnik testified that when Claimant identifies an area of pain (such as her right leg), then he would perform injections to help verify that there is a pain generator at that location and then attempt to do something about it. As reflected in Dr. Bisgard's report, Dr. Ribnik, since January 2008, has performed seven epidural steroid injections in Claimant's low back, with the last injection performed on March 21, 2014. As explained by Dr. Bisgard, the purpose of epidural injections is to determine a pain generator. Specifically, under fluoroscopy, a needle is inserted into a specific level of the spine and injected with both a local numbing medication, as well as a steroid. In order for an injection to be considered diagnostic, there needs to be an 80% or greater reduction of pain in the immediate time period of the anesthetic, and, for a therapeutic response, a lasting benefit from the effect of the steroid.

29. Dr. Bisgard opined that Claimant did not have a diagnostic response to any of the epidural steroid injections.

30. In her report, Dr. Bisgard documented the fact that Claimant's right SI joint radiofrequency ablation in February 2014 resulted in significant benefit in right leg symptoms, but no relief in her back. However, Dr. Bisgard indicated that Claimant's reported response to this procedure was "non-physiologic." As explained by Dr. Bisgard, a radiofrequency ablation performed at the SI joint is not designed to target the nerves that would cause right leg symptomology. Dr. Bisgard opined that it makes no medical sense that Claimant, following a procedure at her SI joint, would experience significant relief in right leg pain.

31. Claimant saw Dr. Ribnik on October 21, 2014. At that time, Claimant had seen Dr. Tolge for an evaluation. Dr. Ribnik explained that he made the referral to Dr. Tolge, a neurologist, for purposes of attempting to determine what may be causing Claimant's ongoing complaints. Dr. Ribnik, in his October 21, 2014 report, made the following comments:

> I had a conversation with Dr. Tolge today about [Claimant's] issues.
>
> She felt that there wasn't likely any pathology interspinally, but can't rule out retroperitoneal pathology. She suggested that a trial of

> peripheral nerve blocks might be helpful diagnostically, possible ilioinguinal or genitofemoral.
>
> I reviewed the report of the lumbar myelogram dated August 2013 that shows only a mild flattening of the thecal sac at L2-L3 without any compression of the cord or nerve roots or any paravertebral structures. I did a lumbar epidural injection for her at L2-L3 in March 2014. Reviewing the subsequent office notes, she did not get more than a day's relief from that injection, suggesting that it was only a brief local anesthetic effect, and not an effect of the steroid.

32. Dr. Bisgard, after reviewing this clinical note, agreed with Dr. Tolge that there was no interspinal pathology to explain Claimant's ongoing symptom presentation.

33. Dr. Ribnik testified that just because imaging shows the hardware intact does not mean that it cannot be the source of Claimant's pain. Dr. Ribnik explained that the hardware is a foreign substance in the body and can create an abnormal physiological and mechanical condition.

34. In addition to providing a written report, Dr. Bisgard also testified at the hearing. She is Board Certified in Occupational Medicine. She is not Board Certified in anesthesiology, not sub-specialty Board Certified in pain management, not Board Certified in interventional pain medicine, and has no certification of any kind in pain management. She does not specialize in treatment of chronic pain patients. She refers her difficult pain patients to other chronic pain specialists.

35. Dr. Bisgard testified Claimant is a chronic pain patient and The Division of Workers' Compensation Chronic Pain Disorder Medical Treatment Guidelines are applicable. She acknowledges the Division recognizes that acceptable medical practice may include deviation from the Treatment Guidelines as individual changes dictate and she agrees with that statement.

36. Referencing Claimant's Exhibit 15, page 187, Dr. Bisgard testified she agrees with the Guidelines' statement that some healthcare providers, by virtue of their experience and additional training or accreditation by pain specialist organizations, have much greater expertise in the area of chronic pain evaluation and treatment than others and that such patients should be referred to recognized specialists.

37. Dr. Bisgard acknowledges Claimant had an L4-S1 posterior lumbar spinal fusion and, on direct examination, testified that L4-5 and L5-S1 involves nerves that go down the right leg. Dr. Bisgard was unaware of what symptoms Claimant reported following her injury and surgery as she did not have records dating back to that time.

38. When asked if she admits Claimant has chronic low back pain secondary to her fusion, Dr. Bisgard stated: "That's what she has been diagnosed with for the last

20 plus years." She conceded: "I agree she has chronic low back pain, that she is subjectively reporting low back pain. It has been attributed to her posterior fusion….and I understand why that is confusing." Dr. Bisgard then testified Claimant does not have low back and right leg pain secondary to her fusion but then comments: "I will clarify. I am not stating that she is not experiencing pain. I am—I cannot get into her head and tell—and say that she is subjectively not feeling some pain. I am looking at a medical explanation for the pain. There is no medical explanation for the bilateral leg pain and the subjective chronic low back pain."

Oxycontin & Percocet

39. Oxycontin, 20 milligrams, is a sustained release form of oxycodone. Dr. Ribnik is prescribing Claimant Oxycontin in a 20 mg dose one tablet, four times a day.

40. Dr. Ribnik indicated that this dosage is moderate, but Dr. Bisgard opined the dosage is excessive especially because Claimant takes the Oxycontin more frequently inasmuch as she is only taking Oxycontin between 5:00 a.m. and 10:00 p.m.

41. Dr. Bisgard went on to testify that Oxycontin should be prescribed once every 12 hours. Because Oxycontin is a medication that is timed released, the manufacturers have designed and packaged this medication so that there is a 12 hour benefit from it.

42. Dr. Ribnik testified that Percocet (5 mg of oxycodone and 325 mg of Tylenol) is a narcotic pain medication directly related to Claimant's pain and maintenance of function. She takes it every six hours.

43. Percocet is a short-acting narcotic pain medication. Dr. Bisgard noted that because Percocet is a short-acting medication, it is designed only for breakthrough pain to be taken on a PRN basis. According to Dr. Bisgard, there is no need to take a short acting medication (Percocet) while you are taking the long acting medication (Oxycontin).

44. Dr. Ribnik explained that he prescribes the Percocet in a way that is most effective for the patient. In this case, it works best for the Claimant to take it every six hours "when the Oxycontin wears thin." He also explained that Claimant is free not to take the Percocet if she feels she does not need it.

45. Dr. Ribnik acknowledged that the FDA has specifically identified how Oxycontin and Percocet should be taken and that he is not prescribing these medications the way the FDA has recommended. Dr. Ribnik also acknowledged that he has never read the specific FDA provisions for the proper use of Oxycontin and Percocet. Dr. Ribnik, however, opined that the FDA recommendations do not establish the standard of care for treatment by a physician.

46. Claimant testified that she tried tapering or weaning from the opioid medications in the past without much success. She recalled reducing her dosage by

one pill per day for approximately one month. She felt her pain increased from 7 out of 10 to 8-8.5 out of 10.

47. Claimant testified that her function was impacted by the reduction in opioids such that on some days she did not get dressed, she sat in her recliner up to 6 hours rather than 1 to 2 hours, she did not cook or clean her house.

48. The Claimant explained that she became more depressed and her sleep disturbances increased. Once she returned to her normal dosages, her pain levels stabilized and returned to her baseline 7 out of 10.

49. Dr. Ribnik agreed that he tried a reduction of Claimant's narcotic pain medications at the Insurer's request but that Claimant's pain levels increased accompanied by increased anxiety.

50. The Claimant's testimony concerning her pain levels in her back is credible. As found above, Dr. Bisgard acknowledged that Claimant experiences pain, but Dr. Bisgard believes that no objective medical evidence supports the Claimant's pain complaints. Dr. Bisgard has opined that Claimant's pain may be psychogenic. Dr. Bisgard is not a mental health professional and the Claimant has not been evaluated by one.

51. The ALJ is also not persuaded by Dr. Bisgard's opinions regarding the lack of an objective basis for Claimant's back pain. The ALJ credits Dr. Ribnik's opinions concerning the hardware and irritation the hardware can cause. Claimant has experienced ongoing back pain since her work injury and resulting surgery. She has received treatment for her back pain for over 20 years. Respondents' argument would essentially suggest "improvement" in Claimant's condition, which is not supported by the medical evidence.

52. Dr. Bisgard takes issue with the reasonableness of the Oxycontin and Percocet dosages and Dr. Ribnik's "off label" prescriptions of these two drugs. While the reasonableness of the dosages may be questionable and there is little doubt that Claimant's continued use of opioids presents other health risks, a medical utilization review would be the more appropriate avenue for modifying the treatment plan for the Claimant. The "off label" use in and of itself is not a basis to simply discontinue the prescriptions as unreasonable and unnecessary.

53. Based on the evidence, the ALJ finds that Oxycontin and Percocet are reasonable, necessary and related to the claim. The Claimant has proven that she continues to experience pain that is relieved with Oxycontin and Percocet.

Methocarbamol

54. Methocarbamol (also known as Robaxin) is a muscle relaxer used to treat muscle spasms. Dr. Ribnik has prescribed Methocarbamol on a scheduled basis (1-2 tablets 4 times per day) as opposed to a PRN basis.

55. Dr. Ribnik testified that Claimant suffers from "quite a bit" of muscle spasms. However, Dr. Bisgard noted that Dr. Ribnik's medical records rarely, if at all, document that Claimant is having ongoing muscle spasms in the three year period of time prior to Dr. Bisgard's evaluation.

56. When asked about lack of documentation of spasms in his reports, Dr. Ribnik admitted that he has not documented spasm consistently.

57. Both Dr. Ribnik and the Claimant believe the Methocarbamol is working to alleviate the spasms. Dr. Ribnik testified that Claimant's chronic low back pain triggers muscle spasm.

58. Dr. Bisgard opined that Methocarbamol is designed to treat muscle spasms when they are present, as opposed to acting as a prophylactic medication to prevent muscle spasms.

59. Dr. Bisgard does not disagree that Methocarbamol is reasonable, necessary or related to Claimant's injury. Rather, Dr. Bigard disagrees with the prophylactic use of Methocarbamol. Again, the dosage and prescription indications are subjects more appropriately addressed by a medical utilization review.

60. Based on the credible medical evidence, the Claimant has proven that Methocarbamol is reasonable, necessary and related to her work injury.

Cymbalta

61. Dr. Bisgard conceded that Cymbalta, 30 mg, twice per day, would be appropriate if Claimant were entitled maintenance medications. The ALJ finds that Claimant has proven she is entitled to continued prescriptions for Cymbalta based on the opinions of Dr. Bisgard and Dr. Ribnik. The ALJ makes no finding regarding the specific appropriate dosages.

Protonix

62. Protonix is a medication designed to relieve symptoms of GERD.

63. Dr. Ribnik opined that the Protonix is related to the Claimant's work injury due to the litigation.

64. According to Dr. Ribnik's medical records, Respondents began questioning Dr. Ribnik's ongoing medical care during the summer of 2014. Dr. Ribnik's records indicate that he has prescribed Protonix since as early as October 4, 2010.

Thus, Dr. Ribnik's opinion that Claimant needs Protonix due litigation stress lacks any foundation.

65. Dr. Ribnik later testified that almost all of Claimant's medications cause some form of gastric irritation. He could not specifically recall Claimant's history of gastric irritation and when he began prescribing Protonix.

66. The medical evidence fails to support that Claimant's work injury or the associated medications cause her to need Protonix. As such, Claimant has failed to prove that Protonix is related to her work injury.

Gabapentin

67. Gabapentin (Neurontin) is a nerve stabilizer designed to treat specific nerve pain.

68. On April 22, 2011 by Dr. Ribnik's physician's assistant started Claimant on Neurontin. The medical record fails to clearly document the basis for the prescription.

69. On June 1, 2011, the Claimant reported "some benefit" from the Nuerontin but her reported pain levels remained the same at 7 out of 10.

70. Dr. Ribnik believes that Claimant suffers from nerve irritation associated with the low back surgery. He characterized the dosages of 600 mg three times per day as mild.

71. Based on a review of Dr. Ribnik's medical records, Dr. Bisgard was unable to identify any reports of neuropathic pain that Claimant would benefit by the ongoing consumption of Gabapentin.

72. Dr. Ribnik's records fail to document any evidence of neuropathic pain generators. The Claimant may have right leg pain but there has been no objective evidence to support that such pain is neuropathic in nature.

73. The ALJ finds that none of the medical records clearly document an objective basis to support the need for Gabapentin. As found above, the initial prescription for Gabapentin lacked support. Claimant has failed to prove that the ongoing need for Gabapentin is reasonable, necessary or related to her work injury.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

General Legal Principals

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a

reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

Medical Benefits

Section 8-42-101(1)(a), C.R.S., provides:

> Every employer … shall furnish … such medical, hospital, and surgical supplies, crutches, and apparatus as may reasonably be needed at the time of the injury … and thereafter during the disability to cure and relieve the employee from the effects of the injury.

Respondents are obligated to provide medical benefits to cure or relieve the effects of the industrial injury. Section 8-42-101(1), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Respondents, however, retain the right to dispute liability for specific medical treatment on grounds the treatment is not authorized or reasonably necessary to cure or relieve the effects of the industrial injury.

The Claimant has proven entitlement to ongoing pain medications. Dr. Bisgard admitted that Claimant suffers from pain, but Dr. Bisgard contends there is no objective reason for it. As found above, the ALJ credits Dr. Ribnik's opinions concerning Claimant's pain generator. The Claimant has been complaining of back pain for over 20 years and has consistently received treatment for it, including pain medications. Claimant's ongoing back pain continues to be related to her work injury. To the extent the Respondents argue that the dosages prescribed by Dr. Ribnik are excessive, the Respondents should pursue the appropriate remedy which is a medical utilization review. Claimant has also proven that she is entitled to Cymbalta.

Claimant has failed to prove that the Protonix is related to her industrial injury. Respondents are no longer liable for the Protonix prescription. Claimant has failed to prove that Gabapentin is reasonable, necessary or related to her industrial injury. Dr. Ribnik shall wean the Claimant from Gabapentin within 90 days of the date of this order or Claimant assume responsibility for payment of the Gabapentin beginning on the 91st day from the date of this order.

The Respondents did not seriously dispute the prescription for Trazadone or Senakot/Senna. In addition, the Claimant and Dr. Ribnik credibly explained that Trazadone improves Claimant's ability to sleep and that her sleep disturbances are directly related to her work injury. Further, Dr. Bisgard diagnosed Claimant with narcotic related constipation which Senakot is designed to treat.

ORDER

It is therefore ordered that:

1. Claimant is entitled to **ongoing maintenance medical benefits**, **including but not limited to,** Oxycontin, Percocet, Methocarbamol and Cymbalta, **Trazadone and Senakot/Senna.**

2. Claimant is no longer entitled to Gabapentin or Protonix. Dr. Ribnik shall wean Claimant from Gabapentin within 90 days of the date of this order, or Claimant shall assume responsibility for payment of Gabapentin.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-952-142-02

STIPULATION

1. The parties stipulated to the authorization of a right L4-S1 transforaminal epidural steroid injection as related and reasonably necessary to cure and relieve the effects of the Claimant's May 21, 2014 work injury.

ISSUE

1. Whether the Claimant proved, by a preponderance of the evidence, that medical treatment, consisting of S1 selective nerve root blocks, is related and reasonably necessary to cure and relieve the effects of his May 21, 2014 work injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ makes the following findings of fact:

1. The Claimant works as a taxi cab driver for Employer. On May 21, 2014, he was performing his usual job duties and suffered a low back injury while lifting a passenger's luggage to load it in the trunk of the vehicle (Respondents' Exhibit A).

2. Respondents admitted for medical benefits and temporary total disability in the General Admission of Liability filed on January 27, 2016 (Respondents' Exhibit B).

3. Dr. Sanjay Jatana is an authorized treating physician (ATP) of the Claimant. On November 4, 2015, the Claimant saw PA-C Brooke DiStefano in Dr. Jatana's office and she noted that the bilateral gluteal and leg pain was approximately 40% of the Claimant's complaint. She noted a positive straight leg raise on the right and a straight leg raise on the left that reproduces gluteal pain. FABER test was negative bilaterally. PA-C DiStefano noted that the Claimant did get initial relief with an L4-5 transforaminal epidural steroid injection, but insurance denied a second injection and now the Claimant reports his symptoms are much worse. PA-C DiStefano recommended a follow up MRI and noted that the Claimant would "follow up here after imaging for discussion with SJ regarding surgical options vs. injection options although he has failed injections long term in the past and really would like to consider surgery if it is an option" (Claimant's Exhibit 1, pp. 1-2).

4. On January 14, 2016, Dr. Jatana performed an L5-S1 microdiscectomy on the Claimant (Claimant's Exhibit 1, p. 4). At the 6-week post operative appointment with Dr. Jatana on February 24, 2016, the Claimant reported ongoing lower back pain and

bilateral lower extremity pain, right greater than left. The Claimant reported no improvement for the lower extremity symptoms from the surgery. Following the surgery, the Claimant had four sessions of physical therapy without much symptomatic improvement. Dr. Jatana further noted, “[d]iminished sensation noted in the right lower extremity in an L5 distribution.” Based on a positive straight leg raise test and the lack of improvement postoperatively for the lower extremities, Dr. Jatana recommended repeat MRI imaging “to rule out a recurrent disc herniation or any other changes as far as the central disc herniation at the L4-5 segment” (Claimant’s Exhibit 1, pp. 4-5).

5. On March 4, 2016, Claimant had an MRI of the low back which was compared to November 13, 2015 imaging. The radiologist, Dr. Solsberg, noted a right paracentral protrusion at L4-5 that has increased in size since the prior study. Lateral recess stenosis at that level had progressed and was now considered moderate. Dr. Solsberg also noted that at L5-S1, there was a small non-enhancing, less than 3mm protrusion and bilateral foraminal protrusions but no recurrent protrusion or stenosis (Claimant’s Exhibit 3, pp. 27-28).

6. The Claimant saw Dr. Jatana again on March 7, 2016. At this visit, Dr. Jatana noted, “[r]adicular complaints are primarily in an L5 distribution. Dr. Jatana noted that the Claimant’s March 4, 2016 MRI revealed “epidural scarring at the L5-S1 segment.” Dr. Jatana discussed injection options with the Claimant including right-sided L4-5 and L5-S1 injections and a selective nerve root block at the S1 nerve root. Dr. Jatana also discussed the option of surgical decompression at the L4-5 level if the selective nerve root block provided temporary relief (Claimant’s Exhibit 1, pgs. 6-7).

7. On March 15, 2016, Respondents denied Dr. Jatana’s request for both the requested right L4-S1 transforaminal epidural steroid injection and the S1 selective nerve root block based on a peer review report. The peer reviewer, Dr. Polanco stated the epidural injections do not offer a long term benefit and “[n]o clinical findings are noted, no conservative treatment is noted and there is no indication of functional limitations,” so the requested procedures were not found to be medically necessary (Respondents’ Exhibit C).

8. On March 28, 2016, Dr. Jatana again recommended going forward with the injections to gain diagnostic information. He commented that the peer reviewer’s opinion that there were no physical exam findings to suggest radiculopathy and no new disc protrusion correlating with radiculopathy was “[simply inaccurate based on the updated imaging study postoperatively which shows increased symptoms at the L4-5 segment and some lateral recess stenosis which would be consistent with his clinical picture of a right L3 radiculopathy which is the patient’s chief complaint...He has been completing physical therapy and treatment with anti-inflammatory medications as well as pain medications and no substantial relief has been noted” (Claimant’s Exhibit 1, pp. 8-9).

9. On April 1, 2016, Dr. Jatana’s renewed requests for a right L4-S1 transforaminal epidural steroid injection and the S1 selective nerve root block were

referred for review by Dr. Stephen Lindenbaum. Dr. Lindenbaum noted that he spoke with Dr. Jatana on April 1, 2016. They discussed Claimant's symptoms and Dr. Jatana's plan to use the steroid injections to see if they could reduce pain. He also noted that Dr. Jatana "understands that the S1 nerve block should not be done at the same time [as the steroid injection]." Dr. Lindenbaum recommended authorization of the right L4-S1 transforaminal epidural steroid injection opining that it was medically necessary based on comparison of the March 4, 2016 MRI to the Claimant's preoperative November 13, 2015 MRI. Dr. Lindenbaum did not find the S1 selective nerve root block to be medically necessary as he found the problem predominantly existed at the L4-5 level. Therefore, on April 5, 2016, the Respondents approved the right L4-S1 transforaminal epidural steroid injection and denied the S1 selective nerve root block (Claimant's Exhibit 5, pp. 34-37).

10. On April 7, 2016, the Claimant had an epidural steroid injection (ESI) at L4, L5 and S1 disc levels performed by Dr. Usama Ghazi. Dr. Ghazi noted that the Claimant was unable to tell the difference between the L4 and L5 injections, "reporting that he felt pressure on the back and lateral aspect of the calf and shin…." After the procedure, the Claimant was reevaluated. Prior to the procedure, the Claimant had reported a 7/10 pain level at rest which increased to 10/10 during straight leg raises and afterwards he reported a 0/10 pain level at rest which increased to 4/10 with straight leg raise maneuvers (Claimant's Exhibit 6, pp. 42-43).

11. On April 18, the 2016, Claimant was evaluated by Dr. Jatana who noted that the Claimant still had have some residual L5 radicular complaints in the right lower extremity, but overall noted symptoms were improving. Dr. Jatana also noted that he discussed ongoing treatment with the Claimant, including additional injections vs. surgery if symptoms are unimproved over the long term (Claimant's Exhibit 1, pp. 10-11).

12. The Claimant saw Dr. Jatana again on June 29, 2016 for follow up. Dr. Jatana noted that the Claimant appeared to be the same overall, but no any worse. The Claimant still had radicular symptoms in the bilateral lower extremities with pain scale ranging from 4-7/10. Straight leg raises caused some low back pain and some paresthesias down the right posterior thigh and calf. Dr. Jatana opined that since the Claimant had continued relief from injections, that nonsurgical treatment be considered at this time and Dr. Jatana recommended repeat injections (Claimant's Exhibit 1, pp. 12-13).

13. On July 14, 2016, Dr. Moshe Lewis performed a peer review for the request for a repeat right L4-S1 ESI. Dr. Lewis noted that he spoke with Dr. Jatana regarding the Claimant's post lumbar surgery status and the recent MRI imaging showing an increase in disc size at L4-5 which appeared to be causing the Claimant's radicular pain. Dr. Lewis opined that the Claimant had signs and symptoms consistent with radiculopathy and he recommended approval of the repeat ESI for pain therapeutic purposes to avoid surgery (Claimant's Exhibit 8, pp. 52-56). However, on July 20, 2016, Dr. Frank Polanco performed a peer review for the request for a repeat right L4-S1 ESI.

Dr. Polanco noted that he also spoke with Dr. Jatana on July 20, 2016 to discuss the case. Dr. Polanco came to a different conclusion than Dr. Moshe, stating that the request for a repeat L4-S1 TFESI was not medically necessary as it was not supported by objective documentation of significant sustained relief with functional improvement (Claimant's Exhibit 9).

14. Although the recommended repeat L4-S1 ESI was originally denied, it has since been authorized and, at the hearing, the Respondents stipulated that it is authorized.

15. The Respondents denied the S1 selective nerve root block again on July 25, 2016 as not medically necessary. The denial was based on the peer review report of Dr. Moshe Lewis, who observed that Claimant had been approved for the steroid injection and that "more details about the benefit or lack thereof" were necessary before determining whether the S1 selective nerve root block was clinically indicated (Claimant's Exhibit 10).

16. The Claimant testified that he continues to have radiating pain with associated numbness down the backside of his right leg and into his right foot. He further testified that he has not been placed at maximum medical improvement (MMI) and would like to undergo the recommended selected nerve root block to help with his radicular symptoms.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Reasonable, Necessary and Causally Related

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. § 8-42-101, C.R.S. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000).

This is an admitted claim with respect to the Claimant's low back. The Claimant's treating physicians continue to offer treatment and recommendations related to the Claimant's low back and lower extremity radicular symptoms. Respondents now challenge the reasonableness and necessity of one of the recommended procedures, a selective nerve root block at the S1 level recommended by the Claimant's ATP, Dr. Jatana.

Although Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury in a compensable case, Respondents may, nevertheless, challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care in a case. See *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002), (upholding employer's refusal to pay for third arthroscopic procedure after having paid for multiple surgical procedures). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra; Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). Factual determinations related to this issue must be supported by substantial evidence in the record. § 8-43-301(8), C.R.S. Substantial evidence is that quantum of probative evidence which a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411, 415 (Colo. App. 1995).

There was no persuasive evidence presented that the Claimant's radicular symptoms are related to a pre-existing condition. Rather, the Respondents argue, in part, that the selective nerve root block was denied because an epidural steroid injection was already approved and should not be done at the same time as the selective nerve root block. As the ESI was previously approved and was scheduled to be completed by this time, this argument is moot. Respondents also argue that the selective nerve root block is not clinically indicated based upon peer review reports of physicians who have not treated or examined the Claimant.

The Medical Treatment Guidelines for Low Back pain discuss indications for spinal injections:

> All spinal injections should be preceded by either an MRI or a CT scan. Selection of patients, choice of procedure, and localization of the level for injection should be determined by clinical information indicating strong suspicion for pathologic condition(s) from reproducible exam findings. Diagnostic blocks may be helpful when MRI or other diagnostic tests are not definitive. The number of diagnostic procedures should be limited in any individual patient to those most likely to be primary pain generators. Patients should not receive all of the available or related diagnostic blocks listed merely in an attempt to identify 100% of the pain generators. Blocks are only appropriate if the patient is eligible for increased therapy, such as rhizotomy or active therapy, based on the results of the block. Informed decision making should also be documented for injections and all invasive procedures. This must include a thorough discussion of the pros and cons of the procedure and the possible complications as well as the natural history of the identified diagnosis. The purpose of spinal injections, as well as surgery, is to facilitate active therapy by providing short-term relief through reduction of pain.
>
> (Rule 17, Exhibit 1, p. 21; Exhibit 1 E.2.b.ii)

Here, the Claimant's ATP, Dr. Jatana has noted over time in the medical records that the selective nerve root block is clinically indicated and may provide further insight into the Claimant's pain generator(s) and may provide short-term pain relief that would allow the Claimant to participate more effectively in therapy and other conservative treatment. Dr. Jatana has also noted that this procedure has been considered as a way of avoiding or delaying surgery which is also discussed as a rationale for spinal injections in the Medical Treatment Guidelines.

On January 14, 2016, Dr. Sanjay Jatana performed an L5-S1 microdiscectomy on the Claimant. On February 24, 2016, Dr. Jatana noted the Claimant continued to experience ongoing lower back pain as well as pain bilaterally in the lower extremities right greater than left with no subjective improvement from the lower extremity symptoms. At that time, it was noted that the Claimant had "completed four sessions of physical therapy without much symptomatic improvement." The Claimant continued to undergo physical therapy. On March 7, 2016,Dr. Jatana noted that the Claimant's radicular complaints are primarily in an L5 distribution. Dr. Jatana interpreted the Claimant's March 4, 2016 MRI to reveal epidural scarring at the L5-S1 segment" and ultimately recommend a selective nerve root block at the S1 nerve root. On March 15, 2016, Respondents' denied Dr. Jatana's request for the S1 SNRB in part because the peer reviewer found that no clinical findings were noted, no conservative treatment was noted and there was no indication of functional limitations. On March 28, 2016, Dr. Jatana addressed the reasoning used to support the denial in part, stating, it was "simply inaccurate based on the updated imaging study postoperatively which shows increased symptoms at the L4-5 segment and some lateral recess stenosis which would be consistent with his clinical picture of a right L3 radiculopathy which is the patient's chief complaint...He has been completing physical therapy and treatment with anti-inflammatory medications as well as pain medications and no substantial relief has been noted." On April 7, 2016, the Claimant underwent the recommended injections. On April 18, 2016, the Claimant was evaluated by Dr. Jatana who noted, the Claimant still had some residual L5 radicular complaints in the right lower extremity, but all in all symptoms were improving.

Since his January 14, 2016 surgery, the Claimant has undergone conservative care (physical therapy and medication/pain management), has had an MRI showing an increasing disc bulge and has had a repeat ESI which provided only limited relief to his symptoms. The radicular symptoms are the Claimant's biggest concern at this point. The Claimant has not been released from care and has not reached maximum medical improvement. As such, the Claimant has proven by a preponderance of the evidence that the recommended S1 Select Nerve Root Block is reasonable, necessary and related medical treatment.

ORDER

Based on the above factual findings and legal conclusions, it is therefore ORDERED that:

1. The Claimant has proven by a preponderance of the evidence that the S1 selective nerve root block recommended by Dr. Jatana is reasonable and necessary to cure and relieve the Claimant from the effects of his May 21, 2014 work injury.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 14, 2016

Kimberly A. Allegretti
Administrative Law Judge

1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUE

The issue presented for determination is whether a right knee scope with partial medial and lateral menisectomies is reasonably necessary and related to the work injury.

FINDINGS OF FACT

1. On June 22, 2015, Claimant was rear-ended in a vehicle collision. Claimant was driving south on York street and while completing a right turn, was struck by another vehicle traveling westbound on 13th Street. Claimant testified that his elbow and shoulder hit the door of his vehicle and his knees drew up and hit the dashboard. He immediately noted pain in his left knee and shoulder and felt dizzy and lightheaded. Claimant was taken to the Denver Health emergency department (ED).

2. At the ED images were taken of Claimant's left shoulder and left knee. Both were negative for acute fracture or dislocation. The ED prescribed Percocet for the pain. Claimant was discharged and returned to work. He did not perform any significant work and completed his shift.

3. Later that night, Claimant testified that he experienced progressive symptoms in his back, bilateral neck pain, and mild tingling in his right upper extremity. In addition, Claimant reported that his right knee first became swollen and was locking when he got out of bed to go to the bathroom.

4. Claimant has a history of right knee symptoms predating 2015. Significantly, Claimant had right knee surgery in July 2012. Prior to that surgery, Claimant complained of nightly right knee pain and received narcotics to treat the pain.

5. At hearing, Dr. Messenbaugh, who was recognized as an expert in orthopedic surgery, credibly testified that 15 percent of Claimant's medial meniscus and 40 percent of his lateral meniscus had been removed in the prior surgery. He stated that once the delicate balance of the knee is interrupted by removing portions of the meniscus, the mechanics, protection, and stability of the knee is altered. This leads to aggressive impaction imperfections and to progressive wear and tear of the remainder of the knee, including further tearing of the menisci.

6. At hearing, Claimant testified that he performed some mulching at work a week prior to the accident. He had to get up on the pickup truck with a shovel and wheelbarrow to fill the wheelbarrow up with mulch. He described the motions

involved in this activity as “twisting, turning, lifting the wheelbarrow up…I’d get it back to the back of the truck and lower it. So I would need to use my knees and my arms to lift it and then move it to the spot we were going to lay mulch.” (HT 15: 16-21). Claimant claimed that he experienced no pain with these actions.

7. The day following the accident, June 23, 2015, Claimant went into the Center for Occupational Safety and Health (COSH) and saw Dr. David Blair. Dr. Blair concluded that Claimant suffered from multiple musculoskeletal injuries from the June 22, 2015, event and estimated Claimant’s maximum medical improvement (MMI) date to be in approximately one month.

8. Claimant underwent an MRI of his neck and right knee on July 2, 2015, at Diamond Hill Health Images Center. The MRI of the knee revealed a multiplanar tear of the anterior horn body and posterior horn of the medial meniscus and lateral meniscus, thickening and increased signal in the anterior cruciate ligament, prepatellar bursitis, Grade III chondromalacia of the patellar apex, and Grade IV chondromalacia lateral tibial plateau. The neck MRI showed moderate C5-6 central stenosis with moderate to severe bilateral foraminal stenosis, moderate C6-7 central stenosis with severe bilateral foraminal stenosis, and moderate to severe left and moderate right C7-T1 foraminal stenosis. Conservative treatment was initially recommended for both the knee and neck.

9. Claimant’s neck began to improve, but his right knee continued to bother him. Therefore, Dr. Motz recommended arthroscopic surgery in August 2015. Respondent denied the surgical request for the right knee surgery after Dr. Messenbaugh completed a W.C.R.P., Rule 16, report stating that the knee surgery was not related to the motor vehicle accident.

10. Respondent retained Dr. Jeffrey Broker, Ph.D., to review the biomechanics of the car accident and the mechanisms of injury. Dr. Broker was qualified as an expert in biomechanics. Dr. Broker concluded that while Claimant reported the impact speed of 20 to 30 mph, such an impact does not appear consistent with the damage profile, such descriptions of impact speed are almost always unreliable, and it is quite possible that Claimant did not know the collision was coming. In addition, the damage to the rear aspect of Claimant’s truck characterizes the collision as a low-speed, rear-end collision event. Dr. Broker assumed a conservative upper limit of impact-phase change in speed of 10mph, with an associated impact phase peak acceleration of 10 Gs. Dr. Broker found that Claimant’s whiplash associated injuries were biomechanically consistent with cervical spine motions, forces and torques which could have developed from a rear-end impact.

11. Dr. Broker credibly opined that Claimant’s report of striking his knees on the dashboard or steering column in the accident, however, are not biomechanically consistent with rear-end collisions. Occupant motions are dominantly rearward relative to the vehicle, away from the steering column. Only on the rebound could

mild contact occur, but the contact is unlikely, due to pelvis restraint, limited rebound at the low seatback, and even bracing of the legs.

12. Further, Drs. Broker and Messenbaugh credibly opined that impacts to the front of knees are not recognized mechanisms of tearing the meniscus or the ACL. The loading conditions associated with these injuries are absent in rear-end collisions, and not associated with simple knee impacts. In addition, given Claimant's prior right knee symptoms and surgery, no traumatic event is needed, from a biomechanical perspective, to explain Claimant's right knee condition before or after the collision.

13. Dr. Broker credibly opined that even if Claimant had been sitting forward on his seat and to the left, as Claimant testified, that would not affect the function of the seatbelt preventing the passenger driver from moving forward.

14. In addition, Dr. Broker credibly opined at hearing that the seatbelt would prevent the loading event that causes meniscus tears. In order to achieve sufficient loading to catch the meniscus, there needs to be more than body weight compressing the knee. In this case, when Claimant was sitting in the vehicle, his body weight was dispersed between his foot, leg, lap belt, shoulder harness and friction with the seat and no loading event occurred. Dr. Broker also credibly testified that even if the motor vehicle accident occurred at a higher speed than he estimated, that would not change his conclusions.

15. In his W.C.R.P., Rule 16, report, Dr. Messenbaugh agreed with Dr. Broker's assessment. The doctor opined that one does not tear a medial meniscus, much less both a medial and lateral meniscus, by sustaining a direct blow to one's knee. Dr. Messenbaugh further opined that Claimant merely experienced the expected continued, progressive wear and tear osteoarthritis of his right knee including degenerative wearing and tearing of both his medial and lateral menisci and not an acute injury. Finally, Dr. Messenbaugh credibly opined that based on the chronic pathology on Claimant's right knee MRI, he may benefit from the right knee arthroscopy. However, Claimant's need for surgery is not related to the motor vehicle accident.

16. Dr. Messenbaugh testified that the MRI of Claimant's right knee suggested that the changes in his knee were degenerative in nature and not acute. The doctor also credibly opined that acute meniscal tears are painful and that pain would register instantly, not hours after the event.

17. Both Drs. Messenbaugh and Broker agreed that Claimant's mulching activities in the days prior to the motor vehicle accident involved the type of twisting activities that could have caused the meniscus tear.

18. Respondent contests the reasonableness, necessity, and relatedness of a right knee arthroscopy to the motor vehicle accident. It is found that that Claimant

right knee condition and proposed treatment is not related to the work injury of June 22, 2015.

CONCLUSIONS OF LAW

Having entered the foregoing Findings of Fact, the following Conclusions of Law are reached.

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

3. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986). If there is a compensable injury, the employer and its insurance carrier must provide all medical benefits, which are reasonably necessary to cure and relieve the work-related injury. Section 8-42-101 C.R.S.; *Owens v. Indus. Claim Appeals Office of State of Colo.,* 49 P.3d 1187, 1188 (Colo. Ct. App. 2002). The right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-42-101, C.R.S.; See *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. Ct. App. 1997). Where liability for a particular medical benefit is contested, the claimant must prove that it is reasonably necessary to treat and is causally related to the industrial injury. *Id*.; See *Grover v. Industrial*

Commission, 759 P2d 705 (Colo. 1988). The record must distinctly reflect that the medical treatment was necessary and designed to cure or relieve the effects of the work injury. *Pub. Serv. Co. of Colorado v. Indus. Claim Appeals Office of State of Colo.,* 979 P.2d 584, 585 (Colo. Ct. App. 1999).

4. Dr. Broker, a biomechanical expert, credibly testified, and it is concluded, that it is not biomechanically consistent with a rear-end collision for someone to strike their knees on the dash or steering column. Additionally, Dr. Broker credibly testified, and it is concluded, that the claimed mechanism of injury, a blow to the front of the knee, does not cause a meniscus tear. There needs to be weight bearing and then either twisting or flexion or extension for a meniscus tear to occur.

5. Dr. Messenbaugh, an orthopedic surgeon, credibly testified, and it is concluded, that Claimant's right knee condition is not related to the motor vehicle accident. Dr. Messenbaugh agreed with Dr. Broker that a meniscus does not tear by sustaining a direct blow to the knee. Instead, there needs to be some sort of weight bearing twisting motion. Claimant's meniscus tear is more likely related to his history of degenerative osteoarthritis and previous right knee surgery and not due to an acute injury.

6. Claimant's preexisting history of right knee issues caused Drs. Broker and Messenbaugh to opine that no traumatic event is needed to explain the current condition of Claimant's knee.

7. Accordingly, it is concluded that a right knee surgery is not related or reasonably needed to cure and relieve Claimant of the effects of the compensable motor vehicle accident.

ORDER

It is therefore ordered that:

Claimant claim for medical benefits, i.e., a right knee scope with partial medial and lateral menisectomies, is not reasonably necessary or related to the work injury.

All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That

you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that her scheduled 23% left upper extremity impairment rating should be converted to a 14% whole person rating.

2. Whether Claimant has established by a preponderance of the evidence that she should be permitted to reopen her January 30, 2015 Workers' Compensation claim based on a worsening of condition pursuant to §8-43-303(1), C.R.S.

FINDINGS OF FACT

1. Claimant worked for Employer as a Back Door Receiver. On January 30, 2015 Claimant was moving a pallet jack cart backwards and tripped over the corner of another cart. She fell to the ground and landed on her left shoulder. Claimant immediately experienced left shoulder pain and sought medical treatment.

2. On February 3, 2015 Claimant visited Bryan Bomberg, M.D. for an examination. He noted that Claimant exhibited tenderness over the lateral subacromial space and limited left shoulder range of motion. Dr. Bomberg recommended physical therapy treatment and a left shoulder MRI.

3. On February 6, 2015 Claimant underwent a left shoulder MRI. The MRI revealed a "large full-thickness tear of the distal fibers of the supraspinatus and infraspinatus tendons."

4. After receiving conservative treatment Claimant underwent left shoulder surgery with Dr. Bomberg on April 14, 2015. The surgery included an arthroscopic rotator cuff repair, a modified Mumford procedure and a subacromial decompression.

5. On December 8, 2015 Claimant returned to Dr. Bomberg for an evaluation. Dr. Bomberg determined that Claimant had reached Maximum Medical Improvement (MMI). He noted that Claimant had a "lack of active [left shoulder] elevation" and significant weakness. Dr. Bomberg remarked that, if Claimant's left shoulder became more painful, she might require a reverse shoulder replacement. He referred Claimant for an impairment rating.

6. On January 21, 2016 Claimant underwent an impairment evaluation with John Tobey, M.D. Dr. Tobey agreed with Dr. Bomberg that Claimant had reached MMI on December 8, 2015. Relying on the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*), Dr. Toby assigned Claimant a 23% left upper extremity impairment rating that converted to a 14% whole person impairment. The rating consisted of 10% for a distal clavicle excision and 14% for

range of motion deficits. Dr. Tobey remarked that Claimant exhibited "significant limitation with range of motion particularly in flexion and abduction at 90 degrees." Moreover, he recounted that Dr. Bomberg had noted that he "did not expect to see much more functional improvement return secondary to the atrophy of the supraspinatus." Dr. Tobey commented that Claimant was entitled to receive medical maintenance benefits in the form of intermittent Ibuprofen usage and an ongoing home exercise program. He also agreed with Dr. Bomberg that Claimant would be a candidate for a reverse total shoulder replacement in the future if her pain became severe.

7. On March 31, 2016 Respondent filed a Final Admission of Liability (FAL) consistent with Dr. Tobey's MMI and impairment determinations. Respondent also recognized that Claimant was entitled to receive post-MMI medical treatment that was reasonable, necessary and related to her January 30, 2015 admitted left shoulder injury.

8. On March 9, 2016 Respondent's attorney authored a letter to Dr. Tobey inquiring whether Claimant had "functional impairment above the glenohumeral joint" of her left upper extremity. Dr. Tobey simply responded "no."

9. Claimant filed a timely objection to the FAL. On April 25, 2016 Claimant filed an Application for Hearing and a Petition to Reopen.

10. On April 19, 2016 Claimant underwent an independent medical examination with John S. Hughes, M.D. Dr. Hughes reviewed Claimant's medical records and performed a physical examination. He noted that Claimant exhibited range of motion deficits in her left upper extremity. Dr. Hughes specifically commented that there was "constant crepitation elicited during passively assisted motion of the left shoulder particularly in the plane of flexion/extension." He thus remarked that Claimant suffered the "progressive development of left shoulder crepitation and range of motion deficits consistent with adhesive capsulitis." Dr. Hughes summarized that "range of motion criteria alone [were] consistent with a worsening" of Claimant's January 30, 2015 admitted left shoulder injury. He concluded that Claimant had not reached MMI.

11. Relying on the *AMA Guides* Dr. Hughes assigned Claimant a 21% left upper extremity impairment rating based on range of motion deficits. He noted constant crepitation at a 20% severity grade based on §3.1j of the *AMA Guides*. Multiplying the 20% severity grade by 60% as outlined in Table 17 yielded a 12% left upper extremity impairment. Combining the range of motion deficits and the Table 17 rating yielded a 30% left upper extremity or 18% whole person impairment rating. Dr. Hughes summarized that Claimant suffered a left upper extremity functional loss that extended beyond the "glenohumeral joint into the region of the cervical spine." The functional impairment loss was not documented by Dr. Tobey in his January 21, 2016 examination of Claimant. The change was thus consistent with a worsening of Claimant's work-related left shoulder condition.

12. On May 4, 2016 Claimant underwent an independent medical examination with Allison M. Fall, M.D. Dr. Fall considered Claimant's medical records, conducted a

physical examination and reviewed Dr. Hughes' April 19, 2016 independent medical examination report. She diagnosed Claimant with a left shoulder subscapularis tear as a result of her January 30, 2015 industrial injury. Dr. Fall commented that, although MRI findings revealed tears of the supraspinatus, infraspinatus and subscapularis, only the subscapularis did not reveal associated atrophy that suggested a long-standing process. Dr. Fall also commented that Claimant did not exhibit any functional impairment into the neck. Specifically, Claimant had not reported any functional deficits proximal to the glenohumeral joint. Although Claimant had noted range of motion limitations of the left shoulder in various arm positions, she had not described any functional limitations related to the cervical or thoracic spines. Dr. Fall also noted that Claimant did not exhibit any left shoulder crepitus. She assigned Claimant a 14% left upper extremity impairment rating.

13. On July 5, 2015 Claimant visited Dr. Bomberg for an examination. He noted that Claimant had continued to experience "increasing discomfort in her trapezial musculature and cervical spine aspect on the left side." Dr. Bomberg remarked that Claimant could not elevate her left arm "above the horizon" and had significant rotator cuff weakness. She had increasing left shoulder pain because of the "degree of heavy lifting and work she does and the compensation of her trapezial and cervical musculature." Dr. Bomberg summarized that Claimant's shoulder had not improved and her potential outcome would be a reverse shoulder arthroplasty.

14. On August 15, 2016 the parties conducted she pre-hearing evidentiary deposition of Allison M. Fall, M.D. Dr. Fall agreed with Drs. Bomberg and Tobey that Claimant had reached MMI on December 8, 2015. She explained that the purpose of the shoulder joint was to move the arm in different planes. Dr. Fall noted that Claimant had complained of some cervical and trapezius area pain. However, she concluded that, even if Claimant has some tightness from tension and guarding in the musculature of the cervical and trapezius areas, the tightness did not constitute functional impairment warranting a whole person rating. Dr. Fall also reiterated that Claimant did not exhibit left shoulder crepitus during her independent medical examination. She maintained that Claimant has not suffered a worsening of condition since she reached MMI and was not a candidate for left shoulder replacement surgery.

15. Dr. Hughes testified at the hearing in this matter. He explained that Claimant had suffered a full thickness left rotator cuff tear. Dr. Hughes maintained that Claimant experienced left upper extremity pain in muscles proximal to or beyond the glenohumeral joint. He specified that Claimant has left shoulder crepitus that causes functional impairment into her neck area. Nevertheless, he acknowledged that there was no documented crepitus in Dr. Bomberg's December 8, 2015 evaluation, Dr. Tobey's January 21, 2016 examination or Dr. Fall's May 4, 2016 independent medical examination. Finally, Dr. Hughes commented that Claimant had suffered a worsening of condition since reaching MMI because she exhibited additional range of motion limitations, developed crepitus and likely suffered from adhesive capsulitus.

16. Claimant testified at the hearing in this matter. She detailed her left shoulder range of motion limitations. Claimant stated that she is only able to lift her left

arm in front of her to about chest height before she is stopped because of pain from her shoulder into her neck. She remarked that she is also only able to reach out to her side to about chest height because of pain in her shoulder that extends into her neck. Claimant is also only able to reach back a few inches because of the pain in her shoulder that extends into her neck. Finally, Claimant summarized that her condition has worsened since April 2016 because she is suffering increased pain in her left shoulder and neck.

17. Claimant has demonstrated that it is more probably true than not that her scheduled 23% left upper extremity impairment rating should be converted to a 14% whole person rating. Claimant suffers functional impairment proximal to, or above, the left arm at the shoulder as a result of her January 30, 2015 industrial injury. She credibly testified that she has range of motion limitations because of left shoulder pain that extends into her neck area. Moreover, Dr. Hughes persuasively explained that Claimant had suffered a full thickness left rotator cuff tear. He maintained that Claimant had left upper extremity pain in muscles proximal to or beyond the glenohumeral joint. Dr. Hughes summarized that Claimant suffered a left upper extremity functional loss that extended beyond the "glenohumeral joint into the region of the cervical spine."

18. In contrast, Dr. Tobey responded "no" to an inquiry from Respondent's attorney about whether Claimant had "functional impairment above the glenohumeral joint" of her left upper extremity. Furthermore, although Dr. Fall explained that Claimant had noted range of motion limitations of the left shoulder, she had not described any functional limitations related to the cervical or thoracic spines. Dr. Fall concluded that, even if Claimant has some tightness from tension and guarding in the musculature of the cervical and trapezius areas, the tightness did not constitute a functional impairment warranting a whole person rating. However, despite the response of Dr. Tobey and the reasoning of Dr. Fall, the record reveals that Claimant has consistently experienced functional limitations to her left upper extremity that have extended beyond her glenohumeral joint. Claimant's left shoulder pain extends into her neck and shoulder areas and limits her movements. Accordingly, Claimant is entitled to a 14% whole person impairment rating for her January 30, 2015 industrial injury.

19. Claimant has failed to establish that it is more probably true than not that she should be permitted to reopen her January 30, 2015 Workers' Compensation claim based on a worsening of condition. On December 8, 2015 Dr. Bomberg determined that Claimant had reached MMI. He noted that Claimant had a "lack of [left shoulder] elevation" and significant weakness. On January 21, 2016 Dr. Tobey agreed with Dr. Bomberg that Claimant had reached MMI on December 8, 2015. He assigned a 23% left upper extremity impairment rating that converted to a 14% whole person impairment. He remarked that Claimant exhibited "significant limitation with range of motion particularly in flexion and abduction at 90 degrees." Moreover, Dr. Tobey recounted that Dr. Bomberg had stated he "did not expect to see much more functional improvement return secondary to the atrophy of the supraspinatus." The record thus reveals that Claimant had significant left shoulder limitations at the time she reached MMI and there was little expectation that her function would improve. Finally, Dr. Fall

persuasively summarized that Claimant has not suffered a worsening of condition since reaching MMI.

20. In contrast, Dr. Hughes maintained that Claimant had suffered a worsening of condition since reaching MMI because she exhibited additional range of motion limitations, developed crepitus and likely suffers from adhesive capsulitus. Nevertheless, he acknowledged that there was no documented crepitus in Dr. Bomberg's December 8, 2015 evaluation, Dr. Tobey's January 21, 2016 examination or Dr. Fall's May 4, 2016 independent medical examination. Furthermore, Claimant testified that her condition has worsened since April 2016 because she is suffering increased pain in her left shoulder and neck. However, the persuasive medical records and testimony reflect that Claimant had been suffering from significant left shoulder range of motion limitations when she reached MMI and there was little chance of improvement. Claimant's continued left shoulder range of motion deficits do not demonstrate that she has suffered a change in the condition of her original compensable injury or a change in her physical or mental condition that is causally connected to the original injury. Accordingly, Claimant's request to reopen her January 30, 2015 Workers' Compensation claim based on a worsening of condition pursuant to §8-43-303(1), C.R.S. is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Whole Person Conversion

4. Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in §8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. The schedule includes the loss of the "arm at the shoulder." *See* §8-42-107(2)(a), C.R.S. However, the "shoulder" is not listed in the schedule of impairments. *See Maree v. Jefferson County Sheriff's Department*, W.C. No. 4-260-536 (ICAP, Aug. 6, 1998); *Bolin v. Wacholtz*, W.C. No. 4-240-315 (ICAP, June 11, 1998).

5. When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. *See* §8-42-107(8)(c), C.R.S.

6. Because §8-42-107(2)(a), C.R.S. does not define a "shoulder" injury, the dispositive issue is whether a claimant has sustained a functional impairment to a portion of the body listed on the schedule of impairments. *See Strauch v. PSL Swedish Healthcare*, 917 P.2d 366, 368 (Colo. App. 1996). Whether a claimant has suffered the loss of an arm at the shoulder under §8-42-107(2)(a), C.R.S., or a whole person medical impairment compensable under §8-42-107(8)(c), C.R.S., is determined on a case-by-case basis. *See DeLaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000).

7. The Judge must thus determine the situs of a claimant's "functional impairment." *Velasquez v. UPS,* W.C. No. 4-573-459 (ICAP Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. *Id.* Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *Eidy v. Pioneer Freightways*, W.C. No. 4-291-940 (ICAP, Aug. 4, 1998).

8. As found, Claimant has demonstrated by a preponderance of the evidence that her scheduled 23% left upper extremity impairment rating should be converted to a 14% whole person rating. Claimant suffers functional impairment proximal to, or above, the left arm at the shoulder as a result of her January 30, 2015 industrial injury. She credibly testified that she has range of motion limitations because of left shoulder pain that extends into her neck area. Moreover, Dr. Hughes persuasively explained that Claimant had suffered a full thickness left rotator cuff tear. He maintained that Claimant had left upper extremity pain in muscles proximal to or beyond the glenohumeral joint. Dr. Hughes summarized that Claimant suffered a left upper extremity functional loss that extended beyond the "glenohumeral joint into the region of the cervical spine."

9. As found, in contrast, Dr. Tobey responded "no" to an inquiry from Respondent's attorney about whether Claimant had "functional impairment above the glenohumeral joint" of her left upper extremity. Furthermore, although Dr. Fall explained that Claimant had noted range of motion limitations of the left shoulder, she had not described any functional limitations related to the cervical or thoracic spines. Dr. Fall concluded that, even if Claimant has some tightness from tension and guarding in the

musculature of the cervical and trapezius areas, the tightness did not constitute a functional impairment warranting a whole person rating. However, despite the response of Dr. Tobey and the reasoning of Dr. Fall, the record reveals that Claimant has consistently experienced functional limitations to her left upper extremity that have extended beyond her glenohumeral joint. Claimant's left shoulder pain extends into her neck and shoulder areas and limits her movements. Accordingly, Claimant is entitled to a 14% whole person impairment rating for her January 30, 2015 industrial injury.

Worsening of Condition

10. Section 8-43-303(1), C.R.S. provides that a Worker's Compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving his condition has changed and he is entitled to benefits by a preponderance of the evidence. *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (ICAP, Oct. 25, 2006). The determination of whether a claimant has sustained his burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* W.C. No. 4-543-945 (ICAP, July 19, 2004).

11. As found, Claimant has failed to establish by a preponderance of the evidence that she should be permitted to reopen her January 30, 2015 Workers' Compensation claim based on a worsening of condition. On December 8, 2015 Dr. Bomberg determined that Claimant had reached MMI. He noted that Claimant had a "lack of [left shoulder] elevation" and significant weakness. On January 21, 2016 Dr. Tobey agreed with Dr. Bomberg that Claimant had reached MMI on December 8, 2015. He assigned a 23% left upper extremity impairment rating that converted to a 14% whole person impairment. He remarked that Claimant exhibited "significant limitation with range of motion particularly in flexion and abduction at 90 degrees." Moreover, Dr. Tobey recounted that Dr. Bomberg had stated he "did not expect to see much more functional improvement return secondary to the atrophy of the supraspinatus." The record thus reveals that Claimant had significant left shoulder limitations at the time she reached MMI and there was little expectation that her function would improve. Finally, Dr. Fall persuasively summarized that Claimant has not suffered a worsening of condition since reaching MMI.

12. As found, in contrast, Dr. Hughes maintained that Claimant had suffered a worsening of condition since reaching MMI because she exhibited additional range of motion limitations, developed crepitus and likely suffers from adhesive capsulitus. Nevertheless, he acknowledged that there was no documented crepitus in Dr. Bomberg's December 8, 2015 evaluation, Dr. Tobey's January 21, 2016 examination or Dr. Fall's May 4, 2016 independent medical examination. Furthermore, Claimant testified that her condition has worsened since April 2016 because she is suffering increased pain in her left shoulder and neck. However, the persuasive medical records

and testimony reflect that Claimant had been suffering from significant left shoulder range of motion limitations when she reached MMI and there was little chance of improvement. Claimant's continued left shoulder range of motion deficits do not demonstrate that she has suffered a change in the condition of her original compensable injury or a change in her physical or mental condition that is causally connected to the original injury. Accordingly, Claimant's request to reopen her January 30, 2015 Workers' Compensation claim based on a worsening of condition pursuant to §8-43-303(1), C.R.S. is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following Order:

1. Claimant suffered a 14% whole person impairment as a result of her January 30, 2015 industrial injury.

2. Claimant's request to reopen her January 30, 2015 Workers' Compensation claim is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-995-144-01

PRELIMINARY MATTER

An Order was originally entered on September 7, 2016. The Order contained an incorrect calculation. The parties jointly requested a Corrected Order that would provide an accurate calculation of AWW based on the method the ALJ determined the AWW should be calculated. This Corrected Findings of Fact, Conclusions of Law and Order is issued to correct the mistaken calculation.

ISSUES

1. Calculation of the Claimant's Average Weekly Wage (AWW).

2. Whether the Claimant proved that she is entitled to temporary partial disability benefits from September 2, 2015 to May 19, 2016.

FINDINGS OF FACT

1. The Claimant was an automobile sales person for Employer. She sustained an admitted workplace injury to her low back and cervical spine on September 1, 2015.

2. Prior to the Claimant's current admitted workplace injury, the Claimant had been receiving treatment for a chronic low back condition due to a 2009 work-related injury. Her chiropractor, Dr. Karen Cain, DC, stated on February 11, 2015 that the Claimant had a prior chronic pain condition that required on-going management. At that time, she recommended continuing chiropractic care, massage therapy and physical therapy (Respondents' Exhibit G, pp. 62-63).

3. The Claimant was also evaluated by Don Fresques, NP at Dr. George Schakaraschwili's office on September 10, 2014, after her prior workers' compensation physician Dr. Rick Artist retired. The Claimant's diagnoses at that time included subjective coccydynia, myofascial pain syndrome, and chronic pain and opioid dependence. NP Fresques noted that the Claimant had no true pain generator at that time, and he expressed concern over her high doses of opioid medications. He recommended continued chiropractic and weaning off the Percocet, OxyContin and all opioid medications. The Claimant agreed to be weaned off of all opioid medications and to continue care with Dr. Schakaraschwili's office (Respondents' Exhibit F, pp. 46-47).

4. On cross-examination, the Claimant testified that she completed the pain scale in Dr. Cain's records. She also marked the body parts that were hurt on the pain diagram and indicated what symptoms she was feeling. In the year of chiropractic treatments with Dr. Cain preceding the September 1, 2015 injury, the Claimant always

marked on the pain scale that her pain was somewhere between moderate and severe. The records also show that in the year preceding her September 1, 2015, the Claimant circled her neck and low back as body parts that were in pain (Respondents' Exhibit G, pp. 51-76). In the year prior to September 1, 2015, the Claimant consistently complained of symptoms in her neck including aching, stiffness, tightness, pain and spasms (Respondents' Exhibit G, pp. 66, 69, and 72). In the year prior to September 1, 2015, Claimant consistently complained of symptoms in her low-back including pain, pressure, stabbing, aching, stiffness, spasm, discomfort and pressure (Respondents' Exhibit G, pp. 72 and 74). On redirect, the Claimant testified that although she noted the pain was in the "moderate" range, she has a high threshold for pain and moderate pain for her is a tolerable pain. She testified that the levels of pain she was feeling prior to the September 1, 2015 work injury were different and that after the work injury, her pain was worse. The Claimant testified that prior to September 1, 2015, she was feeling significantly better from her prior injury, better than she had been feeling in a very long time.

5. When the Claimant was injured on September 1, 2015, she was first treated by Dr. Michael Striplin on September 2, 2015. Dr. Striplin placed the Claimant on temporary restrictions, limiting her to lifting 15 pounds, and no repetitive forward bending (Respondents' Exhibit H, p. 86). Dr. Striplin entered the same restrictions on September 10, 2015 (Respondents' Exhibit H, p. 87).

6 The Claimant's care was subsequently transferred to Concentra and on September 21, 2015, the Claimant began treating with Dr. Carol Ramsey. Dr. Ramsey noted that "patient has a history of 2009 sacroiliac injury at work. On September 1, 2015, she was talking to her boss when the chair broke, and she fell backwards causing herself to experiencing pain over her left SI joint again." She was diagnosed with sacroiliac dysfunction (Respondents' Exhibit I, p. 90). Dr. Ramsey issued restrictions. Dr. Ramsey's restrictions were as follows: May lift up to 15 pounds frequently (up to six hours per day), may lift up to 25 pounds occasionally (up to 3 hours per day), may push/pull up to 30 pounds frequently (up to six hours per day), may bend occasionally (up to 3 hours per day), may stand frequently (up to six hours per day), sit as needed. Stretch breaks as needed (Respondents' Exhibit I, pp. 88-91). The same restrictions were imposed on September 28, 2015 (Respondents' Exhibit I, p. 94). On that date, Dr. Ramsey again remarked that Claimant's pain was "along the left SI joint and extending into the buttock" (Respondents' Exhibit I, p. 96).

7. On October 6, 2015, the Claimant was evaluated by Dr. Lloyd Thurston at Concentra. He noted that the Claimant had a prior SI injury 6 years prior and that she does not want medications. He diagnosed the Claimant with sacroiliac dysfunction, along with cervical sprain and lumbar strain. He recommended physical therapy and imposed the same restrictions as Dr. Ramsey (Respondents' Exhibit I, pp. 103-105).

8. On October 9, 2015, the Claimant saw Dr. Darla Draper who noted that the Claimant has not wanted medications but now her pain is preventing sleep and she would like medications. Dr. Draper assessed the Claimant with cervical sprain, lumbar

sprain and sacroiliac dysfunction and imposed the same restrictions as Dr. Thurston and Dr. Ramsey (Respondents' Exhibit I, pp. 109-111).

9. The Claimant saw PA-C Rammohan Naidu on October 15, 2015 and she reported that she was still in significant pain but has been working with restrictions. She reported that she was afraid that she might lose her job and she really wants to work. Mr. Naidu noted that Claimant had undergone an MRI of the lumbar spine which was "essentially normal." PA-C Naidu assessed the Claimant with multilevel degenerative disc disease, lumbar facet arthropathy and multilevel facet arthropathy. PA-C Naidu changed the Claimant's restrictions. The Claimant's restrictions were changed to the following: may lift up to 15 pounds constantly (up to 8 hours per day), may push/pull up to 30 pounds constantly (up to 8 hours per day), sit as needed, stretch breaks as needed (Respondents' Exhibit I, pp. 112-114). The same restrictions were imposed by Dr. Thurston on October 30, 2015, November 20, 2015 and December 18, 2015 (Respondents' Exhibit I, pp. 128, 134 and 141).

10. The Claimant saw Dr. Frederic Zimmerman for a physiatry consultation on October 29, 2015. Dr. Zimmerman noted the prior 2009 low back injury for which she was undergoing maintenance care. The Claimant reported that "her current set of symptoms are in a different location and different character than her preexisting low back pain." After physical examination noting pain throughout the lumbosacral region, perisacral region and bilateral SI joints and lumbosacral facets, Dr. Zimmerman assessed the Claimant with lumbosacral contusion, bilateral SI joint pain and extension based pain at the lumbosacral facets with evidence of mild facet arthrosis on MRI. He recommended SI joint and L5-S1 facet injections for diagnostic purposes (Respondents' Exhibit I, pp. 120-123).

11. Dr. John Burris evaluated the Claimant on February 4, 2016 for delayed recovery issues. Dr. Burris noted that the Claimant received significant, but temporary, relief from the SI joint injections but did not receive benefit from the facet injections. Dr. Burris noted that the Claimant is resistant to some recommended treatments, including medications and chiropractic care through Concentra due to prior issues. His diagnoses were low back pain and cervical strain. He opined that her examination was benign with no objective findings other than diffuse tenderness other than the positive response to the SI joint injections. Dr. Burris indicated that Claimant had refused to accept fibromyalgia or somatization diagnoses from Dr. Zimmerman. He further indicated that he discussed "the relatively minor nature of the original mechanism and expectations for complete recovery in light of the negative diagnostic testing." He recommended a pelvic x-ray to rule out occult fracture. He also recommended chiropractic treatment with Dr. Cain as the Claimant had a positive response with her in the past, subject to the medical treatment guideline limitations for workers' compensation cases. Dr. Burris recommended that Claimant work "light duty" but imposed only one restriction: no lifting over 20 pounds (Respondents' Exhibit I, pp. 145-146).

12. The Claimant returned to Dr. Thurston on February 11, 2016. Dr. Thurston reviewed the pelvic x-ray and found nothing "worrisome" (Respondents' Exhibit I, p. 151).

13. The Claimant returned to Dr. Burris on March 23, 2016. Dr. Burris noted no significant changes but also noted that a second opinion might be considered. He noted that the Claimant was not happy with her ATP Dr. Zimmerman because of his conclusions of somatization and fibromyalgia, which the Claimant insists she does not have. Again, Dr. Burris imposed the same 20 pounds lifting restriction (Respondents' Exhibit I, pp. 154-155).

14. Following her September 1, 2015 injury, the Claimant continued to treat with Dr. Cain. As she had prior to September 1, 2015, the Claimant filled out a pain diagram when she treated at Dr. Cain's office. On September 3, 2015, the Claimant marked her pain between "work" and "sleep", which coincided with the same place she had previously marked between "moderate" and "severe" [1] (Respondents' Exhibit G, p. 77). She made the same indication on September 22, 2015 and September 28, 2015 (Respondents' Exhibit G, pp. 78 and 80). On February 15, 2016 and February 29, 2016, the Claimant again marked her pain between moderate and severe (Respondents' Exhibit G, pp. 81 and 85).

15. Dr. Nicholas Olsen performed an independent medical exam on behalf of Respondents, and issued a report dated February 29, 2016. He reviewed Claimant's medical history related to her 2009 injury and prepared a thorough written summary of medical records from December 4, 2009 – August 6, 2015 (Respondents' Exhibit E, pp. 22-36). Dr. Olsen noted that the Claimant's diagnoses for that injury included "low back pain, left SI joint versus left lumbar facet with myofascial pain in the high lumbar and thoracic region" (Respondents' Exhibit E, p. 23). He noted that the Claimant had undergone a sacroiliac joint block, in April of 2010, which resulted in a non-diagnostic response (Respondents' Exhibit E, p. 24). Dr. Olsen also noted that the Claimant had undergone an FCE on October 4, 2010 which placed her in the light level work category. She was restricted from lifting more than 20 pounds from the floor to overhead and more than 5 pounds frequently. On October 11, 2010, Dr. Artist assigned the Claimant permanent restrictions, of "no lifting more than 20 occasionally, 5 pounds frequently" (Respondents' Exhibit E, p. 26). The Claimant continued to treat for her pain complaints for a number of years. On February 22, 2013, Dr. Artist told the Claimant that her prognosis was guarded (Respondents' Exhibit E, p. 30). Dr. Olsen noted that on January 9, 2014, Dr. Cain indicated that the Claimant was struggling to make progress and her back pain was escalating on January 17, 2014 (Respondents' Exhibit E, p. 31).

16. The Claimant told Dr. Olsen that her pre-existing low back symptoms were located in the L3 area. She stated that she was placed at MMI at some point but did not know the date. She did not recall if she had an impairment. She advised that post-MMI, she continued massage and chiropractic care. (Respondents' Exhibit E, p. 40). After physical and neurological examination, Dr. Olson opined that he was unable to identify a persistent diagnosis of SI joint dysfunction and he was unable to identify any specific pain generator related to the September 1, 2015 injury. This is based in part on his

[1] The Claimant testified on re-direct examination that she did not notice the difference in the pain scales with these different categories

construing the Claimant's response to the SI joint injection from Dr. Zimmerman as non-diagnostic based upon Claimant's pain diary as opposed to her memory of 50% pain relief or Dr. Zimmerman's report of 75%-80% (Respondents' Exhibit E, p. 43). Dr. Olsen also reviewed Claimant's spinal MRI which she showed her SI joint. He noted that it was well visualized, with no evidence of abnormal physiology. The only changes on the lumbar spine were degenerative in nature. Dr. Olsen also examined a cervical spine MRI, which was also normal except for degenerative changes (Respondents' Exhibit E, pp. 43-44). Dr. Olsen opined that the Claimant "does not demonstrate any functional deficits. While she has not made any functional gains in the last 30 days, she is essentially functioning at full capacity. The subjective complains she reports of pain do not lead to functional deficits." (Respondents' Exhibit E, p. 43-44). He further opined that the Claimant "has some limitations in lumbar extension which are attributed to her progressive disease persisting after the 2009 injury" (Respondents' Exhibit E, p. 45).

17. Dr. Olsen testified at hearing as an expert witness in the areas of physical medicine and rehabilitation as well as Workers' Compensation Level II accreditation matters. He testified that he could not identify any specific diagnosis that he attributed to the current work injury due to the Claimant's significant preexisting issues. He testified that he looked at possible SI joint dysfunction due to Dr. Zimmerman's finding of a positive response to an SI injection, but he concluded that the Claimant's response to Dr. Zimmerman's SI joint injection yielded the same result as an SI joint injection that she had following her 2009 injury, both of which Dr. Olsen believes indicated a non-diagnostic response. He testified that Claimant had no functional deficits as a result of her September 1, 2015 injury. He made this determination based his review of the Claimant's medical workup following her September 1, 2015 injury which he finds failed to reveal any specific pain generator. He also opines that her imaging studies showed no significant change. Dr. Olsen further testified that Dr. Artist's last 20 pound lifting restriction from the 2009 injury remained in place at the time of the Claimant's September 1, 2015 injury, and that remained an appropriate restriction relating to her pre-existing event. He testified on cross-examination that Dr. Artist maintained this same permanent work restriction up until his last visit with the Claimant in July of 2014, supporting the position that the restriction remained in place. Dr. Olsen could not identify any activity restriction related to her September 1, 2015 injury that exceeded her pre-existing permanent restriction or would have restricted her ability to do her job.

18. On cross-examination, Dr. Olsen testified that he did not believe that the Claimant was currently a "drug-seeker," although he did find her prior levels of opioid medication usage to be high. However, he agreed that the Claimant has never been prescribed opioids for this current claim and as of September 1, 2015, she was off all narcotic medications. Dr. Olsen testified that the Claimant to seek care for significant pain complaints in the time frame leading up to her September 1, 2015 injury. He opined that the Claimant's symptoms were elevated due to the Claimant's lack of access to care when Dr. Artist retired and Dr. Schakaraschwili's office declined to continue prescribing narcotic pain medications to Claimant. He testified that the Claimant continued to treat in 2015 with complaints of pain and spasm. Dr. Olsen testified that he listened to Claimant's testimony at hearing. He testified that her testimony concerning her improvements in function leading up to the September 1,

2015 injury were not supported by the medical records that he reviewed. He testified that Dr. Cain's 2015 records were devoid of any note evidencing any marked change in functional improvement from the 2009 injury.

19. Dr. Burris released the Claimant from care and placed her at maximum medical improvement, without impairment or restriction, on May 20, 2016 (Respondent's Exhibit I, pp. 156-157).

20. The Claimant was accepted by the court as an expert in car sales. The Claimant was hired by Employer in August of 2014, and began working in the Lakewood location where she was one of three salespeople. The Claimant testified that she began working at the Northglenn location in January of 2015, where she was the only salesperson. Prior to her September 1, 2015, the Claimant worked from 9:00 a.m. to 6:00 p.m. on the weekdays, and 9:00 a.m. to 1:00 p.m. on Saturdays. The Claimant received a commission based upon selling cars. She also received a sales bonus for meeting certain sales goals. She was paid by the month. Her work duties included, moving cars around the lot, removing snow from cars in the winter, and performing some minor detailing on the vehicles as part of her work duties, and cleaning the car lot. The Claimant estimated that there were two to three snows per month between December and February that required her to remove snow from the vehicles. The Claimant testified that it was difficult for her to remove snow from the vehicles and use the "jump-box" used for starting car batteries. The Claimant testified that she was, at one point, she believed that she was in jeopardy of being transferred to another location because she was unable to perform her regular job duties due to her work-related injuries. However, the Claimant also testified on cross-examination that she spent most of her workday for Employer seated and she was allowed to stand and stretch. The Claimant was able to perform most of her job functions while sitting.

21. Prior to her work injury, the Claimant's monthly wages for Employer varied. Her earnings from March of 2015 through August of 2015 were as follows:

March of 2015:	$9,057.35	
April of 2015:	$6,660.17	
May of 2015:	$1,540.58	
June of 2015:	$2,850.18	
July of 2015:	$6,645.16	
August of 2015:	$5,757.64	(Claimant's Exhibit 3; Respondent's Exhibit D).

22. With respect to her income, the Claimant testified that she missed a few days from work in May or June of 2015 to attend a family member's graduation, but could not remember which month. She believed that it was the first week of June of 2015.

23. The Claimant’s income continued to vary after her workplace injury. Her post-injury earnings were as follows:

September of 2015:	$4,220.50
October of 2015:	$3,314.16
November of 2015:	$3,081.58
December of 2015:	$1,004.60
January of 2016:	$4,326.46
February of 2016:	$1,898.04
March of 2016:	$3,250.82

(Respondents’ Exhibit D, pp. 14- 20).

24. Between August 21, 2014 and August 21, 2015, the Claimant earned $44,249.77 in gross wages, including bonuses (Respondents’ Exhibit C). The Claimant testified that her earnings included commissions plus sales bonuses. For the first 3 months, the Claimant earned a base salary of at least $2,000.00 with Employer, in addition to any sales bonus that she made, then it switched to the purely commission + sales bonus model. The Claimant testified that she made less money the first 3 months and then more after her first three months when her compensation structure was changed to commissions plus bonuses.

25. The Claimant testified that in order to maximize earnings in car sales, it is important to be onsite, if you are not there, people will go somewhere else and you will not make sales. However, the Claimant testified that, after her September 1, 2015 injury, she would miss 4-8 hours per week during work hours for appointment. While the Claimant would try to schedule appointments for medical providers outside of her normal work hours, she nevertheless had to miss some work since the medical providers were generally open during the same time as her normal work hours. Claimant testified that she worked approximately 50 hours per week prior to her injury. The Claimant believed that she was working 42-44 hours per week, which was less that she normally did, and this cost her sales which were the basis of her earnings.

26. The Claimant also testified concerning the monthly variability in wages in the automobile sales industry. She testified that the fall and early winter months are poor months for car sales. She testified that sales can begin to pick up in February and March with tax season, then May is generally slow and the summer months are typically good months until sales generally start to slow down in September or October. The Claimant testified that sales also depend upon how many cars are present on the lot at any given time.

27. Employer owner Kimberley Massa also testified at the hearing. She agreed with the Claimant that car sales fluctuate depending upon the time of year, with the winter months being the worst. Ms. Massa further testified that some months are bad for inexplicable reasons, and some years are also better than others due to normal fluctuation in the level of business. Ms. Massa testified that 2016 has overall been a poorer sales year for Employer. Ms. Massa testified that there were times when sales were referred to Claimant when she was not in the office, and telephone numbers of potential customers were taken for Claimant to return. Ms. Massa testified that she did

not regularly monitor Claimant in the office, but did not think that she missed as much as four-eight hours per week for medical appointments. She testified that Claimant's wages after September 1, 2015 were within the normal variations for the business. She testified that some employees of Employer made less than the Claimant, and some made more.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Calculation of Claimant's Average Weekly Wage

Under Colorado's Workers' Compensation Act, the "average weekly wage" is a key part of the formula used to calculate compensation for injured workers, and it is based upon the definition of "wages" provided at section 8-40-201(19). *Industrial Claim Appeals Office v. Ray,* 145 P.3d 661 (Colo. 2006). To determine a claimant's AWW, the ALJ may choose from two different methods set forth in section 8-42-102. The first method, referred to as the " default provision," provides that an injured employee's AWW " be calculated upon the monthly, weekly, daily, hourly, or other remuneration which the injured or deceased employee was receiving at the time of injury." § 8-42-102(2), C.R.S. The default provision in § 8-42-102(2)(a)-(f), C.R.S lists six different formulas for conducting this calculation. Per § 8-42-102(5)(a), the phrase "at the time of injury" in subsection (2) requires the AWW to be determined using the wage earned on the date of the employee's accident when using this method. The second method for calculating a claimant's AWW, referred to as the "discretionary exception," applies when the default provision will not fairly compute the employee's AWW. § 8-42-102(3), C.R.S. In such a circumstance, the ALJ has discretion to compute the AWW of a claimant in such other manner and by such other method as will, based upon the facts presented, fairly determine the employee's AWW. *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010).

The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993); *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997); *Vigil v. Industrial Claim Appeals Office,* 841 P.2d 335 (Colo.App.1992). Because the default method will not fairly compute the Claimant's AWW in this case, the discretionary method is appropriate to use in order to arrive at a fair approximation of the Claimant's wage loss. An ALJ has the discretion to take seasonal fluctuations in work into account when determining a claimant's average weekly wage. *See, e.g., Reyes v. LVI Environmental Services, Inc.*, Work Comp. No. 4-425-155 (2001) (holding that ALJ did not abuse his discretion in calculating claimant's wages over several months where the work was seasonal in nature).

Both the Claimant and Employer testified that claimant's earnings were subject to seasonal fluctuation independent of her injury status. Therefore, both sides urge the ALJ to use the discretionary method of calculating the AWW, albeit each party has a different approach to the calculation.

Respondents argue that due to these seasonal variations, using one year of wages to calculate Claimant's average weekly wage would most accurately taken into account the seasonal fluctuation in income that the Claimant could expect to experience. Respondents calculated that this resulted in an average weekly wage of

$850.96 [$44,249.77 ÷ 52]. However, this calculation is problematic as the annual gross wage of the Claimant from August of 2014 to August of 2015 includes a 3 month period when the Claimant did not earn wages according to a commission + bonus structure, but rather made a base wage of $2,000.00 per month + bonuses, as it is presumed that employees would otherwise make less that the base wage as they are new and still learning the job. The Claimant also testified credibly that this was the case. This annual gross wage amount also includes the time period from August 2014 through December 2014 when the Claimant worked at a different location with three employees onsite which made it more competitive in terms of making sales and therefore earning commissions and bonuses. Only from January of 2015 ongoing, was the Claimant working at the Employer's Northglenn location where she was normally the only employee.

The Claimant argues that, to avoid including the period of time in the first three months of her job with the lower salary of $2,000.00 a month plus bonuses, a different time period should be used to calculate AWW. The Claimant further argues that the months of November, December and January are months that car salespersons make less money due to natural fluctuations and they should not be used. However, if these are natural fluctuations in earnings, then using these months to average out earnings would actually assist in determining a fair approximation of the Claimant's wage loss and diminished earning activity.

Therefore, the preference would have been to calculate the Claimant's AWW using January 2015, once she was working at the Employer's Northglenn location with her permanent pay structure, up to the date of the Claimant's injury on September 1, 2015. This would have taken natural income fluctuations into account but would not have included the time period when the Claimant was not working alone at the Northglenn location. Unfortunately, neither Claimant nor Respondents provided specific testimony or documents in evidence for the Claimant's gross wages earned from January 2015 through February 2015. As a result, only information from March of 2015 through August 2015 is available for the time period prior to the Claimant's work injury. Since incomplete information is available for computations, the ALJ concludes the next best time period for the calculation of a fair approximation of the Claimant's wages would be from March 2015 through August 2015. Respondents inexplicably argue that if a shorter time period is used, it should only run from May 2015 through August 2015, presumably to eliminate earnings months that the Claimant and owner Ms. Massa testified are generally higher earning months. The ALJ finds that this would artificially lower the Claimant's AWW. While the inclusion of January 2015 and February 2015 would have allowed for typically slower earnings months to have naturally balanced out the typically higher earnings months, this was not provided as an option since neither party presented the earnings for these months. Yet, it does not make sense to arbitrarily eliminate March and April from the calculation.

Thus, the ALJ concludes that, based on the evidence that both parties presented, the best way to determine a fair approximation of the Claimant's AWW would be to use the earnings from March of 2015 through August 2015, the 6 months (or 26 weeks and 2 days) prior to injury:

$9,057.35 + $6,660.17 + $1,540.58 + $2,850.18 + $6,645.16 + $5,757.64 = 32,511.08

32,511.08 ÷ 26 2/7 (26.0285) = $1,2,49.06 AWW

Temporary Disability Benefits

To prove entitlement to temporary disability benefits, the Claimant must prove: that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). C.R.S. § 8-42-103(1)(a), requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain temporary disability benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

Here, the Claimant has not proven medical incapacity, nor has she proven impairment of wage earning capacity. First, the Claimant did not prove that she sustained medical incapacity as evidenced by loss or restriction of bodily function. Dr. Olsen credibly testified that the Claimant does not have any objective functional deficits as a result of her September 1, 2015 injury, and is essentially fully functional at her baseline function levels after her prior 2009 work injury. Dr. Olsen argued that the Claimant does not have any distinct diagnosis which supports the conclusion that she is physically limited. The MRI’s taken of her back, including the SI joint, and neck show no acute injury. Further, and more persuasive, to the extent that Claimant has any loss or restriction of bodily function, she did not prove that is a result of her September 1, 2015 injury, as opposed to her pre-existing limitations. The pain diagrams that the Claimant completed at Dr. Cain’s office following her September 1, 2015 are largely consistent to the ones that she filled out in the year preceding her workplace injury. She was already on permanent restrictions from Dr. Artist from her 2009 injury, which limited to her 20 pounds of lifting, with a 5-pound limit for frequent lifting. To the extent that Claimant’s snow removal duties conflicted with her restrictions from Concentra, more severe restrictions were already in place from Dr. Artist. Ultimately, the Claimant did not prove that any functional limitations she had were related to her September 1, 2015 injury, as opposed to her significant pre-existing issues. The medical records support the conclusion that the Claimant was having continual flare ups and pain complaints after being refused further narcotic pain medication and struggling to find a new workers’ compensation physician and then agreeing to wean off all opioid medications. . The records from Dr. Cain and Dr. Schakaraschwili's office do not show any significant or sustained notes of improvement in pain level. While Claimant alleges that her pre-injury back pain was at the L3 level, she was previously diagnosed with subjective coccydynia, and initially told Dr. Ramsey that her 2009 injury involved her sacroiliac joint. The medical records from her pre-existing injury noted by Dr. Olsen indicate left SI joint pain.

Second, the Claimant did not prove that her restrictions impaired her ability to effectively and properly perform her regular employment duties. While the Claimant testified that she had to remove snow from vehicles and this was difficult, she never alleged or proved that this act violated her lifting restrictions. By the time that winter came, Claimant was cleared to lift up to 15 pounds constantly and push and pull up to 30 pounds constantly. There was no evidence that Claimant's snow removal duties required her to lift more than fifteen pounds, or push and pull more than 30 pounds. When she was asked by her counsel to identify the functional deficits that she suffered from her September 1, 2015 injury, she pointed to her inability to play volleyball and wear high heels, rather than any work-related difficulties.

Because the Claimant has not proven that she suffered a disability in this case, she is not entitled to TPD benefits, even if her medical appointments caused her to lose wages, which itself is not established (see below)

Looking at all of the evidence as a whole, the Claimant also failed to prove that she suffered a wage loss as a result of her industrial injury. Claimant is not considered disabled for purposes of recovering temporary disability benefits if she does not sustain an actual wage loss as a result of her injury. *See, e.g., Whitney v. Metro West Fire Protection Dist.*, 4-920-012 (ICAO August 27, 2014). While the Claimant's income in the six months prior to her injury was lower than the seven months following her injury, consistent testimony from both the Claimant and the owner of the Employer established that there are seasonal fluctuations in car sales and, thus, commission and bonus earnings based on care sales. The wage records in evidence show the following:

Monthly wages before the injury:

March of 2015:	$9,057.35
April of 2015:	$6,660.17
May of 2015:	$1,540.58
June of 2015:	$2,850.18
July of 2015:	$6,645.16
August of 2015:	$5,757.64

Monthly wages after the injury:

September of 2015:	$4,220.50
October of 2015:	$3,314.16
November of 2015:	$3,081.58
December of 2015:	$1,004.60

January of 2016:	$4,326.46
February of 2016:	$1,898.04
March of 2016:	$3,250.82

Both the Claimant and Ms. Massa testified that March and April are typically good months for car sales and then the summer months are also good months for sales. Typically the sales drop, but may still be good in earlier autumn, but then as winter months approach, sales usually go down. The Claimant's wages after her admitted workplace injury were within the normal seasonal fluctuations attendant to her position as an automobile salesperson. Claimant's drop off in earnings following her September 1, 2015 injury were a result of normal seasonal downturn, as well as a general fluctuations inherent to her position. In most of her post-injury months, she earned more money than she did in May and June of 2015. Ms. Massa credibly testified that some employee of Employer made less money than Claimant did, and some made more.

Additionally, while the Claimant may have missed some time while at medical appointments, the Claimant did not identify any sale that she lost at work as a result of attending medical appointments. Based on the credible testimony of Ms. Massa, auto sales dropped significantly at all of her sales locations in the time period after the Claimant's September 1, 2015 injury, in addition to the normal seasonal fluctuations which are likely to have reduced sales and income. Thus, the Claimant did not meet her burden of establishing, that, at least in part, there was a causal connection between her work-related injury and a subsequent wage loss.

Therefore, the Claimant has failed to establish entitlement to temporary partial disability benefits as she has not proven either (1) medical incapacity evidenced by loss or restriction of bodily function or (2) impairment of wage earning capacity as demonstrated by her inability to resume his prior work.

ORDER

It is, therefore, ordered that:

1. The Claimant's Average Weekly Wage (AWW) is $1,249.06

2. The Claimant's claim for temporary partial disability from September 2, 2015 to May 19, 2016 is denied and dismissed.

3. Any issues not determined in this decision are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 15, 2016

Kimberly A. Allegretti

Denver, CO 80203

ISSUES

I. Whether Claimant established by a preponderance of the evidence, that he sustained a compensable low back injury during his January 21, 2016 motor vehicle accident.

II. If Claimant suffered a compensable low back injury on January 21, 2016, whether he has proven by a preponderance of the evidence that the treatment recommended by Dr. Paz is causally connected to the work injury on January 21, 2016.

FINDINGS OF FACT

Based upon the evidence presented, including the parties hearing exhibits along with the testimony of Claimant and Dr. Olsen, the ALJ enters the following findings of fact:

1. In April, 2014, Claimant commenced his employment with Qwest/Century Link in Trinidad, Colorado, as a network technician. Prior to starting this job, he had not experienced any problems with his low back and there is no medical documentation to indicate he received treatment focus to the lumbar spine. Claimant testified that he had no difficulties performing his job duties with Qwest/Century Link prior to his work related injury on January 21, 2016.

2. On January 21, 2016, Claimant was the restrained driver of a 12,000 to 18,000 gross vehicle weight bucket truck. He was stopped at an intersection when he was rear ended by a truck driven by his supervisor. The force of the impact pushed the bucket truck into the intersection. Claimant testified that the force of the collision threw him forward and backwards.

3. After impact, Claimant excited his vehicle and inspected the damage. He testified that his adrenaline was rushing. He did not notice any immediate symptoms and continued working. Approximately three hours after the crash, Claimant developed pain and soreness in his neck and low back. He took Ibuprofen that evening. The following day, Friday, January 22nd, he had pain is his neck and a pinch like sensation between his shoulder blades, as well as low grade pain in the lumbar spine. Over the weekend, the neck pain became worse.

4. On January 25, 2016, Claimant was seen in the emergency room (ER) at the Spanish Peaks Regional Health Center in Walsenburg, Colorado, where he was examined by Dr. Dunnam-Smith. Claimant testified that at the time of his examination, his low back pain was mild and that his neck injury had become worse with numbness

extending into his right hand. He reported only neck pain and did not indicate problems with his low back.

5. The medical records of Dr. Dunnam-Smith indicate that imaging studies were performed of the cervical and thoracic spine. The diagnosis was cervical and neck strain with radiculopathy and thoracic back pain. Claimant was placed on restrictions and returned to modified duty and it was suggested that he follow-up with a workers' compensation provider in 1 week. (Cl. Ex. 1, pg. 6).

6. Claimant was also prescribed a seven day tapering dose of Prednisone in addition to muscle relaxants. (Cl. Ex.1, pg. 5 and 17).

7. Claimant testified that after he completed his course of Prednisone and muscle relaxants, he felt much better, his symptoms were dramatically improved and he thought he had recovered from the injuries sustained in the automobile accident.

8. Per instructions, Claimant was examined by Dr. Schwender, the Respondents' designated workers' compensation physician on February 4, 2016 at the Colorado Center for Occupational Medicine office located in Pueblo, Colorado. Dr. Schwender noted a history of pain in the neck as well as numbness in the right hand. Dr. Schwender noted Claimants treatment with Prednisone and documented that Claimant was feeling much better despite a continued pinching sensation at the base of his neck. There was no report of problems with the low back and Dr. Schwender's physical examination appears limited to the cervical spine only. Dr. Schwender returned the Claimant to modified duty with no lifting greater than 25 pounds. (Cl. Ex. 2, pg. 22).

9. Claimant testified that after completing the course of steroids and muscle relaxants, his neck pain returned. He also had a return of his previously mild low back pain sufficiently intense that it interfered with his work duties. The low back pain was aggravated by his job duties, such as riding in his work vehicle and bending. Gradually, the pain in his low back extended into his right buttock and he experienced loss of feeling in the toes of his right foot.

10. Claimant requested a change to an employer designated physician closer to his home. This medical treatment was transferred to Dr. David Paz at Mr. Carmel Health and Wellness in Trinidad, Colorado. Claimant was evaluated by Dr. Paz for the first time on February 25, 2016. Dr. Paz incorrectly noted an auto accident occurring in the State of Kansas. In addition to the problems with the cervical spine, Dr. Paz noted back pain extending into the thigh and numbness in the right toes. He noted the Claimant had been placed on light duty but riding in the truck aggravated the low back pain. Physical examination demonstrated that the right lower extremity was "jerky" on extension as compared to the left. Dr. Paz also noted decreased sensation in the right upper extremity. He recommended an MRI of both the cervical and lumbar spine. Mr. James was taken off work and prescribed Naprosyn and Hydrocodone-Acetaminophen. (Cl. Ex. 3, pgs. 37-39). Dr. Paz provided an assessment of "interveterbral disc with

myelopathy and radiculopathy." In addition to recommending an MRI of the lumbar spine, Dr. Paz referred Claimant to Dr. Murad for a neurosurgical evaluation. (Cl. Ex. 3, pgs. 33-34).

11. Reports prepared by Physician Assistant (PA) Andrew Glass working under the direction of Dr. Murad were also submitted post hearing. The ALJ finds the reports of PA Glass potentially outcome determinative and admits the reports as Claimant's Exhibit 8.

12. The initial examination on March 30, 2016, notes a history of a motor vehicle accident with resulting cervical and lumbar pain, post-accident. The low back pain radiated into the right lower extremity. Claimant's pain increased with walking and was relieved when lying down. He had no issues with the lumbar spine prior to the accident. Concerning the low back, PA Glass provides an assessment of "back pain" and "lumbar radiculopathy". Claimant was provided with an additional "medrol (Pak), 4 mg to be taken orally along with a referral to anesthesiology for evaluation concerning the efficacy of epidural steroid injections. Claimant also underwent an MRI of the lumbar spine on this date.

13. On June 1, 2016, Claimant returned to PA Glass for review of lumbar spine MRI findings. The MRI demonstrated no significant nerve compression. There was mild bilateral recess stenosis at the L4-L5. X-rays of the lumbar spine of the lumbar spine demonstrated degenerative disc disease. Claimant was advised that there were no structural defects that could be resolved by surgery and that the most likely cause of his symptoms was nerve root irritation, possibly at the L4 level. An assessment of lumbar radiculitis is provided and lumbar epidural steroid injections were recommended.

14. Claimant was examined at the request of Respondents counsel by Dr. Nicholas Olsen. In a report dated April 28, 2016, Dr. Olsen notes that Claimant provided a history to him of feeling a little pain in his lower back over the weekend after the accident. As the weekend passed, the lower back did not seem as it was bothering him too much. When he went to the emergency room on the following Monday, January 25th, he did not report a problem with his low back. Once he commenced a regiment of steroids and muscle relaxants, Claimant reported that he started feeling better. After the course of medication was completed, the pain returned and progressively worsened. (Cl. Ex. 4, pg. 101). Lumbar flexion, extension and bi-lateral bending elicited complaints of pain. A supine straight leg raise test aggravated right lower back pain. (Cl. Ex. 4, pg. 107). Dr. Olsen opined that Claimant had complaints consistent with axial back pain along with a "mild physiologic examination involving the right lower extremity with a stocking loss of sensation." Dr. Olsen questioned Claimant's alleged lumbar spine injury based on the history provided to him. He noted that Claimant is a poor medical historian and questions why the lumbar complaints were not initially presented to Dr. Dunnam-Smith. (Cl. Ex. 4, pg. 110).

14. As noted, the parties took the evidentiary deposition of Dr. Olsen post hearing. During his deposition, Dr. Olsen testified that, based on his review of the medical records, the first mention of low back pain did not occur until February 25, 2016, when Claimant saw Dr. Paz (Olsen's Depo. Tr. p. 13). Dr. Olsen also testified that between what Claimant told him as to when he first had low back pain and what the medical records document, he would rely on the medical records rather than Claimant's historical statements made during the April 28, 2016 independent medical examination (IME). (Dr. Olsen's Depo. Tr. p. 14). Again, Respondents submit that Claimant's testimony at hearing is consistent with what the medical records document in that Claimant did not have the onset of low back symptoms until sometime after he saw Dr. Schwender on February 4, 2016. Consequently, Respondents submit that the greater weight of evidence establishes that, to the extent that Claimant has low back pain at the present time, those low back symptoms began sometime between February 4, 2016 and February 25, 2016.

15. Dr. Olsen testified that there is a generally accepted medical analysis involving a temporal relationship between a trauma and the eventual onset of pain at a certain body location (Olsen's Depo. Tr. pp. 15-16). Specifically, Dr. Olsen stated that when "somebody has a trauma, one would expect that person to have pain within a certain period of time, within a few days. The longer the period of time between the reports of the pain and the inciting event, the less likely that the source of pain is related to the event." Dr. Olsen explained further that a traumatic event causes a physiological change within 2-3 days following the incident and may cause a 3/10 pain level initially. According to Dr. Olsen that pain level could increase to a 6-7/10 level two later because it's progressed; however, to have no pain for a number of days and in the instant case for a couple of weeks leads to the conclusion that Claimant's current low back pain is unrelated to the original motor vehicle accident (MVA) occurring on January 21, 2016. Consequently, Dr. Olsen was of the opinion that the January 21, 2016 injury did not cause Claimant's eventual onset of low back pain (Olsen's Depo. Tr. pp. 17-19).

16. Because of the lack of low back symptoms for at least two weeks following the motor vehicle accident, Dr. Olsen was almost of an "absolute certainty" that the onset of low back problems between February 4, 2016 and February 25, 2016 is not causally related to the motor vehicle accident. Rather, the more likely explanation for Claimant's low back pain, according to Dr. Olsen, is that the onset of symptoms represents "natural back pain" that either developed in the absence of any kind of trauma or alternatively a lumbar sprain/strain event unrelated to the January 21, 2016 MVA. In support of his opinions regarding the cause of Claimant's low back pain, Dr. Olsen notes that over 80% of individuals who have back pain severe enough to see a physician have that onset without any indication of trauma.

17. Based upon the evidence presented as a whole, the ALJ finds Dr. Olsen's testimony unconvincing. The ALJ infers and finds from Dr. Olsen's testimony that he believes that Claimant had no pain in his low back between January 21, 2016 and February 4, 2016 merely because the available medical records do not document the same. The ALJ finds from Claimant's testimony that while he had pain it was not severe

enough to report. In reconciling the competing testimony of Dr. Olsen and Claimant, the ALJ credits Claimant's testimony to find that he likely had low back pain at a level (3/10) which he did not feel required medical attention and was not disabling. Consequently, he did not report it. The decision not to report low level pain which did not require medical treatment and which was not disabling does not mean that Claimant had no pain as is suggested by Dr. Olsen. Moreover, the ALJ finds it probable that the Prednisone Claimant was prescribed was effective in curing and relieving both Claimant's neck and low back pain. The evidence presented persuades the ALJ that when the course of steroids was complete, Claimant, more probably than not had a return of his back pain intense and disabling enough to report to Dr. Paz. Finally, the ALJ finds the dearth of evidence supporting prior problems with his low back, substantially under minds Dr. Olsen's opinion that the cause of Claimant's low back pain represents "natural" back pain which arose simply because 80% of the population will experience low back pain at some time in their lives. Dr. Olsen's alternate opinion that the cause of Claimant's low back symptoms are due to a sprain/strain event unrelated to the January 21, 2016 MVA is speculative and unfounded based upon the evidence presented. Accordingly the ALJ finds it equally unconvincing.

18. The preponderance of the evidence presented persuades the ALJ that the described mechanism of injury (MOI), i.e. the MVA is the cause of Claimant's low back symptoms and current need for treatment. Accordingly, the ALJ finds that Claimant has met his burden of proof to establish that he suffered a compensable industrial injury on January 20, 2016.

19. Based upon the evidence presented, the ALJ also finds the treatment rendered to Claimant by in the ER and by Drs. Paz and PA Glass to be reasonable, necessary and related to his January 21, 2016 low back injury. Moreover, the evidence presented convinces the ALJ that the recommendation for a lumbar MRI was reasonable and related to Claimant's low back injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. The claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-43-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo.App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo.App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

B. In accordance with § 8-43-215, C.R.S., this decision contains specific findings of *f*act, conclusions of law and an order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo.App. 2000).*

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. As found here, Claimant's testimony is credible, consistent and convincing. Moreover, the opinions of Dr. Olsen regarding diagnosis, causality and treatment not persuasive or convincing.

Compensability

D. A "compensable injury" is one which requires medical treatment or causes disability. *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, supra; § 8-41-301, C.R.S. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment*.* *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

E. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Here, there is little question that Claimant's alleged injuries occurred within the time and place limits of his employment relationship with Employer and during an activity, specifically driving a bucket truck to a job site for Employer. Nonetheless, the question of whether the alleged conditions, for which Claimant seeks benefits, "arose out of" his employment must be resolved before the injury is deemed compensable.

F. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). The fact that Claimant may have experienced an onset of pain while performing job duties does not mean that Claimant sustained a work-related injury. An incident which merely elicits pain symptoms without a causal connection to the industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988)*; Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989). As found, the ALJ credits Claimant's testimony to find that he likely had low back pain at a level (3/10) which he did not feel required medical attention and was not disabling. Consequently, he did not report it. The decision not to report low level pain which did not require medical treatment and which was not disabling does not mean that Claimant had no pain as is suggested by Dr. Olsen. The evidence presented also persuades the ALJ that when the course of steroids was complete, Claimant, more probably than not had a return of his back pain intense and disabling enough to report to Dr. Paz. Finally, the ALJ finds the dearth of evidence supporting prior problems with his low back, substantially under minds Dr. Olsen's opinion that the cause of Claimant's low back pain represents "natural" back pain which arose simply because 80% of the population will experience low back pain at some time in their lives. Dr. Olsen's alternate opinion that the cause of Claimant's low back symptoms is due to a sprain/strain event unrelated to the January 21, 2016 MVA is speculative and unfounded. Accordingly the ALJ finds it equally unconvincing. In this case, the evidence presented persuades the ALJ that a logical causal connection exists between Claimant's work duties, the January 21, 2016 MVA, his low back symptoms and his need for treatment. Consequently, the ALJ finds Claimant's low back injury compensable.

Medical Benefits

G. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO

April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). As found here, Claimant has proven by a preponderance of the evidence that he sustained a compensable injury to his low back. The evidence presented persuades the ALJ that this compensable "injury" is the proximate cause of Claimant's need for medical treatment and diagnostic imaging, including a lumbar MRI. Taken in its entirety, the ALJ finds the evidentiary record to contain substantial evidence to support a conclusion that Claimant's MVA and not a "natural" episode of back pain or an unrelated sprain/strain event caused his current symptoms and need for treatment. Consequently, the ALJ concludes that Claimant has established that his need for treatment in the ER and by Dr. Paz and PA Glass was causally related to his work-related MVA on January 21, 2016. Moreover, the totality of the evidence presented establishes that the care, including the diagnostic testing, i.e. lumbar MRI was reasonable and necessary given Claimant's continued pain and functional decline. Consequently, the ALJ concludes that Respondents are liable for Claimant's care at Spanish Peaks Regional Health Center as well as the treatment provided by Dr. Paz and PA Glass.

ORDER

It is therefore ordered that:

1. Claimant has proven, by a preponderance of the evidence, that he suffered a compensable injury to his low back as a consequence of an MVA occurring in the course and scope of his employment on January 21, 2016.

2. Respondents shall pay for all medical expenses, pursuant to the Workers' Compensation fee schedule, to cure and relieve Claimant from the effects of his low back injury, including the care provided at Spanish Peaks Regional Health Center as well as the treatment provided by Dr. Paz and PA Glass.

3. All matters not determined herein are reserved for future determination.

DATED: September 20, 2016

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after

mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant suffer a compensable injury to his left shoulder and left biceps on January 15, 2016 arising out of and in the course of his employment?

- Did Claimant suffer a compensable injury to his left biceps on January 28, 2016 arising out of and in the course of his employment?

- What was Claimant's average weekly wage?

- If Claimant sustained a compensable injury, is he entitled to temporary total disability benefits from January 29, 2016 and continuing?

- If compensable, is Claimant entitled to medical benefits to cure and relieve the effects of his industrial injury?

STIPULATION

The parties stipulated Claimant's AWW was $1,161.00 per week.

FINDINGS OF FACT

1. Claimant has worked as a roofer for over thirty (30) years.

2. Claimant's medical history was significant in that he previously suffered a left shoulder injury on February 26, 2013 while working for another roofing company. He injured his shoulder after falling on the ice.

3. Medical records from Michael McKenna, D.O. for the 2013 injury were admitted at hearing. Claimant underwent conservative treatment consistent primarily of medications. Plain x-rays were taken which showed no fractures or dislocations. On March 5, 2013, Dr. McKenna evaluated Claimant and found full range of motion ("ROM") in the left shoulder. Claimant was placed at MMI with no impairment and given a full-duty release. An M-164 was completed at that time.

4. Claimant returned to Dr. McKenna on June 11, 2013, reporting a worsening of symptoms. Claimant denied an intervening injury and noted he was doing more supervisory tasks in his job. At that time, Dr. McKenna noted marked weakness, crepitans and reduced ROM (abduction) in Claimant's left shoulder. An MRI was ordered. The ALJ infers Dr. McKenna believed Claimant's condition was related to the February 26, 2013 injury and, on that basis, he ordered the MRI and continued to treat Claimant. Dr. McKenna's opinion was persuasive to the ALJ.

5. On June 20, 2013, an MRI was done on Claimant's left shoulder at Platte Valley Medical Center. The films were read by Vincent Herlihy, M.D., whose impression was complete full-thickness tear of the supraspinatus tendon insertion with 2cm of retraction of the form fibers and no muscle belly atrophy; moderate tear of cranial subscapularis insertion with mild to moderate underlying tendinosis; moderate medial subluxation of the long head of the biceps tendon into this defect; small area of irregular partial-thickness tearing of the articular side of the anterior infraspinatus insertion without significant tendon retraction or muscle atrophy; mild to moderate acromioclavicular osteoarthritis with mild subacromial tearing.

6. On June 25, 2013, Dr. McKenna reviewed the MRI results and diagnosed Claimant with a rotator cuff tear. Claimant was referred for an orthopedic evaluation with Kosta Zinis, D.O., who previously performed surgery on Claimant's right shoulder. Dr. McKenna issued work restrictions for Claimant, which included no use of the left arm above the shoulder.

7. Claimant was examined by Dr. Zinis on July 18, 2013. Claimant described 5/10 pain, occasional numbness, tingling, along with pain radiating down his arm. He had pain/weakness in the supraspinatus muscle; and positive empty can, lift-off and Hawkins tests. Surgery was discussed as an option and Claimant wanted to proceed with the procedure. The ALJ infers Dr. Zinis was of the opinion surgery was necessary to repair the torn rotator cuff and retraction of the supraspinatus.

8. Claimant returned to Dr. McKenna on July 25, 2013. Surgery was noted to be scheduled for November 4, 2013. Claimant was noted to be working as a helper and the restriction of no working above the left shoulder was continued.

9. Dr. McKenna evaluated Claimant on August 27, 2013, at which time it was noted there were issues with the insurance carrier and approval of the surgery. Claimant reported no new injuries and no improvement. Dr. McKenna continued Claimant's restrictions of no reaching overhead and no reaching away from the body.

10. In the office note of October 3, 2013, Dr. McKenna noted things were still on hold regarding approval of the surgery. There were references to an imminent hearing and the fact Claimant was working with a different company. The October 31, 2013 note was similar and, at that time, Claimant was adamant about the need to have his shoulder fixed.

11. James Lindberg, M.D. performed an IME on Claimant on November 19, 2013. In the report of the same day, Dr. Lindberg concluded Claimant had an intervening event and that the torn rotator cuff was not a compensable injury. His report stated:

> "IMPRESSION: My impression is that he had significant shoulder pain from the slip and fall on February 26, 2013. This completely resolved by March 5, 2013. Then he again began complaining of pain somewhere in the first week of June 2013 for which he was seen on June 11, 2013. Two possibilities exist. Either he

> had serious pre-existing damage to his shoulder but was still functional and had a temporary aggravation that resolved completely by March 5, 2013, in which case this was all pre-existing. There was a temporary aggravation that resolved itself. The other possibility is that there was another injury that took place between March 5, 2013 and June 5, 2013 that caused this sudden deterioration. This was not documented nor did [Claimant] say anything about another injury. If he had a pre-existing injury, one could expect him to have significant findings, and such a rapid resolution of his symptoms on March 5, 2013, could be consistent with a pre-existing injury. My best guess is that he had an intervening incident that caused his significant problems that were found on the MRI done on June 20, 2013."

The ALJ was not persuaded by this opinion, as there was no evidence that an intervening event caused Claimant's symptoms in 2013. In fact, Dr. McKenna asked Claimant about a subsequent injury and ruled this out. The ALJ notes Dr. Lindberg's use of the phrase "best guess" raises the question whether this was an opinion within a reasonable degree of medical probability and reduced the cogency of Dr. Lindberg's opinion.

12. Claimant returned to Dr. McKenna on December 3, 2013, who noted Claimant continued to have pain in the left shoulder, which was a cause of sleep disruption. Claimant's work restrictions were continued. There was no evidence in the record that Claimant returned to Dr. McKenna after this appointment.

13. Claimant testified he received injections through Kaiser, which helped the pain in his shoulder.[1] There were no medical records admitted at hearing which showed Claimant received treatment from December 4, 2013 to January 30, 2016. There was no evidence Claimant suffered another injury during this time.

14. Claimant testified that although he had pain in the left shoulder, he did not receive treatment from 2013 through January 2016. He said he was able to perform his regular job duties for various roofing companies, which included lifting buckets of tar, roll roofing, tools and shingles. The ALJ found Claimant to be credible on this point and no contrary evidence was admitted at hearing. Claimant testified since he was still able to work and chose to settle his W. C. case (D.O.I. 2/26/13) on a full and final basis. The ALJ concludes Claimant's 2013 rotator cuff injury did not prevent him from working through the end of January 2016.

15. In January, 2016, Claimant was working as a service tech for Employer. His job duties included loading materials on roofs, fixing leaks, along with inspecting roofs.

16. On January 15, 2016, Claimant was working for Employer at the Silver Reef Apartment complex. He was loading roofing materials through a roof hatch when the ladder kicked out from under him. He caught himself with his right hand and left

[1] Those records were not admitted at hearing.

upper arm and was able to brace himself. Claimant testified he felt pain in his left shoulder, both in the front and back. He sat in his car for one-half hour and finished his work at the job site that day. The ALJ infers the act of catching his left arm after the ladder kicked away caused force to be placed on Claimant's upper am, including the rotator cuff.

17. Claimant did not report the January 15, 2016 incident to his supervisor. Claimant understood he was supposed to report this incident to Employer.

18. Claimant continued to work until January 28, 2016, when another incident occurred at work. The ALJ credited Claimant's testimony that he experienced pain, but continued working because he needed the money.

19. On January 28, 2016, Claimant was rolling up the window on the company truck when he felt pain in his left biceps. Claimant testified that he felt the biceps slide over and his wife noticed bruising on his left biceps over the weekend.

20. Claimant presented for treatment at Platte Valley Medical Center on January 31, 2016 and was evaluated by Lane Looka, N.P. He complained of left shoulder/humerus pain after a near fall, while on ladder, "the ladder began falling and he hung on the roof with his lft [sic] shoulder and upper arm he notes pain at that time to then on Thursday was rolling down window and felt pop with immediate deformity and pain to left Bicep area he notes since then has had increased pain and bruising to left Bicep". Onset was described as gradual. The medical records from Platte Valley Medical Center further noted that Claimant had "no headache, no neck pain and no dislocation". Claimant's 2013 left shoulder injury was not listed in the medical history section. Claimant was given discharge instructions.

21. While at Platte Valley Medical Center, an MRI was performed on Claimant's left upper extremity. The films were read by Trystain Johnson, M.D. whose impression was complete full-thickness tear of the supraspinatus without thickened fatty atrophy of the muscle belly, no significant change since 6/20/13; full-thickness tearing now extends into the anterior infraspinatus distal 13 mm. There was also a full-thickness tearing of the distal 9 mm of the upper subscapularis, no fatty atrophy of the rotator cuff muscle bellies. The ALJ notes these changes, including the subscapularis tear, were not noted in the first MRI. Last, an interval long head biceps tendon rupture with retraction was noted.

22. A handwritten, undated Report of Injury (RMS)[2] gave the same account of the January 15 and 28 incidents as was provided to NP Looka on January 31, 2016. This document noted the date of injury as 1/15/2016 and the work activity was described as: "getting into roof hatch for repairs"; how injury occurred: "ladder teedered [sic]-lost balance-caught r hand and l upper arm". The medical provider was Platte Valley Medical Center. The ALJ infers the report was made by a representative of Employer to Insurer.

[2] Exhibit 9.

23. An Employer's First Report of Injury was made on February 1, 2016. This report stated the injury occurred while Claimant was getting into a roof hatch for repairs. The injury was listed as a contusion to the right hand.

24. On February 2, 2016, Claimant was evaluated by Helen Voag, M.S., PA-C and Michael Ladwig, M.D. Claimant reported that he was going up the ladder to work on a skylight, the ladder fell and he grabbed on with his left elbow in the hatch. He injured his left shoulder and left arm. Claimant thought the arm was improving, but the on January 28, 2106, when he was rolling up the company car window he felt his biceps slide over and experienced bruising the next morning. The handwritten notes specified there were no prior injuries to the affected of body part. These notes were prepared, at least in part by Helen Voag, M.S. PA-C.

25. On examination, purple bruising was noted throughout left bicep, with tenderness noted over the biceps and supraspinatus. Claimant had reduced ROM on flexion and abduction. The ALJ notes both the handwritten notes were signed by Pa-C Voag and counter-signed by Dr. Ladwig, as was the written report. The assessment/impression was: strain of muscles and tendons of the rotator cuff of left shoulder, strain of muscles, facia and tendon of long head of the biceps left arm. The written report stated there was a greater than 51% probability that this was a work-related injury or condition. On the M-164, Dr. Ladwig answered affirmatively that the injury/illness was work-related. Dr. Ladwig stated Claimant was unable to work from February 2, 2016.

26. On February 5, 2016, Claimant was evaluated by Mitchel Robinson, M.D., who reviewed the MRI results. Dr. Robinson noted the MRI showed a chronic full-thickness tear of the rotator cuff involving the supra, infra and upper subscap with an acute biceps tendon rupture. The plan was to move forward with surgery, but Dr. Robinson noted due to the chronicity of the tear, it might not be repairable.

27. A Worker's Claim for Compensation, dated February 8, 2016 was completed by Claimant. Claimant stated he was "loading materials threw [sic] hatch for roof repairs" just before the accident occurred. The injury occurred when a ladder kicked out from under his legs and Claimant "caught himself with right hand and left upper arm; got ladder back on feet before falling". Claimant described the injury as torn RC and neck pain. The document stated he reported the injury to supervisor/Robert Burger.

28. Andrew Parker, M.D. issued a record review opinion, dated February 12, 2016. He noted that Claimant's rotator cuff tear had not appreciably increased in size compared to its status in 2013. Dr. Parker observed that Claimant had settled his 2013 claim and elected not to proceed with surgery. Dr. Parker believed that the patient's current rotator cuff pathology should be treated though private insurance, since he closed the 2013 claim. Dr. Parker stated Claimant's biceps rupture was not a surgical problem and should be treated with rehabilitation.

29. Claimant returned to Dr. Ladwig on February 16, 2016, at which time he noted constant left shoulder pain, as well as neck/back pain. Claimant also reported numbness and tingling in the left arm. Significantly, the handwritten treatment note documented Claimant's past medical history of a left rotator cuff tear from an on-the-job injury three years ago, which was never repaired.[3] Claimant was noted to have received intermittent shoulder steroid injections for the 2013 injury. The ALJ infers Dr. Ladwig was aware of Claimant's 2013 injury and believed Claimant's 2016 condition was work-related.

30. Medications were prescribed and Dr. Ladwig issued restrictions. Specifically, it was noted Claimant could return to modified duty with no lifting, repetitive lifting, carrying, pushing/pulling greater than 0 pounds for the left arm. Claimant was also restricted from reaching overhead or away from his body with the left arm.

31. Claimant returned to Dr. Ladwig on March 1, 2016. At that time, Dr. Ladwig's work-related diagnoses were fall; left rotator cuff tear; left biceps tendon tear. Dr. Ladwig continued Claimant's work restrictions, which were the same as from the 2/16/16 evaluation.

32. Claimant received treatment for the rotator cuff tear through his personal doctors at Kaiser Permanente. These records detail a patient visit with Patrick Martin, D.O. on February 29, 2016. The health problems reviewed included: parasthesias; traumatic left rotator cuff tear, subseq; and left biceps injury, subseq. Claimant was scheduled for surgery on May 12, 2016 with James MacDougall, M.D. at Good Samaritan.

33. Dr. Lindberg performed a second IME on March 8, 2016. At that time, Dr. Lindberg's impression was that Claimant had progression of disease of his rotator cuff which was not acute. Dr. Lindberg opined this was a chronic tear and the biceps tendon rupture was a result of his long-standing rotator cuff tear. He agreed with Dr. Parker that the biceps tendon rupture was non-surgical and the rotator cuff tear, as well as other findings were pre-existing. Dr. Lindberg opined Claimant should seek care under Kaiser. He did not believe the January 2016 incident were compensable and would not award any impairment for the shoulder injury.

34. Claimant confirmed he underwent surgery to repair his rotator cuff and biceps. The Kaiser Permanente records also documented a follow-up appointment with Dr. MacDougall, along with physical therapy.

35. A bill from Good Samaritan was admitted into evidence.[4] Claimant testified this bill was related to the rotator cuff surgery.

36. Dr. Lindberg testified as an expert in orthopedic surgery on behalf of Respondents. He reviewed additional medical records after performing the IME on

[3] Exhibit 2, p. 58; Exhibit G, p. 77.

[4] Exhibit 7.

Claimant. He testified that following the January 15, 2016 incident, Claimant had no real disability, as he continued to work. Dr. Lindberg testified that Claimant's 2016 MRI was largely identical to the MRI that was taken in 2013, with the exception of the biceps tendon. The ALJ notes there were differences in the MRIs (i.e. full-thickness tearing now extends into the anterior infraspinatus distal 13 mm; a full-thickness tearing of the distal 9 mm of the upper subscapularis), which were not discussed by Dr. Lindberg. He testified that Claimant had no new injury to his rotator cuff in 2016. Dr. Lindberg testified that there was nothing that would have changed Claimant's pre-existing need for rotator cuff surgery between the 2013 injury and January 15, 2016.

37. Dr. Lindberg testified Claimant had damage to the biceps tendon in 2013, which included tendinitis and subluxation. He stated the long head of the biceps tendon tore, which is where Claimant had subluxation in 2013. Dr. Lindberg testified that the biceps tendon is protected by the rotator cuff from impinging upon the acromion, a bone on top of the shoulder. Dr. Lindberg said once the rotator cuff is taken away, this causes the humeral head to rub against the acromion, tearing the biceps tendon and eventually resulting in rupture.

38. Dr. Lindberg testified the biceps tendon could have torn at any time, including with the lifting of Claimant's arm or waving goodbye, and did not require any special event or force to tear. He testified the typical mechanism of injury for a healthy biceps tendon involves use of excess force, such as weight lifting. Dr. Lindberg opined Claimant had a chronically damaged subluxing biceps tendon with tendonitis, which combined with his rotator cuff tear, resulted in his biceps tendon being susceptible to tear with minimal force. Dr. Lindberg testified that he would have expected Claimant's biceps tendon to deteriorate naturally given its status in 2013. The ALJ credited Dr. Lindberg's expertise and his explanation of the anatomy of a shoulder. The ALJ was persuaded by Dr. Lindberg's testimony that the rupture of the biceps tendon could have happened anywhere. There was nothing intrinsically related to Claimant's work duties or a risk present at the workplace which caused the biceps tendon tear.

39. Claimant proved it is more probable than not he suffered an aggravation of his preexisting left shoulder condition on January 15, 2016. This aggravation was a cause of Claimant's disability

40. Claimant's use of the window crank on January 28, 2016 did not constitute a special hazard related to his employment.

41. Claimant has not worked since January 29, 2016.

42. There were no medical records introduced into evidence which documented Claimant was at MMI or had been released by an ATP.

43. Based upon the stipulated AWW of $1,161.00 per week, Claimant's TTD benefits are payable at a rate of $774.00 per week.

44. There was no evidence before the ALJ that Claimant's biceps tendon rupture required surgery.

45. Based on a totality of the evidence, it was the combination of the January 15, 2016 injury to Claimant's rotator cuff and the January 28, 2016 rupture of the biceps tendon which caused Claimant to stop working. Claimant underwent surgery on his rotator cuff and has not returned to work, nor have his restrictions been lifted. Claimant's injury to his left rotator cuff was one of the proximate causes of his disability.

46. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Compensability

Claimant contends that he sustained a compensable injury on January 15, 2016 and January 28, 2016. Claimant acknowledged he previously suffered an injury to his left shoulder, but was able to work full time thereafter. Even though surgery was recommended in 2013, Claimant argued that the events which occurred in January 2016 while working for Employer arose out of and were in the scope of his employment. Claimant asserted these injuries directly caused him to be disabled from working.

Respondents put forth several arguments as to why the claim was not compensable, starting with the fact that Claimant had previously been diagnosed with a rotator cuff tear and surgery was recommended in 2013. Respondents averred this pre-existing condition degenerated and this was the cause of Claimant's need for treatment in 2016, as well as the cause of the biceps tendon rupture. Respondents relied upon the expert opinions of Dr. Lindberg to support these contentions. Respondents also argued that Claimant was not a credible witness, as he failed to report the January 15, 2016 incident, arguing this raised the question whether this incident actually occurred. Respondents also pointed to the lack of history found in the Platte Valley Medical Center records and those of Dr. Ladwig to support their contention Claimant was not credible.

Claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing a service for Respondent-Employer arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. §§ 8-41-301(1)(b) & (c), C.R.S.; *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); § 8-41-301(1)(c), C.R.S. The Workers' Compensation Act creates a distinction between the terms "accident" and "injury". The term "accident" refers to an "unexpected, unusual or undesired occurrence". § 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); see also § 8-40-201(2) (injury includes disability resulting from accident).

A "compensable" injury is one which is disabling and entitles the Claimant to compensation in the form of disability benefits. *Id*.; *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981). Conversely, no benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury". *Id*.; § 8-41-301, C.R.S. The question of whether the Claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

January 15, 2016

As determined in Findings of Fact 2-10 and 12, Claimant was injured in 2013 as a result of falling at work and was diagnosed with a torn rotator cuff. Surgery was recommended at that time, however, the surgery was not authorized. Claimant did not proceed with the surgery and settled the workers' compensation claim associated with the 2013 injury. There was no evidence the torn rotator cuff prevented Claimant from working or that he was disabled as a result of the 2013 injury. In fact, Claimant's testimony established the opposite, namely that he continued working up to the incidents which formed the basis of this claim. (Finding of Fact 14).

Turning to the events of January 15, 2016, the ALJ found Claimant's description of what occurred that day credible. Specifically, Claimant proved he was working for Employer at the location specified and was loading roofing materials through a hatch. When the ladder kicked out from beneath his feet, he braced himself with his right hand and left arm. Claimant’s description of what occurred was consistent, both through his sworn testimony and in what he reported to physicians. (Findings of Fact 16, 20 & 22). A reasonable inference derived from this event is that it put force on Claimant's already torn rotator cuff and the surrounding structures of the left shoulder.

Furthermore, although Claimant felt pain after the incident on January 15, 2016, he continued working. (Finding of Fact 18). The ALJ declined to find that Claimant's failure to report the injury led to the conclusion that this event did not occur. Even though Claimant knew he was supposed to report such an injury, the ALJ credited Claimant's testimony that he needed the money and continue to work. As such, Claimant's explanation regarding failure to report this injury was credible. Accordingly, the evidence before the Court led the ALJ to conclude that the January 15, 2016 incident aggravated Claimant's pre-existing condition.

The ALJ's analysis comports with the principles articulated by the Colorado Supreme Court in *Colorado Fuel and Iron Corp. v. Industrial Commission*, 380 P.2d 28, 30 (Colo. 1960) in which it held Respondents can be liable for the aggravation of a pre-existing condition, which results in the need for medical treatment. Where Claimant had a dormant pre-existing physical condition, which had not interfered with his ability to do work ,"a direct causal connection between a precipitating event and the resulting disability can be proved by lay testimony and without affirmative medical testimony”. *Id.*

Subsequent decisions reinforced the precept that when a pre-existing condition is aggravated by an employee's work, the resulting disability is a compensable industrial injury*. Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. App. 1990). As the Court of Appeals held in *Cowin & Co. v. Medina,* 860 P.2d 535, 538, an employer must take an employee as it finds him/her, “so that the employer is responsible for any increased disability resulting to an injured worker from a preexisting weakened condition”. *Id.*

As the Court in *Siefried v. Industrial Commission*, 736 P.2d 1262, 1263 (Colo. App. 1986) postulated: “If a disability were 95% attributable to pre-existing, but stable, condition and 5% attributable to the occupational injury, the resulting disability is still compensable if the injury has caused the dormant condition to become disabling”. There must be a direct causal relationship between the precipitating event and the resulting injury. *Id.*

As found, the January 15, 2016 incident caused Claimant to experience symptoms in his shoulder which were referable to the rotator cuff. These symptoms included now constant pain, numbness and tingling. (Finding of Fact 29). Claimant ultimately required surgery to repair the rotator cuff. Prior to the January 15, 2016 incident, there was no evidence Claimant required medical treatment for more than two years for his shoulder. (Finding of Fact 13). Claimant's testimony and the medical records established the injury on January 15, 2016 aggravated his preexisting condition and was a cause of his disability. *Colorado Fuel and Iron Corp. v. Industrial Commission*, *supra*, 380 P.2d at 30.

The ALJ considered Respondents' contentions and specifically, Dr. Lindberg's expert testimony on both the question of whether Claimant was injured and on the causation issue. The ALJ was not persuaded by Dr. Lindberg's testimony for two reasons. First, Dr. Lindberg originally concluded (in 2013) that Claimant's torn rotator cuff was not work-related. This conclusion was derived from a faulty premise, namely, Claimant suffered an intervening injury after being released by Dr. McKenna. Dr. Lindberg described this as his "best guess". There was no factual support for this conclusion by Dr. Lindberg, as it was equally possible that Claimant's symptoms related to the torn rotator cuff simply increased after a period time. As found, Dr. McKenna excluded the intervening event as a potential cause after discussing it with Claimant. As Claimant's ATP for the 2013 injury, Dr. McKenna's opinion was more persuasive to the ALJ. (Finding of Fact 4).

By virtue of his role as the independent medical examiner in connection with the prior claim, Dr. Lindberg had already come to a decision about some of the underlying facts in this case, including his belief that the 2013 injury was not work-related. While testifying, Dr. Lindberg's opinions that Claimant's symptoms came only from degenerative changes arising out of the original injury took on an intractable quality. This hurt Dr. Lindberg's credibility on whether the January15, 2016 incident aggravated the underlying condition of Claimant's rotator cuff. Dr. Lindberg gave the impression while testifying that he would never agree that Claimant's underlying condition could be aggravated by an incident at work.

Second, Dr. Lindberg testified the January 15, 2016 incident did not appear to be much of an injury, while not having analyzed whether it could have caused additional symptoms related to Claimant's rotator cuff. Dr. Lindberg testified there was no real disability, although Claimant had pain. Last, Dr. Lindberg said the subsequent MRI was "identical", but as found, there were differences noted by the radiologists. (Finding of Fact 21). Dr. Lindberg spent no time explaining whether the differences were significant, noting only that believed these were a result of a degenerative process.

Contraposed against Dr. Lindberg's opinion was the opinion of Dr. Ladwig, who while noting Claimant's history, found Claimant's injury was work-related. (Findings of Fact 25 & 29). The ALJ credited this opinion and concluded Claimant aggravated his rotator cuff tear, which preexisted this incident.

January 28, 2016

The evidence before the ALJ established that an incident occurred on January 28, 2016. More particularly, Claimant was in a company vehicle and operated the manual window crank, which caused pain in his biceps. Although Respondents argued Claimant was not credible, as the emergency room recorded he was rolling up the window and he testified he was rolling down the window, this was not determinative for the ALJ.

An injury which results from the aggravation of a preexisting condition, which then combines with a hazard of employment is compensable*.* *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). However, to be considered an employment hazard for this purpose, the employment condition must not be a ubiquitous one; it must be a special hazard not generally encountered. *See Ramsdell v. Horn*, 781 P.2d 150, 151 (Colo. App. 1989).

A special hazard of employment is one which increases either the risk of injury or the severity of injury when combined with the pre-existing condition, which is the direct or precipitating cause of the injury. *Id.* Stated another way, the question in this case was whether Claimant proved he was exposed to an employment hazard that he did not generally encounter outside the workplace. *National Health Laboratories v. Industrial Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992).

As determined in Findings of Fact 37 & 39, the act of operating the manual window crank was not unique to Claimant's work as a roofer that day. This injury could have occurred either on the job or away from it. As such, it did not meet the "arising out of" test for compensability and Claimant is not entitled to benefits under the Colorado Workers' Compensation Act for the biceps tendon injury.

Medical Benefits

Since Claimant proved he suffered an aggravation of his preexisting condition (torn rotator cuff), he is entitled to medical benefits to cure and relieve the effects of the January 15, 2016 injury. This includes the surgery Claimant underwent to repair the torn rotator cuff. Respondents are required to provide reasonable and necessary medical benefits to Claimant.

Temporary Total Disability Benefits

As found, Dr. Ladwig issued work restrictions when he examined Claimant on February 2, 2016. There was no evidence in the record that Dr. Ladwig or another ATP released Claimant to regular duty or that he was at MMI. (Finding of Fact 42). As determined in Finding of Fact 44, it was the combination of Claimant's preexisting rotator cuff tear, the incident on January 15, 2016 and the incident on January 28, 2016 that caused his disability.

Even though only one of these incidents was found compensable, nevertheless, Claimant met his burden and proved that he was disabled and suffered a wage loss, which was due in part to the industrial injury. *PDM Molding v. Stanberg,* 898 P.2d 542 (Colo. 1995) ["If a claimant establishes that his or her work-related injury contributed to some degree to the wage loss, the claimant is eligible for temporary total disability benefits pursuant to section 8-42-105"]. Claimant was disabled as a result of these incidents. Accordingly, Claimant is entitled to TTD benefits from February 2, 2016 and continuing, until terminated by law.

As noted above, the parties stipulated Claimant's average weekly wage was $1,161.00 per week. Therefore, TTD benefits are payable at a rate of $774.00 per week.

ORDER

It is therefore ordered that:

1. Claimant suffered a compensable injury to his left shoulder on January 15, 2016 while working for Employer and is entitled to benefits under the Colorado Workers' Compensation Act.

2. Respondents shall provide medical benefits to Claimant to cure and relieve the effects of the January 15, 2016 injury. This includes the medical bill from Good Samaritan Hospital, which is to be paid pursuant to the Colorado Worker's Compensation Fee Schedule.

3. Respondents shall pay Claimant TTD benefits at a weekly benefit rate of $774.00 from January 29, 2016 and continuing, until terminated by law.

4. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP.

You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period October 13, 2015 until terminated by statute.

2. A determination of Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

1. Concrete Architectural Design performs commercial and residential concrete projects. The company is owned by Leo Urbina. Leo Urbina's brother is Jessie Urbina. Jessie Urbina supervises concrete projects and performs administrative functions, including bookkeeping, for Concrete Architectural Design.

2. On June 9, 2015 Claimant began working for Concrete Architectural Design as a Laborer. On October 9, 2015 he injured his back during the course and scope of his employment when he stumbled while lifting a cement form.

3. Employer was the general contractor on the job site where Claimant was injured. Concrete Architectural Design was the subcontractor and lacked Workers' Compensation insurance coverage. Employer accepted liability as the statutory employer.

4. Claimant explained that he reported his injury to Leo and Jessie Urbina. He was permitted to obtain medical treatment from the physician of his choice. On October 13, 2015 he visited Platte Valley Medical Center for an examination. Emergency Room physician R.M. Tharayll, M.D. excused Claimant from work. On October 14, 2015 Claimant returned to Platte Valley Medical Center. He was diagnosed with a lumbar strain and prohibited from regular work until "seen by occupational health."

5. Claimant testified that, after he was discharged from Platte Valley Medical Center, the billing department informed him that Concrete Architectural Design lacked Workers' Compensation insurance coverage. He was thus responsible for making other financial arrangements for the payment of medical bills. Claimant explained that he could not visit occupational health because he lacked the financial resources to pay for medical treatment. He has thus not been released to work by a physician or reached Maximum Medical Improvement (MMI). Claimant noted that he has not worked since October 13, 2015 because of his October 9, 2015 industrial injury.

6. Claimant explained that he earned $16.00 per hour while working for Concrete Architectural Design. He typically worked 40 hours each week plus 5-6 hours of overtime.

7. On June 29, 2016 the parties conducted the post-hearing evidentiary deposition of Jessie Urbina. Jessie Urbina testified that Claimant earned $16.00 per hour Claimant was not promised any set number of regular or overtime hours each week. He noted that Claimant earned time and one-half pay for working in excess of 40 hours per week. Payroll records reveal that Claimant's did not consistently work 40 hours each week or earn overtime pay. Jessie Urbina commented that the busiest season for concrete work is during the summer months and the number of jobs decreases during the fall.

8. Payroll records reveal that for the 10 week period from June 19, 2015 through October 9, 2015 Claimant earned a total of $5,350.75 from Concrete Architectural Design. Dividing $5,350.75 by 10 yields an Average Weekly Wage (AWW) of $535.00. An AWW of $535.00 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

9. On May 25, 2016 Respondents filed a General Admission of Liability (GAL) in which they acknowledged liability for Claimant's medical treatment. Respondents subsequently admitted liability for TTD benefits based on an AWW of $90.00.

10. Jessie Urbina testified that he learned from a co-worker that Claimant had worked for an entity named "Big D" subsequent to his October 9, 2015 back injury. He explained that he contacted the bookkeeper for Big D about Claimant's employment with the company. After confirming Claimant's social security number, the bookkeeper sent Jessie Urbina a report reflecting that Claimant worked for two weeks for Big D in January 2016 and earned a total of $298.38.

11. Claimant has proven that it is more probably true than not that he is entitled to receive TTD benefits for the period October 13, 2015 until terminated by statute. On October 9, 2015 Claimant suffered an admitted injury to his back during the course and scope of his employment with Concrete Architectural Design. On October 13, 2015 he visited Platte Valley Medical Center for an examination. Dr. Tharayll excused Claimant from work. On October 14, 2015 Claimant returned to Platte Valley Medical Center. He was diagnosed with a lumbar strain and prohibited from regular work until "seen by occupational health." Claimant subsequently learned that he was responsible for the payment of medical bills. However, he explained that he could not visit occupational health because he lacked the financial resources to pay for medical treatment.

12. Claimant's October 9, 2015 industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. Moreover, Claimant has not been released to work by a physician or reached MMI. Accordingly, Claimant is entitled to receive TTD benefits

for the period October 13, 2015 until terminated by statute. However, the record reveals that Claimant earned $298.38 while working for Big D in January 2016. Respondents are thus entitled to an offset of TTD benefits in the amount of $298.38.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Temporary Total Disability Benefits

4. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by the claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant

must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

5. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive TTD benefits for the period October 13, 2015 until terminated by statute. On October 9, 2015 Claimant suffered an admitted injury to his back during the course and scope of his employment with Concrete Architectural Design. On October 13, 2015 he visited Platte Valley Medical Center for an examination. Dr. Tharayll excused Claimant from work. On October 14, 2015 Claimant returned to Platte Valley Medical Center. He was diagnosed with a lumbar strain and prohibited from regular work until "seen by occupational health." Claimant subsequently learned that he was responsible for the payment of medical bills. However, he explained that he could not visit occupational health because he lacked the financial resources to pay for medical treatment.

6. As found, Claimant's October 9, 2015 industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. Moreover, Claimant has not been released to work by a physician or reached MMI. Accordingly, Claimant is entitled to receive TTD benefits for the period October 13, 2015 until terminated by statute. However, the record reveals that Claimant earned $298.38 while working for Big D in January 2016. Respondents are thus entitled to an offset of TTD benefits in the amount of $298.38.

Average Weekly Wage

7. Section 8-42-102(2), C.R.S. requires the Judge to determine a claimant's AWW based on his earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a Judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed methods will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating an AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Therefore, §8-42-102(3), C.R.S. grants an ALJ substantial discretion to modify the AWW if the statutorily prescribed method will not fairly compute a claimant's wages based on the particular circumstances of the case. *In Re Broomfield,* W.C. No. 4-651-471 (ICAP, Mar. 5, 2007). An AWW of $535.00 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant shall receive TTD benefits for the period October 13, 2015 until terminated by statute.

2. Respondents are entitled to an offset of TTD benefits in the amount of $298.38.

3. Claimant earned an AWW of $535.00.

4. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: September 16, 2016.

WORKERS' COMPENSATION NO. WC 4-626-898-02

ISSUES

The issues presented for determination were:

1. Whether the Claimant has proved by a preponderance of the evidence that future medical benefits are reasonably necessary to relieve the effects of his injury or prevent deterioration of her condition.

2. Whether the Claimant's Average Weekly Wage (AWW) should be increased or whether the issue is barred by C.R.S. §8-43-203(2)(b)(II)(A).

FINDINGS OF FACT

1. The Claimant worked for Employer at an inpatient resident treatment facility for high risk juveniles who had been discharged unsuccessfully from other programs. She started working there in June of 2002.

2. The Claimant testified credibly that she was injured on March 5, 2003 when she was kicked repeatedly in the head and jaw by a student who she had to physically restrain while taking her to a quiet room.

3. The Claimant testified that she had suffered prior assaults while working at this facility for Employer, specifically,

- a January 8, 2003 assault when she was bit in the left arm and punched in the eye;
- a January 10, 2003 assault when she was hit in left jaw that caused popping in her jaw;
- and a February 12, 2003 assault when she in her right jaw.

The Claimant testified that she didn't initiate claims were for these, and other assaults, because she stated that if she filled out forms every time, she would have constantly been filling out forms. Additionally, the Claimant was seen by the on-site nurse who determined whether to send employees to a doctor.

4. On November 18, 2013, Dr. Kristin Mason performed a Division IME, including a thorough medical records review. Dr. Mason opined that the Claimant was at MMI for her psychiatric and physical issues (Respondents' Exhibit A, p. 31). The parties agree that the Claimant is at MMI.

5. Respondents filed a Final Admission of Liability on January 14, 2014 admitting for post-MMI medical care and claiming an overpayment (Claimant's Exhibit 7; Respondents' Exhibit A).

6. The Claimant stipulated at hearing that a Hearing Application filed in response to the January 14, 2014 Final Admission included as issues permanent total disability and the overpayment claimed by Respondents but it did not specifically list the AWW issue.

7. On May 23, 2014, the Claimant's office sent defense counsel a letter that outlined the amount of Social Security disability payments the Claimant had recently been awarded. The letter outlined the amount that the Claimant's counsel felt was appropriate for any offset or overpayment, including the amount owed to Claimant in AWW when including COBRA benefits. The letter included a copy of the COBRA letter which showed that the Claimant's AWW increased to $525.06 with inclusion of the COBRA benefit. Defense counsel was asked to correct the overpayment information and pay the Claimant the amount owed. This letter was to defense counsel again on May 14, 2015. The Claimant testified that, as of the date of hearing, the amount the Claimant outlined as an offset has not been corrected by Respondents or paid to the Claimant.

8. Respondents filed a second Final Admission on an unknown date in December, 2014 in which they again admitted for post-MMI medical care. This Final Admission also claimed an offset and overpayment due to the Social Security award (Claimant's Exhibit 8). The Claimant filed an objection to the Final Admission on January 21, 2015 stating that it was invalid due to an incomplete date (Claimant's Exhibit 9).

9. Respondents filed an application for hearing on January 21, 2016 which listed the issue of medical benefits, authorized provider and reasonably necessary, modification of maintenance care and request to de-authorize a treating physician (Claimant's Exhibit 10).

10. In response to that Application, the Claimant listed the issues raised by Respondents. The Claimant also added the issues of AWW, and stated that she wanted "her AWW calculated to include her medical benefits and her TT & PP benefits adjusted accordingly" (Claimant's Exhibit 11).

11. The Claimant testified that since her March 2003 work injury, she has had the following problems/symptoms: slow and confused thinking and speech; sleeping difficulties due to pain and nightmares; headaches that are worse than any before work injury; anxiety and depression; eye pain that may be related to her jaw condition; blurry vision, possibly due to use of Topomax; jaw pain with noise and limited jaw movement; diet limited and difficulty speaking due to jaw pain and inability to open jaw very far; dizziness and nausea; neck pain with popping and limited range of motion; and upper back pain that radiates down into shoulders and arms to her hands.

12. The Claimant testified that her physician recommended a taper off from narcotics in May of 2012 and by May of 2013, the Claimant's pain levels were lower and she had better function and her narcotic use was down. She testified that by October 2013, she was off the narcotics and doing better. The Claimant testified that, contrary to the DIME doctor's recommendation in her November 18, 2013 report that Claimant be weaned off narcotics, she was not on narcotics at the time of the DIME. The medical records from Boulder Community Hospital support a gradual tapering of the Claimant narcotics and reduction of all medications (Claimant's Exhibit 2, pp. 34-41).

13. The Claimant testified that her current medications are: Remeron and Cymbalta for depression and pain; Topomax for headaches; Maxalt for jaw pain; Flexeril for pain; Lorazepam for anxiety; Tamazepam for sleep; Phenegren for nausea; and 2 topical compounds for pain. The medications she takes every day are Remeron, Cymbalta, Topomax. She also uses the Alpha hot/cold stimulator and her jaw splints daily. The rest of the medications are taken as needed, but the Claimant testified that, when she receives her injections, she requires fewer medications. When she does not have the injections, her medication needs increase.

14. The Claimant testified that physical therapy with ultrasound, infrared and passive exercises help her to open her mouth more and increase her jaw strength. She has not had the latest physical therapy that was prescribed by her doctors because it has not been authorized by Insurer. The Claimant testified that she needs the physical therapy both after her injections to increase their effectiveness, as well as sometimes between injections.

15. The Claimant testified that she receives Hyalgan injections for jaw pain; epidural steroid injections for neck, upper back and arm pain; and Botox injections for headaches and some neck pain. About 1 month after her DIME examination, Claimant had her first Hyalgan injection series of 3 injections. Claimant testified that these injections, combined with her Botox injections, increased her functioning dramatically. Her sleep improved, her pain was reduced, her jaw movement increased for 2 to 3 months, and her medication use was decreased. The Claimant that specific functional gains include being able to wash dishes and do laundry and she is sleeping more normally so she can complete tasks because she is able to keep track of what she is doing.

16. The Claimant had her second set of Hyalgan injections in February, 2015 and a third set in July, 2015. The Claimant testified that they provided the same relief for the same duration of time. The Claimant stated that she has not had any Hyalgan injections authorized by Respondents since July, 2015, and her functioning has decreased. It is harder to eat, her jaw is very painful, and her sleep cycle is confused. She can eat salads and vegetables after the injections, but her diet is limited to soups and smoothies when she is unable to have Hyalgan injections authorized because she cannot open her mouth due to pain.

17. The Claimant's Botox Injections, which provide headache relief and some neck pain relief, have not been authorized by the Respondents since December, 2015. The benefits of the injection wore off recently and the Claimant's functioning has declined. She has more pain, she is more tired, and her sleep is more disrupted. Instead of being able to fall asleep at 1:00AM or 2:00AM, now she cannot fall asleep until 4:00AM and so she is tired during the day.

18. The Claimant testified that the Hyalgan injection taken in connection with the Botox injections provided the most significant increase in functioning. It helped with her headaches and jaw pain. The Claimant testified that, after having both in close proximity, her function improved enough that she was able to clean her house.

19. With respect to reporting increases in her function from the injections, the Claimant testified that she would tell the doctors about her increase in functional ability, but she did not have control over what the doctors wrote in the medical reports. In any event, the Claimant testified about some of the medical documentation of functional improvement, specifically:

- 4/21/2015 note of Dr. Dent where she reported that "she has been more active in the last week doing spring cleaning and has been better able to tolerate activity overall. For example, putting the dishes away is no longer painful, and she made it to all her appointments last week"

- 5/19/2015 note of Dr. Dent where she reported "decreased pain levels and increased activity tolerance…

20. Overall, the Claimant testified that the treatment she believes she needs to stay at an increased functioning level includes: Hyalgen injections, epidural steroid injections, Botox injections and physical therapy. She testified that the injections work best when done in the same general time frame about every 2-3 months and the physical therapy works best after a series of the Hyalgen injections and occasionally in between injections when there is a flare. On cross-examination, the Claimant also testified that she needs the medications she currently takes in addition to the injections. Even with the injections, she testified that she cannot stop taking the medications.

21. On May 7, 2014 the PCP at Boulder Community Hospital CNS Bonnie Wilensky noted that the Claimant reported, "Increased pain in the head and neck area. She reports that it has been a long time since she has received injections in the cervical region as well as TMJ injections, which she realizes have been very helpful for her and is likely responsible for the increase in pain she is experiencing. I support her continuing to get this modality, as it is an efficacious part of her treatment plan" (Claimant's Exhibit 2, p. 49). At the hearing, the Claimant testified that this is an accurate statement of the effect on her when she was not receiving the Botox and Hyalgan injections.

22. On November 11, 2015, Dr. Marc Steinmetz performed a medical records review of the Claimant's case. He did not perform a physical examination or meet with

the Claimant. For this review, Dr. Steinmetz was asked to determine if it was reasonably necessary for medical maintenance for the Claimant to receive Botox injections. Dr. Steinmetz reviewed a limited number of records from Dr. Dent and Dr. Leimbach along with the DIME report from Dr. Mason. He noted that the DIME physician did not recommend the Botox injections and recommended discontinuing them (Respondents' Exhibit B, pp. 34-35). Dr. Steinmetz opined that continued Botox injections were not reasonably necessary for this claim. He also noted that the Medical Treatment Guidelines do not recommend Botox injections for cervical headaches and attached the relevant section which states,

> "botulinum injections are no longer generally recommended for cervicogenic or other headaches based on good evidence of lack of effect. There is good evidence that botulinum toxin is not more effective than placebo for reducing the frequency of episodic migraines. It may be considered in a very small subset of patients with 12-15 days/month who have failed all other conservative treatment, including trials of at least three drug classes, and who have committed to any life style changes related to headache triggers.
>
> (Respondents' Exhibit B, pp. 36-36)

In citing to the Medical Treatment Guidelines, Dr. Steinmetz did not distinguish that the Guidelines are for pre-MMI care and the Claimant was receiving maintenance care. The Medical Treatment Guidelines state on page 4: "However, some patients may require treatment after MMI has been declared in order to maintain their functional state. The recommendations in this guideline are for pre-MMI care and are not intended to limit post-MMI treatment."

23. On November 24, 2015, Dr. Steinmetz was asked to provide a second medical records review on the question of whether or not it is reasonably necessary for the Claimant to receive cervical epidural steroid injections for maintenance medical care. Dr. Steinmetz notes that the DIME physician does not recommend epidural injections. He also finds that there is a relative lack of objective independent documentation of functional improvement after prior injections. Based on this, and the DIME physician's opinion, Dr. Steinmetz opined that cervical epidural steroid injections for maintenance medical care were not reasonably necessary for this claim Respondents' Exhibit C).

24. With respect to the Guideline recommendations related to botox injections, the December 9, 2015 report of the Dr. Chloe Dent stated that the Claimant had been tried on amitriptyline, valproic acid, ibuprofen, gabapentin, magnesium, and Lyrica for her neck pain and headaches. The Claimant testified that, to the best of her recollection, she had tried these medications unsuccessfully before beginning to receive Botox injections.

25. With respect to the Guideline recommendations related to epidural steroid injections, the Claimant testified that she received her first ESI on March 25, 2015 and her second one on July 8, 2015. She experienced reduction in neck pain and popping; her upper back/shoulder pain went away; and the numbness and tingling in her arms and hands was significantly better. The effects lasted for 2 to 3 months. The Claimant testified that she has not had any ESI's since July, 2015 because of Insurer denial. As with the denial of her other injections, the Claimant testified that this has resulted in decreased function and increased pain, which is confirmed in the medical records of Dr. Dent.

26. Dr. Leimbach, one of the Claimant's treating physicians, testified as an expert in the areas of physiatry and as to Level II accreditation matters. He has been treating the Claimant since June 3, 2005. Dr. Leimbach took over as PCP when Dr. Cambe retired from the Mapleton Pain Management Center at Boulder Community Hospital. He testified that Dr. Dent has now assumed the role of Claimant's PCP at that program. With reference to Claimant's Exhibit 1, p. 1, his June 3, 2005 medical report, Dr. Leimbach testified that he diagnosed the Claimant with jaw and cervical pain, TMJ joint injury, headaches of mixed migraine/tension type, and cervico-thoracic pain because of jammed facets in the neck which created myospasms. The doctor began treatment with IMS/trigger point dry needling. Dr. Leimbach stated that it is similar to acupuncture but the results are transient. When the Claimant had no significant or progressive change the doctor tried occipital blocks. These also had transient results. In 2006 Dr. Leimbach stated that he switched to Botox injections for the migraine headaches and muscle spasm to try to obtain longer relief. The Botox injections have helped by providing 3-4 months of reduction of headaches and relief from cervical pain/spasm. He noted the relief can vary and overall can be about 2-4 months of actual relief. Dr. Leimbach testified that reasons to continue the Botox injections are that they provide longer relief and that the Claimant was able to reduce her medications and wean off narcotics completely, which Dr. Leimbach believes supports the efficacy of the Botox injections. Specifically, he opines that getting the Claimant off previous high daily doses of OxyContin is a significant benefit warranting continuation of the Botox injections. Dr. Leimbach also testified that the Claimant had functional gains from the Botox injections with the reduction in headaches and muscle spasm. She is not pain free but she has had substantial improvement. When she does not have the injections, her headaches are debilitating. He testified that the Claimant is not working, so those types of gains are not measured, but her increase of function is shown in her ability to engage in more household activities. Dr. Leimbach testified that he doesn't believe he has documented the increases in function in the medical records because this was maintenance treatment at that point, but he specifically recalls discussing these with the Claimant each time. Overall, Dr. Leimbach testified that the Claimant is at a substantial improvement from her baseline condition. He acknowledges that none of the injections are curative, but they are palliative and allow the Claimant to increase her function from day to day. Dr. Leimbach also testified that the DIME doctor was wrong when she stated that the Claimant needed a narcotic taper because she was opioid dependent. Dr. Leimbach testified that Claimant was already off of narcotics at the time of the DIME. Also, the DIME doctor wanted to see a decrease in medication utilization with

the Botox injections, but it had already happened before the DIME when the Claimant tapered off of her narcotics. Dr. Leimbach stated that support for the injections could be found in the range of motion measurements for the Claimant's cervical spine that were obtained at the time of the DIME. At the time of the DIME, Claimant was off of all her narcotics, she had not begun the Hyalgan or ESI injections, and it had been months since her last Botox injection. After the DIME, when the Claimant received her injections, Dr. Leimbach found the Claimant's range of motion to be better than at the time of the DIME. Dr. Leimbach testified that he has never seen permanent weakness from Botox injections because the effects are temporary and wear off. He disagreed with Dr. Steinmetz' opinion to deny Botox and ESI's. Both the Botox and ESI injections have proven helpful for the Claimant for 2 to 3 months, which allowed her to stop her opioids. The ESI's are only done 2 to 3 times a year when the Claimant's radicular symptoms increase. Dr. Leimbach disagrees with Dr. Steinmetz' opinion that Botox is not recommended for headaches or cervicothoracic symptomology. Dr. Leimbach stated that the Claimant has a multifactorial headache with a TMJ factor and migrainous headaches. Botox at low doses reduces muscular spasms and decreases tension. It does not affect cervical discs. Dr. Leimbach testified that there is no placebo effect from the Botox injections. He has seen a reduction in the Claimant's muscle spasms, which is an objective effect that cannot be controlled by the Claimant. Dr. Leimbach stated, that contrary to Dr. Steinmetz' opinion, the Claimant meets the criteria for Botox injections under the MTG. She has tried multiple medication classes that have been unsuccessful. Also, the MTG are guidelines, not dictates for care. They do not apply to the Claimant since MMI on 2/25/13, over 2½ years before Dr. Steinmetz' first report, because the MTG do not apply to maintenance care. Dr. Leimbach stated that the need for Botox, ESI and Hyalgan injections is related to the Claimant's injury and the injections are reasonable and necessary to maintain or improve the Claimant's condition. When done close in time, the Hyalgan injections decrease jaw spasms and pain and the Botox injections decrease spasms and headaches. Dr. Leimbach stated that physical therapy is also necessary to improve the Claimant's function, especially after she has the Hyalgan injections. The doctor recommends 2 to 3 visits for the jaw post Hyalgan injection and 6 to 8 visits to increase general functioning.

27. Dr. Leimbach testified that nothing is permanent for controlling the Claimant's spasms and pain, but if she does not receive the injections her condition will deteriorate. He stated that, if the Claimant is not provided with the injections, she could again require narcotics which are more of a risk to Claimant than the injections. Dr. Leimbach testified that, during the time he has treated the Claimant, he has seen significant improvement in her functioning. She has more cognitive and emotional stability. Although she is still on multiple medications, there has been a decrease in frequency. Some of the medications cannot be decreased in dosage as they are at the lowest levels that can be prescribed. Dr. Leimbach stated that the Claimant's medication regimen is stable, and she must continue to take her medications because the injections cannot take the place of the current medications, such as the ones for anxiety or sleep.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. §8-40-102(1). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. §8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of Respondent, and a workers' compensation claim shall be decided on its merits. C.R.S. §8-43-201.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Maintenance Treatment after MMI

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. The need for medical treatment may extend beyond the point of maximum medical improvement where Claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). The evidence must establish a causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado, 717 P.2d 1000 (Colo. App. 1986).*

An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003).

"If the evidence in a particular case establishes that, but for a particular course of medical treatment, a claimant's condition can reasonably be expected to deteriorate, so that he will suffer a greater disability than he has sustained thus far, such medical treatment, irrespective of its nature, must be looked upon as treatment designed to relieve the effects of the injury or prevent deterioration of the claimant's present condition." *Milco Construction v. Cowan*, P.2d 539, 542 (Colo. App. 1992)

In this case, there was conflicting evidence presented about whether or not the Claimant's continued prescription medications along with Botox, Hyalgan and epidural steroid injections are reasonably necessary to prevent the deterioration of her condition.

The Respondents argue that the Claimant is still on a variety of medications with no tapering during the maintenance care and that none of the maintenance care in dispute has improved her functioning. They further argue that the Botox injections are not recommended or supported by the Medical Treatment Guidelines. The Respondents rely on the opinion of Dr. Steinmetz. The Respondents argue that Dr. Leimbach's testimony is not medically credible. They further rely on Dr. Mason's DIME report for the position that there is no support for the Botox injections as medical maintenance care. Similarly, the Respondents argue there is no medical support for the request for epidural steroids as medical maintenance care. The Respondents also dispute the efficacy of the Hyalgan injections, arguing that they have not given the Claimant relief in the form of increased function. Therefore, the Respondents argue there is not sufficient medical support for the Hyalgan injections as medical maintenance care.

The DIME doctor's opinion is not as persuasive as the testimony and medical records of the treating physicians because Dr. Mason was under the mistaken belief that the Claimant was still on opioids so the injections were unnecessary. However, the Claimant had tapered off of the opioids at the time of the DIME examination and she was unable to obtain Botox injections due to Insurer denials. Dr. Steinmetz' opinions are also not as persuasive as the opinions of the treating physicians. He relied on the Medical Treatment Guidelines for his opinion that the Botox and ESI injections were not reasonable and necessary maintenance medical care, but he disregarded the section of the Medical Treatment Guidelines that supported the use of Botox injections under the facts in the Claimant's case. Additionally, Dr. Steinmetz did not address that the Medical Treatment Guidelines may not apply strictly to maintenance care situations.

The ALJ finds the testimony of Dr. Leimbach more persuasive. It was supported by the medical records in part. Further, in terms of the lack of documentation of functional gains, Dr. Leimbach confirmed that the Claimant was reporting her functional gains consistently even where Dr. Leimbach was not comprehensively documenting the same. He also provided specific instances of objective evidence of the positive effects of the medical treatment being offered to the Claimant, including a reduction of her cervical spasms.

In viewing all of the evidence and testimony presented, the Claimant has established by a preponderance of the evidence that, "but for" the medications and the Botox, Hyalgan and ESI injections, her condition can reasonably be expected to deteriorate. Dr. Leimbach has testified that he has seen objective evidence that the injections have improved Claimant's physical condition, and Claimant has testified that the injections have improved her pain and functioning. The medical records from doctors Leimbach, Dent and Aragon support Claimant's statements about the necessity of receiving the injections and the effect on her pain and functioning.

Average Weekly Wage

In this case, with respect to AWW, the issue is whether Claimant is able to pursue an increase of the Average Weekly Wage at the hearing. Respondents have argued that "Neither . . . 8-43-203(2)(b)(II) nor any other provision in the Act states or implies that a claimant may file an objection to an FAL without identifying a contested issue. Likewise, no provision states or implies that issues admitted in an FAL without identifying a contested issue. Likewise, no provision states or implies that issues admitted in an FAL may remain open indefinitely until the claimant identifies a disputed issue and requests a hearing." *Peregoy v. Industrial Claims Appeals Office,* 87 P.3d 261 (Colo. App. 2004). Further, "giving effect to the plain language of § 8-43-203(2)(b)(II), giving consistent, harmonious, and sensible effect to all parts of the statute, and refraining from a strained interpretation, we conclude that a claimant has thirty days after the date the employer files an FAL to file an application for a hearing." *Peregoy v. Industrial Claims Appeals Office, supra.*

Here, the Claimant only endorsed the issue of Average Weekly Wage on the Response to this Application for hearing as filed by Respondents. However, the Respondents filed their Admission of Liability on January 14, 2014. The Claimant did not file an Application for Hearing on AWW within thirty days. The Claimant's Application for Hearing was filed on the sole issue of PTD, for preservation. Thus, the AWW was not a disputed issue subsequent to the Final Admission of Liability. Further, the second Final Admission of Liability did not generate an Application for Hearing subsequent to its filing either.

Section 8-43-203(2)(b)(II)(A) states, in pertinent part:

> "An admission of liability for final payment of compensation must include a statement that this is the final admission by the workers' compensation

> insurance carrier in the case, that the claimant may contest this admission if the claimant feels entitled to more compensation, to whom the claimant should provide written objection, and notice to the claimant that the case will be automatically closed as to the issues admitted in the final admission if the claimant does not, within thirty days after the date of the final admission, contest the final admission in writing and request a hearing on any disputed issues that are ripe for hearing, including the selection of an independent medical examiner pursuant to section 8-42-107.2 if an independent medical examination has not already been conducted."

Further, under the same section:

> "The claimant has thirty days after the date respondents file the admission or application for hearing to file an application for hearing, or a response to the respondents' application for hearing, as applicable, on any disputed issues that are ripe for hearing."

As noted above, the law is clear that the Final Admission of Liability required, and triggered, an Application for Hearing on the issue for it to be considered. Otherwise, the Claimant could continue to assert any issue she wanted subsequent to the filing of the Final Admission of Liability. Unlike the medical benefits issue noted above, this is not a fluid ongoing issue and should been resolved by this point.

Although the Claimant argues the second admission is invalid, there is no evidence to support this assertion, nor evidence the Claimant or her counsel failed to receive it. Further, such alleged "void" second admission does not the vitiate the argument above. The Claimant had thirty days after the January 14, 2014 FAL to file for resolution of the issue of AWW. It remains undisputed she only endorsed it on the Response to this Application for Hearing filed by Respondents. The Claimant also did not seek to reopen the matter by petitioning on the grounds of mistake or error.

Therefore, the ALJ is precluded from considering the issue of an increase to the Claimant's Average Weekly Wage.

Reimbursement of Medical Expenses and Mileage

The Claimant raised arguments in her post-hearing brief for reimbursement of medical expenses and mileage. The Claimant also included Exhibit 13 with correspondence regarding mileage and receipts which was admitted into evidence with no objection. However, this issue was not endorsed on the Respondents' Application for Hearing dated January 21, 2016. Nor was the issue endorsed on the Claimant's Response to the January 21, 2016 Application. The issue was also not listed on either party's Case Information Sheet. The issue was not tried by consent at the hearing.

Therefore, while the Respondents are to reimburse the Claimant pursuant to C.R.S. section 8-43-203(3)(c)(IV), for “mileage expenses for travel to and from work related medical care and to and from pharmacies to obtain medical prescriptions for work-related medical care,” it is not appropriate to consider the issue where the Respondents did not have a full and fair opportunity to present a defense to the issue. The ALJ declines to consider this issue due to a lack of proper notice to the opposing party.

ORDER

It is therefore ordered that:

1. The Respondents shall be liable for reasonably necessary and related post-MMI treatment recommended by the Claimant’s authorized treating physicians, including Drs. Leimbach and Dent, and specifically including Botox, Hyalgan and epidural steroid injections in conjunction with specifically timed physical therapy.

2. The ALJ is precluded from addressing the issue of an increase to the Claimant’s Average Weekly Wage pursuant to 8-43-203(2)(b)(II)(A) and this issue is denied and dismissed.

3. The issue of reimbursement of mileage and expenses was not properly endorsed nor was it tried by consent and this issue is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 19, 2016

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether the Claimant proved by a preponderance of the evidence that she sustained a worsening of her condition that would entitle her to a reopening of W.C. Case No. 4-909-490 under Section 8-43-303(1), C.R.S.

2. If the Claimant proved that her condition worsened, whether the Claimant proved, by a preponderance of the evidence, that the bilateral L5-S1 microdiscectomies recommended by Dr. DeWitt are reasonably necessary and causally related to the Claimant's January 13, 2013 admitted work injury.

FINDINGS OF FACT

1. The Claimant's date of birth is August 10, 1966, and she is currently 50 years old.

2. The Claimant was employed by Employer as a flight attendant from January 2012 to November 2013. Claimant stopped working as a flight attendant on January 13, 2013 and resigned in November 2013 (Respondents' Exhibit V, p. 0123).

3. The Claimant sustained an admitted work-related injury on January 13, 2013. At that time, she was in Durango, Colorado for an overnight between flights when she woke up at 3:00 a.m. to the hotel's fire alarm. She picked up her suitcase that was on the floor and flung it onto the bed to get dressed. She estimated the weight of her suitcase to be approximately 100 pounds. She did not experience any symptoms at that time. The next morning when she arrived at the airport, her legs gave out and she fell to the floor. She was experiencing pain in her low back with radiation down into her legs. She flew back to Denver but was not able to get to the emergency room. She then flew to Wisconsin, where she resides, to seek medical treatment.

4. The Claimant was initially seen on January 14, 2013 at St. Agnes Hospital in Fond Du Lac, Wisconsin. She was seen by Brenda Brusky, APNP who diagnosed a back strain (Respondents' Exhibit T). APNP Brusky prescribed medications and ice.

5. The Claimant had an MRI of the lumbar spine without contrast on February 12, 2013. Robert Garofalo, MD reviewed the MRI and stated under Impression, "Moderate-sized L5-S1 disc protrusion contacting the S1 nerve roots bilaterally with mild central canal stenosis" (Respondents' Exhibit S).

6. On April 2, 2013, Dr. Mann diagnosed a disc protrusion at L5-S1 with narrowing of the lateral recess bilaterally. He recommended a repeat epidural (Respondents' Exhibit N, p. 0075).

7. On February 15, 2013, the Claimant underwent lumbar interlaminar epidural steroid injection at L5-S1 administered by Dr. Hord (Respondents' Exhibit M, p. 0061).

8. On April 23, 2013, Dr. Mann noted that Claimant did not achieve any relief from the epidural injection and recommended surgical decompression through bilateral L5-S1 laminotomy (Respondents' Exhibit N, p. 0073).

9. On May 8, 2013, the Claimant had an X-ray of the lumbar spine that showed instrumentation at the lumbosacral junction and mild degenerative disc disease (Respondents' Exhibit R).

10. On May 10, 2013, Dr. Mann performed bilateral L5-S1 laminotomy and excision of herniated nucleus pulposus (Respondents' Exhibit Q).

11. The Claimant participated in post-surgery physical therapy with Brooke Roth, DPT, LAT, on May 20, 2013. At that time, the Claimant complained of constant pain that was at best 4/10 when medicated and 9/10 at worst. It was also noted that the Claimant had a history of fibromayalgia (Respondents' Exhibit P).

12. On June 11, 2013, the Claimant was evaluated by Dr. Elizabeth Bensen. The Claimant reported ongoing lower back pain and leg pain. After discussing the options for treatment, the Claimant elected to continue physical therapy (Respondents' Exhibit O).

13. The Claimant returned to Dr. Mann on June 27, 2013 complaining of back pain and leg spasms. He recommended she continue with physical therapy (Respondents' Exhibit N, p. 0067).

14. On July 16, 2013, Dr. Mann noted that the Claimant's leg pain was resolved but she experienced some residual low back pain that bothered her when she rolls over. Dr. Mann felt that the Claimant's pain was related to facet irritation at the L5-S1 level. He recommended steroids and stretching exercises (Respondents' Exhibit N, p. 0065).

15. On August 9, 2013, the Claimant underwent bilateral L5-S1 facet joint injection with fluoroscopy administered by Dr. Hord (Respondents' Exhibit M, p. 0056).

16. An MRI was repeated on August 28, 2013 showing no evidence of any residual disc or recurrent disc (Respondents' Exhibit L).

17. On August 29, 2013, Dr. Mann wrote to Dr. Bensen indicating that the the Claimant's MRI did not show any evidence for nerve compromise. Dr. Mann reported the Claimant was in a great deal of pain on the left on palpation of the sciatic notch and suspected piriformis syndrome. Dr. Mann recommended an injection into the left prirformis for diagnostic purposes (Respondents' Exhibit K).

18. On September 12, 2013, Dr. Mann noted, "She has done quite a bit of exercise and muscle stretching which has helped with her symptoms and she states that they improved to the point where she didn't feel the need to proceed with the piriformis injection. At this point, since she is relatively pain free, we are going to return her to work without restriction." (Respondents' Exhibit J).

19. On March 31, 2014, Dr. Aschberger, a Level II physician in Denver, Colorado perform a permanent impairment evaluation. At the appointment, the Claimant completed a pain diagram complaining of pain on a scale of 1-10 at 4 with 10% recovery as of March 31, 2014. Dr. Aschberger placed the Claimant at maximum medical improvement with 13% whole person permanent medical impairment. Under assessment, Dr. Aschberger noted, "No neuromuscular deficits are identified with the examination. Provocative maneuvers are mildly indicative of irritation. Range of motion demonstrates some mild restriction only." Dr. Aschberger opined that the Claimant's physical examination looked good for postop recovery and he did not recommend a fusion when asked by the Claimant. He further opined that if she experienced objective deterioration, then further workup may be considered but was not warranted at that time (Respondents' Exhibit H).

20. The Claimant requested a Division Independent Medical Examination that was performed by Dr. Striplin on September 30, 2014. Dr. Striplin noted that the Claimant was not under medical care for her lumbar spine and that she complained of constant low back pain with intermittent bilateral lower extremity pain that was worse on the left side. He also noted incontinence with laughing and sneezing that he felt were not work-related. He further opined, "With regard to her low back pain, she has undergone appropriate treatment, has residual symptoms with no focal neurological abnormalities noted on examination, and has undergone a postoperative lumbar MRI scan with no recurrent or residual L5-S1 disc abnormality being found. . . I see no need for consideration of further diagnostic testing, further surgery, maintenance medical care, or formal pain management." He placed the Claimant at maximum medical improvement on September 12, 2013 with 13% whole person permanent impairment (Respondents' Exhibit G).

21. On October 16, 2014, Respondents filed a Final Admission of Liability based on Dr. Striplin's Division IME report admitting to 13% impairment rating for the Claimant's low back and for reasonable and necessary maintenance medical care (Respondents' Exhibit V).

22. At hearing, the Claimant testified that she never fully recovered after surgery in May 2013 (Transcript Hearing p. 31, ll.15-19). The Claimant testified that

within a year, her symptoms worsened. She stated, “The shooting pain in both legs, more so in the left but definitely in both legs. Just the severe back pain. The difficulty in walking and inability to sit for long periods of time and just overall – and just an issue with having to deal with the pain management” (Transcript Hearing p. 33, ll. 4-8). The Claimant testified that she did not sustain any new injuries or accidents (Transcript Hearing p. 34, ll. 7-11). Since being placed at MMI, the Claimant described her worsening symptoms in court: “However, the pain continued. It was –although it was much less than what it was prior to surgery, but again, over time, it has just been coming back and becoming more and more intense. So it’s definitely been a gradual onset, but it is – it has definitely been something that – every day I could definitely feel an increase in what was going on with my body” (Transcript Hearing p. 37, ll. 1-14).

23. On August 7, 2015, the Claimant had a lumbar spine MRI with and without contrast. The findings at L5-S1 showed “mild broad-based disc bulging with right paracentral disc bulge prominence in the right paracentral annulus tear. There is mild mass stenosis in the area of the right lateral recess. Posterior facet arthropathy is mild. There is a minor laminotomy defect. There is no significant foraminal stenosis” (Respondents’ Exhibit F).

24. On September 29, 2015, the Claimant was seen by Dr. DeWitt for complaints of low back and left leg pain. Dr. DeWitt noted that the Claimant’s low back pain was fairly constant and she had difficulty sleeping. He noted that her “left lower extremity pain radiates down the posterolateral leg to the lateral shin/ankle and into the medial foot. She has cramping in the hamstring and ankle to the point where she cannot move. Her left ankle feels swollen lately. She also feels weak in that leg. On the right side, she has been occasionally getting charley horses in the right lateral ankle and to the toes. This happens at night and wakes her up. She cannot sit or stand for any long periods of time. There is no position where she can get comfortable.” Dr. DeWitt’s impression was possible recurrent bilateral L5-S1 disc herniations with bilateral S1 radiculopathies. Dr. DeWitt recommended a S1 selective nerve root blocks to determine if this was her pain generator. He further opined, “I would be inclined to offer her revision bilateral L5-S1 microsurgical discectomies if she has a classic response to selective nerve root blocking” (Respondents’ Exhibit E).

25. On October 1, 2015, Dr. Hendricks performed diagnostic/therapeutic lumbar transforaminal epidural steroid injection/selective nerve root block at bilateral S1 with fluoroscopic guidance (Respondents’ Exhibit D).

26. Jill Buchinger APNP spoke to Claimant by telephone and noted that the Claimant reported 80% improvement in the first several hours after the injections but by 6:00 p.m. the pain had returned (Respondents’ Exhibit C).

27. On October 13, 2015, the Claimant returned to Dr. DeWitt who opined, “She initially had surgery with Dr. Mann. She did very well following that surgery. She is now having recurrent bilateral lower extremity pain. She had selective nerve root blocks of the S1 root and got very good relief from the anesthetic phase and it actually lasted

her most of the day. The pain has now returned. She is interested in surgical options." Dr. DeWitt's impression of the MRI included subtle prominence underneath the traversing S1 roots. Dr. DeWitt felt that the nerve root blocks were indicative of S1 root pathology. He opined that with the subtle findings on MRI and her response to the blocks that she should undergo a revision bilateral L5-S1 microsurgical discectomies (Respondents' Exhibit B).

28. Dr. Allison Fall performed an Independent Medical Examination on April 7, 2016. Dr. Fall opined, "She does report progression of symptoms over the past year and a half. There has been no recurrent trauma or specific event that would account for any new injury or worsening symptoms.She is working in an essentially sedentary position with a standing desk and works four ten-hour shifts. Her only exercise is that she tries to walk and does some stretches. There does not appear to be much in the way of core strengthening exercises. Perhaps a return to more strengthening with stabilization would lead to decrease in symptoms. That would certainly be more favorable than another surgery, which would have no guarantee of benefit and may actually lead to further pain, complications, and possibly fusion. It is for that reason, the subtle MRI findings, and the lack of neurological findings on exam that it is my opinion the surgery recommended by Dr. Dewitt is not reasonable and necessary and related to the work-related injury. Going back through the records, there were comments regarding possible symptoms from a piriformis muscle problem. I have seen this quite often following surgeries. I would certainly recommend addressing muscular issues with core and overall strengthening and possible treatment for piriformis hypertonicity prior to considering any surgery" (Respondents' Exhibit A).

29. Dr. Fall testified at hearing. She was accepted as an expert in physical medicine and rehabilitation. She is also level II accredited at the Division of Workers' Compensation.

30. Dr. Fall testified that her review of the August 28, 2013 and August 7, 2015 MRIs do not show recurrent disc herniation. She further testified that the Claimant's response to the facet injections was not significant for a steroid response, meaning that delayed response that comes on after the steroid acts on the inflammation and takes the inflammation down. Dr. Fall testified that the procedure recommended by Dr. Dewitt is essentially a repeat of the previous procedure. She testified that she evaluated neurological deficits in sensation, strength and reflexes when she evaluated the Claimant, which was normal. She testified Dr. Dewitt tested for neurological deficits and his reported results were normal. Dr. Fall testified that with respect to the Colorado Medical Treatment Guidelines, injections, physical therapy, acupuncture and a trial of medications is treatment that is recommended prior to surgical intervention. Dr. Fall testified the Claimant has had no physical therapy for some time, no acupuncture, no medication trials and no exploration of the potential for piriformis syndrome. In addition, Dr. Fall testified the procedure recommended would not address facet pain. (Transcript of hearing pp. 55, ll. 18-25; pp. 56, ll. 1-25; pp. 57, ll. 1-25; pp. 58, ll. 1-25; pp. 59, ll. 1-18; pp. 60, ll. 1-25; pp. 61, ll. 1-25; pp. 65, ll.1-25).

31. Dr. Fall further testified that there were no objective findings of worsening on the MRI in 2015. When asked if the Claimant's condition has worsened since MMI, she stated, "I would say objectively no, but, you know, subjectively she's reporting that she has, you know, worse pain and worse tolerance. But objectively, an objective exam has not worsened." (Transcript of hearing p. 70, ll. 10-13).

32. Dr. Fall opined that the bilateral L5-S1 microdiscectomies recommended by Dr. Dewitt are not reasonable, necessary or related to the work-related injury of January 13, 2013. She recommended physical therapy, stretching the piriformis, strengthening the core, TENS unit, and discussion of possible facet injections with her treating physician. (Transcript of hearing p. 87, ll. 17-25).

33. During her testimony, Dr. Fall stated that she reviewed the actual MRI films. On May 5, 2016, Dr. Fall authored a letter informing the ALJ and the parties that she was mistaken and had not reviewed the actual films.

34. The Claimant's testimony that her condition has gradually worsened since being placed at MMI is supported by the medical records and is therefore found credible and persuasive.

35. In reviewing Dr. DeWitt's medical records, in conjunction with the Claimant's reports to the other physicians and medical providers that her low back and lower extremity symptoms were increasing, and the Claimant's consistent testimony to that effect, the ALJ finds as fact that the evidence supports that the Claimant's condition has worsened since MMI and the worsening is causally related to the admitted January 13, 2013 work injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *Robinson v. Youth Track*, W.C. No. 4-649-298 (ICAO May 15, 2007).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Petition to Reopen

The Claimant filed her Petition to Reopen on the ground that her medical condition has worsened. The Claimant initially sustained work injuries on January 13, 2013 when she suffered a herniated nucleus pulposus at L5-S1. The Claimant now seeks medical benefits in the nature of a repeat bilateral L5-S1 microdiscectomies and other care for a worsening low back condition that the Claimant alleges is causally related to her original admitted work injury.

Section 8-43-303(1), C.R.S., provides that an award may be reopened at any time within six years after the date on the ground of a change in condition. The claimant shoulders the burden of proving his condition has changed and his entitlement to benefits by a preponderance of the evidence. Section 8-43-201; *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725 P.2d 63 (Colo. App. 1986). A change in condition refers either to change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition. *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082 (Colo. App. 2002). Reopening is warranted if the claimant proves that additional medical treatment or disability benefits are warranted. Reopening is not warranted if once reopened, no additional benefits may be awarded. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo. App. 1988).

As a threshold matter, the Claimant bears the burden of establishing that change in the Claimant's condition is causally related to the original injury. Section 8-41-

301(1)(c), C.R.S.; *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). The question of whether the claimant met the burden of proof to establish a causal relationship between the industrial injury and the worsened condition is one of fact for determination by the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). The weight and credibility to be assigned expert testimony on the issue of causation is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. Moreover, medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado, 717 P.2d 1000 (Colo. App. 1986).*

Colorado recognizes the "chain of causation" analysis holding that results flowing proximately and naturally from an industrial injury are considered to be compensable consequences of the injury. Thus, if the industrial injury leaves the body in a weakened condition and the weakened condition plays a causative role in producing additional disability or the need for additional treatment, such disability and need for treatment represent compensable consequences of the industrial injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970); *City of Durango v. Dunagan*, *supra*. However, to the extent that the worsening of a condition occurs as the result of an independent intervening cause, then reopening would not be warranted as this is unrelated to the original compensable injury. Whether a particular condition is the result of an independent intervening cause is a question of fact for the ALJ. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187, 1188 (Colo. App. 2002).

The Claimant has established, through her testimony and with the medical evidence, that, subsequent to MMI, her low back condition with symptoms radiating into her lower extremities has worsened. Since being placed at MMI by the Division IME physician on September 12, 2013, the Claimant has experienced a gradual worsening of pain in her low back and legs. At hearing, the Claimant testified that within a year from MMI her symptoms worsened. She stated, "The shooting pain in both legs, more so in the left but definitely in both legs. Just the severe back pain. The difficulty in walking and inability to sit for long periods of time and just overall – and just an issue with having to deal with the pain management" (Transcript Hearing p. 33, ll. 4-8). The Claimant testified that she did not sustain any new injuries or accidents (Transcript Hearing p. 34, ll. 7-11). Since being placed at MMI, the Claimant described her worsening symptoms as follows: "However, the pain continued. It was –although it was much less than what it was prior to surgery, but again, over time, it has just been coming back and becoming more and more intense. So it's definitely been a gradual onset, but it is – it has definitely been something that – every day I could definitely feel an increase in what was going on with my body" (Transcript Hearing p. 37, ll. 1-14).

On August 7, 2015, the Claimant had a lumbar spine MRI with and without contrast. The findings at L5-S1 showed “mild broad-based disc bulging with right paracentral disc bulge prominence in the right paracentral annulus tear. There is mild mass stenosis in the area of the right lateral recess. Posterior facet arthropathy is mild. There is a minor laminotomy defect. There is no significant foraminal stenosis” (Respondents’ Exhibit F).

On September 29, 2015, Dr. DeWitt noted that the Claimant’s low back pain was fairly constant and she had difficulty sleeping. He noted that her “left lower extremity pain radiates down the posterolateral leg to the lateral shin/ankle and into the medial foot. She has cramping in the hamstring and ankle to the point where she cannot move. Her left ankle feels swollen lately. She also feels weak in that leg. On the right side, she has been occasionally getting charley horses in the right lateral ankle and to the toes. This happens at night and wakes her up. She cannot sit or stand for any long periods of time. There is no position where she can get comfortable.” (Respondents’ Exhibit E).

Because the Claimant has proven by a preponderance of the evidence that her condition has changed and she is entitled to benefits, WC Claim No. 4-909-490 is reopened.

Medical Benefits – Reasonably Necessary

Once a claimant establishes the worsened condition is causally related, the claimant must prove the proposed medical treatment is reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S. Although Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury, Respondents may, nevertheless, challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care in a case. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002), (upholding employer's refusal to pay for third arthroscopic procedure after having paid for multiple surgical procedures).

The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). Factual determinations related to this issue must be supported by substantial evidence in the record. Section 8-43-301(8), C.R.S. Substantial evidence is that quantum of probative evidence which a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411, 415 (Colo. App. 1995).

Pursuant to W.C. Rule of Procedure 17-2 (A), 7 Code Colo. Regs. 1101-3, health care practitioners are to use the Medical Treatment Guidelines referenced as Exhibits at W.C. Rule of Procedure 17-7, 7 Code Colo. Regs. 1101-3 (the "Medical Treatment Guidelines") when furnishing medical aid under the Workers' Compensation Act. The ALJ may also appropriately consider the Medical Treatment Guidelines as an evidentiary tool. *Logiudice v. Siemans Westinghouse,* W.C. 4-665-873 (ICAO January 25, 2011). However the ALJ is not required to grant or deny medical benefits based upon the Medical Treatment Guidelines. *Thomas v. Four Corners Health Care,* W.C. 4-484-220 (ICAO April 27, 2009). The Medical Treatment Guidelines are not definitive, but merely guidelines, and the ALJ has the discretion to make findings and orders which follow or deviate from the Medical Treatment Guidelines depending upon the evidence presented in a particular case. *Jones v. T.T.C. Illinois, Inc.,* W.C. 4-503-150 (ICAO May 5, 2006), *aff'd Jones v. Industrial Claims Appeals Office,* N. 06CA1053 (Colo. App. March 1, 2007)(not selected for official publication); *Nunn v. United Airlines,* W.C. 4-785-790 (ICAO September 9, 2011).

Here, the Claimant has failed to establish by a preponderance of the evidence that the revision bilateral L5-S1 microsurgial discectomies recommended by Dr. DeWitt are reasonably necessary to cure and relieve the effects of the January 13, 2013 industrial injury and the worsened condition from which the Claimant is now suffering.

Dr. Fall persuasively opined that the bilateral L5-S1 microdiscectomies recommended by Dr. Dewitt are not reasonable and necessary. She opined that the Claimant has not undergone conservative treatment pursuant to the medical treatment guidelines prior to consideration of surgery. She testified that the Claimant's response to the facet injections was not significant for a steroid response, meaning that delayed response that comes on after the steroid acts on the inflammation and takes the inflammation down. She testified that she evaluated neurological deficits in sensation, strength and reflexes when she evaluated the Claimant, which was normal. She testified Dr. Dewitt tested for neurological deficits and his reported results were normal. Dr. Fall testified that with respect to the Colorado Medical Treatment Guidelines, injections, physical therapy, acupuncture and a trial of medications is treatment that is recommended prior to surgical intervention. Dr. Fall further testified the Claimant has had no physical therapy for some time, no acupuncture, no medication trials and no exploration of the potential for piriformis syndrome. She recommended physical therapy, stretching the piriformis, strengthening the core, TENS unit, and discussion of possible facet injections with her treating physician. Dr. Fall's recommendations for conservative treatment is persuasive.

In weighing all of the evidence presented, the ALJ concludes that the recommended surgery is not reasonably necessary to cure and relieve the Claimant from the effects of her January 13, 2013 work injury at this time. Pursuant to the Colorado Medical Treatment Guidelines and Dr. Fall's opinion, the Claimant has not pursued conservative treatment prior to consideration of surgery.

ORDER

It is therefore ordered that:

1. Workers' Compensation Case No. 4-909-490 is reopened.

2. Insurer is not liable for the revision bilateral L5-S1 microsurgical discectomies recommended by Dr. DeWitt at this time.

3. Insurer is liable for the medical care the Claimant receives that is reasonably necessary to cure and relieve her from the effects of the compensable injury as determined by her authorized treating physician and any authorized referrals per the Act, except as provided in paragraph 2 above.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 633 17th Street, Suite 1300, Denver, Colorado, 80202. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 19, 2016

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-765-705-05

ISSUES

- Whether Claimant proved by a preponderance of the evidence that he is entitled to a general award of continuing maintenance medical benefits.

- Whether Claimant is entitled to ongoing maintenance with Dr. Gellrick for maintenance medical care, Dr. Wolff for Botox injections, Dr. Torres for psychological maintenance, and Dr. Krause for psychotropic medication maintenance, as well as massage therapy as prescribed by Dr. Gellrick.

- Whether penalties shall be awarded based on Respondent's failure to comply with the DOWC Rule 16-9 and 16-10 and for unreasonable delay of admitted maintenance care, specifically the Botox injections and health club membership.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On June 5, 2008 Claimant sustained an admitted injury to his right shoulder and neck. Subsequently, on June 17, 2008, Claimant was clinically diagnosed as having suffered a right cerebellar stroke as a result of bilateral vertebral artery dissection. The two claims were consolidated on August 14, 2008.

2. On June 5, 2008, Claimant was working for Employer hanging metal tracks for sheet rock. This required Claimant to use his arms over his head and position his head and neck in an awkward fashion while using a nail gun or similar device. Pictures of Claimant's work activities are attached to the September 5, 2008 deposition of Dr. Wolff. This work activity caused Claimant's neck and shoulder injuries.

3. During Claimant's treatment for his neck and shoulder symptoms, Claimant was observed to have slurred speech, decreased hearing, and blurred vision. He was transported to the emergency department at St. Anthony's Hospital. Imaging studies of Claimant's brain were negative and Claimant was initially diagnosed with Bell's palsy. MRIs taken on July 16, 2008, indicated an evolving ischemic infarct in the right anterior cerebellar hemisphere.

4. Claimant underwent extensive treatment with multiple care providers before being placed at MMI. Claimant was initially treated by Dr. Lon Noel for his physical injury who then referred Claimant to orthopedic surgeon, Dr. James Ferrari. On December 11, 2008, Dr. Ferrari repaired Claimant's labral tear and performed a subacromial decompression of his left shoulder.

5. Claimant was referred to Dr. Mark Wolff who first saw Claimant on June 30, 2008. He confirmed by MRI that Claimant suffered a posterior fossa stroke. He confirmed that the symptoms from such a stroke are dizziness and vertigo and that the symptoms ordinarily improve over time with expected minimal deficit. He also confirmed that a vertebral artery dissection is relatively uncommon. When deposed on September 5, 2008, Dr. Wolff recommended no maintenance care except for a recheck with six months to allow Claimant to continue to heal.

6. Dr. Wolff began treating Claimant's neck and shoulder spasms and headaches with Botox injections. In a letter to Insurer seeking authorization for continuing that treatment Dr. Wolff stated, "We have treated him with Botox for cervical dystonia/post stroke spasticity since 9/2010, with good results. Botox helps the patient improve functioning with improved neck range of motion and less pain, and the response has been consistent over the last 4.5 years."

7. Dr. Wolf was deposed again on January 29, 2016, and testified substantially differently than he did in 2008 regarding Claimant's need for maintenance care. Dr. Wolff's involvement in Claimant's maintenance care has been limited to administering Botox injections. Dr. Wolf testified that although Claimant did not initially have a therapeutic response to Botox, beginning in September 2011 when an increased dose was given, Claimant began experiencing relief. Claimant has been stable at 360 units as of March 2014. Dr. Wolf acknowledged the Medical Treatment Guideline's Botox parameters, but reasonably rejected those Guidelines in this instance because he views Botox is a long-term, rather than curative, therapy. Claimant does not suffer from any of the noted negative side effects from his repeated treatments. Claimant's treatments temporarily eliminate the muscle spasms he experiences in his neck which are associated with cervical dystonia, one of Claimant's work related diagnoses.

8. Dr. Noel referred Claimant to Dr. Lawrence Lesnak who placed Claimant at MMI on July 9, 2009 with a 15% upper extremity impairment.

9. On December 9, 2009, Claimant pursued a Division Independent Medical Examination (DIME) with Dr. Greg Reichhardt. Dr. Reichhardt found Claimant not at MMI, in part because he found Claimant suffered psychological sequelae that required treatment.

10. Dr. Torres first saw Claimant on February 12, 2010 on referral from Claimant's counsel. Dr. Torres performed a psychological evaluation of Claimant after reviewing his medical records and performing a psychodiagnostic interview. Dr. Torres diagnosed Claimant with major depression, post traumatic stress disorder (PTSD) causing claimant to be prone to "severe self-loathing" and "severe depression;" and pain disorder. As of February 12, 2010, Dr. Torres anticipated Claimant needing fourteen sessions of therapy. As of October 19, 2011, Dr. Torres opined Claimant would need approximately two more years of monthly therapy. At hearing, Dr. Torres testified that he anticipated Claimant would need indefinite therapy.

11. Dr. Torres has been providing talk therapy treatment for Claimant. He opined that Claimant's response to treatment had be gradual but positive, and during the hearing suggested that he would like to have an occupational therapist added to Claimant's treatment to improve Claimant's function. Dr. Torres opined that withdrawing his treatment would humiliate Claimant because it would delegitimize his autonomy and generate a sense of insignificance.

12. Dr. Wolff provided Botox injections approximately every three months. Botox relaxes the muscle spasms in Claimant's neck, especially when combined with massage therapy. Dr. Wolff testified by deposition that he had been treating Claimant with Botox injections since September, 2010, and Claimant had good results. Botox helped improve Claimant's function by increasing his cervical spine range of motion and decreasing his pain. Dr. Wolff noted that Claimant experienced consistently good results for the last four and one half years of treatment. Dr. Wolff noted that Botox was safe for chronic long term therapy, that Claimant was not suffering any negative side effects, and that Claimant should continue the Botox treatments indefinitely as he remained with spasticity and decreased range of motion in his neck. Dr. Wolff testified that Botox injections are first-line FDA-approved for cervical dystonia and also provide effective headache relief. Dr. Wolf also explained that the alternative treatment would be oral pain medications which were less effective and had debilitating side effects. The benefits of the Botox treatments are documented in the records of Drs. Gellrick and Torres. Claimant and his wife also testified that the injections decreased Claimant's pain and enabled him to interact with his family more often and at a higher level. Throughout Claimant's massage therapy treatment, he has consistently reported the benefits of massage therapy and injections, including decreased pain and tightness, and increased mobility.

13. Dr. Gellrick documented on March 26, 2015 that Botox injections helped Claimant improve function, neck range of motion and less pain and she recommended that Claimant continue Botox. "With medication management and treatment he is able to get out with the family for outings, school activities with family, to the mall and socialize but without these modalities he cannot do this and tends to isolate totally from the family." She also prescribed massage therapy every three weeks for six months.

14. Claimant also began seeing Dr. Krause who prescribed and continues to manage Claimant's psychotropic medications. Claimant sees Dr. Krause approximately every two months. However, Claimant's medications have stabilized. Medical records from Claimant's personal physician support a finding that while on psychotropic medications, Claimant looked better, seemed calmer, and was more active and alert. Claimant's personal physician also reported that Claimant's major depression and anxiety disorder were stable on medications. Claimant's mood was worse off medications. Dr. Torres' notes also support that psychotropic meds helps Claimant be more focused, with more energy.

15. On June 2, 2015 Dr. Krause reported that Claimant's current medications and psychotherapy are to help Claimant maintain his current level of functioning and prevent relapse. He opined that Claimant will need medication indefinitely.

16. Claimant’s care was eventually transferred to Dr. Gellrick who first began treating Claimant on April 27, 2010 and who placed him at MMI effective February 23, 2011. Dr. Gellrick’s MMI report describes Claimant’s stroke as “right cerebellar consistent with ischemic infarction.” Dr. Gellrick provided Claimant with a 30% whole person impairment. As maintenance care, Dr. Gellrick recommended follow-up with Drs. Torres and Krause on a monthly basis for the next two years and with Dr. Wolff for five years.

17. On July 21, 2015 Dr. Gellrick performed a Medical Record Review Special Report at Claimant’s request. In her report, she stated that Claimant would definitely regress without continued psychotherapy and access to medication. Claimant continues with headaches, as well as trapezius and cervical spasms, which do respond to Botox injections. She noted that there are no adverse side effects, that the Botox injections have been beneficial for Claimant, give him relief, and at this time are permanent. Dr. Gellrick noted that Dr. Wolff agrees with the massage therapy to help Claimant ameliorate symptoms of tenderness, spasm and headaches. Dr. Gellrick stated, "In reviewing all of the consultants on this case, it is clear that the patient has sustained a permanent life threatening event of vertebral artery dissection which could have killed him. He is left with the effects of the stroke, primarily on the cerebellum, which can produce spasms of the cervical spine and trapezius area, as well as headaches. Having gone through this experience, the patient is indeed frightened that without meticulous control, he could have another stroke. Strokes can be precipitated not only by excessive heavy lifting, in this case beyond 25 pounds, but also with factors such as heart disease or hypertension. Therefore, he needs to continue to maintain his wellness as much as he can by not gaining a lot of weight, continuing his exercise program at the local gym, and watching his diet." Dr. Gellrick noted that Dr. Krause highly recommended that Claimant continue with Dr. Torres on a monthly basis, and she concurred. She would keep maintenance treatment down to a minimum, trying to confine rechecks to semi-annual for lab and medication refills.

18. At hearing Dr. Gellrick opined that Claimant’s maintenance care with her, Dr. Torres and Dr. Wolff should continue without change, indefinitely. Dr. Gellrick could foresee Dr. Krause’s prescription writing being limited to semi-annual as Claimant’s medications have stabilized.

19. When Claimant was placed at MMI on February 23, 2011, Claimant’s diagnoses included chronic neck pain with cervical spasms, chronic depression, PTSD, and memory and cognitive dysfunction as a result of his stroke. Dr. Gellrick recommended maintenance medical care which included continued care with Drs. Krause, Torres and Wolff, as well as massage therapy.

- Dr. Gellrick would continue as Claimant's care coordinator;

- Dr. Krause, a neurologist, would continue to prescribe Claimant's psychotropic medications;

- Dr. Torres would continue to provide psychotherapy; and

- Dr. Wolff would continue to provide Botox injections.

20. On March 7, 2011, Respondents filed a Final Admission of Liability (FAL), admitting for medical benefits after MMI, though limiting those benefits.

21. On January 16, 2012, the parties entered into a full and final settlement that was approved on January 20, 2012. By the terms of the settlement Claimant settled all entitlement to workers' compensation benefits listed in paragraph three of the settlement unless those benefits were specifically reserved in paragraph 9A of the settlement agreement. Claimant specifically waived all penalties, interest, costs and attorneys' fees up to the date of the approval of the settlement, but retained the right to seek post-approval penalties for failure to comply with the terms of the approved settlement. In paragraph 9A4 of the settlement agreement the parties agreed that Claimant's post MMI medical benefits shall remain open.

22. Respondents now challenge Claimant's entitlement to medical care generally, and his entitlement to each component of his care.

23. On January 13, 2015, Dr. John Raschbacher performed a Respondent-sponsored medical examination of Claimant. After reviewing available medical records as documented in Dr. Raschbacher's report, Dr. Raschbacher assessed Claimant as suffering from chronic cervical pain, a repaired right shoulder labral tear, a resolved bilateral vertebral artery dissection, and a right cerebellar stroke. Dr. Raschbacher recommended no further care for Claimant's conditions as he opined there was no objective functional improvement secondary to the care. However, objective functional improvement is not required as a result of maintenance care, and is not the standard by which such care is evaluated.

24. Dr. Raschbacher's report opined that Botox injections were not reasonable or necessary under the Medical Treatment Guidelines, or medically aside from the Guidelines. Dr. Raschbacher noted that Claimant was not experiencing or reporting functional gains. He also opined that Claimant did not have a diagnosis that would likely call for indefinite periodic Botox injections. And, in any event, Claimant had exceeded the maximum length of treatment allowed by the Guidelines.

25. Further, Dr. Raschbacher could not attribute any cognitive deficits to Claimant's stroke as the MRI shows Claimant suffered a cerebellar stroke. He explained the cerebellum has no significant role in cognition, memory, or pain. Dr. Raschbacher also did not attribute Claimant's neck pain, cognitive problems,

PTSD, and depression to the injury due to lack of contemporaneous complaints. Dr. Raschbacher noted that Claimant's most optimal level of function after the June 5 and June 17, 2008 injuries probably occurred in late 2008, and that Claimant had clinically worsened over time. Dr. Raschbacher opined that further care from the current medical providers was not reasonably necessary and related to the original injury. With regard to medications, Dr. Raschbacher had difficulty testifying what was reasonably necessary to maintain Claimant's level of function because considering the medications required believing Claimant experienced the symptoms he reported. Dr. Raschbacher did not recommend any further medications, Botox injections, or continued gym membership.

26. On March 16, 2015, Dr. Stephen Moe evaluated Claimant. Dr. Moe opined that a change in Claimant's mental health treatment regimen wais needed. Dr. Moe's opinion is based in part on evidence that Dr. Torres' treatment prior to Dr. Moe's initial evaluation, was ineffective. Therefore, Dr. Moe opined that a change in prospective treatment or treatment provider was needed. Dr. Moe opined that Claimant needs a therapist who will demand more of Claimant than Dr. Torres. Dr. Moe observed an element of dependency between Claimant and Dr. Torres, and opined that cognitive behavioral therapy likely would be more effective than talk therapy. Dr. Moe conceptually rejected the idea that Claimant will necessarily worsen without treatment.

27. On September 17, 2015 Dr. Gellrick noted that Claimant had demonstrated improvement in function with medication management, especially with Dr. Krause's medications, as well as Botox injections with Dr. Wolff and massage therapy. She noted that Claimant is more participatory and interactive with the family. She stated, "Without continued maintenance treatment he tends to regress and isolate at home."

28. Claimant seeks penalties for Respondents' delay in authorizing Botox injections.

29. Claimant's Botox injections scheduled for March 20, 2015 were delayed to April 22, 2015.

30. On July 20, 2015 Dr. Wolff requested authorization for Botox injections every twelve weeks.

31. On July 29, 2015 Respondents issued a letter denying Dr. Wolff's request for authorization for Botox injections every 12 weeks. Attached was Dr. Raschbacher's report as support for the denial; however, they did not provide, nor did Dr. Raschbacher provide the professional credentials for Dr. Raschbacher, as is required in DOWC Rule 16- 10(B)(3)(a). The only credentials reported was that he is Level II accredited. Pursuant to Sec. 8-42-101(3.6)(a)(ll) a Level II qualification is impairment evaluations and does not grant any particular qualification or credential to treat. Also, DOWC Rule 16-10(8)(3)(b) requires a specific cite from the Division's Medical Treatment Guidelines Exhibits to Rule 17. Neither the denial letter nor Dr. Raschbacher's report included a specific cite.

Finally, DOWC Rule 16-10(8)(1) states that the reviewing physician must hold a license and be in the same or similar specialty as would typically manage the treatment under review. Dr. Raschbacher is a family medicine/occupational medicine physician, a specialty that does not normally undertake the treatment of Botox injections. Dr. Wolff is board certified in Neurology in the areas of treatment of strokes, vertebral artery dissections and specialized in treatments with Botox.

32. Claimant seeks penalties for Respondents' delay in paying for Claimant's gym membership.

33. On July 20, 2015, Dr. Adam Wolff requested authorization for Botox injections every twelve weeks. On July 29, 2015 Respondents denied Dr. Wolff's request. Respondents provided a report authored by Dr. Raschbacher as support for the denial; however, they did not provide Dr. Raschbacher's professional credentials as is required in DOWC Rule 16- 10(B)(3)(a). Respondents provided only that Dr. Raschbacher is Level II accredited. Pursuant to section 8-42-101(3.6)(a)(ll), a Level II qualification is required for impairment evaluations and does not grant any particular qualification or credential to treat. Also, DOWC Rule 16-10(8)(3)(b) requires a specific cite from the Division's Medical Treatment Guidelines Exhibits to Rule 17. Neither the denial letter, nor Dr. Raschbacher's report included a specific cite. DOWC Rule 16-10(8)(1) provides that the reviewing physician must hold a license and be in the same or similar specialty as would typically manage the treatment under review. Dr. Raschbacher is a family medicine/occupational medicine physician, a specialty that does not normally undertake the treatment of Botox injections. Dr. Wolff is board certified in Neurology in the areas of treatment of strokes, vertebral artery dissections and specialized in treatments with Botox.

34. On August 27, 2014 Dr. Gellrick issued a prescription for a one-year gym membership. On September 10, 2014 Claimant's attorney's office sent the prescription for gym membership to Respondents requesting that they issue a check to Claimant so he could renew his 24 Hour Fitness membership. On March 2, 2015 Claimant's attorney faxed a letter to Respondents' attorney, advising him that the gym membership had still not been paid, and that Claimant had been unable to continue his exercise program at the gym. On March 26, 2015 Dr. Gellrick noted that Claimant needs to continue his IHEP at the local gym; however, the renewed script had not yet been authorized. On June 12, 2015 Respondents' attorney conceded that Claimant had still not received the gym membership that was requested. On September 21, 2015 (over one year after it was prescribed) Claimant's attorney again provided Respondents with an estimate for the gym membership. On October 21, 2015 Respondents stipulated that they "will pay claimant directly for a health club membership." On January 21, 2016 Dr. Caroline Gellrick issued another prescription for a gym membership, now for 18 months. In fact, Ms. Nancy Gay agreed that she or the adjusters had received the multiple requests for authorization of the gym memberships as well as for Botox injections. She stated that she reviewed the file and had noticed

that claimant had been receiving the gym memberships since being released at MMI.

35. On January 23, 2016 Claimant's attorney sent a copy of Dr. Gellrick's prescription for the 18-month gym membership to Respondents' attorney. On January 25, 2016, Respondents finally issued a check for the gym membership. Claimant and Claimant's wife testified that he received the check for his gym membership finally on February 1, 2016 and was finally able to obtain the membership with 24 Hour Fitness on February 4, 2016. However, she initially received the prescription from Dr. Gellrick in 2014 and it took a long time to get it renewed. She had been getting the gym membership arranged for her husband since 2010.

36. Claimant engages in some household chores, is transportation for the children to and from school, and can drive to run errands or go to the gym. Claimant testifies that he jogs on the treadmill approximately four times a week when he goes to the gym.

37. Ms. Gay, the adjuster, testified that Insurer authorized the most recent Botox injection in December 2015, after the Stipulation, and then denied the recommended one in April 2016. She also confirmed that they did not pay the gym membership prescribed in September 2014 until January 25, 2016.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Where an injured worker reaches maximum medical improvement but requires periodic medical care to prevent his condition from deteriorating, it is permissible to leave medical benefits open subsequent to the final award. *Grover v. Industrial Commission, 759 P.2d 705 (Colo. 1988).* The parties resolved by specifically leaving medical benefits open pursuant to the Stipulation and Order of January 16, 2012. If the language of the agreement is "plain [and] clear, and no absurdity is involved," it must enforce as written. *Cary v. Chevron U.S.A., Inc.,* 867 P.2d 117, 119 (Colo. App. 1993). Therefore, all treatment prior to Respondents Application for Hearing of October 15, 2015 challenging reasonable necessity of medical care related to the claim was authorized.

WCRP 16-10(B) provides that "the payer shall," within seven business days of the completed request have all the submitted documentation reviewed by a physician and furnish the provider and the parties with either a verbal or written approval, or a written contest that sets forth an explanation of the specific medical reasons for the contest, including the name and professional credentials of the person performing the medical review and a copy of the medical reviewer's opinion. A payer's failure to comply in full with WCRP 16-10 (A) or (B), "shall be deemed authorization for payment of the requested treatment."

WCRP 16-10(B)(3) specifically provides, in relevant part, that the payer must furnish the provider and the parties with a written contest that sets forth the following information: “The specific cite from the Medical Treatment Guidelines Exhibits to Rule 17, *when applicable.” (Emphasis added).*

The ALJ finds that Respondents provided a timely denial after review by medical provider. The respondents’ denial was based on Dr. Dr. Raschbacher’s review. The ALJ finds that Dr. Raschbacher’s opinion focused on the fact that Claimant’s symptoms not changed since he was previously put at MMI and thus did not necessitate further treatment. Under these circumstances a citation to the *Guidelines* was not applicable nor warranted in view of the supporting opinion provided by Dr. Raschbacher as the basis of the denial was apparent. The ALJ also concludes that Respondents’ denial included specific medical reasons explaining that any Botox injections exceeded those allowed in the Guidelines and would not constitute reasonable or necessary treatment for the Claimant’s work injury.

Where the respondents file an FAL admitting for maintenance medical treatment pursuant to *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988), this does not preclude them from later contesting their liability for a particular treatment. Rather, when the respondents contest liability for a particular medical benefit, the claimant must prove that such contested treatment is reasonably necessary to treat the industrial injury. *SeeGrover v. Industrial Commission*, 759 P.2d at 712; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo.App. 1997). Where, however, the respondents attempt to modify an issue that previously has been determined by an admission, they bear the burden of proof for such modification. Section 8-43-201(1), C.R.S.; *see also Barker v. Poudre School District,* W.C. No. 4-750-735 (March 7, 2012).

On March 7, 2011, Respondents filed a Final Admission of Liability (FAL) under §8-43-201, C.R.S., admitting for medical benefits after MMI. Here, because Respondents had previously filed an FAL admitting for maintenance medical benefits, Respondents have the burden to show why they are no longer responsible for maintenance medical benefits in general. The ALJ is not persuaded by Respondent’s argument that the settlement agreement effectively nullifies their FAL regarding maintenance benefits.

In *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988), the court noted that when determining whether the claimant is initially entitled to ongoing maintenance medical benefits the ALJ is tasked with finding “substantial evidence in the record to support a determination that future medical treatment will be reasonably necessary …” *Grover*, 759 P.2d at 711. In such circumstances “substantial evidence means such relevant evidence as a reasonable mind might accept as adequate to support a conclusion.” *Woods v. The Home Depot,* W.C. 4-365-829 (Sept. 27, 2001).

In general, the Medical Treatment Guidelines are accepted professional standards for care under the Colorado Worker’s Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). It is appropriate for the ALJ to consider the Guidelines in deciding whether medical treatment is reasonable and necessary for claimant's condition. *Logiudice v. Siemens Westinghouse*, W.C. No. 4-665-873 (ICAO January 25, 2011). Appropriate consideration of the Guidelines does not require that they be strictly followed by the ALJ. *Martinez v. Penske Truck Leasing*, W.C. No. 4-938-870 (ICAO January 6, 2015).

Claimant's condition involves chronic pain and is, therefore, governed by the Chronic Pain Disorder Medical Treatment Guidelines found under Rule 17, Exhibit 9 of the Colorado Workers Compensation Rules of Procedure. Claimant's medical treatment has been authorized and provided by Drs. Wolff, Gellrick, Torres and Krause since the parties agreed on these providers after Dr. Reichhardt, serving as a DIME, found claimant was not at MMI. These doctors all have a different role in Claimant's care. Dr. Gellrick has served as an authorized treating physician providing primary care to claimant. For an extended timeframe this is amounted to Claimant's periodic visits with Dr. Gellrick for a checkup and possible blood work. Dr. Gellrick also monitors some of Claimant's prescriptions and will generate prescriptions for things such as a gym membership. Dr. Wolff is a neurologist who only administers Botox injections to claimant. Dr. Torres is a psychologist who engages in monthly therapy with Claimant. Dr. Krause is a psychiatrist who basically provides some prescriptions for Claimant, without engaging in any further therapy, except determine what medications are working for claimant. Claimant's maintenance medical treatment provided by these doctors has exceeded the recommendations for such treatment under the Medical Treatment Guidelines. However, while the ALJ must consider the Guidelines, the ALJ finds and concludes that Claimant's medical care is reasonable, related, and necessary to maintain Claimant at his baseline and to prevent further deterioration of his condition.

The ALJ finds the opinions of Dr. Gellrick, Dr. Torres, Dr. Wolff and Dr. Krause, Claimant's treating providers to be credible, persuasive, and supported by the preponderance of the evidence. The doctors consistently testified that Claimant's current treatments maintain him at a baseline and prevent his condition from deteriorating. Claimant's treatment has increased his ability to perform activities of daily living and interact positively with his family. Their opinions are consistent with the medical records and testimony, which demonstrate a marked improvement from injections which reduce pain in order for Claimant to function, get out of bed and participate in family affairs and the gym activities. The psychological care has assisted Claimant with decreasing his anxiety, moodiness, anger, fatigue, focus, and overall depression. Claimant is entitled to the maintenance medical benefits recommended for him by Dr. Gellrick, Dr. Krause, Dr. Wolff and Dr. Torres.

Even Dr. Moe, Respondent's IME physician, although critical of aspects of Dr. Torres' care, agreed that Claimant requires continuing maintenance care for his psychological and psychiatric care. Based on the totality of the evidence the ALJ finds and concludes that Dr. Torres' care should be maintained.

The ALJ is not persuaded by Dr. Raschbacher's opinion that Claimant does not need any additional medical care. Dr. Raschbacher's opinions are contrary to the great of the evidence that Claimant needs the treatment he is receiving in order to prevent deterioration. They are also based on his apparent disbelief that Claimant actually suffers from any work related injuries, and the ALJ finds them to be unreasonable.

The ALJ is not persuaded by Respondents' argument that Claimant waived penalties as part of the settlement agreement. As found, Claimant specifically waived all penalties, interest, costs and attorneys' fees up to the date of the approval of the settlement, but retained the right to seek post-approval penalties for failure to comply with the terms of the approved settlement. In paragraph 9A4 of the settlement agreement the parties agreed that Claimant's post MMI medical benefits shall remain open.

The ALJ finds and concludes Claimant's penalty claim is not adequately factually supported. Claimant appears to contend that a penalty should be assessed for failing to authorize a gym membership sent by Claimant's counsel in a letter dated September 10, 2014. There is no persuasive evidence that Respondents received the letter. Rather, approximately one year later the adjuster received a note with an 18 month estimate for a gym membership, rather than the ordinary 12 month membership previously provided. This was not a reimbursement request, but an estimate with the apparent expectation that the adjuster simply pay the estimated amount. After it became apparent Claimant was not going to pay for the gym membership and seek reimbursement, efforts were made to try to get the gym to accept payment directly, requiring a W-9. The adjuster was advised that the gym would not provide this document so eventually payment had to be made directly to Claimant. No persuasive evidence supports a finding that the gym membership issue ever involved prior authorization under Rule 16 as there was never a preauthorization request.

The denial of authorization for Botox injections also fails to support a penalty. Respondents filed their hearing application over reasonably necessary and related medical benefits on April 15, 2015. Prior to this, in March 2015, Claimant's counsel sent a letter referencing an appointment Claimant had with Dr. Wolf on March 20, 2015 where no authorization for a Botox injection was given. This was not a prior authorization request by a provider, and thus was not subject to Rule 16 requirements. While Respondent's challenge to the continuance of Botox injections was pending before the Office of Administrative Courts, Dr. Wolff's office faxed a request for prior authorization for Botox to Insurer. The request for a Botox injections was given the proper medical review and denied by a letter sent by fax and certified mail dated July 29, 2015, within the seven business days of receipt of the original authorization request. The same prior authorization request was sent in March 2016 and Insurer dealt with it in the same fashion. Therefore, the ALJ finds and concludes there is an inadequate factual basis for Claimant to claim a penalty as there is no violation of a statute, rule or order identified or proven by Claimant.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has proven by a preponderance of the evidence that he is entitled to a continuing general award of the requested maintenance care, which is reasonably necessary and related to the injury.

2. Respondents shall provide all reasonably necessary medical care related to the injuries as prescribed by Dr. Gellrick, claimant's primary authorized treating physician; Dr. Wolff, his neurologist; Dr. Krause, his psychiatrist; and Dr. Torres, his psychologist; including Botox injections, psychological therapy maintenance, massage therapy, medications for both Claimant's physical and mental injuries related to his June 5, 2008 accident.

3. Claimant's claims for penalties are denied and dismissed.

4. Issues not expressly decided herein are reserved to the parties for future determination.

5. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301 (2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http:/lwww.colorado.gov/dpa/oac/forms-WC.htm

DATED: September 20, 2016

Denver, CO 80203

ISSUES

I. Whether Claimant established by a preponderance of the evidence, that he sustained a compensable low back injury during his January 21, 2016 motor vehicle accident.

II. If Claimant suffered a compensable low back injury on January 21, 2016, whether he has proven by a preponderance of the evidence that the treatment recommended by Dr. Paz is causally connected to the work injury on January 21, 2016.

FINDINGS OF FACT

Based upon the evidence presented, including the parties hearing exhibits along with the testimony of Claimant and Dr. Olsen, the ALJ enters the following findings of fact:

1. In April, 2014, Claimant commenced his employment with Qwest/Century Link in Trinidad, Colorado, as a network technician. Prior to starting this job, he had not experienced any problems with his low back and there is no medical documentation to indicate he received treatment focus to the lumbar spine. Claimant testified that he had no difficulties performing his job duties with Qwest/Century Link prior to his work related injury on January 21, 2016.

2. On January 21, 2016, Claimant was the restrained driver of a 12,000 to 18,000 gross vehicle weight bucket truck. He was stopped at an intersection when he was rear ended by a truck driven by his supervisor. The force of the impact pushed the bucket truck into the intersection. Claimant testified that the force of the collision threw him forward and backwards.

3. After impact, Claimant excited his vehicle and inspected the damage. He testified that his adrenaline was rushing. He did not notice any immediate symptoms and continued working. Approximately three hours after the crash, Claimant developed pain and soreness in his neck and low back. He took Ibuprofen that evening. The following day, Friday, January 22nd, he had pain is his neck and a pinch like sensation between his shoulder blades, as well as low grade pain in the lumbar spine. Over the weekend, the neck pain became worse.

4. On January 25, 2016, Claimant was seen in the emergency room (ER) at the Spanish Peaks Regional Health Center in Walsenburg, Colorado, where he was examined by Dr. Dunnam-Smith. Claimant testified that at the time of his examination, his low back pain was mild and that his neck injury had become worse with numbness

extending into his right hand. He reported only neck pain and did not indicate problems with his low back.

5. The medical records of Dr. Dunnam-Smith indicate that imaging studies were performed of the cervical and thoracic spine. The diagnosis was cervical and neck strain with radiculopathy and thoracic back pain. Claimant was placed on restrictions and returned to modified duty and it was suggested that he follow-up with a workers' compensation provider in 1 week. (Cl. Ex. 1, pg. 6).

6. Claimant was also prescribed a seven day tapering dose of Prednisone in addition to muscle relaxants. (Cl. Ex.1, pg. 5 and 17).

7. Claimant testified that after he completed his course of Prednisone and muscle relaxants, he felt much better, his symptoms were dramatically improved and he thought he had recovered from the injuries sustained in the automobile accident.

8. Per instructions, Claimant was examined by Dr. Schwender, the Respondents' designated workers' compensation physician on February 4, 2016 at the Colorado Center for Occupational Medicine office located in Pueblo, Colorado. Dr. Schwender noted a history of pain in the neck as well as numbness in the right hand. Dr. Schwender noted Claimants treatment with Prednisone and documented that Claimant was feeling much better despite a continued pinching sensation at the base of his neck. There was no report of problems with the low back and Dr. Schwender's physical examination appears limited to the cervical spine only. Dr. Schwender returned the Claimant to modified duty with no lifting greater than 25 pounds. (Cl. Ex. 2, pg. 22).

9. Claimant testified that after completing the course of steroids and muscle relaxants, his neck pain returned. He also had a return of his previously mild low back pain sufficiently intense that it interfered with his work duties. The low back pain was aggravated by his job duties, such as riding in his work vehicle and bending. Gradually, the pain in his low back extended into his right buttock and he experienced loss of feeling in the toes of his right foot.

10. Claimant requested a change to an employer designated physician closer to his home. This medical treatment was transferred to Dr. David Paz at Mr. Carmel Health and Wellness in Trinidad, Colorado. Claimant was evaluated by Dr. Paz for the first time on February 25, 2016. Dr. Paz incorrectly noted an auto accident occurring in the State of Kansas. In addition to the problems with the cervical spine, Dr. Paz noted back pain extending into the thigh and numbness in the right toes. He noted the Claimant had been placed on light duty but riding in the truck aggravated the low back pain. Physical examination demonstrated that the right lower extremity was "jerky" on extension as compared to the left. Dr. Paz also noted decreased sensation in the right upper extremity. He recommended an MRI of both the cervical and lumbar spine. Mr. James was taken off work and prescribed Naprosyn and Hydrocodone-Acetaminophen. (Cl. Ex. 3, pgs. 37-39). Dr. Paz provided an assessment of "interveterbral disc with

myelopathy and radiculopathy." In addition to recommending an MRI of the lumbar spine, Dr. Paz referred Claimant to Dr. Murad for a neurosurgical evaluation. (Cl. Ex. 3, pgs. 33-34).

11. Reports prepared by Physician Assistant (PA) Andrew Glass working under the direction of Dr. Murad were also submitted post hearing. The ALJ finds the reports of PA Glass potentially outcome determinative and admits the reports as Claimant's Exhibit 8.

12. The initial examination on March 30, 2016, notes a history of a motor vehicle accident with resulting cervical and lumbar pain, post-accident. The low back pain radiated into the right lower extremity. Claimant's pain increased with walking and was relieved when lying down. He had no issues with the lumbar spine prior to the accident. Concerning the low back, PA Glass provides an assessment of "back pain" and "lumbar radiculopathy". Claimant was provided with an additional "medrol (Pak), 4 mg to be taken orally along with a referral to anesthesiology for evaluation concerning the efficacy of epidural steroid injections. Claimant also underwent an MRI of the lumbar spine on this date.

13. On June 1, 2016, Claimant returned to PA Glass for review of lumbar spine MRI findings. The MRI demonstrated no significant nerve compression. There was mild bilateral recess stenosis at the L4-L5. X-rays of the lumbar spine of the lumbar spine demonstrated degenerative disc disease. Claimant was advised that there were no structural defects that could be resolved by surgery and that the most likely cause of his symptoms was nerve root irritation, possibly at the L4 level. An assessment of lumbar radiculitis is provided and lumbar epidural steroid injections were recommended.

14. Claimant was examined at the request of Respondents counsel by Dr. Nicholas Olsen. In a report dated April 28, 2016, Dr. Olsen notes that Claimant provided a history to him of feeling a little pain in his lower back over the weekend after the accident. As the weekend passed, the lower back did not seem as it was bothering him too much. When he went to the emergency room on the following Monday, January 25th, he did not report a problem with his low back. Once he commenced a regiment of steroids and muscle relaxants, Claimant reported that he started feeling better. After the course of medication was completed, the pain returned and progressively worsened. (Cl. Ex. 4, pg. 101). Lumbar flexion, extension and bi-lateral bending elicited complaints of pain. A supine straight leg raise test aggravated right lower back pain. (Cl. Ex. 4, pg. 107). Dr. Olsen opined that Claimant had complaints consistent with axial back pain along with a "mild physiologic examination involving the right lower extremity with a stocking loss of sensation." Dr. Olsen questioned Claimant's alleged lumbar spine injury based on the history provided to him. He noted that Claimant is a poor medical historian and questions why the lumbar complaints were not initially presented to Dr. Dunnam-Smith. (Cl. Ex. 4, pg. 110).

14. As noted, the parties took the evidentiary deposition of Dr. Olsen post hearing. During his deposition, Dr. Olsen testified that, based on his review of the medical records, the first mention of low back pain did not occur until February 25, 2016, when Claimant saw Dr. Paz (Olsen's Depo. Tr. p. 13). Dr. Olsen also testified that between what Claimant told him as to when he first had low back pain and what the medical records document, he would rely on the medical records rather than Claimant's historical statements made during the April 28, 2016 independent medical examination (IME). (Dr. Olsen's Depo. Tr. p. 14). Again, Respondents submit that Claimant's testimony at hearing is consistent with what the medical records document in that Claimant did not have the onset of low back symptoms until sometime after he saw Dr. Schwender on February 4, 2016. Consequently, Respondents submit that the greater weight of evidence establishes that, to the extent that Claimant has low back pain at the present time, those low back symptoms began sometime between February 4, 2016 and February 25, 2016.

15. Dr. Olsen testified that there is a generally accepted medical analysis involving a temporal relationship between a trauma and the eventual onset of pain at a certain body location (Olsen's Depo. Tr. pp. 15-16). Specifically, Dr. Olsen stated that when "somebody has a trauma, one would expect that person to have pain within a certain period of time, within a few days. The longer the period of time between the reports of the pain and the inciting event, the less likely that the source of pain is related to the event." Dr. Olsen explained further that a traumatic event causes a physiological change within 2-3 days following the incident and may cause a 3/10 pain level initially. According to Dr. Olsen that pain level could increase to a 6-7/10 level two later because it's progressed; however, to have no pain for a number of days and in the instant case for a couple of weeks leads to the conclusion that Claimant's current low back pain is unrelated to the original motor vehicle accident (MVA) occurring on January 21, 2016. Consequently, Dr. Olsen was of the opinion that the January 21, 2016 injury did not cause Claimant's eventual onset of low back pain (Olsen's Depo. Tr. pp. 17-19).

16. Because of the lack of low back symptoms for at least two weeks following the motor vehicle accident, Dr. Olsen was almost of an "absolute certainty" that the onset of low back problems between February 4, 2016 and February 25, 2016 is not causally related to the motor vehicle accident. Rather, the more likely explanation for Claimant's low back pain, according to Dr. Olsen, is that the onset of symptoms represents "natural back pain" that either developed in the absence of any kind of trauma or alternatively a lumbar sprain/strain event unrelated to the January 21, 2016 MVA. In support of his opinions regarding the cause of Claimant's low back pain, Dr. Olsen notes that over 80% of individuals who have back pain severe enough to see a physician have that onset without any indication of trauma.

17. Based upon the evidence presented as a whole, the ALJ finds Dr. Olsen's testimony unconvincing. The ALJ infers and finds from Dr. Olsen's testimony that he believes that Claimant had no pain in his low back between January 21, 2016 and February 4, 2016 merely because the available medical records do not document the same. The ALJ finds from Claimant's testimony that while he had pain it was not severe

enough to report. In reconciling the competing testimony of Dr. Olsen and Claimant, the ALJ credits Claimant's testimony to find that he likely had low back pain at a level (3/10) which he did not feel required medical attention and was not disabling. Consequently, he did not report it. The decision not to report low level pain which did not require medical treatment and which was not disabling does not mean that Claimant had no pain as is suggested by Dr. Olsen. Moreover, the ALJ finds it probable that the Prednisone Claimant was prescribed was effective in curing and relieving both Claimant's neck and low back pain. The evidence presented persuades the ALJ that when the course of steroids was complete, Claimant, more probably than not had a return of his back pain intense and disabling enough to report to Dr. Paz. Finally, the ALJ finds the dearth of evidence supporting prior problems with his low back, substantially under minds Dr. Olsen's opinion that the cause of Claimant's low back pain represents "natural" back pain which arose simply because 80% of the population will experience low back pain at some time in their lives. Dr. Olsen's alternate opinion that the cause of Claimant's low back symptoms are due to a sprain/strain event unrelated to the January 21, 2016 MVA is speculative and unfounded based upon the evidence presented. Accordingly the ALJ finds it equally unconvincing.

18. The preponderance of the evidence presented persuades the ALJ that the described mechanism of injury (MOI), i.e. the MVA is the cause of Claimant's low back symptoms and current need for treatment. Accordingly, the ALJ finds that Claimant has met his burden of proof to establish that he suffered a compensable industrial injury on January 20, 2016.

19. Based upon the evidence presented, the ALJ also finds the treatment rendered to Claimant by in the ER and by Drs. Paz and PA Glass to be reasonable, necessary and related to his January 21, 2016 low back injury. Moreover, the evidence presented convinces the ALJ that the recommendation for a lumbar MRI was reasonable and related to Claimant's low back injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. The claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-43-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo.App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo.App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

B. In accordance with § 8-43-215, C.R.S., this decision contains specific findings of *f*act, conclusions of law and an order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo.App. 2000).*

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. As found here, Claimant's testimony is credible, consistent and convincing. Moreover, the opinions of Dr. Olsen regarding diagnosis, causality and treatment not persuasive or convincing.

Compensability

D. A "compensable injury" is one which requires medical treatment or causes disability. *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, supra; § 8-41-301, C.R.S. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment*.* *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

E. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Here, there is little question that Claimant's alleged injuries occurred within the time and place limits of his employment relationship with Employer and during an activity, specifically driving a bucket truck to a job site for Employer. Nonetheless, the question of whether the alleged conditions, for which Claimant seeks benefits, "arose out of" his employment must be resolved before the injury is deemed compensable.

F. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). The fact that Claimant may have experienced an onset of pain while performing job duties does not mean that Claimant sustained a work-related injury. An incident which merely elicits pain symptoms without a causal connection to the industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988)*; Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989). As found, the ALJ credits Claimant's testimony to find that he likely had low back pain at a level (3/10) which he did not feel required medical attention and was not disabling. Consequently, he did not report it. The decision not to report low level pain which did not require medical treatment and which was not disabling does not mean that Claimant had no pain as is suggested by Dr. Olsen. The evidence presented also persuades the ALJ that when the course of steroids was complete, Claimant, more probably than not had a return of his back pain intense and disabling enough to report to Dr. Paz. Finally, the ALJ finds the dearth of evidence supporting prior problems with his low back, substantially under minds Dr. Olsen's opinion that the cause of Claimant's low back pain represents "natural" back pain which arose simply because 80% of the population will experience low back pain at some time in their lives. Dr. Olsen's alternate opinion that the cause of Claimant's low back symptoms is due to a sprain/strain event unrelated to the January 21, 2016 MVA is speculative and unfounded. Accordingly the ALJ finds it equally unconvincing. In this case, the evidence presented persuades the ALJ that a logical causal connection exists between Claimant's work duties, the January 21, 2016 MVA, his low back symptoms and his need for treatment. Consequently, the ALJ finds Claimant's low back injury compensable.

Medical Benefits

G. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO

April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). As found here, Claimant has proven by a preponderance of the evidence that he sustained a compensable injury to his low back. The evidence presented persuades the ALJ that this compensable "injury" is the proximate cause of Claimant's need for medical treatment and diagnostic imaging, including a lumbar MRI. Taken in its entirety, the ALJ finds the evidentiary record to contain substantial evidence to support a conclusion that Claimant's MVA and not a "natural" episode of back pain or an unrelated sprain/strain event caused his current symptoms and need for treatment. Consequently, the ALJ concludes that Claimant has established that his need for treatment in the ER and by Dr. Paz and PA Glass was causally related to his work-related MVA on January 21, 2016. Moreover, the totality of the evidence presented establishes that the care, including the diagnostic testing, i.e. lumbar MRI was reasonable and necessary given Claimant's continued pain and functional decline. Consequently, the ALJ concludes that Respondents are liable for Claimant's care at Spanish Peaks Regional Health Center as well as the treatment provided by Dr. Paz and PA Glass.

ORDER

It is therefore ordered that:

1. Claimant has proven, by a preponderance of the evidence, that he suffered a compensable injury to his low back as a consequence of an MVA occurring in the course and scope of his employment on January 21, 2016.

2. Respondents shall pay for all medical expenses, pursuant to the Workers' Compensation fee schedule, to cure and relieve Claimant from the effects of his low back injury, including the care provided at Spanish Peaks Regional Health Center as well as the treatment provided by Dr. Paz and PA Glass.

3. All matters not determined herein are reserved for future determination.

DATED: September 20, 2016

Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after

mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

➢ Whether claimant has proven by a preponderance of the evidence that the ongoing maintenance medical treatment he receives of prescription Tramadol is reasonable and necessary to maintain claimant at maximum medical improvement (“MMI”).

FINDINGS OF FACT

1. Claimant worked for employer as long-wall mechanic. Claimant sustained an admitted injury to his lower back on September 27, 2004. The injury occurred when the claimant was struck by a coworker’s automobile in the employer’s parking lot. The claimant sought treatment and underwent back surgery in December 2004.

2. Claimant was eventually placed at maximum medical improvement (“MMI”) on August 19, 2005, with a partial permanent disability (“PPD”) rating of 18% whole person. Respondents filed a final admission of liability (“FAL”) on April 11, 2006 admitting to the impairment rating and for general maintenance medical benefits.

3. Claimant moved to California in 2006 and respondents agreed to transfer his post-MMI care to Dr. Laurence Badgley. As demonstrated by the medical records, between 2006 and 2013, Dr. Badgley prescribed various pain medications to claimant including Cymbalta, Lyrica, Oxycodone, and MS Contin. Claimant had varying success with the effectiveness of these medications.

4. Claimant testified at hearing that he had a previous opioid dependence when he was taking Hydrocodone and MS Contin. Claimant also testified that he is aware of the possibility of becoming dependent on Tramadol. As demonstrated by Dr. McCranie’s report, claimant signed an informed consent regarding the use of narcotic medications in June 2009.

5. As demonstrated by the medical records, Dr. Badgley retired in September 2012. Thereafter, Dr. Martin Kernberg became claimant’s physician. Since that time, Dr. Kernberg has prescribed various pain medications to claimant including Hydrocodone, Gabapentin, Lidoderm patches, and Tramadol.

6. As indicated in the medical records, claimant attended an independent medical exam (“IME”) with Dr. Kathy Fine McCranie on August 7, 2013. Dr. McCranie reviewed claimant’s medical records, obtained a medical history, and performed a physical examination of claimant in connection with her IME. Following her IME, Dr. McCranie issued an IME report and opined that the claimant’s use of any opioid is not reasonable and necessary to maintain MMI. Dr. McCranie recommended the claimant use a neurogenic pain medication such as Gabapentin.

7. As demonstrated by claimant's testimony and the medical records, following the recommendation of Dr. McCranie, Dr. Kernberg prescribed Gabapentin to claimant. However, as indicated by the medical records, claimant's use of Gabapentin has been ineffective in treating his pain symptoms. In April 2016, Dr. Kernberg prescribed Tramadol to the claimant. Respondents have denied claimant's prescriptions for Tramadol.

8. Claimant credibly testified at hearing that he is able to function with the use of Tramadol. In addition, claimant testified that his quality of life has improved since beginning the use of Tramadol. Comparatively, claimant testified that he feels "high all the time" when taking Oxycodone and feels "sick" when taking Gabapentin.

9. The ALJ credits claimant's testimony, claimant's medical records, and the medical reports of Dr. Kernberg and finds that it is more likely than not that claimant's use of Tramadol is reasonable and necessary to maintain his MMI.

10. The ALJ credits the reports of Dr. Kernberg as more persuasive than the contrary opinion of Dr. McCranie. Dr. Kernberg has treated the claimant since 2012 and has observed the claimant's success with the use of Tramadol to treat claimant's pain. Furthermore Dr. McCranie's IME was conducted in August 7, 2013, well before claimant's first prescription for Tramadol. The ALJ recognizes claimant's admitted prior opioid dependence. However, the claimant has shown that his continued use of Tramadol is reasonable and necessary to maintain MMI.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if support by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra*.

5. As found, claimant has shown by a preponderance of the evidence that the prescription for Tramadol is reasonable and necessary to maintain claimant at MMI. As found, claimant's testimony and the opinion expressed by Dr. Kernberg are more persuasive regarding the reasonableness of claimant's use of Tramadol than the contrary opinion expressed by Dr. McCranie.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the prescription medications from Dr. Kernberg including Tramadol.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 20, 2016

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-919-196-02

ISSUE

The sole issue presented for adjudication at the hearing was:

1. Whether Respondent has proven it is entitled to a fifty percent (50%) reduction in compensation because the Claimant's May 16, 2013 work injury was caused by a willful failure to obey a reasonable rule adopted by Employer for the safety of the employee.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ finds as fact:

1. The Claimant has been employed as a network technician for Employer for approximately 21 years and remained employed there as of the date of the hearing. The Claimant's job duties included maintaining the integrity for the company's copper network which require repairing both underground cables and aerial cables. The Claimant operated a bucket truck, that is, a truck with an aerial lift incorporated into the vehicle. The Claimant had a reputation with Employer for being a model employee and had been identified as an example of an employee who understands and follows the rules. Prior to the work injury that is the subject of this case, the Claimant was unaware of any prior write-ups or safety issues with respect to use of the operation of the aerial lift on his company vehicle.

The May 16, 2013 Incident and Events Leading Up to It

2. The day before the Claimant's work injury, his supervisor, Mr. Andrew Frevert, was aware of a low line near the site in question. He had sent another technician out to assess the situation. Apparently a tree was partially blocking Valmont Road and was resting on one of Employer's cables. Mr. Frevert was advised that a line crew should be sent out to tighten up the line.

3. The morning of the Claimant's work injury, Employer received a call about low lines over Valmont Road. The Employer was informed that a truck had just missed hitting the lines. Mr. Frevert confirmed that this was a serious situation. He wasn't personally aware of this complaint, but if he had received this report, he would have gone to the site or sent someone if he were unavailable.

4. At approximately 1:00 p.m., the Claimant was dispatched to raise a low hanging cable that was crossing Valmont Road in Boulder, Colorado. The Claimant had not been informed that another technician had assessed the situation the day before nor was he informed that there had been a complaint earlier in the day that a truck had just missed hitting the low lines.

5. At the hearing, the Claimant testified that his memory of the events of May 16, 2013 is incomplete. He testified that he believes that he properly donned his harness and anchored his lanyard to the aerial bucket before performing aerial work at the worksite. The Claimant testified that his recollection was that while he was in the aerial bucket facing the road, he saw a truck drive under the low hanging cables, the top of the truck caught the low hanging cables, and he recalled being hit from behind. The Claimant could not recall falling out of the bucket to the ground, but he does have some memory of what occurred once he was on the ground. The Claimant testified that he recalls conversation going on around him about removing his safety harness. When he got to the emergency room later, his safety harness was off.

6. The Employer's First Report of Injury was prepared by Mr. Frevert. He described the mechanism of injury as follows:

> APS calling on behalf of EE, [Claimant], alleges EE was up in bucket working on a drop line. A passing vehicle caught the drop line causing the pole to snap and EE fell to ground approx. 12-15 feet. 911 was called and EE was transported to Good Samaritan Hospital.
>
> (Respondents' Exhibit D)

7. Mr. Frevert testified that he was at the scene of the May 16, 2013 incident within 5 to 10 minutes after the incident occurred. Mr. Frevert testified that the Claimant's safety harness and lanyard was lying on the ground behind the Claimant's vehicle at the scene of the accident. The lanyard was not deployed. Mr. Frevert retrieved the harness and lanyard at the scene and maintained custody of the harness until taking photographs of the harness the next day in his office. Mr. Frevert also reviewed Respondents' Exhibits K, L and M, which he stated accurately depicted the scene of the May 16, 2013 work site shortly after the incident. Both Mr. Frevert and Ms. Neher, after reviewing these exhibits, testified that the exhibits demonstrate that the Claimant did not have safety cones deployed, nor did he have wheel chocks deployed.

8. The Respondents have asserted that there are three safety rules while performing aerial work that would have applied relative to the Claimant's May 16, 2013 work injury:

- Placing a minimum of two safety cones around the vehicle
- Deploying a minimum of two wheel chocks to be placed against the tires of his truck.
- Wearing a harness and lanyard that is attached to the bucket

Safety Cones

9. Respondents have a written safety rule involving traffic cones for vehicles parked off of Employer's property (Claimant's Exhibit 18). Specifically, the rule provides that traffic cones are to be used to channel pedestrians or vehicle traffic away from work areas. The Claimant acknowledged that the Employer had a written safety rule involving

the proper use of cones while at worksites, and that he knew of this safety rule at the time of the May 16, 2013 incident. The purpose of safety cones is to set up a “circle of safety.” Safety cones are to let other drivers and pedestrians know that there is a service vehicle in the area, and to take caution to avoid the service vehicle.

10. The Claimant testified that he believes, as a matter of habit and practice, that he would have placed cones out as part of the circle of safety. However, the Claimant testified credibly that he does not have complete memory of the events prior to the work injury and admitted that there were no cones around the vehicle in the photographs of the worksite taken after his work injury.

11. In any event, there was no persuasive evidence presented that the placement of two safety cones near the Claimant’s truck would have prevented the work injury. There was, likewise, no persuasive evidence presented that the lack of placement of two safety cones near the Claimant’s truck had a causal relation to the incident or to the Claimant’s resulting injuries.

Wheel Chocks

12. Respondents, at the time of the May 16, 2013 incident, had a written safety rule in place that required a line technician such as the Claimant to deploy a minimum of two wheel chocks (Respondents’ p. 6). The purpose of deploying wheel chocks is to prevent the service truck from moving while performing aerial work. The Claimant acknowledged that Respondents had a safety rule involving wheel chocks for aerial work. However, the Claimant further testified that he did not understand the wheel chock rule to be applicable under the conditions that he encountered at the Valmont Road job on the day of the incident. The Claimant testified that he believed the wheel chock rule applied if you were stopped on a hill or incline or on ice, snow or a slick surface. His testimony about his understanding of the wheel chock rule was credible.

13. In any event, there was no persuasive evidence presented that the placement of two wheel chocks would have prevented the work injury. There was, likewise, no persuasive evidence presented that the lack of placement of two wheel chocks had a causal relation to the incident or to the Claimant’s resulting injuries.

Harness and Lanyard

14. Respondents have a written safety rule on how to use a harness and lanyard in an aerial bucket situation (Respondents’ p. 6). Specifically, the written safety rule states that in performing aerial lift operations, a technician must wear a full body harness with lanyard attached to the anchorage point and a hardhat must be worn. The Claimant admitted that he knew of this written safety rule at the time of his May 16, 2013 incident.

15. Respondents submitted into evidence Respondents’ Exhibit G, which is a picture of the actual harness and lanyard that Claimant had with him at the time of the May 16, 2013 incident. A harness with a lanyard properly anchored to a bucket is designed to

prevent a line technician from hitting the ground if he were ever to fall out of his bucket. Specifically, the harness contains a lanyard, which is a pocket enclosing strapping stitched together designed to both break the fall if a technician were to fall out of his bucket, and to prevent the technician from hitting the ground. Consequently, if a technician is properly wearing his harness with the lanyard is properly anchored to the bucket, and the line technician were to then fall out of his bucket, it is expected that the lanyard would deploy with the pocket opening and the enclosed strapping would be out of the pocket.

16. Mr. Frevert testified credibly that, prior to taking the pictures of the harness with the lanyard, the harness and lanyard remained in his custody. As such, Exhibit G is a fair and accurate depiction of the condition of lanyard that Mr. Frevert retrieved from the site of the Claimant's work injury. The photograph that is Exhibit G plainly shows that: (a) the lanyard hook that should have been attached to the bucket was hooked back onto the harness, and (b) the lanyard had not deployed.

17. Mr. Frevert testified that because the lanyard had not deployed, he only had two possible explanations for what may have occurred: (a) the Claimant was not wearing his harness at the time that he fell out of the bucket; or (b) If the Claimant was in fact wearing the harness, he had not properly anchored the lanyard to his bucket.

18. Tamara Neher is the area operations manager for the Employer and was in the line of supervision for Claimant. Ms. Neher concurred with Mr. Frevert that Exhibit G demonstrated that the lanyard had not deployed. As such, Ms. Neher also concluded that, at the time of the May 16, 2013 incident, the Claimant had not properly used his harness, either because he never had it on, or, if he had it on, he did not properly anchor his lanyard to the bucket.

19. At the hearing, Mr. Frevert and Ms. Neher were each asked to consider the scenario that the Claimant may have actually been wearing his harness and the lanyard was properly anchored to the bucket, but that the lanyard, for whatever reason, simply did not deploy. Both Mr. Frevert and Ms. Neher testified that if that in fact would be the case, the Claimant still would not have hit the ground when he fell out of his bucket. Rather, Claimant would have been hanging further up in the air outside of his bucket than he would have had it deployed.

20. Exhibit G shows, and Respondents acknowledge, that the harness and lanyard that was at the worksite on May 16, 2013 has parts of the harness that had been clipped away. However, Respondents submit that does not imply that the harness somehow tore while Claimant was falling out of the bucket. First, if the harness had actually torn, then the harness would have been still attached to the bucket after the Claimant fell. Second, the Claimant has testified that, following the incident, individuals at the scene cut the harness off of him. The ALJ finds that it is more likely than not that the destruction to portions of the harness was caused by the harness being cut off the Claimant.

21. The ALJ notes that although photographs of the harness and lanyard that the Claimant wore on May 16, 2013 were admitted into evidence, the actual harness and lanyard were not presented at the hearing either for admission or as a demonstrative

exhibit. It is unknown if the equipment was fully functional at the time of the Claimant's work injury.

The Claimant's Injuries

22. There was significant damage to the aerial bucket where the pole hit it as reflected in some of the photographs in Claimant's Exhibit 9. There was also credible testimony that the aerial bucket for the Claimant's vehicle was replaced after the Claimant's May 16, 2013 work injury.

23. Dr. Nicholas Olsen also testified at hearing. Dr. Olsen testified as to how the contemporaneous medical records were inconsistent with the Claimant being struck by the pole before falling out of the bucket. Specifically, although Dr. Olsen acknowledged that some of the earlier medical records referenced a history in which the Claimant was actually hit by the pole, Dr. Olsen believed that if the Claimant had actually been hit by the pole before he fell out of the bucket, he would have had much more serious injuries than he actually had. Dr. Olsen testified that if the Claimant had actually been hit by the pole as it was actually falling, he would have had compression fractures of his neck and skull, subdermal hematomas, and most likely would have actually died. Dr. Olsen also noted that the emergency room records dated May 16, 2013, only demonstrated that the Claimant was complaining of a mild headache with no loss of consciousness. Dr. Olsen also noted that the CT scan of the Claimant's neck was basically normal except for mild degenerative changes. As a result, based on the Claimant's presentation at the emergency room, as well as the result of the CT scan, it was Dr. Olsen's opinion that it was highly unlikely that the Claimant was struck by the pole as it was falling.

24. Dr. Olsen identified the following as injuries the Claimant sustained as a result of the May 16, 2013 incident:

- Fracture of the T1 transverse process of the right side
- Compression fracture at the T2 level of 20%
- Compression of the T3 vertebrae body at 60%
- Right rib fractures
- Clear evidence of post-traumatic amnesia with potentially a closed head injury

25. Dr. Olsen testified that the mechanism of injury that caused the resulting injuries was when the Claimant fell out of the bucket and landed on the ground. Dr. Olsen then testified that it was his opinion that the Claimant would not have sustained any of the listed enumerated injuries if the Claimant had been properly wearing a harness which was properly anchored to the lift bucket because the Claimant would not have hit the ground.

Disciplinary Proceedings

26. Both Mr. Frevert and Ms. Neher testified that if a network technician was not properly using a harness while performing aerial work in a bucket, that technician would be subject to discipline. Both Mr. Frevert and Ms. Neher testified that at the time that they

have been supervisors, this is the only time in which there was evidence to suggest that a line technician had been performing aerial work without properly using his harness.

27. In April of 2014, the Employer held two investigative meetings with the Claimant, management for Employer, and union representatives all present at the meeting. The first meeting started on April 14, 2014 and was halted and later concluded two days later. The Claimant argues, and Ms. Audrey DeGuio, a union representative testified, the first meeting was stopped when union representatives questioned the company representatives about management's responsibility to assess risk in this case based on the information available to the company prior to dispatching the Claimant to this job. Ms. DeGuio also testified that, during the proceedings, the Claimant and the union representatives were not permitted to touch the Claimant's safety harness. Ms. DeGuio testified that she felt this was unusual.

28. Following the meetings, Ms. Neher, as the decision maker for any potential safety rule violation, determined that the Claimant violated the following safety rules as it pertains to aerial work during the May 16, 2013 incident:

- He had not properly used a safety harness
- He had not properly deployed safety cones
- He had not properly deployed wheel chocks

29. With regards to the failure to properly use a harness during the May 16, 2013 incident, Ms. Neher testified that she relied upon Exhibit G (the picture of the harness and lanyard), which demonstrated that the lanyard had not been deployed, and that the lanyard hook used to anchor the harness to the bucket was still attached to the harness. Ms. Neher stated that the basis for her determination that the Claimant had not properly deployed safety cones and wheel chocks were Exhibits K through M (pictures taken at the scene of the incident). Consequently, Ms. Neher determined that the Claimant would be disciplined in the form of a written warning. The Claimant acknowledged that he received a written warning as a result of the violations of the safety rules pertaining to the proper use of a harness, the proper deployment of safety cones, and the proper deployment of wheel chocks.

30. Based on all of the admitted exhibits and testimony presented at the hearing, the ALJ finds that the Claimant's safety harness and lanyard clearly did not properly deploy. However, the ALJ finds that it is more likely than not that the Claimant was wearing the harness, given that it was cut off of him. Although there is no way to know for certain due to the Claimant's credible and reasonable lack of memory regarding his traumatic work injury, the most likely explanations are that the harness was either (a) not sufficiently hooked to the connection in the bucket, or (b) the hook on the harness failed and the harness disconnected from the connection in the bucket.

CONCLUSIONS OF LAW

The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201, C.R.S. Respondent bears the burden of establishing that Claimant's injury was caused by a willful violation of a safety rule. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. § 8-43-201 (2008) C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Safety Rule Violation

C.R.S. § 8-42-112(1)(a) provides for a 50% reduction in compensation to a claimant where a respondent proves that the claimant's injury was caused by the willful failure obey any reasonable rule adopted by the employer for the safety of the employee. The Respondents carry the burden of establishing all five elements of a safety rule violation, which are:

1. There must be a specific, unambiguous and definite safety rule adopted by the employer.

2. The safety rule must be reasonable.

3. The safety rule must be "brought home" to the employee and diligently enforced.

4. Violation of the safety rule must be willful.

5. The violation of the safety rule must be a cause of the claimant's injury.

Here, the evidence established that the Employer adopted safety rules about the use of safety cones, wheel chocks and the use of the harness and lanyard equipment when employees are performing aerial work. These rules are reasonable and are designed for the safety of the employees. However, there is some question regarding whether the rules about safety cones and wheel chocks were sufficiently "brought home" to the Claimant. The Claimant credibly testified that he did not understand the wheel chock rule to apply in the conditions at the time of his work injury. Moreover, with respect to the use of safety cones and wheel chocks, Respondents failed to establish that violation of these rules was a cause of the Claimant's injury.

With respect to the use of the harness and lanyard equipment, there were various opinions offered as to what may have occurred. Ultimately, based on the evidence presented, the ALJ concluded that the Claimant's safety harness and lanyard clearly did not properly deploy. However, the ALJ found it more likely than not that the Claimant was wearing the harness, given that it was cut off of him.

Thus, the question turns to whether the Claimant employed the harness and lanyard properly by appropriately attaching it to the connection in his aerial bucket. Although there is no way to know for certain due to the Claimant's credible and reasonable lack of memory regarding his traumatic work injury, the most likely explanations are that the harness was either (a) not sufficiently hooked to the connection in the bucket, or (b) the hook on the harness failed and the harness disconnected from the connection in the bucket. In the first scenario, the Claimant may have been careless or negligent in and attempt to connect his harness. In the second situation, the Claimant would not have had culpability and the equipment simply failed.

However, in any event, the Respondents have failed to establish that the Claimant acted willfully and with deliberate intent. The safety rule penalty is only applicable if the violation is willful. The question of whether the respondents proved willful violation of a safety rule by a preponderance of the evidence is one of fact for the ALJ. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995). intention. Violation of a rule is not willful unless the claimant did the forbidden act with deliberate intent. A violation which is the product of mere negligence, carelessness, forgetfulness or inadvertence is not willful. *Bennett Properties Co. v. Industrial Commission*, 437 P.2d 548 (Colo. 1968); *Johnson v. Denver Tramway Corp.,* 171 Colo. 214, 171 P.2d 410 (1946); *In re Alverado,* W.C. No. 4-559-275 (ICAO December 10, 2003). Conduct which might otherwise constitute a safety rule violation is not willful misconduct if the employee's actions were intended to facilitate accomplishment of a task or of the employer's business. *Grose v. Riviera Electric*, W.C. No. 4-418-465 (ICAO August 25, 2000). A violation of a safety rule will not be considered willful if the employee can provide some plausible purpose for the conduct. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990).

Here, even if the Claimant's harness and lanyard safety equipment were not properly attached to the connection in the bucket, the Respondents have failed to establish that the Claimant acted willfully. The Claimant was a long-time employee and had a solid reputation as an employee who followed the rules and was committed to safety. No reasonable explanation was offered at the hearing as to why the Claimant would intentionally and willfully violate the rule about properly attaching his harness and lanyard to the connection in the aerial bucket. The Claimant has no recollection of the relevant events and Respondents have speculated that the Claimant willfully and intentionally failed to wear his harness or that he wore it but failed to connect the harness and lanyard to the bucket connection. However, this action would be inapposite to a record for safety compliance that the Claimant built over more than two decades. The Claimant had no prior safety violations and was, by all accounts, an excellent employee who was held up as an example for other employees in terms of his record for safety. Thus, the ALJ finds that, rather than inferring the Claimant's actions were in any way willful, it was equally plausible that the Claimant was negligent or careless, even if he didn't connect his harness properly. If, the Claimant was merely negligent or careless, which is just as likely, possibly more likely, then the Respondents failed to meet their burden of proof.

As the Respondents failed to establish that the Claimant's injury resulted from his willful failure to obey a reasonable rule adopted by the Employer for his safety, the Claimant's benefits shall not be reduced by fifty percent.

ORDER

It is therefore ordered that:

1. Respondents have failed to establish that Claimant's injury resulted from his willful failure to obey a reasonable safety rule adopted for the safety of the employees and therefore Respondents are not entitled to a reduction in benefits pursuant to §8-42-112(1).

2. Respondents shall pay the Claimant in full for all admitted temporary or permanent disability benefits with no reduction.

3. Insurer shall pay eight percent (8%) per annum on all compensation not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to

Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 19, 2016

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

The following issues were endorsed and raised for consideration at hearing:

1. Whether the Respondents have proven, by a preponderance of the evidence, that the Claimant has engaged in injurious practice per C.R.S. § 8-43-404(3) by delaying in scheduling surgery for his elbow.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ finds as fact:

1. The Claimant was employed as a sign installer and was repairing and interior sign on December 10, 2014 when he fell from a ladder and hit his elbow on a concrete floor (Respondents' Exhibit A).

2. The Claimant testified that, after the fall, he was taken to the hospital for treatment. The Claimant underwent emergency surgery to address a fracture and dislocation on December 10, 2014 (see Respondents' Exhibit K, p. 157).

3. The Respondents filed the General Admission of Liability on December 24, 2014 and began paying temporary disability benefits from December 11, 2014 and continuing (Respondents' Exhibit B).

4. The Claimant underwent a second surgery on March 24, 2015 performed by Michael P Rusnak, MD. This surgery was a removal of external fixator from the right arm and manipulation under anesthesia of the right elbow. The postoperative diagnosis was a right elbow terrible triad fracture dislocation with involvement of the olecranon through a trans olecranon fracture, status post fixation complicated by instability, status post external fixation placement (Respondents' Exhibit K, p. 162).

5. On April 7, 2015, the Claimant saw Dr. Seiler for evaluation of a post-operative dislocated right elbow that had been subluxed. Dr. Seiler assessed the Claimant with elbow instability. He recommended radial and ulnar collateral ligamentous reconstruction of the elbow (Respondents' Exhibit L, p. 168).

6. Dr. Seiler performed the surgery he had previously recommended on April 23, 2015 (Respondents' Exhibit J). At a follow up evaluation with Dr. Seiler on May 7, 2015, Dr. Seiler commented that the Claimant's elbow joint appeared to be subluxed. Dr. Seiler noted that the surgery had been rather difficult (Respondents' Exhibit L, p. 169). On June 11, 2015, the Claimant saw Dr. Seiler who noted that he continued to have recurrent subluxation events which were very painful and the Claimant had been started again on narcotics. Dr. Seiler discussed that the Claimant's treatment options

were to live with the condition as is or to consider an elbow effusion (Respondents' Exhibit L, p. 172). On July 16, 2015, the Claimant saw Dr. Seiler again reporting that he had been working on range of motion but was still experiencing instability symptoms and pain. The Claimant advised Dr. Seiler that he was moving back to New York where he has more support. He asked for a recommendation for an elbow surgeon in New York for a second opinion. Dr. Seiler provided him with the name and number of Dr. Hotchkiss. The Claimant advised Dr. Seiler that he would like to try to hold off on the elbow effusion surgery, but that he would follow up with Dr. Hotchkiss (Respondents' Exhibit L, p. 173).

7. The Claimant testified that while he was still living in Colorado after his work injury, he moved a couple of times. He testified that Insurer would arrange for his travel for medical treatment or would reimburse him for mileage.

8. The Claimant testified that he subsequently moved to New York on August 8, 2015. The Claimant testified that Insurer facilitated his treatment with Dr. Hotchkiss, the surgeon recommended by Dr. Seiler. Ms. Dawn Lewis of Corvel Corporation was assigned to assist the Claimant with coordinating the transfer of care to Dr. Robert Hotchkiss. Ms. Lewis, the nurse case manager noted that she secured an appointment for the Claimant with Dr. Hotchkiss on September 24, 2015. Ms. Lewis noted that this was the only case management task assigned to CorVel, so on September 21, 2015, she sent a closure letter to the Claimant (Respondent's Exhibit H).

9. The Claimant first saw Dr. Hotchkiss on September 24, 2015. Dr. Hotchkiss noted the following case history from the Claimant,

> He states that he was seen in the emergency room the same day and taken to the operating room the same day for an I&D, open reduction internal fixation of the ulna, and radial head replacement. After the surgery, he returned home to another part of Colorado and due to insurance issues and logistical reasons did not see his surgeon for approximately six weeks after surgery. At this point, he was noted to be, what sounds like, dislocated per his description. At this point, he was placed in a static ex-fix for approximately two months. This was in January or February. There was no intermittent motion while he was in the ex-fix. After two months, he had the ex-fix removed and he was placed in a hinged brace in a locked position. The next morning, he felt his elbow slip out of place. He was seen the next day and taken for an examination under anesthesia with fluoroscopy and placed in a hard cast. He states that he felt his elbow dislocate while in the hard cast. He was referred to another surgeon, Dr. Seiler, who performed a ligament reconstruction with Palmaris autograft from both forearms, and this sounds as though it has failed essentially immediately as they were unable to get good fixation of the bone. After this, his surgeon discussed with him that fusion may be an option, but was uncomfortable recommending it definitively. Therefore, he recommended a second opinion for which the patient presents today. Interval history is that [the Claimant] feels that his elbow is both painful and unstable. It has been slightly better over the last month with less

> noticeable “shift.” He wakes up with significant pain in the morning. He is a very active person and would like to return to his previous level of activity.
>
> (Claimant’s Exhibit 5, p. 6; Respondents’ Exhibit G, p. 19).

At this time Dr. Hotchkiss recommended that he obtain a high-quality CT scan for potential preoperative planning and had discussed with the Claimant the option of a possible interposition arthroplasty as the next surgical step (Claimant’s Exhibit 5, p. 7; Respondents’ Exhibit G, p. 20).

10. On September 25, 2015 a request for authorization was sent to Corvel Corporation Attn: Dawn E Lewis R.N. CCM. This authorization was for the CT scan of the right elbow without contrast (Claimant’s Exhibit 2, p. 2). A letter from Insurer dated October 2, 2015 notes that a request dated September 25, 2015 was received on September 28, 2015 (Claimant’s Exhibit 1, p. 1).

11. On October 22, 2015 the Claimant underwent a CT of the right elbow which showed the “radial head prosthesis in anatomic position. Healed fracture of the proximal ulna with internal fixation. Posttraumatic degenerative changes of the humeral ulnar joint” (Respondents’ Exhibit M, p. 175).

12. On October 22, 2015, the Claimant also saw Dr. Hotchkiss again. After review of the CT scan, Dr. Hotchkiss noted that the joint was a bit open with the radial head implant now abutting/eroding into the capitellum. He also noted loose bodies in the joint and that the ulnohumeral joint was gapping. Dr. Hotchkiss advised the Claimant that this was not an easy problem to solve but that he did not want to perform a total elbow arthroplasty as it would not be durable in a 34-year old. However, because the Claimant was in pain and could not use his arm functionally, he recommended an interposition arthroplasty surgical pan to repair the Claimant’s ligament and do the interposition with an ulnar nerve transposition and application of a hinge ex-fix. The Claimant advised that he was currently studying to be a physicist and would prefer to schedule the surgery the next May. The medical note does not indicate that deferring the surgery to May was not recommended or that it would pose additional risk to the Claimant. Rather, the note indicates that Dr. Hotchkiss’ office would proceed to schedule the surgery in May (Claimant’s Exhibit 6; Respondents’ Exhibit G, p. 21).

13. On October 26, 2015 a request for authorization for surgery in May of 2016 was sent to Corvel Corporation Attn: Dawn E Lewis R.N. CCM. The surgery requested was right elbow interposition arthroscopy with Achilles tendon allograph, right elbow ulnar nerve neurolysis, right elbow application of ex-fix compass hinge and right elbow lateral collateral ligament repair (Claimant’s Exhibit 3, p. 4).

14. The adjuster for Insurer, Nancy A’Hern, testified that she did not receive this request for authorization. She testified that she did receive the medical report from Dr. Hotchkiss in October 2015. On November 13, 2015, Ms. A’Hern sent a letter to Dr. Hotchkiss stating “thank you for your most recent report dated October 22, 2015. In this report you are recommending a surgery due to continued pain in [the Claimant’s] inability to use the arm functionally. The surgery, to accommodate [the Claimant’s]

schedule, is not likely to be done until May. What are [the Claimant's] treatment recommendations between now and this surgery?" She then described MMI and asked if Dr. Hotchkiss agreed that the Claimant was at MMI as of this date until he has surgery in May, and then he could be taken off MMI status for surgery and the recovery period (Respondents' Exhibit N).

15. On December 18, 2015, Dr. James P. McElhinney provided a written opinion which appears to be based on a record review, although there is no indication which medical records Dr. McElhinney may have reviewed. Nevertheless, Dr. McElhinney notes that the Claimant saw Dr. Hotchkiss who recommended a possible interposition arthroplasty but that the Claimant did not want to have surgery until May or June. Dr. McElhinney opined that because the Claimant was waiting for surgery and would be getting no treatment until then, he should be placed at MMI and then the case could be reopened when the Claimant returned for treatment/surgery (Respondents' Exhibit I).

16. The Claimant testified that he did not want to have the surgery until May as he was enrolled in school and didn't want to miss school as a result of the surgery. He testified that he attended school from August 31, 2015 through December 14, 2015 and then again from January 19, 2016 through May 12, 2016. During this time, the Claimant continued to receive TTD benefits of $560.00 per week. The Claimant testified that he was not contacted by a medical case manager about scheduling his surgery sooner.

17. On April 14, 2016 Insurer issued a letter authorizing the surgery requested (Claimant's Exhibit 4, p. 5).

18. On May 17, 2016, the Claimant saw Dr. Hotchkiss for presurgical discussion. After physical examination and review of new radiographs, Dr. Hotchkiss noted that there was no significant deterioration and, "in fact, the joint congruity looks to be a bit improved." Dr. Hotchkiss noted that although the previously recommended interposition arthroplasty had been approved by the Insurer, because the Claimant's daily function had improved, he was now "hesitant to disturb the equilibrium in the elbow with an interposition arthroplasty" and now advised that an arthroscopic debridement of the elbow would be useful to reduce pain and remove the loose bodies that are causing the elbow to lock and grind. Dr. Hotchkiss noted, "the patient is grateful and also relieved to be having a procedure that is not quite as drastic and is hopeful it will reduce some of his pain." A Request for Authorization was sent to Insurer on May 19, 2016 for a right elbow arthroscopic debridement (Respondents' Exhibit O, offered during the deposition of Dr. Seiler and admitted, with no objection, by the ALJ upon review of the transcript).

19. In his deposition, Dr. Steven Seiler, who had treated the Claimant in Colorado, commented on the surgery proposed by Dr. Hotchkiss and opined that the surgery was an appropriate option and one thing that could be done to try to improve the Claimant's elbow condition (Seiler Depo. Tr., May 23, 2016, pp. 9-10). When Dr. Seiler was asked whether the Claimant's condition improved during the delay between the recommendation of surgery and the approval for the surgery. Dr. Seiler first testified

that “that’s what I read…Dr. Hotchkiss’ physical exam findings states that it appears that he’s doing better. So, his function is such that you would not necessarily recommend the interpositional arthroplasty at that time.” He further testified “you know, it’s hard – – I’m just speculating between some notes and not here. So the only thing I can say is Dr. Hotchkiss originally recommended a much more involved procedure and now doesn’t, based on the last time he saw the patient, so you can infer maybe that things got a little bit better” (Seiler Depo. Tr., May 23, 2016, pp. 16-17).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers’ compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Injurious Practice

C.R.S. §8-43-404(3) provides, in pertinent part,

> If any employee persists in any unsanitary or injurious practice which tends to imperil or retard recovery or refuses to submit to such medical or surgical treatment or vocational evaluation as is reasonably essential to promote recovery, the director shall have the discretion to reduce or suspend the compensation of any such injured employee.

The employer has the burden of proving that a worker has persisted in engaging in "any unsanitary or injurious practice which tends to imperil or retard his recovery" or has "refused to submit to such medical ... treatment ... as is reasonably essential to promote his recovery and rehabilitation. Absent proof of either a refusal to accept essential medical treatment or persistence in engaging in an injurious practice, the statute is inapplicable. *Neodata Services v. Industrial Claim Appeals Office*, 805 P.2d 1180 (Colo. App. 1991).

Respondents argue in favor of the suspension of benefits from December 28, 2015 through May 23, 2016 and entitlement to an overpayment of $11,840.00 Respondents further argue that they are not required to prove that the Claimant's condition "worsened" as a result of the delay. Rather, Respondents are required to prove that the surgery is "reasonably essential to promote recovery." *Gonzales v. Industrial Claim Appeals Office,* 905 P.2d 16 (Colo. App. 1995). Respondents additionally rely upon *Todd Parks v. Ft. Collins Ready Mix*, W.C. No. 4-251-955 (ICAO, March 31, 1999). In that case, the claimant underwent an unsuccessful talonavicular fusion. A repeat fusion was recommended and that claimant was referred for a second opinion where he was again recommended to undergo the revision surgery. Respondents filed a petition to suspend TTD benefits on grounds that the claimant in that case had refused to submit to further surgery after months of delay. The ALJ found that the claimant "willfully and unreasonably delayed and refused to submit to medical treatment" and had "failed to appear for surgery scheduled for September 2, 1998." *Id*.

This case is distinguishable from the cases cited by the Respondents. Here, in considering the history of the case, the recommendations of physicians, the Claimant's actions, the inaction of the Respondents and the fact that, due to the delay in the surgery, the Claimant's surgeon now recommends a much less drastic surgery than he originally did, it is clear that the Claimant has not engaged in an injurious practice.

From the medical records, it is clear that neither Dr. Hotchkiss nor Dr. Seiler were entirely comfortable with recommending a total arthroplasty, a fusion or right elbow interposition arthroscopy (as the only option remaining after this surgery would be a total elbow arthroplasty). The Claimant's physicians noted that the Claimant is in his early thirties and the more drastic surgical options were not expected to be durable for such a young patient. When the Claimant advised that he was currently studying to be a physicist and would prefer to schedule the surgery the next May, there is no indication that Dr. Hotchkiss recommended against the delay or that deferring the surgery to May would pose additional risk to the Claimant. Rather, quite the opposite, the medical records indicate that Dr. Hotchkiss' office would proceed to schedule the surgery in May.

While the adjuster from Insurer, inquired on November 13, 2015, about the Claimant's treatment recommendations between now and this surgery and she asked if Dr. Hotchkiss agreed that the Claimant was at MMI as of this date until he has surgery in May, she did not inquire if Dr. Hotchkiss advised against delaying the proposed surgery until May. Nor did she appear to have any communications with the Claimant about this or about requests that he schedule his surgery earlier.

On April 14, 2016, Insurer issued a letter authorizing the surgery requested by Dr. Hotchkiss. Then, on May 17, 2016, the Claimant saw Dr. Hotchkiss for presurgical discussion. After physical examination and review of new radiographs, Dr. Hotchkiss noted that there was no significant deterioration and, "in fact, the joint congruity looks to be a bit improved." Dr. Hotchkiss noted that although the previously recommended interposition arthroplasty had been approved by the Insurer, because the Claimant's daily function had improved, he was now “hesitant to disturb the equilibrium in the elbow with an interposition arthroplasty” and now advised that an arthroscopic debridement of the elbow would be useful to reduce pain and remove the loose bodies that are causing the elbow to lock and grind. Dr. Hotchkiss noted, “the patient is grateful and also relieved to be having a procedure that is not quite as drastic and is hopeful it will reduce some of his pain.” In his deposition, Dr. Steven Seiler was asked whether the Claimant’s condition improved during the delay between the recommendation of surgery and the approval for the surgery and he agreed that Dr. Hotchkiss originally recommended a much more involved procedure and now doesn’t, based on the last time he saw the patient, so you can infer maybe that things got a little bit better.

While Respondents are not required to prove that the Claimant’s condition “worsened” to prove injurious practice, when a Claimant’s condition actually improves because of a delay of approximately 5 months, there simply is no injurious practice. This is especially true in this case where the Claimant’s ATP, Dr. Hotchkiss did not recommend the Claimant submit to an earlier surgery, did not recommend against a delay, and the Claimant was not willfully disobeying any recommendation from his treating physicians, nor any requests from Respondents, that he schedule his surgery at an earlier date. Further, the Claimant had already had four surgeries, several of which had failed. The ALJ finds that a delay is reasonable in this situation even if the delay was partly due to accommodate a school schedule. Finally, in this case, the delay actually resulted in the medical decision to proceed with a significantly less drastic surgical procedure which leaves the Claimant with more future treatment options, which is important due to his age. It is even possible that the Claimant may actually achieve MMI status earlier in this case due to undergoing a less drastic surgical option than was originally planned, which may have had a longer recovery or a greater chance of failure requiring additional medical treatment.

Respondents have failed to prove that the Claimant engaged in injurious practice which warrants the exercise of the ALJ’s discretion to reduce of suspend the Claimant’s benefits pursuant to C.R.S. §8-43-404(3).

ORDER

It is therefore ordered that:

1. The Respondents have failed to prove by a preponderance of the evidence that the Claimant has engaged in injurious practice per C.R.S. §8-43-404(3) warranting the exercise of the ALJ’s discretion to reduce or suspend the Claimant’s compensation. As such, the Respondents’ claim under C.R.S. §8-43-404(3) is dismissed and denied.

2. Because the Respondents have not proven injurious practice, they have likewise failed to prove entitlement to an overpayment due to the suspension of benefits.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

Whether Claimant has produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Thomas G. Fry, M.D. that she reached Maximum Medical Improvement (MMI) on April 22, 2015 and left shoulder surgery is not reasonable or necessary.

FINDINGS OF FACT

1. Employer is a large supermarket. Claimant worked as a Deli Clerk for Employer. On March 31, 2013 Claimant suffered an admitted industrial injury to her left shoulder. The injury constituted an aggravation of her pre-existing acriomioclavicular arthritis and other degenerative conditions.

2. Claimant received medical treatment through Concentra Medical Centers. She underwent physical therapy and conservative medical care that included subacromial injections. Because conservative measures failed, Authorized Treating Physician (ATP) Eric McCarty, M.D. sought authorization for a left shoulder arthroscopic subacromial decompression, distal clavicle excision and an evaluation of biceps tenodesis.

3. Respondent denied the surgical request and Claimant sought a hearing. On July 29, 2014 the parties conducted a hearing before ALJ Edwin L. Felter, Jr. on whether the requested left shoulder arthroscopic subacromial decompression, distal clavicle excision and evaluation of biceps tenodesis constituted reasonable and necessary medical treatment. On August 14, 2014 ALJ Felter denied the surgical request but authorized physical therapy. He noted that, after conservative measures were exhausted, Claimant could seek reevaluation as a surgical candidate.

4. Claimant subsequently completed 12 physical therapy sessions. Physical therapy decreased the cracking and popping in her left shoulder.

5. On October 27, 2015 Claimant underwent a DIME with Thomas G. Fry, M.D. After reviewing Claimant's medical history and performing a physical examination, Dr. Fry diagnosed Claimant with the following: (1) subscapular bursitis; (2) pre-existing acromioclavicular arthritis; (3) frozen shoulder; (4) possible posterior labrum tear; (5) mild tendinosis of the supraspinatus and infraspinatus; (6) "inconsistent effort as demonstrated by grip testing;" and (7) "significant frustration and anger issues." He determined that Claimant had reached MMI on April 22, 2015 and did not require additional medical treatment. Based on Claimant's inconsistent effort and significant frustration, Dr. Fry noted that surgical treatment and postoperative therapy were unlikely to be successful. Left shoulder surgery was thus not reasonable or necessary. He

assigned Claimant a 17% left upper extremity impairment or 10% whole person rating based on range of motion deficits. Dr. Fry also assigned permanent restrictions that precluded overhead use of the left arm, repetitive lifting and pushing or pulling in excess of 20 pounds.

6. On April 11, 2016 Claimant underwent an independent medical examination with F. Mark Paz, M.D. Dr. Paz also testified at the hearing in this matter. He agreed with Dr. Fry that Claimant had reached MMI on April 22, 2015. Dr. Paz explained that Claimant did not warrant any additional medical treatment for her left shoulder condition. Relying on the *Workers' Compensation Medical Treatment Guidelines* (*Guidelines*), he detailed that left shoulder surgery was not reasonable or necessary because it would not relieve Claimant's pain or improve her function. Dr. Paz commented that, because Claimant exhibited inconsistent effort during her examination, her subjective complaints were unreliable.

7. Claimant testified at the hearing in this matter. She explained that she would like to undergo left shoulder surgery if it would improve her condition. Claimant noted that she is willing to participate in psychological treatment to address her anger and frustration as part of her Workers' Compensation claim.

8. Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Fry that she reached MMI on April 22, 2015 and left shoulder surgery is not reasonable or necessary. After reviewing Claimant's medical history and performing a physical examination, Dr. Fry determined that Claimant had reached MMI on April 22, 2015 and did not require additional medical treatment. Based on Claimant's inconsistent effort and significant frustration, Dr. Fry noted that surgical treatment and postoperative therapy were unlikely to be successful. Left shoulder surgery was thus not reasonable or necessary. Dr. Paz agreed with Dr. Fry that Claimant had reached MMI on April 22, 2015. He explained that Claimant did not warrant any additional medical treatment for her left shoulder condition. Relying on the *Guidelines*, Dr. Paz detailed that left shoulder surgery was not reasonable or necessary because it would not relieve Claimant's pain or improve her function. He noted that, because Claimant exhibited inconsistent effort during her examination, her subjective complaints were unreliable.

9. Claimant explained that she would like to undergo left shoulder surgery if it would improve her condition. She also commented that she is willing to participate in psychological treatment to address her anger and frustration as part of her Workers' Compensation claim. However, Claimant's testimony merely constitutes a disagreement with Dr. Fry about whether she has reached MMI and left shoulder surgery is reasonable and necessary. Claimant has not directly challenged the methodology or validity of Dr. Fry's conclusions. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Fry's MMI and surgical determinations were incorrect.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. In ascertaining a DIME physician’s opinion, the ALJ should consider all of the DIME physician’s written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician’s determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant’s impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician’s impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician’s findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

. 6. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by “clear and convincing evidence.” §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). “Clear and convincing evidence” is evidence that demonstrates that it is “highly probable” the DIME physician's rating is incorrect. *Qual-Med, Inc. v.*

Industrial Claim Appeals Office, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, “there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt.” *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

7. As found, Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Fry that she reached MMI on April 22, 2015 and left shoulder surgery is not reasonable or necessary. After reviewing Claimant’s medical history and performing a physical examination, Dr. Fry determined that Claimant had reached MMI on April 22, 2015 and did not require additional medical treatment. Based on Claimant’s inconsistent effort and significant frustration, Dr. Fry noted that surgical treatment and postoperative therapy were unlikely to be successful. Left shoulder surgery was thus not reasonable or necessary. Dr. Paz agreed with Dr. Fry that Claimant had reached MMI on April 22, 2015. He explained that Claimant did not warrant any additional medical treatment for her left shoulder condition. Relying on the *Guidelines*, Dr. Paz detailed that left shoulder surgery was not reasonable or necessary because it would not relieve Claimant’s pain or improve her function. He noted that, because Claimant exhibited inconsistent effort during her examination, her subjective complaints were unreliable.

8. As found, Claimant explained that she would like to undergo left shoulder surgery if it would improve her condition. She also commented that she is willing to participate in psychological treatment to address her anger and frustration as part of her Workers’ Compensation claim. However, Claimant’s testimony merely constitutes a disagreement with Dr. Fry about whether she has reached MMI and left shoulder surgery is reasonable and necessary. Claimant has not directly challenged the methodology or validity of Dr. Fry’s conclusions. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Fry’s MMI and surgical determinations were incorrect.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant reached MMI on April 22, 2015 and left shoulder surgery is not reasonable or necessary.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge’s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

STIPULATIONS

The parties agreed to the following:

1. Pursuant to a General Admission of Liability (GAL) filed subsequent to the hearing in this matter, Claimant suffered a right shoulder injury during the course and scope of her employment with Employer on February 10, 2016.

2. Claimant is entitled to receive Temporary Total Disability (TTD) benefits for the period February 10, 2016 until terminated by statute.

ISSUE

A determination of Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

1. Claimant is employed by Employer as an Assembler. Her duties involve working on an assembly line removing and replacing IDC reels.

2. Claimant is an hourly employee. Since she began working for Employer in 2009 she has consistently received pay raises. Her last pay raise in June 2015 increased her hourly earnings to $13.49. Claimant noted that she was still earning $13.49 on the date of her industrial injury.

3. Claimant testified that she normally worked 12 hour shifts for six to seven days per week. She also earned overtime pay for exceeding 40 hours each week. The following chart reflects Claimant's bi-weekly earnings for the 15 pay periods from July 2015 through January 2016.

Pay Period End	**Gross Pay**
07/12/15	$1,893.20
07/26/15	$2,162.87
08/09/15	$1,197.67
08/23/15	$1,197.68
09/06/15	$1,786.46
09/20/15	$1,885.42
10/04/15	$1,417.39
10/18/15	$1,330.65
11/01/15	$1,377.57
11/15/15	$2,156.81
11/29/15	$1,814.50
12/11/15	$1,893.81
12/25/15	$1,635.35
01/15/16	$1,858.28
01/29/16	$1,409.28
Total	$25,016.94

4. Dividing $25,016.94 by 15 pay periods yields an average bi-weekly pay of $1,667.80. Dividing $1,667.80 by two yields an average weekly pay of $833.90. Claimant's average weekly pay of $833.90 covers the period of time between her June 2015 raise and industrial injury.

5. In contrast, Respondents assert that the proper period for calculating Claimant's wages is to consider all of her earnings for 2015. Respondents reason that

Claimant earned $39,482.54 over 52 1/7 weeks during the year. Dividing $39,482.54 by 52 1/7 yields weekly earnings of $757.20.

6. Although Respondents considered all of Claimant's 2015 earnings to calculate an AWW, the period encompasses the time preceding Claimant's June 2015 pay raise to $13.49 per hour. The calculation thus does not provide an accurate representation of Claimant's earnings because she received a raise in June 2015. Considering the period from when Claimant received her raise until she suffered her industrial injury is a more accurate representation of her earnings at the time of her injury. Accordingly, an AWW of $833.90 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-42-102(2), C.R.S. requires the Judge to determine a claimant's AWW based on his earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a Judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed methods will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating an AWW is to arrive at a fair

approximation of a claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Therefore, §8-42-102(3), C.R.S. grants an ALJ substantial discretion to modify the AWW if the statutorily prescribed method will not fairly compute a claimant's wages based on the particular circumstances of the case. *In Re Broomfield,* W.C. No. 4-651-471 (ICAP, Mar. 5, 2007).

5. As found, although Respondents considered all of Claimant's 2015 earnings to calculate an AWW, the period encompasses the time preceding Claimant's June 2015 pay raise to $13.49 per hour. The calculation thus does not provide an accurate representation of Claimant's earnings because she received a raise in June 2015. Considering the period from when Claimant received her raise until she suffered her industrial injury is a more accurate representation of her earnings at the time of her injury. Accordingly, an AWW of $833.90 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a right shoulder injury during the course and scope of her employment with Employer on February 10, 2016.

2. Claimant shall receive TTD benefits for the period February 10, 2016 until terminated by statute.

3. Claimant earned an AWW of $833.90.

4. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

Denver, CO 80202

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-992-558-01

ISSUES

The issues to be determined are as follows:

- Whether the Claimant's work-related resulted in functional impairment beyond that found in the schedule of impairments or whether Claimant's impairment is limited to his left lower extremity; and

- Whether Claimant is entitled to a disfigurement award.

STIPULATIONS

The parties are not challenging the impairment ratings assigned by the Division Independent Medical Examination (DIME) physician. The parties also stipulated that Claimant's average weekly wage converts to the maximum temporary disability rate of $881.65 based on the date of his injury.

FINDINGS OF FACT

1. The Claimant is a 46-year old male who works for the Employer as a firefighter.

2. On May 25, 2015, the Claimant sustained an admitted injury after he stepped out of an ambulance and a drop down step gave way under his right foot. As Claimant stepped down with his right foot, he held a handrail with his right hand. When the step gave way, the Claimant stated that he twisted to his right, leaned back and put his weight on his left foot. Claimant's left knee was stressed and hyperflexed. Claimant initially experienced pain in his lumbar spine, right hip and right ankle.

3. Dr. David Orgel (of Arbor Occupational Medicine) evaluated the Claimant on May 28, 2015. Dr. Orgel's note reflects that Claimant's right ankle pain had resolved and that Claimant's chief complaints included "some bilateral knee pain, right hip pain and low back pain." Claimant indicated that his worst pain was located in his low back and right lateral hip. Claimant noticed some bilateral knee pain with some swelling when he tried using the elliptical machine on May 27, 2015. Dr. Orgel released the Claimant to work at full duty. Dr. Orgel prescribed therapy and Ultram for pain.

4. Claimant had three physical therapy visits, the last of which occurred on June 5, 2015.

5. On June 8, 2015, Claimant returned to Arbor Occupational Medicine and saw physician's assistant, Richard Shouse. Mr. Shouse noted that Claimant had returned "basically for follow up of his left knee." Claimant reported improvement in his hip, lower back and ankle so Mr. Shouse canceled therapy and massage. Claimant had reported he could do his normal job as a firefighter safely and without harm to other people. Mr. Shouse also noted Claimant was not taking any pain medications. On physical examination, Mr. Shouse observed Claimant ambulate with a normal gait; Claimant had full range of motion in his lumbar spine; full range of motion in the right hip; an unremarkable ankle; and let knee tenderness. Mr. Shouse referred Claimant for an MRI of his left knee and for an orthopedic consultation.

6. The remaining medical records in evidence reflect that Claimant repeatedly followed up with his treatment providers for left knee symptoms only. Claimant's treatment included injections in his left knee and Dr. Greenhow also prescribed a knee brace for stabilization.

7. Claimant worked full duty throughout the medical treatment he received other than one reference to Claimant being restricted from work on June 23, 2015 (the day he had a steroid injection in his left knee).

8. On August 25, 2015, Claimant followed up with Dr. Greenhow's physician's assistant, Brandon Kolodzek. Claimant reported good relief from the Synvisc injections he had undergone. Mr. Kolodzek's notes also reflect that Claimant is more active on a day-to-day basis with less pain. At that time, Claimant was noticing minimal pain if he overdid it and would get relief after 20 minutes of rest or after icing.

9. On August 26, 2015, Dr. Orgel determined that Claimant reached maximum medical improvement (MMI) with a 15% lower extremity rating which converted to a 6% whole person rating. Dr. Orgel observed that Claimant walked with a non-antalgic gait and had some crepitation in the left knee with movement. Claimant reported taking only over-the-counter medications, and working full duty while wearing his knee unloader brace. Dr. Orgel indicated that Claimant could follow-up with Dr. Greenhow for additional injections at Dr. Greenhow's discretion. Dr. Orgel otherwise discharged Claimant from further medical treatment and released him to work at full duty.

10. On December 8, 2015, the Respondents applied for a Division Independent Medical Examination ("DIME").

11. The DIME occurred on January 28, 2016, which Dr. Hendrick Arnold performed. He agreed with Dr. Orgel that Claimant reached MMI on August 26, 2015. Dr. Arnold concluded Claimant sustained an 18% lower extremity impairment rating which converts to a 7% whole person rating. Dr. Arnold opined that Claimant could return to work without restrictions.

12. Claimant reported that his current symptoms included occasional left knee pain, but not daily and not all day, and that the pain depended on activity. Claimant

reported increased pain in his left knee with stair climbing when he has to climb five flights of stairs, especially when carrying heavy gear which weighs about 80 pounds. Crawling on his knees increases his knee pain, but he can continue to perform his job including evacuating victims and fellow employees. Claimant told Dr. Arnold that he has completed and passed the Employer-required biannual physical examinations the first time, every time.

13. Claimant reported to Dr. Arnold that his activities included running two to four miles per week and walking one to two miles daily.

14. Claimant wrote in his own handwriting that his left knee was the affected body part. Claimant did not identify other body parts during Dr. Arnold's examination.

15. Dr. Arnold concluded that after reviewing Claimant's medical records and taking a verbal history from Claimant, the only area for consideration is the left knee.

16. The Respondents filed a Final Admission of Liability on February 19, 2016 and admitted for the 18% lower extremity rating assessed by Dr. Arnold.

17. Claimant followed up with Dr. Orgel on May 13, 2016. Dr. Orgel documented that Claimant has arthritis in his knee which causes him to limp sometimes and that the limping causes some increased back pain. Dr. Orgel, however, noted that none of these symptoms impact Claimant's ability to work full duty. Claimant also reported use of the unloader brace, but that he does not always use the brace when called out on an emergency at work. Claimant reported the brace only mildly reduces his symptoms and that he can do his job whether not he wears the brace. Claimant reported that his left knee pain is 0-1 out of 10. Dr. Orgel observed the Claimant walk with a non-antalgic gait. Claimant was able to squat and duck walk without difficulty.

18. During the hearing, the Claimant testified that when he limps, his low back tightens up and sometimes he experiences an ache in his right hip. He explained that these are his cues to rest. He takes Tylenol and relaxes to get everything to calm down. He sometimes uses ice on his left knee and a TENS unit for his low back.

19. Claimant testified that he now has to plan ahead for activities. For instance, he takes pain medications with him when he hikes. He cannot walk the golf course when golfing 18 holes, and twisting his back while swinging the clubs bothers his back. He can bend and squat but leans on "stuff" to get up. He avoids twisting at the waist.

20. Claimant stated he avoids activities at home so he can safely perform his job duties. He has learned to self-treat to avoid increased symptoms in his back and hip.

21. At work, Claimant wears his brace. He occasionally uses ice and over-the-counter medications. Claimant admitted he can perform all of the functions of his job.

22. Claimant testified that his low back and hip pain is not constant and does not occur on a daily basis.

23. When asked why the medical records indicate that his back and hip were no longer symptomatic, Claimant stated that he felt he was managing the symptoms okay, but now realizes he should have been more open and honest with his medical providers.

24. When asked why he reported to Dr. Arnold that his lumbar spine, ankle and hip felt fine, Claimant explained that he was confused by Dr. Arnold's questions concerning the body parts affected by his May 2015 work injury.

25. Claimant testified that he no longer runs 2-4 miles per week, but does walk between 1 and 2 miles each day throughout the course of the day.

26. Claimant has a history of low back problems which necessitated surgery in March 2012. Claimant testified his low back was symptom free until the May 2015 work-related accident.

27. Claimant displayed his left knee brace which is black. He does not wear it daily though it was prescribed by an authorized treating physician. He walked with a very slight left-sided limp.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102 (1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 593 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

Permanent Impairment

4. Section 8-42-107, C.R.S., sets forth two different methods of compensating medical impairment. Subsection (2) provides a schedule of disabilities and subsection (8) provides for whole person ratings. The threshold issue is application of the schedule and this is a determination of fact based upon a preponderance of the evidence. The question of whether the Claimant sustained a whole person medical impairment compensable under § 8-42-107(8), C.R.S., is one of fact for determination by the ALJ. The application of the schedule depends upon the "situs of the functional impairment" rather than just the situs of the original work injury. *Langton v. Rocky Mountain Health Care Corp.,* 937 P.2d 803 (Colo. App. 1996); *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996).

5. Pain and discomfort which limit a Claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule. See *Langton v. Rocky Mountain Healthcare Corp.*, *supra*; *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996).

6. The Claimant has failed to prove that he suffered permanent impairment beyond his left lower extremity. The persuasive and credible evidence demonstrates that Claimant's left knee is the situs of his functional impairment. The Claimant has no work restrictions. He is able to perform all of his job duties, which include heavy lifting, stair climbing, and rescuing people, without any problem. The Claimant repeatedly told medical providers that his low back and hip were asymptomatic, and the Claimant was working full duty during the entire duration he received treatment for his injury. Thus the physical nature of his job does not appear to have produced increased symptoms in his back or hip. In addition, the ALJ is not persuaded by Claimant's assertion that his functional impairment extends beyond his left lower extremity merely because he self-limits his personal activities. Given the Claimant's ability to perform his very physical job, it defies logic that he would be incapable of golfing, hiking or other physical activities. Claimant's testimony lacks credibility in this regard, especially in light of the medical records which do not corroborate Claimant's testimony. As such, Claimant's request for whole person permanent impairment is denied.

Disfigurement

7. As a result of Claimant's work injury, he has a visible disfigurement to the body consisting of a very slight left sided limp, and usage of a medically prescribed knee brace. Claimant has sustained a serious permanent disfigurement to areas of his

body normally exposed to public view, which entitles Claimant to additional compensation. Section 8-42-108 (1), C.R.S.

ORDER

It is therefore ordered that:

1. The Claimant is entitled to permanent partial disability benefits based upon the left lower extremity impairment rating of 18%.

2. Insurer shall pay Claimant $1,500.00 for this disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

The issues to be determined by this decision are the following:

1. Whether Claimant overcame the Division independent medical examiner's (DIME's) opinion with regard to impairment rating and/or causation by clear and convincing evidence;

2. Whether Claimant proved by a preponderance of the evidence entitlement to permanent total disability (PTD) benefits;

3. Whether Respondents accrued an overpayment; and

4. Whether Claimant proved by a preponderance of the evidence that Claimant is entitled to a general award of maintenance medical benefits.

FINDINGS OF FACT

Having considered the evidence presented at hearing and the depositions of Dr. Jeffrey Wunder and Katie Montoya, the following Findings of Fact are entered.

1. Claimant is a 62 year old female who has been employed by Employer for 11 years in Fort Collins, CO. On July 16, 2012, Claimant sustained an admitted injury. She testified she tripped over a piece of rubber and fell to her left. She described a hyperextension of her left knee and striking her right hand and right knee on the ground.

2. Claimant has a medical history significant for right upper extremity conditions, specifically, right arm pain, dysesthesias, neuralgia, and carpal tunnel for which she received neurological treatment just days prior to the work injury. Specifically, on July 12, 2012, four days prior to the work injury, Claimant presented to Dr. Curiel to evaluate right hand/arm pain that had resulted in Claimant having trouble at work typing because of right hand pain, which was reported to be aggravated by use. Claimant was prescribed a Gabapentin formulation to control her upper extremity pain.

3. In the months leading to the work injury, Claimant sought treatment for decreased wrist range of motion, a 1.5 year-history of hand numbness and pain, arthritis, and Ehlers-Danlos syndrome. These conditions interfered with her sleep.

4. Ehlers-Danlos is a connective tissue condition which results in joint laxity. Over time, this joint laxity can result in osteoarthritis, nerve pathology, and neuropathies.

5. Claimant's medical history is also significant for a 2011 right carpal tunnel release and a 2000 bilateral total knee replacement.

6. Following Claimant's July 16, 2012, work injury, initial diagnostic testing established unremarkable bilateral knee x-rays, a right wrist x-ray showed no acute abnormality, and a negative brain MRI.

7. An EMG established a C7 radiculopathy without any evidence of an ulnar neuropathy. Subsequently, a cervical MRI was performed, finding degeneration at multiple levels, multilevel neural foraminal stenosis, anterolisthesis of C7 on T11, and development of central canal stenosis from C3 through C6.

Overcoming the DIME with Regard to Causation;
The ulnar nerve, carpel tunnel and the left knee condition

8. The ALJ finds that Claimant did not overcome Dr. Ginsburg's causation opinions by clear and convincing evidence with regard to Claimant's ulnar nerve, carpel tunnel and her left knee condition. In coming to this conclusion, the ALJ finds the opinions of Dr. Ginsburg, Dr. Cebrian, and Dr. Edmonds to be more persuasive and credible than that of Dr. Wunder.

9. Claimant's right ulnar nerve condition, including the need for surgery and ongoing sequelae, is not related to the July 16, 2012, industrial injury. While Claimant's authorized treating physicians (ATPs) initially aimed at conservative treatment of Claimant's right ulnar nerve condition, Claimant was referred to a neurosurgeon for a surgical consultation. Dr. Hans Coester ultimately recommended a C4-C5, C5-C6, and C6-C7 anterior cervical discectomy and fusion. He opined this procedure was partially required due to Claimant's underlying Ehlers-Danlos syndrome. This procedure occurred on September 24, 2013.

10. Claimant testified her first complaints of ulnar issues, including numbness in her ring and middle fingers, occurred after her cervical surgery. She testified she was getting physical therapy for post-operative rehabilitation when the symptoms began.

11. Dr. Jeffrey Wunder, an ATP, opined Claimant's development of an ulnar neuropathy was either related to her time in physical therapy arising from the cervical surgery or the result of positioning during the neck surgery.

12. Dr. Wunder subsequently retracted the positioning argument for causation and opined that Claimant developed ulnar neuropathy during the physical therapy sessions performed as part of her post-operative care arising from the cervical surgery.

13. In deposition testimony, Dr. Wunder conceded that he could not read the handwritten physical therapy notes, so he did not know which activities were performed during these sessions. Because of this, he could not explain if any of those activities met the W.C.R.P. 17 guidelines known to plausibly cause ulnar neuropathy.

14. Dr. Cebrian credibly testified at hearing that Dr. Wunder's causation theory was not medically probable. Specifically, because Claimant spent an insignificant amount of time in physical therapy for a few weeks at the time of the onset of symptoms, those activities would not meet the threshold requirements of a W.C.R.P. 17 causation analysis.

15. Dr. Hope Edmonds, an ATP, agreed with Dr. Cebrian that Claimant's development of ulnar neuropathy was not work related.

16. Dr. Ginsburg, the DIME, also credibly opined that the right carpal tunnel syndrome was not related to the July 16, 2012, work injury. Dr. Wunder agreed with Dr. Ginsburg that there was no aggravation of Claimant's underlying right carpal tunnel syndrome as a result of the July 16, 2012, work injury. Accordingly, the ALJ finds that Claimant failed to overcome the DIME opinion with regard to causation of the Claimant's right carpal tunnel syndrome.

17. The DIME physician opined Claimant's left knee condition was not related to the July 16, 2012, work injury, but rather was a pre-existing condition that did not cause additional difficulty after the work injury.

18. Dr. Wunder initially opined he "could not determine...if there was any additional injury to the left knee as a result of her work related injury." He subsequently retracted this opinion, noting it was a typographical error and he meant there was no ratable left knee injury. He conceded, however, that when he compared the left knee to the right knee, they were "virtually" the same. He also conceded that his opinion regarding causation of the left knee was merely a different opinion than that of the DIME.

19. Dr. Wunder did not point to any specific errors in Dr. Ginsburg's causation analysis. Dr. Wunder reluctantly conceded on cross examination that his opinions with regard to causation of the left knee and right upper extremity conditions were differences of opinion. However, with regard to the left knee, Dr. Wunder persisted in the opinion that the left knee condition was a rateable condition for which Claimant received a 0% impairment.

20. The ALJ finds the opinion presented by Claimant regarding the causal analysis of the left knee condition is merely a difference of opinion from that of the DIME physician and does not amount to clear and convincing evidence that Dr. Ginsburg's opinion is most probably incorrect.

.

Maintenance Medical Benefits for unrelated medical conditions

21. The ALJ finds that Claimant failed to prove by a preponderance of the evidence that her request for medical maintenance treatment related to the right ulnar nerve, right carpel tunnel and the left knee condition is for reasonably necessary and

related medical treatment. Since the DIME physician concluded that the right ulnar nerve, right carpel tunnel and the left knee conditions are not related to the work injury, maintenance medical treatment for these condition is not reasonably necessary or related.

22. The DIME physician, Dr. Ginsburg, opined the only condition that was related to the work injury was the cervical condition. Dr. Ginsburg's causation opinion is supported by both the opinion of Dr. Edmonds (ATP) and Dr. Cebrian.

23. Claimant testified that the right ulnar nerve condition, the right upper extremity condition, and the left knee conditions were related to her work injury. In support of that argument, she presented the opinion of Dr. Wunder. However, Dr. Wunder did not point to any specific errors in Dr. Ginsburg's causation analysis. Dr. Wunder reluctantly conceded on cross examination that his opinions with regard to causation of the left knee and right upper extremity conditions were differences of opinion. However, with regard to the left knee, Dr. Wunder persisted in the opinion that the left knee condition was a rateable condition for which Claimant received a 0% impairment.

Overcoming the DIME with Regard to Impairment

24. Dr. Ginsburg, the DIME physician, opined Claimant had a 20% whole person impairment arising out of her cervical condition. The rating arose from a Table 53(II)(D) rating of 9% whole person impairment for the multi-level disc lesion and 12% whole person impairment for range of motion loss. He opined the date of maximum medical improvement (MMI) was December 1, 2014.

25. While Dr. Edmonds' impairment rating of 23% whole person was higher than the DIME, she concurred with a 9% whole person rating for Table 53(II)(D), but found 15% whole person impairment for range of motion loss.

26. Dr. Wunder provided an impairment rating of 26% whole person impairment. His opinion was based on a cervical condition (22% whole person impairment) and an exacerbation of the right wrist condition (8% scheduled impairment). Discounting the right wrist impairment, the sole difference between Dr. Wunder's cervical impairment and the Division IME's opinion is with regard to an additional rating under Table 53(II)(F); Dr. Wunder does not explain in his report how that rating was arrived at, nor did he give an opinion regarding why that rating was incorrectly omitted by the DIME physician.

27. Claimant did not overcome the DIME with regard to causation of the right wrist, thus there can be no impairment for a right wrist condition. The ALJ finds Claimant has not overcome the DIME with regard to impairment arising out of any right wrist condition. The ALJ finds the opinions of Dr. Ginsburg, Dr. Cebrian, and Dr. Edmonds to be more persuasive than that of the opinion of Dr. Wunder.

28. The ALJ also finds that in Claimant's argument to overcome the DIME with regard to cervical impairment, Claimant merely presented a different medical opinion. Claimant did not present significant evidence regarding any error made by Dr. Ginsburg in his impairment rating. Therefore, the ALJ finds Claimant has not overcome the DIME with regard to cervical impairment. In this regard, the ALJ credits the opinion of Dr. Ginsburg, which is supported by Dr. Edmonds and Dr. Cebrian.

29. The ALJ finds that Claimant reached MMI on December 1, 2014, with a 20% whole person impairment arising out of her cervical condition. Claimant failed to sustain her burden of proof to establish by clear and convincing evidence that the DIME physician is most probably incorrect with regard to causation and impairment rating.

PTD

30. Claimant's job history includes accounting work, bookkeeping, paralegal work, performing work as a title clerk at a car dealership, handling the business side of a self-owned business for 10-plus years, performing payroll services, and transcribing and managing a police substation in Fort Lupton, CO.

31. Claimant's job at Employer, prior to her injury, was an office job, where most of the day was spent at a desk typing and answering phones. Additionally, Claimant has significant managerial/supervisory skills; Claimant managed four employees while working for the employer and managed thirty-five employees in a business she operated with her husband for ten years.

32. Claimant is qualified to work in sedentary jobs. Claimant's prior jobs as a bookkeeper, office worker, and legal assistant were all sedentary jobs according to the Dictionary of Occupational Titles. Claimant has good transferable skills for other professions/jobs. Claimant is considered to be in a skilled classification of work.

33. Prior to Claimant's placement at MMI for the work injury, Dr. Edmonds referred Claimant to a functional capacities evaluation (FCE). That FCE was performed over a two day period, on November 21, 2014, and December 4, 2014. That exam reached the following conclusions:

- Claimant was able to sit unrestricted during the intake interview for 85 minutes;
- Stationary standing was limited to 12 minutes prior to a positional change, i.e. walking, in a 30 minute test;
- Walking restricted to 4 minutes 45 seconds; and
- Lifting in the light work classification category (20 pounds from 11.5" to knuckle, 17.5 pounds knuckle to shoulder, 12 pounds shoulder to overhead, and 100 foot bilateral lift carrying 15 pounds).

34. Having reviewed the November 21, 2014, and December 4, 2014, FCE, Dr. Edmonds, the ATP, indicated the sole restriction on Claimant's work was a limitation to a six-hour work day.

35. Dr. Wunder did not assign permanent work restrictions contemporaneous with Claimant's placement at MMI. Rather, almost a year later, on August 10, 2015, Dr. Wunder opined Claimant should have a 10 pound lift/push/pull limitation on an occasional basis and 5 pounds frequently. He also limited Claimant's use of the right hand to occasional use.

36. On October 12, 13 and 14, 2015, Claimant underwent a second FCE at Starting Points, at the request of Claimant's attorney. That FCE concluded Claimant had the ability to lift up to 10 pounds, should take "micro-breaks" during her day, and should be limited to 4 hours of work per day. No physician has adopted the October 2015 FCE. Dr. Wunder specifically rejected the four hour limitation provided by the Starting Points FCE.

37. Dr. Wunder issued a second opinion regarding restrictions on November 12, 2015. There, he noted that many of the restrictions identified by the Starting Points FCE would not be related to the work injury. Specifically, he opined many of the restrictions, including the bending, crouching, squatting, kneeling, and crawling restrictions are in regard to Claimant's longstanding low back and knees problem and are not related to her work injuries.

38. Dr. Cebrian opined that Claimant's claim-related permanent work restrictions were no lifting, pushing, or pulling over 20 pounds. He also opined there would be no requirement for time limitations arising out of the work injury.

39. The Starting Point FCE occurred on October 12-14, 2015; therein, there is no mention of right hip pain. Ms. Montoya performed her vocational evaluation on October 21, 2015. At the time of her interview, Claimant had been taken off work by Dr. Clark for two weeks for an acute onset of AVN/hip pain. Claimant reported to Ms. Montoya that the week prior to the interview, she did not work several days because of this hip pain. Claimant alleged at the hearing that her right hip condition had very little impact on the Starting Point FCE because in the couple weeks prior to that FCE, her hip symptoms resolved. Claimant's testimony is not credible.

40. Despite Claimant's testimony, the record establishes that Claimant sought right hip treatment with Dr. Clark on October 15, 2015, the day after the FCE. Dr. Clark noted that Claimant had a limp and has been unable to work due to hip pain. Dr. Clark noted that activity modification had failed. On October 29, 2015, Dr. Clark reported that Claimant was unable to stand for a couple of minutes and able to walk about a block before the onset of severe pain.

41. Mr. Blythe, Claimants vocational expert, testified he was did not know about the severe hip problem and he was not aware of any work absences arising out of

that problem. Despite not knowing about the hip and its timing of symptoms, Mr. Blythe testified he gave the Starting Point FCE more weight than the FCE performed in 2014.

42. Dr. Cebrian opined that, at the time of the Starting Point FCE, Claimant was being evaluated for severe right hip pain that he opined would significantly impact Claimant's performance on testing and her reported pain levels. Dr. Cebrian testified this condition invalidates the Starting Point FCE and potentially explained the differences in the Starting Point FCE relative to the 2014 FCE. .

43. Ms. Montoya also questioned the Starting Point FCE because Claimant was still symptomatic for the hip and undergoing care and treatment for that condition. She testified it was difficult to separate out the implications of the hip pain and mobility from the other issues examined by the FCE.

44. Ms. Montoya credibly testified the 2014 FCE correctly allowed for a light classification of work, lifting 20 pounds occasionally and that the definition of light work, being able to materially handle (lift) up to 20 pounds occasionally and 10 pounds or less frequently without limitation of the lifting level.

45. Mr. Blythe's opinions regarding Claimant's employability were found less credible than the opinions of Ms Montoya. Based on the inconsistencies in Mr. Blythe's testimony and report, the ALJ finds and determines that his testimony and report are not credible.

46. Ms. Montoya opined in her report that Claimant was able to work within the restrictions put forth by Dr. Edmonds, allowance of six hours per day. Ms. Montoya opined the ongoing job with Employer, performed until December 2015, was appropriate for Claimant as the job was sedentary, and there was no physical reason Claimant could not continue at six hours per day as recommended by the ATP. Ms. Montoya similarly opined the work restrictions as proffered by Dr. Cebrian and Dr. Wunder would allow Claimant to continue her work with the employer. Ms. Montoya opined that, considering the opinions of Dr. Edmonds, Dr. Cebrian, and Dr. Ginsburg, Claimant maintains the capacity to return to work.

47. Ms. Montoya credibly opined that Claimant would be hired due to her good skill base and because she is a desirable candidate and Claimant will be able to maintain employment. Ms. Montoya further credibly opined that this is because Claimant is working within the restrictions she has been provided, frequent absences and/or breaks will not be hindrances to her continued employment.

48. Ms. Montoya credibly testified Claimant was employable in the following fields: reception, general clerical, and customer service. She testified these types of jobs were readily available in the Fort Collins geographical area.   Ms. Montoya testified her opinion was based on the work restrictions opinions issued by the providers, along with consideration of Claimant's relevant vocational background. The ALJ finds Ms. Montoya's testimony that Claimant is employable in her competitive labor market within

her restrictions to be credible and persuasive. In so finding, the ALJ finds Ms. Montoya's employability opinion to be more credible and persuasive than that of Mr. Blythe. Claimant has not met her burden to establish that she is PTD as the result of her July 16, 2012 work injury.

49. It is found that Claimant's continued employment with Employer was not sheltered employment. Claimant worked within her work restrictions as assigned by Dr. Edmonds from the date of maximum medical improvement (MMI) December 1, 2014, until mid-December 2015. Claimant, in her post-MMI work, earned approximately $38,000 per year and maintained her pre-injury job title. Claimant testified that the reason she stopped working for Employer in December 2015 was because she thought her workers' compensation claim settled and that as part of that settlement she agreed to resign. Claimant did not return to Employer after December 2015 to try to work again.

50. Ms. Montoya credibly testified that the job Claimant was performing post-MMI for the employer was not sheltered employment. She testified that she came to this conclusion because (1) Claimant was still performing the work tasks that were required for her position, (2) Claimant was still performing needed work tasks, and (3) the actual work performed, clerical and customer service work, is available in the Fort Collins labor market. Claimant was actually productive during this post-MMI employment and Ms Montoya learned that she did not have excessive or frequent absences.

51. Ty Hendrickson was Claimant's supervisor from July 2012 until July 2015. He testified credibly at hearing. The following is found that in the position post-MMI with Employer: Claimant arranged her schedule given her six-hour-work restriction and that Claimant would schedule her medical appointments around that limitation; Claimant's hour limitation was not a problem because in a call center all employees report at different hours, so there was flexibility; Claimant had average productivity between December 2014 and July 2015 on par with other employees; Claimant performed the same job duties as all other coordinators for the Employer; and Claimant could have continued her job had she not resigned in December 2015.

52. Dave Mueller, Claimant's supervisor from September 2015 through December 2015, testified credibly at hearing. It is found that Claimant's performance during that time was similar to that of other employees and, if Claimant did not cease her employment in December 2015, she would still be working for Employer.

53. Based on the totality of the evidence, the ALJ finds that Claimant failed to establish by a preponderance of the evidence that she is unable to earn any wages. Therefore, it is found that Claimant is not permanently totally disabled.

Overpayment

54. Claimant was originally placed at MMI by Dr. Edmonds on December 18, 2014, with a rating of 23% whole person impairment. Subsequently, the DIME placed Claimant at MMI on December 1, 2014, with a 20% whole person impairment. On September 15, 2015, Respondents filed a Final Admission of Liability, admitting to the DIME opinions on MMI and impairment rating.

55. Payroll records reflect that as of May 9, 2016, Respondents paid $71,106.18 in combined TTD, TPD, and PPD benefit payments. The Final Admission of Liability, dated September 15, 2015, admits to a total of combined TTD, TPD, and PPD benefit in the amount of $78,482, consistent with the benefit cap under Section 8-42-107.5, C.R.S.

56. Respondents concede that any overpayment initially incurred due to the filing a Final Admission of Liability after the placement of MMI has been recouped. The ALJ finds that no overpayment exists.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936).

Overcoming the DIME

3. A DIME's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Indus. Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates it is "highly probable" that the DIME's findings are incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME's opinion, "there must be evidence that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (I.C.A.O., Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (I.C.A.O., July 19, 2004).

4. Claimant failed to overcome the DIME with regard to causation or impairment by clear and convincing evidence. Claimant presented the opinion of Dr. Wunder, which was merely a difference of opinion from the DIME on both causation and impairment. Dr. Wunder's opinions are insufficient to meet the clear and convincing standard required for the claimant to overcome the DIME. *Javalera*, *supra*. In reaching this conclusion, the ALJ credits the persuasive opinions of the DIME, which was supported by the totality of the medical record and the opinions of Dr. Edmonds and Dr. Cebrian.

Medical Benefits for Unrelated Body Parts

5. The need for medical treatment may extend beyond the point of MMI, where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent deterioration of his condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). The claimant must prove entitlement to maintenance medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915 (Colo. App. 1993).

6. As found, Claimant's right wrist condition, right ulnar condition, and left knee condition are not related to the work injury pursuant to the opinion of the DIME. Claimant's request for maintenance medical benefits, including the knee brace and physical therapy, for these body parts is denied.

PTD

7. PTD is defined as the inability to earn "any wages in the same or other employment." Section 8-40-201(16.5)(a), C.R.S.; *Christie v. Coors Transportation Co*., 933 P.2d 1330 (Colo. 1997). Under this statute, a claimant is not PTD if he is able to earn some wages in modified, sedentary, or part-time employment. *McKinney v. Indus. Claim Appeals Office,* 894 P.2d 42 (Colo. App. 1995). *T*he claimant has the

burden of proof to establish PTD by a preponderance of the evidence. The question of whether the claimant has proven PTD is a question of fact for resolution by the ALJ*. Id.* A claimant is required to prove a direct causal relationship between the industrial injury and the resulting PTD, which necessitates a determination of the nature and extent of her residual impairment from the industrial injury. *Seifried v. Indus. Comm'n,* 736 P.2d 1262 (Colo. App. 1986).

8. In determining whether the claimant is unable to earn any wages, the ALJ may consider a number of "human factors." *Christie*, *supra*. These factors include the claimant's physical condition, mental ability, age, employment history, education, and the "availability of work" the claimant can perform. *Weld County School Dist. RE-12 v. Bymer,* 955 P.2d 550 (Colo. 1998). Another human factor is the claimant's ability to obtain and maintain employment within his physical abilities. *See Professional Fire Protection, Inc. v. Long, 867 P.2d 175 (Colo. App. 1993).*

9. In this case, as found, Claimant failed to sustain her burden of proof to establish that she is PTD as a result of the admitted work injury. The testimony of Dr. Cebrian, and a review of the medical records, is persuasive that Claimant's permanent work restrictions are limited to the cervical spine and would permit a full range of sedentary work, which is the type and kind of work she performed prior to the work injury. Additionally, based on the credible and persuasive opinions of Ms. Montoya, Claimant is able to earn wages in her geographical labor market of Fort Collins and within her work restrictions. *Bymer, supra*.

ORDER

It is therefore ordered that:

1. Claimant failed to overcome the DIME with regard to causation or impairment. Claimant is at MMI as of December 1, 2014, with a whole person impairment of 20%. The right upper extremity, ulnar or wrist, and the left knee complaints are not related to the work injury of July 16, 2012.

2. Claimant failed to establish an entitlement to post-MMI maintenance medical benefits to treat her left knee condition, her right wrist condition, or her right ulnar condition. Claimant's request for medical benefits for those body parts is denied and dismissed with prejudice.

3. Claimant failed to establish that she is permanently and totally disabled as a result of the July 16, 2012, work injury. Claimant's claim for permanent total disability benefits is denied and dismissed with prejudice.

4. The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

The issue presented for determination is whether the Claimant is entitled to the two-level anterior cervical fusion and discectomy as recommended by Douglas Beard, M.D. Respondents assert the requested medical treatment is not related, reasonable and necessary. Claimant also seeks a change of physician.

FINDINGS OF FACT

1. On September 20, 2013, Claimant was involved in a motor vehicle accident. His vehicle, while at a complete stop, was rear-ended. Claimant was wearing his seatbelt at the time of impact.

2. The Claimant was transported to the emergency room following the accident. Claimant reported a right-sided headache; neck pain from his ear to the midline all the way down his cervical spine into his low back. All of his complaints seemed to be worse on the right side. Claimant reported that his pain was intolerable which is why he was unable to ambulate or extricate himself from his vehicle. Claimant advised the ER physician that he had a history of low back pain after falling off a ladder in 2012 but that his pain had been under control.

3. Following the work-related motor vehicle accident, Claimant continued to complain of neck-related symptoms.

4. On September 24, 2013, Sally Knauer, M.D., evaluated the Claimant. Dr. Knauer noted Claimant's concern that he continued to have significant muscular pain across the posterior neck and shoulders that felt like whiplash. Dr. Knauer's impression was that he had neck-related symptoms, primarily trapezius spasms. Dr. Knauer recommended that Claimant use some topical creams and suggested biofreeze. She also gave him a prescription for Flexeril and recommended physical therapy.

5. Thereafter, the Claimant continued with conservative treatment including a home exercise program, and pain medications.

6. On January 7, 2014, the Claimant reported to Dr. Knauer that his neck is better but it gets sore in cold weather. Dr. Knauer documented no significant pain with active range of motion of the cervical spine. Claimant localized most of his tenderness to the right trapezius. Claimant had no significant radicular symptoms.

7. On February 25, 2014, Lawrence Lesnak, D.O. performed an independent medical examination (IME) at the Respondents' request. Claimant reported "occasional residual right lateral neck/suprascapular discomfort with intermittent right occipital

headaches that occurred several times per week." Claimant reported occasional aching sensations in his right upper arm. Claimant denied any left upper extremity or lower extremity symptoms. Claimant reported no history of previous neck symptoms or injuries.

8. Dr. Lesnak's physical exam revealed full range of motion of Claimant's cervical spine in all planes with some "mild right distal posterolateral distal neck discomfort during cervical extension activities." Claimant also had some tenderness to palpation over his right posterolateral distal neck region and right proximal suprascapular region.

9. Dr. Lesnak's impressions included probable right-sided cervical/trapezius sprain/strain injury by report; no evidence of cortical or thoracic radiculitis, radiculopathy or myelopathy; and probable residual occasional right cervical/trapezius myalgias. Dr. Lesnak stated that "it is certainly feasible that patient sustained an acute right-sided cervical/trapezius strain/sprain injury as a result of the work-related motor vehicle accident on September 20, 2013. However, a CT scan of the patient's cervical spine and head revealed no abnormalities, including any type of acute trauma whatsoever."

10. Dr. Lesnak opined that Claimant's symptoms are purely stemming from a myofascial etiology, and that Claimant need no further diagnostic studies. He indicated that a brief course of physical therapy directed at the cervical spine and suprascapular regions might be reasonable. Dr. Lesnak concluded that Claimant needs no further treatment, including medications, other than eight sessions of physical therapy.

11. Claimant had one additional visit with Dr. Knauer on March 4, 2014 before his care was transferred. The next medical record in evidence is dated August 7, 2014, at which time Claimant presented to Rebekah Martin, M.D. at Colorado Rehabilitation & Occupational Medicine ("CROM"). Claimant reported hot burning pain down the right side of his neck immediately after the September 20, 2013, industrial accident. Dr. Martin noted that although Dr. Knauer tried to place him in physical therapy, he did not do well after even one visit. Claimant reported right-sided cervical spine pain within the upper mid cervical region with associated headaches. Dr. Martin noted "vague" arm discomfort that radiated all the way down and caused his fingertips to "drive him nuts." Dr. Martin noted Claimant's decreased cervical range of motion and opined that he had probable underlying cervical facet syndrome at C2-3 and C3-4 on the right with significant overlying myofascial pain. Dr. Martin recommended pain medication; anti-inflammatories; a TENS unit and that he pursue right C2-3 and C3-4 facet joint injections for both diagnostic and therapeutic purposes.

12. Dr. Martin performed right C2-C3 and C3-C4 facet joint injections on September 15, 2014.

13. On November 4, 2014, Claimant followed-up at CROM with Scott Astley, PA-C, and reported relief for about a week after Dr. Martin administered the C2-C3 and C3-C4 facet joint injections. On examination, Claimant still displayed tenderness directly over his upper and lower trapezius, rhomboids and levator scapula. On the right, Claimant

had palpable pain with pain down his arm as well as to his bicep. Mr. Astley referred Claimant for an MRI without contrast of his cervical spine. Mr. Astley noted concerns over Claimant's lack of significant longstanding benefit from the cervical facet injections.

14. Claimant underwent a cervical spine MRI on November 13, 2014, which revealed a mild to moderate narrowing of the central canal, as well as moderate right and mild left foraminal stenosis due to uncovertebral joint and facet hypertrophy at C4-5. At C5-6, the MRI showed a broad-based disc bulge with central disc protrusion resulting in mild to moderate narrowing of the central canal, and a broad-based disc bulge with central disc protrusion at C6-C7.

15. Scott Astley, PA-C reviewed the MRI results on November 21, 2014, and recommended that Claimant proceed with facet rhizotomies to the right at C2-3, C3-4 facets and that Claimant return once those were completed.

16. On February 3, 2015, the Claimant returned to CROM, and saw Mr. Astley. On exam, Claimant had full range of motion, but tenderness over C2-3 and C3-4 facets. Claimant requested a referral to surgeon, Douglas Beard, M.D. for a consultation. Although Mr. Astley believed Claimant was not a good surgical candidate because he believes Claimant's symptoms are facetogenic and myofascial, Mr. Astley indicated that a second opinion might be effective and therefore made the referral to Dr. Beard.

17. On March 4, 2015, Claimant met with Dr. Beard. Claimant reported that he continued to have substantial neck pain after the motor collision on September 20, 2013. Claimant advised Dr. Beard that his neck became symptomatic and stayed symptomatic following the September 20, 2013, motor vehicle collision. Dr. Beard's examination revealed no evidence of exaggerated pain behaviors and that Claimant had more of an aching sensation to the right trapezial ridge and right shoulder almost in a C5 radiculitis type fashion to the right than to the left. Dr. Beard also reviewed Claimant's November 13, 2014, MRI scan which clearly demonstrated evidence of multi-level disc protrusion. Dr. Beard noted that the most significant levels are at C4-5, where to the right of the midline, there is evidence of effacement and subtle indentation of the anterior aspect of the cord. Dr. Beard also noted evidence of a central disc protrusion at the C5-6 motion segment. Dr. Beard did not believe it appeared to cause near as much cord impact as the C4-5 motion segment. Dr. Beard advised Claimant those could certainly be the culprit in producing his ongoing symptomatology and that many times whiplash mechanisms could be quite chronic and debilitating. Dr. Beard opined that Claimant's cervical disc protrusions at C4-5 and C5-6 were consistent with a whiplash mechanism of injury. Dr. Beard discussed surgical treatments for a disc protrusion and herniation. Dr. Beard recommended that Claimant exhaust a conservative and non-operative program first and thus referred him back to Colorado Rehabilitation & Occupational Medicine for further discussions, otherwise, Dr. Beard would plan to see Claimant in the future should he continue to struggle.

18. Claimant returned to CROM on April 2, 2015. Ryan Mansholt, PA-C, examined Claimant and noted full range of motion with some pain on end range, and significant

tenderness over the C2-3 and C3-4 facet joints on the right side with positive facet loading maneuver in the area. Mr. Mansholt noted Dr. Beard's recommendation that Claimant exhaust a conservative and non-operative program before considering surgery. Claimant elected to undergo occipital nerve, C3, and C4 radio frequency ablation.

19. On April 6, 2015, Claimant underwent the ablation procedure at the right C2 medial branch, right C3 medial branch and right C4 medial branch.

20. Claimant returned to Dr. Beard on May 27, 2015, after having undergone C2-C4 ablation. Claimant reported not much improvement in his overall symptom complex with constant suboccipital headaches; numbness in his neck and pain in the back of his head. Claimant reported greater pain to his right side radiating into the trapezial ridge region and into the scapular region. Dr. Beard stated, "This is certainly consistent with his C4-5 cervical disc protrusion causing cord compression." After discussing ongoing pain management options, such as ongoing and continued injections. Dr. Beard recommended that since Claimant did not find injections to be helpful, then the next option was to consider surgical intervention. Dr. Beard discussed the possibility of an anterior cervical discectomy and fusion at the C4-5 and C5-6 motion segments, the site of most significant cervical cord compression. After discussing his treatment options, Claimant opted to give it thought and consideration and advised Dr. Beard that he would re-contact him in the future should he desire to proceed with surgical intervention.

21. Claimant subsequently transferred his medical care from CROM to Concentra. Claimant saw Dr. Rosalind Pineiro on June 17, 2015. Dr. Pineiro reviewed Dr. Beard's notes with Claimant. Dr. Pineiro and the Claimant both agreed to continue conservative measures and thus made a new referral to a physiatrist to see if additional injections were necessary before surgical intervention was considered.

22. Per Dr. Pineiro's referral, Matthew Pouliot, D.O. examined the Claimant on July 15, 2015. Dr. Pouliot's physical examination revealed limited cervical range of motion with pain on extension, flexion and right-sided rotation with tenderness to palpation in the occiput on the right and in the cervical paraspinal muscles.

23. Dr. Pouliot assessed continued cervical pain, cervicogenic-type headaches, possible occipital neuralgia, and radiating radicular-type pain into the C4 and C5 distributions with disk herniations at C4-5 and C5-6.

24. Dr. Pouliot noted Dr. Beard's recommendation for a possible cervical spine fusion for two-level disk herniations at C4-5 and C5-6 and that Claimant wanted another opinion as to whether a cervical fusion was reasonable. Dr. Pouliot recommended and ordered bilateral occipital nerve blocks as Claimant might have a component of occipital. Dr. Pouliot noted that Claimant was nearly two years out from his original industrial accident, and that he would likely not improve much beyond that point. Ultimately, Dr. Pouliot agreed with Dr. Beard's assessment that a cervical fusion might be necessary.

25. Claimant followed up with Dr. Pineiro on July 28, 2015. Dr. Pineiro agreed with Dr. Pouliot and recommended that if Claimant's symptoms persisted after another injection, surgery was the next option.

26. On July 29, 2015, Claimant underwent bilateral occipital nerve blocks for occipital neuralgia.

27. Claimant returned to see Dr. Pineiro on August 14, 2015, and reported he was pain free for a week following the occipital nerve block; however, 25% of his pain had returned. Dr. Pineiro noted that Claimant would return to Dr. Pouliot in three weeks.

28. On August 19, 2015, Claimant returned to Dr. Pouliot and reported feeling 100% pain relief for 2-3 hours following the occipital nerve block then 50% decrease in his headaches for 1 to 1 ½ weeks. Dr. Pouliot believed radio frequency ablation of the occipital nerves using the pulsed radio frequency procedure would be appropriate.

29. Claimant returned to see Dr. Pouliot on September 16, 2015. Dr. Pouliot noted that Claimant was awaiting authorization of the greater occipital nerve radio frequency ablation. Due to Claimant's report of 100% pain relief through the anesthetic phase of the occipital nerve blocks followed by a 50% decrease in his headaches for one and a half weeks post procedure, Dr. Pouliot concluded that this met the diagnostic criteria for radio frequency ablation. Dr. Pouliot planned to continue to pursue the radio frequency ablation of the greater occipital nerves bilaterally.

30. On September 28, 2015, Claimant followed up with Dr. Pineiro. Claimant reported that he feels worse, and his now having more neck pain with pain at a level 8 out of 10. He stated he is now considering neck surgery. Dr. Pineiro advised Claimant that he needed to undergo repeat injections before considering surgery since two years had passed since his last injections.

31. Dr. Pouliot performed bilateral greater occipital nerve pulsed radio frequency ablation on October 26, 2015.

32. Claimant followed up with Dr. Pouliot two days later on October 28, 2015. Dr. Pouliot reported Claimant had a predictable flare-up of his pain with pressure in the occipital distribution and that Claimant's pain level was at 7 out of 10. Dr. Pouliot reported that he typically would not expect noticeable relief for one to two weeks post procedure other than the local anesthetic and steroid that was injected. Accordingly, Dr. Pouliot planned for Claimant to follow up in six weeks with anticipated improvement in his occipital neuralgia.

33. Claimant returned to Dr. Pineiro on November 11, 2015. Her report indicates that Claimant had good results with the ablation he had over a year ago but it had worn out. Claimant reported that after the second ablation on October 26, 2015, his neck pain is worse at 8-9 out of 10. Claimant described his pain as sharp in nature with

associated headaches, decreased cervical range of motion, muscle spasms and neck stiffness. Dr. Pineiro planned to see Claimant after December 9, 2015, to defer to Dr. Pouliot's treatment plan.

34. Dr. Pouliot re-examined Claimant on December 9, 2015. Claimant reported that the bilateral occipital nerve pulsed radio frequency ablation on October 26, 2015, did not help his pain much. Dr. Pouliot observed that Claimant's pain seemed to be more cervical and radicular, possibly attributable to disc herniations at C4-5 and C5-6. Dr. Pouliot recommended a re-evaluation for possible anterior cervical discectomy and fusion as recommended by Dr. Beard. Dr. Pouliot opined that Claimant exhausted interventional care as he did not experience any long-lasting benefits from them. Dr. Pouliot referred the Claimant back to Dr. Beard.

35. On December 11, 2015, ATP Dr. Pineiro followed up with Claimant and agreed with Dr. Pouliot's re-referral to Dr. Beard for purposes of exploring an anterior cervical discectomy and fusion as Claimant's symptoms returned to their pre-injection state with continued pain and spasms in the right upper extremities. Dr. Pineiro noted that she would wait until Dr. Beard re-evaluated him and that she would ask for any work-ups Dr. Beard requested. Dr. Pineiro concluded that Claimant was not at MMI.

36. Per Dr. Pouliot's recommendation, Claimant underwent a second cervical spine MRI on January 5, 2016. The MRI scan revealed the C4-5 intervertebral disc was decreased in height with a disc bulge and central protrusion flattening the anterior aspect of the cervical cord with central canal stenosis and bilateral neural forminal narrowing. Another annular disc bulge at C5-6 was present with central protrusion with high-intensity zone abutting the anterior aspect of the cervical cord with central canal stenosis and neural foraminal narrowing. Small central protrusions were also revealed at C6-7 and C7-T1.

37. On January 11, 2016, Claimant returned to see Dr. Beard. Claimant reported that injections are not helping him anymore and he "can't live with this anymore." Dr. Beard discussed and reviewed the most recent MRI scan. Dr. Beard noted that the MRI continued to demonstrate evidence of "fairly degenerative disc herniations at C4-5 and C5-6 motion segments. Both of these are relatively large and cause effacement of the central surface of the cord."

38. Dr. Beard opined that if Claimant cannot live with this, then the option was to go forward with the two-level anterior cervical discectomy and fusion. Claimant indicated his willingness to proceed with the two-level anterior cervical discectomy and fusion. Dr. Beard stated, "He has really done quite a rigorous job of trying to avoid surgical intervention, but he feels he is simply at the end of his rope and desires surgical intervention."

39. Dr. Pouliot re-evaluated Claimant on January 13, 2016. Dr. Pouliot reviewed the January 5, 2016 MRI which he opined showed disc herniations at C5-6 and C6-7. Dr. Pouliot noted Dr. Beard's plan to proceed with a two-level anterior cervical

discectomy and fusion pending authorization. Dr. Pouliot's assessment was that Claimant suffered from ongoing cervical disc mediated pain with disc herniations at C5-6 and C6-7 and failure of conservative therapies. Dr. Pouliot planned to continue Claimant's pain management.

40. Claimant returned to Dr. Pineiro on January 25, 2016, who noted that Respondents denied authorization of the two-level anterior cervical discectomy and fusion. Dr. Pineiro opined that Claimant had not reached maximum medical improvement, and that he continued to display neck tenderness and spasms.

41. Claimant followed up with Dr. Pouliot on February 17, 2016. Dr. Pouliot also noted Respondents' denial of the two-level anterior cervical discectomy and fusion. Dr. Pouliot stated, "I do feel [Claimant] is an appropriate surgical candidate. He has failed all other treatments and continues to take opioids for pain control which is now modest at best." Dr. Pouliot's added additional pain medication for better nighttime pain control.

42. On March 30, 2016, Dr. Brian Reiss performed an independent medical examination (IME) at Respondents' request. Dr. Reiss reviewed the medical record and MRI films. Dr. Reiss did not agree with the surgical recommendation. Based upon his review of the MRI images, Dr. Reiss did not believe there was any significant foraminal narrowing, any significant cord compression, or any significant nerve root compression necessitating the need for surgery. Dr. Reiss also explained that the mere presence of degenerative change and bulging discs at C4-5 and C5-6 did not mean that those disks were necessarily the pain generators. Dr. Reiss felt that some records suggested Claimant's pain generator was higher up. For example, Claimant had reported complete pain relief from the greater occipital nerve which according to Dr. Reiss meant his pain generator was in the upper cervical not the C4-5 and/or C5-6 disk. Dr. Reiss also explained that the Worker's Compensation Medical Treatment Guidelines Guidelines require clear identification of the pain generator prior to proceeding with surgical intervention and the pain generator had not been identified this case.

43. Claimant returned to Dr. Pouliot on April 6, 2016, and reported that he was awaiting another surgical opinion regarding the two-level anterior cervical discectomy and fusion. Dr. Pouliot's exam revealed cervical spine guarding with generalized tenderness in all motions and palpable tenderness over the right cervical paraspinal muscles into the trapezius. Dr. Pouliot planned to continue with medication to relieve Claimant's ongoing neck and radicular arm pain.

44. On April 8, 2016, Dr. Pineiro suggested a second surgical opinion with neurosurgeon Hans Coester, M.D. Dr. Pineiro noted that Claimant's neck pain and radicular arm pain was ongoing, and referred Claimant to Dr. Coester.

45. Dr. Coester evaluated Claimant on May 19, 2016. Dr. Coester noted Claimant's very significant neck pain and headaches since his industrial accident. Dr. Coester's physical exam revealed pain aggravation upon neck extension and diminished reflex at the biceps.

46. Dr. Coester reviewed Claimant's MRI scans as well as Dr. Beard's recommendations for a two-level anterior cervical discectomy and fusion. Dr. Coester agreed with Drs. Beard and Pouliot that the MRI scans showed disc protrusions at C4-5 and C5-6 with contact of the spinal cord as a result of those disk protrusions.

47. Dr. Coester opined that a C4-5 and C5-6 anterior cervical discectomy and fusion would probably have a 50% chance of making the Claimant feel significantly better but that it would not make Claimant pain free and comes with many risks.

48. Dr. Coester also opined that Claimant exhausted conservative care and that surgical intervention was reasonable.

49. Brian Reiss, M.D. testified by deposition on June 7, 2016. Dr. Reiss opined that it was unlikely that the two-level anterior cervical discectomy and fusion would help the Claimant because he disagrees that the potential pain generators have been adequately identified. Dr. Reiss testified that the bulges present at C4-5 and C5-6 were degenerative in nature and pre-existed the work injury.

50. Dr. Reiss disagrees that disc bulges at C4-5 are causing cord compression or that the bulges are touching any of the nerve roots.

51. Dr. Reiss later admitted that, "There is touching of the spinal cord, but when you touch the spinal cord with something like that, it usually causes no symptoms whatsoever." Dr. Reiss concluded that, "there's no evidence whatsoever that the bulges at C4-5 and C5-6 caused any symptoms whatsoever."

52. He further explained that Claimant had degenerative findings at four levels with some objective evidence that Claimant's pain generator was coming from a level other than those for which surgery was proposed. He opined that it is essentially "arbitrary" to propose surgery at two of the levels shown on the MRI with no objective evidence that either level was Claimant's pain generator.

53. Dr. Reiss believes Claimant's pain is myofascial, and that a stretching and strengthening program could improve his symptoms. Dr. Reiss opined that surgery may make the Claimant worse.

54. Dr. Reiss explained that minimal contact with the spinal cord could produce symptoms and that Claimant's MRI scans revealed disc bulging in at least four levels, but that the imaging does not show that the discs are touching the cord.

55. Dr. Reiss also admitted that physical therapy would not cause that high-intensity zone to stop contacting the cord; however, Dr. Reiss opined that C5-6 was not the source of his pain and that the MRI scans did not demonstrate nerve root compression although he agreed that, "There's a little bit of touching of the spinal cord anteriorly."

56. John Douthit, M.D., performed a medical records review pursuant to WCRP Rule 16 following the request Dr. Beard made to Insurer to authorize the surgery. Dr. Douthit issued a report dated January 21, 2016. Dr. Douthit's report indicates that Claimant's MRI does not reveal anything significant, thus he declined to endorse Dr. Beard's surgical recommendation. Dr. Douthit concluded that Claimant should obtain a supporting opinion from a Board Certified spine surgeon if he wishes to further pursue surgery.

57. Dr. Beard testified by deposition on June 1, 2016. Dr. Beard explained that the two-level anterior cervical fusion and discectomy was the last treatment remaining to alleviate Claimant's pain in the event that he did not want to live in pain the rest of his life. Dr. Beard also testified that the two-level anterior cervical fusion and discectomy was reasonable and necessary based on Claimant's ongoing neck pain and radiculopathy.

58. Dr. Beard testified that the MRI scan demonstrated some multi-level degenerative changes but that the most significant findings were at C4-5 and C5-6. At both of those levels, Dr. Beard observed that, "there was enough protrusion that the CSF column in front of the spinal cord was completely obliterated and both of those protrusions contacted, if not indented, the - - or effaced the front part of the spinal cord."

59. Dr. Beard explained that the disc protrusions can cause symptoms simply by the fact that normal spinal cords are free-floating and designed to have fluid all the way around them so nothing pushes or impinges upon them. In this particular case, Dr. Beard testified that the bulges/protrusions at C4-5 and C5-6 most certainly contacted the spinal cord.

60. Dr. Beard testified that Claimant's MRI scans certainly revealed multi-level degenerative changes; however, the most significant findings were the disc bulges at C4-5 and C5-6. He opined that the two-level anterior cervical fusion and discectomy is reasonable and necessary to cure and relieve the effects of the industrial injury.

61. Dr. Beard acknowledged that the surgery has its risks, but it is a reasonable undertaking considering Claimant's exhaustion of conservative and non-surgical measures. Dr. Beard clearly believes Claimant has a higher chance of symptom reduction with surgery than without surgery. Dr. Beard explained that after Claimant's symptoms over two years did not alleviate by benign neglect or even active intervention of injections in pain management.

62. Dr. Beard disagreed that Claimant's symptoms are myofascial in nature. He explained that myofascial pain or a strain would improve after two years, and given Claimant's lack of improvement it is more likely the disc bulges at C4-5 and C5-6 are causing Claimant's symptoms.

63. Although Dr. Beard is not a level II accredited physician, he did offer testimony about the Medical Treatment Guidelines. He agreed there was a reasonable likelihood of at least a measureable and meaningful symptom reduction with surgery than without surgery. He also identified the specific sites of disc protrusion which contacted the spinal cord. In addition, Dr. Beard believed that Claimant has very reasonable expectations as it pertains to the outcome of the surgery.

64. Dr. Douthit testified by deposition on June 14, 2016. Dr. Douthit testified that he did not feel a two-level anterior cervical discectomy and fusion was reasonable because there were no objective physical findings, but rather all of Claimant's symptomatology was entirely subjective in nature. Despite Drs. Beard, Pouliot, Pineiro and Coester concluding that Claimant's MRI scan showed clear objective findings of multi-level disc protrusions, Dr. Douthit testified that Claimant's MRI was very ordinary, showing no unusual findings with no evidence of nerve root compression. Dr. Douthit testified that, "It was a chronic pain problem."

65. The ALJ credits the opinions of Dr. Beard as more credible and persuasive than those of Drs. Reiss and Douthit. Dr. Beard credibly explained, and the medical records confirm, that Claimant's MRI scans demonstrate objective findings consistent with Claimant's present symptoms. Dr. Beard established that the Claimant does not suffer from a cervical strain with myofascial pain because cervical strains improve and Claimant's symptoms continued to persist over two years with no improvement. Drs. Reiss and Douthit felt that Claimant's MRI findings were not consistent with his neck pain and radicular symptoms, but they admitted that disc bulges and protrusions and C4-5 and C5-6 were present. Their opinions merely differed in regards to what symptoms should be associated with spinal cord impingement at those levels. The ALJ finds that Dr. Beard, a board-certified orthopedic surgeon specializing in spine surgery, and who is also the Claimant's treating surgeon, has a better understanding of Claimant's condition than Dr. Reiss who examined Claimant one time and Dr. Douthit who completed a one-time record review.

66. Dr. Beard is an authorized treating provider, and his recommendation for a two-level anterior cervical fusion and discectomy is consistent with the Medical Treatment Guidelines, and is reasonable, necessary and related to Claimant's industrial injury.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197

Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

4. Section 8-42-101(1)(a), C.R.S., provides:

> Every employer … shall furnish … such medical, hospital, and surgical supplies, crutches, and apparatus as may reasonably be needed at the time of the injury … and thereafter during the disability to cure and relieve the employee from the effects of the injury.

5. Respondents are obligated to provide medical benefits to cure or relieve the effects of the industrial injury. Section 8-42-101(1), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Respondents, however, retain the right to dispute liability for specific medical treatment on grounds the treatment is not authorized or reasonably necessary to cure or relieve the effects of the industrial injury. *Id.*

6. The Claimant has proven that surgery recommended by Dr. Beard is reasonable, necessary and related to his industrial injury. As found above, the ALJ credits the opinions of Dr. Beard as more credible and persuasive than those of Drs. Reiss and Douthit. Dr. Beard credibly explained, and the medical records confirm, that Claimant's MRI scans demonstrate objective findings consistent with Claimant's present symptoms. Dr. Beard established that the Claimant does not suffer from a cervical strain with myofascial pain because cervical strains improve and Claimant's symptoms continued to persist over two years with no improvement. Drs. Reiss and Douthit felt that Claimant's MRI findings were not consistent with his neck pain and radicular symptoms, but they admitted that disc bulges and protrusions and C4-5 and C5-6 were present. Their opinions merely differed in regards to what symptoms should be associated with spinal cord impingement at those levels. The ALJ finds that Dr. Beard, a board-certified orthopedic surgeon specializing in spine surgery, and who is also the Claimant's treating surgeon, has a better understanding of Claimant's condition than Dr. Reiss who examined Claimant one time and Dr. Douthit who completed a one-time record review.

ORDER

It is therefore ordered that:

1. The Respondents shall be liable for the two-level anterior cervical fusion and discectomy as recommended by Dr. Beard.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-006-030-01

ISSUES

The issues to be determined by this decision are:

- Whether Claimant sustained an injury arising out of and during the course and scope of her employment with the Employer on December 2, 2015;

- Whether Claimant is entitled to medical treatment and whether the surgery that Dr. Ciccone recommended is reasonable, necessary, and related to her December 2, 2015 work-related injury; and

- Whether Claimant has proven by a preponderance of the evidence that she is entitled temporary disability benefits from February 3, 2016, through June 1, 2016.

STIPULATIONS

The parties stipulated that Claimant's average weekly wage (AWW) for the purposes of this hearing is $1,380.81. Additionally, the parties stipulated that the temporary disability time period at issue for this hearing is February 3, 2016, through June 1, 2016 if the claim is found compensable. Claimant reserves for future determination her right: a) for ongoing temporary total and/or temporary partial disability benefits from June 2, 2016; and b) to address the AWW for her second job.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge finds as follows:

1. The Claimant works for the Employer as a registered nurse. On December 2, 2015, Claimant, after parking in an employee-designated parking lot, was walking into work when she slipped and fell on ice. Deena Goodman, an employee of the Employer, witnessed the event.

2. On December 2, 2015, Claimant completed an incident report which identified left shoulder pain, a right knee scrape and a right hand scrape.

3. Ms. Goodman also completed an incident report on December 2, 2015, and indicated Claimant fell hard on her shoulder, knee and elbow.

4. Claimant refused medical treatment and continued working. Claimant explained that she felt sore and believed she would improve.

5. On January 19, 2016, Claimant saw her primary care physician, M. Shannon Arnsberger, M.D. Dr. Arnsberger's January 19, 2016 report reflects that Claimant reported a "right shoulder pulled when tried not to fall and grabbed a railing. Feels same as rotator cuff injury from past. Injured Thu 1/14/16." Dr. Arnsberger's report states that Claimant did not request a letter for time off work due to her shoulder pain.

6. On January 29, 2016, Claimant underwent a right shoulder MRI, which revealed evidence of a previous supraspinatus tendon repair and "a suspected bone contusion along the anterior greater tuberosity with full-thickness re-tear of the supraspinatus tendon insertion; [m]ild retraction is evident and mild volume loss of the supraspinatus muscle."

7. Claimant discussed her slip and fall with her Employer in early February. The Employer offered Claimant a list of authorized treating physicians and Claimant chose Centura St. Anthony North.

8. On February 3, 2016, James D. Fox, M.D., with Centura, evaluated the Claimant. His report indicates that Claimant "apparently slipped and fell on the ice several months ago at work. She initially complained of some pain in her shoulder and her right knee but did not immediately seek medical care for various reasons." Dr. Fox added that Claimant reported "she thought her symptoms would resolve with time. When her symptoms persisted, she went to see her primary care physician apparently because she was under the impression that she was unable to see her work comp physician because too much time had elapsed."

9. Dr. Fox noted he asked Claimant "if she had reinjured the shoulder in any way since the initial injury and [Claimant] states that she has not sustained any further injury or trauma." Dr. Fox assigned Claimant work restrictions, including no lifting, pushing, or pulling over ten pounds and no lifting above chest level with the right arm. Dr. Fox referred Claimant to an orthopedic surgeon.

10. On February 5, 2016, the Employer filed a First Report of Injury. The First Report of Injury reflects that on December 2, 2015, at approximately 1:50 p.m., Claimant was crossing the "North parking lot on her way to clock in her for 2:00 p.m. shift [when she] slipped and fell on black ice, injuring her [right] shoulder." The First Report also reflects that Claimant reported her injury on December 2, 2015.

11. Also on February 5, 2016, the Employer completed a Notice of Available Temporary, Modified Duty for Claimant. The modified duty job offer outlined work, which included multiple different tasks, duties, etc., within Claimant's work restrictions, including no overhead reaching and no lifting, pushing, or pulling over ten pounds with her right shoulder. On February 5, 2016, Dr. Fox approved the modified duty job offer. On February 8, 2016, Claimant accepted the modified duty job offer.

12. On February 12, 2016, Claimant treated with William Ciccone II, M.D., who is an orthopedic surgeon. Claimant reported that she injured her right shoulder when she slipped and fell at work on December 2, 2015. Claimant reported right shoulder pain with reaching and lifting. Claimant reported she previously injured in her right shoulder in 2011, underwent surgical repair, and has had no right shoulder problems or restrictions with her right shoulder since. Dr. Ciccone reviewed the MRI and noted that it revealed a previous rotator cuff repair with recurrent full-tearing of the supraspinatus tendon. Dr. Ciccone diagnosed Claimant with a traumatic rotator cuff tear and impingement. Dr. Ciccone recommended surgery.

13. On February 15, 2016, Dr. Ciccone requested authorization for right shoulder arthroscopy with decompression, rotator cuff repair, and biceps tenodesis.

14. On February 17, 2016, Claimant returned to see Dr. Fox, who noted that Claimant was somewhat upset and tearful because she learned that Respondents were likely to deny her claim. Dr. Fox added that Claimant also expressed anxiety about having another shoulder surgery since it took her eight months to recover from her last shoulder surgery. Dr. Fox also noted that Claimant reported significant amounts of pain with even minimal use of her right arm and requested that she be taken off work. Dr. Fox stated that he can give her appropriate work restrictions but that it is not necessary that she be taken off work completely. Dr. Fox assigned Claimant additional work restrictions, including no use of her right upper extremity.

15. Also on February 17, 2016, Respondents filed a Notice of Contest.

16. On February 22, 2016, Dr. Ciccone cleared Claimant for surgery.

17. On February 26, 2016, Claimant told Dr. Fox that the insurance company had denied surgery, but had approved conservative treatment. Claimant reported she feels unable to continue working due to severe anxiety. Dr. Fox noted that Claimant has a preexisting history of anxiety and that Claimant's anxiety is not related to her work injury, thus he is unable to take her off work. Dr. Fox added that he spoke to a representative of the Employer regarding Claimant's work restrictions and that he believes Claimant can continue light duty with the Employer. Dr. Fox maintained Claimant's work restrictions of no use of her right arm and that Claimant must wear a sling on her right arm.

18. On March 1, 2016, Claimant saw Dr. Arnsberger and reported that she was scheduled to undergo right shoulder surgery on February 29, 2016, and "WC canceled this plan." Claimant reported that she feels very anxious about the lack of plan to repair her shoulder. Dr. Arnsberger noted, "HR filed WC because she fell at work," and Dr. Arnsberger added, "[Claimant] had presented to me weeks ago with injury from a 'fall.' She was proceeding with planned care from surgeon until [the Employer] said that WC had to be filed." Claimant reported that she's losing her mind because she knows "what I'm headed into. It took me 8mo to recover from previous work injury due to delay by WC." Claimant reported that she just wanted to recover and heal.

19. In her March 1, 2016 report, Dr. Arnsberger stated that she needs “to find out how to get her true problem resolved. [Claimant] is usually in good health and mentally stable. The source of anxiety needs to be removed.” Dr. Arnsberger added that Claimant’s “main issue is being trapped in worker’s compensation indecision.” Dr. Arnsberger stated that she is completing Claimant’s FMLA paperwork.

20. On March 25, 2016, Claimant returned to Dr. Fox, who noted that Claimant’s primary care physician took her off work due to anxiety and PTSD. Dr. Fox opined that Claimant’s “PTSD diagnosis is not indicated typically for a slip and fall accident. There [were] no significant psychological stressors associated with this incident other than the fact that she was injured and looking at possible surgery.” Dr. Fox added that Claimant continues to have right shoulder pain and limited range of motion. Dr. Fox maintained Claimant’s work restrictions.

21. On April 19, 2016, Claimant applied for a hearing on compensability, reasonable and necessary medical benefits, average weekly wage, and temporary disability benefits.

22. On April 27, 2016, Claimant saw Dr. Fox and reported increased pain and decreased function with her right shoulder. Dr. Fox noted that Claimant most likely needs surgical intervention but that right shoulder surgery continues to be denied by Respondents because they felt Claimant has a preexisting injury. Dr. Fox maintained Claimant’s work restrictions.

23. Claimant has worked as a registered nurse (RN) since 1978 and as an RN for the Employer for a year and a half. Claimant sustained a prior right shoulder injury in December 2011 while skiing with her daughter, who is a ski instructor. Claimant testified it was her first and last time skiing. As a result of the 2011 skiing injury, Claimant underwent right shoulder surgery and it took approximately eight months for her to recover.

24. Claimant testified that she lost her job as a result of the 2011 shoulder injury. Claimant was eventually released back to work full duty with no restrictions. After Claimant returned to work in approximately August 2012, she had no other right shoulder injuries, treatment, restrictions, or limitation until the December 2, 2015 slip and fall.

25. Claimant testified that on December 2, 2015, she parked in the employee parking lot and was walking across the lot, along the side of the building when she slipped and fell on ice and landed on her right side, specifically her right shoulder and right knee. Ms. Goodman ran up to her and asked her if she was okay.

26. Claimant testified that she landed on her right side including her right shoulder. She explained that her right knee was the worst at that time and that she had torn her scrub pants.

27. Claimant initially refused medical care because she just thought she was sore from the fall and because she knew the Employer was short-staffed and she did

not want to miss any time from work or put the Employer in a position to find someone to work for her. After the fall continued to work because she did not want to miss any time from work. Claimant testified she had limited use of her right shoulder and could not raise her right arm over her head while working.

28. On January 14, 2016, Claimant and her husband drove from Colorado to Minnesota to attend her granddaughter's January 16, 2016 baptism. Prior to leaving on her trip, Claimant called her primary care physician (PCP), Dr. Arnsberger, to schedule an appointment regarding her right shoulder because her right shoulder was hurting and she knew something was wrong. Claimant testified that Dr. Arnsberger's earliest available appointment was January 19, 2016.

29. Claimant testified that she did not slip or fall or sustain an injury to her right shoulder on January 14, 2016. Claimant testified that other than the December 2, 2015 right shoulder injury, she did not sustain any other right shoulder injury. Claimant does not know why Dr. Arnsberger's January 19, 2016 report states that she sustained an injury on January 14, 2016. Claimant could not pick up or hold her ten pound granddaughter with her right arm while in Minnesota.

30. Claimant testified that she was traumatized after her last surgery and that she was scared she was going to lose her job if she had to go out of work for another shoulder surgery. Claimant was in a significant amount of pain but could not take any pain medications while working light duty.

31. Claimant asked Dr. Fox to take her off work. Claimant testified that Dr. Fox directed her to her primary care physician regarding work limitations. Claimant saw her PCP, who thought Claimant was suffering from PTSD and took her off work and referred her to a psychologist, with whom Claimant treated.

32. Ms. Goodman testified during the hearing that she witnessed Claimant slip and fall on ice and land on her right side on December 2, 2015. In her written description of the incident, Ms. Goodman did not differentiate between right and left.

33. Bonnie Bates-King works as a Division Coordinator for Workers' Compensation and Safety for the Employer. Ms. Bates-King testified that the Employer has an extensive light duty program and that the Employer provided Claimant with light duty. Ms. Bates-King understood Claimant was off work due to a non-work-related event.

34. Claimant sustained a work-related accident, but no injury to her right shoulder occurred as a result. Despite incident reports completed the day of the accident, there is no record of Claimant injuring her right shoulder until January 19, 2016 when she saw Dr. Arnsberger.

35. Claimant never pursued medical treatment for any other body part she claimed she injured on December 2, 2015, and Claimant missed no time from work as a result of the slip and fall accident.

36. Based on the foregoing the Claimant has failed to prove that she suffered an injury to her right shoulder on December 2, 2015. It is undisputed Claimant slipped and fell in the Employer's parking lot. Claimant testified that her right knee was the worst and she identified a "scrape" on the right knee of the pain diagram she completed the same day of the fall. The same diagram identified pain in her left shoulder, not her right shoulder. It does not make sense for Claimant to mistake right from left on the pain diagram given her experience as an RN and the consistent identification of her right knee as an injured body part. If Claimant were to have simply mistaken right from left on the pain diagram, it would make more sense for her to make the mistake as to both the knee and the shoulder. Further, Dr. Arnsberger's very specific description of when and how Claimant's right shoulder injury occurred is compelling. Claimant also reported to Dr. Arnsberger that her right shoulder symptoms felt like the rotator cuff tear she had previously experienced which is not consistent with the described "natural soreness" Claimant believed she had been experiencing for several weeks. Finally, the timing of Claimant's inability to perform her job duties seems to coincide more with an incident that occurred on January 14, 2016 rather than on December 2, 2015. Claimant worked full duty for two months following the slip and fall then suddenly claimed the complete inability to work in February 2016.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and

actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

4. A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with employer. *Section 8-41-301(1)(b), C.R.S.; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arise out of" requirement is narrower and requires claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See id.*

5. The Workers' Compensation Act creates a distinction between the terms "accident" and "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence. Section 8-40-201(1), C.R.S. An "injury" refers to the physical trauma cased by the accident. In other words, an "accident" is the cause and an "injury" is the result. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." A compensable injury requires medical treatment or causes a disability.

6. As found above, Claimant has failed to prove that she suffered an injury to her right shoulder on December 2, 2015. It is undisputed Claimant slipped and fell in the Employer's parking lot, but no injury that produced the need for medical treatment flowed from the slip and fall.

7. Claimant testified that her right knee was the worst and she identified a "scrape" on the right knee of the pain diagram she completed the same day of the fall. The same diagram identified pain in her left shoulder, not her right shoulder. It does not make sense for Claimant to mistake right from left on the pain diagram given her experience as an RN and the consistent identification of her right knee as an injured body part. If Claimant were to have simply mistaken right from left on the pain diagram, it would make more sense for her to make the mistake as to both the knee and the shoulder rather than marking the opposite knee and shoulder. Further, Dr. Arnsberger's very specific description of when and how Claimant's right shoulder injury occurred is compelling. Claimant also reported to Dr. Arnsberger that her right shoulder symptoms felt like the rotator cuff tear she had previously experienced which is not consistent with the described "natural soreness" Claimant believed she had been experiencing for several weeks following her fall. Finally, the timing of Claimant's inability to perform her job duties seems to coincide more with an incident that occurred on January 14, 2016 rather than on December 2, 2015. Claimant worked full duty for two months following the slip and fall then suddenly claimed the complete inability to work in February 2016.

8. Claimant's claim for workers' compensation benefits is denied and dismissed. Respondents are not liable for additional medical benefits including the surgery proposed by Dr. Ciccone nor are they liable for temporary disability benefits.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

2. Respondents are not liable for additional medical benefits including the surgery proposed by Dr. Ciccone nor are they liable for temporary disability benefits.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable injury in the course and scope of his employment.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to reasonable and necessary medical benefits to cure/relieve the compensable injury.

STIPULATIONS

The issues of average weekly wage and temporary indemnity benefits were reserved by the parties.

FINDINGS OF FACT

1. Claimant works for Employer as a Deputy Sheriff and has been so employed for approximately 11 years.

2. In 2010 Claimant began working at the Van Cise Simonet Detention Center, also known as the downtown detention center. Claimant had previously worked in a different location.

3. At the downtown detention center Claimant worked in the intake area and was responsible for the care, custody, and supervision of inmates. The intake area had places for fingerprinting, interviewing, and booking. Claimant also worked in the housing area where he sent people to court, supervised the area, and oversaw cleaning. Claimant typically worked 12 hour shifts, but could work up to 16 hour shifts with overtime.

4. At the detention center Virex II is used extensively as a disinfectant cleaner and is used to clean most surfaces including cells, walls, mattresses, tables, and chairs. Inmates clean the facility using Virex II while deputies supervise.

5. Virex II is used in spray bottles and in mop solutions. At the detention center it is used in a diluted form with 1 part Virex II to 256 parts water. The detention center has a dispensing station that provides the Virex II in its diluted form for cleaning purposes. Virex II contains quaternary ammonia compounds.

6. Prior to being transferred to the Downtown Detention Center, Claimant had never been exposed to Virex II and Claimant does not use Virex II outside the workplace.

7. On June 23, 2012 while he was working, Claimant experienced a reaction. Claimant broke out in hives, had an itchy feeling on his arms and face, and had swelling in his face, lips, tongue and throat. Claimant went to the emergency room at Denver Health Medical Center.

8. At Denver Health Medical Center Claimant reported his first episode of an allergic reaction was one month prior. Claimant was found to have diffusely red skin with hives and bilateral redness of the sclera. Claimant had no signs of upper or lower airway obstruction and his chest had good breath sounds. Claimant was treated with IV fluids and medication. He was diagnosed with allergic reaction and was given a four-day course of prednisone and an EpiPen injection. The medical records show that Claimant reported eating a breakfast burrito at Sam's diner smothered in green chili three hours prior to his reaction and that he had eaten the same burrito at the same location 2-3 weeks prior and noticed 2-4 hours after eating that he had itchy eyes and itching skin but related it to summer hayfever. *See* Exhibit 8.

9. On June 27, 2012 Claimant was evaluated by Karen Mulloy, D.O. at the Center for Occupational Safety and Health. Claimant reported he was at work and had not come into contact with any new substances or been bit by any insects, but that he suddenly broke out in hives and swelling in his throat and had difficulty breathing. Dr. Mulloy noted that it was unclear whether Claimant had any specific exposure related to work that caused his reaction and that she could not say the reaction was work related. Dr. Mulloy advised Claimant to finish the prednisone course given to him by the emergency department and advised Claimant it would be good to make an appointment with his primary care physician for a referral to an allergist to determine what he might be allergic to in order to avoid future reactions. Dr. Mulloy advised Claimant that if the testing revealed that he was allergic to a substance he is exposed to at work to return. *See* Exhibit 5.

10. On July 6, 2012 Claimant felt sick while at work. Claimant testified that he had trouble breathing, felt weak, and felt his throat swelling. Claimant went home from work, slept most of the day and then went to an after care clinic. Claimant's workup showed a severely high white blood cell count and he was transferred to St. Joseph's hospital for further evaluation. See Exhibit 8.

11. On July 6, 2012 Claimant was evaluated at the emergency department of St. Joseph's hospital by Jeremiah Fletcher, M.D. Claimant reported a one day history of nausea with associated diarrhea 3-4 times. Claimant also reported a sore throat, abdominal pain, fever, and chills. Claimant was found to have high white blood cell count and a low grade fever. A test for strep throat was found to be negative. *See* Exhibit 7.

12. On July 12, 2012 Claimant was evaluated at Kaiser by his primary care physician as a follow up to his hospital visit. Claimant was diagnosed with bacterial enteritis and with an abnormal complete blood count measurement. It was noted that Claimant continued to have diarrhea and weakness. His provider discussed good hand washing to prevent the spread of illness. *See* Exhibit 8.

13. On August 28, 2012 Claimant was evaluated at Kaiser by his primary care physician. Claimant reported two to three weeks of swelling/bumps on his face, lateral to his left eye that seemed to be growing and felt sore. Claimant also reported that he caught a "sinus thing" over the past couple of weeks and that his right nostril was completely plugged with periodic clear drainage. On examination it was noted that Claimant had nodules under his skin and that his right nostril was obstructed by turbinate swelling. Claimant was prescribed an antibiotic for possible infection in his right sinus and was referred to ENT to evaluate the facial nodules. *See* Exhibit 8.

14. On September 19, 2012 Claimant was evaluated at Kaiser. Claimant reported that his sinus symptoms had worsened and that he had sinus pressure, pain, and headache and felt like he had drainage down his throat. Claimant reported he also had a cough and that he had been diagnosed with bronchitis at Swedish and was given an inhaler that helped. Claimant was diagnosed with sinusitis and bronchitis as well as asthma with acute exacerbation. *See* Exhibit 8.

15. On November 6, 2012 Claimant was evaluated at Kaiser. Claimant reported that following his September 19, 2012 visit he started to feel good, joined a gym, and got on a regular exercise program. Claimant reported that approximately two weeks prior he started getting a funny feeling in his throat, a runny nose and drainage and that one week ago he got chest congestion and dyspnea. Claimant was given prednisone and advised to continue his nebulizer treatments. *See* Exhibit 8.

16. On December 26, 2012 Claimant was evaluated at Kaiser. Claimant underwent a CT of his chest on December 20, 2012 and the impression was airway disease with mucous plugging or secretions, tree in bud abnormality and/or clustered micronodules and it was noted that the findings were probably inflammatory such as atypical infection or noninfectious etiology. Claimant also underwent a CT of his sinuses on December 20, 2016 and the impression was mucosal thickening involving all the paranasal sinuses consistent with sinusitis changes, and the presence of air fluid levels in the maxillary and sphenoid sinus air cells implied acute sinusitis. The impression also included mild rightward deviation of the nasal septum. It was noted that Claimant had been diagnosed a few weeks earlier with chronic bronchitis, and that two days prior Claimant was assessed with chronic sinusitis and pneumonia/pulm infiltrates as shown by the chest CT. On December 26, 2012 Claimant was assessed with eosinophilia with no evidence of allergic sensitization, chronic sinusitis, and with reactive airway disease. *See* Exhibit 8.

17. On January 21, 2013 Claimant underwent a bronchoscopy that showed bilateral lung abnormalities. *See* Exhibit 7.

18. On February 5, 2013 Claimant was evaluated at Kaiser. Claimant reported that he had been feeling better, was working out again, and that he had chest congestion primarily at night when he woke up coughing a little bit but that during the day he was feeling much better. *See* Exhibit 8.

19. Claimant continued to be evaluated on numerous occasions from February of 2013 through April of 2014 where he continued to have chronic sinusitis and corresponding symptoms. Claimant was eventually referred for sinus surgery. *See* Exhibit 8.

20. On April 23, 2014 Claimant underwent sinus surgery with septoplasty and turbinate reduction. Claimant had bilateral nasal polyps primarily in the ethmoid sinuses and the pathology report showed polypoid mucosa with edema, and chronic inflammation including numerous eosinophils. *See* Exhibit I.

21. Claimant initially reported feeling better following surgery but again began having an increase in mucus and symptoms and continued to have flare-ups of sinusitis throughout the remainder of 2014. Claimant was referred to National Jewish Hospital for evaluation. *See* Exhibit 8.

22. On February 24, 2015 Claimant was evaluated at National Jewish Hospital by Rohi Katial, M.D. Dr. Katial opined that Claimant's chest congestion and shortness of breath were likely due to adult-onset asthma and he considered associated conditions. Dr. Katial referred Claimant to the occupational medicine clinic for further evaluation due to Claimant's reports of greater symptoms while at work and due to Claimant and Claimant's wife's indications that they believed it was work related and due to chemicals. *See* Exhibit 3.

23. On March 11, 2015 Claimant was evaluated by Karin Pacheco, M.D. Claimant reported that after about four hours of being at work he develops chest congestion, shortness of breath, nasal congestion with diffuse nasal drainage, headache, and itchy eyes, face, and exposed arms. Claimant reported that the symptoms gradually worsen over the course of the work week and improve on his days off and also improve when treated with steroids. Dr. Pacheco assessed recurrent work related allergic reaction associated with asthma (presumed) and chronic rhinosinusitis. Dr. Pacheco opined that Claimant's presentation was consistent with sensitization at work because Claimant's symptoms developed after two years of exposure at work, the symptoms responded to prednisone, and the symptoms recurred on each return to work. *See* Exhibit 3.

24. On March 20, 2015 Claimant underwent a methacholine challenge test. During the test a subject inhales a small amount of a chemical known to cause bronchial tube constriction and then does a spirometry test and a series of spirometries are performed as the amount of the chemical inhaled is increased. A positive test would show an individual having broncho constriction when exposed to a low level of

methacholine. Claimant's test was noted to be positive at a level of 7.27 mg, consistent with mild asthma.

25. On April 8, 2015 Claimant was evaluated by Dr. Pacheco and he had been back at work for approximately two weeks after having been off work for 6 weeks following his surgery. Claimant reported that after two days at work he had a stuffy nose, hoarse voice, chest congestion, upper chest tightness, severe morning headaches, and sinus congestion. Claimant's chest exam showed decreased breath sounds but no wheezes and his spirometry was normal. Dr. Pacheco assessed work related asthma and work related chronic sinusitis with polyposis. Dr. Pacheco asked Claimant to monitor his peak flow rates four times daily. Dr. Pacheco noted a general downward trend in the peak flow rate diary. Dr. Pacheco also ordered a specific inhalation challenge. *See* Exhibit 3.

26. On June 4, 2015 Claimant underwent the specific inhalation challenge(SIC). Claimant sprayed Virex II onto cardboard or soaked a gauze pad to clean surfaces with Virex II during the two 15 minute exposures in a small enclosed room. The spirometry was measured after each exposure and then every 30-60 minutes over the next six hours. Claimant's baseline spirometry before the challenge was 99% of predicted. His spirometry 17 and 32 minutes after exposure was 97% of his normal baseline value and his lowest spirometry value was 62 minutes after exposure and showed a value of 91% of his baseline. *See* Exhibit J.

27. On July 23, 2016 Claimant was evaluated by Dr. Pacheco. Claimant reported that he had not been to work since June 11, 2015 but that his sinus symptoms persisted with some nasal congestion and some clear nasal drainage. Claimant also continued to report chest congestion. Dr. Pacheco opined that Claimant's asthma was documented on the basis of a positive methacholine challenge and peak flow rates at work and that it was also confirmed by a SIC to Virex II. Dr. Pacheco noted that Claimant was also sensitized to some molds and that it was possible that the exposure to mold also contributes to Claimant's symptoms, although the molds would not be expected to contribute an occupational component. *See* Exhibit 3.

28. On August 23, 2015 Claimant was evaluated by Dr. Pacheco. Claimant had not been working for ten weeks prior. Claimant reported that his chest congestion continued and chest examination showed diffuse late rhonchi on auscultation and a normal spirometry. *See* Exhibit 3.

29. On September 8, 2015 Claimant underwent a CT scan of his chest that revealed no change from his July 8, 2013 CT scan. His CT scan of the sinuses showed worsening sinus disease with greater than 50% opacification of the maxillary antra with some residual mild mucosal disease in the remaining ethmoid air cells, sphenoid ethmoid junction mucosal disease predominantly on the left with mild mucosal thickening in the sphenoid sinus, frontoethemoid junction mucosal disease with some minor mucosal thickening in the base of the frontal sinus, and right ostiomeatal complex opacified. *See* Exhibit J.

30. On September 11, 2015 Claimant was evaluated by Dr. Pacheco. Claimant reported still having wheezing that woke him up once per night and he reported more green-brown nasal drainage over the past two weeks. Dr. Pacheco noted that Claimant's last day at work was June 11, 2015 and that since June 11 Claimant's symptoms had gradually improved, however, that on September 11, 2015 Claimant presented with an acute sinusitis that has also aggravated his asthma. Dr. Pacheco noted that although Claimant reported persistent asthma symptoms out of exposure to the workplace, the medical literature suggested that it may require up to two years out of exposure on adequate medical treatment to see improvement or resolution of occupational asthma and so she opined that Claimant's clinical course was consistent. See Exhibit 3.

31. On October 30, 2015 Jeffrey Schwartz, M.D. performed an independent medical examination of Claimant. Claimant reported that he was in good health until June of 2012. Claimant reported that he had seasonal allergic rhinitis as a child. Claimant reported in June of 2012 he developed an allergic reaction while at work, later in the month had weakness and fever at work, and soon thereafter developed sinus congestion with associated chest congestion and cough and had been struggling with the same symptoms for the past three years. Claimant reported the symptoms were variable and that he was diagnosed with chronic sinusitis and had episodes of acute sinusitis. Claimant reported that his chest congestion with cough and shortness of breath usually followed worsening of his sinusitis and that his chest symptoms were under fair control with medication as long as his sinusitis had not worsened. Claimant related his allergic reaction in June of 2012 to his work environment in the downtown detention center. Claimant reported that after time off from work and when he returned to work he experienced gradual worsening symptoms and within four weeks of returning to work following his surgery, he felt as bad as ever. *See* Exhibit M.

32. Dr. Schwartz performed a physical exam and noted that Claimant's head and neck exam showed moderate nasal congestion on the right and good airflow on the left. Dr. Schwartz reviewed the 9/25/25 methacholine challenge test and opined it showed no evidence of hyper reactive airways and also reviewed the 10/30/15 spirometry and opined that it was a normal study. *See* Exhibit M.

33. Dr. Schwartz opined that the peak expiratory flow records for Claimant did not show a work related deterioration in Claimant's airflow. Dr. Schwartz noted the graph suggested a decline in airflow over a 6 week period that Claimant kept the diary but that it did not show correlation between his peak flows during his 3-4 days at work and his 3-4 days off work. Dr. Schwartz noted that in order to be indicative of occupational asthma he would expect the peak flow graph to demonstrate cyclic deterioration and then improvement of airflow when Claimant is at work and away from work, respectively. Dr. Schwartz opined that Claimant's peak flow graph did not show this characteristic pattern. *See* Exhibit M.

34. Dr. Schwartz opined that Dr. Pacheco's interpretations of Claimant's peak flow measures, Claimant's methacholine responsiveness, and Claimant's "positive" SIC were wrong and opined that Dr. Pacheco had no objective evidence to support her conclusions. Dr. Schwartz acknowledged that Claimant had adult-onset asthma and had some evidence of reversible airflow obstruction, but opined that Claimant did not demonstrate sensitization to a causative agent, the Virex II. Dr. Schwartz noted that after Dr. Pacheco had reviewed Claimant's workplace exposures and believed the exposure to Virex II was the probable cause of his occupational asthma she ordered a specific inhalation challenge (SIC). Dr. Schwartz reviewed the 6/4/15 SIC test where Claimant had two 15 minute periods of direct exposure to Virex II that were more direct than what was described during his normal work day and that Claimant experienced only an insignificant fall in his FEV1 levels of 8%. Dr. Schwartz opined that this fall in the level objectively was a negative response to the test as it was not 20% or more which would be required to objectively state that the Virex II was the cause of the asthma. *See* Exhibit M.

35. Dr. Schwartz noted that Dr. Pacheco evaluated Claimant on April 8, 2015 after Claimant had been off work for 6 weeks. Claimant had returned to work on March 24, 2015 and he had specifically worked both on April 7, 2015 and April 8, 2015. Despite reporting that his symptoms had come back within two days of returning to work, Dr. Schwartz opined that Claimant's FEV1 levels were at 103% of predicted and were perfectly normal. *See* Exhibit M.

36. Dr. Schwartz also noted that Dr. Pacheco considered significant the change in results of Claimant's two methacholine challenge tests performed after Claimant had been off work for several weeks, and then when Claimant was back at work. Dr. Schwartz noted that the change in the studies was a 40% change but that the recommendation for that test to be considered significant in diagnosis requires a 400% change, not a 40% change. *See* Exhibit M.

37. Dr. Schwartz concluded that the cause of Claimant's chronic sinusitis with nasal polyps and eosinophilia is unknown, as is often the case, and that there was no evidence that the disorder was work related. Dr. Schwartz opined that there was no evidence that chronic sinusitis with nasal polyps was caused by exposure to Virex II and that such cleaning agents have never been associated with that disorder. Dr. Schwartz opined that while a cleaning agent containing quaternary ammonium compounds like Virex II could cause asthma, there were no studies or reports that showed a quaternary ammonium compound could cause occupational rhinosinusitis and that Dr. Pacheco's opinion that Virex II contained a known sensitizer capable of causing both occupational asthma and rhinosinusitis was only partially correct. *See* Exhibit M.

38. Dr. Schwartz noted that Claimant's primary problem has not been his asthma but has been his chronic sinusitis with nasal polyps which can frequently coexist with asthma and without an allergic basis. Dr. Schwartz noted that the sequence of chronic sinusitis triggering the asthma is a common occurrence and is noted by Dr. Suskin on 12/5/12 when Dr. Suskin opined that Claimant's sinusitis was likely the

ongoing trigger of Claimant's bronchial inflammation. Dr. Schwartz also pointed out that Claimant recognized that the sinusitis was his primary problem and that his chest symptoms always follow a worsening of Claimant's sinusitis. Dr. Schwartz opined that Claimant's asthma was secondary and a less significant disorder than the chronic sinusitis and that this is supported by a September 25, 2015 methacoline challenge study that indicated Claimant did not have present evidence of asthma despite a CT scan that showed extensive chronic sinusitis. *See* Exhibit M.

39. On January 27, 2016 Dr. Pacheco issued a report at Claimant's request to review and comment on Dr. Schwartz's opinions. Dr. Pacheco opined that Claimant became sensitized to the use of sprayed quaternary ammonia compounds used to clean the jail and that he developed disease associated with the workplace exposure to Virex-II. Dr. Pacheco opined that the proper process was followed in establishing Claimant's diagnoses. Dr. Pacheco noted that Claimant underwent three methacholine challenges. On March 20, 2015 after six weeks off work his level was 7.27, then a repeat challenge on April 20, 2015 showed 4.34. Dr. Pacheco then noted that Claimant had been out of exposure since June 11, 2015 and underwent a methacholine challenge on September 25, 2015 that showed a level at 19.4. Dr. Pacheco concluded that the progression of the methacholine challenge doses were consistent with occupational asthma due to a sensitizer in that it could resolve out of exposure and with adequate treatment. Dr. Pacheco noted that Claimant's challenge responsiveness improved on short term removal from work, worsened on his return to the exposure, then resolved when he was out of exposure.

40. Dr. Pacheco also noted that Claimant's peak flows did not show classic changes of occupational asthma with clear cut worsening at work and clear cut improvements while away. However, she opined that Claimant's peak flow rates measured during the six weeks he was off work remained in the 600 to 700 range and that his rates after returning to work became increasingly variable and gradually fell to the 500 to 600 range with a low value of 476 which showed a greater than 20% decrease in overall peak flow rate upon Claimant's return to work. Dr. Pacheco opined that this was significant for consideration of work-related worsening. See Exhibit 3.

41. Dr. Pacheco also disagreed with Dr. Schwartz's statements that there were no reports relating exposure to quaternary ammonia compounds to occupational rhinosinusitis and cited numerous studies reporting upper respiratory symptoms to exposure to quaternary ammonia compounds as well as reporting rhinitis. Based on the reports she reviewed she continued to opine that occupational exposure to quaternary ammonia compounds has been associated with both new onset asthma as well as with nasal symptoms at work and that this applied to Claimant. Thus she continued to conclude that Claimant developed occupational sensitization to quaternary ammonia compounds sprayed in the area where he worked that resulted in chronic rhinosinusitis and asthma. Dr. Pacheco noted that the asthma essentially resolved out of exposure but that the rhinosinusitis persisted and needed further treatment. See Exhibit 3.

42. On May 23, 2016 Sarah Urfer, an expert in forensic toxicology testified by deposition. Ms. Urfer is a board certified diplomat of The American Board of Forensic Toxicology. Ms. Urfer opined that the Virex II, 256 was a highly diluted form of the chemical mixture and had no known respiratory irritant effects.

43. Dr. Schwartz testified at hearing consistent with his IME report. Dr. Schwartz noted that asthma is a variable condition and that airflow levels can change. Dr. Schwartz noted that Claimant had several occasions where Claimant's IGE levels were extremely elevated and that the high levels would occur if Claimant had some type of parasite or allergic reaction. Dr. Schwartz opined that the IGE levels show allergic reactions to molds, pollens, parasites, or complex-proteins but do not become elevated due to chemical exposures. Dr. Schwartz opined that chemical compounds like Virex II (quatroammonia) do not cause rhinosinusitis and that it has never been reported that an ammonia compound like Virex II has caused rhinosinusitis.

44. Dr. Schwartz opined that the SIC is the gold standard test for assessing occupational asthma and that a positive test would have to show a variance of 20% or more for the asthma to be considered occupationally related. Dr. Schwartz opined that Claimant did not meet the condition and that the Virex II did not cause a reduction at the level required to say, more likely than not, that Claimant's asthma is occupationally related. Dr. Schwartz opined that the test would have shown much higher levels if Claimant had occupationally related asthma due to Virex II.

45. Dr. Schwartz opined that with occupational asthma suspicion they will have patients keep peak flow records and that the typical pattern you would see is that a patient would have a normal peak flow on the weekend, go to work Monday and that the peak flow would get worse through the work week and to Friday, then that the peak flow would again improve over the weekend. Dr. Schwartz opined that Claimant's peak flow did not show this pattern and that it showed no improvement over the 3-4 days Claimant was off work versus the 3-4 days Claimant was on shift and working. Dr. Schwartz also opined that currently Claimant has been out of exposure of the Virex II for quite a while as he was moved to a different facility that does not use Virex II yet his symptoms have not gotten better which he would have expected if the Virex II was the cause. Dr. Schwartz noted that despite removal from exposure to Virex II Claimant was still using his inhaler daily and using nasal and sinus medications.

46. Dr. Schwartz is found credible and persuasive. His opinions are consistent overall with the objective medical testing. His opinions are also consistent with the opinions of Ms. Urfer and with those of Dr. Suskin.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of

litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. *See* § 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

"Occupational disease" is defined by § 8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned

> by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). However, the existence of a preexisting condition does not defeat a claim for an occupational disease. *Id.* A claimant is entitled to recovery if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

The claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified or aggravated the disease for which compensation is sought. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). The question of whether the claimant has proven causation is one of fact for the ALJ. *Faulkner v. Industrial Claim Appeals Office, supra*. In this regard the mere occurrence of symptoms in the workplace does not require the conclusion that the conditions of the employment were the cause of the symptoms, or that such symptoms represent an aggravation of a preexisting condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (I.C.A.O. August 18, 2005).

Claimant has failed to establish, more likely than not, that he suffers from an occupational disease proximately caused by his employment. The opinions of Dr. Schwartz are found more credible and persuasive than the opinions of Dr. Pacheco. Specifically, Claimant's asthma and chronic sinusitis have not been shown to be proximately caused by his exposure to Virex II. The overall objective medical testing supports Dr. Schwartz's opinions that the Claimant's symptoms are most likely not due to a work related exposure or occupational disease developed due to his exposure. Claimant's symptoms throughout the several years of treatment had periods where he reported feeling well and much improved despite his alleged continued contact with and regular exposure to Virex II. Claimant also reported feeling poorly and having symptoms during periods of time when he was off work and not exposed to Virex II. Claimant's peak flow rates did not show improvement on the days that he was off work and worsening on the days he was at work. Further, despite having been off work for a period of approximately three months, Claimant developed once again an acute sinusitis that aggravated his asthma in September of 2015. It also is noted that Claimant is sensitive to molds as a possible alternative source to his continued problems. The opinions of Dr. Schwartz after an extensive review of all of the medical records are found to be persuasive. Claimant has the burden of proof and although possible, the evidence does not establish more likely than not that Virex II caused Claimant's symptoms or complaints. Further, the testimony of forensic toxicologist Sarah Urfer is also persuasive and supports Dr. Schwartz's conclusion that Virex II has no known respiratory irritants. Overall, Dr. Pacheco is not as credible or persuasive.

Medical benefits

Respondents are required to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). The claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to establish by a preponderance of the evidence that he suffers from an industrial injury or an occupational disease. Therefore, his request for medical benefits is denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that developed an occupational disease as a result of his employment. His claim is denied and dismissed.

2. As Claimant failed to establish that he sustained a compensable injury, his request for medical benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 22, 2016,

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUE

The following issue was raised for consideration at hearing:

Whether Claimant established by a preponderance of the evidence that she sustained injuries to her left shoulder and that the need for left shoulder surgery as recommended by Dr. Isaacs is reasonable, necessary, and causally related medical treatment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following

findings of fact:

1. On February 26, 2015, Claimant slipped and fell on ice while working for the Employer.

2. Following the slip and fall event, Claimant was seen at the Emergency Room on the date of accident. The ER report describes that Claimant had fallen landing on her buttocks and then hitting the back of her head. Claimant denied any neck or back pain or pain in her extremities.

3. On February 27, 2015, Claimant was evaluated by authorized treating physician, Katherine Drapeau, D.O. Dr. Drapeau's report notes that Claimant described that she had slipped and fallen on ice landing on her buttocks and then striking her head on the ground.

4. Claimant testified that she fell landing straight on her head and then her left side hit the ground. Claimant was adamant that she did not fall landing on her buttocks. Claimant testified that she does not recall how her arms were positioned at the time of the fall. Claimant agreed that she told her doctors about the mechanism of injury, but Claimant denied that she told the ER physician and Dr. Drapeau that she had fallen landing on her buttocks.

5. Claimant testified that she experiences a chronic stabbing pain in her left shoulder and a popping sensation in her left shoulder. Claimant testified that her left shoulder popping onset at least ten months after the February 26, 2015, accident, which was approximately in December 2015. Claimant testified that the stabbing sensation in her left shoulder onset on the date of accident and has been present on a constant basis since the date of accident.

6. Claimant was evaluated by Samuel Chan, M.D. on June 5, 2015. Dr. Chan's report indicates that he performed an objective examination of Claimant's bilateral shoulders. The report indicates that Claimant had no tenderness to palpation over her AC joints and that impingement testing was negative bilaterally. The report does not document any subjective complaints related to the left shoulder and Dr. Chan did not diagnose Claimant with any objective findings related to the left shoulder.

7. Dr. Chan evaluated the Claimant again on June 26, 2015, and July 15, 2015, and Claimant did not report any pain complaints related to her left shoulder. Dr. Chan's objective examination of Claimant's left shoulder again did not reveal any findings.

8. On August 20, 2015, Dr. Chan placed the Claimant at maximum medical improvement (MMI) and assigned her a rating of 6% whole person impairment for injuries to the cervical spine. Dr. Chan's discharge impairment report does not indicate that Claimant reported any pain complaints related to her shoulder and Dr. Chan did not diagnose any findings related to the shoulder. Dr. Chan recommended biofeedback, a home exercise program, and myofascial release as maintenance treatment for Claimant's cervical spine injuries.

9. On September 10, 2015, Claimant returned to Dr. Drapeau who agreed that Claimant was at MMI and recommended six sessions of massage therapy for maintenance treatment. Dr. Drapeau's discharge diagnoses were cervical and thoracic sprains and post concussive syndrome. Claimant reported that she was working full duty and was performing her duties without any problems.

10. The opinions of the treating providers, Drs. Chan and Drapeau, that Claimant did not sustain injuries or impairment to her left shoulder as a result of the industrial accident is credited*.* The persuasive medical evidence supports, and it is hereby found, that the Claimant did not sustain injuries or aggravations to her left shoulders as a result of the February 26, 2015, industrial accident.

11. Respondents filed a Final Admission of Liability on October 21, 2015, admitting to the impairment rating assigned by Dr. Chan. The Final Admission admitted for maintenance medical benefits.

12. On November 2, 2015, Claimant was evaluated by Dr. Oeser and Dr. Oeser noted complaints significant for left upper extremity paresthesias. Dr. Oeser's examination of the Claimant did not reveal findings that correlated with a SLAP tear to the left shoulder*.*

13. On November 23, 2015, Claimant returned to Dr. Drapeau and reported that she was working full duty and that she was following up for pain complaints related to her neck, upper back, and lower back. Dr. Drapeau referred Claimant for more massage therapy. Claimant did not report to Dr. Drapeau a popping or stabbing sensation in the left shoulder.

14. On December 18, 2015, Claimant was evaluated by Paul Raford, M.D. and described that she was feeling terrible with pain fluctuating throughout her left upper extremity, left subnuchal area, and migraines. Dr. Raford diagnosed her with adjustment disorder, delayed recovery, and post concussive syndrome. Dr. Raford referred Claimant for an EMG of her left upper extremity. Dr. Raford's report does not reference that Claimant reported that she was experiencing a popping sensation in her left shoulder or a stabbing pain sensation in the left shoulder.

15. The EMG of the left upper extremity was conducted on December 22, 2015 and revealed normal findings. Dr. Oeser again diagnosed Claimant with left upper extremity paresthesias. Dr. Cebrian explained that the diagnosis of paresthesias refers only to nonspecific subjective complaints in the left arm.

16. On December 23, 2015, Claimant underwent a Division Independent Medical Evaluation with Dr. Yamamoto and complained of blurred vision, headaches, depression, word finding difficulty, memory problems, and pain in her left shoulder and upper back. Dr. Yamamoto opined that he believed Claimant was not at MMI and that she needed additional medical treatment for her headaches. Dr. Yamamoto stated in his report that Claimant had been complaining of left shoulder pain complaints since the date of accident and he recommended that Claimant be referred for an MRI of her left shoulder. It is found that Dr. Yamamoto's characterization of the persistent nature of Claimant's shoulder pain complaints is not supported by the medical records.

17. Respondents are contesting the finding of the DIME that Claimant is not at MMI. A separate hearing is set for adjudication of the request to challenge the DIME. Claimant opted not to consolidate the matters for hearing and instead Claimant chose to proceed to hearing on the surgery request as a maintenance surgery.

18. Claimant returned to Dr. Raford on January 18, 2016, and he noted that Claimant had relatively mild if any objective findings.

19. In February 2016, Claimant underwent neuropsychological testing performed by William Boyd, M.D. Dr. Boyd concluded in his report that the claimant was likely to have a psychological component to her somatic complaints, and he diagnosed her with a somatoform disorder. Dr. Boyd recommended that "medical treatment recommendations not be based on patient report or behavior."

20. On March 17, 2016, Claimant returned to Dr. Raford who reviewed the DIME report from Dr. Yamamoto and noted numerous disagreements with the DIME report. Dr. Raford noted that Dr. Yamamoto did not have numerous medical records in his possession for his review at the DIME.

21. On April 28, 2016, Claimant underwent an MRI of her left shoulder which revealed a SLAP tear of indeterminate age and mild to chronic AC joint arthrosis.

22. On May 26, 2016, Dr. Isaacs evaluated the Claimant, reviewed her MRI, and referred her for right shoulder surgery. Dr. Isaacs report does not reference that he had any of Claimant's prior medical records available for review.

23. Dr. Cebrian performed an IME of the Claimant on March 3, 2016, and authored reports dated April 28, 2016, and June 8, 2016. Dr. Cebrian testified credibly at the hearing that Claimant reported at the IME that when she fell on February 26, 2015, she landed on her head. In contrast to Claimant's testimony at the hearing, the Claimant did not report to Dr. Cebrian that she fell on the left side of her body. The Claimant reported to Dr. Cebrian that her arms were at her side when she fell and that she did not land on an outstretched arm when she fell. At the hearing, Claimant testified that she did not recall how her arms were positioned when she fell.

24. At the IME, Claimant reported widespread diffuse complaints through her upper back, neck, and trapezius region. Dr. Cebrian's examination of the Claimant did not reveal objective findings that correlated with a SLAP tear such as popping or clicking or difficulty with raising the arm above 90 degrees. Dr. Cebrian explained that the Claimant's SLAP tear is not the cause of her specific pain complaints and that Claimant's objective examination does not support the SLAP tear as being the cause of Claimant's pain complaints.

25. Dr. Cebrian opined to a reasonable degree of medical probability that the need for the surgery recommended by Dr. Isaacs is not reasonable, necessary and causally related for maintenance of claimant's industrial injuries at MMI. Claimant reported to Dr. Cebrian that she was initially injured when she fell landing on her buttocks. Dr. Cebrian explained that the mechanism of injury is not consistent with causing a SLAP tear to the left shoulder. In order to cause a traumatic SLAP tear or to have aggravated a pre-existing SLAP tear Claimant would have needed to have landed on her outstretched arm, which would have caused the humeral head to drive into the shoulder joint. Claimant's testimony and her report of the mechanism of injury to her medical providers does not support a mechanism of injury involving Claimant landing on her outstretched arm. Dr. Cebrian's opinion that the mechanism of injury did not cause an injury to the left shoulder is credited as being well supported in the medical records.

26. Dr. Cebrian explained that the MRI finding of a SLAP tear is an incidental degenerative finding that is not causally related to the work injury. The MRI report showed numerous chronic and long standing findings that pre-existed the date of accident in this case.

27. Dr. Cebrian explained that Claimant's clinical presentation following the February 26, 2015, accident is not consistent with the conclusion that Claimant sustained an acute SLAP tear as a result of the work related fall. Dr. Cebrian testified that Claimant's medical records do not document persistent shoulder complaints following the fall, which is what would have been expected with an acute SLAP tear. The medical records document that Claimant initially had some soft tissue contusion type complaints in the region of the left trapezius region, but these complaints resolved

early on in the claim. If Claimant had in fact sustained a SLAP tear as a result of the fall, Dr. Cebrian explained that it is unlikely her shoulder symptoms would have resolved. Claimant's own testimony that her shoulder symptoms worsened over time is not consistent with the medical records. Claimant's report of the onset of popping ten months after her date of accident is further not consistent with the industrial accident causing an injury or SLAP tear. If the industrial fall was the cause of the left shoulder injuries, it is likely the popping would have onset much earlier on in Claimant's course of treatment.

28. Dr. Cebrian testified that Claimant did not report to him at the IME that she was experiencing a popping sensation in her left shoulder. Dr. Cebrian testified that the medical records do not corroborate that Claimant reported to any providers that she was experiencing a popping sensation in her left shoulder until July 2016, the same month the hearing took place.

29. Even if the SLAP tear was caused by the February 26, 2015, work accident, Dr. Cebrian opined that the surgery is not reasonable and necessary for maintenance of Claimant's industrial injuries. Dr. Cebrian explained that the Claimant is not an appropriate surgical candidate. Claimant has been diagnosed with a somatoform disorder, which is a psychological condition that manifests physical complaints, without a true organic or physiologic explanation. Dr. Cebrian explained that the Claimant's physical examination at his IME was extremely non physiologic with inconsistent range of motion movements and limitations that were not explained by the objective examination. Dr. Cebrian explained that it is unlikely Claimant would have a good outcome from surgery based on her somatoform disorder and prior history in the claim which has not established a good response to any treatment modalities.

30. Dr. Cebrian's own examination did not corroborate findings suggestive of a SLAP tear. The Claimant has become fixated on her shoulder because the MRI, which was performed after the IME, revealed a tear, but at the IME Claimant's own report of symptomatology was not focused on the left shoulder. Dr. Cebrian explained that not all SLAP tears require surgical repair and there is no medical reason that Claimant's SLAP tear would require surgical repair.

31. Claimant's testimony that her left shoulder stabbing pain complaints have been present since the date of accident is not credible and is not supported by the medical records. The medical records do not support the onset of symptoms consistent with a SLAP tear temporal to February 26, 2015, date of accident

32. Even if the SLAP tear was caused by the February 26, 2015, work accident, Dr. Cebrian credibly opined that the surgery is not reasonable and necessary for maintenance of Claimant's industrial injuries. Dr. Cebrian explained that the Claimant is not an appropriate surgical candidate. Claimant has been diagnosed with a somatoform disorder, which is a psychological condition that manifests physical complaints, without a true organic or physiologic explanation. Dr. Cebrian explained that Claimant's physical examination at his IME was extremely non physiologic with

inconsistent range of motion measurements and limitations that were not explained by the objective examination. Dr. Cebrian explained that it is unlikely Claimant would have a good outcome from surgery based on her somatoform disorder and prior history in the claim which has not established a good response to any treatment modalities.

33. Claimant's alleged left shoulder injuries are not causally related to the February 26, 2015, work accident and Claimant's request for authorization of left shoulder surgery is not reasonably necessary and is therefore denied.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

1. Claimant must prove entitlement to benefits by a preponderance of the evidence. However, the facts in a workers' compensation case are not interpreted liberally in favor of either Claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979).

2. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office, supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990).

3. If a dispute over medical benefits arises after the filing of an admission of liability, respondents may assert that the claimant did not establish the threshold requirement of a direct causal relationship between the on-the-job injury and the need for medical treatment. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997). This principle recognizes that even though an admission is filed, the claimant bears the burden of proof to establish the right to specific medical benefits, and the mere admission that an injury occurred and treatment is needed cannot be construed as a concession that all conditions and treatments which occur after the injury were caused by the injury. *See Maestas v. O'Reilly Auto Parts*, W.C. 4-856-563-01 (ICAO Aug. 31, 2012).

4. Claimant is not entitled to medical care that is not causally related to his work-related injury or condition. As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 10, 2007), "[a] showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary." Where the relatedness, reasonableness or necessity of medical treatment is disputed, the Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.,* W.C. No. 4-117-758 (ICAO April 7, 2003).

5. In order to prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. Although a preexisting condition does not disqualify a Claimant from receiving workers' compensation benefits, the Claimant must prove a causal relationship between the injury and the medical treatment Claimant is seeking. *Snyder v. Indus. Claim Appeals Office*, *supra.* Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1189 (Colo. App. 2002). And where an industrial injury merely causes the discovery of the underlying disease to happen sooner, but does not accelerate the need for the surgery for the underlying disease, treatment for the preexisting condition is not compensable. *Robinson v. Youth Track*, 4-649-298 (ICAO May 15, 2007).

6. An industrial accident is the proximate cause of a Claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority*, 768 P.2d 751 (Colo. App. 1988). In order to prove that an industrial injury was the proximate cause of the need for medical treatment, an injured worker must prove a causal nexus between the need for treatment and the work-related injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998). It is for the ALJ, as the fact-finder, to determine whether a need for medical treatment is caused by the industrial injury, or some other intervening injury. *Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985).

7. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensieck v. Indus. Claim Appeals* Office, 183 P.3d 684 (Colo. App. *2008); Kroupa v. Indus. Claim Appeals* Office, 53 P.3d 1192, 1197 (Colo. App. 2002). The ALJ determines the credibility of the witnesses. *Arenas v. Industrial Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. Indus. Claim Appeals Office*, 197 P.3d 220 (Colo. App. 2008). The fact finder should

consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

8. Claimant's testimony that her left shoulder stabbing pain complaints has been present since the date of accident is not credible and is not supported by the medical records. The medical records do not support the onset of symptoms consistent with a SLAP tear temporal to February 26, 2015, date of accident. Claimant has failed to establish by a preponderance of the evidence that she sustained any injuries to her left shoulder as a result of the February 26, 2015, accident and that the need for left shoulder surgery recommended by Dr. Isaacs is reasonable, necessary, and causally related for maintenance of the industrial injuries.

9. The Claimant's argument that the opinion of the DIME physician must be overcome by clear and convincing evidence is without merit. The DIME opinion is not persuasive and not entitled to any deference on the issue of medical benefits. Further, the DIME opinion is contested and disputed by Respondents and Claimant chose to bear the risks of proceeding to hearing before the opinion of the DIME could be adjudicated at a later hearing.

ORDER

It is therefore ordered that:

1. Claimant's left shoulder injuries are not causally related to the February 26, 2015, work accident and Claimant's request for authorization of left shoulder surgery is not reasonable, necessary, and related and is therefore DENIED.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant waived her right to contest the validity of the October 20, 2014 24-month Division Independent Medical Examination (DIME) performed by Brian Beatty, D.O. under §8-42-107(8)(b)(2)(A)-(D), C.R.S.

2. Whether Claimant has demonstrated by a preponderance of the evidence that Respondents failed to comply with §8-42-107(8)(b)(II)(B), C.R.S.

3. Whether DIME Dr. Beatty was authorized to address Claimant's permanent impairment.

4. Whether Respondents have established by a preponderance of the evidence that they are entitled to recover an overpayment in the amount of $97,641.12.

FINDINGS OF FACT

1. On May 9, 2012 Claimant suffered admitted industrial injuries during the course and scope of her employment with Employer.

2. On August 14, 2012 Respondents filed a General Admission of Liability (GAL). The GAL specified that Claimant was entitled to receive Temporary Total Disability (TTD) benefits beginning on July 16, 2012 in the amount of $732.57 per week.

3. On July 24, 2014 Respondents filed a Notice and Proposal to Select a Division Independent Medical Examiner. However, on July 28, 2014 Respondents filed a Notice of Failed IME Negotiation.

4. On July 28, 2014 Respondents filed an Application for a 24-Month Division Independent Medical Examinaion (DIME). The Application specified Claimant's left shoulder as the body part to be addressed. Respondents listed Maximum Medical Improvement (MMI) and impairment rating as issues to be considered at the DIME.

5. On October 20, 2014 Claimant underwent a 24-month DIME with Brian Beatty, D.O. Dr. Beatty determined that Claimant had reached MMI on June 15, 2012 for her left shoulder and cervical spine injuries. He assigned a 16% whole person impairment rating.

6. Dr. Beatty subsequently reviewed extensive video surveillance and medical records. On January 27, 2015 he issued a supplemental report concluding that Claimant reached MMI on June 15, 2012 with a 0% whole person impairment rating.

7. On February 13, 2015 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Beatty's MMI date of June 15, 2012 and 0% whole person impairment rating. Because the date of MMI preceded the first TTD payment, Respondents asserted an overpayment of all TTD benefits from July 16, 2012 and continuing for a total of $97,641.12.

8. On March 11, 2015 Claimant filed an Application for Hearing and Notice to Set. Claimant specifically noted in her Application that she was seeking to strike the DIME because of "failure to follow procedures set forth in C.R.S. §8-42-107(8)(b)(II)(A-D)."

9. The record reveals that Claimant did not waive her right to contest the October 20, 2014 24-month DIME performed by Dr. Beatty under §8-42-107(8)(b)(II)(A)-(D), C.R.S. Although Claimant did not object to various pleadings prior to undergoing the 24-month DIME, she filed an Application for Hearing and Notice to Set on March 11, 2015. Claimant specifically noted in her Application that she was seeking to strike the DIME because of "failure to follow procedures set forth in C.R.S. §8-42-107(8)(b)(II)(A-D)." The record reflects that Claimant did not unequivocally express an intent to abandon her right to challenge the 24 month-DIME. She also did not implicitly waive her right to challenge the 24-month DIME by engaging in a course of conduct free from ambiguity concerning her intention. Although Claimant could have objected to the 24-month DIME process at an earlier stage of the proceedings, her conduct did not constitute a waiver. She thus properly challenged the validity of Dr. Beatty's 24-month DIME.

10. Claimant has not demonstrated that it is more probably true than not that Respondents failed to comply with §8-42-107(8)(b)(II)(B), C.R.S. Specifically, Claimant asserts that Respondents failed to request in writing that an Authorized Treating Physician (ATP) determine whether she reached MMI. The plain language of §8-42-107(8)(b)(II)(B), C.R.S. requires the moving party to inquire in writing from an ATP whether a claimant has reached MMI. Inquiring of an ATP in writing is a condition precedent to obtaining a 24-Month DIME. Initially, the record is devoid of evidence that an ATP addressed in writing whether Claimant had reached MMI prior to the 24-month DIME. However, Claimant did not present any documentary evidence or testimony suggesting that Respondents failed to submit a written request to an ATP inquiring whether she had reached MMI. Based on the lack of evidence that Respondents failed to submit a written request to the ATP, it is speculative to assume that Respondents did not make a written request. Accordingly, in the absence of any contradictory evidence, the October 20, 2014 24-month DIME by Dr. Beatty was proper under §8-42-107(8)(b)(II)(A)-(D), C.R.S.

11. Section 8-42-107(8)(b)(III), C.R.S. specifically provides that the 24-month DIME physician is authorized to determine whether a claimant has reached MMI and assign a permanent impairment rating. On January 27, 2015 Dr. Beatty issued a supplemental report concluding that Claimant had reached MMI on June 15, 2012 with a 0% whole person impairment rating. Claimant has not produced unmistakable evidence that Dr. Beatty's MMI or impairment determinations were incorrect.

Accordingly, Claimant reached MMI on June 15, 2012 and suffered a 0% permanent impairment rating as a result of her May 9, 2012 admitted industrial injuries.

12. Respondents have established that it is more probably true than not that they are entitled to recover an overpayment of TTD benefits from Claimant in the amount of $97,641.12. On August 14, 2012 Respondents filed a GAL. The GAL specified that Claimant was entitled to receive TTD benefits beginning on July 16, 2012 in the amount of $732.57 per week. On January 27, 2015 Dr. Beatty issued a supplemental report concluding that Claimant had reached MMI on June 15, 2012 with a 0% whole person impairment rating. However, because of the retroactive MMI determination, Claimant had received TTD benefits from July 16, 2012 and continuing for a total of $97,641.12. The TTD benefits that Respondents paid after June 15, 2012 constituted an overpayment. Claimant's challenge to the $97,641.12 overpayment was predicated on the invalidity of Dr. Beatty's MMI and impairment determinations. However, Claimant has failed to produce unmistakable evidence that Dr. Beatty's MMI and impairment determinations were incorrect. Accordingly, Respondents are entitled to recover an overpayment from Claimant in the amount of $97,641.12.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Waiver

4. Respondents assert that Claimant waived her right to contest the validity of Dr. Beatty's October 20, 2014 24-month DIME under §8-42-107(8)(b)(2)(A)-(D), C.R.S. They reason that Claimant fully participated in the 24-month DIME process and did not raise any objection until after the DIME was completed. Respondents specifically argue that Claimant should have objected to the following pleadings prior to undergoing the 24-month DIME: (1) the Notice and Proposal to Select a DIME; (2) the Notice of failed IME negotiations ; and (3) the Application for a 24-month DIME.

5. Waiver is an affirmative defense that must be established by a preponderance of the evidence. *In Re Quintana,* W.C. No. 3-062-456 (ICAP, Sept. 24. 2007). Waiver is the voluntary, knowing and intelligent relinquishment of a known right. *Jiminez v. Industrial Commission*, 51 P.3d 1090 (Colo. App. 2002). The waiver of a right may be explicit or demonstrated when a party expresses an intent to abandon a known right. Waiver may also be implied based on conduct that is free of ambiguity concerning the party's intention. *Department of Health v. Donahue*, 690 P.2d 243, 247 (Colo. 1984); *In Re Barnett,* W.C. No. 4-769-486 (ICAP, Mar. 5, 2010). The question of whether a party waived a right is one of fact for determination by the ALJ. *See Johnson v. Industrial Commission*, 761 P.2d 1140, 1147 (Colo. 1988).

6. As found, the record reveals that Claimant did not waive her right to contest the October 20, 2014 24-month DIME performed by Dr. Beatty under §8-42-107(8)(b)(II)(A)-(D), C.R.S. Although Claimant did not object to various pleadings prior to undergoing the 24-month DIME, she filed an Application for Hearing and Notice to Set on March 11, 2015. Claimant specifically noted in her Application that she was seeking to strike the DIME because of "failure to follow procedures set forth in C.R.S. §8-42-107(8)(b)(II)(A-D)." The record reflects that Claimant did not unequivocally express an intent to abandon her right to challenge the 24 month-DIME. She also did not implicitly waive her right to challenge the 24-month DIME by engaging in a course of conduct free from ambiguity concerning her intention. Although Claimant could have objected to the 24-month DIME process at an earlier stage of the proceedings, her conduct did not constitute a waiver. She thus properly challenged the validity of Dr. Beatty's 24-month DIME.

Propriety of 24-month DIME

7. A 24-Month DIME is statutorily authorized pursuant to §8-42-107(8)(b)(II)(A)-(D), C.R.S. Claimant seeks to strike Dr. Beatty's DIME report because Respondents failed to comply with §8-42-107(8)(b)(II)(A)-(D), C.R.S. in proceeding with a 24-month DIME. Section 8-42-107(8)(b)(II)(A)-(D), C.R.S. provides that an insurer may request a DIME if the following criteria have been satisfied:

> (A) At least twenty-four months have passed since the date of injury;
>
> (B) A party has requested in writing that an authorized treating physician determine whether the employee has reached maximum medical improvement;
>
> (C) Such authorized treating physician has not determined that the employee

> has reached maximum medical improvement; and
>
> (D) A physician other than such authorized treating physician has determined that the employee has reached maximum medical improvement.

Notably, the statute provides that at least 24 months must have passed since the date of injury before a party may seek an independent medical examination. §8-42-107(8)(b)(II)(A), C.R.S. The statute also requires a party to request in writing that an ATP determine whether the employee has reached MMI. §8-42-107(8)(b)(II)(B), C.R.S.

8. As found, Claimant has not demonstrated by a preponderance of the evidence that Respondents failed to comply with §8-42-107(8)(b)(II)(B), C.R.S. Specifically, Claimant asserts that Respondents failed to request in writing that an Authorized Treating Physician (ATP) determine whether she reached MMI. The plain language of §8-42-107(8)(b)(II)(B), C.R.S. requires the moving party to inquire in writing from an ATP whether a claimant has reached MMI. Inquiring of an ATP in writing is a condition precedent to obtaining a 24-Month DIME. Initially, the record is devoid of evidence that an ATP addressed in writing whether Claimant had reached MMI prior to the 24-month DIME. However, Claimant did not present any documentary evidence or testimony suggesting that Respondents failed to submit a written request to an ATP inquiring whether she had reached MMI. Based on the lack of evidence that Respondents failed to submit a written request to the ATP, it is speculative to assume that Respondents did not make a written request. Accordingly, in the absence of any contradictory evidence, the October 20, 2014 24-month DIME by Dr. Beatty was proper under §8-42-107(8)(b)(II)(A)-(D), C.R.S.

Permanent Medical Impairment

9. In ascertaining a DIME physician’s opinion, the ALJ should consider all of the DIME physician’s written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician’s determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

10. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by “clear and convincing evidence.” §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). “Clear and convincing evidence” is evidence that demonstrates that it is “highly probable” the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, “there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt.” *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v.*

Monte Vista Head Start, Inc., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

11. The statute authorizing a 24-month DIME provides, in relevant part:

> If the independent medical examiner . . . finds that the injured worker has reached [MMI], the independent medical examiner shall also determine the injured worker's permanent medical impairment rating. The finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising uner subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence.

§8-42-107(8)(b)(III), C.R.S.

12. As found, §8-42-107(8)(b)(III), C.R.S. specifically provides that the 24-month DIME physician is authorized to determine whether a claimant has reached MMI and assign a permanent impairment rating. On January 27, 2015 Dr. Beatty issued a supplemental report concluding that Claimant had reached MMI on June 15, 2012 with a 0% whole person impairment rating. Claimant has not produced unmistakable evidence that Dr. Beatty's MMI or impairment determinations were incorrect. Accordingly, Claimant reached MMI on June 15, 2012 and suffered a 0% permanent impairment rating as a result of her May 9, 2012 admitted industrial injuries.

Overpayment

13. In 1997 the General Assembly amended §§8-43-303(1), C.R.S. and 8-43-303(2)(a), C.R.S. to permit the reopening of a claim on the grounds of "fraud" or "overpayment" in addition to the traditional grounds of error, mistake or change in condition. *In Re Haney,* W.C. No. 4-796-763 (ICAP, July 28, 2011). The 1997 legislation is designated as an act "concerning the recovery from claimants of Workers' Compensation benefits to which such claimants are not entitled." *Id.* The statutes provide that reopening may not "affect moneys already" paid except in cases of fraud or overpayment. *In Re Stroman,* W.C. No. 4-366-989 (ICAP, Aug. 31, 1999). The statute contemplates that in the case of an overpayment the ALJ has the authority to remedy the situation. *In Re Haney,* W.C. No. 4-796-763 (ICAP, July 28, 2011)

14. Section 8-40-201(15.5), C.R.S, defines "overpayment" as "money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles." There are thus three categories of possible overpayment pursuant to §8-40-201(15.5). *In Re Grandestaff,* No. 4-717-644 (ICAP, Mar. 11, 2013). An overpayment may occur even if it did not exist at the time the claimant received disability or death benefits. *Simpson v. ICAO,* 219 P.3d 354, 358 (Colo. App. 2009). Therefore, retroactive recovery for an overpayment is permitted. *In Re Haney,* W.C. No. 4-796-763 (ICAP, July 28, 2011).

15. In *Mattorano v. United Airlines*, W.C. No. 4-861-379-01 (ICAP, July 25, 2013) the DIME physician assigned the claimant a permanent impairment rating lower than that determined by her treating physician. The ATP assigned the claimant a 16% lower extremity impairment rating. The respondents filed an FAL and paid the claimant $8,490.73 in PPD benefits. However, the DIME physician subsequently assigned the claimant a 12% lower extremity impairment rating. The respondents filed an amended FAL and awarded the claimant PPD benefits in the amount of $6,368.05. The respondents filed an application for hearing and sought to recover an overpayment in PPD benefits of $2,122.60. The ALJ agreed with the respondents and ordered the claimant to repay an overpayment of $2,122.60. The ICAP affirmed because an overpayment may result even though it did not "exist at the time the claimant received disability or death benefits." The reasoning and analysis in *Mattorano* is controlling in the present matter.

16. As found, Respondents have established by a preponderance of the evidence that they are entitled to recover an overpayment of TTD benefits from Claimant in the amount of $97,641.12. On August 14, 2012 Respondents filed a GAL. The GAL specified that Claimant was entitled to receive TTD benefits beginning on July 16, 2012 in the amount of $732.57 per week. On January 27, 2015 Dr. Beatty issued a supplemental report concluding that Claimant had reached MMI on June 15, 2012 with a 0% whole person impairment rating. However, because of the retroactive MMI determination, Claimant had received TTD benefits from July 16, 2012 and continuing for a total of $97,641.12. The TTD benefits that Respondents paid after June 15, 2012 constituted an overpayment. Claimant's challenge to the $97,641.12 overpayment was predicated on the invalidity of Dr. Beatty's MMI and impairment determinations. However, Claimant has failed to produce unmistakable evidence that Dr. Beatty's MMI and impairment determinations were incorrect. Accordingly, Respondents are entitled to recover an overpayment from Claimant in the amount of $97,641.12.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant did not waive her right to contest the 24-month DIME performed by Dr. Beatty on October 20, 2014 under §8-42-107(8)(b)(II)(A)-(D), C.R.S.

2. Claimant has not demonstrated that Respondents failed to comply with §8-42-107(8)(b)(II)(B), C.R.S.

3. Claimant reached MMI on June 15, 2012 and suffered a 0% permanent impairment rating as a result of her May 9, 2012 admitted industrial injuries.

4. Respondents are entitled to recover an overpayment from Claimant in the amount of $97,641.12.

5. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

STATE OF COLORADO

W.C. No. 4-984-069-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on September 7, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 9/7/16, Courtroom 3, beginning at 1:30 PM, and ending at 4:00 PM). The official Spanish/English Interpreter was Axel Rangel.

Claimant's Exhibits 1 through 8 were admitted into evidence, without objection. Respondents' Exhibits A through S were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ took the matter under advisement and hereby issues the following decision.

The evidentiary deposition of Craig Anderson, M.D., taken on August 16, 2016 was filed on September 7, 2016; and the evidentiary deposition of Allison Fall, M.D., taken on August 18, 2016, was filed on September 7, 2016.

ISSUES

The paramount issue to be determined by this decision concerns whether the Claimant suffered a compensable injury to her left shoulder as the result of a fall on

March 29, 2015; or, whether her left shoulder injury is attributable to a pre-existing condition. The Respondents paid the dental expenses arising out of the March 29, 2016 incident, without admitting or denying liability.

The burden of proof rests with the Claimant by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant was born on August 2, 1957 and was 59 years of age at the date of the hearing.

2. The Claimant began working at her current position since around January 2015. The Employer provides cleaning services for the Denver metro area.

3. The Claimant was a cleaning person for the Employer. Her job duties included cleaning the office building to which she was assigned. Her cleaning duties encompassed a wide variety of tasks including trash collection, vacuuming, surface cleaning and so forth.

The Incident of March 29, 2015

4. On March 29, 2015, while performing cleaning duties, the Claimant turned her head quite forcefully into a glass door, striking the left side of her face. Her dental records support and corroborate a significantly forceful hitting of the glass door.

5. The Claimant initially experienced facial and dental injuries at the time of the impact. She struck her head around the left periorbital area and sustained mild discomfort of the left eye. She had a dull left front-temporal headache. The Claimant also experienced mild neck pain, posteriorly, and mild stiffness. She struck her upper incisors and experienced initial bleeding along with pain while biting or chewing.

6. Upon subsequent examinations, the Claimant told her medical providers that she also suffered a left shoulder injury as a result of the work-related incident. She was experiencing radiating pain along the left upper trapezius to the left shoulder. The Claimant's left shoulder was mildly tender around the superior deltoid and she experienced tension and tenderness around the left scapula. Although there is no apparent should instability, the Claimant suffers from considerable left shoulder discomfort.

7. Soon after the work-related incident, Claimant reported the injury to her supervisor. The supervisor then reported this incident to his manager, Miriam Saenz, who subsequently reported the incident the Human Resources (HR) manager, Brenda Martinez. Both Saenz and Martinez testified on behalf of Respondents.

8. On direct examination, Saenz testified that the Claimant informed her on March 30, 2015 that the Claimant had hit her face during the work-related incident on March 29, 2015. Saenz stated that the Claimant never mentioned a shoulder injury or shoulder pain. Similarly, Martinez testified that the Claimant never mentioned any shoulder pain or discomfort when discussing the work-related incident. The Respondents heavily premise their theory of non-compensability on the fact that the Claimant did not mention the left shoulder to Saenz and Martinez when reporting the incident of March 29, 2015. The ALJ infers and finds that the Claimant was focused on the immediately more painful consequences of the incident, *i.e.,* her dental injuries, at the time.

9. The Employer covered all dental expenses associated with the initial work-related incident, without admitting or contesting liability. The Employer, however, contests the Claimant's claim that the left shoulder injury arose from the work-related incident. The Claimant further contends that wearing the vacuum backpack at work has aggravated her injury.

Craig Anderson, M.D.

10. The Claimant first saw Dr. Anderson on March 31, 2015 for her left shoulder because he was an Employer's designated provider. Therefore, he became the Claimant's authorized treating physician (ATP). Dr. Anderson was deposed on August 16, 2016 regarding the Claimant's left shoulder on behalf of the Claimant. According to Dr. Anderson, at the time of the injury, the Claimant initially informed him of the facial trauma; however, on April 14, 2015, the Claimant informed him of the left shoulder discomfort. As a result, Dr. Anderson ordered physical therapy (PT). On April 28, 2015, the Claimant felt increased pain while wearing her vacuum backpack and she then began receiving PT. On May 11, 2015, after the Claimant underwent an MRI (magnetic resonance imaging), Dr. Anderson observed a rotator cuff tear from the imagery. On May 27, 2015, Dr. Anderson was of the opinion that the Claimant's left shoulder injury was the result of her March 29, 2015 incident. Dr. Anderson stated that the impact "aggravated the underlying supraspinatus tendinosis and caused the tear which was progressively more and more symptomatic with work activities." Additionally, Dr. Anderson further was of the opinion that there was no preexisting rotator cuff tear of substantial severity.

Allison Fall, M.D., Respondents' Independent Medical Examiner (IME)

11. Dr. Fall was deposed on August 18, 2016 regarding the Claimant's left shoulder injury. Dr. Fall did not physically examine the Claimant. After reviewing the Claimant's medical records, Dr. Fall disagreed with the opinion given by Dr. Anderson regarding the Claimant's left shoulder injury. Dr. Fall was of the opinion that the Claimant's shoulder injury was degenerative and existed prior to the work-related incident. Dr. Fall asserts that the impact from the March 29, 2015 incident would not have caused a rotator cuff tear and she does not believe that there is a temporal relationship between the Claimant's impact with the door and the resulting shoulder injury. The ALJ draws a plausible inference and finds that Dr. Fall's opinion concerning lack of a temporal relationship is based on the statements of Saenz and Martinez herein above in Finding No. 8. Dr. Fall disagrees that the Claimant's impact with the door was anything of significant force. She offers no persuasive underlying rationale for "the lack of sufficient impact" opinion. Dr. Fall's opinions are lacking in persuasive underpinnings. Other than attributing the Claimant's rotator cuff tear to a pre-existing condition, Dr. Fall offered no plausible explanation for the tear other than implying that it must have just happened as a result of the Claimant's pre-existing condition. The ALJ finds Dr. Anderson's opinions on causation more persuasive and credible than Dr. Fall's opinions.

Ultimate Findings

12. The ALJ finds that the Claimant's testimony, including the expert opinion of Dr. Anderson, is credible, convincing, and it persuasively refutes the Respondents' denial of causal relatedness (to work) concerning the incident of March 29, 2015. Thus, the ALJ finds that the Claimant has proven, a work-related aggravation or acceleration of her left shoulder condition that resulted in her injuries as a consequence of her impact with the glass door. While, the Respondents presented Dr. Fall's medical opinion that contradicted Dr. Anderson's opinion, Dr. Anderson's medical opinion is based upon a more thorough familiarity with the Claimant's condition. Dr. Anderson was the ATP for many months while Dr. Fall relied entirely upon medical records, and her ultimate opinion of lack of causal relatedness lacks any persuasive underlying rationale. Dr. Fall's only underlying rationale is temporal relationship (the Claimant did not complain about the left shoulder until a few days later) and lack of significant force in hitting the glass door. The ALJ finds Dr. Anderson's opinions concerning causal relatedness of the left shoulder considerably more persuasive and credible than Dr. Fall's opinions

13. The ALJ makes a rational choice between conflicting medical opinions, based on substantial evidence, to accept the opinion of Dr. Anderson as dispositive and to reject the opinion of Dr. Fall and the Respondents' position that the left shoulder trauma was not caused by the work-related incident. Also, there is no persuasive

evidence of any left shoulder discomfort or pain experienced by the Claimant in the 20 years leading up to the March 29, 2015 incident.

14. The evidence establishes that the Claimant experienced a significant impact on her left shoulder which led to a torn rotator cuff. This condition was worsened by the Claimant's continued work after the initial incident. Therefore, the Claimant has proven, by preponderant evidence that she sustained a compensable injury to her left shoulder on March 29, 2015.

15. The evidence further establishes that Dr. Anderson was the ATP and any referrals he made, including referral for a MRI, were within the chain of authorized referrals. Also, all of the Claimant's medical care and treatment for her compensable left shoulder injury was and is causally related thereto and reasonably necessary to cure and relieve the effects of her injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof).

See Young v. Burke, 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony, including the expert opinion of Dr. Anderson, was credible, convincing, and persuasively refuted the Respondents' denial of causal relatedness (to work) concerning the incident of March 29, 2015. Thus, the Claimant proved a work-related aggravation or acceleration of her left shoulder condition that resulted in her injuries as a consequence of her impact with the glass door. As further found, while, the Respondents presented Dr. Fall's medical opinion that contradicted Dr. Anderson's opinion, Dr. Anderson's medical opinion was based upon a more thorough familiarity with the Claimant's condition. Dr. Anderson was the ATP for many months while Dr. Fall relied entirely upon medical records, and her ultimate opinion of lack of causal relatedness lacked any persuasive underlying rationale. Dr. Fall's only underlying rationale was temporal relationship (the Claimant did not complain about the left shoulder until a few days later) and lack of significant force in hitting the glass door. Dr. Anderson's opinions concerning causal relatedness of the left shoulder was considerably more persuasive and credible than Dr. Fall's opinions.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, The ALJ made a rational choice between conflicting medical opinions, based on substantial evidence, to accept the opinion of Dr. Anderson as dispositive and to reject the opinion of Dr. Fall and the Respondents' position that the left shoulder trauma was not caused by the work-related incident. Also, there was no persuasive evidence of any left shoulder discomfort or pain experienced by the Claimant in the 20 years leading up to the March 29, 2015 incident.

Compensability

c. A compensable injury is one that arises out of and in the course of employment. § 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the Claimant's left shoulder injury, or aggravation of her underlying left shoulder condition of March 29, 2015 arose out of the course and scope of her employment for the employer herein and was, therefore, a compensable injury.

Medical

d. To be authorized, all referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). When an ATP refers an injured worker to his personal physician, under the mistaken belief that the claim was not compensable, the referral was nonetheless within the chain of authorized referrals and, thus, subsequent treatment was authorized. *See Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277 (Colo. App. 2008). As found, all referrals emanating from Dr. Anderson were within the chain of authorized referrals.

e. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v.*

Vasquez, 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to the aggravation of her left shoulder condition on March 29, 2015. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary to cure and relieve the effects of that injury.

Burden of Proof

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found. The Claimant has met her burden with respect to compensability and medical benefits.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondents shall pay the costs of all authorized, causally related and reasonably necessary medical care and treatment for the Claimant's compensable left shoulder injury, subject to the Division of Workers' Compensation medical Fee Schedule.

B. Any and all issues not determined herein are reserved for future decision.

DATED this______day of September 2016.

____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-852-795-04

ISSUES

I. The issue for determination is whether Claimant has met her burden of proving entitlement to an award of penalties based upon Respondents alleged violation of an order.

FINDINGS OF FACT

This matter comes before the Court with an extremely complex and lengthy procedural background, including a remand from the Court of Appeals to the Industrial Claims Appeals Office and there from to the ALJ with direction to enter an order consistent with the views of the Court of Appeals. Based upon the evidence presented, the ALJ enters the following findings of fact:

1. On August 2, 2010, Claimant sustained admitted, compensable injuries to her neck, shoulders, and elbows when she was rear-ended in an automobile accident while she was en route from a client's home to Respondent-Employer's office. In addition to medical benefits, Insurer paid Claimant temporary total disability (TTD) benefits for the period during which she could not work as a result of her compensable injuries. *See* May 1, 2015 Findings of Fact, Conclusions of Law, and Order on Remand ("Order on Remand").

2. Claimant began working for a different employer in November of 2011 but admitted in a prior proceeding that she continued receiving TTD benefits under the instant claim while working. Consequently, Insurer overpaid Claimant in TTD benefits leading up to the time Claimant was placed at maximum medical improvement (MMI).

3. Because Claimant would not cooperate with efforts to determine whether she was working while collecting TTD, the Respondent-Employer could not fully document Claimant's return to work and the Division of Workers' Compensation would not release Insurer from paying Claimant TTD benefits while she was working.

4. Claimant was placed at MMI for her work injuries effective August 15, 2012 by Terrence Lakin, DO, an authorized treating physician (ATP). Dr. Lakin determined Claimant sustained a 10% scheduled rating of the left upper extremity.

5. At the time she was placed at MMI, Claimant had yet to provide requested information regarding her return to work for a different employer. Since the MMI determination compelled Respondents to take a position on the MMI finding, Respondents sought an order compelling claimant to produce the information necessary to determine the details of Claimant's return to work, including wage information. The parties participated in an August 31, 2012 prehearing conference (PHC) regarding the

requested disclosures. The undersigned ALJ, in his capacity as a Prehearing Administrative Law Judge (PALJ) at the time, presided over the prehearing conference.

6. At conclusion of the PHC, the undersigned ordered Claimant to provide releases that would allow Respondents, through counsel, to obtain employment and payroll information from subsequent employers. The undersigned also suspended Respondents' obligation to take a position regarding the MMI determination by the ATP. Respondents' requirement to act on the ATP's MMI report was held in abeyance for sixty (60) days. During this sixty day stay, Claimant was ordered to provide information regarding her return to work, *inter alia.*

7. Claimant complied with the order to compel and it was confirmed that she had been drawing TTD while working for another employer. After the information was received from the subsequent employer, Respondents filed a Final Admission (FAL) consistent with the MMI and impairment rating opinions of ATP Lakin. The FAL is dated October 11, 2012 and reflects that Insurer admitted to a disfigurement award of $300.00. The FAL also reflects that Insurer claimed an asserted overpayment in benefits equaling $5,276.06.

8. In the FAL, Respondents asserted their right to collect the overpayment and/or credit the overpayment against any future benefits payable in the claim.

9. Claimant objected to the October 11, 2012 FAL and pursued a Division of Worker's Compensation Independent Medical Examination (Division IME) with Dr. Timothy Sandell. Dr. Sandell agreed with Claimant's date of maximum medical improvement as assigned by ATP Lakin. However, he reduced Claimant's scheduled rating from 10% of the left upper extremity to 2% left upper extremity impairment and 2% right upper extremity impairment. Insurer filed a FAL consistent with Dr. Sandell's opinion concerning MMI and impairment on July 16, 2013. Because the scheduled ratings provided by Dr. Sandell were less than the 10% scheduled rating provided by Dr. Lakin, the asserted overpayment increased to $8,451.08.

10. In the July 16, 2013 FAL, Respondents specifically reserved their right to credit the $8,451.08 overpayment against future benefits. Since the value of Dr. Sandell's scheduled impairment rating was less than the value of the rating of ATP Lakin, which was previously admitted and paid by respondents and there was already an overpayment, Claimant was not owed additional benefits under the July 16, 2013 FAL.

11. In addition to her workers' compensation claim, Claimant pursued an action against the driver who rear-ended her and caused her injury in this claim through a personal injury claim. After a demand letter was sent to the tortfeasor's insurer, the adverse insurer offered to settle with Claimant for the policy limit of $50,000. Because it had a statutory subrogation right to the compensation/benefits it had paid to Claimant under the workers' compensation claim, Insurer participated in the settlement negotiations with the tortfeasor's insurer and the attorney representing Claimant in the automobile action.

12. At the time of the third-party settlement negotiations, Insurer's lien against the third-party who caused Claimant's injuries totaled $44,739.39. This lien amount represented the total amount of worker's compensation benefits that respondent-insurer had paid to Claimant at the time, including the $8,451.08 overpayment asserted in the July 16, 2013 FAL. The three interested parties to the personal injury action agreed to divide the settlement proceeds reached with the third-party carrier as follows: $18,000 payable to Insurer; $13,000 payable to Claimant; and, the remainder ($19,000) payable to Claimant's personal injury lawyer.

13. The letter memorializing the parties' agreement regarding distribution of the proceeds from the third-party settlement agreement made no mention of the overpayment or how it would impact the overpayment caused by claimant's return to work while continuing to draw full TTD benefits. The letter states: "This letter is to confirm that [the respondent-insurer] has accepted your offer of $18,000.00 for full and final settlement of its third party subrogation lien in the above-matter." The letter went on to invite Claimant to "contact [the respondent-insurer's subrogation counsel] immediately in the event this correspondence does not accurately reflect the terms of our agreement or should you have additional questions/concerns."

14. Claimant objected to the July 16, 2013 FAL and filed an application for hearing on the issues of disfigurement, conversion and overpayment. Respondents filed their response to the application for hearing and requested an order regarding the $8,451.08 asserted overpayment.

15. Hearing on the issues was held before ALJ Donald Walsh on November 14, 2013. A transcript of the hearing is found at Respondents Submissions Bate Stamp Number (BN) 078-130. Evidence was introduced at hearing demonstrating Claimant worked while collecting TTD. Claimant also incorrectly affirmed in checks she received from Insurer that she was not working while collecting TTD. The hearing addressed the issues of PPD (conversion to whole person), disfigurement and overpayment.

16. Claimant argued before Judge Walsh that Respondents had accepted $18,000.00 as full payment for their subrogation lien against Claimant's third-party settlement. Since the overpayment amount was, as admitted by counsel for Insurer in the third party action, included in the lien figure submitted to Claimant's personal injury attorney, the $18,000.00 paid off the claimed overpayment. Consequently, Claimant asserted that requiring Claimant to repay the asserted overpayment would, in essence amount to "double-dipping" on the part of Insurer. This argument was rejected by Judge Walsh who entered a Summary Order in the matter on December 27, 2013. A request for a full order was made. Specific Findings of Fact, Conclusions of Law, and Order ("Specific Findings") were issued by Judge Walsh on January 21, 2014.

17. In his Specific Findings, Judge Walsh determined Judge Walsh determined that Claimant was overpaid $8,451.08. He also concluded that the overpayment was not affected by the third-party settlement. Consequently, Judge Walsh concluded that Insurer was entitled to recoup the overpayment of $8,451.08 against future benefits.

Additionally, Judge Walsh found the overpayment subject to the collection remedies under Section 8-43-306, C.R.S.

18. Judge Walsh also determined that Claimant had proven that her permanent impairment extended beyond the upper extremity. Accordingly, Judge Walsh converted the scheduled impairment to a 2% whole person award. Finally, Judge Walsh concluded that Claimant had disfigurement entitling her to an award of $1,500, which was $1,200 more than Insurer had admitted for in their July 16, 2013 FAL. Because the increased benefits owed to Claimant for the conversion and additional disfigurement was less than the asserted overpayment, Respondents did not pay any additional money to the Claimant following the November 14th hearing.

19. Claimant appealed Judge Walsh's order to the Industrial Claims Appeals Office (ICAO), arguing that the overpayment was previously paid through the settlement of the third-party allocation agreement. After briefing, a panel from the ICAO affirmed Judge Walsh's Specific Findings in a June 11, 2014 Final Order. The ICAO rejected Claimant's assertion that the overpayment was included in the agreement to divide the third-party settlement proceeds. The ICAO agreed there was insufficient evidence of a "voluntary, knowing, and intelligent waiver of the right" to recoup the overpayment. The ICAO determined the matter was a factual dispute and it must defer to Judge Walsh's resolution if supported by substantial evidence in the record.

20. Claimant appealed the ICAO determination to the Court of Appeals. In a February 12, 2015 decision, the Court of Appeals set aside the prior decisions of Judge Walsh and the ICAO and remanded the case with directions. In remanding the case, the Court noted:

> As claimant points out, Pinnacol's subrogation counsel acknowledged that the total lien amount paid by Pinnacol to claimant included the overpayment. In particular, she conceded that the lien amount of $44,739.39 represented all payments Pinnacol made to claimant, including the $8,451.08 overpayment. The settlement of the lien thus necessarily, and "mathematically," incorporated the overpayment.

21. The ICAO issued a remand order on April 2, 2015 to Judge Walsh.

22. Judge Walsh issued his Findings of Fact, Conclusions of Law, and Order on Remand ("Remand Order") on April 30, 2015. Consistent with the opinion of the Court of Appeals, Judge Walsh's Remand Order used the same language mandated by the Court of Appeals' decision.

23. In the Remand Order, Judge Walsh issued the following orders: 1. Respondents' request for reimbursement of the overpayment paid to the claimant in the amount of $8,451.08 is denied and dismissed. 2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due. 3. All matters not determined herein, and not closed by operation of law, are reserved for future determination. Judge Walsh incorporated the language from the Court of Appeals that

indicates the parties' agreement to allocate the third-party settlement proceeds was a full and final settlement. When read in conjunction with the Court of Appeals' opinion, Judge Walsh adopts the Court of Appeals' characterization of the third-party allocation agreement as a resolution of all claims and debts between the parties. The order does not specifically require Respondents to make any additional payment to Claimant.

24. Respondents complied with the order and took no action to recover any overpayment from Claimant following Judge Walsh's remand order. Nonetheless, Insurer did not pay Claimant additional money owed for conversion of the scheduled impairment to impairment of the whole person nor did Insurer pay for the additional disfigurement and interest ordered by ALJ Walsh in his Order dated January 21, 2014.

25. Claimant alleges Respondents violated the April 30, 2015 Remand Order due to Insurer's failure to pay the additional impairment and disfigurement benefits that "should have been paid immediately upon issuance of the April 30, 2015 order" resolving the dispute surrounding Insurer's right to recoup their asserted overpayment. Claimant filed an application for hearing on the issue of Respondents' failure to comply with the April 30, 2015 remand order.

26. In her December 16, 2015 application for hearing, Claimant listed one issue for determination, specifically: "failure to comply with Court Order dated April 30, 2015." Penalties were not listed as an issue. Further, the application for hearing did not specify how the remand order was violated.

27. Respondents claim that the application for hearing was vague and that they were unaware of what Claimant was seeking by filing the application for hearing. Because it was unclear to Respondents what Claimant was seeking, Respondents' requested a PHC to clarify the issues for hearing and discuss whether there was some resolution that might be reached. The parties participated in a PHC with PALJ Craig Eley on March 8, 2016. Respondents' request for a PHC represents the first action by either party to discuss the issue raised in Claimant's December 16, 2015 application for hearing.

28. During the aforementioned prehearing, Respondents learned from Claimant that she did not view the April 30, 2015 remand order as merely removing her obligation to reimburse Respondents for the asserted overpayment, but as an order requiring them to pay additional benefits.

29. Following the PHC, Respondents, without admitting that the Remand Order required additional money to be paid to Claimant, agreed to resolve the dispute by making a full payment to Claimant for the value of her converted impairment rating, less previous permanent partial disability (PPD) paid, in addition to additional disfigurement as ordered by ALJ Walsh, less disfigurement previously paid, plus interest payable on benefits not paid when due. Claimant was paid $3,024.96 for the PPD/disfigurement and $551.30 for interest.

30. On March 10, 2016, or two days after the aforementioned PHC, where Claimant explained her position and while respondents were arranging for payment of the moneys requested, Claimant filed a second application for hearing, this time endorsing the issue of penalties. Claimant provided a detail statement for the requested penalties. The explanation is similar to the explanation provided by Claimant at the PHC two days earlier with Judge Eley where her counsel explained why Respondents should pay her additional PPD, disfigurement and interest.

31. On March 22, 2016 Insurer paid the additional benefits awarded by Judge Walsh in his January 21, 2014 Order. Specifically, Insurer paid $3,024.96 for additional PPD and disfigurement as ordered by ALJ Walsh. A second check in the amount of $551.30 was paid in interest for the improperly withheld PPD and disfigurement.

32. Claimant seeks penalties from the date the April 30, 2015 order became final, or May 20 through March 21, 2016, as the penalty was cured by Respondents on March 22, 2016. The ALJ takes judicial notice of the fact that 305 days exists between May 21, 2015, the first day of penalty exposure and March 21, 2016, the last day of penalty exposure.

33. Respondents assert that even if the order on remand could be read as requiring The imposition of a penalty for non-payment of benefits ordered, the credible and persuasive evidence demonstrates Respondents cured any penalty timely based upon the payments made to Claimant on March 22, 2016; which payments fully satisfied any claim to additional benefits, including interest. The payment was made 12 days after she filed her application for hearing asserting penalties.

34. Based upon the evidence presented, the ALJ finds that Respondents cured the alleged violation of ALJ Walsh's April 30, 2015 remand order and by extension any penalty arising from a violation of the January 21, 2014 order.

35. The credible evidence presented in this case demonstrates Respondents' actions in response to the April 30, 2015 remand order, and by extension the January 21, 2014 order issued by Judge Walsh were not objectively reasonable. Further, the evidence presented persuades the ALJ that knew or reasonably should have known that they were in violation of the orders issues. Consequently, the ALJ is persuaded that Respondents are subject to penalties in this case.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, et seq., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the Claimant nor in favor of the rights of Respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

B. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

Penalties

C. Section 8-43-304(1), C.R.S. provides, in pertinent part, that "any employer or insurer . . . who . . . fails, neglects or refuses to obey any lawful order . . . shall . . .be punished by a fine of not more than one thousand dollars per day for each such offense, to be apportioned, in whole or part, at the discretion of the director or administrative law judge, between the aggrieved party and the workers' compensation cash fund created in section 8-44-112(7)(a); except that the amount apportioned to the aggrieved party shall be a minimum of fifty percent of any penalty assessed."

D. The imposition of penalties under § 8-43-304(1) is a two step process. Before penalties may be assessed the ALJ must first determine whether the disputed conduct constituted a violation of the Act, of a duty lawfully enjoined, or of an order. If the ALJ finds such a violation, he may impose penalties if he also finds that the employer's actions were objectively unreasonable. *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003); *Pioneers Hospital of Rio Blanco County v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Jimenez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). The "objective standard" is measured by reasonableness of the insurer's action and does not require knowledge that the conduct was unreasonable." *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo. App. 1995).

E. In the instant case, Respondents contend that "a plain reading of the Court of Appeals' order of remand indicates there was a **"**full and final settlement" of "all claims and debts associated with a claim." Consequently, Respondents argue that the claim to additional PPD and disfigurement benefits after the agreement cannot be maintained."

According to Respondents argument, the right to those benefits were claims that arose when Claimant reached MMI and prior to the agreement settling the third party action. Per Respondents, if the parties were deemed to have memorialized the “resolution of the entire dispute between the parties” with the agreement on distribution of the third-party proceeds, Claimant’s later claim for increased PPD and disfigurement were also settled. When that same reasoning is applied to Claimant’s assertion that she is entitled to further benefits for conversion of the scheduled rating and disfigurement, Respondents argue that it is clear these were claims for benefits that accrued at MMI and prior to the “full and final settlement” as found by the Court of Appeals. Thus, Respondents’ contend that if collection of the overpayment is barred, so must be the claim for further PPD and disfigurement benefits. Moreover, because ALJ Walsh incorporated, into his remand order, the language from the Court of Appeals decision that indicates the parties’ agreement to allocate the third-party settlement proceeds was a full and final settlement, Respondents assert that the any claim for additional PPD, disfigurement benefits and interest as ordered by ALJ Walsh on January 21, 2014 is barred. Simply put, Respondents contend that Claimant “settled” all workers’ compensation claims on a “full and final” basis when she negotiated the settlement of Insurer’s subrogation interest in her third party action. The ALJ is not persuaded. Rather, the ALJ finds that the Court of Appeals decision addressed the narrow issue concerning Claimant’s assertion that Respondents’ claimed overpayment was included in Respondents’ agreement to settle their subrogation lien and whether Claimant was obligated to repay the overpayment in the event that it was excluded from the asserted lien. Based upon the evidence presented, the ALJ concludes that the Court of Appeals determined only that “all claims and debts” associated with the third party subrogation lien were settled rather than “all” claims associated with the workers compensation claim. Indeed, the Remand Order from the ICAO notes only that the Court concluded that the third party settlement “unambiguously encompassed all portions of the lien, including the overpayment.”

F. Citing that the first page of the Remand Order wherein ALJ Walsh ordered Claimant to reimburse the respondent-insurer for the asserted $8,451.08 overpayment which was later reversed and remanded by a panel of the Court of Appeals, Respondents also contend that there is no “order” compelling the payment of additional benefits. Instead, the remand order “releases” Claimant from reimbursing Respondents for the overpayment. Thus, Respondents argue that there has been no violation of the April 30, 2015 Remand Order. While the April 30, 2015 order does not specifically indicate that Respondents were ordered to pay additional benefits, the ALJ finds and concludes that the April 30, 2015 remand order removed the barrier, i.e. the claimed overpayment shielding Respondents from having to pay additional PPD and disfigurement benefits pursuant to the order of ALJ Walsh issued January 21, 2014. The ALJ agrees with Claimant that once this shield was removed, Claimant was entitled to the payment of additional PPD and disfigurement previously ordered. Because the only issue on appeal from the January 21, 2014 order involved Claimant’s obligation to repay the claimed overpayment, the ALJ concludes that the obligation to pay additional PPD and disfigurement as set forth in the January 21, 2014 order was subsumed in the April 30, 2015 remand order. Simply put, ALJ Walsh was not required to specifically order Respondents to direct payment of additional benefits again. Indeed, as found, Claimant raises this point in her specific statement regarding penalty claim attached to her application for hearing admitted into evidence. Since the April 30, 2015 order incorporates the January 21, 2014 order, which had become final as to Respondents obligation to pay Claimant additional PPD, disfigurement and interest, the ALJ finds and concludes that Respondents' violated the April 30, 2015 order when they did not pay Claimant the money owed for these additional benefits. Consequently, the ALJ concludes that the first prong of the two part test concerning the imposition of penalties has been met. Nonetheless, Respondents assert that their action in response to the remand order issued April 30, 2015 by ALJ Walsh was "objectively reasonable" and they otherwise cured any violation pursuant to Section 8-43-304(4). Consequently, Respondents urge the ALJ deny and dismiss the claim for penalties.

G. Section 8-43-304(4) provides that any party alleged to have committed any violation categorized above shall have twenty days to cure the violation from the date of mailing of an application for hearing in which penalties are alleged. Section 8-43-304(4) also provides that if the alleged violator cures the violation within the twenty-day period, and the party seeking a penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed. Accordingly, no penalty may be imposed if, first, the violation is cured within twenty days and, second, the moving party fails to prove by clear and convincing evidence that the violator knew or should have known of the violation.

H. The cure statute adds an element of proof to a claim for penalties in cases where a cure is proven. In the ordinary case, it is not necessary for the party seeking penalties to prove that the violator knew or reasonably should have known they were in violation. All that is necessary is that the party seeking penalties prove the putative violator acted unreasonably under an objective standard. *See Jiminez v. Indus. Claim Appeals Office,* 107 P.3d 965 (Colo.App.2003); *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996). Section 8-43-304(4) modifies this rule and adds an extra element of proof when a cure has been effected. Accordingly, when a cure has been effected the party seeking penalties must prove the violator had actual or constructive knowledge that its conduct was unreasonable. *Diversified Veterans Corporate Center v. Hewuse,* 942 P.2d 1312 (Colo. App. 1997); *Ray v. New World Van Lines of Colorado* W. C. No. 4-520-251 (October 12, 2004). Here, the evidence presented convinces the ALJ that once Claimant filed her application for penalties, Respondents cured the alleged violation within the twenty (20) day time period provided for by statute. Payment for additional PPD, disfigurement and interest was made to Claimant on March 22, 2015, 12 days after Claimant filed her application for penalties. Consequently, Claimant was required to prove, by clear and convincing evidence, that Respondents knew or reasonable should have know that they were in violation of ALJ Walsh's April 30, 2015 order. Respondent's contend that "given the complexity of the issues and facts, as well as the ambiguous language of the remand order", that it is "not credible or persuasive" to conclude that respondents could have made the "logical leaps and assumptions" to conclude that additional money was due and owing to Clamant and should be paid. The ALJ is not persuaded. While this case clearly has a complex procedural history, the ALJ notes from the evidence submitted that the adjuster assigned to the case has remained consistent and Respondents have been represented at various times during the claim by qualified in house counsel or by attorneys from outside law firms. It is because this case has a complex procedural history, created by the litigation that has ensued, that the undersigned finds it highly improbable that Respondents would not know that they were in violation of ALJ Walsh's directive to pay Claimant additional PPD, disfigurement and interest once the dispute concerning recovery of the overpayment was resolved. In other words, the ALJ is convinced that it is highly probably and free from serious doubt that Respondents knew or should have known that failure to pay Claimant consistent with the January 21, 2014 order following issuance of the April 30, 2015 remand order would constitute a violation of the April 30, 2015 remand order and by extension the January 21, 2014 order.

I. In concluding that Respondents knew or reasonably should have known that they were in violation of the April 30, 2015 remand order, the ALJ finds the claim of *Darren Varga v. A1 Sewer Master Mountain Water and Ace Insurance Company*, W.C. 4-508-548 (ICAO, July 1, 2004) instructive. In *Varga*, Claimant appealed the decision of an ALJ which failed to impose a penalty for respondents' failure to timely file a General Admission of Liability or an application for hearing pursuant to statute. The ALJ denied the penalty based upon respondents' cure and the failure of Claimant to present evidence, such as "testimony from the adjuster", that respondents knew or reasonably should have known of the violation. In remanding the claim, the ICAO noted that the "parties to a workers' compensation claim are presumed to know the applicable law." *Citing Midget Consol. Gold Mining Co. v. Industrial Commission*, 64 Colo. 218, 193 P. 493 (Colo. 1920); *Paul v. Industrial Commission*, 632 P.2d (Colo. App.1981); *cf. Federal Life Insurance Co. v. Wells*, 98 Colo. 455, 56 P.2d 936 (Colo. 1936). Citing Colorado Rule of Evidence 301, the ICAO noted further "that the party against whom the presumption is directed must come forward with evidence to rebut the presumption." Because neither Mr. Varga nor respondents presented evidence concerning the reason for the respondents' violation of a statute, the ICAO determined that the ALJ was "required" to presume that respondents knew the requirements of the statute. The ICAO went on to indicate the "[b]ecause the respondents' knew the rule and did not present any factual or legal argument that their actions did not violate the rule, the record [compelled] the conclusion that the respondents' knew or reasonably should have known that their actions violated § 8-42-107.2", i.e., the statute in question. Like the situation presented in *Varga*, neither party to the instant claim presented testimony concerning Insurers "knowledge" and understanding of the January 21, 2014 and April 30, 2015 orders. While Respondents argued that their "actions in response to the remand order issued by Judge Walsh were "objectively reasonable", they did not present any testimony in support of that position. Argument by counsel is not evidence. *See Subsequent Injury Fund v. Gallegos*, 476 P.2d 71 (Colo. App. 1987). Accordingly, in keeping with the decision announced in Varga, the undersigned ALJ concludes that he was required to presume that Respondents knew the content of both the January 21, 2014 and April 30, 2015 orders and their obligation to pay benefits there under. Consequently, the ALJ agrees with Claimant that:

> There was only one reason why the Respondents were withholding the payment of additional disfigurement money and additional money for a whole-person impairment --- their alleged overpayment. Once the courts reversed the earlier decision on the overpayment issue, the Respondents had no reasonable basis to withhold payment from Claimant. . . . The Respondents were aware that they would have had to pay additional benefits had they not prevailed initially on the overpayment issue. Therefore, once they lost that issue on appeal, there was no rational basis for holding onto money based on an alleged overpayment.

J. Because the ALJ presumes that Respondents knew the content of the January 21, 2014 and April 30, 2015 orders and finds that they otherwise did not have a reasonable argument for their decision to withhold payment to Claimant, the record evidence compels a conclusion that Respondents knew or reasonably should have known of their violation of the April 30, 2015 by virtue of the previous January 21, 2014 order. *See Varga v. A1 Sewer Master Mountain Water and Ace Insurance Company*, *supra*, *citing Schreiber v. Brown & Root, Inc*., 888 P.2d 274 (Colo. App. 1993). As found, Claimant has established that Respondents violated an order subjecting them to penalties in this case.

ORDER

It is therefore ordered that:

1. Respondents shall pay to Claimant a penalty in the amount of twenty-five ($25.00) dollars per day for 305 days for a total penalty of $7,625.00 for their violation of ALJ Walsh’s order(s).

2. Pursuant to § 8-43-304(1) the penalty assessed is apportioned between Claimant and the workers’ compensation cash fund created in section 8-44-112(7)(a). Fifty percent (50%) of the penalty assessed shall be paid to Claimant and the remaining fifty percent of the penalty assessed shall be paid to the workers’ compensation cash fund.

3. All matters not determined herein are reserved for future determination.

DATED: September 28, 2016

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-949-918-02

ISSUE

> Whether the Claimant proved, by a preponderance of the evidence, that he is entitled to continued medical treatment after MMI consisting of osteopathic manipulation and massage therapy.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ finds as fact:

1. The Claimant is a firefighter and hazmat technician who suffered a neck injury on February 3, 2011. He was investigating a fire in a warehouse and an overhead electronic door, a zip door, closed unexpectedly and struck the top of his helmet. Employer admitted liability and provided medical benefits.

2. The Claimant received treatment on the date of the injury with Dr. Dickson and complained of pain in the back of his neck and low back. Neck range of motion was normal. X-rays revealed no fracture. The Claimant saw Dr. Blair on February 7, 2011, stated his neck felt better and was diagnosed with resolving cervical and lumbar strains.

3. On March 15, 2011, the Claimant was referred to Dr. Gridley, a chiropractor. After five visits, Dr. Gridley found that the Claimant was 75% improved.

4. Dr. Blair diagnosed a slowly resolving cervical strain on April 18, 2011 and prescribed six additional chiropractic visits. On August 11, 2011, Dr. Blair noted that the Claimant still complained of some postero-lateral neck pain. An MRI performed on August 25, 2011 showed degenerative disc disease with a left-sided disc protrusion and C6-7.

5. The Claimant then went a year without further treatment for his neck problems. He explained to Dr. Wunder that he still had some symptoms but that he didn't want to miss any work.

6. On September 3, 2012, the Claimant was working out with weights at the fire station. The following morning he had a sensation of left arm tingling and numbness in the first and second digits. The September 3, 2012 claim was administered under W.C. 4-933-652. The Claimant chose Concentra to provide treatment for the September 3, 2012 incident. After he complained of shooting pains and numbness in the left thumb and index fingers, MRIs of the neck and brachial plexus were performed on October 9, 2012. The brachial plexus MRIs were normal and the cervical spine MRI showed the same C7 abnormality and left C6-7 stenosis. The Claimant treated for the September 3,

2012 incident separately and on March 13, 2013 Dr. Burris placed the Claimant at MMI. He found no neurological deficits in the cervical spine and the Claimant continued to perform his usual duties.

7. Dr. Linda Mitchell performed an IME on January 13, 2014. The Claimant complained of neck pain and stiffness with an occasional headache. He had some numbness over the left forearm into the left thumb and index finger. He also complained of occasional numbness in his right arm. He had no upper extremity weaknesses. Dr. Mitchell's spinal examination found tightness in the right splenius capitis, the left posterior scalenes, and the trapezius bilaterally. Sensation and strength were normal in both upper extremities. Dr. Mitchell diagnosed a herniated disc at C6-7 with severe left C6-7 foraminal stenosis and cervical spondylosis. She provided a 6% impairment for specific disorders of the cervical spine under Table 53.II.C and a 9% impairment for loss of cervical spine range of motion. These combined to a 14% whole person impairment rating. Dr. Mitchell explained that the September 3, 2012 weight-lifting incident did not cause any new injuries. She stated that Claimant's progressive radicular symptoms after the 2012 weight-lifting incident were the result of a natural progression of his degenerative disc disease. She further stated that the right arm symptoms were unrelated to the February 3, 2011 or September 3, 2012 incidents at work.

8. The parties reached a Stipulation Regarding Benefits and agreed that for this claim (W.C. 4-949-818), the Claimant reached MMI as of January 13, 2014 and agreed with the 14% whole person impairment rating. Respondent filed a Final Admission of Liability consistent with the parties' stipulation and Dr. Mitchell's report on August 8, 2014. Per the Final Admission of Liability and the Stipulation of the parties, Dr. Blair and Dr. Chan would remain the Claimant's authorized treating physicians for reasonable and necessary post-MMI benefits.

9. The Claimant saw Dr. Blair on January 22, 2015. The Claimant complained continued neck pain and paresthesias and numbness of the left upper extremity. Dr. Blair noted the Claimant continued to slowly improve with osteopathic manipulation and massage therapy. Dr. Blair noted that, "because of the recent episode of paresthesias and numbness, [the Claimant] is starting to think more seriously about the possibility of surgery. However, he does feel that he is making continued slow incremental improvement with the treatments as outlined above and prefers to give this a little more time before considering surgery." Dr. Blair further noted that "the purpose of continued osteopathic manipulation and myofascial release is to maintain the patient at MMI and full duty status and hopefully allow the herniated disc to contract and avoid surgery."

10. The Claimant saw Dr. Samuel Chan on January 28, 2015 for maintenance acupuncture treatments. The Claimant continued to work full-time, full-duty but complained of fluctuation of pain in the cervical and lumbar spine area. At this visit, the Claimant reported no radiating pain, no numbness and no tingling sensation. Dr. Chan diagnosed myofascial type complaints and provided acupuncture treatment for maintenance.

11. From February 18, 2015 to March 18, 2015, the Claimant continued to treat with Dr. Chan for maintenance acupuncture. The Claimant reported that the combination of acupuncture and the osteopathic manipulation therapy continued to offer benefits although the Claimant continued to report pain at 5/10. Dr. Chan noted the Claimant was not using any medications and was working without restrictions.

12. On April 13, 2015, the Claimant saw Dr. Blair and reported that he had recently had a lot of smoke/carbon dioxide calls, which require him to have his neck at full extension while wearing a helmet, and this was causing him increased neck symptoms. The Claimant also reported continued benefit from the maintenance treatment, specifically the osteopathic treatments with Dr. Woessner, which Dr. Blair recommended the Claimant continue.

13. On April 16, 2015, the Claimant saw Dr. Chan and reported the pain complaint was between 4/10 and 6/10 in the cervical spine, lumbar spine and left upper extremity. Dr. Chan noted that the Claimant reported he is able to increase his activity level and continued to be working full-time, full duty with the maintenance care.

14. On May 14, 2015, the Claimant saw Dr. Blair and reported that his maintenance treatment, including osteopathic manipulation, acupuncture, and massage are keeping his symptoms controlled and allowing him to continue to work his full duty job as a firefighter. The Claimant reported that he believed the high-profile helmet that he was wearing frequently would bang into over-hangs in crawl spaces and so he was re-traumatizing his neck, but the Claimant stated that he was on a list to try a new, lighter, low profile helmet and was hoping that this might improve symptoms. The Claimant also reported that while he was continuing to work full duty, he had applied for a transfer to a more administrative type job that would not require wearing all of the heavy, bulky firefighter equipment. Dr. Blair recommended Claimant continue full duty and his continuance maintenance treatment.

15. On June 16, 2015 the Claimant saw Dr. Joshua Krembs for osteopathic manipulation therapy and complained of left arm tingling, neck pain, low back pain, and left foot pain. Dr. Krembs did note, however, that the recent paresthesias likely stemmed from being in an awkward position while weightlifting. The paresthesias stopped when the Claimant changed positions.

16. On June 25, 2015, the Claimant treated with Dr. Blair and reported the most benefit from the osteopathic manipulation. He reported that the medical massage would temporarily improve his symptoms. The Claimant reported that he continued to work full duty and is being careful to avoid traumatizing his neck. The Claimant also reported that he borrowed a upper extremity posture brace device from Dr. Woessner and that was helping with his symptoms. Dr. Blair recommended continued maintenance treatment and asked the Claimant to discuss with Dr. Woessner if she felt that interposing massage therapy in between osteopathic manipulation therapy sessions would be helpful. The Claimant also reported that while he had considered

transferring to another, less strenuous job, it did not appear that would happen any time soon.

17. On July 15, 2015, Dr. Krembs noted that the tension in the low back / sacral area was the area of greatest discomfort. The Claimant reported that there was "sustained benefit" from recent treatments and he was more active around the house and the fire station with minimal symptoms. Osteopathic treatment was directed to the head, cervical spine, lumbar spine, pelvis, the upper extremity, the ribs, and the abdomen. The July 23, 2015 visit to Dr. Krembs, the Claimant reported he was feeling healthier and healthier in response to recent treatments with some tension in his low back and neck and intermittent "burning/stabbing/aching." Dr. Krebs listed the same diagnoses as before, neck strain improving, cervical disc herniation improving, shoulder pain improving, lumbosacral pain improving, and muscle spasms improving. On July 30, 2015, the Claimant's chief complaints were "Bilateral diffuse shoulder / upper back pain. Mild low back pain/tension. Left foot pain." However, the Claimant reported that work was much less of a pain trigger recently.

18. On July 30, 2015, the Claimant also treated with Dr. Blair, who noted that the Claimant continues to receive a benefit from his maintenance treatment, including osteopathic manipulation and medical massage. Dr. Blair added that the conservative treatment has eliminated the Claimant's bilateral upper extremity paresthesia and numbness. Dr. Blair recommended that the Claimant continue to interpose the osteopathic manipulation and medical massage treatments.

19. On August 26, 2015, the Clamant reported to Dr. Krebs that he felt better since his last treatment but "work continues to provide opportunities for exacerbating his pain. Dr. Krebs noted the Claimant had not been sleeping well lately.

20. On August 27, 2015, Claimant treated with Dr. Blair, who noted that the Claimant's treatment regimen, including osteopathic manipulation and myofascial release massage, has eliminated the Claimant's upper extremity paresthesia and numbness. Dr. Blair noted that the Claimant reported to him that a few weeks ago he felt he might not need further treatment, and then he had two intense work calls that flared up his neck symptoms. Dr. Blair noted that the Claimant had tightness and mild pain in the posterior cervical musculature and recommended the Claimant continue his maintenance treatment.

21. On September 1, 2015, the Claimant also advised Dr. Krebs that working big fires had flared his symptoms. He reported that he felt better again due to the OMT, massage and maintaining his stretching program at home. The Claimant reported he was still not sleeping well.

22. The Claimant returned to Dr. Krembs on September 8, 2015 with increased complaints of neck /upper back pain and low back pain after using "jaws of life" tool to extract 2 kids from a care. The tool weighs about 70 pounds, but due to being in a hyper adrenal state, the Claimant was working with it like it didn't weigh

anything. However, the next morning he woke up with a lot of localized discomfort. On September 16, 2015, the Claimant reported that the prior treatment had been very helpful and he felt good for several days until he was working another large fire with heavy gear and his low back and neck pain returned. Dr. Krebs also opined that lack of sleep was a contributing factor to the Claimant's general symptoms at that visit as the Claimant attended a minor fire around 4:30 AM prior to the visit. Dr. Krebs saw the Claimant again on September 22, 2015 and noted the neck and low back pain had returned even though the Claimant did not recall any particularly severe or strenuous incidents at work. The Claimant was still reporting difficulty sleeping and general discomfort was up to 5-6/10 as opposed the 4/10 that it had been at recent visits.

23. On October 8, 2015, the Claimant treated with Dr. Blair and reported that he had a significant setback about three weeks prior with increased neck pain and bilateral hand paresthesia. The Claimant reported that, at that point, he definitely though he needed to proceed with surgery, but then the symptoms calmed down in the interim. Dr. Blair recommended the Claimant follow-up with Dr. Rauzzino to discuss surgery and to continue the maintenance treatment.

24. On October 14, 2015, Dr. Krembs noted that he strongly supported the Claimant avoiding severely exacerbating activities at work. The Claimant reported sleeping 5-6 hours a night which was an improvement over recent visits. Otherwise the diagnoses and treatment were similar to before. Then, the Claimant returned to Dr. Krembs on October 19, 2015 and stated that his low back hurt after exacerbating his pain at a fire 4 days prior where he had to throw around heavy ladders. The Claimant reported that it felt like his kidney hurt, although he denied urinary symptoms. The Claimant was back to sleeping only 3-4 hours nightly with some difficulty. On October 22, 2015, the Claimant told Dr. Krembs that he used his inversion table for the first time in a year and, while gently moving around at a tilted angle, he experienced a very deep "clunk, clunk, clunk" in his lumbar spine. Since then the Claimant reported that he felt "fantastic" with almost no pain in his lumbar spine. On October 28, 2015, the Claimant reported a dramatic response to the last treatment. He reported about 36 hours of feeling very "off" and then he suddenly felt dramatically more resilient and health with only a "shadow" of his low back pain and upper thoracic pain. The Claimant reported that he continued to feel well with no flare in symptoms even after a very heavy work training session on extraction using the "jaws of life." The Claimant attributed this to the result of treatments and taking Dr. Krebs advice to work smart. On November 4, 2015, the Claimant reported a return of some pain around his neck and left upper back/shoulder region with some numbness/paresthesias in his left arm, but the low back continued to feel better than usual. As of November 24, 2015, the Claimant's chief complaints to Dr. Krebs were neck/upper back pain, low back pain which continued to be "tight and vulnerable."

25. On November 24, 2015, the Claimant treated with Dr. Blair and reported continued symptoms and that he exercises considerable caution in terms of sleep posture and when working as a firefighter to try and avoid aggravating his neck. The Claimant reported that he continues to get osteopathic manipulation but that no

additional massage therapy had been approved. Dr. Blair recommended the Claimant continue his maintenance treatment.

26. The Claimant continued to receive osteopathic manipulation treatments with Dr. Krembs through December 2015 and January 2016. On December 21, 2015, the Claimant told Dr. Krembs that the kink in his neck resolved after treatment but that he still had "generalized tension" in his neck and upper back. He attributed this to wearing his normal firefighting gear. Dr. Krembs' December 31, 2015 note stated that the waxing and waning symptoms returned in the neck, thoracic spine, and lower lumbar region after one week. On January 5, 2016, the Claimant complained that his neck, upper back, low back, and foot pain went from a 4/10 to a 6/10 due to fighting a structure fire. On January 14, 2016, the Claimant told Dr. Krembs that the previous treatment help for about 5 days but symptoms of neck, upper back, and low back pain returned due to more effort and stress at work. The Claimant had trouble finding a way to "crack" his low back and reduce tension.

27. On January 13, 2016, the Claimant underwent an independent medical examination with Dr. Jeffrey A. Wunder, M.D. Dr. Wunder noted that he performed a physical examination and reviewed the Claimant's medical records up through October 18, 2015. Dr. Wunder found that the Claimant had chronic neck pain with an undetermined pain generator and age related cervical degenerative disc disease. Dr. Wunder opined that the Claimant did not require any additional osteopathic manipulation or massage therapy treatment. Dr. Wunder added that Claimant has already received more treatment than outlined in the Division of Workers' Compensation Treatment Guidelines and, therefore, has been over-treated. Dr. Wunder recommended Claimant try a home cervical traction machine and opined that the Claimant needs to be more independent with pain management rather than relying on others for pain control.

28. The Claimant saw Dr. Blair on January 14, 2016 and reported that he tried to exercise care when working to avoid traumatizing his neck. Dr. Blair noted the Claimant continued to inquire about being provided with a newer lightweight helmet and that the Claimant was "actively pursuing a job change within the fire department so as to avoid the physical strenuousness of working as a firefighter." Dr. Blair opined that the Claimant continue full duty status and treatment with Dr. Krembs, but that if the Claimant could change job duties to less strenuous work that the neck symptoms would decrease to the point where treatment could be discontinued.

29. On January 20, 2016, the Claimant underwent an osteopathic manipulation session with Dr. Krembs and reported at least four days relief after the last treatment. On February 1, 2016, the Claimant underwent an osteopathic manipulation session with Dr. Krembs and reported the last treatment was very helpful. The Claimant reported that his main area of discomfort is the left side of his neck and upper back; the Claimant reported aching, burning, and tension. The Claimant also reported that when he sleeps on his side, his left thumb and index fingers go numb. On February 10, 2016, the Claimant underwent an osteopathic manipulation session with Dr. Krembs and reported that he did exceptionally well after the last treatment, which completely

resolved his numbness and tingling in his left forearm. The Claimant did report that on February 9, 2016, he was called to a physically challenging fire during the Broncos parade and this fire increased his symptoms. Dr. Krembs recommended Claimant follow-up for additional treatment.

30. On February 16, 2016, the Claimant treated with Dr. Blair who noted that the Claimant continued to have waxing and waning symptoms of neck pain and stiffness with some upper extremity paresthesias and numbness. The flare ups typically occur when he is involved in a particularly strenuous call, such as when he has to extract people from vehicles. Dr. Blair stated that the Claimant finds that osteopathic manipulation and massage in combination will calm his symptoms and allow him to continue with full duty work status. Dr. Blair also noted that he spoke to Dr. Krembs on the phone and reviewed his osteopathic notes. Dr. Blair noted that Dr. Krembs had the same findings, essentially that Claimant can be asymptomatic and then have a significant flare-up of symptoms after a strenuous Fire Department call. Dr. Blair noted that Dr. Krembs recommended continued maintenance treatment, and Dr. Blair additionally recommended the Claimant try a home cervical traction unit.

31. On February 29, 2016, the Claimant applied for a hearing on reasonable and necessary medical benefits; specifically, the Claimant requested chiropractic manipulation and medical massage, as recommended by Dr. Blair.

32. On March 15, 2016, the Claimant treated with Dr. Blair and reported waxing and waning symptoms, including neck pain and stiffness and occasional paresthesia and numbness in both arms. As before, the Claimant reported that his symptoms are aggravated when he has a particularly physically strenuous call. The Claimant reported that the combination of osteopathic manipulation and massage help relieve his symptoms and allow him to continue to work his full-duty job. The Claimant reported that he continues to do his home exercises and stretches and to use his inversion table at home. Dr. Blair stated that he "concur[s] with Dr. Krembs that [the Claimant's condition] does require periodic maintenance treatments with both massage and osteopathic manipulation. The ideal situation would be to have several of these available on account such that when he does have a flare-up he can schedule a visit." Dr. Blair noted that Respondent denied ongoing massage therapy and osteopathic manipulation.

33. On May 5, 2016, the Claimant treated with Dr. Blair and reported continued symptoms. The Claimant stated that he woke up that morning with total numbness in his left index finger and thumb. The Claimant reported that was applying for less strenuous jobs at work. Dr. Blair noted that Claimant has a mild exacerbation of his symptoms and that the Claimant needs continued osteopathic manipulation and massage treatments to control his symptoms so that he can continue to work as a firefighter.

34. At the hearing, the Claimant testified that he has worked for Respondent for 19 years as a firefighter. The Claimant testified that his job duties include multiple

different tasks regarding fighting fires, inspection and motor vehicle accidents. His main duties involve being the truck man on a heavy rescue unit for search and rescue. The Claimant testified that since his injury he has had neck pain, stiffness, and tension as well as numbness and tingling primarily into his left arm. The Claimant testified that he has undergone a number of different treatment options, including injections, acupuncture, osteopathic manipulation, massage, physical therapy, cervical traction unit, home exercises, and stretching. The Claimant testified that throughout this claim, he continued to work full duty. The Claimant testified that his work activities, including vehicle extractions and major fires, aggravate his symptoms and limit his function. The Claimant testified that the osteopathic manipulation and massage therapy really helped him and allowed him to continue working full duty. The Claimant testified that two days prior to the hearing he worked a major fire and that he has had trouble sleeping due to pain and other symptoms in his neck and upper back since that fire. The Claimant testified that he is no longer authorized to undergo osteopathic manipulation and massage therapy and that he is now having to take 800mg Ibuprofen to try and relieve some of his symptoms. Further, the Claimant testified he completes a home exercise program and a stretching routine on a daily basis, as recommended by his therapist. The Claimant testified that of all the different treatment modalities he has undergone, the combination of osteopathic manipulation and massage provides him the most relief. Claimant testified that the treatment combination is awesome, and he is thankful he found it because he is not sure if he will be able to continue to do his full duty job without it. On rebuttal, the Claimant testified that he performs a combination of home exercises he received from his therapist religiously every day. He stated that without these exercises, he could not function, but nothing provides as much relief as the combination of osteopathic manipulation and massage. The ALJ finds the Claimant's testimony credible and persuasive.

35. At Hearing, Dr. Wunder testified as an expert in the field of physical medicine and rehabilitation. Dr. Wunder testified that he performed a physical examination of the Claimant and reviewed the Claimant's medical records. Dr. Wunder testified that the Claimant reported neck pain, headaches, and left upper extremity numbness. Dr. Wunder testified that his physical examination of the Claimant did not reveal much; there was no tenderness over the midline and slight tenderness to the left of C5-6 with no nerve root pain, radiation or facet joint pain. He was not able to determine a specific pain generator for the Claimant. Dr. Wunder testified that the Claimant does not require any additional osteopathic manipulation or massage treatment. Dr. Wunder testified that the Claimant has exceeded the recommendations outlined in the Colorado Medical Treatment Guidelines for both therapy and osteopathic manipulation. Dr. Wunder testified that he recommended the Claimant try using a home cervical traction unit. Additionally, Dr. Wunder testified that home exercises are essential to recovery and that there is no indication that the Claimant has been doing a home exercise plan. Dr. Wunder testified that the Claimant's work activities as a firefighter do not exacerbate the Claimant's condition.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Maintenance Treatment after MMI

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. The need for medical treatment may extend beyond the point of maximum medical improvement where Claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). The evidence must establish a causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado, 717 P.2d 1000 (Colo. App. 1986).*

An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003).

“If the evidence in a particular case establishes that, but for a particular course of medical treatment, a claimant’s condition can reasonably be expected to deteriorate, so that he will suffer a greater disability than he has sustained thus far, such medical treatment, irrespective of its nature, must be looked upon as treatment designed to relieve the effects of the injury or prevent deterioration of the claimant’s present condition.” *Milco Construction v. Cowan*, P.2d 539, 542 (Colo. App. 1992)

Osteopathic Manipulation and Massage

The Colorado Medical Treatment Guidelines for chronic pain provide guidance for physicians for the use of osteopathic manipulation and massage treatments.

For osteopathic manipulation treatment
The Guidelines provide that the maximum duration for osteopathic manipulation is 8 weeks. However, at 8 weeks, the patient may be reevaluated and continuing care may be indicated for certain chronic pain patients in whom manipulation is helpful in improving function, decreasing pain and improving quality of life. In these cases, treatment may be continued at one treatment every other week until the patient has reached MMI and maintenance treatments have been determined. Extended durations of care beyond what is considered “maximum” may be necessary in cases of re-injury, interrupted continuity of care, exacerbation of symptoms, and in those patients with comorbidities. Such care should be re-evaluated and documented on a monthly basis. There is good evidence that a combination of exercise and spinal manipulation is more effective than manipulation alone in relieving chronic neck pain, and that these advantages remain for more than one year after the end of treatment.
WCRP Rule 17, Exhibit 9, 7 CCR 1101-3.

For massage
The Guidelines provide that the maximum duration for massage treatments is 2 months.
WCRP Rule 17, Exhibits 9, 7 CCR 1101-3.

In this case, although number of osteopathic manipulation therapy and massage treatments the Claimant has undergone are in excess of the treatments recommended by the Medical Treatment Guidelines, the treatments have been effective to keep the Claimant stronger and functional and the medical records likewise document that the treatments enabled to Claimant to work full time, full duty. When the Claimant was involved in a particularly strenuous firefighter call, his symptoms would flare, but the combination of osteopathic manipulation therapy and massage allowed him to continue to function at a high level in a strenuous job. After he was no longer authorized to continue with these treatments, the Claimant testified that he needed to take 800 mg of ibuprofen to deal with his pain and be able to function well. Based on the benefit that he received from the manipulation therapy and massage treatments, he would like to receive additional treatments.

The Claimant's testimony is consistent with medical records of Dr. Blair and Dr. Krembs who noted improved/continued function and decreased pain with the osteopathic manipulation therapy and massage sessions. The medical records contain sufficient documentation to confirm functional gains and symptom relief during periods of symptom flare ups. Combined with the Claimant's credible testimony and the recommendations of his medical treatment providers, the ALJ finds there is sufficient basis for extending the duration of treatments.

While the Medical Treatment Guidelines were appropriately considered, the weight of the opinions expressed in the medical records by the Claimant's medical treatment professionals provides sufficient rationale for deviation from the Guidelines. Additional osteopathic manipulation and massage treatments are reasonably necessary to relieve the effects of the injury or prevent deterioration of the Claimant's present condition.

ORDER

It is therefore ordered that:

1. The Claimant proved, by a preponderance of the evidence, that the medical treatment consisting of additional osteopathic manipulation therapy and massage therapy is reasonably necessary to relieve the effects of his February 3, 2011 injury or prevent deterioration of the Claimant's present condition. Respondent shall pay for this medical treatment in accordance with the Official Medical Fee Schedule of the Division of Workers' Compensation.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 27, 2016

Kimberly A. Allegretti
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-985-283-03

STIPULATION

The parties stipulated that the Claimant's (AWW) is $787.40.

ISSUES

- Whether the Claimant suffered a compensable injury on April 2, 2015;

- If Claimant suffered a compensable injury, whether University Hospital is an authorized treating provider; and

- If Claimant suffered a compensable injury, whether she is entitled to receive temporary total disability (TTD) benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was working as a packer for the Employer on April 2, 2015 when a plastic basket fell and struck her in the lower abdomen and pelvic area. Claimant's job responsibilities as a packer included loading packaged buns into a plastic basket and stacking the plastic baskets filled with buns. Claimant testified the plastic baskets weighed six pounds when empty, and 30 pounds when filled with buns.

2. Claimant worked primarily as a bun guider prior to working as a packer. Claimant began working as packer one week prior to April 2, 2015. Claimant's job responsibilities as a bun guider required her to sit or stand and watch for damaged buns coming down a conveyor belt. A bun guider must dispose of the damaged buns by emptying a 49-pound trash can at least once an hour, and sometimes more often, during a one hour period

3. Claimant testified that she had been experiencing chronic abdominal and low back pain for over one year prior to April 2, 2015, and that her chronic pain began after she gave birth to her son via Cesarean section on February 5, 2014. Claimant testified that her preexisting conditions worsened after April 2, 2015 as a result of her work-related job duties.

4. Claimant testified that she reported her injury to her foreperson Sharon Henry on April 2, 2015.

5. Claimant sought medical care at University of Colorado Hospital (“University Hospital”) on April 2, 2015. The medical record does not reflect that Claimant reported to the providers at University Hospital that a basket struck her abdomen while at work or that her condition was work-related.

6. On April 2, 2015, Claimant told the providers at University Hospital that she had been experiencing chronic abdominal pain and low back pain for over a year. Claimant’s chief complaints were chronic abdominal pain, pain with intercourse for the past two months, and chronic low back pain for the past year. The ER physician, Dr. Druck, noted motion tenderness of the cervix on exam. Dr. Druck planned to treat Claimant for Pelvic Inflammatory Disease, which is an internal disease that affects the uterus and pelvis.

7. Claimant returned to University Hospital on April 13, 2015. She reported that lifting at work increased her pain symptoms.

8. Nicole Ourada is a Product Manager for the Employer and had been Claimant’s immediate supervisor since September 2013. Ms. Ourada testified that the plastic basket in question weighs three pounds empty and between 12.5 and 15 pounds at most when filled with buns.

9. Claimant testified that as of April 2015, her son weighed approximately 25 pounds, and that she enjoyed playing with him and lifting him, and that he was very active.

10. Ms. Ourada testified that Claimant had complained to her of abdominal and vaginal issues related to the birth of Claimant’s child prior to April 2, 2015.

11. Claimant was absent on three different occasions prior to April 2, 2015 for her abdominal issues.

12. On March 28, 2015, Claimant reported to her medical provider at OnPoint Urgent Care that she had been experiencing chronic abdominal and low back pain since her Cesarean section.

13. On May 8, 2015, Claimant completed Family Medical Leave Act paperwork at to University Health for chronic low back pain that began after her Cesarean Section. Dr. Nicholas Brown indicated that Claimant’s chronic pain issues were not work-related.

14. Claimant completed her statement of injury or illness for the Employer on June 11, 2015. Ms. Ourada testified that she heard of Claimant’s work-related injury for the first time at a meeting a few days prior to June 11, 2015. In her statement of injury or illness, Claimant did not report that she injured her back.

15. Claimant selected Workwell Occupational Health Clinic as her authorized provider. During Claimant’s first appointment at Workwell on June 15, 2015, she reiterated to Dr. Paul Ogden that the plastic basket struck her in the abdomen, and that

her position as a packer required frequent bending, twisting, reaching and lifting. She claimed soreness and achiness in the low back, and mild soreness in the pelvic and abdominal muscles. Claimant reported immediate severe pain after the injury happened (the ALJ infers that Claimant meant the basket striking her). Dr. Ogden deferred an opinion on causation until he could review Claimant's medical records.

16. After reviewing Claimant's medical records, particularly records from University Hospital, Dr. Ogden also concluded that Claimant's chronic pain issues were not work-related.

17. On March 7, 2016, Dr. Carlos Cebrian performed an independent medical examination of the Claimant at Respondents' request. Dr. Cebrian took a history from the Claimant, reviewed her medical records, and performed an examination. Dr. Cebrian concluded that Claimant has chronic pelvic pain, chronic abdominal pain, chronic low back pain, diffuse pain complaints, headaches and depression, none of which is related to her workers' compensation claim.

18. During her visit with Dr. Cebrian, Claimant reported that she injured her low back and abdomen due to the basket falling and striking her in the abdomen and by virtue of her being placed in the packer position. Claimant attributed her symptoms to lifting the bread baskets, twisting and bending.

19. During the hearing, Dr. Cebrian reiterated his opinions concerning the work-relatedness of Claimant's pain complaints. He testified to within a reasonable degree of medical probability, that: (1) Claimant's abdominal and pelvic symptoms were not related to Claimant's work activities as of April 2, 2015; (2) Claimant's abdominal and pelvic symptoms were not aggravated or exacerbated as a result of Claimant's work duties as of April 2, 2015; and (3) Claimant's work activities on April 2, 2015, did not aggravate or exacerbate her preexisting chronic low back pain.

20. Dr. Cebrian testified that a plastic basket—even assuming it weighed as much as six pounds—would not have significant enough force to cause any trauma to Claimant's internal pelvic region because female pelvic bones are designed to protect the uterus and reproductive organs. Dr. Cebrian testified that for an external blow to injure these organs, the blow would have to be severe enough to break the pubic bones. A strike from a small plastic basket would not result in trauma to Claimant's internal pelvic region.

21. Dr. Cebrian further testified that Claimant's job duties for one week as a packer were not of a quality or quantity that would cause an injury, or otherwise aggravate or exacerbate Claimant's preexisting chronic pelvic, abdominal and low back pain. Dr. Cebrian explained that females do not use any kind of muscles in their pelvis or uterus when lifting.

22. As Dr. Cebrian explained, the *Colorado Medical Treatment Guidelines* indicate that occupationally related low back pain is the result of repetitive lifting of 50 to 55 pounds over a duration of years.

23. Based on the foregoing, the ALJ finds that Claimant failed to prove that she sustained a work-related injury whether due to a basket striking her on April 2, 2015, or due to a change in the physical nature of her job duties.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Except as specifically noted below, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of respondents. Section 8-43-201.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

3. It is Claimant's initial burden to prove a compensable injury. To sustain his burden of proof, Claimant is required to establish that the condition for which he sought benefits was approximately caused by an "injury" arising out of and in the course of the employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011). The question of whether Claimant has met his burden of proof is factual in nature and within the province of the ALJ.

4. The Workers' Compensation Act creates a distinction between the terms "accident" and "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence. Section 8-40-201(1), C.R.S. An "injury" refers to the physical trauma cased by the accident. In other words, an "accident" is the cause and an "injury" is the result. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." A compensable injury requires medical treatment or causes a disability.

5. An aggravation of a preexisting condition is compensable. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. 1990); *H & H Warehouse v. Vicory*, 805

P.2d 1167 (Colo. App. 1990). If a direct causal relationship exists between the mechanism of injury and resultant disability, the injury is compensable if it caused a preexisting condition to become disabling. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004). There must be some affirmative causal connection beyond a mere assumption that the asserted mechanism of injury was sufficient to have caused an aggravation. *Brown v. Industrial Commission*, 447 P.2d 694 (Colo. 1968). It is not sufficient to show merely that the asserted mechanism could have caused an aggravation, but rather Claimant must show that it is more likely than not that the mechanism of injury did, in fact, cause an aggravation. *Id*. Simply because a claimant experiences symptoms after performing a job function does not necessarily create a causal connection to the work function. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968). ICAO has upheld denial of compensability where the mechanism asserted was the mere act of turning and experiencing pain. See *Willis v. Craig Hospital*, W.C. No. 4-627-742 (February 13, 2006).

6. As found above, the Claimant has failed to prove, by a preponderance of the evidence, that she suffered a work-related injury. The medical evidence documents a longstanding history of preexisting abdominal and back pain. Although Claimant testified that she was injured by a plastic basket on April 2, 2015, she did not report this mechanism of injury to the medical providers at University Hospital on that date. Instead, Claimant reported a one year history of chronic pain. In addition, the ALJ is not persuaded by Claimant's reports and testimony that her job duties as a packer worsened or aggravated her preexisting conditions.

7. The ALJ credits the opinion of Dr. Cebrian that a six-pound plastic basket striking Claimant on the outside of the abdomen could not result in an acute, internal pelvic injury. As Dr. Cebrian explained, a six-pound plastic basket falling straight down could not injure the internal cervix or uterus. Dr. Cebrian also credibly opined that the basket striking Claimant's abdomen would not aggravate any preexisting pelvic issues the Claimant had been experiencing.

8. Finally, the ALJ is not persuaded that Claimant's change in job duties from bun guider to packer one week prior to April 2, 2015 aggravated or accelerated Claimant's preexisting chronic pains complaints. As a bun guider, Claimant was required to stand for prolonged periods of time and lift a 49-pound trash can at least once an hour, and sometimes more often. As a packer, Claimant was required to lift a maximum of 15 pounds. Although Claimant may have engaged in some additional bending and twisting as a packer, she worked in the position for one week. As Dr. Cebrian credibly opined, the nature of the work Claimant performed was not of the quality or quantity that would result in an acute low back injury or an aggravation of a preexisting condition.

ORDER

It is therefore ordered that Claimant's claim for workers' compensation is denied and dismissed. Claimant is not entitled to medical benefits or temporary disability benefits as the result of any incident that occurred at work on April 2, 2015.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP.   You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 4-968-202-03

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on September 14, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 9/14/16, Courtroom 3, beginning at 1:30 PM, and ending at 3:00 PM).

Respondents' Exhibits A through E were admitted into evidence, without objection. Claimant's Exhibits 1 through 9 were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench, granting the Claimant's motion for judgment in the nature of a directed verdict, on the basis that Respondents had not proven their case by preponderant evidence at the conclusion of their case-in-chief. The motion was granted and the ALJ referred preparation of a proposed decision to counsel for the Claimant, which filed, electronically, on September 26, 2016. On the same date, counsel for the Respondents indicated that they had no objections as to form. After a consideration of the proposed decision, the ALJ has modified it hereby issues the following decision.

ISSUES

The matter is before the ALJ at the request of the Respondents to overcome the Division Independent Medical Examination (DIME) opinion of Kenneth Finn, M.D., that the Claimant is not at maximum medical improvement (MMI); and, medical benefits.

The Respondents shoulder the burden of proof by clear and convincing evidence to overcome the DIME. The Claimant bears the burden on medical benefits by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant, Francisco Barrientes, is now a 45 year old employee of the Employer. He was injured on September 12, 2014 in a motor vehicle accident while driving his work vehicle. He was rear-ended by a Ford F-150 pickup truck at approximately 11:00 AM, while stopped at a red light at an intersection in Fort Collins, Colorado. The Claimant sustained a low back/lumbar strain injury.

2. The Claimant completed his work shift that day but reported to the North Colorado Medical Center ER (emergency room) at approximately 7:30 PM that evening, complaining of lower back pain.

3. The Respondents filed a Final Admission of Liability (FAL), dated September 16, 2015, admitting for zero permanent partial disability (PPD), for an MMI date of June 16, 2015, and denying liability for further medical care and treatment, based on the opinions of then authorized treating physician (ATP) Rosalinda Piniero, M.D. The DIME process was initiated and Kenneth Finn, M.D. was selected, performed the DIME on February 5, 2016, and dated his report February 25, 2016. The Respondents requested a hearing to attempt to overcome the DIME by clear and convincing evidence.

Medical

4. The Claimant was seen by Brian E. Cooper, M.D., at the ER. Dr. Cooper ordered x-rays of the lumbar spine, which were read as negative. The Claimant was diagnosed with an injury to the lumbosacral spine and directed to follow up with his primary care physician (PCP), under the mistaken belief that any further medical care

and treatment was not work-related. Dr. Cooper is with Banner Health, which is an authorized medical provider.

5. The insurance carrier referred the Claimant to Concentra, which is also an authorized medical provider.

6. Thereafter, the Claimant reported to the Kaiser Permanente facility in Greeley, Colorado on September 15, 2014 where he was seen by David S. Knechtges, M.D (Claimant's PCP). Dr. Knechtges noted that the Claimant was seen at the ER for a back strain but was also complaining of pain in the upper thoracic area of his back. Dr. Knechtges diagnosed right and left rhomboid strains and recommended an exercise program.

7. Dr. Knechtges saw the Claimant for a follow up appointment on October 2, 2014. Dr. Knechtges noted complaints of both low back and thoracic spine pain. He noted that the lumbar spine was then more sensitive, with decreased range of motion in the back. Dr. Knechtges ultimately diagnosed thoracic and lumbar strains due to the work-related motor vehicle accident and recommended physical therapy.

8. The Claimant was seen on April 3, 2015 by Keith Meier, FNP-C, at the Fort Collins, Colorado Concentra Health Center, after a determination that the motor vehicle accident was work-related. Meier diagnosed a thoracic myofascial strain and a lumbosacral strain. Claimant was referred for additional physical therapy(PT).

9. Concentra physical therapist Brian Busey treated the Claimant from April 3, 2015 to May 21, 2015. The Claimant was seen periodically during that time at Concentra FNP Meier and medical assistant Julia Balderson. The Claimant also received chiropractic treatment from Dr. Scott Parker, D.C. Then authorized treating physician (ATP), Rosalinda Pineiro, M.D., saw the Claimant on June 16, 2015, when she placed him at MMI. She noted that the Claimant's symptoms had improved and that he reported that he was 90 percent better and working regular duty. Dr. Pineiro assigned no impairment and recommended no maintenance treatment.

Division Independent Medical Examination (DIME), Kenneth Finn, M.D.

10. The Claimant was seen by Dr. Finn for a D IME on February 5, 2016. Dr. Finn's diagnoses included chronic lumbosacral spinal pain, with a posterior component. Dr. Finn questioned whether the Claimant's symptoms had a discogenic or a sacroiliac joint component.

11. Dr. Finn found that the Claimant "not at MMI". He recommended a lumbar MRI (magnetic resonance imaging) to determine whether there might be some intervertebral disc pathology. If the MRI were determined to be within "normal limits" he recommended consideration of diagnostic right L4-5, L5-SI facet injections or medial branch blocks with consideration of facet rhizotomy if the Claimant responded favorably.

Respondents' Independent Medical Examination (IME) by Allison Fall, M.D.

12. The Claimant was seen for a Respondents' IME by Dr. Fall on July 20, 2016. Dr. Fall diagnosed temporary myofascial back pain, resolved. Basedc on the totality of the evidence, the ALJ infers and finds that Dr. Fall summarily dismissed the Claimant's complaints after one brief visit. She noted her agreement with Dr. Pineiro that the Claimant was properly placed at MMI on June 16, 2015, with no impairment or need for maintenance treatment.

13. Dr. Fall testified at hearing and stated the opinion that the Claimant had sustained a myofascial thoracic strain, which had resolved. She disagreed with Dr. Finn's assessment of a lumbosacral spinal injury and that the Claimant required additional medical diagnostics and treatment to reach MMI. She testified that her opinions differed from those of Dr. Finn. She indicated that her findings and opinions were within a "reasonable degree of medical probability". Dr. Fall offered no persuasive underpinnings to her opinions and why they differed from DIME Dr.Finn's opinion of "not at MMI."

Ultimate Findings

14. The opinions of DIME Dr. Finn are more credible and persuasive than the opinions of Respondents' IME Dr. Fall because they are more thorough and grounded in medical underpinnings. Additionally, the fact that DIME Dr. Finn would like an MRI is more credible than the opinion of Respondents' IME Dr. Fall that an MRI was unnecessary.

15. The ALJ makes a rational choice between two competing medical opinions, based on substantial evidence, to accept the opinions of DIME Dr. Finn and to reject the opinions of IME Dr. Fall.

16. The testimony of Dr. Fall amounts to a difference of medical opinion with DIME Dr. Finn, but it is not sufficient to overcome Dr. Finn's findings and opinions concerning the nature of the Claimant's injuries and "not at MMI" opinion insofar as Dr. Fall's ultimate opinions do not make it highly probable, unmistakable and free from serious and substantial doubt that Dr. Finn's opinions concerning the Claimant's medical condition and "not at MMI" are in error.. Therefore, the Respondents failed to carry their burden of proof, by clear and convincing evidence, as of the conclusion of their case-in-chief. The MRI recommended by DIME Dr. Finn offers a reasonable prospect of diagnosing or further defining the Claimant's condition so as to suggest a future course of treatment.

17. The medical evidence supports the Claimant's need for continuing medical care and treatment for his low back as long as it is authorized and within the chain of authorized referrals, thus, Claimant has proven this need by preponderant evidence as contained in the documentary medical evidence.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Judgment in the Nature of a Directed Verdict

a. Colo. Rules of Civil Procedure, Rule 41(b) (1), provides that, after a plaintiff in a civil action *tried without a jury* has completed the presentation of his evidence, the defendant may move for a dismissal on the grounds that the plaintiff has failed to present a prima facie case for relief. In determining whether to grant a motion to dismiss or in the nature of a directed verdict, the court is not required to view the evidence in the light most favorable to the plaintiff, as argued by a claimant. *Rowe v. Bowers*, 160 Colo. 379, 417 P.2d 503 (Colo. 1966)*; Blea v. Deluxe/Current, Inc.*, W.C. No. 3-940-062 [Indus. Claim Appeals Office (ICAO), June 18, 1997] (applying these principles to workers' compensation proceedings). Neither is the court required to "indulge in every reasonable inference that can be legitimately drawn from the evidence" in favor of the Claimant. Rather, the test is whether judgment for the respondents is justified on the claimant's evidence. *Amer. National Bank v. First National Bank*, 28 Colo. App. 486, 476 P.2d 304 (Colo. App. 1970); *Bruce v. Moffat County Youth Care Center*, W. C. No. 4-311-203 (ICAO, March 23, 1998). The question of whether the Claimant carried this burden was one of fact for resolution by the ALJ. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). As found, at the conclusion of the Respondents' case-in-chief, it had failed to prove, by clear and convincing evidence, that DIME Dr. Finn's DIME opinions concerning "not at MMI," diagnosis and related medical conditions were in error, thus, the ALJ granted the Claimant's motion for judgment in the nature of a directed verdict.

Credibility

b. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App.

2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of DIME Dr. Finn were more credible and persuasive than the opinions of Respondents' IME Dr. Fall because they were more thorough and grounded in medical underpinnings. Additionally, the fact that DIME Dr. Finn felt that an MRI was necessary to reasonably diagnose or define a further course of treatment is more credible than the opinion of Respondents' IME Dr. Fall that an MRI was unnecessary, and Dr. Fall's summary dismissal of the Claimant's complaints.

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice between two competing medical opinions, based on substantial evidence, to accept the opinions of DIME Dr. Finn and to reject the opinions of IME Dr. Fall.

Maximum Medical Improvement

d. MMI is defined as the point in time when any medically determinable physical or medical impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. § 8-40-201(11.5), C.R.S. *Donald B. Murphy Contractors, Inc. V. Indus. Claim Appeals Office*, 916 P.2d 611 (Colo. App. 1995). Diagnostic procedures that constitute a compensable medical benefit must be provided prior to MMI if such procedures have a reasonable prospect of diagnosing or defining a claimant's condition so as to suggest a course of further treatment *See In the Matter of the Claim of William Soto, Claimant,* W.C. No. 4-813-582 [Indus. Claim Appeals Office (ICAO), October 27, 2011]. .As found, the Respondent failed to overcome, by clear and convincing evidence, the DIME physician's opinions regarding MMI and the causal relatedness of Claimant's condition. As further found, the MRI recommended by DIME Dr. Finn offers a reasonable prospect of diagnosing or further defining the Claimant's condition so as to suggest a future course of treatment.

Overcoming the DIME of Dr. Finn

e. The party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's determination of MMI is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert, supra*; *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005); *Eller v. Indus. Claim Appeals Office, supra*. "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). In other words, a DIME physician's findings may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P. 2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). A mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Bush,* *Inc.,* W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). As found, the testimony of Dr. Fall amounted to a difference of medical opinion with DIME Dr. Finn, but it was not sufficient to overcome Dr. Finn's findings and opinions concerning the nature of the Claimant's injuries and "not at MMI" insofar as Dr. Fall's ultimate opinions do not make it highly probable, unmistakable and free from serious and substantial doubt that Dr. Finn's opinions concerning the Claimant's medical condition and "not at MMI" opinion are in error. Therefore, the Respondents failed to carry their burden of proof to overcome the DIME of Dr. Finn, by clear and convincing evidence.

Burden of Proof on Medical Benefits

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to medical benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant sustained his burden concerning the need for continuing medical benefits at least until the results from the recommended MRI are known.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Judgment in the Nature of a Directed Verdict is hereby granted in favor of the Claimant.

B. The Respondents failed to overcome the Division Independent Medical Examination of Kenneth Finn, M.D., thus, the Claimant is not at maximum medical improvement.

C. The Respondents shall pay the costs of all authorized, causally related and reasonably necessary medical care and treatment for the Claimant's admitted low back injury of September 15, 2014, subject to the Division of Workers' Compensation Medical Fee Schedule.

D. Any and all issues not determined herein are reserved for future decision.

DATED this______day of September 2016.

____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

STIPULATIONS

At the outset of the hearing, the parties stipulated that Claimant's average weekly wage from June 3, 2015 through June 30, 2016, is $560.00 per week. From July 1, 2016, and continuing, the average weekly wage increases to $667.84, secondary to the value of Claimant's fringe benefits. The stipulation is approved.

REMAINING ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that the lumbar decompression and fusion procedure recommended by Dr. Bhatti is reasonable and necessary.

FINDINGS OF FACT

Based upon the evidence presented at hearing, as well as the deposition testimony of Dr. Bhatti and Dr. Reiss, the ALJ enters the following findings of fact:

1. Claimant sustained an admitted injury on June 3, 2015, when she was standing on a milk crate, it slipped and she fell injuring her low back and right hip. Following the event, she was seen at St. Thomas More Hospital complaining of low back and right leg pain. X-rays taken demonstrated degenerative disc disease at L5 and degenerative low lumbar facet arthropathy. There were no acute findings noted. X-rays taken of her right hip were also negative.

2. Claimant testified that following the accident she has been unable to work. She testified to daily sharp right leg pain and numbness in her right foot which hampers her activity level. According to Claimant she has difficulty picking up and holding her 2 ½ year old grandchild. She reported that she can stand for 10 minutes, move and walk for 15 minutes and sit for 30-45 minutes all of which limit her functional capacity, including her ability to travel and keep up with domestic tasks, such as doing dishes and housekeeping.

3. Claimant testified that she has pain in her entire right leg 80-90% the time and rates her pain as 8-9/10. Claimant's leg pain reportedly causes her to limp when she walks. The limp comes and goes. She cannot carry any objects and can only bend about 10° to 15°, but slightly more with pain.

4. Claimant has engaged in conservative treatment modalities including physical therapy (PT), which reportedly aggravated her pain levels resulting in a suspension of further PT after 2 appointments. She has testified that she has been prescribed multiple

medications in an effort reduce her pain with limited success. Epidural steroid injection (ESI) made her sick which also increased her pain levels.

5. On cross examination, Claimant admitted that she has been released to work, modified duty and that she has no specific restrictions as there is no modified duty work available to her.

6. A review of medical records establishes that Claimant was examined by Steven Quackenbush, physicians assistant (PA), on June 11, 2015. Claimant was ambulating with an antalgic gait, had reproducible pain with palpation of the lumbar spine without pain into her right hip or SI joint, and she had no paraspinous muscular spasm. Straight leg was positive on the right at 30° with subjective numbness of the right foot. PA Quackenbush prescribed a “Medrol Dose Pak” and recommended a “stat” MRI.

7. An MRI was performed on June 12, 2015. The MRI report indicated there were “no bulging discs” and “[n]o levels of significant spinal stenosis or neural foraminal compromise seen.” While there was “minimal posterior disk bulge seen at L4-5” this did not cause “significant spinal stenosis or neural foraminal impingement.” The impression reached by the interpreting radiologist was “[m]ild degenerative disc disease. Nothing acute. No levels a significant spinal stenosis or neural foraminal compromise.”

8. On June 18, 2015, claimant continued to complain of 7/10 pain, 90% the time. The Physical therapy was recommended by Mr. Quackenbush. Claimant was seen on June 19, 2015, by physical therapy. The physical therapist noted claimant had negative straight leg raise, negative slump test, and negative prone instability test.

9. On June 25, 2015, claimant was seen by Mr. Quackenbush indicating that she had minimal improvement being off of work and physical therapy was not helpful. Her ambulation was described as a splinting antalgic gait.

10. On July 22, 2015, Claimant was seen by Dr. Leggett. During this encounter, Claimant complained of sharp shooting pain that traveled from her back to her buttocks, back of the right leg into the heel. She occasionally had weakness and instability primarily involving the right leg and over time numbness and tingling into the foot, growing in intensity. She rated her pain as 7/10 typically 5- 9/10.

11. On August 18, 2015, claimant underwent an L5/S1 and S1 transforaminal epidural corticosteroid injection (TFESI).

12. In August 26, 2015, Claimant was seen by Dr. Leggett and indicated that after the TFESI she became ill and her pain intensified to 10/10 the following night. She was overall 0% better after the injections. It was his impression that her pain was greatest in the distribution of S1 on the right. Due to lack of improvement following the injections, he recommended an EMG.

13. Claimant was seen on September 30, 2015, by Dr. Michael Sparr. She reported sharp pain in her back with radiation to the posterior thigh and calf as well as numbness in the plantar foot and toes. She was reporting difficulty with walking. Clinical evidence from the EMG revealed a "normal electrodiagnostic study of the right lower extremity" without "evidence of acute or chronic lumbosacral radiculopathy . . . distal compression neuropathy . . . or generalized peripheral neuropathy." Dr. Sparr opined that there was "no obvious neurologic damage or cause of her current symptoms."

14. Claimant returned to Dr. Leggett for a follow-up visit on October 26, 2015. During this appointment, Claimant reported she felt no better, reported crying throughout the day because of the intense pain and also crying herself to sleep at night. She had tried to increase her activities but this intensified her pain. Dr. Leggett noted a large amount of acute distress on exam which intensified with any sort of movement. Transition from sit to stand was slow and guarded with Claimant utilizing the exam table to stand. Multiple pain behaviors were identified throughout the examination. Dr. Leggett noted that with sitting upright, without slumping forward, extending the right knee from 90° flexion to 60° flexion was reported to greatly intensify shooting sensations traveling from the back to the foot. Claimant was unable to maintain this position. However when going through the process of standing, she was able to maintain a forward flexed position of the hip with her knee in full extension. She was unable to tolerate any sort of examination to the underlying facet joints or trunk extension. During examination into the low back region, pressure was applied to the right low back region to the degree that pushed her overlying sweat shirt down to the skin. With this, she became extremely tearful and reported intense shooting and burning pain which traveled down the posterior aspect of the right leg and into the foot, but also affecting the entire right leg as well. Any sort of touch along the posterior aspect of the leg was reported to have greatly diminished sensation. Observation gait showed extreme antalgia with minimal step length and stride length on the right side, a wide base of support, and very slow ambulation.

15. Dr. Leggett opined that upon review of Claimant's MRI of the spine, he did not have an explanation for her reported progressive back pain. He had no further treatment to offer. He did not believe that physical therapy, chiropractic or massage would be of benefit. Dr. Leggett could not find an anatomical correlation to substantiate her ongoing symptoms.

16. Dr. Nanes referred Claimant to Dr. Sana Bhatti for a surgical evaluation. Dr. Bhatti saw claimant on December 10, 2015. By deposition, Dr. Bhatti testified that he has never performed an examination of claimant. Rather, all physical examinations of Claimant through Dr. Bhatti's office have been performed by his physician's assistant. (PA). The PA's examination showed back tenderness to palpation throughout her lumbar spine. Dr. Bhatti testified this complaint was not specific to anything and non-anatomic. The examination also showed sensation decrease to pin prick over the entire right foot, which Dr. Bhatti also testified was not anatomic. Claimant was able to heel walk but not toe walk. Dr. Bhatti opines that claimant has right sided disc herniation at

L5-S1 with degenerative disease, worse on the right, with right foraminal stenosis for which he recommends an L5-S1 decompression and fusion with instrumentation.

17. Claimant underwent a second opinion with Dr. David Wong on February 11, 2016. Dr. Wong noted non physiologic findings in his examination to include pain with simulated range of motion testing, straight leg raising to 45° on the right 60° on the left but patient had 90° of straight leg raise in the sitting position and cogwheel weakness. Dr. Wong reviewed the MRI findings and noted that there was minor retrolisthesis at L5-S1 and a desiccated disc at L4-L5 with a mild bulge and early facet arthropathy which was not noted on the MRI. Flexion/extension films demonstrated stability at L5-S1. It was Dr. Wong's opinion that Claimant may have some facet pain secondary to degenerative changes primarily at L5-S1 and lesser at L4-L5. Moreover, he felt Claimant clinically had mild right L5 sensory changes despite a normal EMG study. It was his opinion that an L5 differential nerve root block should be done to determine whether the foraminal stenosis at L5-S1 on the right was clinically significant. He also noted that Claimant may be a candidate for facet blocks. Finally, he felt a psychological evaluation would be appropriate due to Claimants non organic pain. Dr. Wong stated that *if* Claimant ultimately had findings that would suggest decompression at L5-S1 on the right, he would not recommend a fusion, although there may be an argument to be made for this.

18. During his deposition, Dr. Bhatti testified that the MRI did not show a large disc herniation, but degenerative arthritis worse on the right at L5-S1. Initially, it was Dr. Bhatti's opinion that surgery would help claimant by greater than 50%. He acknowledged that it was important to identify the pain generator. He testified that he does not rely on EMG findings or diagnostic injections, but only on the patient's complaints in determining the need for surgery. He testified that part of the reason he wanted to perform surgery is that Claimant was reporting 8/10 pain. Nonetheless, he noted that there were at least two findings on examination by his PA that were non-anatomic. It concerned him that other doctors also found non-anatomic findings. He noted that the more non-anatomic findings present, the less chance of a successful operation. Following review of other physicians' reports, Dr. Bhatti changed his opinion and stated that the chances of a successful surgery would be 30% to 40%. He thought the surgery was reasonable, but questioned whether it was necessary. Ultimately, he recommended surgery with the caveat that there is a significant failure rate.

19. Dr. Brain Reiss evaluated Claimant at the request of Respondents. Dr. Reiss preformed a physical examination, reviewed Claimant's records, including the MRI films. and issued a report on April 27, 2016. He did not believe there was significant nerve compression that would be alleviated with surgical intervention, noting that the L5-S1 nerve blocks were not beneficial, that there was no instability of the lumbar spine and a one level fusion procedure at an arbitrary level without evidence that that level was producing the pain was unlikely to help. According to Dr. Reiss, there was no evidence that Claimant had discogenic pain. It was his opinion that Claimant had non-physiologic findings, subjective complaints out of proportion to objective findings with

severe pain complaints and no observed pain behaviors. Consequently, he did not believe that surgical intervention would be appropriate, nor helpful.

20. As noted, Dr. Reiss testified by deposition. He testified that he would not perform surgery without personally examining Claimant, especially without further objective information that the L5 nerve root was the pain generator. He also would not perform surgery based on pain complaints. According to Dr. Reiss, operating on pain complaints alone creates a low likelihood of Claimant getting better. Dr. Bhatti's assessment of a 30% to 40% success rate in this case indicated to Dr. Reiss that Claimant shouldn't undergo the recommended surgery. During his deposition Dr. Reiss was shown surveillance videotape of Claimant. After review of that video, Dr. Reiss testified Claimant's activities, specifically bending and lifting and carrying her grandchild were inconsistent with her pain complaints of 9/10. After review of the videotape Dr. Reiss opined that Claimant did not require further treatment and was at maximum medical improvement.

21. The undersigned ALJ reviewed video surveillance from June 14th and June 26th, 2016. The video surveillance tapes demonstrate that, contrary to Claimant's testimony she is active and functional. Her gait appears normal both barefoot and while wearing sandals. She bears weight on her right leg while ascending and descending stairs, and stoops. She is observed to walk on both level and inclined surfaces without pain behavior noted. Claimant actively bends at the waist 10-15° on numerous occasions while looking into her car. She is able to enter, exit and drive her personal vehicle without apparent difficulty. In the June 14, 2016 video, Claimant is seen lifting her granddaughter into her car and bending to place/secure the child in a car seat in the back of Claimant's car. She does this without apparent pain. Later she is seen carrying this same child in her left arm to the car where she twists and bends slightly to place the child in the backseat. In the June 26, 2016 video, Claimant is observed to lean into a widow of her car for a sustained period. She is later seen carrying a car seat to her car in preparation of taking her grandchildren swimming. Again, the captured video from this date is devoid of noted pain behaviors.

22. Based upon the evidence presented, the ALJ finds Claimant's testimony regarding her asserted pain level and functional decline out of proportion to the objective findings on physical examination and inconsistent with the surveillance video tape.

23. Based upon the testimony presented, the ALJ credits the opinions of Dr. Reiss over the contrary opinions of Dr. Bhatti to find that the proposed surgery is not reasonable or necessary. Accordingly, Claimant has failed to carry her burden of proof and her claim for additional medical benefits must be denied and dismissed.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* Claimant must prove that she is a covered employee who suffered an injury arising out of and in the course of employment. *Section 8-41-301(1), C.R.S.; See, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought, including medical treatment *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997*.* Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. In this case, Claimant's testimony regarding her alleged functional decline is generally inconsistent with her demonstrated capability captured on surveillance video tape. Moreover, her alleged ongoing symptoms are out of proportion to the objective findings on examination and imaging study. Finally, there has been a demonstrated lack of anatomical correlation to Claimant's ongoing complaints during examination, prompting Dr. Wong to suggest completion of a psychological evaluation to determine whether Claimant's is an appropriate surgical candidate. Even Dr. Bhatti expressed concern regarding the existence of non-organic findings during physical examination leading him to change his opinion concerning the percentage chances that the proposed surgery would help Claimant. Consequently, the ALJ finds Claimant's testimony regarding her asserted pain and functional decline, upon which the proposed surgery was recommended by Dr. Bhatti, to be unreliable and unconvincing.

C. In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Medical Benefits

D. As noted above, Claimant bears the burden of establishing entitlement to medical treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). Once a claimant has established a compensable work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S.*; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

E. Regardless, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949). Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability were caused by the industrial injury. Rather, the range of compensable consequences of an industrial injury are limited to those that flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970).

F. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). The medical reports submitted in this case along with surveillance video tape and the testimony of Dr. Reiss persuade the ALJ that Claimant has failed to prove by preponderance of the evidence that the need for surgery is reasonable and necessary. Dr. Reiss, Dr. Wong and even Dr. Bhatti, have all indicated that it is important to identify the pain generator causing Claimant's ongoing symptoms. The objective testing in this matter does not support Claimant's subjective pain complaints, nor do Claimant's MRI, EMG and nerve blocks adequately identify the L5 nerve root as a pain generator responsible for causing Claimant's pain.

G. Where a party presents expert opinion on the issue of causation, the weight and credibility of the opinion is a matter exclusively within the discretion of the ALJ as the fact-finder. *Cordova v. Industrial Claim Appeals Office*, P.3d (Colo. App. No. 01CA0852, February 28, 2002); *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990). As found here, the opinions of Dr. Reiss and credible and more persuasive than the contrary opinions of Dr. Bhatti. In this case, Dr. Bhatti is largely basing his recommendation for surgery upon Claimant's pain complaints and asserted functional decline, which for the reasons outlined above are not credible. As noted, Claimant's pain complaints and asserted functional decline are substantially eroded by the non-anatomic/non-physiologic findings documented on physical examination and the content of the surveillance video tape. Indeed, Dr. Leggett and Dr. Sparr could not find anatomical correlation to Claimant's ongoing complaints and Dr. Wong notes that it may be "worthwhile having a psych eval . . . to evaluate nonorganic pain." Dr. Bhatti agrees with Dr. Wong and Dr. Reiss that Claimant's nonorganic/non-physiologic findings raise concerns when assessing Claimant's complaints and the need for surgery. Moreover, the videotape suggests, contrary to Claimant's testimony that she is active and more functional than she has lead her providers and the undersigned ALJ to be. Taken in its entirety, the ALJ concludes that the evidentiary record contains substantial evidence to support a conclusion that the surgical procedure recommended by Dr. Bhatti is not reasonable or necessary. Consequently, Respondents are not liable for it.

ORDER

It is therefore ordered that:

1. Claimant's claim for additional medical benefits in the form of a minimally invasion lumbar decompression and fusion with instrumentation as recommended by Dr. Sana Bhatti is DENIED and DISMISSED.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 30, 2016

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

The issues presented for determination are whether the Respondents have overcome the opinions of the Division Independent Medical Examination (DIME) physician regarding maximum medical improvement (MMI). The Respondents assert that the DIME physician erred by including Claimant's right knee, right shoulder, sexual dysfunction and traumatic brain injury (TBI) as components of the original injury. The Respondents also assert that the DIME physician erred by opining Claimant had not reached MMI for his back conditions. If the Respondents successfully prove that the DIME physician erred regarding MMI, the Respondents seek to overcome the DIME opinions with respect to Claimant's impairment ratings for his lumbar and thoracic spine. Claimant seeks reinstatement of temporary total disability (TTD) benefits based upon the opinions of Dr. Ryan that he is not at MMI. The issue of medical benefits was also endorsed for hearing.

FINDINGS OF FACT

1. The Claimant worked for Employer as a roofer. On November 27, 2012, Claimant fell from a third story roof, approximately 30 feet, and landed with his legs striking a fence and then landing in a sitting position onto gravel. Claimant sustained an L1 burst fracture and a T12 compression fracture.

2. According to the Littleton Adventist emergency room record dated November 27, 2012, a witness observed that Claimant briefly lost consciousness for about 30 seconds to one minute. On examination, Claimant's head was "completely atraumatic" despite reports Claimant fell onto his head.

3. Claimant testified that he tried to reach out and grab anything to break his fall. He attempted to grab a gutter with his right hand.

4. Claimant underwent surgery to repair the fractures. On December 1, 2012, Claimant was discharged from Littleton Adventist to Porter Rehabilitation. The discharge note indicates Claimant was able to move all extremities with equal and excellent strength.

5. The records from Porter Rehabilitation were not offered into evidence.

6. On January 2, 2013, Claimant followed up with Dr. Robert Kawasaki. The nurse case manager, Kevin Shea, was present and provided language translation. Claimant did not report reaching out or any other attempt to break the fall. Dr. Kawasaki documented his review of Claimant's medical records. Subjectively, Claimant

described achiness in his low back and pins and needles in his anterior thighs. He reported difficulty with sitting greater than eight minutes, and difficulty standing and walking greater than 15 minutes. On physical examination, Dr. Kawasaki noted normal ambulation. Dr. Kawasaki's impression was L1 burst fracture with T-11-L3 fusion. He noted Claimant was fortunate in that he had no signs or symptoms for head injury or spinal cord compression. Dr. Kawasaki continued to treat Claimant over the next two months and symptoms and impressions remained the same.

7. Claimant began physical therapy in March. A March 25, 2013, physical therapy note documented "ongoing pain in the right shoulder and knee concern him."

8. Dr. Kawasaki saw Claimant on April 4, 2013. Claimant reported right shoulder, right knee, and right hip pain. Claimant estimated that this had started six weeks prior. Claimant reported that his right knee has pain with ambulation and feels stiffer than the left knee. Claimant also reported psychological issues, including disturbed sleep, anxiety about his finances because he was unable to work. Dr. Kawasaki noted that Claimant's physical therapist had contacted Mr. Shea to inform him that Claimant had right knee and right shoulder pain which seemed to be interfering with Claimant's progress. Dr. Kawasaki referred the Claimant to Ricardo Esparza, Ph.D., for psychological counseling.

9. Dr. Kawasaki opined that Claimant's right knee, right hip and right shoulder complaints were not, within medical probability, related to Claimant's November 2012 injury but that if the shoulder and knee were to be worked up, he would recommend MRI scans for each.

10. The MRIs of Claimant's right knee and shoulder occurred on April 9, 2013. RESULTS

11. On April 11, 2013, Dr. Esparza evaluated the Claimant. Dr. Esparza assessed Claimant with a depressive disorder, a cognitive disorder, and relational problems. Claimant continued to receive psychological treatment with Dr. Esparza until September 5, 2013 when Dr. Esparza determined that Claimant had reached maximum medical improvement (MMI) for his psychological condition. Dr. Esparza also completed a psychological impairment rating which was 16%.

12. Dr. Kawasaki determined that Claimant reached overall MMI on September 27, 2013.

13. Claimant's range of motion measurements in his low back were inconsistent requiring Dr. Kawasaki to re-measure Claimant's spine range of motion a second time. The ultimate impairment rating was 32% whole person.

14. The Respondents filed a Final Admission of Liability on November 21, 2013, and an Amended Final Admission of Liability on March 7, 2014.

15. Claimant objected and applied for a DIME. Dr. Christopher Ryan was selected as the DIME physician.

16. The DIME appointment occurred on March 3, 2014. Dr. Ryan took a history from the Claimant, examined him and reviewed the medical records. Dr. Ryan concluded that Claimant had not reached MMI for his work-related injury. Specifically, Dr. Ryan diagnosed a right hyperabduction/flexion injury to Claimant's right shoulder. He also diagnosed right knee medial and lateral meniscal injuries, probably caused by the work-related fall. Dr. Ryan diagnosed a mild TBI, which he noted was "not fully characterized."

17. Dr. Ryan concluded that for Claimant is "probably" at MMI for his thoracic spine injury and fusion from T11 through L3. Dr. Ryan also noted that Claimant has a disc herniation and anterolisthesis at L3-4 and L4-5 with significant spinal stenosis. He stated that Claimant is probably at MMI for this condition but he would suggest another view. Dr. Ryan went on to recommend that Claimant have a second spine surgical evaluation to get another opinion and reasonable treatment for the stenosis. He also recommended a high field MRI. Dr. Ryan's treatment recommendations regarding the spinal stenosis are inconsistent with his finding that Claimant is probably at MMI for that condition.

18. Regarding Claimant's psychological condition, Dr. Ryan indicated that Dr. Esparza recommended neuropsychological testing in Spanish and Dr. Ryan did not believe the testing had been done and he opined Claimant was not at MMI for this condition. Dr. Ryan also stated that Claimant was not at MMI for his post-traumatic stress disorder until "declared so by Dr. Esparza, his attending psychologist." Finally, Dr. Ryan opined Claimant suffered from sexual dysfunction, discussed, but not fully characterized. Dr. Ryan noted that Claimant is not at MMI for sexual dysfunction because it had not been fully evaluated and that it could have a neuropathic component in light of Claimant's spine injury.

19. On June 12, 2014, the Respondents filed an application for hearing and endorsed, among other issues, overcoming the opinions of Dr. Ryan.

20. In preparation for litigation, the Respondents referred Claimant to Dr. Scott Primack for independent medical examinations (IME), the first of which occurred on July 16, 2014. Dr. Primack also conducted and IME on May 10, 2013 concerning causation of Claimant's right shoulder and right knee symptoms.

21. During the IME on May 10, 2013, Dr. Primack took Claimant's history in Spanish. Claimant described the mechanism of injury as he had reported it to Dr. Kawasaki. Claimant also reported to Dr. Primack that had been focusing more on his back than on his right knee and right shoulder at first. Claimant denied previous problems with his shoulder and knee, and reported the shoulder worsened with lifting overhead and placing his hands behind his back. With regard to the knee, Claimant reported worsening when walking and ascending or descending stairs.

22. Dr. Primack reviewed Claimant's medical records including the surgical notes and rehabilitative facility records, and performed a physical examination. He ultimately opined that Claimant required no further medical treatment for any body part

and recommended a functional capacity evaluation to determine any permanent work restrictions. He agreed with Dr. Kawasaki that Claimant's knee, shoulder, and hip complaints were not related to the industrial injury. He noted that in the rehabilitative program, multiple joints would have been utilized to optimize function. In essence, because the rehabilitation notes lack any complaints related to the right knee, right shoulder or right hip, those body parts were not injured during the fall.

23. In conjunction with his second IME on July 16, 2014, Dr. Primack reviewed additional medical records including MRI reports pertaining to the right knee and right shoulder. After examining the Claimant and reviewing the additional medical records which included Dr. Ryan's report, Dr. Primack reiterated his opinions that Claimant did not suffer a right shoulder, right knee or right hip injury when he fell. Dr. Primack also opined that Claimant did not sustain a mild TBI and no sexual dysfunction related to a spinal cord injury. Dr. Primack opined that Dr. Ryan's opinions were clearly in error. Specifically, Dr. Primack disagreed that Claimant suffered a right shoulder, right knee or right hip injury; or that Claimant suffered a mild traumatic brain injury or sexual dysfunction that has any basis other than psychological.

24. On August 5, 2014, at Respondents' request, Dr. Gary Gutterman performed an independent medical examination to determine the extent of Claimant's psychiatric or psychological issues. Dr. Gutterman reviewed Claimant's medical records and met with the Claimant. Claimant told the Dr. Gutterman that he is active all day long, that he takes care of his 3-year old daughter, including going to the park and out for walks. Claimant did express frustration with being unable to do as many things with his daughter as he used to prior to his injury. Claimant also reported that since he is at home, he has various responsibilities including cleaning the home, making lunch and starting dinner. He goes to the store on occasions and drives.

25. Claimant told Dr. Gutterman about his experiences with Dr. Esparza and group therapy. Claimant stated that he is not sure whether any of the treatment was helpful. Claimant also stated that his sex drive is diminished and same with his ability to perform. Claimant expressed that psychologically, he worried about returning to work and about providing for his family. He was worried about his finances as well.

26. Dr. Gutterman concluded that Claimant probably experienced a Depressive Disorder and Anxiety Disorder following the work-related fall. Dr. Gutterman concluded that, based on Claimant's clinical presentation during his examination of Claimant, along with Claimant's reports of daily functioning, and a review of the medical records, he did not believe Claimant suffered a mild TBI leading to cognitive deficits. Dr. Gutterman opined that Claimant's cognitive functioning appeared to be intact throughout the exam, and that he displayed no issues with memory, focus or concentration. Dr. Gutterman opined that Claimant had improved psychologically since he stopped treatment with Dr. Esparza. Dr. Gutterman opined that Claimant's mental impairment rating was 6%. Dr. Gutterman did not believe additional psychological treatment was warranted, and he concurred with Dr. Esparza that Claimant reached MMI from a psychological perspective in September 2013.

27. Regarding his physical complaints, Claimant told Dr. Gutterman that he did not complain about right knee or shoulder pain initially because he was focused on his back and taking pain medications. After he ceased using the pain medications, he noticed the shoulder and knee pain.

28. Claimant sought an IME from Dr. Caroline Gellrick which occurred on February 11, 2015. Dr. Gellrick took a history from the Claimant with the assistance of a Spanish language interpreter, reviewed his medical records and examined the Claimant. Claimant reported continued achiness in his head, pain in the right shoulder, right knee and lower thoracic and lumbar spine. He also reported neck pain. Claimant presented more functionally limited to Dr. Gellrick than compared to other physicians. He reported difficulty with activities of daily living (ADLs), including personal hygiene, yard work and preparing meals.

29. Dr. Gellrick opined that that the impact of Claimant's fall affected his whole body including his right knee and right shoulder:

> He had a back brace on, he was sedated heavily with narcotics. It is noted that when physical therapy started when he was cleared by spine surgery for the spine, that is when he became symptomatic for the shoulder and the knee. This part of immobilization post-traumatic injury would not be inconceivable that the shoulder and knee would not have been painful prior to this time, but just then nature of the fall itself being catastrophic could have induced these injuries. It is notable the patient had right hip pain since day one, especially even in physical therapy, but this seems more localized to the right SI joint.

30. Dr. Gellrick agreed with Dr. Ryan that Claimant suffered sexual dysfunction and should be referred to urology or a neurologist. She ultimately opined that Claimant was not at MMI for his urologic problems, his right knee or right shoulder. Dr. Gellrick pointed out that prior to the work-related fall, Claimant worked full duty as a roofer which involved climbing ladders while carrying heavy materials. Thus, Claimant was able to use both his right shoulder and knee without problems.

31. On July 1, 2015, Dr. Primack issued an addendum report after he reviewed additional medical records and surveillance video of the Claimant. Dr. Primack agrees that Claimant's right knee MRI demonstrates findings of a multi-planar tear within the body of the posterior horn of the medial meniscus; a peripheral tear within the posterior horn; and a horizontal cleavage tear at the anterior horn with a 1.9 cm meniscal cyst. Dr. Primack opined that Dr. Gellrick erred in her assessments of the Claimant, and that Claimant was consciously misrepresenting his physical capabilities.

32. Dr. Gutterman testified by deposition on October 21, 2014. Dr. Gutterman testified that due to the poly-trauma nature of Claimant's injury, it would not have been unusual for Claimant to have post traumatic stress disorder and anxiety. He disagreed

with Dr. Ryan's diagnosis of mild TBI. He noted that there was no reported trauma to Claimant's head, and no reported cognitive difficulties. Dr. Gutterman explained that oftentimes with anxiety and depression, cognitive alterations can be present but that does not mean the patient suffered a mild TBI. Dr. Gutterman disagreed that Claimant was not at MMI for his psychological condition. Dr. Gutterman credibly testified that he disagreed with further psychological treatment and neuropsychological testing.

33. Dr. Kawasaki testified by deposition on February 18, 2015. Dr. Kawasaki disagreed with Dr. Ryan's conclusions that Claimant's knee and shoulder complaints were related to the fall. Dr. Kawasaki noted that these issues were not present on initial exam of the Claimant and neither did the hospital records document knee or shoulder symptoms. Dr. Kawasaki documented in his April 4, 2013, report that Claimant noticed these symptoms approximately six weeks prior. He reviewed his contemporaneous medical report and he did not record knee and shoulder complaints.

34. Dr. Kawasaki ordered MRIs of Claimant's right shoulder and right knee. Dr. Kawasaki concluded that the changes found on the MRI scans were degenerative in nature and not from a traumatic fall. Dr. Kawasaki testified that had Claimant injured his shoulder or knee when he fell, the symptoms would have manifested sooner than when Claimant reported. Dr. Kawasaki agreed with Dr. Primack that Claimant's right knee, hip and shoulder symptoms would have presented themselves in the rehabilitation facility.

35. Dr. Kawasaki addressed the issues of sexual dysfunction as well. He noted that Claimant did not have neurological symptoms. He explained that while spinal cord stenosis exists, there was no spinal cord injury. Dr. Kawasaki opined that Claimant did not experience nerve damage. Dr. Kawasaki noted that Claimant would have presented with neurological deficits present early on, but he did not.

36. Dr. Primack testified during the first hearing held in this matter. He reiterated his opinions that Claimant's right shoulder and right knee complaints were not related to the work injury. Dr. Primack continued to opine that Claimant did not suffer a mild traumatic brain injury or spinal cord injury that would produce sexual dysfunction.

37. Dr. Primack explained that the mechanism of injury did not support the shoulder injury. Dr. Primack went into great detail that had Claimant injured his shoulder on that date of injury, the symptoms would have manifested much sooner than late March 2013. Dr. Primack held the opinion that the emergency room staff or at least at the rehabilitative hospital would have observed Claimant's shoulder problems. Dr. Primack explained, it would have been extremely difficult for Claimant to have completed physical and occupational therapy in the rehabilitative unit with a shoulder and knee injury. Dr. Primack also relied on both Drs. Kawasaki and Gridley's physical examinations of the Claimant which did not initially reveal a shoulder or knee injury.

38. Dr. Primack explained that the act of abducting the shoulder would not result in the shoulder injury asserted. Dr. Primack opined that the MRI findings are degenerative in nature and not traumatic. Both Drs. Kawasaki and Primack disagreed with the

postulation by Dr. Ryan and later Dr. Gellrick that Claimant's focus was his spinal injury and the medications "masked" his symptoms.

39. Dr. Primack testified that signs of cauda equina or other spinal cord issues that would cause erectile dysfunction were not present when he examined the Claimant. Dr. Primack noted that the erectile dysfunction appeared to be psychological in nature.

40. When Dr. Primack examined the Claimant he observed no signs of mild TBI. The Claimant followed directions, and expressed himself without any memory issues.

41. Dr. Gellrick testified by deposition on November 11, 2015. She stated that initially, Claimant's primary pain was located in his back with a diagnosis of a burst fracture. She noted that it is common for someone with an injury of this magnitude to focus on the primary pain source. As Claimant's condition stabilized, other pain sources became apparent. Dr. Gellrick again pointed out that if Claimant had knee instability it would be doubtful he could carry heavy bundles of roofing materials while climbing a ladder. She also discussed that Claimant could have sprained his shoulder when he fell.

42. Dr. Gellrick noted that the MRI scans of the right shoulder showed minor pathology and that surgery would not likely be indicated. She felt steroid injections may be sufficient.

43. Dr. Gellrick recommended Claimant be referred to orthopedics given the MRI findings regarding his right knee.

44. Dr. Gellrick agreed with Dr. Gutterman's opinions concerning the presence of a mild traumatic brain injury and the mental permanent impairment.

45. Dr. Gellrick repeated her written opinion that Claimant is not at MMI for his urologic problems and requires further workup.

46. Dr. Gellrick also opined that Claimant required additional treatment for his spine.

47. Claimant testified that he did not have any right shoulder or knee pain prior to his work-related fall from a roof. He had no problem performing his job as a roofer at full duty prior to the accident. His job duties included carrying materials with his right arm, walking around on uneven surfaces, and climbing ladders.

48. Claimant explained that as he slipped and fell from the roof, he tried to catch himself on anything he could grab onto, but was unsuccessful because it happened too fast. He landed in a seated position then went backward onto gravel. He fainted and regained consciousness, and was in a lot of pain.

49. Claimant initially focused on his back symptoms and treatment. He also was taking a significant amount of pain medications so he did not immediately appreciate his right shoulder and right knee pain.

50. The ALJ observed the video surveillance which depicted Claimant sitting and driving, lifting his daughter into a car seat, carrying groceries and walking. He walked without a pronounced limp. Claimant testified that the groceries weighed less than 10 pounds. His daughter obviously weighs more than 10 pounds. Claimant was also observed carrying a mop and empty buckets. In one video Claimant sat in his vehicle for close to 15 minutes, which is not significantly longer than what he claims he can tolerate.

51. Nothing in the video surveillance is so compelling as to alter this ALJ's findings concerning Claimant's right shoulder and right knee. Further, the ALJ gives no weight to Dr. Primack's opinion, based on approximately 31 minutes of video surveillance, that Claimant was consciously misrepresenting his physical capabilities to his medical providers.

52. Respondents failed to overcome the opinion that Claimant's right knee and right shoulder conditions are related to the work injury. The opinions of Dr. Primack and Dr. Kawasaki that the lack of documentation in the medical records immediately subsequent to the injury does not constitute clear and convincing evidence. Rather, it is more probably true than not that Claimant was focused on his significant back injury and failed to recognize symptoms in other parts of his body until after his back injury had improved. Dr. Primack's opinions concerning the rehabilitation facility are not persuasive. Claimant has proven that he is entitled to receive treatment for the knee and shoulder injuries as recommended by the DIME physician.

53. The Respondents have overcome the DIME opinions regarding Claimant's mild TBI and psychological conditions. Clear and convincing evidence, specifically the opinions of Dr. Gutterman, who is a psychiatrist, indicates that Claimant does not continue to suffer from cognitive deficits related to a TBI. Dr. Gutterman's opinions that Claimant's cognitive problems arose from the anxiety, depression and PTSD rather than a TBI are very persuasive. Dr. Gutterman opined that Claimant had reached MMI for his psychological condition as did Dr. Esparza. Dr. Ryan, who is not a psychiatrist or psychologist, erroneously concluded that Dr. Esparza had not found Claimant at MMI for the psychological component of his injury. Additional medical treatment related to a TBI or for any ongoing psychological issues is not reasonable, necessary or related to the Claimant's work injury. Any opinions rendered to the contrary are specifically rejected.

54. The Respondents have overcome Dr. Ryan's opinions concerning any diagnosis of sexual dysfunction. The medical records lack any specific plausible causation analysis concerning ongoing sexual dysfunction. Claimant reported a decrease in sexual activity secondary to pain or fear of re-injury. He also reported a loss of sex drive. Eventually, he described erectile dysfunction (ED). As Dr. Gellrick indicated, Claimant is no longer taking a significant amount of opioid medications which could have accounted for the ED. Dr. Gellrick stated that she agreed with Dr. Ryan's

opinion that Claimant's ED requires a neurological consultation but then stated Claimant needs a urology evaluation. Dr. Ryan opined that Claimant suffered a spinal cord trauma which could be causing the ED, but the medical records do not support such a diagnosis. The medical evidence does not support a physical reason for Claimant's ED. Instead, the record appears to suggest that it is psychological and Claimant has received appropriate psychological treatment. Claimant has failed to prove that any further psychological treatment is reasonable, necessary or related to his claim. Claimant has also failed to prove that a neurology or urolgy referral related to ED is reasonable, necessary or related to his work injury.

55. Dr. Ryan noted that Claimant has a disc herniation and anterolisthesis at L3-4 and L4-5 with significant spinal stenosis. He stated that Claimant is probably at MMI for this condition but he would suggest another view. Dr. Ryan goes on to recommend that Claimant have a second spine surgical evaluation to get another opinion and reasonable treatment for the stenosis. He also recommended a high field MRI. Dr. Ryan's treatment recommendations regarding the spinal stenosis are inconsistent with his finding that "he is probably at MMI for this . . ." The ALJ rejects the treatment recommendations made by Dr. Ryan. Another spine surgical evaluation and high field MRI are not reasonable or necessary at this time. No persuasive evidence supports Dr. Ryan's recommendations.

56. To the extent Claimant needs any further treatment to maintain his spine condition, such decisions are deferred to Claimant's authorized treating providers, including, but not limited to Dr. Kawasaki, and the surgeon, Dr. Szapiel. The parties did not suggest that the Respondents had denied any specific treatment recommendations made by either Dr. Kawasaki or Dr. Szapiel. Thus, the ALJ declines to find that any specific medical treatment directed at Claimant's spine is reasonable, necessary or related to his industrial injury.

57. Claimant is unable to earn wages in his usual occupation as a roofer. His permanent work restrictions as determined by a functional capacity evaluation include occasional lifting from knuckle to shoulder limited to 15 pounds, 10 pounds frequently and 5 pounds constantly; bilateral carrying limited to 10 pounds occasionally; overhead lifting limited to 5 pounds occasionally; and lift and carry 10 pounds maximum occasionally. Claimant was restricted to no bending at the waist, crouching or crawling; and occasional ladder and stair climbing. In light of the restrictions and because Claimant is not MMI given his right shoulder and right knee problems that have not been adequately addressed, the Claimant is entitled to TTD commencing on September 28, 2013 and continuing until terminated pursuant to law. The Respondent is entitled to credits for indemnity benefits previously paid.

58. Whether Dr. Ryan's impairment ratings were correct is not ripe for determination. Because the Claimant is not at MMI and requires further follow up for his right knee and right shoulder, the issue of permanent partial disability may not be decided. As such, the ALJ declines to make any findings of fact pertaining to the accuracy of Dr. Ryan's permanent impairment ratings.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge enters the following conclusions of law:

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

4. “Maximum medical improvement" is defined in section 8-40-201(11.5), C.R.S., as:

> [A] point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. The requirement for future medical maintenance which will not significantly improve the condition or the possibility of improvement or deterioration resulting from the passage of time shall not affect a finding of maximum medical improvement. The possibility of improvement or deterioration resulting from the passage of time alone shall not affect a finding of maximum medical improvement.

5. Sections 8-42-107(8)(b)(I) and (II), C.R.S., provide that an authorized treating physician shall determine when the injured employee reaches MMI and that, should either party dispute that finding, the disputing party shall request a DIME. Claimant’s authorized treating physician, Dr. Kawasaki, placed the Claimant at MMI in September 2013 despite Claimant’s ongoing complaints of right knee and right shoulder pain. Dr. Kawasaki opined that the right knee and right shoulder were not related to the industrial injury thus Claimant did not receive much, if any, medical treatment for those two body parts. The Respondents filed a Final Admission of Liability, Claimant objected and

requested a DIME. The DIME physician, Dr. Ryan opined that Claimant was not at MMI for several reasons. Dr. Ryan felt that Claimant needed additional treatment directed at his spine, that Claimant need further psychological treatment, that Claimants suffered a TBI, that Claimant had ED related to a possible neurological problem, and that Claimant's right shoulder and right knee were related to the industrial injury. Respondents applied for hearing seeking to challenge Dr. Ryan's opinions.

6. Sections 8-42-107(8)(b)(III) and (c), *supra*, provide that the finding of a DIME selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004).

7. Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all the evidence, the trier-of-fact finds it to be highly probable and free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert*, *supra*. The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004); *see Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (Nov. 17, 2000).

8. The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). Since the DIME physician is required to identify and evaluate all losses and restrictions which result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Id.* The Division IME examiner's determination of MMI and permanent medical impairment inherently require the physician to assess, as a matter of diagnosis, whether the various components of the claimant's medical condition are causally related to the industrial injury. *Leprino Foods Co. v. ICAP*, 134 P.3d 475 (Colo. App. 2005).

9. Respondents failed to overcome the opinion that Claimant's right knee and right shoulder conditions are related to the work injury. The opinions of Dr. Primack and Dr. Kawasaki that the lack of documentation in the medical records immediately subsequent to the injury does not constitute clear and convincing evidence. Rather, it is more probably true than not that Claimant was focused on his significant back injury and failed to recognize symptoms in other parts of his body until after his back injury had improved. Dr. Primack's opinions concerning the rehabilitation facility are not persuasive. Claimant has proven that he is entitled to receive treatment for the knee and shoulder injuries as recommended by the DIME physician.

10. The Respondents have overcome the DIME opinions regarding Claimant's mild TBI and psychological conditions. Clear and convincing evidence, specifically the opinions of Dr. Gutterman, who is a psychiatrist, indicates that Claimant does not continue to suffer from cognitive deficits related to a TBI. Dr. Gutterman's opinions that Claimant's cognitive problems arose from the anxiety, depression and PTSD rather than a traumatic brain injury are very persuasive. Dr. Gutterman opined that Claimant had reached MMI for his psychological condition as did Dr. Esparza. Dr. Ryan, who is not a psychiatrist, erroneously concluded that Dr. Esparza had not found Claimant at MMI for the psychological component of his injury. Additional medical treatment related to a TBI or for any ongoing psychological issues is not reasonable, necessary or related to the Claimant's work injury. Any opinions rendered to the contrary are specifically rejected.

11. The Respondents have overcome Dr. Ryan's opinions concerning any diagnosis of sexual dysfunction. The medical records lack any specific plausible causation analysis concerning ongoing sexual dysfunction. Claimant reported a decrease in sexual activity secondary to pain or fear of re-injury. He also reported a loss of sex drive. Eventually, he described ED. As Dr. Gellrick indicated, Claimant is no longer taking a significant amount of opioid medications which could have accounted for the ED. Dr. Gellrick stated that she agreed with Dr. Ryan's opinion that Claimant's ED requires a neurological consultation but then stated Claimant needs a urology evaluation. Dr. Ryan opined that Claimant suffered a spinal cord trauma which could be causing the ED, but the medical records do not support such a diagnosis. The medical evidence does not support a physical reason for Claimant's ED. Instead, the record appears to suggest that it is psychological (per Dr. Gutterman) and Claimant has received appropriate psychological treatment. Any ED from which Claimant continues to suffer is not related to his industrial injury and no further treatment is reasonable or necessary.

12. Dr. Ryan noted that Claimant has a disc herniation and anterolisthesis at L3-4 and L4-5 with significant spinal stenosis. He stated that Claimant is probably at MMI for this condition but he would suggest another view. Dr. Ryan goes on to recommend that Claimant have a second spine surgical evaluation to get another opinion and reasonable treatment for the stenosis. He also recommended a high field MRI. Dr. Ryan's treatment recommendations regarding the spinal stenosis are inconsistent with his finding that "he is probably at MMI for this . . ." The ALJ rejects the treatment recommendations made by Dr. Ryan. Another spine surgical evaluation and high field MRI are not reasonable or necessary at this time. No persuasive evidence supports Dr. Ryan's recommendations.

13. To the extent Claimant needs any further treatment to maintain his spine condition, such decisions are deferred to Claimant's authorized treating providers, including, but not limited to Dr. Kawasaki, and the surgeon, Dr. Szapiel. The parties did not suggest that the Respondents had denied any specific treatment recommendations made by either Dr. Kawasaki or Dr. Szapiel. Thus, the ALJ declines to find that any specific medical treatment directed at Claimant's spine is reasonable, necessary or related to his industrial injury.

14. To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

15. As found above, Claimant's permanent work restrictions impact his earning ability. In addition, the Claimant is not at MMI for the injury. The Claimant is entitled to TTD commencing on September 28, 2013 and continuing until terminated pursuant to law. The Respondent is entitled to credits for indemnity benefits previously paid.

ORDER

It is therefore ordered that:

1. Claimant is not at maximum medical improvement. He is entitled to reasonable and necessary medical treatment for his right shoulder and right knee. Any determination on impairment ratings is premature and is reserved for future decision.

2. Claimant is entitled to ongoing TTD commencing on September 28, 2013 and ongoing until terminated pursuant to law.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

1. Whether Decedent suffered a heart attack pursuant to §8-41-302 C.R.S. during the course and scope of his employment with Employer on June 30, 2015

2. Whether Claimant has demonstrated by a preponderance of the evidence that Decedent's work for Employer on June 30, 2015 constituted an "unusual exertion" pursuant to §8-41-302(2), C.R.S.

3. Whether Claimant has proven by a preponderance of the evidence that Decedent's death occurred during the course and scope of his employment with Employer on June 30, 2015.

4. Whether Claimant has established by a preponderance of the evidence that Respondents are financially liable for reasonable, necessary and causally related medical expenses for Decedent's June 30, 2015 death.

5. Whether Claimants Kate Stewart, Dominic Stewart and Declan Stewart.are Decedent's dependents for purposes of receiving death benefits pursuant to §§8-42-114 & 8-42-115 C.R.S.

6. A determination of Decedent's Average Weekly Wage (AWW).

7. Whether Claimant is entitled to receive the statutory maximum for Decedent's funeral expenses pursuant to §8-42-123 C.R.S.

FINDINGS OF FACT

1. Decedent initially worked for Employer as a Utility Worker II but was subsequently promoted to the position of T&D Mechanic. His job duties included digging with a shovel to access water lines for repair.

2. Decedent earned $19.70 per hour plus overtime while working for Employer. Decedent's total income for the weeks of May 8, May 15, May 22, May 29, June 5, June 12, June 19 and June 26, 2015 was $10,602.71. Dividing $10,602.71 by 8 weeks yields an Average Weekly Wage (AWW) of $1,325.34. Decedent also received health benefits at a cost of $760 per month or $175.38 each week. Adding $1,325.34 and $175.38 yields a total AWW of $1,500.72. An AWW of $1,500.72 constitutes a fair approximation of Decedent's wage loss and diminished earning capacity.

3. On the morning of June 30, 2015 Decedent, his coworker Daniel and his supervisor Johnny Roybal were fixing a water meter in Denver, Colorado. To effectuate the repair Decedent used a shovel to remove dirt from around the meter. The trio

finished the job at about 11:00-11:30 a.m. and then traveled to a different job location to assist another work crew.

4. At the new jobsite crews were replacing a main water lead line with a copper line. To locate the line Heavy Equipment Operator Mike Smith had excavated a hole approximately 4-6 feet deep and 4-6 feet wide.

5. After eating lunch Decedent entered the service hole and used a shovel to remove some dirt in order to locate the water line. Decedent subsequently exited the hole and asked Mr. Smith to use the backhoe to remove additional dirt.

6. After Mr. Smith removed some dirt from the service hole Decedent used a ladder to descend into the hole. He again removed dirt in order to locate the water line. After approximately 10-15 minutes Decedent stopped digging.

7. Mr. Smith asked Decedent whether anything was wrong. Decedent raised his hand, shook his head and moved toward the ladder in an attempt to exit the service hole. He was unable to get out and collapsed. Various crew members entered the hole and poured water on Decedent because it was a hot summer day. Mr. Roybal called 9-1-1 for an ambulance.

8. Decedent was transported to Denver Health Medical Center by paramedics and pronounced dead. Claimant incurred medical expenses from the Denver Fire Department, Denver General Hospital and Emergency Medical Services as a result of Decedent's treatment on June 30, 2015.

9. The City and County of Denver Medical Examiner prepared an Autopsy Report of Decedent's death. He concluded that Decedent died as a result of idiopathic dilated cardiomyopathy with cardiomegaly and atrial fibrillation. The Medical Examiner noted that obesity was a significant contributing factor.

10. The record reveals that Claimant incurred funeral expenses in the amount of $8,570.38. Respondents shall thus pay the statutory maximum of $7,000 for Decedent's funeral expenses.

11. It is undisputed that Claimant Kate Stewart is Decedent's surviving spouse and was wholly dependent on Decedent at the time of his death on June 30, 2015. Claimants Dominic Stewart and Declan Stewart.were Decedent's minor children and thus also wholly dependent on him at the time of his death. Accordingly, Claimants are entitled to recover death benefits.

12. The record reveals that Decedent suffered from the pre-existing condition of atrial fibrillation or an electrical disorder of the heart. In July 2014 Decedent suffered an episode of atrial fibrillation while at Coors Field in Denver, Colorado. He was eating a hot dog and drinking a beer when his heart began racing. Decedent experienced lightheadedness and lost consciousness for approximately one to two minutes. He was transported by ambulance to a local hospital. Decedent underwent a successful DC cardioversion and received medications.

13. On June 6, 2015 Decedent awoke with a racing heart. He subsequently underwent a medical evaluation and received treatment for a recurrence of atrial fibrillation. Decedent also obtained medications and expressed interest in another DC cardioversion or possible catheter ablation.

14. On August 18, 2016 the parties conducted the pre-hearing evidentiary deposition of Cardiologist Mark W. Keller, M.D. After reviewing the Denver Medical Examiners Autopsy Report Dr. Keller recounted that Decedent had died of idiopathic dilated cardiomyopathy with cardiomegaly and atrial fibrillation. He explained that "dilated cardiomyopathy" means "bad heart muscle" or more specifically "a weak heart or a heart that's too thick or in some other way the muscle of a heart is deranged." Dr. Keller remarked that the Autopsy Report revealed Decedent had normal coronary arteries with no coronary artery disease or atherosclerosis that would cause a myocardial infarction or heart attack. He commented that the term "myocardial infarction" is synonymous with the phrase "heart attack."

15. Dr. Keller explained that "atrial fibrillation" is an electrical disorder of the heart. Normally, the atria or top chambers of the heart receive blood from the veins and then contracts to pump blood down to the ventricle to improve the ventricular filling. The electrical signal passes down to the ventricle. The ventricle then pumps blood to the body through the lungs. When atrial fibrillation occurs, the atria contract irregularly. More specifically, the fibers beat independently and there is no coordinated contraction. The ventricle receives extra electrical impulses that usually accelerate the ventricular heart rate but decrease ventricular filling because the atria are not contracting. Dr. Keller acknowledged that atrial fibrillation is significantly different from a heart attack. He remarked that pure atrial fibrillation does not cause death.

16. Dr. Keller reviewed witness statements from Mr. Roybal and Mr. Smith concerning Decedent's June 30, 2015 work activities. He noted that Decedent was performing manual labor in a hole on a very hot day. Decedent became distressed then collapsed and could not be revived. Dr. Keller summarized that Decedent's work in extremely hot conditions caused him to suffer cardiac arrest. He detailed that "heat caused [Decedent's] body temperature to increase and he then developed hyperthermia, heat exhaustion, heatstroke or hyponatremia as a consequence. The conditions caused a malignant heart arrhythmia leading to cardiac arrest and death."

17. On August 23, 2016 the parties conducted the pre-hearing evidentiary deposition of Edwin M. Healey, M.D. After examining the Denver Medical Examiners Autopsy Report Dr. Healey recounted that Decedent died of idiopathic dilated cardiomyopathy with cardiomegaly and atrial fibrillation. He explained that Decedent had an enlarged heart with dilated chambers and there was something wrong with the heart muscle. Decedent also suffered from atrial fibrillation or an irregular heartbeat. Dr. Healey summarized that Decedent likely developed heat exhaustion as a result of his job duties on June 30, 2015. The heat exhaustion led to his arrhythmia or abnormal heartbeats and death.

18. The definitions of "heart attack" reflect that the ailment is characterized by diminished blood supply because of a blockage that damages the heart muscle. Moreover, a "heart attack" is also known as a "myocardial infarction." The plain and ordinary meaning of "heart attack" thus involves death or heart damage caused by insufficient blood supply to the heart.

19. Dr. Keller's testimony bolsters the determination that a heart attack is limited to a myocardial infarction or heart damage caused by insufficient blood supply to the heart. Dr. Keller remarked that the Autopsy Report revealed Decedent had normal coronary arteries with no coronary artery disease or atherosclerosis that would cause a myocardial infarction. He commented that the term "myocardial infarction" is synonymous with the phrase "heart attack."

20. The Denver Medical Examiner concluded that Decedent died as a result of idiopathic dilated cardiomyopathy with cardiomegaly and atrial fibrillation. The Medical Examiner noted that obesity was a significant contributing factor. Dr. Keller explained that "dilated cardiomyopathy" means "bad heart muscle" or more specifically "a weak heart or a heart that's too thick or in some other way the muscle of a heart is deranged." Dr. Healey remarked that Decedent had an enlarged heart with dilated chambers and there was something wrong with the heart muscle. Decedent also suffered from atrial fibrillation or an irregular heartbeat caused by an electrical disorder. Dr. Keller explained that "atrial fibrillation" is an electrical disorder of the heart. Normally, the atria or top chambers of the heart receive blood from the veins and then contract to pump blood down to the ventricle to improve the ventricular filling. The electrical signal passes down to the ventricle. The ventricle then pumps blood to the body through the lungs. When atrial fibrillation occurs, the atria contract irregularly. More specifically, the fibers beat independently and there is no coordinated contraction. The ventricle receives extra electrical impulses that usually accelerate the ventricular heart rate but decrease ventricular filling because the atria are not contracting. Dr. Keller acknowledged that atrial fibrillation is significantly different from a heart attack.

21. Based on the plain and ordinary meaning or the term "heart attack" as well as persuasive medical testimony, Decedent did not suffer a heart attack pursuant to §8-41-302(2), C.R.S. during the course and scope of his employment with Employer on June 30, 2015. Claimant is therefore not required to demonstrate that Decedent's death "was proximately caused by an unusual exertion arising out of and within the course of employment."

22. Claimant has proven that it is more probably true than not that Decedent's death occurred during the course and scope of his employment with Employer on June 30, 2015. On June 30, 2015 Decedent used a ladder to enter a service hole. He removed dirt in order to locate the water line. After approximately 10-15 minutes Decedent stopped digging. Mr. Smith asked Decedent whether anything was wrong. Decedent raised his hand, shook his head and moved toward the ladder in an attempt to exit the service hole. He was unable to get out of the hole and collapsed. Various crew members entered the hole and poured water on Decedent because it was a hot summer day. Mr. Roybal called 9-1-1 for an ambulance. Decedent was transported to

Denver Health Medical Center by paramedics and pronounced dead. The City and County of Denver Medical Examiner concluded that Decedent died as a result of idiopathic dilated cardiomyopathy with cardiomegaly and atrial fibrillation. The Medical Examiner noted that obesity was a significant contributing factor.

23. Dr. Keller persuasively explained that he reviewed witness statements from Mr. Roybal and Mr. Smith concerning Decedent's June 30, 2015 death. He noted that Decedent was performing manual labor in a hole on a very hot day. Decedent became distressed then collapsed and could not be revived. Dr, Keller summarized that Decedent's work in extremely hot conditions caused his cardiac arrest. He detailed that "heat caused [Decedent's] body temperature to increase and he then developed hyperthermia, heat exhaustion, heatstroke or hyponatremia as a consequence. Then conditions caused a malignant heart arrhythmia leading to cardiac arrest and death." Moreover, Dr. Healey persuasively summarized that Decedent likely developed heat exhaustion as a result of his job duties on June 30, 2015. The heat exhaustion led to his arrhythmia and death. Although Decedent suffered from the pre-existing condition of atrial fibrillation or an electrical disorder of the heart, the record reveals that Decedent's job activities while working for Employer on June 30, 2015 aggravated, accelerated or combined with his pre-existing condition to cause his death.

24. Claimant has established that it is more probably true than not that Respondents are financially liable for reasonable, necessary and causally related medical expenses for Decedent's June 30, 2015 death. On June 30, 2015 Decedent was transported to Denver Health Medical Center by paramedics and pronounced dead. Claimant incurred medical expenses from the Denver Fire Department, Denver General Hospital and Emergency Medical Services as a result of Decedent's treatment on June 30, 2015.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

The Heart Attack Statute

4. Section 8-41-302(2), C.R.S. provides that a heart attack is not compensable "unless it is shown by competent evidence that such heart attack was proximately caused by an unusual exertion arising out of and within the course of employment." The statute establishes a two prong test of compensability when the claim for Workers' Compensation benefits is based upon a heart attack. The intent of the legislature in enacting the "unusual exertion" requirement was to replace the law as it existed before a 1965 amendment to the statute that had abolished the requirement. The legislature sought to ensure that only those heart attack related injuries resulting from more than the normal work activities of the claimant were compensable. *See Public Service Co. v. Industrial Comm'n*, 189 Colo. 153, 538 P.2d 430 (1975); *TNT Loveland Chinchilla Ranch, Inc. v. Bourne,* 178 Colo. 65, 495 P.2d 546 (1972). The claimant must not only show that he experienced an "unusual exertion arising out of and within the course of the employment" but also prove that the heart attack was caused by the unusual exertion. *See Kinninger v. Industrial Claim Appeals Office*, 759 P.2d 766 (Colo. App. 1988); *Vialpando v. Industrial Claim Appeals Office*, 757 P.2d 1152 (Colo. App. 1988).

5. The determination of whether an employee has been subjected to unusual exertion requires a comparison between the employee's duties at the time of the heart attack and his typical job duties. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 975 P.2d 1131, 1133 (Colo. App. 1997); *Vialpando*, 757 P.2d at 1153. However, the exertion does not need to be "different in nature" from the usual work of the employee. *See Wackenhut Corp.,* 975 P.2d at 1133; *In Re Carr v. Industrial Comm'n.*, 709 P.2d 52 (Colo. App. 1985) (although employee was performing routine job duties when he suffered heart attack, where amount of work on day of heart attack required significantly greater physical exertion and involved substantially more emotional stress, his job duties constituted unusual exertion). The determination of whether a claimant has sustained the burden of demonstrating an "unusual exertion" is a question of fact to be resolved by the ALJ. *Wackenhut Corp.,* 975 P.2d at 1133.

Principles of Statutory Construction and Definition of Heart Attack Pursuant to §8-41-302(2), C.R.S.

6. Because the phrase "heart attack" is not expressly defined in the Colorado statutes, the principles of statutory construction must be applied to determine and give effect to the intent of the legislature. *See People v. Madden,* 111 P.3d 452, 457 (Colo. 2005). To ascertain legislative intent we must consider the plain and ordinary meaning of the statutory language. *Id.* "A commonly accepted meaning is preferred over a

strained or forced interpretation." *People v. Voth,* 312 P.3d 144, 149 (Colo. 2013). When the intent of the legislature can be determined within reasonable certainty, it is unnecessary to resort to other rules of statutory construction. *Id.*

7. In ascertaining the plain and ordinary meaning of words and phrases courts may consider dictionaries for assistance. *See Voth,* 312 P.3d at 150 (consulting the Merriam-Webster Online Dictionary to define "substance"). The Merriam-Webster Online Dictionary defines "heart attack" as

> an acute episode of heart disease marked by the death or damage of heart muscle due to insufficient blood supply to the heart usually as a result of a coronary thrombosis or a coronary occlusion and that is characterized especially by chest pain — called also *myocardial infarction*.

Merriam-Webster, http://www.merriam-webster.com/dictionary/heart attack (last visited Sep. 29, 2016).

Similarly, Dictionary.com defines "heart attack" as

> damage to an area of heart muscle that is deprived of oxygen, usually due to blockage of a diseased coronary artery, typically accompanied by chest pain radiating down one or both arms, the severity of the attack varying with the extent and location of the damage; myocardial infarction.

Dictionary.com, http://www.dictionary.com/browse/heart-attack (last visited Sept. 29, 2016).

Finally, the Mayo Clinic explains that:

> [a] heart attack occurs when the flow of blood to the heart is blocked, most often by a build-up of fat, cholesterol and other substances, which form a plaque in the arteries that feed the heart (coronary arteries). The interrupted blood flow can damage or destroy part of the heart muscle.
>
> A heart attack, also called a myocardial infarction, can be fatal, but treatment has improved dramatically over the years. . . .

Mayo Clinic, http://www.mayoclinic.org/diseases-conditions/heart-attack/basics/definition/con-20019520 (last visited Sept. 29, 2016).

8. As found, the definitions of "heart attack" reflect that the ailment is characterized by diminished blood supply because of a blockage that damages the heart muscle. Moreover, a "heart attack" is also known as a "myocardial infarction." The plain and ordinary meaning of "heart attack" thus involves death or heart damage caused by insufficient blood supply to the heart. *See In re Rittenhouse,* W.C. No. 4-

817-721 (ICAP, July 19, 2011) (using "heart attack" and "myocardial infarction" synonymously in addressing compensability claim involving §8-41-302(2), C.R.S).

9. In *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985) the Colorado Supreme Court considered whether the decedent's death from a cardiac arrhythmia caused by the combination of a preexisting congenital heart condition, mitral valve prolapse and job-related mental stress constituted a compensable Workers' Compensation injury. In conducting its analysis the Court noted §8-41-108(2-5), 3 C.R.S. (1984 Supp.) provides that death or disability caused by a heart attack is not compensable unless the heart attack was caused by unusual exertion during work activities. *Id.* at 790, n.3. The Court commented that the referee "expressly found that the decedent did not suffer a heart attack" because the referee had determined that a cardiac arrhythmia caused the decedent's death. *Id*. The Court's analysis demonstrates that a "cardiac arrhythmia" is distinct from a "heart attack."

10. As found, Dr. Keller's testimony bolsters the determination that a heart attack is limited to a myocardial infarction or heart damage caused by insufficient blood supply to the heart. Dr. Keller remarked that the Autopsy Report revealed Decedent had normal coronary arteries with no coronary artery disease or atherosclerosis that would cause a myocardial infarction. He commented that the term "myocardial infarction" is synonymous with the phrase "heart attack."

11. As found, the Denver Medical Examiner concluded that Decedent died as a result of idiopathic dilated cardiomyopathy with cardiomegaly and atrial fibrillation. The Medical Examiner noted that obesity was a significant contributing factor. Dr. Keller explained that "dilated cardiomyopathy" means "bad heart muscle" or more specifically "a weak heart or a heart that's too thick or in some other way the muscle of a heart is deranged." Dr. Healey remarked that Decedent had an enlarged heart with dilated chambers and there was something wrong with the heart muscle. Decedent also suffered from atrial fibrillation or an irregular heartbeat caused by an electrical disorder. Dr. Keller explained that "atrial fibrillation" is an electrical disorder of the heart. Normally, the atria or top chambers of the heart receive blood from the veins and then contract to pump blood down to the ventricle to improve the ventricular filling. The electrical signal passes down to the ventricle. The ventricle then pumps blood to the body through the lungs. When atrial fibrillation occurs, the atria contract irregularly. More specifically, the fibers beat independently and there is no coordinated contraction. The ventricle receives extra electrical impulses that usually accelerate the ventricular heart rate but decrease ventricular filling because the atria are not contracting. Dr. Keller acknowledged that atrial fibrillation is significantly different from a heart attack.

12. As found, based on the plain and ordinary meaning or the term "heart attack" as well as persuasive medical testimony, Decedent did not suffer a heart attack pursuant to §8-41-302(2), C.R.S. during the course and scope of his employment with Employer on June 30, 2015. Claimant is therefore not required to demonstrate that Decedent's death "was proximately caused by an unusual exertion arising out of and within the course of employment."

Compensability

13. For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. §8-41-301(1)(c) C.R.S.; *Faulkner v. Industrial Claim Appeals Office,*12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Faulkner,* 12 P.3d at 846.

14. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

15. As found, Claimant has proven by a preponderance of the evidence that Decedent's death occurred during the course and scope of his employment with Employer on June 30, 2015. On June 30, 2015 Decedent used a ladder to enter a service hole. He removed dirt in order to locate the water line. After approximately 10-15 minutes Decedent stopped digging. Mr. Smith asked Decedent whether anything was wrong. Decedent raised his hand, shook his head and moved toward the ladder in an attempt to exit the service hole. He was unable to get out of the hole and collapsed. Various crew members entered the hole and poured water on Decedent because it was a hot summer day. Mr. Roybal called 9-1-1 for an ambulance. Decedent was transported to Denver Health Medical Center by paramedics and pronounced dead. The City and County of Denver Medical Examiner concluded that Decedent died as a result of idiopathic dilated cardiomyopathy with cardiomegaly and atrial fibrillation. The Medical Examiner noted that obesity was a significant contributing factor.

16. As found, Dr. Keller persuasively explained that he reviewed witness statements from Mr. Roybal and Mr. Smith concerning Decedent's June 30, 2015 death. He noted that Decedent was performing manual labor in a hole on a very hot day. Decedent became distressed then collapsed and could not be revived. Dr, Keller summarized that Decedent's work in extremely hot conditions caused his cardiac arrest. He detailed that "heat caused [Decedent's] body temperature to increase and he then developed hyperthermia, heat exhaustion, heatstroke or hyponatremia as a consequence. Then conditions caused a malignant heart arrhythmia leading to cardiac arrest and death." Moreover, Dr. Healey persuasively summarized that Decedent likely developed heat exhaustion as a result of his job duties on June 30, 2015. The heat exhaustion led to his arrhythmia and death. Although Decedent suffered from the pre-existing condition of atrial fibrillation or an electrical disorder of the heart, the record reveals that Decedent's job activities while working for Employer on June 30, 2015 aggravated, accelerated or combined with his pre-existing condition to cause his death.

Medical Benefits

17. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

18. As found, Claimant has established by a preponderance of the evidence that Respondents are financially liable for reasonable, necessary and causally related medical expenses for Decedent's June 30, 2015 death. On June 30, 2015 Decedent was transported to Denver Health Medical Center by paramedics and pronounced dead. Claimant incurred medical expenses from the Denver Fire Department, Denver General Hospital and Emergency Medical Services as a result of Decedent's treatment on June 30, 2015.

Dependents

19. Pursuant to §8-42-114, C.R.S. death benefits are payable to dependents of a decedent in the amount of two-thirds of the AWW subject to the applicable minimum. If there are wholly dependent persons at the time of the employee's death, they are entitled to weekly compensation equal to two-thirds of the decedent's AWW. §8-42-115(1)(b), C.R.S.

20. Section 8-41-501(1), C.R.S. designates classes of persons who are presumed to be wholly dependent on a decedent. Section 8-41-501(1)(a) provides that a widow or widower is wholly dependent "unless it is shown that she or he was voluntarily separated and living apart from the spouse at the time of the injury or death or was not dependent in whole or in part on the deceased for support." The statutory presumption of spousal dependency can thus only be rebutted by demonstrating that the surviving spouse was voluntarily separated and living apart from the decedent or was not dependent upon the decedent for any support. *See Exeter Drilling v. Industrial Claim Appeals Office,* 801 P.2d 20, 21 (Colo. App. 1990); *Michalski v. Industrial Claim Appeals Office,* 781 P.2d 183, 184-85 (Colo. App. 1989).

21. Section 8-41-501, C.R.S. presumes that a decedent's minor children under the age of 18 years are wholly dependent on the decedent. Pursuant to §8-41-501(1)(c), C.R.S. minor children of a decedent who are over 18 years of age and under 21 years of age who are engaged in courses of study as full-time students at accredited schools are also wholly dependent on the decedent. Section 8-42-121, C.R.S. grants discretion to the Director to apportion death benefits among the beneficiaries in the manner the Director deems just and equitable. Because the undersigned ALJ acts on

behalf of the Director in determining appropriate apportionment after a hearing, the ALJ is afforded the same power to apportion benefits.

22. As found, it is undisputed that Claimant Kate Stewart is Decedent's surviving spouse and was wholly dependent on Decedent at the time of his death on June 30, 2015. Claimants Dominic Stewart and Declan Stewart.were Decedent's minor children and thus also wholly dependent on him at the time of his death. Accordingly, Claimants are entitled to recover death benefits pursuant to §§8-42-114 & 8-42-115 C.R.S.

Average Weekly Wage

23. Section 8-42-102(2), C.R.S. requires the Judge to determine a claimant's AWW based on his earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a Judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed methods will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating an AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Therefore, §8-42-102(3), C.R.S. grants an ALJ substantial discretion to modify the AWW if the statutorily prescribed method will not fairly compute a claimant's wages based on the particular circumstances of the case. *In Re Broomfield,* W.C. No. 4-651-471 (ICAP, Mar. 5, 2007).

24. As found, Decedent earned $19.70 per hour plus overtime while working for Employer. Decedent's total income for the weeks of May 8, May 15, May 22, May 29, June 5, June 12, June 19, and June 26, 2015 was $10,602.71. Dividing $10,602.71 by 8 weeks yields an AWW of $1,325.34. Decedent also received health benefits at a cost of $760 per month or $175.38 each week. Adding $1,325.34 and $175.38 yields a total AWW of $1,500.72. An AWW of $1,500.72 constitutes a fair approximation of Decedent's wage loss and diminished earning capacity.

Funeral Expenses

25. Section 8-42-123, C.R.S. provides that when a work injury proximately causes the death of an employee, a lump sum not to exceed $7,000 shall be paid for burial and funeral expenses within 30 days after the employee's death. As found, the record reveals that Claimant incurred funeral expenses in the amount of $8,570.38. Respondents shall thus pay the statutory maximum of $7,000 for Decedent's funeral expenses.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Decedent did not suffer a “heart attack” pursuant to §8-41-302 C.R.S. during the course and scope of his employment with Employer on June 30, 2015.

2. Because Decedent did not suffer a “heart attack” pursuant to §8-41-302 C.R.S. during the course and scope of his employment with Employer on June 30, 2015.Claimant is not required to demonstrate that Decedent’s work for Employer on June 30, 2015 constituted an “unusual exertion” pursuant to §8-41-302(2), C.R.S.

3. Decedent’s death occurred during the course and scope of his employment with Employer on June 30, 2015.

4. Respondents are financially liable for reasonable, necessary and causally related medical expenses for Decedent’s June 30, 2015 death.

5. Claimants Kate Stewart, Dominic Stewart and Declan Stewart are Decedent’s dependents for purposes of receiving death benefits pursuant to §§8-42-114 & 8-42-115 C.R.S.

6. Decedent earned an AWW of $1,500.72.

7. Respondents shall pay the statutory maximum of $7,000 for Decedent’s funeral expenses pursuant to §8-42-123 C.R.S.

8. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge’s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge’s order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

1. Determination of Claimant's average weekly wage (AWW).

2. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from 9/14/15 through 11/29/15 and from 12/4/15 through 12/6/15 at an increased AWW.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary partial disability (TPD) benefits.

4. Whether Claimant has established by a preponderance of the evidence an entitlement to a permanent partial disability (PPD) rating of 10% whole person.

STIPULATIONS

1. The issue of mileage reimbursement was withdrawn.

FINDINGS OF FACT

1. Claimant works for Employer as a janitor. On April 9, 2015 Claimant sustained an admitted injury to his right shoulder and arm.

2. At the time of his injury in addition to working for Employer, Claimant also worked as a janitor for Kohl's.

3. Prior to his injury, and from December 28, 2014 through April 4, 2015 Claimant earned a total of $2,957.88 in gross wages from Kohl's. These wages were earned during a 14 week period of time resulting in an average weekly wage from Kohl's of $211.27.

4. For Respondent Employer, Claimant was paid twice per month. In the three months prior to his work injury and from January 1, 2015 through March 31, 2015 Claimant earned gross wages of $4,374.75. These wages were over a 90 day period and amount to an average daily wage of $48.61 which multiplied by 7 days in the week provides an average weekly wage of $340.27.

5. Due to his injury, Claimant underwent an MRI of his right shoulder on July 24, 2015 that was interpreted by Eduardo Seda, M.D. Dr. Seda provided the

impression of supraspinatus and infraspinatus tendinosis and acromioclavicular osteoarthritis. *See* Exhibit 4.

6. On September 14, 2015 Claimant underwent right shoulder surgery performed by John Papilion, M.D. Dr. Papilion performed arthroscopic debridement of the superior labrum and partial thickness, bursal sided rotator cuff, arthroscopic subacromial decompression with release of the coracoacromial ligament, and arthroscopic distal clavical resection. *See* Exhibit B.

7. On September 22, 2015 Claimant was evaluated by Allison Hedien, NP. Claimant reported that he had not yet started physical therapy, that he was taking pain medications which helped, and that he was tolerating symptoms okay. Claimant had sharp pain in the upper right area of his neck and back, sharp pain in the upper right neck/arm area, joint swelling and joint stiffness. Claimant reported moderate neck pain and pain migrating to the upper back area. NP Hedien noted Claimant's activity status was no work. *See* Exhibit 3.

8. On September 24, 2015 Claimant was evaluated by Dr. Papilion. Dr. Papilion noted that Claimant had been in the sling and on the CPM machine and that his pain was under control. Dr. Papilion recommended getting Claimant into a course of physical therapy and provided work restrictions of no use of the right arm and noted that Claimant did not require pain medication and could wean out of the sling in the next 1-2 weeks. *See* Exhibit 3.

9. On October 6, 2015 Claimant was evaluated by NP Hedien. Claimant reported that his pain was improving, that he felt physical therapy was helpful, and that he was only taking Norco a few times at night. NP Hedien noted on examination tenderness in the AC joint, anterior shoulder, lateral shoulder, and posterior shoulder with limited range of motion in all planes. NP Hedien noted the plan was to continue physical therapy, use ice/head/meds as helpful, and continued the work restriction of no use of the right upper extremity. *See* Exhibit 3.

10. Claimant returned to work for Kohl's in mid October. Between October 18, 2015 and October 31, 2015 Claimant worked 59.07 hours. Claimant continued to work at Kohl's in November and December and continued to earn wages consistent with his AWW from Kohl's prior to his injury. Claimant testified credibly that he was able to work at Kohl's despite his work restrictions and that he was able to self-modify his duties. *See* Exhibit 5.

11. On December 3, 2015 Claimant was evaluated by Dr. Papilion. Claimant was noted to be three months post shoulder surgery with improvement in motion through therapy. Claimant reported continued pain with overhead use and difficulty with internal rotation. Dr. Papilion performed a subacromial injection. *See* Exhibit 3.

12. On February 2, 2016 Claimant underwent physical therapy with Angela Wilt, PT. PT Wilt noted that Claimant had continued signs of shoulder impingement and

that they had to modify therapy exercises due to pain complaints and scapular weakness. Claimant reported fatigue in the right shoulder/scapular at the end of the session. PT Wilt noted the follow up plan included a focus on scapular stabilization and strengthening. *See* Exhibit 3.

13. On February 23, 2016 Claimant underwent physical therapy with PT Wilt. Claimant reported he was not having any shoulder pain that day and that he sometimes had shoulder pain at work that comes and goes. PT Wilt noted range of motion deficits and that Claimant was making significant progress toward his goal of being pain free. *See* Exhibit C.

14. On February 25, 2016 Claimant underwent physical therapy with PT Wilt. Claimant reported having no shoulder pain for a couple of days. Claimant reported that repetitive movements increased his pain and that his shoulder was usually sore by the end of the work day. Claimant reported that he was unable to sleep on his right shoulder due to pain. PT Wilt noted that the goal status for pain was 90% achieved as Claimant still had occasional shoulder pain and soreness at the end of the work day. PT Wilt discharged Claimant from therapy services due to the anticipated goals and expected outcomes being achieved. PT Wilt noted that the goal of lifting trash bins weighing 20 pounds was 100% achieved, the goal of push/pull a mop was 100% achieved, the goal of push/pull carpet cleaner with 50 pounds of force was 100% achieved, that the goal of lifting 20 pounds overhead with the right arm was 100% achieved, and that the goal of repetitively lifting 5-10 pounds overhead was 100% achieved. PT Wilt in her evaluation noted that Claimant's impairment list included pain and a pinching feeling at OH end range, impaired joint mobility, impaired motor function, impaired muscle performance, and impaired range of motion. *See* Exhibit C.

15. On February 29, 2016 Claimant was evaluated by Eric Tentori, D.O. Dr. Tentori noted that the surgeon, Dr. Papilion, had indicated that there was nothing more to offer Claimant. Dr. Tentori reviewed the operative report from Dr. Papilion and also performed an examination of Claimant. Dr. Tentori noted that Claimant had well-healed arthroscopic surgical sites with no edema, minimal residual discomfort with palpation of a diffuse nature, and active range of motion deficits. Dr. Tentori noted that the neurovascular systems were grossly intact in the right upper extremity and that there was no significant crepitance with passive range of motion. Dr. Tentori placed Claimant at maximum medical improvement (MMI). Dr. Tentori performed an impairment rating pursuant to the AMA Guides to the Evaluation of Permanent Impairment. Dr. Tentori provided a 7% upper extremity impairment rating for right shoulder active range of motion deficits, a 10% upper extremity impairment rating for the distal clavicle resection, and combined the upper extremity ratings using the combined values chart to provide a total upper extremity rating of 16%. Dr. Tentori noted that, if applicable, according to Table 3 of the Guides, the 16% upper extremity rating would convert to a 10% whole person impairment rating. Dr. Tentori noted that no additional impairment rating was indicated. *See* Exhibits 3, B.

16. Dr. Tentori also placed Claimant on permanent work restrictions for Claimant's bilateral upper extremities with a maximum lifting on an occasional basis limited to 25 pounds and a maximum pushing/pulling on an occasional basis limited to 30 pounds. For Claimant's right upper extremity, Dr. Tentori placed Claimant on permanent work restrictions with a maximum lifting on an occasional basis limited to 5-10 pounds and with no work with the right upper extremity at or above right shoulder height. *See* Exhibits 3, B.

17. On March 7, 2016 Respondents filed a Final Admission of Liability (FAL). In the FAL they admitted to an AWW of $340.27. They also admitted to a scheduled impairment rating of 16% of body code 01. Respondents also admitted to TTD from 9/14/15 through 11/29/15 and from 12/4/15 through 12/6/15 at a rate of $226.85 per week. *See* Exhibit A.

18. Claimant testified credibly at hearing. Claimant missed time from work at both Kohl's and Employer due to his surgery. Claimant continues to have pain in his right shoulder that interferes with sleeping, driving, and his work duties. Claimant's right shoulder has pain that travels from his shoulder in three different points and goes up to his neck and back down. Claimant indicated in court the three main points of pain that he feels with use of his right shoulder. Claimant pointed to the front of his right shoulder, the side of his right shoulder, and the backside of his right shoulder leading to his neck. Claimant has pain and limitations from his shoulder injury that go into his neck and that are outside the glenohumeral joint.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance*

Co. v. Cline, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Scheduled Injury vs. Whole Person Impairment

Section 8-42-107, C.R.S., sets forth two different methods of compensating medical impairment. Subsection (2) provides a schedule of disabilities and subsection (8) provides for whole person ratings. The question of whether the Claimant sustained a whole person medical impairment compensable under § 8-42-107(8), C.R.S., is one of fact for determination by the ALJ. The application of the schedule depends upon the "situs of the functional impairment" rather than just the situs of the original work injury. *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996). Pain and discomfort which limit a Claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule. *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). Claimant bears the burden of establishing functional impairment beyond the arm at the shoulder and the consequent right to permanent partial disability benefits under § 8-42-107(8)(c), C.R.S., by a preponderance of the evidence. *Maestas v. American Furniture Warehouse,* W.C. No. 4-662-369 (June 5, 2007); *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005).

In this case Claimant's testimony, substantiated by the medical records, establish that the Claimant is entitled to a whole person medical impairment rating under § 8-42-107(8)(c), C.R.S. Claimant has established that he suffered a functional impairment to a part of the body that is not contained on the schedule of impairment and that his functional impairment extends beyond the "arm at the shoulder." The credible evidence shows that Claimant's shoulder joint itself is impaired. It does not function as it did before Claimant's work injury. Work activities and other activities of daily living cause pain in his arm, shoulder, shoulder joint, upper right back muscles, and cervical area such that he is unable or limited in his ability to engage in actions requiring overhead movement. His impairment has caused him to make adaptations in the performance of his work duties and activities including driving and sleeping. Claimant's testimony is credible and persuasive that he has pain and limitations over areas that are part of his upper right back and into his neck that are not limited to his arm at the shoulder. Claimant's continued pain and limitations in these areas are consistent with the areas shown on MRI to have tendinosis and are also consistent with the surgical procedure that was done and the later injection that was done. NP Hedien noted pain in the upper right area of Claimant's neck and back consistent with his testimony at hearing. PT Wilt noted scapular weakness and a plan to focus on scapular stabilization which is also consistent with Claimant's testimony at hearing. The MRI, the surgery, and the injection all showed indications that the injury was beyond the glenohumeral joint and support Claimant's continued pain and limitation to areas beyond the glenohumeral joint. Accordingly, the ALJ finds that Claimant has established by preponderant evidence that his impairment is not on the schedule of permanent impairments that he is entitled a rating of 10% whole person.

Average Weekly Wage

Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's AWW on her earnings at the time of injury. Under some circumstances, the ALJ may determine a claimant's TTD rate based upon her AWW on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Earnings from concurrent employment may be included in a claimant's AWW where the injury impairs earning capacity from such employment. *Jefferson County Schools v. Dragoo*, 765 P.2d 636 (Colo. App. 1988).

Claimant has established that earnings from his employment at Kohl's are properly included in the determination of his AWW. Claimant had loss of earning capacity from Kohl's due to his work injury. Claimant has established that his AWW from his concurrent employment at Kohl's was $211.27.

For Respondent Employer, Claimant was paid twice per month. In the three months prior to his work injury and from January 1, 2015 through March 31, 2015 Claimant earned gross wages of $4,374.75. These wages were over a 90 day period and amount to an average daily wage of $48.61 which multiplied by 7 days in the week provides an average weekly wage of $340.27. The objective of calculating AWW is to arrive at a fair approximation of Claimant's wage loss due to his injury. Here, in the months immediately preceding his injury, Claimant was earning the wages listed above. Although it is true that prior to January of 2015, Claimant's average gross pay was generally less over each pay period than it was after January of 2015, the wage records have established that Claimant was earning an average weekly wage of $340.27 at the time of his injury. The ALJ concludes that a fair approximation of Claimant's lost earning capacity includes the wages more close in time to his injury and a fair approximation would not include wages earned prior to January 1, 2015 when he was working fewer hours and making less money. At the time of his injury his average weekly wage for Respondent Employer was $340.27. Adding the AWW from his concurrent employment at Kohl's results in an overall AWW at the time of his injury of $551.54.

Temporary Total Disability (TTD)

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*. TTD benefits shall continue until the employee returns to regular or modified employment. *See* § 8-42-105(3)(b), C.R.S.

Claimant is asking for an increase of TTD benefits due to his increased AWW. Claimant has established concurrent employment from Kohl's and an entitlement to an increase in his overall AWW and thus the corresponding TTD benefits for the period of September 14, 2015 through October 17, 2015. Claimant's testimony, substantiated by the medical records, establishes that he had shoulder surgery and was off work completely for a period of time following the surgery while he recovered and was in a sling. However, Claimant has failed to establish a continued entitlement to TTD benefits from October 18, 2015 through November 29, 2015 and has failed to establish an entitlement to TTD benefits from December 4, 2015 through December 6, 2015. TTD benefits continue until an employee returns to regular or modified employment. The wage records submitted show that Claimant returned to employment at Kohl's and earned wages from October 18, 2015 through November 29, 2015 and from December 4, 2015 through December 6, 2015. Claimant failed to demonstrate an entitlement to TTD and an inability to resume his prior work during these periods of time. Although Claimant had restrictions and impairments that prevented him from working for Respondent Employer, he was still able to work for and earn wages from Kohl's and therefore has not established that he was totally disabled from earning wages during these time periods. Thus, Claimant has failed to establish an entitlement to TTD benefits from October 18, 2015 through November 29, 2015 and from December 4, 2015 through December 6, 2015. Claimant has established an entitlement to TTD benefits based on the higher AWW of $551.54 for the period of time covering September 14, 2015 through October 17, 2015.

Temporary Partial Disability

Section 8-42-106, C.R.S. provides that in cases of temporary partial disability, the employee shall receive sixty-six and two-thirds percent of the difference between the employee's average weekly wage at the time of the injury and the employee's average weekly wage during the continuance of the temporary partial disability. Claimant has established an entitlement to TPD from October 18, 2015 through November 29, 2015 and from December 4, 2016 through December 6, 2016. During these periods of time Claimant was recovering from shoulder surgery and from a shoulder injection. Due to his injury, he had the loss/restriction of use of his injured shoulder/arm and had medical restrictions that made him unable to perform his regular employment with Respondent Employer. During this period of time, Claimant was able to work for Kohl's and so was able to earn his normal AWW from Kohl's. However, as he was impaired from earning wages from Respondent Employer, Claimant has established an entitlement to TPD and sixty-six and two-thirds percent of the difference between his AWW at the time of the injury and his AWW during the continuance of the TPD. Here, Claimant has established an entitlement to sixty-six and two-thirds percent of $340.27 (AWW at time of injury of $551.54 minus Kohl's AWW of $211.27 that he continued to earn) for the periods of time covering October 18, 2015 through November 29, 2015 and December 4, 2015 through December 6, 2015.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence an entitlement to a permanent partial disability rating of 10% whole person.

2. Claimant's average weekly wage is $551.54.

3. Claimant has established an entitlement to temporary total disability benefits from 9/14/15 through 10/17/15 at a rate of $367.71 per week. (sixty-six and two-thirds percent of his AWW).

4. Claimant has established an entitlement to temporary partial disability benefits from 10/18/15 through 11/29/15 and from 12/4/15 from 12/6/15 at a rate of $226.85 per week. (sixty-six and two-thirds percent of the difference between his AWW at the time of the injury and the AWW during his TPD).

5. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-964-128-01

ISSUES

- Did Claimant establish by a preponderance of the evidence that he is entitled to permanent partial disability benefits benefits based upon the impairment rating assigned by the Division IME, Timothy Sandell, M.D.

FINDINGS OF FACT

1. The underlying facts in the instant case were not in dispute. Claimant was employed as a truck driver for Employer. He sustained a compensable injury to his left lower extremity on September 17, 2014, while loading acetylene cylinders onto a truck. Claimant testified he was rolling a cylinder with his leg and experienced a burning sensation in his left knee.

2. Evidence related to a prior MRI of Claimant's left knee was admitted hearing. In particular, an x-ray report from Michael Ball, MD related done on May 5, 2006. Dr. Ball found there was no fracture or dislocation, joint spaces of normal with and alignment and a remarkable soft tissues. His impression was: normal knee. A report of the MRI from May 18, 2006 was also admitted, which showed no evidence of chondromalacia patella, but slight myxoid degeneration within the posterior horn of the medial meniscus and anterior cruciate ligament. A vertically oriented tear of the anterior horn of the lateral meniscus with no free meniscal fragment was noted. No other evidence concerning treatment for the left knee was admitted at hearing.

3. Claimant was initially examined by Elizabeth Arrington, M.D. on September 17, 2014, who diagnosed a left knee strain. Claimant was given a prescription for Ibuprofen and a knee immobilizer. Dr. Arrington reexamined Claimant on September 26, 2014 and referred him to an orthopedic surgeon.

4. On September 26, 2014, an MRI was done on Claimant's left knee. The films were read by Jayson Lord, M.D., whose impression was: ACL strain; patellar and quadriceps tendinitis; intact menisci; no fracture was identified, nor were loose bodies present in the joint spaces.

5. Claimant was then evaluated by Michael Simpson, M.D. (an orthopedic surgeon) on October 7, 2014, who diagnosed a possible tear of Claimant's distal quadriceps tendon after reviewing the MRI. Dr. Simpson recommended bracing and platelet rich plasma injections to help with healing.

6. A repeat MRI was performed on December 26, 2014. The MRI films were read by Michael O'Neill, M.D., whose impression was: no significant interval change since prior study; mild chronic tendinosis involving the distal quadriceps tendon and

proximal patellar tendon without tear; small joint effusion; and no meniscal tear. The ALJ concluded the MRI findings constituted objective evidence of Claimant's knee condition and supported the conclusion he sustained a permanent impairment. Claimant received conservative treatment, including physical therapy, but his symptoms continued. Claimant credibly testified he continued to experience symptoms in his left knee and these limited his activities.

7. Claimant returned to Dr. Simpson on January 28, 2015. Dr. Simpson's diagnosis was partial thickness tear of the distal quadriceps tendon with continued tendinitis and surgery was recommended. However, Claimant decided against surgery, as he was concerned about his Crohn's disease and the potential for infection.

8. There was evidence introduced regarding possible somatization and/or psychological issues potentially impacting Claimant's impairment. More particularly, on January 30, 2015, Claimant was evaluated by Scott Primack, M.D. Dr. Primack conducted various psychosocial evaluations to determine whether there were any factors present which would preclude Claimant from achieving a good outcome. Claimant scored a 42 on the Modified Zung Depression Index and an 18 on the Modified Pain Questionnaire, which placed him in the "distressed/depressed" category for psychological functioning. Dr. Primack also noted a significant component of somatization.

9. On February 25, 2015, Claimant was evaluated by Dale Philip Mann, PhD. Dr. Mann administered several psychological evaluations, all of which had valid results. Dr. Mann concluded Claimant was an individual who was experiencing moderate to above average anxiety, moderate to above average depression, high somatic distress and high functional distress. The ALJ was not persuaded these findings impacted Claimant's impairment ratings, as these were based upon range of motion ("ROM") measurements of his left knee.

10. On March 17, 2015, Claimant was seen by Michael Moore, ABDA, PTA, ATC, MA and Ashley Zimmerman, DPT Xcel Physical and Occupational Therapy for a Functional Capacity Evaluation ("FCE"). The results of the evaluation suggested Claimant gave reliable effort, with 20 of 20 consistency measures within expected limits. Claimant displayed ability to perform and tolerate all activities tested, with the exception of crouching and kneeling. Claimant was found to have 121 degrees of flexion, and 14 degrees of extension of the left knee.

11. On March 30, 2015 (thirteen days after the FCE), John Reasoner, M.D. evaluated Claimant for his impairment rating evaluation. Dr. Reasoner confirmed Claimant was at MMI and, using the range of motion measurements obtained from the FCE, assigned a 12% scheduled rating to Claimant's left knee. There was no evidence Dr. Reasoner independently performed ROM measurements on Claimant.

12. Respondents filed a Final Admission of Liability on April 17, 2015, admitting to pay Claimant $6,914.67 in a permanent partial disability (PPD) benefits based on the 12% scheduled rating assigned by Dr. Reasoner.

13. Claimant presented to Dr. Sandell on August 13, 2015 for a DOWC IME. Dr. Sandell agreed that Claimant was at MMI as of March 20, 2015. Dr. Sandell obtained ROM measurements of the left knee, documenting 100 degrees of flexion and 30 degrees of extension. These measurements equal 18% and 17% ratings respectively, and combined for a 35% left lower extremity rating. Dr. Sandell noted that Claimant's range of motion may vary over time, and that Claimant should continue his range of motion exercises to limit his losses.

14. On December 28, 2015, Linda Mitchell, M.D. performed an IME of Claimant on behalf of Respondents. Dr. Mitchell agreed Claimant was at MMI. Dr. Mitchell found Claimant to have 113 degrees of flexion and 15 degrees of extension in the left knee. This equated to a 19% scheduled rating. Dr. Mitchell compared the contralateral joint (right knee) and found the normalized rating for the left knee to be 6%. The ALJ noted there was no evidence admitted at hearing to show that Dr. Mitchell's ROM measurements on the left knee were invalid.

15. Dr. Mitchell testified as an expert in the Occupational Medicine, the specialty in which she is board certified. Dr. Mitchell is Level II accredited pursuant to the WCRP. She testified that she found Claimant had a 6% impairment rating in his left knee. She reached this result by obtaining range of motion measurements for both knees and then normalized (subtracted) the unaffected side from the affected side, which gave the normalized value. When asked to compare her measurements to those of Dr. Sandell, she agreed the range of motion numbers obtained by Dr. Sandell were "significantly worse" than what she obtained. She acknowledged that neither Dr. Reasoner nor Dr. Sandell normalized for the right knee. When asked whether there is any guidance in the AMA *Guides* for dealing with different ratings from different doctors, Dr. Mitchell testified, "I don't know if there's anything in the *AMA Guides*, but the Division must use some guidance".[1] Dr. Mitchell testified it was within the examining doctor's discretion whether to compare the affected joint with a contralateral joint. The DOWC impairment tip sheet involved the example of an obese patient. There was no evidence before the Court that which persuaded the ALJ that the example in the DOWC tip sheet applied in this case.

16. Claimant testified his left knee affects his functioning, including walking up stairs, standing, lifting and walking.

17. Claimant sustained a permanent medical impairment as a result of his industrial injury.

18. The ALJ found Dr. Reasoner's conclusions regarding Claimant's permanent medical impairment to be less persuasive than the other physicians, as he did not perform ROM measurements, but relied upon those done at the FCE.

19. The ALJ found Dr. Sandell's conclusions regarding Claimant's permanent

[1] (Mitchell Deposition 9:6-7).

medical impairment to be less persuasive than Dr. Mitchell's, as he provided scant analysis and/or explanation as to why the rating was vastly higher than Dr. Reasoner's.

20. The ALJ was persuaded by Dr. Mitchell's opinion regarding Claimant's gross impairment rating, as she had the benefit of all of Claimant's treatment records, as well as the ratings done by Dr. Reasoner and Dr. Sandell.

21. The ALJ was not persuaded that the methodology used by Dr. Mitchell to "normalize" Claimant's impairment, by comparing it with the contralateral joint, accurately reflected Claimant's impairment.

22. The ALJ was persuaded that Claimant was entitled to permanency benefits based upon Dr. Mitchell's gross impairment rating.

23. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the credibility of the various health care providers who evaluated Claimant's permanent impairment and the basis of these opinions was the focus of the ALJ's review of the evidence admitted at hearing.

Claimant's Impairment Rating

The Workers' Compensation Act classifies work-related injuries as either scheduled or non-scheduled injuries. Scheduled injuries are those listed in § 8-42-107(2). Claimant's impairment rating was determined pursuant to §8-42-107(1)(a) and (2), C.R.S. For a scheduled impairment rating, a party does not have to overcome the Division IME by clear and convincing evidence. *Delaney v. Industrial Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2000). Rather, Claimant has the burden of proof to establish his extremity impairment rating.

The ALJ was asked to resolve the discrepancy between the impairment ratings issued by three physicians, Dr. Reasoner, Dr. Sandell, and Dr. Mitchell. As determined in Findings of Fact 14, 20 & 21, the ALJ was persuaded by Dr. Mitchell's findings and her analysis of Claimant's permanent medical impairment (gross). The ALJ utilized the Introduction section for Chapter 2 of the *AMA Guides*[2], which specified:

> "If two physicians using the *Guides* have obtained similar results and reached similar conclusions, a framework exists within which to resolve the discrepancies. Analysis of records and reports will disclose the differences. In such an instance, the differences will be in the clinical findings, which are matters of fact, not opinion; the latter can be verified by further observation of the claimant in accordance with the procedures and methods of the *Guides*…"[3]

When considering the three (3) medical impairment ratings, the ALJ noted all met the validity criteria, as prescribed by the *AMA Guides*. Applying the Introductory Section of Chapter 2, the ALJ considered each rating separately to determine which had the most clinical support. Although Dr. Reasoner's impairment rating was based on a valid FCE, the ALJ notes his evaluation of Claimant was done 13 days after the FCE. There was no evidence in the record that Dr. Reasoner verified the measurements made by the personnel at Xcel Physical and Occupational Therapy. Also, this appears to be the first time he had evaluated Claimant. Thus, the ALJ was not persuaded that Dr. Reasoner's rating most accurately reflected Claimant's permanent impairment. (Finding of Fact 18).

As found, Dr. Sandell's medical impairment rating, while valid numerically, contained very little analysis of why the range of motion measurements differed so greatly from those obtained in the FCE/Dr. Reasoner. (Finding of Fact 19). As such, Dr. Sandell's opinions were not as persuasive to the ALJ. In fact, when applying the principles articulated in Chapter 2 of the introductory section for the AMA Guides, the ALJ was not able to find a clinical explanation in either the medical records or expert testimony as to why Dr. Sandell's rating was so much higher than the rating of either Dr. Mitchell or Dr. Reasoner. Dr. Sandell's explanation, namely, that sometimes there were

[2] *American Medical Association Guides to the Evaluation of Permanent Impairment*, Third Edition (Revised) in effect as of July 1, 1991.

[3] Exhibit K.

variations between range of motion measurements did not illuminate this issue either. (Findings of Fact 13 & 19). Thus, the ALJ concluded Claimant did not meet his burden of proof to establish Dr. Sandell's rating as the rating that most accurately expressed his medical impairment.

Accordingly, the ALJ concluded Dr. Mitchell, who performed the last evaluation and had the benefit of all available medical records (including both prior ratings) was able to accurately assess Claimant's medical impairment. (Finding of Fact 20). The ALJ was persuaded that Dr. Mitchell's gross impairment rating for Claimant's left knee-19% was accurate because the range of motion measurements were more in line with Dr. Reasoner's findings and the FCE, as opposed to Dr. Sandell's. The ROM findings on flexion and extension provided support for the conclusion that these measurements most accurately assessed Claimant's overall impairment.

In reaching this conclusion, the ALJ was not persuaded by all of Dr. Mitchell's opinions. The ALJ was not persuaded Claimant's medical impairment rating should be reduced by the "normalizing" method employed by Dr. Mitchell. (Finding of Fact 21). As Dr. Mitchell admitted, the *AMA Guides* do not necessarily provide for normalizing impairment ratings with an asymptomatic contralateral body part. Dr. Mitchell testified normalizing might be provided for in the DOWC guidelines, but other than the tip sheet, no authority was cited to provide support for this contention. (Finding of Fact 15). There was insufficient evidence introduced at hearing that subtracting Claimant's ROM in the left knee from that of the right leg was an appropriate measure of Claimant's impairment. Accordingly, Dr. Mitchell's testimony did not persuade the ALJ that subtracting the rating from the contralateral joint was proper. (Finding of Fact 21). Further, no legal authority was provided to the Court by Respondents to support this methodology.

Therefore, the ALJ concluded the proper measure of Claimant's medical impairment rating was Dr. Mitchell's gross impairment rating of 19%, based upon valid range of motion measurements made at the time of the IME. (Finding of Fact 22). Claimant is therefore entitled to permanent partial disability benefits based upon Dr. Mitchell's (gross) lower extremity impairment rating.

ORDER

It is therefore ordered that:

1. Claimant is entitled to permanent partial disability benefits based upon the 19% lower extremity impairment rating issued by Dr. Mitchell.

2. Respondents shall pay PPD benefits based on Dr. Mitchell's gross impairment rating.

3. Respondents are entitled to a credit for PPD benefits previously paid.

4. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. ISSUES

- Whether Claimant is entitled to temporary partial or temporary total disability benefits beyond those admitted in the July 6, 2015 Amended Final Admission of Liability;

- Whether Claimant's left shoulder injury resulted in functional impairment beyond that found in the schedule of impairments or whether Claimant's impairment is limited to his left upper extremity; and

- Whether Claimant is entitled to a disfigurement award.

FINDINGS OF FACT

1. Claimant was born December 6, 1949, and was 66 years of age at the time of the hearing.

2. Claimant worked for the Employer as an ATM technician.

3. On January 29, 2014, Claimant suffered an injury while in the course and scope of his employment when he slipped on some ice and fell backwards landing on his back and left side.

4. The Respondents admitted liability for the injury.

5. Claimant first sought treatment for his left shoulder injury on January 29, 2014. Darla Draper, M.D., at Concentra examined the Claimant. Dr. Draper's assessment was contusion of left shoulder and contusion of back secondary to mechanical fall. She restricted Claimant from working the rest of the day and the next day. Dr. Draper then released the Claimant to return on January 31, 2014 with restrictions of no lifting, pushing, or pulling greater than 10 pounds with the right upper extremity; no bending, squatting, or kneeling; may change positions as needed; should be sitting 50% of the time; unable to drive company vehicle; no use of the left upper extremity; and must wear arm sling.

6. Respondents offered Claimant modified duty and he accepted modified duty beginning January 31, 2014. Claimant worked the modified duty job through May 4, 2014 before undergoing shoulder surgery on May 5, 2014.

7. Claimant was restricted from working beginning on May 5 through May 18, 2014. Respondents admitted for TTD from May 5, 2014, through May 18, 2014. The

admitted average weekly wage was $909.01. Claimant does not challenge the admitted AWW.

8. Claimant returned to work on modified duty beginning on May 19, 2014.

9. Claimant submitted paystubs showing the following earnings from the date of the injury in this claim to September 24, 2014, the date of injury in his other claim:

- 1/20/14 – 2/2/14: $1,711.81
- 2/3/14 – 2/16/14: $1,364.89
- 2/17/14 – 3/2/14: $1,488.30
- 3/3/14 – 3/16/14: $1,533.56
- 3/17/14 – 3/30/14: $1,508.93
- 3/31/14 – 4/13/14: $1,632.09
- 4/14/14 – 4/27/14: $1,463.40
- 4/28/14 – 5/11/14: $1,306.90
- 5/12/14 – 5/25/14: $767.70
- 5/26/14 – 6/8/14: $1,477.45
- 6/9/14 – 6/22/14: $1,432.53
- 6/23/14 – 7/6/14: $1,301.43
- 7/7/14 – 7/20/14: $1,482.63
- 8/4/14 – 8/17/14: $1,621.90
- 8/18/14 – 8/31/14: $1,458.98
- 9/1/14 – 9/14/14: $1,459.08
- 9/15/14 – 9/28/14: $1,186.87

10. Claimant has failed to prove he is entitled to TPD benefits for the following time periods: 4/28/14 – 5/11/14, 5/12/14 – 5/25/14, and 7/21/14 – 8/3/14. Claimant received TTD benefits for part of the 4/28/14 – 5/11/14 and 5/12/14 – 5/25/14 pay periods. It is not possible to calculate TPD for those periods based on the evidence submitted. Claimant did not submit a paystub for the pay period 7/21/14 – 8/3/14. Claimant has failed to prove he is entitled to TPD benefits for the 7/21/14 – 8/3/14 pay period.

11. Claimant credibly testified at hearing that he was unable to work his regular job duties and worked fewer hours from his date of injury until his surgery. He explained that on modified duty, he worked only eight hours per day whereas prior to the left shoulder injury he often averaged 10-11 hours per day. As such, Claimant sustained wage loss causally related to his admitted left shoulder injury.

12. Claimant has established a wage loss for the remaining 15 pay periods in the amount of $5,146.45 ($27,270.30 minus $22,123.85).

13. Claimant did not return to work with Employer after September 24, 2014. Claimant was off work from September 25, 2014 until he was placed at maximum medical improvement on March 12, 2015. At all relevant times while Claimant was off

work, he had work-restrictions involving his left shoulder.

14. Claimant was receiving weekly TTD benefits under his work-related right shoulder injury in the amount of $464.43.

15. As referenced above, on May 5, 2014, Claimant underwent a left shoulder arthroscopy with biceps tenotomy, shoulder debridement, and manipulation under anesthesia performed by Dr. Cary Motz. The post-operative assessment was massive irreparable left rotator cuff tear and left biceps tendon rupture. Claimant now does not have an intact supraspinatus or infraspinatus tendon in his left shoulder.

16. On March 12, 2015, Dr. Motz examined the Claimant. Dr. Motz noted that Claimant's left shoulder pain "does not radiate" and "discomfort does not interfere with sleep and is not present at rest. The patient denies any additional symptoms." He noted Claimant's pain was aggravated with left arm activity. Dr. Motz again noted Claimant's cervical spine/neck range of motion was "full painless arc of motion in all planes." Dr. Motz noted mild shoulder girdle atrophy present.

17. Dr. Motz determined that Claimant reached maximum medical improvement (MMI) on March 12, 2015 with permanent restrictions as set forth above. Dr. Motz issued a 18% permanent impairment rating of Claimant's left upper extremity, which converted to 11% whole person.

18. Respondents filed a Final Admission of Liability (FAL) admitting to the 18% left upper extremity rating. Claimant objected to the FAL and noted that an application for hearing had already been filed.

19. On September 24, 2014, Claimant sustained a right shoulder injury, which is the subject of another claim. The Respondents admitted for TTD for the period of September 25, 2014, through July 1, 2015. But for the right shoulder claim, Claimant would have continued to work modified duty.

20. On November 3, 2014, Claimant underwent a right shoulder arthroscopy with arthroscopic rotator cuff repair, arthroscopic biceps tenodesis, arthroscopic subacromial decompression, and manipulation under anesthesia.

21. On February 12, 2015, Dr. Motz examined Claimant regarding his right shoulder post-op condition. He noted Claimant's cervical spine/neck ROM was "full painless arc of motion in all planes." Dr. Motz recommended physical therapy for the right shoulder and commented that Claimant was at MMI for the left shoulder.

22. Jorge Klajnbart, D.O., performed an independent medical examination of Claimant at Respondents' request on December 30, 2015, and issued a report on January 6, 2016. Claimant reported pain and popping in his left shoulder during normal everyday activities. His pain ranges from 0 to 6 out of 10. Claimant reported difficulty extending his left arm out or especially with any weight. Claimant reported aching primarily in the anterior shoulder and some numbness into the palm of his left hand with no neck pain.

23. Dr. Klajnbart observed supraspinatus and infraspinatus fossa atrophy. Dr. Klajnbart provided impairment for weakness of the supraspinatus and infraspinatus, as well as range of motion loss to arrive at the 23% left upper extremity rating.

24. Dr. Klajnbart noted that Claimant had "full active pain (sic) with cervical range of motion." Dr. Klajnbart explained at his deposition that this should have read "full, active, painless range of motion." Dr. Klajnbart opined, "There is no functional impairment proximal to the arm at the shoulder."

25. Claimant solicited an independent medical examination performed by John S. Hughes, M.D. Dr. Hughes examined the Claimant, took a history from him and reviewed his medical records. Dr. Hughes issued a report on March 14, 2016. Dr. Hughes opined Claimant had left shoulder arthritis and shoulder girdle regional muscular atrophy, post arthroscopic extensive debridement, biceps tenotomy and manipulation under anesthesia done by Dr. Motz on May 5, 2014. Dr. Hughes also opined Claimant has residual left-sided trapezius hypertonicity with measurable decreases in right lateral flexion of the cervical spine.

26. Dr. Hughes performed a physical examination of the cervical spine noting posterior trapezius hypertonicity, worse on left than right. Dr. Hughes also tested Claimant's range of motion in his cervical spine which displayed reduced lateral flexion on the right as compared to the left. Dr. Hughes noted supraspinatus and infraspinatus atrophy on the left side. Dr. Hughes issued a 24% left upper extremity rating based upon range of motion loss and substantial loss in strength of the supraspinatus and infraspinatus musculature.

27. Dr. Hughes opined that he disagreed that Claimant suffered no "loss of function beyond the region of the arm into more proximal regions of the musculoskeletal system." Dr. Hughes reiterated the well-documented muscular imbalances sustained by Claimant over his left shoulder girdle, hypertonicity and dyskinesis of the left trapezius musculature and measurably documented impairment of cervical lateral flexion when performed actively with dual inclinometers.

28. Dr. Klajnbart testified by deposition on July 13, 2016. Dr. Klajnbart is board-certified in orthopedic surgery and is Level-II accredited by the Colorado Division of Workers' Compensation. Dr. Klajnbart was offered and accepted as a medical expert. Dr. Klajnbart testified to his opinion that Claimant's left shoulder injury did not cause functional impairment proximal to the arm at the shoulder. Dr. Klajnbart testified Claimant had full, active, painless range of motion in his cervical spine during his examination of Claimant. Dr. Klajnbart described his examination of a patient's active cervical range of motion. He stated that if a patient goes through the range of motion pain-free, that's how he documents it and goes no further, meaning he does not use a dual inclinometer to measure the range of motion. Dr. Klajnbart testified Claimant complained of no neck pain and the physical examination was normal. Dr. Klajnbart also noted that Dr. Motz documented full painless arc of motion in all planes of Claimant's cervical spine on September 11, 2014, October 9, 2014, February 12, 2015, and March 12, 2015. Dr. Klajnbart further testified that he found no left-sided trapezius hypertonicity

upon examination and none was noted by Dr. Motz. Dr. Klajnbart, however, observed that Claimant displayed supraspinatous and infraspinatous fossa atrophy located above and below his scapula/shoulder blade and that it was medically probably that Claimant’s atrophy was getting worse since he was placed at MMI.

29. Claimant testified at hearing that he is left handed. Claimant credibly testified that he continues to have pain and loss of function involving his left shoulder with activity. Claimant demonstrated his range of motion upon direct examination. Claimant credibly testified to pain and limitation proximal to the glenohumeral joint with range of motion and activities.

30. The ALJ observed that Claimant has a surgical scar approximately ½-inch long and indented on the front of his left shoulder; obvious muscle atrophy and loss of muscle involving the area between Claimant’s scapula, trapezius and left shoulder in the back, and left pectoral and left shoulder in the front. Claimant displayed asymmetry between the muscle tone in his right and left shoulder girdles including a described loss of the left scapula. Claimant did not have this atrophy prior to his injury of January 29, 2014. Claimant has sustained a serious permanent disfigurement to areas of his body normally exposed to public view as a result of his work injury.

CONCLUSIONS OF LAW

General Conclusions

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57

P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

Temporary Partial/Temporary Total Disability

4. To establish entitlement to temporary disability benefits, an employee must prove that the industrial injury, or occupational disease, has caused a "disability," and that he/she suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S. (2009); *PDM Molding, Inc. v. Stanburg*, 898 P.2d 542, 546 (Colo. 1995). The term "disability," as used in workers' compensation cases, connotes two elements. The first is "medical incapacity" evidenced by loss or reduction of bodily function. "Disability" connotes both medical incapacity and restrictions to bodily function.

5. Claimant has failed to prove he is entitled to TPD benefits for the following time periods: 4/28/14 – 5/11/14, 5/12/14 – 5/25/14, and 7/21/14 – 8/3/14. Claimant received TTD benefits for part of the 4/28/14 – 5/11/14 and 5/12/14 – 5/25/14 pay periods. It is not possible to calculate TPD for those periods based on the evidence submitted. Claimant did not submit a paystub for the pay period 7/21/14 – 8/3/14. Claimant has failed to prove he is entitled to TPD benefits for the 7/21/14 – 8/3/14 pay period.

6. Claimant has established a wage loss for the remaining 15 pay periods. For the other 15 pay periods, Claimant has proven he is entitled to total TPD benefits in the amount of $5,146.45 ($27,270.30 minus $22,123.85). To the extent Claimant seeks additional TTD benefits under this claim, he has failed to prove that he would be entitled to any additional wage loss benefits other than the $5,146.45 in TPD.

7. An industrial accident is the proximate cause of a claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority*, 768 P.2d 751, 753 (Colo. App. 1988). If an intervening event triggers disability or need for medical treatment, then the causal connection between the original injury and the claimant's condition is severed. *See Post Printing & Publishing Co. v. Erickson*, 94 Colo. 382, 384, 30 P.2d 327, 328 (1934); *Vargus v. United Parcel Service*, W.C. No. 4-325-149 at 3 (ICAO Aug. 29, 2002); *Vandenberg v. Ames Construction*, W.C. No. 4-388-883 at 4 (ICAO Dec. 5, 2007).

8. Claimant has failed to prove entitlement to additional temporary disability benefits under his left shoulder claim for any period of time after he sustained his right shoulder injury on September 24, 2014. After September 24, 2014, Claimant was unable to work due to a new industrial injury not because of his left shoulder injury. The causal connection between the left shoulder injury and Claimant's subsequent wage loss beginning on September 24, 2014 was, therefore, severed. Claimant has cited to persuasive authority that would allow an award of TPD under one claim following a subsequent separate industrial injury for which he was receiving TTD. As such, Claimant's claim for TPD following September 24, 2014 is denied.

Permanent Partial Disability

9. Section 8-42-107, C.R.S., sets forth two different methods of compensating medical impairment. Subsection (2) provides a schedule of disabilities and subsection (8) provides for whole person ratings. The threshold issue is application of the schedule and this is a determination of fact based upon a preponderance of the evidence. The question of whether the Claimant sustained a whole person medical impairment compensable under § 8-42-107(8), C.R.S., is one of fact for determination by the ALJ. The application of the schedule depends upon the "situs of the functional impairment" rather than just the situs of the original work injury. *Langton v. Rocky Mountain Health Care Corp.,* 937 P.2d 893 (Colo. App. 1996); *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996).

10. Pain and discomfort which limit a Claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule. See *Langton v. Rocky Mountain Healthcare Corp.*, *supra*; *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996).

11. Claimant has proven by a preponderance of the evidence that the situs of his functional impairment extends beyond the "arm at the shoulder." The credible evidence shows that Claimant's left shoulder joint itself is impaired. It does not function as it did before Claimant's work injury. Thus, the situs of the functional impairment is the shoulder joint, which is not on the schedule of injuries. The mere fact that the shoulder joint affects arm mobility does not mean Claimant sustained only a "loss of arm at the shoulder." In addition, whether Claimant had neck symptoms resulting from his left shoulder injury is only one factor to consider. Claimant credibly testified that he is left handed. He continues to have pain and loss of function involving his left shoulder with activity. Claimant demonstrated his range of motion upon direct examination. Claimant credibly testified to pain and limitation proximal to the glenohumeral joint with range of motion and activities. Accordingly, Claimant's impairment is not on the schedule of permanent impairment.

Disfigurement

12. As a result of Claimant's left shoulder work-related injury, he has a visible disfigurement to the body consisting of has surgical scar approximately ½-inch long and indented on the front of his left shoulder; Claimant displayed obvious muscle atrophy and loss of muscle involving the area between Claimant's scapula, trapezius and left shoulder in the back, and left pectoral and left shoulder in the front. An asymmetry between the muscle tone of Claimant's right and left shoulder girdles was observed, including a described loss of Claimant's left scapula. Claimant has sustained a serious permanent disfigurement to areas of his body normally exposed to public view, which entitles Claimant to additional compensation. Section 8-42-108 (1), C.R.S. Insurer shall pay Claimant $1,700.00 for that disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

ORDER

It is therefore ordered that:

1. Respondents shall pay Claimant $5,146.45 in temporary partial disability benefits.

2. Claimant's request for additional temporary total benefits is denied and dismissed.

3. Claimant's request for temporary partial disability benefits for any period following his September 24, 2014 work-related injury is denied and dismissed.

4. Claimant's request to convert the scheduled rating of his shoulder to a whole person rating and award PPD benefits based on the whole person rating is granted. Respondents shall pay Claimant a PPD award consistent with the 11% whole person impairment rating assigned by Dr. Motz.

5. Respondents shall pay Claimant $1,700.00 for disfigurement pursuant to § 8-42-108 (1), C.R.S.

6. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. ISSUES

- Did Claimant establish by a preponderance of the evidence that he is entitled to permanent partial disability benefits benefits based upon the impairment rating assigned by the Division IME, Timothy Sandell, M.D.

FINDINGS OF FACT

1. The underlying facts in the instant case were not in dispute. Claimant was employed as a truck driver for Employer. He sustained a compensable injury to his left lower extremity on September 17, 2014, while loading acetylene cylinders onto a truck. Claimant testified he was rolling a cylinder with his leg and experienced a burning sensation in his left knee.

2. Evidence related to a prior MRI of Claimant's left knee was admitted hearing. In particular, an x-ray report from Michael Ball, MD related done on May 5, 2006. Dr. Ball found there was no fracture or dislocation, joint spaces of normal with and alignment and a remarkable soft tissues. His impression was: normal knee. A report of the MRI from May 18, 2006 was also admitted, which showed no evidence of chondromalacia patella, but slight myxoid degeneration within the posterior horn of the medial meniscus and anterior cruciate ligament. A vertically oriented tear of the anterior horn of the lateral meniscus with no free meniscal fragment was noted. No other evidence concerning treatment for the left knee was admitted at hearing.

3. Claimant was initially examined by Elizabeth Arrington, M.D. on September 17, 2014, who diagnosed a left knee strain. Claimant was given a prescription for Ibuprofen and a knee immobilizer. Dr. Arrington reexamined Claimant on September 26, 2014 and referred him to an orthopedic surgeon.

4. On September 26, 2014, an MRI was done on Claimant's left knee. The films were read by Jayson Lord, M.D., whose impression was: ACL strain; patellar and quadriceps tendinitis; intact menisci; no fracture was identified, nor were loose bodies present in the joint spaces.

5. Claimant was then evaluated by Michael Simpson, M.D. (an orthopedic surgeon) on October 7, 2014, who diagnosed a possible tear of Claimant's distal quadriceps tendon after reviewing the MRI. Dr. Simpson recommended bracing and platelet rich plasma injections to help with healing.

6. A repeat MRI was performed on December 26, 2014. The MRI films were read by Michael O'Neill, M.D., whose impression was: no significant interval change since prior study; mild chronic tendinosis involving the distal quadriceps tendon and

proximal patellar tendon without tear; small joint effusion; and no meniscal tear. The ALJ concluded the MRI findings constituted objective evidence of Claimant's knee condition and supported the conclusion he sustained a permanent impairment. Claimant received conservative treatment, including physical therapy, but his symptoms continued. Claimant credibly testified he continued to experience symptoms in his left knee and these limited his activities.

7. Claimant returned to Dr. Simpson on January 28, 2015. Dr. Simpson's diagnosis was partial thickness tear of the distal quadriceps tendon with continued tendinitis and surgery was recommended. However, Claimant decided against surgery, as he was concerned about his Crohn's disease and the potential for infection.

8. There was evidence introduced regarding possible somatization and/or psychological issues potentially impacting Claimant's impairment. More particularly, on January 30, 2015, Claimant was evaluated by Scott Primack, M.D. Dr. Primack conducted various psychosocial evaluations to determine whether there were any factors present which would preclude Claimant from achieving a good outcome. Claimant scored a 42 on the Modified Zung Depression Index and an 18 on the Modified Pain Questionnaire, which placed him in the "distressed/depressed" category for psychological functioning. Dr. Primack also noted a significant component of somatization.

9. On February 25, 2015, Claimant was evaluated by Dale Philip Mann, PhD. Dr. Mann administered several psychological evaluations, all of which had valid results. Dr. Mann concluded Claimant was an individual who was experiencing moderate to above average anxiety, moderate to above average depression, high somatic distress and high functional distress. The ALJ was not persuaded these findings impacted Claimant's impairment ratings, as these were based upon range of motion ("ROM") measurements of his left knee.

10. On March 17, 2015, Claimant was seen by Michael Moore, ABDA, PTA, ATC, MA and Ashley Zimmerman, DPT Xcel Physical and Occupational Therapy for a Functional Capacity Evaluation ("FCE"). The results of the evaluation suggested Claimant gave reliable effort, with 20 of 20 consistency measures within expected limits. Claimant displayed ability to perform and tolerate all activities tested, with the exception of crouching and kneeling. Claimant was found to have 121 degrees of flexion, and 14 degrees of extension of the left knee.

11. On March 30, 2015 (thirteen days after the FCE), John Reasoner, M.D. evaluated Claimant for his impairment rating evaluation. Dr. Reasoner confirmed Claimant was at MMI and, using the range of motion measurements obtained from the FCE, assigned a 12% scheduled rating to Claimant's left knee. There was no evidence Dr. Reasoner independently performed ROM measurements on Claimant.

12. Respondents filed a Final Admission of Liability on April 17, 2015, admitting to pay Claimant $6,914.67 in a permanent partial disability (PPD) benefits based on the 12% scheduled rating assigned by Dr. Reasoner.

13. Claimant presented to Dr. Sandell on August 13, 2015 for a DOWC IME. Dr. Sandell agreed that Claimant was at MMI as of March 20, 2015. Dr. Sandell obtained ROM measurements of the left knee, documenting 100 degrees of flexion and 30 degrees of extension. These measurements equal 18% and 17% ratings respectively, and combined for a 35% left lower extremity rating. Dr. Sandell noted that Claimant's range of motion may vary over time, and that Claimant should continue his range of motion exercises to limit his losses.

14. On December 28, 2015, Linda Mitchell, M.D. performed an IME of Claimant on behalf of Respondents. Dr. Mitchell agreed Claimant was at MMI. Dr. Mitchell found Claimant to have 113 degrees of flexion and 15 degrees of extension in the left knee. This equated to a 19% scheduled rating. Dr. Mitchell compared the contralateral joint (right knee) and found the normalized rating for the left knee to be 6%. The ALJ noted there was no evidence admitted at hearing to show that Dr. Mitchell's ROM measurements on the left knee were invalid.

15. Dr. Mitchell testified as an expert in the Occupational Medicine, the specialty in which she is board certified. Dr. Mitchell is Level II accredited pursuant to the WCRP. She testified that she found Claimant had a 6% impairment rating in his left knee. She reached this result by obtaining range of motion measurements for both knees and then normalized (subtracted) the unaffected side from the affected side, which gave the normalized value. When asked to compare her measurements to those of Dr. Sandell, she agreed the range of motion numbers obtained by Dr. Sandell were "significantly worse" than what she obtained. She acknowledged that neither Dr. Reasoner nor Dr. Sandell normalized for the right knee. When asked whether there is any guidance in the AMA *Guides* for dealing with different ratings from different doctors, Dr. Mitchell testified, "I don't know if there's anything in the *AMA Guides*, but the Division must use some guidance".[1] Dr. Mitchell testified it was within the examining doctor's discretion whether to compare the affected joint with a contralateral joint. The DOWC impairment tip sheet involved the example of an obese patient. There was no evidence before the Court that which persuaded the ALJ that the example in the DOWC tip sheet applied in this case.

16. Claimant testified his left knee affects his functioning, including walking up stairs, standing, lifting and walking.

17. Claimant sustained a permanent medical impairment as a result of his industrial injury.

18. The ALJ found Dr. Reasoner's conclusions regarding Claimant's permanent medical impairment to be less persuasive than the other physicians, as he did not perform ROM measurements, but relied upon those done at the FCE.

19. The ALJ found Dr. Sandell's conclusions regarding Claimant's permanent

[1] (Mitchell Deposition 9:6-7).

medical impairment to be less persuasive than Dr. Mitchell's, as he provided scant analysis and/or explanation as to why the rating was vastly higher than Dr. Reasoner's.

20. The ALJ was persuaded by Dr. Mitchell's opinion regarding Claimant's gross impairment rating, as she had the benefit of all of Claimant's treatment records, as well as the ratings done by Dr. Reasoner and Dr. Sandell.

21. The ALJ was not persuaded that the methodology used by Dr. Mitchell to "normalize" Claimant's impairment, by comparing it with the contralateral joint, accurately reflected Claimant's impairment.

22. The ALJ was persuaded that Claimant was entitled to permanency benefits based upon Dr. Mitchell's gross impairment rating.

23. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the credibility of the various health care providers who evaluated Claimant's permanent impairment and the basis of these opinions was the focus of the ALJ's review of the evidence admitted at hearing.

Claimant's Impairment Rating

The Workers' Compensation Act classifies work-related injuries as either scheduled or non-scheduled injuries. Scheduled injuries are those listed in § 8-42-107(2). Claimant's impairment rating was determined pursuant to §8-42-107(1)(a) and (2), C.R.S. For a scheduled impairment rating, a party does not have to overcome the Division IME by clear and convincing evidence. *Delaney v. Industrial Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2000). Rather, Claimant has the burden of proof to establish his extremity impairment rating.

The ALJ was asked to resolve the discrepancy between the impairment ratings issued by three physicians, Dr. Reasoner, Dr. Sandell, and Dr. Mitchell. As determined in Findings of Fact 14, 20 & 21, the ALJ was persuaded by Dr. Mitchell's findings and her analysis of Claimant's permanent medical impairment (gross). The ALJ utilized the Introduction section for Chapter 2 of the *AMA Guides*[2], which specified:

> "If two physicians using the *Guides* have obtained similar results and reached similar conclusions, a framework exists within which to resolve the discrepancies. Analysis of records and reports will disclose the differences. In such an instance, the differences will be in the clinical findings, which are matters of fact, not opinion; the latter can be verified by further observation of the claimant in accordance with the procedures and methods of the *Guides*…"[3]

When considering the three (3) medical impairment ratings, the ALJ noted all met the validity criteria, as prescribed by the *AMA Guides*. Applying the Introductory Section of Chapter 2, the ALJ considered each rating separately to determine which had the most clinical support. Although Dr. Reasoner's impairment rating was based on a valid FCE, the ALJ notes his evaluation of Claimant was done 13 days after the FCE. There was no evidence in the record that Dr. Reasoner verified the measurements made by the personnel at Xcel Physical and Occupational Therapy. Also, this appears to be the first time he had evaluated Claimant. Thus, the ALJ was not persuaded that Dr. Reasoner's rating most accurately reflected Claimant's permanent impairment. (Finding of Fact 18).

As found, Dr. Sandell's medical impairment rating, while valid numerically, contained very little analysis of why the range of motion measurements differed so greatly from those obtained in the FCE/Dr. Reasoner. (Finding of Fact 19). As such, Dr. Sandell's opinions were not as persuasive to the ALJ. In fact, when applying the principles articulated in Chapter 2 of the introductory section for the AMA Guides, the ALJ was not able to find a clinical explanation in either the medical records or expert testimony as to why Dr. Sandell's rating was so much higher than the rating of either Dr. Mitchell or Dr. Reasoner. Dr. Sandell's explanation, namely, that sometimes there were

[2] *American Medical Association Guides to the Evaluation of Permanent Impairment*, Third Edition (Revised) in effect as of July 1, 1991.

[3] Exhibit K.

variations between range of motion measurements did not illuminate this issue either. (Findings of Fact 13 & 19). Thus, the ALJ concluded Claimant did not meet his burden of proof to establish Dr. Sandell's rating as the rating that most accurately expressed his medical impairment.

Accordingly, the ALJ concluded Dr. Mitchell, who performed the last evaluation and had the benefit of all available medical records (including both prior ratings) was able to accurately assess Claimant's medical impairment. (Finding of Fact 20). The ALJ was persuaded that Dr. Mitchell's gross impairment rating for Claimant's left knee-19% was accurate because the range of motion measurements were more in line with Dr. Reasoner's findings and the FCE, as opposed to Dr. Sandell's. The ROM findings on flexion and extension provided support for the conclusion that these measurements most accurately assessed Claimant's overall impairment.

In reaching this conclusion, the ALJ was not persuaded by all of Dr. Mitchell's opinions. The ALJ was not persuaded Claimant's medical impairment rating should be reduced by the "normalizing" method employed by Dr. Mitchell. (Finding of Fact 21). As Dr. Mitchell admitted, the *AMA Guides* do not necessarily provide for normalizing impairment ratings with an asymptomatic contralateral body part. Dr. Mitchell testified normalizing might be provided for in the DOWC guidelines, but other than the tip sheet, no authority was cited to provide support for this contention. (Finding of Fact 15). There was insufficient evidence introduced at hearing that subtracting Claimant’s ROM in the left knee from that of the right leg was an appropriate measure of Claimant’s impairment. Accordingly, Dr. Mitchell’s testimony did not persuade the ALJ that subtracting the rating from the contralateral joint was proper. (Finding of Fact 21). Further, no legal authority was provided to the Court by Respondents to support this methodology.

Therefore, the ALJ concluded the proper measure of Claimant's medical impairment rating was Dr. Mitchell's gross impairment rating of 19%, based upon valid range of motion measurements made at the time of the IME. (Finding of Fact 22). Claimant is therefore entitled to permanent partial disability benefits based upon Dr. Mitchell's (gross) lower extremity impairment rating.

ORDER

It is therefore ordered that:

1. Claimant is entitled to permanent partial disability benefits based upon the 19% lower extremity impairment rating issued by Dr. Mitchell.

2. Respondents shall pay PPD benefits based on Dr. Mitchell’s gross impairment rating.

3. Respondents are entitled to a credit for PPD benefits previously paid.

4. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-979-296-02

ISSUES

- Whether Claimant established by a preponderance of the evidence, that he sustained a compensable injury arising out of and in the course and scope of his employment on or around March 14, 2015.

- Whether the Claimant established by a preponderance of the evidence that he is entitled to temporary total disability (TTD) from March 4, 2015 through January 5, 2016.

- Whether Claimant has proven by a preponderance of the evidence that he is entitled to all reasonable, necessary, and medical treatment stemming from the March 14, 2015 alleged injury, including repayment by Respondents to Claimant's private health insurance carrier in the amount of $20,669.50.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant began working for Employer as an emergency response technician in March, 2014. His job required him to have a class A CDL license, which he would use to haul equipment to and from sites where trains have derailed. When he arrived at job sites, Claimant assembled equipment and assisted in clearing train tracks. Claimant's regular work schedule was Monday through Friday, 8:00 a.m. to 5:00 p.m. He was on-call to respond to emergencies twenty four hours a day every day and when called would respond to the site as quickly as possible.

2. Claimant testified that there was often downtime at these jobsites while he and coworkers waited for railroad officials would ensured the tracks were safe to begin work. Claimant testified that downtime could last a few minutes to six hours. During that time, Claimant would sleep sitting up in the cab of the truck.

3. Claimant testified that at derailments, he and his coworkers would often work for a few hours and then move off the tracks to allow for other trains to pass through. While he was working, his activities involved heavy lifting, crawling, and using a welding/cutting torch. During downtime, Claimant and coworkers would sleep in his truck until they were allowed back on the tracks.

4. On March 12, 2015, Employer dispatched Claimant to a train derailment site in Lusk, Wyoming from his residence in Denver, Colorado. He testified that when he arrived at the site, the heavy machinery was working to rip rail cars off the track. Claimant waited in his truck until he could begin working.

5. Claimant began feeling chest pain while working in Lusk, Wyoming. He informed both his main supervisor, Adam Hinkle, and the on-site corporate supervisor about his chest pain. Mr. Hinkle allowed Claimant to rest in his truck for a few hours. Claimant eventually returned to work and worked the entire evening of March 12 and finished the next day at approximately four or five in the afternoon. Claimant slept in a motel room on March 13 before traveling home the following day.

6. On March 14, 2015 Claimant presented to Porter Adventist Hospital complaining of chest pain and shortness of breath. Earlier in the week, Claimant had begun feeling isolated left leg pain. An ultrasound of Claimant's left leg revealed a left lower extremity deep vein thrombosis. A CT angiography of Claimant's chest revealed a saddle embolus with thrombus extending into the lower lobes and a left pulmonary infarct. Claimant underwent genetic testing which ruled out hypercoagulability. Claimant was discharged on March 17, 2015. The discharge report reflected Claimant reporting "many hours of prolonged truck driving."

7. On March 19, 2015, Claimant followed up with his PCP, Dr. Stephanie Thomas, a family medicine doctor. Claimant reported that he had recently received his CDL and had been driving long trips over the past six months, and Claimant thought his driving was related to his condition. Based on Claimant's report, Dr. Thomas noted that long driving would predispose Claimant to a blood clot.

8. Claimant returned to Dr. Thomas on April 1, 2015. Dr. Thomas ran another genetic test which was negative. Dr. Thomas opined that, because Claimant did not have a genetic predisposition to blood clotting, his clot was likely related to his extended driving periods at work. Dr. Thomas encouraged Claimant to pursue a workers' compensation claim.

9. On May 7, 2015, Claimant was seen by Dr. Cynthia Rubio at Colorado Urgent Care for evaluation of a potential workers' compensation claim. He reported being a long distance truck driver. "Pt drives a semi truck for a living, often for extended periods of time." Based at least in part on Claimant's reported job, Dr. Rubio checked "yes" indicating that her objective findings were consistent with a work related mechanism of injury/illness. Dr. Rubio referred Claimant to Dr. Updike for treatment.

10. On May 12, 2015, Dr. White at HealthONE Occupational Medicine evaluated Claimant and completed an Initial Evaluation report. Again, Claimant described his job as "having to drive quite long distances, a lot of driving. . . He says he pretty much does a lot of driving." Claimant reported "prolonged driving episodes where sometimes he will be on the road for 15-16 hours in a day." Dr. White opined that Claimant's immobility while driving might have caused his DVT and secondary pulmonary embolism.

11. Respondents retained Dr. Jeffrey Schwartz to perform an Independent Medical Examination. This exam took place on June 10, 2015. Claimant reiterated that his job required extensive traveling, and that he often slept sitting up in the driver's seat of his truck when jobsites were in remote areas. Claimant also reported that his PCP

told him the clots were likely related to his work, but that his occupational medicine doctor had said were likely not related.

12. Dr. Schwartz explained that there are three common causes of blood clots: 1) immobility, 2) trauma, and 3) hypercoagulability. Approximately 25% of blood clots “cannot be attributed to any risk factor” and are known simply as idiopathic. Dr. Schwartz recognized that Claimant does not have a blood disorder making him prone to hypercoagulability, and Claimant did not sustain a trauma shortly preceding the clot. He noted that smoking can be a risk factor, but that Claimant’s smoking would only have resulted in a “very small increased likelihood” of developing the clot. Ultimately, Dr. Schwartz opined that Claimant’s blood clot had no known cause and therefore was idiopathic and not work related. Dr. Schwartz criticized Dr. Thomas’ opinion relating Claimant’s injury to work, describing it as “without scientific basis.”

13. Claimant retained Dr. Edwin Healey to perform an Independent Medical Examination. This exam took place on October 9, 2015. Dr. Healey solicited information from Claimant regarding his extended periods of immobility noting Claimant’s report that he would often sleep sitting up in the cabs of trucks from four to six hours until they were able to return to their job duties. Claimant reported in greater detail than in any of his reports to treatment providers that the sleeping conditions were in a “cramped cab,” sitting, with pressure on his left posterior distal thigh and calf with the seat. Claimant reported sleeping with his leg bent over the seat with it being almost impossible to stretch out. Around the time of the incident, Claimant recalled having to sleep in the cab of his truck, again in a seated position with the edge of the seat pushed up against his posterior thigh and calf. Claimant reported working shifts lasting between twenty-four and thirty hours. Claimant’s description to Dr. Healy about the position of his legs in the cab was inconsistent with his in-court demonstration of his leg position.

14. On December 7, 2015, Dr. Thomas released the Claimant without restrictions.

15. When asked to demonstrate in court the position of his leg in the truck, Claimant bent his leg approximately thirty degrees from straight. Thus his leg was partially extended and his lower leg was not tucked under his upper leg and was not even perpendicular to his knee.

16. Dr. Healey diagnosed Claimant with a left lower extremity DVT secondary to prolonged immobilization and sleeping in a sitting position in Employer’s truck. He opined, largely based on Claimant’s reports “that the left lower extremity deep venous thrombosis and subsequent venous thromboembolism to [Claimant’s] lungs were causally and directly related to the work activities [Claimant] was performing at the time he had the onset of symptoms.”

17. Dr. Healey reasoned that Claimant had two significant risk factors that were related to his job. First, Claimant had to travel by driving long distances to job sites and then slept in strained ergonomic positions with pressure on the back of his leg, making him more vulnerable to DVTs. Second, the edges of the particular seats that

Claimant would sleep against were hard, placing extra pressure on the calf and thigh, which would increase stasis in the lower extremities, contributing to the DVT. The reports concerning the condition of the seats was subjectively reported by Claimant. Dr. Healey cited DVT risk factors as listed by the National Heart, Lung. And Blood Institute, the Mayo Clinic, the Centers for Disease Control and Prevention, and an E-Medicine DVT review. All the articles upon which Dr. Healey relied are general, informational information written for a lay audience.

18. Claimant testified that he contacted Employer after the incident to inquire about returning to work. Mr. Hinkle informed Claimant that he would have to be "100 percent" before returning to work. While Claimant was on blood thinners it was too dangerous to work in remote areas.

19. In December, 2015, Employer informed Claimant that he could take a physical to determine if he would be able to return to work. However, Claimant already had a new job beginning approximately January 5, 2016.

20. Dr. Schwartz was admitted as an expert in pulmonology. He testified at hearing that the three known causes of DVTs are prolonged immobility, hypercoagulability, and trauma. Approximately 25% of DVTs have no identifiable cause. Dr. Schwartz persuasively testified that a person's physical position can increase the likelihood that they develop DVT. He discussed a large study conducted on people traveling in the economy section of an aircraft. The study concluded that passengers sitting in the economy section for four hours or longer had a very small increased likelihood of developing DVT – 1.5 people in 1,000,000 did so. Dr. Schwartz performed a medical literature search to determine whether the incidence of DVTs in truck drivers had ever been studied. No such study has been performed. The ALJ infers that if truck drivers had a higher rate of DVTs, such a study would more likely than not have been performed. Dr. Schwartz testified that the risk is extraordinarily low with driving because one's knees are partially extended. He clarified that medically important "immobility" applies to bedridden patients with bathroom privileges, as distinguished from Claimant's level of immobility.

21. Robert Brown, Employer's vice president of human resources, testified that it was company policy and a union requirement that drivers be provided hotel accommodations anytime they were away from home for an extended amount of time. His testimony is corroberated by a log of Employer's lodging provisions. He testified that down time is treated as break time and that employees can use that time to walk around, smoke, and socialize. Mr. Brown testified that employees could wait in the truck cabs, and they could nap. However, extended naps at the job site were in violation of the railroad safety board, and it is unlikely that Claimant was allowed to sleep for longer than 30 minutes.

22. Mr. Brown testified that if employees were responding to a catastrophic event, they might work as long as twelve to eighteen hours, but not in excess of that amount because relief crews would be in place by then.

23. Mr. Brown testified that Employer was in compliance with all state and federal regulations regarding the amount of driving performed in one day and safety regulations. The ALJ finds Mr. Brown’s testimony more reliable and less biased that the testimony of Claimant.

24. Employer’s driving logs of Claimant’s time and mileage for the twelve months prior to the incident were admitted as Respondent’s exhibit G. The logs reflect that in the six months prior to the incident, Claimant drove:

September, 2014	1 hour	8 miles
October, 2014	17.5 hours	831 miles
November, 2014	14.5 hours	516 miles
December, 2014	30.5 hours	1105 miles
January, 2015	53 hours	2278 miles
February, 2015	13.5 hours	407 miles, and
March, 2015	17.5 hours	676 miles

25. During the twelve months prior to the incident, Claimant drove more than four hours on only 19 occasions. Of those, Claimant drove more than 8 hours only once, in January, 2015, and no persuasive evidence supports that that drive time was not interrupted by breaks to refuel or for physical comfort which the ALJ reasonably infers occurred.

26. The ALJ finds that the driving logs are the most persuasive evidence of the times and distances Claimant spent driving, are more credible than Claimant’s testimony and reports to his doctors.

27. The ALJ finds Claimant exaggerated to his treatment providers and to Dr. Healey the amount of time he spent driving and that Employer required him to sleep in the truck cab. Claimant’s demonstration in court of his leg position was inconsistent with how he described his leg position to Dr. Healey rendering Dr. Healey’s causation analysis less persuasive. These exaggerations and inconsistencies were used by the treating providers and Dr. Healey in rendering less persuasive their opinions about whether Claimant’s injuries were work related.

28. The ALJ finds Dr. Schwartz’s opinions on relatedness to be most credible and persuasive. His opinions are based on more persuasive medical studies, reasoning, and training and expertise in the relevant area of medicine.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The injured worker has the burden of proof by a preponderance of evidence establishing entitlement to benefits. C.R.S. § 8-43-201 and 8-43-210. *See City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). A "preponderance of evidence" is a quantum of evidence that makes a fact, or facts, more reasonably probable or improbable, than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to the lay witness apply to the expert witness as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P.254 (1913). The fact finder should consider among other things the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness of a witness' testimony and/or actions, including whether or not the expert opinions are adequately founded upon appropriate research; the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936). The fact finder should consider an expert witness' special knowledge, training, experience or research or lack thereof. *See Young v. Burke*, 139 Colo. 305, 338 P.2d 284 (1959).

Claimant is a poor historian. Claimant's reports to his treatment providers and medical evaluators is not supported by the Employer's driving log. Claimant's testimony about the number of hours he drove exceeded those allowed by the Federal Department of Transportation, was contradicted by the more credible testimony of Employee's witness, and was also not supported by his driving logs.

Additionally, at each appointment, the amount of time he reported he drove increased. For example, by May 12, 2015, two months later after his initial trip to the ER, Claimant reported that his job was "pretty much a lot of long-distance driving" and that he was on the road for 15 to 16 hours in a day. As testified by Mr. Brown and Claimant, drivers are limited to 11 hours of driving per day per the federal safety standards. Additionally, according to his driving log, Claimant never reached the limit imposed by the safety standards. His longest day of driving was less than nine hours.

Claimant also testified that he frequently slept in the cab of his truck for up four to six hours. However, Mr. Brown testified that sleeping on the job site would be a violation of railroad safety regulations and it was unlikely that Claimant took more than an occasional brief nap.

As found, Dr. Schwartz's opinions on relatedness were more credible and persuasive than those of the other doctors. His opinions are based on more persuasive medical studies, reasoning, and training and expertise in the relevant area of medicine.

For a claim to be compensable under the Act, the claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

The claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified or aggravated the disease for which compensation is sought. *Faulkner v. Industrial Claim Appeals Office, supra; Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). The mere occurrence of symptoms does not require the conclusion that the conditions of the employment were the cause of the symptoms. *See Chasteen v. King Soopers, Inc.,* W.C. No. 4-445-608 (ICAO April 10, 2008).

Injuries that are purely idiopathic or personal are generally not compensable under the Act. *City of Brighton v. Rodriguez,* 318 P. 3d 496, 503 (Colo. 2014). The major causes of DVT are immobility, trauma, and hypercoagulability. There is no evidence that Claimant experienced trauma or has hypercoagulability. As Dr. Schwartz testified, immobility is usually thought to be hospitalization where an individual is bedridden except for trips to the bathroom. If Claimant's DVT cannot be attributed to immobility, trauma, or hypercoagulability, it is medically probable that his condition is idiopathic which is very common. Twenty-five percent of all DVT occurrences cannot be attributed to any risk factor.

Dr. Healey opined that Claimant's driving and sleeping in a cab were employment risks which caused Claimant's DVT; however, Dr. Healey relied on Claimant's statements and previous histories given to physicians regarding his employment risks. Claimant exaggerated the amount of time he spent driving and sleeping in the cad. To the extent Dr. Healy relied on Claimant's subjective reports, his opinions are not persuasive. The literature states that there is a slight increased risk of DVT when one is immobile for long periods of time. Certainly driving for 15 to 16 hours would be considered remaining immobile for a long period of time. However, Claimant did not drive this amount. Claimant testified that his driving record may be slightly changed in order to comply with federal regulations which prohibited driving more than eleven hour during a twenty-four hour period. However, no persuasive evidence was presented from which to conclude that Claimant's hours ever approached this limit.

Dr. Schwartz testified that Claimant's DVT and resulting blood clot and pulmonary embolism likely developed in the third or fourth week in February. Claimant's driving record shows that he drove 1.5 hours in the third week of February and 3.5 hours in the fourth week of February. One and a half hours was the longest single drive. The literature establishes an extremely small elevated risk of developing a DVT when an individual is immobile for four or more hours. Claimant's relevant driving record does not support a conclusion that his hours driving more likely than not caused his DVT.

Claimant reported to Dr. Healey that he frequently slept in the cab of his truck for four to six hours; however, this testimony contradicts federal railroad safety rules, Claimant's own statements, and Employer's policy. Claimant testified that a hotel was provided to him in Lusk, Wyoming. Additionally, when Claimant reported he was experiencing chest pain to his supervisor, he was told to go to the hotel and rest. Respondents' exhibits show that hotel rooms were provided on January 14, January 27 through 29, February 19, and March 4 through March 13. These dates correspond with times Claimant was working away from home for extended periods of time. Mr. Brown testified that if naps were taken at the job site, they were likely for short periods of time as sleeping on the job site violated railroad safety rules.

Even if Claimant drove and slept in this truck, Claimant's leg position was not likely to increase his risk of developing DVT. In order to develop DVT, as Dr. Schwartz testified, blood must pool in the back of the leg. Blood pools at the back of leg when the calf is at a 90 degree or lesser angle to the thigh. As Claimant demonstrated at hearing, his leg was extended well beyond 90 degrees when he was in the trucks. Even in an awkward, upright sleeping position, Claimant's legs were extended beyond the 90 degree angle necessary to cause DVT.

Based on the totality of the evidence, it is more likely than not that Claimant's condition was idiopathic and not related to his work. Therefore, Claimant's injury is not compensable.

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo.App.2000). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971).

The ALJ credits Claimant's testimony at hearing and finds that Claimant has established by a preponderance of the evidence that all medical treatment he received was reasonable and necessary. However, because Claimant failed to establish that his medical treatment was related to his employment, Respondents are not liable for that treatment.

To prove entitlement to temporary total disability ("TTD") benefits, the claimant must prove: the industrial injury has caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995).

Because Claimant failed to establish that his injury is related to his employment, Claimant is not entitled to TTD.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim is hereby denied and dismissed as it has been determined to not be compensable.

2. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 4, 2016

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

This order addresses the following issues raised for consideration at hearing:

I. Whether Claimant established by a preponderance of the evidence that he is entitled to ongoing temporary total disability (TTD) benefits beginning November 19, 2015?

II. Whether Respondents established by a preponderance of the evidence that Claimant was terminated for cause on November 22, 2015 for violating Employer's no call/no show policy?

III. If Claimant was terminated for cause, whether he established, by a preponderance of the evidence, that his symptoms worsened on March 7, 2016, entitling him to TTD benefits from this date and ongoing?

STIPULATIONS

Prior to the commencement of hearing, the parties reached the following stipulations:

I. The parties stipulated and agreed that Claimant's average weekly wage is $344.66.

II. If it is found that Claimant is not entitled to TTD benefits, Respondents are entitled to an overpayment of $98.47.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Employer is a large potato packing facility which operates two separate packing lines. Hrg CD 1:27:55, 1:31:35. On one production line, Employer turns out single, individually wrapped microwavable potatoes. *Id.* at 1:28:00. On the other line, Employer bags 3, 5, 10, and 15 pound bags of organic potatoes for distribution. *Id.* at 1:28:10.

2. To prepare the organic potato bags for shipping, the potatoes collect in a large "hopper" that drops potatoes into a pre-set bag size; either 3,5,10 or 15 pound

bags *Id.* at 24:30. Once full, the bag falls onto a long conveyor belt. *Id.* at 1:30:50. At the end of the conveyor belt, the bags fall into a master container. *Id.* at 1:31:05. Once twelve bags fill the master container, the master container is prepared for shipment. *Id.* Occasionally, an empty potato bag or loose potatoes fall onto the conveyor belt which need to be removed. *See, e.g.*, *Id.* at 1:48:22.

3. Claimant was hired on August 11, 2015 as a bagger and was supervised by C.J. Dominguez. *Id.* at 24:19, 1:35:23, 1:54:04.

4. On the date Claimant was hired, Tiffani Barnes, Employer's OSHA safety coordinator and payroll and worker's compensation administrator, explained Employer's policies to him. *Id.* at 1:33:14. This explanation included reviewing Employer's handbook and specifically Employer's no call/no show policy. *Id.* at 1:33:14, 1:36:26. Ms. Barnes testified that the no call/no show policy is a policy that automatically terminates employees if they do not call their supervisors or appear for work on three consecutive days. *Id.* at 1:36:34. The employee handbook confirms this testimony and notes that "[a]n absence of three consecutive days without notifying your direct supervisor is job abandonment and is considered voluntary separation of employment." Respondents' Exhibit C 029. Mr. Dominguez testified that he received the same explanation of Employer's no call/no show policy when he was hired. Hrg CD 1:54:12
.

5. Ms. Barnes also testified that she is responsible for enforcing the no call/no show policy and that she has terminated employees for violating this policy. *Id.* at 1:36:56, 1:37:25. Ms. Barnes explained that the no call/no show policy is important to the Employer's business because when an employee unexpectedly misses work Employer's production slows down resulting in overtime hours to compensate for the lost production, in addition to causing uncertainty about whether to hire another employee. *Id.* at 1:37:00, 1:54:55.

6. In her three years as Employer's workers' compensation administrator, Ms. Barnes has been involved with other claims and has facilitated other injured employees in returning to work. *See, e.g.*, *id.* at 1:32:00-1:32:45. She testified that when an employee returns to work with work restrictions, she notifies the supervisor of the work restrictions and ensures that the work restrictions are being followed. *Id.* at 1:32:40. Once she receives a modified duty letter from a doctor, she discusses the letter with the employee, the employee's supervisor, and the plant manager. *Id.* at 1:38:29.

7. Mr. Dominguez has also been involved with returning injured employees to work. *Id.* at 1:53:30. He testified that when an employee is released to return to work, Ms. Barnes provides him with a copy of the employee's work restrictions. *Id.* at 1:53:21.

8. On October 9, 2015 Claimant was counting bags on the conveyor belt
when he reached out with his left hand and felt a "bite" on his left ring finger. The finger had been grabbed and yanked into the machine, twisting it and amputating a portion of

it. Exhibit 2 016-017; Exhibit K 058. That same day, claimant received treatment at the Regional Occupational Medicine Program ("ROMP") clinic. Exhibit E 039.

9. Claimant was off work and receiving temporary disability benefits as a result of his injury when Employer sent a modified duty offer letter to him on November 9, 2015 (Claimant's Exhibit 10, Respondents' Exhibit A).

10. Per the offer letter, Claimant was to begin modified duty on November 18, 2015. Exhibit A 001. The modified job offered claimant $9.00 per hour for 45 hours a week. *Id.* Dr. Susan Geiger of the ROMP clinic approved two tasks for claimant: placing stickers on a tray and counting potatoes. *Id.* at 002.

11. Claimant acknowledged that he received the modified job offer and understood that he was supposed to place stickers on a tray and count potatoes once he returned to work. Hrg CD 29:11; 31:28. The modified duty tasks were defined as follows: 1. "placing stickers on a tray, involves no lifting, standing and use of one hand to attach stickers; 2. "Counting potatoes – counts bags of potatoes (12) as they go into large container. Involves sitting or standing just counting to 12 and verbally lets another employee know this and the other employee rotates the conveyor belt. No lifting or use of hands is involved."

12. Claimant returned to his modified job on November 18. *See, e.g.* Exhibit B 017.

13. Claimant testified that no one directed him to his modified tasks. While Claimant testified that no one directed him regarding his modified duties tasks, Claimant's actions and the testimony of Ms. Barnes and Mr. Dominguez persuades the ALJ that Claimant was aware of and how to perform his modified duties. For example, Claimant testified that when he arrived at work on November 18, 2015, he went immediately to the bagging station to count potatoes, which was one of the two tasks he was released to perform. Hrg CD 33:17; Exhibit A 002. Ms. Barnes testified that she had discussed Claimant's modified duties with him before he returned to work on November 18. Hrg CD 1:38:54. As in the past, Ms. Barnes told Mr. Dominguez about Claimant's work restrictions. *Id.* at 1:51:29, 1:56:18. Mr. Dominguez testified that on November 18, he was responsible for watching claimant and making "sure he was within his work restrictions and he was comfortable with his job." *Id.* at 1:56:08. Mr. Dominguez testified that he spoke with Claimant on November 18 and told him that employer "needed him to sticker trays or to count bags until the doctor lifted the work release." *Id.* at 1:56:45.

14. Claimant testified that he was able to keep up with counting at the bagging station as long as the operator was dropping one bag at a time. However, once the operator increased the speed and started dropping two bags at a time, Claimant explained that the reason he could not count two potato bags at a time was that "sometimes" loose potatoes would fall directly onto the conveyor belt and he could not knock them off when two bags fell. *Id.* at 35:40. Claimant's testimony that he could

perform the counting potato task when one bag fell, but could not perform the task when two bags fell is not credible. Claimant testified that "sometimes" loose potatoes fell directly onto the conveyor belt and Ms. Barnes testified that "occasionally" a loose bag or loose potatoes fell onto the conveyor belt which the potato counter would have to remove from the belt. *Id.* at 35:40, 1:31:20, 1:48:22. The loose potatoes usually fall off the conveyor belt by themselves, without the aid of the potato counter. *Id.* at 1:48:22. Consequently, the ALJ finds that if loose potatoes only fell onto the conveyor belt occasionally, there would only be an occasional need to remove the empty bags or loose potatoes whether one bag or two were being dropped.

15. Because Claimant could not keep up counting if two bags were dropped simultaneously, the operator returned to dropping one bag at a time. Mr. Dominguez, as floor supervisor, instructed the operator to run the machine dropping two bags at a time. Claimant could not keep up at the two bag pace. Accordingly he was instructed by Mr. Dominguez to "go clean up"; although Claimant testified that he was not given a specific job.

16. Mr. Dominguez and Ms. Barnes rebutted Claimant's testimony that counting potatoes when two bags fell required the use of two hands. Ms. Barnes testified that although an employee could use two hands to count potatoes, the task only requires the use of one hand. *Id.* at 1:48:30-46. Ms. Barnes also testified that even though thirty-seven bags a minute drop onto the conveyor belt, employees who use one arm to count potatoes do not have a problem keeping pace with the bags. *Id.* at 1:50:49. Mr. Dominguez testified that counting potatoes could be performed with one hand or even one arm, and the job is so physically effortless that it can be performed sitting down. *Id.* at 1:58:20. The ALJ finds the testimony of Ms. Barns and Mr. Dominguez regarding the physical capacity necessary to count potatoes more persuasive that the contrary testimony of Claimant.

Claimant followed the direction of Mr. Dominguez and moved onto a table which was overloaded with 15 pound bags of potatoes. He used his uninjured right hand to help the employees at that table get caught up. This was not a job task that was approved by Claimant's authorized treating physician, Dr. Susan Geiger, nor was it on the modified duty job offer, yet Claimant was able to perform this job task.

17. Claimant next moved to placing stickers on trays. Tiffany Barnes described this job as taking a tray holding four potatoes, turning it to the proper side, and applying a nutritional sticker. Claimant testified that he attempted this job but could not hold on to the roll of stickers with one hand only, as it was a large role of stickers, and handle the potato package at the same time. Claimant testified that he attempted to perform this task with his right hand only, but found that it took two hands to hold the large roll of stickers, peel a sticker, turn over the potato container and place the sticker on the back of the food container.

18. Ms. Barnes testified that the tray stickers provide nutritional information for the four potatoes on the tray. *Id.* at 1:35:35. Mr. Dominguez clarified how stickers are placed on trays. He testified that there is "a roll of stickers on a table, you peel them off,

and stick them on a tray, move that tray to the side and then move to the next one." *Id.* at 1:57:12. This job is not physically demanding and can be performed with one hand or even with only one arm. *Id.* at 1:57:08-1:57:24. Stickering trays is an important job that needs to be performed throughout the work day, and there is sufficient work stickering trays to keep an employee busy for nine hours a day. *Id.* at 1:58:30-39. The ALJ credits the testimony of Ms. Barns and Mr. Dominguez to find that "stickering" of trays can be done with one hand.

19. Claimant testified that he left work halfway through the day on November 18th to see "Diane," his hand therapist, at the ROMP clinic. *Id.* at 54:00. He testified that when he arrived to work on November 18th he told the office that he needed to leave work around lunch to attend the appointment. *Id.* at 32:38. He also testified that he filled out a leave form and gave that form to Mr. Dominguez. *Id.* at 32:55. Respondents question whether Claimant had an appointment because Claimant was not receiving physical therapy at the time and there are no documents from the ROMP clinic recording Claimant's attendance at an appointment in their facilities on November 18. *See, e.g.* Exhibits E-J 039-057; Exhibit 2 015-110. Further, Mr. Dominguez testified he never received a doctor's note from Claimant. Hrg CD 1:59:19. Regardless, Claimant did not return to work after November 18, 2015. He admitted that he did not call or show for work after the 18th reportedly because he was under the impression that Employer did not have actual modified duty for him as was approved by Dr. Geiger on November 3, 2015.

20. The evidence presented convinces the ALJ that while Claimant was frustrated by his ability to perform his modified duty as efficiently as he wished, he was provided with modified duty assignments within his physical abilities and approved by Dr. Geiger, namely counting potatoes and applying stickers on pre-wrapped potato trays.

21. Ms. Barnes substantiated Claimant's testimony that he was a no call/no show at work, testifying that Claimant did not contact her between November 19 and November 23 and as a result she terminated his employment on November 30 for violation of the no call/no show policy. *Id.* at 1:42:21. Ms. Barnes did not terminate Claimant earlier because no employee worked during the Thanksgiving holiday. *Id.* at 1:41:55.

22. Claimant testified that he did not call employer because he did not know he was supposed to. *Id.* at 43:16. Based upon the evidence presented, the undersigned ALJ is not persuaded. The evidence presented convinces the ALJ that Claimant was probably aware of the no call/no show policy and the consequences for violating the same. The evidence presented persuades the ALJ that Claimant consciously chose to disregard the no call/ no show policy and effectively abandoned his job.

23. Respondents have established by a preponderance of the evidence that Claimant is responsible for his separation from employment.

24. Claimant timely requested a one-time change of physician and accordingly his care was transferred to Dr. Kent Lofley at the Monte Vista Medical Clinic. Dr. Lofley evaluated Claimant on February 5, 2016, at which time he noted: "He current [sic] has restrictions of the left hand with grip strength and lifting. Patient may not perform repetitive gripping with the right hand and in an 8 hour day he may only perform this motion in less than 1 hour." *Id.* Although Dr. Lofley references Claimant's right hand, it is reasonable to infer that he was providing restrictions for Claimant's left hand because Claimant testified that he saw Dr. Lofley for treatment of his left hand only. Hrg CD 50:45. Dr. Lofley also referred Claimant to Dr. Philip Marin for further assessment.

25. Claimant saw Dr. Marin on March 7, 2016 at which time Dr. Marin Dr Marin noted: "Lonnie is a pleasant individual who suffered a severe injury of his left ring finger with a volar amputation. This has gone on to heal with severe sensitivity, decreased range of motion, and loss of soft-tissue padding. There could be some degree of CRPS present as well. I recommend initiating therapy again. We will obtain some nerve conduction studies to evaluate for the numbness. We will do some topical anti-inflammatory gels. We will obtain an MRI to make sure there is no tendon injury. We will see him back for more definitive recommendations." (Claimant's Exhibit 6, page 97). Dr. Marin did not address Claimant's ability to work with/without restrictions.

26. Claimant had a diagnostic imaging MRI of his right upper extremity on March 16, 2016. The impression of the MRI was, "abnormal soft-tissue signal may be residual edema/contusion. Given the history of severe pain consider reflex sympathetic dystrophy. If this is a consideration a sympathetic nerve block can be diagnostic and therapeutic." (Claimant's Exhibit 9, page 111).

27. Claimant was evaluated by Dr. Marin again on April 5, 2016. Dr. Marin noted "MRI reveals increased signal in the proximal, middle and distal phalanx of the left ring finger consistent with RSD." Dr. Marin recommended a trial of treatment for the RSD with blocks. He stated, "He is unable to work due to the extreme pain in his hand." (Claimant's Exhibit 6, page 98). Claimant's restrictions previously had been no use of his left hand. This was from Dr. Geiger on November 10, 2015. (Claimant's Exhibit 2, page 71).

28. Respondents subsequently wrote to Dr. Marin and posed the following question: "Was your statement that Mr. Walls "is unable to work due to the extreme pain in the hand" simply a recitation of Mr. Walls' subjective reports, as opposed to the imposition of a work restriction?" Dr. Marin responded "no use left hand secondary to RSD/CRPS; extreme pain; must have RSD/CRPS managed first." Dr. Marin signed this on May 24, 2016. (Claimant's Exhibit 6, page 99).

29. Based upon the totality of the evidence presented, including the medical records submitted at hearing, the undersigned ALJ finds that Claimant's physical condition continues to deteriorate and that the symptoms associated with his partial amputation have worsened with time. Moreover, the ALJ finds that Dr. Marin removed Claimant from work as a consequence of his worsening symptoms on April 5, 2016. At the request of Respondents, Dr. Marin specifically addressed Claimant's capacity by

imposing the specific work restriction of no use of the left hand due to pain likely associated with RSD/CRPS.

30. Diagnostic blocks were scheduled for mid-July 2015. As of the hearing date, Claimant had not been referred by any physician for other diagnostic testing for CRPS/RSD, such as a triple phase bone scan or Q-Sart.

31. The ALJ credits the medical records from Dr. Marin to find that Claimant has demonstrated that it is more probable than not that his medical condition worsened by April 5, 2016 to the point where he was incapable of working. Consequently, the ALJ finds that Claimant is entitled to an award of TTD benefits commencing April 5, 2016 and continuing until such benefits can be terminated in accordance with the provisions of the Workers Compensation Act.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40101, et seq., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the Claimant nor in favor of the rights of Respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

B. Assessing weight, credibility, and sufficiency of evidence in Workers'
Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). In this case, Claimant's testimony

regarding his inability to perform his modified tasks is unconvincing. Regarding placing stickers on trays, Mr. Dominguez testified this task could be performed with one hand or even one arm and that all the job requires is to peel stickers from a roll and place them on a tray. While the ALJ infers from Claimant's testimony that he could not perform this task one handed, i.e. because of the work restrictions imposed secondary to his industrial injury, the ALJ finds such suggestion unconvincing based upon the credible testimony of Ms. Barns and Mr. Dominguez. Regarding counting potatoes, the undersigned ALJ finds and concludes that Claimant's testimony that he could not perform this task when two bags fell at a time unconvincing because there was consistent testimony that a potato counter would only need to remove empty bags and loose potatoes occasionally. The requirements for counting potatoes when one bag falls are the same as when two bags fall. Even with the increased number of bags dropping, the frequency to remove items from the conveyor belt would arise only occasionally, as claimant and Ms. Barnes testified. It is therefore reasonable to infer that if Claimant could count potatoes when one bag fell, he could count potatoes when two bags fell.

C. In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Claimant's Entitlement to TTD

D. To prove entitlement to TTD benefits, Claimant must prove: that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). C.R.S. § 8-42-103(1)(a), requires a Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg*, supra. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the Claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). In this case, the Claimant suffered an admitted work injury and established that he has missed work and suffered a wage loss. Indeed, Claimant received TTD benefits prior to being released to modified duty. TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office*, supra.

Additionally, §8-42-105(4)(a) provides: "In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." As Claimant's employment was terminated in this case, it is necessary to address Respondents' contention that the Claimant is precluded from receiving temporary indemnity benefits.

Responsibility for Termination

E. Because Claimant's injury was after July 1, 1999, sections 8-42-105(4) and 8-42-103(1)(g), C.R.S. apply. Those identical provisions state, "In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." Sections 105(4) and 103(1)(g) bar reinstatement of TTD benefits when, after the work injury, claimant causes his/her wage loss through his/her own responsibility for the loss of employment. *Colorado Springs Disposal d/b/a Bestway Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002). Simply put, if claimant is responsible for his/her termination of employment, the wage loss which is the consequence of claimant's actions shall not be attributable to the on-the-job injury. *Anderson v. Longmont Toyota, Inc.,* W.C. No. 4-465-839 (ICAO February 13, 2002). Respondents shoulder the burden of proving by a preponderance of the evidence that Claimant was responsible for her termination. *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office,* 20 P. 3d 1209 (Colo. App. 2000).

F. The concept of "responsibility" is similar to the concept of "fault" under the previous version of the statute. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). "Fault" requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994). An employee is "responsible" if the employee precipitated the employment termination by a volitional act that an employee would reasonably expect to result in the loss of employment. *Patchek v. Colorado Department of Public Safety*, W.C. No. 4-432-301 (September 27, 2001). "Fault" does not require "willful intent" on the part of the Claimant. *Richards v. Winter Park Recreational Association*, 919 P.2d 933 (Colo. App. 1996)(unemployment insurance); *Harrison v. Dunmire Property Management, Inc.,* W.C. no. 4-676-410 (ICAO April 9, 2008). "Fault" can include poor job performance, but Claimant is not at fault if the termination is due to claimant's physical or mental inability to perform assigned duties, *Johnston v. Deluxe/Current Corporation*, W.C. No. 4-376-417 (Industrial Claim Appeals Office, June 7, 1999). In this case, Respondents assert that Claimant was terminated because he consciously violated Employer's no call/no show policy. Claimant counters that he is not responsible for his termination because there was no volitional act since Claimant had no degree of control as there was no modified duty job for him to report to. As found, the ALJ is not persuaded by Claimant's assertion. Here, the evidence supports a conclusion that Claimant was provided with modified duty which complied with his physical restrictions. The evidence presented further convinces the ALJ that Claimant, despite his protestation to the contrary, was capable of performing that modified duty. While Claimant may have been frustrated by his inability to use his left hand as he had prior to his admitted injury, the evidence persuades the ALJ that he was aware of the no/call/no show policy and the consequences for violating it. Simply because Claimant was frustrated by his physical abilities and participate in work as efficiently as he had does not condone his conscious decision not to call in or show for work. In short, Claimant took voluntary acts that caused the termination of her employment.

G. The ALJ concludes that Claimant's reliance on *Bookout v. Safeway, Inc.*, W.C. 4-798-629 (ICAO 12/15/2010)(Claimant not at fault for termination for violating "no call – no show" policy when wrongly incarcerated); *Hall v. Wal-Mart Stores, Inc.*, W.C. 4-601-953 (ICAO 3/18/04)(The Respondents cannot adopt a strict liability personnel policy which usurps the statutory definition of "responsibility" for termination where the Claimant engaged in a fight it at work but did not provoke assault); *Bonney v. Pueblo Youth Service Bureau*, W.C. 4-485-720 (ICAO April 24, 2002)(Claimant was not responsible for failure to comply with the employer's absence policy if the Claimant was not physically able to notify the employer); see e.g., *Bell v. Industrial Claim Appeals Office*, 93 P .3d 584, (Colo. App. 2004)(Claimant not at fault for termination for refusing to sign settlement agreement waiving statutory rights) misplaced based upon the distinguishable facts of the present case. Accordingly, Claimant's claim for TTD benefits beginning November 19, 2015 and continuing through April 4, 2016 is denied and dismissed.

Claimant's Entitlement to TTD Beginning April 5, 2016

H. As noted above, termination of employment for cause will sever the causal connection between occupational injury and the subsequent wage loss. However, if a worsening of the Claimant's work-related condition is sufficient to cause a subsequent wage loss, temporary disability benefits are payable even if the termination from employment was for cause. *Anderson v. Longmont Toyota, Inc.*, 102 P. 3d 323 (Colo. 2004). Here, the evidence presented persuades the ALJ that treatment for Claimant's work related condition has been incomplete and as a consequence Claimant has suffered worsened symptoms with the passage of time. As found, Dr. Marin removed Claimant from work on April 5, 2016 and imposed restrictions concerning the use of his left hand. Based upon the evidence presented and as found above, the ALJ concludes that Claimant's worsened condition as of April 5, 2016 caused a disability, and that the disability resulted in an actual wage loss. Accordingly, the ALJ finds and concludes that Claimant is entitled to TTD benefits commencing April 5, 2016 and ongoing.

ORDER

It is therefore ordered that:

1. Respondents have established by a preponderance of the evidence that Claimant was terminated for cause from his employment.

2. The Claimant met the initial threshold to establish he was entitled to temporary disability benefits.

3. Respondents shall pay the Claimant temporary total disability ("TTD") benefits for the time period commencing April 5, 2016 and ongoing until terminated by order, agreement or operation of law pursuant to the statute.

4. Pursuant to the stipulation of the parties, the average weekly wage is $344.66 which results in a corresponding TTD rate of $229.78

5. Insurer shall pay eight percent (8%) per annum on all compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 5, 2016

Colorado Springs, CO 80906

ISSUES

The issue presented for determination is whether the Respondents' petition to terminate temporary total disability (TTD) benefits effective October 4, 2015 should be granted. The Respondents allege that Claimant suffered an intervening injury sufficient to sever the causal connection between his work injury and his subsequent wage loss.

FINDINGS OF FACT

1. The Claimant suffered an injury to his left elbow on September 10, 2015, while in the course and scope of his employment. He was lifting bundles of shingles and experienced a pop in the left elbow with immediate pain and swelling.

2. The Respondents admitted liability for the injury, which included an admission for TTD commencing on September 11, 2015.

3. The Claimant has been receiving medical treatment through Concentra Medical Centers. On September 10, 2015, the Claimant demonstrated to Concentra physician, Dr. Lori Ross, that with his elbow at 90 degrees of flexion, he pulled back then forward with full extension/hyperextension at the elbow, felt and heard a pop accompanied by pain. Dr. Ross observed swelling and documented limited range of motion.

4. The Claimant continued to receive treatment including physical therapy, periodic examinations, and medications.

5. Claimant attended physical therapy on October 5, 2015. The physical therapy note indicates that Claimant reported that his elbow flared up over the past weekend after going to the ground with his daughter after she almost fell from monkey bars (hereinafter the "monkey bar incident").

6. On October 29, 2015, the Insurer's third party administrator (TPA) wrote a letter to Concentra to inquire about the monkey bar incident and whether it worsened Claimant's condition. The TPA's claims adjuster also wrote that based on her review of Claimant's medical records, he appeared to be improving prior to the monkey bar incident.

7. On November 2, 2015, a Concentra Physician's Assistant, Jocelyn Cavender, wrote to the TPA that the monkey bar incident did not delay Claimant's care, and that all of Claimant's problems are related to his work injury.

8. A review of Claimant's medical records from September 10 – 30, 2015 does not reveal that Claimant was experiencing any significant improvement in his left

elbow symptoms. On September 30, 2015, the Claimant reported pain at 6 out of 10, down from 7 out of 10. He still was having problems with gripping, but he still had swelling. Claimant's work restrictions on September 30, 2015, included the following: may lift up to 5 pounds occasionally, may push/pull up to 5 pounds occasionally, may not drive company vehicle due to medication, no frank lifting with left hand, no gripping/squeezing/pinching with left upper extremity, no climbing ladders, may not work in safety sensitive position, and may not work at heights. The Employer could not accommodate these restrictions.

9. On October 15, 2015, Claimant's restrictions included the following: lifting up to 5 pounds occasionally, may push/pull up to 5 pounds occasionally, may not drive company vehicle due to medication, no frank lifting with left hand, may squeeze and grip infrequently with the left hand, no climbing ladders, may not work in safety sensitive position, and may not work at heights.

10. Claimant's work restrictions imposed before and after the monkey bar incident were essentially the same. However, *after* the monkey bar incident Claimant's restrictions allowed infrequent squeezing and gripping whereas *before* the monkey bar incident, Claimant was prohibited from gripping, squeezing or pinching with the left upper extremity. Thus his restrictions after the monkey bar incident were slightly less restrictive.

11. An MRI scan done on November 16, 2015 revealed that Claimant has a partial tear in the left superficial common extensor tendon.

12. An EMG performed on December 1, 2015 suggested mild left radial tunnel syndrome.

13. On January 26, 2016, Dr. Anjmun Sharma performed an independent medical examination (IME) at Respondents' request, and wrote a report.

14. Dr. Sharma's report reflects that he took a history from the Claimant, and examined him. Dr. Sharma also reviewed the Claimant's medical records.

15. Dr. Sharma opined that Claimant's problems are chronic and likely ongoing for "quite some time." Dr. Sharma speculated that Claimant's MRI and EMG findings "could be because another work [sic] that he was doing previous[sic], that he injured worker was doing repetitive activity with his left upper extremity, this could have certainly contributed to his symptoms." Dr. Sharma concluded that "the claim should not have been filed in the first place" and that "it would not be the burden of the current insurance carrier to support this claim and to provide medical treatment."

16. Dr. Sharma indicated that the "central question in this claim is what is related and what is not." He then concluded that Claimant's left elbow and forearm injuries are not related.

17. Dr. Sharma issued an addendum report dated February 4, 2016, wherein he states, "The patient was injured at work which we have already clearly established in

the previous original report." This statement is in direct contradiction to his entire January 26, 2016 report. Dr. Sharma goes on to acknowledge the tear in Claimant's common extensor tendon, but states that the tear was old and the pop Claimant heard on September 10, 2015 was probably not the tear occurring. Dr. Sharma attributed the pop to a muscle strain because Claimant "never had any swelling, he never had any pain, and he never had any ecchymosis." Again, Dr. Sharma's comments are in direct conflict with the Concentra records which clearly documented swelling, pain and limited range of motion in Claimant's left elbow.

18. Claimant has had no medical treatment since February 2016.

19. On May 25, 2016, Claimant underwent an IME performed by Dr. Timothy Hall. Dr. Hall examined the Claimant and reviewed medical records including the report and addendum report of Dr. Sharma. Dr. Hall opined that Claimant suffered a traumatic injury at work, he has failed conservative treatment and will likely need surgery.

20. The Claimant testified about the monkey bar incident. Claimant explained that his daughter started to fall and he caught her with his right hand and arm. They went to the ground and he put his left arm on his daughter's back. He noticed a twinge in the left elbow and experienced a temporary increase in his left elbow pain. The ALJ finds the Claimant's explanation credible.

21. Dr. Sharma testified at the hearing in this matter. He continued to reiterate that Claimant suffered no work injury on September 10, 2015, but then testified that Claimant suffered an elbow strain at work which should have resolved by now.

22. Dr. Sharma acknowledged the tear in Claimant's elbow but insisted it was present before September 10, 2015. He also testified that Claimant probably had symptoms before September 10, 2015 although there are no medical records documenting that Claimant sought treatment for left elbow problems before September 10, 2015. Dr. Sharma then testified that it was possible that Claimant tore the elbow tendon on September 10, 2015.

23. Dr. Sharma indicated, and the ALJ finds, that the monkey bar incident as described by the Claimant would not have made Claimant's left elbow worse. The work restrictions before and after the incident (see paragraphs 8-10 above) support that the monkey bar incident did not worsen Claimant's elbow condition.

24. Dr. Hall also testified at the hearing. Dr. Hall reiterated that Claimant's symptoms were not dramatically different before and after the monkey bar incident. He opined that the monkey bar incident did not cause Claimant's ongoing elbow problems. He further explained that it was unlikely that Claimant had an asymptomatic tear prior to September 10, 2015.

25. Regardless, the ALJ finds that even if Claimant had an asymptomatic tear prior to September 10, 2015, it became symptomatic as a result of work-related activities.

26. Based on the foregoing, the ALJ finds that the monkey bar incident in no way severed the causal connection between Claimant’s work injury and his subsequent wage loss. The ALJ finds that Claimant’s admitted work-related injury, and the resulting work restrictions, are the cause of his wage loss.

27. As of the date of the hearing, the Claimant remained on work restrictions and the Employer has not accommodated those restrictions.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

4. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P. 2d 535 (Colo. App. 1992). Here, the Respondents seek to modify the general admission of liability as it pertains to the Claimant’s award of TTD, and thus they bear the burden of proof.

5. An intervening injury may sever the causal connection between the injury and a claimant's temporary disability if the claimant's disability is triggered by the intervening injury. *See Standard Metals Corp. v. Ball*, 474 P.2d 622; *Marin v. Compass Logistics*, Inc., W.C. No. 4-520-473 (November 7, 2002), affd, Colo. App. No. 02CA2193 (Oct. 30, 2003). Whether the respondents sustained their burden to prove that the claimant's disability was triggered by an intervening injury is a question of fact for resolution by the ALJ. *City of Aurora v. Dortch*, 799 P.2d 462 (Colo. App. 1990).

6. As found above, the monkey bar incident did not constitute a subsequent intervening event sufficient to sever the causal connection between Claimant’s work injury and his subsequent wage loss. The Claimant’s work restrictions were essentially the same before and after the monkey bar incident, and in fact, his gripping/squeezing restriction was less restrictive after the monkey bar incident. While Dr. Sharma’s opinions were, in large part, unpersuasive given the many contradictions, he and Dr. Hall opined that the monkey bar incident did not worsen Claimant’s work-related elbow conditions. Such a conclusion is supported by the Claimant’s testimony and the medical records.

7. Benefits are precluded only when the work-related injury plays no part in the subsequent wage loss. If the injury contributed in part to the wage loss, temporary partial disability benefits can be denied only if one of the statutory conditions is satisfied. *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). It is abundantly clear in this case that Claimant’s wage loss is attributable to the admitted work injury to his left elbow. As such, the Respondents have failed to prove that they are entitled to terminate Claimant’s TTD benefits effective October 4, 2015.

ORDER

It is therefore ordered that:

1. Respondents' petition to terminate Claimant's TTD benefits effective October 4, 2015 is denied and dismissed.

2. Respondents shall continue to pay Claimant TTD at the admitted average weekly wage until terminated pursuant to law.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-992-534-02

ISSUES

- Did Claimant prove by a preponderance of the evidence that he suffered a compensable injury to his head and neck on August 26, 2015?

- If Claimant suffered a compensable injury, is he entitled to temporary total disability benefits from August 31, 2015 and continuing?

- What was Claimant's average weekly wage?

- If Claimant suffered a compensable injury, what medical benefits is he entitled to in order to cure and relieve the effects of his industrial injury?

STIPULATIONS

1. Claimant's AWW is $778.46, which yields a TTD rate of $518.97.

2. If the instant case is found compensable, TTD is due and owing. The time period that Respondent shall pay TTD is from August 31, 2015 to February 2, 2016 (188 days / 26.86 wks).

The ALJ approved the Stipulations at hearing.

FINDINGS OF FACT

1. Claimant was employed as a forklift operator by Employer. He began his employment in March 2015 as a temporary employee. Employer hired Claimant as a permanent employee in June 2015.

2. Claimant's job duties included driving a forklift. He loaded and checked trucks and trailers for delivery, as well as stacking and moving products. Employer had a written job description which set forth the requirements of a forklift operator. Claimant was required to lift and carry 25 pounds frequently and, on occasion, up to 80 pounds. Claimant was also required to climb in and out of the forklift, including turning around 360°.

3. Claimant's medical history was significant in that he had previously sustained concussions playing sports. He also sustained a prior industrial injury in Ohio in which he injured his lumbar spine. Claimant testified he took Percocet for that injury from 2009-2014. Claimant also treated for depression and anxiety. No prior medical records for these conditions were admitted at hearing. Claimant testified he had no physical restrictions before August 26, 2015.

4. Claimant testified he was injured on Wednesday, August 26, 2015[1]. Claimant began his shift at 6:00 a.m. that day and typically worked a twelve (12) hour shift[2]. When he was operating his forklift early that afternoon, he was loading a truck in the area where Employer pre-stages material or packs that are built. Claimant testified he went over to pick up one of the packs with the forklift and noticed one side of the pack did not have a strap. Claimant got out of the forklift, bent over to put a new strap on it. Claimant said he stood up and he hit his head on a board that was sticking out, which caused him to lose consciousness and fall to the ground. The blow to his head caused a contusion that was red and swelling where he hit his head on the lumber. Claimant stated his neck felt stiff and tense after he hit his head.

5. Claimant testified that he started feeling dizzy and nauseous. Because he was having difficulty performing his regular duties, Claimant said he had to leave work prior to his shift ending on August 26, 2015. The ALJ credited this testimony. He also could not work his full shifts on August 27 and 28, 2015.

6. Chris Paquette is the General Manager for Employer and testified on its behalf. Mr. Paquette testified he did not witness Claimant's injury, but Claimant reported he was hurt that day. Mr. Paquette confirmed he observed a red mark on Claimant's head, which he described as a small red abrasion that was not bleeding.[3] The ALJ credited this testimony, which confirmed Claimant struck his head on August 26, 2015.

7. Mr. Paquette testified Claimant told him that his head hurt and initially, Mr. Paquette testified Claimant worked the rest of the day. However, Mr. Paquette equivocated when shown Respondents' Second Supplemental Responses to Claimant's Interrogatories which confirmed Claimant went home approximately one (1) hour after reporting the alleged incident. Mr. Paquette also definitively stated Claimant did not leave work early on August 27 and 28. On cross-examination, Mr. Paquette confirmed he was actually on vacation and did not work August 28, 2015. He testified he would have approved paperwork the following Monday, which is how he knew Claimant worked a full day. The ALJ found it difficult to credit Mr. Paquette's testimony on whether Claimant worked full days on August 27th and 28th, particularly in light of the fact that Mr. Paquette did not work August 28, 2015 and this was on the eve of the two (2) busiest months in 2015 for Employer.

8. Payroll records from Employer were admitted at hearing. These records documented Claimant worked 80 hours, plus overtime (31.64 hours) in the two weeks prior to and including the date of injury through August 29, 2015. The ALJ notes these were not daily timesheets and no evidence documenting the actual number of hours

[1] The ALJ took administrative notice that August 26, 2015 was a Wednesday, pursuant to C.R.E. 201(b)(2).

[2] This was confirmed by Mr. Paquette.

[3] This was also confirmed by Respondents' Second Supplemental Responses to Claimant's Interrogatories-admitted as Exhibit 6.

Claimant worked on each of the days from August 26-28, 2015 was admitted at hearing. The paperwork which Mr. Paquette said he approved was not submitted to the Court. As noted above, the weight of the evidence leads to the conclusion that Claimant left early on August 26, 2015, yet it was not reflected in the payroll records. Therefore, the ALJ is unable to conclude Claimant worked full days on August 27 and 28, 2015 based upon the payroll records.

9. Claimant testified he waited to seek treatment due to him thinking that the symptoms would go away. However, over the weekend (August 29th & 30th), Claimant's symptoms persisted and grew worse. Claimant testified on Saturday, August 29th, he became disoriented causing him to urinate in his clothes and in his bedroom.

10. On August 31, 2015, Claimant was evaluated by Kathryn Bird, D.O. He was taken to Dr. Bird's office by Tony Delusio, who was the assistant general manager for Employer. Claimant reported he hit his head and everything went fuzzy and black for a few seconds, but he did not have a LOC. After the injury, he experienced blurred vision, headaches, dizziness, nausea (including vomiting once), decreased eye-hand coordination, no appetite, and a feeling of being unbalanced. Claimant also reported that he had urinated on his floor in the middle of the night thinking he was in his bathroom. Upon examination, Dr. Bird found Claimant had impaired balance, which was based on a positive Romberg's sign and an abnormal heel-to-toe test. Dr. Bird documented a pink area on the top of Claimant's scalp that was the size of a quarter and was tender. Dr. Bird's assessment was: concussion with brief loss of consciousness and post concussive syndrome. Dr. Bird prescribed Etodolac, ordered a CT scan, as well as physical therapy ("PT"). Dr. Bird also took Claimant off work.

11. Claimant underwent a CT scan of the head on August 31, 2015. Joseph Morgan, M.D. read the films, noting there were no fractures or hemorrhages. Dr. Morgan's impression was a normal CT scan.

12. Claimant returned to Dr. Bird on September 1, 2015 and reported a headache, with pain running down to his neck. He also felt body weakness, nausea, and tiredness. Dr. Bird noted swelling, identified as two (2) pink lesions on the top of Claimant's scalp, which were tender. Neck tenderness was found over the sides in the back. Dr. Bird's assessment was: concussion, thumb laceration and cervical strain. Dr. Bird ordered physical therapy, as well as referring Claimant to John Sacha, M.D. She also noted that given the mechanism of injury, Claimant's lumbar pain was "less likely than not related to this work injury".[4]

13. PT records for Claimant were admitted from Concentra for the treatments that began on September 1, 2015. In the initial evaluation report authored by Sarah Peck, Claimant was noted to have tightness in the upper trapezius, scalene, levator scapulae and SCM. Ms. Peck also documented impaired joint mobility and motor function. Claimant was scheduled to receive PT two times per week for four weeks. PT

[4] Counsel for Claimant confirmed at the hearing that he was not seeking benefits for an injury to the lumbar spine.

records from September 3-8 were admitted at hearing. These records documented continued symptoms on the part of Claimant.

14. Claimant was reevaluated by Dr. Bird on September 13, 2015. Claimant reported pain and pressure constantly, as well as dizziness. At that time, Dr. Bird’s diagnoses included concussion (with LOC), post concussion syndrome, and cervical strain. Dr. Bird's work restrictions included: may lift up to 1 pound constantly up to 8 hours; sitting 90% of the time; push/pull up to 1 pound constantly up to eight hours; no bending; and maximum three hour work shift. The ALJ infers Claimant could not perform his job duties as a forklift operator with these restrictions.

15. On September 30, 2015, Dr. Bird reevaluated Claimant, at which time he reported fairly constant pain, as well as numbness/tingling in his hands and dizziness. Claimant was taking Tramadol and Gabapentin, prescribed by Dr. Sacha and was referred for acupuncture and chiropractic. On examination, Dr. Bird found no impaired balance, but decreased extension and rotation in Claimant’s cervical spine. Dr. Bird’s assessment was cervical strain, concussion, and post-concussion syndrome. Claimant's PT was discontinued and work restrictions were maintained.

16. Claimant was evaluated by Craig Kozak, D.C. on October 5, 2015. At that time, he was complaining of aching, stabbing and throbbing in his whole head. Dr. Kozak noted diffuse muscle tenderness and decreased manual motor testing. His assessment was myalgia and myositis, neck muscle strain, and psychosocial factors, post concussion syndrome. A course of biomedical acupuncture/dry needling, along with spinal joint mobilization and manipulation was begun.

17. Claimant underwent an MRI of the cervical spine on October 21, 2015 and the films were read by David Solsberg, M.D. Minimal bulging was noted at C5-6, with no stenosis. Dr. Solsberg's opinion was no fracture or ligamentous injury was seen. Mild spondylosis was identified, with no central canal or foraminal stenosis seen.

18. Claimant was examined by Marc Treihaft, M.D. on December 9, 2015. Dr. Treihaft reviewed Claimant's course of treatment and noted he was having headaches, as well as increased depression since the day of injury. Dr. Treihaft's impression was post-concussive syndrome with persistent headaches, dizziness, neurobehavioral symptoms. He felt Claimant’s current headache pattern was consistent with an analgesic rebound syndrome to Tramadol and Midrin, as well as post-concussive symptomatology. Dr. Treihaft recommended tapering programs for the analgesic rebound headaches, anti-depressant therapy and if Claimant did not respond, Dr. Treihaft recommended neuropsychological battery and a brain MRI.

19. Dr. Sacha evaluated Claimant on December 15, 2015, at which time Claimant reported continued headaches. Dr. Sacha noted the claim was being contested. Claimant had marked pain behaviors, with some paraspinal spasm in the upper cervical spine, as well as pain with extension and rotation. Dr. Sacha's assessment was cervical facet syndrome, headaches secondary to the above, opioid dependence and rule out adjustment disorder.

20. Claimant was evaluated by Kevin Reilly, Psy.D. on December 17, 2015. At that time, he was reporting constant headaches. Dr. Reilly stated the results of the evaluation were strongly indicative of non-organic factors contributing to symptom production and/or maintenance. Performance testing indicated negative response bias. Symptom validity testing indicated significant symptom magnification. Dr. Reilly also noted Claimant's description of the injury was potentially consistent with a diagnosis of mild traumatic brain injury/post concessional syndrome. The natural history of such an injury was one of steadily resolving symptoms and Claimant's clinical course appeared to be one of increasing symptoms over time, which was a strong indicator for non-organic factors contributing to this symptom production and/or maintenance. Dr. Reilly thought Claimant would benefit from bio feedback therapy and recommended eight sessions of this treatment.

21. On January 19, 2016, Claimant was examined by Lawrence Lesnak, D.O. at the request of Respondents. Dr. Lesnak noted Claimant exhibited very limited range of motion of cervical spine and he had mild crepitus of his right shoulder joint. Claimant had 5/5 strength in his upper extremity's bilaterally, except for some mild giveway weakness when testing his right shoulder abductor musculature because of increased right-sided suboccipital/proximal right neck pains. Claimant had diffuse tenderness to palpation throughout his right occipital region and right proximal cervical paraspinal musculature, with no distinct trigger points or spasm noted. Dr. Lesnak said Claimant's mood appeared to be depressed and his affect was fairly flattened.

22. Dr. Lesnak's impressions were: subjective complaints of constant global headaches with frequent right-sided occipital/proximal neck pains and occasional right suprascapular discomfort, with occasional very minimal right arm pains associated with occasional dizziness, blurred vision and nausea; possible mild closed head injury reported small left parietal/vertex scalp laceration that occurred during work hours on 8/26/2015 by patient’s report; possible mild cerebral concussion as a result of that reported occupational incident; post injury head CT performed on 8/31/2015 which reported no extracranial or intercranial abnormalities whatsoever; no current clinical evidence of gross or focal cognitive abnormalities; possible post-concussive headache; no clinical evidence of cervical radiculitis, radiculopathy or myelopathy; cervical spine MRI performed on 10/21/2015 that noted mild cervical spondylosis apparently involving the mid to lower cervical spine without other identified abnormalities; possible right-sided proximal cervical paraspinal/trapezius myalgias; no evidence of neurogenic or vascular thoracic outlet syndrome; no clinical evidence of symptomatic shoulder joint pathology or rotator cuff impingement signs; no clinical evidence of greater or lesser occipital neuralgia; no specific clinical evidence of cervicogenic headaches/symptomatic proximal cervical facet joint symptoms; hypertension, asymptomatic GERD, as well as pre-injury depression, anxiety, and migraine headaches; chronic tobacco use; history of previous work-related right knee injury in 2009 for which he underwent surgical intervention in 2010; medical record reported evidence noting that the patient has had numerous closed head injuries in the past relating football to injuries and motorcycle accidents; patient underwent psychosocial screen test today in which the patient was

categorized in the “distressed depressive” category during DRAM testing; this suggests that there are significant psychosocial factors that are influencing his symptoms and recovery as it pertains to the alleged occupational injury of 10/26/15.

23. On February 2, 2016, John Burris, M.D. (ATP) returned Claimant to regular duty. The diagnosis was: strain of muscle, fascia and tendon. No narrative report was included with this record.

24. Dr. Lesnak testified at hearing. He was qualified as an expert in Physical Medicine and Rehabilitation, the specialty in which he is board-certified. He is Level II accredited pursuant to the W.C.R.P. He testified Claimant's course of symptoms did not follow what happens in a mild closed head injury. Dr. Lesnak stated he would expect Claimant's symptoms to have been worse at the beginning and then gradually improved over time. This progression of symptoms “always” occurred when someone suffered a mild closed head injury. Dr. Lesnak noted the CT scan showed no problems or abnormalities, as did the cervical MRI. Dr. Lesnak noted Claimant had a history of depression for which he received treatment and took medications. Dr. Lesnak testified further that while Claimant had a scalp abrasion, there was no evidence Claimant had a closed head injury or scalp concussion on August 26, 2015. This differed from the conclusion in his written report, which he said was due to his receipt of Dr. Reilly’s records. Dr. Lesnak distinguished between what he characterized as Claimant’s subjective complaints and post-concussive symptoms. He testified all of the doctors who diagnosed Claimant with post-concussive syndrome were wrong (“in hindsight”). Dr. Lesnak confirmed Claimant told him he fell to the ground after hitting his head. He opined there was no evidence Claimant had an injury to his cervical spine as a result of hitting his head on a two by eight board. Dr. Lesnak thought Claimant could be somaticizing his pain complaints where there was no objective evidence of injury.

25. There was no evidence before the Court that Claimant’s work restrictions were lifted before February 2, 2016.

26. The weight of the evidence led the ALJ to conclude Claimant suffered a minor traumatic brain injury or concussion on August 26, 2015. The ALJ credited the opinions of Drs. Bird, Sacha and Treihaft (treating physicians) that Claimant was suffering from symptoms related to post-concussive syndrome. These physicians’ opinions were more persuasive than those offered by Dr. Lesnak.

27. The evidence established it is more probably true than not that as a result of hitting his head on August 26, 2015, Claimant suffered a cervical strain.

28. The inferences and evidence inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. Section 8-43-201(1),C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). The instant case requires a credibility determination, not only of the Claimant, but also the medical experts.

Compensability-Closed Head Injury and Cervical Spine

Claimant alleges he sustained a closed head injury and an injury to his cervical spine while working for Employer. Claimant relied on his own testimony and that of Mr. Paquette to support his claimant that he hit his head on August 26, 2015. He continued to experience symptoms secondary to this injury, including headaches and nausea. After August 31, 2015, his doctors issued work restrictions, which Claimant relied on to support his argument that his post-concussive syndrome and cervical strain was disabling.

Respondents focused on Claimant's credibility and questioned whether the injury was as serious as he alleged. Respondents also asserted Claimant's symptoms were related to chronic use of Percocet, which he took up to the time of this alleged injury. Respondent also relied on the opinions of IME physician, Dr. Lesnak, to support the contention no compensable head or cervical injury occurred.

To receive workers' compensation benefits, an injured worker bears the threshold burden of establishing, by a preponderance of the evidence, that he or she has sustained a compensable injury proximately caused by his employment. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). ("Proof of causation is a threshold requirement which an injured employee must establish by a preponderance of the evidence before any compensation is awarded.")

Accordingly, Claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing a service for Respondent-Employer arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. *Triad Painting Co. v. Blair* 812 P.2d 638 (Colo. 1991). The question of whether the Claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). Lay testimony alone may be sufficient to prove causation. However, where medical evidence is presented on the issue of causation it is for the ALJ to determine the weight and credibility of such evidence. *Rockwell International v. Turnbull*, 802 P.2d 1182.

In this case, there was no question Claimant was working for Employer on the day in question and performing the job duties of a forklift driver. There was objective evidence of a head injury sustained by Claimant, starting first with Claimant's testimony. (Finding of Fact 4). This was corroborated by Mr. Paquette, who confirmed he saw an abrasion on Claimant's head that day when Claimant reported his injury. (Finding of Fact 6).

When crediting Claimant’s testimony that he struck his head and was injured, the ALJ considered Respondents argument that Claimant was not credible because he initially testified that he missed no time from work before the accident, provided varying versions of the incident and reported worsening symptoms over an extended period of time. While there were some minor variations in Claimant’s descriptions of his injury, his description of the essential elements of the injury remained consistent throughout. The ALJ found Claimant’s description of how he hit his head credible. Likewise, Claimant’s failure to remember one sick day and three vacation days prior to his injury were not material to the issue of whether he struck his head on August 26, 2015. The ALJ notes some of the same inconsistencies for which Respondents aspersed Claimant were present in Mr. Paquette’s testimony. (Finding of Fact 7).

Further objective evidence of the injury was found in Dr. Bird's records, who recorded an abrasion on Claimant's head on August 31 and September 1, 2015. (Findings of Fact 10 and 12). Respondents did not dispute the existence of this objective evidence of injury. Even Dr. Lesnak initially concluded Claimant probably had a mild closed head injury (although he testified this was simply an abrasion). Based upon the evidence presented, the ALJ concluded Claimant sustained a closed head injury when he struck his head against the 2 x 8 lumber on August 26, 2015.

As determined in Findings of Fact 10-16 and 19, the medical records admitted at hearing support the conclusion that the blow to Claimant's head caused post–concussive symptoms, which were diagnosed by Claimant's ATPs, including Dr. Bird and Dr. Sacha. Respondents have, in effect, argued that all of the ATPs who evaluated and treated Claimant were wrong when they concluded he suffered a minor traumatic brain injury/post concussive syndrome. Notwithstanding these arguments, the ALJ credited the opinions of Claimant's treating physicians in determining he suffered a compensable injury.

It follows from the evidence that an incident occurred that Claimant also sustained a cervical sprain arising out of the same event. The ALJ relied upon Claimant's testimony, as well as the inferences derived from said testimony. As found, It is more probable than not the Claimant sustained a neck strain, after standing up from a squatting position and striking his head forcefully enough to fall to the ground. (Finding of Fact 27). The weight of the evidence led the ALJ to conclude Claimant sustained a cervical strain on August 26, 2015.

The ALJ notes that the medical evidence raised issues concerning Claimant's delayed recovery, as well as possible psychosocial factors which affected his symptoms and treatment. Various healthcare providers, including Dr. Lesnak, raised concerns about the presence of psychosocial factors. These psychosocial factors may provide an explanation as to the length of Claimant's recovery and his symptoms. However, the presence of these factors does not refute the evidence proffered by Claimant, which proved he struck his head on the board and sustained an injury arising out of and in the course and scope of his employment. As such, his claimed injuries were compensable.

There was also evidence in the record Claimant had sustained concussions growing up, also treated for a lumbar injury, as well as depression. A preexisting condition does not disqualify Claimant from receiving benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo.App.1990). Moreover, an otherwise compensable injury does not cease to arise out of a worker's employment simply because it is partially attributable to the worker's pre-existing condition. See *Subsequent Injury Fund v. Thompson,* 793 P.2d 576, 579 (Colo.1990).

Claimant's preexisting depression and anxiety may have played a role in his overall condition and treatment for his injuries. It may also impact the issue of whether he sustained a permanent medical impairment. However, these preexisting conditions do not preclude the finding that Claimant suffered a compensable injury.

ORDER

It is therefore ordered that:

1. Claimant suffered a compensable injury arising out of and in the course and scope of his employment with Employer.

2. Respondents shall pay TTD benefits to Claimant from August 31, 2015 to February 2, 2016 (188 days / 26.86 wks) at a rate of $518.97 per week.

3. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. Claimant is entitled to medical benefits to cure and relieve the effects of his industrial injury.

5. Claimant's medical care with the following providers is authorized and is reasonable and necessary to cure and relieve the effects of the August 26, 2015 injury:

Kathryn Bird, M.D., John Burris, M.D. and other treating heath care providers at Concentra.

John Sacha, M.D.

Marc Treihaft, M.D.

Kevin Reilly, PsyD.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant sustain his burden to overcome the DIME physician's opinion on maximum medical improvement (MMI) and permanent medical impairment to Claimant's cervical spine[1]?

- If Claimant is at MMI, is Claimant entitled to conversion of the extremity rating to a whole person rating?

- Did Claimant prove by a preponderance of the evidence he was entitled to medical benefits after MMI?

- Did Claimant prove by a preponderance of the evidence he was entitled to a higher AWW?

FINDINGS OF FACT

1. Claimant was hired by Employer on November 26, 2012. He was hired at the rate of $13.26 per hour. Pay records admitted at hearing showed Claimant earned a total of $7,369.60 from June 7, 2013 through August 30, 2013.

2. Claimant testified he was told by Dave Swenson when he was hired that he would receive pay increases after one (1) year with the company. Claimant testified the pay range was anywhere from $14.00 to $30.00 per hour, which was what other employees earned. Other individuals working for the company made $30.00 per hour. Claimant worked less than a year for the company.

3. Claimant's wages at the time of injury understated the impact of the loss of earnings occasioned by his injury. It is probable Claimant would have received a raise had he not suffered his industrial injury. Claimant is entitled to a reasonable increase in his average weekly wage. The ALJ concludes an increase of 33% in Claimant's wages would be reasonable or an increase of $4.38 per hour to $17.64 per hour. Therefore, Claimant's average weekly wage should be increased to $705.43.

[1] The ALJ notes Claimant's Application for Hearing identified this issue as: "Overcome DIME with regard to causation of cervical spine and right shoulder". At the outset of the hearing, counsel for Claimant termed the issue: "overcoming the DIME-Dr. Janssen, maintenance medical benefits and permanent partial disability. If Claimant is not at MMI, the latter issues would be premature". Counsel for Respondents agreed with this statement of issues. In his post-hearing submission Claimant did not argue he was entitled to PPD benefits based upon a permanent impairment to his cervical spine.

4. Claimant suffered an admitted industrial injury on August 30, 2013 while working for Employer. He injured his left shoulder while lifting heavy bags of coins that each weighed 20-50 pounds.

5. The ATP for Employer was Concentra, where Claimant initially received conservative treatment. His left shoulder pain persisted and he was referred to Mitchell Seemann, M.D. for a surgical consult. Dr. Seeman performed surgery (arthroscopy) on January 20, 2014, as well as on May 7, 2014 and July 30, 2014. Claimant's diagnosis was chronic left shoulder pain.

6. In the report related to the evaluation conducted on April 8, 2014, Dr. Seemann noted Claimant continued to have pain and stiffness in the anterolateral aspect of his left shoulder. Dr. Seemann diagnosed post-operative adhesive capsulitis of the shoulder. He reviewed various options, both operative and nonoperative. Claimant elected to undergo surgery. Dr. Seemann noted the procedure would be a left shoulder arthroscopic diagnostic, possible capsular release and lysis of adhesions, with manipulation under anesthesia. The ALJ infers this surgical procedure involved not only the shoulder joint, but also the adjacent tissues.

7. Claimant was evaluated by Samuel Chan, M.D. on September 16, 2014, at which time Claimant rated his pain to be 7/10 in his right shoulder. Dr. Chan noted Claimant was guarded and had restricted range of motion ("ROM") in the left shoulder. Flexion was at 80°, abduction at 80°, external rotation at 20° and internal rotation was at 10°. Claimant cervical spine range of motion was limited on flexion because of pain. No tenderness with extension-rotation of the cervical spine was noted. Dr. Chan's diagnosis was: left shoulder-status post rotator cuff repair and biceps tenodesis on January 20, 2014; repeat arthroscopy performed on May 7, 2014 and repeat surgery on July 30, 2014, with significant scar debridement and manipulation under anesthesia, as well as biceps tendon release; essentially normal EMG of bilateral upper extremities on April 4, 2014; right shoulder rotator cuff tear; cervical and lumbosacral strain; status post chiropractic care. The plan was to follow-up with Dr. Seemann and a repeat EMG study was considered.

8. Dr. Seemann referred Claimant to David Schneider, M.D., who evaluated Claimant on October 3, 2014. Claimant was noted to have "moderate" pain and mild deltoid atrophy. Intact rotator cuff function was noted, as well as only minimal restrictions in his ROM. Dr. Schneider's impression was post-operative infection, symptomatic; chronic shoulder pain. He recommended Claimant undergo a left shoulder arthroscopic inspection and soft tissue cultures times six. He indicated he had the highest confidence in Dr. Seemann and told Claimant to either Dr. Seemann or he would perform the shoulder and culture of soft tissue samples both within the glenohumeral joint and in the subacromial space. As noted *infra*, Dr. Schneider was concerned about infection because of the presence of P. Acnes bacteria.

9. On October 27, 2014, Dr. Schneider performed a revision of arthroscopic partial left shoulder synovectomy on Claimant. The pre- and post-operative diagnosis

was chronic pain, possible infection. After the procedure was performed, various cultures were taken to determine whether bacteria were present.

10. Claimant testified he experienced continued pain after the various surgical procedures. Claimant was referred to Dr. Brent Wieland at Western Infectious Disease Consultants. That office treated him for an infection of Proprionibacterium Acnes ("P. acnes"). Specifically, Claimant was evaluated by Dr. Wieland on November 7, 2014. At that time, Dr. Wieland noted his diagnosis was: P acnes folliculitis, shoulder region pyogenic arthritis, P. Acnes infected orthopedic device. Claimant began IV antibiotics-Ceftriazone.

11. Claimant returned to Dr. Wieland on November 13, 2014. At that time, Claimant's left shoulder was mildly swollen and warm, as well as diffusely tender to palpation. Dr. Wieland's assessment was same as November 7, 2015. Dr. Wieland planned on treating Claimant for minimum of six weeks with IV antibiotics and if Claimant had the hardware removed, would restart the IV antibiotics after the surgery.

12. On December 1, 2014, Claimant was evaluated by Dr. Wieland. At the time, Claimant was found to have little or no improvement, after a 3 1/2 week course of antibiotics. Dr. Wieland opined the surgical screw may have to be removed in the shoulder.

13. Claimant was seen in follow-up on December 18, 2014 by John Burris, M.D. at Concentra. Claimant described his pain at 7/10 in severity and because of a deep wound infection in his shoulder, was receiving daily antibiotics through a PICC line. Dr. Burris deferred a formal examination and talked with Claimant at length regarding the course of his treatment. Dr. Burris' diagnosis was left shoulder strain and he opined Claimant "clearly" had a psychosomatic overlay in his presentation. Dr. Burris felt a referral to a pain psychologist or psychiatrist may be necessary.

14. On January 15, 2015, Dr. Schneider performed a left shoulder arthroscopy, with multiple cultures of the glenohumeral and subacromial space and tenodesis crew and left shoulder hardware removal of tenodesis screw through a separate anterior incision. The operative report noted the glenohumeral joint did not look infected, but cultures were taken. Dr. Schneider's pre-and post-diagnosis was left shoulder infection.

15. Claimant was evaluated by John Burris, M.D. on May 28, 2015. At that time, Claimant had diffuse complaints in his neck and both shoulders. Claimant reported his complaints were due to compensation for his left shoulder injury. Dr. Burris noted an EMG study on April 4, 2014 which was normal, with no evidence of radiculopathy. Dr. Burris also documented the MRI done on the cervical spine on September 2, 2014 was essentially normal with mild degenerative changes. Dr. Burris noted Claimant self-limited all motions, but displayed normal range of motion in his cervical spine.

16. Dr. Burris' diagnosis was left shoulder strain and he determined Claimant was at MMI. He assigned a 10% upper extremity impairment for persistent left shoulder complaints. Dr. Burris stated that Claimant became argumentative and confrontational towards him[2], which was consistent with his prior contact with other providers. Dr. Burris opined Claimant did not require additional treatment.

17. Claimant requested a DIME on July 1, 2015. On the request form, in the section which states: "list specific part(s) of the body and all conditions to be evaluated, including psychiatric where appropriate", Claimant listed: "cervical spine consult per Dr. Schneider"[3].

18. On September 8, 2015, Michael Janssen, D.O. conducted the Division IME. Dr. Janssen noted he did not review all of the medical records as there was in excess of one-thousand pages, plus films. Dr. Janssen noted the time it to review the scans and examine the patient exceeded 2 hours and he was unable to review the materials in the three additional hours allocated in addition to the time it took to prepare the narrative report. Dr. Janssen estimated he reviewed 70% of the records.

19. Dr. Janssen confirmed the Claimant reached MMI in May 2015. The ALJ notes Dr. Janssen did not note a specific MMI date on the Division IME Examiner's Summary Sheet[4], but in the body of his report Dr. Burris placed Claimant at MMI on May 28, 2015. Dr. Janssen cited the 6% impairment rating given by Dr. Burris for the shoulder with approbation, noting it was reasonable approximately two years following a surgery. The report noted: "I did not (and was not requested to) examination [sic] the shoulder regarding an impairment ". The ALJ notes Dr. Janssen's narrative report referenced Claimant's five shoulder surgeries, followed by a biopsy and consideration of infection, as well as infectious disease consultation. No specific reference was made to the P. Acnes infection. Dr. Janssen offered no opinion regarding Claimant's need for additional treatment including whether a further MRI or aspiration of the left shoulder was required.

20. Dr. Janssen assigned a 13% whole person impairment to Claimant's cervical spine. Dr. Janssen opined that the underlying cervical condition was not exacerbated, caused, nor did it have a direct relationship to the pathology of the sub axial cervical spine. This was based upon the timing of the pain complaints, as well as the EMG. The ALJ found this opinion persuasive and notes there was no contrary opinion before the Court. The ALJ notes there was no evidence Dr. Janssen examined Claimant's shoulder.

[2] The ALJ notes there were no other references in the medical records admitted at hearing, which documented Claimant being confrontational with health care providers.

[3] Exhibit E.

[4] Exhibit B, p 1; Exhibit 9, p 1.

21. Respondents filed a Final Admission of Liability ("FAL") on October 6, 2015, which admitted for the impairment rating issued by Dr. Janssen.

22. On October 16, 2015, Dr. Schneider saw Claimant for a follow-up evaluation. The report noted it had been four months since the last appointment and Claimant reported he was experiencing burning/pain in the shoulder; both in the anterior and posterior aspect. Diffuse tenderness was noted on the evaluation, with positive Neer's and Hawkins tests. Claimant had normal range of motion in the cervical spine, with left C6 distribution pain, numbness and weakness. Significant pain and popping were noted with ROM. Dr. Schneider recommended a shoulder aspiration with ultrasound guidance one last time to ensure the cultures were negative, as well as an MRI of the shoulder. If both were negative, Dr. Schneider opined Claimant would be at MMI.

23. In summary, Claimant received extensive medical treatment for the left shoulder, which included conservative treatment and surgeries. Two (2) surgical procedures were performed by Mitchell Seemann, M.D. and three (3) surgeries were performed by David Schneider, M.D.

24. The records admitted at hearing reveal Claimant received no additional treatment after October 16, 2015.

25. Claimant testified he continues to have pain complaints in his left shoulder. The pain he feels extends down his left arm, as well as into his scapula area and neck.

26. The evidentiary deposition of Dr. Schneider was taken on April 20, 2016 and he testified consistently with the findings reflected in the reports of his treatment. The deposition transcript was admitted into evidence. Dr. Schneider testified as an expert in sports medicine and orthopedic surgery, specialties in which he is board-certified. Dr. Schneider stated his Level II accreditation lapsed in January 2016. Dr. Schneider testified the shoulder presented a number of challenges with regard to post-operative infections. Occult infections were hard to detect in the shoulder because of the presence of many sebaceous glands, which host Propionibacterium acnes. A P. acnes infection does not cause a huge effusion, redness or drainage. The only way to determine whether or not the infection is present is to obtain soft tissue cultures. A P. acnes occult infection will cause chronic pain, as was present in Claimant.

27. Dr. Schneider testified the positive results for P. acnes for Claimant was concerning because this bacteria lives in the skin. When surgery is performed, the bacteria can migrate to the joint, particularly the anchors/sutures that are placed in the shoulder joint. Dr. Schneider confirmed the lab results for Claimant on November 7, 2014 were positive for the presence of P. acnes bacteria. After Claimant was treated with antibiotics, the lab values were normal.

28. Dr. Schneider testified he last evaluated Claimant on October 16, 2015. He noted Claimant had pain in his left shoulder and neck. Dr. Schneider confirmed he

had seen Claimant four months prior to the above-referenced visit and did not note a concern about infection at that time. Dr. Schneider agreed Claim's pain complaints were essentially unchanged since May 2015. The ALJ infers Claimant's left shoulder condition was stable since that time. Dr. Schneider agreed that most doctors would find a Claimant at MMI if the patient's symptoms have not changed within six months and agreed that Claimant's pain complaints were essentially unchanged for six months. However, given the Claimant's history, Dr. Schneider opined Claimant would not be at MMI until such time as he had one additional aspiration and an MRI. The ALJ inferred that because the infection was hard to detect, Dr. Schneider felt additional testing was warranted.

29. Dr. Schneider testified that he could not say that Dr. Janssen was clearly wrong in finding Claimant was at MMI and agreed this was a difference of opinion. This was also true for Dr. Burris' conclusion that Claimant reached MMI on May 28, 2015.

30. Based upon totality of the medical evidence admitted at hearing, Dr. Janssen did not conduct a full and complete evaluation of Claimant, as he did not review all of the medical records provided to him. He did not independently analyze whether Claimant was at MMI, nor did he determine whether Claimant sustained a permanent medical impairment to his shoulder.

31. Based upon totality of the medical evidence admitted at hearing, Claimant was at MMI as of May 28, 2015.

32. It is more probable than not that Claimant sustained a functional impairment beyond the arm at the shoulder. The ALJ concludes the five (5) surgeries Claimant underwent impacted not only the shoulder joint, but the adjacent connective tissues (including the biceps tendon). This limited the functional mobility of Claimant's arm and shoulder, as well as impacting his cervical ROM and scapula. In addition, the presence of the P. Acnes infection, as well as treatment for the infection caused pain and loss of function in structures beyond the shoulder itself.

33. Claimant proved it is more probably true than not that he is entitled to an award of post-MMI medical treatment to relieve the effects of his injury or prevent deterioration of his condition.

34. The inferences and evidence inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. Section 8-43-201(1),C.R.S. Generally, the Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the credibility of various health care providers on the question of MMI and Claimant's need for continuing treatment were the primary areas of dispute to be resolved by the ALJ.

Overcoming the DIME

Claimant contends Dr. Janssen erred in his determination that he was at MMI. Claimant also cited Dr. Schneider's recommendations made when he last saw Claimant, as well as his deposition testimony, and argued because he requires an MRI and an additional procedure to aspirate the joint, he is not at MMI. Claimant also asserted Dr. Janssen did not evaluate his shoulder, nor did he consider the potential presence of the bacteria.

Respondents averred Claimant failed to introduce sufficient evidence to meet the clear and convincing evidence standard. Citing Dr. Schneider's testimony, Respondents contended this was a difference of opinion between the physicians, which did not overcome the DIME physician's conclusions. Respondents also argued that the date of MMI was correct and supported by the evidence. As noted below, the ALJ found Claimant met his burden of proof and overcame Dr. Janssen's opinion. However, based upon the totality of the evidence, the date of MMI was correct and Claimant is entitled to a whole person impairment.

Clear and convincing evidence means "evidence which is stronger than a mere 'preponderance'; it is evidence that his highly probable and free from serious and substantial doubt". *Metro Moving & Storage Co v. Gussert, supra*, 914 P.2d at 414 (citing CJI-Civ. 3d 3:2 (1988); *DiLeo v. Kotlnow*, 200 Colo. 119, 613 P.2d 318 (1980). A party meets this burden only by demonstrating that the evidence contradicting the

DIME's MMI is "unmistakable and free from serious or substantial doubt." *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002) (citing *DiLeo v. Koltnow, supra*). The enhanced burden of proof imposed by § 8-42-108(b)(III), C.R.S., reflects an underlying assumption that the DIME, having been selected by an independent and unbiased tribunal, will provide a reliable medical opinion. *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590, 592 (Colo. App. 1998). The heightened proof requirement to overcome opinions of DIME physicians, such as Dr. Janssen, evinces the intent of the Colorado Legislature to make these opinions difficult to overcome.

Turning to the question of whether Dr. Janssen's opinion was overcome by clear and convincing evidence, the starting point for the ALJ's analysis was the DIME report itself, which revealed an incomplete evaluation. In Dr. Jansen's own words, he did not review all of the available medical records, as the review of the films and examination of Claimant took 2.0 hours. Rather than preparing a medical records summary, Dr. Janssen instead focused on the issue identified in the DIME request form. The lack of a complete review of the file was compelling evidence that Dr. Janssen's opinions were not determinative.

Second, Dr. Janssen narrowly focused his opinions in that case, spending a majority of the analysis on the issue of Claimant's cervical spine and simply adopting the impairment rating for the shoulder issued by the ATP, Dr. Burris. The ALJ noted that Dr. Janssen's opinions were circumscribed by the DIME request completed by Claimant, which asked for an examination of the cervical spine and for other concerns listed: medical maintenance and permit impairment. This was the basis for the incongruity between some of Dr. Janssen's conclusions and the other evidence presented on the issues set for determination at hearing.

Third, Dr. Janssen's report was issued prior to Dr. Schneider's last evaluation of Claimant in which he made the recommendation for an MRI and one final aspiration of the left shoulder joint. Dr. Janssen did not consider these recommendations and made no specific findings of his own concerning Claimant's permanent medical impairment of the left shoulder or his need for additional treatment. Dr. Janssen simply commented that he felt the finding of MMI and impairment by the ATP was "reasonable".

Based on the evidence before the Court, ALJ determined Dr. Janssen's opinions were overcome, considering the abbreviated nature of his review of the medical records and lack of findings concerning Claimant's permanent medical impairment of the left shoulder. (Findings of Fact 18-20, 30). As such, Dr. Janssen's findings are not binding. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

Having concluded Dr. Janssen's opinion were overcome, the inquiry turns to whether Claimant is at MMI. The ALJ considered the opinions of the various physicians in the case, including Claimant's ATPs and Dr. Janssen.

The Act defines MMI as:

> " a point in time when any medically determinable physical or mental impairment as a result of injury has become stable and no further treatment is reasonably expected to improve the condition. The requirement for future medical maintenance which will not significantly improve the condition or the possibility of improvement or deterioration resulting from the passage of time shall not affect a finding of maximum medical improvement. The possibility of improvement or deterioration resulting from the passage of time alone shall not affect a finding of maximum medical improvement."
> Section 8-40-201(11.5), C.R.S.

More particularly, the ALJ considered the question of whether the MRI and aspiration procedures, as proposed by Dr. Schneider lead to the conclusion Claimant is not at MMI. There is authority for the proposition that additional diagnostic procedures offer a reasonable prospect for defining the Claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Patterson v. Comfort Dental East Aurora,* WC 4-874-745-01 (ICAO February 14, 2014); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000).

On balance, the ALJ was persuaded Claimant reached MMI as of May 28 2015. The ALJ relied on the fact that the last cultures taken from Claimant's left shoulder were negative, as confirmed by Dr. Schneider in his evidentiary deposition, as well by the findings made by Dr. Burris. The physical findings made by Dr. Burris on May 28th also supported the conclusion Claimant was at MMI. Dr. Snyder did not make specific recommendations for treatment when saw Claimant in June 2015.

In making this determination, the ALJ specifically reviewed Dr. Schneider's recommendations for an additional MRI and aspiration of the shoulder joint. These appear to be recommendations to rule out further issues with the left shoulder. The ALJ construed as these recommendations as post-MMI medical treatment, more in the nature to rule out problems and to ensure there is been no deterioration of Claimant's condition. The procedures proposed by Dr. Schneider are not to cure and relieve the effects of Claimant's industrial injury, but rather are to rule out any potential issues with the left shoulder. Thus, while the ALJ found the proposed treatment to be reasonable, it is more accurately characterized as post-MMI treatment.

Conversion of Medical impairment Rating-Left Shoulder

Claimant argues if the DIME physician's finding on MMI is upheld, the 10% upper extremity impairment rating should be converted to a 6% whole person rating and PPD benefits awarded on this basis. Claimant argued that many of his activities are restricted due to pain and the overall effect on his activities requires conversion of his medical impairment benefits. The ALJ was persuaded Claimant was entitled to PPD benefits based upon a whole person impairment rating

Section 8-42-107(1)(a), C.R.S., provides that when an injury results in permanent medical impairment and the "injury" is enumerated in the schedule set forth in subsection (2) of the statute, "the employee shall be limited to the medical impairment benefits as specified in subsection (2)." As used in these statutes the term "injury" refers to the part or parts of the body that sustained the ultimate loss, not necessarily the situs of the injury itself.

Thus, the term "injury" refers to the part or parts of the body that have been functionally disabled or impaired. *Warthen v. Industrial Claim Appeals Office,* 100 P.3d 581 (Colo. App. 2004); *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996). Under this test the ALJ is required to determine the situs of the functional impairment, not the situs of the initial harm, in deciding whether the loss is one listed on the schedule of disabilities. *Strauch v. PSL Swedish Healthcare System, supra.* Pain and discomfort that limit the Claimant's use of a portion of the body may constitute functional impairment. *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005); *Vargas v. Excel Corp.,* W.C. No. 4-551-161 (ICAO April 21, 2005). The ALJ may also consider whether the injury has affected physiological structures beyond the arm at the shoulder. *Brown v. City of Aurora,* W.C. No. 4-452-408 (ICAO October 9, 2002).

In this case, the evidence admitted at hearing led the ALJ to conclude Claimant had a functional impairment beyond the shoulder. As found, there was objective medical evidence that connective tissues beyond Claimant's arm and shoulder were affected by the industrial injury. (Findings of Fact 6, 32). In addition, Claimant's pain complaints extended beyond the shoulder (including the scapula and extending to the neck), which provided support for the conclusion his impairment extended beyond the arm at the shoulder. Last, Claimant's treatment for the P. acnes infection, including the IV antibiotics and removal of the hardware affected anatomical structures beyond the shoulder.

Therefore, Claimant's request that he be awarded PPD benefits based in conversion of an upper extremity impairment rating to a whole person is granted.

Cervical Spine

Dr. Janssen calculated Claimant's permanent medical impairment of his cervical spine as part of his evaluation of Claimant. However, he concluded this impairment was not caused by the industrial injury. Claimant has not argued he is entitled to PPD benefits based upon a permanent medical impairment to the cervical spine, nor did he present evidence to overcome Dr. Janssen's opinions on the subject.

Therefore, although there was evidence Claimant had symptoms and received treatment for his cervical spine, the ALJ was persuaded by Dr. Janssen's opinions that Claimant's cervical spine impairment was not the result of his industrial injury. (Finding of Fact 20).

Average Weekly Wage

Claimant alleged he was entitled to a higher average weekly wage than that admitted to by Respondents. Claimant proffered his testimony that he was promised $30.00 per hour by the manager who hired him. Respondents disputed Claimant would be entitled to a higher average weekly wage. The ALJ concluded Claimant met his burden of proof and showed he was entitled to a higher average weekly wage.

Section 8-42-102(2), C.R.S., requires the ALJ to base the Claimant's AWW on his earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993).

Specifically, § 8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the Claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra. Pizza Hut v. Industrial Claims Appeals Office,* 18 P.3d 867 (Colo. App 2001). Where Claimant's earnings increase periodically after the date of injury the ALJ may elect to apply § 8-42-102(3) and determine that fairness requires the AWW to be calculated based upon the Claimant's earnings during a given period of disability, not the earnings on the date of the injury. *Avalanche Industries, Inc. v. Clark, supra*; *Campbell v. IBM Corp.* and *Pizza Hut v. Industrial Claims Appeals Office, supra*.

In *Pizza Hut v. Industrial Claims Appeals Office, supra,* 18 P.3d at 869-870*.* Claimant was working part-time for an employer and sustained an industrial injury. Shortly afterwards, Claimant obtained full-time employment at a significantly higher wage, working both jobs for two weeks. The ALJ's determination that Claimant's medical impairment benefits should be paid based upon a higher average weekly wage (which included Claimant's concurrent employment) was affirmed by the Panel and subsequently by the Court of Appeals. Citing Section 8-42-102(3), C.R.S., the Court affirmed the ALJ's findings as within the ALJ's discretionary authority to calculate AWW in an alternative manner, if prescribed methods would not fairly calculated the wage in view of the particular circumstances. *Id.*

As found, Claimant's industrial injury precluded him from receiving at increase in his hourly rate of pay. (Finding of Fact 3). The ALJ determined Claimant's average weekly wage should be increased as the higher wage more fairly compensates him, based upon the specific circumstances of the case. *Pizza Hut v. Industrial Claims Appeals Office, supra,* 18 P.3d at 870.

Based on the totality of the evidence, the ALJ concluded Claimant sustained his burden of proof and established he was entitled to a higher average weekly wage. In this regard, Claimant's industrial injury and the surgeries he underwent (including the complications) prevented him from completing his first year of employment with Employer, after which time he would have secured a raise. As found, a fair assessment of the average weekly wage requires inclusion of the additional amount Claimant would have received. The evidence before the Court showed it was more probable than not Claimant would have received an increase in pay but for the industrial injury. Claimant's unrefuted testimony established he was eligible to receive this increase in pay after his first year of service and there was no contrary evidence in the record.

Although Claimant testified he was eligible to receive up to $30.00 per hour, the ALJ declines to reach that conclusion, as there was no corroboration of Claimant’s testimony to support such a finding. However, since the ALJ found it was more likely than not he would have received a raise, a reasonable increase in Claimant's wages was 33% or an increase of $4.38, since it has been approximately three (3) years since the injury. This increases Claimant’s wages to $17.64 per hour. Therefore, Claimant's average weekly wage should be increased to $705.43.

***Grover* Medical Benefits**

Claimant argued the treatment proposed by Dr. Schneider (MRI and the shoulder aspiration procedure) was reasonable and necessary. He also contended he was not at MMI. Since the ALJ determined he was at MMI, the inquiry turns to whether that treatment fits within post–MMI medical benefits and whether Claimant is entitled to said treatment. The ALJ concludes Claimant is entitled to an award of post-MMI medical benefits.

The need for medical treatment may extend beyond the point of MMI where Claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). An award of *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). Claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003).

As determined in Findings of Fact 5-14, Claimant had extensive treatment for his left shoulder, including multiple surgeries. He experienced complications from the procedures, specifically the P. acnes bacteria infection, which also required extensive treatment. The ALJ credited Dr. Schneider’s testimony that this type of infection is poorly understood. Accordingly, the ALJ finds that an MRI is reasonable to evaluate the current status of Claimant’s left shoulder. A follow-up evaluation with Dr. Schneider is also reasonable and necessary to prevent deterioration of Claimant’s condition. The ALJ concluded this treatment is properly characterized as post-MMI treatment governed by *Grover* and its progeny. Respondents are required to provide said treatment.

ORDER

It is therefore ordered that:

1. On May 28, 2015, Claimant reached MMI for his August 30, 2013 industrial injury.

2. Respondents shall pay Claimant permanent partial disability benefits based upon a six (6) percent whole person impairment for the functional impairment to the left shoulder and surrounding anatomical structures.

3. Claimant's average weekly wage is increased to $705.43.

4. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. Claimant is entitled to maintenance medical treatment, including an MRI and follow-up evaluation with Dr. Schneider.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-976-657-02

ISSUES

The issue presented for determination is whether the Claimant is entitled to temporary total disability (TTD) benefits from February 3, 2016 through March 24, 2016.

FINDINGS OF FACT

1. On November 4, 2015, ALJ Richard Lamphere entered a Summary Order which found that on February 28, 2015, Claimant suffered a compensable injury to her cervical spine. ALJ Lamphere specifically found that Claimant's "current cervical pain is a consequence of her turning her head suddenly in response to a customer while she was twisting her body in the opposite direction while mopping the floor."

2. ALJ Lamphere determined that Claimant suffered a compensable aggravation of a pre-existing spine condition in the course and scope of her employment. He also found that, "the aggravation of Claimant's pre-existing condition prompted by her work duties caused the need for treatment rather than the natural progression of Claimant's pre-existing condition.

3. ALJ Lamphere also determined that Respondents are liable for reasonable and necessary medical treatment related to cure and relieve the Claimant from the effects of the compensable injury.

4. Claimant's authorized treating provider is Concentra. The record suggests that Claimant had not been receiving consistent medical treatment through Concentra due to the litigation over the compensability of her claim. Several medical records reflect that the Insurer denied referrals for medical treatment while it contested the claim.

5. On December 15, 2015, Claimant returned to Concentra after a six month absence once ALJ Lamphere's found her claim compensable. Claimant continued to complain of neck pain. She reported that her primary care physician had been managing her neck pain.

6. On January 6, 2016, the Claimant returned to Concentra and saw physician's assistant, Kenneth Ginsburg. The record indicates that Claimant continues to experience "much cervical pain with right arm radiculopathy." She stated that all treatments had been denied prompting her to retain an attorney.

7. On January 8, 2016, Mr. Ginsburg documented his receipt and review of ALJ Lamphere's November 4, 2015 order. Mr. Ginsburg noted that, "It appears a neck strain as an exacerbation of an underlying condition is what is covered. We have completed or attempted to complete conservative care for this condition and she may be at MMI,

but would need evaluation and possibly apportionment to determine MMI." Mr. Ginbsurg deferred to "Physical Medicine" to determine if additional conservative treatments were indicated before MMI or to Dr. Hattem who is a delayed recovery specialist.

8. Claimant returned to Concentra on February 3, 2016 and saw Mr. Ginsburg. Claimant reported that her symptoms are much worse and she could hardly move her head. She reported the inability to concentrate due to pain. Mr. Ginsburg offered more conservative treatment, but Claimant declined citing to a specialist who advised her that she needs her "pinched nerve" fixed. Claimant told Mr. Ginsburg that she was not working at that time.

9. Mr. Ginbsurg referred the Claimant to Dr. Hattem for an impairment rating and case closure so Claimant could receive treatment under her personal health insurance.

10. Mr. Ginsburg noted Claimant's activity status as "No work." He also indicated, "OFF WORK UNTIL FOLLOW UP APPOINTMENT AND RE-EVALUATION." Dr. Walter Larimore approved the Mr. Ginsburg's recommendations.

11. On February 12, 2016, Claimant returned to Concentra at which time Dr. Randall Jones evaluated her. Claimant reported she was no better. Dr. Jones noted that Dr. Rauzzino recommended surgery a year earlier and had advised against physical therapy. Dr. Jones and Claimant discussed having her workers' compensation case closed so she could pursue surgery under her private health insurance. Dr. Jones continued the "no work" activity status.

12. Dr. Albert Hattem evaluated the Claimant on March 24, 2016. He noted that after Claimant returned to Concentra in December 2015 after a six month absence, no further treatment was provided because the Insurer had denied all referrals. Claimant requested that her case be closed, and Dr. Hattem indicated he would honor her request.

13. Dr. Hattem determined that Claimant reached MMI effective March 24, 2016. He assigned a 6% permanent impairment rating under Table 53 of the AMA Guides. Dr. Hattem declined to assign an impairment rating for cervical spine range of motion deficits. Dr. Hattem concluded that Claimant's cervical spine range of motion measurements were invalid based on his casual observations of her movements throughout the exam.

14. Dr. Hattem assigned permanent work restrictions, but opined that Claimant did not require further medical monitoring or future follow-up treatment.

15. Claimant has proven that the restriction of "no work" assigned by authorized provider, Mr. Ginsburg, and approved by Dr. Larimore, resulted in her inability to earn wages in her usual occupation.

16. Based on the evidence in the record, the ALJ finds that Mr. Ginsburg determined Claimant could not work due to the effects of her compensable work injury. Mr. Ginsburg acknowledged that he reviewed ALJ Lamphere's summary order then proceeded to restrict Claimant from working. Dr. Larimore approved that restriction and Dr. Jones continued the "no work" restriction. There is no persuasive evidence that the "no work" restriction was related to anything other than Claimant's compensable workers' compensation injury.

17. Even if Claimant's compensable work injury was limited to an aggravation of a pre-existing soft tissue injury as Respondents contend, the medical records do not document any improvement in Claimant's soft tissue injury condition from the date of the injury, February 28, 2015 through the date of MMI. Rather, Claimant attended a few physical therapy sessions then there are significant gaps in treatment through the workers' compensation system due, in part, to Respondents' refusal to authorize treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

4. To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires a claimant to establish a causal connection between a work-related injury and a

subsequent wage loss in order to obtain TTD benefits. *Id*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

5. As found above, the Claimant has proven entitlement to TTD commencing on February 3, 2016, when her authorized treating provider issued a “no work” restriction related to her compensable work injury. Claimant could not perform her usual job duties when restricted to “no work.” As such, Respondents shall be liable for TTD benefits until Dr. Hattem placed the Claimant at MMI on March 24, 2016.

ORDER

It is therefore ordered that:

1. Respondents shall be liable for TTD benefits commencing on February 3, 2016 until March 24, 2016, at the AWW of $461.35.

2. The Insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-009-016-01

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable lower back injury during the course and scope of his employment with Employer on August 31, 2015.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive authorized, reasonable and necessary medical treatment for his industrial injuries.

3. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period October 31, 2015 through November 30, 2015 and Temporary Partial Disability (TPD) benefits for the period December 1, 2015 until terminated by statute.

4. Whether Respondents have demonstrated by a preponderance of the evidence that Claimant is precluded from receiving indemnity benefits because he was responsible for his termination from employment under §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. (collectively "termination statutes").

STIPULATIONS

The parties agreed to the following:

1. Claimant earned an Average Weekly Wage (AWW) of $1,098.00.

2. The period for temporary disability benefits began on October 31, 2015.

FINDINGS OF FACT

1. Claimant worked for Employer as a Maintenance Supervisor. His job duties required him to perform and supervise the maintenance work at properties owned and operated by Employer.

2. Claimant's job duties involved completing work orders for general repairs in rental units. He was specifically responsible for plumbing, electrical, painting and the preparation of units for new tenants. Claimant also supervised a team of Maintenance Technicians. His management duties specifically included hiring and terminating employees, assigning work orders and confirming completed work orders.

3. Claimant testified that on August 31, 2015 one of his supervisors asked him to assist a resident in transporting boxes that had been delivered to the lobby area.

As he attempted to lift a box that was falling from a dolly, he immediately experienced a pinch and pain in his lower back.

4. On September 12, 2015 Claimant visited Craig Hare, PA-C at Concentra Medical Centers for an evaluation. Claimant reported lower back pain. PA-C Hare diagnosed him with a lumbar strain, assigned work restrictions and implemented a conservative course of treatment.

5. On October 5, 2015 Claimant returned to Concentra and visited Ron Rasis, PA-C for an examination. He reported lower back pain and "aching pain down posterior right leg."

6. On October 29, 2015 Claimant underwent an initial physiatric evaluation with Robert I. Kawasaki, M.D. Claimant reported that he was lifting heavy boxes and felt a pinch in his back. He noted continuing lower back pain and radicular symptoms that extended into his bilateral lower extremities. Dr. Kawasaki diagnosed Claimant with an L4-L5 versus an L5-S1 disc protrusion with some radicular symptoms into the lower extremities.

7. On October 30, 2015 Claimant was terminated from his employment with Employer. The evidence reveals that Claimant began having job performance issues in October 2014. Employer unsuccessfully engaged in ongoing counseling efforts in an attempt to correct Claimant's employment deficiencies.

8. Employer's Office Manager Sandy Bucceri testified that Employer uses a progressive disciplinary system to apprise employees of work performance concerns. She summarized that "we encourage the managers to communicate problems early and often, if you will. So it may start with informal counseling sessions; this might be verbal. And then an e-mail is sent to corporate documenting the conversation, followed by a written counseling session, which is a written warning. If the problem escalates, then it becomes a final written warning."

9. Employer's Property Manager Melody Seitz began counseling Claimant about his job performance in late October 2014. She specifically advised Claimant to leave detailed notes anytime a member of the maintenance crew entered an apartment unit. Ms. Seitz also specified that maintenance team members should leave notes for tenants to advise them of expected repair completion time.

10. On February 12, 2015 Ms. Seitz sent an e-mail to Claimant and other maintenance team members that outlined job concerns. She specifically detailed that work orders must be completed within 48 hours, notes must be left in units about the status of work orders and keys must be ready one day prior to the move-in date.

11. On March 9, 2015 Ms. Seitz completed her first employee counseling form for Claimant. She detailed concerns with "following through when telling me/upper management/coworkers that something will get done…completing work orders and following up with residents & office staff when they are not completed with details of why & when it will be done." Ms. Seitz also outlined areas where Claimant could improve his

work performance. She stated: "I would like to see [Claimant's] communication improve. This includes telling me (and the team) if something that we request cannot be completed in the timeframe we request, communicating with the staff and residents about the status of work orders, following up on work orders that were unable to be completed at initial visits, [and] following up with the office staff and his team on anything that we may need to know."

12. On March 18, 2015 Ms. Seitz drafted an e-mail summarizing a meeting she had with Claimant earlier in the day. She advised Claimant that he had to improve communication "so that when work orders take weeks to complete, our residents are aware of why and an expected time frame for completion."

13. On June 3, 2015 Ms. Seitz conducted a second employee counseling session with Claimant. Ms. Seitz outlined issues including repairs of broken elevator doors, failures to effectively communicate with tenants regarding repairs and continued concerns with having keys in the leasing office the day before a unit was to be rented. Ms. Seitz specifically stated "I would like to see [Claimant] step up to the supervisor role a bit more, and provide more leadership and training for the maintenance technicians. Instead of blaming them when they don't do things, make sure they have the proper training and are capable of doing whatever it is that they need to do…I would also like to see [Claimant's] attention to detail improve. There are numerous things like guest suite reservations, move-in scheduling [and] item ordering that can be improved upon."

14. On June 26, 2015 Ms. Seitz conducted Claimant's annual performance review. The sections of the appraisal that allowed the reviewer to rate Claimant on a scale of 1-5 reflected that Claimant's job performance was satisfactory. However, Ms. Bucceri clarified that the scores on the annual performance review directly correlate to an employee's annual raise. Because managers want to provide better raises for their personnel, scores may not accurately reflect an employee's actual job performance.

15. The written portions of the review included a variety of suggestions for Claimant's improvement. Regarding Claimant's job knowledge Ms. Seitz stated "I would like to see improvement with the supervisor duties." In terms of Claimant's job performance Ms. Seitz noted "[Claimant's] work is normally satisfactory. Would like more follow up on his team's work." Finally, in addressing Claimant's job initiative Ms. Seitz commented "I would like to see a little more follow through when assigned tasks."

16. Because Claimant's work performance failed to improve, Ms. Seitz initiated a third counseling session on September 30, 2015. She explained that "[t]here are currently 173 outstanding work orders in MRI. Either these maintenance items have not been addressed, or the work orders are not being documented properly. Work orders are a primary job duty, so if they are not being addressed that is unacceptable." The note was marked as Claimant's final written warning.

17. The final written warning also included additional comments about Claimant's supervisory duties and professionalism. Ms. Seitz explained that Claimant "needed to take oversight of third party vendors more seriously, especially when they

are performing work on-site. This goes back to the need to step up in the supervisory role documented in previous write ups and the most recent annual review. Specifically, there has been little oversight of involvement with the flood that occurred on 9/13/15." Regarding professionalism Ms. Seitz specifically stated that "[w]hen dealing with residents, vendors, and team members this is an area where huge improvement is necessary. When residents are cc'ed on emails with the team, it is a necessity to be cognizant of the level of professionalism. When office members ask if something has been completed, the complete truth is expected so we are relaying accurate information to residents and vendors." Claimant refused to sign the final written warning.

18. On October 5, 2015 Ms. Seitz authored a second final written warning. She again detailed continuing issues with Claimant's work performance. She remarked that "[p]er previous employee counsellings, apartment turns should be done and move-in keys are expected to be in the office by 3pm the day before the move-in. This has been addressed numerous times and has failed to happen as recently as 9/30/2015." Ms. Seitz reiterated recommendations on improving Claimant's work performance and stated, "Get organized with work orders. Maint. Tech received a service request in his mailbox on 10/1/15 that was from 9/11/15, and a service request entered 9/25/15 is still incomplete without contact on 10/5/15." At the bottom of the final written warning, Claimant was again warned that the failure to adhere to the outlined performance improvement plan would result in termination.

19. On October 14, 2015 Ms. Seitz again sent Claimant an e-mail that outlined ongoing issues with his handling of work orders. Complaints included failing to lock the doors of units after servicing, placing incomplete work orders in the stack of completed work orders and failing to timely respond to requests. Ms. Seitz reiterated that "[w]e need to be able to depend on you and trust the information you give us, especially when we are relaying this information to residents. Please let me know that you received this and understand that these things cannot continue happening."

20. The record reveals that Employer repeatedly discussed and documented job performance concerns with Claimant. Nevertheless, because Claimant's job performance did not improve, he was terminated on October 31, 2015 for the failure to meet performance expectations.

21. On November 11, 2015 Claimant underwent a lumbar MRI. The MRI revealed a mild L5-S1 disc bulge with a left foraminal anular fissure.

22. Claimant did not work from October 31, 2015 until December 1, 2015. On December 1, 2015 Claimant began working at the Colorado History Museum performing maintenance duties. He still works at the Museum. His job duties are less strenuous than when he worked for Employer and are within his work restrictions. Claimant commented that he does not engage in any heavy lifting or intense labor.

23. Claimant explained that on December 15, 2015 he attempted to assist co-workers with snow removal because of a recent storm. He attempted to scoop

approximately two shovels of snow but quickly stopped because of increasing lower back pain.

24. On December 17, 2015 Claimant returned to Dr. Kawasaki for an examination. Dr. Kawasaki recounted that Claimant had undergone chiropractic treatment, acupuncture sessions and an MRI for his lower back condition. Claimant reported that his lower back symptoms were beginning to decrease until he had a flare-up while doing “quite a bit of snow removal.” After reviewing Claimant’s November 11, 2015 MRI and performing a physical examination, Dr. Kawasaki diagnosed Claimant with a lumbar strain and a foraminal disc protrusion with an annular fissure. Dr. Kawasaki anticipated a follow-up visit with Claimant in four weeks if his symptoms continued to improve. However, if Claimant’s radicular symptoms persisted he would consider epidural steroid injections.

25. Claimant continued chiropractic and physical therapy treatment for his lower back symptoms. Because there was no significant change in Claimant’s condition, he underwent an epidural steroid injection with Dr. Kawasaki on May 6, 2016. Claimant reported no extended benefits from the procedure.

26. On June 7, 2016 Claimant underwent an independent medical examination with Marc Steinmetz, M.D. Claimant reported that on August 31, 2015 he injured his lower back at work while helping a resident move a heavy box. He also explained that he had a flare-up of his lower back pain when shoveling snow while working at the Colorado History Museum. Dr. Steinmetz determined that Claimant likely sustained a minor lower back strain while working for Employer on August 31, 2015 that would have resolved within a few months. His symptoms improved until he suffered a permanent aggravation of his lower back condition while shoveling snow during his subsequent employment at the Colorado History Museum on December 15, 2015. Dr. Steinmetz thus determined that Claimant reached Maximum Medical Improvement (MMI) for his August 31, 2015 lower back injury by December 16, 2015. Claimant was thus not entitled to additional medical treatment for his August 31, 2015 industrial injury. The December 15, 2015 incident at the Colorado History Museum constituted a permanent aggravation of Claimant’s pre-existing lower back condition.

27. Dr. Steinmetz also testified at the hearing in this matter. He reiterated that Claimant suffered a lower back strain while working for Employer on August 31, 2015. Claimant then received reasonable and necessary conservative medical treatment and his symptoms improved. Claimant suffered no impairment and is not entitled to medical maintenance treatment as a result of the August 31, 2015 incident. However, Claimant suffered an efficient intervening cause and permanently aggravated his lower back condition while shoveling snow for the Colorado History Museum on December 15, 2015. Dr. Steinmetz specifically remarked that Claimant suffered a muscle strain and had been one “month pain free in the medical records from any leg complaints and was improving by mid-December, per Dr. Kawasaki’s note, until the shoveling and lifting at the museum.” He reasoned that conservative treatment had improved Claimant’s

condition and he did not have any leg complaints for approximately one month from mid-November until mid-December.

28. Claimant has demonstrated that it is more probably true than not that he suffered a compensable lower back injury during the course and scope of his employment with Employer on August 31, 2015. Claimant credibly testified that on August 31, 2015 one of his supervisors asked him to assist a resident in transporting boxes that had been delivered to the lobby area. As he attempted to lift a box that was falling from a dolly, he immediately experienced a pinch and pain in his lower back. He was diagnosed with a lumbar strain as a result of the incident. The medical records consistently support Claimant's testimony and reflect that he injured his lower back area while moving a box at work on August 31, 2015. Moreover, Dr. Steinmetz persuasively explained that Claimant likely suffered a lower back strain while working for Employer on August 31, 2015. Accordingly, the August 31, 2015 lifting incident aggravated, accelerated or combined with Claimant's pre-existing condition to produce a need for medical treatment.

29. Although Claimant suffered an industrial lower back injury on August 31, 2015 his condition resolved through conservative treatment by December 15, 2015. On December 15, 2015 Claimant's back symptoms flared-up when shoveling snow while working for the Colorado History Museum. Dr. Steinmetz persuasively determined that Claimant's symptoms from the August 31, 2015 incident improved until he suffered a permanent aggravation of his lower back condition while shoveling snow during his subsequent employment at the Colorado History Museum on December 15, 2015. He reasoned that conservative treatment had improved Claimant's condition and he did not have any leg complaints for approximately one month from mid-November until mid-December. Finally, when Claimant visited Dr. Kawasaki on December 17, 2015 he reported that his lower back symptoms were beginning to decrease until he had a flare-up while doing "quite a bit of snow removal." Accordingly, the snow shoveling flare-up constituted an efficient intervening cause that severed the causal connection with the August 31, 2015 incident.

30. Claimant has proven that it is more probably true than not that he received authorized, reasonable and necessary medical treatment for his August 31, 2015 industrial lower back injury. Claimant received conservative care through Concentra that included chiropractic treatment, acupuncture sessions, physical therapy, injections and diagnostic testing. Dr. Steinmetz persuasively commented that Claimant received reasonable and necessary conservative medical treatment and his symptoms improved. Claimant's treatment was designed to cure or relieve the effects of his August 31, 2015 industrial lower back strain. However, because Claimant's December 15, 2015 injury at the Colorado History Museum constituted an efficient intervening cause, he is not entitled to additional medical treatment for his August 31, 2015 industrial injury. Accordingly, Claimant's entitlement to medical benefits ceased on December 16, 2015.

31. Claimant asserts that he is entitled to receive TTD benefits for the period October 31, 2015 through November 30, 2015 and TPD benefits for the period December 1, 2015 until terminated by statute. However, Respondents have established

that it is more probably true than not that Claimant is precluded from receiving indemnity benefits because he was responsible for his termination from employment under the termination statutes. The evidence reveals that Claimant began having job performance issues in October 2014. Employer unsuccessfully engaged in ongoing counseling efforts in an attempt to correct Claimant's employment deficiencies. The record reveals that Employer repeatedly discussed and documented job performance concerns with Claimant. Nevertheless, because Claimant's job performance did not improve, he was terminated on October 31, 2015 for the failure to meet performance expectations. Ms. Seitz used Employer's progressive disciplinary system to apprise Claimant of job performance concerns. She extensively detailed deficiencies in Claimant's job knowledge, performance and initiative. Ms. Seitz specifically expressed concerns about Claimant's repeated failures to leave notes for residents about maintenance tasks, incomplete work orders and documentation, lack of available keys for new residents, leadership deficiencies in his supervisory position and lack of professionalism. Claimant thus precipitated his employment termination by a volitional act that he would reasonably expect to cause the loss of employment. Accordingly, under the totality of the circumstances Claimant committed a volitional act or exercised some control over his termination from employment. He is thus not entitled to receive indemnity benefits.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. The existence of a weakened condition is insufficient to establish causation if the new injury is the result of an efficient intervening cause. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187, 1188 (Colo. App. 2002); *In Re Lang,* W.C. No. 4-450-747 (ICAP, May 16, 2005). No liability exists when a later accident occurs as the direct result of an intervening cause. *Vargas v. United Parcel Service*, W.C. No. 4-325-149 (ICAP, Aug. 29, 2002). However, the intervening event does not sever the causal connection between the injury and the claimant's condition unless the disability is triggered by the intervening event. *See Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970); *Vargas v. United Parcel Service*, W.C. No. 4-325-149 (ICAP, Aug. 29, 2002). If the need for medical treatment occurs as the result of an independent intervening cause, then the subsequent treatment is not compensable. *Owens,* 49 P.3d at 1188. The new injury is not compensable “merely because the later accident might or would not have happened if the employee had retained all his former

powers." *In Re Chavez,* W.C. No. 4-499-370 (ICAP, Jan. 23, 2004). The determination of whether an injury resulted from an efficient intervening cause is a question of fact for the ALJ. *Id.*

8. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable lower back injury during the course and scope of his employment with Employer on August 31, 2015. Claimant credibly testified that on August 31, 2015 one of his supervisors asked him to assist a resident in transporting boxes that had been delivered to the lobby area. As he attempted to lift a box that was falling from a dolly, he immediately experienced a pinch and pain in his lower back. He was diagnosed with a lumbar strain as a result of the incident. The medical records consistently support Claimant's testimony and reflect that he injured his lower back area while moving a box at work on August 31, 2015. Moreover, Dr. Steinmetz persuasively explained that Claimant likely suffered a lower back strain while working for Employer on August 31, 2015. Accordingly, the August 31, 2015 lifting incident aggravated, accelerated or combined with Claimant's pre-existing condition to produce a need for medical treatment.

9. As found, although Claimant suffered an industrial lower back injury on August 31, 2015 his condition resolved through conservative treatment by December 15, 2015. On December 15, 2015 Claimant's back symptoms flared-up when shoveling snow while working for the Colorado History Museum. Dr. Steinmetz persuasively determined that Claimant's symptoms from the August 31, 2015 incident improved until he suffered a permanent aggravation of his lower back condition while shoveling snow during his subsequent employment at the Colorado History Museum on December 15, 2015. He reasoned that conservative treatment had improved Claimant's condition and he did not have any leg complaints for approximately one month from mid-November until mid-December. Finally, when Claimant visited Dr. Kawasaki on December 17, 2015 he reported that his lower back symptoms were beginning to decrease until he had a flare-up while doing "quite a bit of snow removal." Accordingly, the snow shoveling flare-up constituted an efficient intervening cause that severed the causal connection with the August 31, 2015 incident.

Medical Benefits

10. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

11. As found, Claimant has proven by a preponderance of the evidence that he received authorized, reasonable and necessary medical treatment for his August 31, 2015 industrial lower back injury. Claimant received conservative care through Concentra that included chiropractic treatment, acupuncture sessions, physical therapy, injections and diagnostic testing. Dr. Steinmetz persuasively commented that Claimant received reasonable and necessary conservative medical treatment and his symptoms improved. Claimant's treatment was designed to cure or relieve the effects of his August 31, 2015 industrial lower back strain. However, because Claimant's December 15, 2015 injury at the Colorado History Museum constituted an efficient intervening cause, he is not entitled to additional medical treatment for his August 31, 2015 industrial injury. Accordingly, Claimant's entitlement to medical benefits ceased on December 16, 2015.

TTD and TPD Benefits/Responsible for Termination

12. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by the claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability.

13. Respondents assert that Claimant is precluded from receiving temporary disability benefits because he was responsible for his termination from employment pursuant to §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. Under the termination statutes a claimant who is responsible for his termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *In re of George,* W.C. No. 4-690-400 (ICAP July 20, 2006). The termination statutes provide that, in cases where an employee is responsible for his termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAP Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to his termination if the effects of the injury prevent him from performing her assigned duties and cause the termination. *In re of Eskridge,* W.C. No. 4-651-260 (ICAP Apr. 21, 2006). Therefore, to establish that Claimant was responsible for his termination, Respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over his termination

under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus “responsible” if he precipitated the employment termination by a volitional act that he would reasonably expect to cause the loss of employment. *Patchek v. Dep’t of Public Safety,* W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

14. As found, Respondents have established by a preponderance of the evidence that Claimant is precluded from receiving indemnity benefits because he was responsible for his termination from employment under the termination statutes. The evidence reveals that Claimant began having job performance issues in October 2014. Employer unsuccessfully engaged in ongoing counseling efforts in an attempt to correct Claimant’s employment deficiencies. The record reveals that Employer repeatedly discussed and documented job performance concerns with Claimant. Nevertheless, because Claimant’s job performance did not improve, he was terminated on October 31, 2015 for the failure to meet performance expectations. Ms. Seitz used Employer’s progressive disciplinary system to apprise Claimant of job performance concerns. She extensively detailed deficiencies in Claimant’s job knowledge, performance and initiative. Ms. Seitz specifically expressed concerns about Claimant’s repeated failures to leave notes for residents about maintenance tasks, incomplete work orders and documentation, lack of available keys for new residents, leadership deficiencies in his supervisory position and lack of professionalism. Claimant thus precipitated his employment termination by a volitional act that he would reasonably expect to cause the loss of employment. Accordingly, under the totality of the circumstances Claimant committed a volitional act or exercised some control over his termination from employment. He is thus not entitled to receive indemnity benefits.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable lower back injury during the course and scope of her employment with Employer on August 31, 2015.

2. Claimant received reasonable and necessary medical benefits through December 15, 2015 but is not entitled to any additional medical benefits.

3. Claimant earned an AWW of $1098.00.

4. Claimant’s request for TTD and TPD benefits is denied and dismissed because he was responsible for his termination from employment with Employer on October 31, 2015.

5. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that Dr. David Yamamoto was an authorized treating physician.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant suffered an occupational injury to his shoulder and low back from repetitive climbing of very tall ladders at work.

2. Employer sent Claimant to Workwell Occupational Medicine on December 26, 2014.

3. On February 23, 2015, Workwell decided Claimant's low back symptoms were "not likely work comp. related. He will follow up with PCP for this matter." Dr. Jaramillo at the Salud Clinic was Claimant's PCP. Based on Workwell's referral to his PCP for his low back condition, Claimant went to Salud and Salud then referred Claimant to Boulder Neurosurgery for low back care. Claimant used his private insurance to be seen by Dr. Kara Beasley at Boulder Neurosurgery on March 3, 2015. Claimant treated at Boulder Neurosurgery until January 1, 2016. Dr. Beasley did not personally see Claimant after the first appointment. Claimant's other appointments at Boulder Neurosurgery were with a physician's assistant.

4. Claimant continued treatment at Workwell for his shoulder injury until March 11, 2015. On that date, Dr. Fitzgibbons at Workwell requested authorization for shoulder surgery. Respondents denied the entire claim.

5. Claimant continued to treat for his low back condition with Boulder Neurosurgery.

6. Claimant and his wife testified that after Workwell discharged Claimant for nonmedical reasons, their attorney gave them two doctors' names to consider for Claimant's shoulder treatment. Claimant chose Dr. Yamamoto because his office accepted their insurance. Claimant saw Dr. Yamamoto on March 30, 2015. Dr. Yamamoto referred Claimant to Dr. Eric McCarty for shoulder surgery. Dr. McCarty performed the previously recommended surgery on Claimant's right shoulder on March 30, 2015. The shoulder surgery was paid for by Claimant's private health insurance. Dr. Yamamoto was Claimant's primary treating doctor for his shoulder condition from March 30, 2015 until January 5, 2016.

7. On August 12, 2015, ALJ Margot Jones presided over a hearing on compensability, identity of the authorized provider, and temporary total disability benefits.

8. In her Order issued December 9, 2015, ALJ Jones ordered Respondents liable for workers' compensation benefits for the December 26, 2014 occupational disease for Claimant's right shoulder and low back.

9. ALJ Jones found that Dr. Jaramillo/Salud Clinic was the physician Claimant selected in December 2014, when Claimant reported a work injury because Employer did not comply with C.R.S. § 8-43-404(5)a)(I)A). ALJ Jones concluded Claimant was not entitled to select a second physician, Dr. Yamamoto, as his treating physician.

10. Claimant and his wife credibly testified that Salud Clinic does not accept Workers Compensation cases. Claimant and his wife also testified they knew Dr. Jaramillo was on an extended medical leave and unable to treat Claimant. Consequently, upon receipt of the Compensability Order, Claimant, through his wife who worked at Salud Clinic, asked for a referral to Dr. Yamamoto to obtain workers compensation medical care. Claimant's wife testified that she and Claimant wanted Claimant's ongoing treatment to be handled by Dr. Yamamoto for reasons of continuity of care and because they were happy with Dr. Yamamoto.

11. Claimant's wife testified that after receiving the note from the clinic's director, Linda Deeming, that the clinic did not treat workers' compensation claims, she then spoke with Dr. Hand, a physician at the Salud Clinic, about obtaining a referral for Claimant to Dr. Yamamoto because Claimant needed medical treatment, he was pleased with Dr. Yamamoto's treatment, and he wanted to continue under his care..

12. On December 16, 2015, Salud Clinic referred Claimant to Dr. Yamamoto. Dr. Hand, made the referral, although it was stamped with Dr. Jaramillo's signature. The ALJ reasonably infers that Dr. Hand referred Claimant to Dr. Yamamoto so Claimant could obtain appropriate medical treatment under workers' compensation and to maintain the continuity of Claimant's care. The referral was made in Claimant's best interest and for legitimate medical reasons.

13. On December 22, 2015, Respondents filed a Petition to Review ALJ Jones' Order.

14. Also on December 22, 2015, Respondents' counsel faxed Claimant's counsel a letter rejecting the Salud Clinic referral to Dr. Yamamoto. Respondents noted that Dr. Jaramillo had refused to treat Claimant due to non-medical reasons and re-designated Dr. Cazden at Workwell as Claimant's ATP.

15. Claimant and his wife both testified that Claimant was not happy with his prior treatment at Workwell because Workwell had discharged him when he still needed treatment, and Claimant did not want to return to Workwell for additional treatment.

16. On January 28, 2016, Claimant returned to Boulder Neurosurgical for a follow up appointment regarding his low back condition. Claimant's wife testified that Claimant wanted another referral to Dr. Yamamoto to manage his care in the event the prior referral from Salud Clinic was deemed to be invalid for the reasons cited in Respondent's December 22, 2015 letter. Claimant's wife testified that she explained to the P.A. at Boulder Neurosurgical that Dr. Yamamoto had been managing Claimant's care related to his shoulder since March 2015, and that they wished to continue using him for reasons of continuity of care. The Boulder Neurosurgical P.A. made the requested referral which was automatically stamped with Dr. Beasley's signature as the treating medical doctor. Respondents maintained their position that Dr. Yamamoto was not an ATP.

17. On March 15, 2016, the Industrial Claims Appeals Office issued its final Order. ICAO overturned the ALJ's designation of Salud Clinic as Claimant's ATP and held that Claimant had selected Workwell as his ATP as of the injury date. It further held that when Workwell discharged Claimant for non-medical reasons on March 11, 2015 that the statutorily required certified letter advising the Respondent that Workwell was refusing to provide medical treatment for non-medical reasons had not been sent, and since the certified mail letter had not been sent that Claimant's attempt to nominate Dr. Yamamoto in March 2015 as an authorized treating physician was "to no avail."

18. Respondents deposed Dr. Beasley on June 13, 2016. When asked whether she referred Claimant to Dr. Yamamoto, Dr. Beasley testified that she "had no idea who Dr. Yamamoto is." Dr. Beasley explained that she makes referrals for treatment, not a specific doctor. Dr. Beasley testified that in the context of workers' compensation, her referrals are for treatment and claimants are instructed to contact the workers' compensation carrier to provide a physician for the procedure.

19. Claimant's wife testified that they did not want to use Claimant's private insurance to pay for medical care after the favorable Compensability Order. Claimant tried to return to Workwell under protest in early March 2016, but Workwell refused to treat him because his case was still under denial. On March 25, 2016, after the ICAO Order, Workwell accepted Claimant back as a patient.

20. When Claimant returned to Workwell on March 25, 2016, Workwell referred Claimant back to Boulder Neurosurgery for low back care, and referred Claimant back to Dr. Eric McCarty for shoulder care.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. C.R.S. § 8-40-102(1). A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-42-101. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. C.R.S. § 8-43-20. A Workers' Compensation case is decided on its merits. C.R.S. § 8-43-201.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936).

It is in the ALJ’s sole prerogative to assess the credibility of the witnesses and the probative value of the evidence to determine whether the Claimant has met his burden of proof. *Dover Elevator Co. v. Industrial Claim Appeals Office*, 961 P.2d 1141 (Colo. App. 1998). It is within an ALJ’s purview to assess the relative weight and credibility of various opinions. See, *Kraft v. Medlogic Global Corp*. *et al*., W.C. No. 4-412-711 (ICAO, Mar. 15, 2001) (citing *Rockwell Internat’l v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990)). Additionally, if an individual expert’s opinion contains contradictions or is subject to multiple interpretations, the ALJ may resolve the conflict by crediting only a portion of the opinion, or discrediting the opinion in its entirety. *See Kraft*, W.C. No. 4-412-711; *Johnson v. Indus. Claim Appeals Office*, 973 P.2d 624 (Colo. App. 1997).

An ALJ is required to make specific findings only as to the evidence which is deemed persuasive and determinative. An ALJ is not obligated to address every issue raised or evidence which is unpersuasive. *See Riddle v. Ampex Corp.*, 839 P.2d 489 (Colo. App. 1992) (citing *Roe v. Industrial Commission*, 734 P.2d 138 (Colo. App. 1986); *Crandall v. Watson-Wilson Transportation System, Inc.*, 467 P.2d 48 (Colo. 1970)). Furthermore, an ALJ may resolve conflicts in the evidence based upon her credibility determinations. *See*, *Brodbeck v. Too Busy Painting and Pinnacol Assurance*, W.C. No. 4-163-762 (ICAO, Apr. 16, 2002) (citing *Riddle*, 839 P.2d at 489).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

ISSUE PRECLUSION

Respondents argue that Claimant's attempt to have this court determine the validity of referrals to Dr. Yamamoto is barred by the doctrine of issue preclusion. The ALJ is not persuaded.

The law of the case doctrine is a "rule of practice, based upon sound policy that when an issue is once litigated and decided, that should be the end of the matter." *Verzuh v. Rouse*, 660 P.2d 1301 (Colo. App. 1982)(citing *United States v. United States Smelting, Refining and Minding Co*., 339 U.S. 186(1950)). Additionally, the issue preclusion doctrine "holds that the final decision of a court on an issue actually litigated and determined is conclusive of that issue in any subsequent suit." *Umberfield v. School District No. 11*, 522 P.2d 730 (1974).

Here, the issue previously litigated and decided was whether Claimant had the right to choose Dr. Yamamoto in March 2015 after Respondent's denied Claimant's claim. That is not the same as the issues now before the court: (1) whether Salud Clinic's December 2015 referral to Dr. Yamamoto was valid, and, alternatively (2) whether Boulder Neurosurgery's January 2016 referral to Dr. Yamamoto was valid. The ALJ finds and concludes that these issues have not yet been considered and are appropriately before this ALJ.

VALIDITY OF SALUD CLINIC'S DECEMBER 2015 REFERRAL TO DR. YAMAMOTO

Respondent-insurers retain the right to authorize an additional physician to provide care upon their receipt of knowledge that the previously designated doctor now refuses to provide necessary care for nonmedical reasons. *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). Specifically, C.R.S. section 8-43-404(10) provides that an employer may designate a new physician within 15 calendar days following receipt of a written notice from the injured employee or his legal representative "than an authorized physician refused to provide medical treatment to the injured employee…for nonmedical reasons…"

The questions of whether a referral was made as part of the normal progression of authorized treatment, and the scope of the referral, are questions of fact for determination by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App.2001).

Respondents argue that based on the ICAO decision, that the Salud Clinic and Dr. Jaramillo were not ATPs and therefore could not refer Claimant to Dr. Yamamoto. The ALJ disagrees. ALJ Jones' December 9, 2015 order identified the Salud Clinic as Claimant's ATP. From the time the order issued until the ICAO decision was issued on March 25, 2016, the parties were bound by the ALJ's order. And during that period the Salud Clinic was the ATP. As such, the Salud Clinic had the capacity during that time period to make referrals.

Respondent next argues that Salud Clinic's referral to Dr. Yamamoto was invalid because it "was not the result of the independent medical judgment." Again, the ALJ disagrees.

The "independent medical judgment" standard upon which Respondents rely was articulated in *Bestway Concrete v. Indus. Claim Appeals Office*, 984 P.2d 680, 684 (Colo. App. 1999). However, in *Sackett v. ICAO,* 15CA0786, a division of the court of appeals expressly disapproved that standard, stating: "The Panel's narrow 'independent medical judgment' standard does not represent a reasonable extrapolation of *Bestway Concrete's* analysis. The division stated the appropriate standard as: "In our view, independent judgment may take many forms, so long as the physician determines, without undue outside influence, that a referral is in the injured worker's best interest."

Here, the Salud Clinic's referral to Dr. Yamamoto was made for the purposes of providing Claimant with a physician who would be able and willing to treat his injuries, maintaining Claimant's continuity of care, and respecting Claimant's preference in who provided his care. Salud Clinic did not simply acquiesce in Claimant's request for a referral. Rather, based on Claimant's and Claimant's wife's testimony, the clinic understood from the ALJ's order that Claimant had sustained compensable injuries, treatment for which fell under the workers' compensation system. Thus, Claimant was in need of medical treatment which they were not able to provide. The ALJ finds, based on the totality of the evidence, that these factors were in Claimant's best interest and are sufficient to support the validity of the referral. Further, the referral was made as part of the normal progression of then-authorized treatment because the ALJ's order identified Salud Clinic as the ATP.

The fact that Claimant requested the referral to Dr. Yamamoto does not require a different result. A claimant's request to be referred to a particular provider did not defeat the validity of such a referral in *Sackett*; *City of Durango v. Dunagan*, 939 P.2d 496, 500 (Colo. App. 1997); or *Greager v. Indus. Comm'n*, 701 P.2d 168, 170 (Colo. App. 1985).

Based on this conclusion, the ALJ need not address the validity of other referrals.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. The referral made by Dr. Hand to Dr. Yamamoto was valid, and from the Date of ALJ Jone's order, to the date of the ICAO decision, Dr. Yamamoto was an authorized treating physician.

2. Issues not expressly decided herein are reserved to the parties for future determination.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. WC 4-975-918-02

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that Dr. David Yamamoto was an authorized treating physician.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant suffered an occupational injury to his shoulder and low back from repetitive climbing of very tall ladders at work.

2. Employer sent Claimant to Workwell Occupational Medicine on December 26, 2014.

3. On February 23, 2015, Workwell decided Claimant's low back symptoms were "not likely work comp. related. He will follow up with PCP for this matter." Dr. Jaramillo at the Salud Clinic was Claimant's PCP. Based on Workwell's referral to his PCP for his low back condition, Claimant went to Salud and Salud then referred Claimant to Boulder Neurosurgery for low back care. Claimant used his private insurance to be seen by Dr. Kara Beasley at Boulder Neurosurgery on March 3, 2015. Claimant treated at Boulder Neurosurgery until January 1, 2016. Dr. Beasley did not personally see Claimant after the first appointment. Claimant's other appointments at Boulder Neurosurgery were with a physician's assistant.

4. Claimant continued treatment at Workwell for his shoulder injury until March 11, 2015. On that date, Dr. Fitzgibbons at Workwell requested authorization for shoulder surgery. Respondents denied the entire claim.

5. Claimant continued to treat for his low back condition with Boulder Neurosurgery.

6. Claimant and his wife testified that after Workwell discharged Claimant for nonmedical reasons, their attorney gave them two doctors' names to consider for Claimant's shoulder treatment. Claimant chose Dr. Yamamoto because his office accepted their insurance. Claimant saw Dr. Yamamoto on March 30, 2015. Dr. Yamamoto referred Claimant to Dr. Eric McCarty for shoulder surgery. Dr. McCarty performed the previously recommended surgery on Claimant's right shoulder on March 30, 2015. The shoulder surgery was paid for by Claimant's private health insurance. Dr. Yamamoto was Claimant's primary treating doctor for his shoulder condition from March 30, 2015 until January 5, 2016.

7. On August 12, 2015, ALJ Margot Jones presided over a hearing on compensability, identity of the authorized provider, and temporary total disability benefits.

8. In her Order issued December 9, 2015, ALJ Jones ordered Respondents liable for workers' compensation benefits for the December 26, 2014 occupational disease for Claimant's right shoulder and low back.

9. ALJ Jones found that Dr. Jaramillo/Salud Clinic was the physician Claimant selected in December 2014, when Claimant reported a work injury because Employer did not comply with C.R.S. § 8-43-404(5)a)(I)A). ALJ Jones concluded Claimant was not entitled to select a second physician, Dr. Yamamoto, as his treating physician.

10. Claimant and his wife credibly testified that Salud Clinic does not accept Workers Compensation cases. Claimant and his wife also testified they knew Dr. Jaramillo was on an extended medical leave and unable to treat Claimant. Consequently, upon receipt of the Compensability Order, Claimant, through his wife who worked at Salud Clinic, asked for a referral to Dr. Yamamoto to obtain workers compensation medical care. Claimant's wife testified that she and Claimant wanted Claimant's ongoing treatment to be handled by Dr. Yamamoto for reasons of continuity of care and because they were happy with Dr. Yamamoto.

11. Claimant's wife testified that after receiving the note from the clinic's director, Linda Deeming, that the clinic did not treat workers' compensation claims, she then spoke with Dr. Hand, a physician at the Salud Clinic, about obtaining a referral for Claimant to Dr. Yamamoto because Claimant needed medical treatment, he was pleased with Dr. Yamamoto's treatment, and he wanted to continue under his care..

12. On December 16, 2015, Salud Clinic referred Claimant to Dr. Yamamoto. Dr. Hand, made the referral, although it was stamped with Dr. Jaramillo's signature. The ALJ reasonably infers that Dr. Hand referred Claimant to Dr. Yamamoto so Claimant could obtain appropriate medical treatment under workers' compensation and to maintain the continuity of Claimant's care. The referral was made in Claimant's best interest and for legitimate medical reasons.

13. On December 22, 2015, Respondents filed a Petition to Review ALJ Jones' Order.

14. Also on December 22, 2015, Respondents' counsel faxed Claimant's counsel a letter rejecting the Salud Clinic referral to Dr. Yamamoto. Respondents noted that Dr. Jaramillo had refused to treat Claimant due to non-medical reasons and re-designated Dr. Cazden at Workwell as Claimant's ATP.

15. Claimant and his wife both testified that Claimant was not happy with his prior treatment at Workwell because Workwell had discharged him when he still needed treatment, and Claimant did not want to return to Workwell for additional treatment.

16. On January 28, 2016, Claimant returned to Boulder Neurosurgical for a follow up appointment regarding his low back condition. Claimant's wife testified that Claimant wanted another referral to Dr. Yamamoto to manage his care in the event the prior referral from Salud Clinic was deemed to be invalid for the reasons cited in Respondent's December 22, 2015 letter. Claimant's wife testified that she explained to the P.A. at Boulder Neurosurgical that Dr. Yamamoto had been managing Claimant's care related to his shoulder since March 2015, and that they wished to continue using him for reasons of continuity of care. The Boulder Neurosurgical P.A. made the requested referral which was automatically stamped with Dr. Beasley's signature as the treating medical doctor. Respondents maintained their position that Dr. Yamamoto was not an ATP.

17. On March 15, 2016, the Industrial Claims Appeals Office issued its final Order. ICAO overturned the ALJ's designation of Salud Clinic as Claimant's ATP and held that Claimant had selected Workwell as his ATP as of the injury date. It further held that when Workwell discharged Claimant for non-medical reasons on March 11, 2015 that the statutorily required certified letter advising the Respondent that Workwell was refusing to provide medical treatment for non-medical reasons had not been sent, and since the certified mail letter had not been sent that Claimant's attempt to nominate Dr. Yamamoto in March 2015 as an authorized treating physician was "to no avail."

18. Respondents deposed Dr. Beasley on June 13, 2016. When asked whether she referred Claimant to Dr. Yamamoto, Dr. Beasley testified that she "had no idea who Dr. Yamamoto is." Dr. Beasley explained that she makes referrals for treatment, not a specific doctor. Dr. Beasley testified that in the context of workers' compensation, her referrals are for treatment and claimants are instructed to contact the workers' compensation carrier to provide a physician for the procedure.

19. Claimant's wife testified that they did not want to use Claimant's private insurance to pay for medical care after the favorable Compensability Order. Claimant tried to return to Workwell under protest in early March 2016, but Workwell refused to treat him because his case was still under denial. On March 25, 2016, after the ICAO Order, Workwell accepted Claimant back as a patient.

20. When Claimant returned to Workwell on March 25, 2016, Workwell referred Claimant back to Boulder Neurosurgery for low back care, and referred Claimant back to Dr. Eric McCarty for shoulder care.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. C.R.S. § 8-40-102(1). A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-42-101. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. C.R.S. § 8-43-20. A Workers' Compensation case is decided on its merits. C.R.S. § 8-43-201.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936).

It is in the ALJ’s sole prerogative to assess the credibility of the witnesses and the probative value of the evidence to determine whether the Claimant has met his burden of proof. *Dover Elevator Co. v. Industrial Claim Appeals Office*, 961 P.2d 1141 (Colo. App. 1998). It is within an ALJ’s purview to assess the relative weight and credibility of various opinions. See, *Kraft v. Medlogic Global Corp*. *et al*., W.C. No. 4-412-711 (ICAO, Mar. 15, 2001) (citing *Rockwell Internat’l v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990)). Additionally, if an individual expert’s opinion contains contradictions or is subject to multiple interpretations, the ALJ may resolve the conflict by crediting only a portion of the opinion, or discrediting the opinion in its entirety. *See Kraft*, W.C. No. 4-412-711; *Johnson v. Indus. Claim Appeals Office*, 973 P.2d 624 (Colo. App. 1997).

An ALJ is required to make specific findings only as to the evidence which is deemed persuasive and determinative. An ALJ is not obligated to address every issue raised or evidence which is unpersuasive. *See Riddle v. Ampex Corp.*, 839 P.2d 489 (Colo. App. 1992) (citing *Roe v. Industrial Commission*, 734 P.2d 138 (Colo. App. 1986); *Crandall v. Watson-Wilson Transportation System, Inc.*, 467 P.2d 48 (Colo. 1970)). Furthermore, an ALJ may resolve conflicts in the evidence based upon her credibility determinations. *See*, *Brodbeck v. Too Busy Painting and Pinnacol Assurance*, W.C. No. 4-163-762 (ICAO, Apr. 16, 2002) (citing *Riddle*, 839 P.2d at 489).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

ISSUE PRECLUSION

Respondents argue that Claimant's attempt to have this court determine the validity of referrals to Dr. Yamamoto is barred by the doctrine of issue preclusion. The ALJ is not persuaded.

The law of the case doctrine is a "rule of practice, based upon sound policy that when an issue is once litigated and decided, that should be the end of the matter." *Verzuh v. Rouse*, 660 P.2d 1301 (Colo. App. 1982)(citing *United States v. United States Smelting, Refining and Minding Co*., 339 U.S. 186(1950)). Additionally, the issue preclusion doctrine "holds that the final decision of a court on an issue actually litigated and determined is conclusive of that issue in any subsequent suit." *Umberfield v. School District No. 11*, 522 P.2d 730 (1974).

Here, the issue previously litigated and decided was whether Claimant had the right to choose Dr. Yamamoto in March 2015 after Respondent's denied Claimant's claim. That is not the same as the issues now before the court: (1) whether Salud Clinic's December 2015 referral to Dr. Yamamoto was valid, and, alternatively (2) whether Boulder Neurosurgery's January 2016 referral to Dr. Yamamoto was valid. The ALJ finds and concludes that these issues have not yet been considered and are appropriately before this ALJ.

VALIDITY OF SALUD CLINIC'S DECEMBER 2015 REFERRAL TO DR. YAMAMOTO

Respondent-insurers retain the right to authorize an additional physician to provide care upon their receipt of knowledge that the previously designated doctor now refuses to provide necessary care for nonmedical reasons. *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). Specifically, C.R.S. section 8-43-404(10) provides that an employer may designate a new physician within 15 calendar days following receipt of a written notice from the injured employee or his legal representative "than an authorized physician refused to provide medical treatment to the injured employee…for nonmedical reasons…"

The questions of whether a referral was made as part of the normal progression of authorized treatment, and the scope of the referral, are questions of fact for determination by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App.2001).

Respondents argue that based on the ICAO decision, that the Salud Clinic and Dr. Jaramillo were not ATPs and therefore could not refer Claimant to Dr. Yamamoto. The ALJ disagrees. ALJ Jones' December 9, 2015 order identified the Salud Clinic as Claimant's ATP. From the time the order issued until the ICAO decision was issued on March 25, 2016, the parties were bound by the ALJ's order. And during that period the Salud Clinic was the ATP. As such, the Salud Clinic had the capacity during that time period to make referrals.

Respondent next argues that Salud Clinic's referral to Dr. Yamamoto was invalid because it "was not the result of the independent medical judgment." Again, the ALJ disagrees.

The "independent medical judgment" standard upon which Respondents rely was articulated in *Bestway Concrete v. Indus. Claim Appeals Office*, 984 P.2d 680, 684 (Colo. App. 1999). However, in *Sackett v. ICAO,* 15CA0786, a division of the court of appeals expressly disapproved that standard, stating: "The Panel's narrow 'independent medical judgment' standard does not represent a reasonable extrapolation of *Bestway Concrete's* analysis. The division stated the appropriate standard as: "In our view, independent judgment may take many forms, so long as the physician determines, without undue outside influence, that a referral is in the injured worker's best interest."

Here, the Salud Clinic's referral to Dr. Yamamoto was made for the purposes of providing Claimant with a physician who would be able and willing to treat his injuries, maintaining Claimant's continuity of care, and respecting Claimant's preference in who provided his care. Salud Clinic did not simply acquiesce in Claimant's request for a referral. Rather, based on Claimant's and Claimant's wife's testimony, the clinic understood from the ALJ's order that Claimant had sustained compensable injuries, treatment for which fell under the workers' compensation system. Thus, Claimant was in need of medical treatment which they were not able to provide. The ALJ finds, based on the totality of the evidence, that these factors were in Claimant's best interest and are sufficient to support the validity of the referral. Further, the referral was made as part of the normal progression of then-authorized treatment because the ALJ's order identified Salud Clinic as the ATP.

The fact that Claimant requested the referral to Dr. Yamamoto does not require a different result. A claimant's request to be referred to a particular provider did not defeat the validity of such a referral in *Sackett*; *City of Durango v. Dunagan*, 939 P.2d 496, 500 (Colo. App. 1997); or *Greager v. Indus. Comm'n*, 701 P.2d 168, 170 (Colo. App. 1985).

Based on this conclusion, the ALJ need not address the validity of other referrals.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. The referral made by Dr. Hand to Dr. Yamamoto was valid, and from the Date of ALJ Jone’s order, to the date of the ICAO decision, Dr. Yamamoto was an authorized treating physician.

2. Issues not expressly decided herein are reserved to the parties for future determination.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 11, 2016

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable injury to her right knee on July 23, 2013.

2. Whether Claimant has established by a preponderance of the evidence that she is entitled to medical benefits to treat a July 23, 2013 right knee injury including benefits provided by Dr. Irish and the referrals made by Dr. Irish.

3. Whether Claimant has established that she is entitled to an award for disfigurement of her right knee.

4. Whether Claimant has overcome the opinion of the Division Independent Medical Examination (DIME) of Mindy Gehrs, M.D. regarding the date of maximum medical improvement (MMI) of her left ankle injury.

5. Whether Claimant has overcome the opinion of DIME Dr. Gehrs regarding permanent partial disability for her left ankle injury.

6. Whether Claimant has established that she is entitled to an award for disfigurement of her left ankle.

STIPULATIONS

1. An overpayment offset of $2,224.26 exists.

FINDINGS OF FACT

1. Claimant worked for Employer beginning in January of 2012. On February 7, 2012 Claimant was entering work and was in the employee parking lot when she slipped on ice and twisted her left ankle.

2. The February 7, 2012 injury was a compensable injury and Claimant was diagnosed with an ankle sprain. Claimant underwent treatment for her left ankle that included two surgeries, one on December 7, 2012 and one on August 14, 2013.

3. As a result of her two surgeries, Claimant has visible disfigurement to her left ankle. The disfigurement includes a scar measuring approximately 3.5 inches on the back of her left ankle that is red, white, raised, and discolored from her normal skin tone.

4. While treating her left ankle, Claimant at times had both a cast and a boot on her left ankle.

5. On June 21, 2013 Claimant attended physical therapy for her left ankle. Claimant reported that her right knee and right hip pain was increasing and that she believed it was from compensating for her left ankle. *See* Exhibit G.

6. On July 5, 2013 Claimant attended physical therapy for her left ankle. Claimant again reported right knee pain. *See* Exhibit G.

7. On July 10, 2013 Claimant was evaluated by Margaret Irish, D.O. who was her authorized treating physician for her left ankle injury. Claimant reported to Dr. Irish right knee pain at the medial collateral ligament area and Claimant reported that her right knee was hurting because she was walking differently. Claimant also reported mild low back pain for the same reason. Dr. Irish noted on examination that Claimant had tenderness to palpation at the medial collateral ligament. *See* Exhibit H.

8. On July 15, Claimant attended physical therapy for her left ankle. Claimant reported right knee pain that hurt more while she was at work. Claimant reported right knee swelling that she believed was from compensating for her left ankle. *See* Exhibit G.

9. On July 16, 2013 Claimant was evaluated by Dr. Irish. Dr. Irish noted tenderness to palpation over the medial collateral ligament. *See* Exhibit H.

10. On July 18, Claimant attended physical therapy for her left ankle. Claimant reported that her right knee was hurting more each day. The therapist noted that Claimant had noticeable antalgic gait because of the right knee pain and that the right knee pain was interfering with the correct execution of her program. *See* Exhibit G.

11. On July 22, 2013, Claimant attended physical therapy for her left ankle. Claimant reported that her ankle was doing a little bit better but that her right knee was hurting more than her ankle. *See* Exhibit G.

12. On July 23, 2013 Claimant alleges that she was working for Employer in the kitchen when she slipped on water and twisted her right knee. Claimant alleges that she had an immediate increase in pain in her right knee. Claimant was scheduled to see the doctor the next day for her left ankle injury.

13. On July 24, 2013 Claimant was evaluated by Dr. Irish. Claimant reported slipping on water the night prior and twisting her right knee and Claimant reported pain in the medial aspect of the right knee. Claimant reported that she had mentioned her right knee pain to the orthopedic surgeon when they met previously and that he considered getting an MRI of the right knee. Dr. Irish noted on examination that the right knee had no obvious swelling. Dr. Irish continued to note tenderness to palpation

over the medial collateral ligament as well as the anterior medial joint line but noted functional active range of motion and strength throughout the knee with good stability. Dr. Irish noted that Claimant had an aggravation of her right knee pain due to the slip on water on the floor and that she should discuss the right knee pain with orthopedist Dr. Jackson. *See* Exhibit H.

14. On July 29, 2013 Claimant attended physical therapy for her left ankle. Claimant reported that her right knee and left ankle hurt more since she had been off work. Claimant did not report an injury to her right knee and reported that she was not sure why it was hurting more. *See* Exhibit G.

15. On July 30, 2013 Claimant was evaluated by orthopedic doctor Wesley Jackson, M.D. Claimant reported she was getting a little bit of compensatory right anterior knee pain that was not associated with an injury. Dr. Jackson noted that Claimant described her knee pain pointing to the anterior aspect of the knee but that Claimant had full range of motion and a normal gait. *See* Exhibit F.

16. On October 16, 2013 Claimant underwent an MRI of her right knee interpreted by Vincent Herlihy, M.D. Dr. Herlihy provided the impression of longitudinal tearing throughout the body segment and posterior horn of the medial meniscus with a vertical configuration in the body segment and a horizontal configuration throughout the posterior horn; suspected small meniscal flap displaced anteriorly from the free edge of the posterior horn into the joint space; second small suspected meniscal flap displaced inferiorly from the medical meniscal body; mild grade 1-2 chondromalacia in the central weight bearing medial femoral condyle; small joint effusion; mild partial discoid morphology of the lateral meniscus without evidence of discrete tear. *See* Exhibit E.

17. On October 29, 2013 Claimant was evaluated by David Beard, M.D. Claimant reported that she sustained work related injury in February of 2012 where she injured her right knee and her left ankle. Claimant reported having several procedures on her left Achilles but that through the whole time period she continued to have problems with her right knee that had been treated with rest, modified activity, and anti-inflammatory medication. Claimant reported that due to her persistent right knee symptoms she underwent an MRI of her right knee and was referred for orthopedic consultation. Dr. Beard reviewed the MRI and noted that due to persistent symptoms despite conservative management, he recommended Claimant undergo a right knee arthroscopy to address her meniscal pathology. *See* Exhibit 4.

18. On October 31, 2013 Dr. Irish noted that Claimant had been referred for right knee orthopedic evaluation and treatment, that Claimant had seen Dr. Beard, and that surgery for the right knee was being planned. *See* Exhibit 1.

19. On December 2, 2013 Claimant underwent right knee surgery performed by Dr. Beard. Dr. Beard noted that Claimant had injured her right knee back in 2012 in a work related injury and was treated conservatively. *See* Exhibit 5.

20. On December 16, 2013 Claimant was evaluated by Dr. Irish. Claimant reported that she recently underwent right knee arthroscopy with repair of the medial meniscus and that it was starting to feel better. *See* Exhibit H.

21. On June 25, 2015 Claimant underwent an independent medical examination performed by Allison Fall, M.D. Dr. Fall opined that Claimant right knee pain was not due to her left ankle injury and/or overcompensation. Dr. Fall opined that the most likely etiology of the right knee pain was Claimant's age and obesity. Dr. Fall opined that Claimant was carrying 100 excess pounds and opined overall that the right knee symptoms and MRI findings were not causally related to the left ankle injury from July of 2012. *See* Exhibit D.

22. On December 29, 2015 Claimant underwent a second independent medical examination performed by Dr. Fall. Claimant reported to Dr. Fall that she fell in the dish area that was greasy. Claimant reported that she had right knee pain prior to the July 23, 2013 incident from compensating, but that after the July 23, 2013 incident her pain was constant all day and night. Dr. Fall opined that Claimant was appropriately placed at MMI for her left ankle injury and that the right knee was not related. Dr. Fall also opined that there was no acute injury to Claimant's right knee on July 23, 2013. Dr. Fall opined that the right knee MRI showed chronic degenerative changes without acute abnormality most likely related to age and obesity. *See* Exhibit D.

23. On January 8, 2015 Claimant underwent a Division Independent Medical Evaluation (DIME) performed by Mindy Gehrs, M.D. Claimant reported constant pain in her left ankle as well as constant right knee pain. Claimant also reported right hip pain that started with changes in her gait related to her injuries. Dr. Gehrs noted that Claimant was morbidly obese. Dr. Gehrs opined that Claimant was at maximum medical improvement for her left ankle and that there was nothing further recommended from a medical treatment standpoint. Dr. Gehrs opined that Claimant was not at MMI for her right knee as Claimant never had physical therapy for the knee and Dr. Gehrs recommended physical therapy and further evaluations. Dr. Gehrs provided an impairment rating for the left ankle of 9% extremity. *See* Exhibit 2.

24. Dr. Gehrs testified by deposition in this matter. Dr. Gehrs opined that that Claimant was at maximum medical improvement (MMI) for her left ankle at the time of the DIME. Dr. Gehrs opined that Claimant's right knee symptoms were not related to Claimant's left ankle injury and that the right knee was a separate claim from a twisting event that occurred on July 23, 2013. Dr. Gehrs noted that Claimant had no right knee complaints from the date of her February 2012 left ankle injury until June of 2013. Dr. Gehrs noted that what was shown on the right knee MRI was either due to an acute injury or due to normal wear and tear. Dr. Gehrs noted that Claimant did not have right knee pain for over a year following her left ankle injury and that there was no proximate relationship between the left ankle injury and right knee complaints. Dr. Gehrs also opined that given Claimant's age and size, it would not be uncommon to get knee pain and degenerative changes with some meniscal changes in the knee. *See* Exhibit B.

25. Dr. Fall testified at hearing consistent with her written reports. Dr. Fall opined that Claimant did not sustain an acute injury to her right knee on July 23, 2013. Dr. Fall opined that the right knee MRI did not show a large effusion or any acute pathology. Dr. Fall also noted that the right knee would have been swollen when Claimant was examined on July 24, 2013 if the injury had happened the day prior. Finally, Dr. Fall opined that the mechanism of injury did not support the severe damage shown by the right knee MRI.

26. Dr. Fall further noted the inconsistencies in Claimant's reports to providers about the right knee pain, when it started, and mechanism of injury. Dr. Fall also pointed out that Claimant's July 10, 2013 right knee physical exam and her July 24, 2013 exam were very similar despite the alleged injury in between.

27. Dr. Fall opined that the MRI findings which resulted in Claimant's right knee surgery were underlying degenerative changes and were pre-existing and due to age and obesity. Dr. Fall's opinions overall are found credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. *See* § 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The Workers' Compensation Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undersigned occurrence." *See* § 8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Wherry v. City and County of Denver,* W.C. No. 4-475-818 (ICAO March 7, 2002).

Claimant has failed to establish by a preponderance of the evidence that she suffered a work related injury to her right knee on July 23, 2013. Although Claimant reports slipping on water on the floor on this date and "twisting" her right knee, Claimant overall is not found credible or persuasive. Claimant made differing reports to multiple providers about the right knee pain. Claimant reported to Dr. Irish that the right knee pain increased after her slip on water. However, six days after the alleged injury Claimant reported at physical therapy that she was not sure why her right knee was hurting more. Then, seven days after the alleged injury Claimant reported to Dr. Jackson that she was having compensatory pain in her right knee that was not associated with an injury. It is logically inconsistent that Claimant would have suffered an acute incident one week prior to visiting an orthopedic doctor but would tell him that it was just compensatory pain with no injury. Further, in October of 2013 Claimant again failed to report an acute incident when she told Dr. Beard that she had injured her right knee in February of 2012 and that she had been having problems with it throughout her ankle treatment. Also, it is significant that Claimant's right knee examinations prior to the July 23, 2013 alleged injury and after the alleged injury remained very similar. Claimant had no signs of acute injury on the right knee MRI nor did she have any acute swelling the day after the alleged injury to her right knee. The opinions of Dr. Fall are found credible and persuasive that Claimant did not suffer an acute injury to her right knee on July 23, 2013. Any slip on the floor that Claimant may have experienced did not result in an injury to her right knee or the need for medical treatment. As found above, Claimant is morbidly obese and the cause of her underlying right knee pain is more likely than not due to her severe obesity and age. Dr. Gehrs even noted that it would not be uncommon given Claimant's age and obesity to have degenerative changes and meniscal damage that was shown on the MRI. Claimant has failed to present sufficient objective evidence establishing the existence of an injury or the aggravation of an underlying condition. Rather, Claimant appears to have experienced continued right knee pain both prior to July 23, 2013 and after July 23, 2013.

Medical benefits

Respondents are required to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). The claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to establish by a preponderance of the evidence that she sustained an industrial injury on July 23, 2013. Therefore, her request for medical benefits to treat her right knee is denied and dismissed.

Disfigurement right knee

Claimant has failed to establish that she sustained an industrial injury to her right knee on July 23, 2013. Therefore, her request for an award of disfigurement for her right knee is denied and dismissed.

Overcoming DIME on left ankle MMI

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

Claimant has failed to establish by clear and convincing evidence that Dr. Gehrs erred in her determination that Claimant reached MMI from the February 7, 2012 left ankle injury as of the date of Dr. Gehrs' DIME. The opinion of Dr. Fall supports the determination of the DIME physician and Claimant has failed to establish by clear and convincing evidence that the DIME physician erred in determining the date of MMI.

Overcoming DIME on left ankle PPD

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Claimant has failed to establish by clear and convincing evidence that the medical impairment rating provided by DIME physician Dr. Gehrs is incorrect. Claimant has failed to establish anything other than a difference of opinion between medical providers. Claimant has failed to show that Dr. Gehrs erred or how the rating provided was incorrect or insufficient for Claimant's permanent partial disability. With nothing more than a difference of opinion, Claimant has not met her burden to overcome the DIME physician's opinion. The permanent partial disability rating of 9 percent (scheduled) that was provided by Dr. Gehrs has not been overcome.

Disfigurement left ankle

As found above and as a result of her two surgeries, Claimant has visible disfigurement to her left ankle. The disfigurement includes a scar measuring approximately 3.5 inches on the back of her left ankle that is red, white, raised, and discolored from her normal skin tone. Claimant has therefore sustained serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation. §§ 8-42-108(1), C.R.S (2014); 8-42-108(2), C.R.S. Insurer shall pay Claimant $1,250.00 for the disfigurement outlined above. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that she sustained a compensable injury to her right knee on July 23, 2013. Her right knee claim is denied and dismissed.

2. As Claimant failed to establish that she sustained a compensable right knee injury, her request for medical benefits for her right knee as well as disfigurement for her right knee is denied and dismissed.

4. For the left ankle claim, Claimant has failed to overcome the DIME physician's opinion on the date of MMI and the PPD rating.

5. Claimant has established that she is entitled to a disfigurement award in the amount of $1,250.00 for her left ankle.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 11, 2016,

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable left knee injury during the course and scope of his employment with Employer on June 26, 2015.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive authorized, reasonable and necessary medical treatment for his June 26, 2015 industrial injury.

3. A determination of Claimant's Average Weekly Wage (AWW).

4. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period July 13, 2015 until July 17, 2015 and Temporary Partial Disability (TPD) benefits for the period July 22, 2015 until November 6, 2015.

FINDINGS OF FACT

1. Employer is an auto parts supplier for both retail customers and repair shops in the Denver Metropolitan Area. Claimant worked for Employer as a Delivery Driver.

2. Claimant testified that on June 26, 2015 he was delivering auto parts to Accurate Transmission while working for Employer. Claimant was attempting to park his small truck and sought to engage the emergency brake. Because the emergency brake would not engage, he depressed the pedal to the floor of the truck. While depressing the emergency brake pedal he experienced a "pop" in his left knee. Claimant remarked that he reported the incident to Employer's Dispatcher Shanee Arnold. However, he did not immediately seek medical treatment because he planned to rest his left knee for a couple of days.

3. Ms. Arnold testified through a pre-hearing evidentiary deposition in this matter on June 23, 2016. She remarked that Claimant reported "the emergency brake was hard" and he injured his left knee. She inquired whether Claimant wanted to go home, seek medical treatment or speak to Store Manager Roscoe Abrams. However, Claimant declined. He completed his shift and performed his regular job duties on the ensuing days.

4. Employer's Mechanic Peter Burton testified through a pre-hearing evidentiary deposition in this matter on June 23, 2016. He explained that he is responsible for regular maintenance, inspections and repair of Employer's fleet of motor vehicles. Claimant typically drove small truck No. 68 for Employer. However, on June

26, 2015 Mr. Burton took vehicle No. 68 out of service for routine maintenance. Claimant thus drove replacement vehicle small truck No. 49 on June 26, 2015.

5. Mr. Burton testified about the emergency brake on vehicle No. 49. The emergency brake is engaged by depressing a foot pedal. The pedal pulls a mechanical cable attached to the rear drum brakes and engages the brakes when depressed. Mr. Burton explained that an emergency brake pedal going all the way to the floor would require an adjustment through the brake shoes. He commented that he never had to adjust the emergency brake on vehicle No. 49 during 2015 and 2016. Mr. Burton remarked that he was unaware of any records documenting complaints about vehicle No. 49's emergency brake in 2015 and 2016.

6. Mr. Burton testified that he completes regular maintenance and repairs of Employer's fleet vehicles every four to six weeks. He visually inspects each vehicle's braking system with the wheels off. In addition, Mr. Burton tests the braking system, including the emergency brake, by taking the vehicle on a test drive. He testified he performs the testing "every single time" a vehicle is in for regular maintenance. Mr. Burton specifically tests the emergency brake on a variety of surfaces to ensure that it is in operating condition. He explained that the brakes on vehicle No. 49 were in operating condition each time he tested them.

7. Store Manager Roscoe Abrams also testified through a pre-hearing evidentiary deposition in this matter on June 23, 2016. He noted that Claimant was one of 15 or more delivery drivers who worked at Employer's facility. On July 7, 2015 Claimant called Mr. Abrams to report a left knee injury and sought to visit a doctor. He stated that the emergency brake on vehicle No. 49 would not move when he attempted to depress the pedal and he injured his left knee. Claimant subsequently completed an accident report so he could visit a doctor.

8. Mr. Abrams testified that Claimant's inability to depress the emergency brake pedal likely involved a brake cable. Consistent with Mr. Burton's testimony, Mr. Abrams remarked that the emergency brake cable on vehicle No. 49 was never replaced or repaired. In fact, when vehicle No. 49 was inspected, maintained and road tested after Claimant's June 26, 2015 incident, the emergency brake was not defective.

9. On July 7, 2015 Claimant visited Braden Reiter, M.D. at HealthOne for an evaluation. Claimant reported that he pushed down on the emergency brake on his work vehicle with his left foot and experienced pain and popping in the left knee. Dr. Reiter diagnosed Claimant with a left knee strain. He assigned work restrictions including driving only an automatic vehicle and no lifting, pushing or pulling in excess of 25 pounds. Dr. Reiter referred Claimant to physical therapy and recommended diagnostic testing.

10. On July 13, 2015 Claimant underwent his initial physical therapy evaluation. He reported that he developed left knee pain after repeatedly pressing the emergency brake to stop his work vehicle from moving. The physical therapist noted

that Claimant’s symptoms were consistent with a left knee strain and possible meniscus tear.

11. On July 15, 2015 Claimant underwent a left knee MRI. The MRI revealed a medial meniscus tear and findings suggestive of a possible fracture.

12. On August 7, 2015 Claimant underwent a surgical consultation with Stewart Weinerman, M.D. Claimant reported that he suffered a left knee injury while working for Employer. He remarked that he was having problems with his truck when he had to “hop in and jam on the emergency brake.” Claimant felt a twist and immediately experienced pain and discomfort. Dr. Weinerman concluded that Claimant suffered a left knee torn meniscus. He explained that it was more likely than not that the injury occurred when Claimant “twisted to jam on the brake and had a lot of valgus stress on the knee.” Dr. Reiter remarked that the injury likely did not constitute a pre-existing condition “although given his history he has had a lot of injuries.” He thus summarized that “the most likely scenario is that this is a work-related injury and he would certainly benefit from arthroscopic surgery and a partial medial meniscectomy.”

13. After Insurer filed a Notice of Contest, James Lindberg, M.D. reviewed Claimant’s medical records on August 11, 2015. Dr. Lindberg noted that Claimant’s left knee MRI reflected a loss of articular cartlidge in the posterior medial femoral condyle, a horizontal tear of the posterior medial meniscus and an MCL sprain. He determined that Claimant’s account of pushing on the emergency brake with his left leg was not consistent with the MRI findings. Specifically, the meniscal tear, the MCL sprain, a disorganized proximal ACL and the underlying osteoarthritis were inconsistent with Claimant’s account. Dr. Lindberg summarized that “something else happened, other than this rather innocuous injury that caused his problems, but definitely not pushing down on the emergency brake.”

14. On October 8, 2015 Claimant underwent a left knee arthroscopy with a partial medial meniscectomy through his personal health insurance. Claimant reported significant improvement after the procedure.

15. On February 17, 2016 Claimant underwent an independent medical examination with F. Marc Paz, M.D. Claimant reported that on June 26, 2015 he was delivering auto parts to Accurate Transmission while working for Employer. He explained that he pushed the emergency brake pedal on his work vehicle to the floor with his left foot Claimant fully extended his left knee and then rotated his left leg clockwise but could not “really get a grip on the pedal.” He heard a “pop” in his left knee and immediately experienced pain on the right side of his kneecap at the joint of the left knee. In considering Claimant’s history of the injury, physical examination findings and prior medical records, Dr. Paz concluded that it was not medically probable that Claimant’s left knee medial meniscus tear was causally related to the June 26, 2015 work incident. Dr. Paz explained that Claimant’s mechanism of injury was “inconsistent with a shearing or twisting movement in the joint itself.” Moreover, Dr. Paz remarked that the medical records revealed inconsistent accounts of the mechanism of Claimant’s left knee injury.

16. On April 22, 2016 Claimant underwent an independent medical evaluation with Edwin M. Healey, M.D. Claimant reported that he had been driving a delivery truck in which the emergency brake would not engage and the vehicle would roll backwards. He noted that the scenario had occurred on several occasions prior to June 26, 2015 and he would have to "run to the truck, jump in the truck and forcibly push down on the emergency brake in order to stop the truck from rolling and hitting objects behind it." Claimant explained that on June 26, 2015 he forcibly pushed down on the emergency brake with his left foot and experienced an acute "pop" and immediate pain in his left knee. After conducting a physical examination and reviewing Claimant's medical records, Dr. Healey concluded that Claimant suffered a medial meniscus injury to his left knee on June 26, 2015. The injury ultimately required arthroscopic surgery with Dr. Weinerman. Dr. Healey determined that Claimant had reached Maximum Medical Improvement (MMI) and suffered a 14% left lower extremity impairment as a result of the June 26, 2015 incident.

17. Dr. Paz testified at the hearing in this matter. He maintained that it was not medically probable that Claimant's left knee medial meniscus tear was causally related to the June 26, 2015 industrial incident. Dr. Paz explained that the act of depressing or attempting to depress an emergency brake pedal would not cause a meniscal tear. Instead, meniscal tears are associated with shearing forces as the knee joint moves outside its normal range of motion. Claimant never described any forces sufficient to cause a meniscal tear to Dr. Paz or other providers. Meniscal tears similar to Claimant's are typically caused when a person's foot is planted or unable to move from side-to-side and the knee joint twists. However, Dr. Paz remarked that there is no evidence that Claimant's left foot was planted or locked in place on the pedal. Instead, Claimant commented that his left foot was twisting on the brake pedal. Dr. Paz thus summarized that the lack of a planted or fixed foot position made it improbable that Claimant sustained an injury to his left knee on June 26, 2015.

18. Claimant has failed to demonstrate that it is more probably true than not that he suffered a compensable left knee injury during the course and scope of his employment with Employer on June 26, 2015. Initially, Claimant has provided inconsistent accounts of the mechanism of his left knee injury to various medical providers. Claimant told Dr. Reiter that he pushed down on the emergency brake on his work vehicle with his left foot and experienced pain and popping in the left knee. During his initial physical therapy evaluation Claimant reported that he developed left knee pain after repeatedly pressing the emergency brake to stop his work vehicle from moving. At his surgical consultation with Dr. Weinerman Claimant remarked that he was having problems with his truck when he had to "hop in and jam on the emergency brake." Claimant felt a twist and immediately experienced pain and discomfort. Claimant subsequently reported to Dr. Paz that he pushed the emergency brake pedal to the floor with his left foot. He fully extended his left knee and then rotated his left leg clockwise but could not "really get a grip on the pedal." Finally, Claimant told Dr. Healey that on several occasions prior to June 26, 2015 he had to run to his truck and depress the emergency brake to prevent the vehicle from rolling backwards. Claimant explained that on June 26, 2015 he forcibly pushed down on the emergency brake with his left foot and experienced an acute "pop" and immediate pain in his left knee. The record thus

reveals that Claimant has thus provided numerous inconsistent accounts of the June 26, 2015 incident. Accordingly, more reliance will be placed on objective and medical evidence than on Claimant's description.

19. The credible testimony of Employer witnesses Mr. Burton and Mr. Abrams demonstrates that the emergency brake on Claimant's vehicle No. 49 was functioning properly on June 26, 2015. Mr. Burton noted that he was unaware of any records documenting a complaint about vehicle No. 49's emergency brake in 2015 and 2016. He regularly tested the braking system on vehicles by performing a test drive on a variety of surfaces. Mr. Burton specifically explained that the brakes on vehicle No. 49 were in operating condition each time he tested them. Consistent with Mr. Burton's testimony, Mr. Abrams remarked that the emergency brake cable on vehicle No. 49 had never been replaced or repaired. In fact, when vehicle No. 49 was inspected, maintained and road tested after Claimant's June 26, 2015 incident, the emergency brake was functioning properly.

20. The medical records also reveal that Claimant likely did not suffer a left knee medial meniscus tear during his employment with Employer on June 26, 2015. Dr. Paz persuasively maintained that it was not medically probable that Claimant's left knee medial meniscus tear was causally related to the June 26, 2015 work incident. He explained that the act of depressing or attempting to depress an emergency brake pedal would not cause a meniscal tear. Instead, meniscal tears are associated with shearing forces as the knee joint moves outside its normal range of motion. Claimant did not describe any forces sufficient to cause a meniscal tear. Specifically, there was no evidence that Claimant's left foot was planted or locked in place on the pedal. Dr. Paz thus summarized that the lack of a planted or fixed foot position made it improbable that Claimant sustained an injury to his left knee on June 26, 2015. Moreover, Dr. Lindberg explained that Claimant's account of pushing on the emergency brake with his left leg was not consistent with MRI findings. Claimant's left knee condition was simply not supported by his description of the mechanism of injury.

21. In contrast, Drs. Weinerman and Healey concluded that Claimant's left knee medial meniscus tear was caused by his June 26, 2015 work activities for Employer. Notably, however, the opinions of Drs. Weinerman and Healey were predicated on Claimant's description of having to run to his work truck, jump in and forcibly push down on the emergency brake in order to stop the vehicle. Moreover, Drs. Weinerman and Healey did not perform an adequate causation analysis to ascertain the origin of Claimant's left knee medial meniscus tear. Accordingly, based on Claimant's inconsistent accounts of the mechanism of injury, the credible testimony of Employer witnesses and the persuasive medical opinions of Drs. Paz and Lindberg, Claimant has failed to demonstrate that his work activities for Employer on June 26, 2015 aggravated, accelerated or combined with a pre-existing condition to produce a need for medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18,

2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered a compensable left knee injury during the course and scope of his employment with Employer on June 26, 2015. Initially, Claimant has provided inconsistent accounts of the mechanism of his left knee injury to various medical providers. Claimant told Dr. Reiter that he pushed down on the emergency brake on his work vehicle with his left foot and experienced pain and popping in the left knee. During his initial physical therapy evaluation Claimant reported that he developed left knee pain after repeatedly pressing the emergency brake to stop his work vehicle from moving. At his surgical consultation with Dr. Weinerman Claimant remarked that he was having problems with his truck when he had to “hop in and jam on the emergency brake.” Claimant felt a twist and immediately experienced pain and discomfort. Claimant subsequently reported to Dr. Paz that he pushed the emergency brake pedal to the floor with his left foot. He fully extended his left knee and then rotated his left leg clockwise but could not “really get a grip on the pedal.” Finally, Claimant told Dr. Healey that on several occasions prior to June 26, 2015 he had to run to his truck and depress the emergency brake to prevent the vehicle from rolling backwards. Claimant explained that on June 26, 2015 he forcibly pushed down on the emergency brake with his left foot and experienced an acute “pop” and immediate pain in his left knee. The record thus reveals that Claimant has thus provided numerous inconsistent accounts of the June 26, 2015 incident. Accordingly, more reliance will be placed on objective and medical evidence than on Claimant’s description.

8. As found, the credible testimony of Employer witnesses Mr. Burton and Mr. Abrams demonstrates that the emergency brake on Claimant’s vehicle No. 49 was functioning properly on June 26, 2015. Mr. Burton noted that he was unaware of any records documenting a complaint about vehicle No. 49’s emergency brake in 2015 and 2016. He regularly tested the braking system on vehicles by performing a test drive on a variety of surfaces. Mr. Burton specifically explained that the brakes on vehicle No. 49 were in operating condition each time he tested them. Consistent with Mr. Burton’s testimony, Mr. Abrams remarked that the emergency brake cable on vehicle No. 49 had never been replaced or repaired. In fact, when vehicle No. 49 was inspected, maintained and road tested after Claimant’s June 26, 2015 incident, the emergency brake was functioning properly.

9. As found, the medical records also reveal that Claimant likely did not suffer a left knee medial meniscus tear during his employment with Employer on June 26, 2015. Dr. Paz persuasively maintained that it was not medically probable that

Claimant’s left knee medial meniscus tear was causally related to the June 26, 2015 work incident. He explained that the act of depressing or attempting to depress an emergency brake pedal would not cause a meniscal tear. Instead, meniscal tears are associated with shearing forces as the knee joint moves outside its normal range of motion. Claimant did not describe any forces sufficient to cause a meniscal tear. Specifically, there was no evidence that Claimant’s left foot was planted or locked in place on the pedal. Dr. Paz thus summarized that the lack of a planted or fixed foot position made it improbable that Claimant sustained an injury to his left knee on June 26, 2015. Moreover, Dr. Lindberg explained that Claimant’s account of pushing on the emergency brake with his left leg was not consistent with MRI findings. Claimant’s left knee condition was simply not supported by his description of the mechanism of injury.

10. As found, in contrast, Drs. Weinerman and Healey concluded that Claimant’s left knee medial meniscus tear was caused by his June 26, 2015 work activities for Employer. Notably, however, the opinions of Drs. Weinerman and Healey were predicated on Claimant’s description of having to run to his work truck, jump in and forcibly push down on the emergency brake in order to stop the vehicle. Moreover, Drs. Weinerman and Healey did not perform an adequate causation analysis to ascertain the origin of Claimant’s left knee medial meniscus tear. Accordingly, based on Claimant’s inconsistent accounts of the mechanism of injury, the credible testimony of Employer witnesses and the persuasive medical opinions of Drs. Paz and Lindberg, Claimant has failed to demonstrate that his work activities for Employer on June 26, 2015 aggravated, accelerated or combined with a pre-existing condition to produce a need for medical treatment.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant’s request for Workers’ Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge’s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge’s order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: August 11, 2016.

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-977-019-02

ISSUES

- Whether the Claimant proved by a preponderance of the evidence that he suffered a compensable injury arising out of and occurring within the course and scope of employment with the Employer on or around July 26, 2014.

- If Claimant suffered a compensable injury on or around July 26, 2014, what medical benefits are reasonable, necessary, and related to that compensable event?

- If Claimant suffered a compensable injury on or around July 26, 2014, what temporary disability benefits, is Claimant entitled to as a result of that event?

STIPULATION

The parties stipulate to an Average Weekly Wage of $1,409.00.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 52-year-old "Article 22" worker at UPS. As an Article 22 worker, Claimant performs split duties and works "pick-off" for the first four hours of his shift and drives at tug for irregular carts for the remainder of his shift. In his duties as a tug driver, Claimant arranges irregular carts to be filled with packages and then takes the full carts, arranges them onto a "mother cart," and drives them to their destination belts.

2. Claimant began a shift on July 25, 2014, which ended on Saturday morning on July 26, 2014. On or around the morning of July 26, 2014, Claimant was in a seated position on his tug when he turned/twisted his head and upper body to the right to look behind him. He felt an acute "tug" on the left side of his low back. Claimant described the onset of pain as mild. Claimant completed the rest of his shift and did not report an injury to anyone at UPS.

3. Claimant testified that he awoke on Saturday afternoon, July 26, 2014, and could not move due to painful spasms. Claimant testified that he could not get up or move forward. Claimant also told Dr. Lesnak during his November 23, 2015 IME that he began to experience left leg symptoms as well. Claimant did not report a work injury to UPS.

4. Claimant testified that his back condition did not improve the following day, Sunday, July 27, 2014.

5. Claimant attended a scheduled appointment at the University of Colorado Hospital for a non-related procedure to remove cysts from his scalp on Monday, July 28, 2014. During examination, Claimant reported that he had left-sided low back pain. Claimant denied radicular symptoms or leg weakness. Claimant reported that he had sciatica symptoms for the past 15 years but felt his pain acutely worsen while twisting at work. Claimant testified at hearing that he had not experienced symptoms involving his low back prior to the incident on July 26, 2014, including any soreness, pain, or problems.

6. Claimant did not work on Monday, July 28, 2014, or Tuesday July 29, 2014, as he was recovering from his cyst removal procedure.

7. On Wednesday, July 30, 2014, Claimant reported a work-related injury to his back to UPS. Claimant was referred to Dr. James Rafferty for treatment and presented on this same date. Claimant reported having experienced a "tweak" in the left side of his low back after twisting with the mild onset of pain. Dr. Rafferty noted that Claimant had experienced similar symptoms approximately 10 years prior, which resolved rapidly and without treatment. Claimant indicated symptoms were localized to his left low back and denied any radicular symptoms or weakness into the lower extremities. Dr. Rafferty diagnosed Claimant with a strain of the left hip (gluts) and stated that causation was undetermined because he did not know whether or not the tug placed Claimant at an increased risk of low back pain by turning. There were no work restrictions. At this time, Claimant weighed 219 pounds and stood 5' 5" in height.

8. Claimant was subsequently given light duty by UPS after his visit to Dr. Rafferty. Claimant took two weeks off of work and returned to see Dr. Rafferty on August 7, 2014. Claimant reported that he was "doing great" and was "now back to his usual state of health." Claimant reported that he had no back pain at this time and was ready to return to his usual duties at work. Dr. Rafferty placed Claimant at MMI and discharged him from care with no permanent impairment, permanent restrictions, or need for additional treatment.

9. Claimant worked regular duty and sought no further treatment until December 22, 2014, when he returned to Stapleton Clinic with complaints of renewed low back pain. Claimant saw Dr. Ryan Otten and reported that he had intermittent symptoms in the *right* buttock area after July 2014. Claimant reported that he had originally injured his back while twisting but that his pain had become worse after being on his feet all day. Claimant denied radicular symptoms. Dr. Otten left causation as undetermined and

gave Claimant work restrictions limiting walking and standing duties to 50% of the shift.

10. On January 5, 2015, Claimant returned to see Dr. Otten and again denied radicular symptoms into the legs.

11. On January 26, 2015, Claimant saw Dr. Ricky Lee Artist and complained of low back and *right* hip pain. Dr. Artist noted that Claimant experienced persistent pain at work, increased pain at home in the evenings, pain getting in and out of bed, and marked difficulty getting in and out of his car. Dr. Artist left causation to be determined.

12. On February 2, 2015, Claimant saw Dr. Rick Zimmerman. Claimant reported at "one-year history of slowly progressive low back pain that started insidiously." Claimant reported that, in July 2014, his symptoms became "too much" and that he had attempted to control his symptoms by taking two weeks off from work. Claimant stated that, after several weeks, his symptoms improved but did not totally resolve. Claimant stated that, approximately one month prior, he experienced a "flare-up" with no specific injury. Claimant denied leg pain or paresthesia in the lower extremities. Upon physical examination, Claimant was able to walk without difficulty but Dr. Zimmerman did note that there was a waddling-type gait pattern due to a combination of hip mechanics and general deconditioning. Dr. Zimmerman recommended that Claimant undergo physical therapy and also recommended weight loss to reduce strain on the low back. Dr. Zimmerman referred Claimant for an MRI study.

13. On February 12, 2015, Claimant saw Dr. Brian Williams. Claimant denied radicular symptoms or weakness into the bilateral lower extremities. Claimant was working modified duty at this time.

14. On February 16, 2015, Claimant underwent a lumbar spine MRI. The "Impression" section of the MRI study showed: edema bilaterally at the L4 and L5 pedicles with suspected trabecular stress fractures in the pedicles at these levels; advanced facet arthropathy at L4-L5 with degenerative anterolisthesis; and a broad L5-S1 left paracentral to lateral disc protrusion contributing to moderate left foraminal stenosis.

15. On February 18, 2015, Claimant subsequently began treating with Dr. Tanya Kern at Stapleton clinic.

16. On February 25, 2015, Claimant returned to see Dr. Zimmerman. Dr. Zimmerman noted that Claimant had been off work since February 3, 2015. Claimant complained of some intermittent paresthesia in the left lower extremity, including the lateral knee and foot region. Dr. Zimmerman noted that Claimant went from seated to standing without

hesitation and normal biomechanics. Dr. Zimmerman noted that Claimant ambulated with an upright posture and normal gait pattern. Dr. Zimmerman noted that Claimant could bend forward with only minimal low back discomfort, but that extension recreates axial back pain with stiff rotation and localized pain over the facet joints bilaterally. Dr. Zimmerman reviewed the MRI study and indicated that pain was extension-based and likely facet-mediated. Dr. Zimmerman discussed the findings with the radiologist and indicated that the findings were consistent with a stress reaction type phenomenon. Dr. Zimmerman recommended steroid injections at L4-5 and L5-S1 for diagnostic and therapeutic purposes.

17. On March 11, 2015, Dr. Kern noted that Claimant had taken all of February off of work for soreness. Dr. Kern noted that "sometimes [Claimant] sits and cries because he feels so bad" and that he had difficulties walking. Dr. Kern gave Claimant work restrictions limiting lifting to no more than 5 pounds occasionally, walking/standing no more than 15 minutes per hour, and avoiding repetitive bending and twisting at the waist.

18. On March 18, 2015, Dr. Zimmerman performed bilateral facet steroid injections at L4-5 and L5-S1. Claimant had a diagnostic response and demonstrated improvement with extension of the lumbar spine. Claimant ambulated without difficulty and could touch his toes without hesitation.

19. On April 8, 2015, Insurer's Nurse Case Manager sent a request to Dr. Kern asking whether the finding of trabecular stress fractures on the MRI was related to the mechanism of twisting described by Claimant in July 2014. Dr. Kern issued an undated reply and opined that the stress fractures were not caused by the injury described on July 26, 2014. Dr. Kern stated that such fractures of the lumbar spine are usually caused by repeated extension of the lumbar spine, and that the Claimant could have developed a stress fracture due to repetitive strain over time if his job involved repetitive extension of the lumbar spine.

20. On April 20, 2015, Claimant complained of additional back pain during an appointment with Dr. Zimmerman. Claimant had difficulty ambulating and showed hesitation going from a seated position to standing. Claimant indicated pain with stiffness with extension maneuvers. Dr. Zimmerman recommended medial branch blocks at L4-5 and L5-S1 for further diagnostic purposes. Dr. Zimmerman performed the injections on May 6, 2015. Claimant demonstrated a diagnostic response with pain free extension. Claimant reported complete relief of back pain during his last visit with Dr. Zimmerman, on May 15, 2015. Dr. Zimmerman noted significant improvement with mobility and pain free range of motion with lumbar extension. Dr. Zimmerman noted that Claimant had no evidence of lumbar radicular symptoms. Dr. Zimmerman indicated that further

interventional treatment was not necessary and recommended additional conservative therapy, which could be considered as part of maintenance.

21. Claimant continued pool therapy and saw Dr. Kern for regular follow-up visits. Claimant's complaints of pain continued to fluctuate. Claimant reported continued right hip pain. Claimant also reported ongoing left low back and leg pain.

22. On June 14, 2015, Claimant returned for a trial of full duty but did not believe he could return to his former duties. On June 29, 2015, Claimant reported pain of over 10/10 to Dr. Kern with painful lumbar extension. On or around July 27, 2015, UPS offered Claimant a lighter duty job and Claimant requested to be released to full duty. Claimant's weight fluctuated between 220 and 230 pounds during this time.

23. On August 17, 2015, Dr. Kern placed Claimant at MMI. Dr. Kern gave Claimant no permanent impairment, no work restrictions, and recommended no additional medical care. At the time of MMI Claimant's diagnoses were listed as stress fracture with routine healing and lumbosacral facet arthropathy. The vast majority of medical records admitted into evidence reference July 26, 2014 as the date of injury.

24. On November 3, 2015, Claimant saw Dr. Lawrence Lesnak for an IME commissioned by Respondents. Claimant told Dr. Lesnak that he had injured himself on July 14, 2014 (later clarified to be July 26, 2014) while he was in a seated position driving his tug and turned to the right to look behind him. Claimant stated that the following morning, he awoke with significant left low back pain symptoms and subsequently developed left leg symptoms. Claimant specifically denied any history of low back injuries or similar symptoms prior to the July 2014 alleged work injury. Claimant did not report any injury from pushing a cart on or around December 22, 2014.

25. During physical evaluation, Dr. Lesnak noted that Claimant showed no signs of antalgic gait and could independently heel and toe walk without difficulty. Claimant was negative for Patrick's maneuver.

26. Dr. Lesnak opined that the described mechanism of twisting could possibly cause a temporary strain, but that the findings on the MRI were unrelated to this mechanism. Dr. Lesnak noted that Claimant had initially reported left-sided low back symptoms in July 2014 but that his complaints after December 2014 involved right-sided buttock symptoms. Dr. Lesnak noted that there was no specific inciting event that caused these symptoms and that Claimant had preexisting chronic, intermittent low back and buttock symptoms prior to July 2014. Dr. Lesnak opined that any and all treatment after Claimant was found to be at MMI by Dr. Rafferty, on

August 7, 2014, would be completely unrelated to the alleged occupational injury which occurred in July 2014.

27. On December 2, 2015, Claimant saw Dr. Caroline Gellrick for an IME commissioned by Claimant. Claimant reported a 15-year history of sciatica with pain down his left leg. Claimant described work duties involving lifting, pushing, and pulling. Claimant told Dr. Gellrick that at times, while pushing and pulling carts, his sciatic pain down his left leg would become worse. Claimant told Dr. Gellrick that on or around December 21, 2014, "his back pain suddenly worsened and also pain down the leg." Dr. Gellrick states that, by Claimant's history, he had an injury on approximately "December 21, 2014 when he got up that morning the back pain was severe with pain radiating down the leg." She opined that "the injury itself probably occurred December 20, 2014" as an aggravation of a preexisting condition. Claimant did not describe any specific inciting event. Dr. Gellrick reviewed Claimant's job for extension-type injuries and Claimant stated that he did not recall hyperextension problems on the job, stating that his job involved bending, pushing, and pulling on carts.

28. Dr. Gellrick performed a physical examination and noted "definite weakness on the left." Dr. Gellrick noted that Claimant exhibited pain with a heel and toe walk maneuver. Dr. Gellrick indicated that Claimant tested positive for Patrick's maneuver, bilaterally, with the left worse than the right.

29. Dr. Gellrick opined that "It is clear the patient has two separate work related events that caused flare of symptoms in the low back." RHE I at 31. Dr. Gellrick did not address the mechanism of twisting or turning in regard to analysis of causation of the alleged July 26, 2014 injury. Dr. Gellrick states: "[Claimant's] sciatica that he describes of 15 years at the Family Medicine Clinic at the University of Colorado in July of 2014 he feels is due to repetitive use with lifting, pushing and pulling on his job." Dr. Gellrick opined that that Claimant was not at MMI for his alleged December 2014 work injury, without addressing medical causation. Dr. Gellrick opined that Claimant should have further diagnostic studies of the lower extremity based upon the weakness demonstrated upon evaluation.

30. Claimant testified at hearing that he did a full body turn while on his tug and "felt a tug on my left side" of the low back. Claimant explicitly denied having experienced symptoms involving his low back prior to this time. Claimant subsequently changed his testimony and stated that he had experienced prior low back pain, but that this had not prevented him from work. Claimant thereafter testified that he did not have any low back or leg pain prior to the alleged July 26, 2014 work injury. Claimant testified that he did not experience the onset of pain in July 2014 while lifting or

bending. Claimant testified that he did not have any leg pain at the time he reported back pain to the University of Colorado Hospital, on July 28, 2014, and at the time he was discharged from care by Dr. Rafferty, on August 7, 2014. Claimant testified that his pain had become much more severe after the alleged July 26, 2014 incident.

31. Claimant testified that he subsequently injured himself pushing a cart on December 22, 2014. Claimant testified that he had denied having suffered any injuries subsequent to the alleged July 26, 2014 incident in an interrogatory response sent to Respondents in November 2015. Claimant testified that he experienced the immediate onset of pain pursuant to this alleged event. Claimant testified that his job does not involve any activities requiring bending backwards.

32. Dr. Lesnak testified at hearing as Respondents' expert. Dr. Lesnak testified that twisting could possibly cause a sprain/strain. Dr. Lesnak testified that the mere act of twisting would not be specifically related to any work activities and that he agreed with Dr. Rafferty that causation was therefore undetermined in relationship to work duties. Dr. Lesnak testified that there was no medical evidence to suggest that Claimant would be at any increased risk of developing a strain/sprain by sitting in a tug and twisting. Dr. Lesnak testified that this type of injury, by the mechanism described by Claimant, could have occurred while sitting in a car, sitting at home, or sitting on the couch. Dr. Lesnak testified that none of the work activities described by Dr. Gellrick as the potential cause of the alleged July 26, 2014 work injury, including lifting, pushing and pulling, were related by Claimant to any of his providers as having precipitated his back pain on that date. Dr. Lesnak testified that, based upon the totality of the medical evidence and testimony, it was his medical opinion that the alleged strain from twisting was not work-related.

33. Dr. Lesnak testified that Claimant's testimony that he had no back pain or prior leg symptoms and his report to Dr. Lesnak upon evaluation contradicted the medical records which indicated a history of similar symptoms. Dr. Lesnak testified that sciatica commonly refers to back pain, buttock pain, and leg symptoms, including low back pain. Dr. Lesnak testified that Claimant's symptoms on or around July 25, 2014 would be consistent with a patient who has a history of episodic sciatica and back pain. Dr. Lesnak testified that Claimant's characterization of his pain having become "much more severe" after twisting in July 2014 was not consistent with the medical records at the time of that alleged incident, as these symptoms resolved within a week. Dr. Lesnak testified that, based upon Claimant's weight, his age, and the degenerative findings on the MRI study, he would be expected to have non-related back pain.

34. Dr. Lesnak testified that Claimant did not report any second work-related event to him during his IME evaluation in November 2015. Dr. Lesnak testified that there was no lifting, twisting, pushing or pulling incident reported in connection with an injury or aggravation sustained on or around December 22, 2014, and that Claimant had simply reported experiencing back pain from standing too much at work. Dr. Lesnak noted that Claimant's report of left-sided low back pain pursuant to the alleged July 26, 2014 incident was inconsistent with reports of right-sided low back pain subsequent to December 2014. Dr. Lesnak also testified that Claimant's complaints of leg pain were not consistent in the medical records.

35. Dr. Lesnak testified that the findings on the MRI, including suspected stress fractures of the pedicles at L4-5 and L5-S1, were not causally related to the alleged July 26, 2014 twisting event. Dr. Lesnak testified that extension, described by Dr. Kern as a potential cause of the MRI findings, involves backward bending at the waist. Dr. Lesnak testified that there would need to be a significant extension injury to cause stress fractures. Dr. Lesnak testified that twisting, lifting, pushing, and pulling do not and should not involve extension. Dr. Lesnak testified that none of the work activities that Claimant described to his providers involved repetitive extension and that there was no evidence of an extension-type injury at work. Dr. Lesnak testified that Claimant's weight at the time of the alleged injury would have classified him as overweight and that the increased gravitational forces upon the spine could hasten degenerative changes.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

In determining whether a claimant has met his burden of proof, the ALJ may resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence. *Bodensleck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Youngs v. Indus. Claim Appeals Office*, 297 P.3d 964 (Colo. App. 2012). The same principles for determining credibility of lay witnesses apply to expert witnesses as well. *Heinicke v. Indus. Claim Appeals Office*, 197 P.3d 220 (Colo. App. 2008). When determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness, probability or improbability, of the testimony and actions, the motives of the witness; whether the testimony has been contradicted; and bias, prejudice and interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936), *overruled in part*, *Lockwood v. Travelers Ins. Co.*, 498 P.2d 947 (Colo. 1972). The ALJ should consider an expert witness' special knowledge, training, experience, or research, and has broad discretion to determine the weight of evidence on this basis. *See Young v. Burke*, 338 P.2d 284 (Colo. 1959); *see also* Section 8-43-210, C.R.S.; *One Hour Cleaners v. Indus. Claim Appeals Office*, 914 P.2d 501 (Colo. App. 1995).

The ALJ determines that Claimant's testimony is not credible. Claimant's testimony is not credible in regard to documented medical evidence in the record of a longstanding history of preexisting back pain and symptoms similar to those reported as part of his alleged July 26, 2014 work injury. Claimant's testimony is not consistent with his own reports to his providers and to the parties' experts regarding the nature of his symptoms, as he reported to Dr. Lesnak that he had leg pain after the alleged July 26, 2014 incident when this was denied in the medical records at that time. Claimant also reported having the onset of leg symptoms to Dr. Gellrick after his alleged December 2014 incident, which was not consistent with the medical records at that time. Claimant's testimony regarding the cause of the reoccurrence of his back pain in December 2014 is not credible, as he claims that he sustained an injury from pushing a cart and felt immediate pain when this mechanism is absent in the entirety of the medical records. Claimant also told Dr. Zimmerman that his pain reoccurred with no specific onset or mechanism of injury, which was contrary to his testimony. Likewise, while Claimant denied having prior back pain or leg pain on multiple occasions during testimony, and to Dr. Lesnak at his IME evaluation, he reported to Dr. Zimmerman in February 2015 a one-year history of similar symptoms which began insidiously and became progressively worse.

The ALJ finds that the opinion of Dr. Gellrick is not credible or persuasive. Dr. Gellrick surmises two separate work-related injuries, in July 2014 and in December 2014. This is contrary to the totality of the medical records, which indicate only a single alleged injurious event occurred at work on or around July 26, 2014. Dr. Gellrick does not address the causal mechanism of twisting in relation to this event and instead posits alternative mechanisms which were not described in the medical records and explicitly denied as a mechanism by Claimant at hearing. Dr. Gellrick likewise does not record any causal mechanism for the alleged December 2014 injury, though Claimant clearly reported at hearing that he injured himself pushing a cart at that time. Dr. Gellrick does not cite or provide supporting documentation in the record to serve as the basis for her opinion. Moreover, Dr. Gellrick explicitly notes that Claimant's job does not involve hyperextension, which Dr. Kern indicated may be a sufficient causal mechanism for the findings on the MRI and which Dr. Lesnak testified may be sufficient to cause stress fractures. Dr. Gellrick's findings upon examination were also markedly different to those of Dr. Lesnak, who had seen Claimant just one month prior to her IME. Dr. Gellrick's opinion regarding causation was largely based upon the report that Claimant, himself, attributed his symptoms to his work duties.

The ALJ finds that the testimony and opinions of Dr. Lesnak are credible and persuasive. The opinions of Dr. Lesnak are most consistent with the opinions of Claimant's providers in the medical records regarding the history of the alleged injury and causation. Dr. Lesnak's opinion regarding of causation of the alleged July 26, 2014 injury is consistent with that of Drs. Rafferty, Dr. Otten, and Dr. Artist. Dr. Lesnak's opinion regarding causation and the relatedness of the findings on the MRI is consistent with that of Dr. Kern.

An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). Substantial evidence is that "quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. *See Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). An ALJ's determination of factual findings must be upheld if supported by substantial evidence and plausible inferences of the record. *Eller v. Indus. Claim Appeals Office*, 224 P.3d. 397, 399-400 (Colo. App. 2009).

The ALJ finds that Claimant's testimony and assertion of a work-related injury is not supported by substantial evidence in the record.

A compensable injury is one that arises out of and occurs within the course and scope of employment. § 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Industrial Claim Appeals Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

An aggravation of a preexisting condition is compensable. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. 1990). If there is a direct causal relationship between the mechanism of injury and resultant disability, the injury is compensable if it caused a preexisting condition to become disabling. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004). There must be some affirmative causal connection beyond a mere assumption that the asserted mechanism of injury was sufficient to have caused an aggravation. *Brown v. Industrial Commission*, 447 P.2d 694 (Colo. 1968). It is not sufficient to show merely that the asserted mechanism could have caused an aggravation, but rather Claimant must show that it is more likely than not that the mechanism of injury did, in fact, cause an aggravation. *Id*. Simply because a claimant experiences symptoms after performing a job function does not necessarily create a causal connection to the work function. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968). ICAO has upheld denial of compensability where the mechanism asserted was the mere act of turning and experiencing pain. *See*

Willis v. Craig Hospital, W.C. No. 4-627-742 (February 13, 2006).

Notwithstanding, if the claimant's injury is precipitated by a preexisting nonindustrial condition, the injury is not compensable unless a special hazard of the employment contributes to the accident or the extent of the injuries sustained. *National Health Laboratories v. Industrial Claim Appeals Office*, 844 P.2d 1259 (Colo. App. 1992). Under the "special hazard" rule, a claimant may be compensated if a preexisting injury, infirmity, or disease is exacerbated by the concurrence of a preexisting weakness and a hazard of employment. *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989); *Gates Rubber Co. v. Industrial Commission*, 705 P.2d 6 (Colo. App. 1985). In such cases, the existence of a special hazard, which elevates the probability of an injury serves to establish the required causal relationship between the employment and the injury. *Ramsdell v. Horn, supra*. A condition is not a special hazard of employment if it is ubiquitous in the sense that it is found generally outside of the employment. *Gates Rubber Co. v. Industrial Commission, supra*.

Notwithstanding Claimant's testimony to the contrary, the medical records establish that Claimant has a significant preexisting history of chronic, intermittent low back pain and sciatica. Claimant alleges that he injured his left low back while sitting on his tug and twisting to look behind him. Claimant was not driving his tug, not lifting, not bending, and not pushing or pulling anything. Dr. Rafferty indicated that he could not state that Claimant had a work-related injury because he did not know whether merely sitting and turning on a tug placed Claimant at increased risk of low back pain. Dr. Lesnak testified that, there was no medical evidence to suggest that a person is at increased risk of developing any strain/sprain injury by sitting in a tug and twisting. Dr. Lesnak testified that the act of sitting and twisting is one which is commonly encountered in everyday situations outside of work, including in one's car, at one's home, and sitting on the couch. Dr. Gellrick did not render any specific opinion concerning the causal relationship between Claimant's asserted mechanism of twisting, his job duties, and his injury. Rather, Dr. Gellrick indicated that Claimant likely developed an injury based upon job duties not reported to be the cause in the medical records or in testimony at hearing. Based upon the testimony, the medical records, and the preponderance of the medical opinion, Claimant's injury did not arise out of his employment duties.

Respondents are liable only for those medical benefits which are reasonable and necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The record must distinctly reflect the medical necessity of any medical treatment needed to cure and relieve an injured employee from the effects of the industrial injury and any ancillary service, care, or treatment as designed to cure and relieve the effects of such industrial injury. *Public Service Co. of Colorado v. Industrial Claim Appeals Office of State of Colo.*, 797 P.2d 584 (Colo. App. 1999). The question of whether medical treatment is reasonable and necessary is one of fact for determination by an ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Treatment for a work injury must not only be reasonable and necessary but must also be causally related to that injury. *Lerner v. Wal-Mart Stores, Inc*., 865 P.2d 915 (Colo. App. 1993). Respondents are permitted to challenge causation and relatedness of the need for any treatment, despite having admitted liability for a claim. *Hanna v. Print Expediters, Inc*. 77 P.3d 863 (Colo. App. 2003). In a dispute over medical benefits that arises after filing an admission of liability, respondents may assert, based upon subsequent medical reports, that a workers' compensation claimant did not establish a threshold requirement of direct causal relationship between the on-the-job injury and need for medical treatment. *Snyder v. Industrial Claim Appeals Office of the State of Colo., supra*. Claimant bears the burden to prove a causal connection exists between a particular treatment and the industrial injury. *Id*.; *see also Grover v. Industrial Commission of Colorado*, 759 P.2d 705 (Colo. 1988). Causation is a question of fact for resolution by the ALJ. *F.R. Orr Construction v. Rint*, 717 P.2d 965 (Colo. App. 1985).

Claimant has failed to establish a causal relationship between his work duties and his alleged injury on July 26, 2014 and no medical treatment pursuant to that date of injury is reasonable, necessary, or related to an injury which arose out of and occurred within the course and scope of his employment.

While Claimant has recently filed a separate claim for a second injury which he alleges was caused by pushing a cart on or around December 22, 2014, issues concerning that claim are not before this ALJ for resolution.

Because the ALJ has found and concluded that Claimant's claim is not compensable, Respondents are not liable for temporary total disability benefits.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to meet his burden of proof by a preponderance of the evidence that he suffered an acute aggravation of a preexisting condition arising out of and occurring within the course and scope of his employment on or around July 26, 2014. Claimant's claim for compensation is denied and dismissed.

2. 2. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 15, 2016

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-005-983-02

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on July 5, 2016, in Denver, Colorado. The hearing was digitally recorded (reference: 7/6/16, Courtroom 3, beginning at 8:30 AM, and ending at 10:15 AM). The official Spanish/English Interpreter was Juan Moreno.

Claimant's Exhibits 1 through 3 were admitted into evidence, without objection. Respondents' objection to Claimant's Exhibit 4 was sustained on the basis of the 20-day exchange rule. The Respondents were offered the opportunity to deal with Claimant's Exhibit 4 at a continuation hearing, however, the Claimant withdrew the exhibit. Respondents' Exhibits A through K were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule. The Claimant's opening brief was filed on July 21, 2016. Respondents' answer brief was filed on July 25, 2016. The Claimant's reply brief was filed on August 1, 2016, at which time the matter was deemed submitted for decision.

ISSUES

The issues to be determined by this decision concern compensability; if compensable, average weekly wage (AWW), temporary total disability (TTD) benefits from January 15, 2016 and continuing; and, medical benefits.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Stipulations and Findings Based Thereon

1. At the commencement of the hearing, the parties stipulated and the ALJ finds that the Claimant's AWW, if the claim is compensable, is $859.10.

2. Also, at the commencement of the hearing the Respondents made a judicial admission that the authorization of the medical providers at SCL/Good Samaritan, Dean L. Prok, M.D., and his referral to Nicholas K. Olsen, D.O., were authorized, if the claim is compensable, and the ALJ so finds.

Preliminary Findings

3. The Claimant was a 40-year-old general laborer for the Employer where he was employed as a laborer on construction sites with duties that included lifting and carrying 2"X8"X9' pieces of lumber that were used on scaffolding.

4. On January 14, 2016, the Claimant was attempting to lift six, nine foot wooden beams with a coworker when he felt a popping in his lower back and immediately felt sharp pain. At hearing, the Claimant initially indicated that he lifted one wooden plan. Later, the Claimant indicated that he was lifting multiple planks with the assistance of a co-worker. The resolution of this discrepancy is not critical to whether the Claimant aggravated a pre-existing condition by lifting **a** plank or **six** planks.

5. After contemporaneously reporting the incident, the Claimant's supervisor, Luis Cervantes, transported the Claimant to an authorized medical provider, SCL Physicians in Broomfield. The Claimant was initially seen by Physician Assistant (PA) Tara Clemens where he described his mechanism of injury and noted no prior conditions or symptoms in his lower back. Based upon the Claimant's presentation PA Clemens thought he may have suffered a lumbar herniated disc. The Claimant was

prescribed medications and a follow-up appointment was set with Dean Prok, M.D. for the next day (Respondents' Exhibit C, pp.81-84). Dr. Prok is the Claimant's first authorized treating physician (ATP).

Compensability

6. Upon examination, PA Clemens found spasm in the Claimant's lumbar back, as well as weakness with resisted hip flexion and knee extension bilaterally. Her assessment was lumbar herniated disc.

7. PA Clemens was of the opinion that there was a greater than 50% medical probability of work-related injury.

8. Next, the Claimant presented to the Emergency Department (ER) of Good Samaritan Hospital where he continued to report persisting back pain, right lower quadrant abdominal pain, and the decreased sensation extending down his legs. The ER personnel noted a positive right inguinal canal tenderness with a mass appreciated. The Claimant also had positive exquisite tenderness of the right testicle which was high riding. Subsequent imaging was negative for appendicitis, inguinal hernia, femoral hernia or abdominal wall defect in the right lower quadrant and consideration of a bulging disc/sciatica. The final impressions were bilateral low back pain with sciatica, sciatica laterally unspecified; right lower quadrant abdominal pain; testicular pain right. The symptoms at that time were thought to be most consistent with a muscular strain or spasm (Respondents' Exhibit A, pp.10-11).

Dean Prok, M.D.

9. The Claimant was seen by ATP Dr. Prok at SCL on January 18, 2016 and the Claimant presented with ongoing pain and weakness. Dr. Prok reported a greater than 50% medical probability of work-related injury and imposed work restrictions, which consisted of avoidance of any twisting or bending or heavy activity.

10. The Claimant presented his work restrictions to his supervisor, and he was not provided any modified duty after his initial medical treatment, nor was he ever called back to work for the Employer.

11. Dr. Prok continued to impose restrictions on the Claimant that are not further specified in the reports, but the Claimant reported that modified duty was not made available to him.

12. The Claimant has not undertaken any other work since his injury, nor has he received any benefits for being off work. He has received assistance from his family, including his parents and sister.

Nicholas K. Olsen, D.O. and Followup

13. On January 20, 2016, the Claimant was seen by Dr. Olsen, on referral from Dr. Prok. The Claimant reported that his pain kept him awake at night, and he suffered balance issues that had caused him to fall a couple times since his work accident. Dr. Olsen is also one of the Claimant's ATPs.

14. On informational surveys completed by the Claimant for Dr. Olsen, the Claimant indicated that he was very satisfied with his job, but he was now severely anxious and quite irritable.

15. When the Claimant was seen in physical therapy at SCL on March 15, 2016, he was found to have limited lumbar range of motion (ROM) and lower extremity (LE) weakness. Objective findings reported by therapist Cindy Vair included decreased lumbar lordosis, forward trunk lean, a wide base of support and a myotome/strength rating on the L4 tibialis anterior of only 3 on the right, versus 5 on the left.

16. The Claimant's MRI (magnetic resonance imaging) of January 28, 2016 revealed bilateral facet arthrosis resulting in mild bilateral foraminal stenosis at L4-5 and a probable annular fissure at L5-S1.

17. Dr. Olsen administered an epidural steroid injection (ESI) at L5-S1 on April 12, 2016, to address the Claimant's annular fissure. Although the Claimant reported a decreased VAS score after the injection, lumbar extension continued to aggravate his back pain. On April 20, 2016, Dr. Olsen was of the opinion that the Claimant's response to the ESI did not seem to identify his annular fissure as a significant pain generator, so he planned for a bilateral L4-5 and L5-S-1 facet injection.

18. The last report of examination by Dr. Prok was May 20, 2016, at which point a concern for the Claimant's cardiac condition had been resolved, so he might proceed with additional injections. Dr. Prok reported good strength in the Claimant's lower extremities, and the ability to walk on heels, but not toes. Dr. Prok repeated his assessment of a greater than 50% probability of work-related injury, and estimated maximum medical improvement (MMI) in 3-5 months. Dr. Prok has not yet determined whether the Claimant is at MMI.

19. On June 3, 2016, Dr. Olsen administered the facet injections, and the Claimant reported a pre-injection VAS score of 7/10 followed by some 80% reduction of pain to a post-injection score of 2/10 and the ability to flex and extend his lumbar spine to a greater extent without aggravation of pain complaints. Reexamination was to take place within two weeks.

Respondents' Independent Medical Examiner (IME) Kathleen D'Angelo, M.D.

20. IME Dr. D'Angelo stated that the symptoms from a facet problem might or might not have a specific nature, but could include pain in the thigh.

21. Dr. D'Angelo provided Claimant the diagnosis of lumbar myofascial strain due to his work injury (Respondents' Ex. A, p.21). Therefore, Dr. D'Angelo is of the opinion that the Claimant sustained a work-related injury on January 14, 2016, however, she is of the opinion that none of the Claimant's restrictions are attributable to that injury, thus by inference, temporary disability is not attributable to that injury.

22. Dr. D'Angelo offered a diagnosis of Somatic Symptom Disorder for the Claimant, based upon the DSM-5, however she conceded that she is not board certified in psychiatry or neurology, and this assessment is given minimal weight.

23. Dr. D'Angelo was quite clear in stating the opinion that the Claimant is not malingering.

24. With regard to a report of the Claimant experiencing shaking in his leg when asked to stand on only one leg, Dr. D'Angelo also stated that she did not believe he was faking that.

25. Dr. D'Angelo was of the opinion that the Claimant's disc bulges, fissuring, and facet joint arthropathy were not acute structural injuries caused by the work events. Therefore any need for treatment to the discs, or facet joints, according to Dr. D'Angelo were related to the Claimant's underlying, pre-existing and causally unrelated degenerative spine disease. According to Dr. D'Angelo, there was no evidence that the Claimant suffered some chronic aggravation, acceleration or exacerbation of his underlying degenerative spine disease, since these aggravations would normally present as a temporary condition and a limited inflammatory response. According to Dr. D'Angelo, the fact that the Claimant's symptoms have continued for six months in light of his treatment, injections, physical therapy, and medications are indicative of some other condition other than a traumatic or acute injury related to a specific event. Dr. D'Angelo failed to convincingly explain the underlying basis for this opinion.

26. Dr. D'Angelo did not feel that the Claimant needed work restrictions, and that there was no need for further treatment. She specifically did not feel he suffered a work-related back injury during the course of his employment. Rather, according to Dr. D'Angelo, the Claimant's presentation of symptoms was a manifestation of an underlying osteoarthritis and or a somatic symptom disorder. Both of those conditions are systemic diseases and not causally related to work duties or a work injury, according to Dr. D'Angelo. The ALJ finds that Dr. D'Angelo's opinions are categorically made to exclude most potential bases of work-relatedness and they are contrary to the weight of the medical opinions of the treating physicians.

Temporary Total Disability

27. The Claimant presented his work restrictions to his supervisor, and he was not provided any modified duty after his initial medical treatment, nor was he ever called back to work for the Employer.

28. Dr. Prok continued to impose restrictions on the Claimant that are not further specified in the reports, but the Claimant reported that modified duty was not made available to him.

29. The Claimant has not undertaken any other work since his injury, nor has he received any benefits for being off work. He has received assistance from his family, including his parents and sister.

30. The Claimant has neither been able to work at his pre-injury work nor has he earned any wages whatsoever since the date of his injury, January 14, 2016. He continues under medical restrictions that prevent him from working at his pre-injury job. Modified employment has not been made available to him and he has not been declared to be at maximum medical improvement (MMI) by an authorized treating physician. Therefore, the Claimant has been temporarily and totally disabled since January 15, 2016 and continuing.

Ultimate Findings

31. The ALJ finds the opinions of ATPs Dr. Prok and Dr. Olsen more persuasive and more credible than the opinions of IME Dr. D'Angelo. Dr. D 'Angelo's opinion supports a compensable event, however, it does not support continuing restrictions or after-effects as a result thereof, thus, it does not support temporary disability. Dr. Prok's and Dr. Olsen's opinions not only support a compensable event but they support continuing restrictions through the present, which would prevent the Claimant from performing his pre-injury work.

32. Between the conflicting opinions of Dr. D'Angelo versus the opinions of Dr. Prok and Dr. Olsen, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of ATPs Dr. Prok and Dr. Olsen, and to reject the opinions of IME Dr. D'Angelo.

33. The Claimant has proven by a preponderance of the evidence, that he sustained compensable injuries to his back as described herein above by Dr. Prok and Dr. Olsen on January 14, 2016, consisting of a work-related aggravation of pre-existing

back conditions, and these injuries arose out of the course and scope of his employment for the Employer.

34. The Claimant has proven, by preponderant evidence that all of the medical care and treatment for his back injury of January 14, 2016 was authorized, causally related thereto, and reasonably necessary to cure and relieve the effects thereof.

35. The Claimant has further proven, by a preponderance of the evidence that his AWW is $859.10, which yields a TTD rate of $572.73 per week, or $81.96 per day.

36. The Claimant has proven, by preponderant evidence that he has been temporarily and totally disabled since January 15, 2016 and continuing. The period from January 15, 2016 through July 5, 2016, both dates inclusive is a total of 173 days.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of ATPs Dr. Prok and Dr. Olsen were more persuasive and credible than the opinions of IME Dr. D'Angelo. Dr. D'Angelo's opinion supports a compensable event, however, it does not support continuing restrictions, after-effects or temporary disability as a result thereof. Dr. Prok's and Dr. Olsen's opinions not only support a compensable event but they support continuing restrictions through the present, which would prevent the Claimant from performing his pre-injury work.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between the conflicting opinions of Dr. D'Angelo versus the opinions of Dr. Prok and Dr. Olsen, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of ATPs Dr. Prok and Dr. Olsen, and to reject the opinions of IME Dr. D'Angelo.

Compensability

c. A compensable injury is one that arises out of and in the course of employment. Section 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-**

existing condition to cause a need for medical treatment or produce the disability for which benefits are sought. § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the Claimant sustained compensable injuries to his back as described herein above by Dr. Prok and Dr. Olsen on January 14, 2016, consisting of a work-related aggravation of pre-existing back conditions, and these injuries arose out of the course and scope of his employment for the Employer.

Medical Benefits

d. As stipulated and found, all of the Claimant's medical care and treatment for the January 14, 2016 event was authorized and within the chain of authorized referrals. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to the aggravating injury of January 14, 2016. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary to cure and relive the effects of that injury.

Average Weekly Wage

e. As stipulated and found, the Claimant's AWW is $859.10, thus yielding a TTD rate of $572.73 per week, or $81.96 per day.

Temporary Total Disability

f. To establish entitlement to temporary disability benefits, the Claimant must prove that the industrial injury has caused a "disability," and that he has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). When a temporarily disabled employee loses his employment for other reasons which are not his responsibility, the causal relationship between the industrial injury and the wage loss necessarily continues. Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair his opportunity to obtain employment at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 (ICAO, December 18, 2000). Claimant's separation from employment in this case was because his medical restrictions would not permit him to perform his pre-injury work and his Employer did not offer him modified employment. There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish her physical disability. See *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Id*.

g. Once the prerequisites for TTD are met (*e.g.,* no release to return to full duty, MMI has not been reached, a temporary wage loss is occurring, modified employment is not made available, there is no actual return to work and MMI has not been reached), TTD benefits are designed to compensate for a 100% temporary wage loss. *See Eastman Kodak Co. v. Industrial Commission,* 725 P. 2d 107 (Colo. App. 1986); *City of Aurora v. Dortch,* 799 P. 2d 461 (Colo. App. 1990). As found, the Claimant has been temporarily and totally disabled since January 15, 2016 and continuing. The period from January 15, 2016 through July 5, 2016, both dates inclusive is a total of 173 days.

Burden of Proof

h. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has met his burden with respect to compensability, medical benefits, AWW, and TTD.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondents shall pay the costs of the Claimant's authorized medical care and treatment for his compensable back injury of January 14, 2016, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. The Respondents shall pay the Claimant $572.73 per week, or $81.96 per day from January 15, 2016 through July 5, 2016, both dates inclusive is a total of 173 days, in the aggregate amount of $14, 179.08, which is payable retroactively and forthwith. From July 6, 2016 and continuing until cessation of temporary indemnity benefits is warranted by law, the Respondents shall continue to pay the Claimant $572.73 per week in temporary total disability benefits.

C. Any and all issues not determined herein are reserved for future decision.

DATED this______day of August 2016.

ISSUES

- Whether Respondent overcame, by clear and convincing evidence, the DIME opinion of Dr. Timothy Hall that Claimant was not at maximum medical improvement (MMI)?

- If Claimant was at MMI, whether Claimant proved by a preponderance of the evidence that her left and right scheduled shoulder ratings should be converted to whole person impairment ratings?
